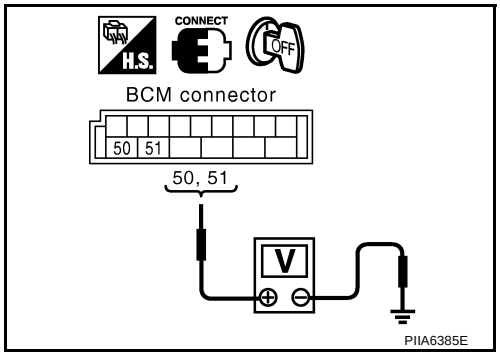
50 (PU) – 1 (PU) : Continuity should exist.

3. Check continuity between BCM harness connector M91 terminals 44, 50 and ground.

44 (Y) – Ground : Continuity should not exist.
50 (PU) – Ground : Continuity should not exist.

OK or NG

OK >> Replace driver side door lock actuator.
NG >> Repair or replace harness between BCM and driver side door lock actuator.



Check Passenger Side Door Lock Actuator

NIS0000U

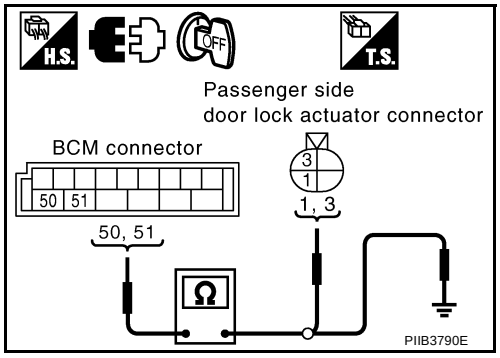
1. CHECK DOOR LOCK ACTUATOR SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between passenger side door lock actuator connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M91	50 (PU)	Ground	Door lock/unlock switch is turned to LOCK.	0 → Battery voltage → 0
	51 (W/R)		Door lock/unlock switch is turned to UNLOCK.	0 → Battery voltage → 0

OK or NG

OK >> GO TO 2.
NG >> Replace BCM.



2. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M91 terminals 50, 51 and passenger side door lock actuator harness connector D40 terminals 1, 3.

50 (PU) – 1 (PU) : Continuity should exist.
51 (W/R) – 3 (GY) : Continuity should exist.

3. Check continuity between BCM harness connector M91 terminals 50, 51 and ground.

50 (PU) – Ground : Continuity should not exist.
51 (W/R) – Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger side door lock actuator.
NG >> Repair or replace harness between BCM and passenger side door lock actuator.

Check Door Key Cylinder Switch

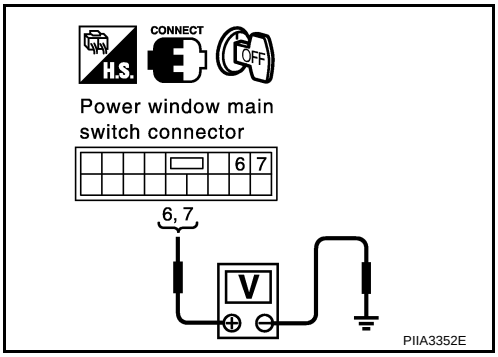
NIS0000V

1. CHECK DOOR KEY CYLINDER SWITCH INPUT SIGNAL

With CONSULT-III

- Check door key cylinder switch (“KEY CYL LK SW”) in “DATA MONITOR” mode with CONSULT-III.

  “KEY CYL LK-SW” should be “ON” when key inserted in door key cylinder is turned to lock.



- Check door key cylinder switch (“KEY CYL UN-SW”) in “DATA MONITOR” mode with CONSULT-III.

  “KEY CYL UN-SW” should be “ON” when key inserted in door key cylinder is turned to unlock.

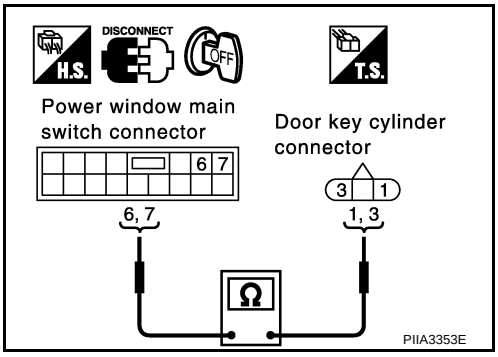
Without CONSULT-III

Check voltage between power window main switch (door lock and unlock switch) connector and ground.

Connector	Terminals (+)	Terminals (–)	Key position	Voltage (V) (Approx.)
D7	6 (B/R)	Ground	Neutral/Unlock	5
			Lock	0
	7 (SB)		Neutral/Lock	5
			Unlock	0

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.



NG >> GO TO 2.

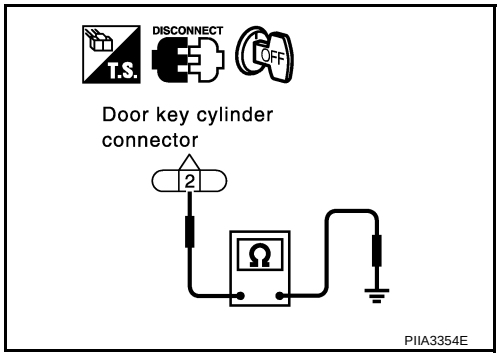
2. CHECK DOOR KEY CYLINDER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch (door lock and unlock switch) and door key cylinder switch connector.
3. Check continuity between power window main switch (door lock and unlock switch) harness connector D7 terminals 6, 7 and door key cylinder switch harness connector D12 terminals 1, 3.

6 (B/R) – 3 (B/R) : Continuity should exist.

7 (SB) – 1 (SB) : Continuity should exist.

OK or NG



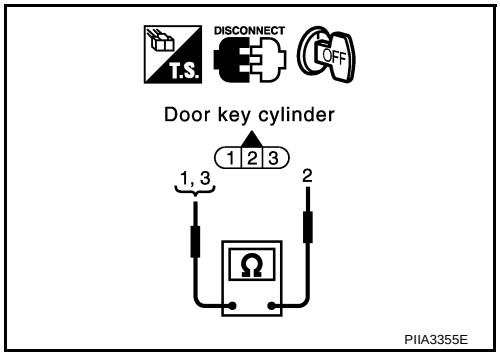
OK >> GO TO 3.

NG >> Repair or replace harness between power window main switch and door key cylinder switch.

3. CHECK DOOR KEY CYLINDER SWITCH GROUND CIRCUIT

Check continuity between door key cylinder switch harness connector D12 terminal 2 and ground.

2 (B) – Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK DOOR KEY CYLINDER SWITCH

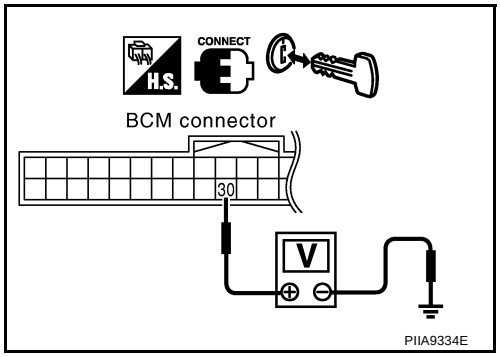
Check continuity between door key cylinder switch terminals 1, 3 and 2.

Connector	Terminals		Key position	Continuity
D12	1	2	Neutral/Lock	No
			Unlock	Yes
	3		Neutral/Unlock	No
			Lock	Yes

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace door key cylinder switch.

Check Back Door Opener Switch



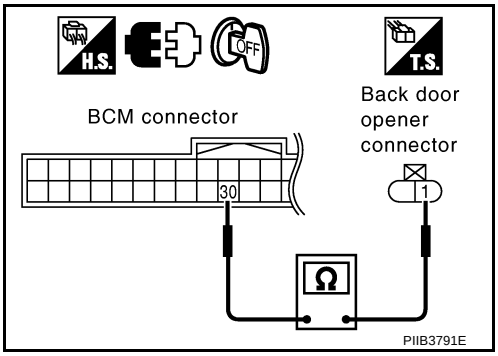
NIS0000W

1. CHECK BACK DOOR OPENER SIGNAL

Check voltage between BCM connector and ground.
Press back door opener switch when driver side door is unlocked.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Back door opener switch ON	0
			Back door opener switch OFF	Battery voltage*

*: When interior lamp battery saver control is in OFF position. →Approx.5V



OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

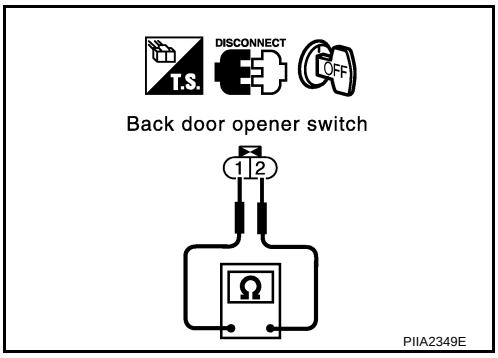
2. CHECK BACK DOOR OPENER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door opener switch connector.
3. Check continuity between BCM harness connector M90 terminal 30 and back door opener switch harness connector T103 terminal 1.

30 (P) – 1 (P) **: Continuity should exist.**

OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between BCM and back door opener switch.

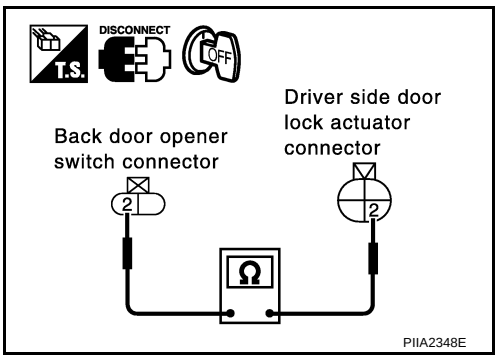


3. CHECK BACK DOOR OPENER SWITCH

Check continuity between back door opener switch terminals 1 and 2.

Connector	Terminals		Condition	Continuity
T103	1	2	Back door opener switch: ON	Yes
			Back door opener switch: OFF	No

OK or NG

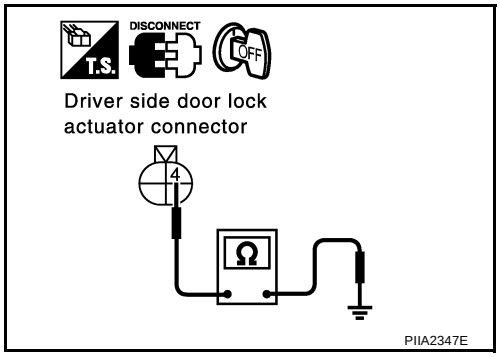


OK >> GO TO 4.
NG >> Replace back door opener switch.

4. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between back door opener switch harness connector T103 terminal 2 and driver side door lock actuator harness connector D11 terminal 2.

2 (G) – 2 (OR) **: Continuity should exist.**



OK or NG

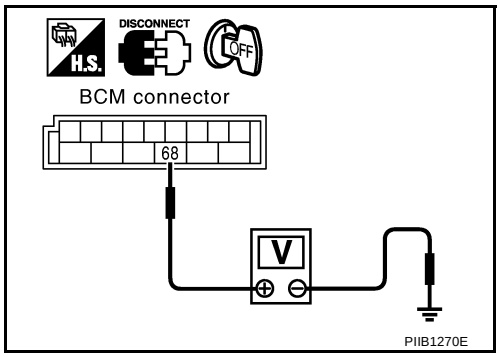
OK >> GO TO 5.
NG >> Repair or replace harness between back door opener switch and driver side door lock actuator.

5. CHECK DOOR LOCK ACTUATOR GROUND CIRCUIT

Check continuity between driver side door lock actuator harness connector D11 terminal 4 and ground.

4 (B) – Ground : Continuity should exist.

OK or NG



OK >> Replace driver side door lock actuator.
NG >> Repair or replace harness.

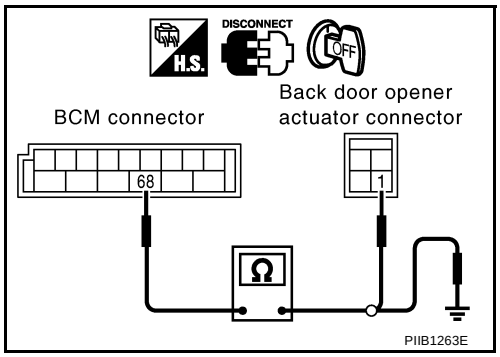
Check Back Door Opener Actuator

NIS0000X

1. CHECK BACK DOOR OPENER ACTUATOR SIGNAL

Check voltage between BCM connector and ground.
Press the back door opener switch when driver side door is unlocked.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
B83	68 (L/R)	Ground	Back door opener switch ON	Battery voltage
			Back door opener switch OFF	0



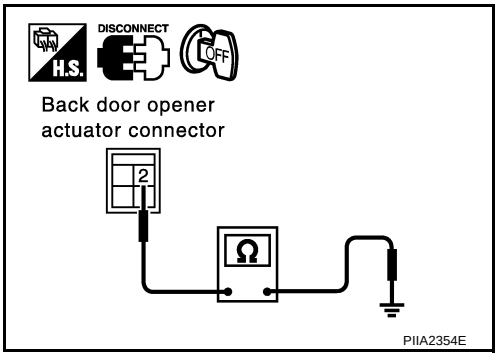
OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

2. CHECK BACK DOOR OPENER ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door opener actuator connector.
3. Check continuity between BCM harness connector B83 terminal 68 and back door opener actuator harness connector T11 terminal 1.

68 (L/R) – 1 (L/R) : Continuity should exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between BCM and back door opener actuator.

3. CHECK BACK DOOR OPENER ACTUATOR GROUND CIRCUIT

Check continuity between back door opener actuator harness connector T11 terminal 2 and ground.

2 (B) – Ground : Continuity should exist.

OK or NG

OK >> Replace back door opener actuator.
NG >> Repair or replace.

FUEL FILLER LID OPENER

PFP:78820

System Description/For RoadSter

NIS0000Y

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

When ignition switch ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

FUEL LID OPEN OPERATION

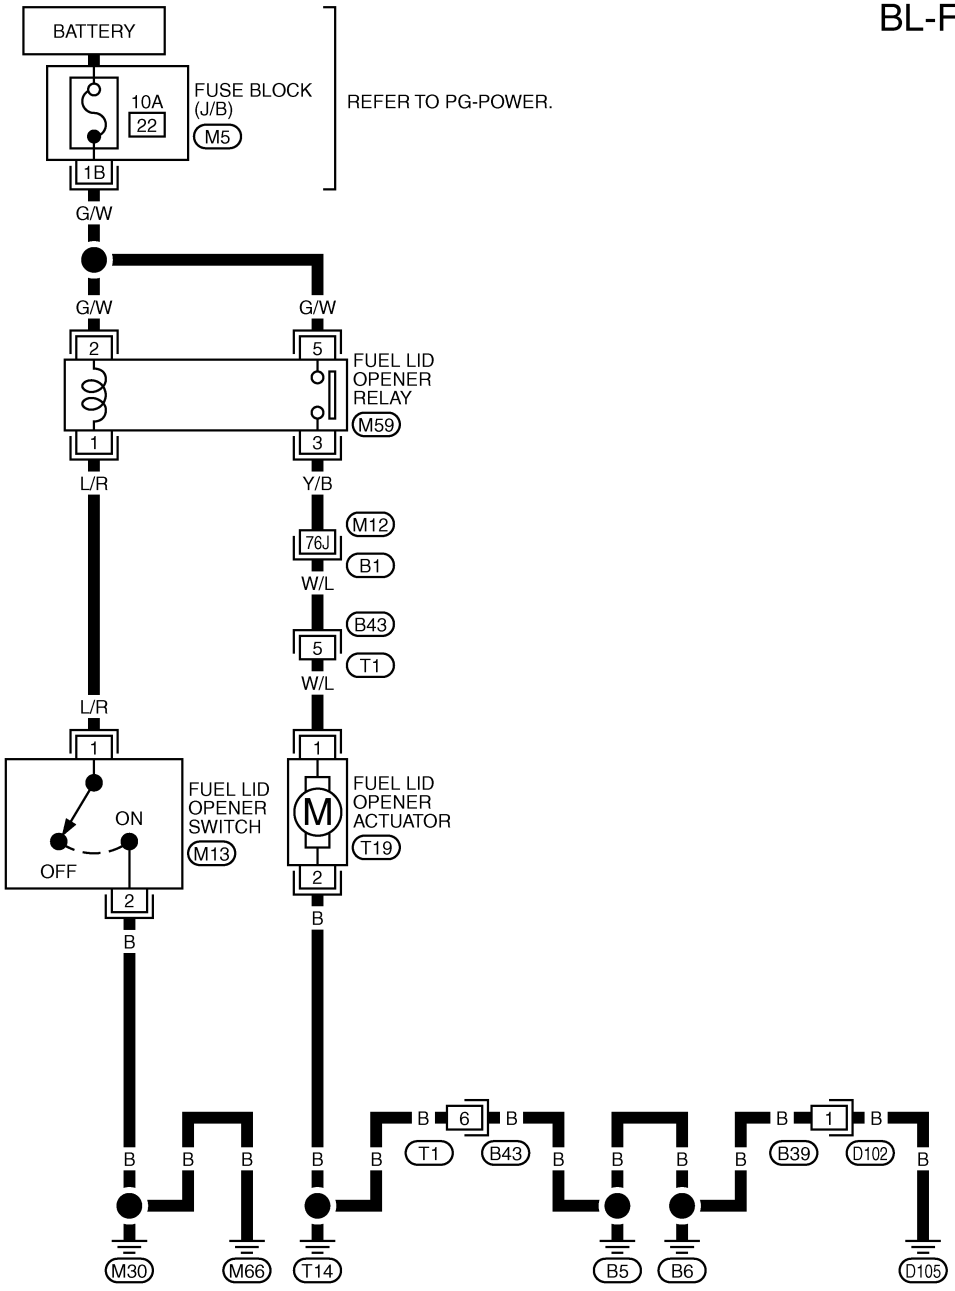
When fuel lid opener switch is ON (pushed), ground is supplied

- to BCM terminal 58
- through fuel lid opener switch terminals 1 and 2, and
- through body grounds M30 and M66.

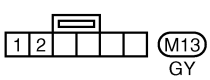
And power is supplied

- to BCM terminal 70
- through fuel lid opener actuator terminals 1 and 2, and
- through body grounds B5, B6, and T14.

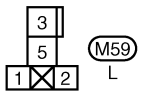
Then fuel lid opener actuator opens fuel lid.



FUEL LID OPENER CANCEL OPERATION



Fuel lid cannot open when vehicle condition is in arm or alarm phase.



Wiring Diagram — F/LID — /For Coupe

CONSULT-III Function (BCM)/For Roadster

NIS00011

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Inspection item, self-diagnosis mode	Content
Fuel lid	Data monitor	Displays BCM input data on real-time basis.
	Active test	Sends drive signals to fuel lid opener actuator to perform operation check.

DATA MONITOR

Monitor item “operation”	Content
F/LID OPN SW	Indicates [ON/OFF] condition of fuel lid opener switch.

ACTIVE TEST

Test item	Content
FUEL LID OPEN	This test is able to check fuel lid opener actuator unlock operation. This actuator unlocks when “ON” on CONSULT-III screen is touched.

Terminals and Reference Value for BCM/For Roadster

NIS00012

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage [V] (Approx.)
11	LG	Ignition switch (ACC)	Input	Ignition switch (ACC or ON)	Battery voltage
39	L	CAN-H	Input	—	—
40	P	CAN-L	Input	—	—
42	GY	Power source (Fuse)	Input	—	Battery voltage
52	B	Ground	—	—	0
55	R	Power source (Fusible link)	Input	—	Battery voltage
58	Y/B	Fuel lid opener switch	Input	Fuel lid opener switch is ON	0
				Fuel lid opener switch is OFF	Battery voltage
70	W/L	Fuel lid opener release output signal	Output	Fuel lid opener switch is ON	0
				Fuel lid opener switch is OFF	Battery voltage (For 0.5s)

Trouble Diagnosis/For Roadster

NIS00013

FUEL LID DOSE NOT OPEN WITH FUEL LID OPENER SWITCH

1. VEHICLE CONDITION

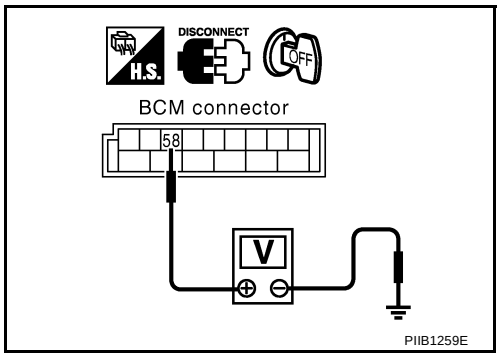
Check vehicle security system.

Arm phase or alarm phase?

Yes or No

Yes >> Cancel arm phase or alarm phase condition.
No >> GO TO 2.

2. CHECK FUEL LID OPEN INPUT SIGNAL



With CONSULT-III

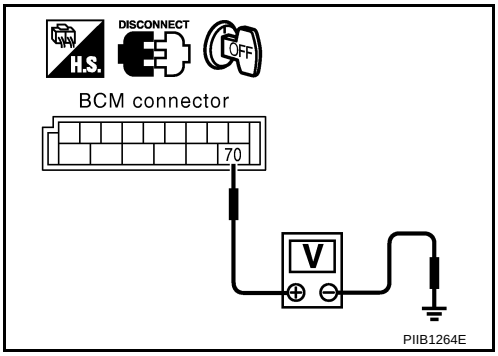
Check door switches (“F/LID OPN SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
F/LID OPN SW	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

1. Turn ignition switch OFF.
2. Check voltage between BCM and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V] (Approx.)
	(+)	(–)		
B83	58 (Y/B)	Ground	Fuel lid opener switch ON	0
			Fuel lid opener switch OFF	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 6.

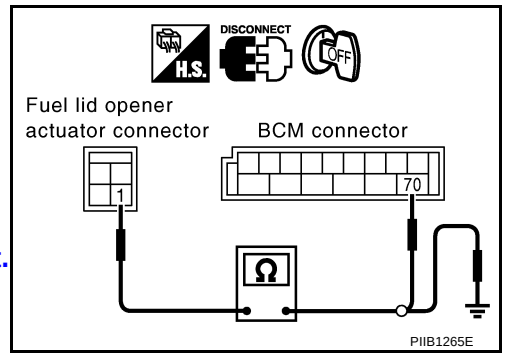
3. CHECK FUEL LID OPEN OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V] (Approx.)
	(+)	(–)		
B83	70 (W/L)	Ground	Fuel lid opener switch ON	Battery voltage (for 0.5s)
			Fuel lid opener switch OFF	0

OK or NG

OK >> GO TO 4.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .



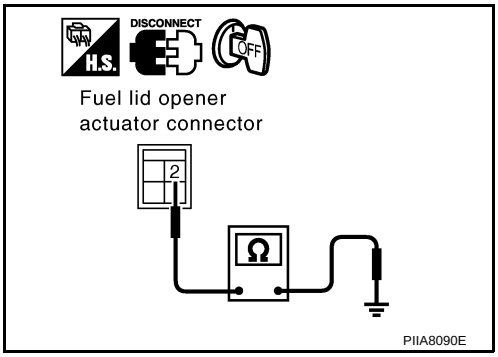
4. CHECK FUEL LID OPENER ACTUATOR CIRCUIT

1. Disconnect BCM connector and fuel lid opener actuator connector.
2. Check continuity between BCM harness connector B83 terminal 70 and fuel lid opener actuator harness connector T19 terminal 1.

70 (W/L) - 1 (W/L) : Continuity should exist.

3. Check continuity between fuel lid opener actuator harness connector T19 terminal 1 and ground.

1 (W/L) - ground : Continuity should not exist.



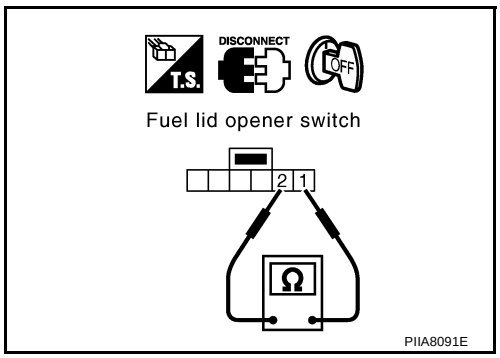
OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK FUEL LID OPENER ACTUATOR GROUND CIRCUIT

Check continuity between fuel lid opener actuator harness connector T19 terminal 2 and ground.

2 (B) - ground : Continuity should exist.



OK or NG

OK >> Replace fuel lid opener actuator.
NG >> Repair harness or connector.

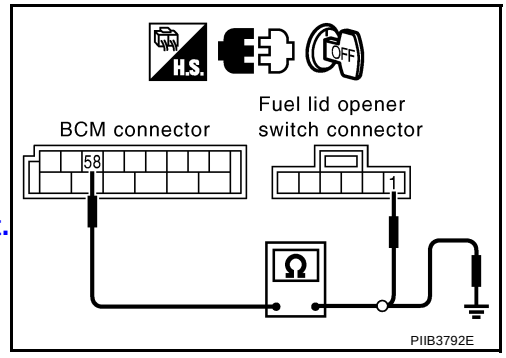
6. CHECK FUEL LID OPENER SWITCH

1. Disconnect fuel lid opener switch
2. Check continuity between fuel lid opener switch harness connector M13 terminals 1 and 2.

Connector	Terminals		Fuel lid opener switch condition	Continuity
M13	1	2	ON (Pushed)	Yes
			OFF (Released)	No

OK or NG

OK >> GO TO 7.
NG >> Replace fuel lid opener switch.



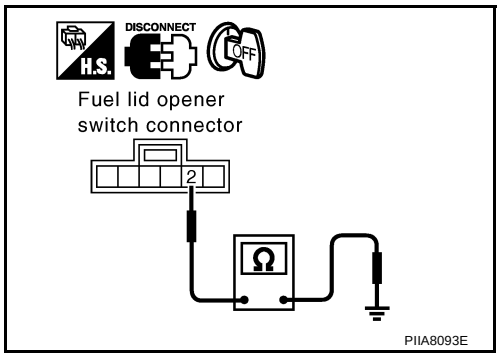
7. CHECK FUEL LID OPENER SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector B83 terminal 58 and fuel lid opener switch harness connector M13 terminal 1.

58 (Y/B) - 1 (L/R) : Continuity should exist.

3. Check continuity between BCM harness connector B83 terminal 58 (Y/B) and ground.

58 (Y/B) - ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Repair harness or connector.

8. CHECK FUEL LID OPENERE SWITCH GROUND CIRCUIT

Check continuity between fuel lid opener switch harness connector M13 terminal 2 and ground.

2 (B) - ground : Continuity should exist.

OK or NG

OK >> Replace fuel lid opener switch.
NG >> Repair harness or connector.

System Description

NIS00015

INPUTS

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No. 21, located in the fuse block (J/B)]
- to key switch terminal 2.

When the ignition switch is ON or START position, power is supplied

- through 10A fuse [No.1, located in the fuse block (J/B)]
- to BCM terminal 38.

When the ignition switch is ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

When the driver side door switch is ON (door is OPEN), ground is supplied

- to BCM terminal 62
- through driver side door switch terminal 1 and
- through driver door switch case ground.

When the passenger side door switch is ON (door is OPEN), ground is supplied

- to BCM terminal 12
- through passenger side door switch terminal 1 and
- through passenger side door switch case ground.

When the back door switch (For coupe models) is ON (door is OPEN), ground is supplied

- to BCM terminal 58
- through the back door switch terminals 1 and 3 and
- through body grounds B5, B6, D105 and T14.

When the trunk lid lock assembly (trunk room lamp switch) (For roadster models) is ON (trunk is OPEN), ground is supplied

- to BCM terminal 57
- through the trunk room lamp switch terminals 3 and 1 and
- through body grounds B5,B6 and T14.

When the key switch is ON (key is inserted in ignition key cylinder), power is supplied

- through key switch terminals 2 and 1
- to BCM terminal 37.

Key fob signal is inputted to remote keyless entry receiver (the antenna of the system is built in remote keyless entry receiver).
Remote keyless entry receiver sends keyfob signal

- to BCM terminal 20
- from remote keyless entry receiver terminal 2.

The remote keyless entry system controls operation of the

- power door lock
- hazard and horn reminder
- auto door lock
- interior lamp and step lamp
- panic alarm

- back door opener (For coupe)
- trunk lid opener (For roadster)
- keyless power window down (open)

OPERATION PROCEDURE

Power Door Lock Operation

BCM receives a LOCK signal from key fob. BCM locks all doors receiving of LOCK signal from key fob.
When an UNLOCK signal is sent from key fob once, driver's door will be unlocked.
Then, if an UNLOCK signal is sent from key fob again within 5 seconds, all other doors will be unlocked.

Hazard Reminder

When the doors are locked or unlocked by key fob, power is supplied to hazard warning lamp and it flashes as follows

- LOCK operation: C mode (flash twice) or S mode (flash twice)
- UNLOCK operation: C mode (flash once) or S mode (does not flash)

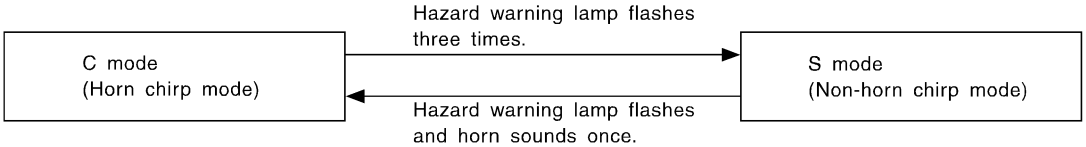
Horn Reminder

BCM output to IPDM E/R for horn reminder signal as DATA LINE (CAN H line and CAN L line).
The horn reminder has C mode (horn chirp mode) and S mode (non-horn chirp mode).

Operating function of hazard and horn reminder

	C mode		S mode	
Remote controller operation	Lock	Unlock	Lock	Unlock
Hazard warning lamp flash	Twice	Once	Twice	—
Horn sound	Once	—	—	—

Hazard and horn reminder does not operate if any door switch is ON (any door is OPEN).



How to change hazard and horn reminder mode

With CONSULT-III

Hazard and horn reminder can be changed using “WORK SUPPORT” mode in “MULTI ANSWER BACK SET”.
Refer to BL-73, "Work Support" .

Without CONSULT-III

When LOCK and UNLOCK signals are sent from the key fob for more than 2 seconds at the same time, the hazard and horn reminder mode is changed and hazard warning lamp flashes and horn sounds as follows:

SEL153WA

Auto Door Lock Operation

Auto lock function signal is sent for operation when any of the following signals are not sent within 1 minute after the unlock signal is sent from the key fob:

- when door switch is turned ON for open.
- when the key switch is turned ON.
- when the lock signal is sent from the key fob.

Auto door lock mode can be changed using “WORK SUPPORT” mode in “AUTO LOCK SET”.
Refer to BL-73, "Work Support" .

Interior Lamp and Step Lamp Operation

When the following conditions come:

- condition of interior lamp switch is DOOR position;
- door switch OFF (when all the doors are closed);

Remote keyless entry system turns on interior lamp (for 30 seconds) with input of UNLOCK signal from key fob.
For detailed description, refer to LT-130, "MAP LAMP TIMER OPERATION" .

Panic Alarm Operation

When key switch is OFF (when ignition key is not inserted in key cylinder), BCM turns on and off horn and headlamp intermittently with input of PANIC ALARM signal from key fob.
The alarm automatically turns off after 25 seconds or when BCM receives any signal from key fob.
For detailed description, refer to BL-128, "PANIC ALARM OPERATION" .

Back Door Operation/For Coupe

When a BACK DOOR OPEN signal is sent with key OFF (ignition key removed from key cylinder) from key fob, power is supplied through BCM terminal 19.
When power and ground are supplied, back door opener actuator opens back door.

Trunk Opener Operation/For Roadster

When a TRUNK OPEN signal is sent with key OFF (ignition key removed from key cylinder) from key fob, power is supplied through BCM terminal 19.
When power and ground are supplied, trunk lid opener actuator opens trunk.

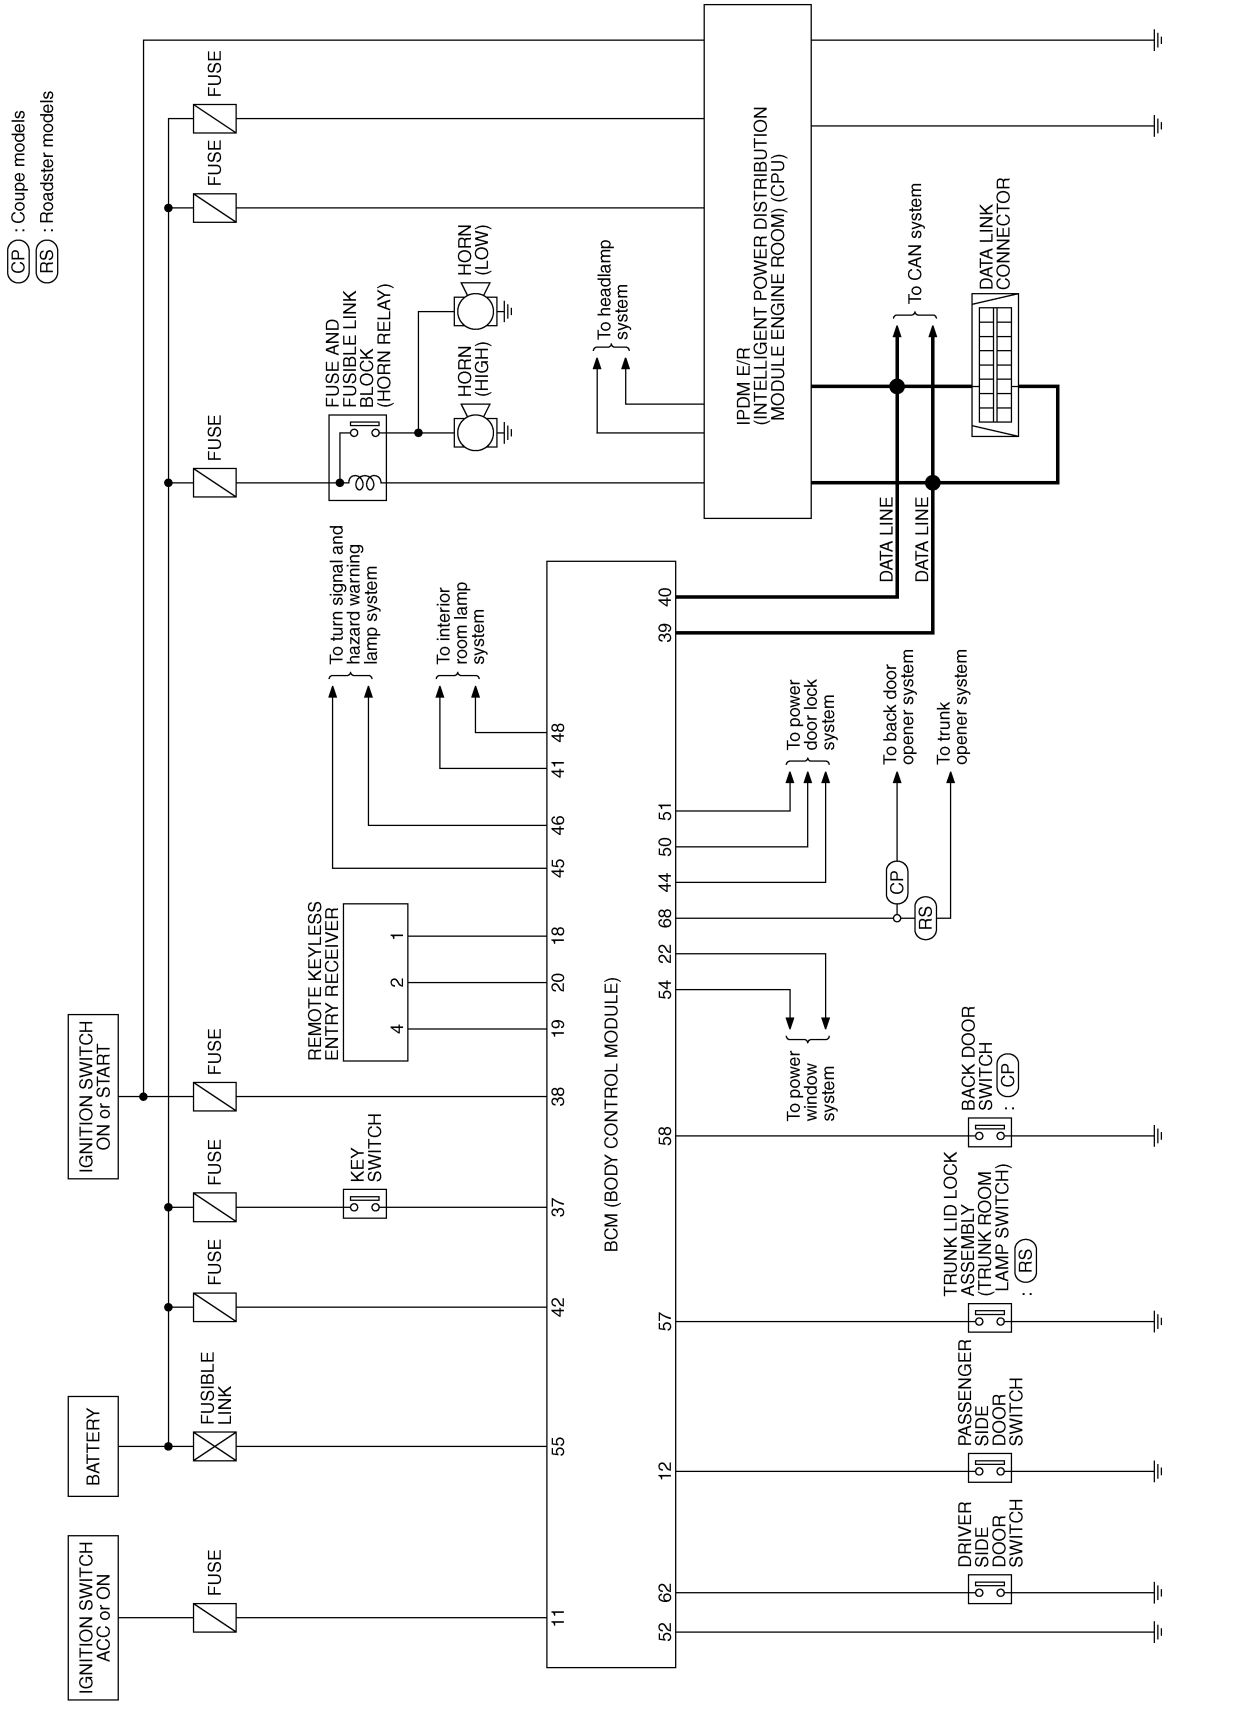
Keyless Power Window Down (open) Operation

When key fob unlock switch is turned ON with ignition switch OFF, and key fob unlock switch is detected to be on continuously for 3 seconds, the driver's door and passenger's door power windows are simultaneously opened.
Power window is operated to open and the operation continues as long as the key fob unlock switch is pressed.

CAN Communication System Description

NIS00016

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.

Monitored Item	Description
KEY ON SW	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW-AS	Indicates [ON/OFF] condition of passenger side door switch.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch (For Coupe).
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from lock/unlock switch.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from door key cylinder switch.
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from key fob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from key fob.
PANIC BTN	Indicates [ON/OFF] condition of panic signal from key fob.
TRUNK OPNR SW	Indicates [ON/OFF] condition of trunk room lamp switch (For Roadster).
TRUNK BTN/SIG	Indicates [ON/OFF] condition of back door open signal from key fob.
	Indicates [ON/OFF] condition of trunk open signal from key fob. (For Roadster)
TRUNK OPN MNTR	Indicates [ON/OFF] condition of trunk lid opener switch. (For Roadster)
UN BUTTON ON	Indicates [ON/OFF] condition of unlock signal from key fob.
LK/UN BTN ON	Indicates [ON/OFF] condition of lock/unlock signal at the same time from key fob.
DOOR SW-RR	This is displayed even when it is not equipped.

Active Test

Test Item	Description
INT LAMP	This test is able to check interior lamp operation. The interior lamp is turned on when “ON” on CONSULT-III screen is touched.
IGN ILLUM	This is displayed even when it is not equipped.
TRUNK/BACK DOOR	This test is able to check back door (For Coupe) or trunk lid (For Roadster) opener actuator operation. The back door (For Coupe) or trunk (For Roadster) is unlocked when “ON” on CONSULT-III screen is touched.
HORN	This test is able to check panic alarm and horn reminder operations. The horn activate for 0.02 seconds after “ON” on CONSULT-III screen is touched.
HEAD LAMP(HI)	This test is able to check headlamps panic alarm operation. The headlamp illuminates for 0.5 seconds after “ON” on CONSULT-III screen is touched.
POWER WINDOW DOWN	This test is able to check power window open operation. The front power windows activate for 10 seconds after “ON” or CONSULT-III screen is touched.
FLASHER RIGHT	This test is able to check hazard reminder operation. The right hazard lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER LEFT	This test is able to check hazard reminder operation. The left hazard lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER RIGHT (CAN)	This test is able to check hazard reminder operation. The right hazard indicator lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER LEFT (CAN)	This test is able to check hazard reminder operation. The left hazard indicator lamp turns on when “ON” on CONSULT-III screen is touched.

CONSULT-III Application Items for IPDM E/R

NIS0001H

DATA MONITOR

Monitored Item	Description
HORN CHIRP	Indicates [ON/OFF] condition of horn function by IPDM E/R.

ACTIVE TEST

Test Item	Description
HORN	This test is able to check horn operation. Horn activates when “ON” on CONSULT-III screen is touched.

Work Flow

NIS0001I

1. Check the trouble symptom and customer's requests.
2. Understand outline of system. Refer to BL-61, "System Description" .
3. Confirm that power door lock system operates normally. Refer to BL-21, "POWER DOOR LOCK SYSTEM" .
4. Refer to trouble diagnosis chart by symptom, repair or replace any malfunctioning parts. Refer to BL-75, "Trouble Diagnosis Chart by Symptom" .
5. Inspection end.

Trouble Diagnosis Chart by Symptom

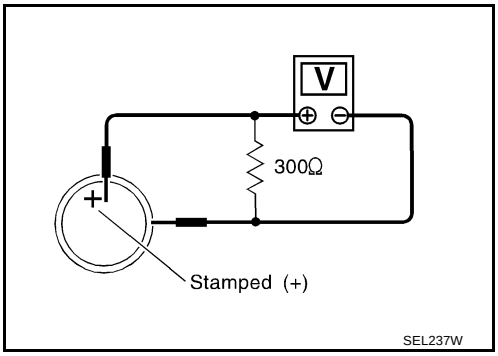
NIS0001J

NOTE:

- Always check the “Work Flow” before troubleshooting. Refer to BL-75, "Work Flow" .
- Always check key fob battery before replacing key fob.
- The panic alarm operation, back door or trunk lid (Roadster models) opener operation and keyless power window down operation of remote keyless entry system do not activate with the ignition key inserted in the ignition key cylinder.

Symptom	Diagnoses/service procedure	Reference page
All functions of remote keyless entry system do not operate.	1. Check key fob battery and function	BL-77
	2. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	3. Check remote keyless entry receiver	BL-85
	4. Replace BCM	BCS-17
The new ID of key fob cannot be entered without CONSULT-III.	1. Check key fob battery and function	BL-77
	2. Check key switch	BL-84
	3. Check door switch	BL-79
	4. Check ACC switch	BL-78
	5. Check door lock and unlock switch	BL-42
	6. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	7. Replace BCM	BCS-17
Door lock or unlock does not work.	1. Check door lock operation	BL-23
	2. Check key fob battery and function	BL-77
	3. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	4. Replace BCM	BCS-17
Back door does not open when back door opener button is continuously pressed.	1. Check back door opener operation	BL-23
	2. Check back door open operation mode	BL-73
	3. Check key fob battery and function	BL-77
	4. Check key switch	BL-84
	5. Replace BCM	BCS-17

Symptom	Diagnoses/service procedure	Reference page
Trunk does not open when trunk opener button is continuously pressed. (Roadster models)	1. Check trunk opener operation	BL-114
	2. Check trunk open operation mode	BL-73
	3. Check key fob battery and function	BL-77
	4. Check key switch	BL-84
	5. Replace BCM	BCS-17
Hazard reminder does not activate properly when pressing lock or unlock button of key fob.	1. Check hazard reminder mode * *: Hazard reminder can be activated or deactivated. First check the hazard reminder setting.	BL-73
	2. Check hazard warning lamp function with hazard switch.	LT-66
	3. Check door switch	BL-79
	4. Replace BCM	BCS-17
Horn reminder does not activate properly when pressing lock button of key fob.	1. Check horn reminder mode * *: Horn reminder can be activated or deactivated. First check the horn chirp setting.	BL-73
	2. Check horn chirp function with horn switch.	BL-88
	3. Check door switch	BL-79
	4. Check IPDM E/R operation	BL-85
	5. Replace BCM	BCS-17
Interior lamp and step lamp operation do not activate properly.	1. Check interior lamp and step lamp operation	BL-88
	2. Check door switch	BL-79
	3. Replace BCM	BCS-17
Panic alarm (horn and headlamp) does not activate when panic alarm button is continuously pressed.	1. Check panic alarm mode * *: Panic alarm can be activated or deactivated. First check the Panic alarm setting.	BL-73
	2. Check key fob battery and function	BL-77
	3. Check headlamp alarm	BL-88
	4. Check horn chirp function with horn switch.	BL-88
	5. Check IPDM E/R operation	BL-85
	6. Check key switch	BL-84
	7. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	8. Replace BCM	BCS-17
Auto door lock operation does not activate properly. (All other remote keyless entry system function is OK.)	1. Check auto door lock operation mode * *: Auto door lock operation can be activated or deactivated. First check the auto door lock operation setting.	BL-73
	2. Replace BCM	BCS-17
Keyless power window down (open) operation does not activate properly. (All other remote keyless entry system function is OK.)	1. Check power window down operation mode * *: Power window down operation can be activated or deactivated. First check the power window down setting.	BL-73
	2. Check power window function	GW-19
	3. Replace BCM	BCS-17



Check Key Fob Battery and Function

NIS0001K

1. CHECK KEY FOB BATTERY

1. Remove key fob battery. Refer to BL-91, "Key Fob Battery Replacement" .
2. Measure voltage between battery positive and negative terminals.

Voltage : 2.5 - 3.0V

NOTE:
Key fob does not function if battery is not set correctly.

OK or NG

OK >> GO TO 2
NG >> Replace battery.

2. CHECK KEY FOB FUNCTION

With CONSULT-III

Check key fob function in “DATA MONITOR” mode with CONSULT-III.
When pushing each button of key fob, the corresponding monitor item should be turned as follows.

Condition	Monitor item	
Pushing LOCK	KEYLESS LOCK	: ON
Pushing UNLOCK	KEYLESS UNLOCK	: ON
Keep pushing UNLOCK	RKE KEEP UNLK	: ON*
	*: “RKE KEEP UNLK” turns to ON 3 seconds after UNLOCK button keeps pushing.	
Pushing TRUNK	KEYLESS TRUNK	: ON
Pushing PANIC	KEYLESS PANIC	: ON
Pushing LOCK and UNLOCK at the same time	RKE LCK - UNLCK	: ON

OK or NG

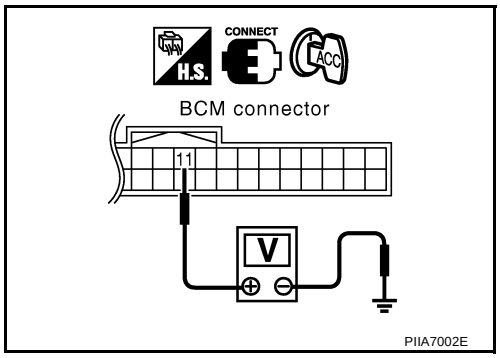
OK >> Key fob is OK.
NG >> Replace key fob.

Check ACC Switch

NIS0001L

1. CHECK ACC SWITCH

With CONSULT-III



Check ACC switch (“ACC ON SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
ACC ON SW	Ignition switch position is ACC or ON	: ON
	Ignition switch position is OFF	: OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Item	Con-nector	Terminals (Wire color)		Condition	Voltage [V] (Approx.)
		(+)	(–)		
Ignition switch	M90	11 (LG)	Ground	ACC or ON	Battery voltage
				OFF	0

OK or NG

OK >> ACC switch is OK.

NG >> Check the following.

- 10A fuse [No. 6, located in fuse block (J/B)]
- Harness for open or short between BCM and fuse

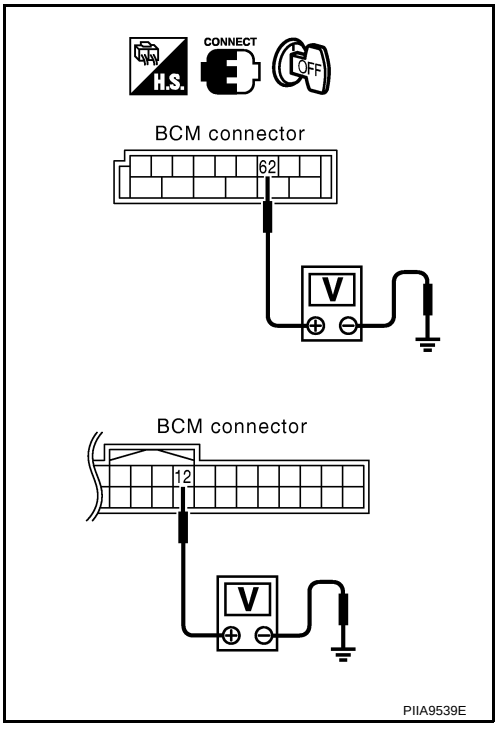
Check Door Switch

NIS0001M

DRIVER SIDE DOOR SWITCH AND PASSENGER SIDE DOOR SWITCH CHECK

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-DR” and “DOOR SW-AS”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

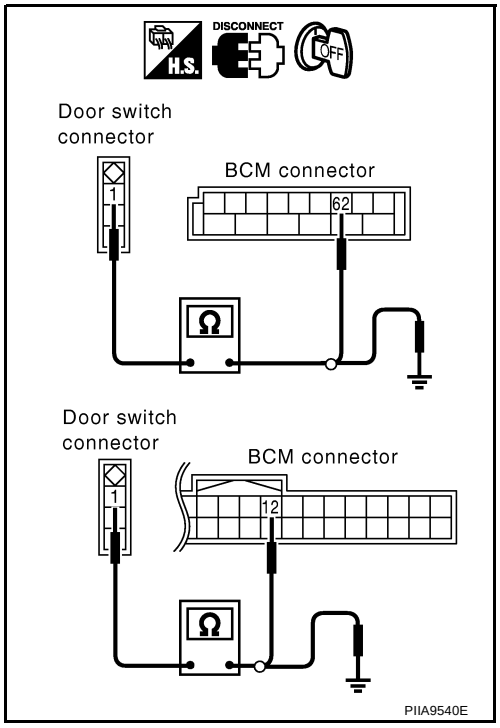
Check voltage between BCM connector and ground.

Item	Con-nector	Terminals (Wire color)		Condition	Voltage [V] (Approx.)
		(+)	(–)		
Driver side door switch	B83	62 (L)	Ground	Open	0
				Close	5
Passenger side door switch	M90	12 (P)		Open	0
				Close	5

OK or NG

OK >> Door switch is OK.

NG >> GO TO 2.



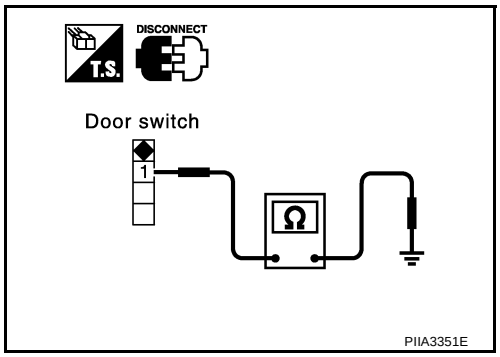
2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between door switch harness connector B17, B23 terminal 1 and BCM harness connector B83 terminal 62 (driver side) or M90 terminal 12 (passenger side).

Driver side door
1 (L) - 62 (L) : Continuity should exist.
Passenger side door
1 (P) - 12 (P) : Continuity should exist.

4. Check continuity between door switch harness connector B17, B23 terminal 1and ground.

Driver side door switch
1 (L) - Ground : Continuity should not exist.
Passenger side door switch
1(P) - Ground : Continuity should not exist.

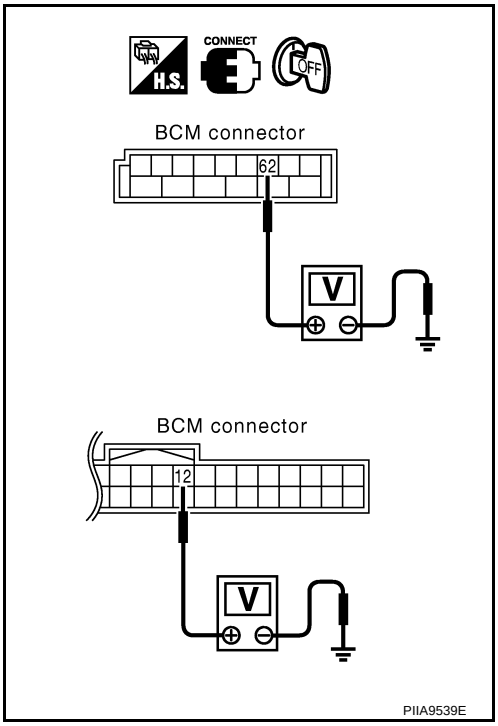


OK or NG
OK >> GO TO 3.
NG >> Repair or replace door switch harness.

3. CHECK DOOR SWITCH

Check continuity between door switch B17 (driver side) or B23 (passenger side) terminal 1 and ground part of door switch.

Terminal		Condition of door switch	Continuity
1	Ground part of door switch	Pushed (close)	No
		Released (open)	Yes



OK or NG
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK DOOR SWITCH INPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM harness connectors B83 (driver side), M90 (passenger side) terminals 62, 12 and ground.

62 (L) – Ground : Approx. 5V
12 (P) – Ground : Approx. 5V

OK or NG

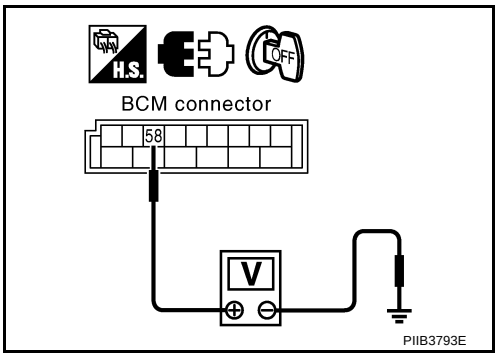
OK >> Check harness connection.
NG >> Replace BCM.

CHECK BACK DOOR SWITCH /FOR COUPE

1. CHECK BACK DOOR SWITCH INPUT SIGNAL

With CONSULT-III

Check back door switch (“BACK DOOR SW”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

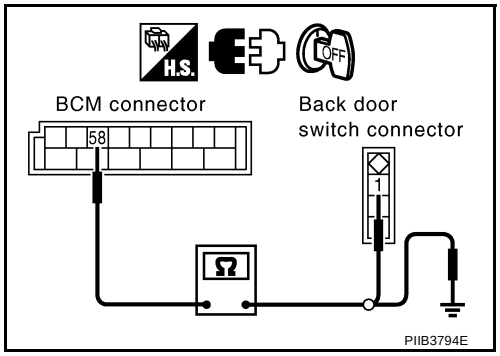
1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition of back door switch	Voltage [V] (Approx.)
	(+)	(–)		
B83	58 (R/W)	Ground	Open	0
			Close	Battery voltage*

* : When interior lamp battery saver control is in OFF. → Approx. 5V

OK or NG

OK >> Back door switch circuit is OK.
NG >> GO TO 2.



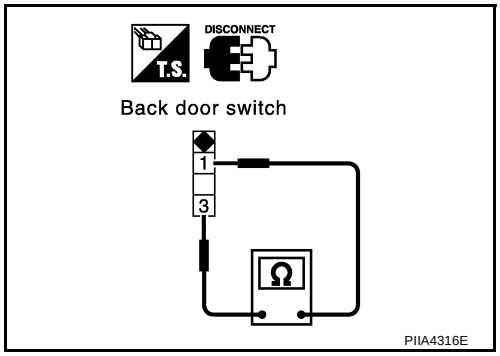
2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect back door switch and BCM connector.
3. Check continuity between BCM harness connector B83 terminal 58 and back door switch harness connector T12 terminal 1.

58 (R/W) - 1 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 58 and ground.

58 (R/W) - Ground : Continuity should not exist.



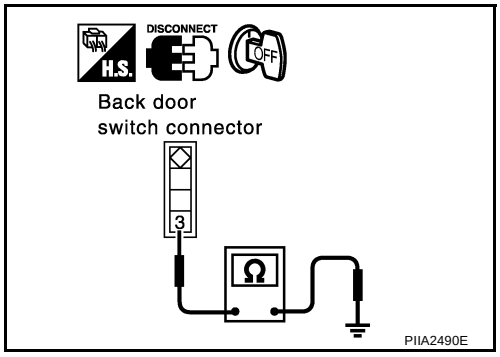
OK or NG

OK >> GO TO 3.
NG >> Repair or replace back door switch harness.

3. CHECK BACK DOOR SWITCH

Check continuity between back door switch terminals 1 and 3.

Connector	Terminal		Condition of back door switch	Continuity
T12	1	3	Open position	Yes
			Closed position	No



OK or NG

OK >> GO TO 4.
NG >> Replace back door switch.

4. CHECK BACK DOOR SWITCH GROUND CIRCUIT

Check continuity between door switch harness connector T12 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check harness connection.
NG >> Repair or replace back door switch harness.

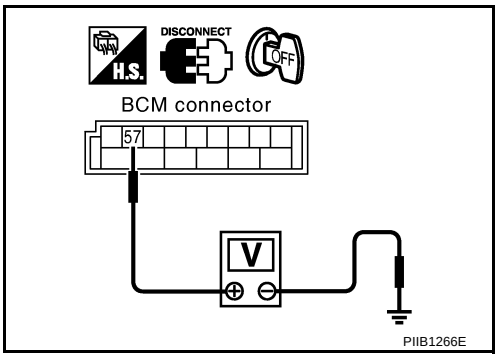
Check Trunk Lid Lock Assembly (Trunk Room Lamp Switch) / For Roadster

NIS0001N

1. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) INPUT SIGNAL

With CONSULT-III

Check trunk lid opener switch (“TRUNK OPN MNTR”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
TRNK OPN MNTR	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

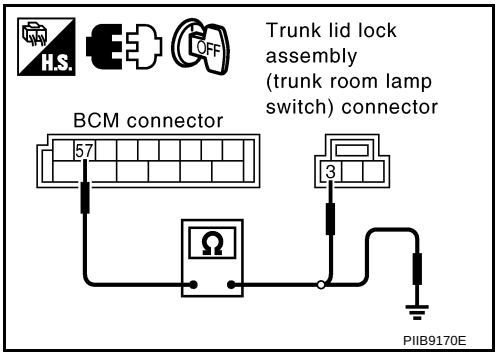
Check voltage between BCM connector and ground.

Con-nector	Terminals (Wire color)		Condition of trunk lid lock assembly (trunk room lamp switch)	Voltage [V] (Approx.)
	(+)	(–)		
B83	57 (R/W)	Ground	Open	0
			Close	Battery voltage*

*: When interior lamp battery saver control is in OFF. → Approx. 5V.

OK or NG

OK >> Trunk room lamp switch is OK.
NG >> GO TO 2.



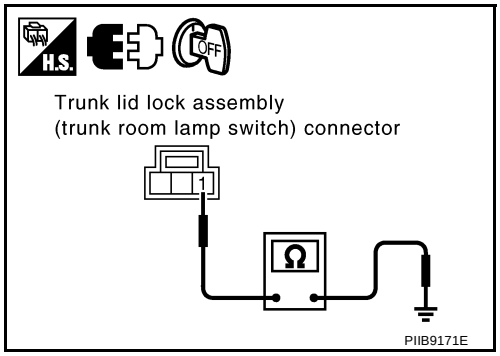
2. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) and BCM connector.
3. Check continuity between BCM harness connector B83 terminal 57 and trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 3.

   57 (R/W) - 3 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 57 and ground.

   57 (R/W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.

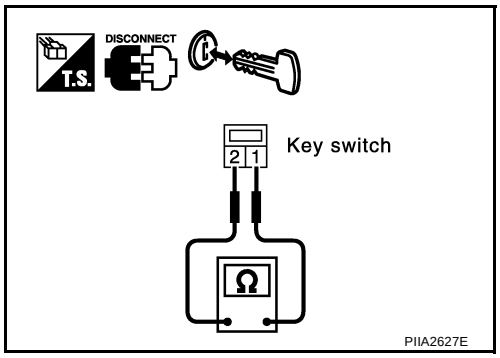
3. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) connector.
3. Check continuity between trunk lid lock assembly (trunk room lamp switch) connector T47 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check trunk lid lock assembly (trunk room lamp switch).
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.



Check Key Switch

NIS0001O

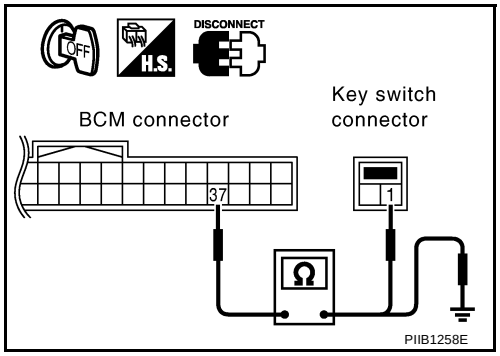
1. CHECK KEY SWITCH

Check continuity key switch terminals 1 and 2.

Connector	Terminals		Condition of key switch	Continuity
M25	1	2	Inserted	Yes
			Removed	No

OK or NG

OK >> GO TO 3.
NG >> Replace key switch.



2. CHECK KEY SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 37 and key switch harness connector M25 terminal 1.

37 (B/R) - 1 (B/R) : Continuity should exist.

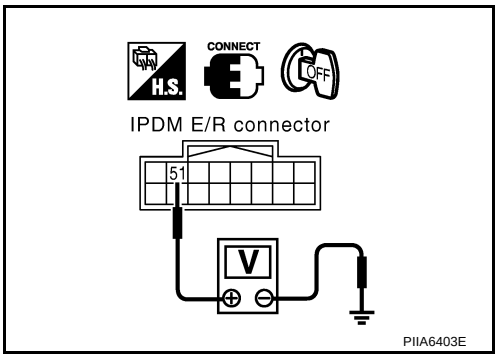
3. Check continuity between BCM harness connector M90 terminal 37 and ground.

37 (B/R) - Ground : Continuity should not exist.

OK or NG

OK >> Check the following.
- 10A fuse [No.21, located in the fuse block (J/B)]
- Harness for open or short between key switch and fuse

NG >> Repair or replace harness.



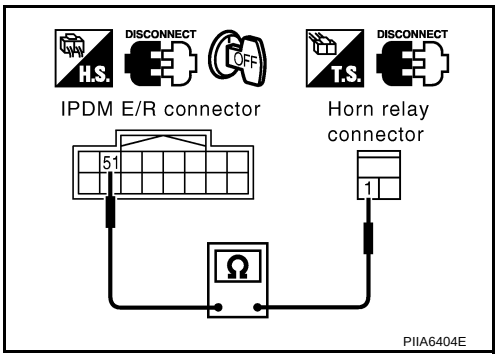
Check IPDM E/R Operation

NIS0001P

1. CHECK IPDM E/R INPUT SIGNAL

Check voltage between IPDM E/R connector E9 terminal 51 and ground.

51 (G/B) – Ground : Battery voltage



OK or NG

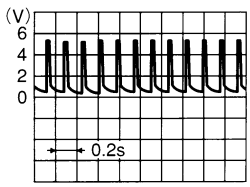
OK >> Replace IPDM E/R.
NG >> GO TO 2.

2. CHECK IPDM E/R CIRCUIT

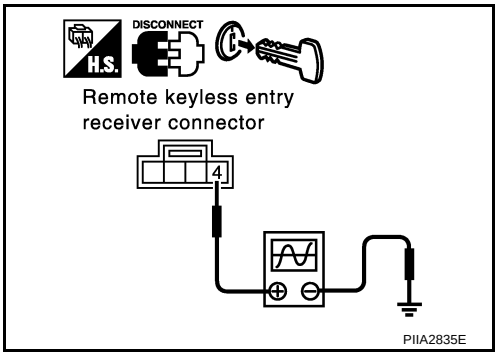
1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay connector.
3. Check continuity between IPDM E/R harness connector E9 terminal 51 and horn relay harness connector E21 terminal 1.

1 (G/B) - 51(G/B) : Continuity should exist.

OK or NG



OK >> Check harness connection.
NG >> Repair or replace harness.



Check Remote Keyless Entry Receiver

NIS0001Q

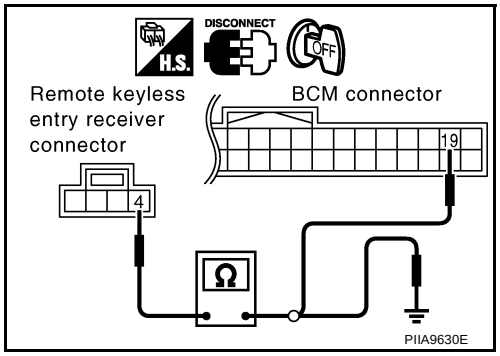
1. CHECK MULTI-REMOTE CONTROL RECEIVER INPUT VOLTAGE

1. Remove key from ignition key cylinder.
2. Check signal between remote keyless entry receiver connector and ground with oscilloscope.

Con-nector	Terminal (Wire color) (+)	Terminal (Wire color) (–)	Condition	Signal (Reference value)
M78	4 (Y)	Ground	Key is inserted in IGN key cylinder	0
			All door closed	

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



2. CHECK REMOTE KEYLESS ENTRY RECEIVER HARNESS

1. Turn ignition switch OFF.
2. Disconnect remote keyless entry receiver and BCM connector.
3. Check continuity between remote keyless entry receiver connector M78 terminal 4 and BCM connector M90 terminal 19.

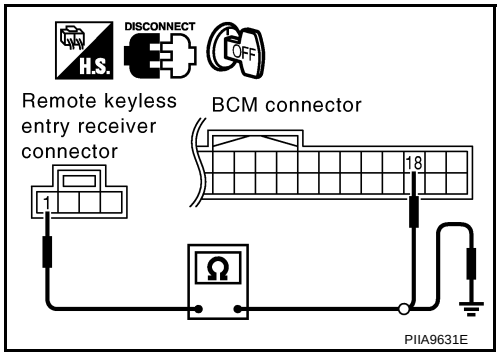
4 (Y) - 19 (Y) : Continuity should exist.

4. Check continuity between remote keyless entry receiver connector M78 terminal 4 and ground.

4 (Y) - Ground : Continuity should not exist.

OK or NG

OK >> Check harness connection.
NG >> Repair or replace the harness.



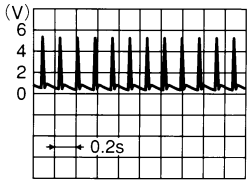
3. CHECK REMOTE KEYLESS ENTRY RECEIVER

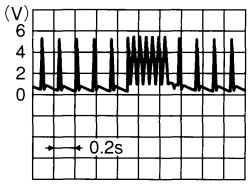
1. Turn ignition switch OFF.
2. Check continuity between remote keyless entry receiver connector M78 terminal 1 and BCM connector M90 terminal 18.

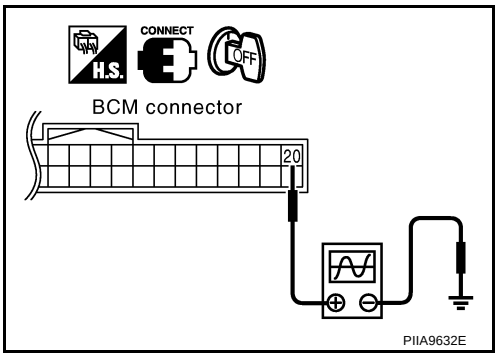
1 (B) - 18 (B) : Continuity should exist.

3. Check continuity between remote keyless entry receiver connector M78 terminal 1 and ground.

1 (B) - Ground : Continuity should not exist.







OK or NG

OK >> GO TO 4.
NG >> Repair or replace the harness.

4. CHECK REMOTE KEYLESS ENTRY RECEIVER OUTPUT SIGNAL

1. Connect remote keyless entry receiver connector.
2. Check signal BCM connector and ground with oscilloscope.

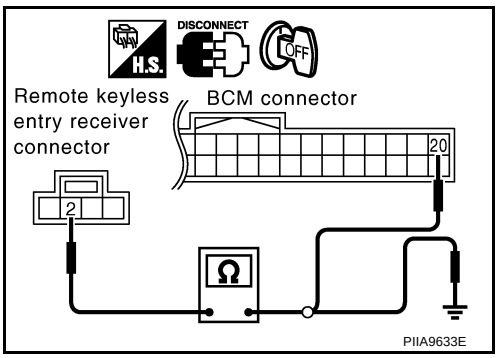
Connector	Terminal (Wire color) (+)	Terminal (Wire color) (–)	Condition	Signal (Reference value)
M90	20 (L)	Ground	Key is inserted in IGN key cylinder	0
			Waiting (All door closed)	 OCC3879D
			When signal is received (All door closed)	 OCC3880D

OK or NG

OK >> Replace BCM.
NG >> GO TO 5.

5. CHECK REMOTE KEYLESS ENTRY RECEIVER HARNESS

1. Disconnect remote keyless receiver and BCM connector.
2. Check continuity between remote keyless entry receiver connector M78 terminal 2 and BCM connector M90 terminal 20.



2 (L) - 20 (L) : Continuity should exist.

3. Check continuity between remote keyless entry receiver connector M78 terminal 2 and ground.

2 (L) - Ground : Continuity should not exist.

OK or NG

OK >> Replace remote keyless entry receiver.
NG >> Repair or replace the harness.

Check Horn Function

NIS0001R

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HORN OPERATION

Check if horn sounds with horn switch.

Does horn operate?

Yes >> Horn circuit is OK.
No >> Check horn circuit. Refer to WW-53, "Wiring Diagram — HORN —" .

Check Headlamp Alarm

NIS0001S

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HEADLAMP OPERATION

Does headlamp come on when turning lighting switch “ON”.

YES or NO

Yes >> Headlamp alarm circuit is OK.
No >> Check headlamp system. Refer to LT-5, "HEADLAMP (FOR USA)" , LT-32, "HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -" ,.

Check Interior Lamp Operation

NIS0001T

1. CHECK ILLUMINATION OPERATION

When interior lamp switch is in “DOOR” position, open the door (driver side or passenger side).

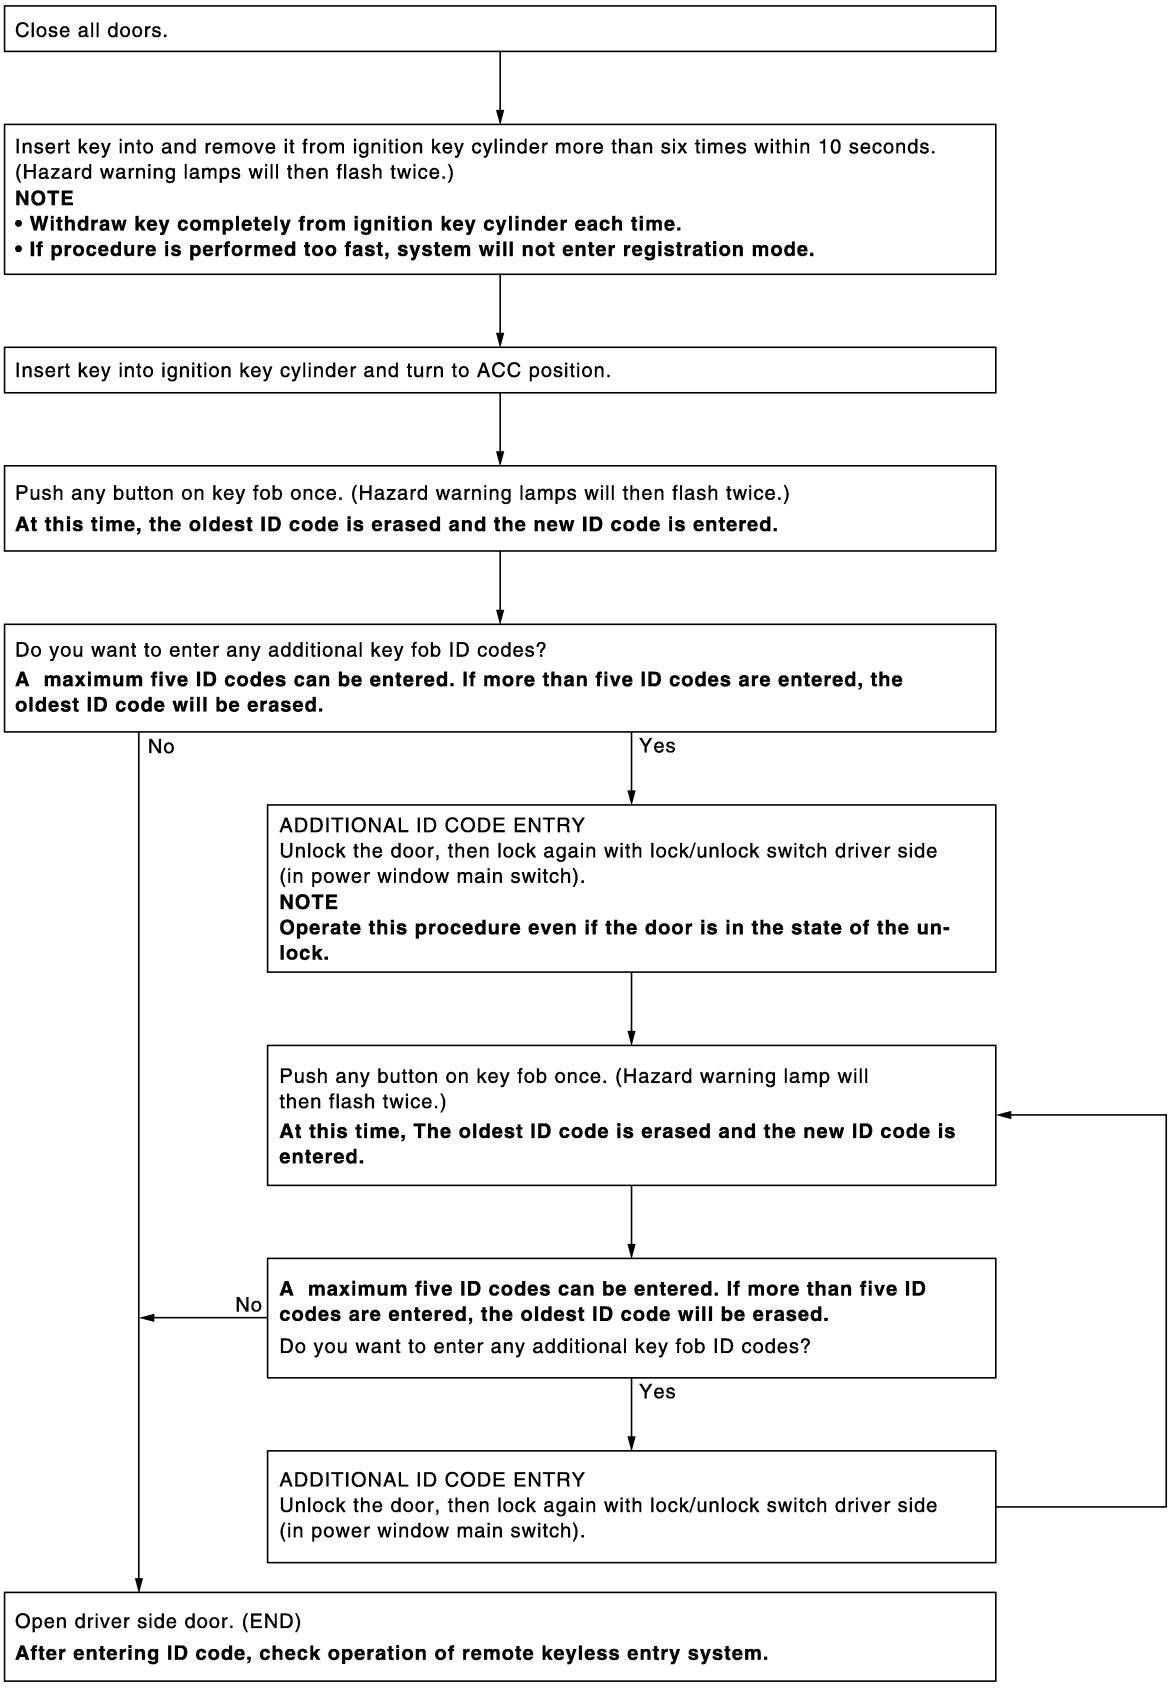
Interior lamp should illuminate.

OK or NG

OK >> Interior lamp circuit is OK.
NG >> Check interior lamp circuit. Refer to LT-128, "INTERIOR ROOM LAMP" .

ID Code Entry Procedure

NIS0001U



KEY FOB ID SETUP WITH CONSULT-III

NOTE:
If a key fob is lost, the ID code of the lost key fob must be erased to prevent unauthorized use. When the ID code of a lost key fob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.

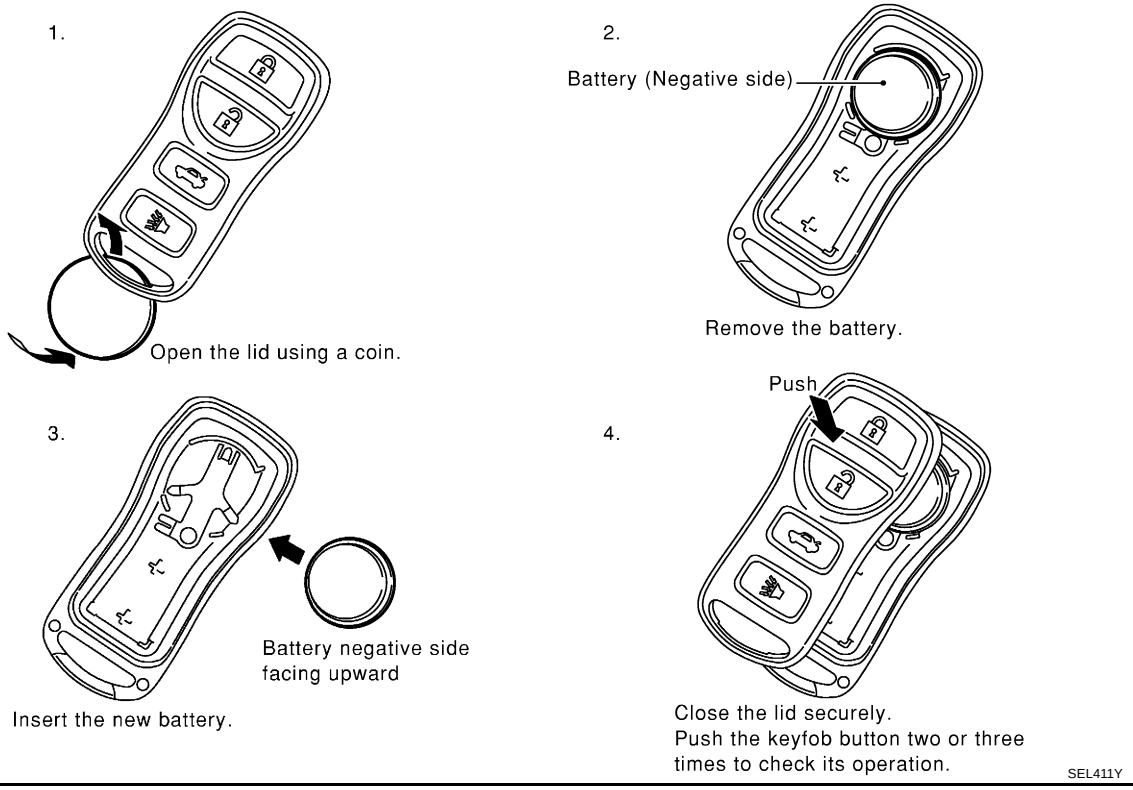
1. Touch “WORK SUPPORT”.

2. The items shown on the figure can be set up.
   - “REMO CONT ID REGIST”
     Use this mode to register a key fob ID code.
     NOTE:
     Register the ID code when key fob or BCM is replaced, or when additional key fob is required.
   - “REMO CONT ID ERASUR”
     Use this mode to erase a key fob ID code.
   - “REMO CONT ID CONFIR”
     Use this mode to confirm if a key fob ID code is registered or not.

KEY FOB ID SETUP WITHOUT CONSULT-III

PIIA2839E

NOTE:



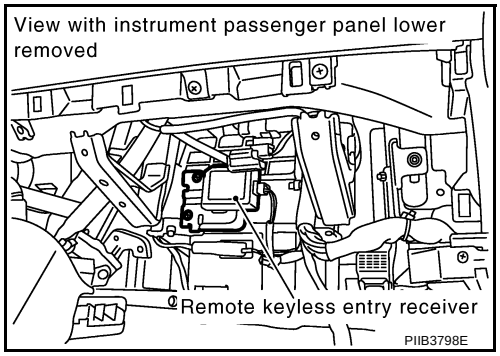
- If a key fob is lost, the ID code of the lost key fob must be erased to prevent unauthorized use. A specific ID code can be erased with CONSULT-III. However, when the ID code of a lost key fob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.
  To erase all ID codes in memory, register one ID code (key fob) five times. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.
- When registering an additional key fob, the existing ID codes in memory may or may not be erased. If five ID codes are stored in memory, when an additional code is registered, only the oldest code is erased. If less than five ID codes are stored in memory, when an additional ID code is registered, the new ID code is added and no ID codes are erased.
- If you need to activate more than two additional new key fobs, repeat the procedure “Additional ID code entry” for each new key fob.
- Entry of maximum five ID codes is allowed. When more than five ID codes are entered, the oldest ID code will be erased.
- Even if same ID code that is already in the memory is input, the same ID code can be entered. The code is counted as an additional code.

Key Fob Battery Replacement

NIS0001V

NOTE:

- Be careful not to touch the circuit board or battery terminal.
- The keyfob is water-resistant. However, if it does get wet, immediately wipe it dry.



Removal and Installation of Remote Keyless Entry Receiver

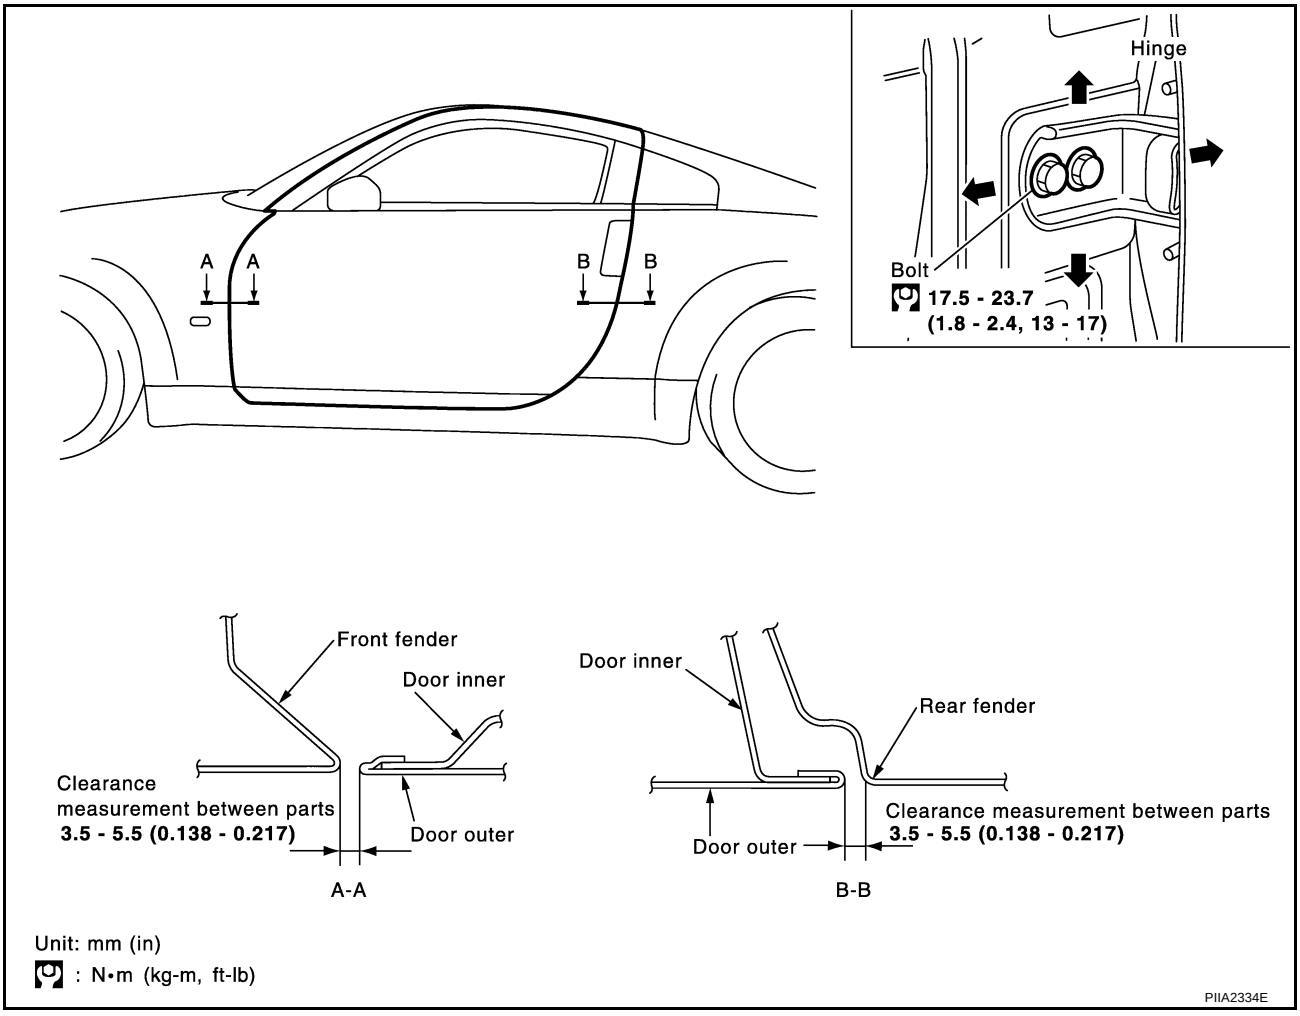
NIS0001W

REMOVAL

1. Remove the instrument passenger panel lower. Refer to IP-13, "(L) Instrument Passenger Panel Lower" .
2. Remove the screw and remote keyless entry receiver connector.
3. Remove the remote keyless entry receiver.

INSTALLATION

Install in the reverse order of removal.



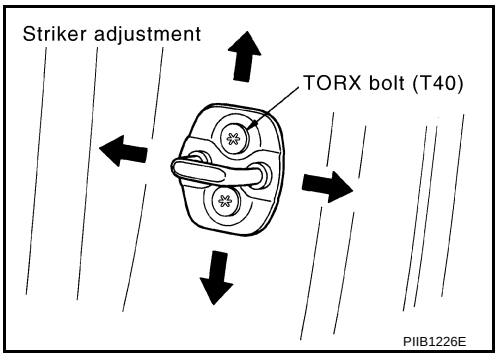
DOOR

PFP:80100

Fitting Adjustment

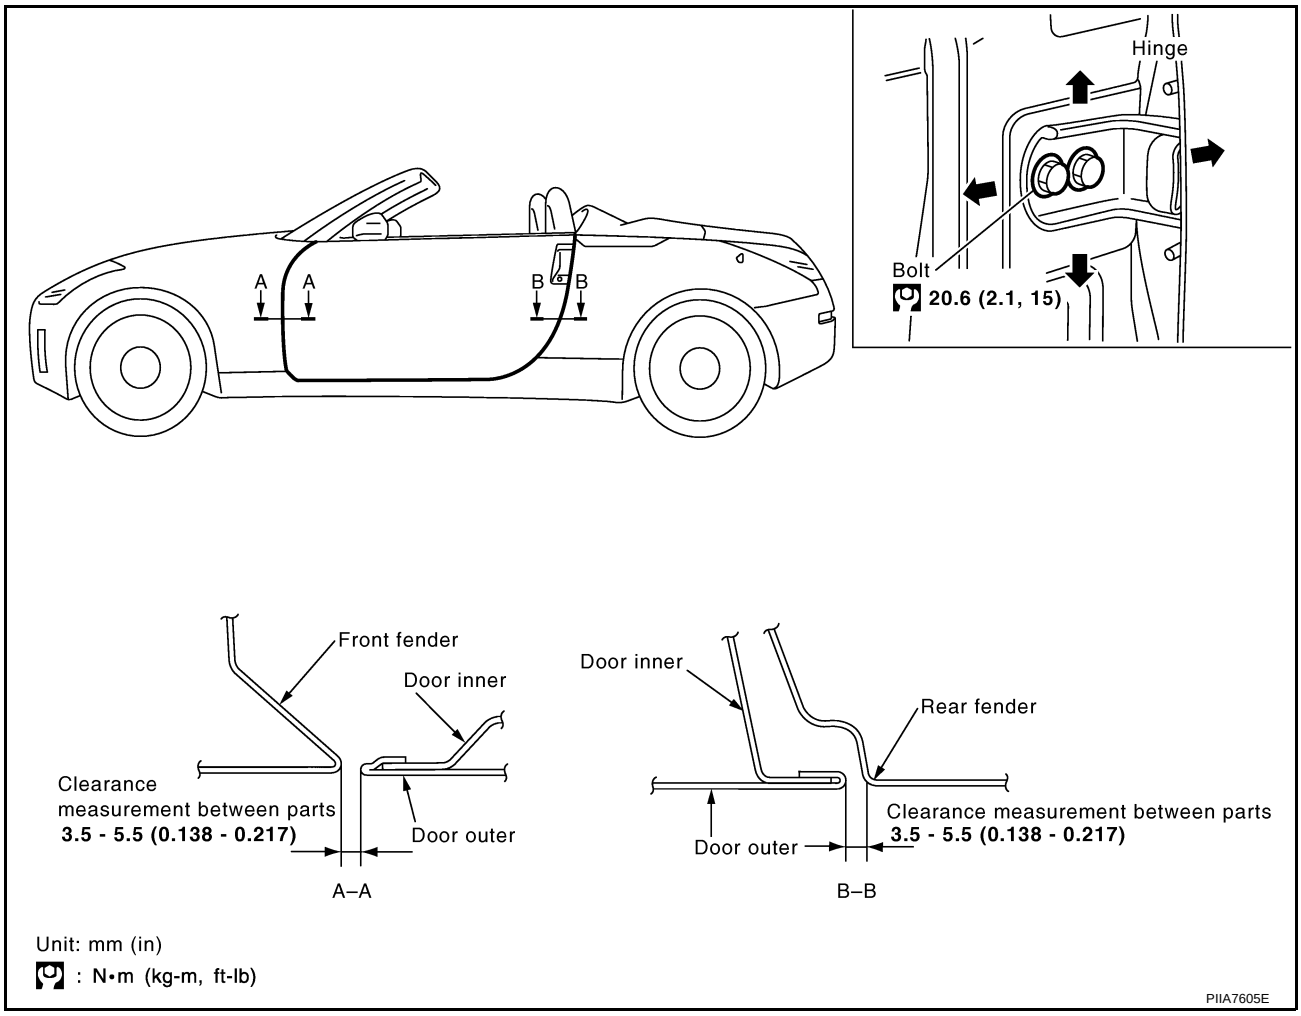
NIS0001X

COUPE



DOOR

Longitudinal clearance and surface height adjustment at front end

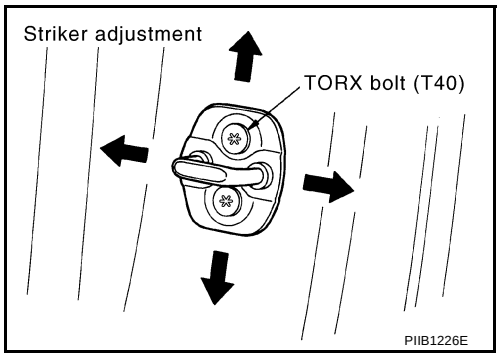


1. Remove the fender protector. Refer to EI-21, "FENDER PROTECTOR" .
2. Loosen the hinge mounting bolts. Raise the door at rear end to adjust.

STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock insertion direction.

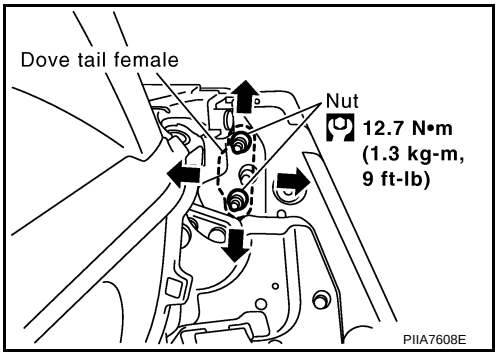
ROADSTER



DOOR

Longitudinal clearance and surface height adjustment at front end

1. Remove the fender protector. Refer to EI-21, "FENDER PROTECTOR" .
2. Loosen the hinge mounting bolts. Raise the door at rear end to adjust.



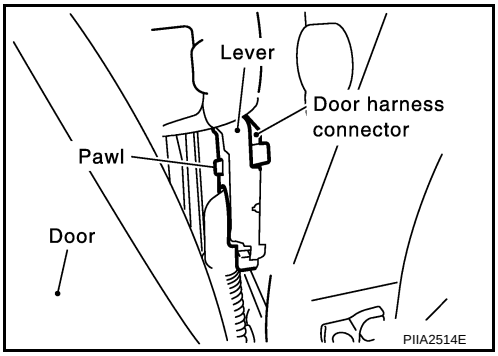
STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock insertion direction.

DOVE TAIL FEMALE ADJUSTMENT (ROADSTER)

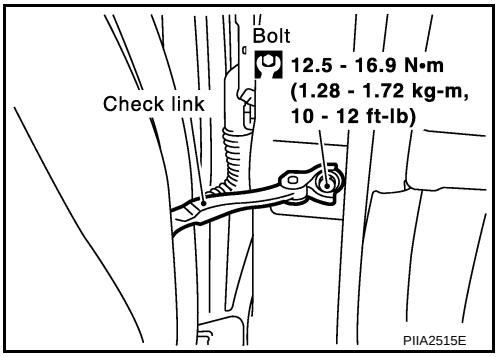
Adjust the dove tail female so that it becomes parallel with the lock insertion direction.

Removal and Installation



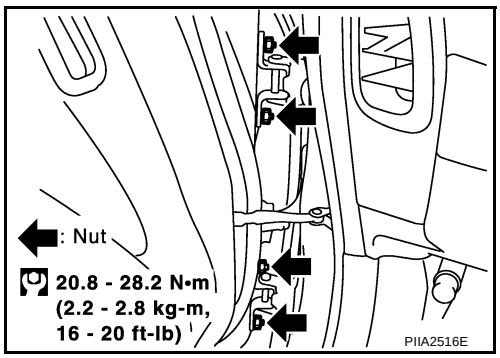
NIS0001Y

CAUTION:



- **When removing and installing the door assembly, support the door with a jack and cloth to protect the door and body.**
- **When removing and installing door assembly, be sure to perform the fitting adjustment Refer to BL-93, "Fitting Adjustment" .**
- **Operate with two workers, because of its heavy weight.**
- **Check the hinge rotating part for poor lubrication. If necessary, apply “body grease”.**
- **After installing, check operation.**
- **Apply sealant and coat with the same body color paint to door hinge installation part and mounting nuts.**

REMOVAL

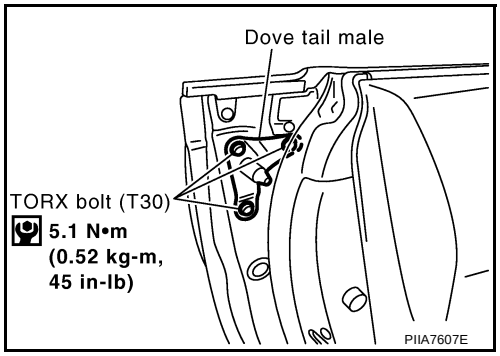


1. Pull the lever and remove the door harness connector while removing tabs of door harness connector.

2. Remove the mounting bolts of the check link on the vehicle.

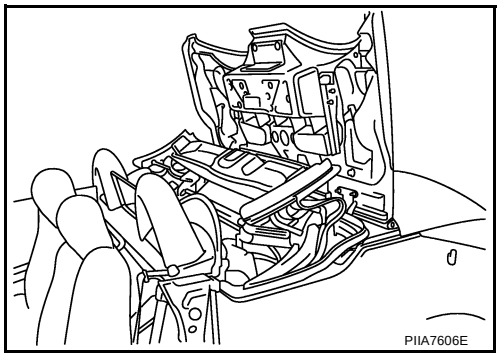
3. Remove the door-side hinge mounting nuts, and remove the door assembly.

INSTALLATION



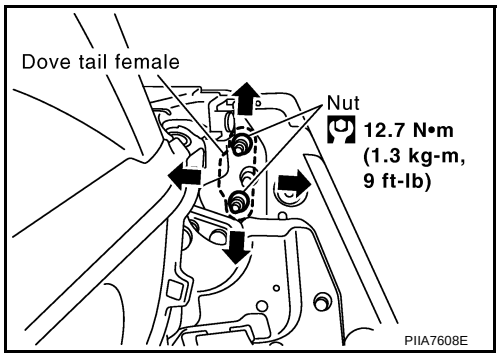
Install in the reverse order of removal.

Removal and Installation of Dove Tail Male & Female (Roadster)



NIS0001Z

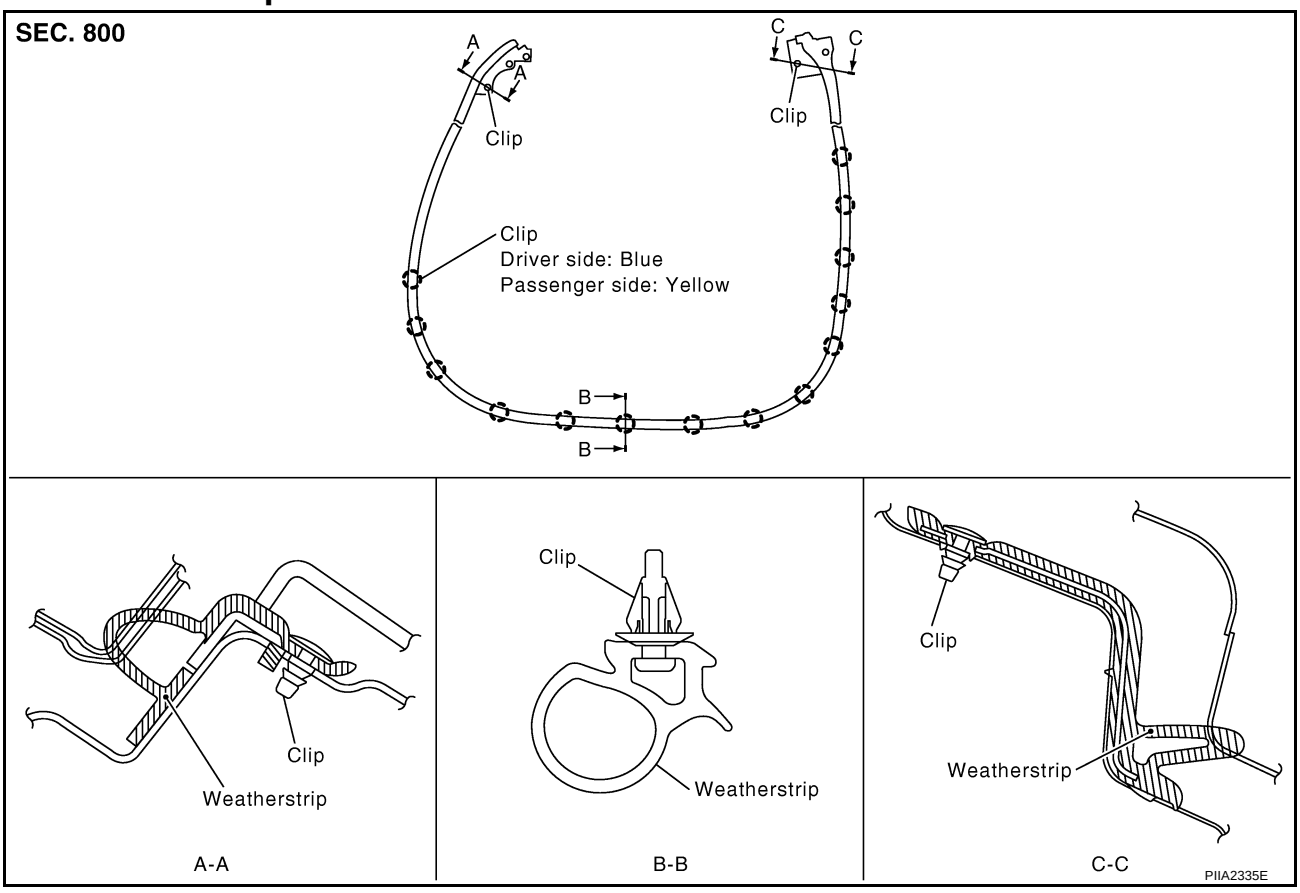
REMOVAL



1. Remove the TORX bolts (T30) of dove tail male.

2. Soft top assembly locate like a figure.
3. Remove the body side welt. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
4. Remove the body side weatherstrip. Refer to EI-32, "Removal and Installation (for Roadster Models)" .
5. Remove the rear side finisher and kicking plate inner. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
6. Remove the shoulder anchor. Refer to SB-6, "Removal and Installation of Seat Belt (Roadster)" .
7. Remove the rear side trim. Refer to EI-37, "Removal and Installation (for Roadster Models)" .

8. Remove the dove tail female mounting nuts. Remove the dove tail female.



INSTALLATION

Install in the reverse order of removal.

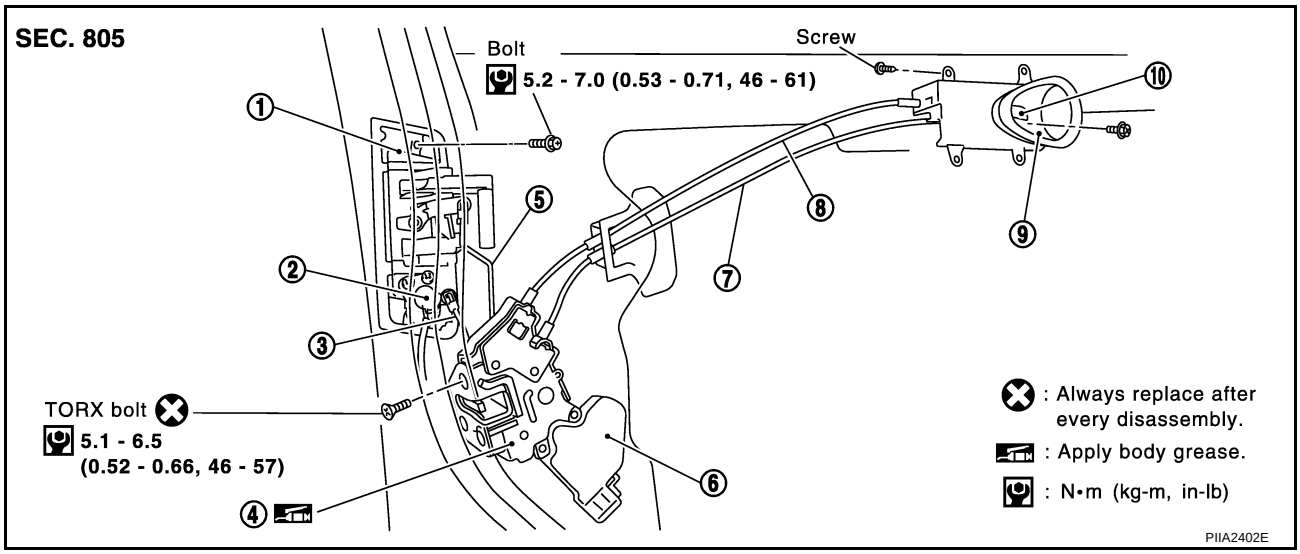
Door Weatherstrip

NIS00020

REMOVAL

Remove the weatherstrip clips and remove weatherstrip.

INSTALLATION



Install in the reverse order of removal.

DOOR LOCK

PFP:80502

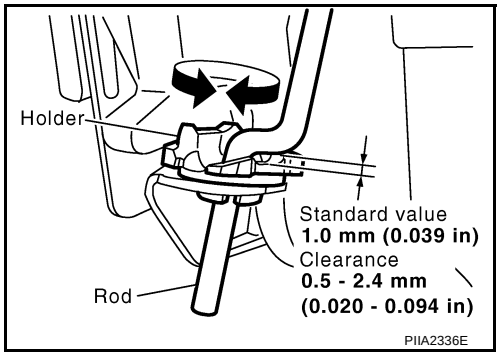
Component Structure

NIS00021

1. Outside handle
2. Key cylinder (driver side only)
3. Key lock rod (driver side only)
4. Door lock assembly
5. Outside handle rod
6. Door lock actuator
7. Lock knob cable
8. Inside handle cable
9. Inside handle
10. Lock knob

Inspection and Adjustment

NIS00022



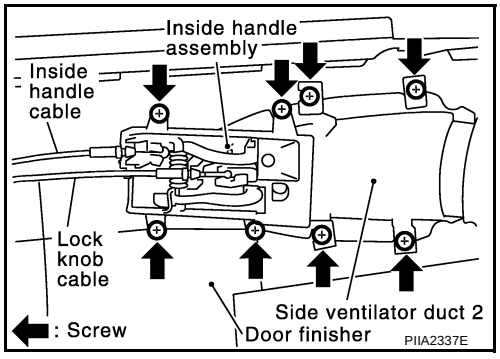
1. Remove the door finisher. Refer to EI-33, "Removal and Installation" .
2. Remove the door window and door module assembly. Refer to GW-51, "Removal and Installation" .

EXTERIOR HANDLE ROD ADJUSTMENT

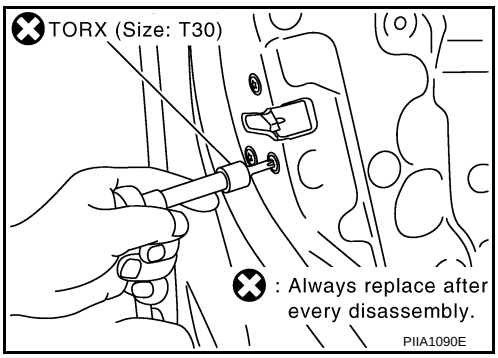
Rotate the bushing to adjust so that the clearance between the bushing and rod becomes as shown in the figure.

CAUTION:

Be careful not to make the clearance 0 mm (0 in) or the rod will be pressed continuously.

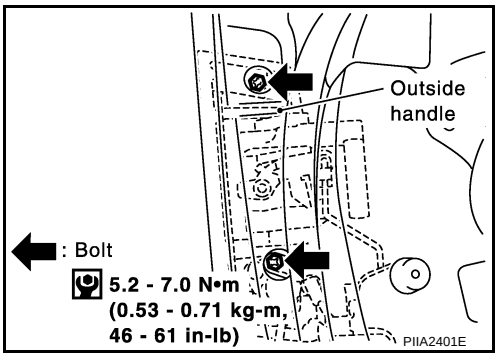


Removal and Installation



NIS00023

REMOVAL



1. Remove the door finisher. Refer to EI-33, "Removal and Installation" .
2. Remove the door window and door module assembly. Refer to GW-51, "Removal and Installation" .
3. Disconnect the inside handle cable and locking knob cable from the back side of the door finisher.

4. Reach to separate the key cylinder (driver side only) rod and outside handle rod connection (on the handle).
5. Disconnect the door lock actuator connector.
6. Remove the mounting screws (TORX T30), remove the door lock assembly.

7. Remove the outside handle mounting bolts, remove the outside handle.

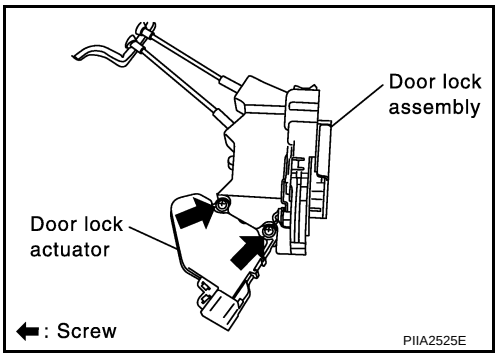
INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **To install each rod, be sure to rotate the rod holder until a click is felt.**
- **After installing, check operation.**
- **After installing, perform fitting adjustment. Refer to BL-93, "Fitting Adjustment" .**

Disassembly and Assembly



NIS00024

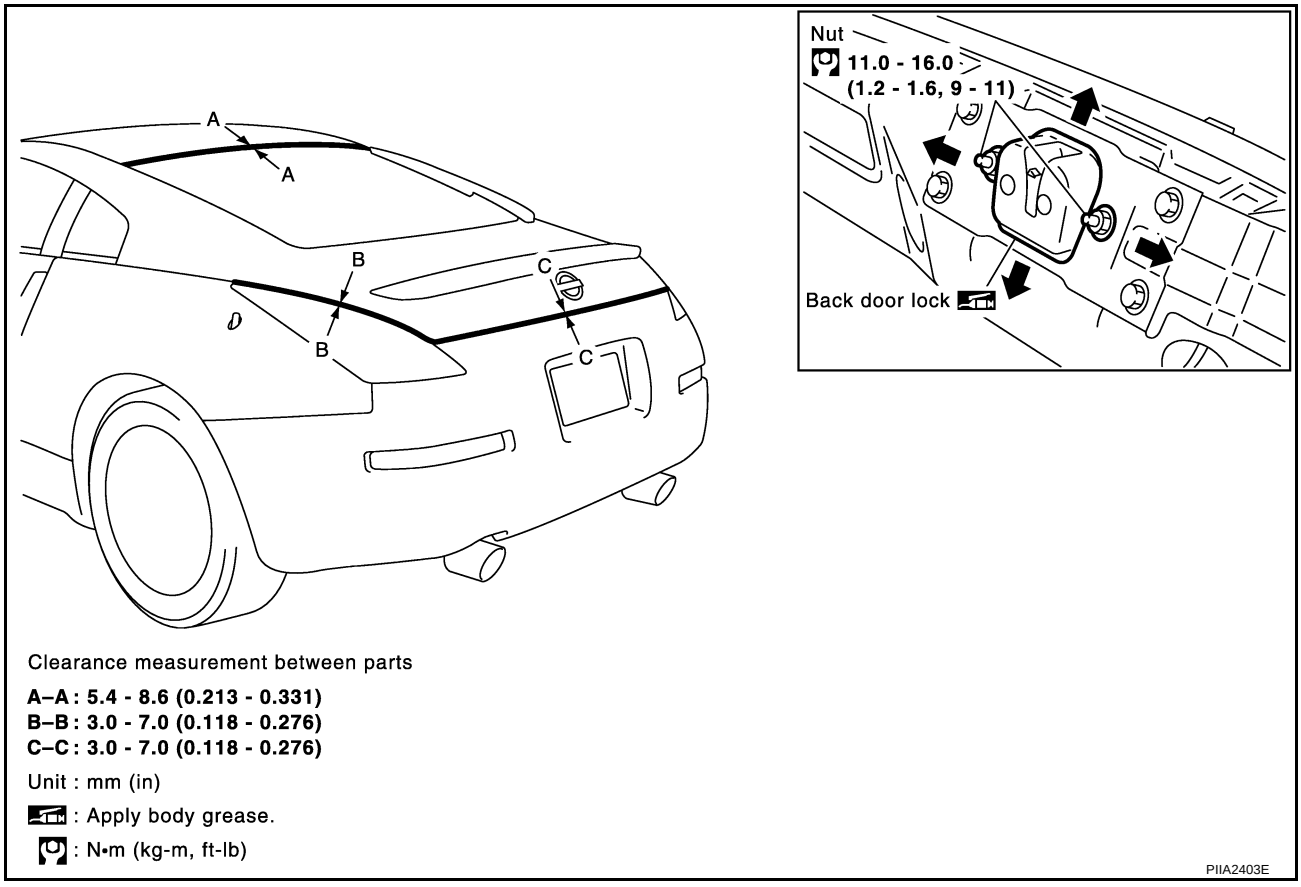
DISASSEMBLY

CAUTION:

Be sure to remove or install the actuator with the door lock assembly removed.

1. Remove the mounting screws, and remove the actuator from the door lock assembly.
2. Pull the actuator straight downward to separate it from the door lock assembly.

ASSEMBLY



1. Align the actuator pivot with the cutout on the knob lever of the door lock assembly, then assemble the actuator.
2. Move the knob lever and the actuator pivot toward the lock-on direction, and check that it engages securely.

BACK DOOR

PFP:90100

Fitting Adjustment

NIS00025

Clearance measurement between parts

A–A : 5.4 - 8.6 (0.213 - 0.331)
B–B : 3.0 - 7.0 (0.118 - 0.276)
C–C : 3.0 - 7.0 (0.118 - 0.276)

Unit : mm (in)

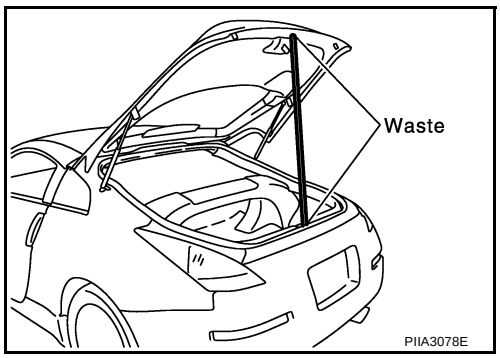
: Apply body grease.

: N•m (kg-m, ft-lb)

PIIA2403E

VERTICAL/LATERAL CLEARANCE ADJUSTMENT

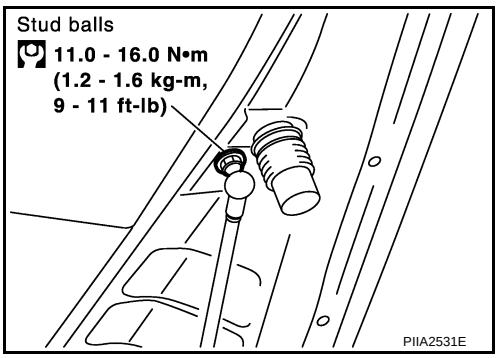
1. Remove back door weatherstrip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove the luggage finisher lower (center). Refer to EI-40, "LUGGAGE FLOOR TRIM" .
3. Loosen the back door lock mounting bolts. Raise the back door lock to the top position, and temporarily tighten the back door lock mounting bolt at the position.
4. Close the back door lightly and adjust the surface height, then open the back door to finally tighten the back door lock mounting bolts to the specified torque.



Back Door Assembly

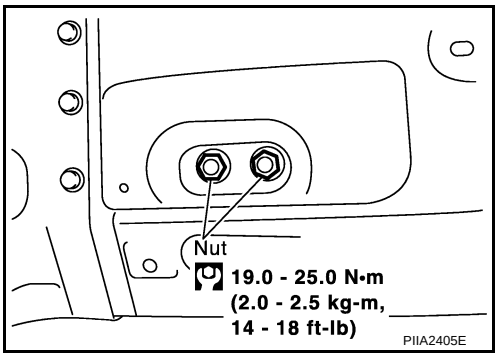
NIS00026

REMOVAL



1. Remove the headlining. Refer to EI-44, "Removal and Installation (for Coupe Models)" .
2. Disconnect each harness connector, which is out to body from back door.
3. Support the back door striker with a proper material to prevent it from falling.

   WARNING:
   Body injury may occur if no supporting rod is holding the back door open when removing the damper stay.

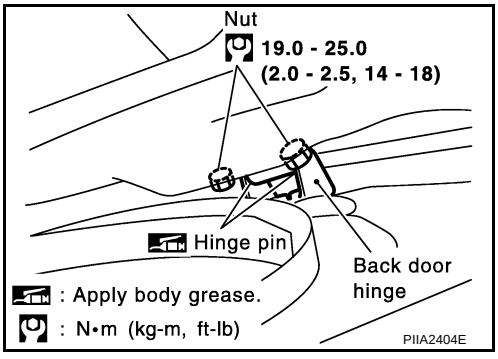


PIIA3078E

4. Remove stud balls on back door.

5. Remove hinge mount nuts of the body and remove back door assembly.

INSTALLATION



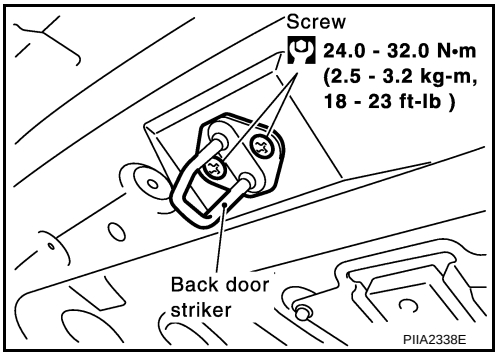
Install in the reverse order of removal.

CAUTION:

- **After installing, check operation.**
- **After installing, perform fitting adjustment.**

INSPECTION

1. Check hinges for the following items.
   - Malfunction noise or door closing and opening effort
   - Component wear or damage
2. Apply body grease to the rotating part of the hinge.



Removal and Installation of Back Door Striker

NIS00027

REMOVAL

1. Remove back door finisher lower. Refer to EI-48, "BACK DOOR FINISHER" .
2. Remove mounting screws, and remove striker from the vehicle.

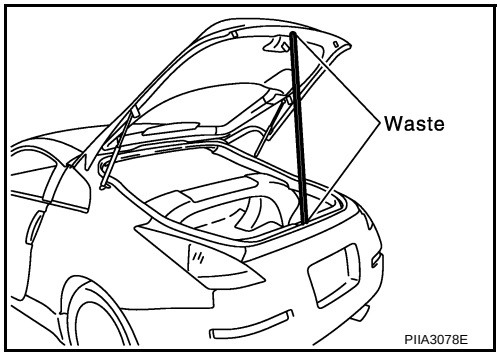
INSTALLATION

Install in the reverse order of removal.

CAUTION:

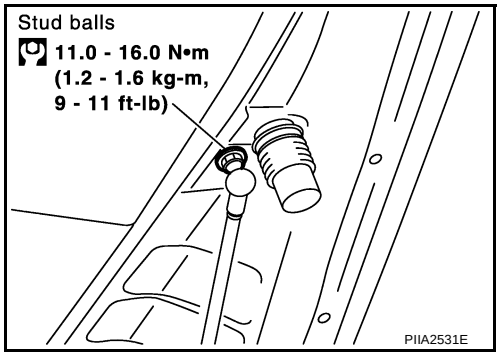
After installing, perform fitting adjustment.

Removal and Installation of Back Door Stay



NIS00028

REMOVAL



1. Support the back door striker with a proper material to prevent it from falling.

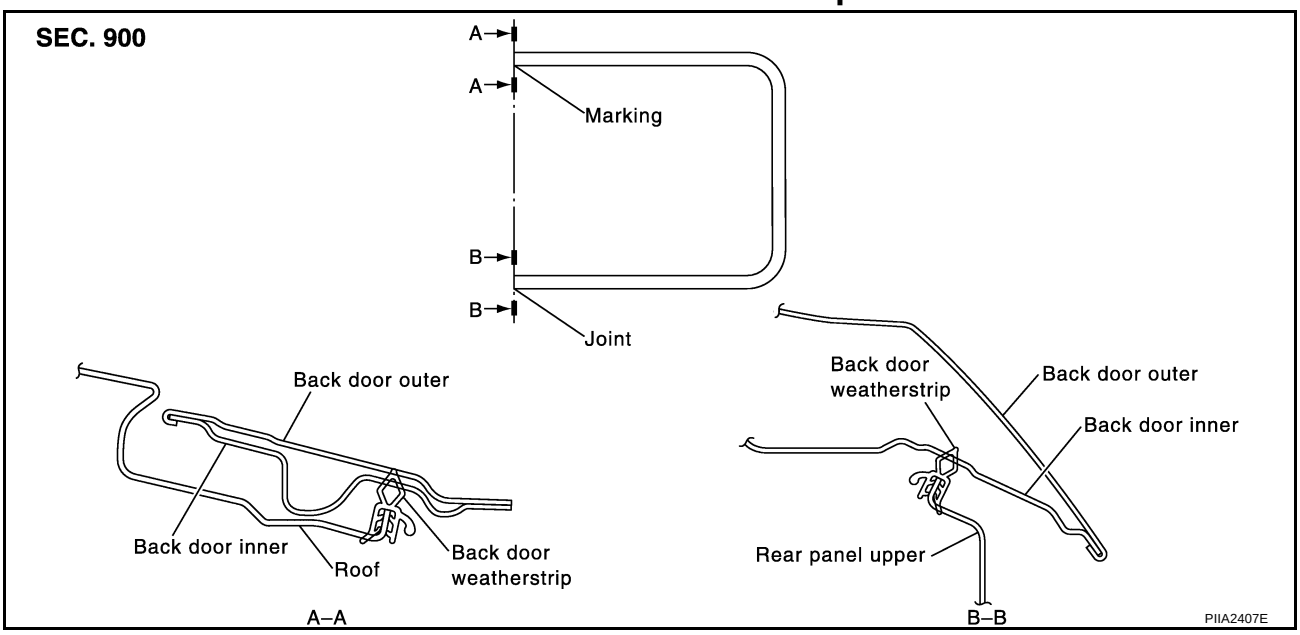
   WARNING:

   Body injury may occur if no supporting rod is holding the back door open when removing the damper stay.

2. Remove stud balls on back door.

3. Remove back door stay assembly (gas stay) bracket adjusting nuts and remove back door stay assembly.

INSTALLATION



Install in the reverse order of removal.

CAUTION:

After installing, check operation.

Removal and Installation of Back Door Weatherstrip

NIS00029

REMOVAL

Pull up and remove engagement with body from weatherstrip joint.

CAUTION:

After removal, do not pull strongly on the weatherstrip.

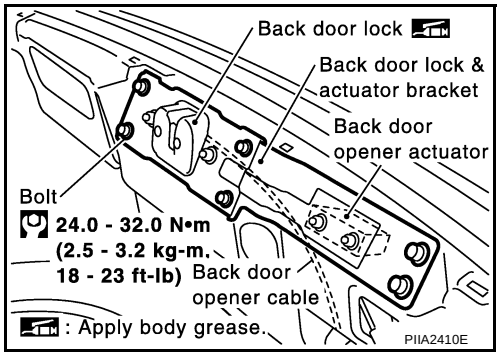
INSTALLATION

Install in the reverse order of removal.

1. Working from the upper section, align weatherstrip mark with vehicle center position mark and install weatherstrip onto the vehicle.
2. For the lower section, align the weatherstrip seam with center of the striker.
3. After installation, pull the weatherstrip gently to ensure that there is no loose section.

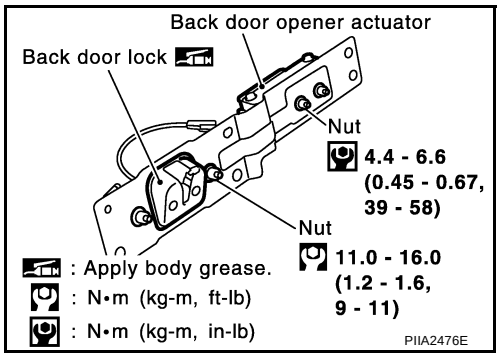
   NOTE:
   Make sure the weatherstrip is fit tightly at each corner and back door rear plate.

BACK DOOR LOCK



PFP:90504

Removal and Installation of Back Door Lock & Back Door Opener Actuator



NIS0002A

REMOVAL

1. Remove back door weatherstrip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove luggage finisher lower (center). Refer to EI-40, "LUGGAGE FLOOR TRIM" .
3. Disconnect the connector and the clip of the back door opener.
4. Remove the mounting bolts.

5. Disconnect the connector of the back door opener actuator and back door opener cable, remove the bracket.
6. Remove the mounting nuts, remove back door lock and back door opener actuator.

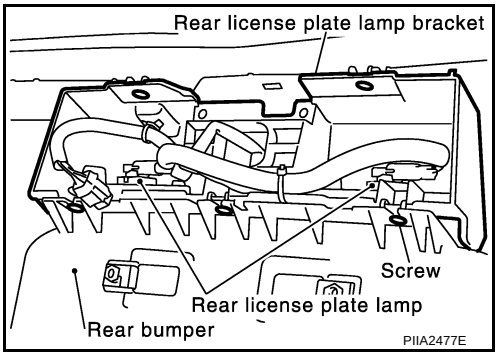
INSTALLATION

Install in the reverse order of removal.

CAUTION:

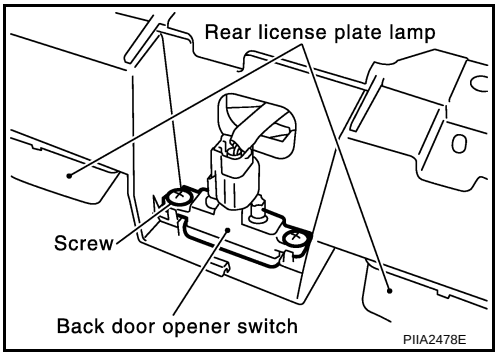
- **After installing, check operation.**
- **After installing, perform fitting adjustment. Refer to BL-100, "Fitting Adjustment" .**

INSPECTION



1. Check back door lock for the following items.
   - Malfunction noise or door closing and opening effort
   - Component wear or damage
2. Apply body grease to the rotating part of the back door lock.

Removal and Installation of Back Door Opener Switch (External)

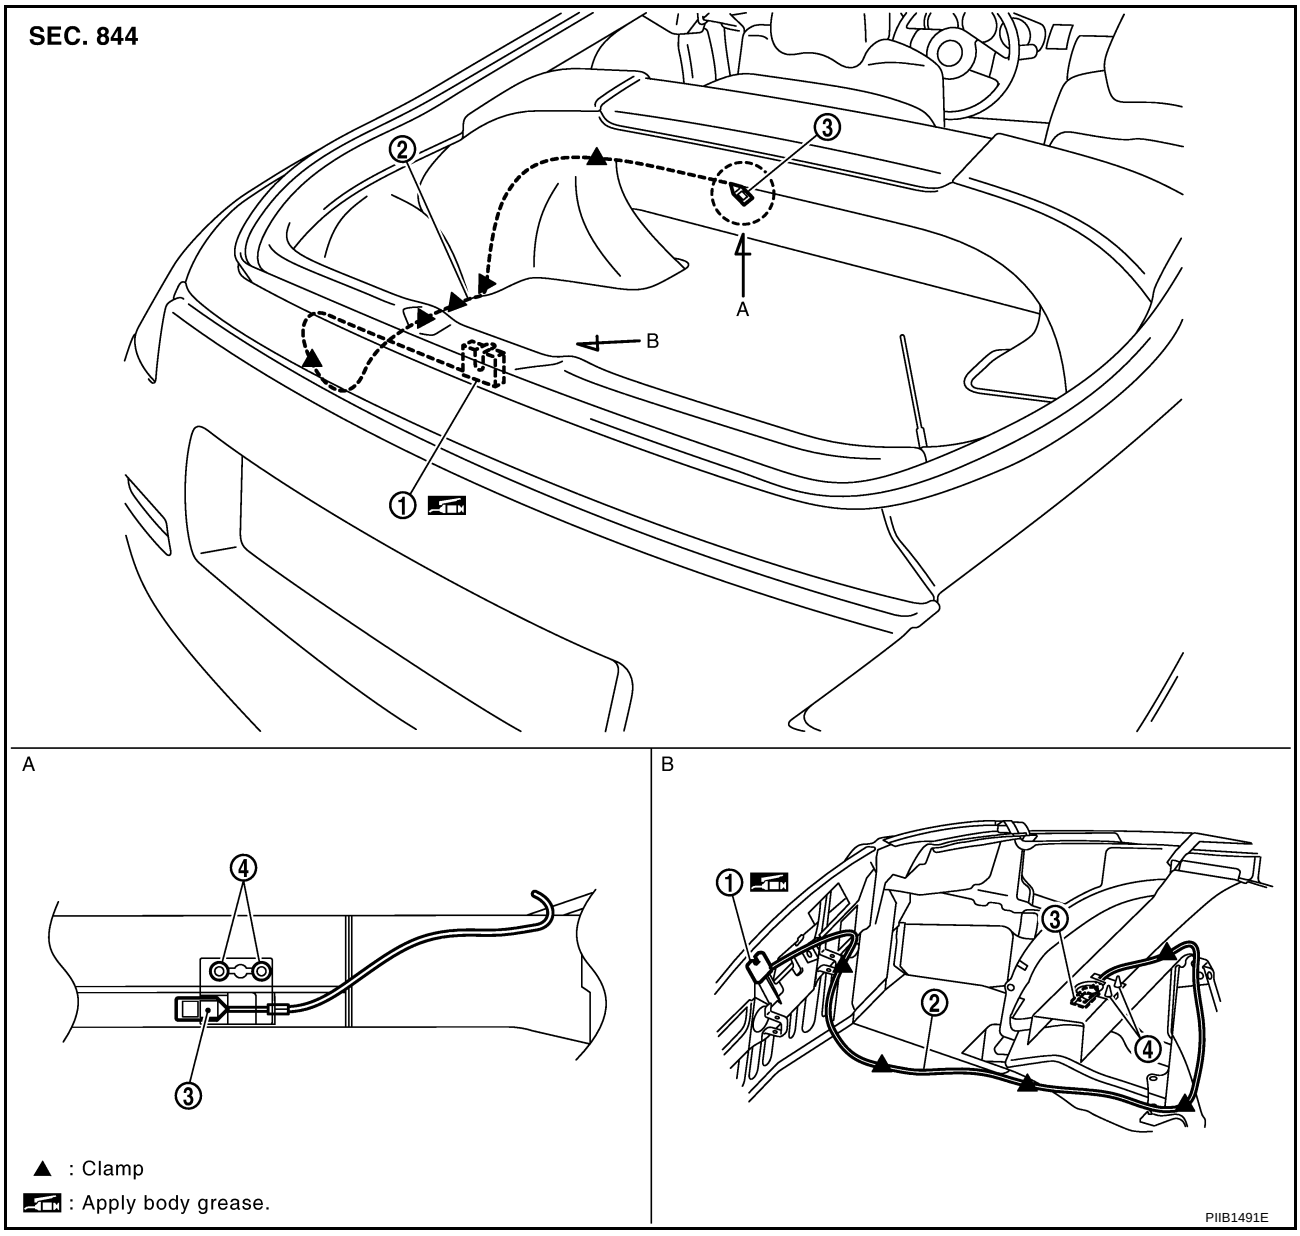


NIS0002B

REMOVAL

1. Remove rear bumper fascia assembly. Refer to EI-17, "Removal and Installation" .
2. Remove the mounting screws of the license plate bracket.

3. Remove the mounting screws and connector of the back door opener switch.



INSTALLATION

1. Install in the reverse order of removal.
2. After installing, check the operation.

Removal and Installation of Back Door Emergency Opener Cable

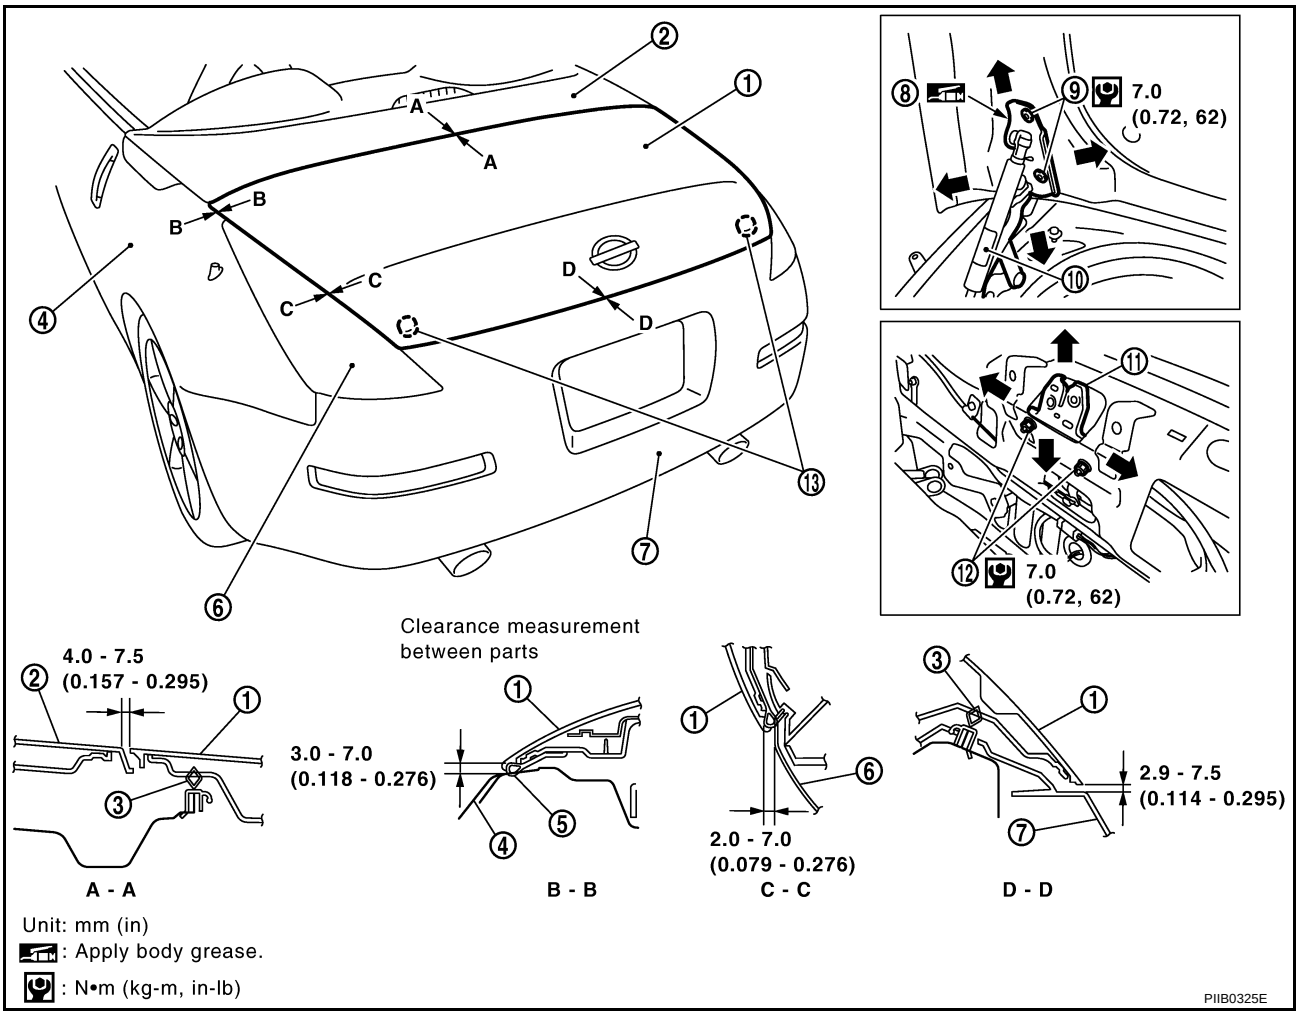
NIS0002C

1. Back door lock assembly
2. Back door emergency opener cable
3. hook
4. Clip

REMOVAL

1. Remove back door weather strip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove luggage finisher lower (center), luggage side finisher lower (LH), luggage side finisher upper (LH), trunk side box, luggage floor carpet, strut cover rear, strut cover lower (center), and strut cover lower (LH). Refer to EI-39, "Removal and Installation (for Coupe Models)" .
3. Disconnect back door emergency opener cable from back door lock.
4. Disconnect back door emergency opener cable from back door emergency opener cable clamp, and then remove back door emergency opener cable.

INSTALLATION



1. Install in the reverse order of removal.
2. After installing, check the operation.

TRUNK LID

PFP:H4300

Fitting Adjustment

NIS0002D

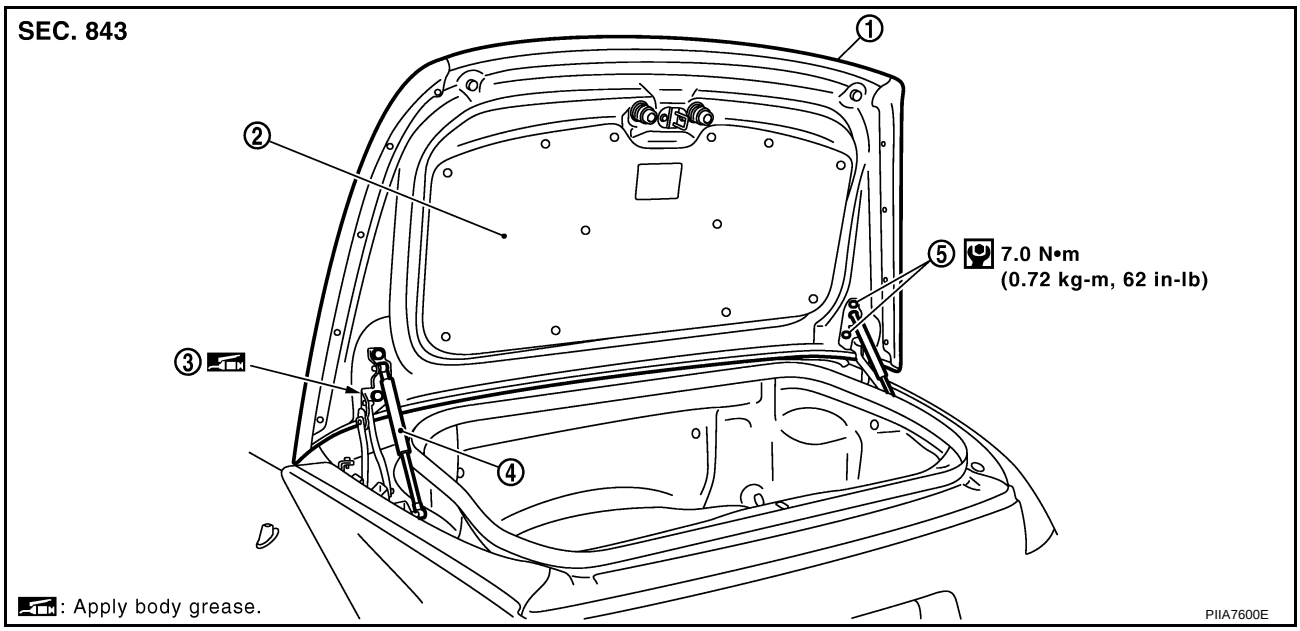
1. Trunk lid assembly
2. Storage lid
3. Trunk lid weatherstrip
4. Rear fender
5. Trunk lid moulding
6. Rear combination lamp
7. Rear bumper fascia
8. Trunk lid hinge
9. TORX bolt (T30)
10. Trunk lid stay
11. Trunk lid lock assembly
12. Nut
13. Bumper rubber

LONGITUDINAL AND LATERAL CLEARANCE ADJUSTMENT

1. Remove trunk rear finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
2. Loosen trunk lid hinge mounting bolts, and remove trunk lid lock. And then, close trunk lid.
3. Tighten trunk lid hinge mounting bolts to the specified torque after adjusting lateral clearance and clearance to storage lid and rear bumper fascia.
4. Position trunk lid lock and engage trunk lid striker. Check trunk lid striker and trunk lid lock for looseness.
5. Tighten trunk lid mounting bolts to the specified torque.

SURFACE HEIGHT ADJUSTMENT

1. Remove trunk rear finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER"
2. Remove trunk lid lock. Rotate bumper rubber to adjust height between trunk lid and bumper fascia.
3. Position trunk lid lock and engage trunk lid striker. Check trunk lid striker and trunk lid lock for looseness. Tighten trunk lid mounting bolts to the specified torque.
4. Adjust lateral clearance and surface height between trunk lid and other parts so that they are within the following dimensional difference.



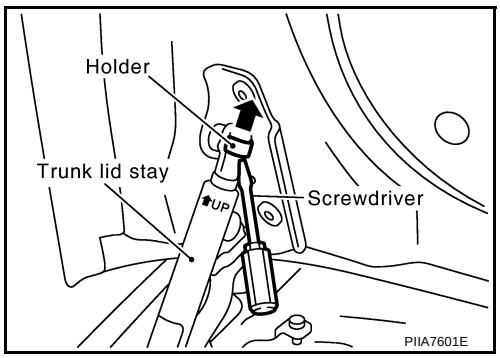
CAUTION:

Adjust evenness between trunk lid and each part to the following specification.

Trunk lid and storage lid (A–A) : 0 ± 1.0 mm (0 ± 0.04 in)
Trunk lid and rear bumper fascia (D–D) : 0.85 ± 2.1 mm (0.0335 ± 0.083 in)

Removal and Installation of Trunk Lid Assembly

NIS0002E



1. Trunk lid assembly
2. Trunk lid insulator
3. Trunk lid hinge
4. Trunk lid stay
5. TORX bolt (T30)

CAUTION:
Operate with two workers, because of its heavy weight.

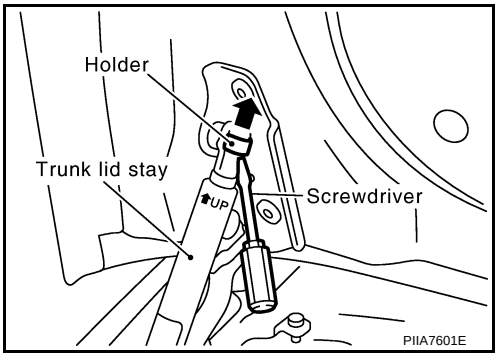
REMOVAL

1. Screwdriver into the gap and remove holder.
2. Remove trunk lid stay (gas stay).
3. Remove the trunk lid hinge bolts, trunk lid assembly side and remove the trunk lid assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.
Install holder to trunk lid stay, and then push it into trunk lid hinge (stud ball) when installing trunk lid stay.

CAUTION:



- **Check trunk lid open/close operation after installation**
- **Apply sealant and coat with the same body color paint to trunk lid hinge installation part and mounting bolts.**

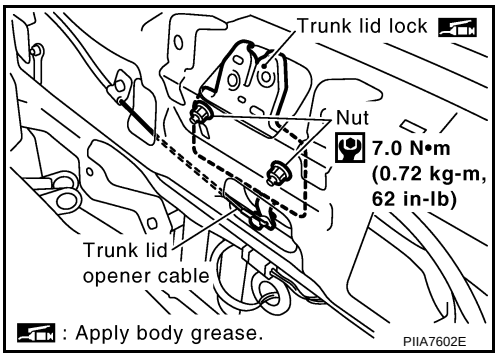
Removal and Installation of Trunk Lid Stay

NIS0002F

REMOVAL

1. Screwdriver into the gap and remove holder.
2. Remove trunk lid stay.

INSTALLATION



1. Note the following, and install in the reverse order of removal.
   Install holder to trunk lid stay, and then push it into trunk lid hinge (stud ball) when installing trunk lid stay.
2. After installation, check the operation.

Removal and Installation of Trunk Lid Lock Assembly

NIS0002G

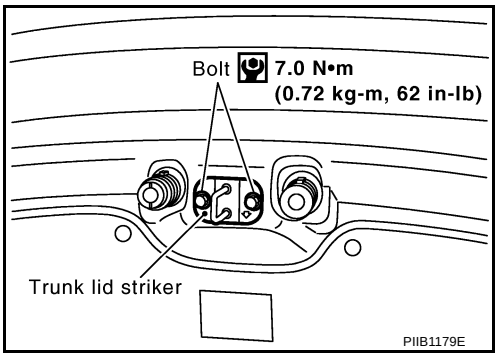
REMOVAL

1. Remove the trunk lid weatherstrip. Refer to BL-113, "Removal and Installation of Trunk Lid Weatherstrip" .
2. Remove trunk lid release lever. Refer to EI-49, "Removal and Installation (for Roadstar Models)" .
3. Remove the trunk lid finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
4. Disconnect the release lever cable and trunk lid opener cable from the clip.
5. After removing the harness connector, remove the mounting bolts, and remove the trunk lid lock.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



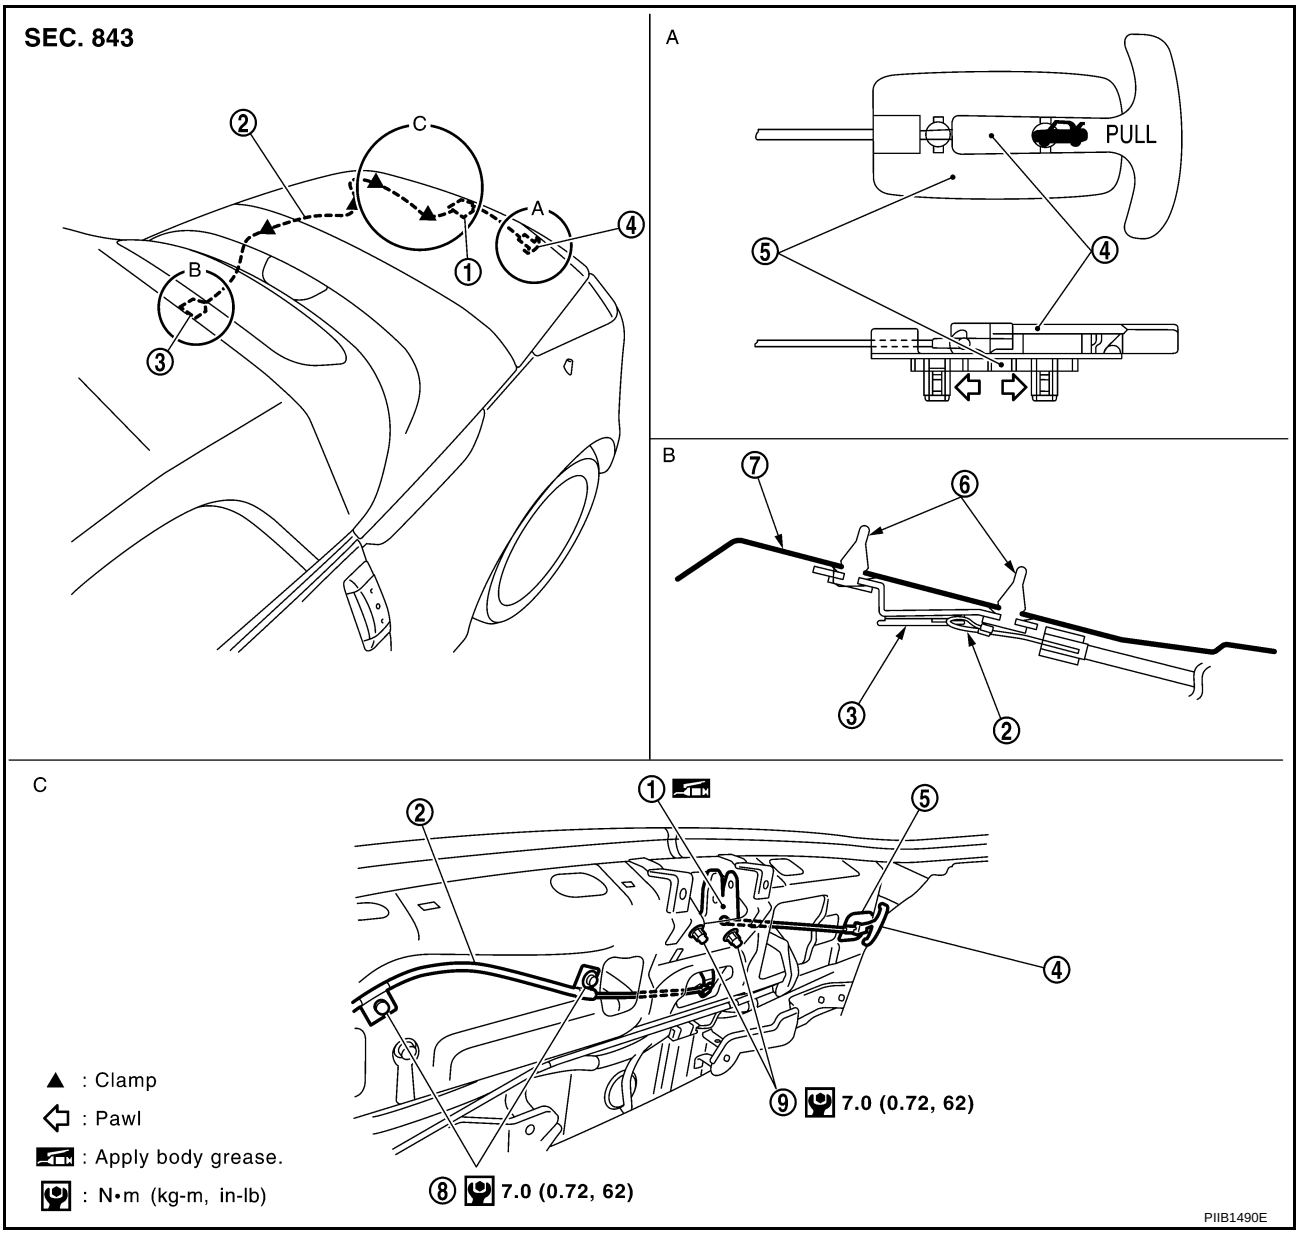
- **After installing, close the trunk lid height. Perform the lock and surface height adjustment. Refer to BL-107, "Fitting Adjustment" .**
- **After installing, check the operation.**

Removal and Installation of Trunk Lid Striker

NIS0002H

REMOVAL

Remove the mounting bolts, then remove the striker from the trunk lock support.



INSTALLATION

1. Install in the reverse order of removal.
2. After installing, close the trunk lid height. Perform the lock and surface height adjustment. Refer to BL-107, "Fitting Adjustment" .
3. After installation, check the operation.

Removal and Installation of Trunk Lid Emergency Opener Cable

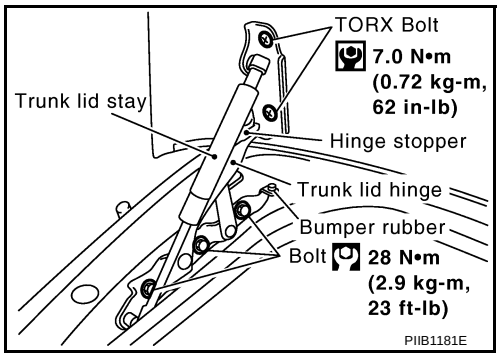
NIS0002I

1. Trunk lid lock assembly	2. Trunk lid emergency opener cable	3. Trunk lid emergency opener cable hook
4. Trunk lid emergency opener lever (secondary)	5. Trunk lid emergency opener lever holder	6. Clip
7. Panel	8. Bolt	9. Nut

REMOVAL

1. Remove trunk lid weatherstrip. Refer to BL-113, "Removal and Installation of Trunk Lid Weatherstrip" .
2. Remove trunk floor carpet, spare tire cover, trunk rear finisher, trunk front finisher, and trunk side box. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
3. Remove floor box lid. Refer to EI-41, "Removal and Installation (for Roadster Models)" .
4. Disconnect trunk lid emergency opener cable from trunk lid lock.
5. Disconnect each clamp of trunk lid emergency opener cable.

INSTALLATION



Install in the reverse order of removal.

Removal and Installation of Trunk Lid Hinge

NIS0002J

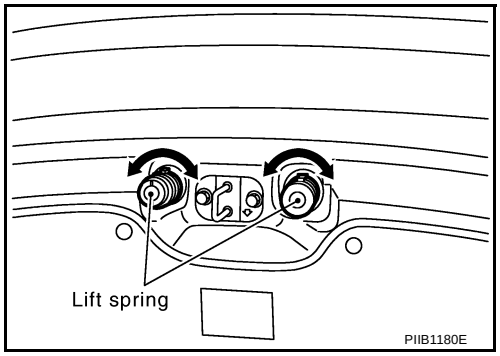
REMOVAL

1. Remove trunk lid stay. Refer to BL-109, "Removal and Installation of Trunk Lid Stay" .
2. Remove trunk lid assembly. Refer to BL-108, "Removal and Installation of Trunk Lid Assembly" .
3. Remove trunk lid hinge mounting bolts, and then remove trunk lid hinge.

INSTALLATION

1. Position trunk lid hinge to body side. Temporarily tighten front side bolt and rear side bolt in this order, and then tighten them to the specified torque.
2. Install trunk lid to trunk lid hinge.
3. Install trunk lid stay.

CAUTION:



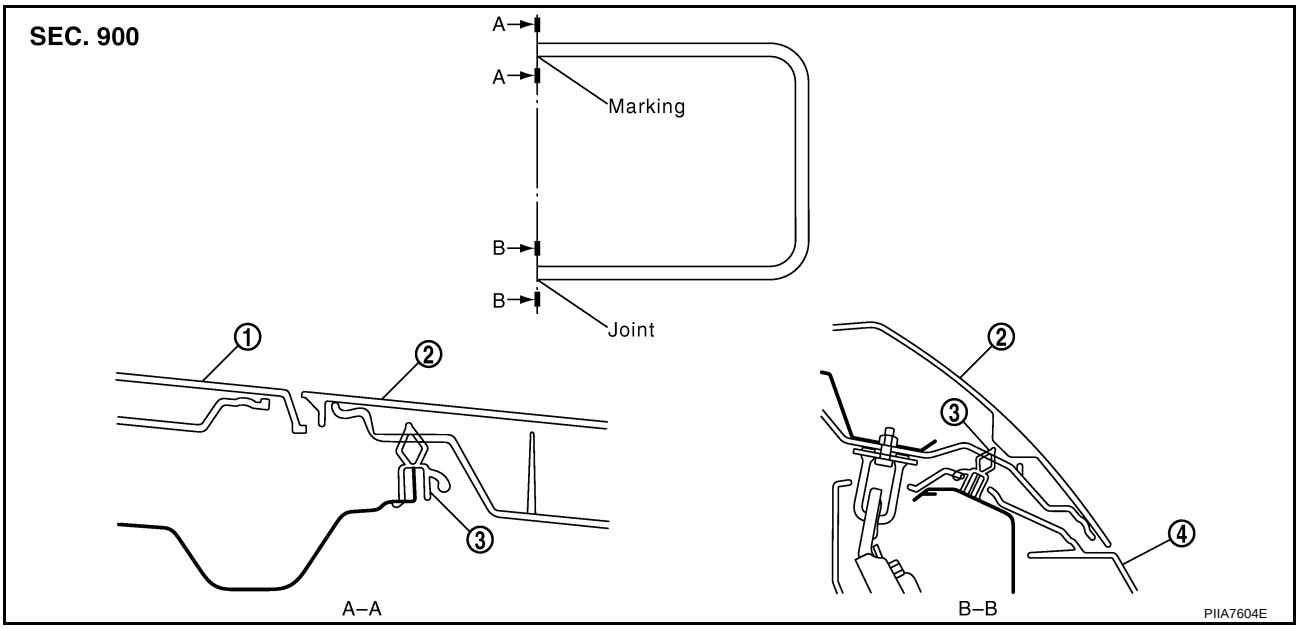
- **Before installing trunk lid hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installation, perform trunk lid fitting adjustment. Refer to BL-107, "Fitting Adjustment" .**
- **Check trunk lid open/close operation after installation.**
- **Apply sealant and the same body color paint to trunk lid hinge and mounting bolts to cover broken seal area.**

Removal and Installation of Lift Spring

NIS0002K

REMOVAL

Rotate lift spring bottom clockwise/counterclockwise by approximately 90 deg, and then remove lift spring.



INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Trunk Lid Weatherstrip

NIS0002L

1. Storage lid
2. Trunk lid assembly
3. Trunk lid weatherstrip
4. Rear bumper fascia

REMOVAL

Pull up and remove engagement with body from weatherstrip joint.

CAUTION:

After removal, do not pull strongly on the weatherstrip.

INSTALLATION

Install in the reverse order of removal.

1. Install the weatherstrip from the front with the vehicle center mark aligned to the weatherstrip mark.
2. At rear side, align the weatherstrip seam to the center of the striker.
3. After installing, pull the weatherstrip lightly to check for looseness.

   CAUTION:

   The weatherstrip should fit tightly onto the corners and trunk lid rear plate.

TRUNK LID OPENER

PFP:84640

Component Parts and Harness Connector Location

NIS0002M

System Description

NIS0002N

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

When trunk lid opener switch is ON (pushed) with trunk lid opener cancel switch is ON and driver's door unlocked, ground is supplied

- to BCM terminal 30
- through trunk lid opener cancel switch terminals 1 and 2,
- through trunk lid opener switch terminals 1 and 2,

- through driver side door lock actuator (unlock sensor) terminals 2 and 4,
- through grounds M30 and M66.

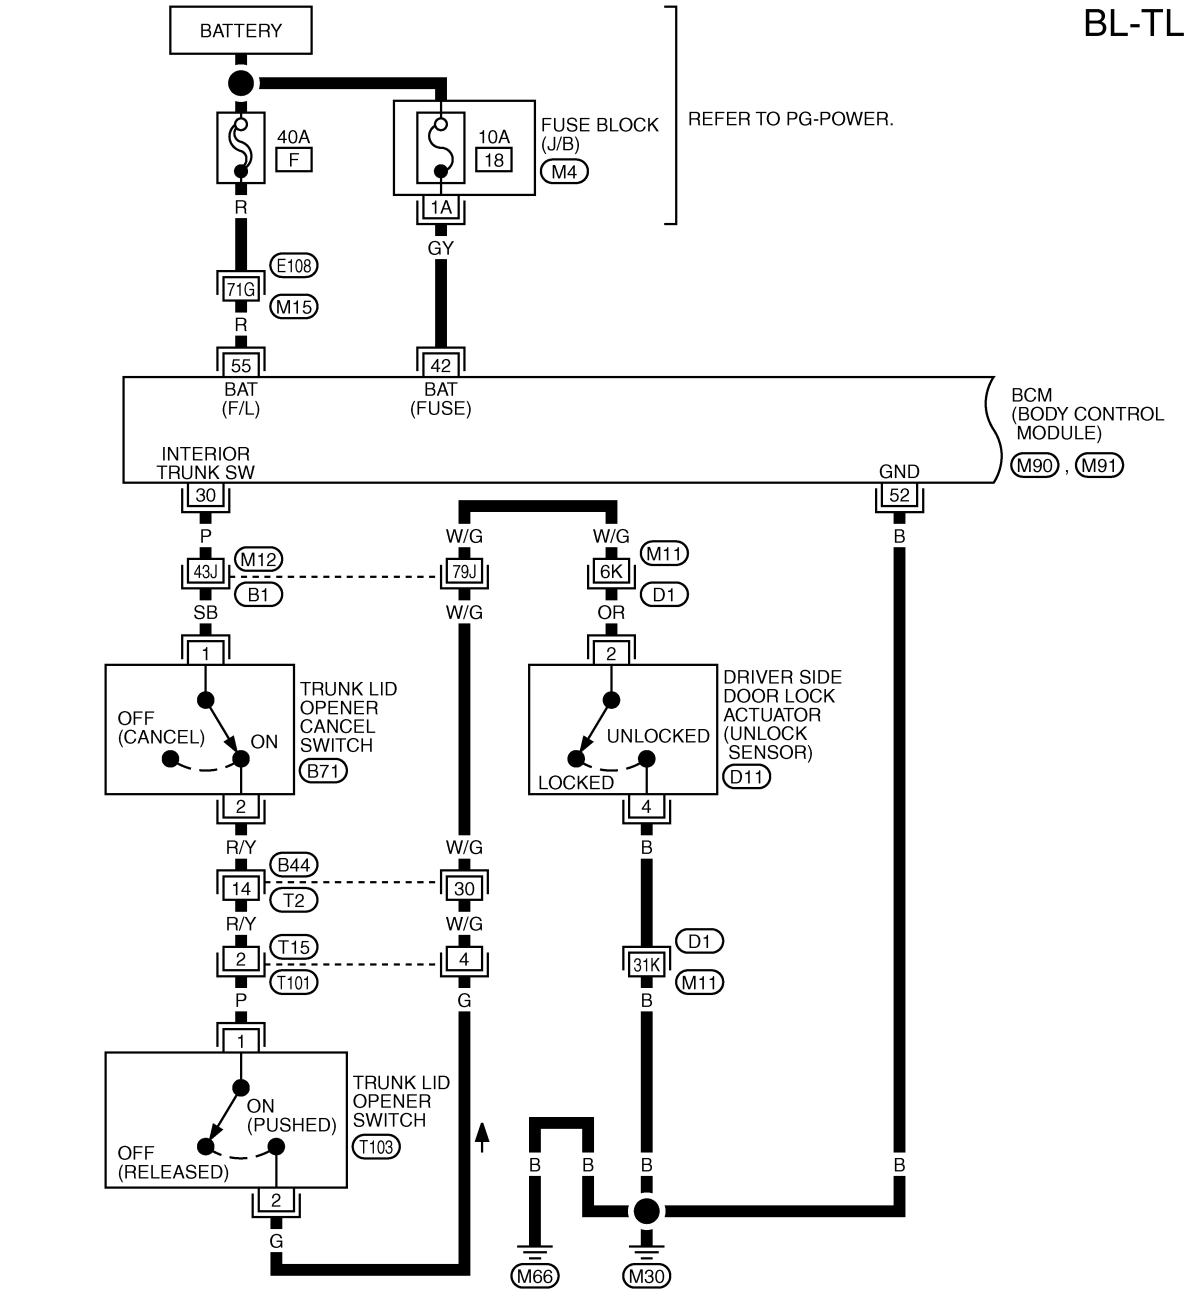
And power is supplied

- to BCM terminal 68
- through trunk lid lock assembly (trunk lid opener actuator) terminals 2 and 1
- through grounds B5, B6 and T14.

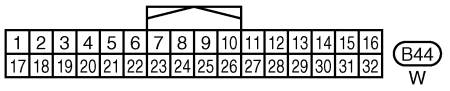
Then trunk lid lock assembly (trunk lid opener actuator) opens trunk.

TRUNK LID OPENER CANCEL OPERATION

When trunk lid opener cancel switch is OFF (CANCEL), it cannot open trunk with trunk lid opener switch.



TRUNK OPENER OPERATION WITH KEY FOB



Open the trunk with key fob. Refer to BL-63, "Trunk Opener Operation/For Roadster" .

Wiring Diagram—T/LID—

Terminals and Reference Value for BCM

NIS0002P

Terminal	Wire color	Item	Signal input/output	Condition		Voltage (V) (Approx.)
18	B	Remote keyless entry receiver (Ground)	—	—		0
19	Y	Remote keyless entry receiver (Power supply)	Output	Key is inserted in IGN key cylinder		0
				All door closed		 OCC3881D
20	L	Remote keyless entry receiver (Signal)	Input	Key is inserted in IGN key cylinder		0
				Waiting (All door closed)		 OCC3879D
				When signal is received (All door closed)		 OCC3880D
30	P	Trunk lid opener switch	Input	Trunk lid opener cancel switch is ON	Trunk lid opener switch is ON	0
					Trunk lid opener switch is OFF	5
				Driver side door is locked	Trunk lid opener cancel switch is OFF	5
39	L	CAN – H	Input/Output	—		—
40	P	CAN – L	Input/Output	—		—
42	GY	Ignition switch (ON)	Input	Ignition switch ON or START position		Battery voltage
52	B	Ground	—	—		0
55	R	Power source (Fusible link)	Input	—		Battery voltage
68	L/R	Trunk lid opener release output signal	Output	Closed (OFF) → Opened (ON)		0 → Battery voltage

CONSULT-III Function (BCM)

NIS0002Q

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Inspection item, self-diagnosis mode	Content
Trunk	DATA MONITOR	Displays the input data of BCM in real time basis.
	ACTIVE TEST	Give a drive signals to load to check the operation check.

ACTIVE TEST

Test item	Content
TRUNK/BACK DOOR	This test is able to check trunk lid opener actuator unlock operation. This actuator unlocks when “ON” on CONSULT-III screen is touched.

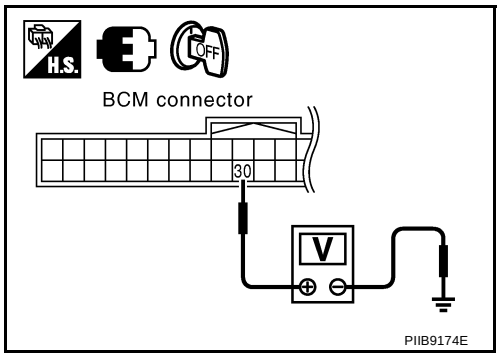
Trouble Diagnosis

NIS0002R

TRUNK DOSE NOT OPEN WITH TRUNK LID OPENER SWITCH

1. CHECK TRUNK LID OPENER CANCEL SWITCH

Check trunk lid opener cancel switch position.



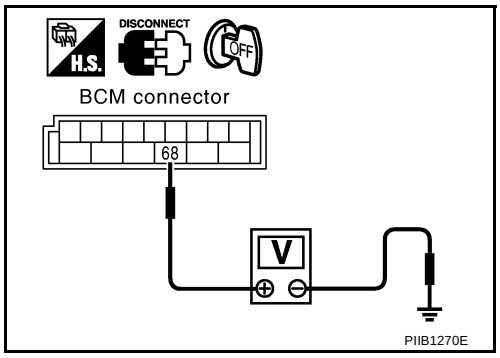
Is trunk lid opener cancel switch in ON position?

Yes or No

Yes >> GO TO 2.
No >> Turn on trunk lid opener cancel switch.

2. CHECK TRUNK LID OPEN INPUT SIGNAL

1. Remove Key from ignition key cylinder.
2. Unlock driver side door.
3. Check voltage between BCM and ground.



Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Trunk lid opener switch ON	0
			Trunk lid opener switch OFF	5

OK or NG

OK >> GO TO 3.
NG >> GO TO 6.

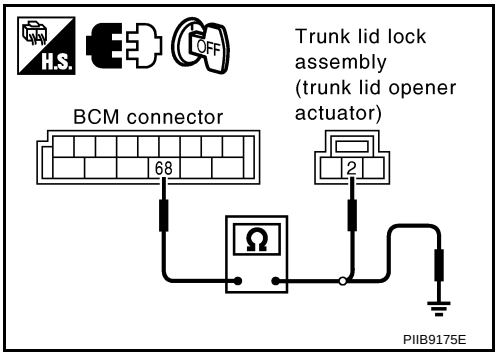
3. CHECK TRUNK LID OPEN OUTPUT SIGNAL

Check voltage between BCM and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
B83	68 (L/R)	Ground	Trunk lid opener switch ON	Battery voltage
			Trunk lid opener switch OFF	0

OK or NG

OK >> GO TO 4.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .



4. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK LID OPENER ACTUATOR) CIRCUIT

1. Disconnect BCM connector and trunk lid lock assembly (trunk lid opener actuator) connector.
2. Check continuity between BCM harness connector B83 terminal 68 and trunk lid lock assembly (trunk lid opener actuator) harness connector T47 terminal 2.

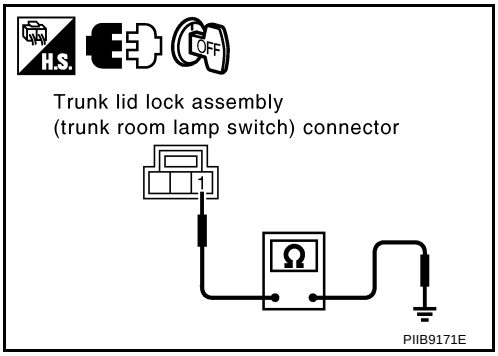
68 (L/R) - 2 (L/R) : Continuity should exist.

3. Check continuity between BCM harness connector B83 terminal 68 and ground.

68 (L/R) - ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



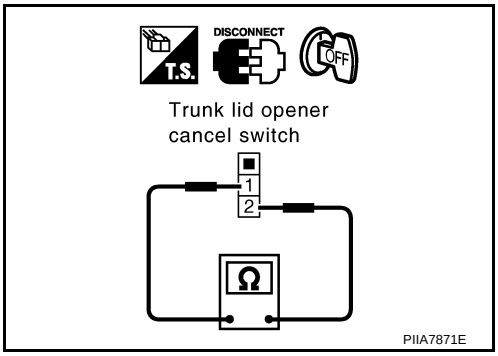
5. CHECKTRUNK LID LOCK ASSEMBLY (TRUNK LID OPENER ACTUATOR) GROUND CIRCUIT

Check continuity between trunk lid lock assembly (trunk lid opener actuator) harness connector T47 terminal 1 and ground.

1 (B) - ground : Continuity should exist.

OK or NG

OK >> Replace trunk lid lock assembly (trunk lid opener actuator).
NG >> Repair harness or connector.

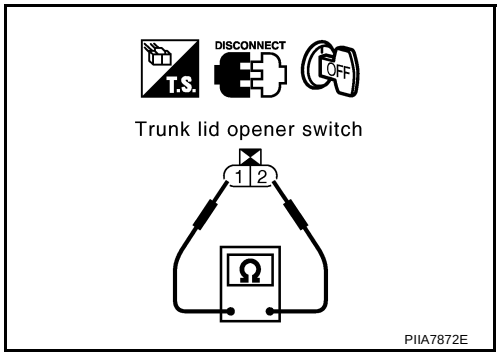


6. CHECK TRUNK LID OPENER CANCEL SWITCH

1. Disconnect trunk lid opener cancel switch.
2. Check continuity between trunk lid opener cancel switch harness connector B71 terminals 1 and 2.

Terminals		Trunk lid opener cancel switch condition	Continuity
1	2	ON	Yes
		OFF	No

OK or NG

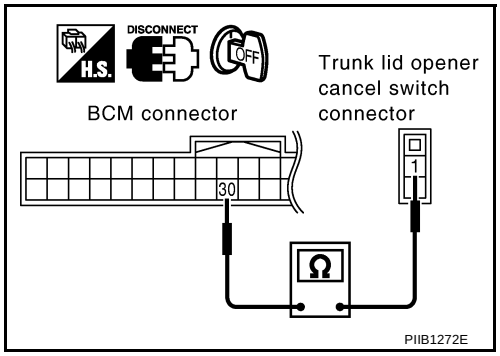


OK >> GO TO 7.
NG >> Replace trunk lid opener cancel switch.

7. CHECK TRUNK LID OPENER SWITCH

1. Disconnect trunk lid opener switch
2. Check continuity between trunk lid opener switch harness connector T103 terminals 1 and 2.

Terminals		Trunk lid opener switch condition	Continuity
1	2	ON (Pushed)	Yes
		OFF (Released)	No



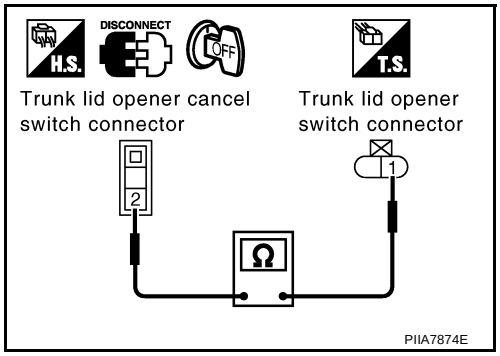
OK or NG

OK >> GO TO 8.
NG >> Replace trunk lid opener switch.

8. CHECK TRUNK LID OPENER CANCEL SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 30 and trunk lid opener cancel switch harness connector B71 terminal 1.

30 (P) - 1 (SB) : Continuity should exist.



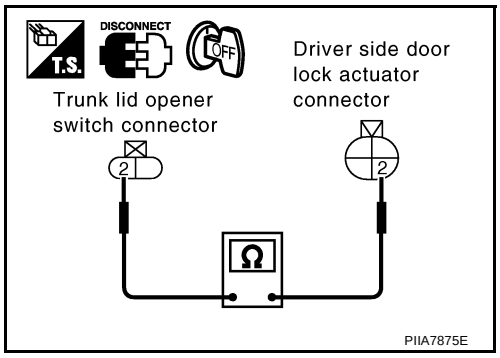
OK or NG

OK >> GO TO 9.
NG >> Repair harness or connector.

9. CHECK TRUNK LID OPENER SWITCH CIRCUIT

Check continuity between trunk lid opener cancel switch harness connector B71 terminal 2 and trunk lid opener switch harness connector T103 terminal 1.

2 (R/Y) - 1 (P) : Continuity should exist.



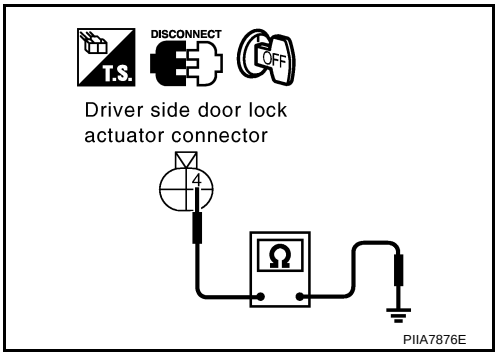
OK or NG

OK >> GO TO 10.
NG >> Repair harness or connector.

10. CHECK DRIVER SIDE DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between trunk lid opener switch harness connector T103 terminal 2 and driver side door lock actuator switch harness connector D11 terminal 2.

2 (G) - 2 (OR) : Continuity should exist.



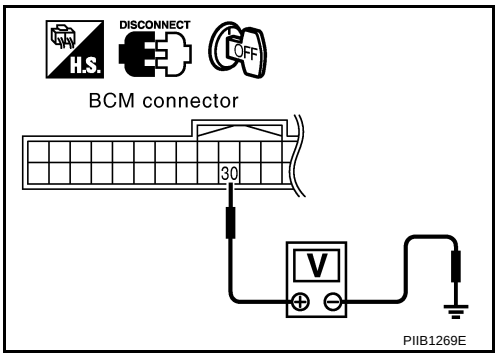
OK or NG

OK >> GO TO 11.
NG >> Repair harness or connector.

11. CHECK DRIVER SIDE DOOR LOCK ACTUATOR GROUND CIRCUIT

Check continuity between driver side door lock actuator switch harness connector D11 terminal 4 and ground.

4 (B) - ground : Continuity should exist.



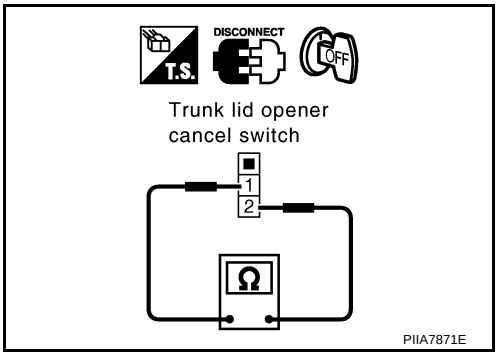
OK or NG

OK >> Replace driver side door lock actuator.
NG >> Repair harness or connector.

TRUNK DOSE NOT CLOSE

1. CHECK TRUNK LID OPEN INPUT SIGNAL

1. Remove Key from ignition key cylinder.
2. Turn on trunk lid opener cancel switch.
3. Unlock driver side door.
4. Check voltage between BCM and ground.



Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Trunk lid opener switch ON	0
			Trunk lid opener switch OFF	5

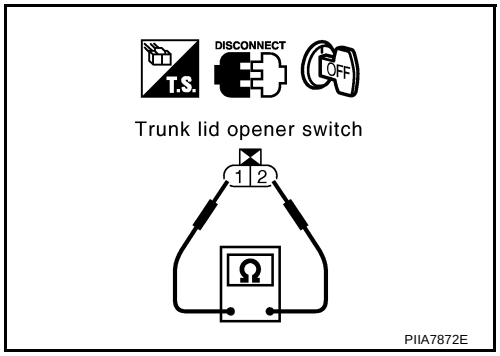
OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

2. CHECK TRUNK LID OPENER CANCEL SWITCH

1. Disconnect trunk lid opener cancel switch.
2. Check continuity between trunk lid opener cancel switch harness connector B71 terminals 1 and 2.

Terminals		Trunk lid opener cancel switch condition	Continuity
1	2	ON	Yes
		OFF	No



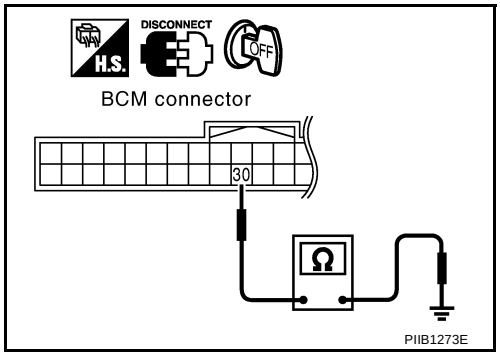
OK or NG

OK >> GO TO 3.
NG >> Replace trunk lid opener cancel switch.

3. CHECK TRUNK LID OPENER SWITCH

1. Disconnect trunk lid opener switch
2. Check continuity between trunk lid opener switch harness connector T103 terminals 1 and 2.

Terminals		Trunk lid opener switch condition	Continuity
1	2	ON (Pushed)	Yes
		OFF (Released)	No



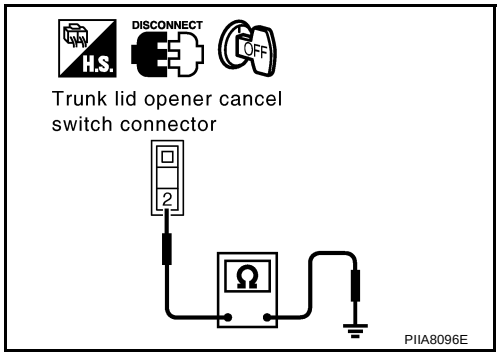
OK or NG

OK >> GO TO 4.
NG >> Replace trunk lid opener switch.

4. CHECK TRUNK LID OPENER CANCEL SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 30 and ground.

30 (P) - ground : Continuity should not exist.



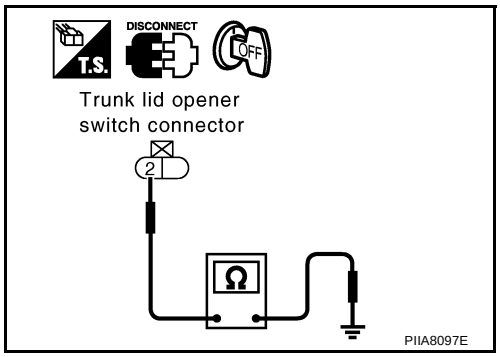
OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK TRUNK LID OPENER SWITCH CIRCUIT

Check continuity between trunk lid opener cancel switch harness connector B71 terminal 2 and ground.

2 (R/Y) - ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

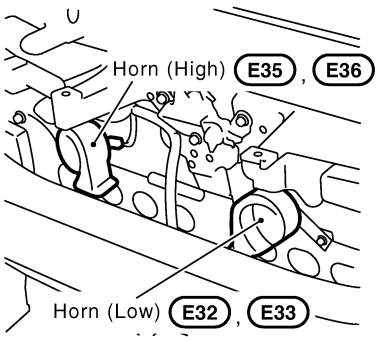
6. CHECK DRIVER SIDE DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between trunk lid opener switch harness connector T103 terminal 2 and ground.

2 (G) - ground : Continuity should not exist.

OK or NG

OK >> Replace BCM.
NG >> Repair harness or connector.



VEHICLE SECURITY (THEFT WARNING) SYSTEM

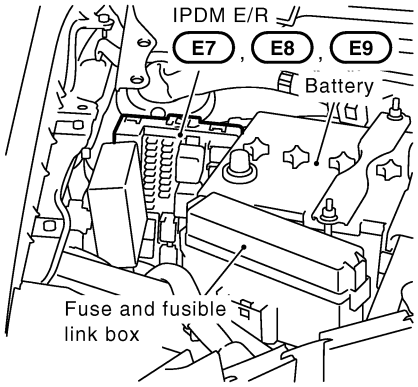
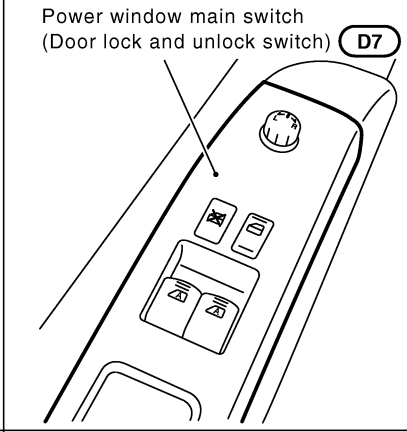
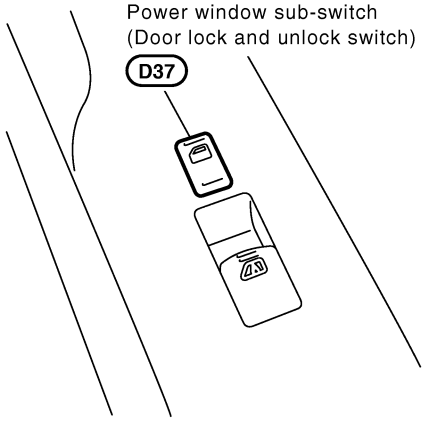
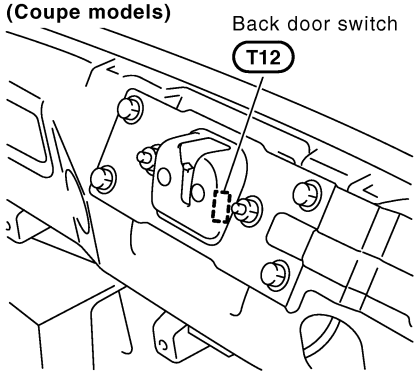
View with front bumper removed



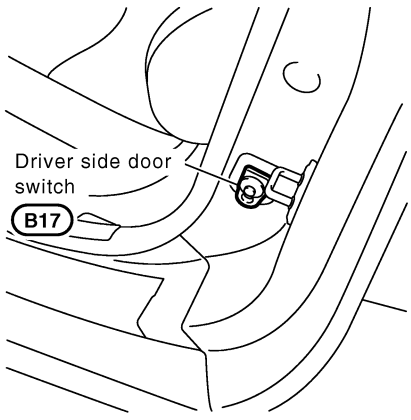


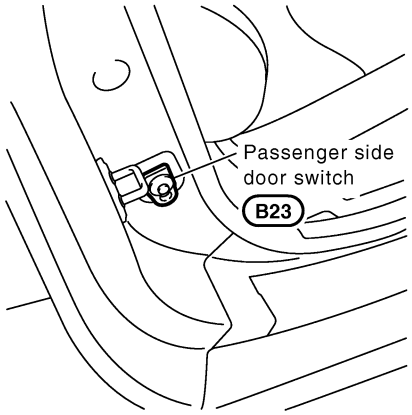


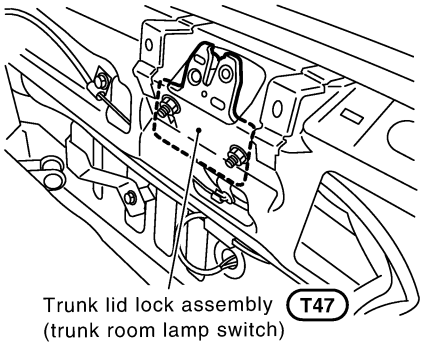
View with dash side LH removed



View with cowl top removed

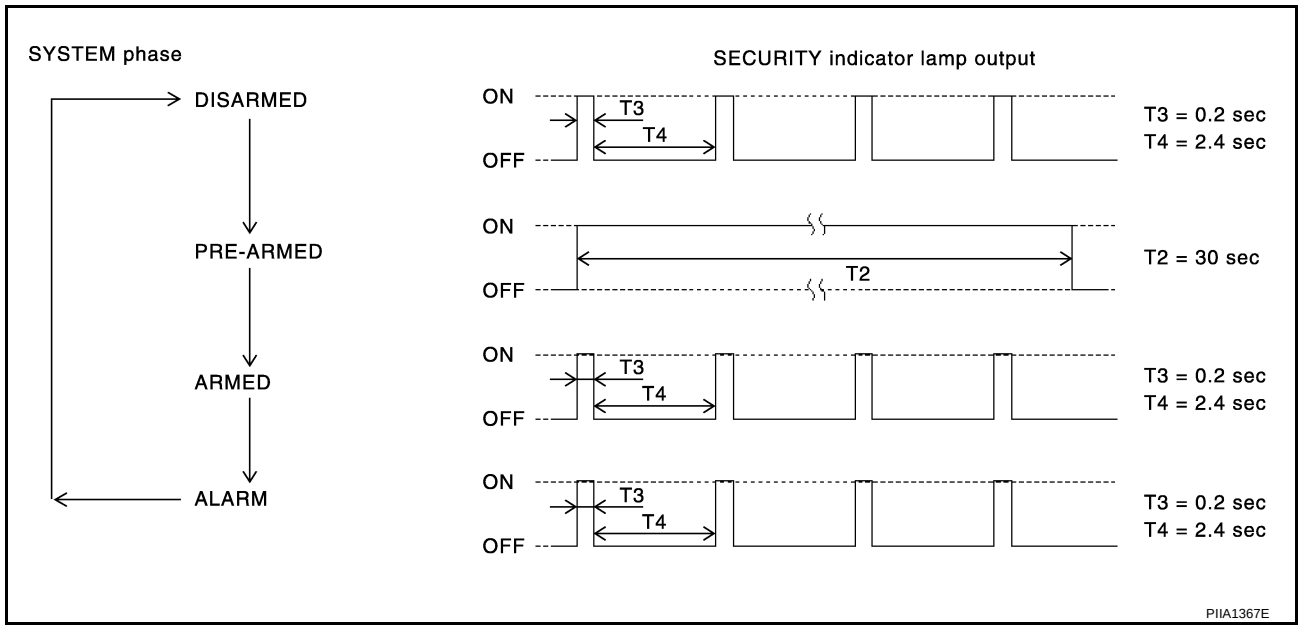






View with luggage finisher rear (Coupe models)

View with luggage finisher lower (center) removed



PIIB9256E

System Description

NIS0002T

DESCRIPTION

Operation Flow

Setting the vehicle security system

Initial condition

- Ignition switch is in OFF position.

Disarmed phase

- When hood, doors, back door (for Coupe) or trunk (for Roadster) is open, the vehicle security system is set in the disarmed phase on the assumption that the owner is inside or near the vehicle.
- When the vehicle security system is in the disarmed phase, the security indicator lamp blinks every 2.4 seconds.

Pre-armed phase and armed phase

When the following operation 1 or 2 is performed, the vehicle security system turns into the “pre-armed” phase. (The security indicator lamp illuminates.)

1. BCM receives LOCK signal from door key cylinder switch or key fob after all doors and back door (for Coupe) or trunk (for Roadster) are closed.
2. All doors and back door (for Coupe) or trunk (for Roadster) are closed after doors are locked by key or door lock and unlock switch.
   The security indicator lamp illuminates for 30 seconds. Then, the system automatically shifts into the “armed” phase.

Canceling the set vehicle security system

When one of the following operations is performed, the armed phase is canceled.

1. Unlock the doors with the key or the key fob.
2. Open the back door (for Coupe) or trunk (for Roadster) with the key fob.
3. Turn ignition switch to “ON” or “ACC” position.

Canceling the alarm operation of the vehicle security system

When one of the following operations is performed, the alarm operation is canceled.

- Unlock the door with the key or key fob.
- Open the trunk (for Roadster) with the key fob.

Activating the alarm operation of the vehicle security system

Make sure the system is in the armed phase. (The security indicator lamp blinks every 2.4 seconds.)
When the following operation 1 or 2 is performed, the system sounds the horns and flashes the headlamps for about 50 seconds.

1. Any door or trunk (for Roadster) is opened during armed phase.

2. Disconnecting and connecting the battery connector before canceling armed phase.

POWER SUPPLY AND GROUND

Power is supplied at all times

- through 10A fuse [No.19, located in the fuse block (J/B)]
- to security indicator lamp terminal 1.

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

With the ignition switch in the ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied.

- to BCM terminal 52
- through body grounds M30 and M66.

INITIAL CONDITION TO ACTIVATE THE SYSTEM

The operation of the vehicle security system is controlled by the doors and trunk (for Roadster).
To activate the vehicle security system, BCM must receive signals indicating the doors and trunk (for Roadster) are closed and the doors are locked by key or key fob.
When a door is open, BCM terminals 12, 65 receives a ground signal from each door switch.
When driver side door is unlocked by power window main switch (door lock and unlock switch), BCM terminal 22 receives a signal from terminal 12 of power window main switch.
When passenger side door is unlocked by power window sub-switch (door lock and unlock switch), BCM terminal 22 receives a signal from terminal 16 of power window sub-switch.
The IPDM E/R then sends a signal to the BCM via CAN communication line.
When the back door (for Coupe) or trunk (for Roadster) is open, BCM terminal 57 (for Roadster) or 58 (for Coupe) receives a ground signal

- from terminal 1 of the back door switch (for Coupe) or terminal 3 of trunk lid lock assembly (trunk room lamp switch) (for Roadster)
- through body grounds B5, B6,T14, D105 (for Coupe) or B5, B6, T14 (for Roadster).

VEHICLE SECURITY SYSTEM ALARM OPERATION

The vehicle security system is triggered by

- opening a driver or passenger side door
- opening the back door (for Coupe)
- opening the trunk (for Roadster)
- detection of battery disconnect and connect.

The vehicle security system will be triggered once the system is in armed phase,
When BCM receives a ground signal at terminals 12, 62 (door switch), 57 (trunk room lamp switch) or 58 (back door switch).
Power is supplied at all times

- to horn relay terminal 2
- through 15A fuse (No. 35, located in the fuse and fusible link box).

When the vehicle security system is triggered, ground is supplied intermittently to both headlamp relay and horn relay.
When both headlamp relay (with built-in IPDM E/R) and horn relay are energized and then power is supplied to headlamps (high beam and low beam) and horns (HIGH and LOW).
The headlamps flash and the horn sounds intermittently.
The alarm automatically turns off after 50 seconds, but will reactivate if the vehicle is tampered with again.

VEHICLE SECURITY SYSTEM DEACTIVATION

To deactivate the vehicle security system, a door must be unlocked or back door (for Coupe) or trunk (for Roadster) must be opened with the key or key fob.

When the key is used to unlock a door, BCM terminal 22 receives signal

- from terminal 12 of the power window main switch (door lock and unlock switch).

When the BCM receives either above signal or unlock signal from key fob, the vehicle security system is deactivated. (Disarmed phase)

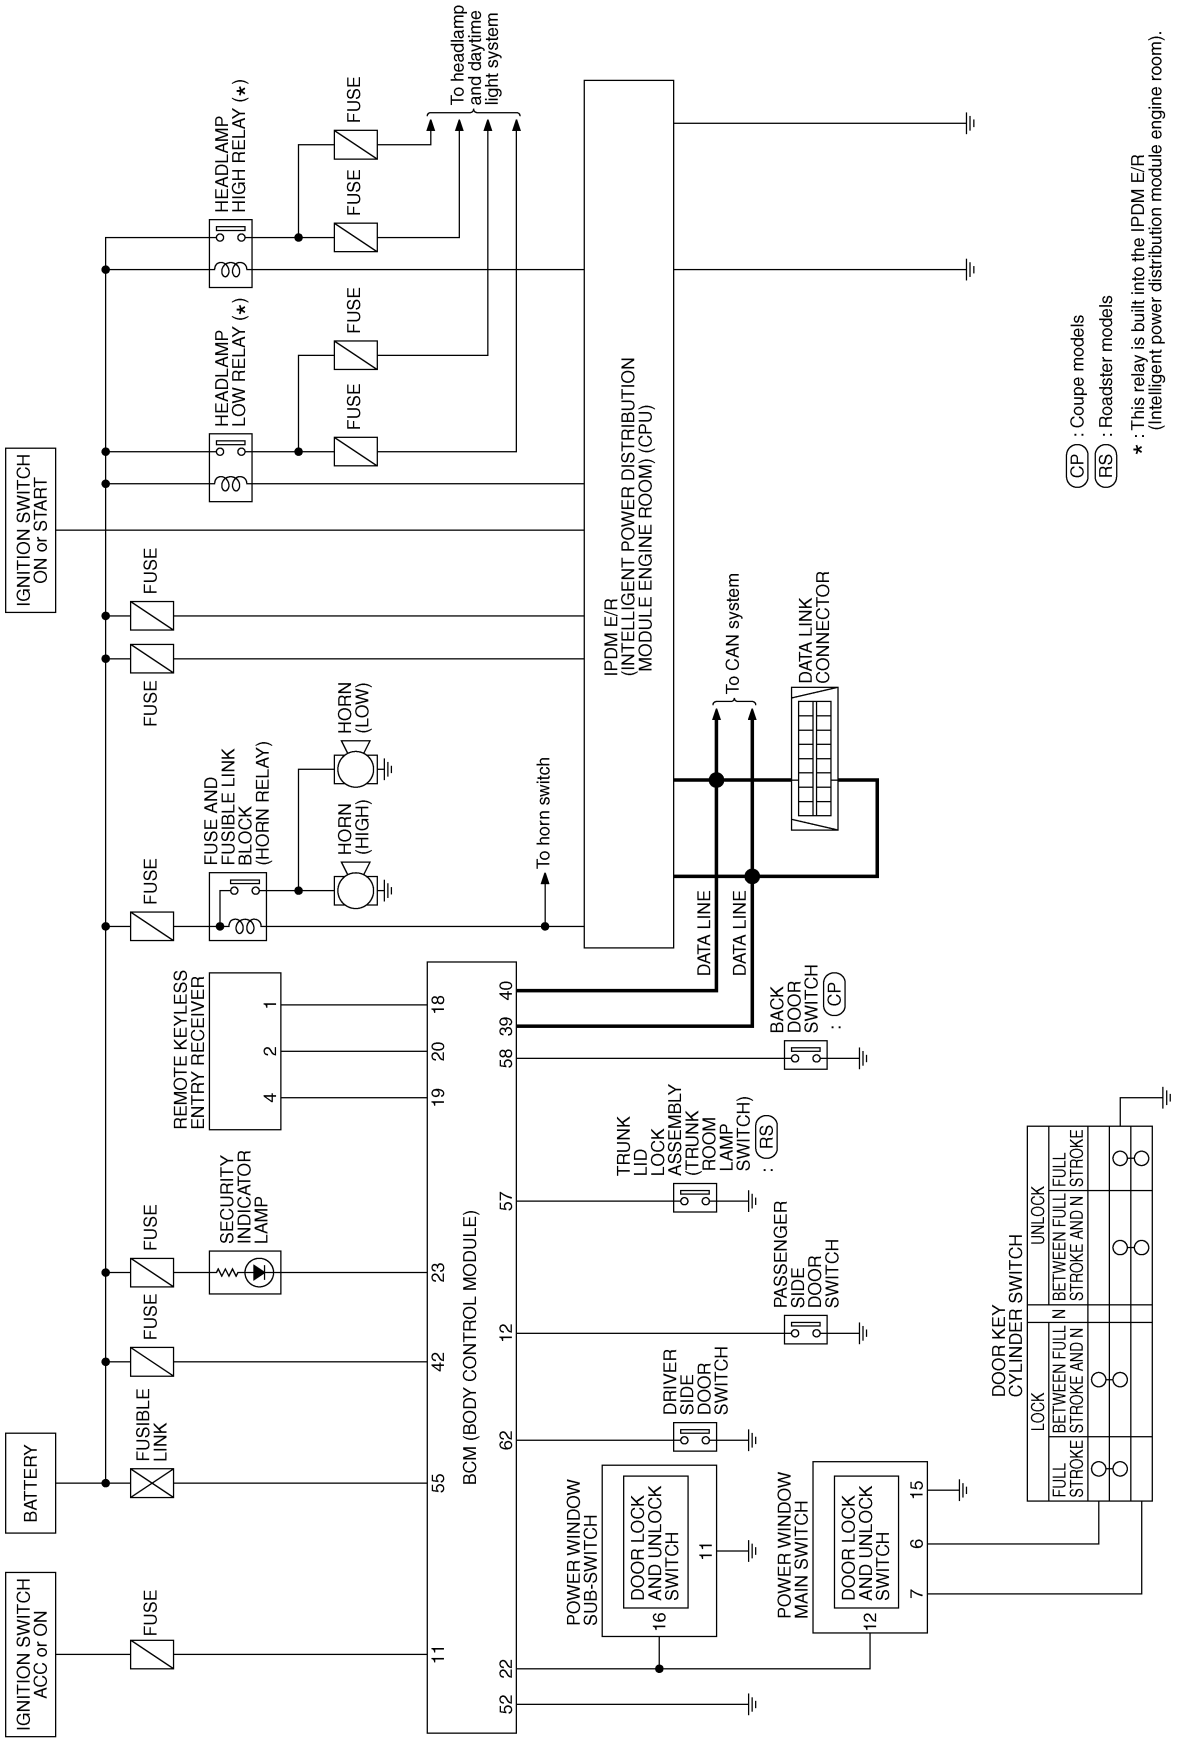
PANIC ALARM OPERATION

Remote keyless entry system may or may not operate vehicle security system (horn and headlamps) as required.
When the panic alarm button on the keyfob is triggered, ground is supplied intermittently to both headlamp relay and horn relay.
When both headlamp relay (with built-in IPDM E/R) and horn relay are energized and then power is supplied to headlamps (high beam and low beam) and horns (HIGH and LOW).
The headlamp flashes and the horn sounds intermittently.
The alarm automatically turns off after 25 seconds or when BCM receives any signal from key fob.

CAN Communication System Description

NIS0002U

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NIS0002V

Refer to LAN-4, "CAN Communication System" .

55	R	Power source (Fusible link)	Input	—	Battery voltage
57	R	Trunk room lamp switch (For Roadster)	Input	ON (Open) → OFF (Closed)	0 → Battery voltage*1
58	R/W	Back door switch (For Coupe)	Input		
62	L	Driver side door switch	Input	ON (Open) → OFF (Closed)	0 → 5

*1: When interior lamp battery saver control is in OFF: Approx.5V.

Terminals and Reference Value for IPDM E/R

NIS0002Z

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage [V] (Approx.)
38	B	Ground	—	—	0
48	L	CAN-H	Input/ Output	—	—
49	P	CAN-L	Input/ Output	—	—
51	G/B	Horn relay	Output	ON → OFF	0 → Battery voltage
60	B	Ground	—	—	0

CONSULT-III Function (BCM)

NIS00030

CONSULT-III APPLICATION ITEM

Work Support

Test Item	Description
SECURITY ALARM SET	This mode is able to confirm and change security alarm ON-OFF setting.
THEFT ALM TRG	The switch which triggered vehicle security alarm is recorded. This mode is able to confirm and erase the record of vehicle security alarm. The trigger data can be erased by touching “CLEAR” on CONSULT-III screen.

Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from key cylinder switch.
KEY CYL UN SW	Indicates [ON/OFF] condition of unlock signal from key cylinder switch.
DOOR SW-DR	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW-AS	Indicates [ON/OFF] condition of passenger side door switch.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
TRUNK OPNR SW	Indicates [ON/OFF] condition of trunk room lamp switch. (Roadster models)
TRUNK OPN MNTR	This is displayed even when it is not equipped. Indicates [ON/OFF] condition of trunk lid opener switch. (Roadster models)
TRUNK KEY SW	This is displayed even when it is not equipped.
DOOR SW-RR	This is displayed even when it is not equipped.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from driver and passenger side door lock/unlock switch.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from driver and passenger side door lock/unlock switch.
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from key fob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from key fob.
TRUNK BTN/SIG	Indicate [ON/OFF] condition of back door open signal from key fob (for Coupe). Indicates [ON/OFF] condition of trunk open signal from key fob (for Roadster).

Active Test

Test Item	Description
THEFT IND	This test is able to check security indicator lamp operation. The lamp will be turned on when “ON” on CONSULT-III screen is touched.

Test Item	Description
HORN	This test is able to check vehicle security horn (horn alarm) operation. The horns will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.
HEAD LAMP	This test is able to check vehicle security lamp (headlamp alarm) operation. The headlamps will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.

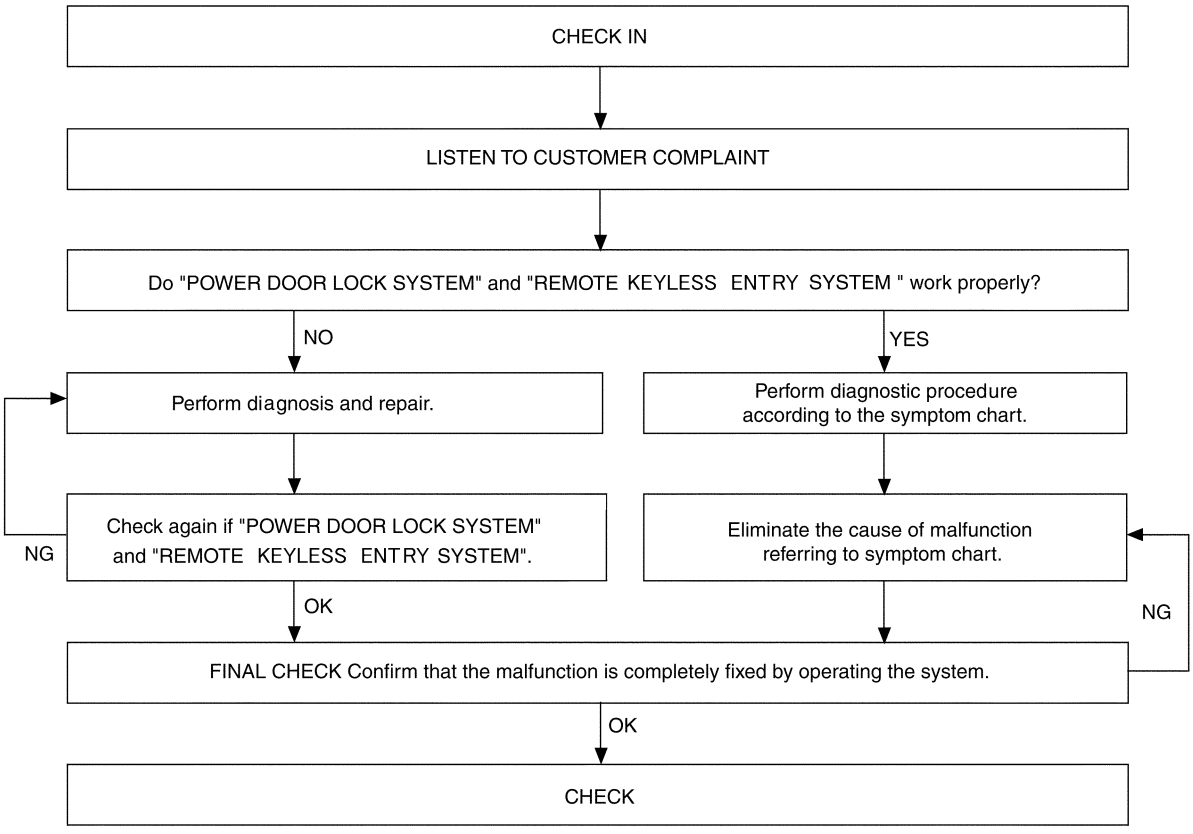
CONSULT-III Function (IPDM E/R)

NIS00031

CONSULT-III APPLICATION ITEM

Data Monitor

Monitored Item	Description
HL LO REQ	Indicates [ON/OFF] condition of headlamp low beam.
HL HI REQ	Indicates [ON/OFF] condition of headlamp high beam.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
THFT HRN REQ	Indicates [ON/OFF] condition of horn relay.



Active Test

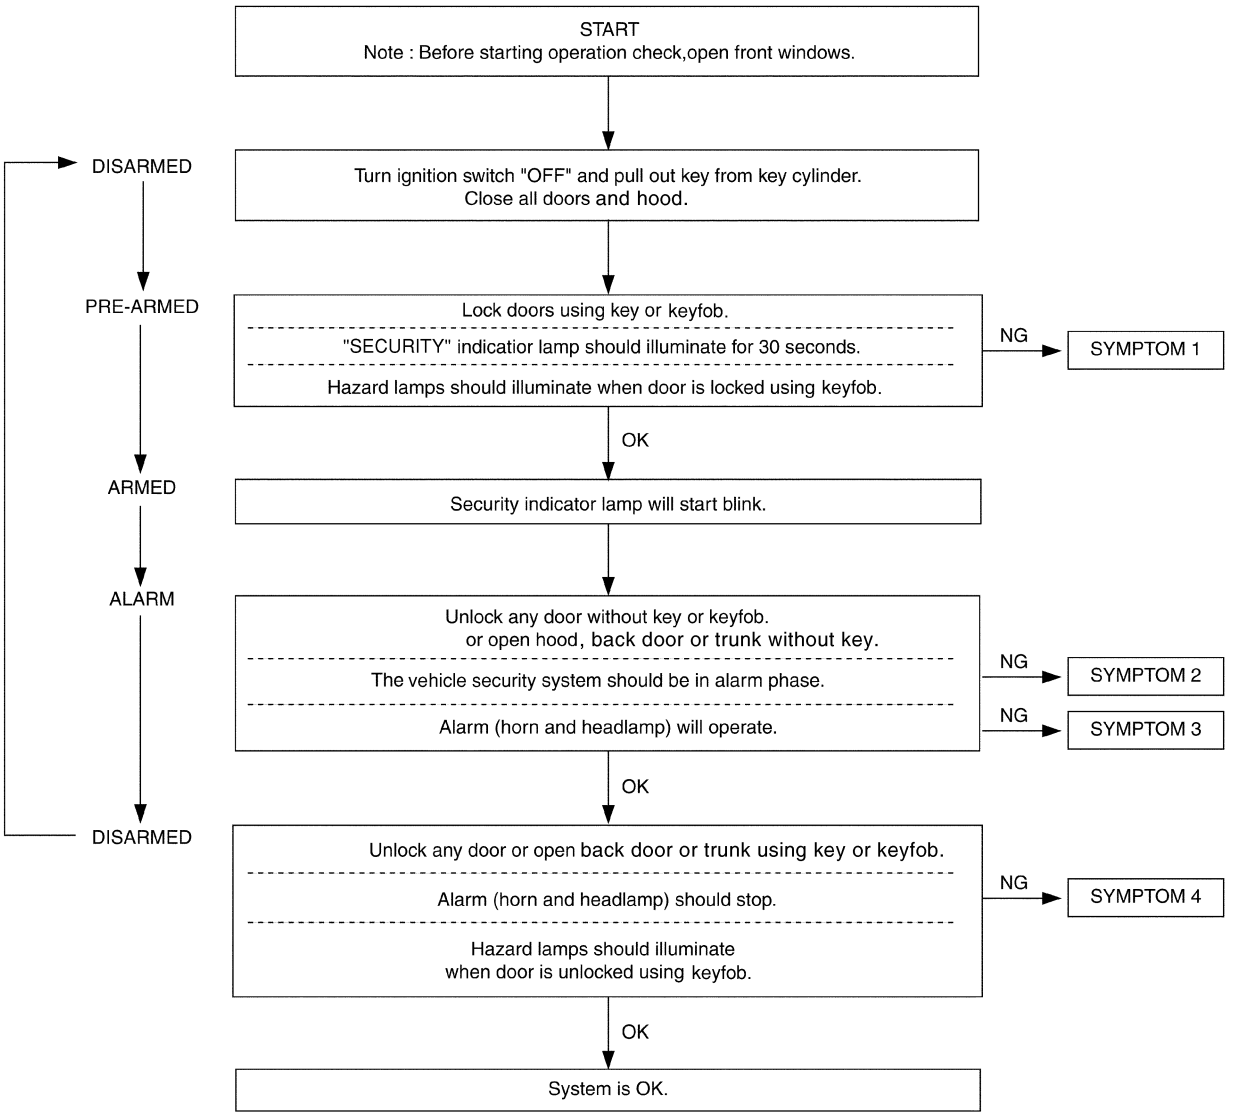
Test Item	Description
LAMPS	This test is able to check theft warning lamp (headlamp alarm) operation. The headlamps will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.
HORN	This test is able to check theft warning horn (horn alarm) operation. The horns will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.

Trouble Diagnosis

NIS00032

WORK FLOW

LIIA0123E



- “POWER DOOR LOCK SYSTEM” Diagnosis; refer to BL-35, "Work Flow" .

- “REMOTE KEYLESS ENTRY” Diagnosis; refer to BL-75, "Work Flow" .

Preliminary Check

NIS00033

The system operation is canceled by turning ignition switch to “ACC” at any step between START and ARMED in the following flow chart.

PIIA8954E

After performing preliminary check, go to symptom chart. Refer to BL-140, "Symptom Chart" .

Symptom Chart

NIS00034

PROCEDURE / SYMPTOM			Diagnostic procedure	Reference page
1	Vehicle security system cannot be set by ….	Door switch	Diagnostic Procedure 1 (Check door, hood, back door switch or trunk room lamp switch)	BL-141
		Lock/unlock switch	Diagnostic Procedure 6 (Check door lock/unlock switch)	BL-149
		Door outside key	Diagnostic Procedure 3 (Check door key cylinder switch)	BL-147
		Key fob	Check remote keyless entry system function.	BL-61
		BCM	If the above systems are “OK”, replace BCM.	BCS-17
	Security indicator does not turn “ON”.		Diagnostic Procedure 2 (Check security indicator lamp)	BL-146
			If the above systems are “OK”, replace BCM.	BCS-17
2	*1 Vehicle security system does not alarm when ….	Any door is opened.	Diagnostic Procedure 1 (Check door, hood and trunk room lamp switch)	BL-141
			If the above systems are “OK”, replace BCM.	BCS-17
3	Vehicle security alarm does not activate.	Horn alarm	Diagnostic Procedure 4 (Check vehicle security horn alarm)	BL-148
			If the above systems are “OK”, replace BCM.	BCS-17
		Headlamp alarm	Diagnostic Procedure 5 (Check vehicle security headlamp alarm)	BL-148
			If the above systems are “OK”, replace BCM.	BCS-17
4	Vehicle security system cannot be canceled by ….	Door outside key	Diagnostic Procedure 3 (Check door key cylinder switch)	BL-147
		Key fob	Check remote keyless entry system function.	BL-61
			If the above systems are “OK”, replace BCM.	BCS-17

*1: Make sure the system is in the armed phase.

Diagnostic Procedure 1

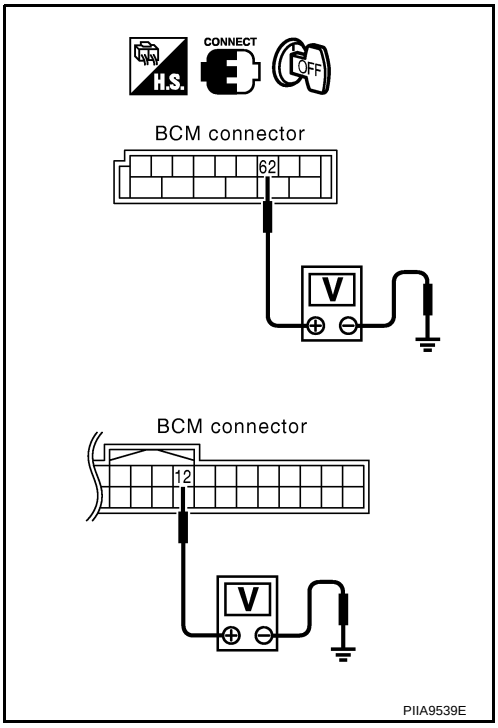
NIS00035

1 – 1 CHECK DOOR SWITCH

Check driver side door switch and passenger side door switch

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-DR” and “DOOR SW-AS”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Item	Con-nector	Terminal (Wire color)		Condi-tion of door switch	Voltage [V] (Approx.)
		(+)	(–)		
Driver side door switch	B83	62 (L)	Ground	Open	0
				Close	5
Passenger side door switch	M90	12 (P)		Open	0
				Close	5

OK or NG

OK >> Door switch is OK, and go to the following

- BL-143, "1 – 2 CHECK BACK DOOR SWITCH (COUPE)"
- BL-145, "1 – 3 CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) (ROADSTER)"

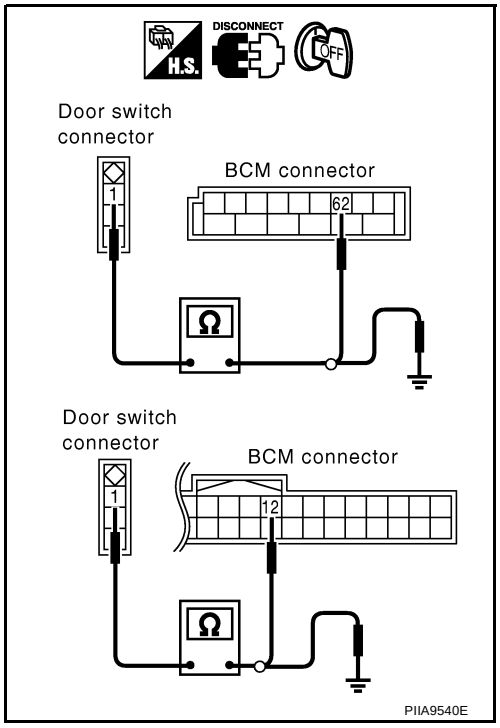
NG >> GO TO 2.

2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between door switch harness connector B17, B23 terminal 1 and BCM harness connector B83 terminal 62 (driver side) or M90 terminal 12 (passenger side).

Driver side door

1 (L) - 62 (L) : Continuity should exist.



Passenger side door

1 (P) - 12 (P) : Continuity should exist.

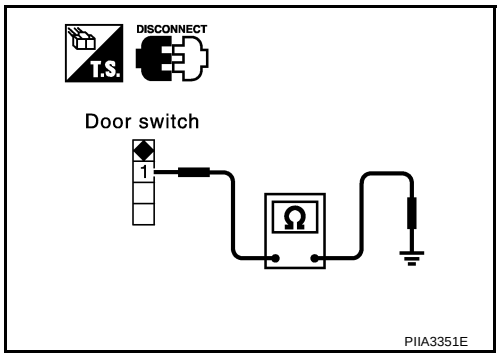
4. Check continuity between door switch harness connector B17, B23 terminal 1 and ground.

Each door switch

1 (W or P) - Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace door switch harness.

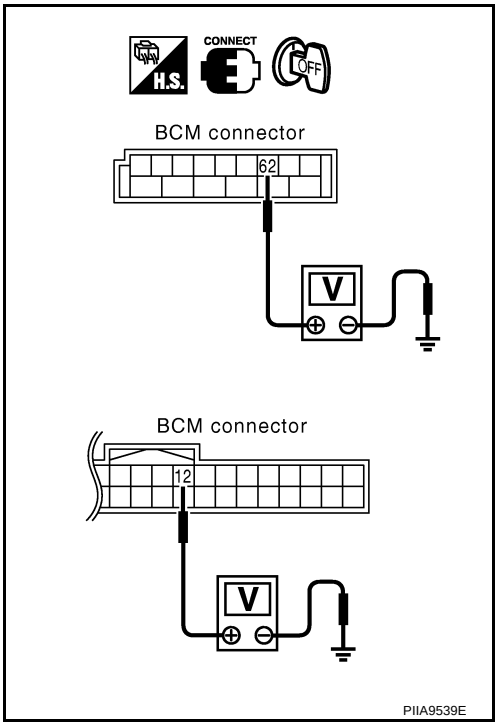


3. CHECK DOOR SWITCH

Check continuity between door switch B17 (driver side) or B23 (passenger side) terminal 1 and ground part of door switch.

Terminal		Condition of door switch	Continuity
1	Ground part of door switch	Pushed	No
		Released	Yes

OK or NG



OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK DOOR SWITCH INPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM harness connectors B83 (driver side), M90 (passenger side) terminals 62, 12 and ground.

62 (L) – Ground : Approx. 5V
12 (P) – Ground : Approx. 5V

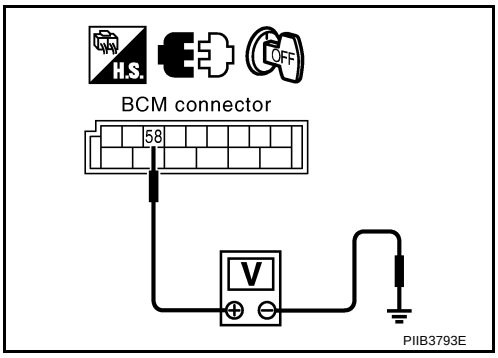
OK or NG

OK >> Check harness connection.
NG >> Replace BCM.

1 – 2 CHECK BACK DOOR SWITCH (COUPE)

1. CHECK BACK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check back door switch (“BACK DOOR SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

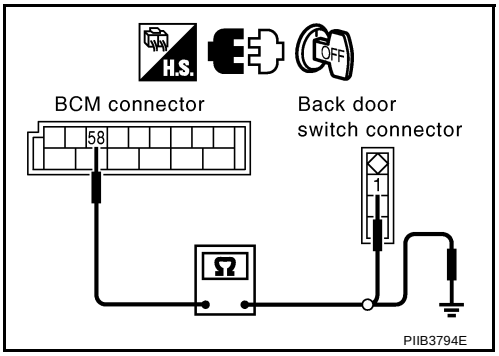
Without CONSULT-III

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition of back door switch	Voltage [V] (Approx.)
	(+)	(–)		
M83	58 (R/W)	Ground	Open	0
			Close	Buttery voltage

OK or NG

OK >> Back door switch is OK.
NG >> GO TO 2.



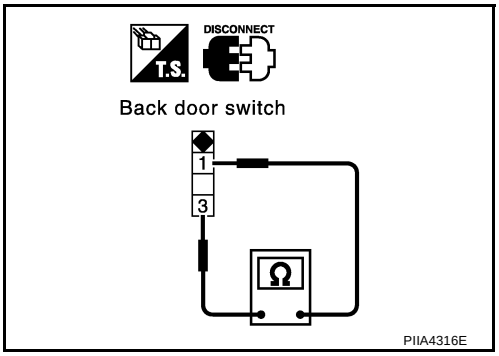
2. CHECK BACK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door switch connectors.
3. Check continuity between BCM harness connector B83 terminal 58 and back door switch harness connector T12 terminal 1.

58 (R/W) - 1 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 58 and ground.

58 (R/W) - Ground : Continuity should not exist.



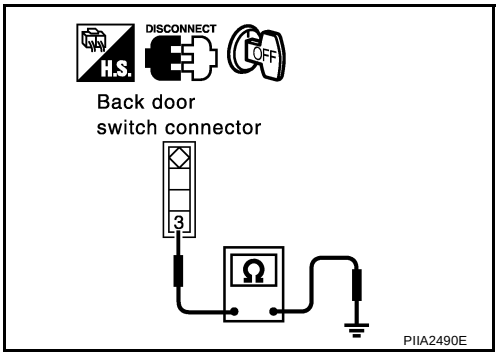
OK or NG

OK >> GO TO 3.
NG >> Repair or replace back door switch harness.

3. CHECK BACK DOOR SWITCH

Check continuity between door switch terminals 1 and 3.

Terminal		Condition of back door switch	Continuity
1	3	Open position	Yes
		Closed position	No



OK or NG

OK >> GO TO 4.
NG >> Replace back door switch.

4. CHECK BACK DOOR SWITCH GROUND CIRCUIT

Check continuity between back door switch harness connector T12 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.

OK or NG

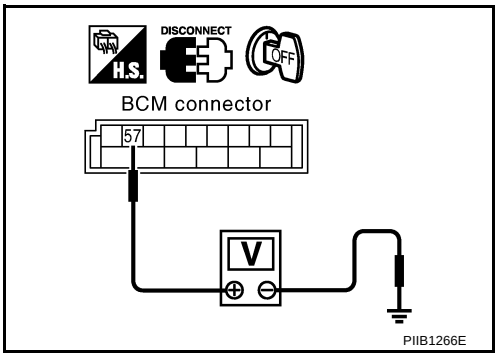
OK >> Back door switch circuit is OK.
NG >> Repair or replace harness.

1 – 3 CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) (ROADSTER)

1. CHECK TRUNK ROOM LAMP SWITCH INPUT SIGNAL

With CONSULT-III

Check trunk lid opener switch (“TRUNK OPN MNTR”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
TRNK OPN MNTR	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

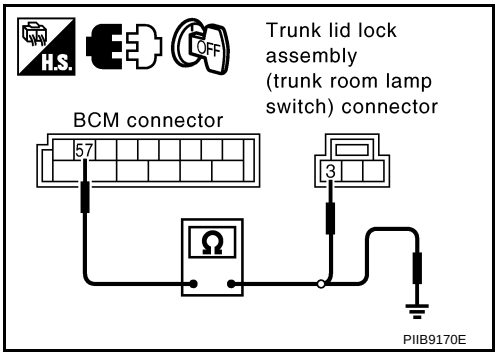
Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition of trunk room lamp switch	Voltage [V] (Approx.)
	(+)	(–)		
B83	57 (R/W)	Ground	Open	0
			Close	Battery voltage*

*: When interior lamp battery saver control is in OFF. → Approx 5V.

OK or NG

OK >> Trunk room lamp switch is OK .
NG >> GO TO 2.



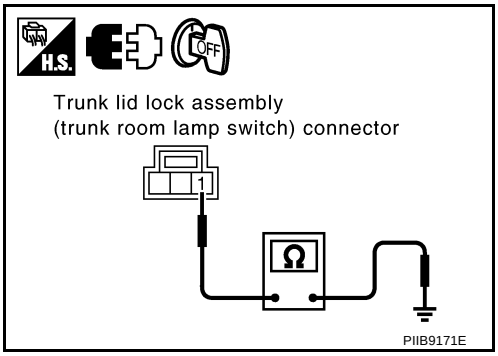
2. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) and BCM connector.
3. Check continuity between trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 3 and BCM harness connector B83 terminal 57.

   57 (R/W) - 3 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 57 and ground.

   57 (R/W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Replace trunk lid lock assembly (trunk room lamp switch) harness.

3. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 1 and ground.

   1 (B) - Ground : Continuity should exist.

OK or NG

OK >> Trunk lid lock assembly (trunk room lamp switch) is OK.
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.

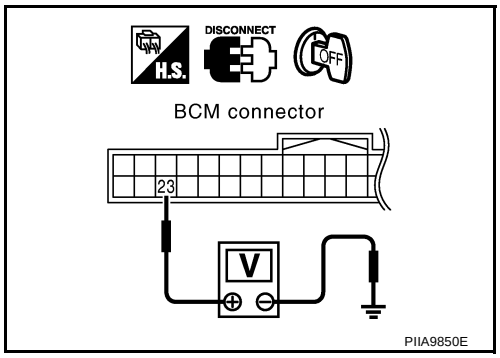
Diagnostic Procedure 2

NIS00036

CHECK SECURITY INDICATOR LAMP

1. SECURITY INDICATOR LAMP ACTIVE TEST

With CONSULT-III



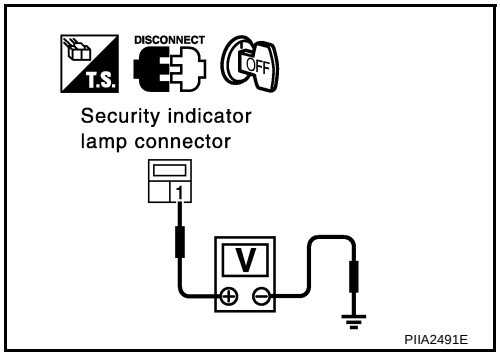
Check “THEFT IND” in “ACTIVE TEST” mode with CONSULT-III.

Perform operation shown on display.
Indicator lamp should illuminate.

Without CONSULT-III

1. Disconnect BCM connector.
2. Check voltage between BCM connector M90 terminal 23 and ground.

23 (G/OR) - Ground : Battery voltage



OK or NG

OK >> Security indicator lamp is OK.
NG >> GO TO 2.

2. CHECK POWER SUPPLY CIRCUIT FOR SECURITY INDICATOR LAMP

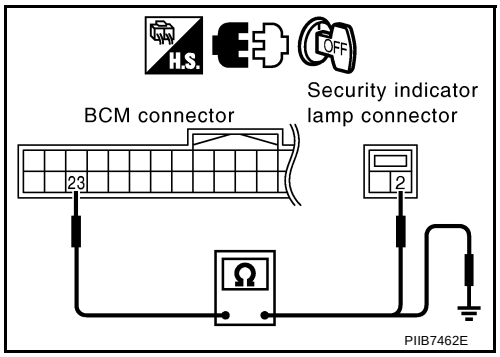
1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp connector M34 terminal 1 and ground.

1 (R/W) - Ground : Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Check the following.

- 10A fuse [No. 19, located in fuse block (J/B)]
- Harness for open or short between security indicator lamp and fuse



3. CHECK SECURITY INDICATOR LAMP CIRCUIT

1. Check continuity between BCM harness connector M90 terminal 23 and security indicator lamp harness connector M34 terminal 2.

23 (G/OR) - 2 (G/OR) : Continuity should exist.

2. Check continuity between BCM harness connector M90 terminal 23 and ground.

23 (G/OR) - Ground : Continuity should not exist.

OK or NG

OK >> Check indicator lamp condition.
NG >> Repair harness or connector.

Diagnostic Procedure 3

NIS00037

CHECK DOOR KEY CYLINDER SWITCH

1. CHECK DOOR KEY CYLINDER SWITCH DRIVER SIDE OPERATION

Do doors lock/unlock when using the key?

YES or NO

YES >> Door key cylinder switch operation is OK.
NO >> Check door key cylinder switch circuit. Refer to BL-47, "Check Door Key Cylinder Switch" .

Diagnostic Procedure 4

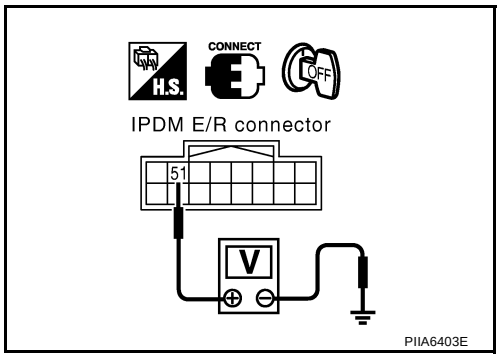
NIS00038

CHECK VEHICLE SECURITY HORN ALARM

First perform the “SELF-DIAG RESULTS” of “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated in “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HORN OPERATION

Check if horn sounds with horn switch.



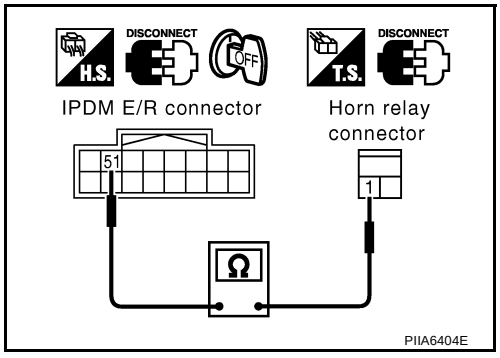
Does horn operate?

YES >> GO TO 2.
NO >> Check horn circuit. Refer to WW-53, "HORN" .

2. CHECK IPDM E/R INPUT SIGNAL

Check voltage between IPDM E/R connector E9 terminal 51 and ground.

51 (G/B) – Ground : Battery voltage.



OK or NG

OK >> Replace IPDM E/R.
NG >> GO TO 3.

3. CHECK HORN RERAY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay connector.
3. Check continuity between IPDM E/R harness connector E9 terminal 51 and horn relay harness connector E21 terminal 1.

1 (G/B) - 51(G/B) : Continuity should exist.

OK or NG

OK >> Horn circuit is OK.
NG >> Repair or replace harness.

Diagnostic Procedure 5

NIS00039

CHECK VEHICLE SECURITY HEADLAMP ALARM

1. CHECK HEAD LAMP OPERATION

Does headlamp come on when turning lighting switch “ON”?

YES or NO

YES >> Headlamp alarm circuit is OK.
NO >> Check headlamp system. Refer to,,, LT-32, "HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -"LT-5, "HEADLAMP (FOR USA)" .

Diagnostic Procedure 6

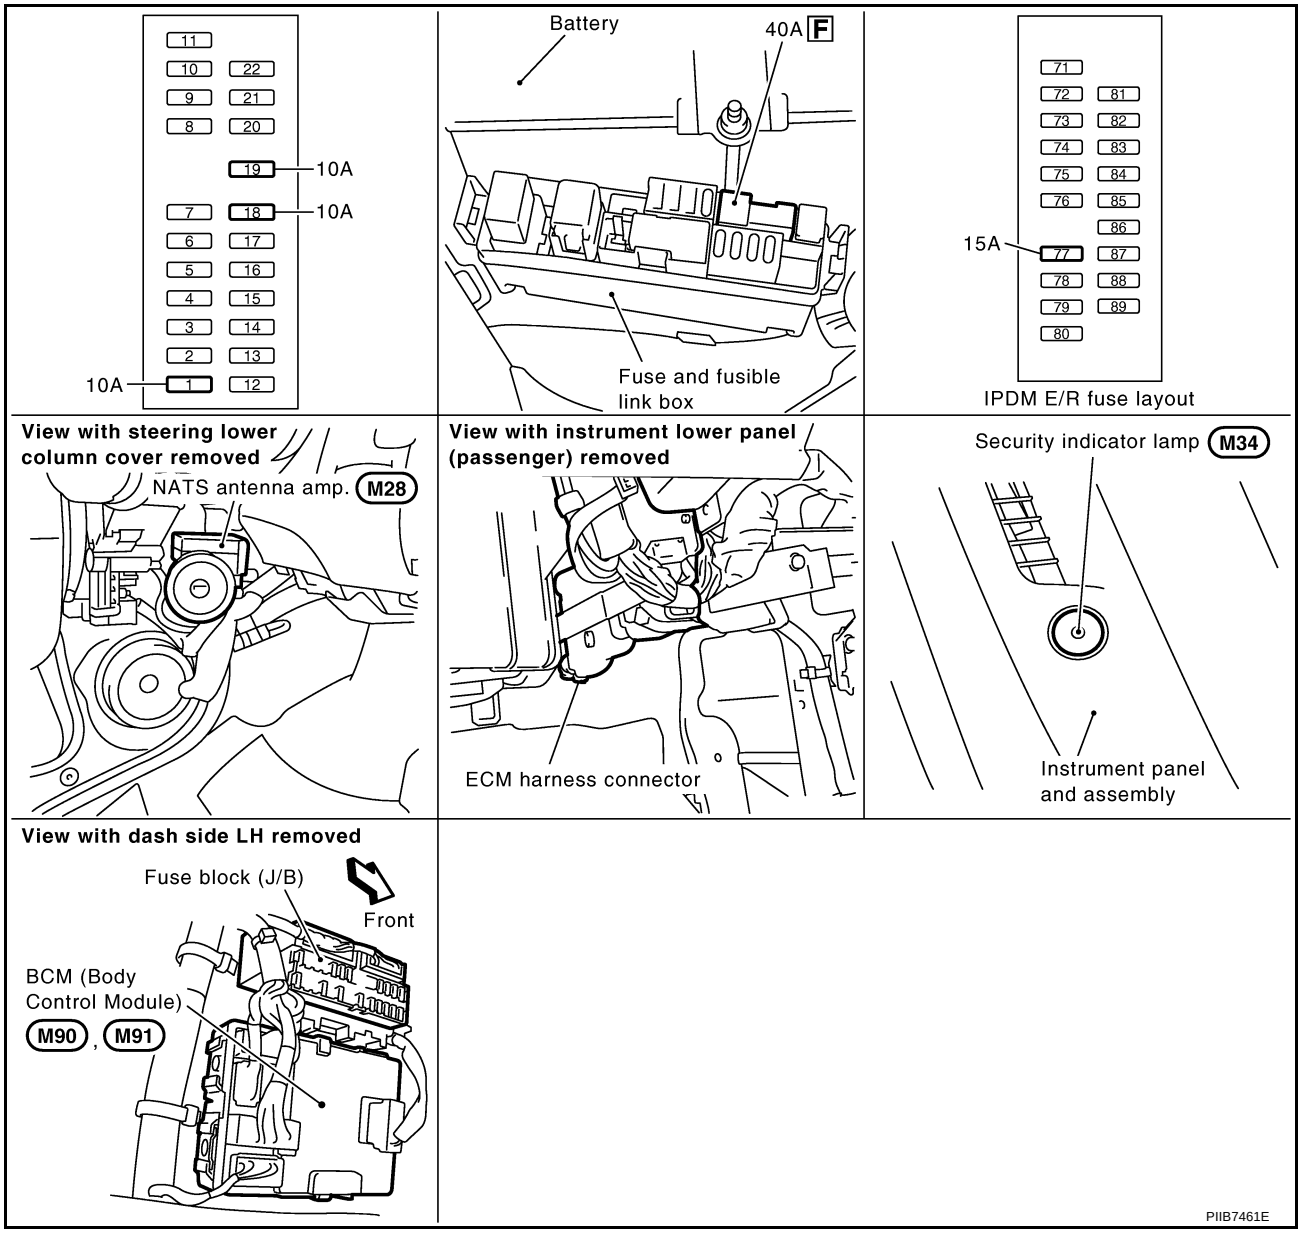
NIS0003A

CHECK DOOR LOCK AND UNLOCK SWITCH

1. CHECK DOOR LOCK AND UNLOCK SWITCH INPUT SIGNAL

Does doors lock/unlock when using power window main switch (door lock and unlock switch) or power window sub-switch (door lock and unlock switch)?

YES or NO?



YES >> Door lock and unlock switch is OK.
NO >> Refer to BL-42, "Check Door Lock and Unlock Switch" .

NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

PFP:25386

Component Parts and Harness Connector Location

NIS0003B

NOTE:

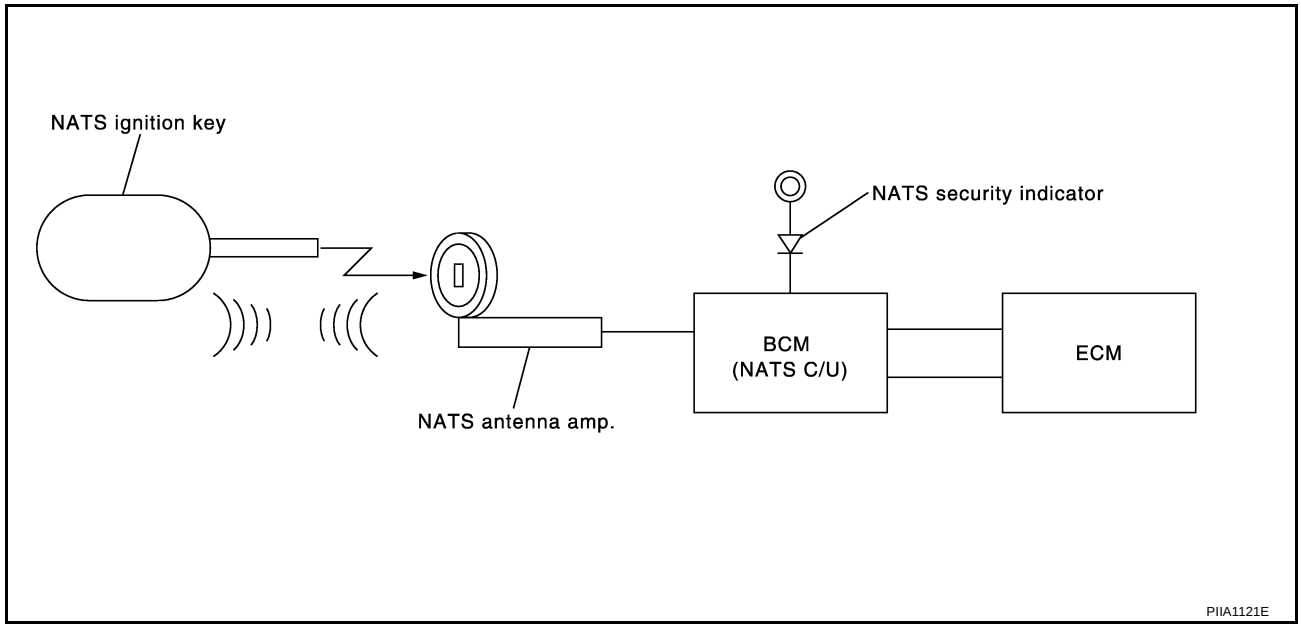
If customer reports a “No start” condition, request ALL KEYS to be brought to an NISSAN dealer in case of a NVIS (NATS) malfunction.

System Description

NIS0003C

NVIS (Nissan Vehicle Immobilizer System-NATS) has the following immobilizer functions:

- Since only NVIS (NATS) ignition keys, whose ID Nos. have been registered into the ECM and BCM, allow the engine to run, a vehicle operation without a key registered in NVIS (NATS) is prevented by NVIS (NATS).
  That is to say, NVIS (NATS) will immobilize the engine if someone tries to start it without the registered key of NVIS (NATS).
- All of the originally supplied ignition key IDs (except for card plate key) have been registered in NVIS (NATS).
  If requested by the vehicle owner, a maximum of five key IDs can be registered into the NVIS (NATS) components.
- The security indicator blinks when the ignition switch is in “OFF” or “ACC” position. Therefore, NVIS (NATS) warns outsiders that the vehicle is equipped with the anti-theft system.
- When NVIS (NATS) detects trouble, the security indicator lamp lights up while ignition key is in the “ON” position.
- NVIS (NATS) trouble diagnoses, system initialization and additional registration of other NVIS (NATS) ignition key IDs must be carried out using CONSULT-III hardware and CONSULT-III NVIS (NATS) software.
  When NVIS (NATS) initialization has been completed, the ID of the inserted ignition key is automatically registered in NVIS (NATS). Then, if necessary, additional registration of other NVIS (NATS) ignition key IDs can be carried out.
  Regarding the procedures of NVIS (NATS) initialization and NVIS (NATS) ignition key ID registration, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS.
- **When servicing a malfunction of the NVIS (NATS) (indicated by lighting up of Security Indicator Lamp) or registering another NVIS (NATS) ignition key ID No., it may be necessary to re-register original key identification. Therefore, be sure to receive ALL KEYS from vehicle owner.**



System Composition

NIS0003D

The immobilizer function of the NVIS (NATS) consists of the following:

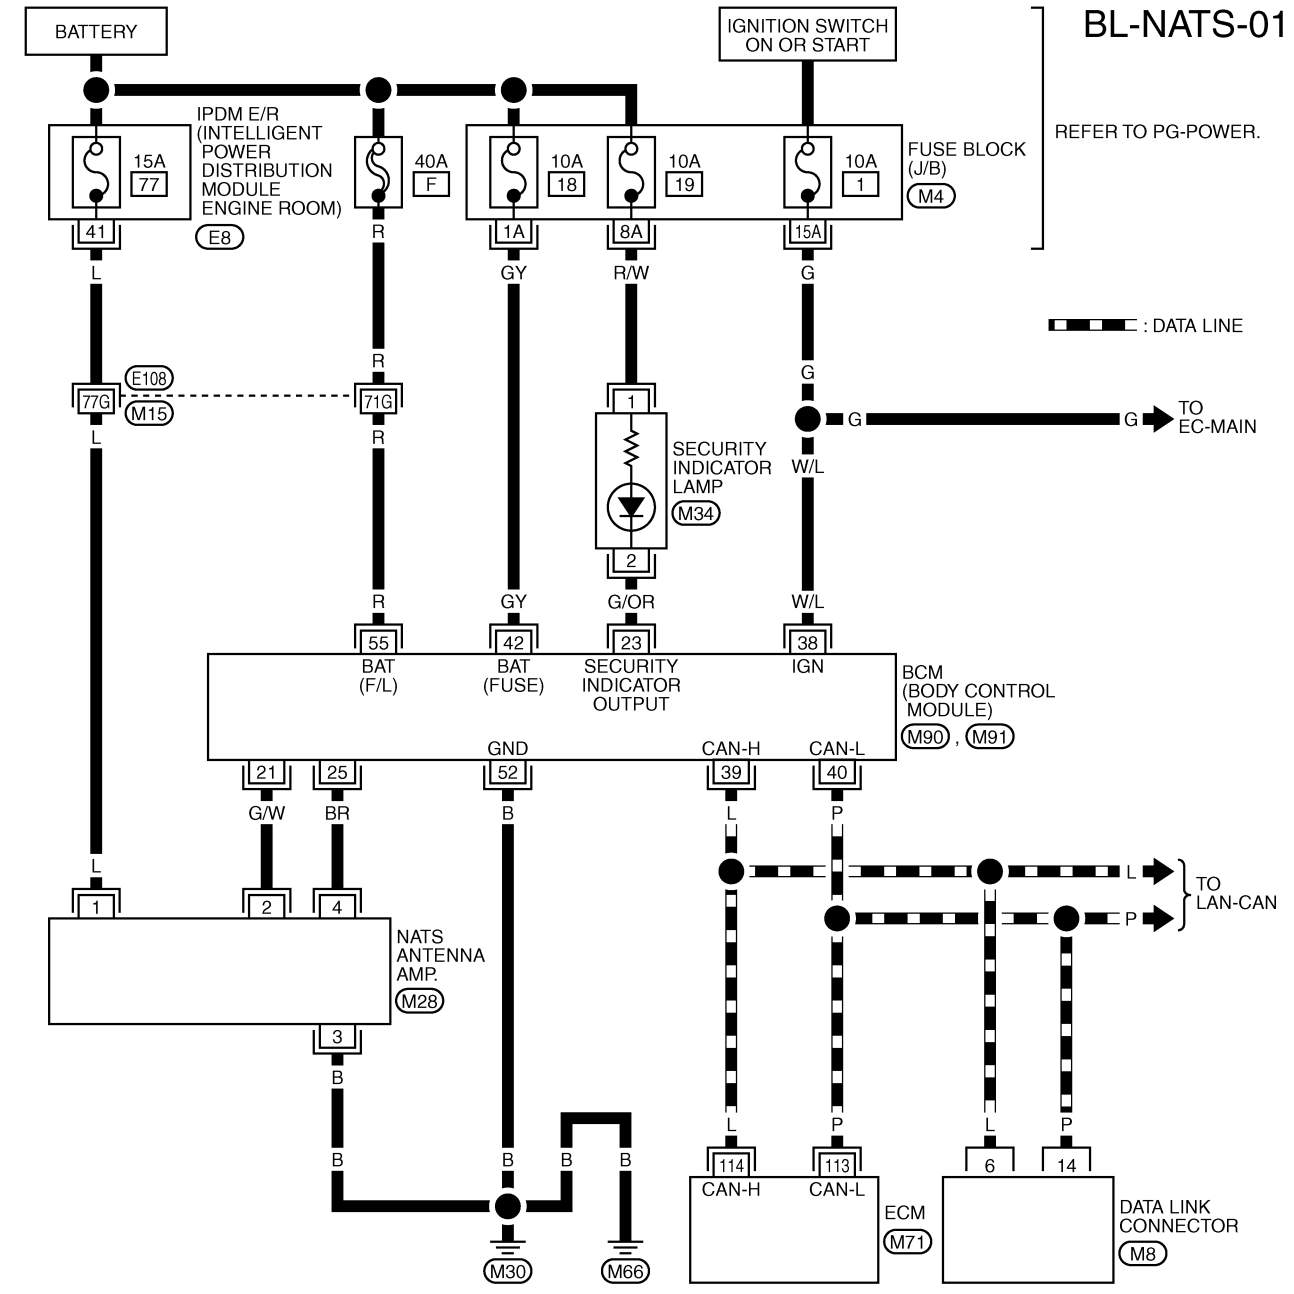
- NATS ignition key
- NATS antenna amp. located in the ignition key cylinder
- BCM
- Engine control module (ECM)
- Security indicator

NOTE:
The communication between ECM and BCM uses the CAN communication system.

ECM Re-communicating Function

NIS0003E

Performing following procedure can automatically perform re-communication of ECM and BCM, but only when the ECM has been replaced with a new one (*1).
*1: New one means a virgin ECM which has never been energized on-board.
(In this step, initialization procedure by CONSULT-III is not necessary)



NOTE:

- **When registering new Key IDs or replacing the ECM other than brand new, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS.**
- **If multiple keys are attached to the key holder, separate them before work.**
- **Distinguish keys with unregistered key ID from those with registered ID.**

1. Install ECM.
2. Using a registered key (*2), turn ignition switch to “ON”.
   *2: To perform this step, use the key (except for card plate key) that has been used before performing ECM replacement.
3. Maintain ignition switch in “ON” position for at least 5 seconds.
4. Turn ignition switch to “OFF”.
5. Start engine.
   If engine can be started, procedure is completed.
   If engine cannot be started, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS and initialize control unit.

Wiring Diagram — NATS —

NIS0003F

TIWT2271E

Terminals and Reference Value for BCM

NIS0003G

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage (V) (Approx.)
21	G/W	NATS antenna amp.	Input/ Output	Ignition switch (OFF → ON)	Just after turning ignition switch “ON”: Pointer of tester should move.
23	G/OR	Security indicator lamp	Output	Goes OFF → illuminates (Every 2.4 seconds)	Battery voltage → 0
25	BR	NATS antenna amp.	Input/ Output	Ignition switch (OFF → ON)	Just after turning ignition switch “ON”: Pointer of tester should move.
38	W/L	Ignition switch (ON)	Input	Ignition switch (ON or START)	Battery voltage
39	L	CAN-H	Input/ Output	—	—
40	P	CAN-L	Input/ Output	—	—
42	GY	Power source (Fuse)	Input	—	Battery voltage
52	B	Ground	—	—	0
55	R	Power source (Fusible link)	Input	—	Battery voltage

CONSULT-III

NIS0003H

CONSULT-III INSPECTION PROCEDURE

Refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

CONSULT-III DIAGNOSTIC TEST MODE FUNCTION

CONSULT-III DIAGNOSTIC TEST MODE	Description
C/U INITIALIZATION	When replacing any of the following components, C/U initialization and re-registration of all NATS ignition keys are necessary. [(NATS ignition key BCM/ ECM)

NOTE:

- When any initialization is performed, all ID previously registered will be erased and all NATS ignition keys must be registered again.

NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART

Detected items [NVIS (NATS) program card screen terms]	P No. Code (Self-diagnostic result of “ENGINE”)	Malfunction is detected when.....	Reference page
CHAIN OF ECM-IMMU [P1612]	NATS MALFUNCTION P1612	Communication impossible between ECM and BCM In rare case, “CHAIN OF ECM-IMMU” might be stored during key registration procedure, even if the system is not malfunctioning.	Refer to BL-158, "Diagnostic Procedure 1" .
DIFFERENCE OF KEY [P1615]	NATS MALFUNCTION P1615	BCM can receive the key ID signal but the result of ID verification between key ID and BCM is NG.	Refer to BL-159, "Diagnostic Procedure 2" .
CHAIN OF IMMU-KEY [P1614]	NATS MALFUNCTION P1614	BCM cannot receive the key ID signal.	Refer to BL-160, "Diagnostic Procedure 3" .

Detected items [NVIS (NATS) program card screen terms]	P No. Code (Self-diagnostic result of “ENGINE”)	Malfunction is detected when.....	Reference page
ID DISCORD, IMM-ECM [P1611]	NATS MALFUNCTION P1611	The result of ID verification between BCM and ECM is NG. System initialization is required.	Refer to BL-161, "Diagnostic Procedure 4" .
LOCK MODE [P1610]	NATS MALFUNCTION P1610	When the starting operation is carried out five or more times consecutively under the following conditions, NVIS (NATS) will shift the mode to one which prevents the engine from being started. ● Unregistered ignition key is used. ● BCM or ECM’s malfunctioning.	Refer to BL-165, "Diagnostic Procedure 6" .
DON'T ERASE BEFORE CHECKING ENG DIAG	—	All engine trouble codes except NVIS (NATS) trouble code has been detected in ECM.	Refer to BL-155, "Work Flow" .

Work Flow

NIS002B3

1. LISTEN TO CUSTOMER COMPLAINT OR REQUEST

Get symptoms or listen to customer complaints or request.

NOTE:
In case of request for NVIS (NATS) system repair, the key ID re-registration might be necessary. Keep all the ignition keys before work for the re-registration.

Key ID registration request>>Register ignition key by referring to CONSULT-III Operation Manual NATS-IVIS/NVIS.
Request for malfunction repair.>>GO TO 2.

2. CONFIRM SELF DIAGNOSIS 1

Start CONSULT-III with ignition switch in ON position and confirm “SELF DIAG RESULT” with “ENGINE”.

Is DTC detected?

No malfunction>>GO TO 3.
If the codes detected are between the interval P1610 to P1615.>> Refer to BL-154, "NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART" .
If the codes detected are between the interval P1610 to P1615 and others.>> GO TO 4.

3. CHECK SECURITY INDICATOR FUNCTION

Check that security indicator for lighting up fulfill the two conditions below.

- Security indicator lights off when ignition switch is ON position.
- Security indicator blinks when ignition switch is in any position except ON.

Lighting up condition is normal.>>Inspection END.
Lighting up condition is malfunctioning.>>Perform security indicator Inspection. Refer to BL-163, "Diagnostic Procedure 5" .

4. TROUBLE DIAGNOSIS

Perform by priority the trouble diagnosis for the codes which are not included in the interval P1610 to P1615.

Is DTC detected?

No malfunction>>Inspection END.
If the codes detected are between the interval P1610 to P1615.>>BL-154, "NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART".

DIAGNOSTIC SYSTEM DIAGRAM

Diagnostic Procedure 1

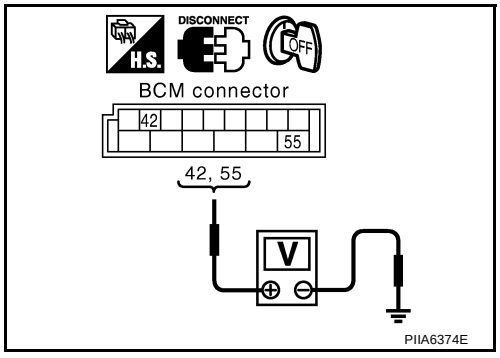
NIS0003K

Self-diagnostic results:
“CHAIN OF ECM-IMMU” displayed on CONSULT-III screen
First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF ECM-IMMU” displayed on CONSULT-III screen.

NOTE:
In rare case, “CHAIN OF ECM-IMMU” might be stored during key registration procedure, even if the system is not malfunctioning.



Is CONSULT-III screen displayed as above?

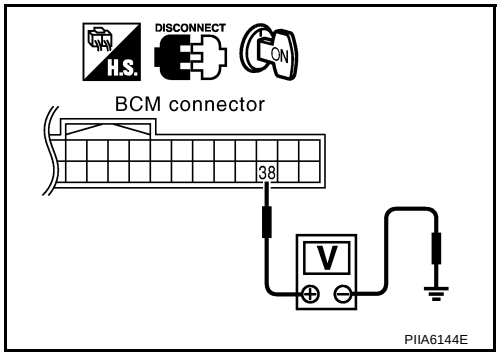
Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. CHECK POWER SUPPLY CIRCUIT FOR BCM

1. Disconnect BCM connector.
2. Check voltage between BCM harness connector M91 terminal 42, 55 and ground with CONSULT-III or tester.

42 (GY) - Ground : Battery voltage
55 (R) - Ground : Battery voltage

OK or NG



OK >> GO TO 3.
NG >> Check the following.

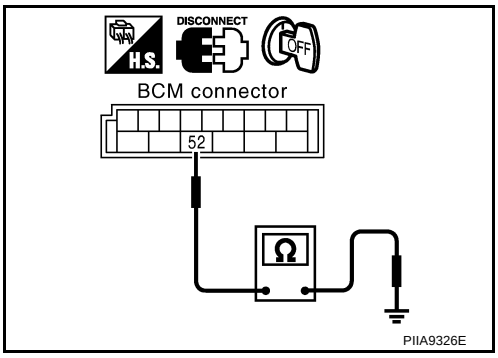
- 40A fusible link (letter **F** , located in fuse and fusible link box)
- 10A fuse [No.18, located in the fuse block (J/B)]
- Harness for open or short between fusible link and BCM. **Ref. Part No. C1**
- Harness for open or short between fuse and BCM. **Ref. Part No. C1**

3. CHECK IGN SW. ON SIGNAL

1. Turn ignition switch ON.
2. Check voltage between BCM harness connector M90 terminal 38 and ground with CONSULT-III or tester.

38 (W/L) - Ground : Battery voltage

OK or NG



OK >> GO TO 4.
NG >> Check the following.

- 10A fuse [No. 1, located in the fuse block (J/B)]
- Harness for open or short between fuse and BCM. **Ref. part No. C2**

4. CHECK GROUND CIRCUIT FOR BCM

1. Turn ignition OFF.
2. Check continuity between BCM harness connector M91 terminal 52 and ground.

52 (B) - Ground : Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness. **Ref. part No. C3**

5. REPLACE BCM

1. Replace BCM **Ref. part No. A**
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Does the engine start?

Yes >> BCM is malfunctioning.
- Replace BCM. **Ref. part No. A**
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

No >> ECM is malfunctioning.
- Replace ECM. **Ref. part No. B**
- Perform initialization or re-communicating function.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.
- For re-communicating function, refer to BL-152, "ECM Re-communicating Function" .

Diagnostic Procedure 2

NIS0003L

Self-diagnostic results:
“DIFFERENCE OF KEY” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “DIFFERENCE OF KEY” displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III. Re-register all NATS ignition key IDs.
For initialization and registration of NATS ignition key IDs, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows message on the screen.

Can the system be initialized and can the engine be started with re-registered NATS ignition key?

Yes >> Ignition key ID was unregistered. **Ref. part No. D**
No >> BCM is malfunctioning.
- Replace BCM. **Ref. part No. A**
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Diagnostic Procedure 3

NIS0003M

Self-diagnostic results:
“CHAIN OF IMMU-KEY” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF IMMU-KEY” displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as shown in figure?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to BL-166, "How to Replace NATS Antenna Amp." .

OK or NG

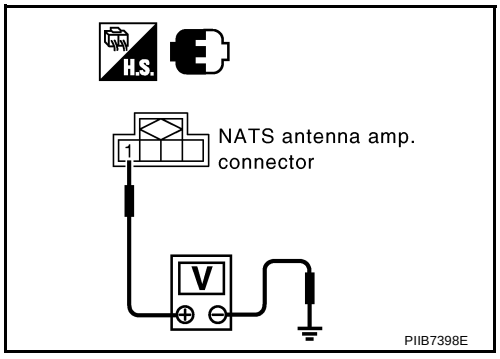
OK >> GO TO 3.
NG >> Reinstall NATS antenna amp. correctly.

3. CHECK NVIS (NATS) IGNITION KEY ID CHIP

Start engine with another registered NATS ignition key.

Does the engine start?

Yes >> Ignition key ID chip is malfunctioning.
- Replace the ignition key. **Ref. part No, E5**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.



No >> GO TO 4.

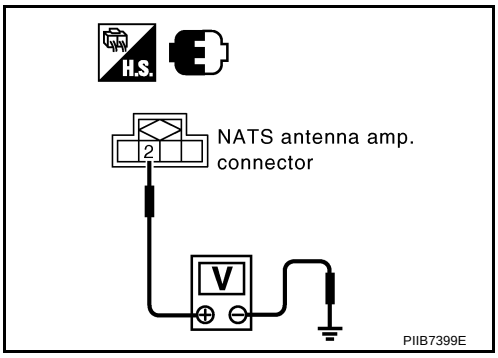
4. CHECK POWER SUPPLY FOR NATS ANTENNA AMP.

1. Turn ignition switch “ON”.
2. Check voltage between NATS antenna amp. harness connector M28 terminal 1 and ground with CONSULT-III or tester.

Just after turning ignition switch “ON”

Voltage: Approx. 5V (For 3 seconds)

OK or NG



OK >> GO TO 5.
NG >>
- Check harness for open or short between NATS antenna amp. and BCM.

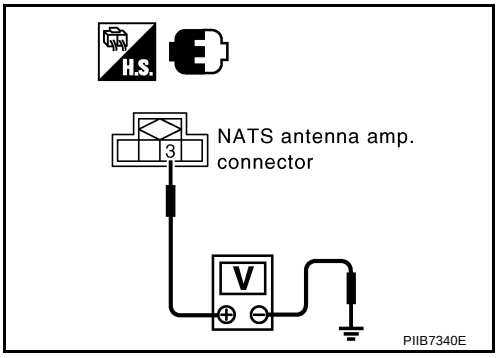
NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

5. CHECK NATS ANTENNA AMP. SIGNAL LINE- 1

Check voltage between NATS antenna amp. harness connector M28 terminal 2 and ground with analogue tester.

Before turning ignition switch "ON"
Voltage: 0V
Just after turning ignition switch "ON"
: Pointer of tester should move.

OK or NG



OK >> GO TO 6.
NG >> ● Check harness for open or short between NATS antenna amp. and BCM.

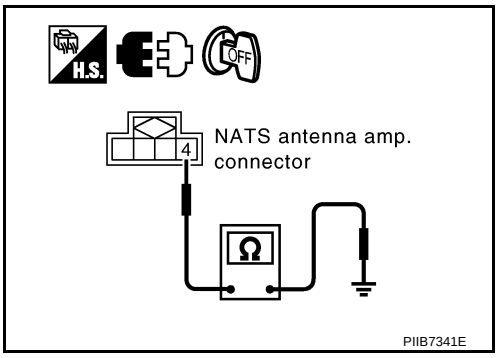
NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

6. CHECK NATS ANTENNA AMP. SIGNAL LINE- 2

Check voltage between NATS antenna amp. harness connector M28 terminal 3 and ground with analogue tester.

Before turning ignition switch "ON"
Voltage: 0V
Just after turning ignition switch "ON"
: Pointer of tester should move.

OK or NG



OK >> GO TO 7.
NG >> ● Check harness for open or short between NATS antenna amp. and BCM.

NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

7. CHECK NATS ANTENNA AMP. GROUND LINE CIRCUIT

1. Turn ignition switch "OFF".
2. Check continuity between NATS antenna amp. connector harness M28 terminal 4 and ground.

4 (BR) – Ground : Continuity should exist.

OK or NG

OK >> NATS antenna amp. is malfunctioning. **Ref. part No. E6**
NG >> Replace NATS antenna amp.

● Check harness for open or short between NATS antenna amp. and BCM.

NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

Diagnostic Procedure 4

NIS0003N

Self-diagnostic results:
"ID DISCORD, IMM-ECM" displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “ID DISCORD, IMM-ECM” displayed on CONSULT-III screen.

NOTE:
“ID DISCORD IMM-ECM”:
Registered ID of BCM is in discord with that of ECM.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III. Re-register all NATS ignition key IDs.
For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows message on the screen.

Can the system be initialized?

Yes >> Start engine. (END)
- (System initialization had not been completed. **Ref. part No. F**)

No >> ECM is malfunctioning.
- Replace ECM. **Ref. part No. B**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Diagnostic Procedure 5

NIS0003O

“SECURITY INDICATOR LAMP DOES NOT LIGHT UP”

1. CHECK FUSE

- Check 10A fuse [No.19, located in the fuse block (J/B)]

  NOTE:
  Refer to BL-150, "Component Parts and Harness Connector Location" .

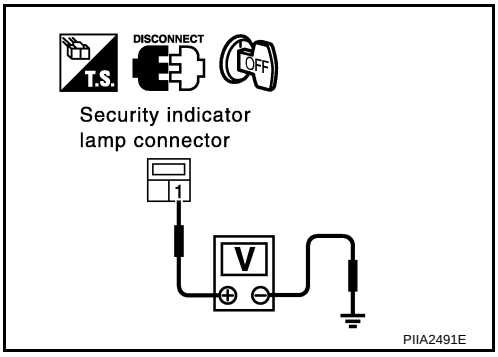
OK or NG

OK >> GO TO 2.
NG >> Replace fuse.

2. CHECK SECURITY INDICATOR LAMP

1. Install 10A fuse.
2. Start engine and turn ignition switch OFF.
3. Check the security indicator lamp lights up.

Security indicator lamp should light up.



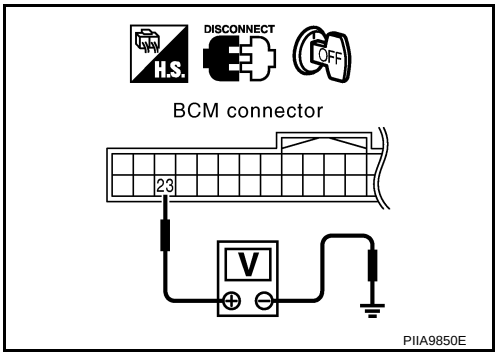
OK or NG

OK >> Inspection END.
NG >> GO TO 3.

3. CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp harness connector M34 terminal 1 and ground.

1 (R/W) – Ground : Battery voltage should exist.



OK or NG

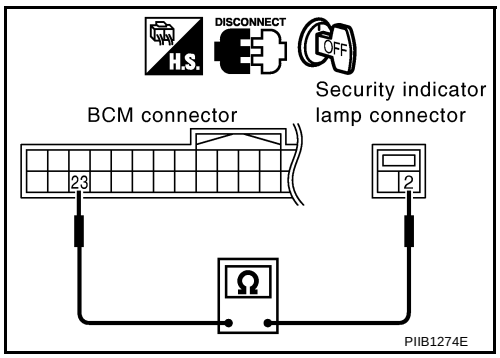
OK >> GO TO 4.
NG >> Check harness for open or short between fuse and security indicator lamp.

4. CHECK BCM FUNCTION

1. Connect security indicator lamp connector.
2. Disconnect BCM (NATS connector.
3. Check voltage between BCM harness connector M90 terminal 23 and ground.

23 (G/OR) – Ground : Battery voltage

OK or NG



OK >> BCM is malfunctioning.
- Replace BCM.
  Ref. part No. A
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NG >> GO TO 5.

5. CHECK SECURITY INDICATOR LAMP CIRCUIT

1. Check continuity between BCM harness connector M90 terminal 23 and security indicator lamp harness connector M34 terminal 2.

23 (G/OR) - 2 (G/OR) : Continuity should exist.

OK or NG

OK >> Check indicator lamp condition.
NG >> Repair harness or connector.

Diagnostic Procedure 6

NIS0003P

Self-diagnostic results:
“LOCK MODE” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “LOCK MODE” is displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. ESCAPE FROM LOCK MODE

1. Turn ignition switch OFF.
2. Turn ignition switch ON with registered key. (Do not start engine.) Wait 5 seconds.
3. Return the key to OFF position. Wait 5 seconds.
4. Repeat steps 2 and 3 twice (total of three cycles).
5. Start the engine.

Does engine start?

Yes >> System is OK (Now system is escaped from “LOCK MODE”).
No >> GO TO 3.

3. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III.
For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows the message on the screen.

Can the system be initialized?

Yes >> System is OK.
No >> GO TO 4.

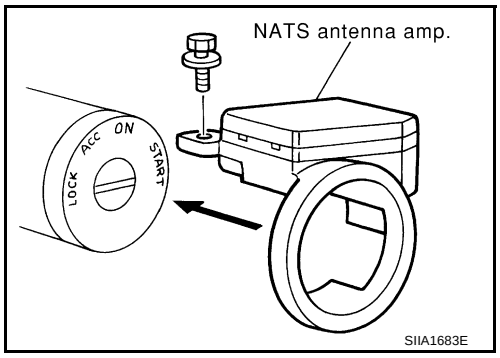
4. PERFORM INITIALIZATION WITH CONSULT-III AGAIN

1. Replace BCM.
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows the message on the screen.

Can the system be initialized?

Yes >> System is OK. (BCM is malfunctioning. **Ref. part No. A**)
No >> ECM is malfunctioning.



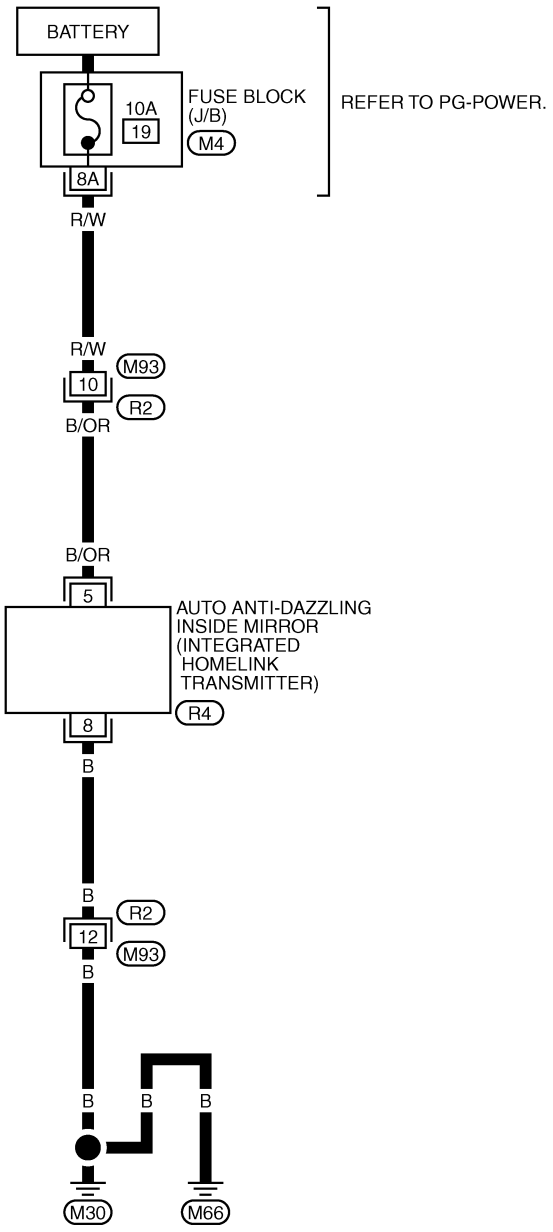
- Replace ECM. **Ref. part No. B**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

How to Replace NATS Antenna Amp.

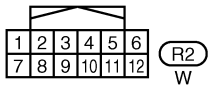
NIS0003Q

NOTE:

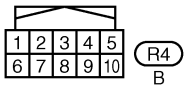
- **If NATS antenna amp. is not installed correctly, NVIS (NATS) system will not operate properly and SELF-DIAG RESULTS on CONSULT-III screen will show “LOCK MODE” or “CHAIN OF IMMU-KEY”.**
- **Initialization is not necessary only when NATS antenna amp. is replaced with a new one.**



INTEGRATED HOMELINK TRANSMITTER



PFP:96401



Wiring Diagram — TRNSCV —

NIS0003R

BL-TRNSCV-01

REFER TO THE FOLLOWING.
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

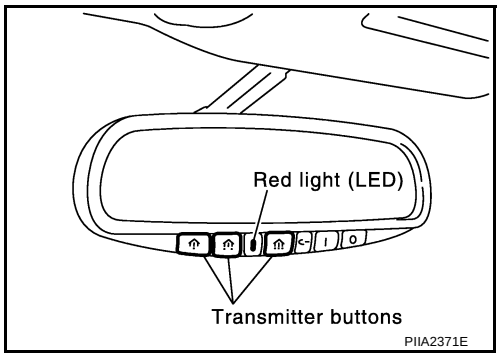
TIWT2272E

Trouble Diagnoses

NIS0003S

DIAGNOSTIC PROCEDURE

SYMPTOM: Transmitter does not activate receiver.



Before conducting the procedure given below, make sure that system receiver (garage door opener, etc.) operates with original, hand-held transmitter. If NG, receiver or hand-held transmitter is malfunctioning, not vehicle related.

1. CHECK ILLUMINATION

1. Turn ignition switch “OFF”.
2. Does red light (LED) of transmitter illuminate when any transmitter button is pressed?

YES or NO

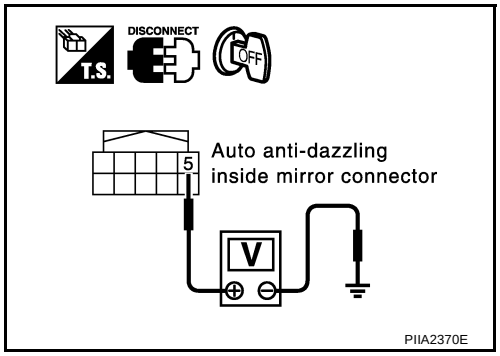
YES >> GO TO 2.
NO >> GO TO 3.

2. CHECK TRANSMITTER

Check transmitter with Tool*.
*:For details, refer to Technical Service Bulletin.

OK or NG

OK >> Receiver or hand-held transmitter malfunction, not vehicle related.
NG >> Replace inside mirror assembly.

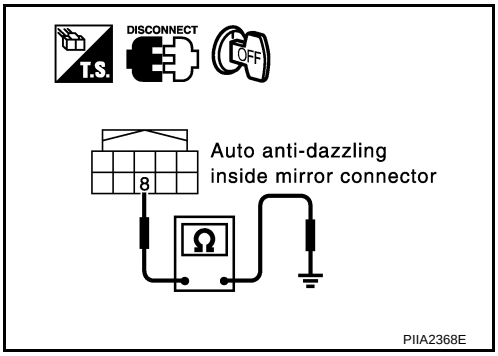


3. CHECK POWER SUPPLY

1. Disconnect transmitter connector.
2. Turn ignition switch “OFF”.
3. Check voltage between auto anti-dazzling inside mirror (integrated homelink transmitter) connector R4 terminal 5 and ground.

5 (B/OR) – Ground : Battery voltage

OK or NG



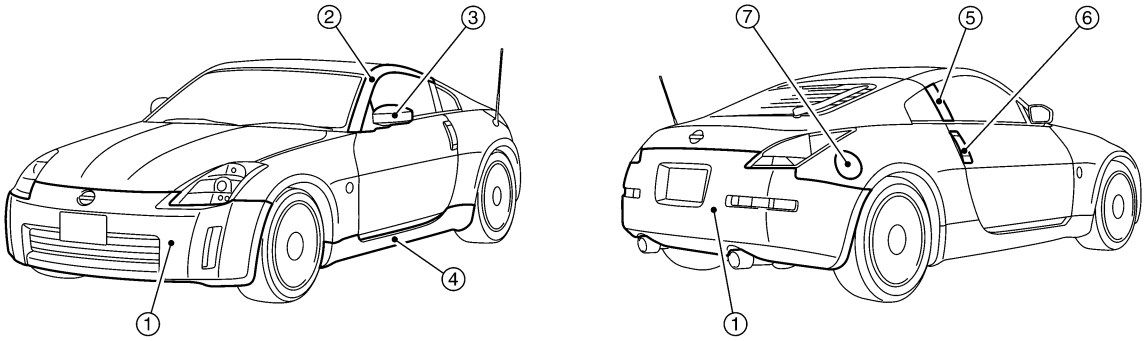
OK >> GO TO 4.
NG >>
- Check 10A fuse. [No. 19 located in the fuse block (J/B)]
- Harness for open or short between fuse and anti-dazzling inside mirror (integrated homelink transmitter).

4. CHECK GROUND CIRCUIT

Check continuity between anti-dazzling inside mirror (integrated homelink transmitter) connector R4 terminal 8 and ground.

8 (B) – Ground : Continuity should exist.

OK or NG



OK >> Replace inside mirror assembly.
NG >> Harness for open or short between anti-dazzling inside mirror (integrated homelink transmitter) body ground.

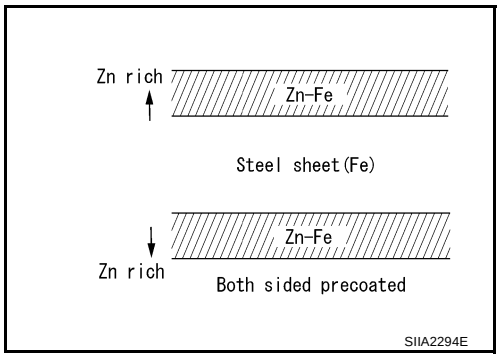
40. Front bumper stay (RH&LH)
41. Rear bumper reinforcement
42. Rear bumper stay (RH&LH)

Corrosion Protection



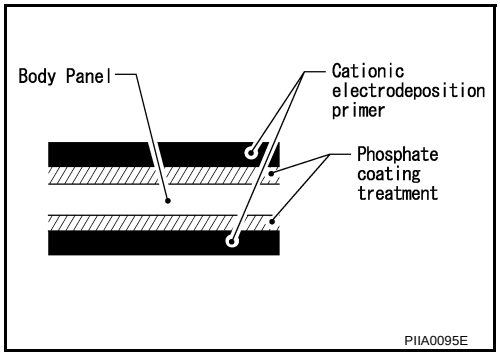
NIS0003X

DESCRIPTION

To provide improved corrosion prevention, the following anti-corrosive measures have been implemented in NISSAN production plants. When repairing or replacing body panels, it is necessary to use the same anti-corrosive measures.

Anti-corrosive precoated steel (Galvannealed steel)

To improve repairability and corrosion resistance, a new type of anti-corrosive precoated steel sheet has been adopted replacing conventional zinc-coated steel sheet.
Galvannealed steel is electroplated and heated to form Zinc-iron alloy, which provides excellent and long term corrosion resistance with cationic electrodeposition primer.

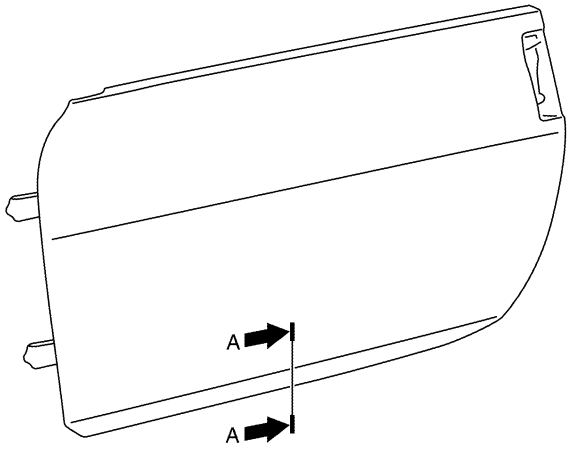


Nissan Genuine Service Parts are fabricated from galvannealed steel. Therefore, it is recommended that GENUINE NISSAN PARTS or equivalent be used for panel replacement to maintain the anti-corrosive performance built into the vehicle at the factory.

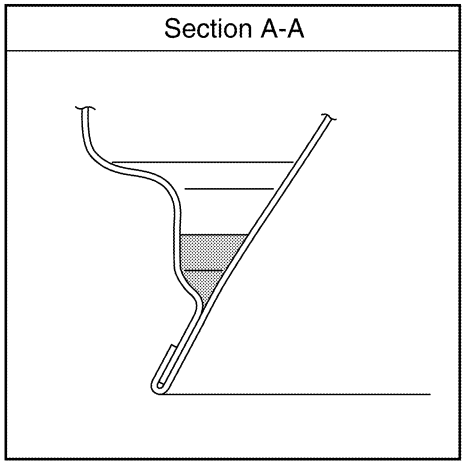
Phosphate coating treatment and cationic electrodeposition primer

A phosphate coating treatment and a cationic electrodeposition primer, which provide excellent corrosion protection, are employed on all body components.

CAUTION:



Confine paint removal during welding operations to an absolute minimum.



Nissan Genuine Service Parts are also treated in the same manner. Therefore, it is recommended that GENUINE NISSAN PARTS or equivalent be used for panel replacement to maintain anti-corrosive performance built into the vehicle at the factory.

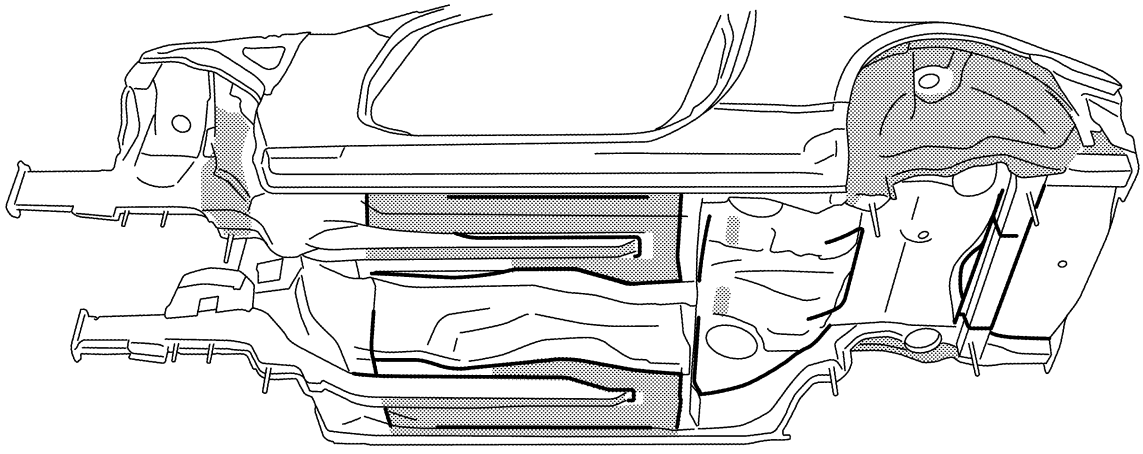
ANTI-CORROSIVE WAX

To improve corrosion resistance, anti-corrosive wax is applied inside the body sill and inside other closed sections. Accordingly, when replacing these parts, be sure to apply anti-corrosive wax to the appropriate areas of the new parts. Select an excellent anti-corrosive wax which will penetrate after application and has a long shelf life.

: Indicates anti-corrosive wax coated portions.

SIIA1979E

UNDERCOATING

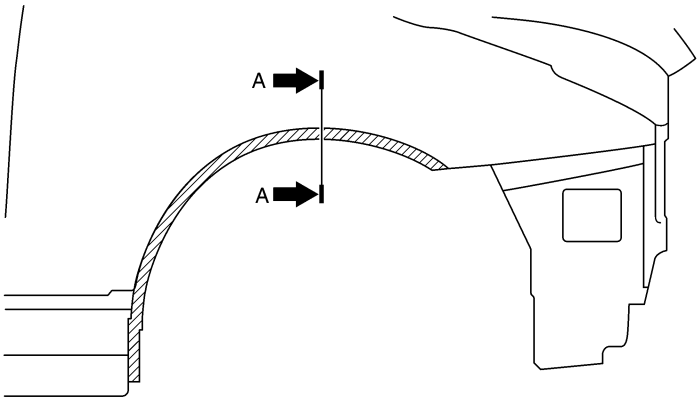


The underside of the floor and wheelhouse are undercoated to prevent rust, vibration, noise and stone chipping. Therefore, when such a panel is replaced or repaired, apply undercoating to that part. Use an undercoating which is rust preventive, soundproof, vibration-proof, shock-resistant, adhesive, and durable.

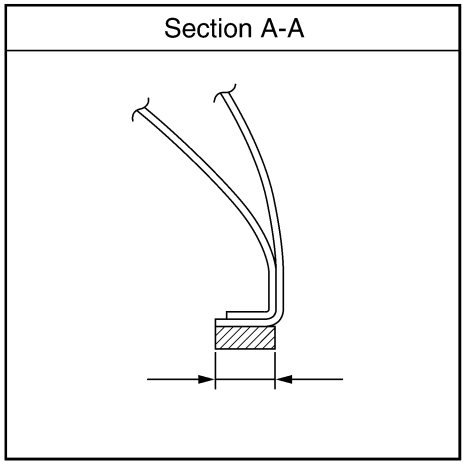
Precautions in undercoating

1. Do not apply undercoating to any place unless specified (such as the areas above the muffler and three way catalyst which are subjected to heat).
2. Do not undercoat the exhaust pipe or other parts which become hot.
3. Do not undercoat rotating parts.
4. Apply bitumen wax after applying undercoating.
5. After putting seal on the vehicle, put undercoating on it.

: Indicates undercoated portions.



: Indicates sealed portions.

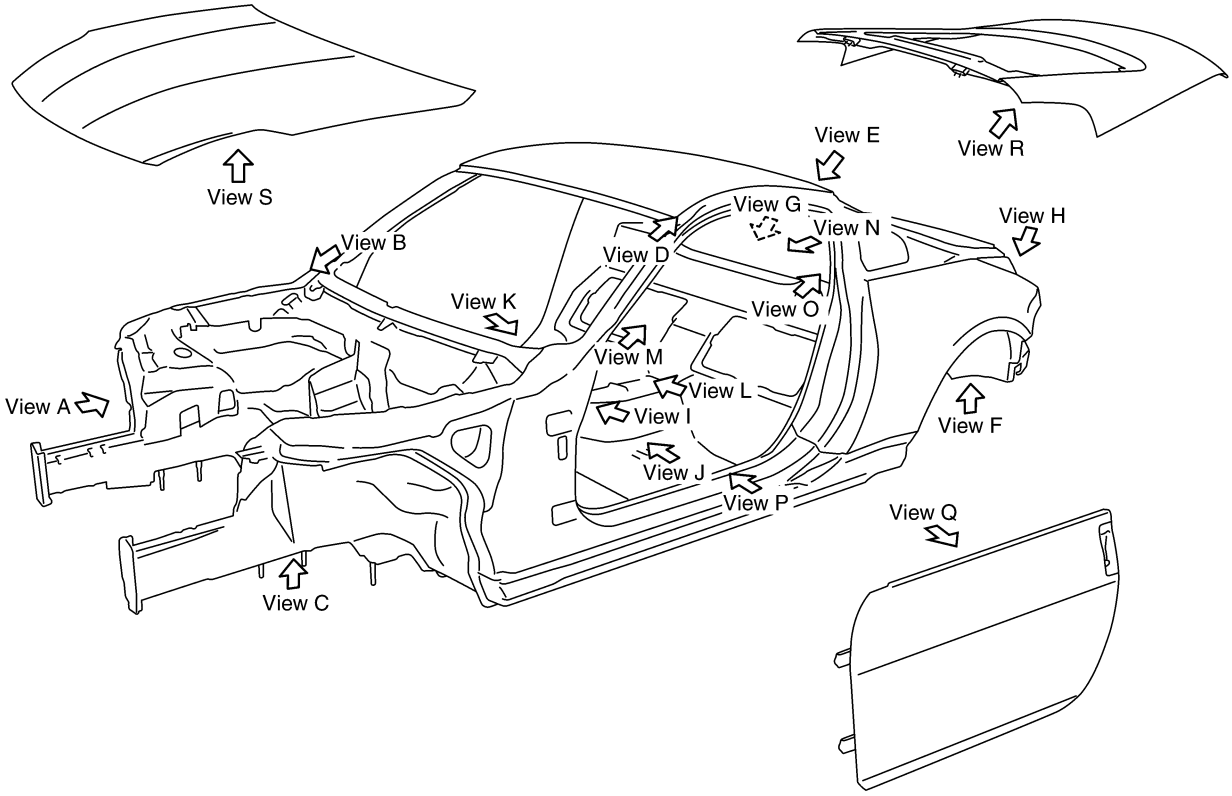


SIIA2298E

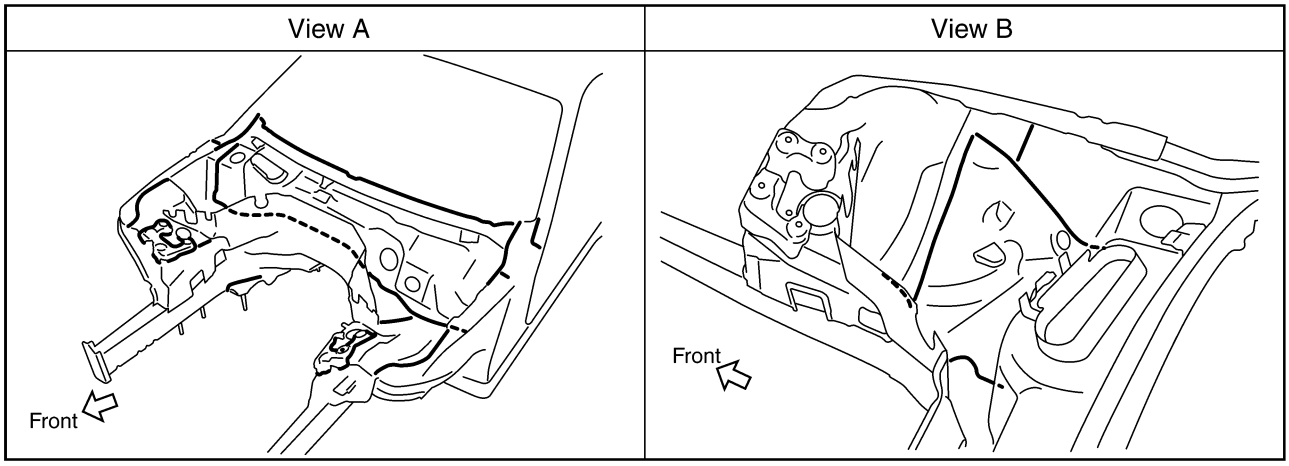
STONE GUARD COAT

To prevent damage caused by stones, the lower outer body panel (fender, door, etc.) have an additional layer of Stone Guard Coating over the ED primer coating. When replacing or repairing these panels, apply Stone Guard coating to the same portions as before. Use a coating which is rust preventive, durable, shock-resistant and has a long shelf life.

: Indicates stone guard coated portions.

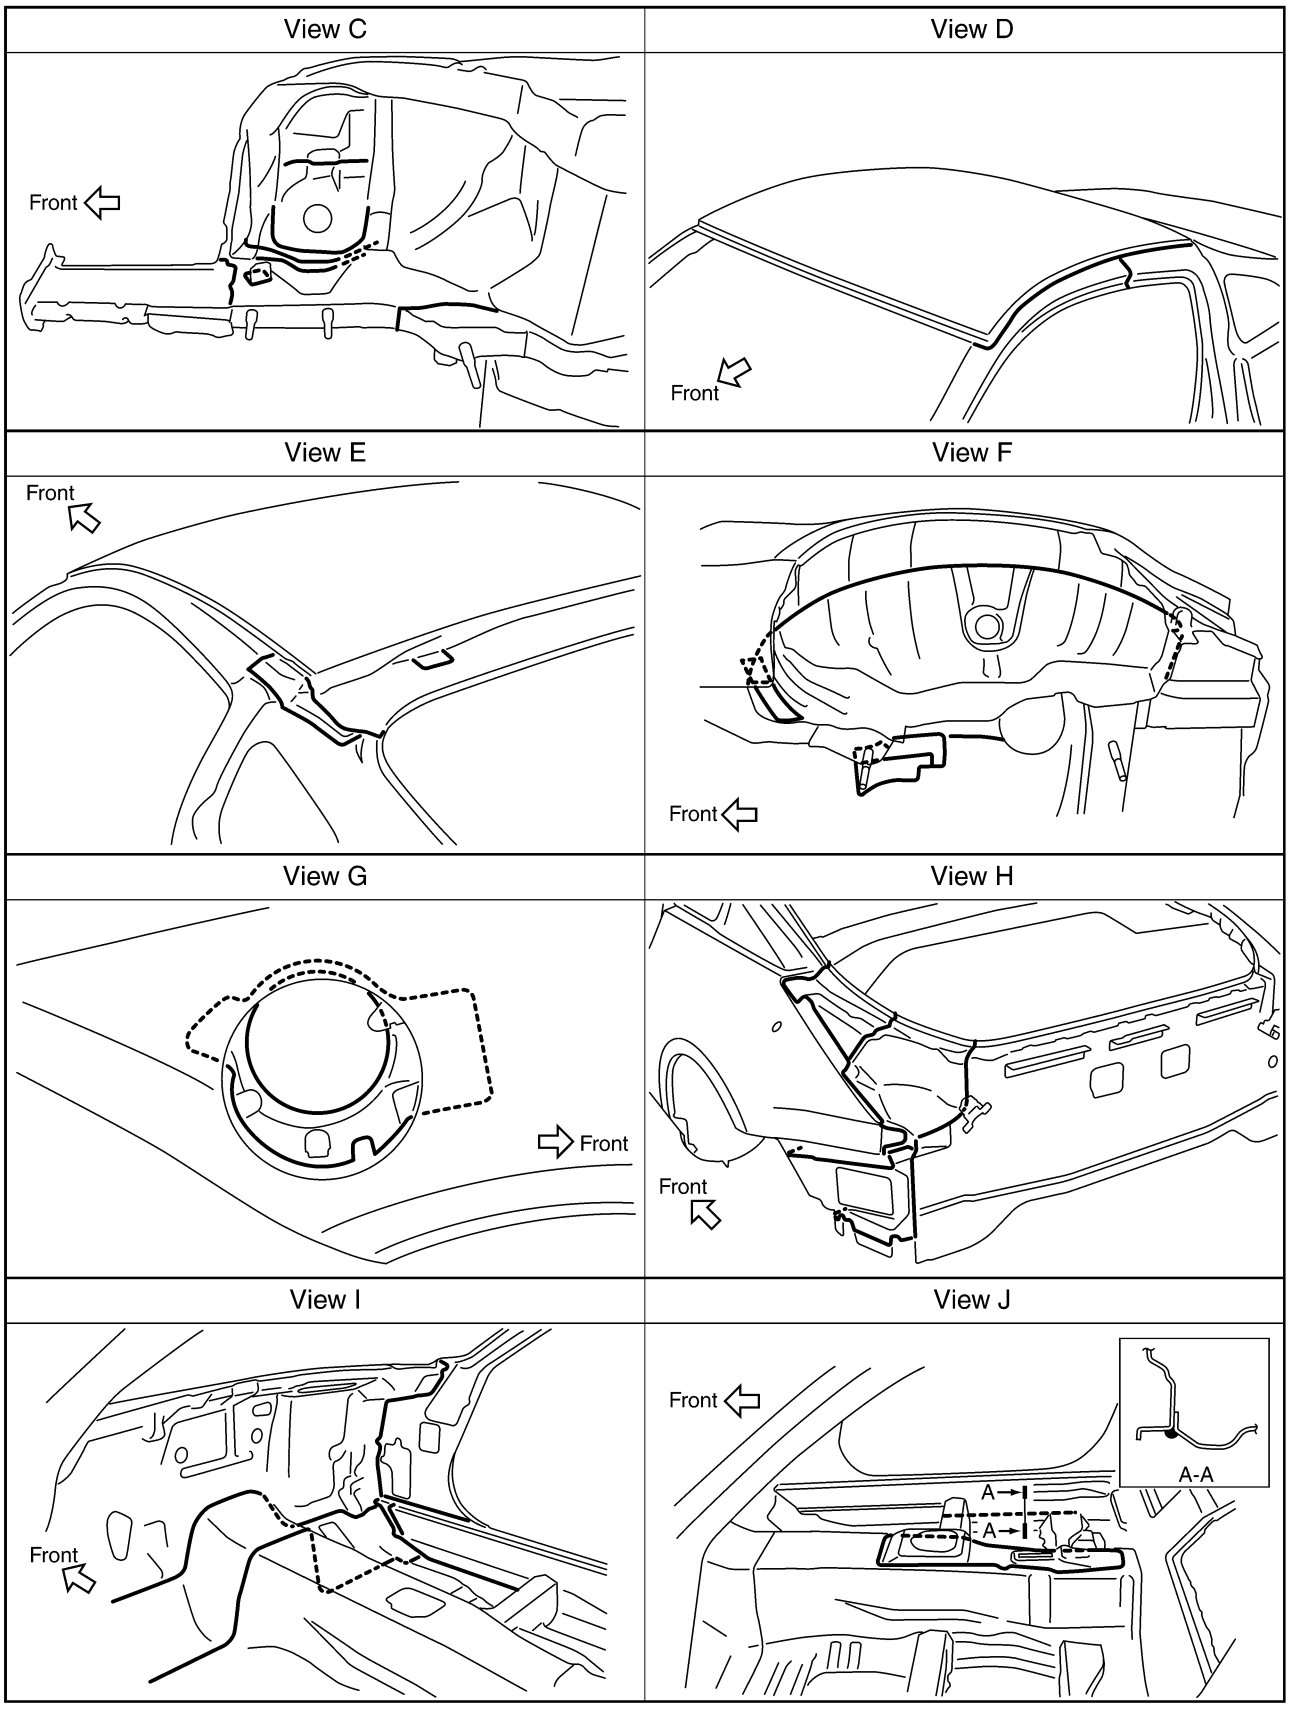


SIIA2299E



Body Sealing (Coupe)

NIS0003Y



DESCRIPTION

The following figure shows the areas which are sealed at the factory. Sealant which has been applied to these areas should be smooth and free from cuts or gaps. Care should be taken not to apply an excess amount of sealant and not to allow other unaffected parts to come into contact with the sealant.

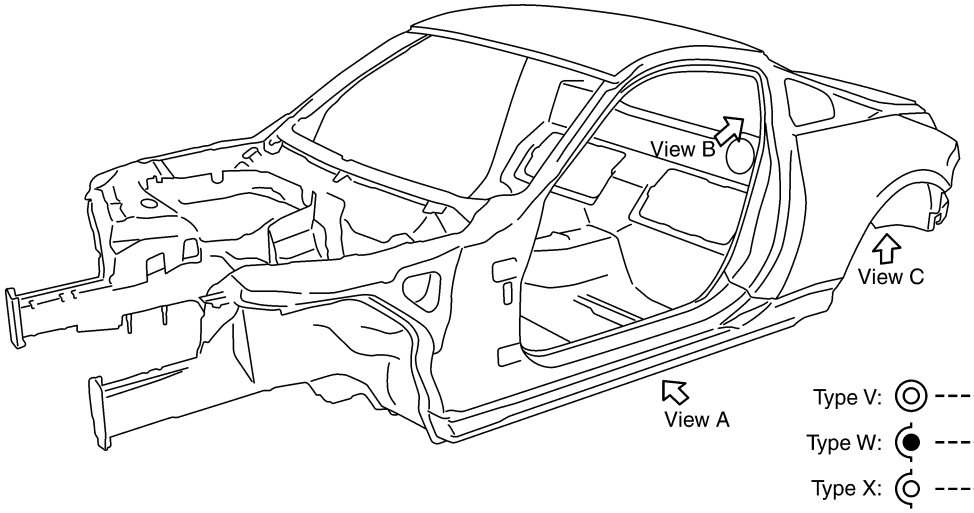
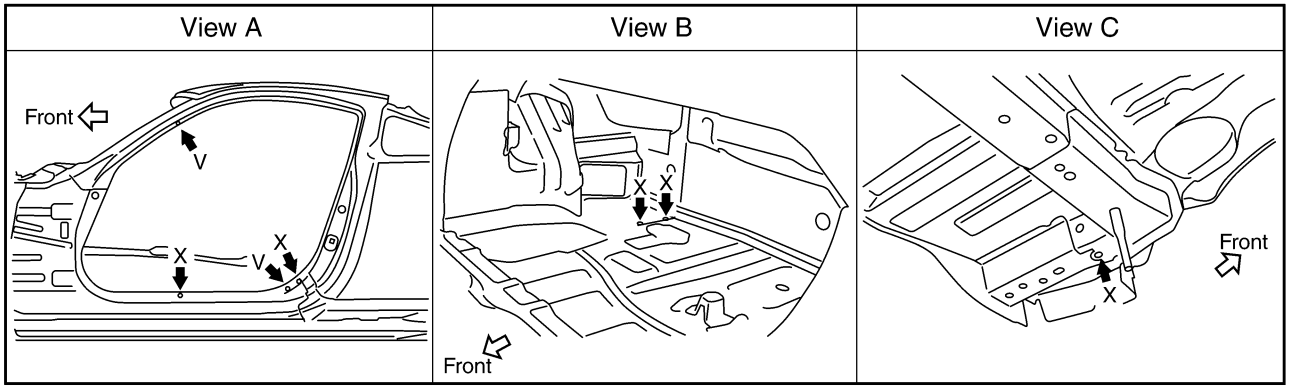
Body Alignment (Coupe)

NIS00042

BODY CENTER MARKS (COUPE)

A mark has been placed on each part of the body to indicate the vehicle center. When repairing parts damaged by an accident which might affect the vehicle frame (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.

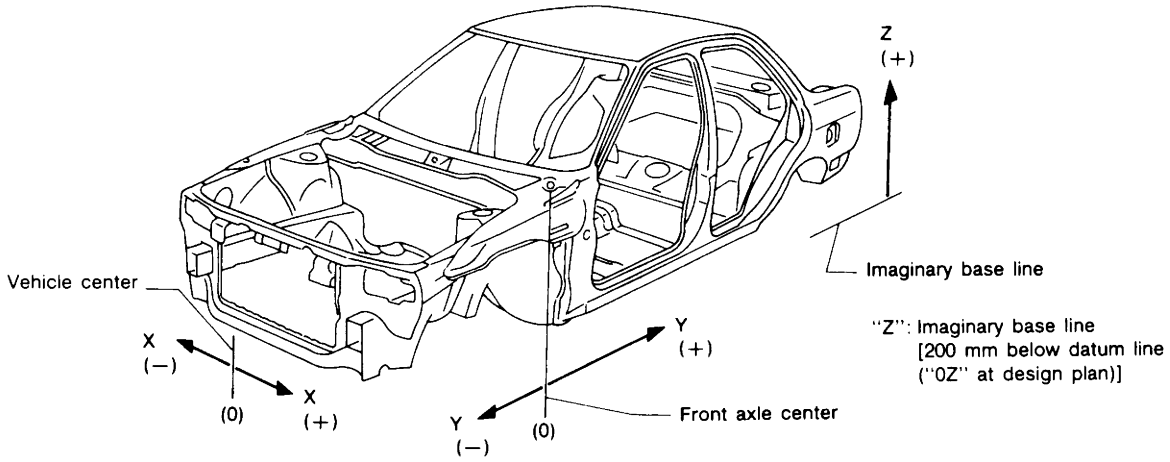




SIIA1974E

PANEL PARTS MATCHING MARKS (COUPE)

A mark has been placed on each body panel to indicate the parts matching positions. When repairing parts damaged by an accident which might affect the vehicle structure (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.



SIIA1981E

DESCRIPTION

- All dimensions indicated in the figures are actual.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (*) following the value at the measuring point indicates that the measuring point on the other side is symmetrically the same value.
- The coordinates of the measurement points are the distances measured from the standard line of ″X″, ″Y″ and ″Z″.

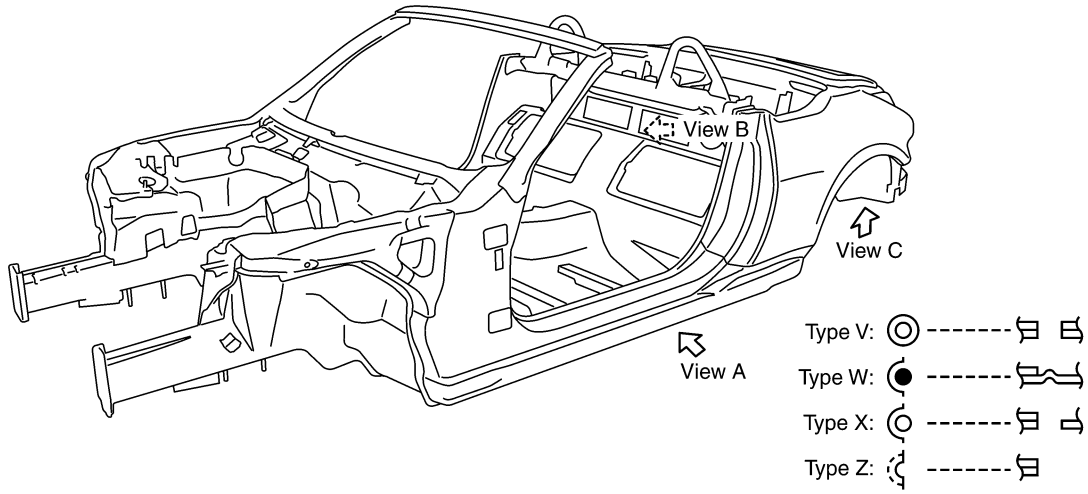
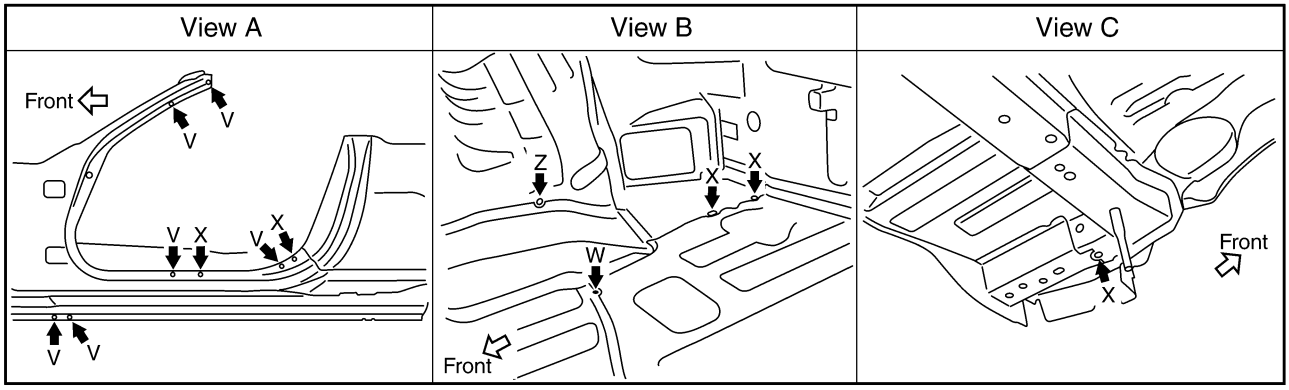
BODY CENTER MARKS (ROADSTER)

A mark has been placed on each part of the body to indicate the vehicle center. When repairing parts damaged by an accident which might affect the vehicle frame (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.

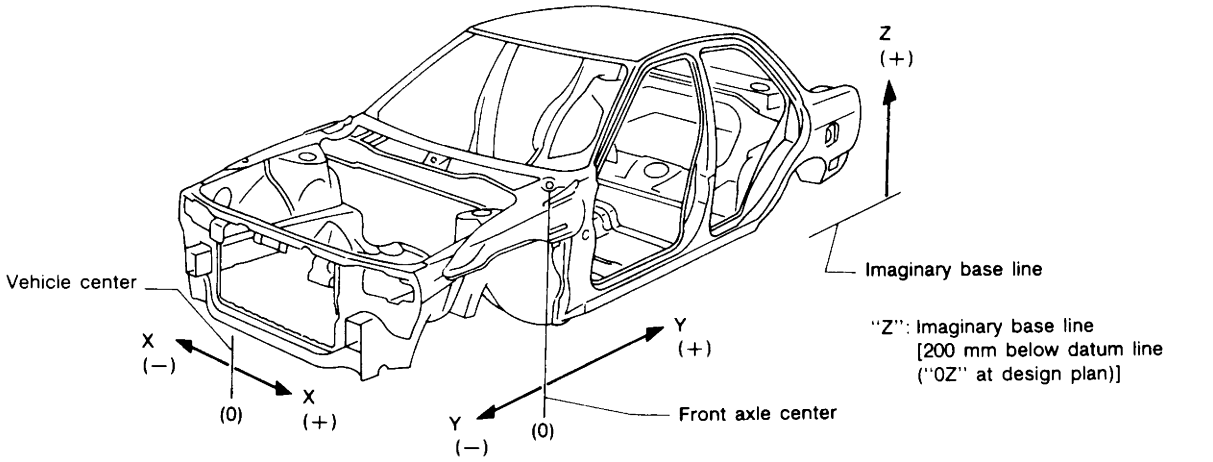




SIIA2304E

PANEL PARTS MATCHING MARKS (ROADSTER)

A mark has been placed on each body panel to indicate the parts matching positions. When repairing parts damaged by an accident which might affect the vehicle structure (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.



SIIA2305E

DESCRIPTION

- All dimensions indicated in the figures are actual.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (*) following the value at the measuring point indicates that the measuring point on the other side is symmetrically the same value.
- The coordinates of the measurement points are the distances measured from the standard line of ″X″, ″Y″ and ″Z″.

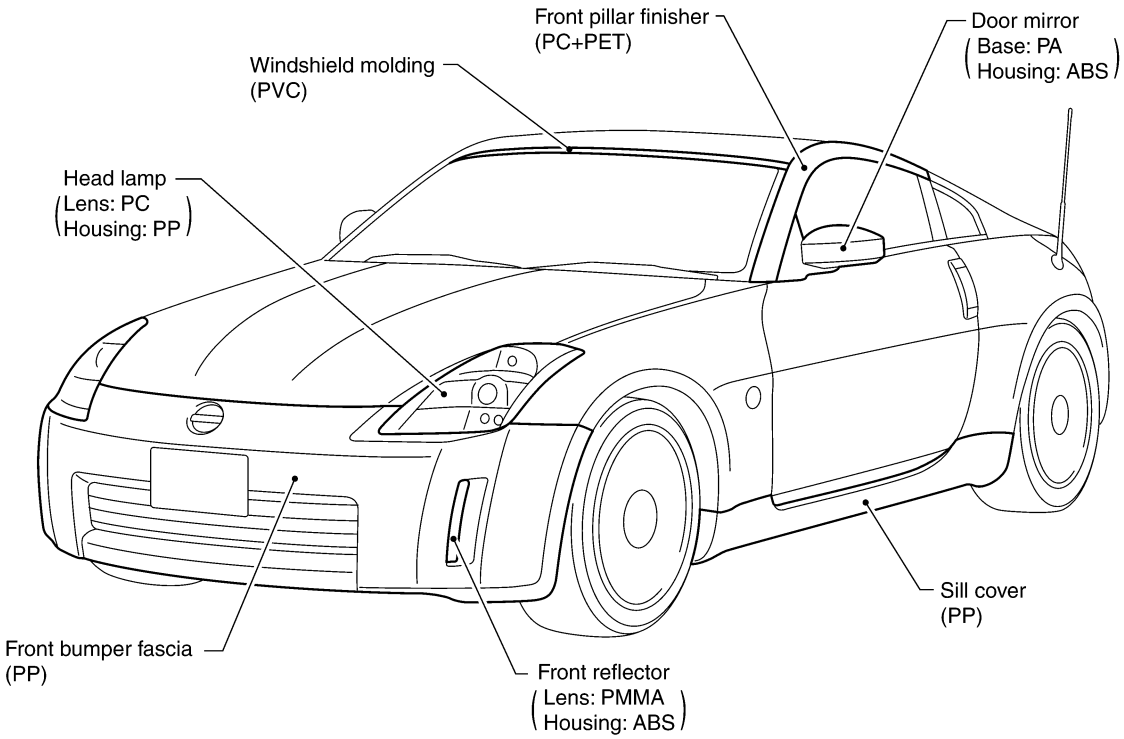
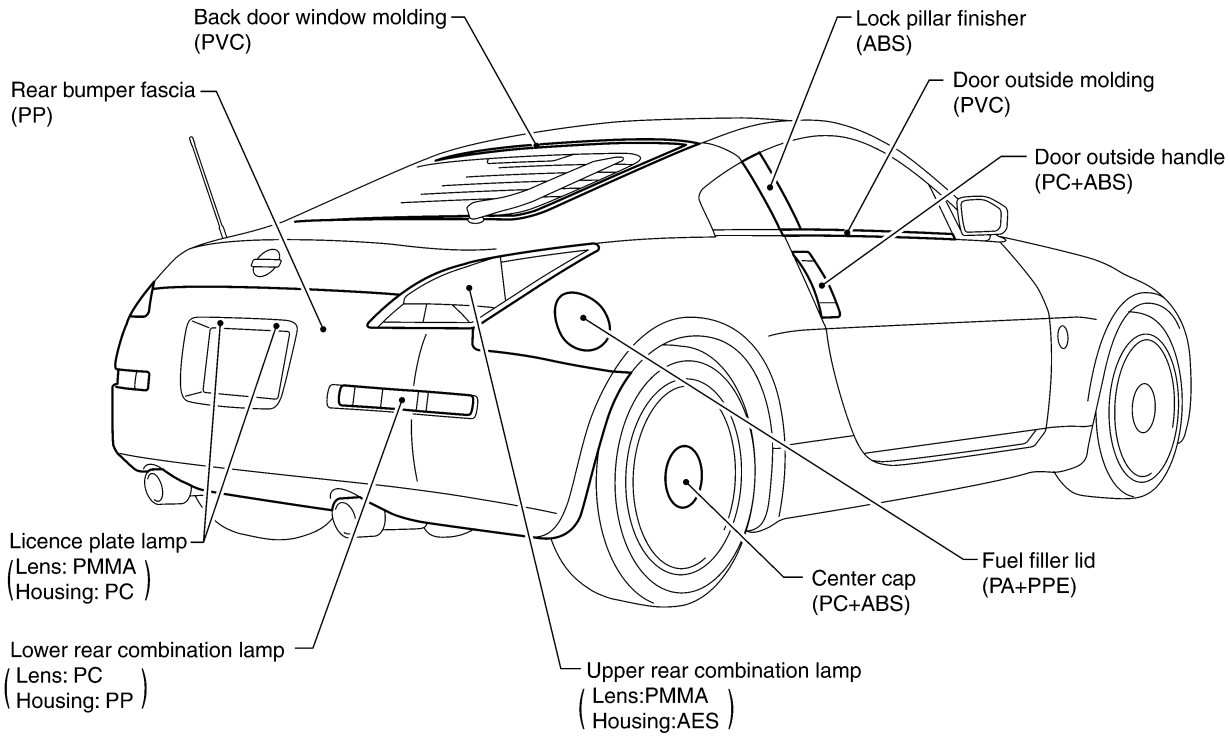
Handling Precautions For Plastics (Coupe)

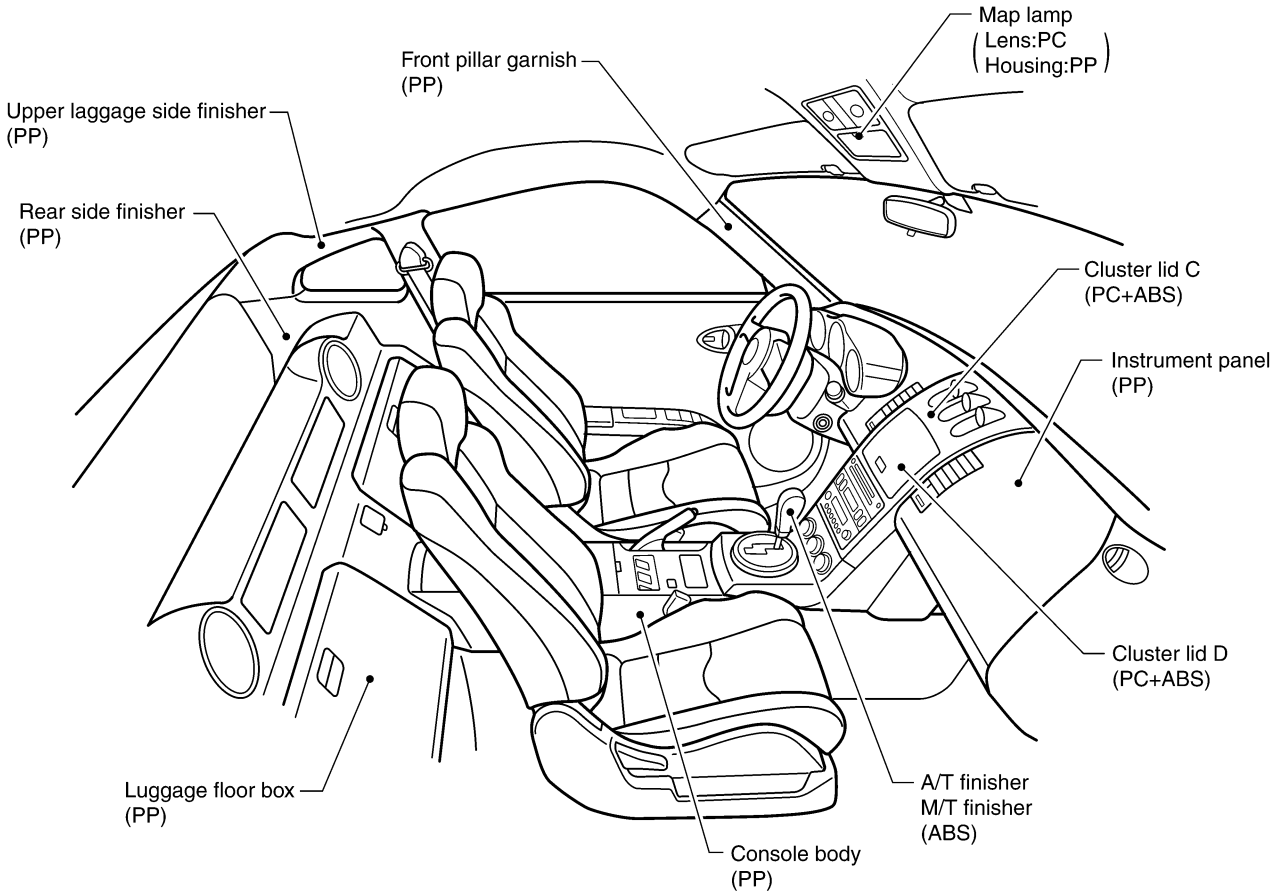


NIS00044



HANDLING PRECAUTIONS FOR PLASTICS

Abbre-viation	Material name	Heat resisting temperature °C(°F)	Resistance to gasoline and solvents	Other cautions
PE	Polyethylene	60(140)	Gasoline and most solvents are harmless if applied for a very short time (wipe up quickly).	Flammable
PVC	Poly Vinyl Chloride	80(176)	Same as above.	Poison gas is emitted when burned.
EPM/ EPDM	Ethylene Propylene (Diene) copolymer	80(176)	Same as above.	Flammable
PP	Polypropylene	90(194)	Same as above.	Flammable, avoid battery acid.
UP	Unsaturated Polyester	90(194)	Same as above.	Flammable
PS	Polystyrene	80(176)	Avoid solvents.	Flammable
ABS	Acrylonitrile Butadiene Styrene	80(176)	Avoid gasoline and solvents.	
AES	Acrylonitrile Ethylene Styrene	80(176)	Same as above.	
PMMA	Poly Methyl Methacrylate	85(185)	Same as above.	
EVAC	Ethylene Vinyl Acetate	90(194)	Same as above.	
ASA	Acrylonitrile Styrene Acrylate	100(222)	Same as above.	Flammable
PPE	Poly Phenylene Ether	110(230)	Same as above.	
PC	Polycarbonate	120(248)	Same as above.	
PAR	Polyarylate	180(356)	Same as above.	
PUR	Polyurethane	90(194)	Same as above.	
POM	Poly Oxymethylene	120(248)	Same as above.	Avoid battery acid.
PBT+ PC	Poly Butylene Terephthalate + Polycarbonate	120(248)	Same as above.	Flammable
PA	Polyamide	140(284)	Same as above.	Avoid immersing in water.
PBT	Poly Butylene Terephthalate	140(284)	Same as above.	
PET	Polyester	180(356)	Same as above.	
PEI	Polyetherimide	200(392)	Same as above.	



1. When repairing and painting a portion of the body adjacent to plastic parts, consider their characteristics (influence of heat and solvent) and remove them if necessary or take suitable measures to protect them.
2. Plastic parts should be repaired and painted using methods suiting the materials' characteristics.

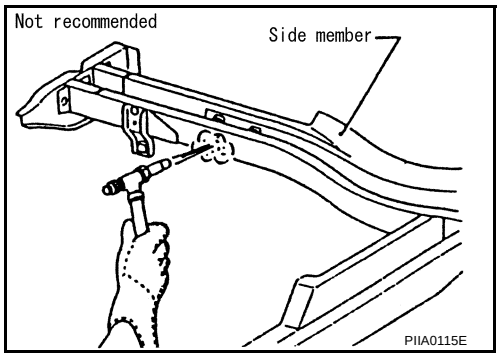
Precautions In Repairing High Strength Steel

NIS00046

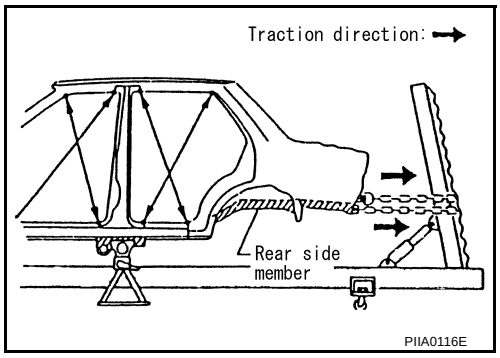
High strength steel is used for body panels in order to reduce vehicle weight.
Accordingly, precautions in repairing automotive bodies made of high strength steel are described below:

HIGH STRENGTH STEEL (HSS) USED IN NISSAN VEHICLES



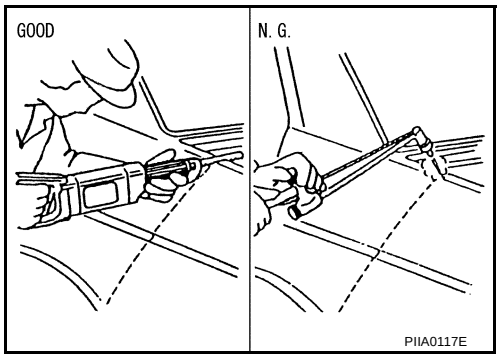
Tensile strength	Nissan/Infiniti designation	Major applicable parts
373 N/mm^2 (38kg/mm^2 ,54klb/sq in)	SP130	● Front & rear side member assembly ● Hoodledge assembly ● Upper dash ● Body side ● Other reinforcements
785-981 N/mm^2 (80-100kg/mm^2 ,114-142klb/sq in)	SP150	● Front door guard beam

SP130 is the most commonly used HSS.

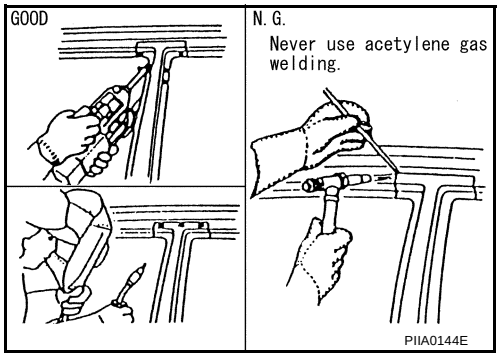


Read the following precautions when repairing HSS:

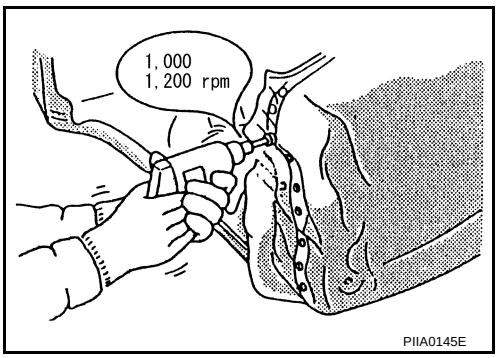
1. Additional points to consider



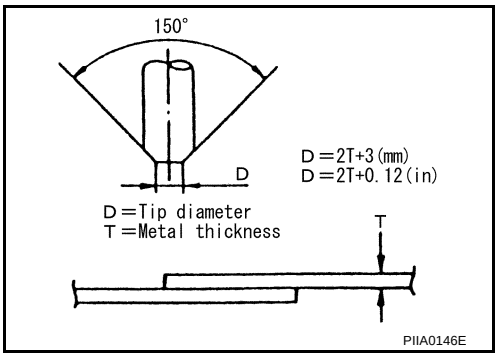
- The repair of reinforcements (such as side members) by heating is not recommended since it may weaken the component. When heating is unavoidable, do not heat HSS parts above 550°C (1,022°F).
  Verify heating temperature with a thermometer.
  (Crayon-type and other similar type thermometer are appropriate.)



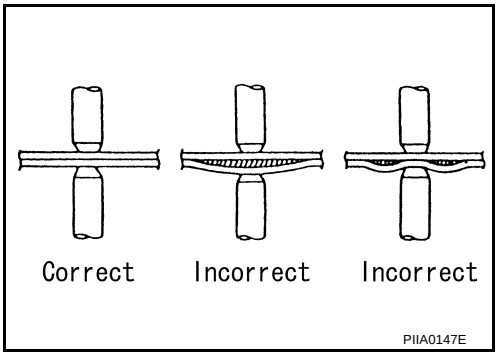
- When straightening body panels, use caution in pulling any HSS panel. Because HSS is very strong, pulling may cause deformation in adjacent portions of the body. In this case, increase the number of measuring points, and carefully pull the HSS panel.



- When cutting HSS panels, avoid gas (torch) cutting if possible. Instead, use a saw to avoid weakening surrounding areas due to heat. If gas (torch) cutting is unavoidable, allow a minimum margin of 50 mm (1.97in).



- When welding HSS panels, use spot welding whenever possible in order to minimize weakening surrounding areas due to heat.
  If spot welding is impossible, use M.I.G. welding. Do not use gas (torch) welding because it is inferior in welding strength.



- The spot weld on HSS panels is harder than that of an ordinary steel panel.
  Therefore, when cutting spot welds on a HSS panel, use a low speed high torque drill (1,000 to 1,200 rpm) to increase drill bit durability and facilitate the operation.

2. Precautions in spot welding HSS
   This work should be performed under standard working conditions. Always note the following when spot welding HSS:
   - The electrode tip diameter must be sized properly according to the metal thickness.

   - The panel surfaces must fit flush to each other, leaving no gaps.

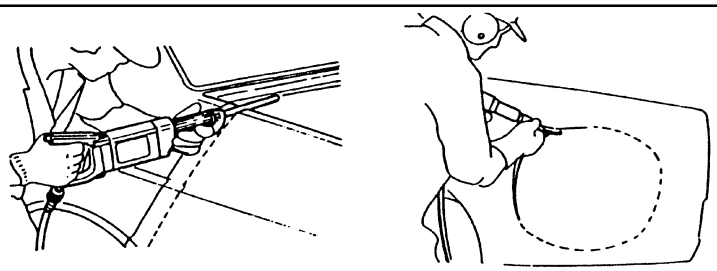
   - Follow the specifications for the proper welding pitch.

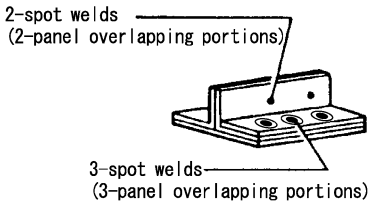
Unit:mm

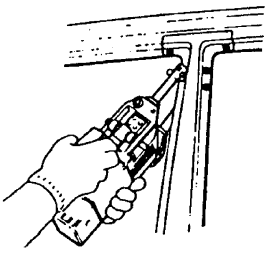
Thickness (t)	Minimum pitch (l)
0.6 (0.024)	10 (0.39) or over
0.8 (0.031)	12 (0.47) or over
1.0 (0.039)	18 (0.71) or over
1.2 (0.047)	20 (0.79) or over
1.6 (0.063)	27 (1.06) or over
1.8 (0.071)	31 (1.22) or over

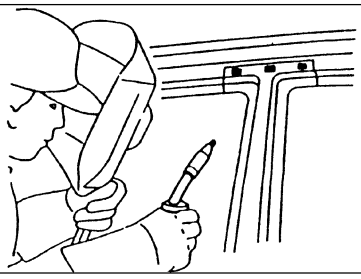
Replacement Operations (Coupe)

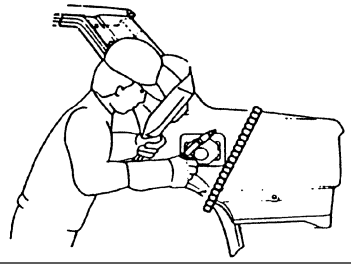
NIS00047

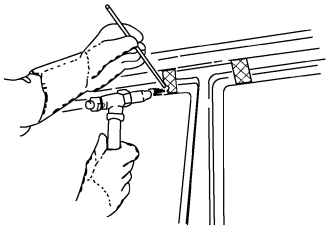


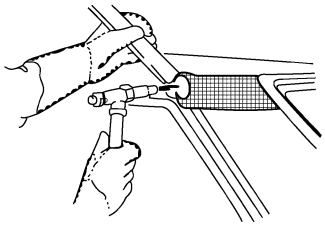


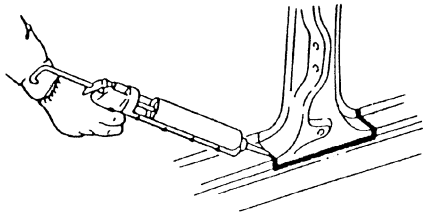








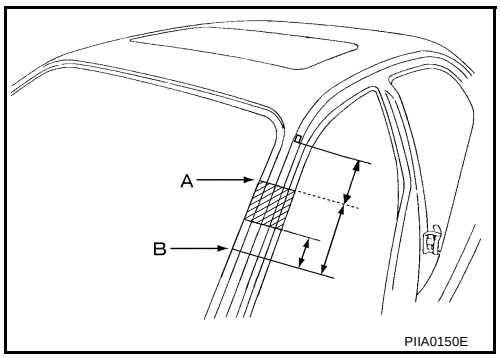




DESCRIPTION

This section is prepared for technicians who have attained a high level of skill and experience in repairing collision-damaged vehicles and also use modern service tools and equipment. Persons unfamiliar with body repair techniques should not attempt to repair collision-damaged vehicles by using this section.

Technicians are also encouraged to read Body Repair Manual (Fundamentals) in order to ensure that the original functions and quality of the vehicle can be maintained. The Body Repair Manual (Fundamentals) contains additional information, including cautions and warning, that are not including in this manual. Technicians should refer to both manuals to ensure proper repairs.



Please note that these information are prepared for worldwide usage, and as such, certain procedures might not apply in some regions or countries.

The symbols used in this section for cutting and welding / brazing operations are shown below.

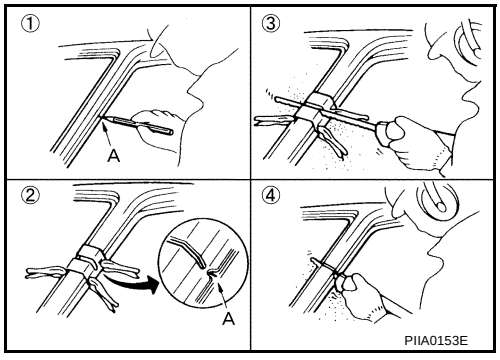
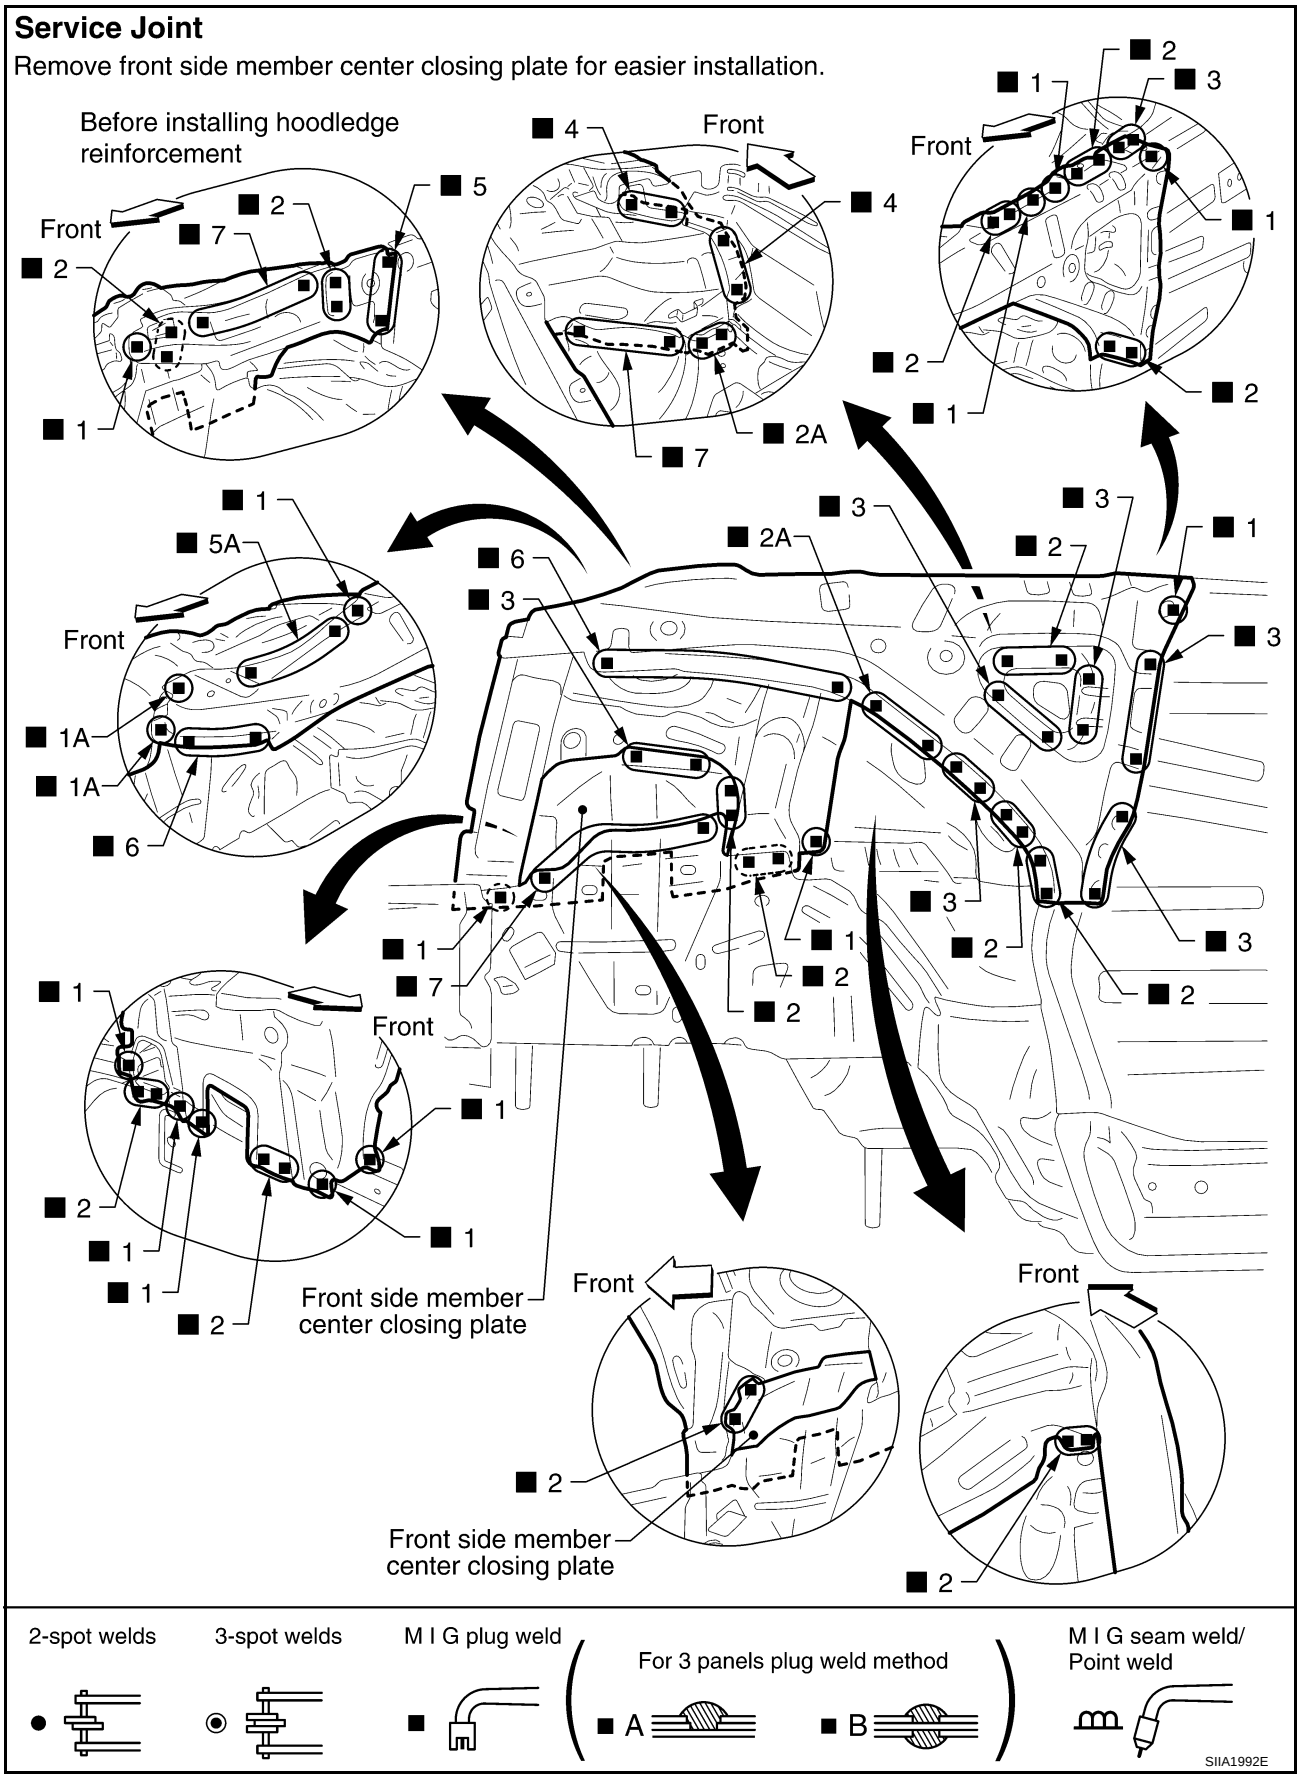
- Front pillar butt joint can be determined anywhere within shaded area as shown in the figure. The best location for the butt joint is at position A due to the construction of the vehicle. Refer to the front pillar section.

- Determine cutting position and record distance from the locating indent. Use this distance when cutting the service part. Cut outer front pillar over 60 mm above inner front pillar cut position.



- Prepare a cutting jig to make outer pillar easier to cut. Also, this will permit service part to be accurately cut at joint position.

- An example of cutting operation using a cutting jig is as follows.



1. Mark cutting lines.
   A: Cut position of outer pillar
   B: Cut position of inner pillar
2. Align cutting line with notch on jig. Clamp jig to pillar.
3. Cut outer pillar along groove of jig. (At position A)
4. Remove jig and cut remaining portions.
5. Cut inner pillar at position B in same manner.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

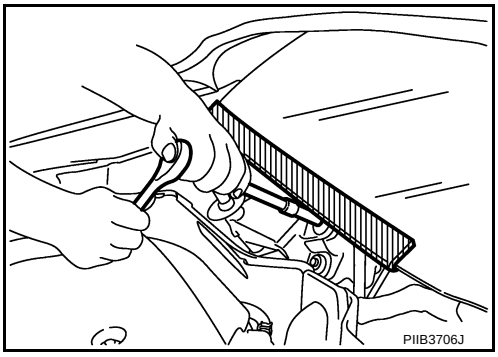
NFS00001

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



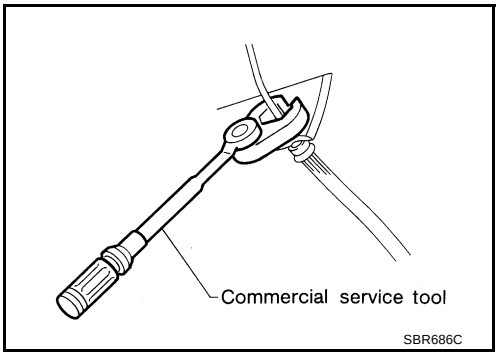
NFS00002

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

NFS000HT

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



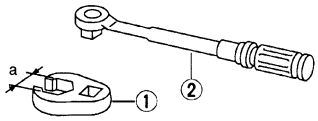
Precautions for Brake System

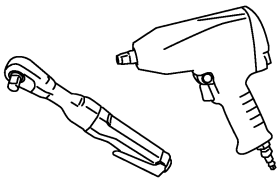
NFS00003

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "Fluids and Lubricants" .
- Do not reuse drained brake fluid.
- Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.
- To clean or wash all parts of master cylinder and disc brake caliper, use clean brake fluid.
- Do not use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.

- Use flare nut crowfoot and torque wrench when removing and installing brake tube.
- When installing brake piping, be sure to check torque.
- Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or the battery negative terminal.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.
  Refer to BR-38, "Brake Burnishing Procedure" .

WARNING:





Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

PREPARATION

BRAKE PEDAL

PFP:46501

Inspection and Adjustment

NFS00006

PLAY AND CLEARANCE BETWEEN THE BRAKE PEDAL AND FLOOR PANEL WITH PEDAL DEPRESSED

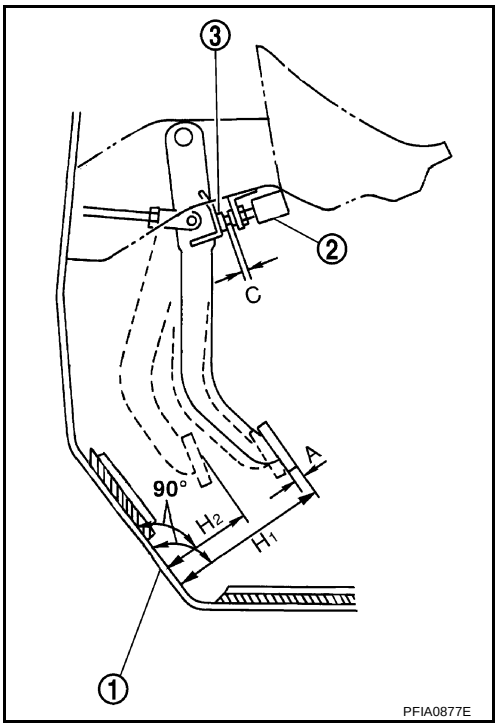
1. Check the brake pedal free height from the dash lower panel (1).
2. Adjust the height referring to the following specifications.

Brake pedal height "H_1 " (from dash lower panel top surface)

M/T models : 153.2 – 163.2 mm (6.03 – 6.43 in)

A/T models : 161.5 – 171.5 mm (6.36 – 6.75 in)

Depressed pedal height "H_2 " [under a force of 490 N (50 kg, 110 lb) with the engine running]



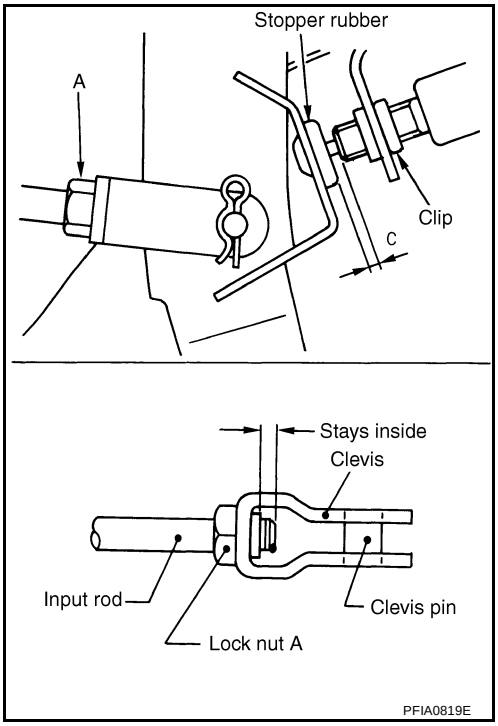
M/T models : More than 90 mm (3.54 in)

A/T models : More than 95 mm (3.74 in)

Clearance "C " between threaded end of the stop lamp switch/ASCD cancel switch (2) and stopper rubber (3).

: 0.74 – 1.96 mm (0.0291 – 0.0772 in)

Pedal play "A" : 3 – 11 mm (0.12 – 0.43 in)



ADJUSTMENT

1. Loosen the stop lamp switch and ASCD cancel switch by rotating it counterclockwise by 45°.
2. Loosen the lock nut (A) on the input rod, then rotate the input rod to set the pedal to the specified height, and tighten the lock nut (A) to the specified torque. Refer to BR-23, "Components" .

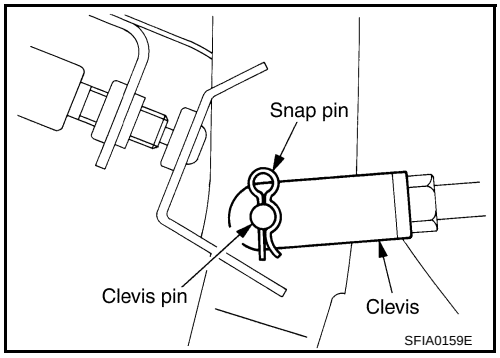
   CAUTION:
   Check that the threaded end of the input rod stays inside the clevis.
3. With the pedal pulled and held by hand, press the stop lamp switch and ASCD cancel switch until its threaded end contacts the stopper rubber.
4. With the threaded end of the stop lamp switch contacting the stopper rubber and ASCD cancel switch, rotate the switch clockwise by 45° to secure.

   CAUTION:
   Make sure that the clearance "C" between the stopper rubber and threaded end of the stop lamp switch and ASCD cancel switch is within the standard.
5. Check the pedal play.

   CAUTION:
   Make sure that the stop lamps go off when the pedal is released.
6. Start the engine to check the brake pedal's depressed height.

Components

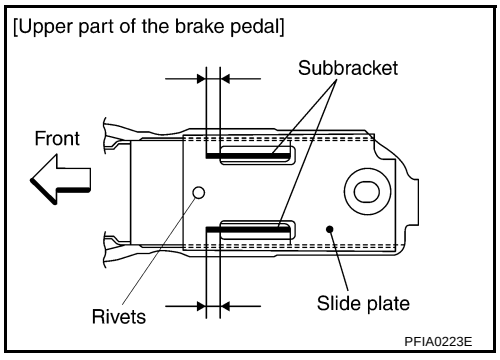
NFS000IF



1. Clevis pin
2. Snap pin
3. Stop lamp switch
4. Clip
5. Stopper rubber
6. Pedal pad
7. Brake pedal assembly
8. ASCD cancel switch

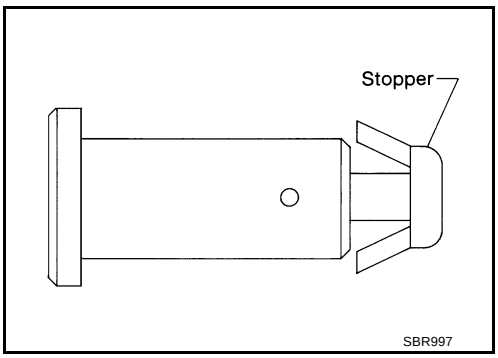
Removal and Installation

NFS00007



REMOVAL

1. Remove instrument driver lower panel. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the steering column. Refer to PS-10, "STEERING COLUMN" .
3. Remove the stop lamp switch and ASCD cancel switch from the pedal assembly.
4. Remove the snap pin and clevis pin from the brake booster clevis.
5. Remove the mounting nuts and bolt from the bracket, and remove the pedal assembly from the vehicle.



INSPECTION AFTER REMOVAL

- Check that the rivets in the upper part of the brake pedal are not deformed.
- Make sure the sub bracket and the slide plate are at least 5.0 – 6.0 mm (0.197 – 0.236 in) apart.

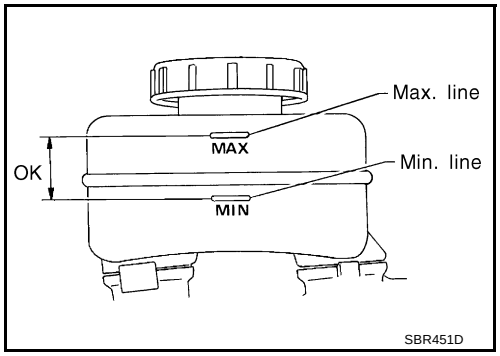
- Check the brake pedal for bend, damage, and cracks on the welded parts. Replace the applicable part if a failure is detected.
- Check the clevis pin and resin stopper for damage and deformation. If a failure is detected, replace the clevis pin.

INSTALLATION

Paying attention to the following items, install in the reverse order of removal.

- After installing the brake pedal assembly to the vehicle, adjust the brake pedal.

BRAKE FLUID



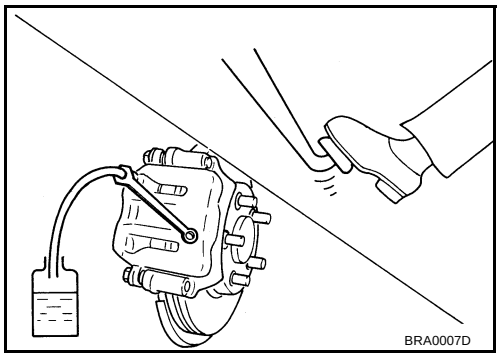
PFP:KN100

On-Vehicle Inspection

NFS00008

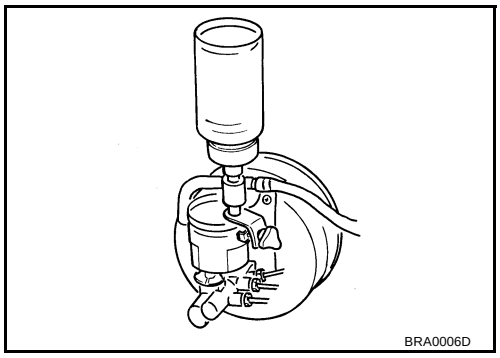
LEVEL CHECK

- Check that the fluid level in the reservoir tank is within the standard (between MAX and MIN lines).
- Visually check around the reservoir tank for fluid leaks.
- If fluid level is excessively low, check brake system for leaks.
- If warning lamp remains illuminated after parking lever is released, check brake system for fluid leakage.



Drain and Refill

NFS00009



CAUTION:

- **Refill with new brake fluid “DOT3”.**
- **Do not reuse drained brake fluid.**
- **Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.**

1. Connect a vinyl tube to bleed valve.
2. Depress the brake pedal, loosen the bleed valve, and gradually remove the brake fluid.
3. Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or battery negative terminal.

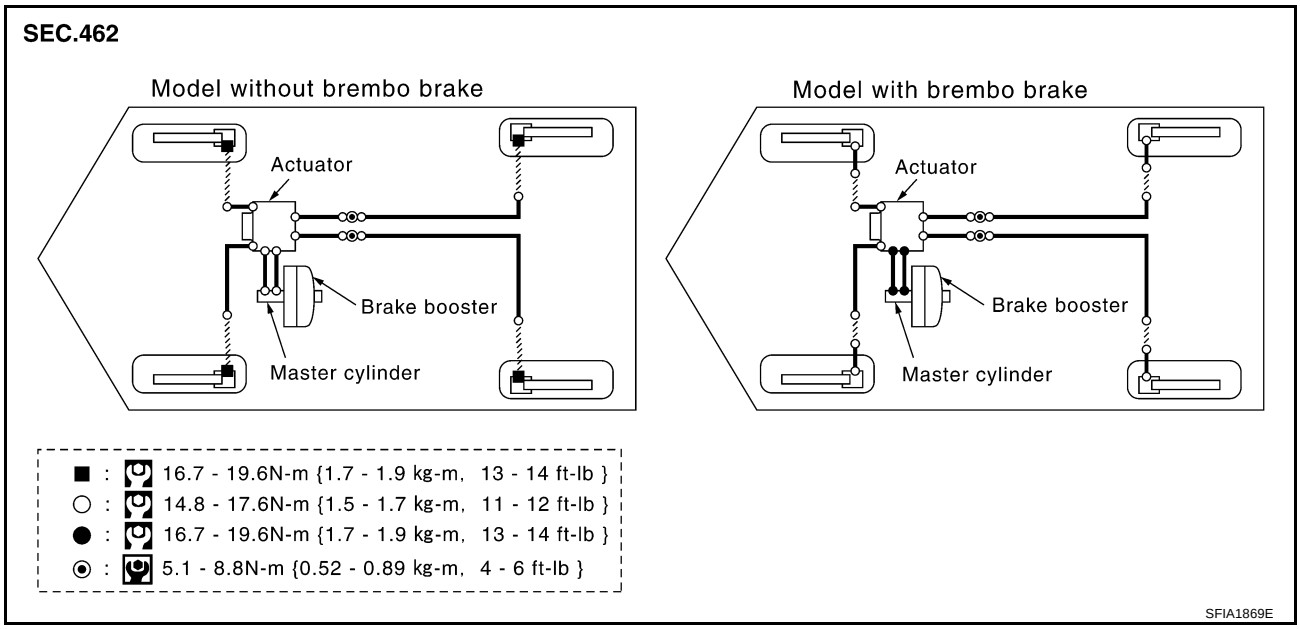
4. Make sure there is no foreign material in the reservoir tank, and refill with new brake fluid.
5. Rest foot on brake pedal. Loosen bleed valve. Slowly depress pedal until it stops. Tighten bleed valve. Release brake pedal. Repeat this process a few times, then pause to add new brake fluid to master cylinder. Continue until new brake fluid flows out. Bleed Air. Refer to BR-11, "Bleeding Brake System" .

Bleeding Brake System

NFS0000A

CAUTION:

While bleeding, pay attention to master cylinder fluid level.



1. Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or battery negative terminal.
2. Connect a vinyl tube to the rear right bleed valve.
3. Fully depress brake pedal 4 to 5 times.
4. With the brake pedal depressed, loosen the bleed valve to let the air out, and then tighten it immediately.
5. Repeat steps 3, 4 until no more air comes out.
6. Tighten the bleed valve to the specified torque. Refer to BR-27, "Components" (Front) and BR-40, "Components" (Rear).
7. In steps 2 to 6 below, with the master cylinder reservoir tank filled at least half way, bleed air from the front left, rear left, and front right tires, in that order.

BRAKE TUBE AND HOSE

PFP:46300

Hydraulic Circuit

NFS0000B

CAUTION:

- **Make sure it does not twist or break when being attached.**
- **Make sure there is no interference with other parts when turning steering both clockwise and counterclockwise.**
- **The brake tube is an important safety part. If a brake fluid leak is detected, always disassemble the parts. Replace applicable part with a new one, if necessary.**
- **Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.**
- **Do not bend or twist brake hose sharply, or strongly pull it.**
- **When removing components, cover connections so that no dirt, dust, or other foreign matter gets in.**
- **Refill with new brake fluid " DOT 3 ".**
- **Do not reuse drained brake fluid.**

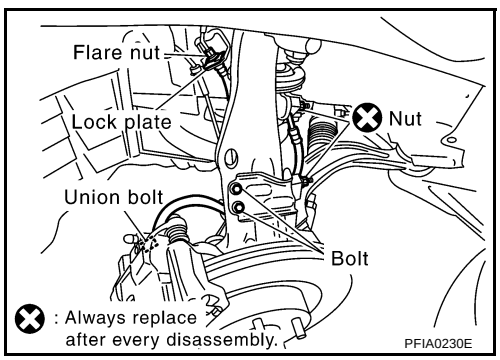
Removal and Installation of the Front Brake Tube and Brake Hose (Other than Brembo Calipers)

NFS0000C

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove brake tube from brake hose.
3. Remove union bolt and remove the brake hose from the caliper assembly.
4. Remove the lock plate and nut, and remove the brake hose from the vehicle.

INSTALLATION



1. Attach the brake hose to the vehicle and tighten the nut to the specified torque.

   : 19.6 – 23.5 N·m (2.0 – 2.3 kg-m, 15 – 17 ft-lb)

   NOTE:
   When removed bracket attaching the bolt is tightened with provisions torque.

   : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

2. Install brake hose by aligning with the protrusion on caliper assembly, and tighten union bolts to the specified torque.

: 16.7 – 19.6 N·m (1.7 – 1.9 kg-m, 13 – 14 ft-lb)

CAUTION:
Do not reuse the copper washer.

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure it to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque.

: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

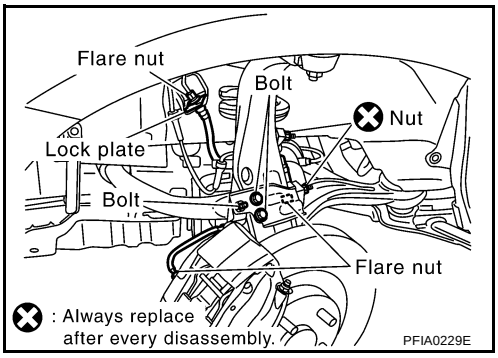
Removal and Installation of the Front Brake Tube and Brake Hose (With Brembo Calipers)

NFS0000D

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove the brake tube from the brake hose.
3. Using a flare nut wrench, remove the caliper-side brake tube from the brake hose.
4. Remove the lock plate and nut, and remove the brake hose from the vehicle.

INSTALLATION



1. Attach the brake hose to the vehicle and tighten the nut to the specified torque.

Nut : 19.6 – 23.5 N·m (2.0 – 2.3 kg-m, 15 – 17 ft-lb)

Bolt : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

2. Attach the caliper-side brake tube to the brake hose, partially tighten the flare nut as far as possible by hand, then tighten it to the specified torque with flare nut crowfoot and torque wrench.

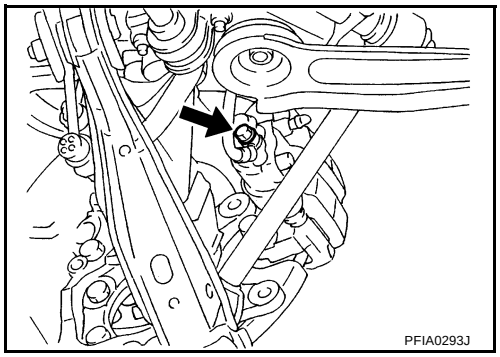
: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque with flare nut torque.

: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Removal and Installation of the Rear Brake Tube and Brake Hose (Other than Brembo Calipers)



NFS0000E

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove brake tube from brake hose.
3. Remove union bolts, and then remove brake hose from the caliper assembly.
4. Remove the lock plate and then remove the brake hose from the vehicle.

INSTALLATION

1. Attach the brake hose L-pin to the caliper assembly positioning hole and tighten the union bolt to the specified torque.

: **16.7 – 19.6 N·m (1.7 – 1.9 kg-m, 13 – 14 ft-lb)**

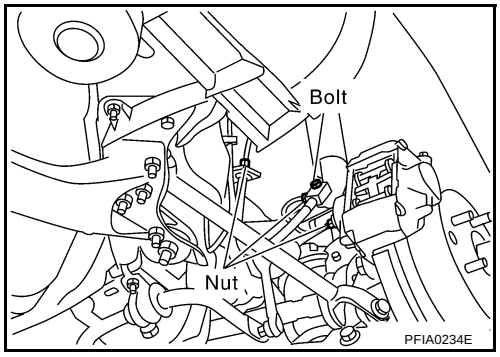
CAUTION:
Do not reuse the copper washer.

2. After securing the brake hose to the vehicle with the lock plate, partially tighten the brake tube flare nut as far as possible by hand and then tighten to the specified torque with flare nut crow-foot and torque wrench.

: **14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)**

3. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Removal and Installation of the Rear Brake Tube and Brake Hose (With Brembo Calipers)



NFS0000F

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove the brake tube from the brake hose.
3. Using a flare nut wrench, remove the caliper-side brake tube from the brake hose.
4. Remove the lock plate and bolt, and remove the brake hose from the vehicle.

INSTALLATION

1. Attach the brake hose to the vehicle and tighten the bolt to the specified torque.

: **19.6 – 22.5 N·m (2.0 – 2.2 kg-m, 15 – 16 ft-lb)**

2. Attach the caliper-side brake tube to brake hose, partially tighten the flare nut as far as possible by hand, then tighten it to the specified torque with flare nut crowfoot and torque wrench.

: **14.8 – 17.6 N·m (1.5 – 1.7kg-m, 11 – 12 ft-lb)**

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque.

: **14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)**

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Inspection after Installation

NFS0000G

CAUTION:
If a leak is detected at the connections, retighten it or, if necessary, replace the damaged part.

1. Check hose, tube, and connections for fluid leaks, damage, twist, deformation, contact with other parts, and loose connections.
2. While depressing pedal under a force of 785 N (80 kg, 177 lb) with engine running for approximately 5 seconds, check for fluid leakage from each part.

BRAKE MASTER CYLINDER

PFP:46010

On-Vehicle Inspection

NFS0000H

LEAK INSPECTION

- Check for leaking in the master cylinder installation surface, the reservoir tank installation surface, and the brake tube connections.

Removal and Installation

NFS0000I

CAUTION:

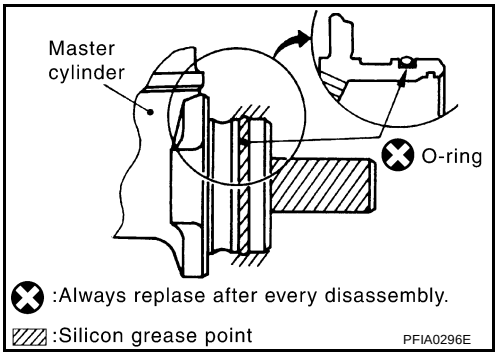
Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Remove the fluid surface sensor harness connector.
3. Using a flare nut wrench, disconnect master cylinder assembly and brake tube.
4. Remove the master cylinder assembly nut and remove the master cylinder assembly from the vehicle. Refer to BR-24, "Removal and Installation" .

INSTALLATION

CAUTION:



- **Refill with new brake fluid “DOT3”.**
- **Do not reuse drained brake fluid.**

1. Attach the master cylinder assembly to the brake booster assembly and tighten the nut to the specified torque. BR-23, "Components" .

   CAUTION:

   Vehicles equipped with VDC require particular attention when conducting the following installation.

   - **Make sure the sliding surface of the primary piston rod is not damaged, and that no foreign matter become attached.**
   - **Do not reuse the O-ring on the rear end of the master cylinder as it is a non-reusable part.**
   - **Apply the silicon grease in the inner kit to and around the O-ring at the rear end of the master cylinder and to the inside of the booster.**

2. Install brake tube to master cylinder assembly and temporarily tighten flare nuts by hand.
3. Tighten the brake tube flare nut to the specified torque with flare nut crowfoot and torque wrench. Refer to BR-12, "Hydraulic Circuit" .
4. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

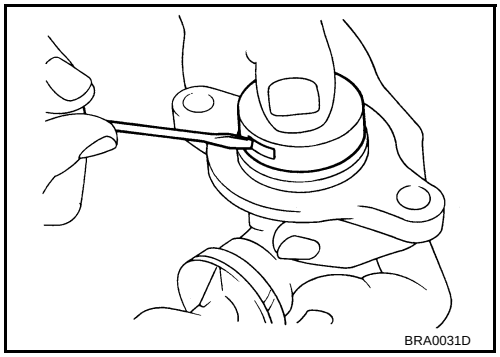
Components

NFS0000J

1. Reservoir tank
2. Reservoir cap
3. Oil strainer
4. Pin
5. Cylinder body
6. Piston stopper
7. Grommet
8. Secondary piston assembly
9. Primary piston assembly
10. O-ring
11. Snap ring
12. Guide assembly
13. Plate
14. Stopper cap
15. Primary piston assembly
16. Secondary piston assembly

Disassembly and Assembly

NFS0000K

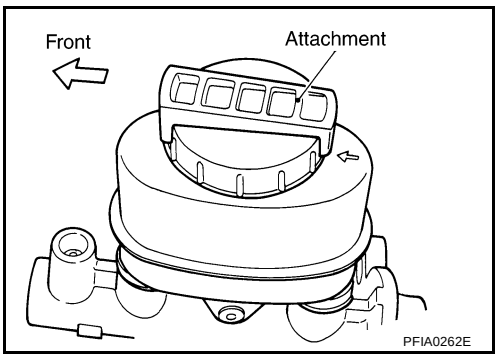


MODELS WITHOUT VDC

Disassembly

CAUTION:

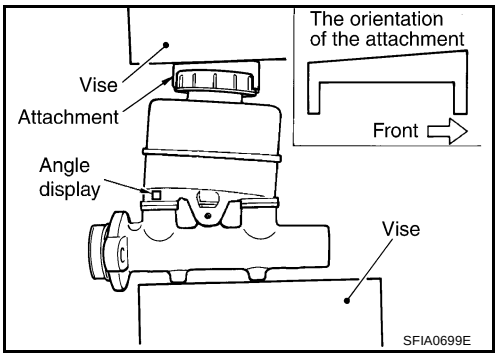
Only remove the reservoir tank when absolutely necessary.



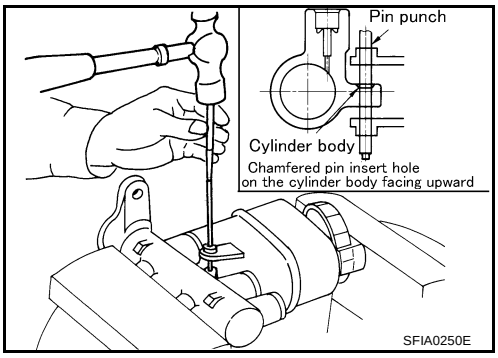
1. Using a flat-bladed screwdriver as shown in the figure, lift up the tabs on the stopper cap and remove it from the master cylinder. The piston inside the master cylinder might pop out when this is done, so hold the stopper cap down at the same time.

2. Attach the attachment in the inner kit to the reservoir cap as shown in the figure.

CAUTION:

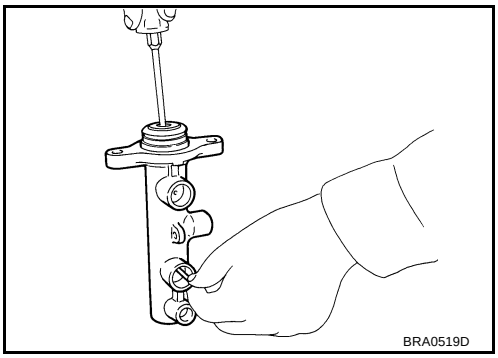


When attaching the attachment to the reservoir cap, make sure it is pointing in the right direction.

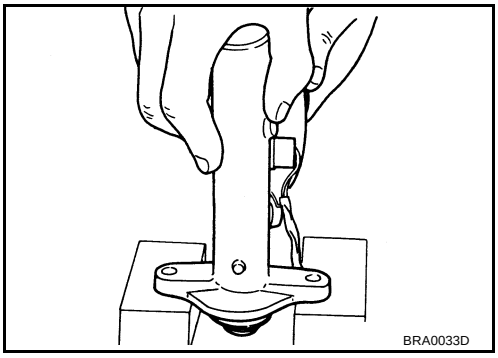


3. Place the side of the cylinder body with chamfering around the pin insertion hole facing up, and secure the master cylinder assembly with a vise.

CAUTION:



- **Tighten without letting the pin securing the reservoir tank and cylinder body come in contact with the pin insertion hole of the reservoir tank.**
- **When securing the master cylinder assembly with the vise, be sure not to over-tighten.**
- **When securing in a vise, use copper plates or cloth to protect the flange.**



4. Using a pin punch [commercial service tool: diameter approx. 4 mm (0.16 in)], remove mounting pin on the reservoir tank.
5. Remove master cylinder assembly from the vise.
6. Remove reservoir tank and grommet from cylinder body.

7. Using a Phillips flat-bladed screwdriver, push in the primary piston and remove the piston stopper from the cylinder body secondary-side tank boss hole.
8. Carefully pull the primary piston assembly straight out to prevent cylinder inner wall from being damaged.

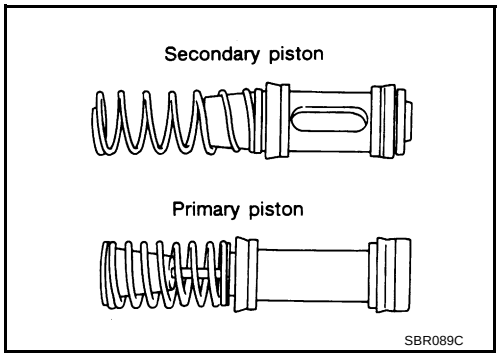
9. Tap flange using a soft block such as wood, and carefully pull the secondary piston assembly straight out to prevent cylinder inner wall from being damaged.

Inspection after Disassembly

Master cylinder

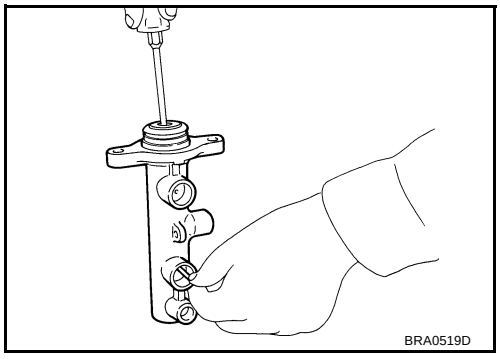
- Check that there is no damage, friction, rusting, or pinholes on the cylinder inner wall, and replace if there are any non-standard conditions.

Assembly



CAUTION:

- **Do not use mineral oils such as kerosene, gasoline during the cleaning and assembly process.**
- **Make sure there is no foreign matter such as dirt or dust attached to the inner cylinder walls, the piston, or the cap seal, and use care to avoid damaging parts with the assembly tools.**
- **Do not drop parts. If a part is dropped, do not use it.**



1. Apply brake fluid to cylinder inner wall body and contact surface of the piston assembly.
2. Insert the secondary piston assembly and primary piston assembly into cylinder body in this order.

   CAUTION:

   - **Do not reuse the primary and secondary piston assemblies.**
   - **Be sure to replace the assembly without disassembling the new inner kit.**
   - **Pay attention to the orientation of the piston cup, and insert straight to prevent the cup from being caught by cylinder inner wall.**

3. Perform a visual inspection of the secondary piston slit through the tank boss hole on the secondary-side of the cylinder body, and install the piston stopper.

4. Holding down the piston with the stopper cap, push the stopper cap tabs so they are firmly into the cylinder grooves, then attach the stopper cap.

   CAUTION:

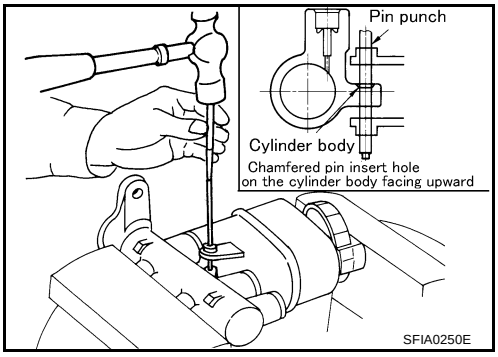
   Do not reuse the stopper cap.

5. Apply brake fluid the grommet and attach to the cylinder body.

   CAUTION:

   Do not reuse the grommet.

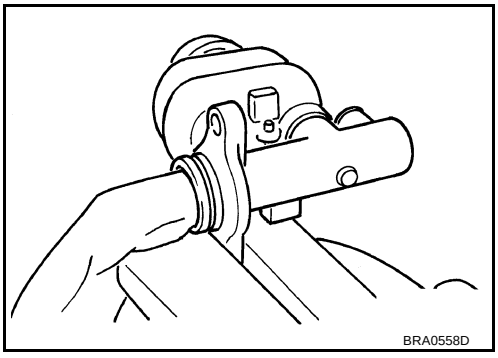
6. Attach the attachment in the inner kit to the reservoir cap as described in disassembly step 2.
7. Master cylinder assembly is fixed in the vise as described in disassembly step 3.



NOTE:
Attach the reservoir tank in the orientation shown in the figure.

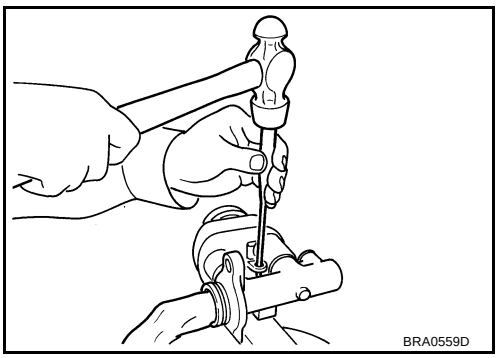
8. Using a pin punch [commercial service tool: diameter Approx. 4 mm (0.16 in)], attach the reservoir tank mounting pin so that the attachment side and the opposite side are identical.

CAUTION:
Do not reuse reservoir tank and mounting pin.



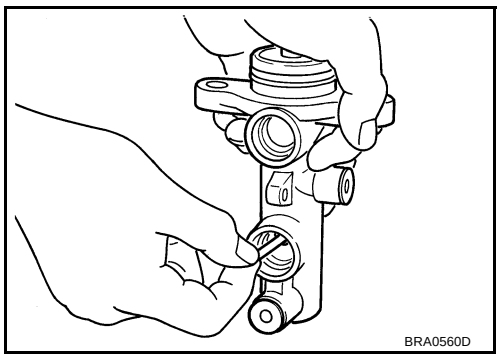
MODELS WITH VDC

Disassembly



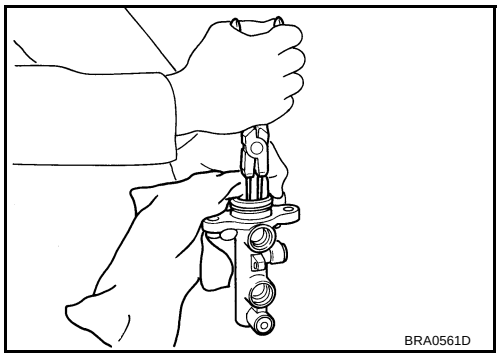
CAUTION:
- **While working, cover the primary piston rod with cloth to prevent it from being damaged.**
- **Only remove the reservoir tank when absolutely necessary.**

1. Place the side of the cylinder body with chamfering around the pin insertion hole up, and secure the cylinder body flange section with a vise as shown in the figure.

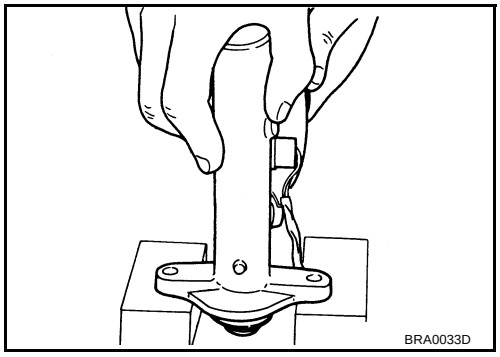


CAUTION:
When securing in a vise, use copper plates or cloth to protect the flange.

2. Using a pin punch [commercial service tool: diameter Approx 4 mm (0.16 in)], remove the reservoir tank mounting pin.
3. Remove master cylinder assembly from the vise.
4. Remove reservoir tank and grommet from cylinder body.



5. Push in the primary piston and remove the piston stopper from the cylinder body secondary-side tank boss hole.



6. Remove the snap ring while pushing the primary piston in to prevent the piston from popping out.
7. Holding the primary piston rod, pull the primary piston assembly, the plate, and the guide straight out.
8. Remove the plate and guide from the primary piston.

CAUTION:
When removing the plate from the primary piston rod, make sure the inside of the plate does not damage the rod.

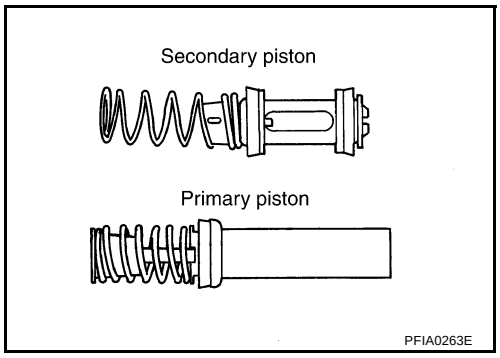
9. Tap flange using a soft block such as wood, and carefully pull the secondary piston assembly straight out to prevent cylinder inner wall from being damaged.

Inspection after Disassembly

Master cylinder

- Check that there is no damage, friction, rusting, or pinholes on the cylinder inner wall, and replace if there are any non-standard conditions.

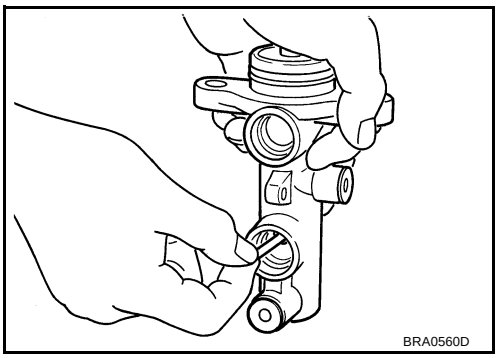
Assembly



CAUTION:

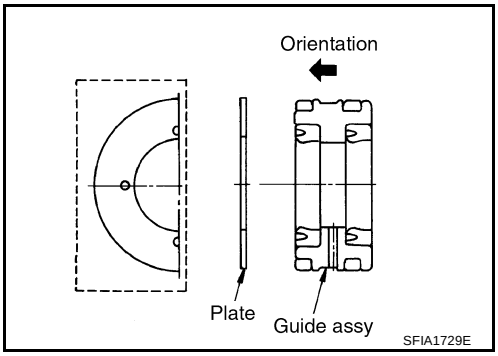
- **Do not use mineral oils such as kerosene, gasoline during the cleaning and assembly process.**
- **Make sure there is no foreign matter such as dirt or dust attached to the inner cylinder walls, the piston, or the cap seal, and use care to avoid damaging parts with the assembly tools.**
- **Do not drop parts. If a part is dropped, do not use it.**

1. Apply brake fluid to cylinder inner wall body and contact surface of the piston assembly, and apply the silicon grease in the inner kit to the primary piston rod.
2. Insert the secondary piston and primary piston into cylinder body in this order.



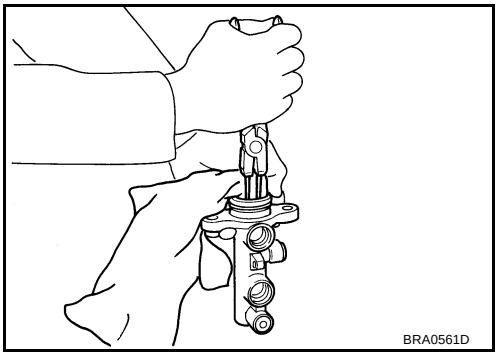
CAUTION:

- **Do not reuse the primary and secondary piston assemblies.**
- **Be sure to replace the assembly without disassembling the new inner kit.**



- **Pay attention to the orientation of the piston cup, and insert straight to prevent the cup from being caught by cylinder inner wall.**

3. Perform a visually inspection of the secondary piston slit through the tank boss hole on the secondary-side of the cylinder body, and install the piston stopper.

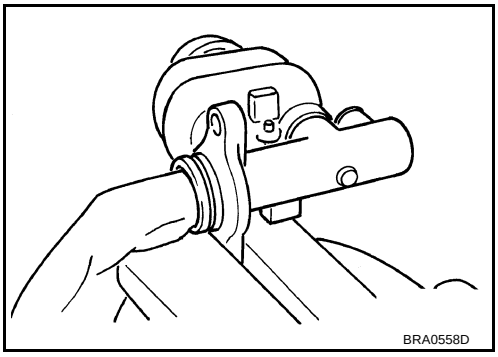


4. Insert the plate and guide into the cylinder body.

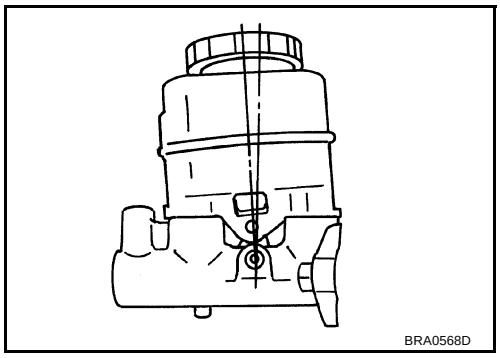
CAUTION:
- **Make sure not to damage the primary piston rod.**
- **Pay attention to the direction of the guide.**
- **Do not drop the O-ring.**
- **Make sure the guide and/or plate are not inserted at an angle.**

5. Cover the primary piston rod with cloth to prevent it getting damaged, and attach the snap ring with the primary piston pushed in.

CAUTION:
- **Make sure the area around the snap ring is snug in the cylinder body bore groove.**
- **Do not reuse the snap ring.**



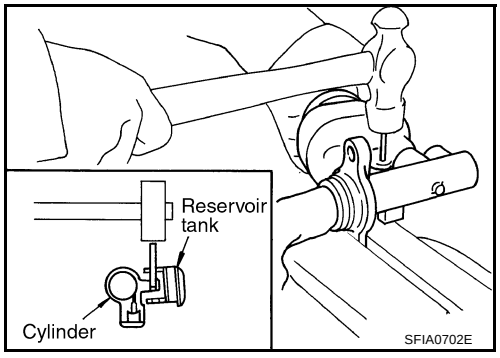
6. Place the side of the cylinder body with chamfering around the pin insertion hole up, and secure the cylinder body flange section with a vise.



CAUTION:
When securing in a vise, use copper plates or cloth to protect the flange.

7. Apply brake fluid to the grommet and attach the reservoir tank to the master cylinder.

CAUTION:
Do not reuse the grommet.



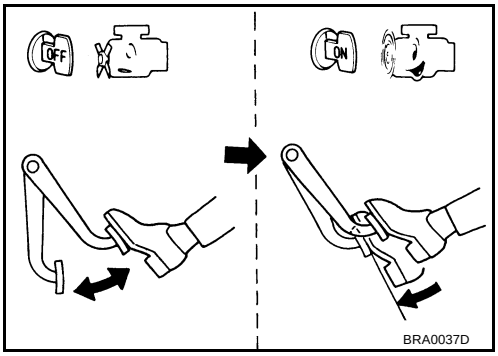
NOTE:
Attach the reservoir tank in the orientation shown in the figure.

8. Tilt the reservoir tank so that the mounting pin can be inserted as shown in the figure, and insert the mounting pin. When the mounting pin has passed the master cylinder pinhole, return the reservoir tank to a level position. Attach the mounting pin to the opposite mounting pin hole of the reservoir tank so that it is the same as the insertion side.

CAUTION:

- **Be sure to insert pin from the chamfered pinhole of cylinder body.**
- **Do not reuse reservoir tank and mounting pin.**

BRAKE BOOSTER



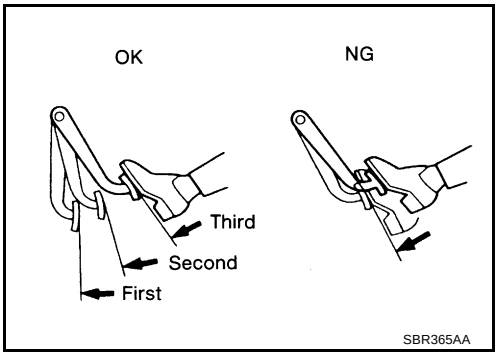
PFP:47200

On-Vehicle Inspection

NFS0000L

OPERATING CHECK

With the engine stopped, change the vacuum to the atmospheric pressure by depressing the brake pedal several times. Then with brake pedal fully depressed, start the engine and when the vacuum pressure reaches the standard, check that the clearance between the brake pedal and floor panel decreases.

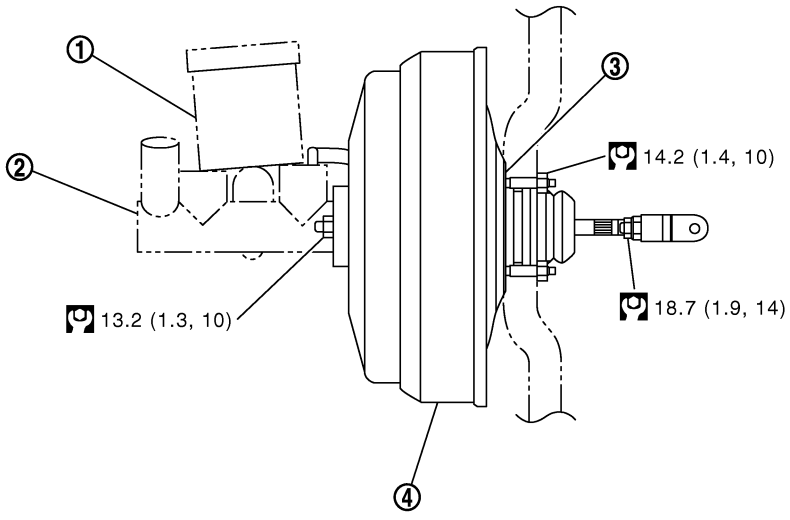


CAUTION:

Depressing pedal interval is approximately 5 seconds.

AIRTIGHT CHECK

- Run the engine at idle for approximately 1 minute, and stop it after applying vacuum to the booster. Depress the brake pedal normally to change the vacuum to the atmospheric pressure. Check that distance between the brake pedal and floor panel gradually increases.
- Depress brake pedal while engine is running, and stop engine with pedal depressed. The pedal stroke should not change after holding pedal down for 30 seconds.



CAUTION:

Depressing pedal interval is approximately 5 seconds.

Components

NFS000IG

SEC. 460•465•470

1. Reservoir tank
2. Master cylinder
3. Gasket
4. Brake booster

Refer to GI-11, "Components" , for the symbols in the figure.

Removal and Installation

NFS0000M

REMOVAL

CAUTION:

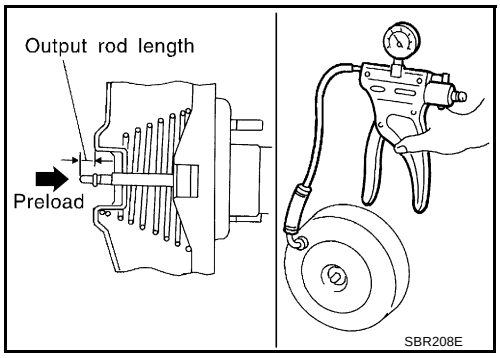
- **Be careful not to deform or bend brake piping while removing and installing the brake booster.**
- **Replace clevis pin if it is damaged.**
- **Be careful not to damage brake booster stud bolt threads. If brake booster is tilted or inclined during installation, the dash panel may damage the threads.**
- **Attach the check valve in the correct orientation.**

1. Remove vacuum hose from the brake booster. Refer to BR-25, "VACUUM LINES" .
2. Remove the brake master cylinder. Refer to BR-24, "Removal and Installation" .
3. Remove the brake piping between brake master cylinder and ABS actuator and electric unit (control unit). Refer to BR-12, "Hydraulic Circuit" .

   CAUTION:

   For M/T vehicles with remove the brake piping after removing the clutch reservoir tank bolt.
4. Remove the brake pedal attachment snap pin and clevis pin from inside the vehicle.
5. Remove the nuts on the brake booster and brake pedal assembly.
6. Remove brake booster assembly from the engine compartment side.

INSPECTION AFTER REMOVAL

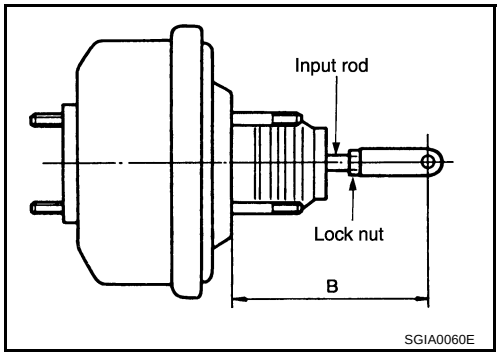


Output Rod Length Inspection

1. Using a handy vacuum pump, apply a vacuum of –66.7 kPa (–500 mmHg,–19.69 inHg) to the brake booster.
2. Check output rod length.

Standard dimension when vacuum –66.7 kPa (–500 mmHg, –19.69 inHg)

With TCS : 10.4 mm (0.409 in)

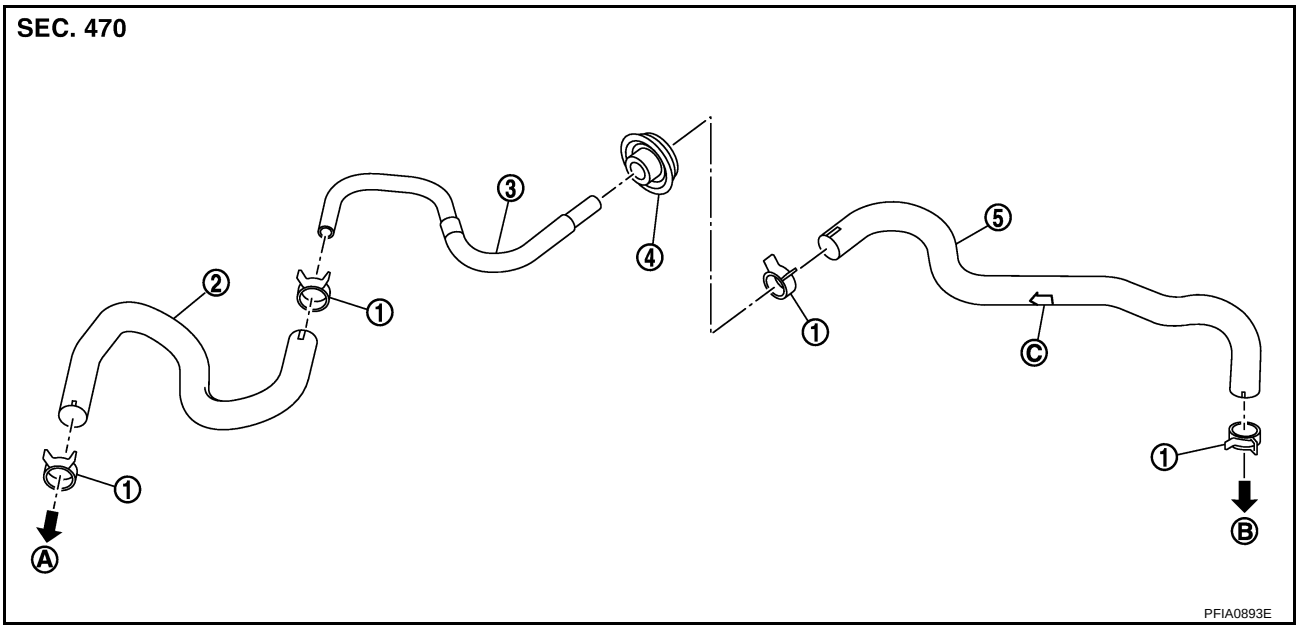


With VDC : –6.2 mm (–0.244 in)

INSTALLATION

1. Loosen the lock nut to adjust the input rod length so that the length “B” (in the figure on the right) satisfies the specified value.

   Length “B” : 125 mm (4.92 in)
2. After adjusting “B”, temporarily tighten the lock nut to install the booster assembly to the vehicle. At this time, make sure to install a gasket between the booster assembly and the vehicle.
3. Connect the brake pedal with the clevis of the input rod.
4. Install the pedal bracket mounting nuts and tighten them to the specified torque.
5. Install the brake piping between brake master cylinder and ABS actuator and electric unit (control unit). Refer to BR-12, "Hydraulic Circuit" .
6. Install the master cylinder to the booster assembly. Refer to BR-24, "Removal and Installation" .
7. Adjust the height and play of the brake pedal. Refer to BR-7, "ADJUSTMENT" .
8. Tighten the lock nut of the input rod to the specified torque. Refer to BR-23, "Components" .
9. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

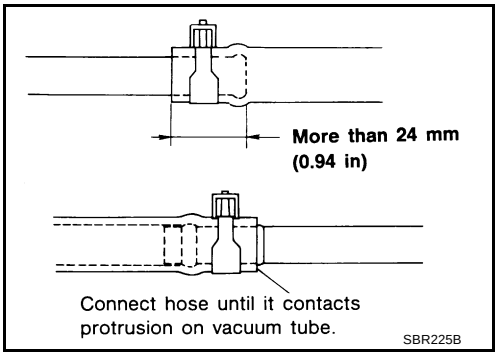


VACUUM LINES

PFP:41920

Components

NFS000IH



1. Clamp	2. Vacuum hose	3. Vacuum tube
4. Grommet	5. Vacuum hose (built in check valve)	
A. To intake manifold	B. To brake booster	C. Stamp indicating engine direction

Removal and Installation

NFS0000N

CAUTION:

- **Because vacuum hose contains a check valve, it must be installed in the correct orientation. Refer to the stamp or label to confirm correct installation. The brake booster will not operate normally if the hose is installed in the wrong direction.**
- **Insert the vacuum hose for at least 24 mm (0.94 in).**
- **Do not use lubricating oil during assembly.**

Inspection

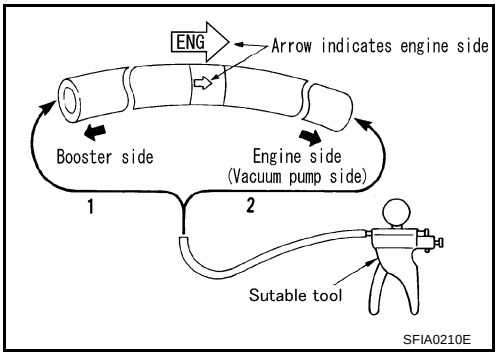
NFS0000O

VISUAL INSPECTION

Check for improper assembly, damage and deteriorate.

CHECK VALVE INSPECTION

Airtightness Inspection



Use a hand-held vacuum pump to check.

When connected to booster side (1):

Vacuum decrease should be within 1.3 kPa (10 mmHg, 0.39 inHg) for 15 seconds under a vacuum of −66.7 kPa (−500 mmHg, −19.69 inHg)

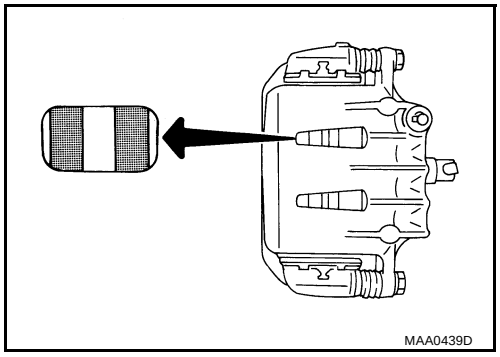
When connected to engine side (2):

No vacuum will be applied

FRONT DISC BRAKE

PFP:41000

On-Vehicle Inspection

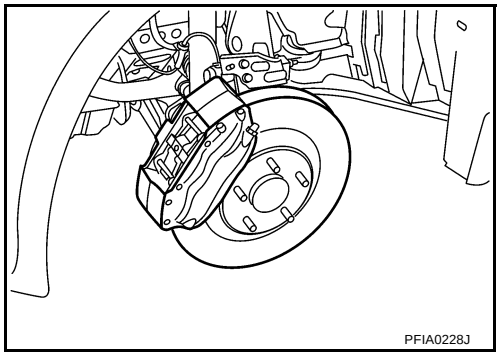


NFS000AS

PAD WEAR INSPECTION

Other than Brembo Calipers

- Check pad thickness from check hole on cylinder body. Use a scale for inspection if necessary.

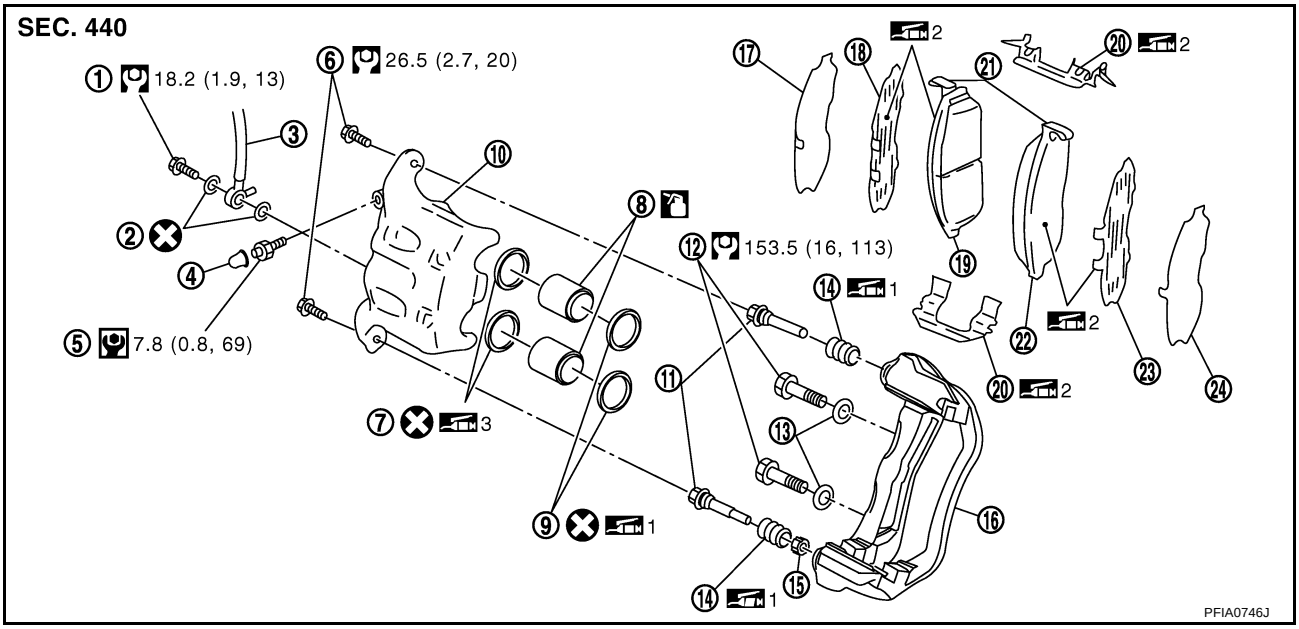


Standard thickness : 11.0 mm (0.433 in)
Repair limit thickness : 2.0 mm (0.079 in)

MAA0439D

With Brembo Calipers

- Inspect the thickness of the pad through the caliper inspection hole. Use a scale for inspection if necessary.



Standard thickness : 9.3 mm (0.366 in)
Repair limit thickness : 2.0 mm (0.079 in)

PFIA0228J

Components

NFS000AT

OTHER THAN BREMBO CALIPERS

1. Union bolt	2. Copper washer	3. Brake hose
4. Cap	5. Bleed valve	6. Sliding pin bolt
7. Piston seal	8. Piston	9. Piston boot
10. Cylinder body	11. Sliding pin	12. Torque member mounting bolt
13. Washer	14. Sliding pin boot	15. Bushing
16. Torque member	17. inner shim cover	18. inner shim
19. Inner pad	20. Pad retainer	21. Pad wear sensor
22. Outer pad	23. Outer shim	24. Outer shim cover

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

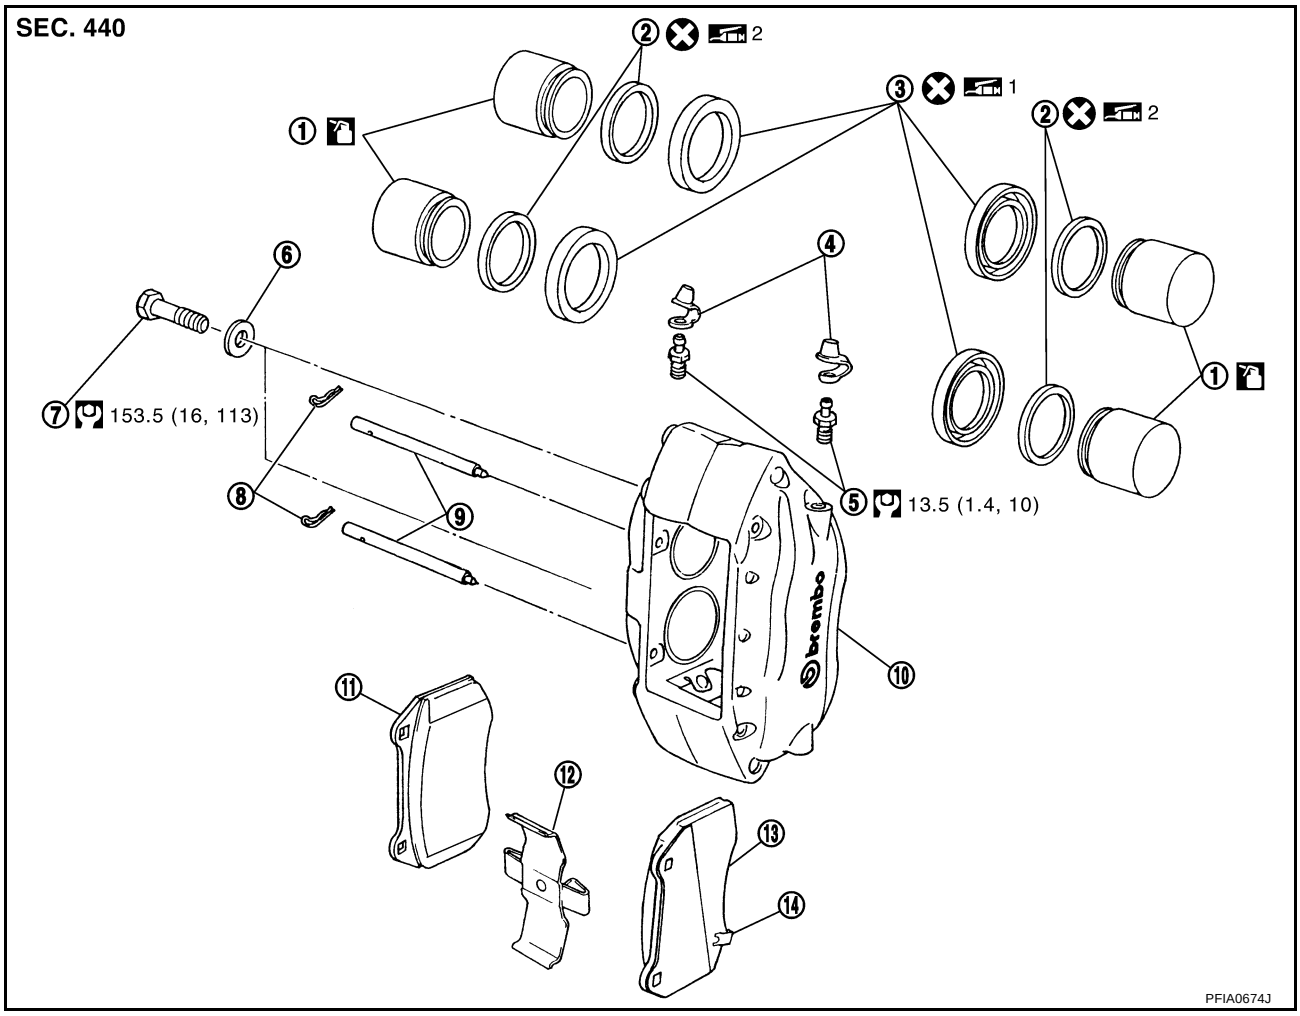
2: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

3: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.



CAUTION:

- **While removing cylinder body, do not depress brake pedal because piston will pop out.**
- **It is not necessary to remove torque member mounting bolts on torque member and brake hose except for disassembly or replacement of caliper assembly. In this case, hang cylinder body with a wire so that brake hose is not under tension.**
- **Do not damage piston boot.**
- **If any shim is subject to serious corrosion, replace it with a new one.**
- **Always replace shim and shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**
- **Burnish the brake pads and disc rotor mutually contacting surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-38, "Brake Burnishing Procedure" .**

WITH BREMBO CALIPERS

NOTE:

Refer to BR-30, "HOW TO APPLY GREASE TO THE BRAKE PAD" for how to apply grease to brake pads.

1.	Piston	2.	Piston seal	3.	Piston boot
4.	Cap	5.	Bleed valve	6.	Washer
7.	Bolt	8.	Clips	9.	Pad pins
10.	Caliper	11.	Inner pad	12.	Cross spring
13.	Outer pad	14.	Pad wear sensor		

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

2: Apply polyglycol ether based lubricant.

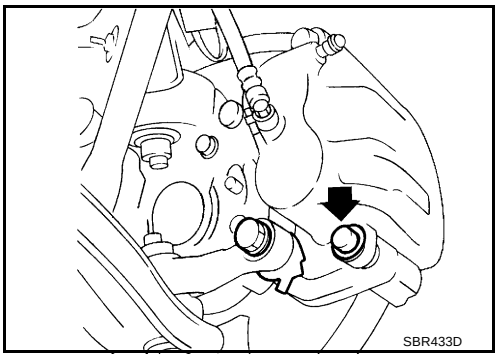
: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

CAUTION:

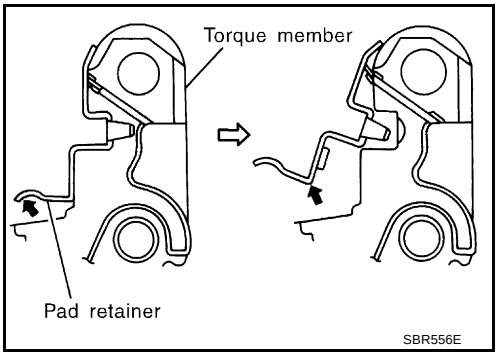
- **While the brake pad and cylinder body are separated, the piston may suddenly jump out, so do not depress the brake pedal.**
- **Apart from caliper assembly, disassembly or replacement, there is no need to remove caliper bolts or brake hose or tube.**
- **Do not damage piston boot.**
- **Keep disc rotor clean of brake fluid.**



- **Burnish the brake pads and disc rotor mutually contacting surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-38, "Brake Burnishing Procedure" .**

Removal and Installation of Brake Pad (Other than Brembo Calipers)

NFS000AU

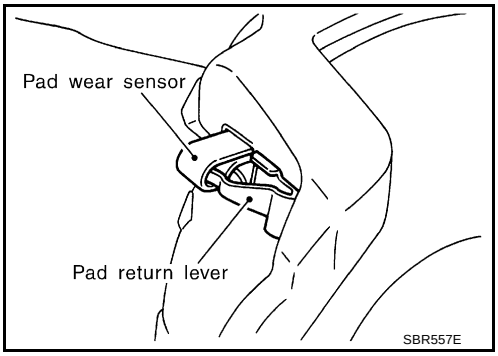


REMOVAL

1. Remove tires from vehicle with a power tool.
2. Remove lower sliding pin bolt.

3. Hang cylinder body with a wire, and remove pads, shims and pad retainers from torque member.

   CAUTION:
   - **When removing pad retainer from torque member, lift pad retainer in the direction shown by arrow (shown in the figure) so as not to deform it.**
   - **Do not damage piston boot.**
   - **Keep disc rotor clean of brake fluid.**

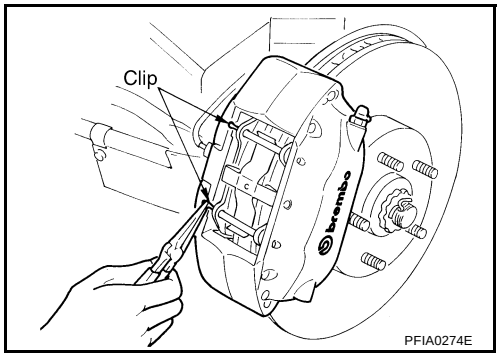


INSTALLATION

1. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease between pad retainer and pad.
2. Install pad retainers and pad assemblies to torque member.

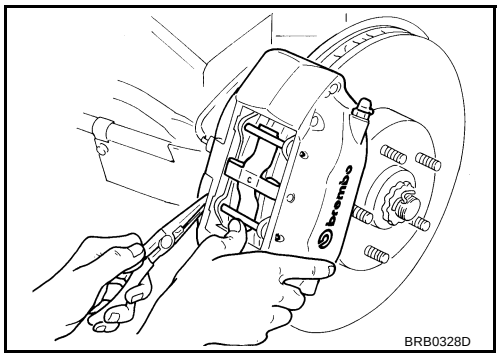
   CAUTION:
   Inner pad and outer pad have pad-return mechanism on upper side of pad retainer. When installing pad to torque member, be sure to install pad return lever to pad wear sensor securely.
3. Install cylinder body to torque member.

   CAUTION:
   When replacing pads with new ones, press in piston until pads can be installed. In this case, carefully monitor brake fluid level in reservoir tank because brake fluid will return to master cylinder reservoir tank.



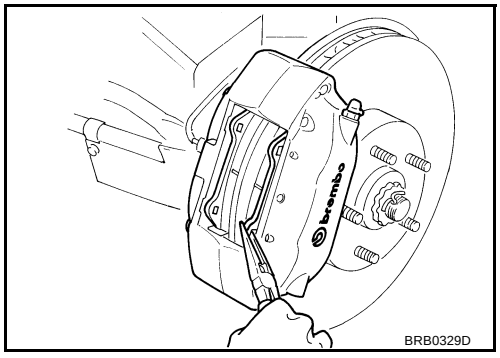
4. Install lower sliding pin bolt, and tighten it to the specified torque. Refer to BR-27, "Components" .
5. Secure disc rotor with wheel nuts. Depress brake pedal a few times until it gets a responsive touch.
6. Check front disc brake for drag.
7. Install tires to vehicle.

Removal and Installation of Brake Pad (With Brembo Calipers)



NFS0000W

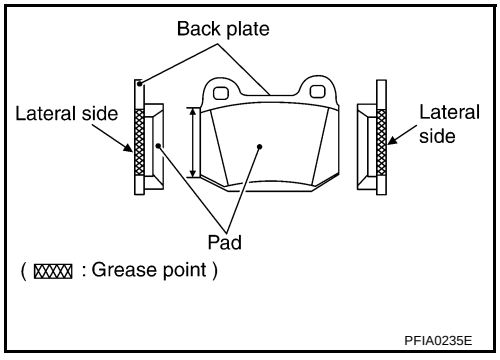
REMOVAL



1. Remove tires from vehicle with a power tool.
2. Remove the clip from the pad pin.

3. Remove the pad pin while holding down the cross spring, then remove the cross spring from the caliper.

4. Using pliers, remove the pad from the caliper.



HOW TO APPLY GREASE TO THE BRAKE PAD

Pad Side

Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease about 0.5 g (0.018 oz) per surface equally to back plate side of Inner Pad and Outer Pad. (Refer to the figure.)

CAUTION:

Make sure no foreign matter attaches itself to the grease.

INSTALLATION

1. Insert the piston to the position where the pad is attached.

   NOTE:

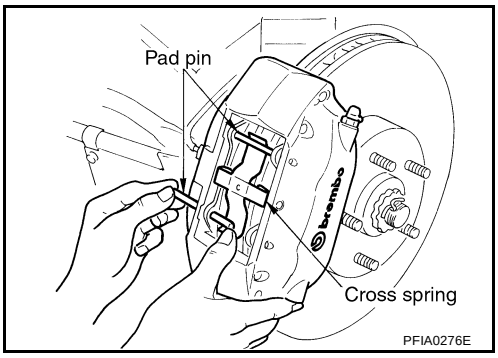
   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

   CAUTION:

   By pushing in the piston, the brake fluid returns to the master cylinder reservoir tank. Watch the level of the surface of the reservoir tank.

2. Attach pad.

CAUTION:



- **Attach the pad with wear sensor to the outer side.**
- **The side of the shim with the larger cutouts should be on the entry side of the disc rotor spin.**

3. Insert the upper pad pin from the inner cylinder side, then insert firmly to the outer cylinder side through the hole in the top of the pad.
4. As shown in the figure, place the top of the cross spring over the top pad pin, press in the cross spring, push the lower pad pin from the inner cylinder side to the outer cylinder side, and secure the cross spring.
5. Insert the clip in the small hole at the end of the pad pin.

CAUTION:

If the clip is not fully attached, the pad pin or the pad could fall out while the vehicle is in motion.

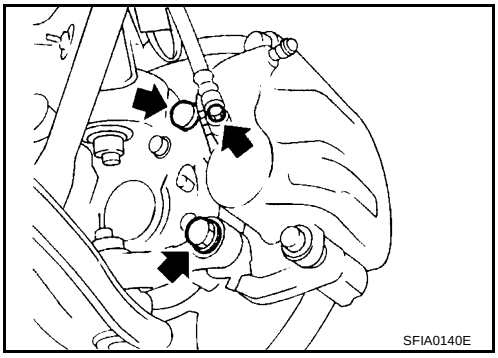
6. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)

NFS000AV

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Fasten disc rotor using wheel nut.
3. Drain brake fluid gradually (from bleed valve while depressing brake pedal). Refer to BR-10, "Drain and Refill" .
4. Remove union bolt, and then remove brake hose from caliper assembly.
5. Remove torque member mounting bolts (from torque member), and remove caliper assembly (from vehicle with a power tool).



CAUTION:

Do not drop brake pad.

6. Remove disc rotor.

CAUTION:

Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.

INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

CAUTION:

Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install caliper assembly to vehicle, and tighten torque member mounting bolts to the specified torque. Refer to BR-27, "Components" .

CAUTION:

Before installing torque member to vehicle, wipe oil and grease on washer seats on steering knuckle and mounting surface of torque member.

3. Install a projection of brake hose metal fitting by aligning with protrusions on cylinder body, and tighten union bolt to the specified torque. Refer to BR-27, "Components" .

   CAUTION:
   - **Do not reuse copper washers for union bolts.**
   - **Assemble brake hose securely on caliper assembly.**
4. After installing caliper assembly, refill with new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
5. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (With Brembo Calipers)

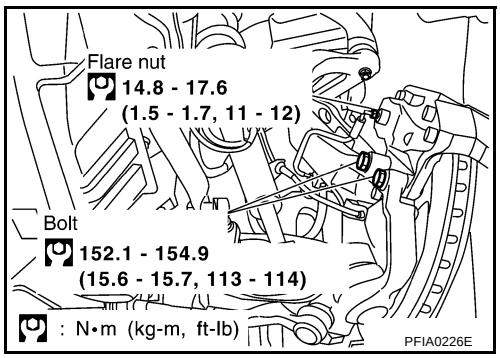
NFS0000X

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
3. Remove the brake pad. Refer to BR-30, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
4. Remove the brake tube flare nut using a flare wrench.
5. Remove the brake tube bracket from the knuckle spindle.

6. Remove the caliper bolt and remove the caliper assembly from the vehicle.
7. Remove disc rotor.

   CAUTION:
   Put matching marks of wheel hub assembly and disc rotor, if it is necessary to remove when removing disc rotor.



INSTALLATION

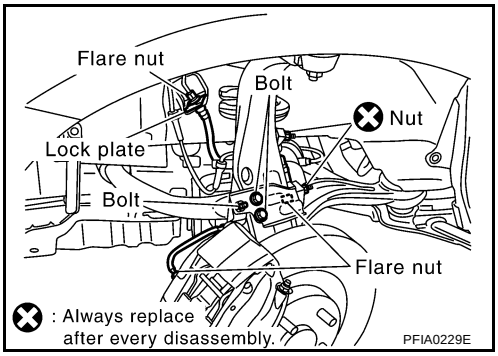
CAUTION:
- **Refill with new brake fluid “DOT 3”.**
- **Never reuse drained brake fluid.**

1. Install disc rotor.

   CAUTION:
   Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.
2. Install caliper assembly to the vehicle, and tighten bolts to the specified torque.

   CAUTION:
   When attaching the caliper assembly to the vehicle, wipe any oil off the knuckle spindle washers and caliper assembly attachment surfaces.

3. Attach the brake tube to the caliper assembly and partially tighten the flare nut.



4. Attach the brake tube bracket to the knuckle spindle and tighten to the specified torque.

   : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

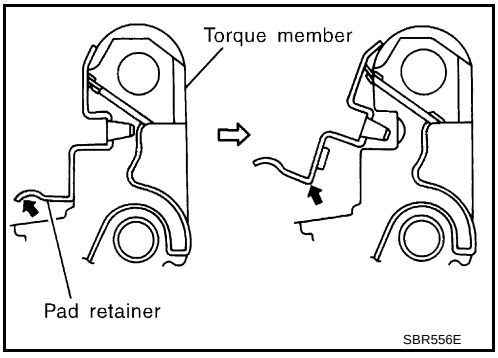
5. Using a flare nut crowfoot and torque wrench, tighten the caliper assembly and brake tube connection flare nut to the specified torque.

   : 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

6. Attach brake pad. Refer to BR-30, "Removal and Installation of Brake Pad (With Brembo Calipers)" .

7. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
8. Install tires to vehicle.

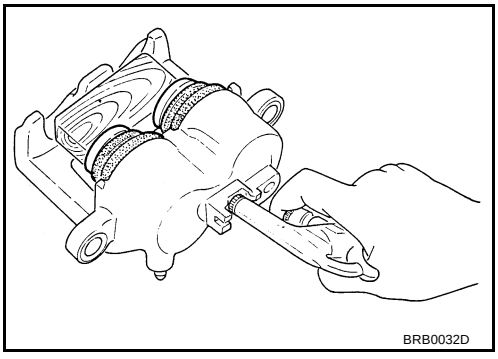
Disassembly and Assembly of Brake Caliper Assembly (Other than Brembo Calipers)



NFS000AW

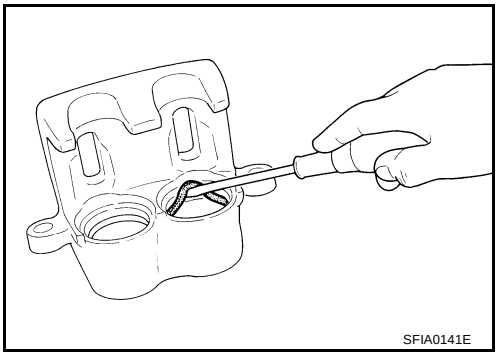
NOTE:
Do not remove torque member, brake pads, shims, shim covers and pad retainers, when disassembling or assembling cylinder body.

DISASSEMBLY



1. Remove caliper assembly from vehicle. Refer to BR-31, "Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)" .
2. Remove sliding pin bolts from cylinder body, and remove pads, shims, shim cover and pad retainers from torque member.

   CAUTION:
   When removing pad retainer from torque member, lift the pad retainer in the direction shown by arrow (shown in the figure) so as not to deform it.



3. Remove sliding pins and sliding pin boots from torque member.
4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove pistons and piston boots.

   CAUTION:
   Do not get fingers caught in the pistons.

5. Using a flat-bladed screwdriver, remove piston seals from cylinder body.

   CAUTION:
   Be careful not to damage the inner wall of cylinder.

INSPECTION AFTER DISASSEMBLY

Cylinder Body

CAUTION:

Use new brake fluid to clean. Do not use mineral oils such as gasoline or kerosene.

- Check the inner wall of cylinder for corrosion, wear, and damage. If a malfunction is detected, replace cylinder body.
- Minor flaws caused by corrosion or a foreign material can be removed by polishing a surface of the inner wall with a fine sandpaper. Replace cylinder body, if a malfunction is detected.

Torque Member

Check for wear, cracks, and damage. If a malfunction is detected, replace applicable part.

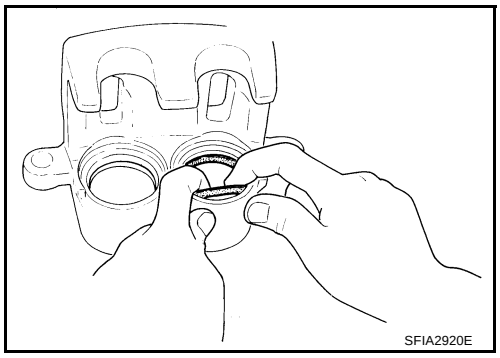
Piston

CAUTION:

The piston sliding surface is plated. Do not polish with sandpaper.

Check piston surface for corrosion, wear, and damage. If a malfunction is detected, replace applicable part.

Sliding Pin, Sliding Pin Bolt, and Sliding Pin Boot



Check sliding pins and sliding pin boots for wear, damage, and cracks. If a malfunction is detected, replace applicable part.

ASSEMBLY

1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

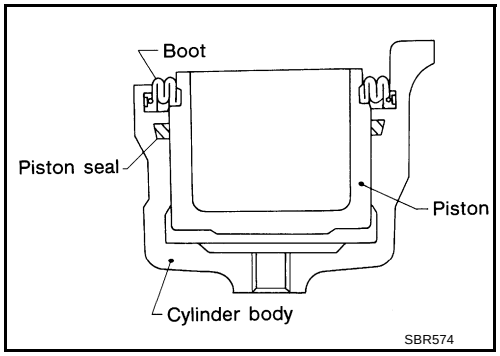
   CAUTION:

   Do not reuse piston seal.

2. Apply rubber grease to piston boots. Cover the piston end with piston boot, and install cylinder-side lip on piston boot properly into groove on cylinder body.

   CAUTION:

   Do not reuse piston boot.



3. Apply brake fluid to piston, and press piston into cylinder body by hand to assemble piston-side lip on piston boot properly into a groove on piston.

   CAUTION:

   Press piston evenly and change pressing point to prevent inner wall of cylinder from being rubbed.

4. Install sliding pins and sliding pin boots to the torque member.

5. Install the torque member to the steering knuckle and tighten the mounting bolts to the specified torque. Refer to BR-27, "Components" .

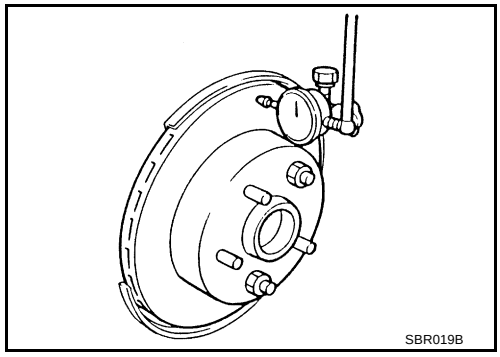
CAUTION:
Before installing torque member to vehicle, wipe off oil and grease on the washer seats on steering knuckle and the mounting surface of the torque member.

6. Install pad retainers to torque member.
7. Press in piston until pads can be installed, and then install cylinder body to torque member.
8. Install cylinder body, and tighten sliding pin bolt to the specified torque. Refer to BR-27, "Components" .
9. Position a projection of brake hose metal fitting by aligning with protrusions on cylinder body and tighten union bolt to specified torque. Refer to BR-12, "Hydraulic Circuit" .

CAUTION:
- **Assemble brake hose securely to cylinder body.**
- **Do not reuse copper washer for union bolts.**

10. After installing caliper assembly, refill with new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

DISC ROTOR INSPECTION



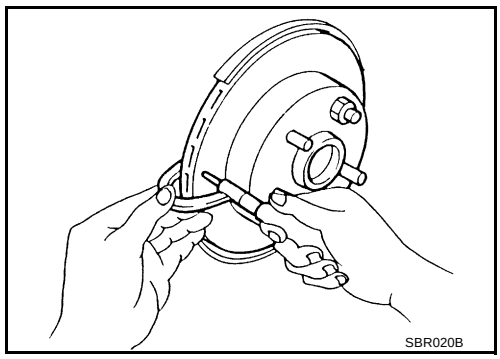
Visual Inspection

Check surfaces of disc rotor for uneven wear, cracks, and serious damage. If a malfunction is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, secure disc rotor to wheels hub. (2 or more positions)
2. Using a dial indicator, check runout.

Measurement point:
At a point 10.0 mm (0.394 in) from outer edge of disc
Runout limit (with it attached to the vehicle):
0.035 mm (0.0014 in) or less



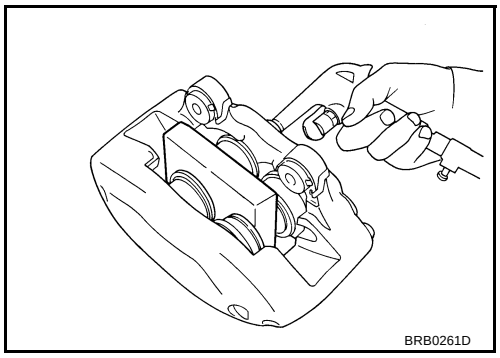
NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer to FAX-4, "On-Vehicle Inspection" .

3. If runout is outside limit, find the minimum runout point by shifting the mounting positions of disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of disc rotor. If thickness is outside standard, replace disc rotor.

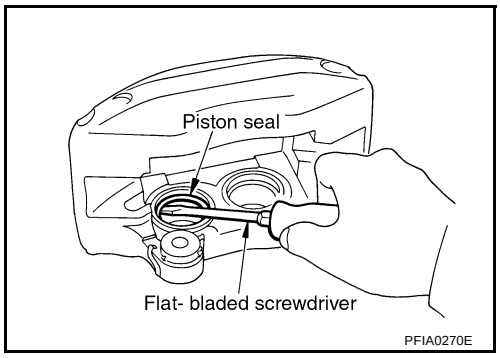
Standard thickness : 28.0 mm (1.10 in)
Repair limit thickness : 26.0 mm (1.02 in)
Maximum uneven wear (measured at 8 positions)
: 0.015 mm (0,0006 in) or less



Disassembly and Assembly of Brake Caliper Assembly (With Brembo Calipers)

NFS0000Y

DISASSEMBLY



1. Insert a piece of wood as shown in the figure, blow air in through the flare nut mounting hole, and remove the piston and piston boot. If the four pistons do not all come out at the same time, press the piston(s) that have come out a ways into the cylinder body and blow air in again.

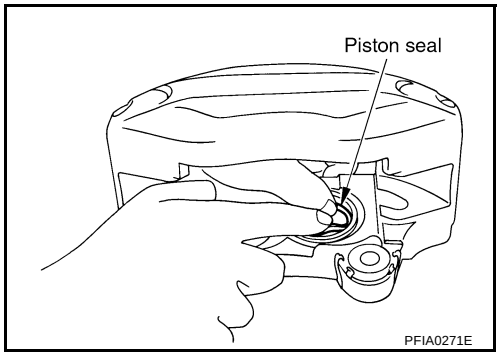
   CAUTION:
   Do not get fingers caught in the piston.
2. Remove the piston boot from the piston.

3. Using a flat-bladed screwdriver, remove the piston seal.

   CAUTION:
   - **Be careful not to damage cylinder inner wall.**
   - **Never remove the four bolts from the inner and outer sides of the caliper. Do not tighten them further, either.**

CALIPER INSPECTION

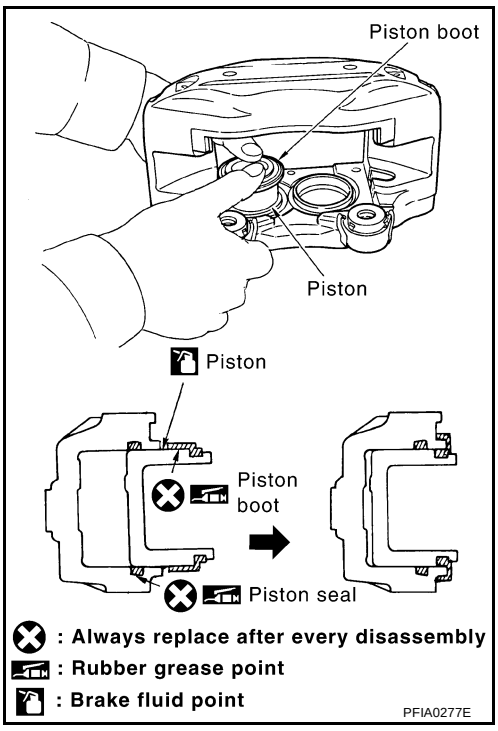
Caliper



CAUTION:
- **Use new brake fluid to clean. Do not use mineral oils such as gasoline or kerosene.**
- **Check for corrosion, wear, or damage to the cylinder inner wall, and replace the caliper if there are any non-standard conditions.**

Piston

CAUTION:
- **Since the piston surface is plated, do not repair using sandpaper.**
- **Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.**



ASSEMBLY

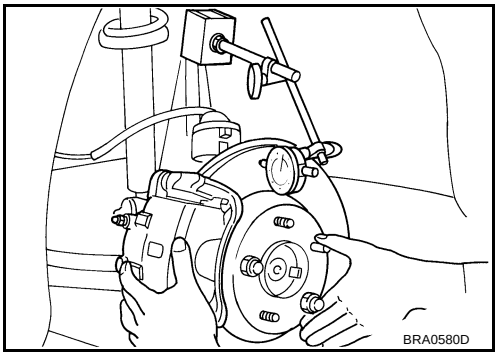
1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

2. Apply rubber grease to the piston boot, place it on the piston, and firmly insert the piston boot cylinder-side lip into the cylinder body groove.
3. Insert the piston into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

4. Attach the shim and shim cover to the pad and attach to the caliper.

DISC ROTOR INSPECTION



Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

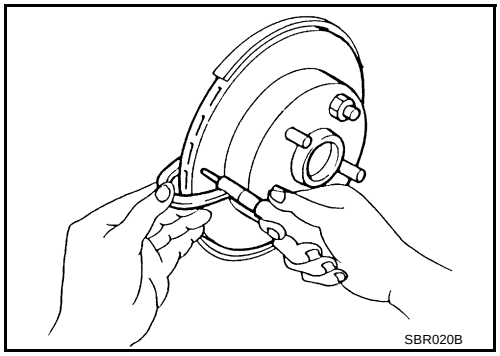
Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Runout limit (with it attached to the vehicle)
: 0.040 mm (0.0016 in) or less
Runout limit (just the disc rotor)
: 0.040 mm (0.0016 in) or less

NOTE:
Make sure that wheel bearing axial end play is with in the specifications before measuring runout. Refer to FAX-4, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.



Standard

Standard thickness : 30.0 mm (1.181 in)

Wear limit : 28.4 mm (1.118 in)

Maximum uneven wear (measured at 8 positions)

: 0.015 mm (0.0006 in) or less

Brake Burnishing Procedure

NFS000AX

Burnish the brake pad and disc rotor mutually contacting surfaces of disc rotor according to following procedure after refinishing or replacing disc rotors, after replacing pads, or if a soft pedal occurs at very low mileage.

CAUTION:

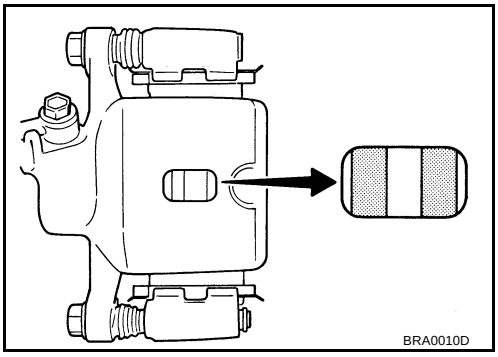
- **Be careful of vehicle speed because brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

REAR DISC BRAKE

PFP:44000

On-Vehicle Inspection

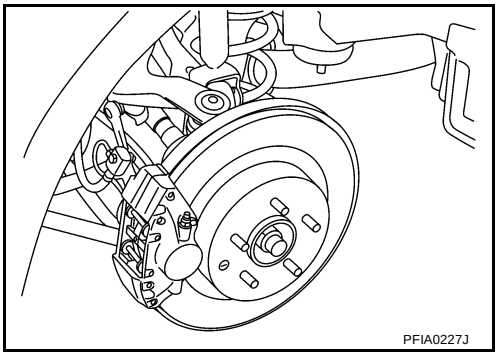


NFS0000Z

PAD WEAR INSPECTION

Other than Brembo Calipers

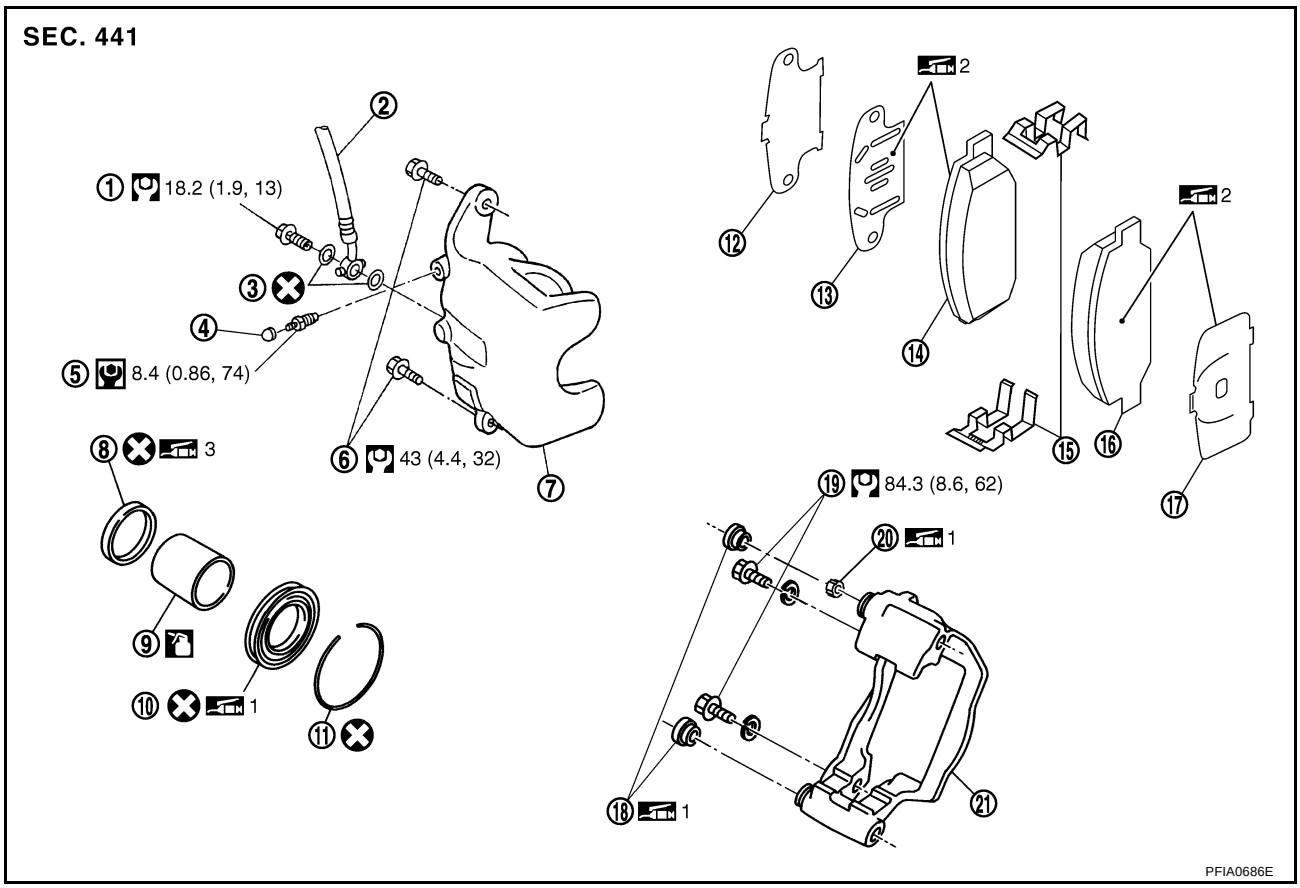
- Inspect the thickness of the pad through the cylinder body inspection hole. Use a scale for inspection if necessary.



Standard thickness : 8.5 mm (0.335 in)
Repair limit thickness : 2.0 mm (0.079 in)

With Brembo Calipers

- Inspect the thickness of the pad through the caliper inspection hole. Use a scale for inspection if necessary.



Standard thickness : 9.1 mm (0.358 in)
Repair limit thickness : 2.0 mm (0.079 in)

Components

NFS00010

OTHER THAN BREMBO CALIPERS

1.	Union bolt	2.	Brake hose	3.	Copper washer
4.	Cap	5.	Bleed valve	6.	Sliding pin bolt
7.	Cylinder body	8.	Piston seal	9.	Piston
10.	Piston boot	11.	Retaining ring	12.	Inner shim cover
13.	Inner shim	14.	Inner pad	15.	Pad retainer
16.	Outer pad	17.	Outer shim	18.	Slide pin boot
19.	Torque member bolt	20.	Bushing	21.	Torque member

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

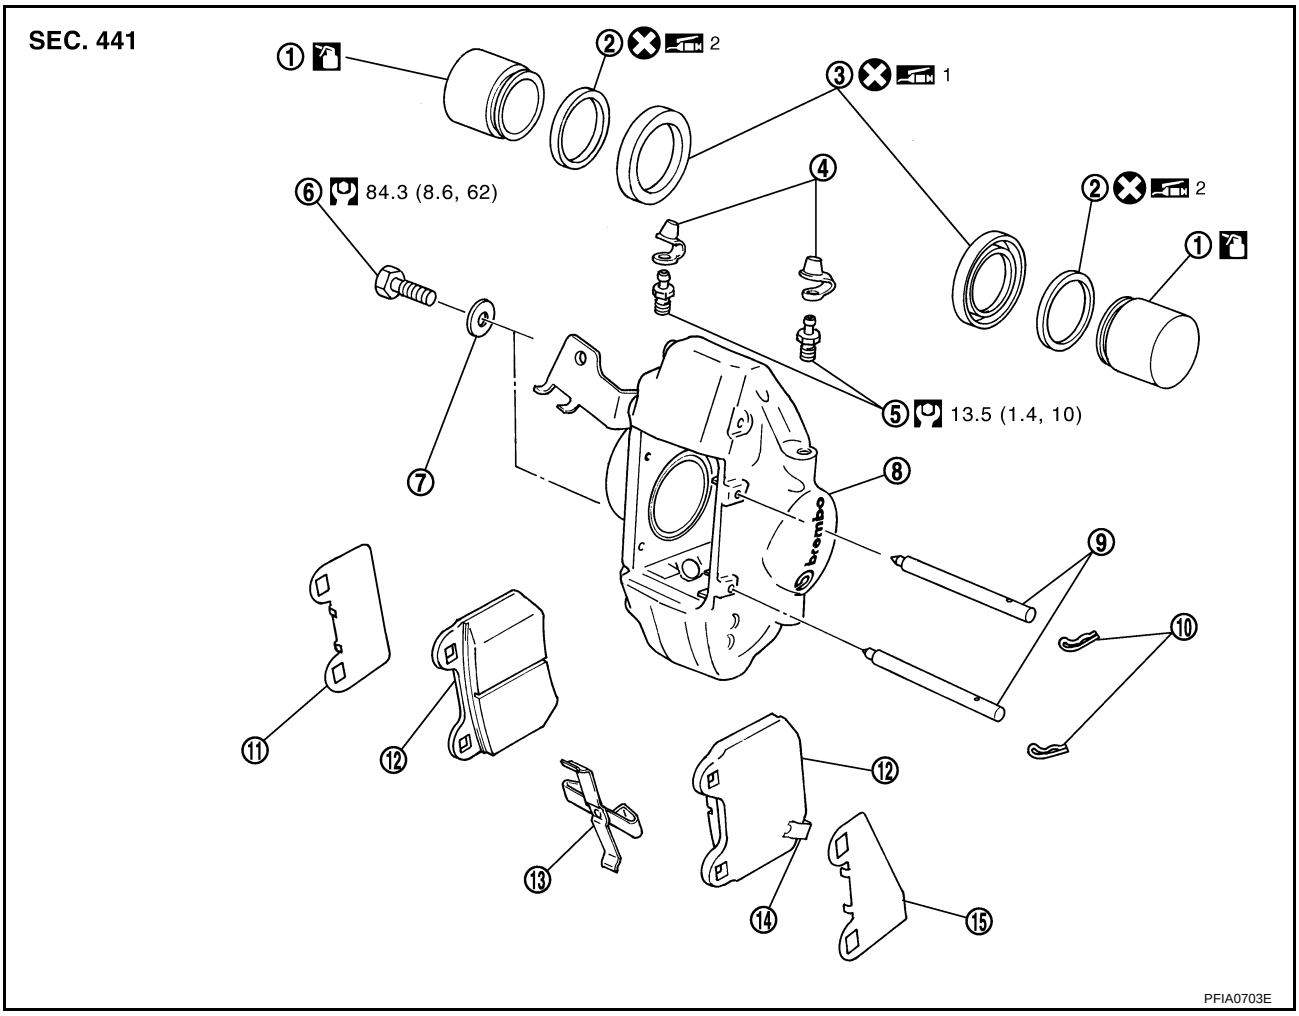
2: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

3: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.



CAUTION:

- **While removing cylinder body, never depress the brake pedal because the piston will pop out.**
- **It is not necessary to remove bolts on torque member and brake hose except for disassembly or replacement of the caliper assembly. In this case, hang cylinder body with a wire so as not to stretch brake hose.**
- **Do not damage piston boot.**
- **If any shim is subject to serious corrosion, replace it with a new one.**
- **Always replace shims and shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**

WITH BREMBO CALIPERS

NOTE:

Refer to BR-43, "HOW TO APPLY GREASE TO THE BRAKE PAD" for how to apply grease to brake pads.

1.	Piston	2.	Piston seal	3.	Piston boot
4.	Cap	5.	Bleed valve	6.	Bolt
7.	Washer	8.	Caliper	9.	Pad pins
10.	Clips	11.	Inner shim cover	12.	Brake pad
13.	Cross spring	14.	Pad wear sensor	15.	Outer shim cover

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

2: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

CAUTION:

- **While removing cylinder body, never depress the brake pedal because the piston will pop out.**
- **Apart from caliper assembly, disassembly or replacement, there is no need to remove caliper bolts or brake hose or tube.**
- **Do not damage piston boot.**
- **Always replace shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**

Removal and Installation of Brake Pad (Other than Brembo Calipers)

NFS00011

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Remove sliding pin bold (one on top).
3. Hang cylinder body with a wire, and remove pads, pad retainers, shims and shim cover from torque member.

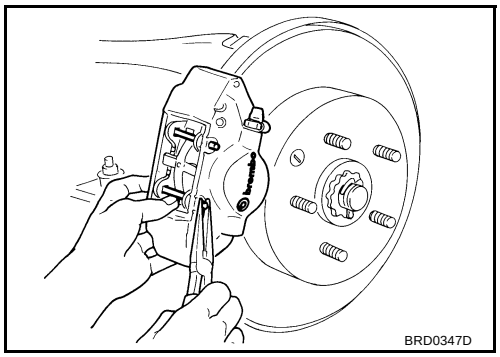
INSTALLATION

1. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease to the rear of the pad and to both sides of the shim, and attach the inner shim and shim cover to the inner pad, and the outer shim to the outer pad.
2. Attach the pad retainer and pad to the torque member.
3. Push the piston in so that the pad is firmly attached and attach the cylinder body to the torque member.

   NOTE:
   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

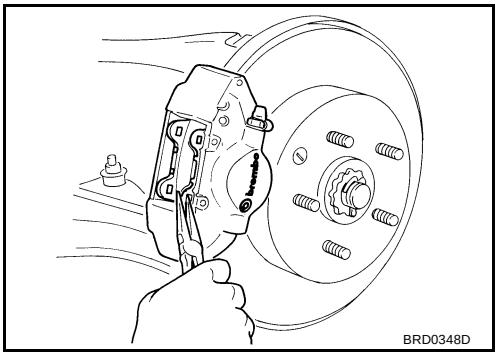
   CAUTION:
   By pushing in the piston, the brake fluid returns to the master cylinder reservoir tank. Watch the level of the surface of the reservoir tank.
4. Attach the sliding pin bolt (one on top) and tighten to the specified torque.
5. Check brake for drag.
6. Install tires to vehicle.

Removal and Installation of Brake Pad (With Brembo Calipers)



NFS00016

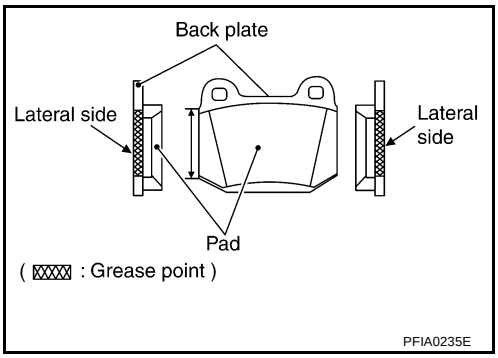
REMOVAL



1. Remove tires from vehicle with a power tool.
2. Remove the clip from the pad pin.

3. Remove the pad pin while holding down the cross spring, then remove the cross spring from the caliper.

4. Using pliers, remove the pad from the caliper.



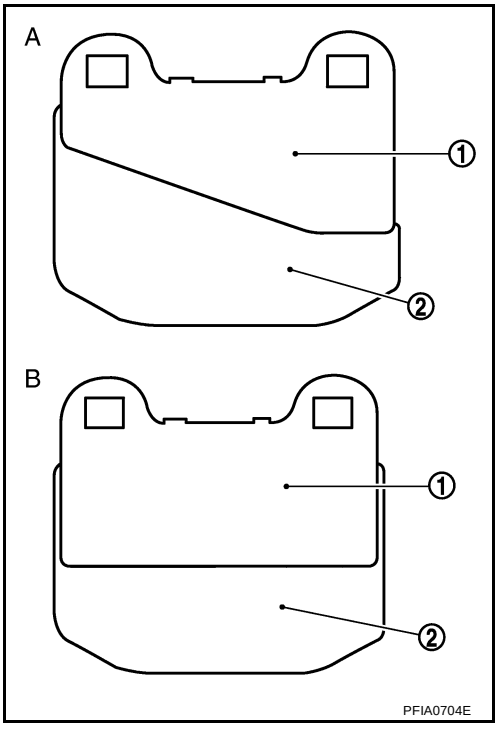
HOW TO APPLY GREASE TO THE BRAKE PAD

Pad Side

Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease about 0.5 g (0.018 oz) per surface equally to back plate side of Inner Pad and Outer Pad. (Refer to the figure)

CAUTION:

Make sure no foreign matter attaches itself to the grease.



Pad Rear

Apply approximately 1.5 g (0.053 oz) of PBC (Poly Butyl Cuprysil) grease or silicone -based grease between shim cover (1) and pad (2).

- A: Outer side
- B: Inner side

CAUTION:

Make sure no foreign matter attaches itself to the grease.

INSTALLATION

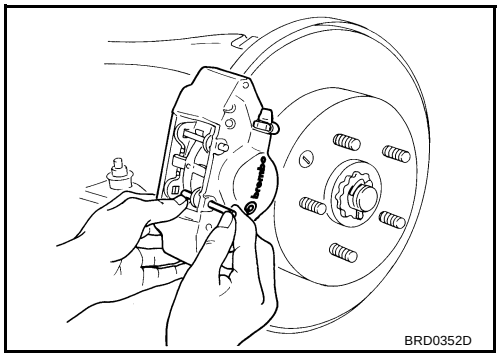
1. Insert the piston to the position where the pad is attached.

   NOTE:

   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

   CAUTION:

   Pushing the piston in will make the brake fluid return to the master cylinder reservoir tank, so watch the level of the surface of the reservoir tank.



2. Attach pad and shim cover.

CAUTION:
Attach the pad with wear sensor to the outer side.

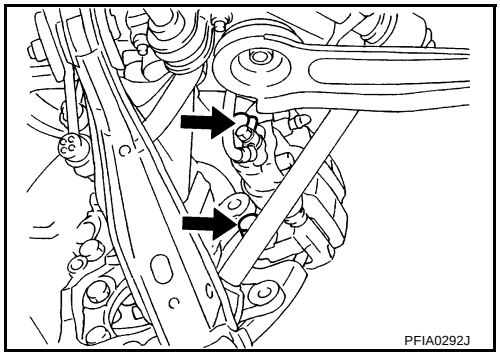
3. Insert the upper pad pin from the outer cylinder side, then insert firmly to the inner cylinder side through the hole in the top of the pad.
4. As shown in the figure, place the top of the cross spring over the top pad pin, press in the cross spring, push the lower pad pin from the outer cylinder side to the inner cylinder side, and secure the cross spring.
5. Insert the clip in the small hole at the end of the pad pin.

CAUTION:
If the clip is not fully attached, the pad pin or the pad could fall out while the vehicle is in motion.

6. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)

NFS00012



REMOVAL

1. Remove tires from vehicle with a power tool.
2. Fasten disc rotor using wheel nut.
3. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
4. Remove union bolts then disconnect brake hose from caliper assembly and torque member bolts, and remove caliper assembly.

CAUTION:
Do not drop brake pad.

5. Remove disc rotor.

CAUTION:
Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.

INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

CAUTION:
Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install caliper assembly to the vehicle, and tighten torque member mounting bolts to the specified torque.

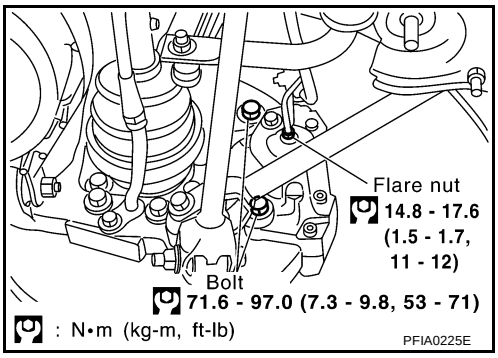
CAUTION:
Before installing caliper assembly to the vehicle, wipe off oil and grease on washer seats on axle assembly and mounting surface of caliper assembly.

3. Install L-shape pin of brake hose to caliper assembly and tighten union bolts to the specified torque.

CAUTION:

- **Do not reuse the copper washer for union bolts.**
- **Securely attach brake hose to protrusion on caliper assembly.**

4. Insert new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
5. Check rear disc brake for drag.
6. Install tires to vehicle.



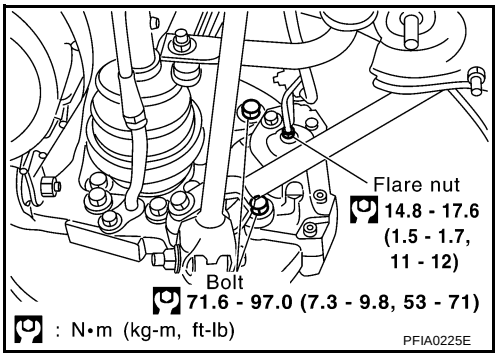
Removal and Installation of Brake Caliper Assembly (With Brembo Calipers)

NFS00017

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
3. Remove the brake pad. Refer to BR-42, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
4. Remove the brake tube flare nut using a flare wrench.
5. Remove the brake hose bolt, move the brake hose, and remove the caliper assembly from the vehicle.
6. Remove disc rotor.

CAUTION:
Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.



INSTALLATION

CAUTION:
- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

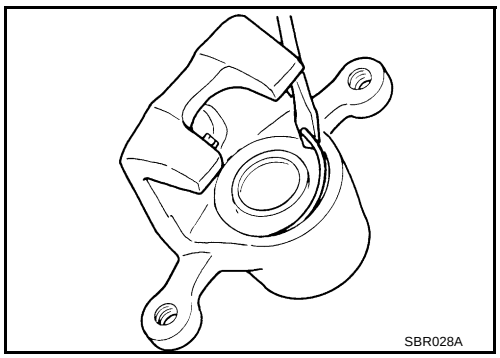
CAUTION:
Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install the brake tube to the caliper assembly and partially tighten the flare nut.
3. Install the caliper assembly to the vehicle and tighten the bolt to the specified torque.
4. Tighten the flare nut to the specified torque.
5. Install brake pad and shim. Refer to BR-42, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
6. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
7. Install tires to vehicle.

Disassembly and Assembly of Brake Caliper Assembly (Other than Brembo Calipers)

NFS00013

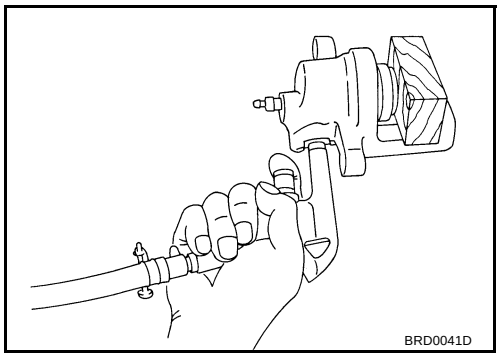
NOTE:
Do not remove torque member, pads, shims, shim cover and pad retainers when disassembling and assembling cylinder body assembly.



DISASSEMBLY

1. Remove the slide pin bolt, and then remove cylinder body from torque member.

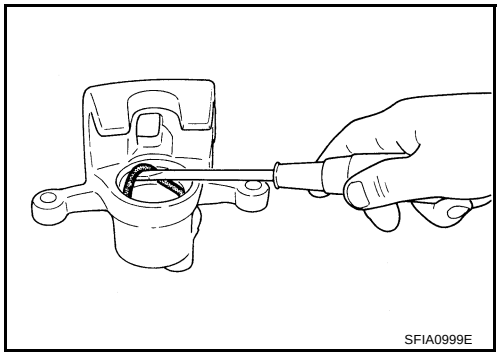
CAUTION:
Do not drop pads, shims, shim covers and pad retainers from torque member.



2. Remove sliding pin boot from torque member.

3. As shown in the figure, using a flat-bladed screwdriver, remove the retaining ring from the cylinder body.

SBR028A



4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove pistons and piston boots.

CAUTION:
Do not get fingers caught in the piston.

BRD0041D

5. Using a flat-bladed screwdriver, remove piston seals from cylinder body.

CAUTION:
Be careful not to damage cylinder inner wall.

SFIA0999E

CALIPER INSPECTION

Cylinder Body

CAUTION:

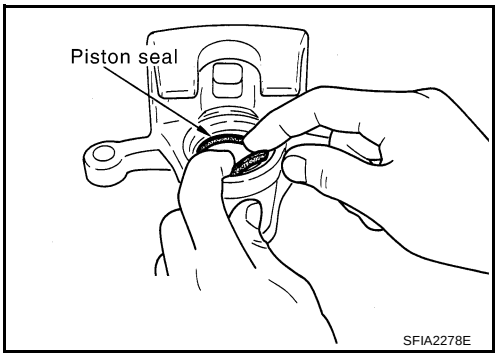
- **Use new brake fluid to clean. Never use mineral oils such as gasoline or kerosene.**
- **Check inner wall of cylinder for corrosion, wear, and damage. If any non-standard condition is detected, replace cylinder body.**
- **Minor flaws caused by corrosion or a foreign material can be removed by polishing the surface with a fine sandpaper. Replace the cylinder body, if necessary.**

Torque Member

Check for wear, cracks, and damage. If damage or deformation is present, replace the affected part.

Piston

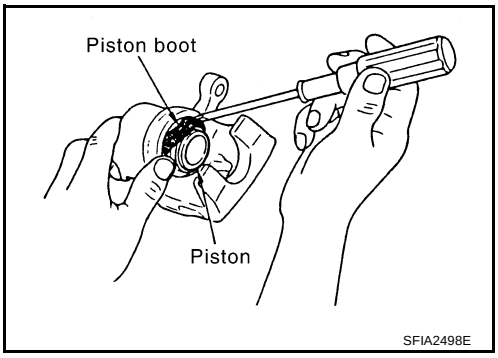
CAUTION:
Since the piston surface is plated, do not repair using sandpaper.
Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.



Sliding Pin Bolts and Sliding Pin Boots

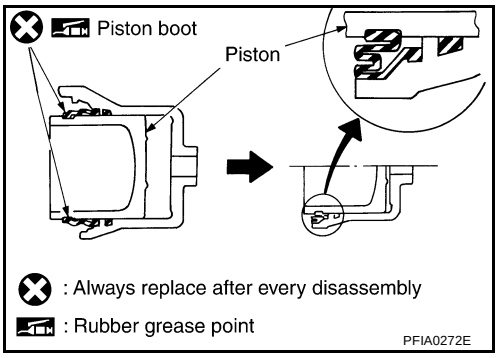
Check that there is no wear, damage, or cracks in the sliding pin bolts and sliding pin boots, and if there are, replace them.

ASSEMBLY



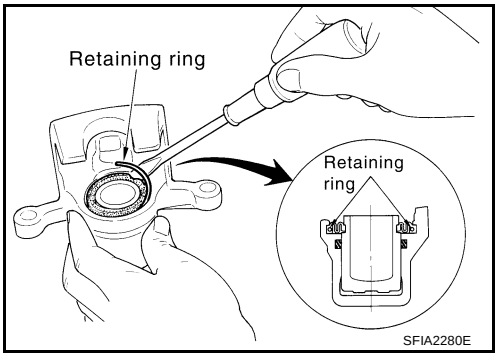
1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

   CAUTION:
   Do not reuse piston seal.



2. Apply rubber grease to piston boot. Cover the piston end with the piston boot, and then install cylinder slide lip on the piston boot securely into the groove on cylinder body.

   CAUTION:
   Do not reuse the piston boot.



3. Apply a brake fluid to the piston, insert into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

   CAUTION:
   Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

4. Fix piston boot with retaining ring.

   CAUTION:
   - **Make sure the boot is firmly in the cylinder body groove.**
   - **Do not reuse the retaining ring.**

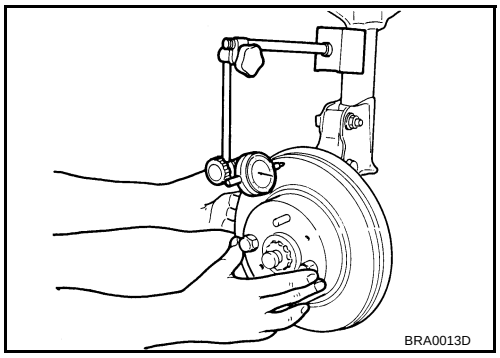
5. Install the sliding pin bolt and sliding pin boot to the torque member.
6. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease to the rear of the pad and to both sides of the shim, and attach the inner shim and shim cover to the inner pad, and the outer shim to the outer pad.

7. Install the pad retainers and pads to the torque member.

CAUTION:
When attaching the pad retainer, attach it firmly so that it does not float up higher than the torque member, as shown in the figure.

8. After assembling shims and shim cover to pad, install it to the torque member.
9. Install cylinder body. Tighten sliding pin bolts to the specified torque. Refer to BR-40, "Components" .

DISC ROTOR INSPECTION



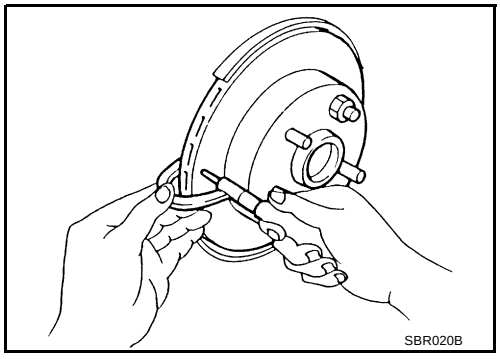
Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Measurement position:
At a point 10 mm (0.39 in) from outer edge of the disc
Runout limit (with it attached to the vehicle):
0.055 mm (0.0022 in) or less
Runout limit (just the disc rotor):
0.020 mm (0.008 in) or less



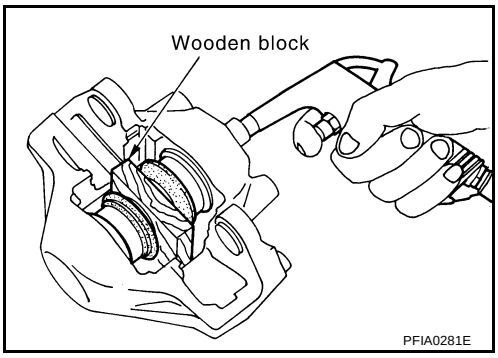
NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer to RAX-6, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.

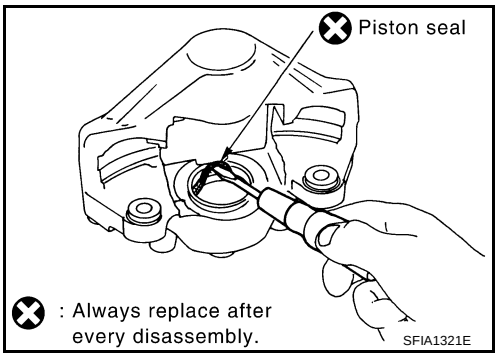
Standard
Standard thickness : 16.0 mm (0.630 in)
Wear limit : 14.0 mm (0.551 in)
Maximum uneven wear (measured at 8 positions)
: 0.015 mm (0.0006 in) or less



Disassembly and Assembly of Brake Caliper Assembly (With Brembo Calipers)

NFS00018

DISASSEMBLY



1. Insert a piece of wood as shown in the figure, blow air in through the flare nut mounting hole, and remove the piston and piston boot.

   CAUTION:
   Do not get fingers caught in the piston.
2. Remove the piston boot from the piston.

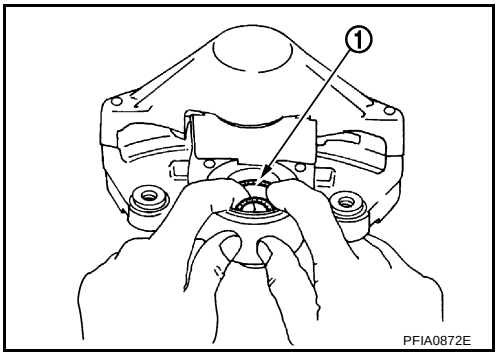
3. Using a flat-bladed screwdriver, remove the piston seal.

   CAUTION:
   - **Be careful not to damage cylinder inner wall.**
   - **Never remove the four bolts from the inner and outer sides of the caliper. Do not tighten them further, either.**

CALIPER INSPECTION

Caliper

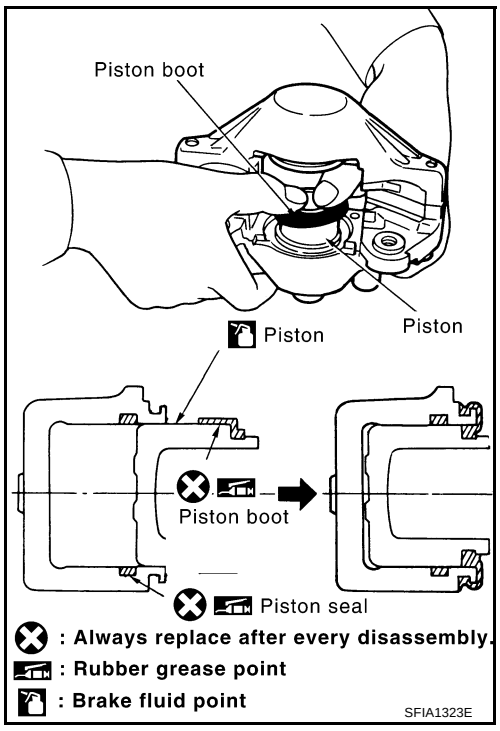
CAUTION:
- **Use new brake fluid to clean. Never use mineral oils such as gasoline or kerosene.**
- **Check for corrosion, wear, or damage to the cylinder inner wall, and replace the caliper if there are any non-standard conditions.**



Piston

CAUTION:
- **Since the piston surface is plated, do not repair using sandpaper.**
- **Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.**

ASSEMBLY



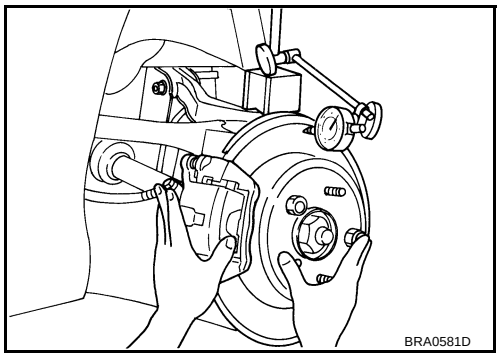
1. Apply polyglycol ether based lubricant to the piston seal (1), and install them to the cylinder body.

   CAUTION:
   Do not reuse piston seal.

2. Apply rubber grease to the piston boot, place it on the piston, and firmly insert the piston boot cylinder-side lip into the cylinder body groove.
3. Insert the piston into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

DISC ROTOR INSPECTION



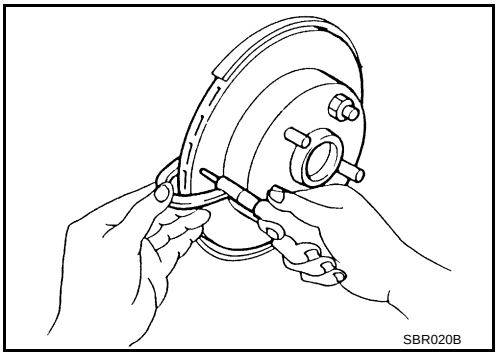
Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Runout limit (with it attached to the vehicle)
: 0.070 mm (0.0028 in) or less
Runout limit (just for disc rotor)
: 0.040 mm (0.0016 in) or less



NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer toRAX-6, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.

Standard

Standard thickness : 22.0 mm (0.866 in)

Wear limit : 20.2 mm (0.795 in)

Maximum uneven wear (measured at 8 positions)

: 0.015 mm (0.0020 in) or less

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

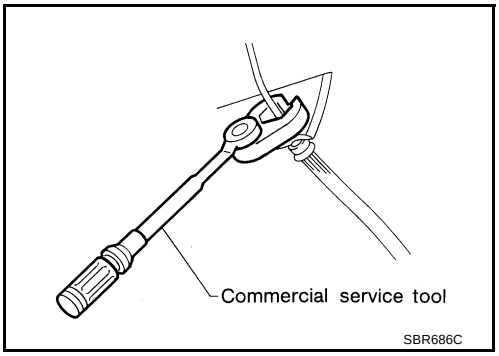
NFS0001M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0001N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0001O

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene to clean. They will ruin rubber parts and cause improper operation.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of ABS actuator and electric unit (control unit) or the battery negative terminal.

WARNING:

Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

Precautions for Brake Control

NFS0001P

- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.

- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.

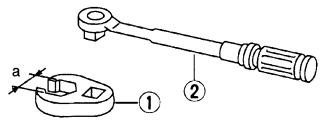
Special Service Tools



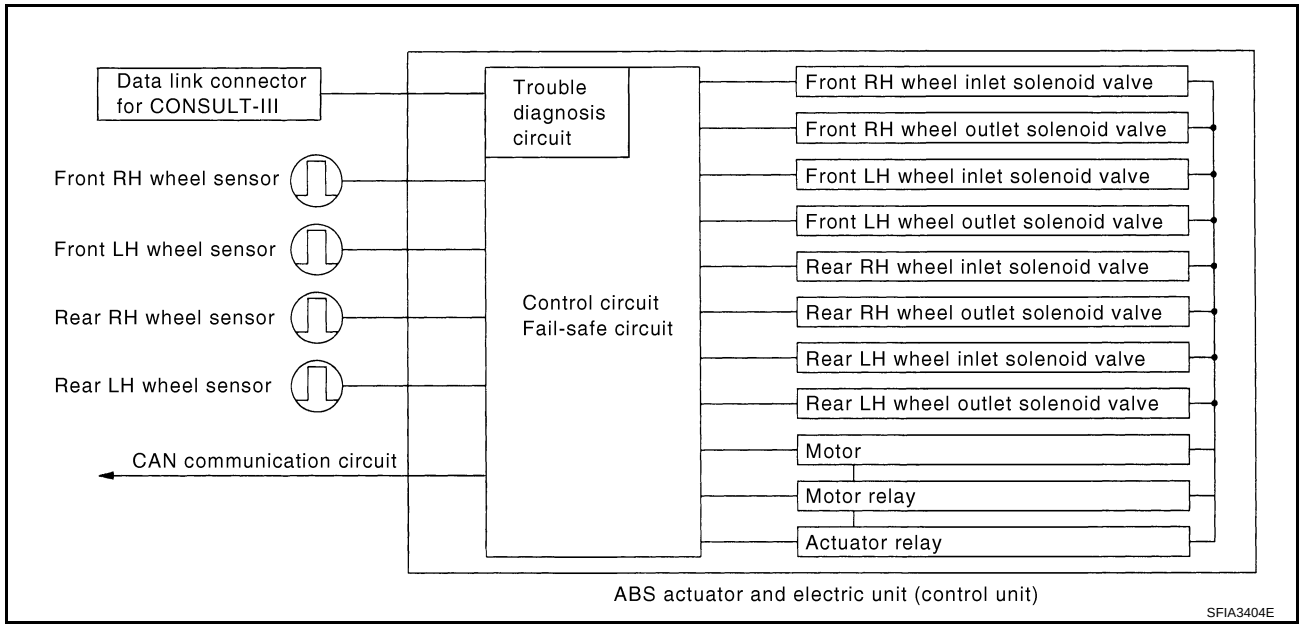
NFS0001Q

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	Installation rear sensor rotor
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	
KV40104710 (—) Drift a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0001R



Tool name		Description
1. Flare nut crowfoot a: 10 mm (0.39 in) / 12 mm (0.47 in) 2. Torque wrench	 S-NT360	Installing brake tube

SYSTEM DESCRIPTION

PFP:00000

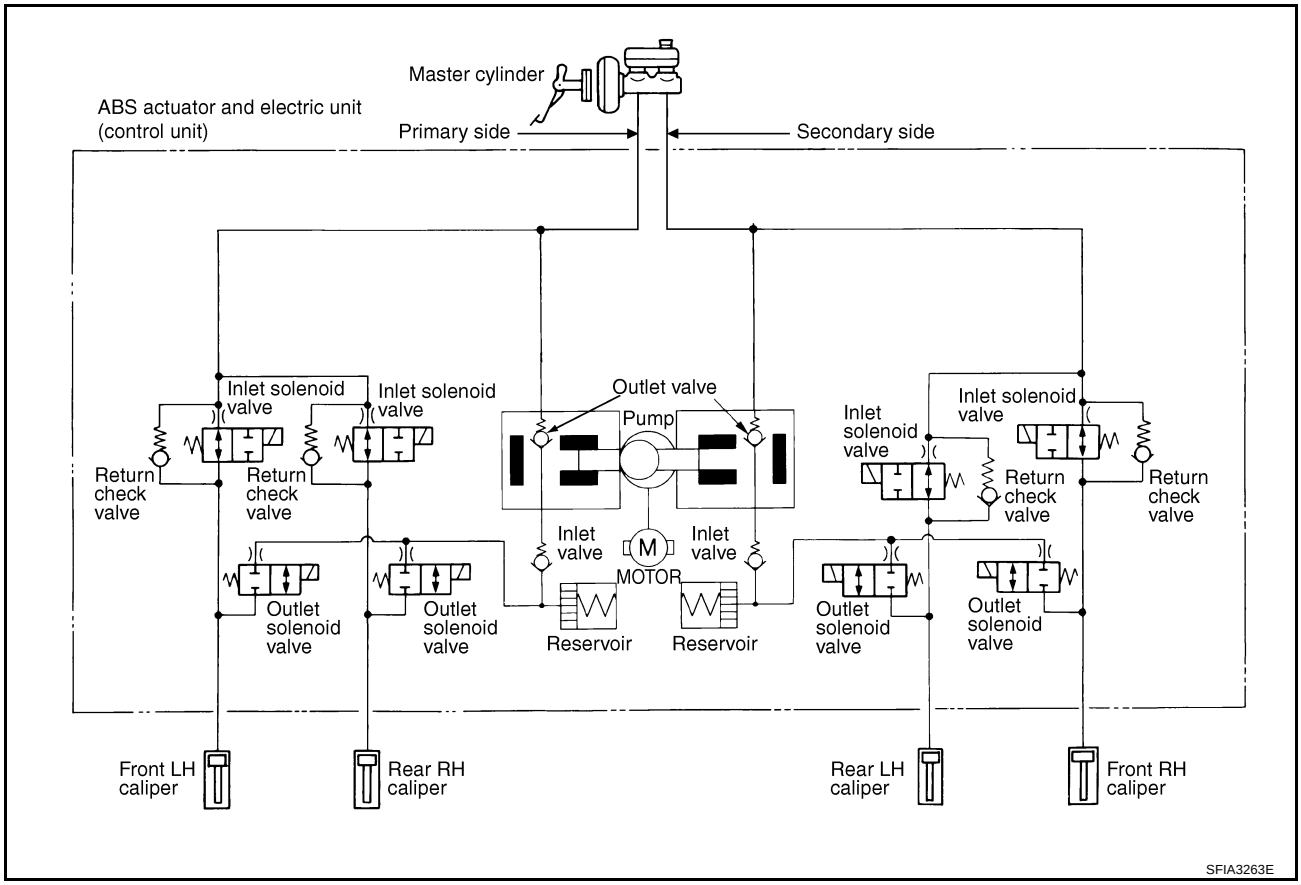
System Diagram

NFS0001S

ABS Function

NFS0001T

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical System Diagnosis by CONSULT-III is available.



EBD Function

NFS0001U

- Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical System Diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS0001W

CAN Communication

NFS0001X

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

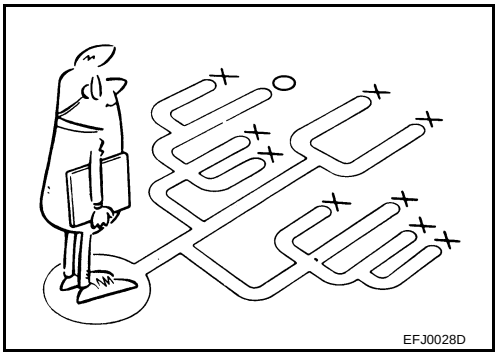
NFS000II

ABS, EBD SYSTEM

In case of electrical problems with the ABS, the ABS warning lamp will turn on. In case of electrical problems with the EBD, brake warning lamp, ABS warning lamp will turn on. Simultaneously, the ABS become one of the following conditions of the Fail-Safe function.

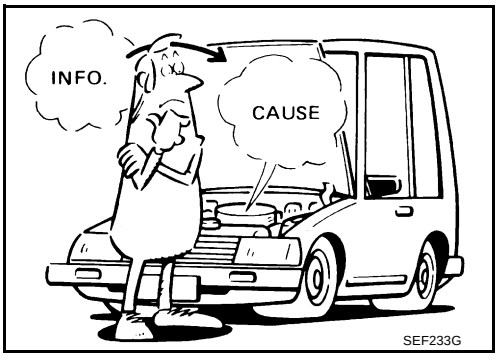
- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicle without ABS equipment.

  NOTE:
  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For EBD trouble, The EBD and ABS become inoperative, are the condition of the vehicle is the same as the condition of vehicles without ABS, EBD equipment.



How to Proceed with Diagnosis

NFS0001Y

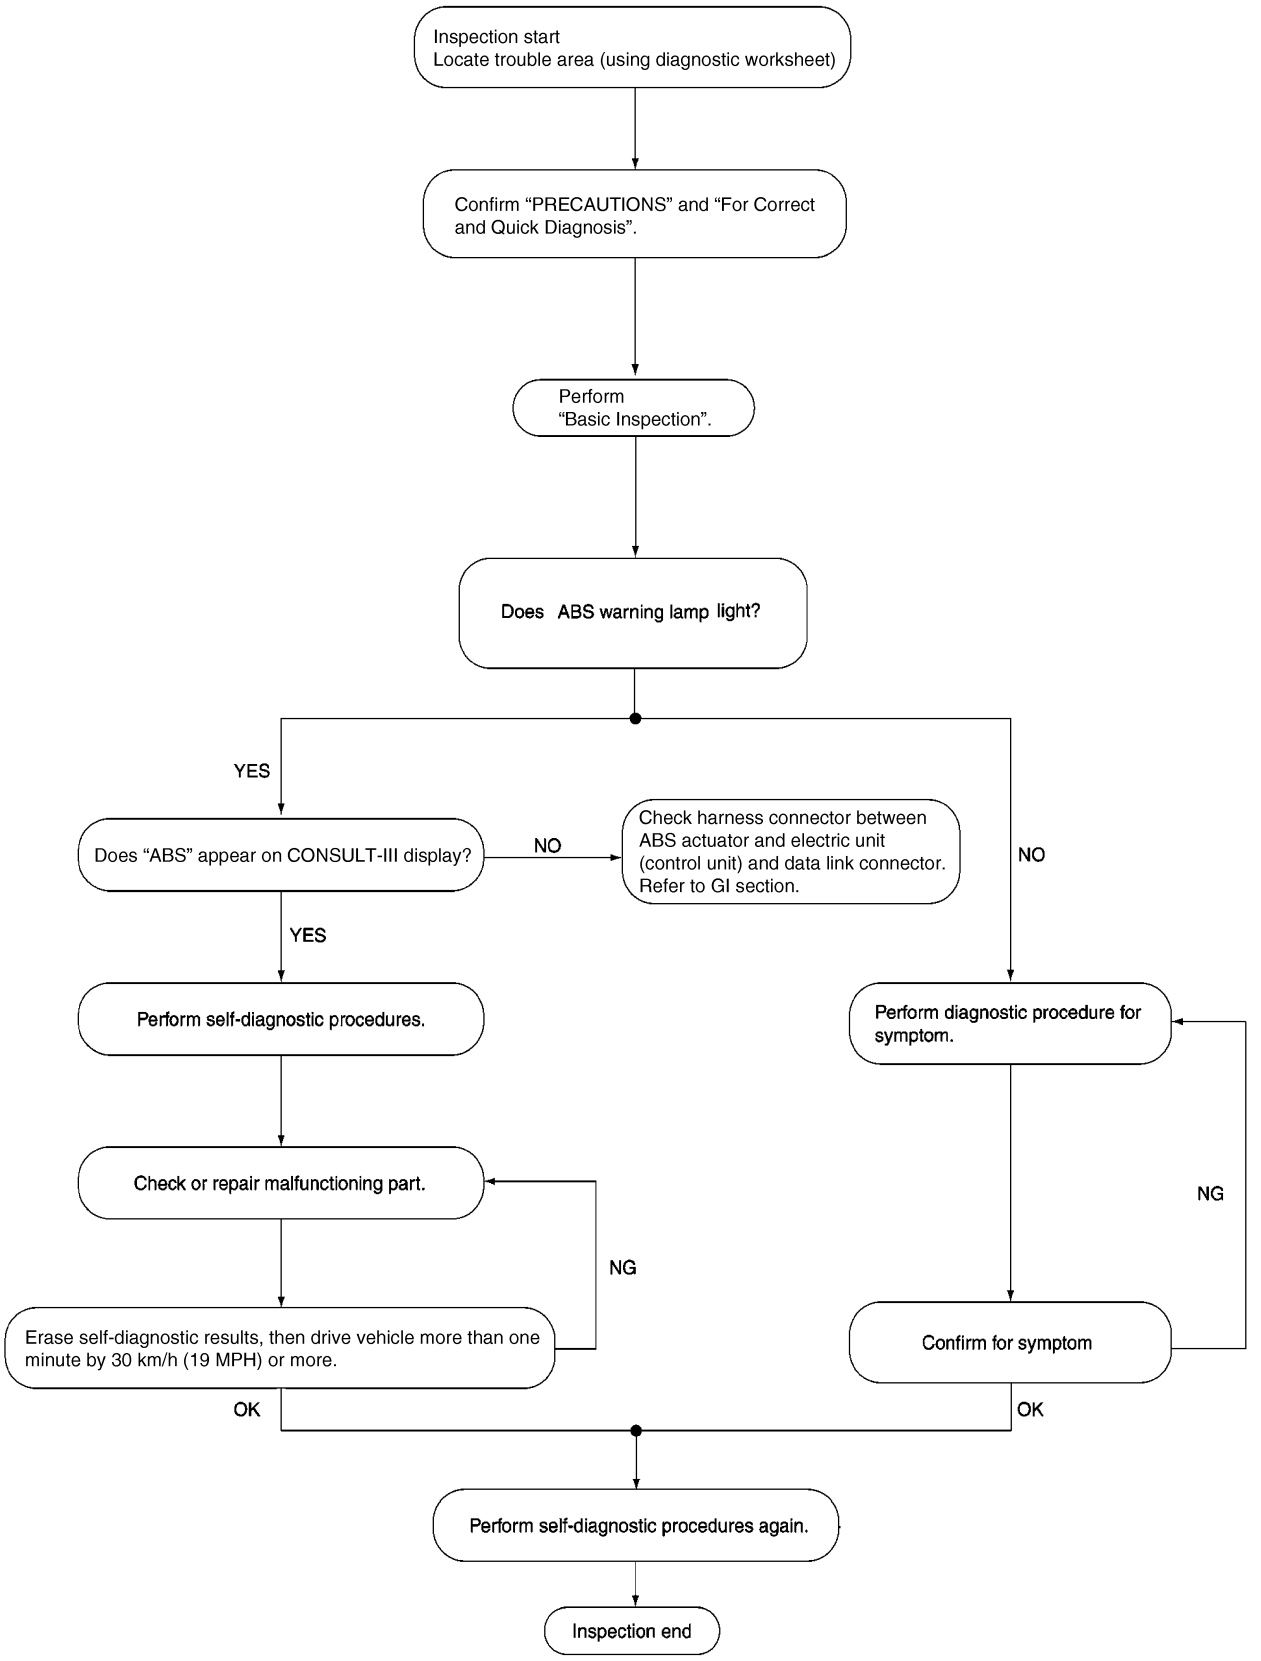


BASIC CONCEPT

- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.
- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:
  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

EFJ0028D



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions" .

DIAGNOSIS FLOWCHART

SFIA3405E

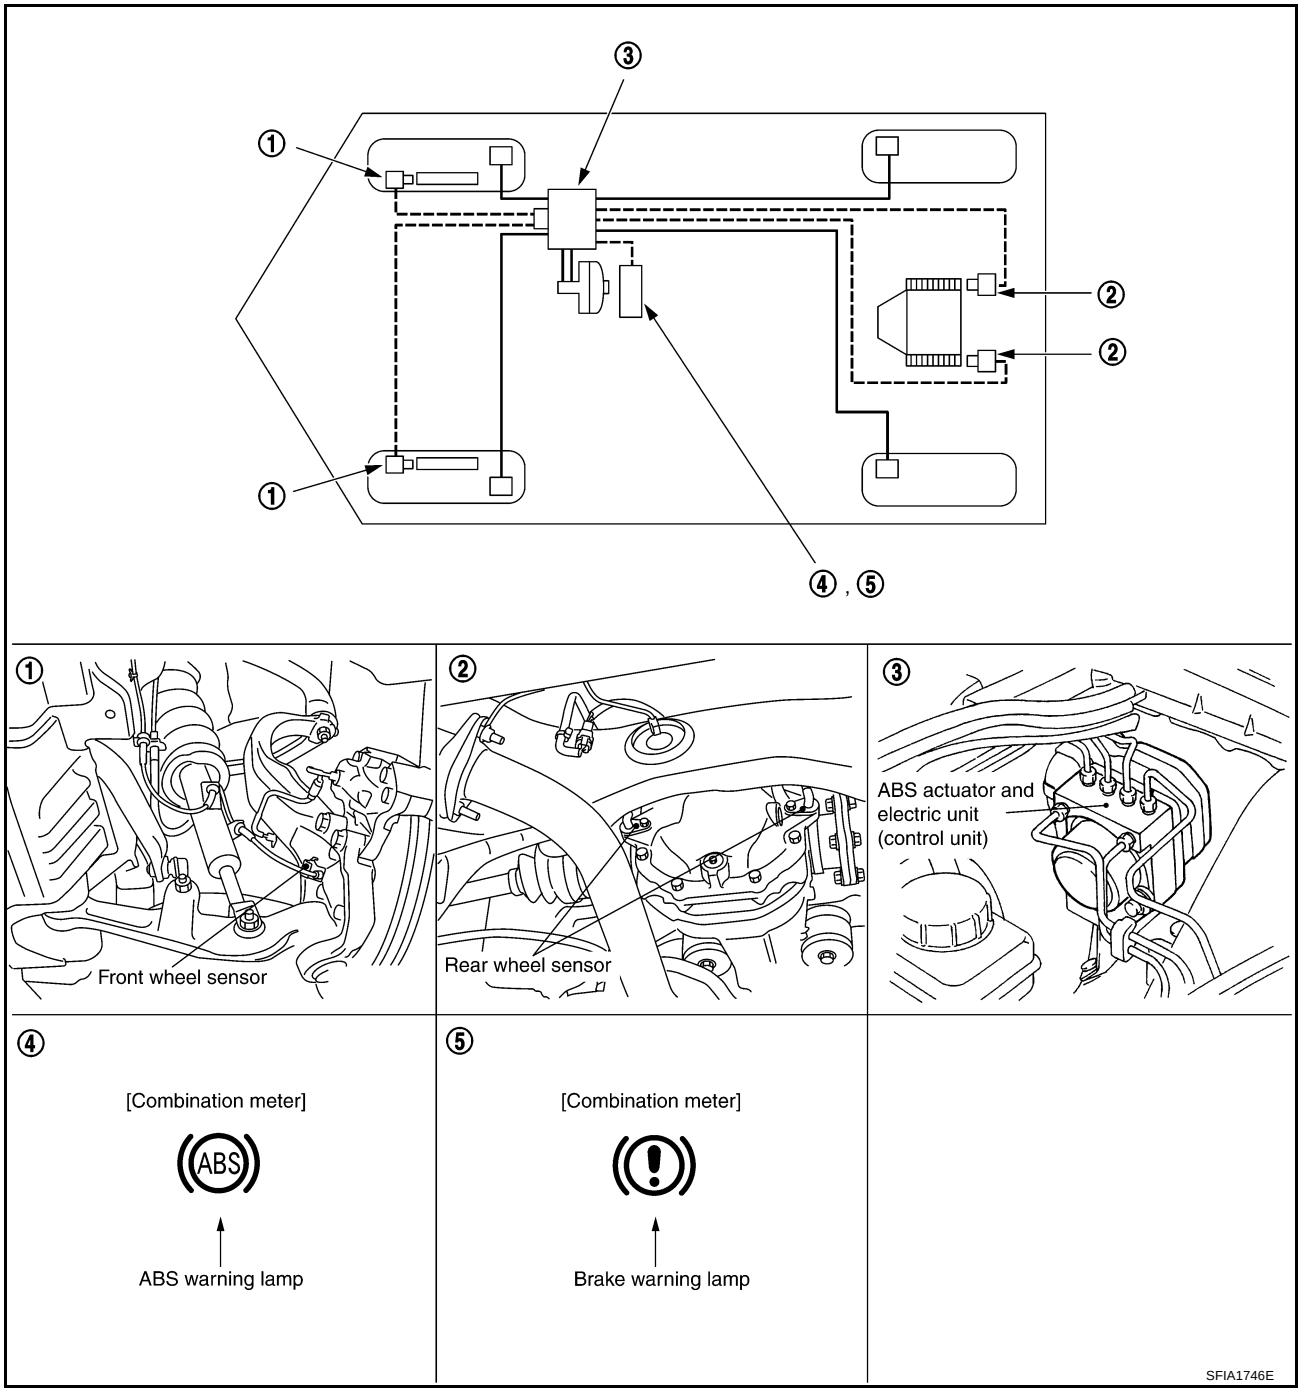
ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B



EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration	
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00022

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Wheel speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (± 10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
EBD WARN LAMP	Brake warning lamp on condition (Note 2)	Brake warning lamp ON	ON
		Brake warning lamp OFF	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
ABS WARN LAMP	ABS warning lamp on condition (Note 3)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
BATTERY VOLT	Battery voltage supplied to ABS control unit	Ignition switch ON	10 - 16V
GEAR	Determined gear shift position from the A/T PNP switch signal	Driving	M/T vehicles are always left in 1.
ENGINE RPM	Engine running	With engine stopped	0 rpm
		With engine running	Almost in accordance with tachometer display
FAIL SIGNAL	Fail signal status	During ABS fail-safe During EBD fail-safe	ON

Note 1: Confirm tire pressure is normal.
Note 2: Serves as EBD warning lamp.
Note 3: ON/OFF timing of ABS warning lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal).

CONSULT- II Functions (ABS)

NFS00023

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-19, "Self-Diagnosis"
DATA MONITOR	Input/Output data in the ABS actuator and electric unit (control unit) can be read.	BRC-21, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.	BRC-22, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	ABS actuator and electric unit (control unit) part number can be read.	—

Self-Diagnosis

NFS000HD

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp and brake warning lamp turn OFF.

   CAUTION:

   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR-1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-25, "Wheel Sensor System" (Note 1)
RR LH SENSOR-1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR-1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR-1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR-2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR-2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR-2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR-2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the ABS actuator and electric unit (control unit) power supply voltage is lower than normal.	BRC-27, "ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal malfunction in the ABS actuator and electric unit (control unit).	BRC-27, "ABS Actuator and Electric Unit (Control Unit)"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system.	BRC-29, "ABS Actuator Relay or ABS Motor Relay Power System"
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-30, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the control unit detects an error in the front left inlet solenoid system.	BRC-29, "ABS Actuator Relay or ABS Motor Relay Power System"
FR LH OUT ABS SOL [C1121]	When the control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the control unit detects an error in the rear right inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the control unit detects an error in the rear right outlet solenoid system.	

Display item	Malfunction detecting condition	Check item
EMERGENCY BRAKE [C1153]	When the ABS actuator and electric unit (control unit) malfunctions (pressure increase is too much or too little).	BRC-31, "ABS Actuator and Electric Unit (Control Unit) 2"
CAN COMM CIRCUIT [U1000]	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-31, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) or more for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.
Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Data Monitor

NFS000HE

DISPLAY ITEM LIST

×: Standard –: Not applicable ▼: Option

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECM INPUT SIGNALS	MAIN SIGNALS	SELECTION MENU	
FR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by front LH wheel sensor signal is displayed.
FR RH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by front RH wheel sensor signal is displayed.
RR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by rear LH wheel sensor signal is displayed.
RR RH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by rear RH wheel sensor signal is displayed.
FR LH IN SOL (ON/OFF)	—	×	▼	Front left inlet ABS solenoid valve (ON/OFF) status is displayed.
FR LH OUT SOL (ON/OFF)	—	×	▼	Front left outlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH IN SOL (ON/OFF)	—	×	▼	Rear right inlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH OUT SOL (ON/OFF)	—	×	▼	Rear right outlet ABS solenoid valve (ON/OFF) status is displayed.

EBD SIGNAL (ON/OFF)	—	—	▼	EBD operation (ON/OFF) status is displayed.
ABS SIGNAL (ON/OFF)	—	—	▼	ABS operation (ON/OFF) status is displayed.
EBD FAIL SIG (ON/OFF)	—	—	▼	EBD fail-safe signal (ON/OFF) status is displayed.
ABS FAIL SIG (ON/OFF)	—	—	▼	ABS fail-safe signal (ON/OFF) status is displayed.

Active Test

NFS000IN

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

For ABS solenoid valve, touch “UP”, “KEEP”, and “DOWN”.Then use screen monitor to check that solenoid valve operates as shown in the table below.

Operation	ABS solenoid valve		
	UP	KEEP	DOWN
FR RH IN SOL	OFF	ON	ON
FR RH OUT SOL	OFF	OFF	ON*

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS00024

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	This is the sound of the motor operating inside ABS actuator, and there may be some low sounds while the ABS is operating.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal

ABS WARNING LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	Remarks
Ignition switch OFF	—	—
For approximately “1” second after ignition switch ON	×	—
After approximately “1” second after ignition switch ON. (When system is normal)	—	Turns off 2 second after engine start
ABS error	×	When there is an ABS actuator and electric unit error (power or ground error)

Basic Inspection

NFS00025

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around ABS actuator for leaks. If there is leaking or oozing fluid, check following items.
   - If ABS actuator connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or ABS actuator screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than ABS actuator connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at ABS actuator, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace ABS actuator body.

     CAUTION:
     ABS actuator and electric unit (control unit) cannot be disassembled.
3. Check brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP INSPECTION

1. Make sure ABS warning lamp turned on approximately 1 second when the ignition switch is turned ON. Check CAN communications. Refer to BRC-31, "CAN Communication System" .
2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. Make sure ABS warning lamp turn off 2 seconds after the engine is started. If ABS warning lamp has not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the ABS actuator and electric unit.
4. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS"

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS00026

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR -1, -2
FR LH SENSOR -1, -2
RR RH SENSOR -1, -2
RR LH SENSOR -1, -2

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are the air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

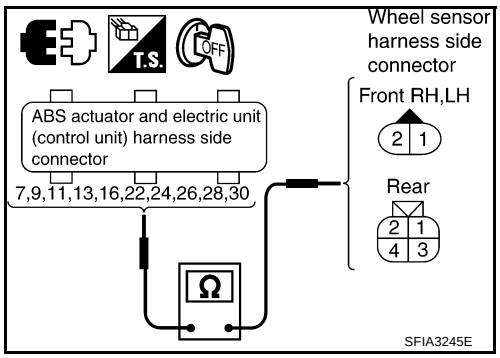
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect ABS control unit connector and the malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connector, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1 minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

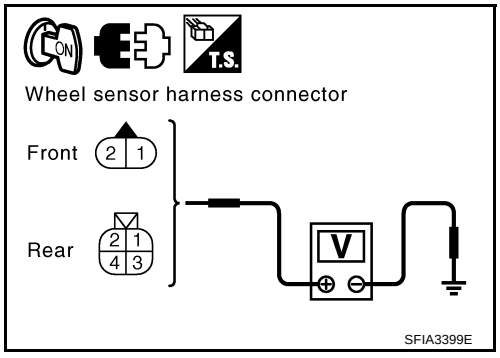
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect the wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH) and ABS control unit (control unit) connector E51.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit) (signal)	ABS actuator and electric unit (control unit) (ground)
Front RH	24	1	9	2	24, 9	16, 30
Front LH	22	1	7	2	22, 7	
Rear RH	28	1	13	2	28, 13	
Rear LH	26	3	11	4	26, 11	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

ABS Actuator and Electric Unit (Control Unit)

NFS00028

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit). Re-conduct ABS actuator and electric unit (control unit) self-diagnosis.
NO >> INSPECTION END

ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems

NFS00029

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

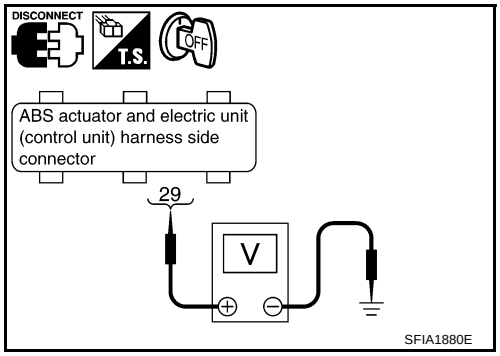
Check self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis display items?

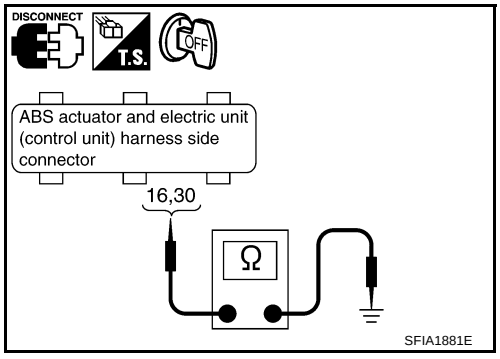
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector and check terminal for deformation, disconnection, looseness, and so on, If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.

Is the result of self-diagnosis normal?



YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER AND GROUND CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check continuity and voltage between connector terminals and ground.

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Voltage
Power supply	29	Ignition switch ON	Battery voltage (Approx. 12 V)
		Ignition switch OFF	Approx. 0 V

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Continuity
Ground	16, 30	Ignition switch OFF	Yes

OK or NG

OK >> Check battery (terminal looseness, power drop, etc.) error. If there is an error, make repairs.
NG >> Corresponding harness circuit error. Repair the circuit.

ABS Actuator Relay or ABS Motor Relay Power System

NFS0002A

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

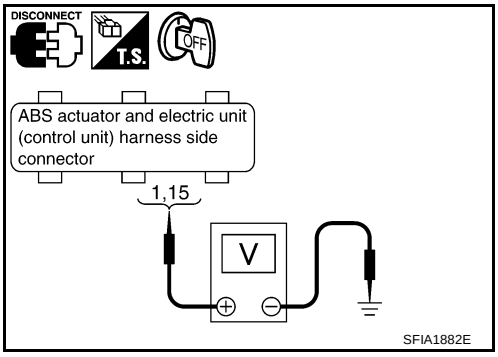
Self-diagnosis results
IN ABS SOL
OUT ABS SOL
MAIN RELAY

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E51, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

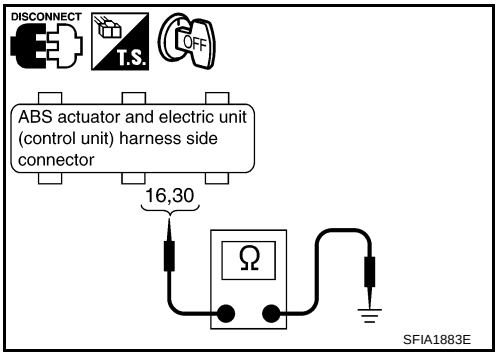
3. CHECK ABS ACTUATOR RELAY OR ABS MOTOR RELAY POWER CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. For ABS actuator relay, measure the voltage between the connector terminal 1 and ground. For ABS motor relay, measure the voltage between connector terminal 15 and ground.

ABS actuator and electric unit (control unit)	Ground	Voltage
1, 15	—	Battery voltage (Approx. 12 V)

OK or NG

OK >> GO TO 4
NG >> Error in the circuit between battery and ABS actuator and electric unit (control unit). Repair the circuit.



4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) connector and ground.

ABS actuator and electric unit (control unit)	Ground	Continuity
16, 30	—	Yes

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Open or short in harness. Repair or replace the harness.

Stop Lamp Switch System

NFS0002B

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

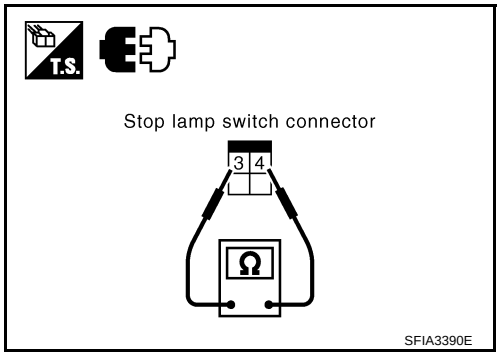
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E51 and stop lamp switch connector E112, check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and conduct self-diagnosis.
3. Start engine.
4. Repeat Pumping brake pedal carefully several times, then perform self-diagnosis again.



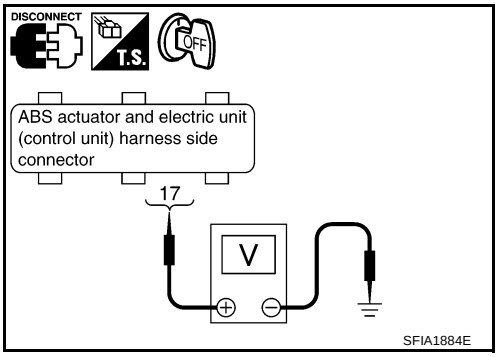
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check voltage between ABS actuator and electric unit (control unit) connector terminal and ground.

ABS actuator and electric unit (control unit)	Ground	Measurement condition	Voltage
17	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> INSPECTION END
NG >> Open or short in harness between ABS actuator and electric unit and stop lamp switch. Repair or replace the harness.

ABS Actuator and Electric Unit (Control Unit) 2

NFS0002C

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit).
NO >> INSPECTION END

CAN Communication System

NFS0002D

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the ABS actuator and electric unit (control unit) connector, and check terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connector is loose, damaged, open, or shorted.

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0002E

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system.

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0002F

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >>
- Bleed air from the brake piping.
- Check brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repairs.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector, and make sure the braking force is sufficient when the ABS is not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .
NG >> Check brake system.

The Braking Distance is Long

NFS0002G

CAUTION:
On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .

NG >>
- Bleed air from the brake piping.
- Check brake system.

The ABS Function Does Not Operate

NFS0002H

CAUTION:
The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0002I

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.

NO >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

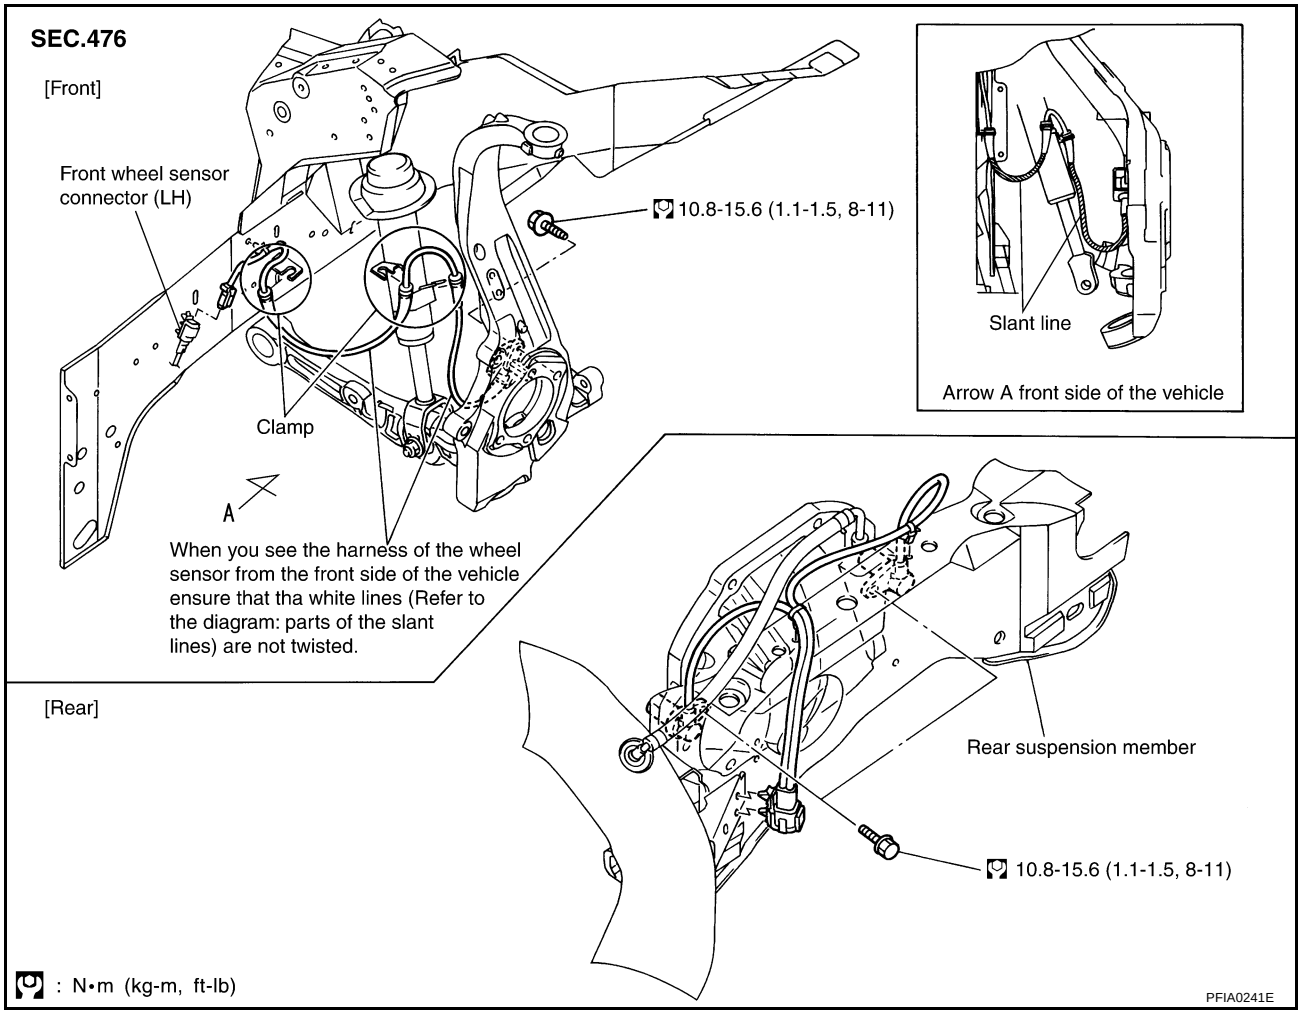
2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.

NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0002J

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS0002K

REMOVAL

Front

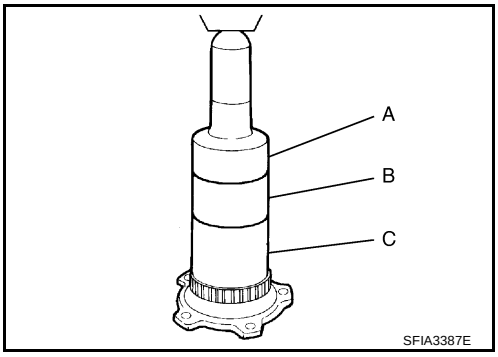
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
  - Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
  - Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the companion flange.

INSTALLATION

Front



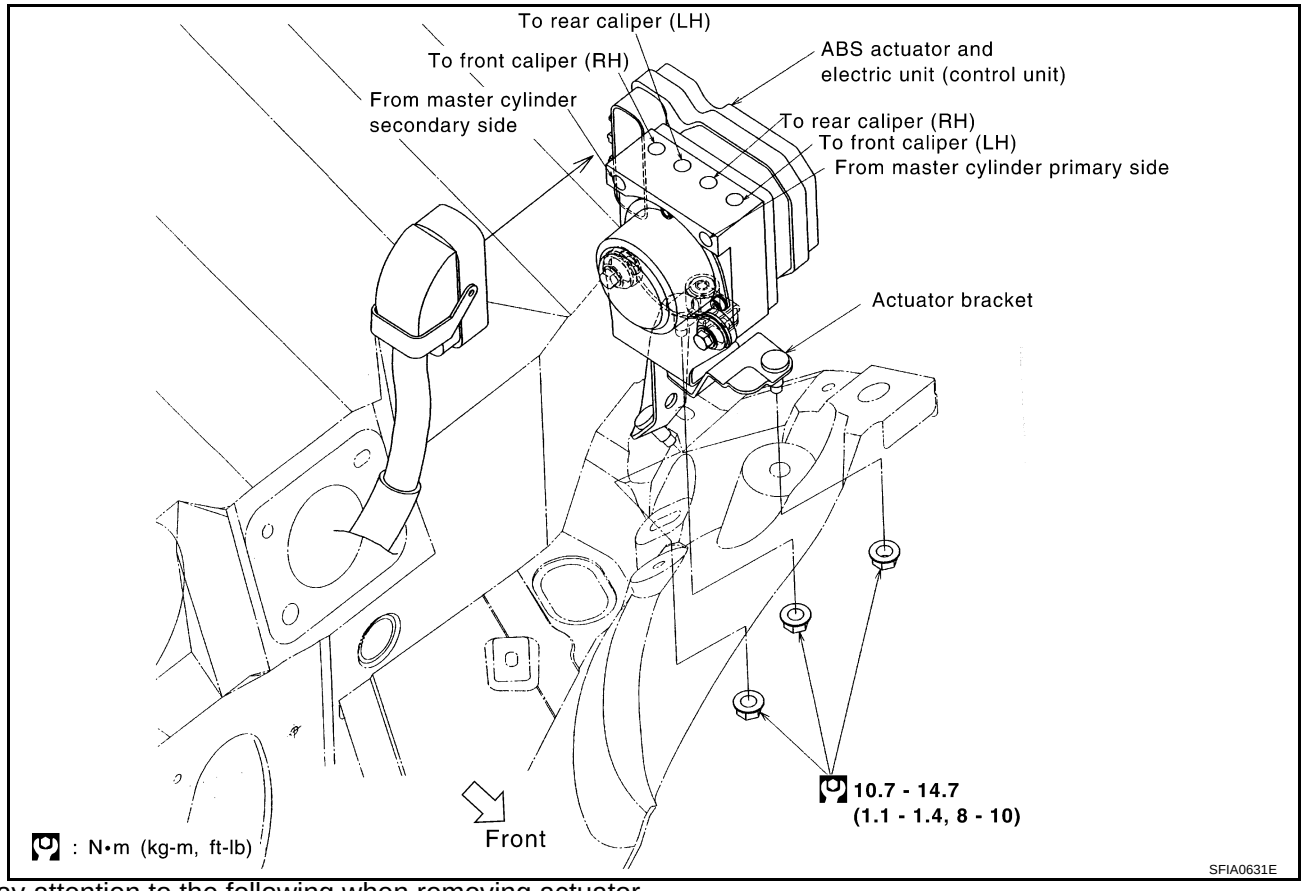
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
  - Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

  - Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



ABS ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

NFS0002L

COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer to BR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

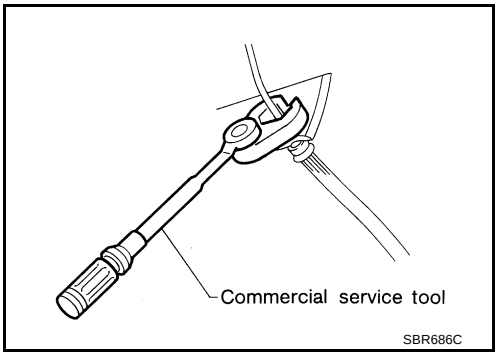
NFS0002M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0002N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0002O

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of ABS actuator and electric unit (control unit) or the battery negative terminal.

WARNING:

Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

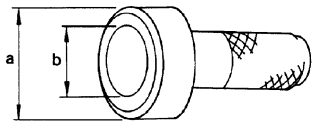
Precautions for Brake Control

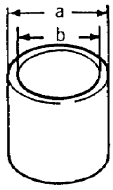
NFS0002P

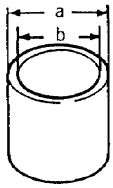
- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting

diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.

- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.



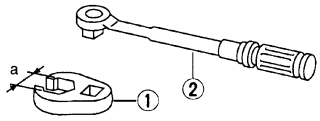




PREPARATION

PFP:00002

Special Service Tools



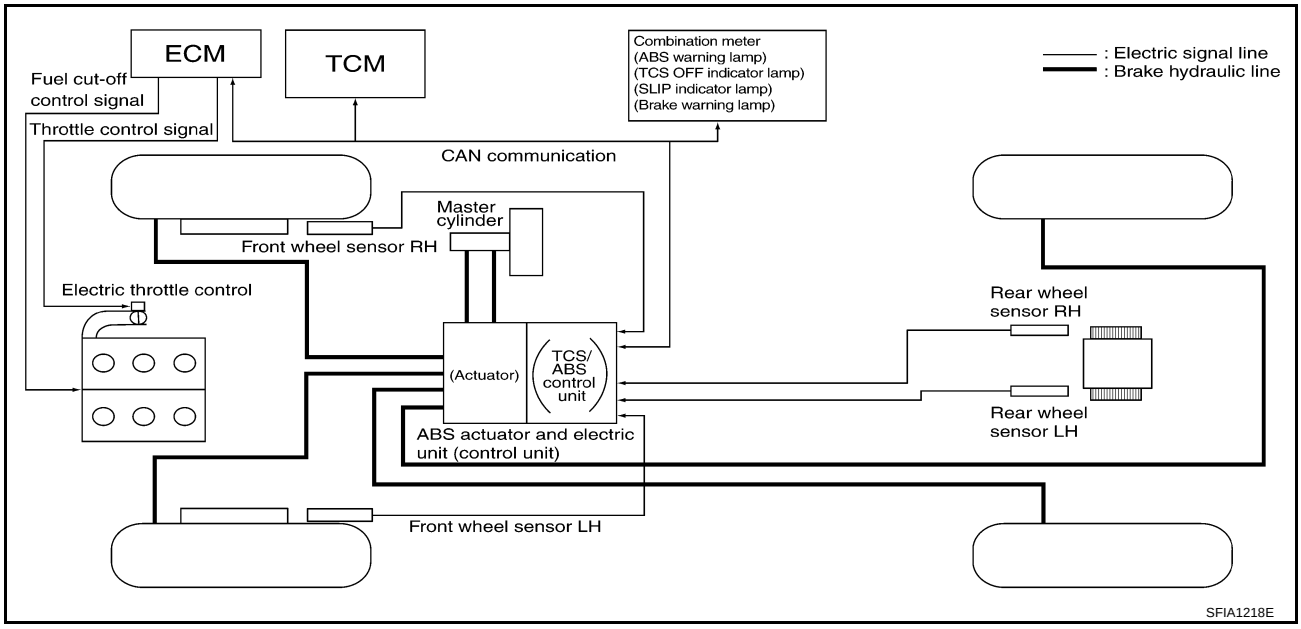
NFS0002Q

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	Installation rear sensor rotor
KV40104710 (—) a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0002R



Tool name		Description
1. Flare nut crowfoot a: 10 mm (0.39 in) / 12mm (0.47 in) 2. Torque wrench	 S-NT360	Installing brake tube

SYSTEM DESCRIPTION

PFP:00000

System Diagram

NFS0002S

TCS Function

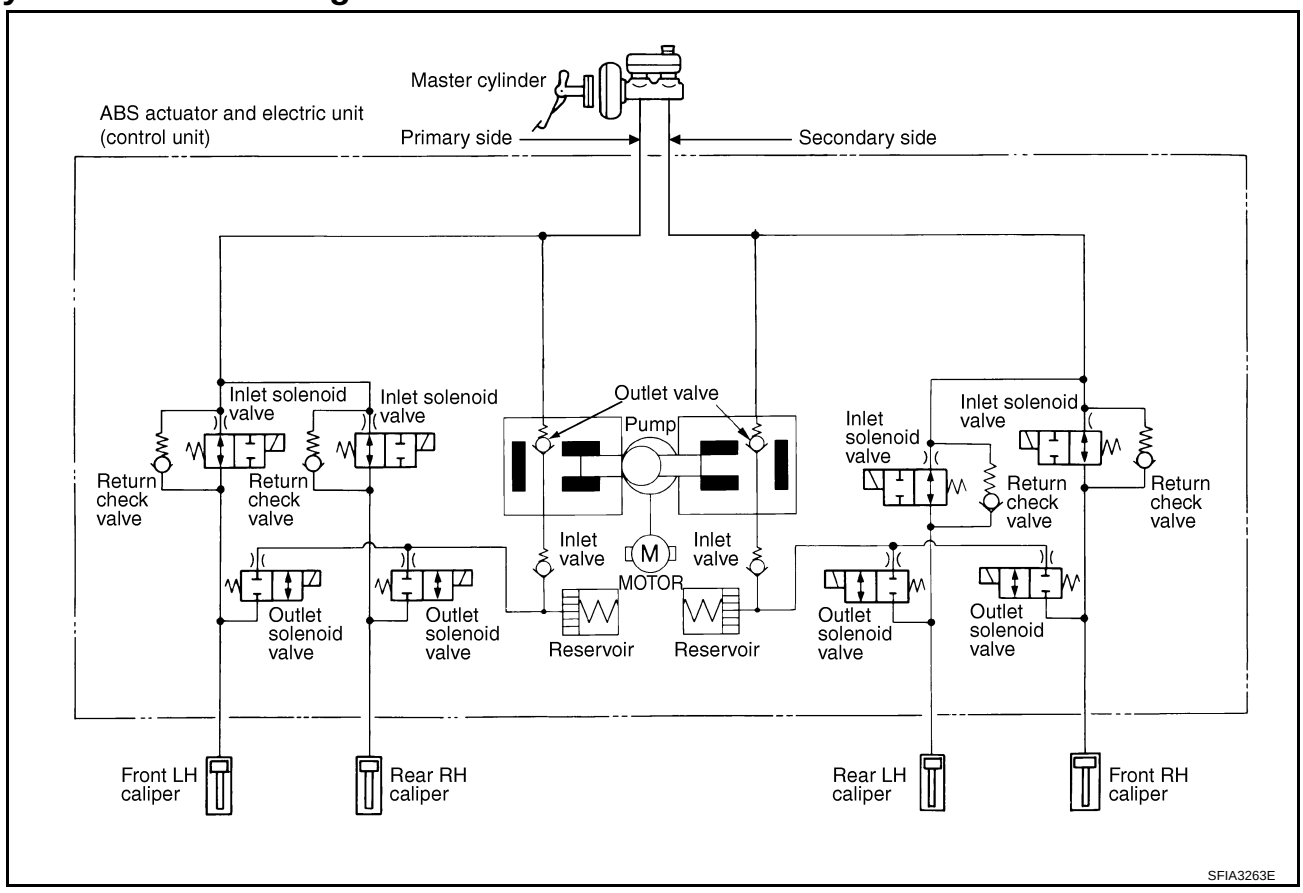
NFS0002T

- The wheel spin occurrence of the drive wheels is detected by the ABS actuator and electric unit (control unit) using the wheel speed signals from all four wheels, so when wheel spin occurs, the amount of wheel spin is reduced by cutting the fuel to the engine, and partially closing the throttle valve to reduce the engine torque. The throttle opening is also controlled to obtain the optimum engine torque.
- Depending on road circumstances, the driver may have a sluggish feel. This is normal, because the optimum traction has the highest priority under TCS operation.
- TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.
- During TCS operation, it informs a driver of system operation by flashing SLIP indicator lamp.

ABS Function

NFS0002U

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical system diagnosis by CONSULT-III is available.



EBD Function

NFS0002V

- The Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical system diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS0002X

CAN Communication

NFS0002Y

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

NFS000IJ

TCS SYSTEM

In case of Throttle Control System trouble, the TCS OFF indicator lamp and SLIP indicator lamp are turned on, and the condition of the vehicle is the same as the condition of vehicles without TCS equipment. In case of trouble to the Throttle Control System, the ABS control continues to operate normally without TCS control.

CAUTION:

If the Fail-Safe function is activated, then perform the self-diagnosis for TCS/ABS control system.

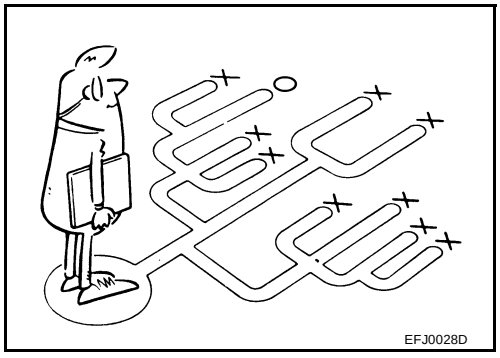
ABS, EBD SYSTEM

In case of electrical problems with the ABS, the ABS warning lamp, TCS OFF indicator lamp and SLIP indicator lamp will turn on. In case of electrical problem with the EBD, brake warning lamp, ABS warning lamp, TCS OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the TCS/ABS become one of the following conditions of the Fail-Safe function.

- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicles without TCS/ABS equipment.

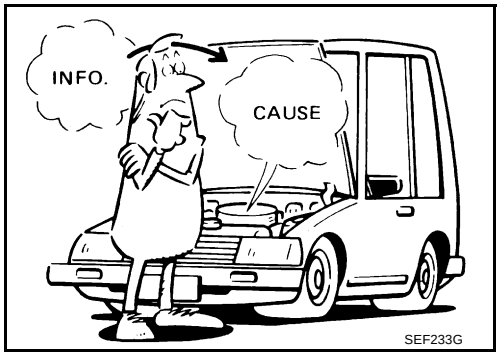
  NOTE:
  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.

How to Proceed with Diagnosis



NFS0002Z

BASIC CONCEPT

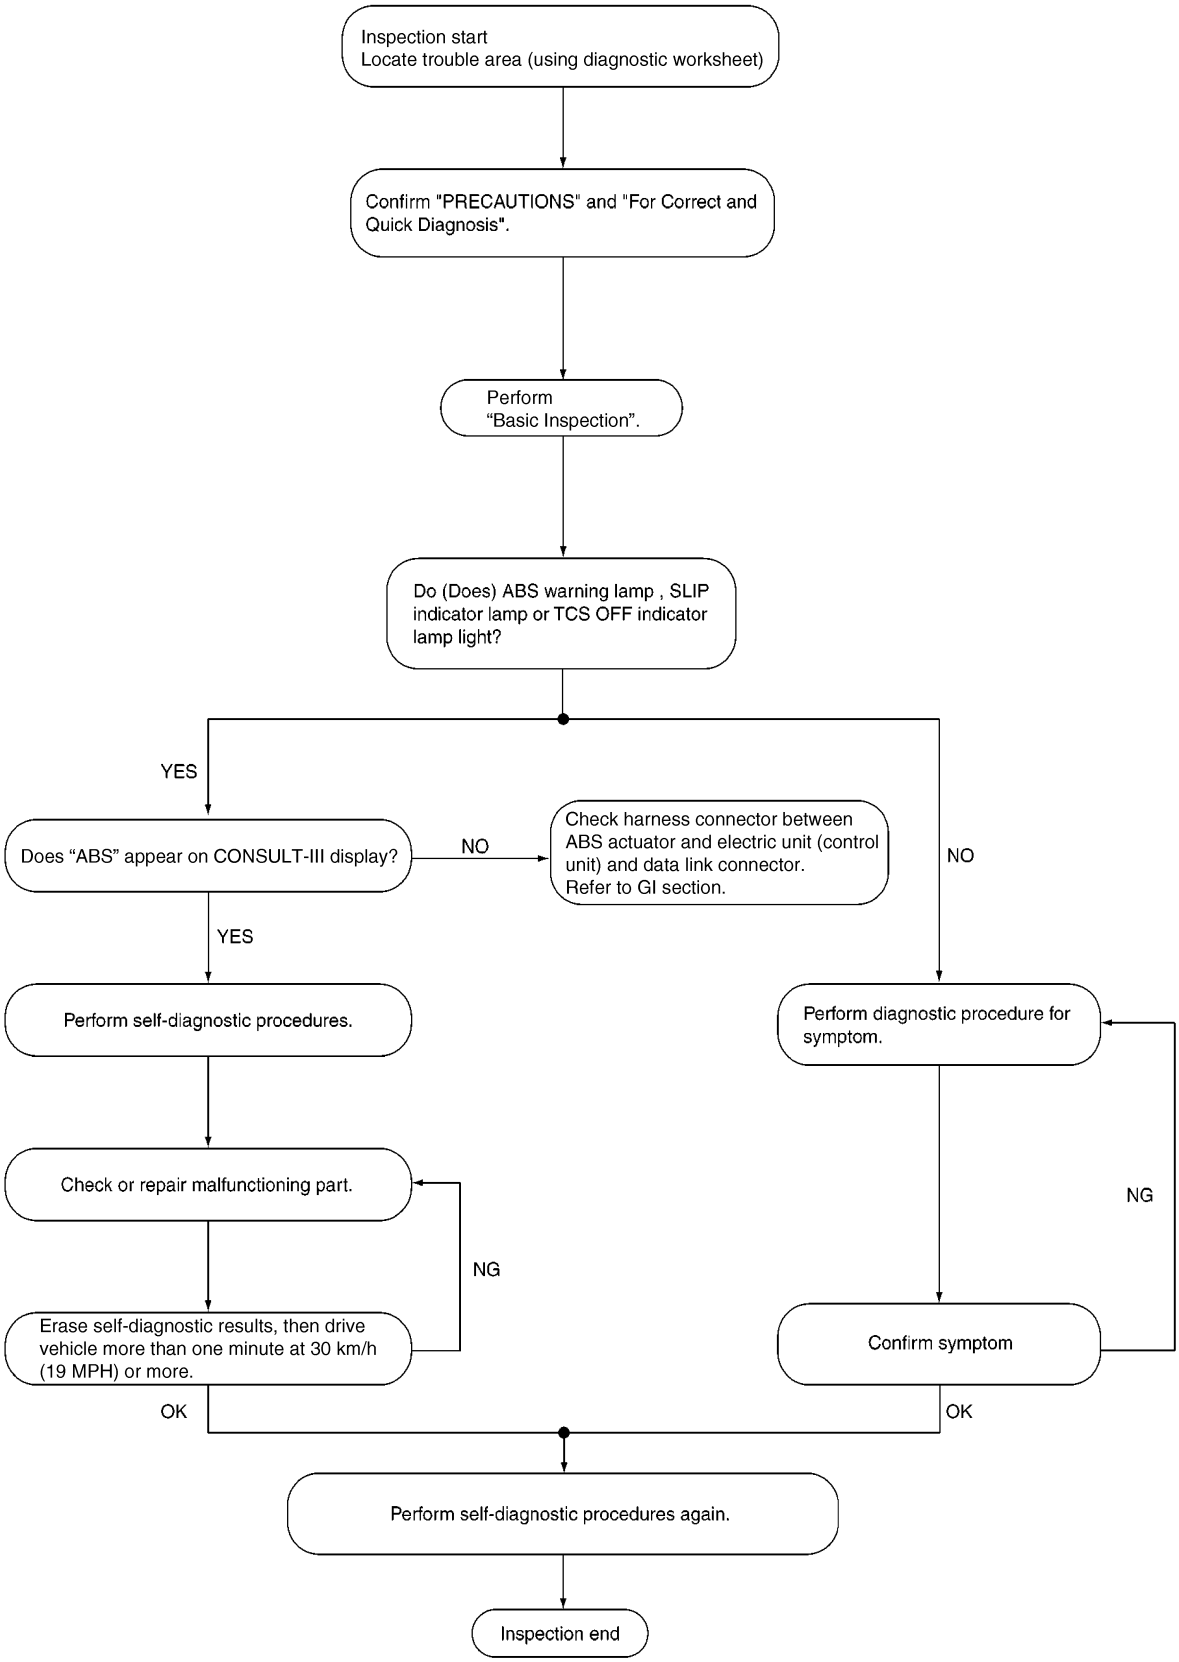


- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.

- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:
  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

EFJ0028D



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions"

DIAGNOSIS FLOWCHART

SFIA3406E

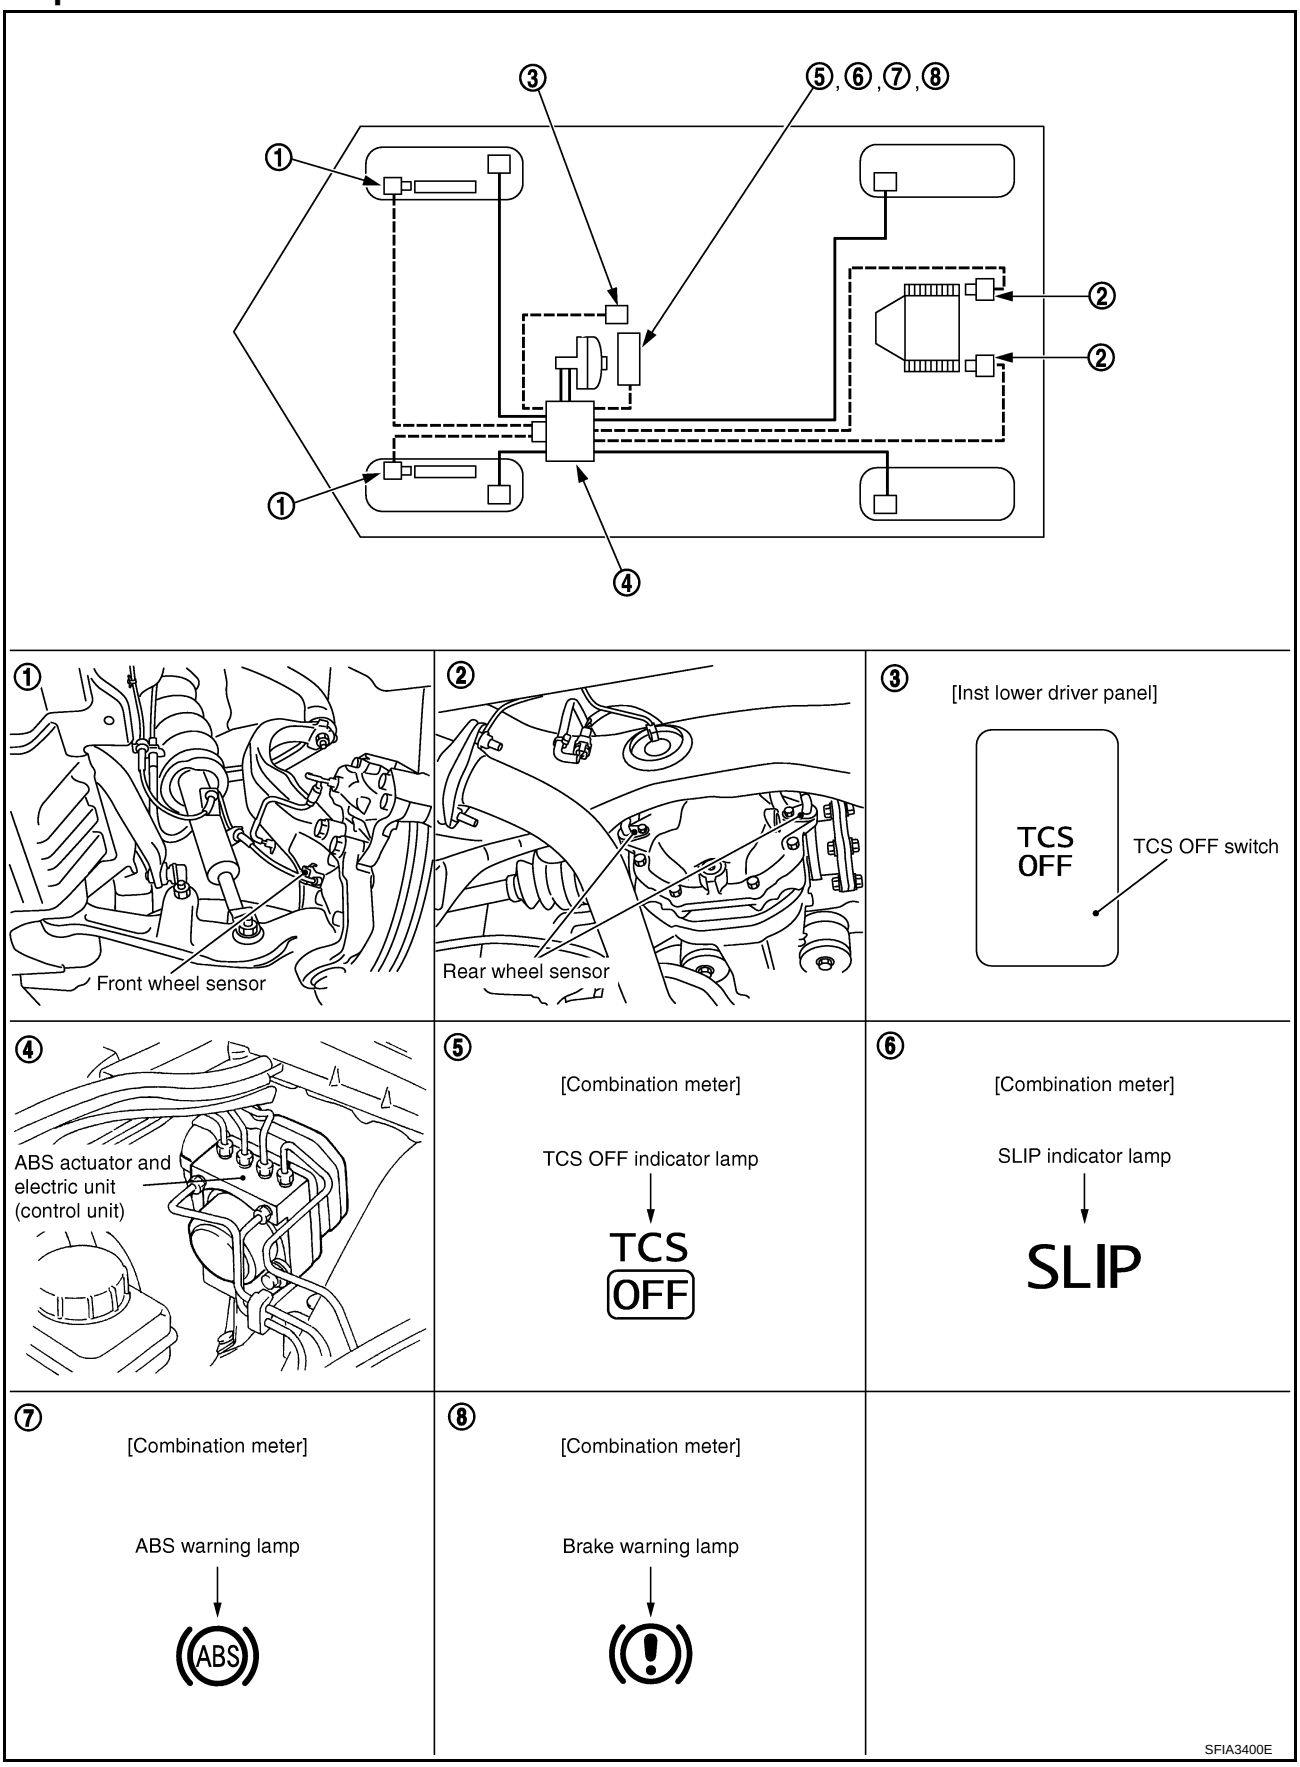
ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B



EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00034

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Wheel speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (±10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
EBD WARN LAMP	Brake warning lamp on condition (Note 2)	Brake warning lamp ON	ON
		Brake warning lamp OFF	OFF
ABS WARN LAMP	ABS warning lamp on condition (Note 3)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
OFF LAMP	TCS OFF indicator lamp on condition (Note 4)	TCS OFF indicator lamp ON	ON
		TCS OFF indicator lamp OFF	OFF
SLIP LAMP	SLIP indicator lamp on condition (Note 5)	SLIP indicator lamp ON	ON
		SLIP indicator lamp OFF	OFF
OFF SW	TCS switch ON-OFF status	TCS OFF switch ON (TCS OFF indicator lamp ON)	ON
		TCS OFF switch OFF (TCS OFF indicator lamp OFF)	OFF
BATTERY VOLT	Battery voltage supplied to TCS/ABS control unit	Ignition switch ON	10 - 16 V
GEAR	Determined gear shift position from the A/T PNP switch signal	Driving	1 - 5 ● Differs depending on the transmission status. (M/T vehicles are always left in 1.)
ENGINE RPM	Engine running	With engine stopped	0 rpm
		With engine running	Almost in accordance with tachometer display
N POSITION SIGNAL	Determined gear shift position from the A/T PNP switch signal (Note 5)	N position	ON
		Other than N position	OFF

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
P POSITION SIGNAL	Determined gear shift position from the A/T PNP switch signal (Note 6)	P position	ON
		Other than P position	OFF
FAIL SIGNAL	Fail signal status	During TCS fail-safe During ABS fail-safe During EBD fail-safe	ON
ACCEL POS SIG	Open/close condition of throttle valve (linked with accelerator pedal).	Accelerator pedal not depressed (ignition switch is ON)	0 %
		Depress accelerator pedal (ignition switch is ON)	0 to 100 %

Note 1: Confirm tire pressure is normal.
Note 2: Serves as EBD warning lamp.
Note 3: ON/OFF timing of ABS warning lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal).
Note 4: ON/OFF timing of TCS OFF indicator lamp
ON: For approximately 1 second after the ignition switch is turned on, when an error is detected, or when the TCS OFF switch is on.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal), when TCS OFF switch is off.
Note 5: ON/OFF timing of SLIP indicator lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal), when TCS function is not operating
Flash: When the TCS function is operating during driving.
Note 6: A/T models.

CONSULT- II Functions (ABS)

NFS00035

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-53, "Self-diagnosis"
DATA MONITOR	Input/Output data in the ABS actuator and electric unit (control unit) can be read.	BRC-55, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.	BRC-57, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	ABS actuator and electric unit (control unit) part number can be read.	—

Self-diagnosis

NFS000HG

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp, TCS OFF indicator lamp, SLIP indicator lamp and brake warning lamp turn OFF.

   CAUTION:
   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp, TCS OFF indicator lamp, SLIP indicator lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR-1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-61, "Wheel Sensor System" (Note 1)
RR LH SENSOR-1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR-1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR-1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR-2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR-2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR-2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR-2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the ABS actuator and electric unit (control unit) power supply voltage is lower than normal.	BRC-64, "ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal error in the ABS actuator and electric unit (control unit).	BRC-63, "ABS Actuator and Electric Unit (Control Unit)"
PUMP MOTOR [C1111]	When the ABS actuator and electric unit (control unit) detects an error in the motor or motor relay.	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"

Display item	Malfunction detecting condition	Check item
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-66, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the control unit detects an error in the front left inlet solenoid system.	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"
FR LH OUT ABS SOL [C1121]	When the control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the control unit detects an error in the rear right inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the control unit detects an error in the rear right outlet solenoid system.	
EMERGENCY BRAKE [C1153]	When the ABS actuator and electric unit (control unit) malfunctions (pressure increase is too much or too little).	BRC-67, "ABS Actuator and Electric Unit (Control Unit) 2"
ENGINE SIGNAL 1 [C1130]	Major engine components are malfunctioning.	BRC-63, "Engine System"
ENGINE SIGNAL 2 [C1131]		
ENGINE SIGNAL 3 [C1132]		
ENGINE SIGNAL 4 [C1133]		
ENGINE SIGNAL 5 [C1134]		
ENGINE SIGNAL 6 [C1136]		
CAN COMM CIRCUIT [U1000]	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-67, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) or more for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.

Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Data Monitor

NFS000HH

DISPLAY ITEM LIST

×: Standard –: Not applicable ▼: Option

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
FR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by front LH wheel sensor signal is displayed.
FR RH SENSOR [(km/h (MPH)]	×	×	▼	Wheel speed calculated by front RH wheel sensor signal is displayed.
RR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by Rear LH wheel sensor signal is displayed.
RR RH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by Rear RH wheel sensor signal is displayed.
FR LH IN SOL (ON/OFF)	–	×	▼	Front left inlet ABS solenoid valve (ON/OFF) status is displayed.
FR LH OUT SOL (ON/OFF)	–	×	▼	Front left outlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH IN SOL (ON/OFF)	–	×	▼	Rear right inlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH OUT SOL (ON/OFF)	–	×	▼	Rear right outlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH IN SOL (ON/OFF)	–	×	▼	Front right inlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH OUT SOL (ON/OFF)	–	×	▼	Front right outlet ABS solenoid valve (ON/OFF) status is displayed.
RR LH IN SOL (ON/OFF)	–	×	▼	Rear left rear wheel inside ABS solenoid valve (ON/OFF) status is displayed.
RR LH OUT SOL (ON/OFF)	–	×	▼	Rear left outlet ABS solenoid valve (ON/OFF) status is displayed.
EBD WARN LAMP (ON/OFF)	–	×	▼	Brake warning lamp (ON/OFF) status is displayed.
STOP LAMP SW (ON/OFF)	×	×	▼	Stop lamp switch (ON/OFF) status is displayed.
MOTOR RELAY (ON/OFF)	–	×	▼	ABS motor relay (ON/OFF) condition is displayed.
ACTUATOR RLY (ON/OFF)	–	×	▼	ABS actuator relay (ON/OFF) status is displayed.
ABS WARN LAMP (ON/OFF)	–	×	▼	ABS warning lamp (ON/OFF) status is displayed.
OFF LAMP (ON/OFF)	–	×	▼	TCS OFF indicator lamp (ON/OFF) status is displayed.
OFF SW (ON/OFF)	×	×	▼	TCS OFF switch (ON/OFF) status is displayed.
SLIP LAMP (ON/OFF)	–	×	▼	SLIP indicator lamp (ON/OFF) status is displayed.
BATTERY VOLT (V)	×	×	▼	The voltage supplied to the ABS actuator and electric unit (control unit) is displayed.
GEAR (A/T model)	×	×	▼	The gear position determined from the A/T PNP switch signal is displayed.
ENGINE SPEED (rpm)	×	×	▼	Engine speed status determined from the CAN communication signal is displayed.

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
N POSI SIG (ON/OFF) (A/T model)	–	–	▼	Shift position determined from the A/T PNP switch signal is displayed.
P POSI SIG (ON/OFF) (A/T model)	–	–	▼	Shift position determined from the A/T PNP switch signal is displayed.
ACCEL POS SIG (%)	×	–	▼	Throttle position status determined from the CAN communication signal is displayed.
EBD SIGNAL (ON/OFF)	–	–	▼	EBD operation (ON/OFF) status is displayed.
ABS SIGNAL (ON/OFF)	–	–	▼	ABS operation (ON/OFF) status is displayed.
TCS SIGNAL (ON/OFF)	–	–	▼	TCS operation (ON/OFF) status is displayed.
EBD FAIL SIG (ON/OFF)	–	–	▼	EBD fail-safe signal (ON/OFF) status is displayed.
ABS FAIL SIG (ON/OFF)	–	–	▼	ABS fail-safe signal (ON/OFF) status is displayed.
TCS FAIL SIG (ON/OFF)	–	–	▼	TCS fail-safe signal (ON/OFF) status is displayed.
CRANKING SIG (ON/OFF)	–	–	▼	Ignition switch START position signal input status is displayed.
ASCD SIGNAL (ON/OFF)	–	–	▼	ASCD (ON/OFF) status is displayed.

Active Test

NFS000IO

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

For ABS solenoid valve, touch “UP”, “KEEP”, and “DOWN”.Then use screen monitor to check that solenoid valve operates as shown in the table below.

Operation	ABS solenoid valve		
	UP	KEEP	DOWN
FR RH IN SOL	OFF	ON	ON
FR RH OUT SOL	OFF	OFF	ON*

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS00036

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- TCS/ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	This is the sound of the motor operating inside ABS actuator and electric unit (control unit), and there may be some low sounds while TCS or ABS is operating.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	

Symptom	Symptom description	Result
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
TCS operation (SLIP indicator lamp ON)	TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.	Normal When conducting the inspection on a chassis dynamometer, cancel the TCS function.
	When inspecting the speedometer, etc., press TCS OFF switch to turn off TCS function before conducting the work.	
	When accelerator pedal is depressed on a chassis dynamometer (front wheel fixing type), the vehicle speed will not increase. This is normal, because TCS is activated by the stationary front wheels. The warning lamp may also turn on to show “sensor system error” in this case. This is not a malfunction either, because the stationary front wheels are detected. Restart engine, and drive the vehicle at 30 km/h (19 MPH) or more or higher to check that the warning lamp no longer turns on.	
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal
Sluggish feel	Depending on road circumstances, the driver may have a sluggish feel. This is normal, because under TCS operation optimum traction has the highest priority (safety first). Sometimes the driver has a slight sluggish feel in response to substantial accelerator pedal operation.	Normal

ABS WARNING LAMP, TCS OFF INDICATOR LAMP AND SLIP INDICATOR LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	TCS OFF indicator lamp	SLIP indicator lamp	Remarks
Ignition switch OFF	—	—		—
For approximately “1” second after ignition switch ON	×	×	×	—
After approximately “1” second after ignition switch ON (When system is normal)	—	—	—	Turns off 2 second after engine start
When the TCS OFF switch is turned on (TCS function off)	—	×	—	—
TCS/ABS error	×	×	×	—
	×	×	—	When there is an ABS actuator and electric unit (control unit) error (power or ground error)
TCS error	—	×	×	—

Basic Inspection

NFS00037

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around ABS actuator and electric unit (control unit) for leaks. If there is leaking or oozing fluid, check the following items.
   - If ABS actuator and electric unit (control unit) connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or ABS actuator and electric unit (control unit) screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than ABS actuator and electric unit (control unit) connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at ABS actuator and electric unit (control unit), if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the ABS actuator and electric unit (control unit) body.

     CAUTION:
     ABS actuator and electric unit (control unit) cannot be disassembled.
3. Check brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP, TCS OFF INDICATOR LAMP, SLIP INDICATOR LAMP INSPECTION

1. Make sure ABS warning lamp, TCS OFF indicator lamp (when TCS OFF switch is OFF), and SLIP indicator lamp turns ON approximately 1 second when the ignition switch is turned ON. If they do not, check the TCS OFF indicator lamp and then TCS OFF switch. Refer to BRC-68, "TCS OFF SWITCH" . Check CAN communications. Refer to “CAN Communication Inspection”. If there are no errors with TCS OFF switch and CAN communication system, check combination meter. Refer to BRC-67, "CAN Communication System" .
2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. With the engine running, make sure TCS OFF indicator lamp turns on and off when TCS OFF switch is turned on and off. If the indicator lamp status does not correspond to switch operation, check the TCS OFF switch system. Refer to BRC-68, "TCS OFF SWITCH" .
4. Make sure ABS warning lamp, TCS OFF indicator lamp, and SLIP indicator lamp turn off 2 seconds after the engine is started. If ABS warning lamp, TCS OFF indicator lamp, and SLIP indicator lamp have not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the ABS actuator and electric unit (control unit).
5. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS00038

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR -1, -2
FR LH SENSOR -1, -2
RR RH SENSOR -1, -2
RR LH SENSOR -1, -2

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are the air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

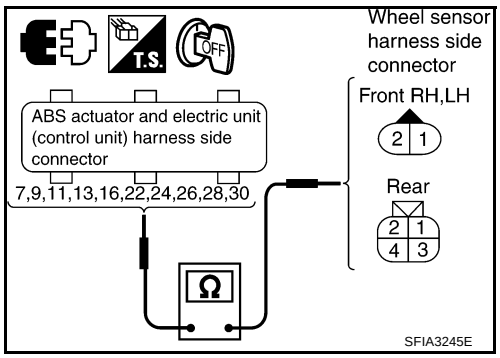
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector and malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connector, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1 minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

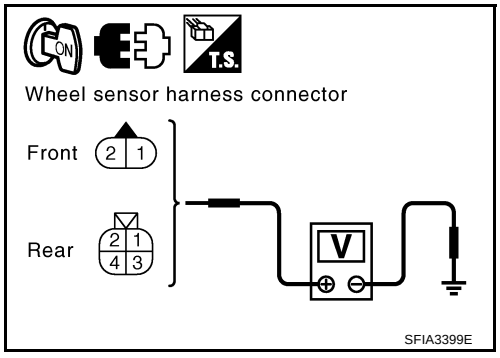
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH) and ABS actuator and electric unit (control unit) connector E51.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit) (signal)	ABS actuator and electric unit (control unit) (ground)
Front RH	24	1	9	2	24, 9	16, 30
Front LH	22	1	7	2	22, 7	
Rear RH	28	1	13	2	28, 13	
Rear LH	26	3	11	4	26, 11	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Engine System

NFS00039

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
ENGINE SIGNAL 1
ENGINE SIGNAL 2
ENGINE SIGNAL 3
ENGINE SIGNAL 4
ENGINE SIGNAL 5
ENGINE SIGNAL 6

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK ENGINE SYSTEM

1. Conduct an ECM self-diagnosis and repair or replace any non-standard items. Re-conduct ECM self-diagnosis.
2. Re-conduct ABS actuator and electric unit (control unit) self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace any non-standard items. Re-conduct the self-diagnosis.

ABS Actuator and Electric Unit (Control Unit)

NFS0003A

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace ABS actuator and electric unit (control unit). Re-conduct the self-diagnosis.
NO >> INSPECTION END

ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems

NFS0003B

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

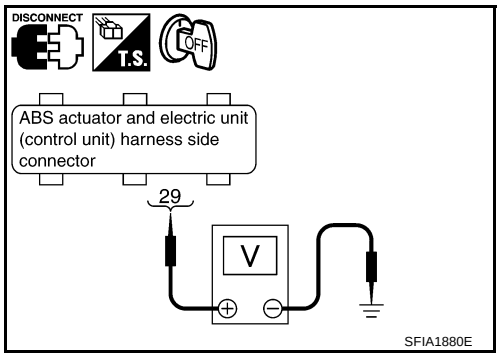
Check self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis display items?

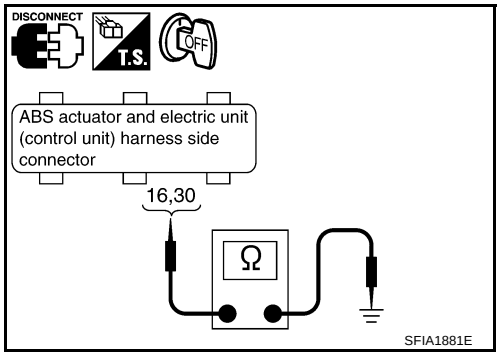
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.

Is the result of self-diagnosis normal?



YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER AND GROUND CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check continuity and voltage between ABS actuator and electric unit (control unit) connector and ground.

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Voltage
Power supply	29	Ignition switch ON	Battery voltage (Approx. 12 V)
		Ignition switch OFF	Approx. 0 V

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Continuity
Ground	16, 30	Ignition switch OFF	Yes

OK or NG

OK >> Check battery (terminal looseness, power drop, etc.) Error. If there is an error, make repairs.
NG >> Corresponding harness circuit error. Repair the circuit.

ABS Actuator Relay or ABS Motor Relay Power System

NFS0003C

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

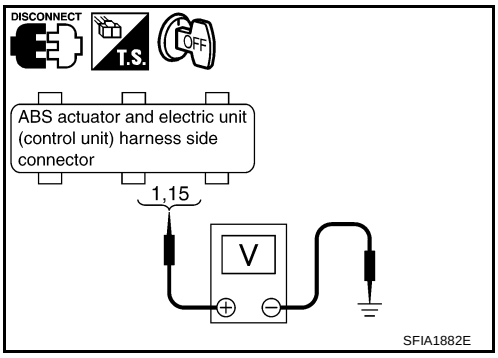
Self-diagnosis results
IN ABS SOL
OUT ABS SOL
PUMP MOTOR
MAIN RELAY

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

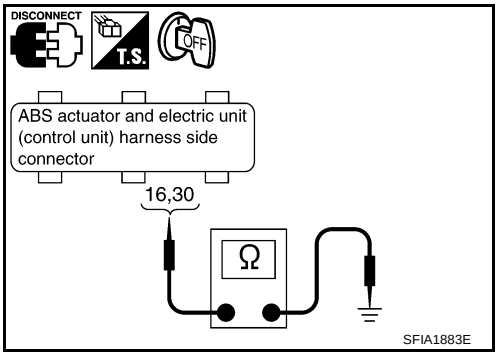
3. CHECK ABS ACTUATOR RELAY OR ABS MOTOR RELAY POWER CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. For ABS actuator relay, measure the voltage between the connector terminal 1 and ground. For ABS motor relay, measure the voltage between connector terminal 15 and ground.

ABS actuator and electric unit (control unit)	Ground	Voltage
1, 15	—	Battery voltage (Approx. 12 V)

OK or NG

OK >> GO TO 4
NG >> Error in the circuit between battery and ABS actuator and electric unit (control unit). Repair the circuit.



4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) connector and ground.

ABS actuator and electric unit (control unit)	Ground	Continuity
16, 30	—	Yes

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Open or short in harness. Repair or replace the harness.

Stop Lamp Switch System

NFS0003D

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

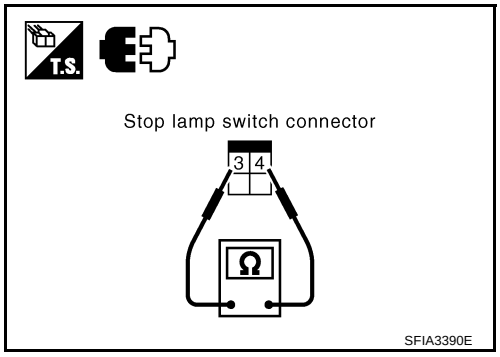
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector and stop lamp switch connector E111, check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and conduct self-diagnosis.
3. Start engine
4. Repeat pumping brake pedal carefully several time, then perform self-diagnosis again



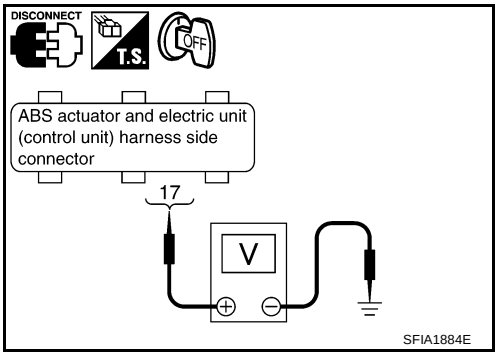
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check voltage between ABS actuator and electric unit (control unit) connector terminal and the ground.

ABS actuator and electric unit (control unit)	Ground	Measurement condition	Voltage
17	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> INSPECTION END
NG >> Open or short in harness between ABS actuator and electric unit (control unit) and stop lamp switch. Repair or replace the harness.

ABS Actuator and Electric Unit (Control Unit) 2

NFS0003E

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit).
NO >> INSPECTION END

CAN Communication System

NFS0003F

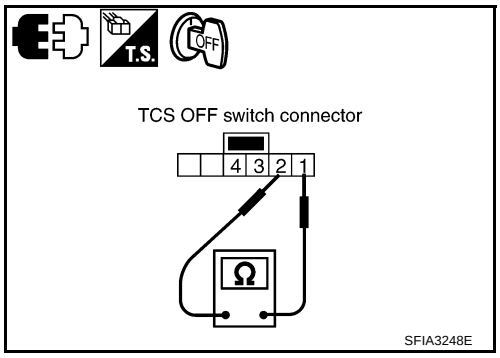
INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the ABS actuator and electric unit (control unit) connector, and check terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connection is loose, damaged, open, or shorted.



Component Inspection

NFS0003G

TCS OFF SWITCH

- Turn ignition switch OFF, disconnect the TCS OFF switch connector M9, and check continuity between terminals 1 and 2.

1 - 2 : Continuity should exist when pushing the switch.
: Continuity should not exist when releasing the switch.

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0003H

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system.

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0003I

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >> ● Bleed air from the brake piping.
● Check the brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repairs.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect the ABS actuator and electric unit (control unit) connector, and make sure the braking force is sufficient when the ABS is not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> Check brake system.

The Braking Distance Is Long

NFS0003J

CAUTION:

On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> ● Bleed air from the brake piping.
● Check brake system.

The ABS Function Does Not Operate

NFS0003K

CAUTION:

The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0003L

CAUTION:

Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.
NO >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.
NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

The Vehicle Jerks Around During TCS/ABS Control

NFS0003M

1. CHECK ENGINE SPEED SIGNAL

Conduct CONSULT-III ABS actuator and electric unit (control unit) “Data Monitor”.

Is the speed during idling 400 rpm or higher?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK ECM SELF-DIAGNOSIS RESULT ITEM

Perform ECM self-diagnosis.

Are self-diagnosis items displayed?

YES >> Check the corresponding items. Refer to EC-81, "TROUBLE DIAGNOSIS" in “Engine Control (EC section)”.
NO >> GO TO 3.

3. SYMPTOM CHECK 1

Check if the vehicle jerks during TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. CHECK A/T SELF-DIAGNOSIS RESULT ITEM

Perform A/T self-diagnosis.

OK or NG

OK >> GO TO 5.
NG >> Check the corresponding items. Refer toAT-40, "TROUBLE DIAGNOSIS" in “A/T”.

5. SYMPTOM CHECK 2

Check if the vehicle jerks during TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 6.

6. CHECK SELF-DIAGNOSIS RESULT ITEM 1

Conduct self-diagnosis of the ABS actuator and electric unit (control unit).

Are self-diagnosis items displayed?

YES >> Check the corresponding items, make repairs, and re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.
NO >> GO TO 7.

7. CHECK CONNECTOR

1. Disconnect the ABS actuator and electric unit (control unit) connector and the ECM connectors, check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the connector.
2. Securely reconnect the connector and conduct self-diagnosis.

OK or NG

OK >> If the connector terminal contact is loose, damaged, open or shorted, repair or replace the connector terminal.
NG >> GO TO 8.

8. CHECK SELF-DIAGNOSIS RESULT ITEM 2

Re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.

Are self-diagnosis items displayed?

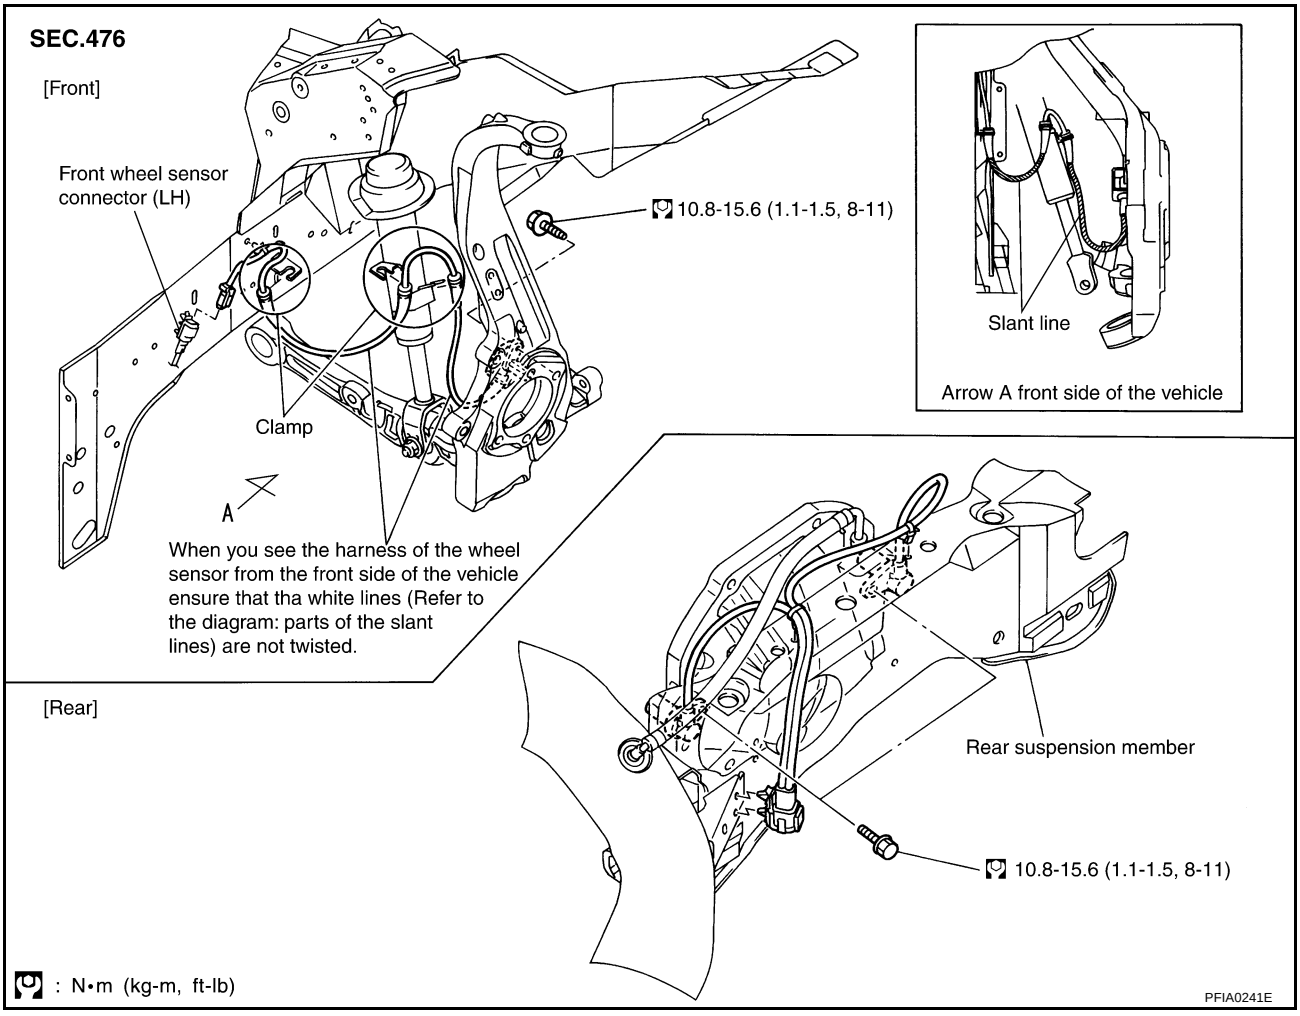
YES >> Repair or replace any non-standard items.
NO >> GO TO 9.

9. CHECK CIRCUIT BETWEEN ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) AND THE ECM

Check CAN communication system. Refer to BRC-67, "CAN Communication System" .

OK or NG

OK >> INSPECTION END
NG >> Connect the connector and re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0003N

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS0003O

REMOVAL

Front

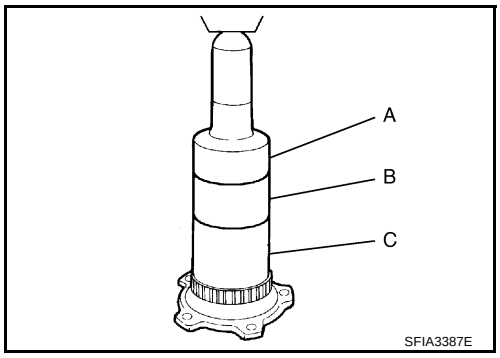
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
- Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
- Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the side flange.

INSTALLATION

Front



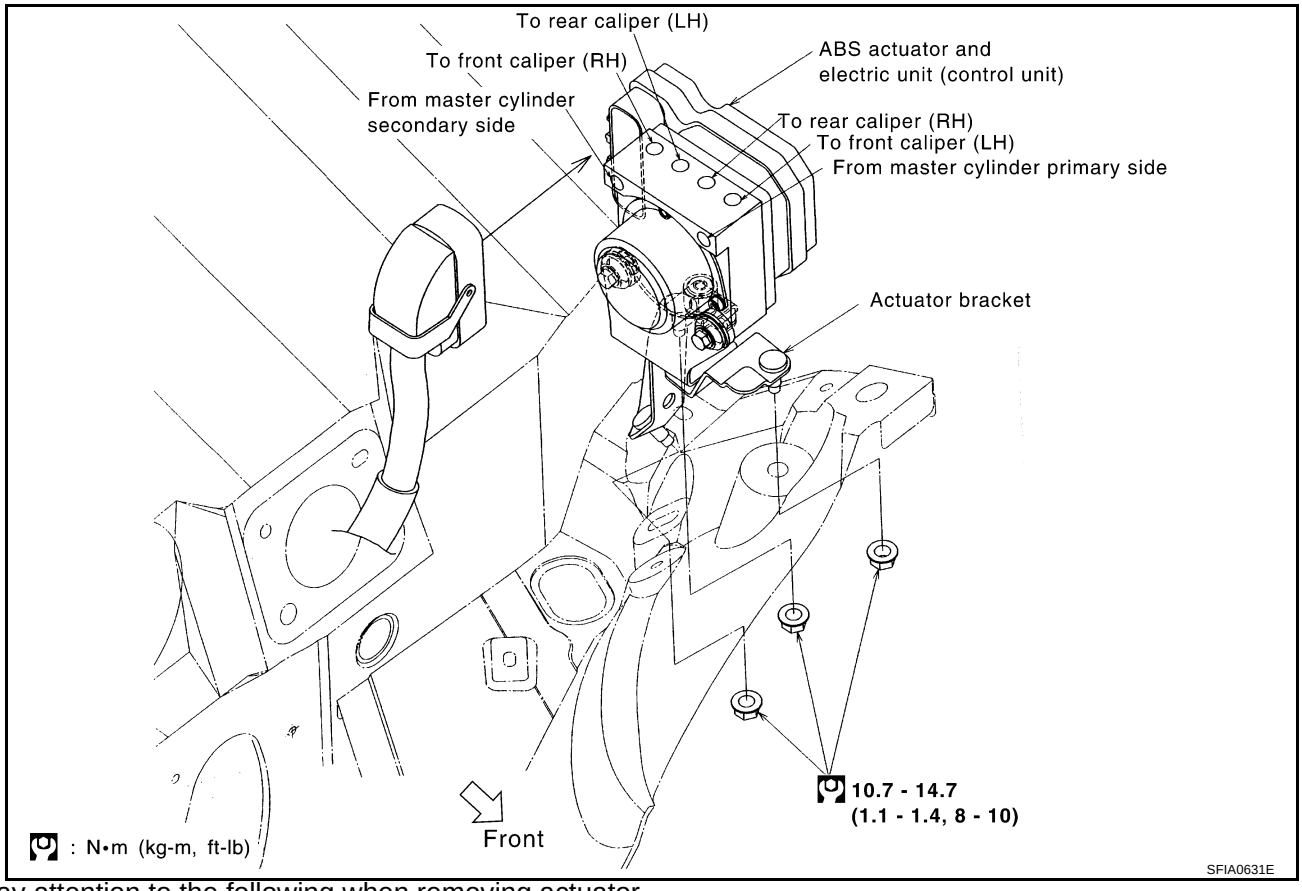
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
- Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

- Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



ABS ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

NFS0003P

COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer toBR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

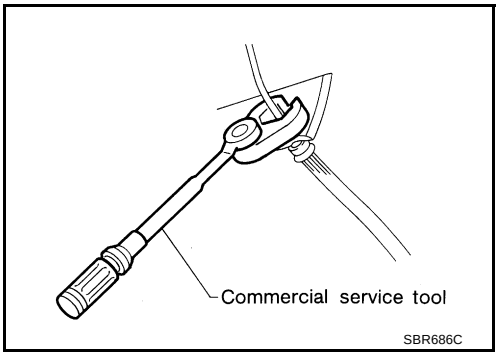
NFS000TP

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0003R

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0003S

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of VDC/TCS/ABS control unit or the battery negative terminal.

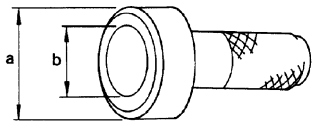
WARNING:

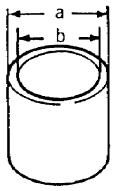
Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

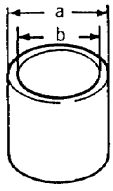
Precautions for Brake Control

NFS0003T

- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.
- If the following components are replaced with non-genuine components or converted, the VDC OFF indicator lamp and SLIP indicator lamp may turn on or the VDC system may not operate properly. Components related to suspension (Shock Absorber, Strut, Spring, Bush, etc.), Tires, wheels (exclude specified size), components related to brake (Pad, Rotor, Caliper, etc.), Components related to engine (Muffler, ECM, etc.), Components related to body reinforcement (Roll bar, Tower bar, etc.).
- Driving in the condition of breakage or excessive wear of the suspension, tires or components related to the brakes may cause the VDC OFF indicator lamp and the SLIP indicator lamp to turn on, and the VDC system may not operate properly.
- When the TCS or VDC is activated by sudden acceleration or sudden turn, some noise may occur if the brake pedal is used. The noise is a result of the normal operation of the TCS and VDC.
- When driving on roads which have extreme slopes (such as mountainous roads) or high banks (such as sharp carves on a freeway), the VDC may not operate normally, or the VDC warning lamp may turn on. However, this is not a problem if normal operation can be resumed after restarting the engine.
- Sudden turns (such as spin turns, acceleration turns), drifting, etc. When VDC function is OFF (VDC SW ON) may cause the yaw rate/side G -sensor system indicate a problem. However this is not a problem if normal operation can be resumed after restarting the engine.



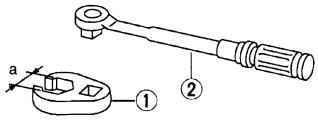




PREPARATION

PFP:00002

Special Service Tools



NFS0003U

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	Installation rear sensor rotor
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	
KV40104710 (—) a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0003V

Tool name		Description
1. Flare nut crowfoot a: 10mm (0.39 in) / 12mm (0.47 in) 2. Torque wrench	 S-NT360	installing brake tube

ON-VEHICLE SERVICE

PFP:00000

Adjustment of Steering Angle Sensor Neutral Position

NFS0003W

In case of doing work that applies to the list below, make sure to adjust neutral position of steering angle sensor before running vehicle.

Situation	Adjustment of Steering Angle Sensor Neutral Position
Removing/Installing VDC/TCS/ABS control unit	–
Replacing VDC/TCS/ABS control unit	×
Removing/Installing steering angle sensor	×
Removing/Installing steering components	×
Removing/Installing suspension components	×
Change 4 tires to new ones	–
Tire rotation	–
Adjusting wheel alignment	×

×: Required
–: Not required

1. Stop vehicle with front wheels in straight-ahead position.
2. Turn ignition switch ON and in the following order touch “ABS” “WORK SUPPORT” “ANGLE SENSOR ADJUSTMENT” in CONSULT-III screen.
3. Touch “START”.

   CAUTION:
   Do not touch steering wheel while adjusting steering angle sensor.
4. After approximately 10 seconds, touch “END”. (After approximately 60 seconds, it ends automatically.)
5. Turn ignition switch OFF, then turn it ON again.

   CAUTION:
   Be sure to carry out above operation.
6. Run vehicle with front wheels in straight-ahead position, then stop.
7. Select “DATA MONITOR”, “ECU INPUT SIGNALS”, and “STEERING ANGLE SIGNAL” on CONSULT-III screen. Then check that “STEERING ANGLE SIGNAL” is within 0±2.5°. If value is more than specification, repeat steps 1 to 7.
8. Erase memory of VDC/TCS/ABS control unit and ECM.
9. Turn ignition switch to OFF.

SYSTEM DESCRIPTION

PFP:00000

System Diagram

NFS0003X

VDC Function

NFS0003Y

- In addition to the TCS/ABS function, the driver steering amount and brake operation amount are detected from the steering angle sensor and pressure sensor, and the vehicle's driving status (amount of under-steering / over-steering) is determined from information from the yaw rate/side G sensor, wheel sensor, etc., and this information is used to improve vehicle stability by controlling the braking and engine power to all four wheels.
- The SLIP indicator lamp flashes to inform the driver of VDC operation.
- During VDC operation, the body and brake pedal lightly vibrate and mechanical noises may be heard. This is normal.
- The ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp might turn on when the vehicle is subject to strong shaking or large vibration, such as when the vehicle is on a turn table or a ship while the engine is running. In this case, restart the engine on a normal road, and if the ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp turn off, there is no problem.

TCS Function

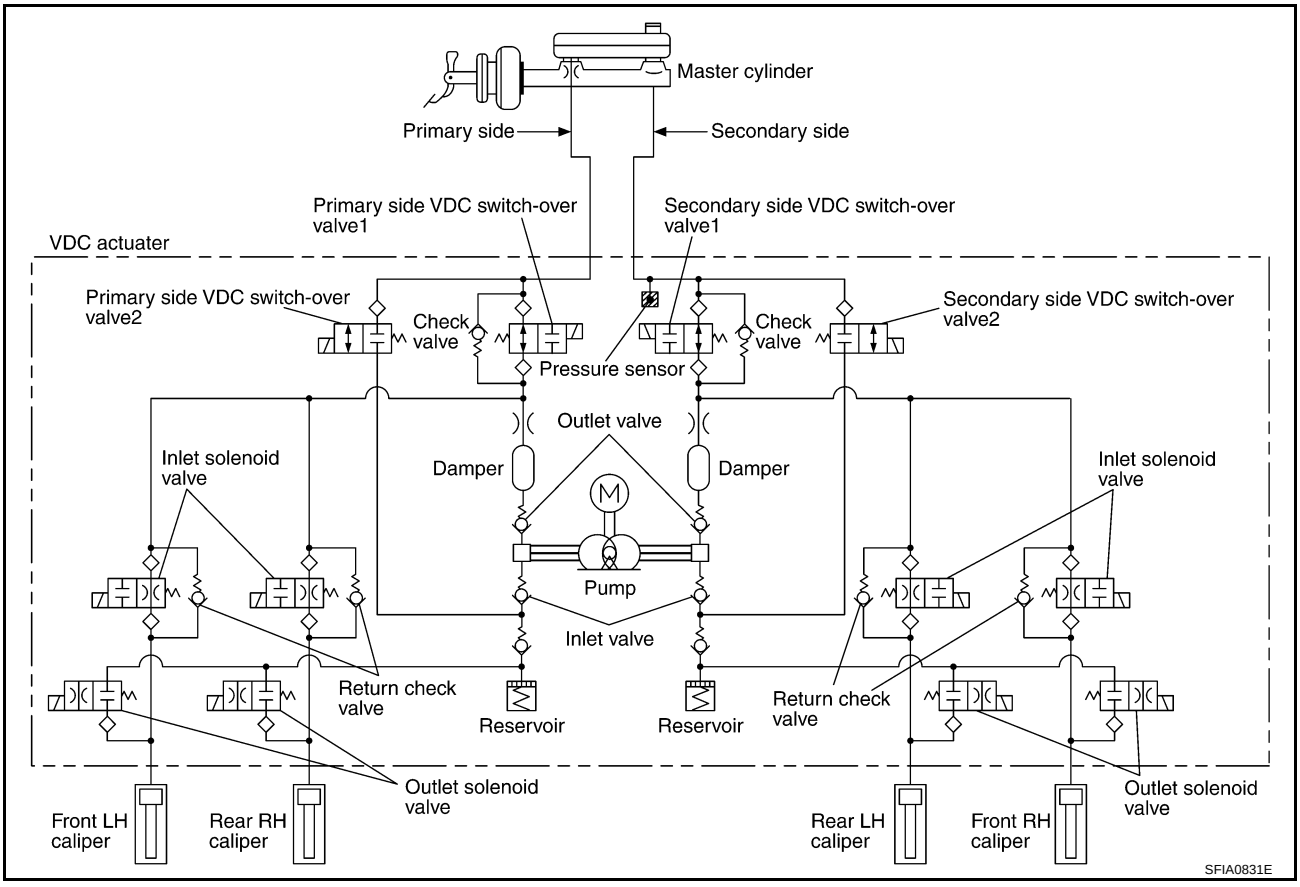
NFS0003Z

- The wheel spin of the drive wheels is detected by the VDC/TCS/ABS control unit from the wheel speed signals from the four wheels, so if wheel spin occurs, the rear wheel right and left brake fluid pressure control and engine fuel cut are conducted while the throttle value is restricted to reduce the engine torque and decrease the amount of wheel spin. In addition, the degree the throttle is opened is controlled to achieve the optimum engine torque.
- Depending on road circumstances, the driver may have a sluggish feel. This is normal, because the optimum traction has the highest priority under TCS operation.
- TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.
- During TCS operation, it informs a driver of system operation by flashing SLIP indicator lamp.

ABS Function

NFS00040

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical System Diagnosis by CONSULT-III is available.



EBD Function

NFS00041

- Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical System Diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS00043

CAN Communication

NFS00044

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

NFS000IK

VDC/TCS SYSTEM

In case of Throttle Control System trouble, the VDC OFF indicator lamp and SLIP indicator lamp are turned on, and the condition of the vehicle is the same as the condition of vehicles without VDC/TCS equipment. In case of trouble to the Throttle Control System, the ABS control continues to operate normally without VDC/TCS control.

CAUTION:

If the Fail-Safe function is activated, then perform the self diagnosis for VDC/TCS/ABS control system.

ABS, EBD SYSTEM

In case of the electrical problems with the ABS, the ABS warning lamp, VDC OFF indicator lamp and SLIP indicator lamp will turn on. In case of the electrical problem with the EBD, brake warning lamp, ABS warning lamp, VDC OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the VDC/TCS/ABS become one of the following conditions of the Fail-Safe function.

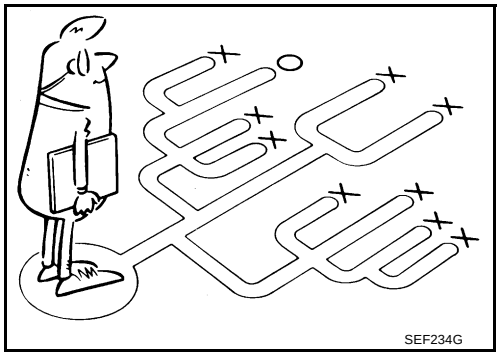
- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicle without VDC/TCS/ABS equipment.

  NOTE:

  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For EBD trouble, the EBD and ABS become inoperative, and the condition of the vehicle is the same as the condition of vehicles without VDC/TCS/ ABS, EBD equipment.

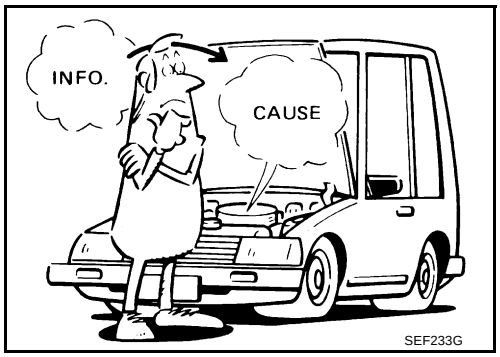
How to Proceed With Diagnosis

NFS00045



BASIC CONCEPT

- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.

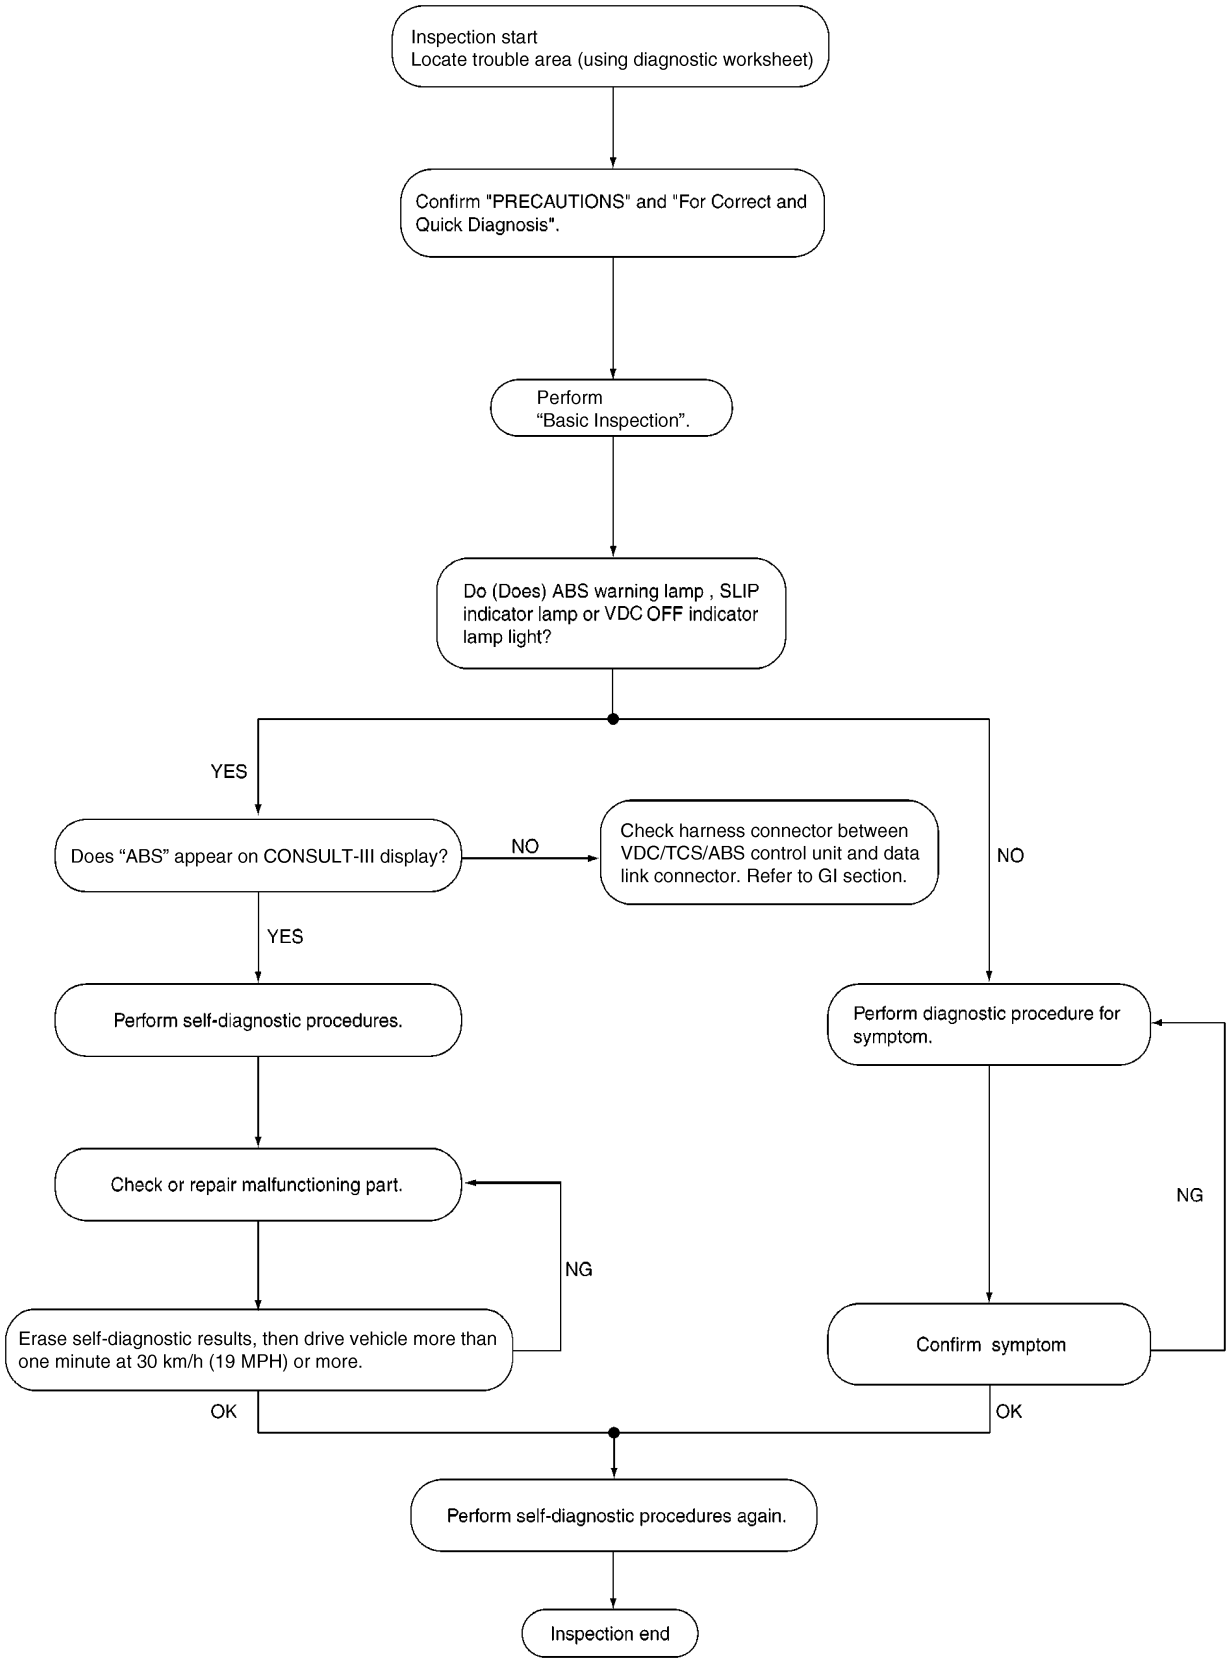


- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:

  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

SEF234G



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions"

DIAGNOSIS FLOWCHART

SFIA3407E

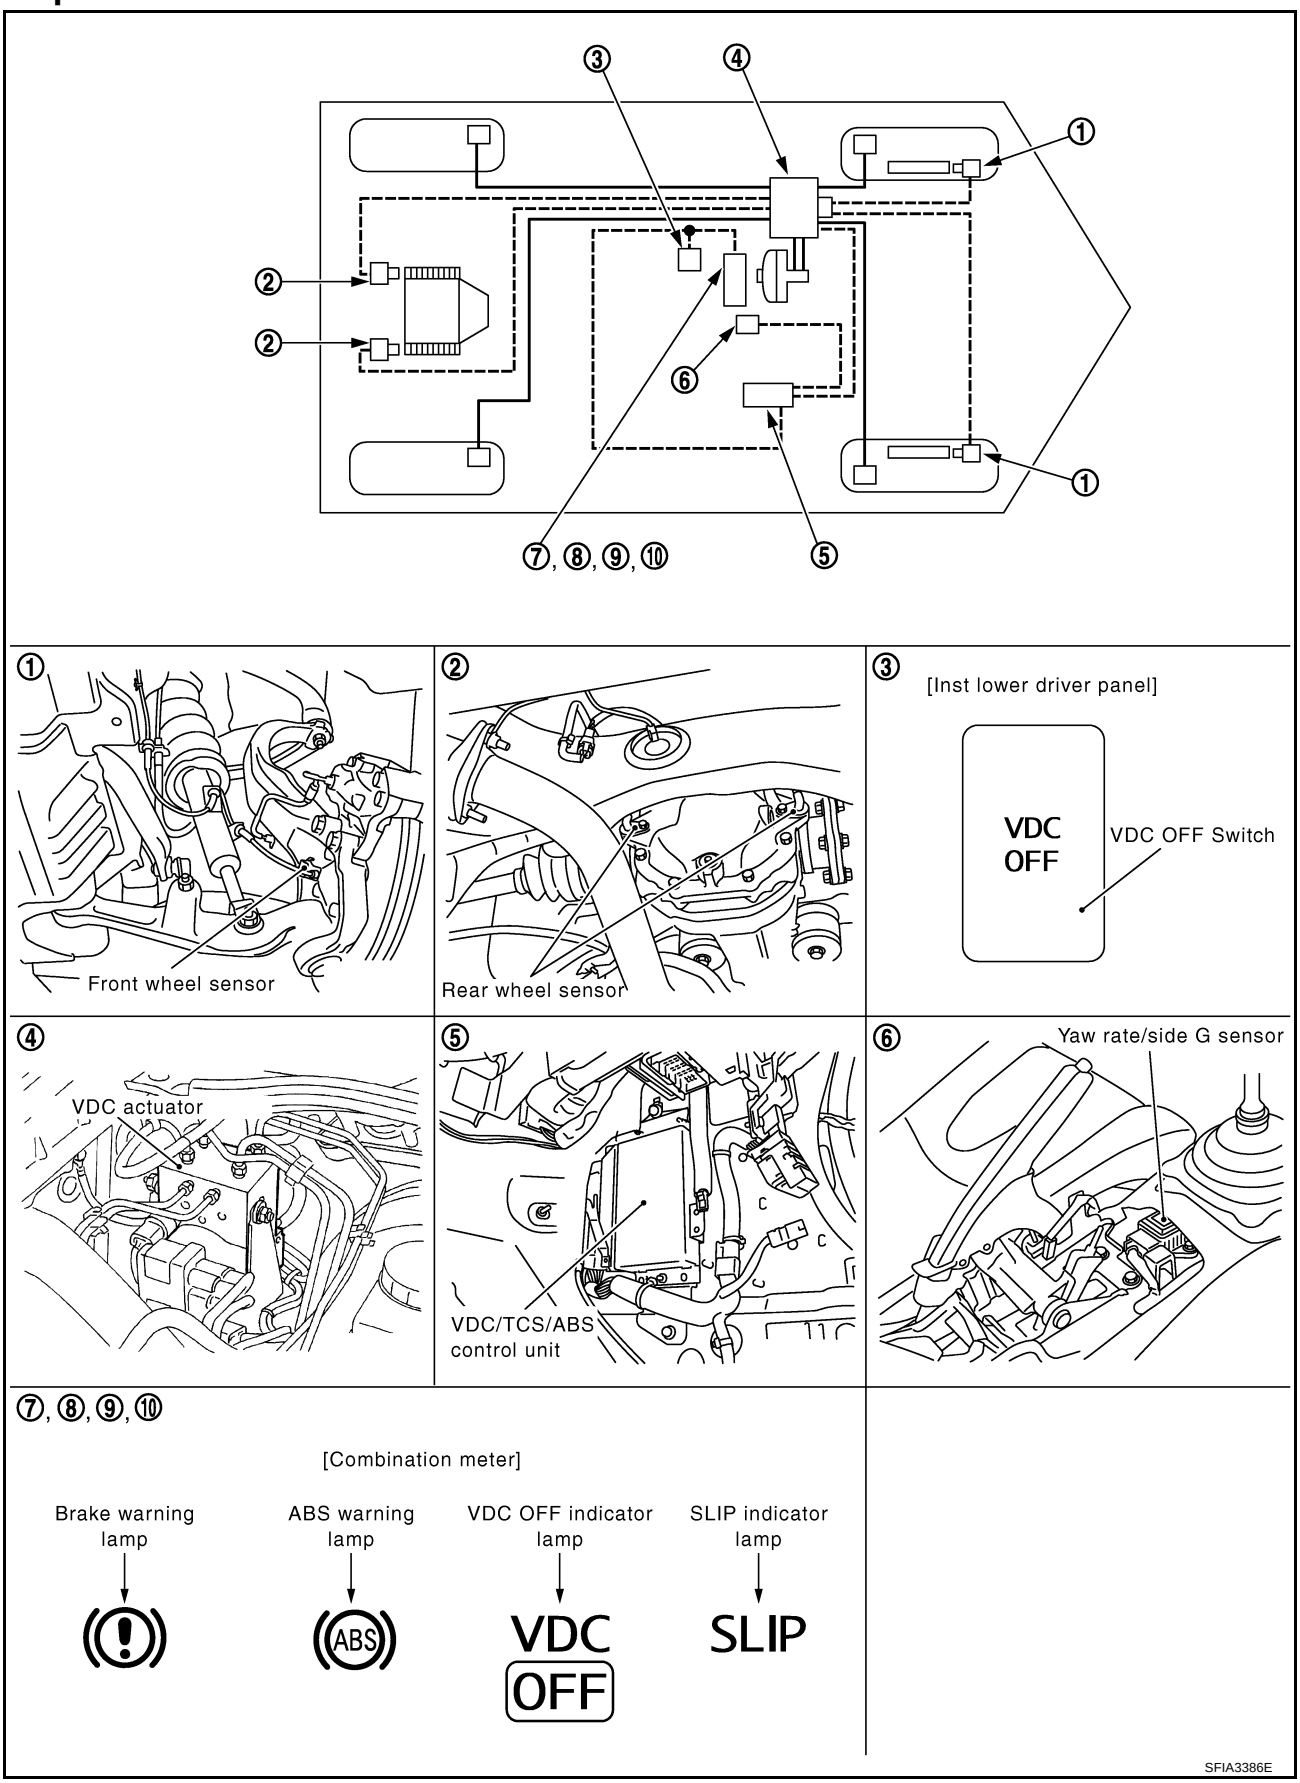
ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B



EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00049

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Vehicle speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (±10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
ABS WARN LAMP	ABS warning lamp on condition (Note 2)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
OFF LAMP	VDC OFF indicator lamp on condition (Note 3)	When the VDC OFF indicator lamp on	ON
		When the VDC OFF indicator lamp off	OFF
OFF SW	VDC OFF switch ON-OFF status	VDC OFF switch ON (When the VDC OFF indicator lamp on)	ON
		When VDC OFF switch OFF (When the VDC OFF indicator lamp off)	OFF
SLIP LAMP	SLIP indicator lamp on condition (Note 4)	When SLIP indicator lamp is ON	ON
		When SLIP indicator lamp is OFF	OFF
BATTERY VOLT	Battery voltage supplied to VDC/TCS/ABS control unit	Ignition switch ON	10 - 16V
GEAR	Determined gear shift position from the A/T PNP switch signal	Always	1 (M/T vehicles normally remain at 1)
POSITION	Shift position determined by the A/T PNP switch signal	Always	## (M/T vehicles normally remain at ##)
YAW RATE SEN	Yaw rate detected by yaw rate sensor	Vehicle stopped	Approx. 0 d/s
		While driving	-70 - 70d/s
ACCEL POS SIG	Throttle open/close status (linked to the accelerator pedal)	Do not step on the accelerator pedal (When ignition switch is on)	0%
		Step on the Brake pedal (When ignition switch is on)	0 to 100%
SIDE G-SENSOR	Side G detected by side G sensor	Vehicle stopped	Approx. 0 m/s^2
		While driving	-24.3 - 24.1 m/s^2
ST ANGLE SIG	Steering angle detected by steering angle sensor	Straight-ahead condition	Approx. 0°
		Steering wheel turned	-720 - 720°

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
PRESS SENSOR	Brake fluid pressure detected by pressure sensor	Do not step on the Brake pedal (When ignition switch is on)	Approx. 0 bar
		Step on the accelerator pedal (When ignition switch is on)	-40 - 300 bar
ENGINE RPM	Engine running	With engine stopped	0rpm
		Engine running	Almost in accordance with tachometer display
SNOW MODE SW	Snow mode switch ON/OFF condition	Snow mode switch ON	ON
		Snow mode switch OFF	OFF
CONTROL BOOSTER	Boost control status	When control booster is operating	ON
		When control booster is not operating	OFF
M MODE	A/T manual mode status	Always	OFF (M/T vehicles normally remain OFF)
OD OFF SW	A/T OD switch status	Always	OFF (M/T vehicles normally remain OFF)
PARK BRAKE SW	Parking brake status	Parking brake depressed	ON
		Parking brake not depressed	OFF
USV HSV	VDC switch-over valve status	During actuator change-over valve operation or during a fail-safe	ON
		When the actuator relay operates and the actuator change-over valve does not operate	OFF
V/R POWER	Actuator relay activated (ON/OFF)	When actuator relay is active (engine is running).	ON
		When actuator relay is not active (before engine starts and in fail-safe mode).	OFF
M/R OUTPUT	Actuator motor and motor relay status (ON/OFF)	When actuator motor and motor relay are active (“ACTIVE TEST” with CONSULT-III).	ON
		When the actuator motor and motor relay are not operating	OFF
FLUID LEV SW	Brake fluid level sensor ON/OFF status	When brake fluid level sensor is on	ON
		When the brake fluid level sensor is off	OFF
FAIL SIGNAL	Fail signal status	During VDC fail-safe During TCS fail-safe During ABS fail-safe During EBD fail-safe	ON

Note 1: Confirm tire pressure is normal.
Note 2: ON/OFF timing of ABS warning lamp
ON: Approximately 1 sec. After turning on the ignition switch or when an error is detected.
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal).
Note 3: ON/OFF timing of VDC OFF indicator lamp
ON: Approximately 1 sec. After the ignition switch is turned on, an error is detected, or the VDC OFF switch is on
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal) and the VDC OFF switch is off
Note 4: ON/OFF timing of SLIP indicator lamp
ON: Approximately 1 sec. After turning on the ignition switch or when an error is detected.
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal) and the VDC/TCS function is not operating
Flashing: VDC/TCS function is active during driving

CONSULT-III Functions (ABS)

NFS0004A

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
WORK SUPPORT	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.	BRC-79, "Adjustment of Steering Angle Sensor Neutral Position"
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-96, "Self-Diagnosis"
DATA MONITOR	Input/Output data in the VDC/TCS/ABS control unit can be read.	BRC-99, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the VDC/TCS/ABS control unit and also shifts some parameters in a specified range.	BRC-101, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	VDC/TCS/ABS control unit part number can be read.	—

Self-Diagnosis

NFS000HK

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp, VDC OFF indicator lamp, SLIP indicator lamp and brake warning lamp turn OFF.

   CAUTION:

   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp, VDC OFF indicator lamp, SLIP indicator lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR -1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-105, "Wheel Sensor System" (Note 1)
RR LH SENSOR - 1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR - 1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR - 1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR -2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR - 2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR -2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR - 2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the VDC/TCS/ABS power voltage is lower than normal.	BRC-120, "VDC/TCS/ABS Control Unit Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal error in the VDC/TCS/ABS control unit.	BRC-107, "VDC/TCS/ABS Control Unit 1"
PUMP MOTOR [C1111]	When the control unit detects an error in the motor or motor relay.	BRC-116, "ABS Motor and Motor Relay System"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system.	BRC-118, "Actuator Relay System"
ABS SENSOR [ABNORMAL SIGNAL] [C1115]	When wheel sensor input is malfunction.	BRC-105, "Wheel Sensor System" (Note 1)
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-119, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the VDC/TCS/ABS control unit detects an error in the front left inlet solenoid system.	BRC-113, "Solenoid and VDC Change-Over Valve System"
FR LH OUT ABS SOL [C1121]	When the VDC/TCS/ABS control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the VDC/TCS/ABS control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the VDC/TCS/ABS control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the VDC/TCS/ABS control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the VDC/TCS/ABS control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the VDC/TCS/ABS control unit detects an error in the rear left inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the VDC/TCS/ABS control unit detects an error in the rear right outlet solenoid system.	

Display item	Malfunction detecting condition	Check item
USV LINE [FL-RR] [C1147]	When the primary side VDC change-over valve 1 circuit is open or short-circuit.	BRC-113, "Solenoid and VDC Change-Over Valve System"
USV LINE [FR-RL] [C1148]	When the secondary side VDC change-over valve 1 circuit is open or short-circuit.	
HSV LINE [FL-RR] [C1149]	When the primary side VDC change-over valve 2 circuit is open or short-circuit.	
HSV LINE [FR-RL] [C1150]	When the secondary side VDC change-over valve 2 circuit is open or short-circuit.	
PRESS SEN CIRCUIT [C1142]	Pressure sensor open-circuit. When a short-circuit is detected. Or, when a pressure sensor error is detected.	BRC-108, "Pressure Sensor System"
ST ANG SEN CIRCUIT [C1143]	When the steering angle sensor neutral point has deviated. Or, when a steering angle sensor error is detected.	BRC-110, "Steering Angle Sensor System"
ST ANG SEN SIGNAL [C1144]	Neutral position correction of steering angle sensor is not finished.	BRC-79, "Adjustment of Steering Angle Sensor Neutral Position"
YAW RATE SENSOR [C1145]	When a yaw rate sensor error is detected. Or, when the yaw rate sensor circuit is open. When a short-circuit is detected.	BRC-111, "Yaw Rate/Side G Sensor System"
SIDE G - SEN CIRCUIT [C1146]	When there is an error in the side G sensor. Or, when the side G sensor circuit is open or short-circuited.	BRC-111, "Yaw Rate/Side G Sensor System"
ENGINE SIGNAL 1 [C1130]	Major engine components malfunctioning.	BRC-107, "Engine System"
ENGINE SIGNAL 2 [C1131]		
ENGINE SIGNAL 3 [C1132]		
ENGINE SIGNAL 4 [C1133]		
ENGINE SIGNAL 5 [C1134]		
ENGINE SIGNAL 6 [C1135]		
EMERGENCY BRAKE [C1153]	When the VDC/TCS/ABS control unit is malfunctioning (excessive pressure increase or insufficient pressure increase).	BRC-121, "VDC/TCS/ABS Control Unit 2"
BR FLUID LEVEL LOW [C1155]	The brake fluid level has dropped. Or, when there is a short to ground in the circuit between the VDC/TCS/ABS control unit and the fluid level sensor.	BRC-121, "Brake Fluid Level Switch System"
ST ANG SEN COM CIR [C1156]	CAN communication line or steering angle sensor has generated an error.	BRC-122, "CAN Communication System"
CAN COMM CIRCUIT [U1000]	When VDC/TCS/ABS control unit is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-122, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.
Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Data Monitor

NFS000HL

DISPLAY ITEM LIST

×: Standard –: Not applicable ▼: Option

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
FR LH SENSOR [km/h (MPH)]	x	x	▼	Wheel speed calculated by front LH wheel sensor signal is displayed.
FR RH SENSOR [km/h (MPH)]	x	x	▼	Wheel speed calculated by front RH wheel sensor signal is displayed.
RR RH SENSOR [km/h (MPH)]	x	x	▼	Wheel speed calculated by rear RH wheel sensor signal is displayed.
RR LH SENSOR [km/h (MPH)]	x	x	▼	Wheel speed calculated by rear LH wheel sensor signal is displayed.
FR LH IN SOL (ON/OFF)	–	x	▼	Front left inlet ABS solenoid valve (ON/OFF) status is displayed.
FR LH OUT SOL (ON/OFF)	–	x	▼	Front left outlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH IN SOL (ON/OFF)	–	x	▼	Rear right inlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH OUT SOL (ON/OFF)	–	x	▼	Rear right outlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH IN SOL (ON/OFF)	–	x	▼	Front right inlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH OUT SOL (ON/OFF)	–	x	▼	Front right outlet ABS solenoid valve (ON/OFF) status is displayed.
RR LH IN SOL (ON/OFF)	–	x	▼	Rear left inlet ABS solenoid valve (ON/OFF) status is displayed.
RR LH OUT SOL (ON/OFF)	–	x	▼	Rear left outlet ABS solenoid valve (ON/OFF) status is displayed.
STOP LAMP SW (ON/OFF)	x	x	▼	Stop lamp switch (ON/OFF) status is displayed.
MOTOR RELAY (ON/OFF)	–	x	▼	ABS motor relay (ON/OFF) condition is displayed.
ACTUATOR REL (ON/OFF)	–	x	▼	ABS actuator relay (ON/OFF) status is displayed.
ABS WARN LAMP (ON/OFF)	–	x	▼	ABS warning lamp (ON/OFF) status is displayed.
OFF LAMP (ON/OFF)	–	x	▼	VDC OFF indicator lamp (ON/OFF) status is displayed.
OFF SW (ON/OFF)	x	x	▼	VDC OFF switch (ON/OFF) status is displayed.
SLIP LAMP (ON/OFF)	–	x	▼	SLIP indicator lamp (ON/OFF) status is displayed.
BATTERY VOLT (V)	x	x	▼	The voltage supplied to the VDC/TCS/ABS control unit is displayed.
GEAR	x	x	▼	The gear position determined from the A/T PNP switch signal is displayed.
SLCT LVR POSI (For A/T models)	x	x	▼	Shift position determined from the A/T PNP switch signal is displayed.
YAW RATE SEN (d/s)	x	x	▼	Yaw rate detected by the yaw rate sensor is displayed.
ACCEL POS SIG (%)	x	–	▼	Throttle position status determined from the CAN communication signal is displayed.

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
SIDE G SENSOR (m/s^2)	x	–	▼	Side G detected by the side G sensor is displayed.
STR ANGLE SIG (°)	x	–	▼	Steering angle detected by the steering angle sensor is displayed.
PRESS SENSOR (bar)	x	–	▼	Brake hydraulic pressured detected by the pressure sensor is displayed.
ENGINE RPM (rpm)	x	–	▼	The engine speed status determined from the CAN communication signal is displayed.
SNOW MODE SW (ON/OFF)	–	–	▼	Snow mode switch (ON/OFF) status determined from the CAN communication signal is displayed.
BST OPER SIG (ON/OFF)	–	–	▼	Control booster operation signal (ON/OFF) status determined from the CAN communication signal is displayed.
M - MODE SIG (ON/OFF)	–	–	▼	M mode (ON/OFF) status determined from the CAN communication signal is displayed.
OD OFF SW (ON/OFF)	–	–	▼	OD cancel switch (ON/OFF) status determined from the CAN communication signal is displayed.
EBD SIGNAL (ON/OFF)	–	–	▼	EBD operation (ON/OFF) status is displayed.
ABS SIGNAL (ON/OFF)	–	–	▼	ABS operation (ON/OFF) status is displayed.
TCS SIGNAL (ON/OFF)	–	–	▼	TCS operation (ON/OFF) status is displayed.
VDC SIGNAL (ON/OFF)	–	–	▼	VDC operation (ON/OFF) status is displayed.
EBD FAIL SIG (ON/OFF)	–	–	▼	EBD fail-safe signal (ON/OFF) status is displayed.
ABS FAIL SIG (ON/OFF)	–	–	▼	ABS fail-safe signal (ON/OFF) status is displayed.
TCS FAIL SIG (ON/OFF)	–	–	▼	TCS fail-safe signal (ON/OFF) status is displayed.
VDC FAIL SIG (ON/OFF)	–	–	▼	The VDC fail-safe signal (ON/OFF) status is displayed.
CRANKING SIG (ON/OFF)	–	–	▼	Ignition switch START position signal input status is displayed.
ASCD SIGNAL (ON/OFF)	–	–	▼	ASCD (ON/OFF) status is displayed.
FLUID LEV (ON/OFF)	x	–	▼	Brake fluid level sensor (ON/OFF) status is displayed.
PARKING BRAKE SW (ON/OFF)	x	–	▼	Parking brake switch (ON/OFF) status is displayed.
USV FL-RR (ON/OFF)	–	–	▼	Primary side USV solenoid valve (ON/OFF) status is displayed.
USV FR-RL (ON/OFF)	–	–	▼	Secondary side USV solenoid valve (ON/OFF) status is displayed.
HSV FL-RR (ON/OFF)	–	–	▼	Primary side HSV solenoid valve (ON/OFF) status is displayed.
HSV FR-RL (ON/OFF)	–	–	▼	Secondary side HSV solenoid valve (ON/OFF) status is displayed.

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
V/R OUTPUT (ON/OFF)	–	–	▼	Valve relay operation signal (ON/OFF) status is displayed.
M/R OUTPUT (ON/OFF)	–	–	▼	Monitor relay operation signal (ON/OFF) status is displayed.

Active Test

NFS000IP

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

- When conducting an active test of the ABS function, select the main item for each test item. In addition, when conducting an active test of the VDC/TCS function, select the item menu for each test item.
- For the ABS solenoid valve, touch “UP”, “KEEP”, “DOWN” on the display screen. For the ABS solenoid valve (ACT), touch “UP”, “ACT UP”, “ACT KEEP” and confirm that the solenoid valves (IN, OUT, USV, HSV) operate as shown in the table below.

Operation	ABS solenoid valve			ABS solenoid valve (ACT)		
	UP	KEEP	DOWN	UP	ACT UP	ACT KEEP
FR RH IN SOL	OFF	ON	ON	OFF	OFF	OFF
FR RH OUT SOL	OFF	OFF	ON*	OFF	OFF	OFF
USV [FR - RL]	OFF	OFF	OFF	OFF	ON	ON
HSV [FR - RR]	OFF	OFF	OFF	OFF	ON*	OFF

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS0004B

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- When replacing steering angle sensor, steering system components or suspension system components, and when adjusting the alignment, be sure to adjust the steering angle sensor neutral position before driving. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .

- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- VDC/TCS/ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	The is a motor operation sound inside VDC/TCS/ABS actuator, and sometimes there is a slight sound when VDC, TCS, or ABS operates.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
TCS operation (SLIP indicator lamp ON)	TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.	Normal Cancel the VDC/TCS function for the inspection on a chassis dynamometer.
	When inspecting the speedometer, etc., press VDC OFF switch to turn off TCS function before conducting the work.	
	When accelerator pedal is depressed on a chassis dynamometer (front wheel fixing type), the vehicle speed will not increase. This is normal, because TCS is activated by the stationary front wheels. The warning lamp may also turn on to show “sensor system error” in this case. This is not a malfunction either, because the stationary front wheels are detected. Restart engine, and drive the vehicle at 30 km/h (19 MPH) or higher to check that the warning lamp no longer turns on.	
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal
Sluggish feel	Depending on road circumstances, the driver may have a sluggish feel. This is normal, because under TCS operation optimum traction has the highest priority (safety first). Sometimes the driver has a slight sluggish feel in response to substantial accelerator pedal operation.	Normal

ABS WARNING LAMP, VDC OFF INDICATOR LAMP, SLIP INDICATOR LAMP AND BRAKE WARNING LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	VDC OFF indicator lamp	SLIP indicator lamp	Brake warning lamp (Note 1)	Remarks
Ignition switch OFF.	—	—	—	—	—
Approx. Within 1 seconds after ignition switch is turned ON.	×	×	×	× (Note 1)	—
Approx. 1 seconds after ignition switch ON.	—	—	—	× (Note 1)	Turns OFF 2 seconds after engine starts.
VDC OFF switch is turned ON. (VDC function is OFF.)	—	×	—	—	—
VDC/TCS/ABS error.	×	×	—	—	There is a malfunction in VDC/TCS/ABS control unit, SLIP indicator lamp turns off (when the power supply or ground circuits return an error).
	×	×	×	—	—
When VDC/TCS is not functioning normally.	—	×	×	—	—
EBD error.	×	×	×	×	—

Note 1:Brake warning lamp will turn on in case of operating parking brake (switch turned on) or of actuating brake fluid level switch (brake fluid is insufficient).

Basic Inspection

NFS0004C

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around VDC actuator for leaks. If there is leaking or oozing fluid, check the following items.
   - If VDC actuator connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or VDC actuator screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than VDC actuator connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at VDC actuator, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the VDC actuator body.

     CAUTION:
     VDC actuator cannot be disassembled.
3. Check the brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP, VDC OFF INDICATOR LAMP, SLIP INDICATOR LAMP INSPECTION

1. Make sure ABS warning lamp, VDC OFF indicator lamp (when VDC OFF switch is OFF), and SLIP indicator lamp turns ON approximately 1 second when the ignition switch is turned ON. If they do not, check the VDC OFF indicator lamp and then VDC OFF switch. Refer to BRC-122, "VDC OFF SWITCH" . Check CAN communications. Refer to “CAN Communication Inspection”. If there are no errors with VDC OFF switch and CAN communication system, check combination meter. Refer to BRC-122, "CAN Communication System" .

2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. With the engine running, make sure VDC OFF indicator lamp turns on and off when VDC OFF switch is turned on and off. If the indicator lamp status does not correspond to switch operation, check the VDC OFF switch system. Refer to BRC-122, "VDC OFF SWITCH" .
4. Make sure ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp turn off 2 seconds after the engine is started. If ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp have not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the VDC/TCS/ABS control unit.
5. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS"

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS0004D

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR-1,-2
FR LH SENSOR- 1,-2
RR RH SENSOR-1,-2
RR LH SENSOR-1,- 2
ABS SENSOR [ABNORMAL SIGNAL]

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

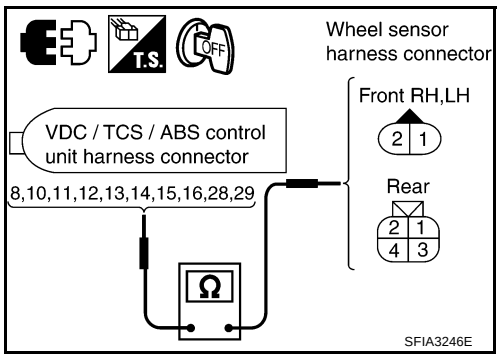
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect VDC/TCS/ABS control unit connector and malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connectors, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

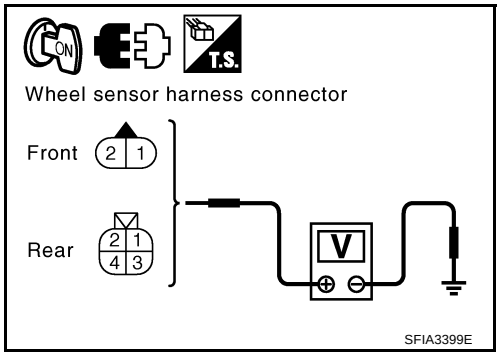
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect wheel sensor connector E42 (FR - LH), E27 (FR - RH), T5 (RR - RH, LH) and VDC/TCS/ABS control unit connector B114.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	VDC/TCS/ABS control unit	Wheel sensor	VDC/TCS/ABS control unit	Wheel sensor	VDC/TCS/ABS control unit (signal)	VDC/TCS/ABS control unit (ground)
Front RH	16	1	15	2	16, 15	28, 29
Front LH	10	1	8	2	10, 8	
Rear RH	12	1	11	2	12, 11	
Rear LH	14	3	13	4	14, 13	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Engine System

NFS0004E

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
ENGINE SIGNAL 1
ENGINE SIGNAL 2
ENGINE SIGNAL 3
ENGINE SIGNAL 4
ENGINE SIGNAL 5
ENGINE SIGNAL 6

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK ENGINE SYSTEM

1. Conduct an ECM self-diagnosis and repair or replace any non-standard items. Re-conduct the ECM self-diagnosis.
2. Re-conduct VDC/TCS/ABS control unit self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace any non-standard items. Re-conduct the self-diagnosis.

VDC/TCS/ABS Control Unit 1

NFS0004F

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace VDC/TCS/ABS control unit. Re-conduct the self-diagnosis.
NO >> INSPECTION END

Pressure Sensor System

NFS0004G

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

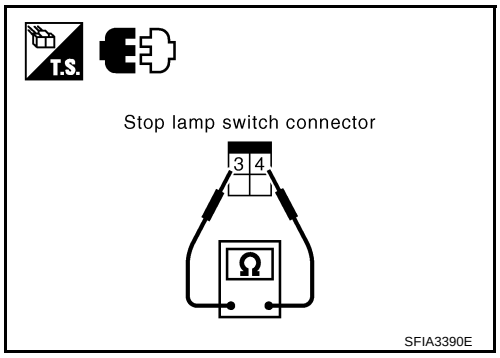
Check self-diagnosis results.

Self-diagnosis results
PRESS SEN CIRCUIT

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK STOP LAMP SWITCH CONNECTOR



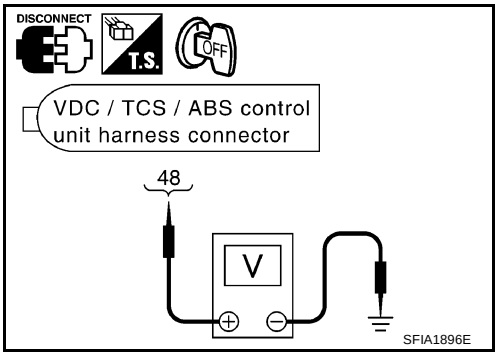
1. Disconnect stop lamp switch connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors.
3. Start engine.
4. Repeat pumping brake pedal carefully several times, then perform self-diagnosis again.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.



Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No

OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114.
2. Check voltage between VDC/TCS/ABS control unit connector B114 terminal 48 and ground.

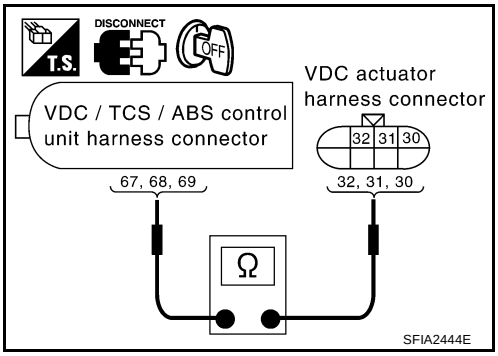
VDC/TCS/ABS control unit	Ground	Measurement condition	Voltage
48	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> GO TO 5.
NG >> Open or short in harness. Repair or replace the harness.

5. CHECK PRESSURE SENSOR CONNECTOR

1. Disconnect VDC actuator connector E50 and VDC/TCS/ABS control unit connector, check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 6.

6. CHECK PRESSURE SENSOR HARNESS

1. Turn ignition switch OFF and disconnect VDC actuator connector E50 and VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC actuator connector.

VDC/TCS/ABS control unit	VDC actuator	Continuity
69	30	Yes
68	31	
67	32	

OK or NG

OK >> GO TO 7.
NG >> If the open or short in harness, repair or replace the harness.

7. CHECK PRESSURE SENSOR

1. Connect VDC actuator and VDC/TCS/ABS control unit connectors.
2. Conduct “DATA MONITOR” of the “PRESS SENSOR” to check if the status is normal.

Condition	Data monitor display
When brake pedal is depressed.	– 40 – 300 bar
When brake pedal is released.	Approx. 0 bar

OK or NG

OK >> INSPECTION END
NG >> If the pressure sensor is damaged or malfunctioning, replace the VDC actuator (pressure sensor it built in).

Steering Angle Sensor System

NFS0004H

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

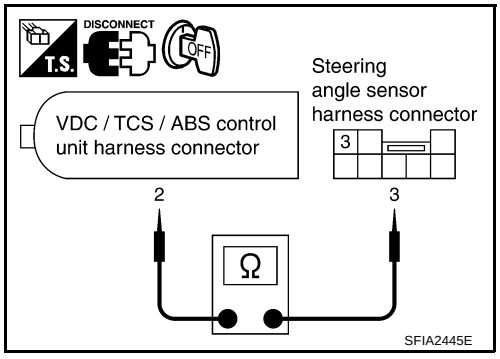
Self-diagnosis results
ST ANG SEN CIRCUIT

Is the above displayed in the self-diagnosis item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect steering angle sensor connector and VDC/TCS/ABS control unit connector and check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then preform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STEERING ANGLE SENSOR HARNESS

1. Check CAN communication system. Refer to BRC-122, "CAN Communication System" .
2. Turn ignition switch OFF and disconnect steering angle sensor connector M22 and VDC/TCS/ABS control unit connector B114.
3. Check continuity between VDC/TCS/ABS control unit connector terminal 2 and steering angle sensor connector terminal 3.

VDC/TCS/ABS control unit	Steering angle sensor	Continuity
2	3	Yes

OK or NG

OK >> GO TO 4.
NG >> If the open or short in harness, repair or replace the harness.

4. CHECK DATA MONITOR

1. Connect steering angle sensor and VDC/TCS/ABS control unit connectors.
2. Conduct “DATA MONITOR” of the “STR ANGLE SIG” to check if the status is normal.

Steering condition	Data monitor
Straight-ahead	Approx. 0°
Turn wheel to the right by 90 °	Approx. + 90°
Turn wheel to the left by 90 °	Approx. - 90°

OK or NG

OK >> Re-conduct VDC/TCS/ABS control unit self-diagnosis.
NG >> Replace spiral cable (steering angle sensor) and adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

Yaw Rate/Side G Sensor System

NFS0004I

CAUTION:
Sudden turns (such as spin turns, acceleration turns), drifting, etc. When VDC function is OFF (VDC OFF switch ON) may cause the yaw rate/side G sensor system indicate a problem. However this is not a problem if normal operation can be resumed after restarting the engine.

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

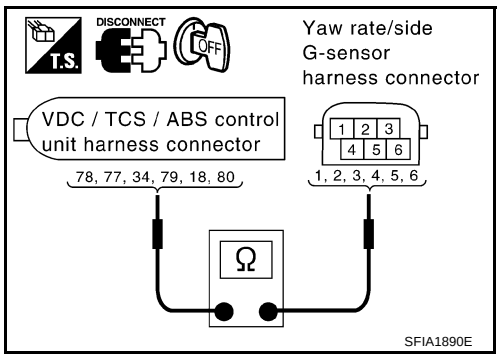
Self-diagnosis results
YAW RATE SENSOR
SIDE G-SENSOR

CAUTION:
When on a turntable, such as at a parking structure entrance, or when on a moving object with the engine running, the VDC OFF indicator lamp might turn on and the self-diagnosis using the CONSULT-III the yaw rate sensor system might be displayed, but in this case there is no problem with the yaw rate sensor system. As soon as the vehicle leaves the turntable or moving object, restart the engine to return the system to normal.

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect yaw rate/side G sensor connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then preform self-diagnosis.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK YAW RATE/SIDE G SENSOR HARNESS

1. Turn ignition switch OFF and disconnect yaw rate/side G sensor connector M51 and VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit vehicle side connector and yaw rate/side G sensor vehicle side connector.

VDC/TCS/ABS control unit	Yaw rate/side G sensor	Continuity
18	5	Yes
34	3	
77	2	
78	1	
79	4	
80	6	

OK or NG

OK >> GO TO 4.
NG >> If the open or short in harness, repair or replace the harness.

4. CHECK YAW RATE/SIDE G SENSOR

1. Connect yaw rate/side G sensor and VDC/TCS/ABS control unit connectors.
2. Use “DATA MONITOR” to check if the yaw rate/side G sensor are normal.

Vehicle status	Yaw rate sensor (Data monitor standard)	Side G sensor (Data monitor standard)
When stopped	- 4 to + 4 deg/s	- 1.1 to + 1.1 m/s^2
Right turn	Negative value	Negative value
Left turn	Positive value	Positive value

OK or NG

OK >> INSPECTION END
NG >> Replace the malfunctioning yaw rate/side G sensor, and then re-conduct the VDC/TCS/ABS control unit self-diagnosis.

Solenoid and VDC Change-Over Valve System

NFS0004J

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

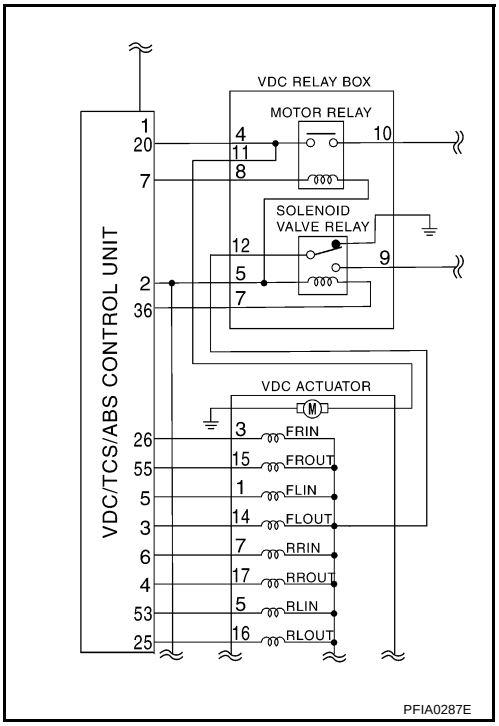
Check self-diagnosis results.

Self-diagnosis results
IN ABS SOL
OUT ABS SOL
USV LINE [FL-RR]
USV LINE [FR-RL]
HSV LINE [FL-RR]
HSV LINE [FR-RL]

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect VDC/TCS/ABS control unit connector and solenoid connector E49, E50 and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.

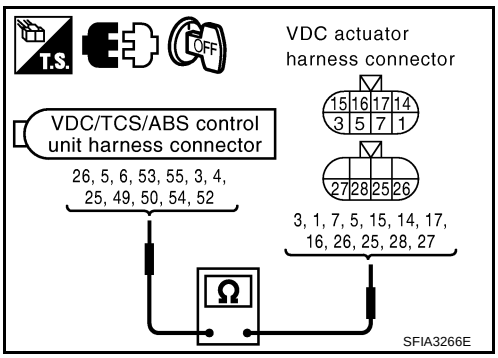
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK SOLENOID INPUT SIGNAL

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector.
2. Check resistance between VDC/TCS/ABS control unit connector and ground.

VDC/TCS/ABS control unit	Ground	Resistance value
26	—	6.0 – 11 Ω
5		
6		
53		
55		3.0 – 5.0 Ω
3		
4		
25		
49		6.0 – 11 Ω
50		
54		3.0 – 5.0 Ω
52		



OK or NG

OK >> Check the VDC/TCS/ABS control unit power system. Refer to BRC-120, "VDC/TCS/ABS Control Unit Power and Ground Systems" .

NG >> GO TO 4.

4. CHECK SOLENOID HARNESS

1. Disconnect VDC actuator connector.
2. Check continuity between VDC/TCS/ABS control unit connector B114 and VDC actuator connector E49.

VDC/TCS/ABS control unit	VDC actuator	Continuity
26	3	Yes
5	1	
6	7	
53	5	
55	15	
3	14	
4	17	
25	16	
49	26	
50	25	
54	28	
52	27	

OK or NG

OK >> Replace VDC/TCS/ABS actuator assembly.
NG >> Open or short in harness. Repair or replace the harness.

ABS Motor and Motor Relay System

NFS0004K

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
PUMP MOTOR

Is the above displayed in the self-diagnosis display items?

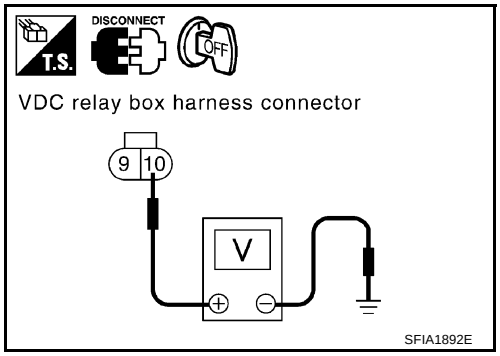
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect VDC relay box connector E47, E48, E222 and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

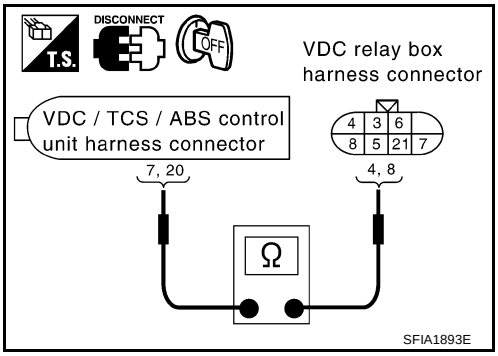


3. CHECK ABS MOTOR AND MOTOR RELAY POWER SYSTEM

1. Disconnect VDC relay box connectors E48.
2. Check voltage between VDC relay box connector and ground.

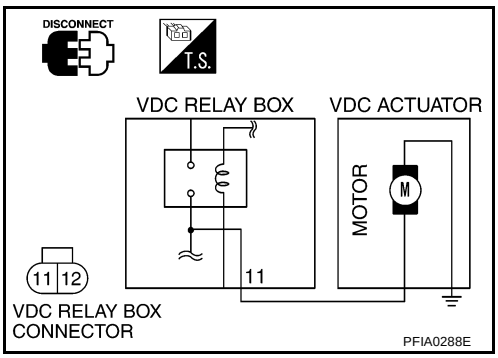
VDC relay box	Ground	Voltage
10	—	Battery voltage (Approx. 12 V)

OK or NG



OK >> GO TO 4.
NG >> The circuit between battery and VDC relay box terminal 10 is open or shorted. Repair the circuit.

4. CHECK ABS MOTOR AND MOTOR RELAY HARNESS



1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114 and VDC relay box connector E47.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC relay box vehicle side connector.

VDC/TCS/ABS control unit	VDC relay box	Continuity
20	4	Yes
7	8	

3. Check if the actuator motor operates when a 12 V voltage is applied to the VDC relay box connector E222 terminal 12.

CAUTION:
Operate the actuator motor for 4 seconds or less to prevent heat generation.

OK or NG

OK >> GO TO 5.
NG >> The actuator motor or actuator motor circuit open or short in harness. Repair or replace the actuator motor or actuator motor circuit harness.

5. CHECK ABS MOTOR RELAY

ABS motor relay independent inspection. Refer toBRC-123, "ABS MOTOR RELAY AND ACTUATOR RELAY".

OK or NG

OK >> Replace VDC actuator assembly.
NG >> Replace VDC relay box.

Actuator Relay System

NFS0004L

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

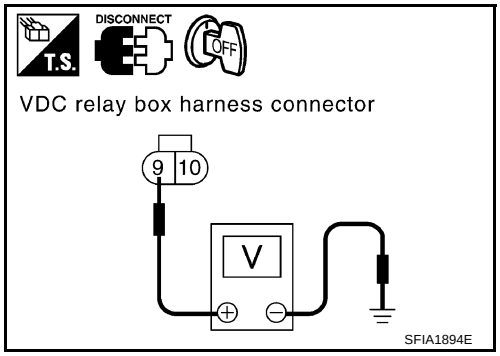
Self-diagnosis results
MAIN RELAY

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect VDC relay box connector E47, E48, E222 and VDC/TCS/ABS control unit connector B114 and check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.



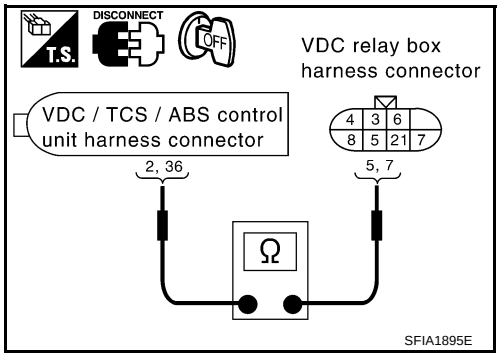
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ACTUATOR RELAY POWER SYSTEM

1. Turn ignition switch OFF and disconnect VDC relay box connector E48.
2. Check voltage between VDC relay box connector and ground.

VDC relay box	Ground	Voltage
9	—	Battery voltage (Approx. 12 V)



OK or NG

OK >> GO TO 4.
NG >> The circuit between battery and VDC relay box harness connector E48 terminal 9 is open or shorted. Repair the circuit.

4. CHECK ACTUATOR RELAY HARNESS

1. Disconnect VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC relay box connector E47.

VDC/TCS/ABS control unit	VDC relay box	Continuity
2	5	Yes
36	7	

OK or NG

OK >> GO TO 5.
NG >> Open or short in harness. Repair or replace the harness.

5. CHECK ACTUATOR RELAY

Independently check VDC actuator relay. Refer to BRC-123, "ABS MOTOR RELAY AND ACTUATOR RELAY".

OK or NG

OK >> Replace VDC actuator assembly.
NG >> Replace VDC relay box.

Stop Lamp Switch System

NFS0004M

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

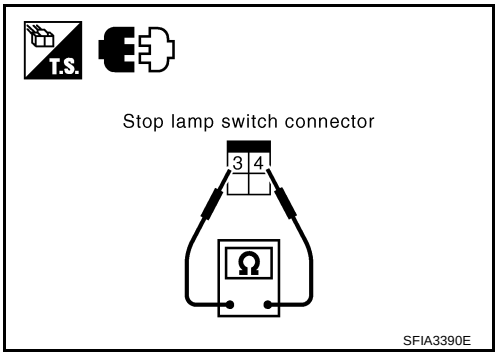
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect stop lamp switch connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors.
3. Start engine.
4. Repeat pumping brake pedal carefully several times, then perform self-diagnosis again.



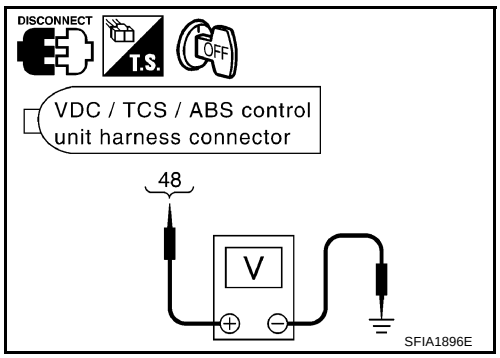
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114.
2. Check voltage between VDC/TCS/ABS control unit connector B114 terminal 48 and ground.

VDC/TCS/ABS control unit	Ground	Measurement condition	Voltage
48	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> Connect the connectors and conduct a VDC/TCS/ABS control unit self-diagnosis.
NG >> Open or short in harness. Repair or replace the harness.

VDC/TCS/ABS Control Unit Power and Ground Systems

NFS0004N

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

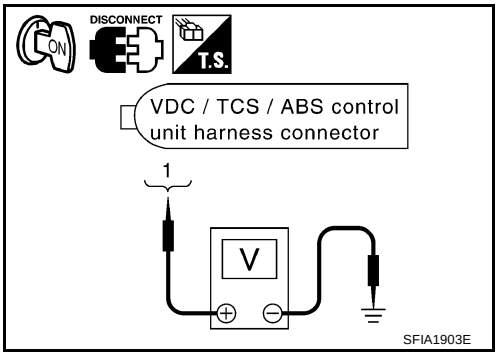
Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

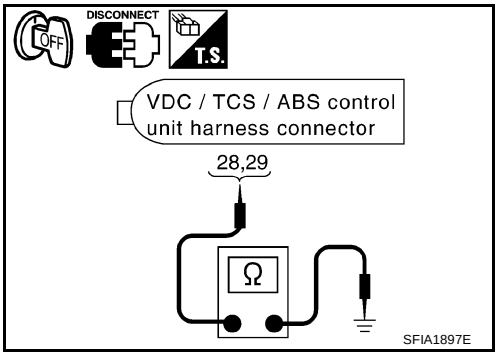
1. Disconnect VDC/TCS/ABS control unit connector and check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK VDC/TCS/ABS CONTROL UNIT POWER AND GROUND CIRCUIT



1. Disconnect VDC/TCS/ABS control unit connector B114.
2. With the ignition switch turned on and off, check voltage between VDC/TCS/ABS control unit connector and ground.

Signal name	VDC/TCS/ABS control unit	Ground	Voltage
Power supply	1	—	Battery voltage (Approx. 12 V)

3. Check continuity between VDC/TCS/ABS control unit and ground.

Signal name	VDC/TCS/ABS control unit	Ground	Continuity
Ground	28, 29	—	Yes

OK or NG

OK >> Check battery (terminal looseness, low voltage, etc.) For any non-standard condition. If any non-standard condition exists, recharge or replace battery as necessary.

NG >> The corresponding harness circuit is open or shorted. Repair the circuit.

VDC/TCS/ABS Control Unit 2

NFS0004O

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace VDC/TCS/ABS control unit and re-conduct the self-diagnosis.

NO >> INSPECTION END

Brake Fluid Level Switch System

NFS0004P

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

1. Check brake reservoir tank fluid level. If the level is low, add brake fluid.
2. Erase the self-diagnosis results and check self-diagnosis results.

Self-diagnosis results
BR FLUID LEVEL LOW

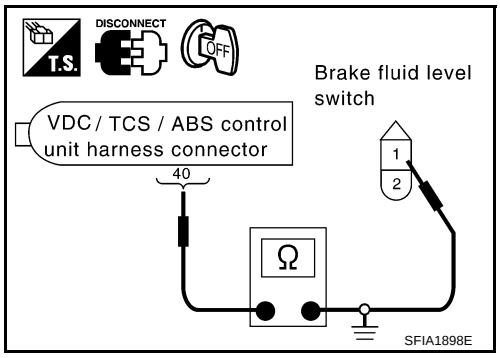
Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.

NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect brake fluid level switch connector and VDC/TCS/ABS control unit connector and check terminal for deformation, disconnection, looseness, and so on. If there is any non-standard condition, repair or replace the terminal.
2. Securely reconnect the connectors and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK HARNESS BETWEEN THE BRAKE FLUID LEVEL SWITCH AND THE VDC/TCS/ABS CONTROL UNIT

1. Turn ignition switch OFF and disconnect brake fluid level switch connector, VDC/TCS/ABS control unit, connectors.
2. Check continuity between brake fluid level switch connector E44 and VDC/TCS/ABS control unit connector B114.

VDC/TCS/ABS control unit	Brake fluid level switch	Continuity
40	1	Yes
	Ground	No
Ground	2	Yes

OK or NG

OK >> Connect connectors and conduct a VDC/TCS/ABS control unit self-diagnosis.
NG >> If the open or short in harness, repair or replace the harness.

CAN Communication System

NFS0004Q

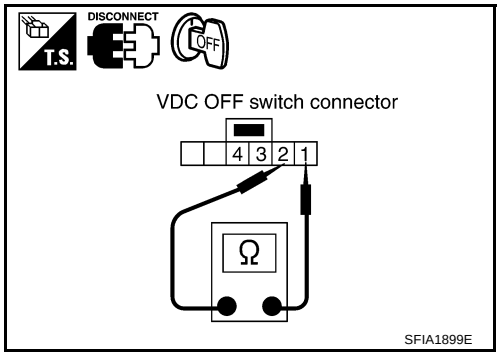
INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the VDC/TCS/ABS control unit connector, and check the terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connection is loose, damaged, open, or shorted.

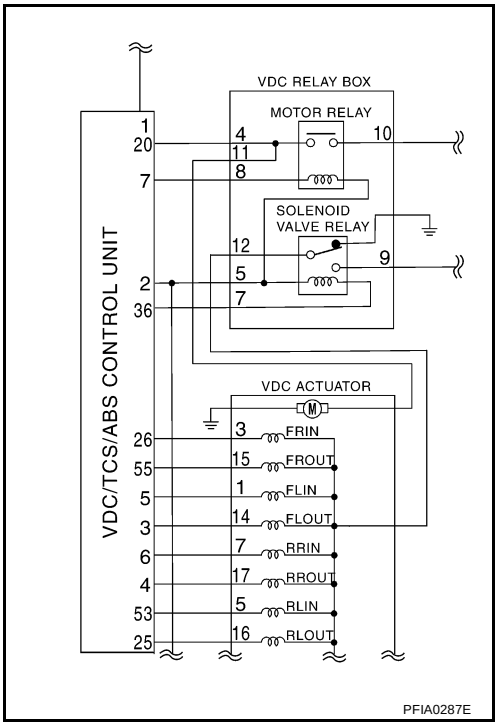


Component Inspection

NFS0004R

VDC OFF SWITCH

- Turn ignition switch OFF, and disconnect the VDC OFF switch connector M9, and check the continuity between terminals 1 and 2.



1 - 2 :Continuity should exist when pushing the switch.
continuity should not exist when releasing the switch.

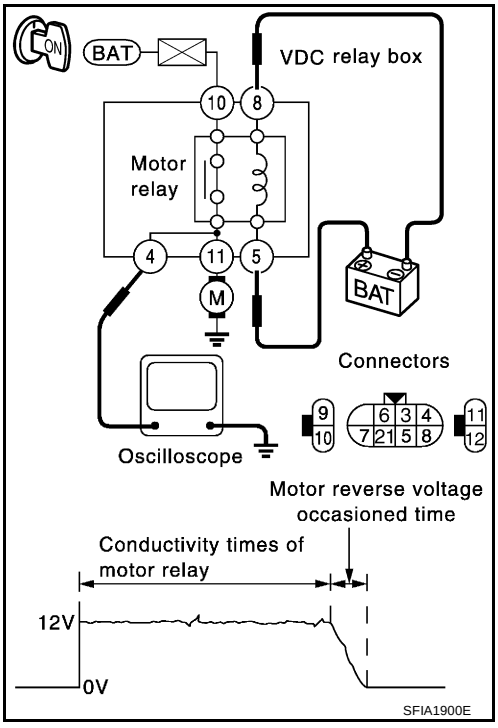
ABS MOTOR RELAY AND ACTUATOR RELAY

- Turn ignition switch OFF and disconnect the VDC relay box connector E47, E48, E222.
- Apply a voltage of 12 V between the ABS motor relay terminal 8 and the actuator relay terminal 7 and then check the continuity between the following terminals.

ABS motor relay	Between terminal 4 to 10	Continuity should exist.
Actuator relay	Between terminal 9 to 12	Continuity should exist.

VDC/TCS/ABS ACTUATOR

Actuator Operation Inspection



1. Turn ignition switch ON, apply a voltage of 12 V between the relay box terminal 5 and 8, use an oscilloscope to measure the motor voltage at this time (between terminal 11 and the ground), and check the motor reverse voltage occurrence time when operation is stopped.

Motor counter-electromotive force duration:

0.1 second or more

CAUTION:

- **The above check should be performed after motor relay unit inspection to make sure relay operates normally.**
- **To prevent overheating, do not drive actuator motor more than 4 seconds.**
- **The motor reverse voltage occurrence time is standard when the battery voltage is 12 V and the air temperature is 20°C (68°F), and this time is a little shorter when the battery voltage is low or the air temperature is low.**

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0004S

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 sec. After the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0004T

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >>
- Bleed air from the brake piping.
- Check the brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repair.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect the VDC/TCS/ABS control unit connector and make sure the braking force is sufficient when the ABS in not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .
NG >> Check brake system.

The Braking Distance Is Long

NFS0004U

CAUTION:
On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect VDC/TCS/ABS control unit connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

NG >>
- Bleed air from the brake piping.
- Check brake system.

The ABS Function Does Not Operate

NFS0004V

CAUTION:
The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0004W

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine (at approximately 10 km/h (6MPH) or higher)**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.

NO >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.

NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

Vehicle Jerks During VDC/TCS/ABS Control

NFS0004X

1. CHECK ENGINE SPEED SIGNAL

Conduct CONSULT-III VDC/TCS/ABS control unit “Data Monitor”.

Is engine speed at idle 400 rpm or higher?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK ECM SELF-DIAGNOSIS RESULT ITEM

Perform ECM self-diagnosis.

Are self-diagnosis items displayed?

YES >> Check the corresponding items. Refer to EC-81, "TROUBLE DIAGNOSIS" in “Engine Control (EC section)”.
NO >> GO TO 3.

3. SYMPTOM CHECK 1

Check if the vehicle jerks during VDC/TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. CHECK A/T SELF-DIAGNOSIS RESULTS ITEM

Perform A/T self-diagnosis.

OK or NG

OK >> GO TO 5.
NG >> Check the corresponding items. Refer to AT-40, "TROUBLE DIAGNOSIS" in “A/T”.

5. SYMPTOM CHECK 2

Check if the vehicle jerks during VDC/TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 6.

6. CHECK SELF-DIAGNOSIS RESULT ITEM 1

Conduct self-diagnosis of the VDC/TCS/ABS control unit.

Are self-diagnosis items displayed?

YES >> Check the corresponding items, make repairs, and re-conduct the VDC/TCS/ABS control unit self-diagnosis.
NO >> GO TO 7.

7. CHECK CONNECTOR

1. Disconnect the VDC/TCS/ABS control unit and the ECM connectors, check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the connector.
2. Securely reconnect the connector and conduct self-diagnosis.

OK or NG

OK >> If the connector terminal contact is loose, damaged, open or shorted, repair or replace the connector terminal.
NG >> GO TO 8.

8. CHECK SELF-DIAGNOSIS RESULT ITEM 2

Re-conduct the VDC/TCS/ABS control unit self-diagnosis.

Are self-diagnosis items displayed?

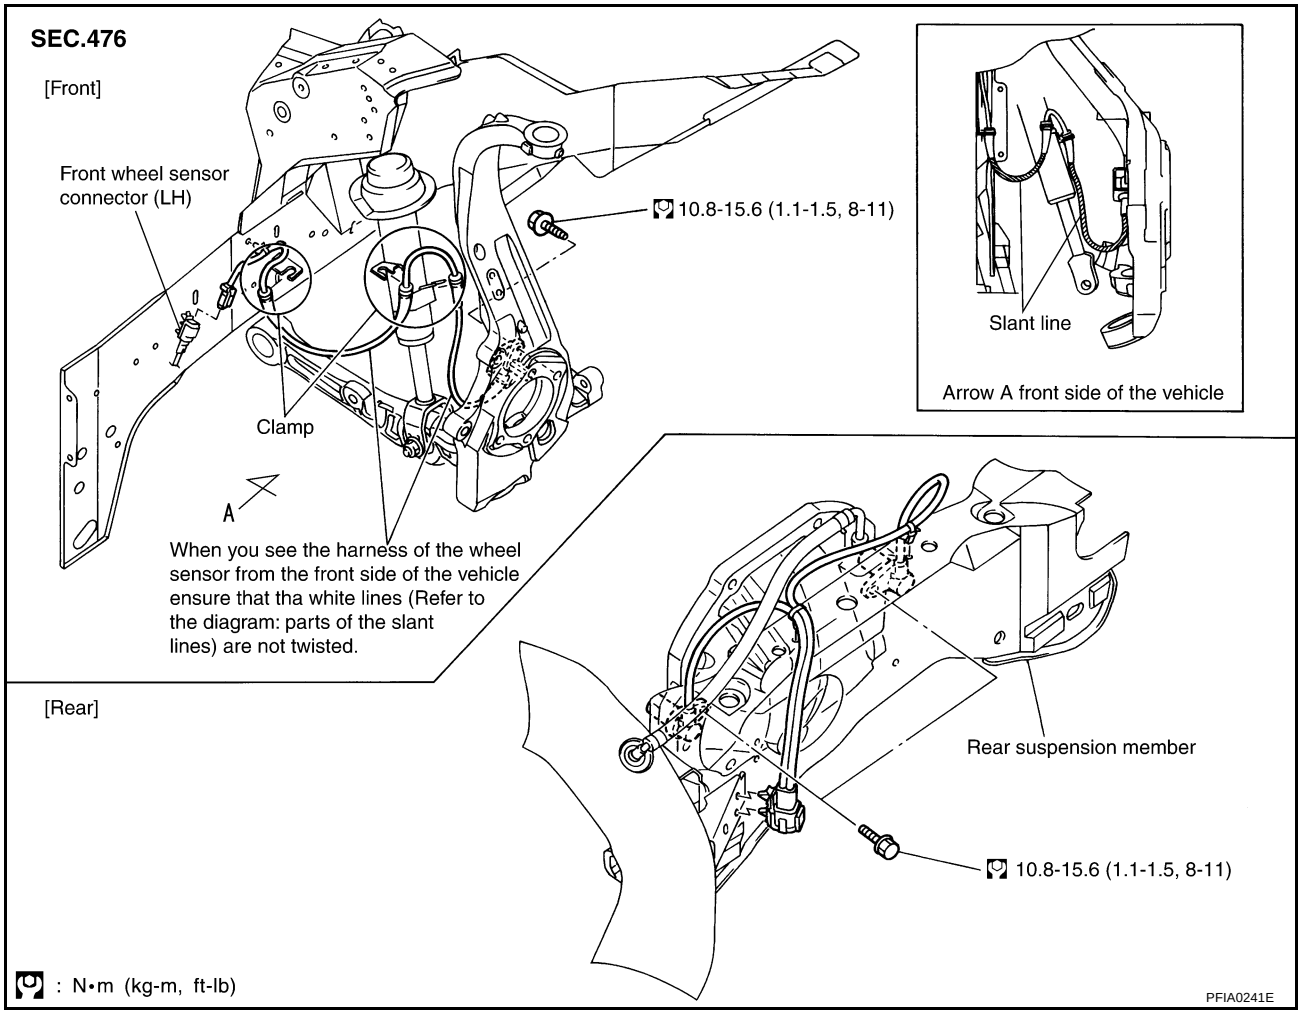
YES >> Repair or replace any non-standard items.
NO >> GO TO 9.

9. CHECK CIRCUIT BETWEEN VDC/TCS/ABS CONTROL UNIT AND THE ECM

Check CAN communication system. Refer to BRC-122, "CAN Communication System" .

OK or NG

OK >> INSPECTION END
NG >> Connect the connectors, and re-conduct the VDC/TCS/ABS control unit self-diagnosis.



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0004Y

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

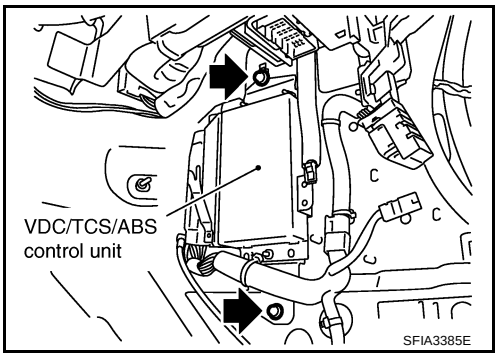
- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

VDC/TCS/ABS CONTROL UNIT



PFP:47660

Removal and Installation

NFS0004Z

REMOVAL

1. Remove dash side finisher (RH). Refer to IP-12, "(C) Dash Side Finisher (RH/LH)" .
2. Remove VDC/TCS/ABS control unit bolts.
3. Remove VDC/TCS/ABS control unit.

INSTALLATION

Installation in the reverse order of removal.

- When installing the VDC/TCS/ABS control unit, tighten bolts to the specified torque.

VDC/TCS/ABS control unit bolts : 8.3 N·m (0.85 kg–m, 73 in–lb)

CAUTION:

When replacing VDC/TCS/ABS control unit, make sure to adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS00050

REMOVAL

Front

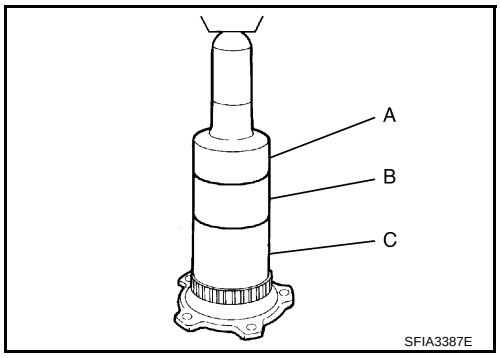
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
- Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
- Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the companion flange.

INSTALLATION

Front



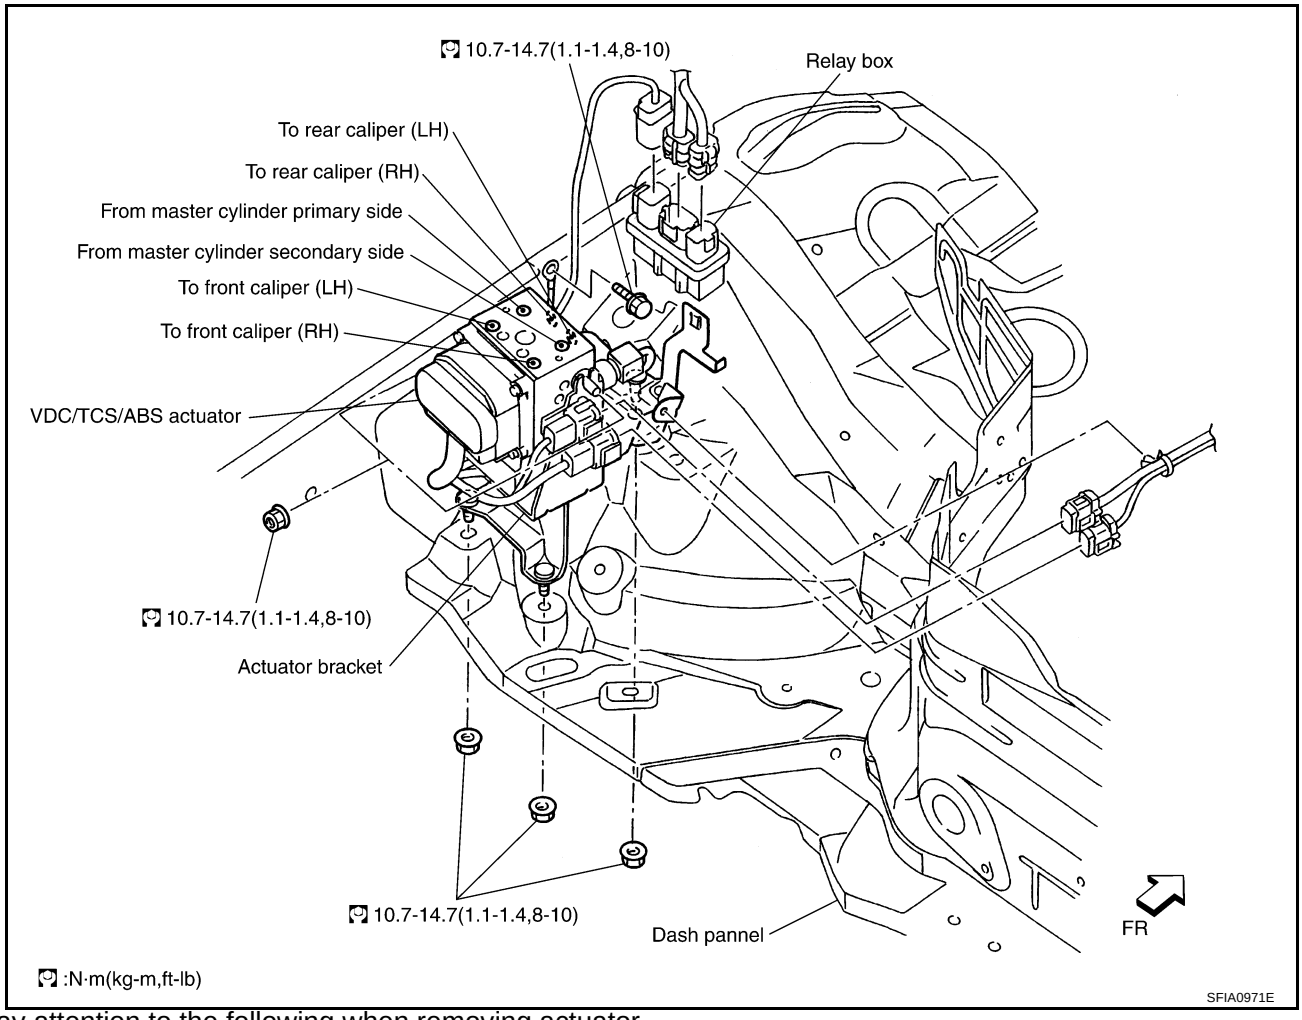
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
- Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

- Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



VDC/TCS/ABS ACTUATOR

PFP:47660

Removal and Installation

NFS00051

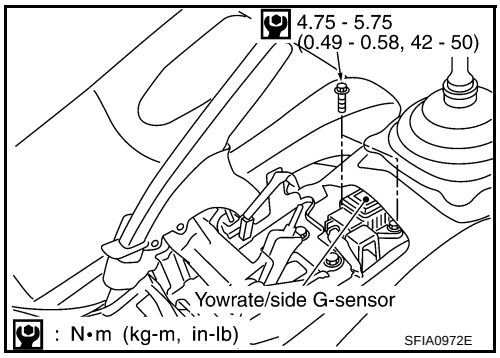
COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer to BR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

G SENSOR



PFP:47930

Removal and Installation

NFS00052

REMOVAL

1. Remove center console. Refer to IP-16, "CENTER CONSOLE" .
2. Remove harness connector.
3. Remove installation bolts. Remove yaw rate/side G sensor.

CAUTION:

- **Do not drop or strike the yaw rate/side G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because yaw rate/side G sensor is weak for the impact.**

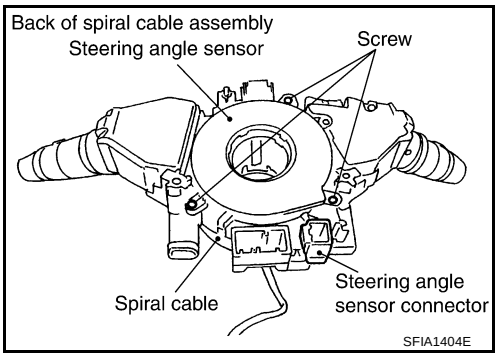
INSTALLATION

To install, follow procedure for removal in reverse order.

CAUTION:

- **Do not drop or strike the yaw rate/side G sensor, because it has little endurance to impact.**

STEERING ANGLE SENSOR



PFP:25554

Removal and Installation

NFS00053

REMOVAL

1. Remove spiral cable assembly. Refer to SRS-42, "SPIRAL CABLE" .
2. Remove steering angle sensor.

INSTALLATION

Install in the reverse order of removal.

NOTE:

After work, make sure to adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

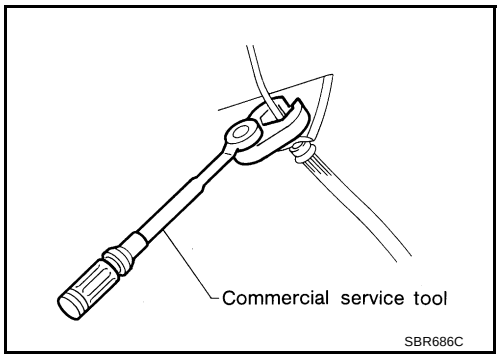
PRECAUTIONS

PFP:00001

Precautions for Battery Service



NCS00001

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

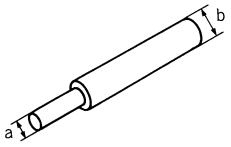
Service Notice or Precautions

NCS00002

- Recommended clutch fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained clutch fluid.
- Be careful not to splash clutch fluid on painted areas.
- When removing clutch tube, use a flare nut wrench.
- When installing clutch tube, use a flare nut torque wrench.
- Use new clutch fluid to clean or wash all parts of master cylinder.
- Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.
- If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.
- Do not disassemble CSC body.

WARNING:

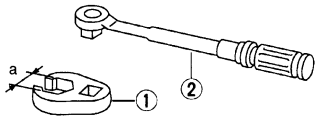
After cleaning clutch disc, wipe it with a dust collector. Do not use compressed air.

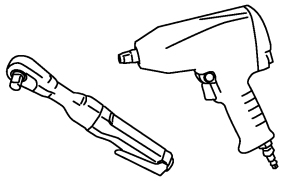


PREPARATION

PFP:00002

Special Service Tools





NCS00003

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
ST20050240 (—) Diaphragm adjusting wrench  ZZA0508D	Adjusting unevenness of diaphragm spring of clutch cover
ST20670000 (—) Clutch aligning bar a: 15 mm (0.59 in) dia. b: 23 mm (0.91 in) dia.  ZZA1178D	Installing clutch disc

Commercial Service Tools

NCS00004

Tool name	Description
Pin punch Tip diameter: 4.5 mm (0.177 in) dia.  ZZA0515D	Removing and installing master cylinder spring pin
1. Flare nut crowfoot a: 10 mm (0.39 in) 2. Torque wrench  S-NT360	Removing and installing clutch piping
Power tool  PBIC0190E	Loosening bolts and nuts

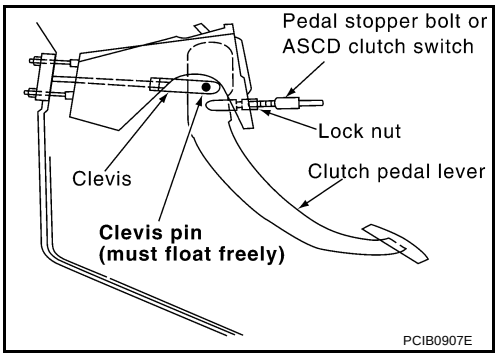
NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

NCS00005

Use the chart below to help you find the cause of the symptom. The numbers indicate the order of the inspection. If necessary, repair or replace these parts.



Reference page		CL-5	CL-7	CL-9	CL-11	EM-101	CL-16										EM-134
SUSPECTED PARTS (Possible cause)		CLUTCH PEDAL (Free play out of adjustment)	CLUTCH LINE (Air in line)	MASTER CYLINDER PISTON CUP (Damaged)	CSC (Concentric Slave Cylinder) (Worn, dirty or damaged)	ENGINE MOUNTING (Loose)	CLUTCH DISC (Out of true)	CLUTCH DISC (Runout is excessive)	CLUTCH DISC (Lining broken)	CLUTCH DISC (Dirty or burned)	CLUTCH DISC (Oily)	CLUTCH DISC (Worn out)	CLUTCH DISC (Hardened)	CLUTCH DISC (Lack of spline grease)	DIAPHRAGM SPRING (Damaged)	DIAPHRAGM SPRING (Out of tip alignment)	PRESSURE PLATE (Distortion)	FLYWHEEL (Distortion)

CLUTCH PEDAL

PFP:46540

On-Vehicle Inspection and Adjustment

NCS00006

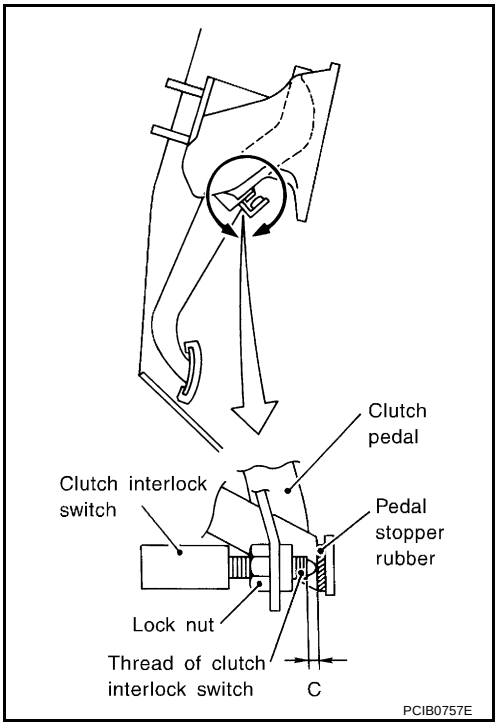
1. Check to see if the clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.

a. If the clevis pin is not free, check that the pedal stopper bolt or ASCD clutch switch is not applying pressure to the clutch pedal causing the clevis pin to bind. To adjust, loosen lock nut and turn pedal stopper bolt or ASCD clutch switch.

b. Tighten the lock nut. Refer to CL-6, "Removal and Installation" .

c. Verify that the clevis pin floats in the bore of the clutch pedal. It should not be bound by the clutch pedal.

d. If the clevis pin is still not free, remove the clevis pin and check for deformation or damage. Replace clevis pin if necessary. Leave pin removed for step 2.



2. Check clutch pedal stroke for free range of movement.

a. With the clevis pin removed, manually move the clutch pedal up and down to determine if it moves freely.

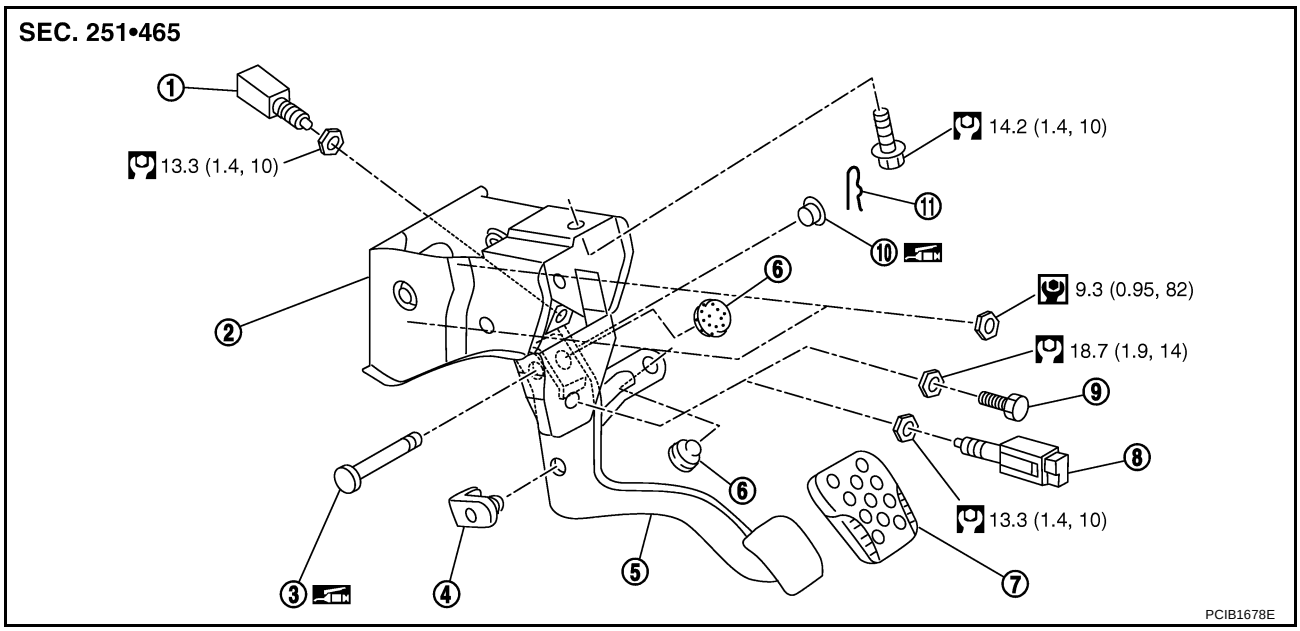
b. If any sticking is noted, replace the related parts (clutch pedal assembly, bushing etc.). Re-assemble the clutch pedal and re-verify that the clevis pin floats freely in the bore of the clutch pedal.

3. Adjust clearance “C” while depressing clutch pedal fully. (With clutch interlock switch)

Clearance C : 0.1 - 1.0 mm (0.004 - 0.039 in)

4. Check clutch hydraulic and system components (clutch master cylinder, CSC, etc.) for sticking or binding.

a. If any sticking or binding noted, repair or replace related parts as necessary.



b. If hydraulic system repair was necessary, bleed the clutch hydraulic system. Refer to CL-7, "Bleeding" .

NOTE:
Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.

Removal and Installation

NCS00007

COMPONENTS

1. Clutch interlock switch
2. Bracket
3. Clevis pin
4. Pedal stopper rubber
5. Clutch pedal
6. Stopper rubber
7. Pedal pad
8. ASCD clutch switch (With ASCD)
9. Pedal stopper bolt (Without ASCD)
10. Bushing
11. Snap pin

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

: Apply lithium-based grease including molybdenum disulphide.

REMOVAL

1. Remove kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove footrest. Refer to EI-43, "Removal and Installation" .
3. Remove dash side finisher (LH). Refer to IP-11, "Removal and Installation" .
4. Remove instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
5. Remove the clutch interlock switch and ASCD clutch switch (with ASCD) connectors and harness.
6. Remove the snap pin and clevis pin.
7. Remove the pedal bracket mounting bolt and nuts and then remove the clutch pedal assembly.

INSPECTION AFTER REMOVAL

Check clutch pedal for bend, damage, or a cracked weld. If bend, damage, or a cracked weld is found, replace the clutch pedal assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

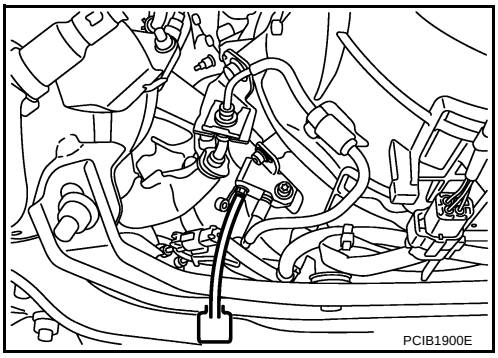
- Tighten pedal stopper bolt lock nut or ASCD clutch switch lock nut to the specified torque after installing the clutch pedal assembly in the vehicle and adjusting the pedal free play. Refer to CL-5, "On-Vehicle Inspection and Adjustment" .
- After installing the clutch interlock switch, adjust the switch position. Refer to CL-5, "On-Vehicle Inspection and Adjustment" .

CLUTCH FLUID

PFP:00017

Bleeding

NCS00008



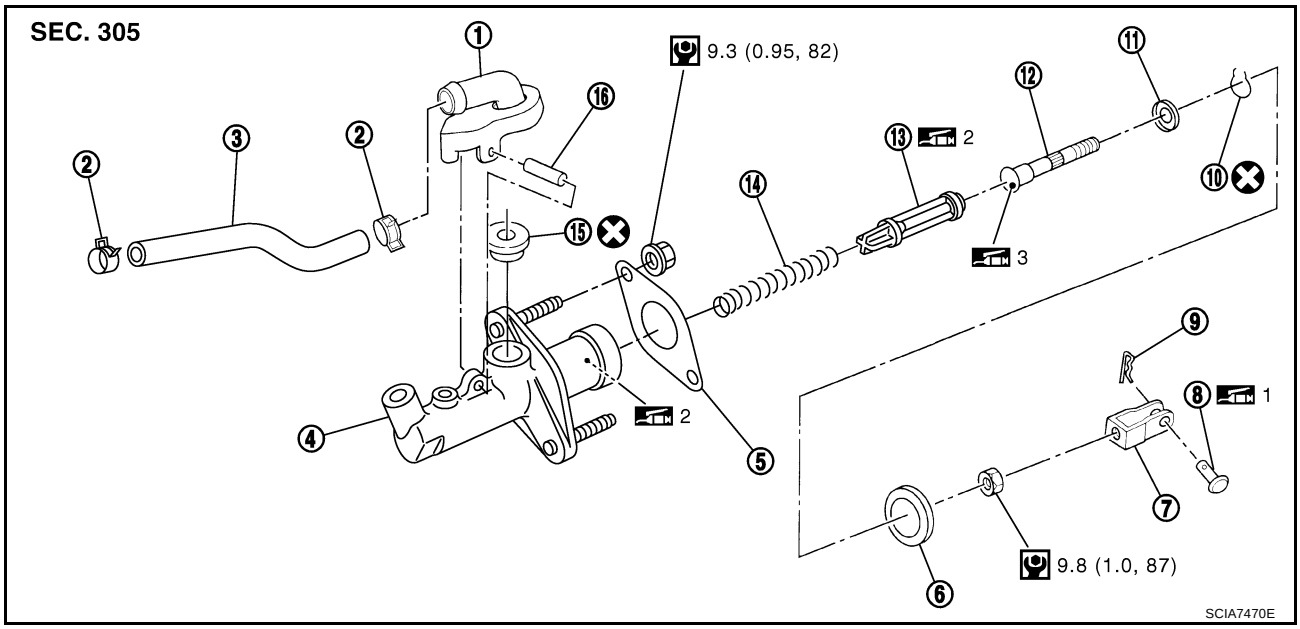
CAUTION:

- **Monitor fluid level in the reservoir tank to make sure it does not empty.**
- **Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.**

NOTE:

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.

1. Fill the master cylinder reservoir tank with new clutch fluid.
2. Connect a transparent vinyl hose to the air bleeder valve.
3. Depress clutch pedal slowly and fully several times at an interval of 2 to 3 seconds and hold it.
4. With clutch pedal depressed, open air bleeder valve to release air.
5. Close air bleeder valve.
6. Release clutch pedal and wait for 5 seconds.
7. Repeat steps 3 to 6 until no bubbles can be observed in the clutch fluid.
8. Tighten air bleeder valve to the specified torque. Refer to CL-11, "COMPONENTS" .



PCIB1900E

CLUTCH MASTER CYLINDER

PFP:30610

Components

NCS001A1

1. Nipple	2. Clamp	3. Reservoir hose
4. Cylinder body	5. Packing	6. Seat
7. Clevis	8. Clevis pin	9. Snap pin
10. Stopper ring	11. Stopper	12. Push rod
13. Piston assembly	14. Return spring	15. Reservoir seal
16. Spring pin		

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

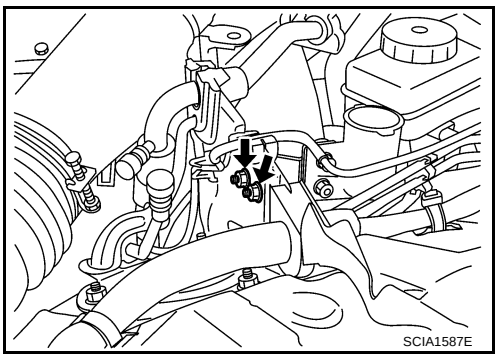
1: Apply lithium-based grease including molybdenum disulphide.

2: Apply rubber lubricant.

3: Apply silicone grease

Removal and Installation

NCS00009

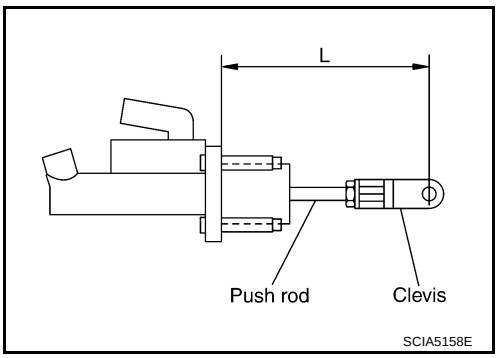


REMOVAL

1. Remove kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove footrest. Refer to EI-43, "Removal and Installation" .
3. Remove dash side finisher. Refer to IP-11, "Removal and Installation" .
4. Remove instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
5. Remove snap pin and clevis pin from the clevis, and separate it from clutch pedal.
6. Remove hoodledge cover. Refer to EI-20, "Removal and Installation" .
7. Drain clutch fluid in reservoir tank and then remove reservoir hose.

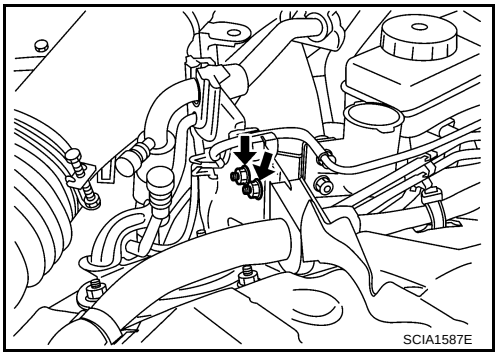
CAUTION:

Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.



8. Remove reservoir tank mounting nut and then remove reservoir tank.
9. Remove clutch tube using a flare nut wrench.
10. Remove mounting nuts and then remove packing and master cylinder assembly.

INSTALLATION



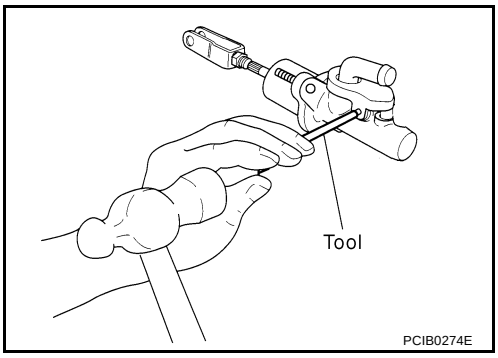
1. Check position of clevis and push rod. If measurement is outside the standard length, adjust position of clevis and push rod.

   Length "L" : 111.0 ± 0.5 mm (4.37 ± 0.02 in)

2. Install packing and master cylinder assembly and tighten mounting nuts to the specified torque. Refer to CL-8, "Components" .
3. Connect clutch tube to master cylinder assembly and temporarily tighten flare nut.
4. Tighten clutch tube flare nut to the specified torque using a flare nut torque wrench. Refer to CL-15, "Removal and Installation" .
5. Install clevis to the clutch pedal, and fix clevis with clevis pin.
6. Install snap pin to the clevis pin.
7. Install reservoir hose to the nipple. Install the reservoir tank to the vehicle, and then tighten mounting nuts to the specified torque.

   : 5.8 N·m (0.59 Kg-m, 51 in-lb)

8. After completing this procedure, inspect and adjust for clutch pedal and then bleed the clutch hydraulic system. Refer to CL-5, "On-Vehicle Inspection and Adjustment" and CL-7, "Bleeding" .
9. Install hoodledge cover.
10. Install instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
11. Install dash side finisher. Refer to IP-11, "Removal and Installation" .
12. Install footrest. Refer to EI-43, "FLOOR TRIM" .
13. Install kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .



Disassembly and Assembly

NCS0000A

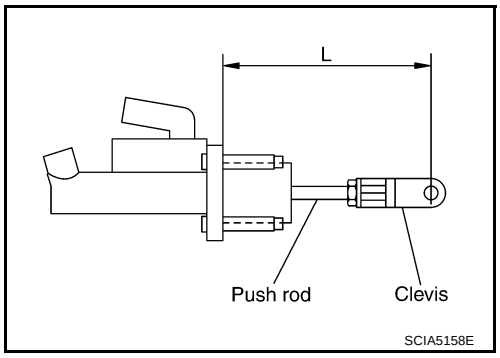
DISASSEMBLY

1. Remove spring pin, nipple and reservoir seal from cylinder body using a pin punch.
2. Loosen push rod lock nut. Remove clevis and lock nut.
3. Remove the seat from the cylinder body.
4. Remove the stopper ring and stopper, and then remove the push rod, piston assembly and return spring from the cylinder body.

   CAUTION:
   Restrain the push rod while doing this because there is a danger the piston assembly will fly out of the cylinder body.

INSPECTION AFTER DISASSEMBLY

Check for any of the conditions shown below. If any malfunction is found, replace the part concerned.



- Damaged cylinder internal wall, foreign matter, wear, corrosion, or pin hole
- Damaged or deformed nipple or reservoir tank
- Settling of the spring
- Cracked and deformed seat

ASSEMBLY

1. Apply rubber lubricant to internal surface of the cylinder body, sliding surface of piston assembly, and the piston cup. Insert return spring and piston assembly to the cylinder body.
2. Apply silicone grease to the push rod and install the stopper before installing the stopper ring.

   CAUTION:
   - **Do not reuse stopper ring.**
   - **Restrain the push rod while doing this because there is a danger the piston assembly will fly out of the master cylinder.**
3. Install seat to the cylinder body.
4. Install clevis to push rod.
5. Check and adjust the position of clevis and push rod. After adjusting “L”, tighten lock nut to the specified torque. Refer to CL-8, "Components" .

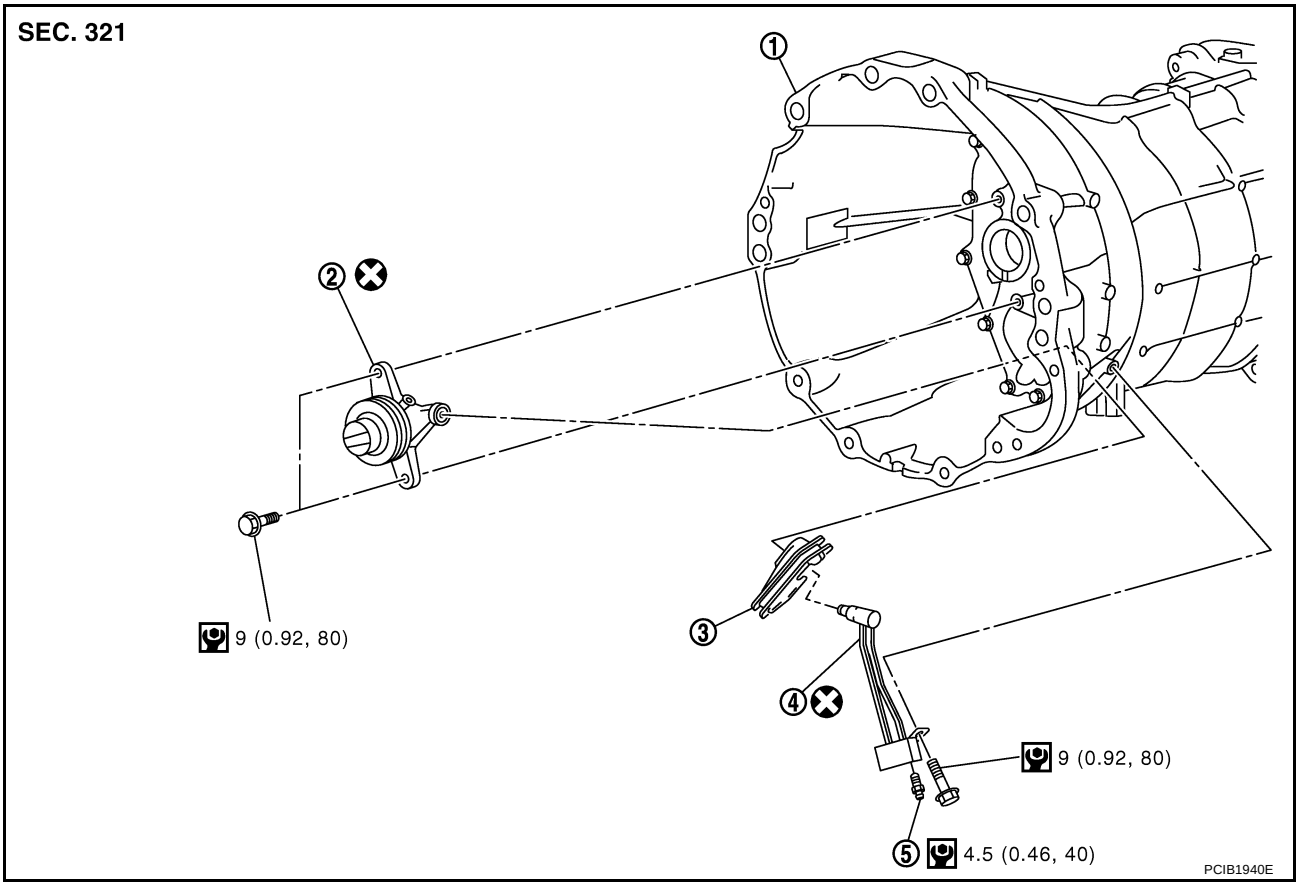
   Length “L” : 111.0 ± 0.5 mm (4.37 ± 0.02 in)

6. Install reservoir seal and nipple to cylinder body. Install spring pin using a pin punch.

   CAUTION:
   Do not reuse reservoir seal.

CSC (CONCENTRIC SLAVE CYLINDER)

PFP:30500



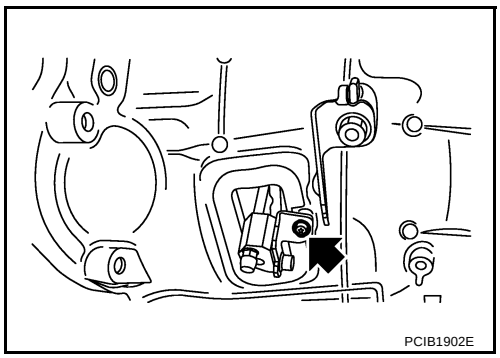
Removal and Installation

NCS0029M

CAUTION:

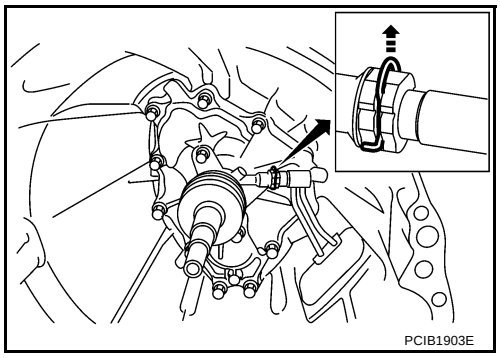
- **If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.**
- **Do not disassemble CSC body.**
- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**

COMPONENTS



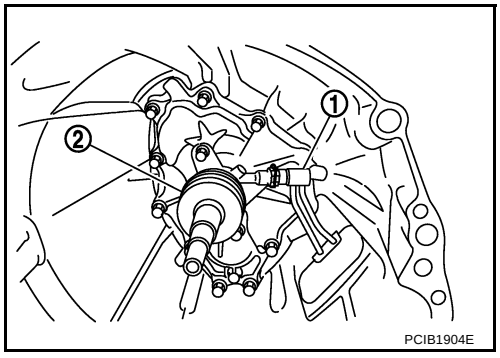
1.	Transmission assembly	2.	CSC (Concentric Slave Cylinder) body	3.	Dust cover
4.	CSC (Concentric Slave Cylinder) tube	5.	Air bleeder valve		

Refer to GI-11, "Components" for the symbols in the figure.



REMOVAL

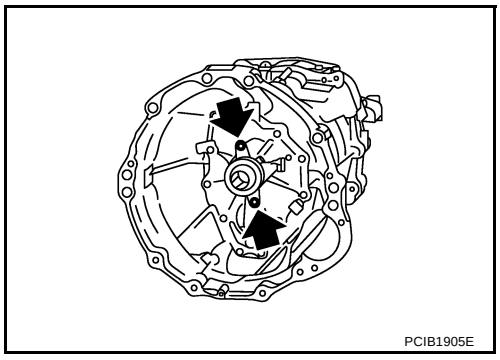
1. Remove transmission assembly from the vehicle. Refer to MT-18, "Removal and Installation" .



2. Remove CSC tube mounting bolt.

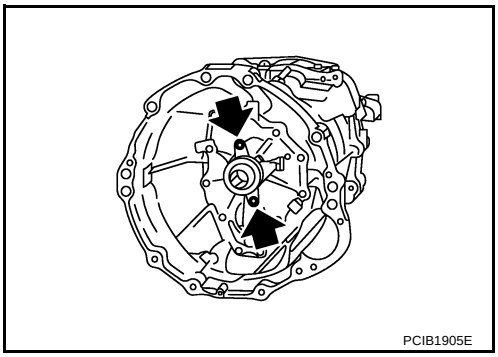
PCIB1902E

3. Pull up the lock pin of CSC body.



PCIB1903E

4. Pull out the CSC tube (1) from the CSC body (2).
5. Remove CSC tube and dust cover from transmission case.
6. Remove air bleeder valve from CSC tube.

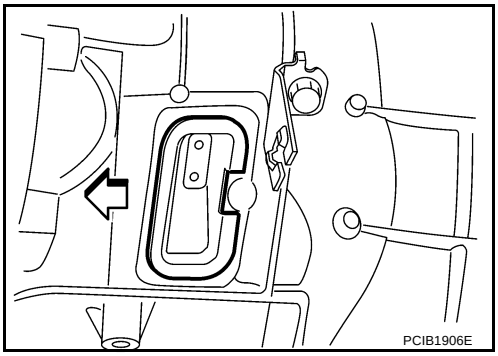


PCIB1904E

7. Remove CSC body from transmission case.

PCIB1905E

INSTALLATION

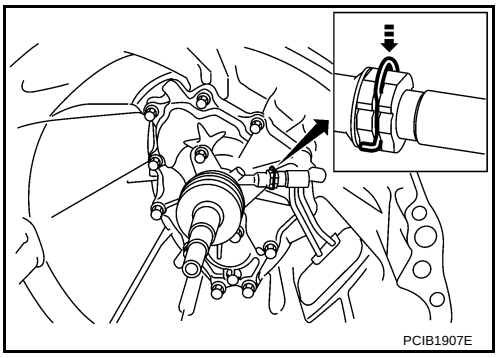


1. Install CSC body to transmission case and then tighten mounting bolts to the specified torque. Refer to CL-11, "COMPONENTS" .

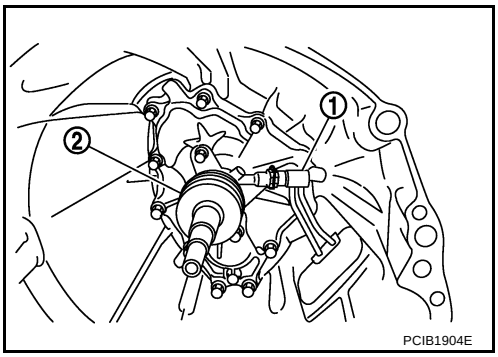
CAUTION:
- **Do not reuse CSC body.**
- **Do not insert and operate CSC body because piston and stopper of CSC body components may fall off.**

2. Install dust cover to transmission case.

⇦ : Vehicle front

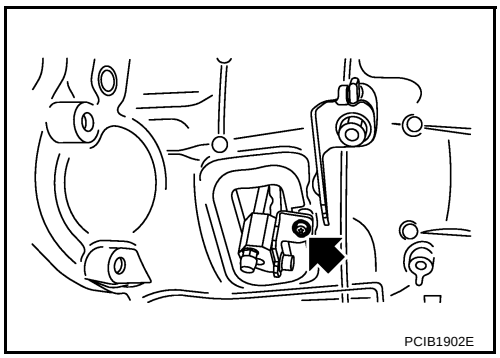


CAUTION:
Be careful with the orientation of dust cover.

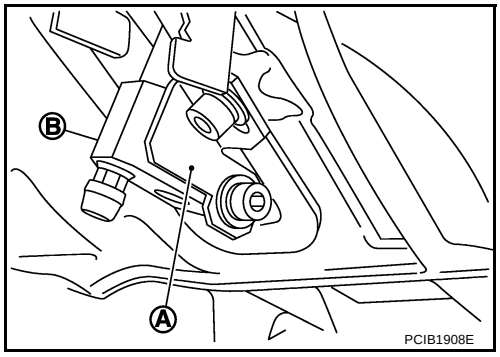


3. Insert CSC tube to dust cover.

CAUTION:
- **Do not reuse CSC tube.**
- **Be sure not to damage O-ring of CSC tube.**



4. Press down the lock pin of the CSC body.



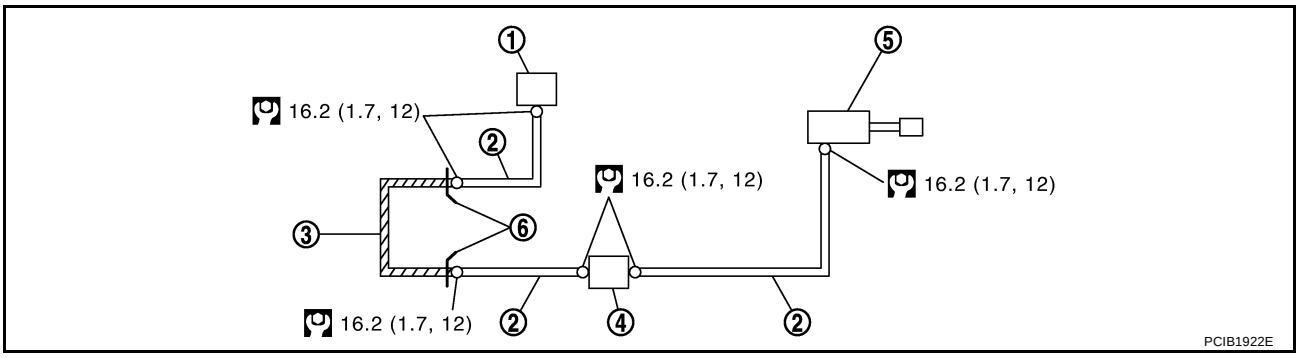
5. Insert the CSC tube (1) into the connector of the CSC body (2) until it clicks.

6. Install CSC tube mounting bolt and then tighten mounting bolt to the specified torque. Refer to CL-11, "COMPONENTS" .

PCIB1902E

CAUTION:
Assemble the components checking that the bracket (A) on the CSC body and the nozzle (B) closely contact each other before tightening the bolt. When assembled correctly, the components should not move beyond the allowable looseness of the connector on the CSC body.

PCIB1908E



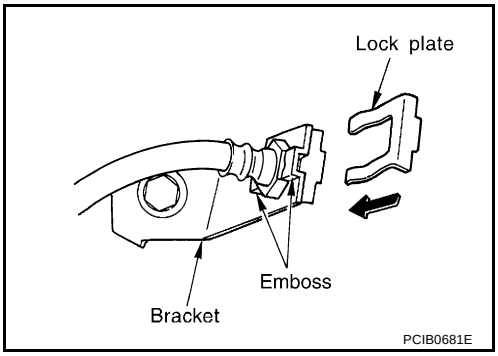
7. Install transmission assembly to the vehicle. Refer to MT-20, "INSTALLATION" .
8. Bleed the air from the clutch hydraulic system, Refer to CL-7, "Bleeding" .

CLUTCH PIPING

PFP:30650

Removal and Installation

NCS0000D



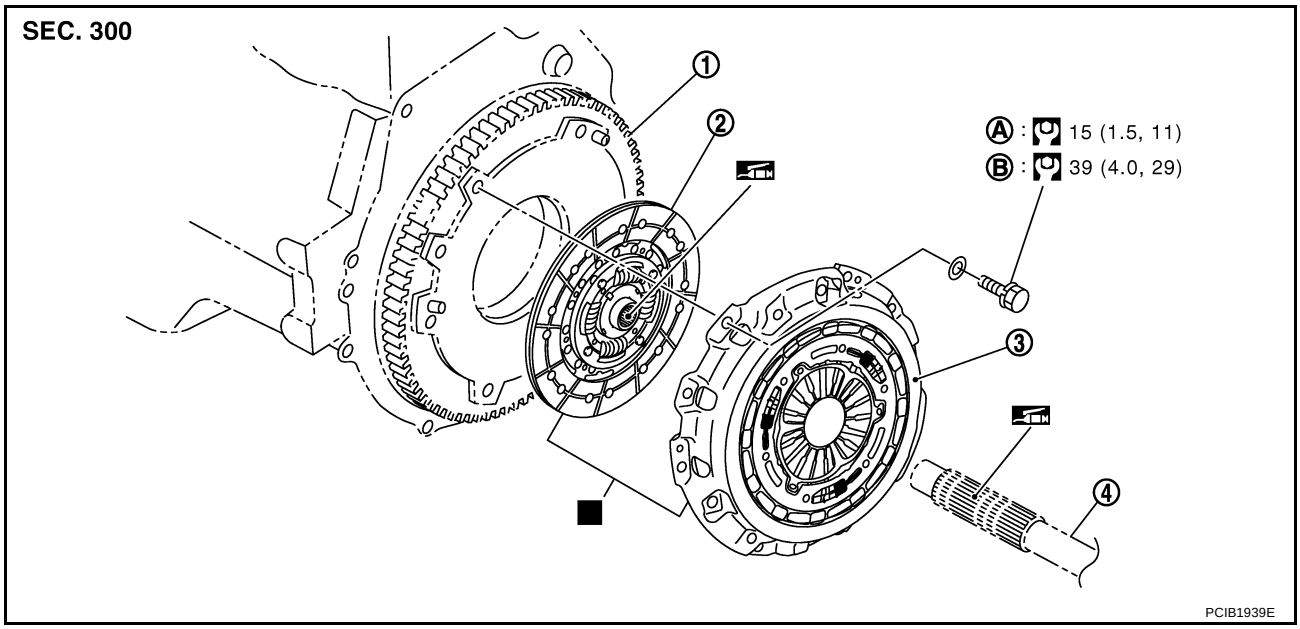
1.	CSC (Concentric Slave Cylinder) assembly	2.	Clutch tube	3.	Clutch hose
4.	Connector	5.	Master cylinder assembly	6.	Lock plate

Refer to GI-11, "Components" , for the symbol in the figure.

Carefully observe the following steps during clutch tube removal and installation.

- Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.
- When fixing clutch hose to bracket, align clutch hose metal fittings with bracket positioning emboss and lock plate to secure. At this time, prevent twisting or damage of clutch hose. In addition, be careful not to damage clutch hose.
- Tighten clutch tube flare nut to the specified torque.

  CAUTION:
  Be careful not to damage flare nut and clutch tube.
- After installation, bleed the clutch hydraulic system. Refer to CL-7, "Bleeding" .



CLUTCH DISC, CLUTCH COVER

PFP:30100

Removal and Installation

NCS0000G

COMPONENTS

1. Flywheel
2. Clutch disc
3. Clutch cover
4. Main drive gear

A. First step

B. Final step

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

■ : Replace the parts as a set.

: Apply lithium-based grease including molybdenum disulphide

CAUTION:

- **If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.**
- **Be careful not to bring any grease into contact with the clutch disc facing, pressure plate surface and flywheel surface.**
- **If flywheel is removed, align dowel pin with the smallest hole of flywheel. Refer to EM-111, "ASSEMBLY" .**
- **When installing, be careful that grease applied to main drive gear does not adhere to clutch disc.**
- **Do not clean in solvent on clutch disk.**

REMOVAL

1. Remove transmission assembly from the vehicle. Refer to MT-18, "Removal and Installation" .
2. Loosen clutch cover mounting bolts with power tool. Remove clutch cover and clutch disc.

   CAUTION:

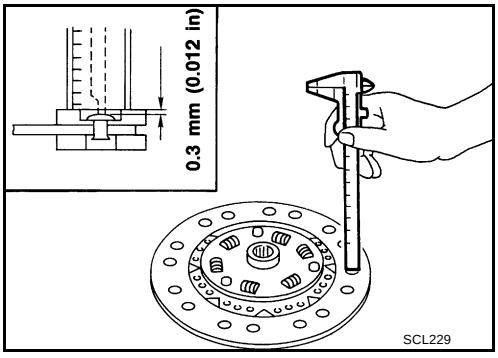
   Do not drop clutch disc.

INSPECTION AND ADJUSTMENT AFTER REMOVAL

Clutch Disc

- Measure circumference runout relative to the clutch disc center spline. If it is outside the specification, replace clutch disc and clutch cover as a set.

  Runout limit/diameter of the area to be measured
  : 1.0 mm (0.039 in)/230 mm (9.06 in) dia.

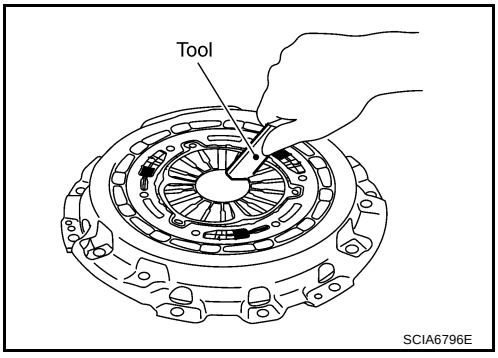


- Measure backlash for clutch disc spline and main drive shaft spline at the circumference of the clutch disc. If it is outside the specified range, replace clutch disc and clutch cover as a set.

  Maximum backlash of spline
  : 1.0 mm (0.039 in)

- Using calipers, measure the depth to the clutch disc facing rivet heads. If it exceeds the allowable wear limit, replace clutch disc and clutch cover as a set.

  Facing wear limit (depth to the rivet head)
  : 0.3 mm (0.012 in)



Clutch Cover

Check diaphragm spring lever claws for unevenness with the lever still on the vehicle. If they exceed the tolerance, adjust lever height using the diaphragm adjusting wrench.

Tolerance for diaphragm spring lever unevenness
: 0.8 mm (0.031 in)

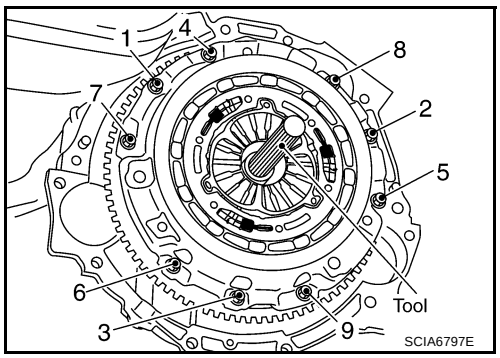
Tool number : ST20050240 (—)

- Check clutch cover thrust ring for wear or breakage. If wear or breakage is found, replace clutch disc and clutch cover as a set.

  NOTE:
  - Worn thrust ring will generate a beating noise when tapped at the rivet with a hammer.
  - Broken thrust ring will make a clinking sound when cover is shaken up and down.

- If a trace of burn or discoloration is found on the clutch cover pressure plate to clutch disc contact surface, repair the surface with sandpaper. If surface is damaged or distorted, replace clutch disc and clutch cover as a set.

INSTALLATION



1. Apply recommended grease to clutch disc and main drive gear spline.

   CAUTION:
   Be sure to apply grease to the points specified. Otherwise, noise, poor disengagement, or damage to the clutch may result. Excessive grease may cause slip or judder. And if it adheres to seal of CSC body, it cause clutch fluid leakage. Wipe off excess grease. Wipe off any grease oozing from the parts.

2. Install clutch disc and clutch cover. Pre-tighten mounting bolts and install clutch aligning bar.

   Tool number : ST20670000 (—)

   CAUTION:
   If either clutch disk or clutch cover is needed to be replaced, replace them as a set.
3. Tighten clutch cover mounting bolts evenly in two steps in the order shown in the figure. Refer to CL-16, "Removal and Installation" .
4. Install transmission assembly. Refer to MT-18, "Removal and Installation" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NBS0001M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

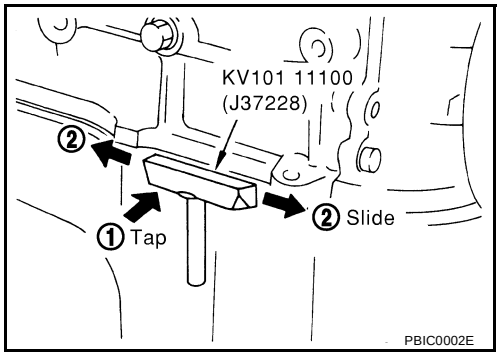
NBS0001N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Liquid Gasket

NBS0001O

REMOVAL OF LIQUID GASKET SEALING



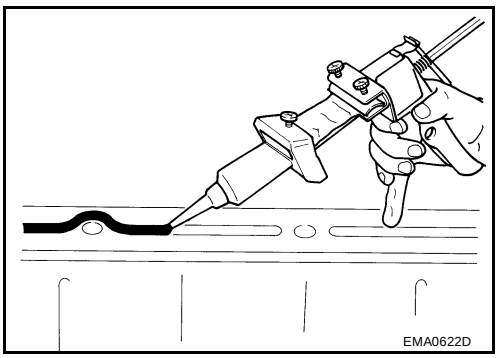
- After removing mounting bolts and nuts, separate the mating surface using seal cutter (SST) and remove old liquid gasket sealing.

  CAUTION:

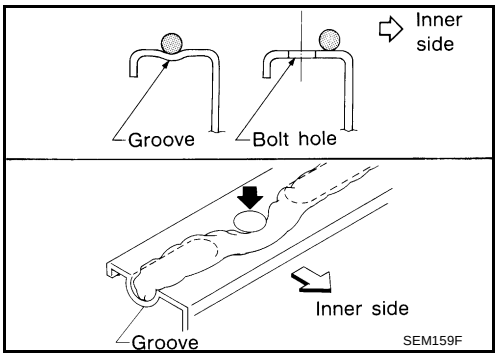
  Be careful not to damage the mating surfaces.
- Tap seal cutter to insert it, and then slide it by tapping on the side as shown in the figure.
- In areas where seal cutter (SST) is difficult to use, use plastic hammer to lightly tap the parts, to remove it.

  CAUTION:

  If for some unavoidable reason tool such as screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE

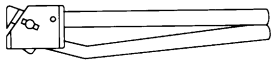


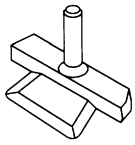
1. Using scraper, remove old liquid gasket adhering to the liquid gasket application surface and the mating surface.
   - Remove liquid gasket completely from the groove of the liquid gasket application surface, mounting bolts, and bolt holes.
2. Wipe the liquid gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.

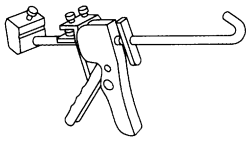
3. Attach liquid gasket tube to tube presser [SST: WS39930000 (—)].
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
4. Apply liquid gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for the liquid gasket application, apply liquid gasket to the groove.

   - As for the bolt holes, normally apply liquid gasket inside the holes. Occasionally, it should be applied outside the holes. Make sure to read the text of service manual.
   - Within five minutes of liquid gasket application, install the mating component.
   - If liquid gasket protrudes, wipe it off immediately.
   - Do not retighten mounting bolts or nuts after the installation.
   - After 30 minutes or more have passed from the installation, fill engine oil and engine coolant.

CAUTION:
If there are specific instructions in this manual, observe them.



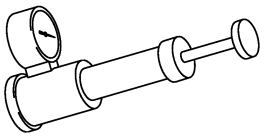


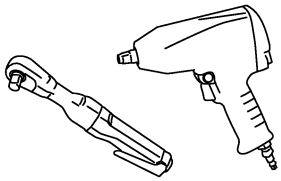


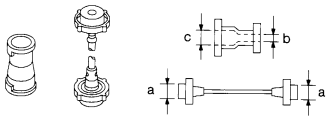
PREPARATION

PFP:00002

Special Service Tools







NBS0001P

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
KV99103510 (—) Radiator plate pliers A  S-NT224	Installing radiator upper and lower tanks
KV99103520 (—) Radiator plate pliers B  S-NT225	Removing radiator upper and lower tanks
KV10111100 (J37228) Seal cutter  NT046	Removing chain tensioner cover and water pump cover
WS39930000 (—) Tube presser  S-NT052	Pressing the tube of liquid gasket

Commercial Service Tools

NBS0001Q

Tool name	Description
Radiator cap tester  PBIC1982E	Checking radiator and radiator cap
Power tool  PBIC0190E	Loosening nuts and bolts
Radiator cap tester adapter  S-NT564	Adapting radiator cap tester to radiator cap and radiator filler neck a: 28 (1.10) dia. b: 31.4 (1.236) dia. c: 41.3 (1.626) dia. Unit: mm (in)

OVERHEATING CAUSE ANALYSIS

PFP:00012

Troubleshooting Chart

NBS0001R

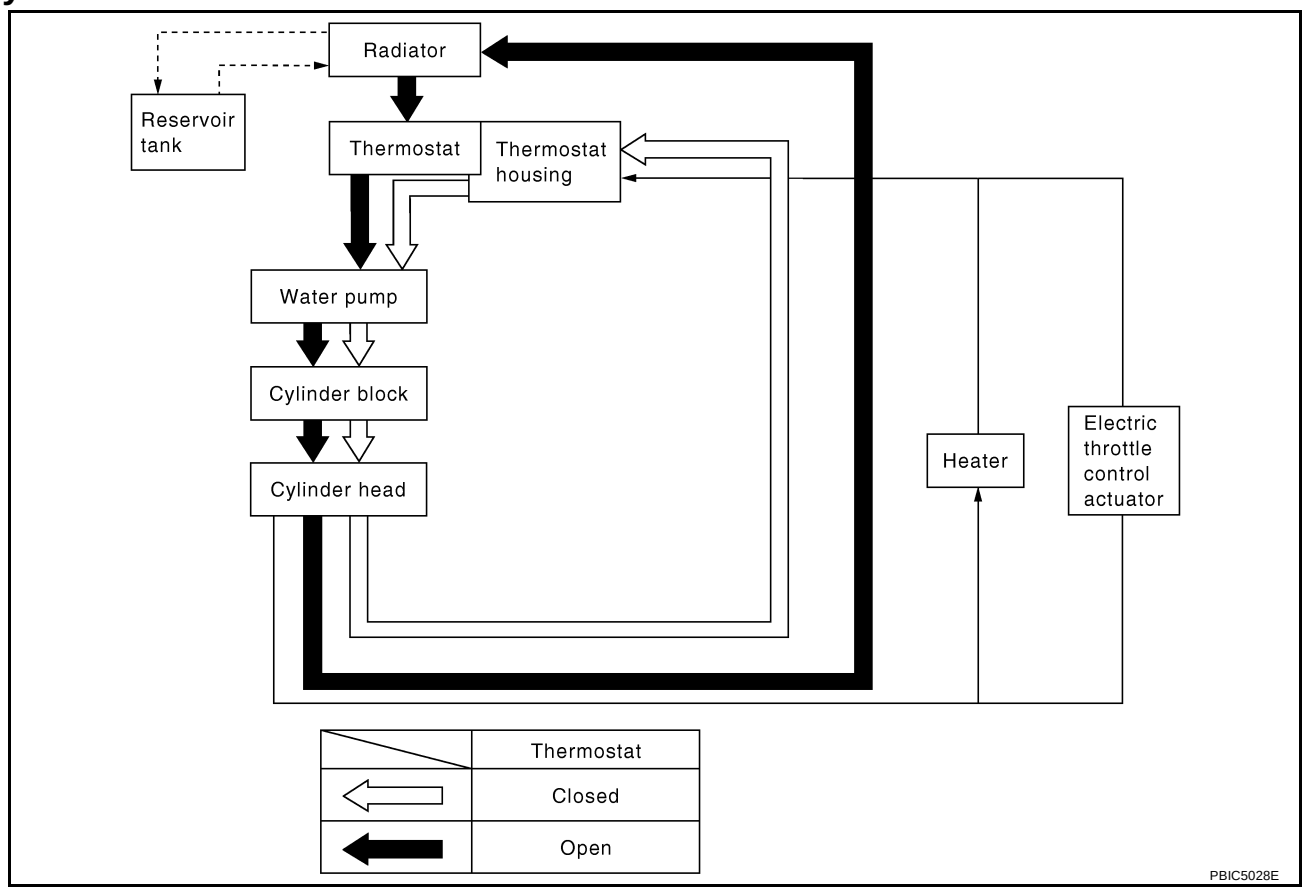
	Symptom		Check items	
Cooling system parts malfunction	Poor heat transfer	Water pump malfunction	Worn or loose drive belt	—
		Thermostat stuck closed	—	
		Damaged fins	Dust contamination or paper clogging	
			Physical damage	
		Clogged radiator cooling tube	Excess foreign material (rust, dirt, sand, etc.)	
	Reduced air flow	Cooling fan does not operate	Fan assembly	—
		High resistance to fan rotation		
		Damaged fan blades		
	Damaged radiator shroud	—	—	—
	Improper engine coolant mixture ratio	—	—	—
	Poor engine coolant quality	—	Engine coolant viscosity	—
	Insufficient engine coolant	Engine coolant leaks	Cooling hose	Loose clamp
				Cracked hose
			Water pump	Poor sealing
			Radiator cap	Loose
				Poor sealing
			Radiator	O-ring for damage, deterioration or improper fitting
				Cracked radiator tank
				Cracked radiator core
			Reservoir tank	Cracked reservoir tank
		Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration
				Cylinder head gasket deterioration

OVERHEATING CAUSE ANALYSIS

	Symptom		Check items	
Except cooling system parts malfunction	—	Overload on engine	Abusive driving	High engine rpm under no load
				Driving in low gear for extended time
				Driving at extremely high speed
			Powertrain system malfunction	—
			Installed improper size wheels and tires	
			Dragging brakes	
			Improper ignition timing	
	Blocked or restricted air flow	Blocked bumper	—	—
		Blocked radiator grille	Installed car brassiere	
			Mud contamination or paper clogging	
		Blocked radiator	—	
		Blocked condenser	Blocked air flow	
		Installed large fog lamp		

COOLING SYSTEM

PFP:21020



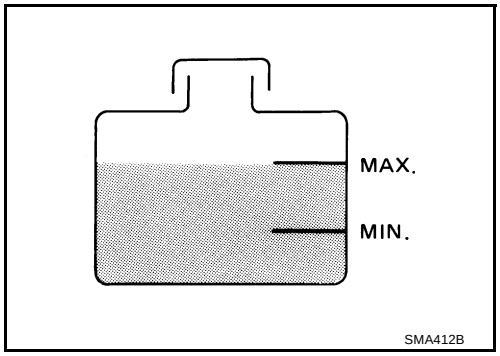
Cooling Circuit

NBS0001S

System Chart

NBS0001T

ENGINE COOLANT



PFP:KQ100

Inspection

NBS0001U

LEVEL CHECK

- Check if the reservoir tank engine coolant level is within the “MIN” to “MAX” range when engine is cool.
- Adjust the engine coolant level as necessary.

LEAK CHECK

- To check for leaks, apply pressure to the cooling system with radiator cap tester (commercial service tool) and radiator cap tester adapter (commercial service tool) (A).

  Testing pressure

  : 157 kPa (1.6 kg/cm^2 , 23 psi)

  WARNING:

  Do not remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from radiator.

  CAUTION:

  Higher test pressure than specified may cause radiator damage.

  NOTE:

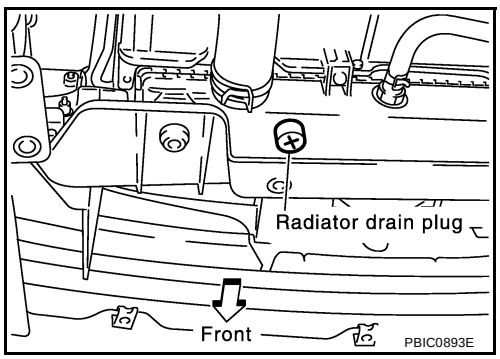
  In a case that engine coolant decreases, replenish radiator with engine coolant.

- If anything is found, repair or replace damaged parts.

Changing Engine Coolant

NBS0001V

WARNING:



- **To avoid being scalded, do not change engine coolant when engine is hot.**
- **Wrap a thick cloth around cap and carefully remove cap. First, turn cap a quarter of a turn to release built-up pressure. Then turn cap all the way.**

CAUTION:

Be careful not to allow engine coolant to contact drive belts.

DRAINING ENGINE COOLANT

1. Remove undercover with power tool.
2. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

When drain all of engine coolant in the system, open water drain plugs on engine cylinder block. Refer to EM-108, "DISASSEMBLY" .

3. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing.
4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush the engine cooling system. Refer to CO-12, "FLUSHING COOLING SYSTEM" .

REFILLING ENGINE COOLANT

1. Install reservoir tank if removed, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .
2. Make sure that each hose clamp has been firmly tightened.
3. Remove air relief plug (1) on heater hose.

   2 : Heater hose
   ⇦ : Vehicle front

4. Fill radiator and reservoir tank to specified level.
   - **Pour engine coolant through engine coolant filler neck slowly of less than 2 ℓ (2-1/8 US qt, 1-3/4 lmp qt) a minute to allow air in system to escape.**
   - **Use Genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS".**

     Engine coolant capacity
     (with reservoir tank at “MAX” level)

     : Approx. 9.0 ℓ (9 - 1/2 US qt, 7- 7/8 lmp qt)

     Reservoir tank capacity (at “MAX” level)

     : 0.8 ℓ (7/8 US qt, 3/4 lmp qt)

   - When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring.

     Air relief plug:

     : 1.2 N·m (0.12 kg-m, 11 in-lb)

5. Install radiator cap.
6. Warm up until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.
   - Make sure thermostat opening condition by touching radiator hose (lower) to see a flow of warm water.

   CAUTION:
   Watch water temperature gauge so as not to overheat engine.

7. Stop engine and cool down to less than approximately 50°C (122°F).
   - Cool down using fan to reduce the time.
   - If necessary, refill radiator up to filler neck with engine coolant.
8. Refill reservoir tank to “MAX” level line with engine coolant.
9. Repeat steps 4 through 7 two or more times with radiator cap installed until engine coolant level no longer drops.
10. Check cooling system for leaks with engine running.
11. Warm up engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between “COOL” and “WARM”.
    - Sound may be noticeable at heater unit.
12. Repeat step 11 three times.
13. If sound is heard, bleed air from cooling system by repeating step 4 through 7 until engine coolant level no longer drops.

FLUSHING COOLING SYSTEM

1. Install reservoir tank if removed, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .

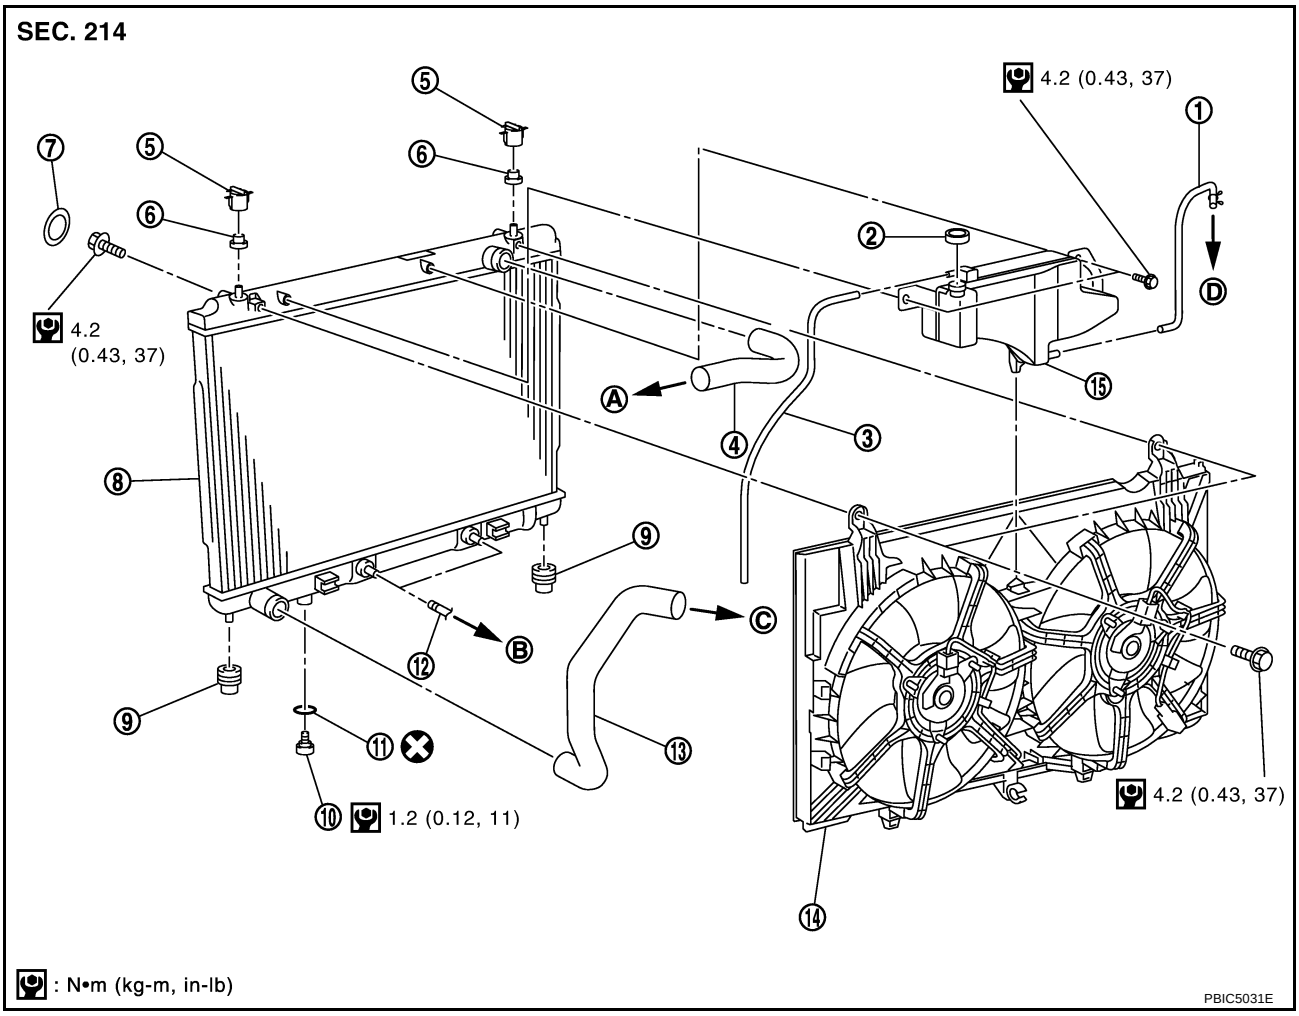
2. Remove air relief plug (1) on heater hose.

   2 : Heater hose
   ⇦ : Vehicle front

3. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.

   Air relief plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)



4. Run engine and warm it up to normal operating temperature.
5. Rev engine two or three times under no-load.
6. Stop engine and wait until it cools down.
7. Drain water from the system. Refer to CO-10, "DRAINING ENGINE COOLANT" .
8. Repeat steps 1 through 7 until clear water begins to drain from radiator.

RADIATOR

PFP:21400

Removal and Installation

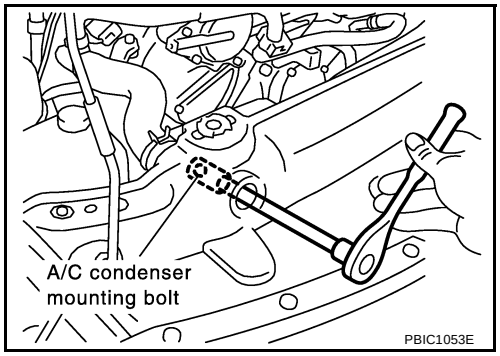
NBS0001W

1. Reservoir tank hose	2. Reservoir tank cap	3. Reservoir tank hose
4. Radiator hose (upper)	5. Upper mount bracket	6. Mounting rubber (upper)
7. Cover	8. Radiator	9. Mounting rubber (lower)
10. Radiator drain plug	11. O-ring	12. A/T fluid cooler hose (A/T models)
13. Radiator hose (lower)	14. Radiator cooling fan assembly	15. Reservoir tank
A. To water outlet	B. To A/T fluid cooler tube (A/T models)	C. To water inlet
D. To water outlet		

- Refer to GI-11, "Components" for symbol marks in the figure.

WARNING:

Do not remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from radiator. Wrap a thick cloth around the cap. Slowly turn it a quarter of a turn to release built-up pressure. Carefully remove radiator cap by turning it all the way.



REMOVAL

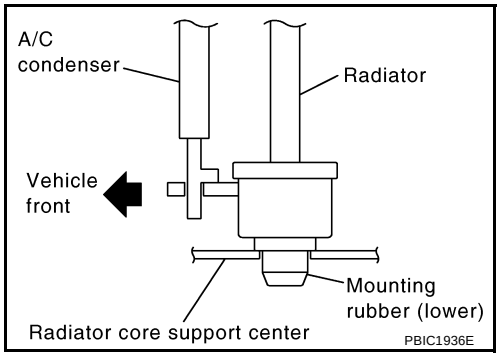
1. Remove undercover with power tool.
2. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air duct and air cleaner case assembly. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove bracket mounting bolt for anchoring A/C piping from vehicle left side, so that A/C piping can be moved.

5. Remove reservoir tank.
6. Removal radiator hoses (upper and lower) and reservoir tank hose.

   CAUTION:
   Be careful not to allow engine coolant to contact drive belts.
7. Remove radiator cooling fan assembly. Refer to CO-21, "COOLING FAN" .
8. Disconnect A/T fluid cooler hoses. (A/T models)
   - Install blind plug to avoid leakage of A/T fluid.
9. Remove cover, and then two A/C condenser mounting bolts located in upper part of radiator.

10. Rotate two radiator upper mount brackets 90 degrees in the direction as shown in the figure, and remove them.



11. Remove radiator as follows:

    CAUTION:
    Do not damage or scratch A/C condenser and radiator core when removing.

a. With lifting and pulling radiator in a rear direction, disassemble lower mount from radiator core support center.

   CAUTION:
   Because A/C condenser is onto the front-lower portion of radiator, moving to rear direction should be at minimum.

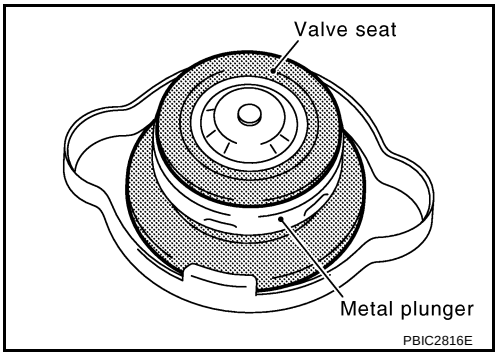
b. Lift A/C condenser up and remove radiator after disengaging the fitting as front-bottom surface.

   CAUTION:
   Lifting A/C condenser should be minimum to prevent a load to A/C piping.

c. After removing radiator, put A/C condenser on radiator core support center to prevent a load to A/C piping, and temporarily fix it with rope or similar means.

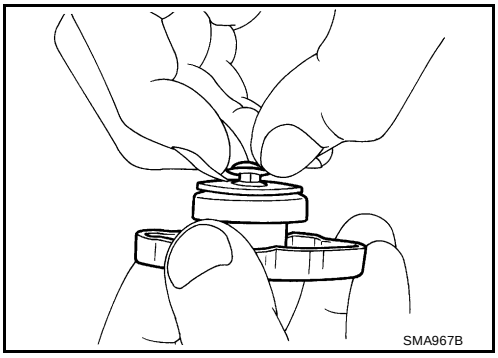
INSTALLATION

Installation is the reverse order of removal.



INSPECTION AFTER INSTALLATION

- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant and A/T fluid.



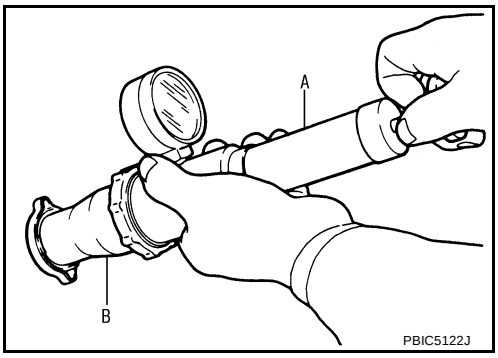
Checking Radiator Cap

NBS0001X

- Check valve seat of radiator cap.
  - Check if valve seat is swollen to the extent that the edge of the plunger cannot be seen when watching it vertically from the top.
  - Check if valve seat has no soil and damage.

- Pull negative-pressure valve to open it, and make sure that it is completely closed when released.
  - Make sure that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
  - Make sure that there are no unusualness in the opening and closing conditions of negative-pressure valve.

- Check radiator cap relief pressure.



Standard:

108 - 127 kPa (1.1 - 1.3 kg/cm^2 , 16 - 18 psi)

Limit:

88 kPa (0.9 kg/cm^2 , 13 psi)

  - When connecting radiator cap to the radiator cap tester (commercial service tool) (A) and the radiator cap tester adapter (commercial service tool) (B), apply engine coolant to the cap seal surface.

- Replace radiator cap if there is an unusualness related to the above three.

CAUTION:

When installing radiator cap, thoroughly wipe out the filler neck to remove any waxy residue or foreign material.

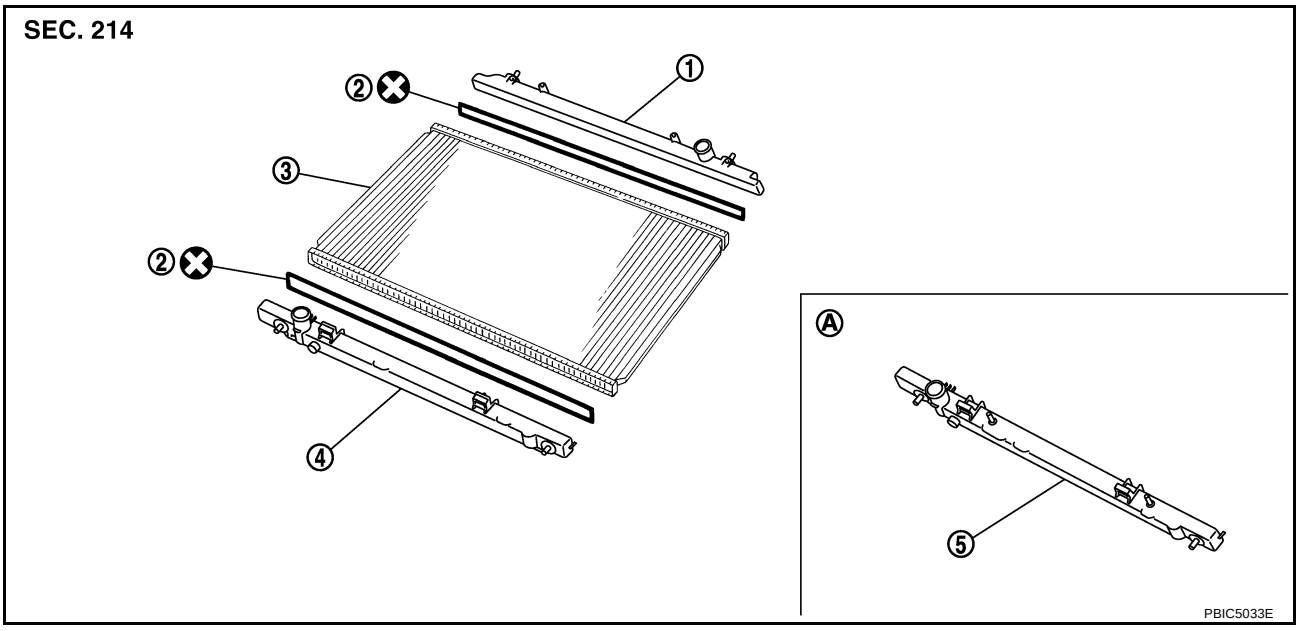
Checking Radiator

NBS0001Y

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape harness and electrical connectors to prevent water from entering.

1. Apply water by hose to the back side of radiator core vertically downward.



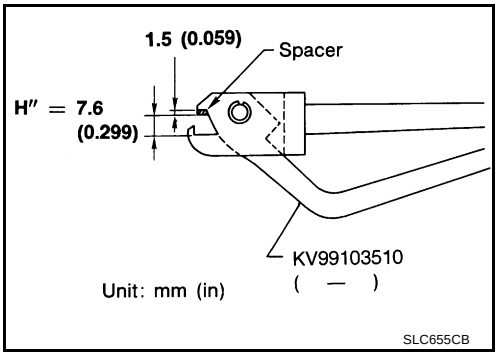
2. Apply water again to all radiator core surface once per minute.
3. Stop washing if any stains no longer flow out from radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (5 kg/cm^2 , 71 psi) and keep distance more than 30 cm (11.8 in).
5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

RADIATOR (ALUMINUM TYPE)

PFP:21460

Disassembly and Assembly

NBS0001Z



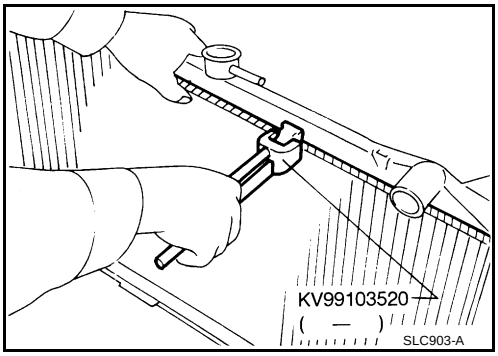
1. Upper tank
2. Sealing rubber
3. Core
4. Lower tank
5. Lower tank (with A/T fluid cooler)

A. A/T models

- Refer to GI-11, "Components" for symbol marks in the figure.

PREPARATION

1. Attach spacer to tip of radiator plate pliers A (SST).
   Spacer specification: 18 mm (0.71 in) wide × 8.5 mm (0.335 in) long × 1.5 mm (0.059 in) thick.



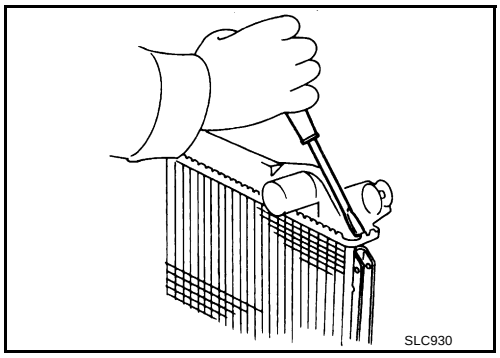
2. Make sure that when radiator plate pliers A [SST: KV99103510 (—)] are closed dimension H″ is approx. 7.6 mm (0.299 in).
3. Adjust dimension H″ with spacer, if necessary.

DISASSEMBLY

1. Remove upper and lower tanks with radiator plate pliers B (SST).

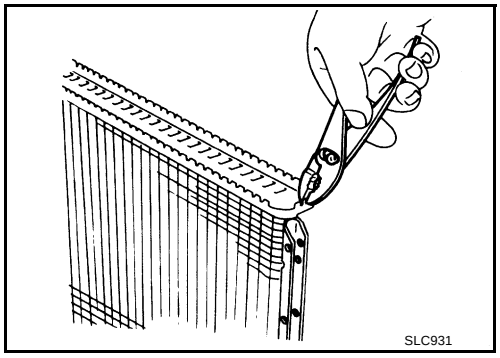
   CAUTION:
   Do not disassemble lower tank and A/T fluid cooler. (A/T models)

   NOTE:
   Regard lower tank and A/T fluid cooler as an assembly. (A/T models)



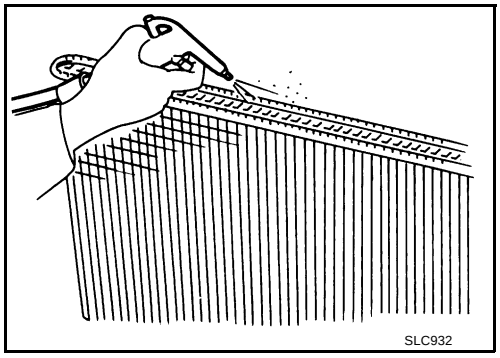
- Grip the crimped edge and bend it upwards so that radiator plate pliers B [SST: KV99103520(—)] slips off.

  CAUTION:
  Do not bend excessively.

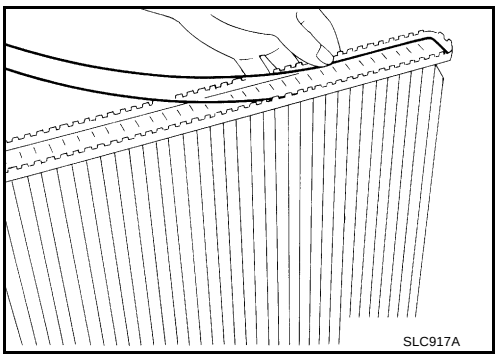


- In areas where radiator plate pliers B [SST: KV99103520(—)] cannot be used, use screwdriver to bend the edge up.

  CAUTION:
  Be careful not to damage tank.

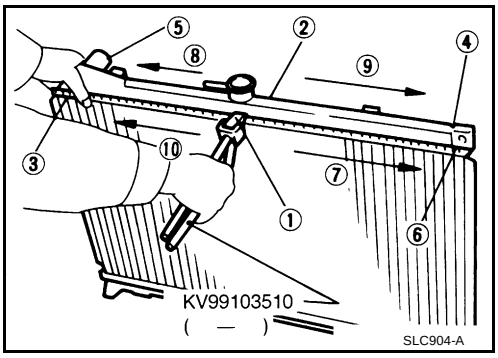


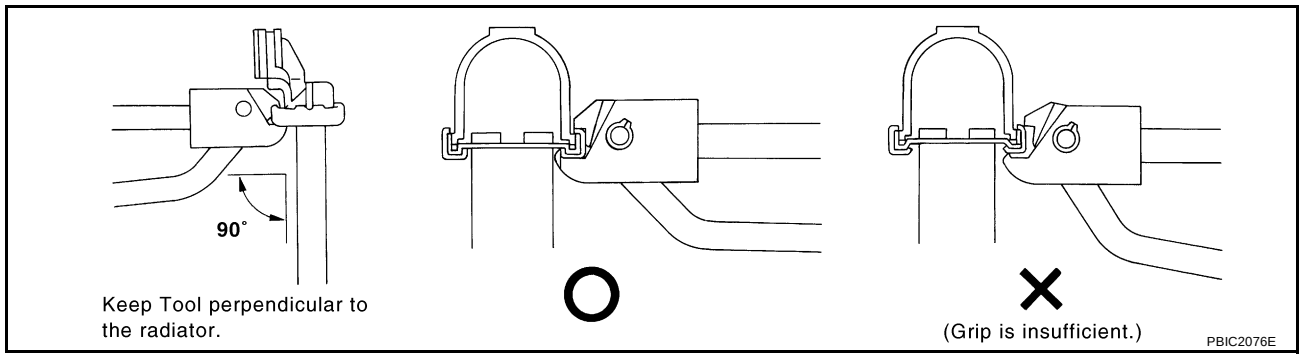
2. Remove sealing rubber.
3. Make sure the edge stands straight up.



ASSEMBLY

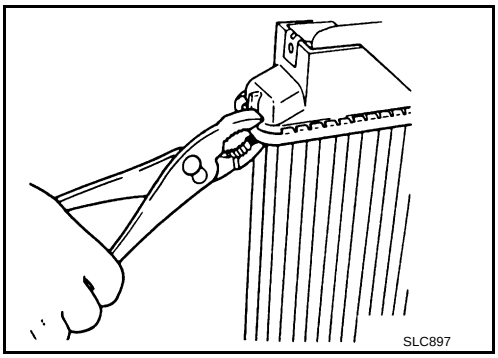
1. Clean contact portion of tank.



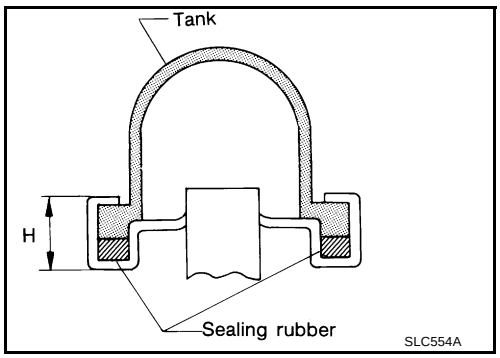


2. Install sealing rubber while pushing it with fingers.

CAUTION:
Be careful not to twist sealing rubber.



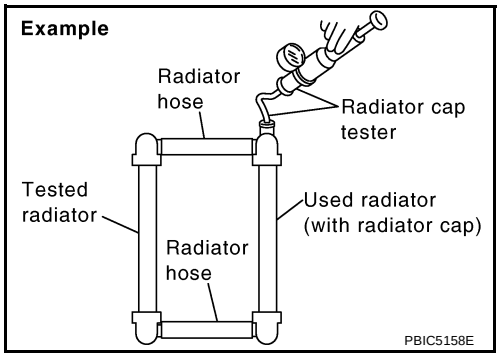
3. Caulk tank in numerical order as shown in the figure with radiator plate pliers A (SST).



- Use pliers in the locations where radiator plate pliers A [SST: KV99103510 (—)] cannot be used.

4. Make sure that the rim is completely crimped down.

Standard height "H" : 8.0 - 8.4 mm (0.315 - 0.331 in)

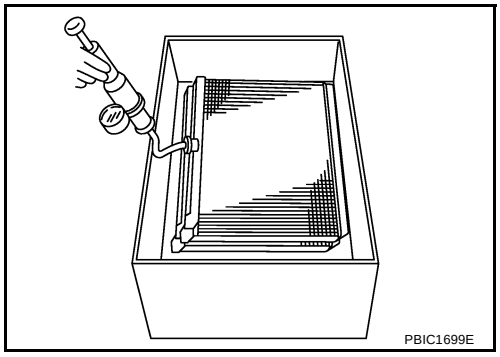


5. Make sure that there is no leakage.
Refer to CO-20, "INSPECTION" .

INSPECTION

1. Apply pressure with radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool).
   - Provide used radiator and connect it to tested radiator using radiator hoses as shown in the figure.

   NOTE:
   The used radiator should be tested beforehand to confirm it has no leakage. If used one is not available, it is possible to use new service part as a radiator testing tool.



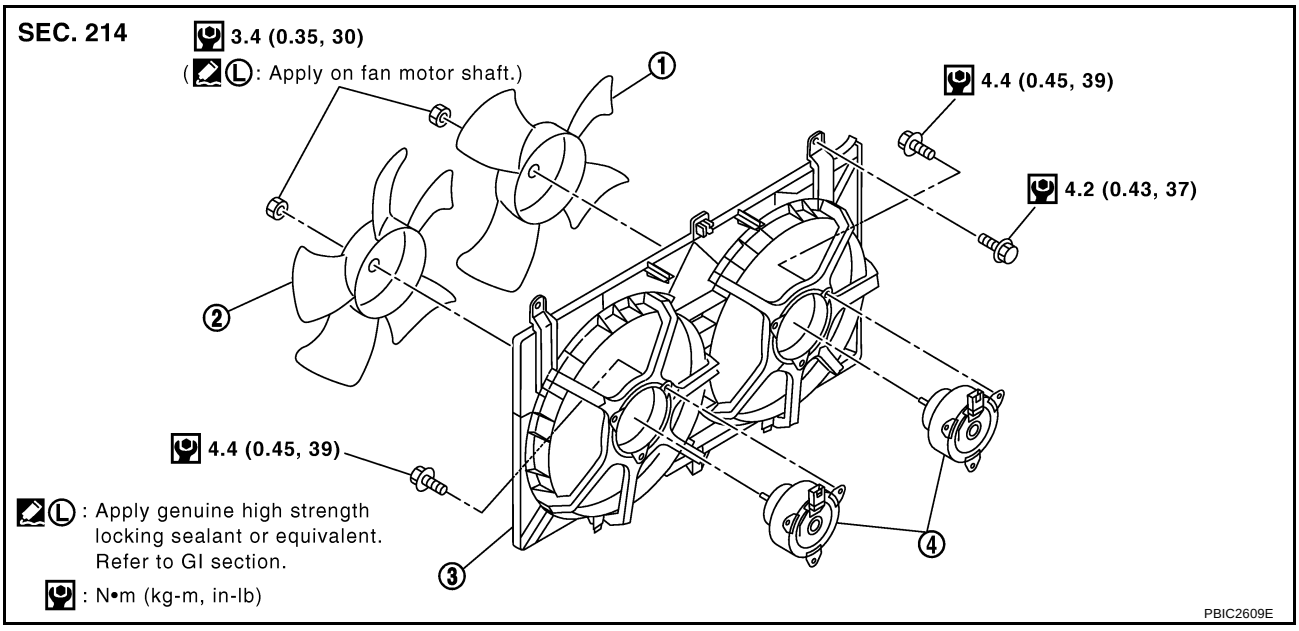
Testing pressure

: 157 kPa (1.6 kg/cm^2 , 23 psi)

WARNING:
To prevent the risk of hose coming undone while under pressure, securely fasten it down with hose clamp.

CAUTION:
Attach hose to A/T fluid cooler to seal its inlet and outlet.
(A/T models)

2. Check for leakage by soaking radiator in water container with the testing pressure applied.

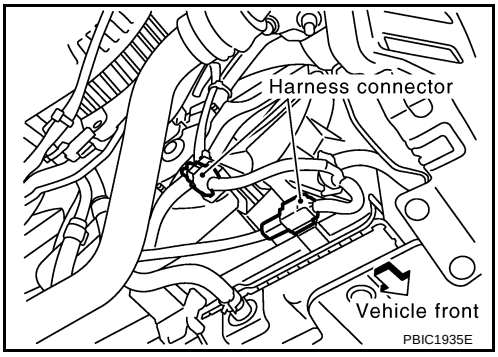


COOLING FAN

PFP:21140

Removal and Installation

NBS00020



1. Cooling fan (RH)
2. Cooling fan (LH)
3. Fan shroud
4. Fan motor

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air cleaner case assembly (RH, LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove reservoir tank. Refer to CO-13, "RADIATOR" .
5. Disconnect radiator hose (upper) at radiator side. Refer to CO-13, "RADIATOR" .
6. Disconnect fan motor harness connectors at the right-lower portion of fan shroud.

7. Remove mounting bolts to lift up and radiator cooling fan assembly.

   CAUTION:
   Be careful not to damage or scratch on radiator core.

INSTALLATION

Installation is the reverse order of removal.

NOTE:
Cooling fans are controlled by ECM. For details, refer to EC-543, "DTC P1217 ENGINE OVER TEMPERATURE" .

Disassembly and Assembly

NBS00021

DISASSEMBLY

1. Remove cooling fans (RH and LH) from fan motors.
2. Remove fan motors from fan shroud.

INSPECTION AFTER DISASSEMBLY

Cooling Fan

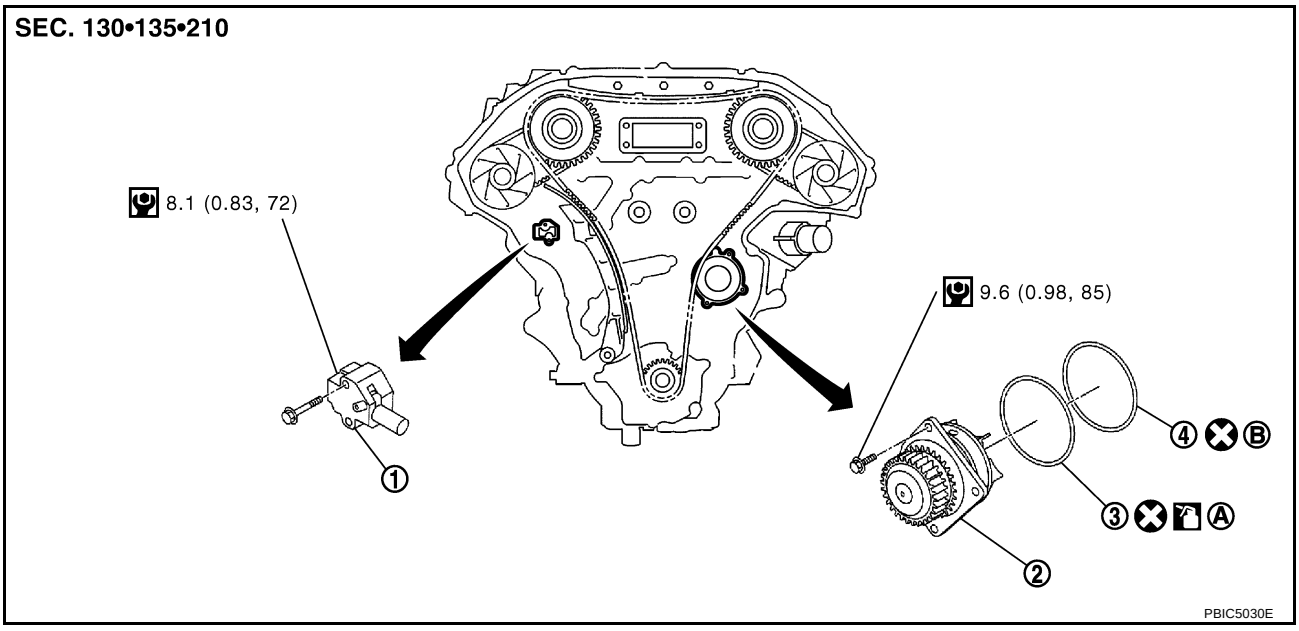
Inspect cooling fan for crack or unusual bend.

- If anything is found, replace cooling fan.

ASSEMBLY

Assembly is the reverse order of disassembly.

CAUTION:



RH and LH cooling fans are different. Be careful not to misassemble them.

WATER PUMP

PFP:21020

Removal and Installation

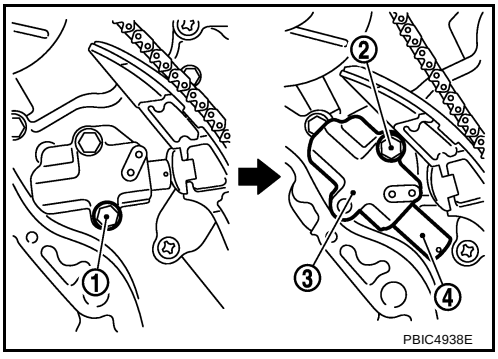
NBS00022

1. Timing chain tensioner (primary)	2. Water pump	3. O-ring
4. O- ring		
A. Identify with yellow paint mark	B. Identify with light blue paint mark Apply engine coolant	

- Refer to GI-11, "Components" for symbol marks in the figure.

CAUTION:

- **When removing water pump assembly, be careful not to get engine coolant on drive belt.**
- **Water pump cannot be disassembled and should be replaced as a unit.**
- **After installing water pump, connect hose and clamp securely, then check for leaks using radiator cap tester (commercial service tool) and radiator cap tester adapter (commercial service tool).**



REMOVAL

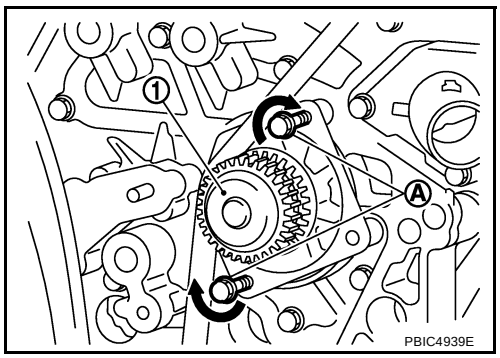
1. Remove front timing chain case. Refer to EM-44, "FRONT TIMING CHAIN CASE" .
2. Remove timing chain tensioner (primary) as follows:

a. Remove lower mounting bolt (1).

b. Loosen upper mounting bolt (2) slowly, and then turn chain tensioner (primary) (3) on the upper mounting bolt so that plunger (4) is fully expanded.

NOTE:
Even if plunger is fully expanded, it is not dropped from the body of timing chain tensioner (primary).

c. Remove upper mounting bolt, and then remove timing chain tensioner (primary).



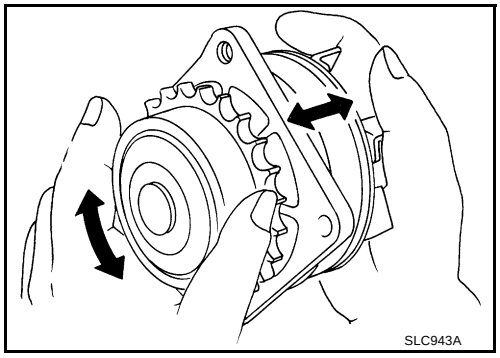
3. Remove water pump as follows:

a. Remove three water pump mounting bolts. Secure a gap between water pump gear and timing chain, by turning crankshaft counterclockwise until timing chain looseness on water pump sprocket becomes maximum.

b. Screw M8 bolts (A) [pitch: 1.25 mm (0.049 in) length: approx. 50 mm (1.97 in)] into water pumps upper and lower mounting bolt holes until they reach timing chain case. Then, alternately tighten each bolt for a half turn, and pull out water pump (1).

CAUTION:

- **Pull straight out while preventing vane from contacting socket in installation area.**
- **Remove water pump without causing sprocket to contact timing chain.**

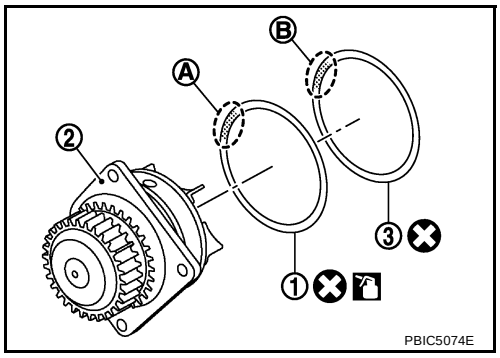


c. Remove M8 bolts and O-rings from water pump (1).

CAUTION:

Do not disassemble water pump.

INSPECTION AFTER REMOVAL



- Check for badly rusted or corroded water pump body assembly.
- Check for rough operation due to excessive end play.
- Replace water pump, if necessary.

INSTALLATION

1. Install new O-rings to water pump.
   - Apply engine oil to O-rings (1) and engine coolant to O-ring (3) as shown in the figure.
   - Locate O-ring (1) with yellow paint mark (A) to engine front side.
   - Locate O-ring (3) with light blue paint mark (B) to rear side.

   2 : Water pump

2. Install water pump.

CAUTION:

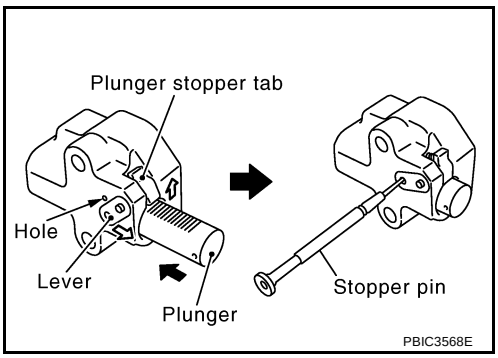
Do not allow cylinder block to nip O-rings when installing water pump.

- Make sure that timing chain and water pump sprocket are engaged.
- Insert water pump by tightening mounting bolts alternately and evenly.

3. Install timing chain tensioner (primary) as follows:

a. Turn crankshaft clockwise so that timing chain on the timing chain tensioner (primary) side is loose.

b. Pull plunger stopper tab up (or turn lever downward) so as to remove plunger stopper tab from the ratchet of plunger.



NOTE:
Plunger stopper tab and lever are synchronized.

c. Push plunger into the inside of tensioner body.

d. Hold plunger in the fully compressed position by engaging plunger stopper tab with the tip of ratchet.

e. To secure lever, insert stopper pin through hole of lever into tensioner body hole.

- The lever parts and the tab are synchronized. Therefore, the plunger will be secured under this condition.

NOTE:
Figure shows the example of 1.2 mm (0.047 in) diameter thin screwdriver being used as the stopper pin.

f. Install timing chain tensioner (primary).

- Remove dust and foreign material completely from backside of timing chain tensioner (primary) and from installation area of rear timing chain case.

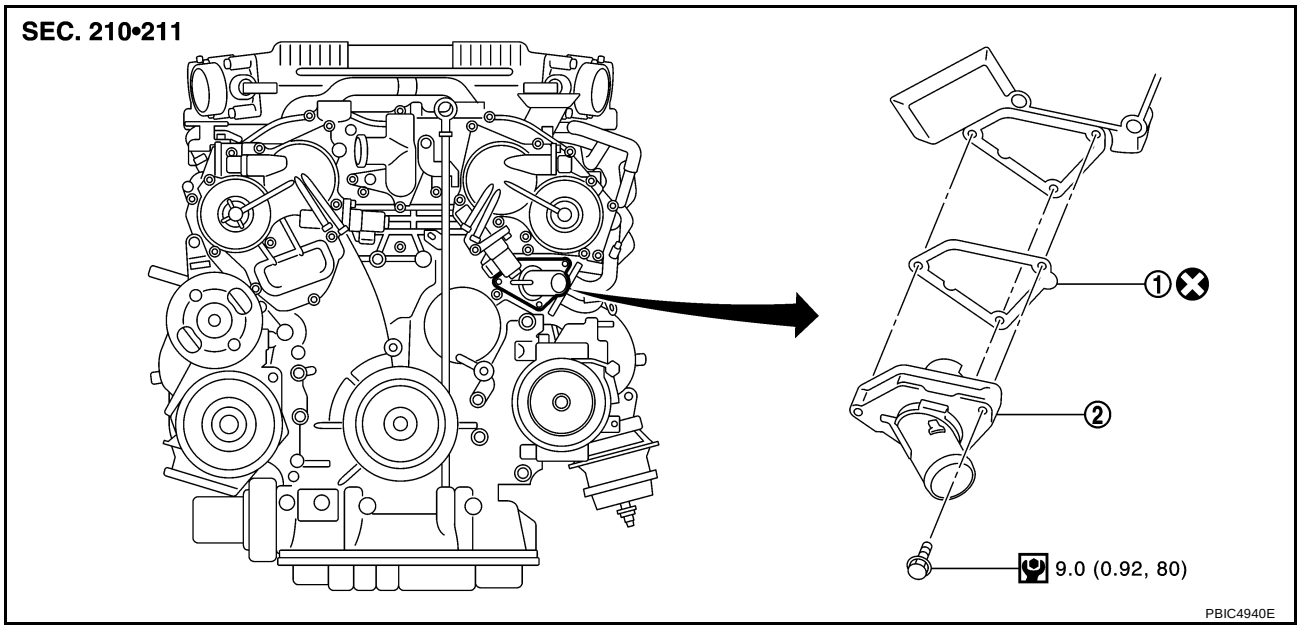
g. Remove stopper pin.

h. Make sure again that timing chain and water pump sprocket are engaged.

4. Install in the reverse order of removal after this step.

- **After starting engine, let idle for three minutes, then rev engine up to 3,000 rpm under no load to purge air from the high-pressure chamber of chain tensioner. Engine may produce a rattling noise. This indicates that air still remains in the chamber and is not a matter of concern.**

INSPECTION AFTER INSTALLATION



- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

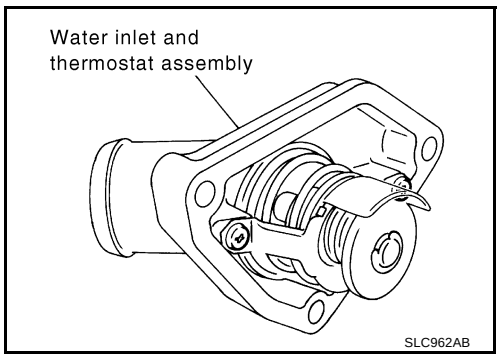
WATER INLET AND THERMOSTAT ASSEMBLY

PFP:21200

Removal and Installation

NBS00023

1. Gasket
2. Water inlet and thermostat assembly



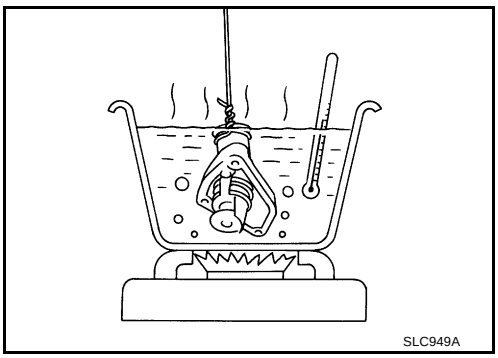
- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove undercover with power tool.
2. Drain engine coolant from radiator drain plug at the bottom of radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air duct and air cleaner case (LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Disconnect radiator hose (lower) from water inlet and thermostat assembly.
5. Remove intake valve timing control solenoid.
6. Remove water inlet and thermostat assembly.

   CAUTION:
   Do not disassemble water inlet and thermostat assembly. Replace them as a unit, if necessary.



INSPECTION AFTER REMOVAL

1. Check valve seating condition at ordinary room temperatures. It should seat tightly.

2. Check valve operation.

Thermostat	Standard
Valve opening temperature	82°C (180°F)
Maximum valve lift	9.0 mm / 95°C (0.354 in / 203°F)
Valve closing temperature	77°C (171°F)

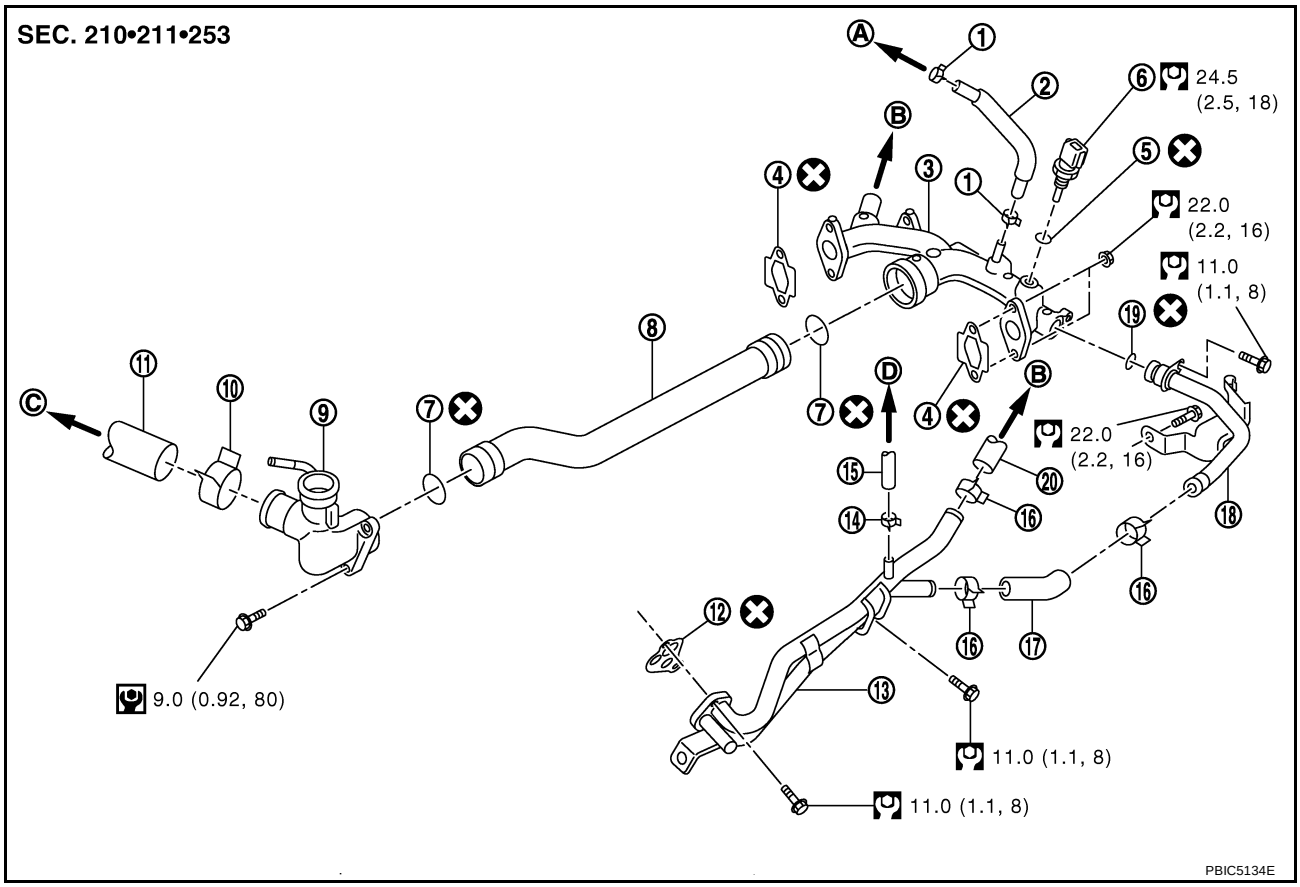
- If the malfunctioning condition, when valve seating at ordinary room temperature, or measured values are out of the standard, replace water inlet and thermostat assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

- **Be careful not to spill engine coolant over engine room. Use rag to absorb engine coolant.**

INSPECTION AFTER INSTALLATION



- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

WATER OUTLET AND WATER PIPING

PFP:11060

Removal and Installation

NBS00024

1.	Clamp	2.	Water hose	3.	Water outlet (rear)
4.	Gasket	5.	Washer	6.	Engine coolant temperature sensor
7.	O-ring	8.	Water outlet pipe	9.	Water outlet (front)
10.	Clamp	11.	Radiator hose (upper)	12.	Gasket
13.	Heater pipe	14.	Clamp	15.	Water hose
16.	Clamp	17.	Heater hose	18.	Water bypass pipe
19.	O-ring	20.	Heater hose		
A.	To EVAP piping	B.	To heater core	C.	To radiator
D.	To electric throttle control actuator				

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove undercover with power tool.
2. Drain engine coolant from radiator drain plug at the bottom of radiator, and from water drain plug at the front of cylinder block. Refer to CO-10, "Changing Engine Coolant" and CO-23, "WATER PUMP" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
4. Remove air duct and air cleaner case (RH, LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
5. Remove radiator hose (upper), heater hoses and water hoses.
6. Remove the following parts, when remove water outlet.
   - A/T fluid charging pipe (A/T models): Refer to AT-242, "TRANSMISSION ASSEMBLY" .
   - Intake manifold collector: Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
7. Remove engine coolant temperature sensor as necessary.

CAUTION:
Be careful not to damage engine coolant temperature sensor.

8. Remove oil level gauge and guide. Refer to EM-44, "FRONT TIMING CHAIN CASE" .
9. Remove water outlet, heater pipe, water bypass hoses and water pipe.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Securely insert each hose, and install clamp at a position where it does not interfere with the pipe bulge.
- When inserting water pipe into water outlet, apply neutral detergent to O-ring.

INSPECTION AFTER INSTALLATION

- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00100

Standard and Limit

NBS00025

ENGINE COOLANT CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Engine coolant capacity (With reservoir tank at “MAX” level)	9.0 (9-1/2, 7- 7/8)
Reservoir tank engine coolant capacity (At “MAX” level)	0.8 (7/8, 3/4)

RADIATOR

Unit: kPa (kg/cm^2 , psi)

Cap relief pressure	Standard	108 - 127 (1.1 - 1.3, 16 - 18)
	Limit	88 (0.9, 13)
Leakage test pressure		157 (1.6, 23)

THERMOSTAT

Valve opening temperature	82°C (180°F)
Maximum valve lift	9.0 mm / 95°C (0.354 in / 203°F)
Water closing temperature	77°C (171°F)

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS0005P

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS0005Q

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

COMBINATION METERS

PFP:24814

System Description

NKS0005S

UNIFIED METER CONTROL UNIT

- Speedometer, odo/trip meter, tachometer, fuel gauge and water temperature gauge are controlled by the unified meter control unit, which is built into the combination meter. Unified meter control unit receives a signals from unified meter and A/C amp.
- Warning lamp and indicator lamp of combination meter are controlled by signals drawn from the unified meter and A/C amp.
- Odo/trip meter and A/T indicator segments can be checked in self-diagnosis mode.
- Meters/gauges can be checked in self-diagnosis mode.

UNIFIED METER AND A/C AMP.

Refer to DI-44, "COMBINATION METER CONTROL FUNCTION" in “UNIFIED METER AND A/C AMP”.

POWER SUPPLY AND GROUND CIRCUIT

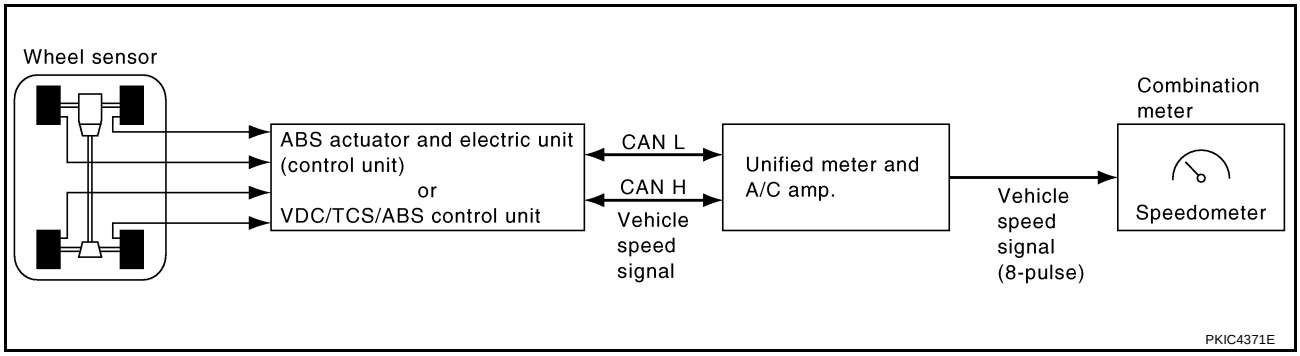
Power is supplied at all times

- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to combination meter terminal 24.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to combination meter terminal 23.

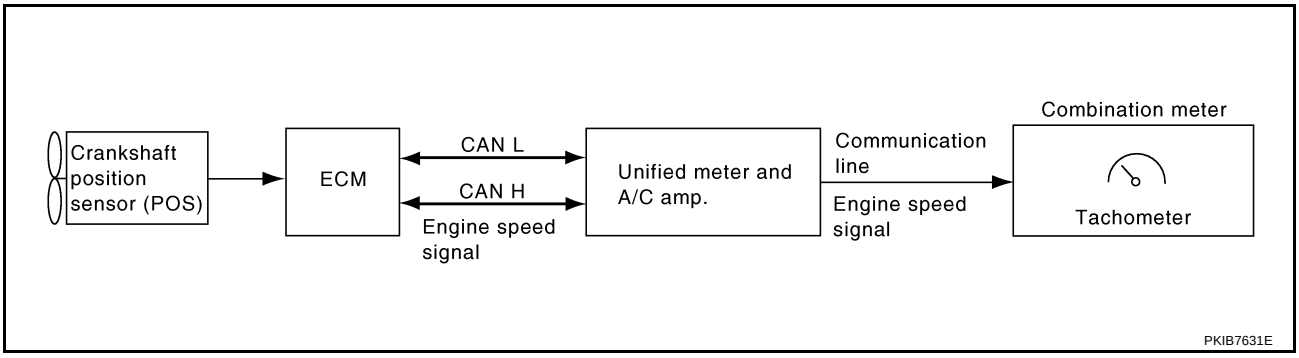
With the ignition switch in the ACC or ON position, power is supplied



- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to combination meter terminal 14.

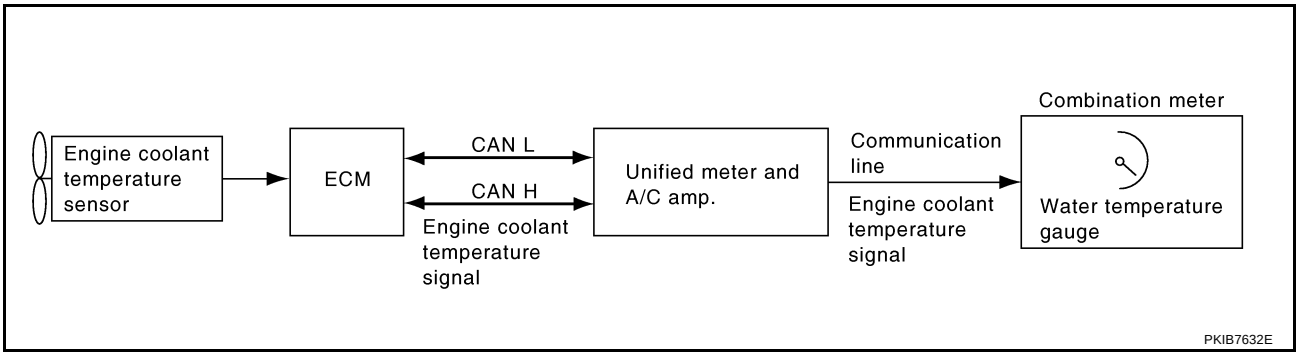
Ground is supplied

- to combination meter terminals 10, 11 and 12
- through body grounds M30 and M66.



SPEEDOMETER

- VDC/TCS/ABS control unit [with VDC] or ABS actuator and electric unit (control unit) [without VDC] provides a vehicle speed signal to the unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. converts the vehicle speed signal to the 8-pulse signal, and outputs the vehicle speed signal (8-pulse) to combination meter.
- Combination meter indicates the vehicle speed according to vehicle speed signal (8-pulse).



TACHOMETER

- ECM provides engine speed signal to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits engine speed signal to combination meter with communication line.
- Combination meter indicates the engine speed according to engine speed signal.

WATER TEMPERATURE GAUGE

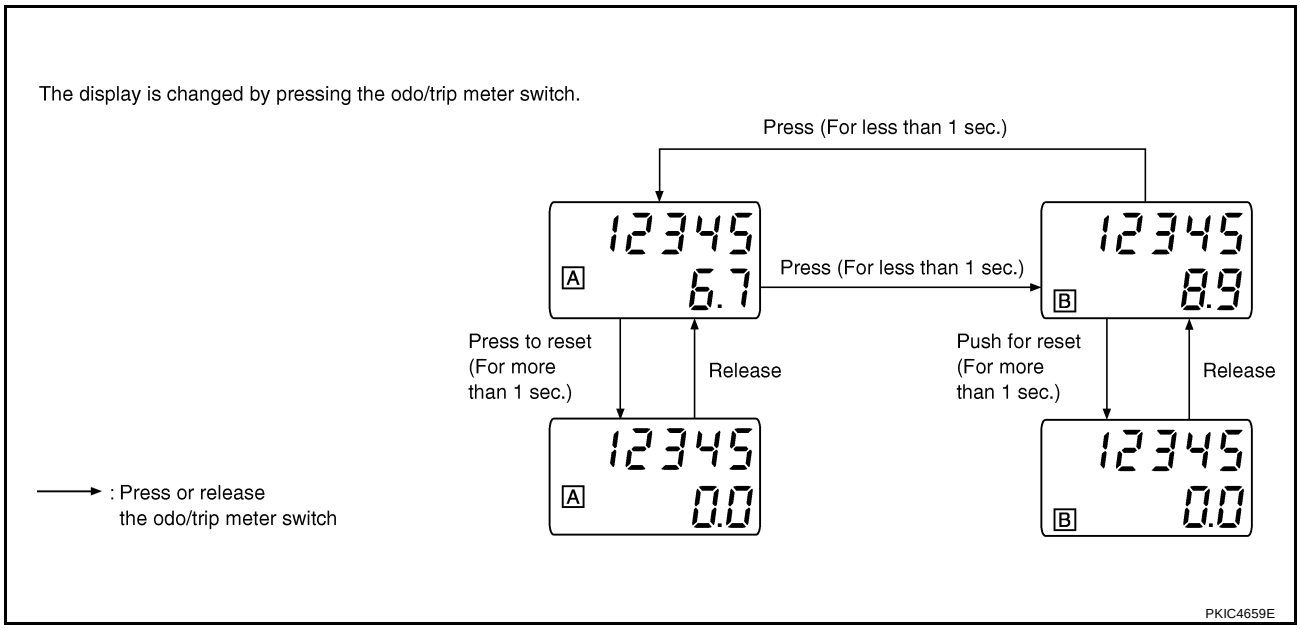
- ECM provides engine coolant temperature signal to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits engine coolant temperature signal to combination meter with communication line.
- Combination meter indicates the engine coolant temperature according to engine coolant temperature signal.

FUEL GAUGE

- Unified meter and A/C amp. reads a resistor signal from fuel level sensor.

Signal is supplied

- from unified meter and A/C amp. terminal 36
- through fuel level sensor unit and fuel pump (main) terminals 5 and 2, and
- through fuel level sensor unit (sub) terminals 2 and 1
- to unified meter and A/C amp. terminal 28.



- Unified meter and A/C amp. provides a fuel level signal to combination meter with communication line.
- Combination meter indicates the approximate fuel level according to fuel level signal.

ODO/TRIP METER

- VDC/TCS/ABS control unit [with VDC] or ABS actuator and electric unit (control unit) [without VDC] provides a vehicle speed signal to the unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. converts the vehicle speed signal to the 8-pulse signal, and outputs the vehicle speed signal (8-pulse) to combination meter.
- Combination meter uses the vehicle speed signal (8-pulse) to calculate the mileage, and displays it.

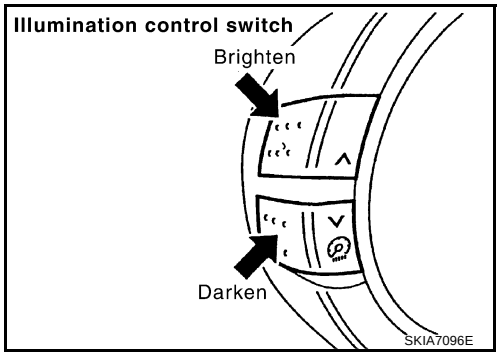
How to Change The Display

Pressing the odo/trip meter switch toggles the display mode in the following order.

- The odo/trip meter display mode toggling and trip display resetting can be identified by the time elapsed from pressing the odo/trip meter switch to releasing it.
- When resetting with “trip A” displayed, only “trip A” is reset. (The “trip B” functions in the same way.)

NOTE:
The record of the odo meter is kept even if the battery cable is disconnected. The record of the trip meter is erased when the battery cable is disconnected.

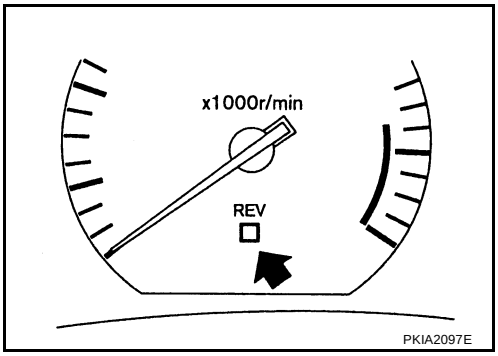
ILLUMINATION CONTROL



Daytime Mode

When ignition switch is turned ON, combination meter and triple meter illumination is turned ON by unified meter control unit.

Nighttime Mode



- Unified meter control unit is transferred to nighttime mode, with ignition switch turned ON and position light request signal from BCM with CAN communication.
- When in nighttime mode, trip computer switch, and illumination control switch illumination turns ON by unified meter control unit. Each illumination is controlled by unified meter control unit.
- Each illumination can be adjusted to 16 step by illumination control switch in nighttime mode.

NOTE:
For further details of illumination circuit, refer to LT-156, "ILLUMINATION" .

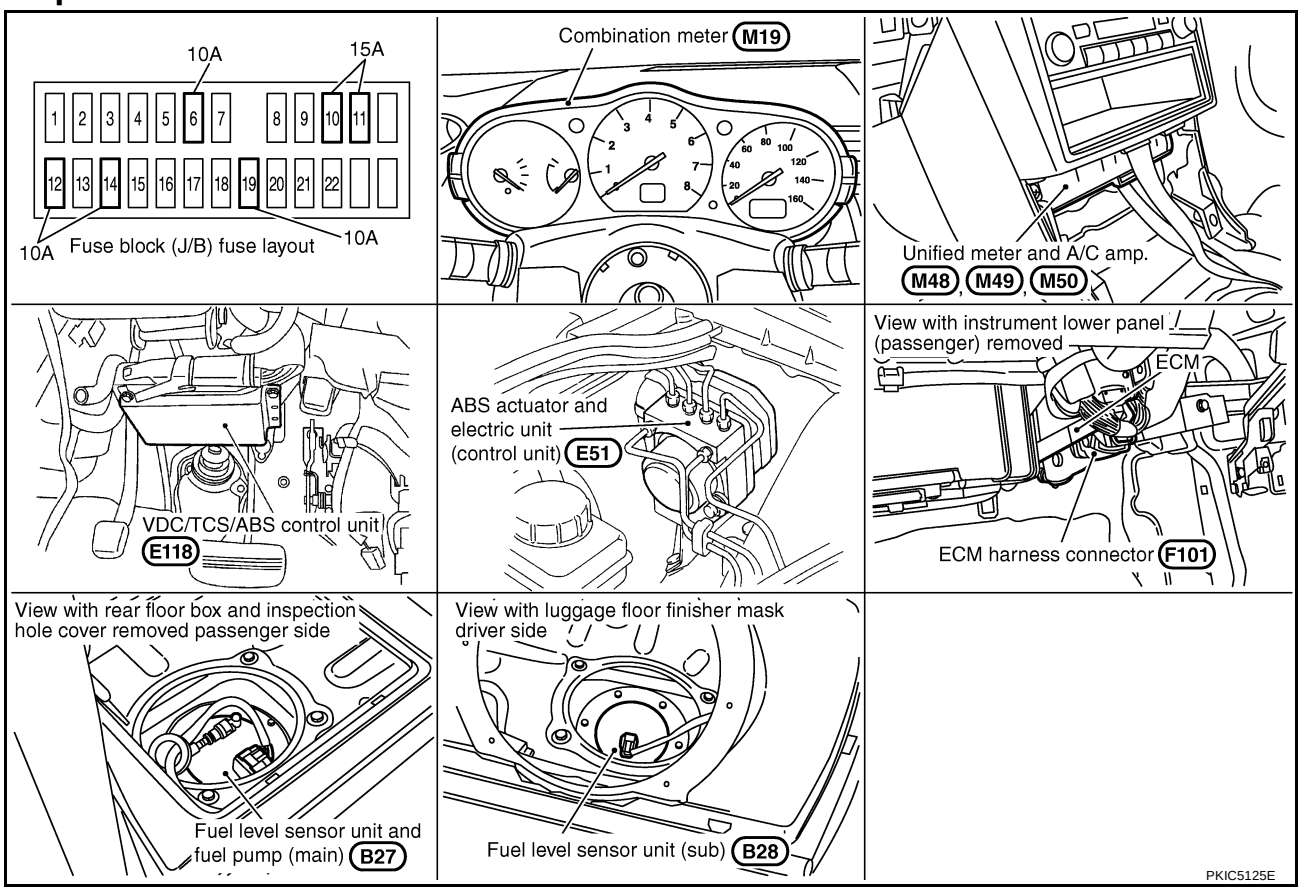
SHIFT-UP INDICATOR

- Shift-up indicator can be used when shifting up at a constant engine speed from any gear while driving. It becomes a guide for shift-up timing.
- Shift-up indicator flashes approximately 500 rpm before reaching the engine speed set. It illuminates when reaching the engine speed set.

Shift-up engine speed can be set by the shift-up indicator setting mode on trip computer. Refer to DI-29, "Shift-up Indicator Setting Mode" .

NOTE:

- There may be a time lag between the shift-up indicator illumination and the tachometer indication.
- If the battery cable is disconnected, the set engine speed becomes 7,000 rpm.



FAIL-SAFE

Combination meter performs fail-safe operation when unified meter and A/C amp. communication is malunction.

Function		Fail-safe operation
Speedometer		Return to zero
Tachometer		Reset to zero
Fuel gauge		
Water temperature gauge		
Illumination control	Combination meter illumination	Change to nighttime mode
Odo/trip meter		Integrate in response to 8-pulse input
A/T indicator		The display turns OFF
Meter buzzer		The meter buzzer turns OFF
Warning lamp/indicator lamp	ABS warning lamp	The lamp turns ON
	VDC OFF indicator lamp	
	TCS OFF indicator lamp	
	SLIP indicator lamp	
	Brake warning lamp	
	Tire pressure warning lamp	
	A/T CHECK lamp	The lamp turns OFF
	Oil pressure warning lamp	
	Door warning lamp	
	High beam indicator lamp	
	Turn signal indicator lamp	
	Malfunction indicator lamp	
	CRUISE indicator lamp	
	SET indicator lamp

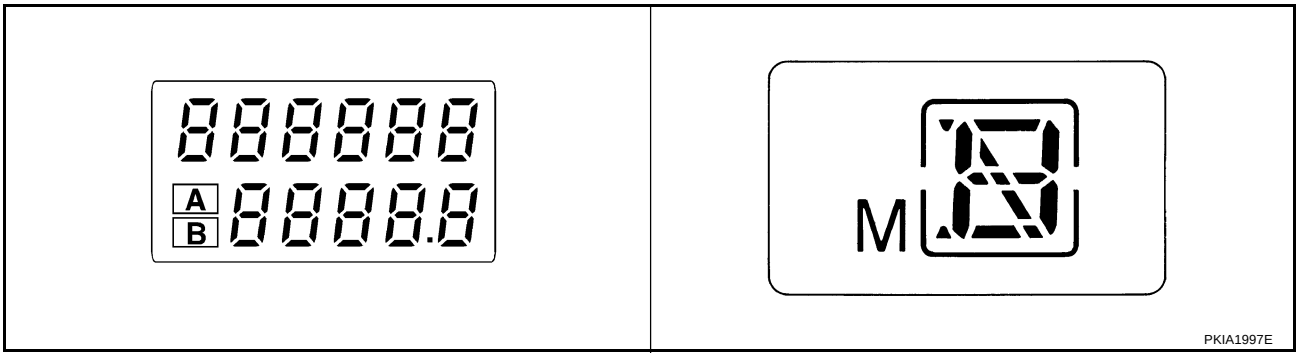
Self-Diagnosis Mode of Combination Meter

NKS0005Z



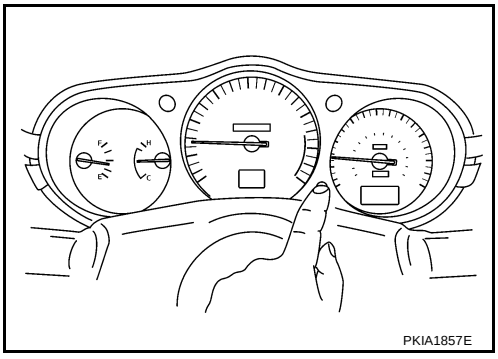
SELF-DIAGNOSIS FUNCTION

- Odo/trip meter segment and A/T indicator segment operation can be checked in self-diagnosis mode.
- Meters/gauges can be checked in self-diagnosis mode.

OPERATION PROCEDURE

1. Turn ignition switch ON, and switch the odo/trip meter to “trip A” or “trip B”.

   NOTE:
   If the diagnosis function is activated with “trip A” displayed, the mileage on “trip A” will indicate “0000.0”, but the actual trip mileage will be retained. (The “trip B” functions in the same way.)
2. Turn ignition switch OFF.
3. While pressing the odo/trip meter switch, turn ignition switch ON again.
4. Make sure that the trip meter displays “0000.0”.
5. Press the odo/trip meter switch at least 3 times (within 7 seconds after the ignition switch is turned ON).
6. All the segments on the odo/trip meter and A/T indicator illuminate, and simultaneously the low-fuel warning lamp indicator illuminates. At this time, the unified meter control unit is turned to diagnosis mode.



NOTE:

- Check combination meter power supply and ground circuit when self-diagnosis mode of combination meter does not start. Replace combination meter if normal.
- If any of the segments is not displayed, replace combination meter.

7. Press the odo/trip meter switch. Each meter/gauge should indicate as shown in the figure while pressing odo/trip meter switch. (At this time, the low-fuel warning lamp goes off).

   NOTE:
   If any of the meter/gauge is not activated, replace combination meter.

CONSULT-III Function (METER A/C AMP)

NKS00060

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Trouble Diagnosis

NKS00061

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom or customer complaint.
2. Perform preliminary check. Refer to DI-16, "PRELIMINARY CHECK" .
3. According to the symptom chart, make sure of the symptom cause and repair or replace applicable parts.
4. Does the meter operate normally? If so, GO TO 5. If not, GO TO 2.
5. INSPECTION END

PRELIMINARY CHECK

1. CHECK OPERATION OF SELF-DIAGNOSIS MODE (COMBINATION METER)

Perform self-diagnosis mode of combination meter. Refer to DI-15, "SELF-DIAGNOSIS FUNCTION" .

Does self-diagnosis mode operation normally?

YES >> GO TO 2.
NO >> GO TO 3.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected >> INSPECTION END
Malfunction detected >> Check applicable parts, and repair or replace corresponding parts.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT OF COMBINATION METER

Check power supply and ground circuit of combination meter. Refer to DI-17, "Power Supply and Ground Circuit Inspection" .

OK or NG

OK >> Replace combination meter.
NG >> Repair power supply and ground circuit of combination meter.

Symptom Chart

NKS00062

Symptom	Possible cause
Speedometer and odo/trip meter indication is malfunction.	Refer to DI-18, "Vehicle Speed Signal Inspection" .
Tachometer indication is malfunction.	Refer to DI-19, "Engine Speed Signal Inspection" .
Water temperature gauge indication is malfunction.	Refer to DI-19, "Engine Coolant Temperature Signal Inspection" .
Fuel gauge indication is malfunction.	Refer to DI-19, "Fuel Level Sensor Signal Inspection" .
Low-fuel warning lamp indication is irregular.	
A/T position indicator is malfunction.	Refer to DI-70, "A/T Indicator Is Malfunction" .
Illumination control does not operate.	Refer to DI-21, "Illumination Control Switch Inspection" .

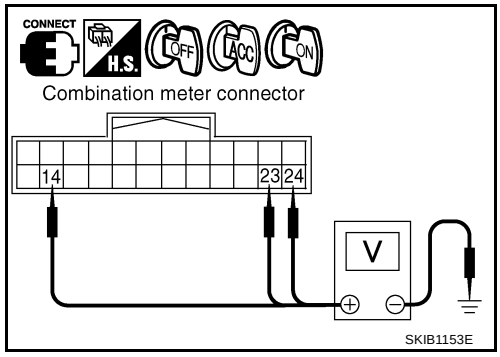
Power Supply and Ground Circuit Inspection

NKS00064

1. CHECK FUSE

Check for blown combination meter fuses.

Power source	Fuse No.
Battery	19
Ignition switch ACC or ON	6
Ignition switch ON or START	14



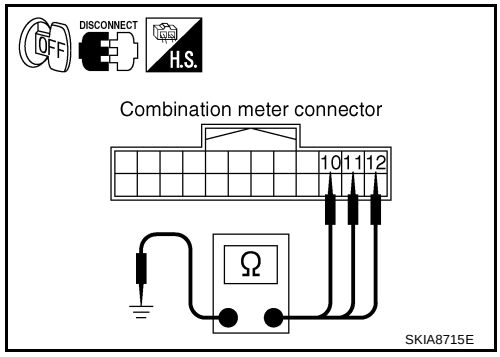
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between combination meter harness connector M19 terminals 24, 23, 14 and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M19	24	Ground	Battery voltage	Battery voltage	Battery voltage
	23		0 V	0 V	Battery voltage
	14		0 V	Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness between combination meter and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check continuity between combination meter harness connector M19 terminals 10, 11, 12 and ground.

10 – Ground
11 – Ground **: Continuity should exist.**
12 – Ground

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

Vehicle Speed Signal Inspection

NKS00065

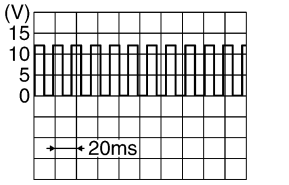
Symptom: Indication is irregular for the Speedometer and odo/trip meter.

1. CHECK VDC/TCS/ABS CONTROL UNIT OR ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform the following units self-diagnosis.

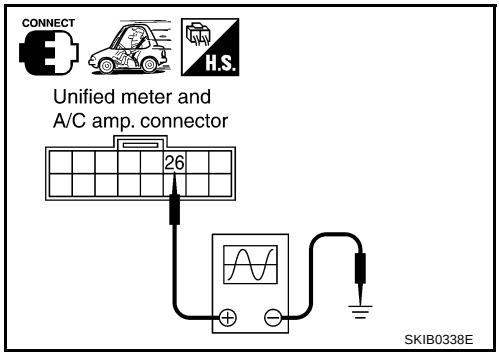
- VDC/TCS/ABS control unit [with VDC]. Refer to BRC-96, "CONSULT-III Functions (ABS)" .
- ABS actuator and electric unit (control unit) [without VDC (with TCS)]. Refer to BRC-52, "CONSULT-III MAIN FUNCTION" .
- ABS actuator and electric unit (control unit) [without VDC (without TCS)]. Refer to BRC-19, "CONSULT-III MAIN FUNCTION" .

Self-diagnostic results



No malfunction detected >> GO TO 2.
Malfunction detected >> Check applicable parts, and repair or replace corresponding parts.

2. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL



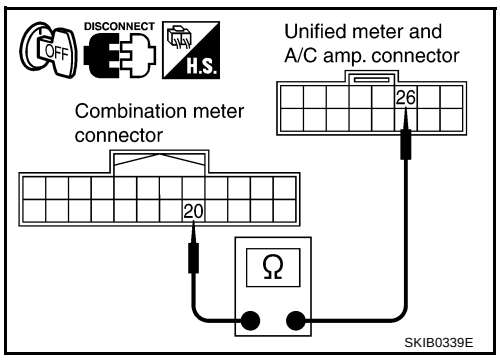
1. Start engine and drive vehicle at approximately 40 km/h (25 MPH).
2. Check voltage signal between unified meter and A/C amp. harness connector M49 terminal 26 and ground.

NOTE:
Maximum voltage may be 5 V due to specifications (connected units).

26 – Ground:

PKIA1935E

SKIB0338E



OK or NG

OK >> GO TO 3.
NG >>
- If monitor indicates “0 V” constantly, repair or replace malfunctioning parts after checking each unit inputting vehicle speed signal (8 pulse), harness and connector between each unit and unified meter and A/C amp.
- If monitor indicates “5 V” or “12 V” constantly, replace unified meter and A/C amp.

3. CHECK CONTINUITY BETWEEN COMBINATION METER AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 20 and unified meter and A/C amp. harness connector M49 terminal 26.

20 – 26 : Continuity should exist.

SKIB0339E

OK or NG

OK >> Replace combination meter.
NG >> Repair harness or connector.

Engine Speed Signal Inspection

NKS00066

Symptom: Tachometer indication is malfunction.

1. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “TACHO METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” with tachometer pointer of combination meter.

OK or NG

OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “ENGINE” on CONSULT-III.
2. Using “ENG SPEED” on “DATA MONITOR”, check the CONSULT-III screen when the engine is idling.
3. Select “METER A/C AMP” on CONSULT-III.
4. Using “TACHO METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” of the idling speed with that of the “ENG SPEED”.

OK or NG

OK >> Perform ECM self-diagnosis. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
NG >> Replace unified meter and A/C amp.

Engine Coolant Temperature Signal Inspection

NKS00067

Symptom: Water temperature gauge indication is malfunction.

1. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “W TEMP METER” on the “DATA MONITOR”, compare the value of “DATA MONITOR” with water temperature gauge pointer of combination meter.

Water temperature gauge pointer	Reference value of data monitor [°C (°F)]
Hot	Approx. 130 (266)
Middle	Approx. 70 - 105 (158 - 221)
Cold	Approx. 50 (122)

OK or NG

OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “ENGINE” on CONSULT-III.
2. Using “COOLAN TEMP/S” on “DATA MONITOR”, check the CONSULT-III screen.
3. Select “METER A/C AMP” on CONSULT-III.
4. Using “W TEMP METER” on, compare the value of “DATA MONITOR” with that of the “COOLAN TEMP/S”.

OK or NG

OK >> Perform ECM self-diagnosis. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
NG >> Replace unified meter and A/C amp.

Fuel Level Sensor Signal Inspection

NKS00068

Symptom:

- Fuel gauge indication is malfunction.
- Low-fuel warning lamp indication is irregular.

NOTE:
The following symptoms are not malfunction.

Fuel level sensor unit

- Depending on vehicle position or driving circumstance, the fuel level in the tank varies, and the pointer may fluctuate.
- If the vehicle is fueled with the ignition switch ON, the pointer will move slowly.

Low-fuel warning lamp

- Depending on vehicle position or driving circumstance, the fuel in the tank flows and the warning lamp ON timing may change.

1. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “METER A/C AMP” on CONSULT-III.
2. Using “FUEL METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” with fuel gauge pointer of combination meter.

Fuel gauge indication	Value on monitor [lit.]
Full	Approx. 74
Three quarters	Approx. 61
Half	Approx. 42
A quarter	Approx. 22
Empty	Approx. 8

OK or NG

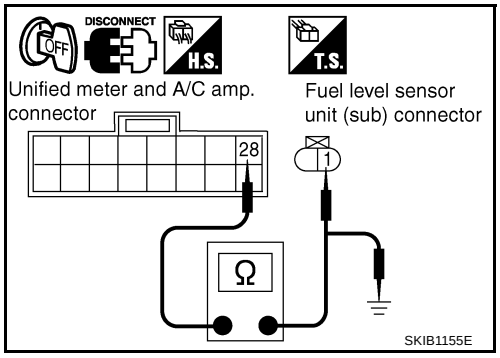
OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK FUEL LEVEL SENSOR

1. Turn ignition switch OFF.
2. Check components. Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .

OK or NG

OK >> GO TO 3.
NG >> Replace fuel level sensor unit.



3. CHECK FUEL LEVEL SENSOR (SUB) CIRCUIT

1. Disconnect unified meter and A/C amp. connector and fuel level sensor unit (sub) connector.
2. Check continuity between unified meter and A/C amp. harness connector M49 terminal 28 and fuel level sensor unit (sub) harness connector B28 terminal 1.

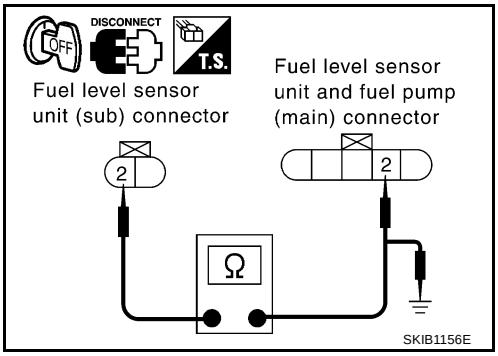
28 – 1 : Continuity should exist.

3. Check continuity between unified meter and A/C amp. harness connector M49 terminal 28 and ground.

28 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.



4. CHECK FUEL LEVEL SENSOR (MAIN·SUB) CIRCUIT

1. Disconnect fuel level sensor unit and fuel pump (main) connector.
2. Check continuity between fuel level sensor unit (sub) harness connector B28 terminal 2 and fuel level sensor unit and fuel pump (main) harness connector B27 terminal 2.

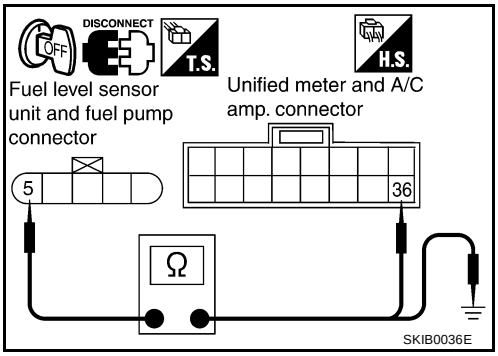
2 – 2 : Continuity should exist.

3. Check continuity between fuel level sensor unit (sub) harness connector B28 terminal 2 and ground.

2 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



5. CHECK FUEL LEVEL SENSOR (MAIN) CIRCUIT

1. Check continuity between fuel level sensor unit and fuel pump (main) harness connector B27 terminal 5 and unified meter and A/C amp. harness connector M49 terminal 36.

5 – 36 : Continuity should exist.

2. Check continuity between fuel level sensor unit and fuel pump (main) harness connector B27 terminal 5 and ground.

5 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

6. CHECK INSTALLATION CONDITION

Check fuel level sensor unit installation, and check whether the float arm interferes or binds with any of the internal components in the fuel tank.

OK or NG

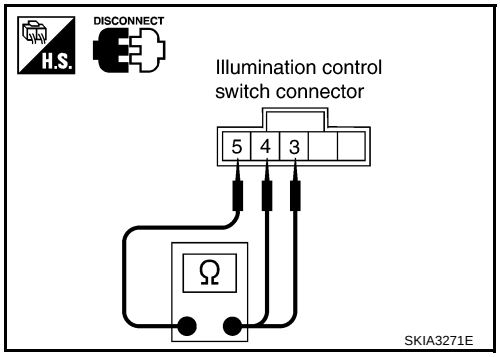
OK >> Replace unified meter and A/C amp.
NG >> Install the fuel level sensor unit properly.

Illumination Control Switch Inspection

NKS00069

Symptom: Illumination control does not operate.

1. CHECK CONNECTOR



1. Turn ignition switch OFF.
2. Remove combination meter.
3. Remove rear finisher of combination meter.
4. Check illumination control switch connector for looseness.

OK or NG

OK >> GO TO 2.
NG >> Repair illumination control switch connector.

2. CHECK ILLUMINATION CONTROL SWITCH

1. Disconnect illumination control switch connector.
2. Check continuity between illumination control switch harness connector M207 terminals 3 or 4 and 5.

Terminal		Condition	Continuity
3	5	Illumination control switch upper side (BRIGHTEN) is pressed.	Yes
		Illumination control switch upper side (BRIGHTEN) is released.	No
4		Illumination control switch lower side (DARKEN) is pressed.	Yes
		Illumination control switch lower side (DARKEN) is released.	No

OK or NG

OK >> Replace combination meter.
NG >> Replace illumination control switch.

Fuel Gauge Pointer Fluctuates, Indicator Wrong Value or Varies

NKS0006A

1. CHECK FUEL GAUGE FLUCTUATION

Test drive vehicle to see if gauge fluctuates only during driving or at the instant of stopping.

Does the indication value vary only during driving or at the instant of stopping?

YES >> The pointer fluctuation may be caused by fuel level change in the fuel tank. Condition is normal.
NO >> Ask the customer about the situation when the symptom occurs in detail, and perform the trouble diagnosis.

Fuel Gauge Does Not Move to FULL Position

NKS0006B

1. QUESTION 1

Does it take a long time for the pointer to move to FULL position?

YES >> GO TO 2.
NO >> GO TO 3.

2. QUESTION 2

Was the vehicle fueled with the ignition switch ON?

YES >> Be sure to fuel the vehicle with the ignition switch OFF. Otherwise, it will take a long time to move to FULL position because of the characteristic of the fuel gauge.
NO >> GO TO 3.

3. QUESTION 3

Is the vehicle parked on an incline?

YES >> Check the fuel level indication with vehicle on a level surface.
NO >> GO TO 4.

4. QUESTION 4

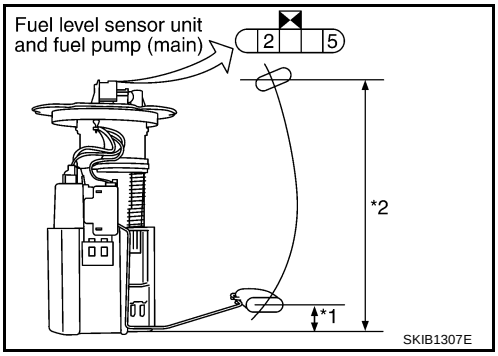
During driving, does the fuel gauge pointer move gradually toward EMPTY position?

YES >> Check the fuel level sensor unit. Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .
NO >> The float arm may interfere or bind with any of the components in the fuel tank.

Electrical Components Inspection

NKS0006C

FUEL LEVEL SENSOR UNIT



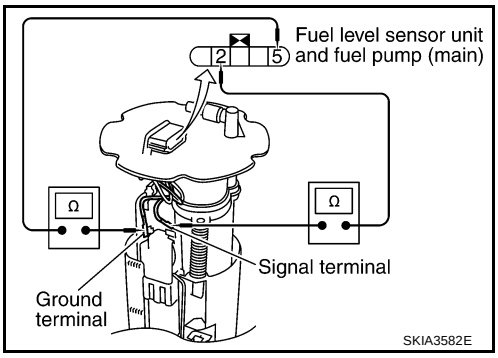
For removal, refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

Fuel Level Sensor Unit and Fuel Pump (Main)

Check the resistance between terminals 2 and 5.

Terminal		Float position [mm (in)]			Resistance value [Ω]
2	5	*1	Empty	30 (1.18)	Approx. 80
		*2	Full	210 (8.27)	Approx. 3

*1 and *2: When float rod is in contact with stopper.

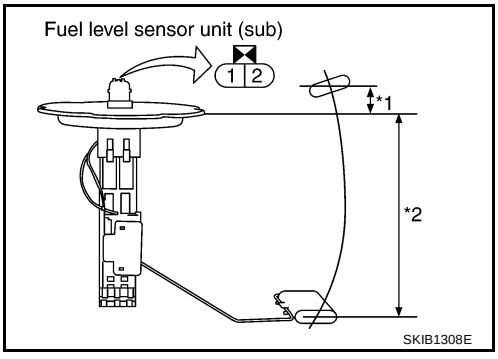


- If the results of check are NG, check the fuel level sensor unit and fuel pump (main) harness. Refer to DI-23, "Fuel Level Sensor Unit and Pump (Main) Harness" .

Fuel Level Sensor Unit and Pump (Main) Harness

Check the continuity between the following terminals.

Terminal	Continuity
2 - Signal terminal	Yes
5 - Ground terminal	



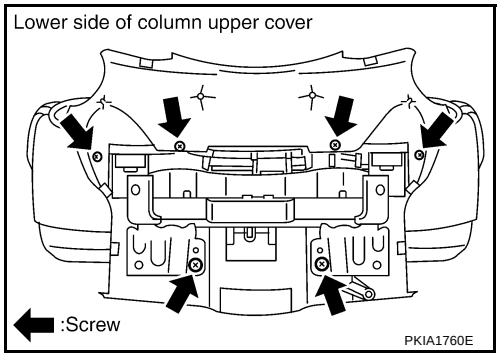
- If the results of check are NG, replace fuel pump assembly. If the results of check are OK, replace fuel level sensor unit.

Fuel Level Sensor Unit (Sub)

Check the resistance between terminals 1 and 2.

Terminal		Float position [mm (in)]			Resistance value [Ω]
1	2	*1	Full	8 (0.31)	Approx. 3
		*2	Empty	175 (6.89)	Approx. 43

*1 and *2: When float rod is in contact with stopper.

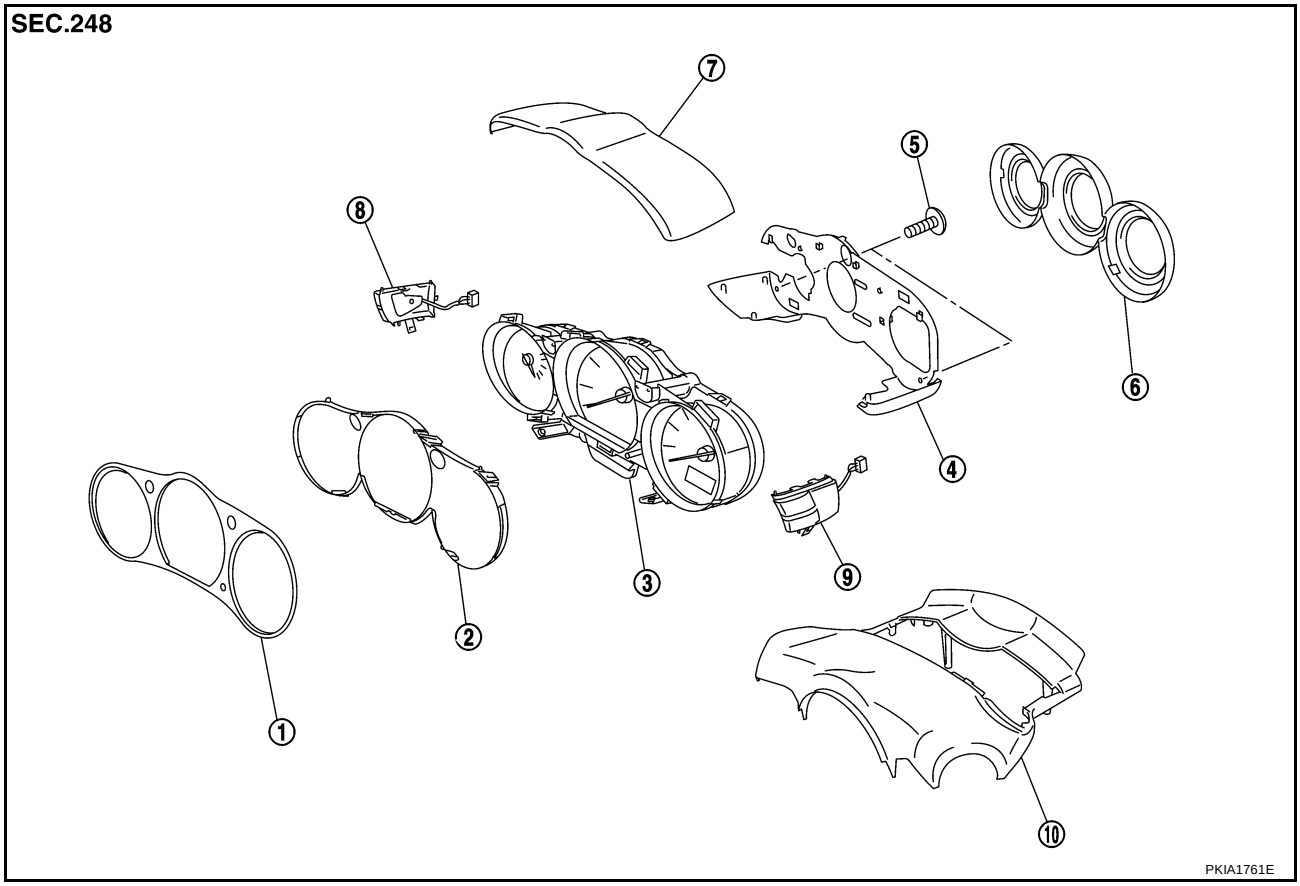


Removal and Installation for Combination Meter

NKS0006D

REMOVAL

1. Remove instrument driver panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove steering column lower cover. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY"
3. Remove bolts (4) and remove column upper cover and combination meter assembly. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove screws (6) and remove combination meter.

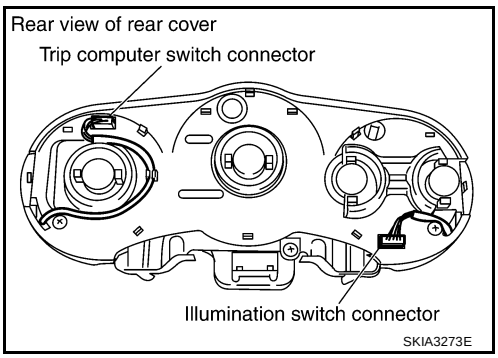


INSTALLATION

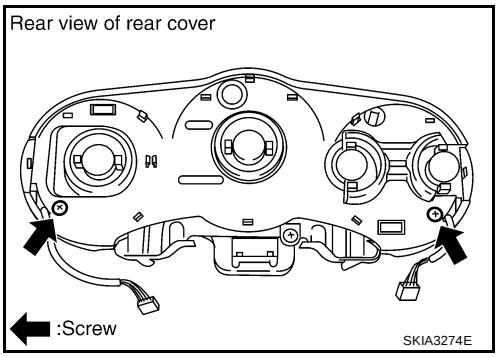
Installation is the reverse order of removal.

Disassembly and Assembly for Combination Meter

NKS0006E



1. Front finisher
2. Front cover
3. Unified meter control unit
4. Rear cover
5. Screws
6. Rear finisher
7. Upper cover
8. Illumination control switch
9. Trip computer switch
10. Steering column upper cover



DISASSEMBLY

1. Remove screws (6) to separate steering column upper cover.
2. Disengage tabs (2) to separate front finisher.
3. Disengage tabs (8) to separate rear finisher.

4. Disconnect illumination control switch connector and trip computer switch connector.

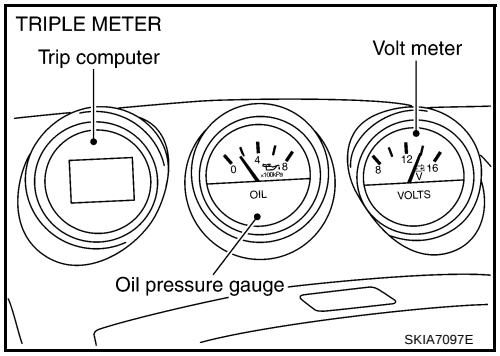
5. Remove screws (2) and remove rear cover.

6. Disengage tabs (4) to separate upper cover from rear cover.
7. Remove illumination control switch.
8. Remove trip computer switch.
9. Disengage tabs (7) to separate front cover.

ASSEMBLY

Assembly is the reverse order of disassembly.

TRIPLE METERS



PFP:24845

System Description

NKS0006F

TRIPLE METER

- Oil pressure gauge and voltmeter are controlled by the triple meter.
- Trip computer is controlled by the signals from the unified meter and A/C amp.
- Triple meter operation can be checked with self-diagnosis mode of combination meter.

UNIFIED METER AND A/C AMP.

Refer to DI-45, "TRIPLE METER CONTROL FUNCTION" in “UNIFIED METER AND A/C AMP”.

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to triple meter terminal 2.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to triple meter terminal 3.

Ground is supplied

- to triple meter terminal 1
- through grounds M30 and M66.

VOLTMETER

When ignition switch is turned to the ON position, the voltmeter indicates the battery voltage.

OIL PRESSURE GAUGE

With the ignition switch in the ON or START position, power is supplied

- through triple meter terminal 9
- to oil pressure sensor terminal 1.

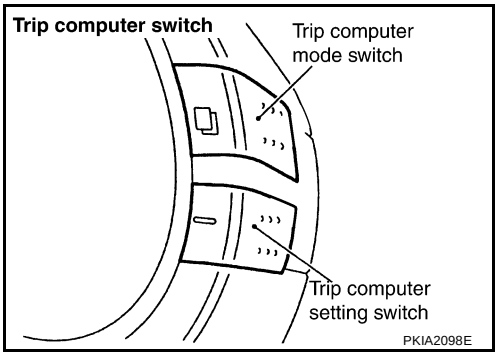
Ground is supplied

- to triple meter terminal 7
- through oil pressure sensor terminal 3.

And triple meter reads oil pressure signal from oil pressure sensor

- from oil pressure sensor terminal 2
- to triple meter terminal 8.

NOTE:



- Triple meter judges an oil pressure condition by oil pressure signal, and transmits oil pressure warning lamp signal to combination meter through unified meter and A/C amp. with communication line.
- Oil pressure gauge is not designed to indicate the low oil level. Use the oil level gauge to check the oil level.

TRIP COMPUTER

Function

When the ignition switch is turned ON, the display scrolls all the modes. And then shows the mode chosen before the ignition switch is turned OFF.

- Trip computer is operated by the trip computer switch.
- Trip computer receives a switch signal from combination meter through the unified meter and A/C amp. with communication line.

The mode of the trip computer is the following.

- Vehicle speed
- Ambient air temperature
- DTE (distance to empty)
- Average fuel consumption
- Average vehicle speed
- Trip time
- Trip distance
- Stopwatch
- Shift-up indicator setting mode

How to Change/ Reset the Displayed Mode

- The displayed mode can be selected in the following order by momentarily pressing the trip computer mode switch.
  - Vehicle speed → Ambient air temperature → DTE → Average fuel consumption and average vehicle speed → Trip time and trip distance → Stopwatch → Shift-up indicator setting
- Holding the trip computer setting switch for more than 1 second resets the displayed mode (Average fuel consumption, average vehicle speed, trip time, trip distance or stopwatch).

NOTE:
When the ambient air temperature warning, the tire pressure warning, and the DTE warning, match warning conditions at the same time, the display automatically displays the ambient air temperature warning.

Vehicle Speed

- Trip computer receives vehicle speed signal from combination meter through the unified meter and A/C amp. with communication line.
- Trip computer displays the vehicle speed according to vehicle speed signal.

Ambient Air Temperature

- Unified meter and A/C amp. reads ambient air temperature signal from ambient air temperature sensor.

Signal is supplied

- from unified meter and A/C amp. terminal 39
- through ambient sensor terminal 1 and 2
- to unified meter and A/C amp. terminal 49.

- Trip computer receives ambient air temperature signal from the unified meter and A/C amp. with communication line.
- Trip computer displays ambient air temperature according to ambient air temperature signal.

NOTE:
- Indication range is between –30 and 55 °C (–22 and 131 °F).
- When ambient air temperature is less than –30 °C (–22 °F) or more than 55 °C (131 °F), the display shows “--”.
- When ambient air temperature is less than 3 °C (37 °F) continuously, the display shows “ICY” as warning. At more than 4 °C (39 °F) the display stops showing “ICY”.

DTE (Distance to Empty)

- Unified meter and A/C amp. uses following signals to calculate the DTE signal.
  - Fuel remaining signal (from the fuel level sensor unit)
  - Fuel consumption signal (from ECM)
  - Vehicle speed signal [from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)]
- Trip computer receives DTE signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the DTE according to DTE signal.
- The indication is refreshed every 30 seconds.

NOTE:

- When fuel remaining is less than approx. 10 ℓ (10-5/8 US qt, 8-3/4 Imp qt), the display shows “dte” blink as a warning. And the fuel remaining is less than approx. 8 ℓ (8-1/2 US qt, 7 Imp qt), the display shows “----”.
- When the battery cable is disconnected and reconnected, the display shows “----” for 30 seconds.

Average Fuel Consumption

- Unified meter and A/C amp. uses following signals to calculate the average fuel consumption signal.
  - Fuel consumption signal (from ECM)
  - Vehicle speed signal [from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)]
- Trip computer receives the average fuel consumption signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the average fuel consumption according to the average fuel consumption signal.
- The indication is refreshed every 30 seconds.

NOTE:

If the average fuel consumption is reset, the average vehicle speed is reset at the same time. While driving about 1/3 miles (500 m) or for 80 seconds after resetting, the display shows “----”.

Average Vehicle Speed

- Unified meter and A/C amp. uses following signals to calculate the average vehicle speed signal.
  - Trip distance signal
  - Trip time signal
- Trip computer receives the average vehicle speed signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the average vehicle speed according the average vehicle speed signal.
- The indication shows refreshed every 30 seconds.

NOTE:

If the average vehicle speed is reset, the average fuel consumption will be reset at the same time. After resetting, the display will show “----” for 30 seconds.

Trip Time

- Unified meter and A/C amp. calculates the time during ignition switch ON.
- Trip computer receives the trip time signal from the unified meter and A/C amp. with communication line.
- Trip computer displays trip time according to the trip time signal.

NOTE:

If trip time is reset, trip distance is reset at the same time.

Trip Distance

- Unified meter and A/C amp. uses following signals to calculate the average fuel consumption signal.
  - Trip time signal
  - Vehicle speed signal from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)
- Trip computer receives the trip distance signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the trip distance according to the trip distance signal.

NOTE:

If trip distance is reset, trip time will be reset at the same time.

Stopwatch

Trip computer displays stopwatch.

NOTE:

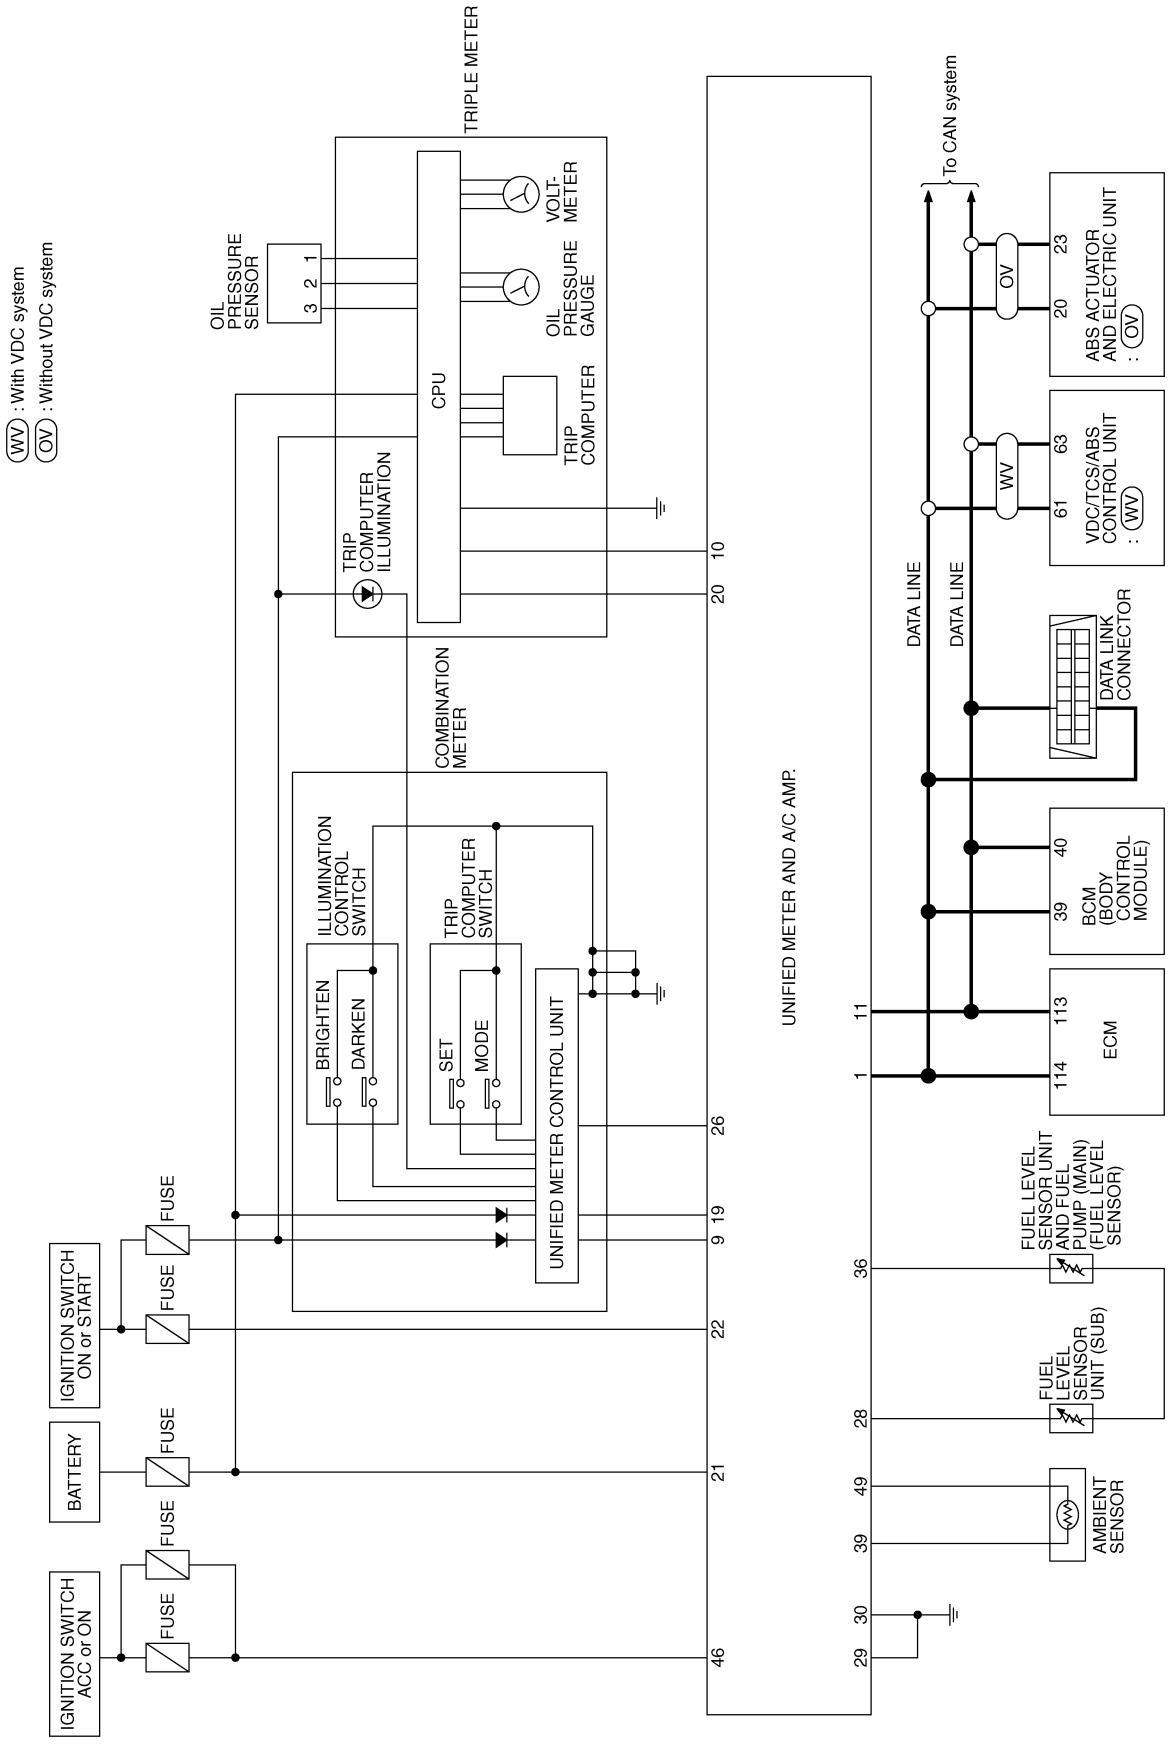
- After 100 hours, the time will start from the reset display again.
- Even if the display is switched to the other mode while the time is starting, the stopwatch continues to advance until the time in the stopwatch mode is stopped.
- When the ignition switch is turned OFF, the stopwatch is reset.

Shift-up Indicator Setting Mode

Trip computer setting switch	Press and hold (for more than 1 sec.)	Press (for less than 1 sec.)
Setting engine speed	Increase setting engine speed by 500 rpm.	Increase setting engine speed by 100 rpm.

NOTE:

The range of engine speed is 2,000 - 8,000 rpm (when exceeding 8,000 rpm returns to 2,000 rpm).



FAIL-SAFE

Triple meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning.

Function		Fail-safe operation
Trip computer	Vehicle speed indication	Displays “---”
	Outside air temperature indication	Displays “--”
	DTE (Distance to empty) indication	Displays “----”
	Average fuel consumption indication	
	Average vehicle speed indication	
	Trip distance indication	
	Trip time indication	Displays “--:--”
Illumination control	Triple meter illumination	Change to nighttime mode.

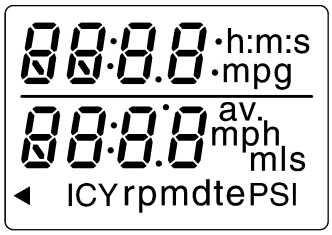
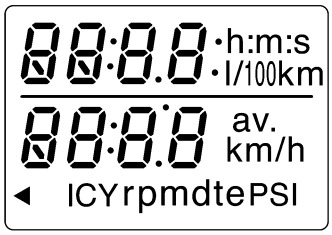
Self-Diagnosis Mode of Triple Meter





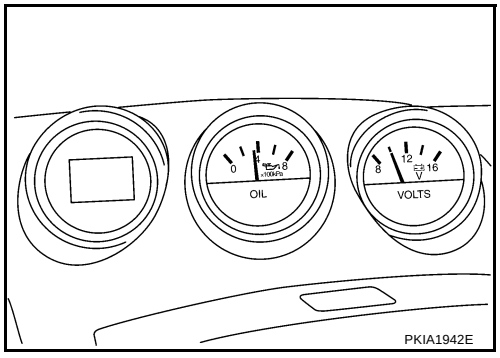
NKS0006L

SELF-DIAGNOSIS FUNCTION

Triple meter operation can be checked with self-diagnosis mode of combination meter.

OPERATION PROCEDURE

1. While pressing the odo/trip meter switch, turn ignition switch ON.
2. Make sure that the trip meter displays “0000.0”.
3. Press the odo/trip meter switch at least 3 times (within 7 seconds after the ignition switch is turned ON).
4. All the segments on the trip computer illuminate. At this time, the triple meter is turned to self-diagnosis mode.



For USA	For Canada
	

SKIA8981E

NOTE:
If any of the segments is not displayed, replace triple meter.

5. Press the odo/trip meter switch. voltmeter and oil pressure gauge should indicate as shown in the figure while pressing odo/trip meter switch.

   NOTE:
   If voltmeter or oil pressure gauge is not activated, replace triple meter.

PKIA1942E

CONSULT-III Function (METER A/C AMP)

NKS0006M

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Trouble Diagnosis

NKS0006N

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom or customer complaint.
2. Perform diagnosis according to diagnosis flow. Refer to DI-39, "PRELIMINARY CHECK" .
3. According to the symptom chart, repair or replace the cause of the symptom.
4. Does the meter operate normally? If so, GO TO 5. If not, GO TO 2.
5. INSPECTION END

PRELIMINARY CHECK

1. CHECK COMMUNICATION LINE

Perform self-diagnosis of unified meter and A/C amp.

Self-diagnostic results content

No malfunction detected>>GO TO 2.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

2. CHECK OPERATION OF SELF-DIAGNOSIS MODE (COMBINATION METER)

Activate self-diagnosis mode of combination meter. Refer to DI-15, "Self-Diagnosis Mode of Combination Meter" .

Does self-diagnosis mode operate?

YES >> GO TO 3.
NO >> Check combination meter power supply and ground circuit. If normal, replace combination meter.

3. CHECK OPERATION OF SELF-DIAGNOSIS MODE (TRIPLE METER)

Check operation of triple meter in self-diagnosis mode. Refer to DI-38, "Self-Diagnosis Mode of Triple Meter" .

Does self-diagnosis mode operation namely?

YES >> INSPECTION END
NO >> GO TO 4.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT OF TRIPLE METER

Check power supply and ground circuit of triple meter.

OK or NG

OK >> Replace triple meter.
NG >> Repair power supply and ground circuit of triple meter.

Symptom Chart

NKS0006O

Trouble phenomenon	Possible cause
Speed indication is not displayed properly.	Refer to DI-40, "Vehicle Speed Signal Inspection" .
Ambient air temperature indication is not displayed properly. (It may take a short time to steady the indication after ignition switch is turned ON.) **NOTE:** If the meter is powered up with the ambient sensor disconnected, ambient air temperature display will show “---” even if the sensor is reconnected. In this case, with the sensor connected, disconnect and reconnect the battery, then the correct temperature will be displayed.	Refer to ATC-92, "AMBIENT TEMPERATURE INPUT PROCESS" in “ATC”.
DTE (distance to empty) indication is not displayed properly.	Refer to DI-40, "Fuel Consumption Monitor Signal Inspection" .
Average fuel consumption indication is not displayed properly.	
Shift-up indicator setting indication is not displayed properly or shift-up indicator does not operate properly.	Refer to DI-42, "Trip Computer Switch Inspection" .

Trouble phenomenon	Possible cause
Average vehicle speed indication is not indicated properly.	Replace triple meter.
Trip distance indication is not indicated properly.	
Trip time indication is not indicated properly.	
Stopwatch indication is not displayed properly.	
Indication is malfunction of voltmeter.	
Indication is malfunction of oil pressure gauge.	Refer to DI-40, "Oil Pressure Sensor Signal Inspection" .
Trip computer switch is not operate.	Refer to DI-42, "Trip Computer Switch Inspection" .

Vehicle Speed Signal Inspection

NKS0006R

Symptom: Speed indication is not displayed properly.

1. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “SPEED METER” on the “DATA MONITOR”, compare the value of data monitor with speed indication of trip computer.

OK or NG

OK >> Refer to DI-18, "Vehicle Speed Signal Inspection" of “COMBINATION METERS”.
NG >> Replace triple meter.

Fuel Consumption Monitor Signal Inspection

NKS0006S

Symptom:

- DTE (distance to empty) indication is not displayed properly.
- Average fuel consumption indication is not displayed properly.

1. CHECK ECM (CONSULT-III)

Perform self-diagnosis of ECM. Refer to EC-116, "CONSULT-III Function (ENGINE)" .

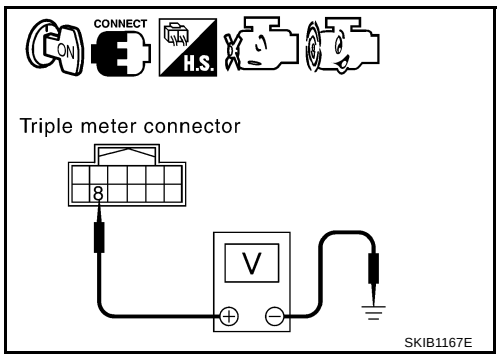
Self-diagnostic results

No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

Oil Pressure Sensor Signal Inspection

NKS0006T

Symptom: Indication is malfunction of oil pressure gauge.



1. CHECK OIL PRESSURE SENSOR SIGNAL INPUT

1. Turn ignition switch ON.
2. Check voltage between triple meter harness connector M44 terminal 8 and ground.

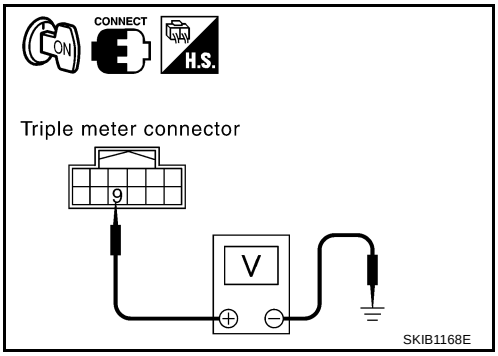
8 – Ground

When ignition switch is in ON position (Engine stopped.) : Approx. 1 V

Engine running [When the oil pressure is 80 psi (500 kPa)] : Approx. 3 V

OK or NG

OK >> Replace triple meter.
NG >> GO TO 2.



2. CHECK OIL PRESSURE SENSOR POWER SUPPLY

Check voltage between triple meter harness connector M44 terminal 9 and ground.

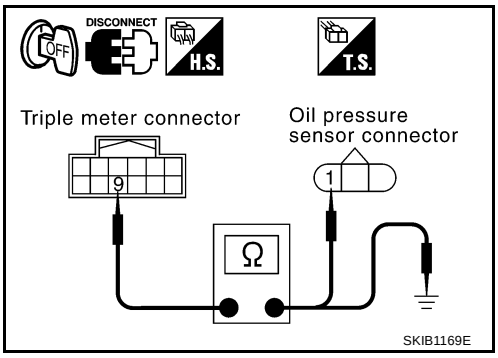
9 – Ground : Approx. 5 V

OK or NG

OK >> GO TO 3.
NG >> Replace triple meter.

3. CHECK OIL PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect triple meter and oil pressure switch connector.
3. Check continuity between triple meter harness connector M44 terminal 9 and oil pressure sensor harness connector F21 terminal 1.



9 – 1 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 9 and ground.

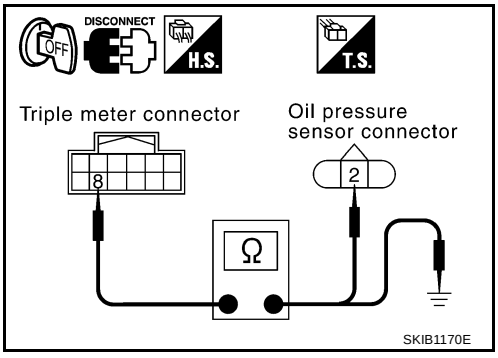
9 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK OIL PRESSURE SENSOR SIGNAL CIRCUIT

1. Check continuity between triple meter harness connector M44 terminal 8 and oil pressure sensor harness connector F21 terminal 2.



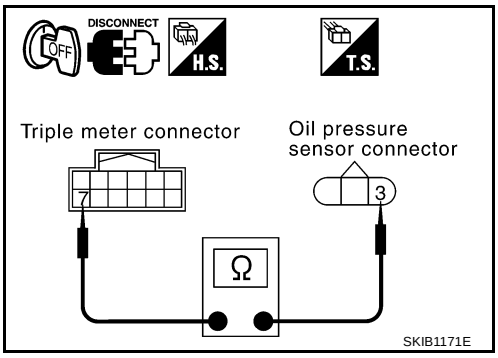
8 – 2 : Continuity should exist.

2. Check continuity between triple meter harness connector M44 terminal 8 and ground.

8 – Ground :Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



5. CHECK OIL PRESSURE SENSOR GROUND CIRCUIT

Check continuity between triple meter harness connector M44 terminal 7 and oil pressure sensor harness connector F21 terminal 3.

7 – 3 : Continuity should exist.

OK or NG

OK >> Replace oil pressure sensor.
NG >> Repair harness or connector.

Trip Computer Switch Inspection

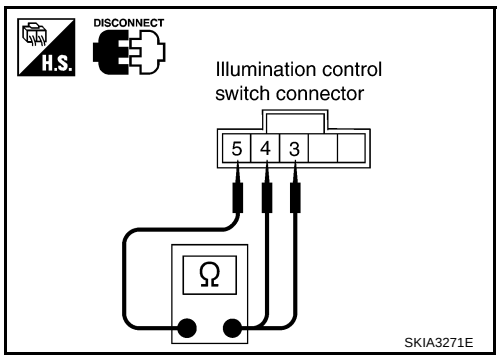
NKS0006U

Symptom:

- Shift-up indicator setting indication is not displayed properly or shift-up indicator does not operate properly.
- Trip computer switch does not operate.

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Remove combination meter. Refer to DI-24, "Removal and Installation for Combination Meter" .
3. Remove rear finisher to combination meter. Refer to DI-24, "Disassembly and Assembly for Combination Meter" .
4. Check trip computer switch connector for looseness.



OK or NG

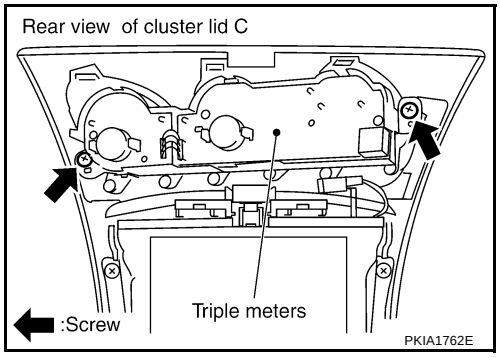
OK >> GO TO 2.
NG >> Repair trip computer switch connector.

2. CHECK CIRCUIT

1. Disconnect trip computer switch connector.
2. Check continuity between trip computer switch harness connector M208 terminals 3, 4 and 5.

Terminal		Condition	Continuity
3	5	Setting switch is pressed.	Yes
		Setting switch is released.	No
4		Mode switch is pressed.	Yes
		Mode switch is released.	No

OK or NG



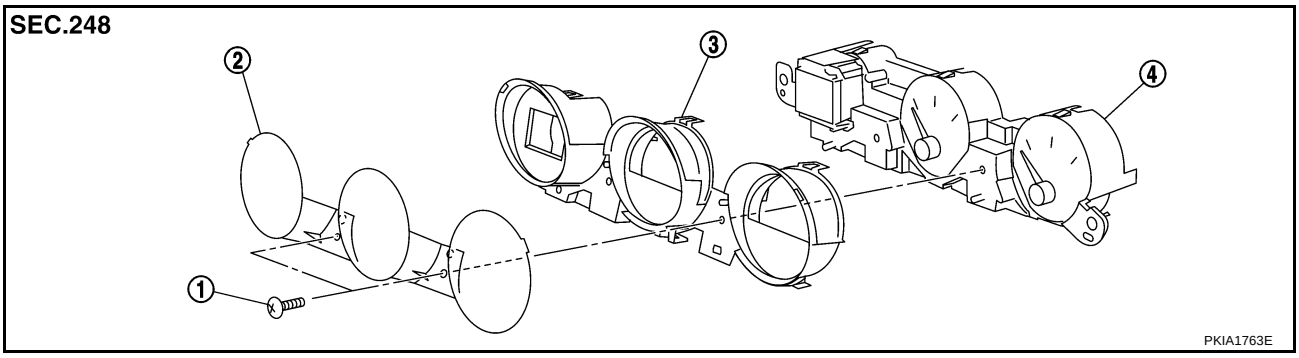
OK >> Replace combination meter.
NG >> Replace trip computer switch.

Removal and Installation of Triple Meters

NKS0006V

REMOVAL

1. Remove cluster lid C. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws (2), and remove triple meters.



INSTALLATION

Installation is the reverse order of removal.

Disassembly and Assembly for Triple Meters

NKS0006W

SEC.248

1. Screw
2. Front cover
3. Upper housing
4. Triple meter

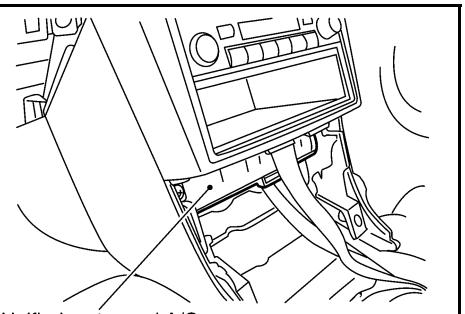
DISASSEMBLY

1. Remove screws (2), and remove front cover.
2. Disengage tabs (6) to separate upper housing.

ASSEMBLY

Assembly is the reverse order of disassembly.

UNIFIED METER AND A/C AMP



PFP:27760

System Description

NKS0006X

DESCRIPTION

- For the unified meter and A/C amp., the signal required for controlling the combination meter and triple meter are integrated in the A/C auto amp.
- Unified meter and A/C amp. corresponds a CONSULT-III function (self-diagnosis results, CAN diagnosis support monitor and data monitor).

Unified meter and A/C amp.
SKIB0018E

COMBINATION METER CONTROL FUNCTION

- Unified meter and A/C amp. receives necessary information for combination meter from each unit.
- Unified meter and A/C amp. converses with the combination meter transmits a signal through with communication line (TX, RX) between unified meter and A/C amp. and combination meter.

Input/output signals between unified meter and A/C amp. and combination meter.

Unit	Input	Output
Unified meter and A/C amp.	● Seat belt buckle switch signal (Driver's side) ● Trip computer mode switch signal ● Trip computer setting switch signal ● Illumination control nighttime required signal ● Refuel status signal ● Vehicle speed signal ● Low-fuel warning lamp condition signal ● Self-diagnosis condition signal ● Odo/trip switch signal ● Delivery destination data signal ● Combination meter receive error signal ● Combination meter specifications signal ● Triple meter specifications signal	● Engine speed signal ● Engine coolant temperature signal ● Fuel level sensor signal (resistance value) ● Malfunction indicator lamp signal ● ABS warning lamp signal ● Tire pressure warning lamp signal ● Brake warning lamp signal ● Oil pressure warning lamp signal ● Turn indicator signal ● High beam request signal ● VDC OFF indicator lamp signal ● TCS OFF indicator lamp signal ● SLIP indicator lamp signal ● CRUISE indicator lamp signal ● SET indicator lamp signal ● A/T CHECK indicator lamp signal ● A/T position indicator signal ● Manual mode indicator signal ● Manual mode gear position signal ● Shift-up indicator setting signal ● CAN communication condition signal of A/T ● Door switch signal ● Position lights request signal ● Buzzer output signal

NOTE:
Combination meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning. Refer to DI-7, "FAIL-SAFE" .

TRIPLE METER CONTROL FUNCTION

- Unified meter and A/C amp. receives necessary information for triple meter from each unit.
- Unified meter and A/C amp. calculates necessary information for trip computer.
- Unified meter and A/C amp. converses with the combination meter transmits a signal with through communication line (TX, RX) between unified meter and A/C amp. and triple meter.

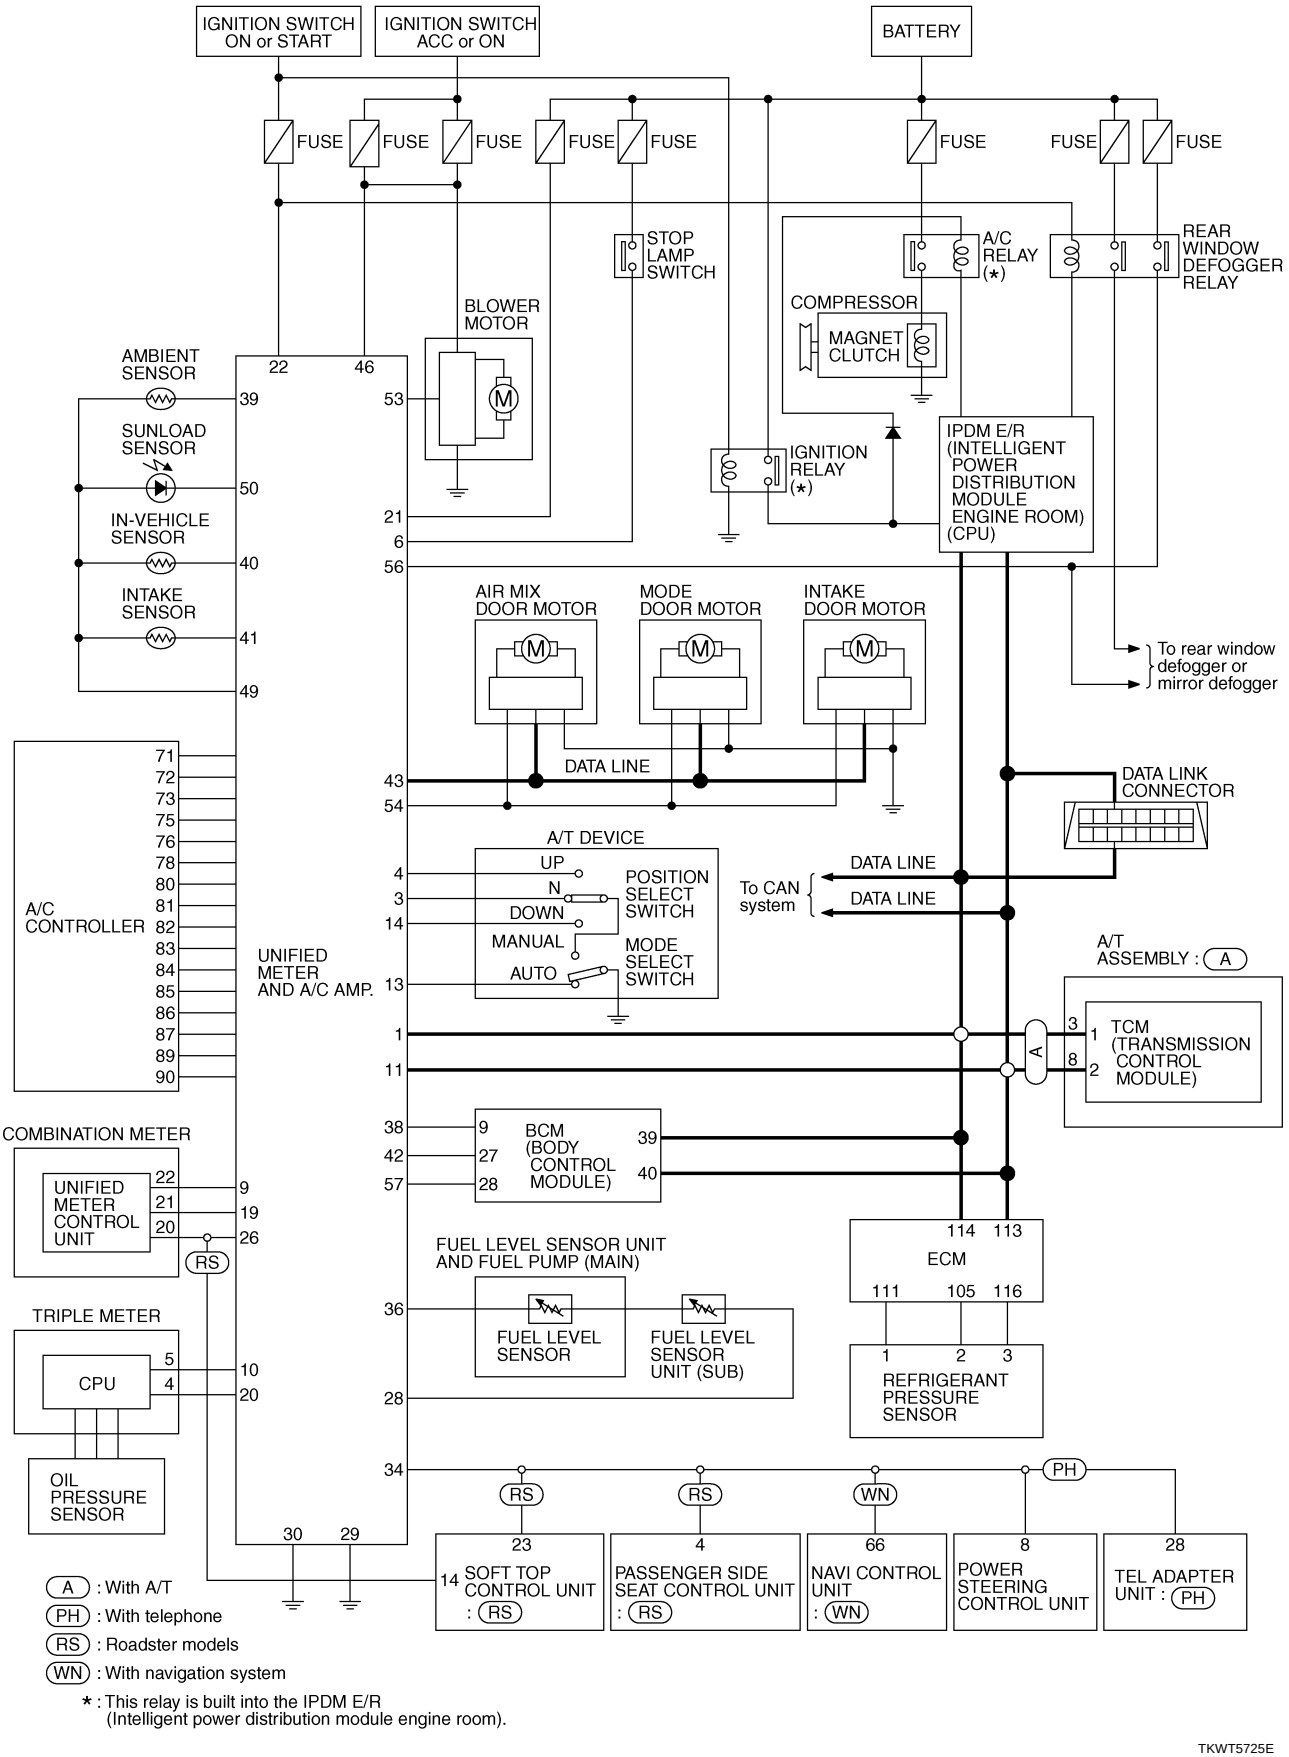
Input/output signals between unified meter and A/C amp. and triple meter

Unit	Input	Output
Unified meter and A/C amp.	● LCD indication condition signal ● Shift-up indicator setting signal ● Oil pressure warning lamp signal ● Triple meter receive error signal	● Ambient air temperature signal ● Ambient air temperature warning signal ● Trip distance signal ● Trip time signal ● Average vehicle speed signal ● Average fuel consumption signal ● Vehicle speed signal ● DTE (Distance to empty) signal ● DTE (Distance to empty) warning signal ● Tire pressure warning signal ● Trip computer mode switch signal ● Trip computer setting switch signal ● Self-diagnosis condition signal ● Odo/trip switch signal ● Triple meter specifications signal

NOTE:
Triple meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning. Refer to DI-29, "FAIL-SAFE" .

A/C AUTO AMP. FUNCTION

Unified meter and A/C amp. controls each operation for A/C auto amp. Regarding A/C control, refer to ATC-24, "AIR CONDITIONER CONTROL" in ATC section.



OTHER FUNCTIONS

Signal Buffer Function

Unified meter and A/C amp. transmits each signal to other units with CAN communication.

Schematic

NKS004RD

TKWT5725E

CONSULT-III Function (METER A/C AMP)

NKS00071

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

System	Diagnosis mode	Description
METER A/C AMP	SELF-DIAG RESULTS	Unified meter and A/C amp. check the conditions and displays memorized erro.
	DATA MONOTOR	Displays unified meter and A/C amp. input data in real time.

SELF-DIAGNOSTIC RESULTS

Display Item List

Display item [Code]	Malfunction is detected when...	Reference page
CAN COMM CIRC [U1000]	When unifield meter and A/C amp. is not transmitting or receiving CAN communication signal for 2 seconds or less.	DI-50
T/METER COMM CIRC [B2201]	Malfunction is detected in communication of between triple meter and unified meter and A/C amp.	DI-50
METER COMM CIRC [B2202]	Malfunction is detected in communication of between combination meter and unified meter and A/C amp.	DI-52
VEHICLE SPEED CIRC [B2205]	When an erroneous signal is input. **CAUTION:** **Even when there is no malfunction on speed signal system, malfunction may be misinterpreted when battery has low voltage (when maintaining 7 - 8 V for about 2 seconds).**	DI-55

NOTE:
"TIME" means the following.

- 0: Means detected malfunction at present.
- 1-63: Means detected malfunction in past. (Displays number of ignition switch OFF → ON after detecting malfunction. "Self-diagnosis result" is erased when exceeding "63".)

DATA MONITOR

Display Item List

Monitor item [Unit]	MAIN SIGNALS	SELECTION FROM MENU	Contents
SPEED METER [km/h] or [mph]	X	X	This is the angle correction value after the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] is converted into the vehicle speed.
SPEED OUTPUT [km/h] or [mph]	X	X	This is the angle correction value before the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] is converted into the vehicle speed.
TACHO METER [rpm]	X	X	This is the converted value for the engine speed signal from the ECM.
W TEMP METER [°C] or [°F]	X	X	This is the converted value for the engine coolant temperature signal from the ECM.
FUEL METER [lit.]	X	X	This is the processed value for the signal (resistance value) from the fuel gauge.
DISTANCE [km] or [mile]	X	X	This is the calculated value for the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] and the signal (resistance signal) from the fuel gauge.
FUEL W/L [ON/OFF]	X	X	Indicates [ON/OFF] condition of low-fuel warning lamp.
MIL [ON/OFF]		X	Indicates [ON/OFF] condition of malfunction indicator lamp.

Monitor item [Unit]		MAIN SIGNALS	SELECTION FROM MENU	Contents
AIR PRES W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of low tire pressure warning lamp.
SEAT BELT W/L*1	[ON/OFF]		X	Indicates [ON/OFF] condition of seat belt warning lamp.
BUZZER	[ON/OFF]	X	X	Indicates [ON/OFF] condition of buzzer.
DOOR W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of door warning lamp.
HI-BEAM IND	[ON/OFF]		X	Indicates [ON/OFF] condition of high beam indicator.
TURN IND	[ON/OFF]		X	Indicates [ON/OFF] condition of turn indicator.
OIL W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of oil pressure warning lamp.
VDC/TCS IND	[ON/OFF]		X	Indicates [ON/OFF] condition of VDC/TCS OFF indicator lamp.
ABS W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of ABS warning lamp.
SLIP IND	[ON/OFF]		X	Indicates [ON/OFF] condition of SLIP indicator lamp.
BRAKE W/L*2	[ON/OFF]		X	Indicates [ON/OFF] condition of brake warning lamp.
M RANGE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of manual mode range switch.
NM RANGE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of except for manual mode range switch.
AT SFT UP SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift up switch.
AT SFT DWN SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift down switch.
AT P MODE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T power mode switch.
AT S MODE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T snow mode switch.
BRAKE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of brake switch (stop lamp switch).
AT-M IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T manual mode indicator.
AT-M GEAR	[5/4/3/2/1]	X	X	Indicates [5/4/3/2/1] condition of A/T manual mode gear position.
P RANGE IND	ON/OFF	X	X	Indicates [ON/OFF] condition of A/T shift P range indicator.
R RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift R range indicator.
N RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift N range indicator.
D RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift D range indicator.
AT CHECK W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T CHECK warning lamp.
CRUISE IND	[ON/OFF]		X	Indicates [ON/OFF] condition of CRUISE indicator.
SET IND	[ON/OFF]		X	Indicates [ON/OFF] condition of SET indicator.

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

*1: It dose not change when fastening or unfastening the passenger seat belt.

*2: Monitor keeps indicating “OFF” when brake warning lamp is on by the parking brake operation or low brake fluid level.

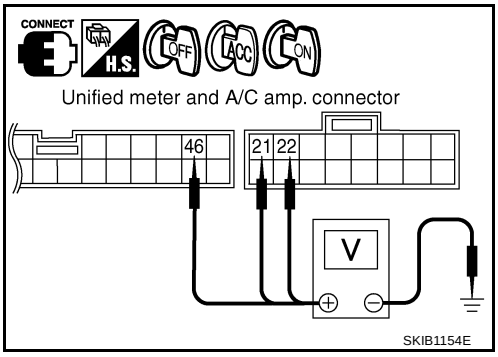
Power Supply and Ground Circuit Inspection

NKS001M5

1. CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	19
Ignition switch ACC or ON	10,11
Ignition switch ON or START	12



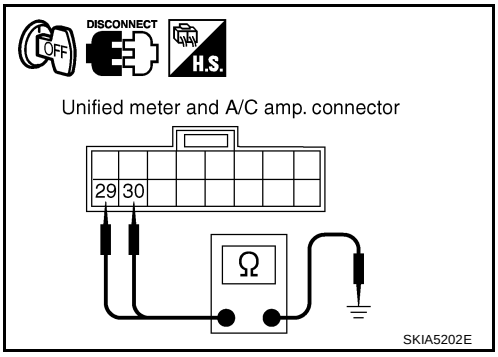
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between unified meter and A/C amp. harness connector terminals and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal				
M49	21	Ground	Battery voltage	Battery voltage	Battery voltage
M50	46		0 V	Battery voltage	Battery voltage
M49	22		0 V	0 V	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Check harness between unified meter and A/C amp. and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between unified meter and A/C amp. harness connector and ground.

Connector	Terminal		Continuity
M49	29	Ground	Yes
	30		

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

DTC [U1000] CAN Communication Circuit

NKS00072

Symptom: Display CAN COMM CIRC [U1000] at the result of self-diagnosis for unified meter and A/C amp.

1. CHECK CAN COMMUNICATION

1. Select “SELF-DIAG RESULTS” mode for “METER A/C AMP” with CONSULT-III.

>> Go to “LAN system”. Refer to LAN-48, "CAN System Specification Chart" .

DTC [B2201] Triple Meter Communication Circuit

NKS00073

Symptom: Display T/METER COMM CIRC [B2201] at the result of self-diagnosis for unified meter and A/C amp.

NOTE:
For the wiring diagram, refer to DI-31, "Wiring Diagram — 3METER —" .

1. CHECK CONNECTOR

Check triple meter, unified meter and A/C amp. and terminals (triple meter side, unified meter and A/C amp. side, and harness side) for looseness or bent terminals.

OK or NG

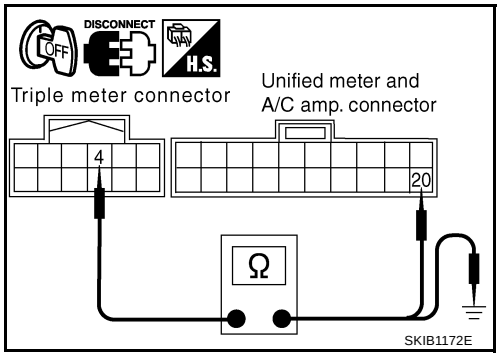
OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK METER/GAUGES VISUALLY

Does the pointer on the meter/gauges fluctuate at the engine start?

Is the fluctuation acceptable?

YES >> GO TO 3.
NO >> GO TO 6.



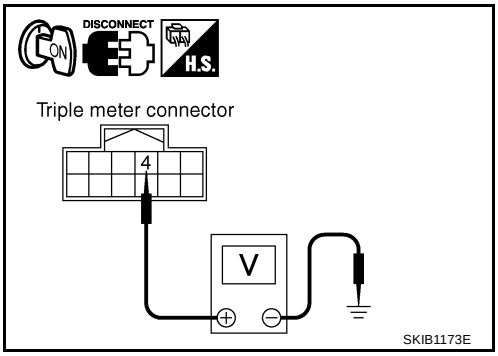
3. CHECK CONTINUITY COMMUNICATION CIRCUIT (TX: TRIPLE METER)

1. Turn ignition switch OFF.
2. Disconnect triple meter connector and unified meter and A/C amp. connector.
3. Check continuity between triple meter harness connector M44 terminal 4 and unified meter and A/C amp. harness connector M48 terminal 20.

4 – 20 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 4 (P) and ground.

4 – Ground : Continuity should not exist.



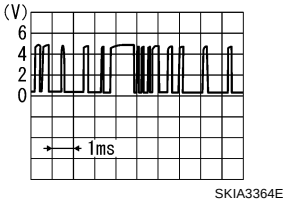
OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

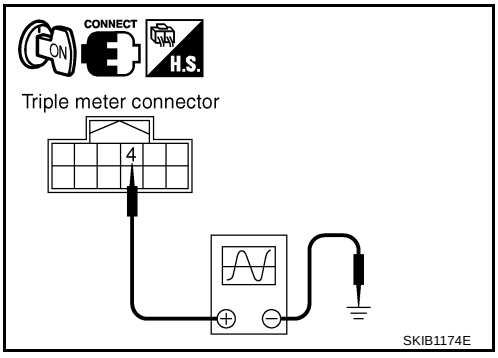
4. CHECK VOLTAGE OF UNIFIED METER AND A/C AMP.

1. Connect unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between triple meter harness connector M44 terminal 4 and ground.

4 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 5.
NG >> Replace unified meter and A/C amp.

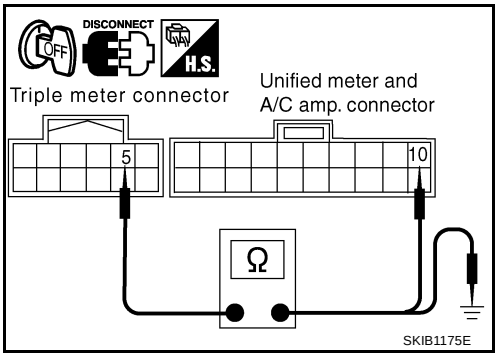
5. CHECK VOLTAGE SIGNAL OF COMBINATION METER

1. Turn ignition switch OFF.
2. Connect triple meter connector.
3. Turn ignition switch ON.
4. Check voltage signal between triple meter harness connector M44 terminal 4 and ground.

4 – Ground:

OK or NG

OK >> Replace unified meter and A/C amp.
NG >> Replace triple meter.



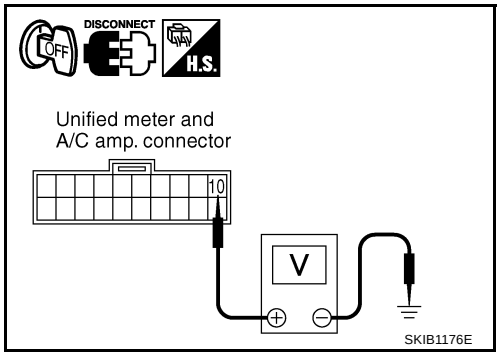
6. CHECK CONTINUITY COMMUNICATION CIRCUIT (RX: TRIPLE METER)

1. Turn ignition switch OFF.
2. Disconnect triple meter connector and unified meter and A/C amp. connector.
3. Check continuity between triple meter harness connector M44 terminal 5 and unified meter and A/C amp. harness connector M48 terminal 10.

5 – 10 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 5 and ground.

5 – Ground : Continuity should not exist.



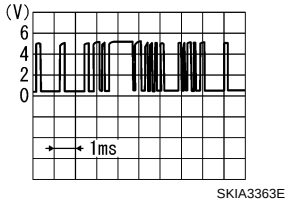
OK or NG

OK >> GO TO 7.
NG >> Repair harness or connector.

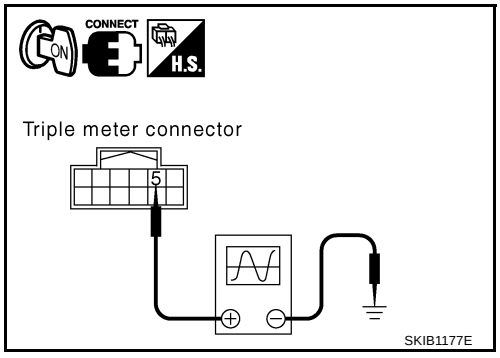
7. CHECK VOLTAGE OF COMBINATION METER

1. Connect triple meter connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M48 terminal 10 and ground.

10 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 8.
NG >> Replace triple meter.

8. CHECK VOLTAGE SIGNAL OF UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Connect triple meter connector and unified meter and A/C amp. connector.
3. Turn ignition switch ON.
4. Check voltage signal between triple meter harness connector M44 terminal 5 and ground.

5 – Ground :

OK or NG

OK >> Replace triple meter.
NG >> Replace unified meter and A/C amp.

DTC [B2202] Meter Communication Circuit

NKS00074

Symptom: Display METER COMM CIRC [B2202] at the result of self-diagnosis for unified meter and A/C amp.

NOTE:
For the wiring diagram, refer to DI-11, "Wiring Diagram — METER —" .

1. CHECK CONNECTOR

Check combination meter, unified meter and A/C amp. and terminals (combination meter side, unified meter and A/C amp. side, and harness side) for looseness or bent terminals.

OK or NG

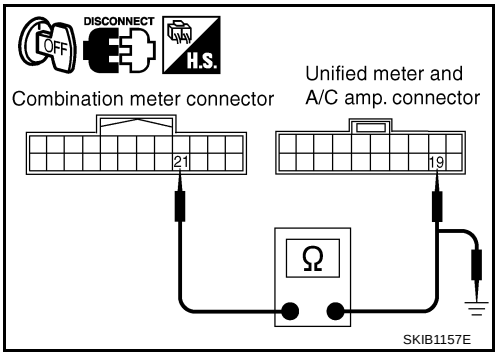
OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK METER/GAUGES VISUALLY

Does the pointer on the meter/gauges fluctuate at the engine start?

Is the fluctuation acceptable?

YES >> GO TO 3.
NO >> GO TO 6.



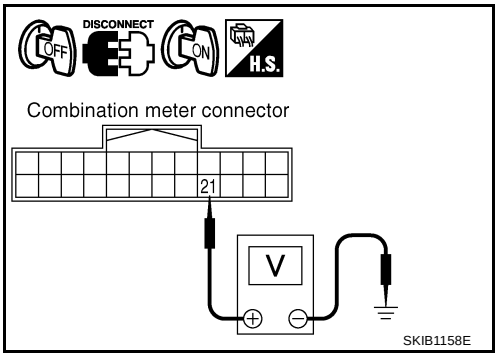
3. CHECK CONTINUITY COMMUNICATION CIRCUIT (TX: COMBINATION METER)

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 21 and unified meter and A/C amp. harness connector M48 terminal 19.

21 – 19 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 21 and ground.

21 – Ground : Continuity should not exist.



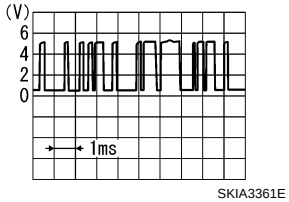
OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

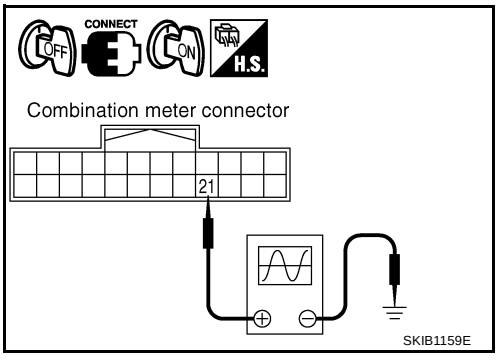
4. CHECK VOLTAGE OF UNIFIED METER AND A/C AMP.

1. Connect unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between combination meter harness connector M19 terminal 21 and ground.

21 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 5.
NG >> Replace unified meter and A/C amp.

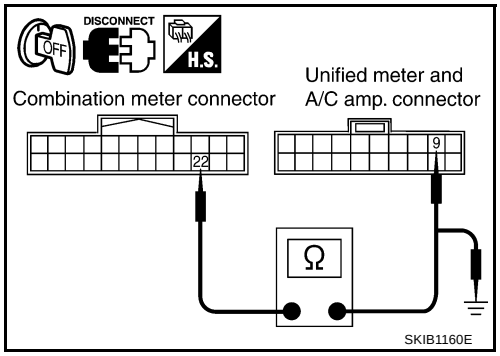
5. CHECK VOLTAGE SIGNAL OF COMBINATION METER

1. Turn ignition switch OFF.
2. Connect combination meter connector.
3. Turn ignition switch ON.
4. Check voltage signal between combination meter harness connector M19 terminal 21 and ground.

21 – Ground:

OK or NG

OK >> Replace unified meter and A/C amp.
NG >> Replace combination meter.



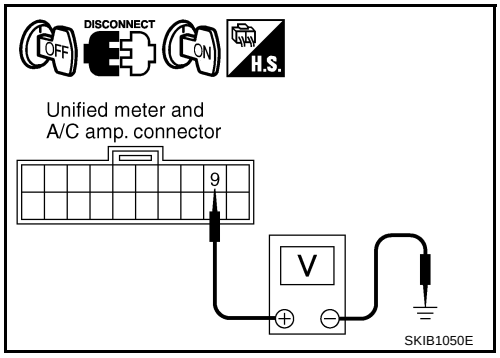
6. CHECK CONTINUITY COMMUNICATION CIRCUIT (RX: COMBINATION METER)

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 22 and unified meter and A/C amp. harness connector M48 terminal 9.

22 – 9 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 22 (L/OR) and ground.

22 – Ground : Continuity should not exist.



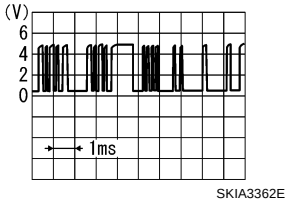
OK or NG

OK >> GO TO 7.
NG >> Repair harness or connector.

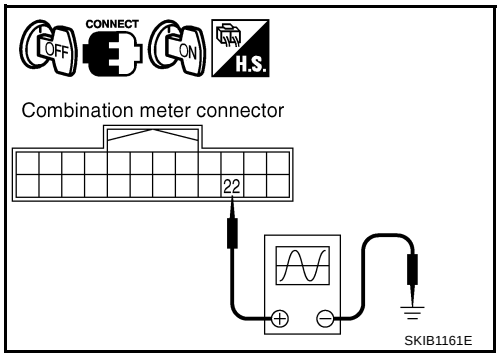
7. CHECK VOLTAGE OF COMBINATION METER

1. Connect combination meter connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M48 terminal 9 and ground.

9 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 8.
NG >> Replace combination meter.

8. CHECK VOLTAGE SIGNAL OF UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Connect unified meter and A/C amp. connector.
3. Turn ignition switch ON.
4. Check voltage signal between combination meter harness connector M19 terminal 22 and ground.

22 – Ground:

OK or NG

OK >> Replace combination meter.
NG >> Replace unified meter and A/C amp.

DTC [B2205] Vehicle Speed Circuit

NKS00075

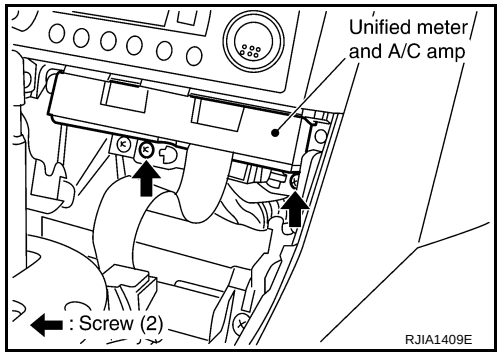
Symptom: Display VEHICLE SPEED CIRC [B2205] at the result of self-diagnosis for unified meter and A/C amp.

1. CHECK VDC/TCS/ABS CONTROL UNIT OR ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform the following unit self-diagnosis.

- VDC/TCS/ABS control unit [with VDC]. Refer to BRC-96, "CONSULT-III Functions (ABS)" .
- ABS actuator and electric unit (control unit) [without VDC]. Refer to BRC-52, "CONSULT-III MAIN FUNCTION" (with TCS) or BRC-19, "CONSULT-III MAIN FUNCTION" (without TCS).

Self-diagnostic results content



No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

Removal and Installation of Unified Meter and A/C Amp.

NKS00076

REMOVAL

1. Remove the console finisher (A/T) or console boot (M/T). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the fixing screws, then remove the unified meter and A/C amp.

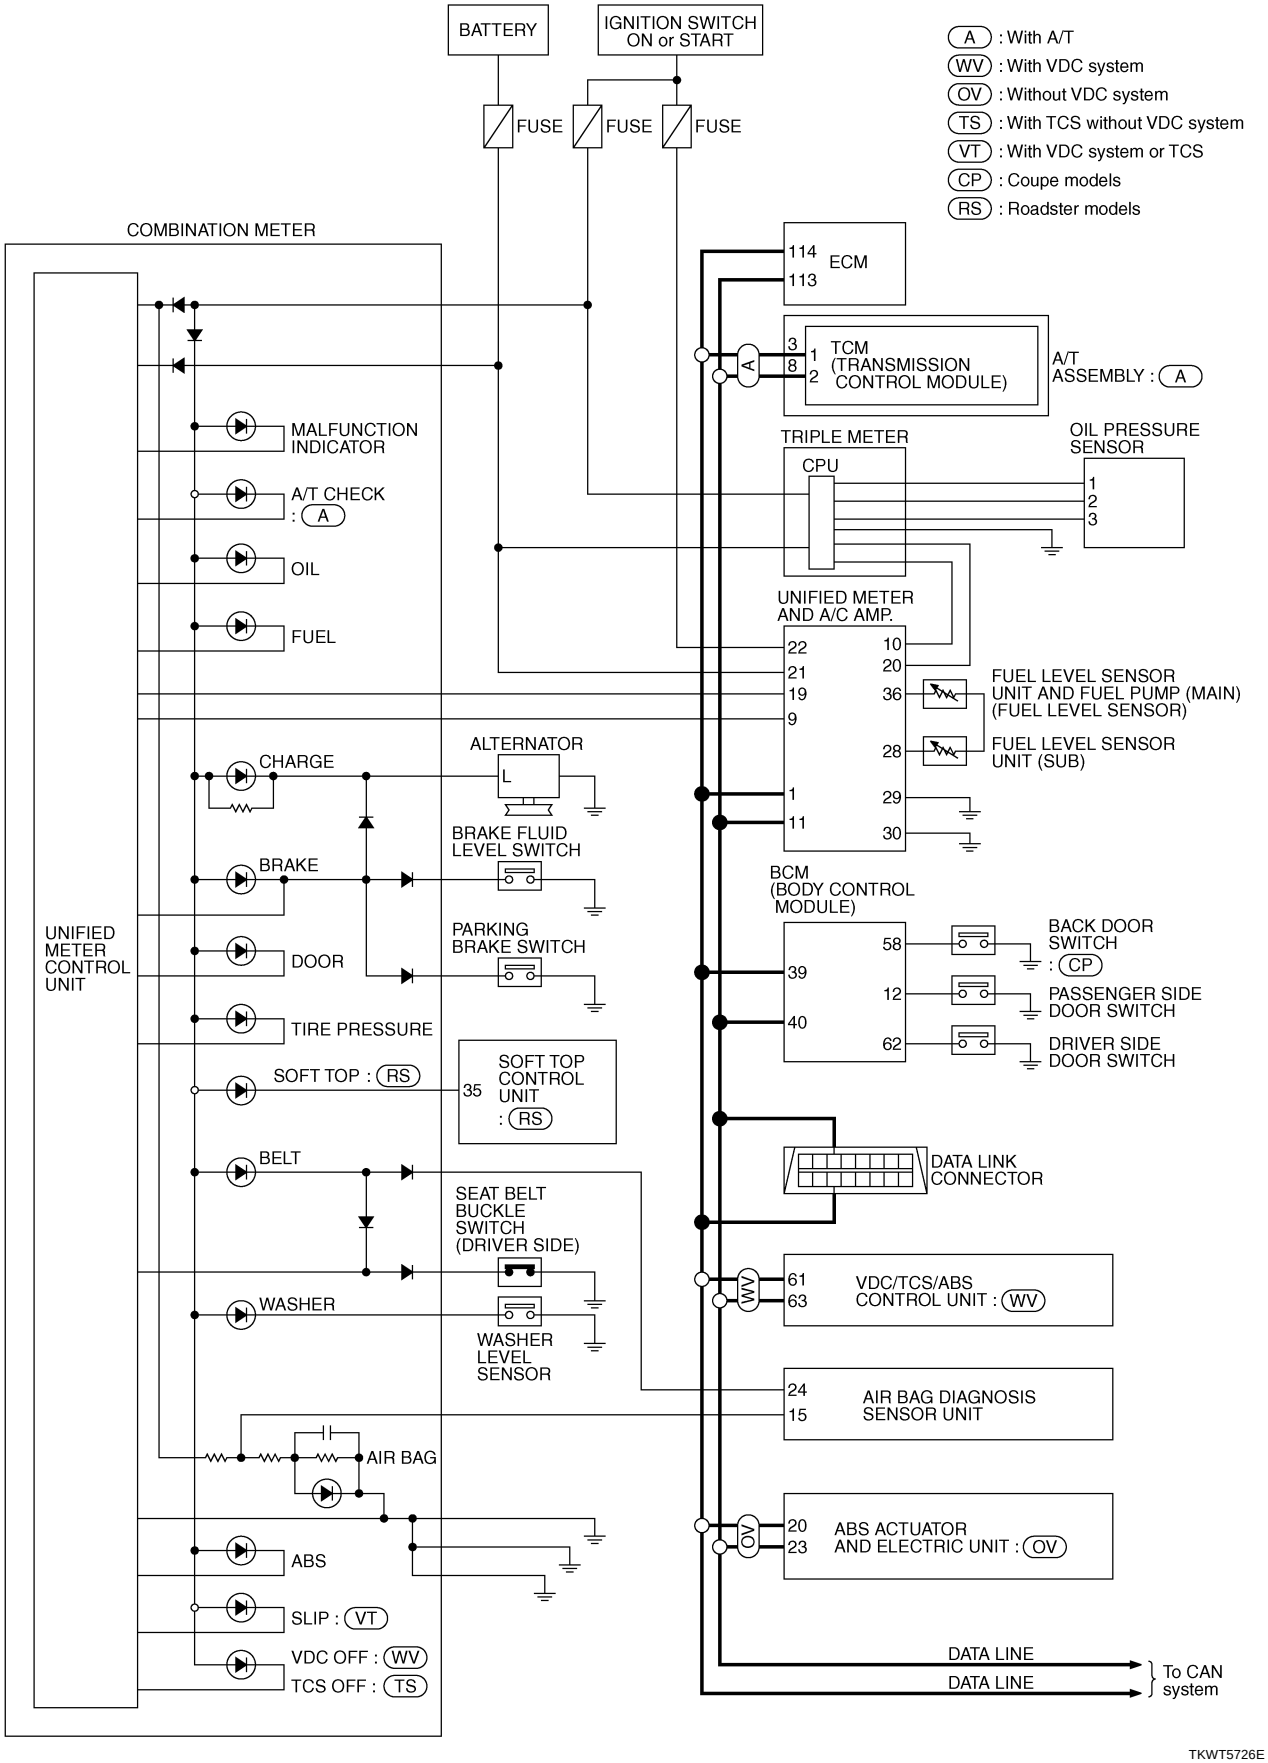
INSTALLATION

Installation is the reverse order of removal.

WARNING LAMPS

PFP:24814

System Description



NKS00264

OIL PRESSURE WARNING LAMP

- Triple meter reads oil pressure signal from oil pressure sensor.
- Triple meter judges an oil pressure condition by oil pressure signal, and transmits oil pressure warning lamp signal to unified meter and A/C amp. with communication line.
- Unified meter and A/C amp. transmits oil pressure switch signal to combination meter with communication line.
- Combination meter turns oil pressure warning lamp according to oil pressure switch signal.

Schematic

CONSULT-III Function (METER A/C AMP)

NKS00079

Refer to DI-15, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Oil Pressure Warning Lamp Stays Off (Ignition Switch ON) or Stays On (Oil Pressure Is Normal)

NKS0007A

NOTE:
For oil pressure inspection, refer to LU-7, "OIL PRESSURE CHECK" .

1. CHECK OIL PRESSURE GAUGE

Start the engine.

Does oil pressure gauge operate?

YES >> GO TO 2.
NO >> Check oil pressure sensor signal.

2. CHECK COMMUNICATION LINE

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-15, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>>GO TO 3.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

3. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

Select “METER A/C AMP” on CONSULT-III. Operate ignition switch with “OIL W/L” of “DATA MONITOR” and check operation status.

“OIL W/L”	
When ignition switch is in ON position (Engine stopped.)	: ON
When engine running	: OFF

OK or NG

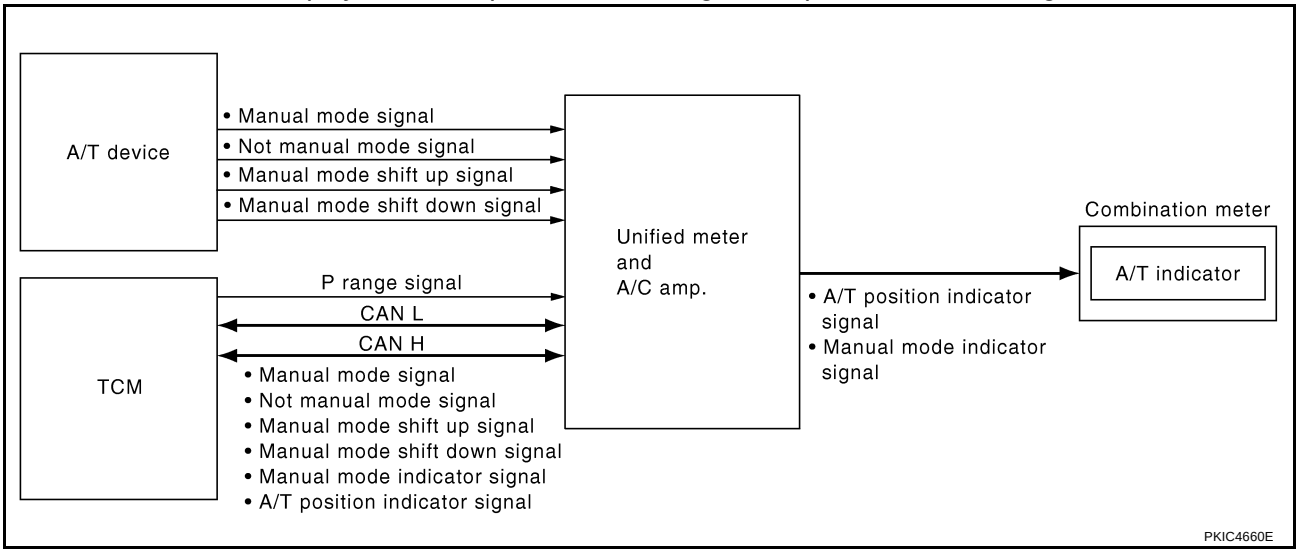
OK >> Replace combination meter.
NG >> Replace triple meter.

A/T INDICATOR

PFP:24814

System Description

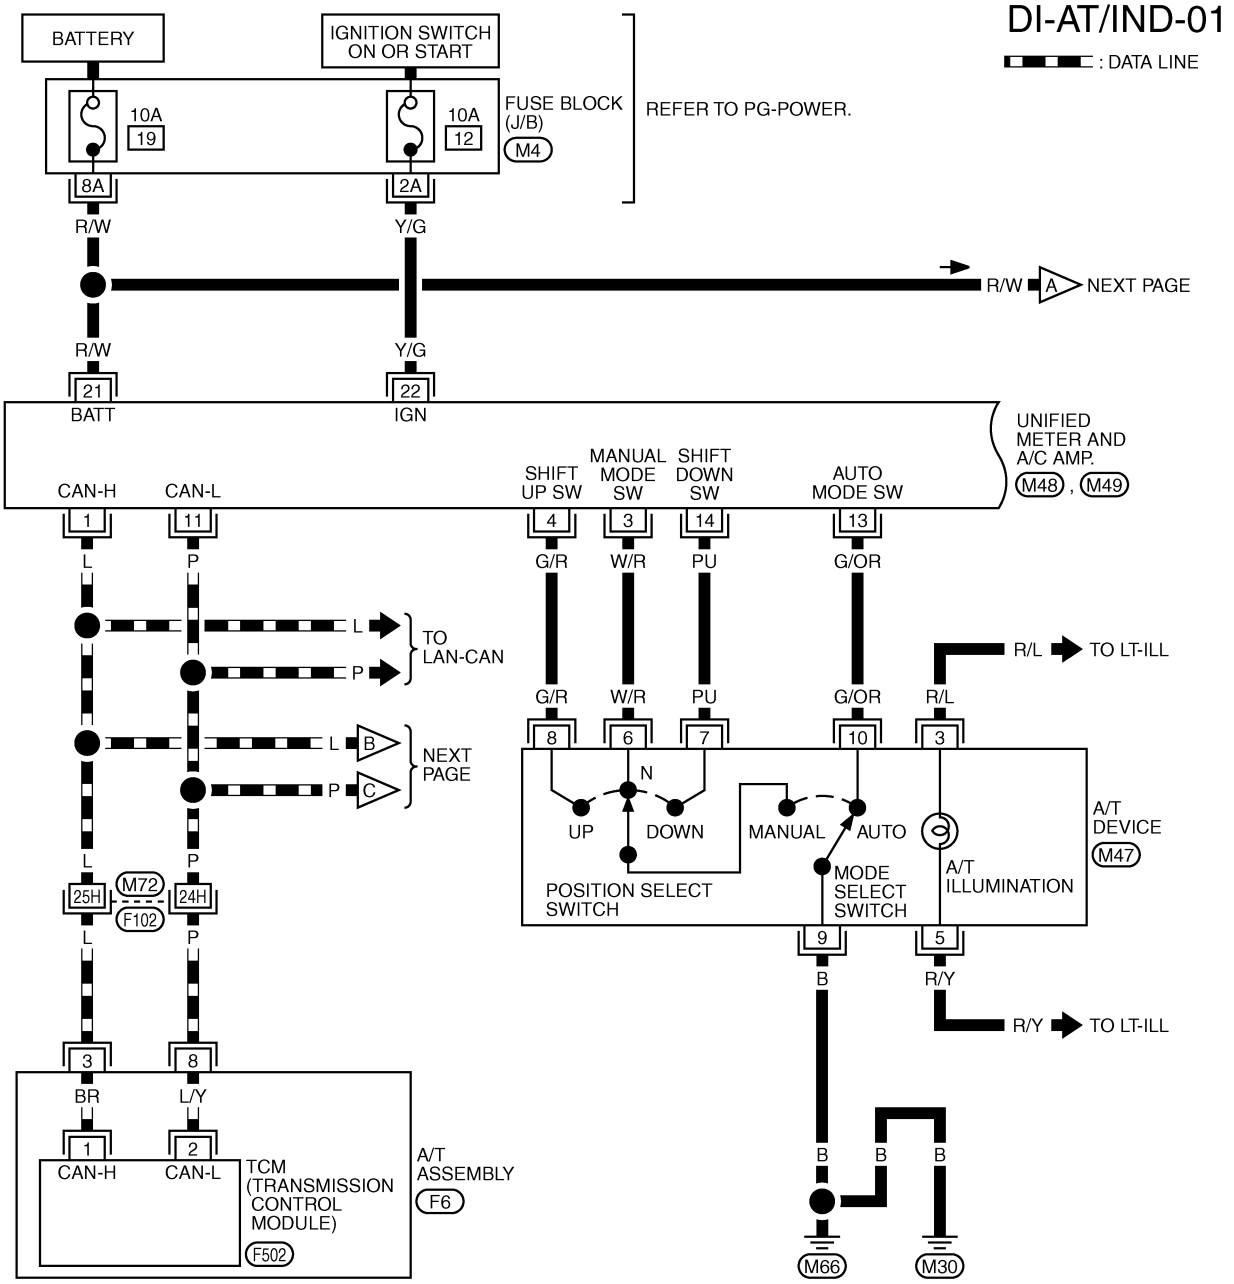
NKS00265



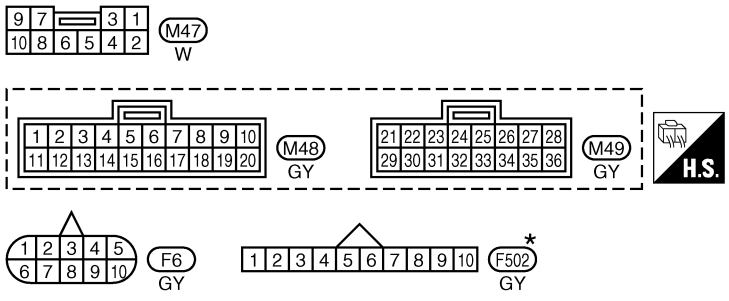
A/T position is displayed in the A/T indicator in the combination meter.

MANUAL MODE

- Unified meter and A/C amp. reads manual mode signal and shift-up/down signal from A/T device, and transmits the signals to TCM with CAN communication.
- TCM processes manual mode signal and shift-up/down signal, and transmits manual mode indicator signal and A/T position indicator signal to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits manual mode indicator signal and A/T position indicator signal to combination meter with the communication line.
- Combination meter displays A/T gear position and manual mode indicator according to A/T position indicator signal and manual mode indication signal.



NOT MANUAL MODE



- Unified meter and A/C amp. reads not manual mode signal from A/T device, and transmits the signals to TCM with CAN communication.
- TCM transmits A/T position indicator signal to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits A/T position indicator signal to combination meter with the communication line.
- Combination meter displays A/T shift position according to A/T position indicator signal.

Wiring Diagram — AT/IND —

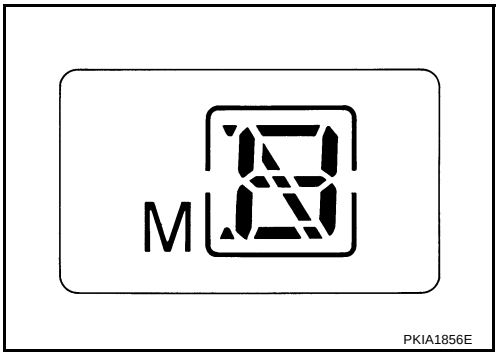
TKWT2309E

CONSULT-III Function (METER A/C AMP)

NKS0007C

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

A/T Indicator Is Malfunction



NKS0007D

1. CHECK A/T INDICATOR SEGMENTS

Perform self-diagnosis mode of combination meter. Refer to DI-15, "OPERATION PROCEDURE" .

Are all segments displayed?

YES >> GO TO 2.
NO >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>>GO TO 3.
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

3. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Use “DATA MONITOR” of “METER A/C AMP” on CONSULT-III. Confirm each indication on the monitor when shifting the selector lever.

CONSULT-II display	Selector lever position	Status
AT-M IND	Manual mode range	ON
	Except for manual mode range	OFF
AT-M GEAR	Manual mode range (shift up or down)	5–1
	Except for manual mode range	1
P RANGE IND	P range	ON
	Except for P range	OFF
R RANGE IND	R range	ON
	Except for R range	OFF
N RANGE IND	N range position	ON
	Except for N range	OFF
D RANGE IND	D range position	ON
	Except for D range	OFF

OK or NG

OK >> Replace combination meter.
NG >> GO TO 4.

4. CHECK TCM (CONSULT-III)

Perform TCM self-diagnosis. Refer to AT-84, "CONSULT-III Function (TRANSMISSION)" .

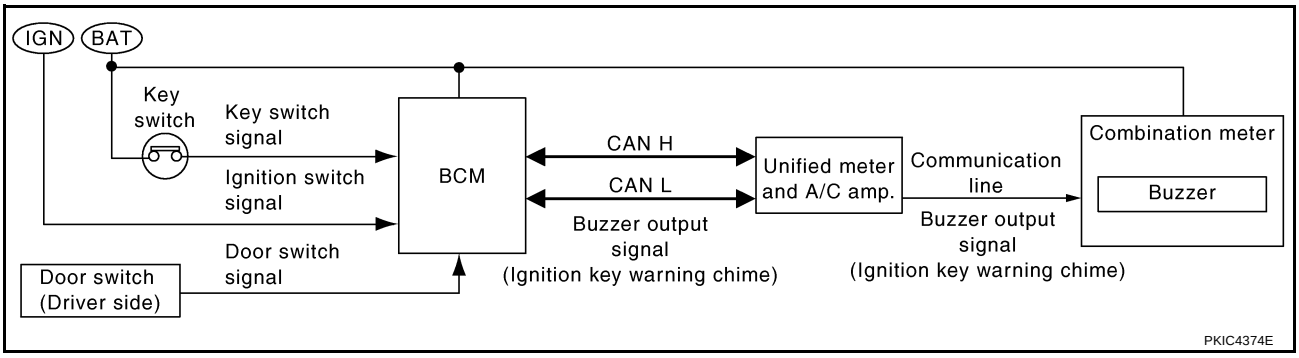
Self-diagnostic results

No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

WARNING CHIME

PFP:24814

System Description

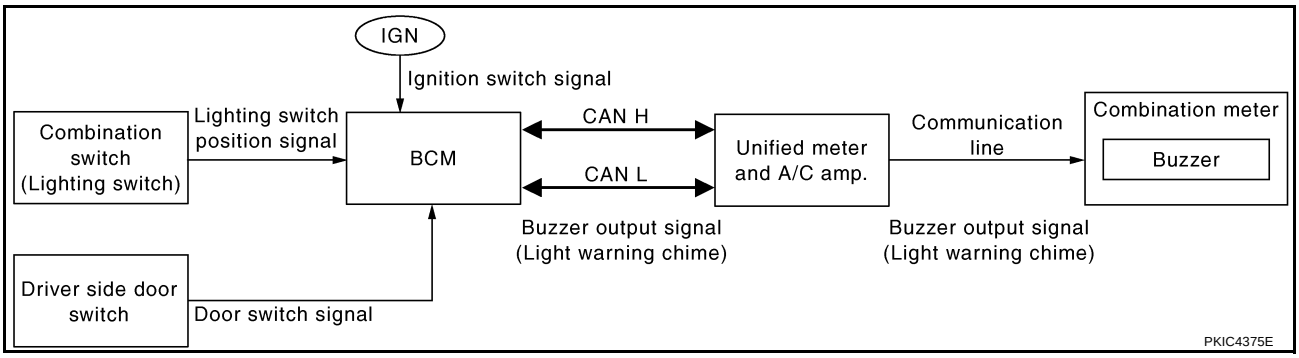


NKS00266

- The buzzer for warning chime system is installed in the combination meter.
- The buzzer sounds when the combination meter receives buzzer output signal from each unit through unified meter and A/C amp.

IGNITION KEY WARNING CHIME

With the key inserted into the key switch, and the ignition switch in OFF or ACC position, when driver's door is open, the ignition key warning chime sounds.

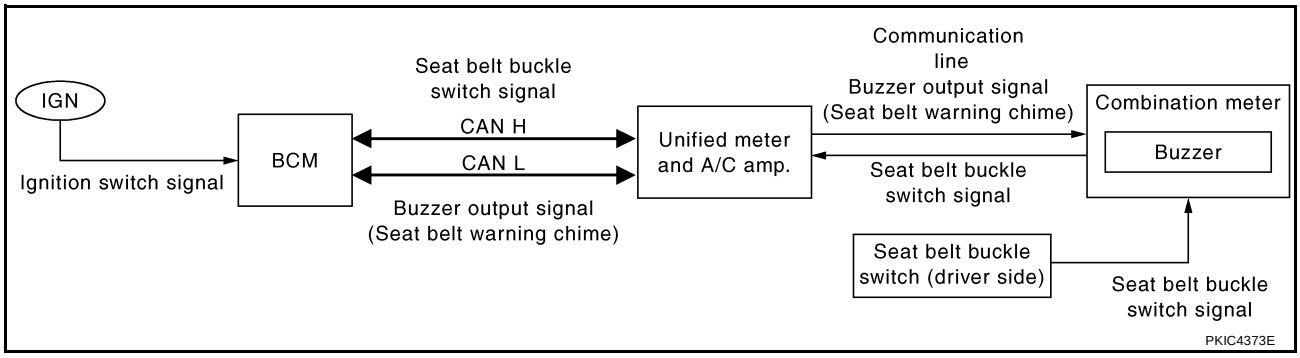


- BCM detects key inserted into the key switch, ignition switch in OFF or ACC position, and driver side door switch ON. And then, BCM transmits buzzer output signal (ignition key warning chime) to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits buzzer output signal (ignition key warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (ignition key warning chime), it sounds the buzzer.

LIGHT WARNING CHIME

With ignition switch in OFF or ACC position, drivers door open, and lighting switch in 1ST or 2ND position, the light warning chime will sounds.

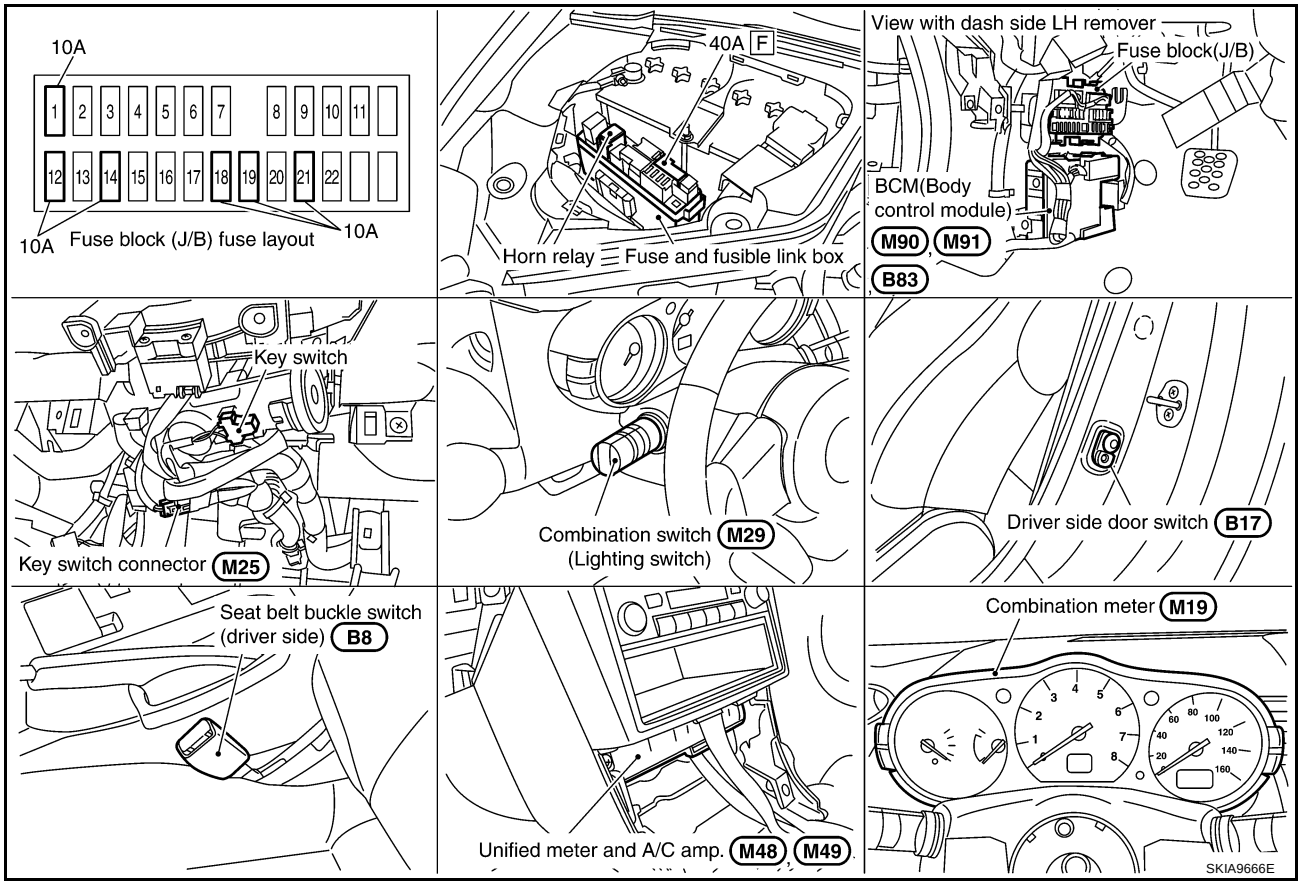
- BCM detects ignition switch in OFF or ACC position, driver side door switch ON, and lighting switch in 1ST or 2ND position. And then, BCM transmits buzzer output signal (light warning chime) to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits buzzer output signal (light warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (light warning chime), it sounds the buzzer.



NOTE:

For further details of combination switch, refer to LT-87, "Combination Switch Reading Function" .

SEAT BELT WARNING CHIME



With ignition switch turned ON and driver seat belt unfastened, seat belt warning chime sounds for approximately 6 seconds.

- Combination meter reads a ON/OFF signal from seat belt buckle switch, and transmits seat belt buckle switch signal to unified meter and A/C amp. with communication line.
- BCM receives seat belt buckle switch signal (driver side) from unified meter and A/C amp. with CAN communication line.
- BCM detects ignition switch turned ON and seat belt buckle switch (driver side) ON. And then, BCM transmits buzzer output signal (seat belt warning chime) to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits buzzer output signal (seat belt warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (seat belt warning chime), it sounds the buzzer.

CONSULT-III Function (METER A/C AMP)

NKS0007O

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

CONSULT-III Function (BCM)

NKS0007P

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

DIAGNOSTIC ITEMS DESCRIPTION

System	Test item	Diagnosis mode	Description
BCM	BCM	SELF-DIAG RESULT	BCM performs self-diagnosis of CAN communication.
	BUZZER	DATA MONITOR	The input data to the BCM control unit is displayed in real time.
		ACTIVE TEST	Operation of electrical loads can be checked by sending driving signal to them.

DATA MONITOR

Display Item List

Monitor item [Unit]		ALL SIGNALS	SELECTION FROM MENU	Contents
IGN ON SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of ignition switch.
KEY ON SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	[ON/OFF]	X	X	Indicates [ON/OFF] condition of driver side door switch.
LIGHT SW 1ST	[ON/OFF]	X	X	Indicates [ON/OFF] condition of lighting switch.
BUCKLE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of seat belt switch.

ACTIVE TEST

Display Item List

Test item	Malfunction is detected when…
LIGHT WARN ALM	This test is able to check light warning chime operation.
IGN KEY WARN ALM	This test is able to check ignition key warning chime operation.
SEAT BELT WARN ALM	This test is able to check seat belt warning chime operation.

SELF-DIAGNOSTIC RESULTS

Display Item List

Display item [Code]	Malfunction is detected when…
CAN communication [U1000]	Malfunction is detected in CAN communication.

NOTE:
If “CAN communication [U1000]” is indicated, after printing the monitor item, go to “CAN system”. Refer to LAN-48, "CAN System Specification Chart" .

Trouble Diagnosis

NKS00267

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom and customer complaint.
2. Understand the outline of system. Refer to DI-71, "System Description" .
3. Perform the preliminary inspection. Refer to DI-84, "PRELIMINARY INSPECTION" .
4. Referring to trouble diagnosis chart, make sure the cause of the malfunction and repair or replace applicable parts. Refer to DI-84, "Symptom Chart" .
5. Does warning chime system operate normally? If yes, GO TO 6. If no, GO TO 4.
6. INSPECTION END

PRELIMINARY INSPECTION

1. CHECK BCM (CONSULT-III)

Perform self-diagnosis of BCM. Refer to BCS-15, "CONSULT-III Function (BCM)" .

Self-diagnostic results

No malfunction detected>> GO TO 2.
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>> INSPECTION END
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

Symptom Chart

NKS00268

Symptom	Diagnoses/Service procedure
All warning chimes do not activate.	Perform the following inspections. 1. DI-84, "Power Supply and Ground Circuit Inspection". 2. DI-85, "Meter Buzzer Circuit Inspection". Replace BCM, found normal function in the above inspections.
Ignition key warning chime does not activate.	Perform the following inspections. 1. DI-87, "Key Switch Signal Inspection". 2. DI-86, "Driver Side Door Switch Signal Inspection". Replace BCM, found normal function in the above inspection.
Light warning chime does not activate.	Perform the following inspections. 1. DI-88, "Lighting Switch Signal Inspection". 2. DI-86, "Driver Side Door Switch Signal Inspection". Replace BCM, found normal function in the above inspection.
Seat belt warning chime does not activate.	Perform DI-88, "Seat Belt Buckle Switch (Driver Side) Signal Inspection" . Replace BCM, found normal function in the above inspection.

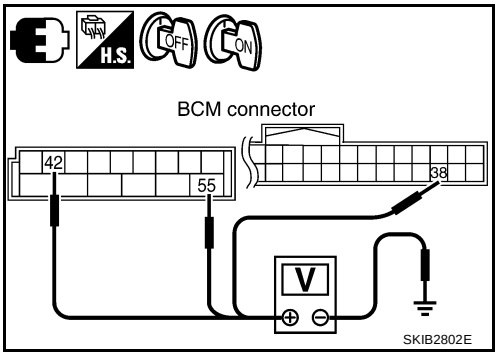
Power Supply and Ground Circuit Inspection

NKS00269

1. CHECK FUSE AND FUSIBLE LINK

Check for blown BCM fuse and fusible link.

Unit	Power source	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START	1



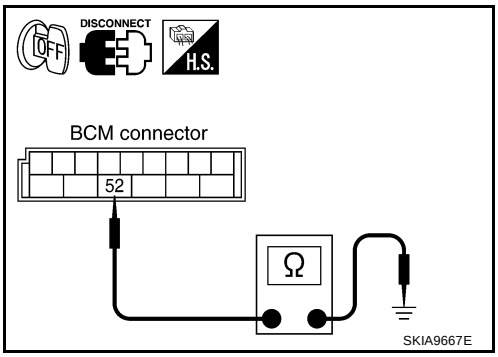
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position	
(+)		(–)	OFF	ON
Connector	Terminal (Wire color)			
M91	42	Ground	Battery voltage	Battery voltage
	55			
M90	38		0 V	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness between BCM and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector M91 terminal 52 and ground.

52 – Ground : Continuity should exist.

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

Meter Buzzer Circuit Inspection

NKS0026F

1. CHECK OPERATION OF METER BUZZER

1. Select “BUZZER” of “BCM” on CONSULT-III.
2. Perform “LIGHT WARN ALM”, “IGN KEY WARN ALM” or “SEAT BELT WARN ALM” of “ACTIVE TEST”.

Does meter buzzer beep?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “METER A/C AMP” on CONSULT-III.
2. With “DATA MONITOR”, confirm “BUZZER” under the condition of buzzer input. (Seat belt warning chime, turn signal lamp operate, etc.)

“BUZZER”
Under the condition of buzzer input : ON
Except above : OFF

OK or NG

OK >> Replace combination meter.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

3. CHECK BATTERY POWER SUPPLY OF COMBINATION METER

Check battery power supply of combination meter. Refer to DI-17, "Power Supply and Ground Circuit Inspection" in combination meter.

OK or NG

OK >> GO TO 4.
NG >> Repair battery power supply circuit of combination meter.

4. CHECK BATTERY POWER SUPPLY OF UNIFIED METER AND A/C AMP.

Check battery power supply of unified meter and A/C amp. Refer to DI-49, "Power Supply and Ground Circuit Inspection" in unified meter and A/C amp.

OK or NG

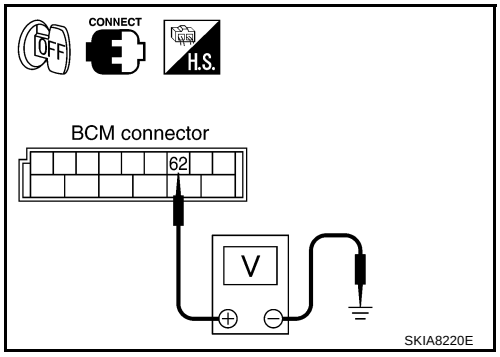
OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair battery power supply circuit of unified meter and A/C amp.

Driver Side Door Switch Signal Inspection

NKS0026A

1. CHECK BCM INPUT SIGNAL

With CONSULT-III



1. Select “BCM”.
2. With “DATA MONITOR” of “BUZZER”, confirm “DOOR SW-DR” when the driver side door is operated.

“DOOR SW-DR”
When driver side door is opened : ON
When driver side door is closed : OFF

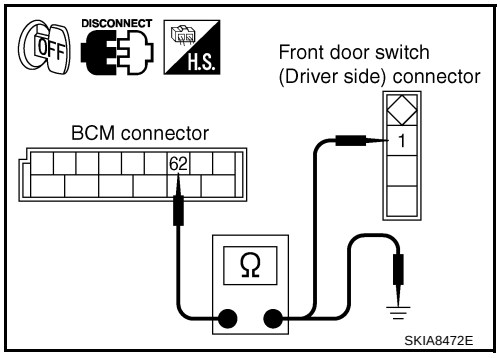
Without CONSULT-III

Check voltage between BCM harness connector B83 terminal 62 and ground.

62 – Ground
When driver side door is opened : Approx. 0 V
When driver side door is closed : Approx. 5 V

OK or NG

OK >> INSPECTION END
NG >> GO TO 2.



2. CHECK DRIVER SIDE DOOR SWITCH CIRCUIT

1. Disconnect BCM connector and driver side door switch connector.
2. Check continuity between BCM harness connector B83 terminal 62 and driver side door switch harness connector B17 terminal 1.

62 – 1 : Continuity should exist.

3. Check continuity between BCM harness connector B4 terminal 62 (W) and ground.

62 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK DRIVER SIDE DOOR SWITCH

Check driver side door switch. Refer to DI-90, "DRIVER SIDE DOOR SWITCH" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Replace driver side door switch.

Key Switch Signal Inspection

NKS0026B

1. CHECK FUSE

Check if the key switch 10A fuse [No. 21, located in the fuse block (J/B)] is blown.

OK or NG

OK >> GO TO 2.
NG >> Be sure to repair the cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK BCM INPUT SIGNAL

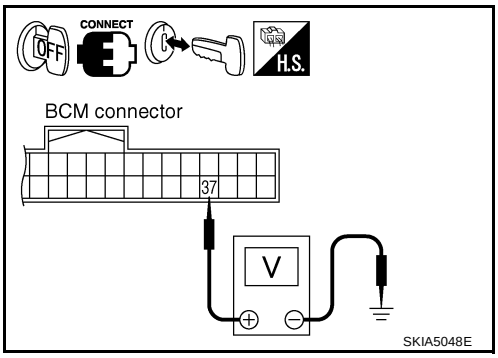
With CONSULT-III

1. Select “BCM”.
2. With “DATA MONITOR” of “BUZZER”, confirm “KEY ON SW” when the key switch is operated.

“KEY ON SW”

When key is inserted to ignition key cylinder : ON

When key is removed from ignition key cylinder : OFF



Without CONSULT-III

Check voltage between BCM harness connector M90 terminal 37 and ground.

37 – Ground

When key is inserted to ignition key cylinder : Approx. 12 V

When key is removed from ignition key cylinder : Approx. 0 V

OK or NG

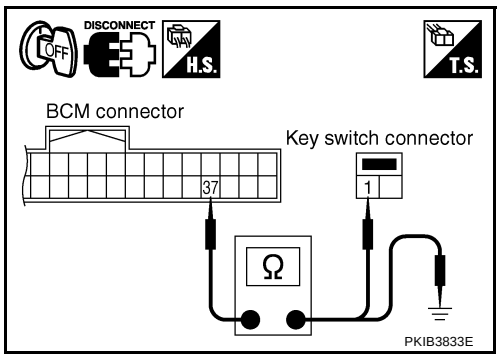
OK >> INSPECTION END
NG >> GO TO 3.

3. CHECK KEY SWITCH

Check continuity between key switch. Refer to DI-90, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace key switch.



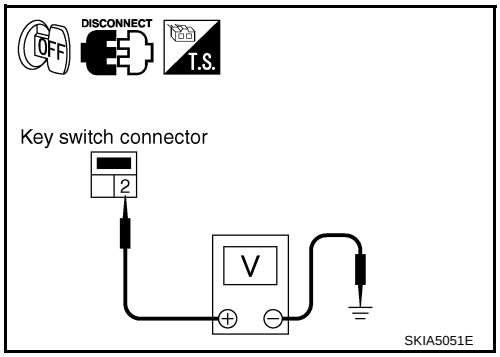
4. CHECK KEY SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 37 and key switch harness connector M25 terminal 1.

37 – 1 : Continuity should exist.

3. Check continuity between BCM harness connector M90 terminal 37 and ground.

37 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

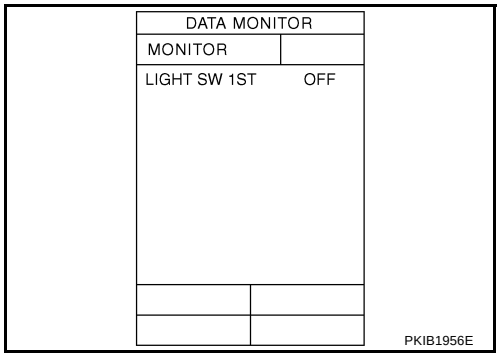
5. CHECK KEY SWITCH POWER SUPPLY CIRCUIT

Check voltage between key switch harness connector M25 terminal 2 and ground.

2 – Ground : Battery voltage

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check continuity between key switch and fuse.



Lighting Switch Signal Inspection

NKS0026C

1. CHECK BCM INPUT SIGNAL

1. Select “BCM” on CONSULT-III.
2. With “DATA MONITOR” of “BUZZER”, confirm “LIGHT SW 1ST” when the lighting switch is operated.

“LIGHT SW 1ST”
Lighting switch (1st position) : ON
Lighting switch (OFF) : OFF

OK or NG

OK >> INSPECTION END
NG >> Check lighting switch. Refer to LT-92, "Combination Switch Inspection" .

Seat Belt Buckle Switch (Driver Side) Signal Inspection

NKS0026D

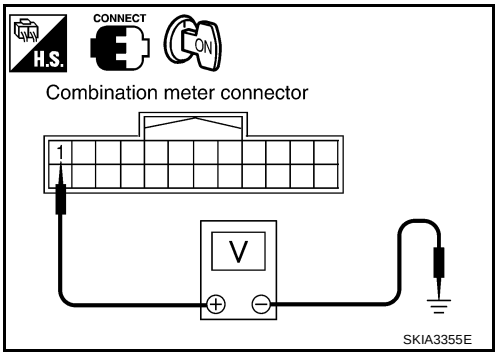
1. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) SIGNAL INPUT (BCM)

1. Select “BCM” on CONSULT-III.
2. With “DATA MONITOR” of “BUZZER”, confirm “BUCKLE SW” when the seat belt buckle switch (driver side) is operated.

“BUCKLE SW”
When seat belt is fastened : OFF
When seat belt is unfastened : ON

OK or NG

OK >> INSPECTION END
NG >> GO TO 2.



2. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) SIGNAL INPUT (COMBINATION METER)

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector M19 terminal 1 and ground.

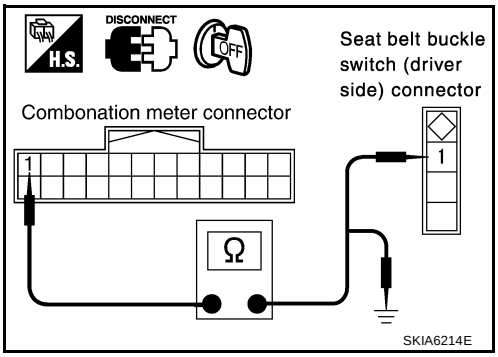
1 – Ground

When seat belt is fastened : Approx. 12 V

When seat belt is unfastened : Approx. 0 V

OK or NG

OK >> Replace combination meter.
NG >> GO TO 3.



3. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and seat belt buckle switch (driver side) connector.
3. Check continuity between combination meter harness connector M19 terminal 1 and seat belt buckle switch (driver side) harness connector B8 terminal 1.

1 – 1 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 1 and ground.

1 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

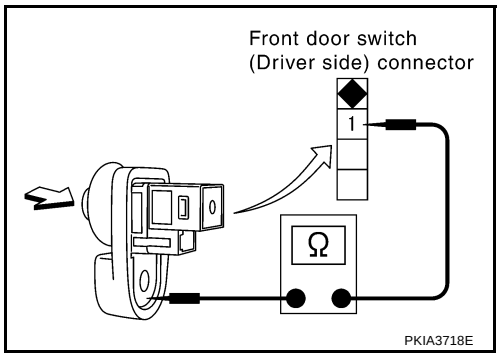
4. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check seat belt buckle switch (driver side). Refer to DI-90, "SEAT BELT BUCKLE SWITCH (DRIVER SIDE)" .

OK or NG

OK >> Check seat belt buckle switch (driver side) ground circuit.
NG >> Replace seat belt buckle switch (driver side).

Component Inspection



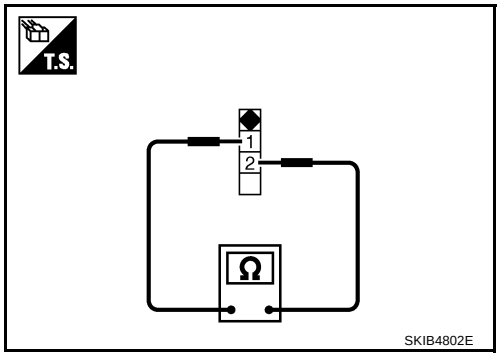
NKS0026E

DRIVER SIDE DOOR SWITCH

Check continuity between terminal 1 and door switch case ground.

1 – Door switch case ground

When driver side door switch is released	**: Continuity should exist.**
When driver side door switch is pressed	**: Continuity should not exist.**

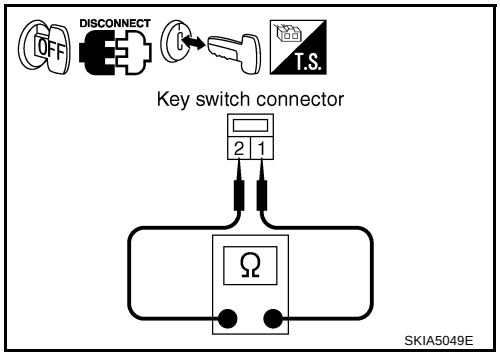


SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check continuity between terminals 1 and 2.

1 – 2

When seat belt (driver side) is fastened	**: Continuity should not exist.**
When seat belt (driver side) is unfastened	**: Continuity should exist.**



KEY SWITCH

Check continuity between key switch terminals 1 and 2.

1 – 2

When key is inserted to ignition key cylinder	**: Continuity should exist.**
When key is removed from ignition key cylinder	**: Continuity should not exist.**

CAN COMMUNICATION

PFP:23710

System Description

NKS001M6

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

NKS001M7

Refer to LAN-48, "CAN System Specification Chart" in “LAN SYSTEM”.

Diagnostic Procedure 606
Component Inspection 609
DTC P1572 ASCD BRAKE SWITCH 610
Component Description 610
CONSULT-III Reference Value in Data Monitor Mode 610
On Board Diagnosis Logic 610
DTC Confirmation Procedure 611
Wiring Diagram 612
Diagnostic Procedure 615
Component Inspection 624
DTC P1574 ASCD VEHICLE SPEED SENSOR 625
Component Description 625
On Board Diagnosis Logic 625
DTC Confirmation Procedure 625
Diagnostic Procedure 626
DTC P1715 INPUT SPEED SENSOR (TURBINE REVOLUTION SENSOR) 627
Description 627
CONSULT-III Reference Value in Data Monitor Mode 627
On Board Diagnosis Logic 627
Diagnostic Procedure 627
DTC P1805 BRAKE SWITCH 628

Description 628
CONSULT-III Reference Value in Data Monitor Mode 628
On Board Diagnosis Logic 628
DTC Confirmation Procedure 628
Wiring Diagram 629
Diagnostic Procedure 630
Component Inspection 632
DTC P2122, P2123 APP SENSOR 633
Component Description 633
CONSULT-III Reference Value in Data Monitor Mode 633
On Board Diagnosis Logic 633
DTC Confirmation Procedure 634
Wiring Diagram 635
Diagnostic Procedure 637
Component Inspection 640
Removal and Installation 640
DTC P2127, P2128 APP SENSOR 641
Component Description 641
CONSULT-III Reference Value in Data Monitor Mode 641
On Board Diagnosis Logic 641
DTC Confirmation Procedure 642
Wiring Diagram 643
Diagnostic Procedure 645
Component Inspection 648
Removal and Installation 649
DTC P2138 APP SENSOR 650
Component Description 650
CONSULT-III Reference Value in Data Monitor Mode 650
On Board Diagnosis Logic 650
DTC Confirmation Procedure 651
Wiring Diagram 652
Diagnostic Procedure 654
Component Inspection 658
Removal and Installation 658
DTC P2A00, P2A03 A/F SENSOR 1 659
Component Description 659
CONSULT-III Reference Value in Data Monitor Mode 659
On Board Diagnosis Logic 659
DTC Confirmation Procedure 660
Wiring Diagram 661
Diagnostic Procedure 665
Removal and Installation 670
ASCD BRAKE SWITCH 671
Component Description 671
CONSULT-III Reference Value in Data Monitor Mode 671

Fuel Pump 719

INDEX FOR DTC

PFP:00024

DTC No. Index

NBS00027

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

INDEX FOR DTC

DTC*1		Items (CONSULT-III screen terms)	Reference page
CONSULT-III GST*2	ECM*3		
P2A00	2A00	A/F SENSOR1 (B1)	EC-659
P2A03	2A03	A/F SENSOR1 (B2)	EC-659

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: The troubleshooting for this DTC needs CONSULT-III.

Alphabetical Index

NBS00028

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

*1: 1st trip DTC No. is the same as DTC No.

*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: The troubleshooting for this DTC needs CONSULT-III.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

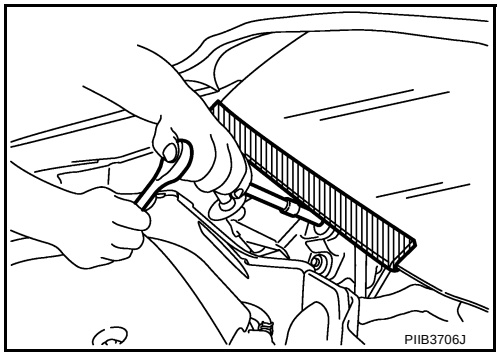
NBS00029

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NBS0002A

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

NBS006TI

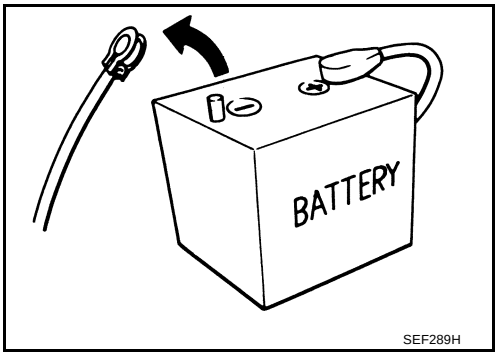
When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

On Board Diagnostic (OBD) System of Engine and A/T

NBS0002B

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

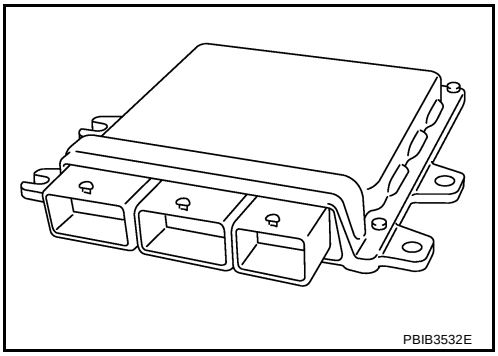
CAUTION:



- **Be sure to turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG-76, "HARNESS CONNECTOR" .**
- **Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.**

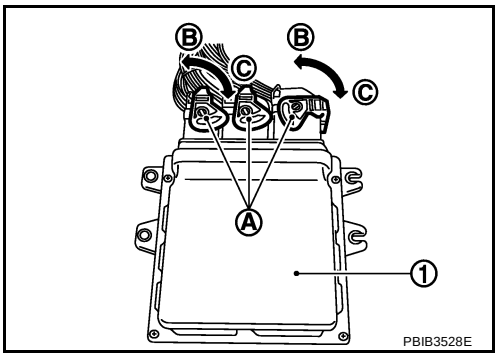
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.**

Precaution



NBS0002C

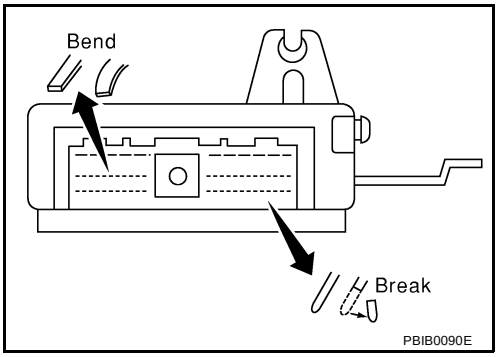
- **Always use a 12 volt battery as power source.**
- **Do not attempt to disconnect battery cables while engine is running.**
- **Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect battery ground cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.**
- **Before removing parts, turn ignition switch OFF and then disconnect battery ground cable.**



SEF289H

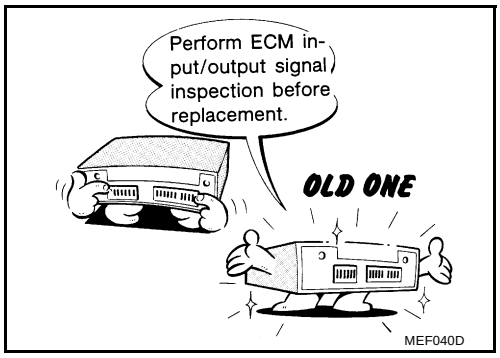
- **Do not disassemble ECM.**
- **If a battery cable is disconnected, the memory will return to the ECM value.**
  The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.
- **If the battery is disconnected, the following emission related diagnostic information will be lost within 24 hours.**
  - **Diagnostic trouble codes**
  - **1st trip diagnostic trouble codes**
  - **Freeze frame data**
  - **1st freeze frame data**
  - **System readiness test (SRT) codes**
  - **Test values**

PBIB3532E



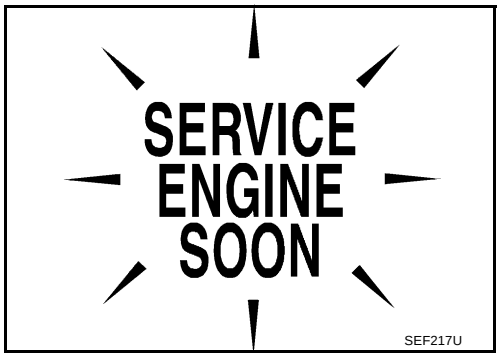
- **When connecting ECM harness connector (A), fasten (B) it securely with a lever as far as it will go as shown in the figure.**

  1 : ECM
  C : Loosen

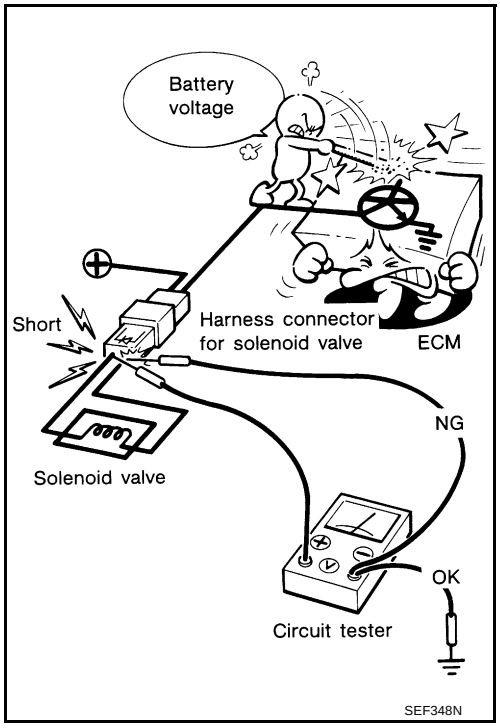


PBIB3528E

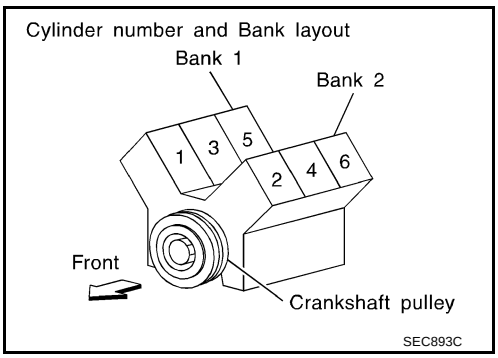
- **When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).**
  Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- **Securely connect ECM harness connectors.**
  A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.



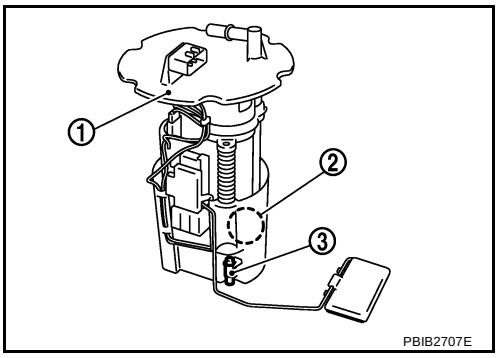
PBIB0090E



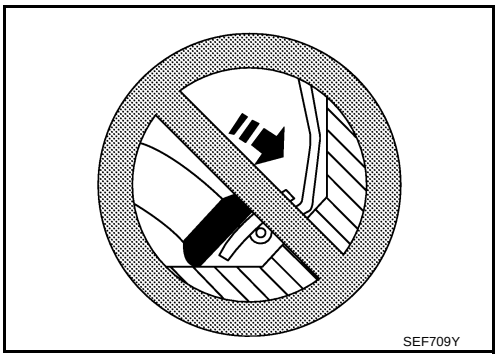
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to EC-103, "ECM Terminals and Reference Value".
- Handle mass air flow sensor carefully to avoid damage.
- Do not clean mass air flow sensor with any type of detergent.
- Do not disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).



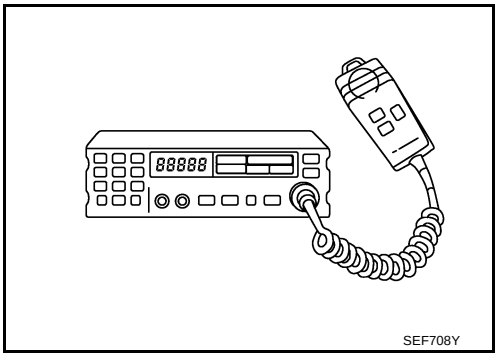
- After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Overall Function Check.
  The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Overall Function Check should be a good result if the repair is completed.



- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact.
  Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.



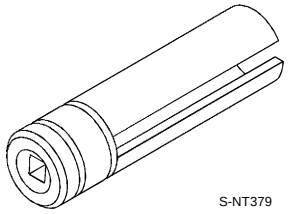
- **B1 indicates the bank 1, B2 indicates the bank 2 as shown in the figure.**

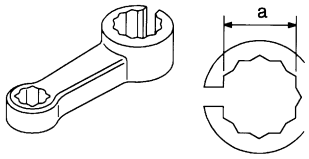


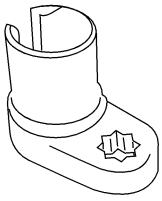
- **Do not operate fuel pump when there is no fuel in lines.**
  - 1 : Fuel level sensor unit and fuel pump
  - 2 : Fuel pressure regulator
  - 3 : Fuel tank temperature sensor
- **Tighten fuel hose clamps to the specified torque.**

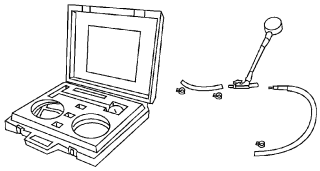
- **Do not depress accelerator pedal when starting.**
- **Immediately after starting, do not rev up engine unnecessarily.**
- **Do not rev up engine just prior to shutdown.**

- **When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.**
  - **Keep the antenna as far as possible from the electronic control units.**
  - **Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.**
  - **Adjust the antenna and feeder line so that the standing-wave radio can be kept smaller.**
  - **Be sure to ground the radio to vehicle body.**





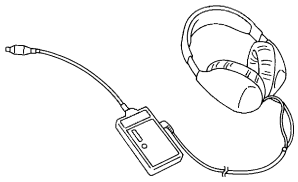


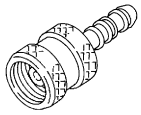


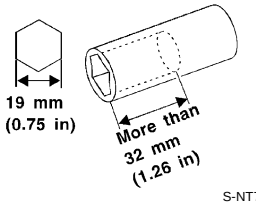
PREPARATION

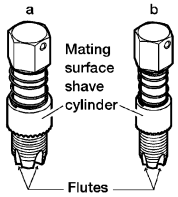
PFP:00002

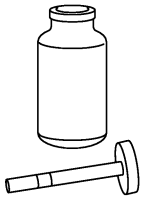
Special Service Tools











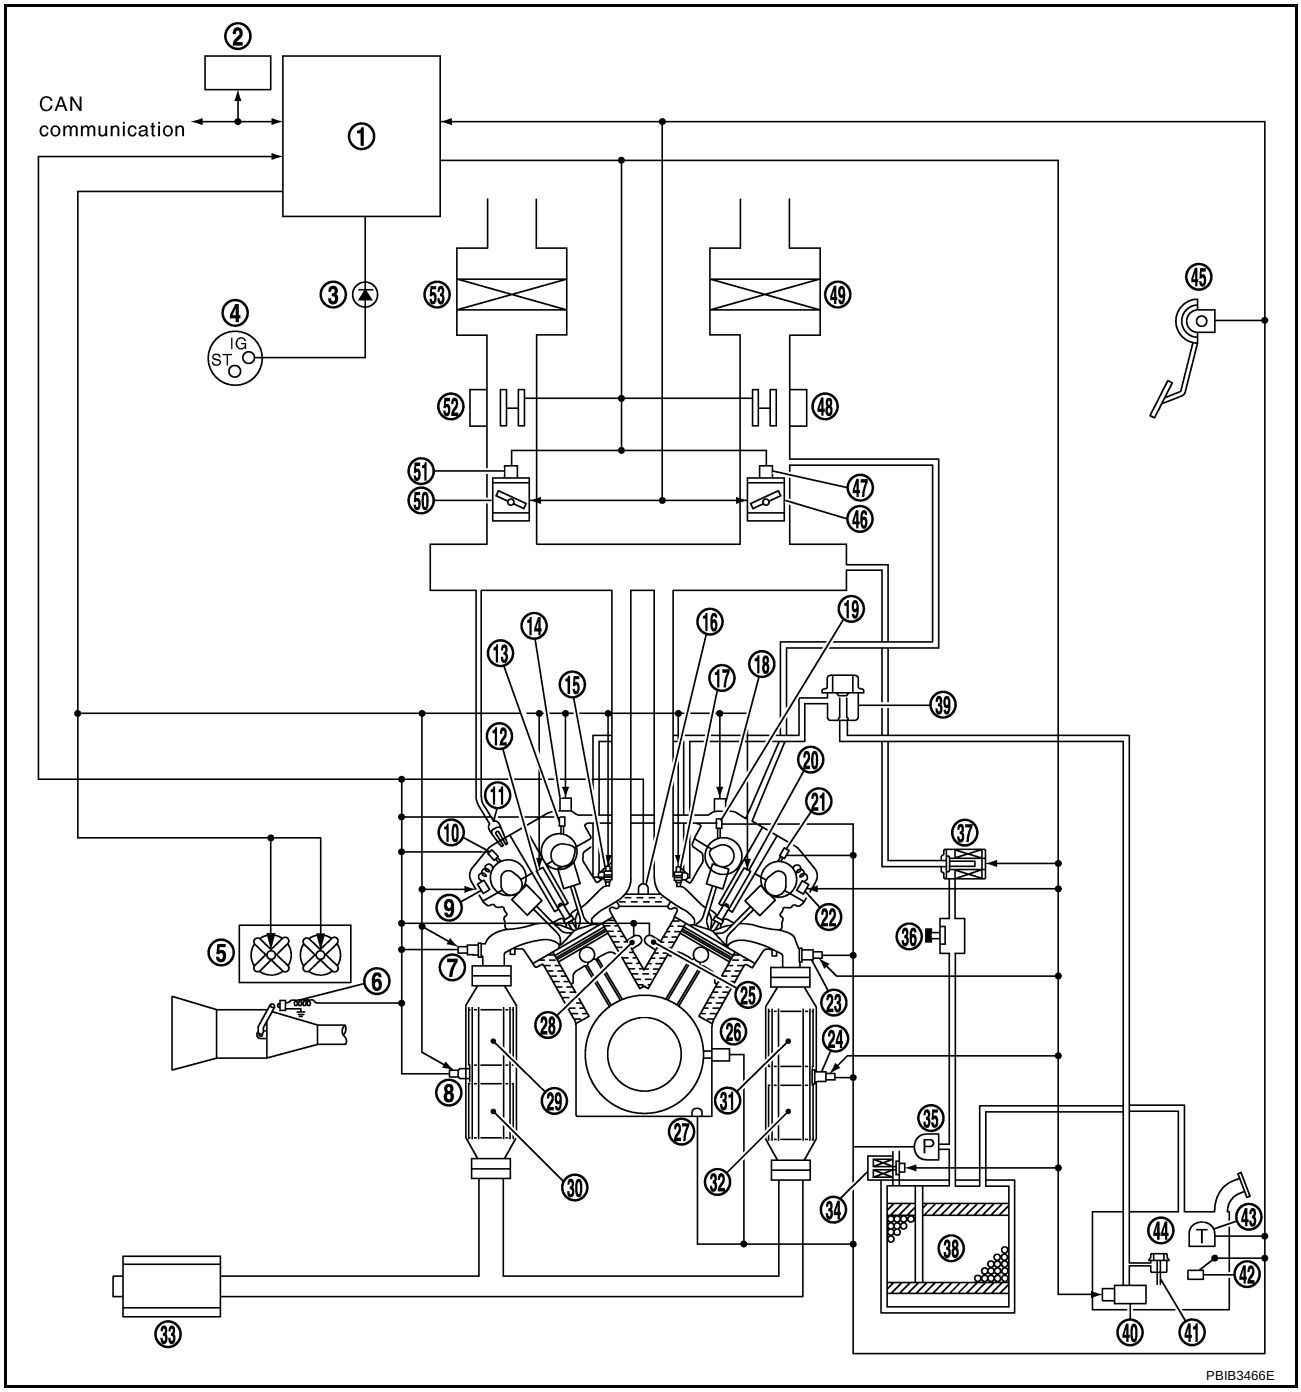
NBS0002E

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
KV10117100 (J-36471-A) Heated oxygen sensor wrench	 S-NT379	Loosening or tightening heated oxygen sensor with 22 mm (0.87 in) hexagon nut
KV10114400 (J-38365) Heated oxygen sensor wrench	 S-NT636	Loosening or tightening heated oxygen sensor **a: 22 mm (0.87 in)**
(J-44626) Air fuel ratio (A/F) sensor wrench	 LEM054	Loosening or tightening air fuel ratio (A/F) sensor 1
(J-44321) Fuel pressure gauge kit	 LEC642	Checking fuel pressure

Commercial Service Tools

NBS0002F



Tool name (Kent-Moore No.)		Description
Leak detector i.e.: (J-41416)	 S-NT703	Locating the EVAP leak
EVAP service port adapter i.e.: (J-41413-OBD)	 S-NT704	Applying positive pressure through EVAP service port
Fuel filler cap adapter i.e.: (MLR-8382)	 S-NT815	Checking fuel tank vacuum relief valve opening pressure
Socket wrench	 S-NT705	Removing and installing engine coolant temperature sensor
Oxygen sensor thread cleaner i.e.: (J-43897-18) (J-43897-12)	 AEM488	Reconditioning the exhaust system threads before installing a new oxygen sensor. Use with anti-seize lubricant shown below. **a: 18 mm diameter with pitch 1.5 mm for Zirconia Oxygen Sensor** **b: 12 mm diameter with pitch 1.25 mm for Titania Oxygen Sensor**
Anti-seize lubricant i.e.: (Permatex™ 133AR or equivalent meeting MIL specification MIL-A-907)	 S-NT779	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads.

Wheel sensor	Vehicle speed*2		

*1: This sensor is not used to control the engine system under normal conditions.
*2: This signal is sent to the ECM through CAN communication line.
*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

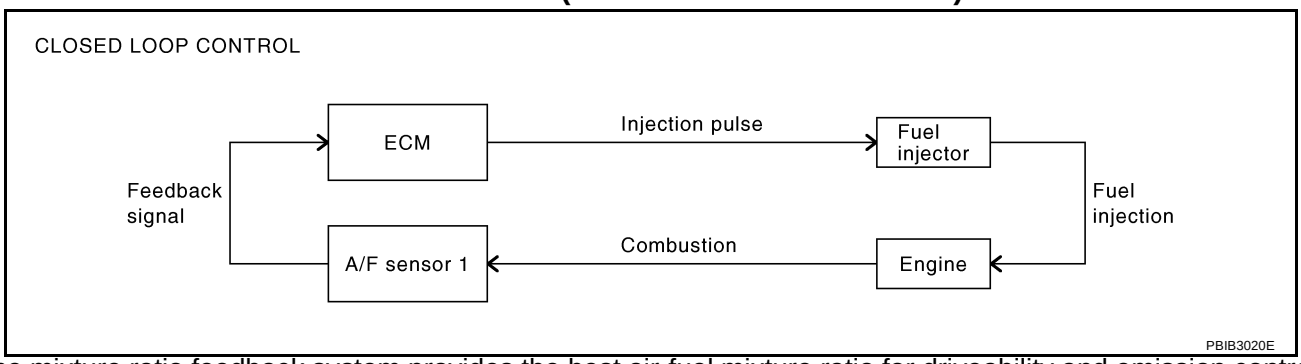
SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the crankshaft position sensor and the mass air flow sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>



- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation

- When selector lever is changed from N to D (A/T models)
- High-load, high-speed operation

<Fuel decrease>

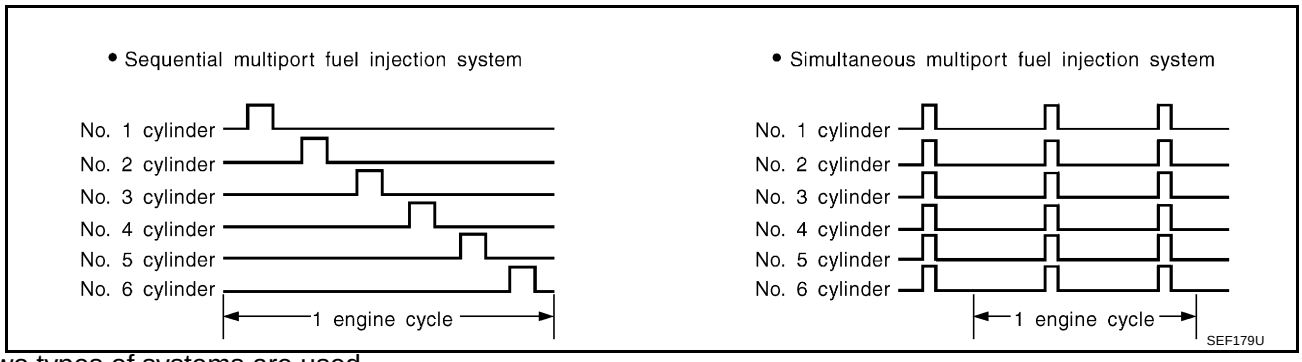
- During deceleration
- During high engine speed operation

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst 1 can then better reduce CO, HC and NOx emissions. This system uses air fuel ratio (A/F) sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about air fuel ratio (A/F) sensor 1, refer to EC-257, "DTC P0131, P0151 A/F SENSOR 1" . This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).
This stage is referred to as the closed loop control condition.
Heated oxygen sensor 2 is located downstream of the three way catalyst 1. Even if the switching characteristics of air fuel ratio (A/F) sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.



- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of air fuel ratio (A/F) sensor 1 or its circuit
- Insufficient activation of air fuel ratio (A/F) sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D (A/T models)
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from air fuel ratio (A/F) sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.
Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.
“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.
“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from air fuel ratio (A/F) sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long term fuel trim" is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

FUEL INJECTION TIMING

Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.
The six fuel injectors will then receive the signals two times for each engine cycle.
This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speeds.

Electronic Ignition (EI) System

NBS0002J

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed*2 Piston position	Ignition timing control	Power transistor
Camshaft position sensor (PHASE)			
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage*2		
Wheel sensor	Vehicle speed*1		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

Firing order: 1-2-3-4-5-6
The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.
The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.
During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting

- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

Fuel Cut Control (at No Load and High Engine Speed)

NBS0002K

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Park/neutral position (PNP) switch	Neutral position	Fuel cut control	Fuel injector
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Wheel sensor	Vehicle speed*		

*: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 1,800 rpm under no load (for example, the shift position is neutral and engine speed is over 1,800 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.
Fuel cut will be operated until the engine speed reaches 1,500 rpm, then fuel cut will be cancelled.

NOTE:
This function is different from deceleration control listed under EC-25, "Multiport Fuel Injection (MFI) System" .

AIR CONDITIONING CUT CONTROL

PFP:23710

Input/Output Signal Chart

NBS0002L

Sensor	Input Signal to ECM	ECM function	Actuator
Air conditioner switch	Air conditioner ON signal*1	Air conditioner cut control	Air conditioner relay
Throttle position sensor	Throttle position

Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Refrigerant pressure sensor	Refrigerant pressure		
Power steering pressure sensor	Power steering operation		
Wheel sensor	Vehicle speed*1		
Battery	Battery voltage*2		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signal of engine speed and battery voltage.

SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned OFF.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

System Description

NBS006TJ

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

PFP:18930

System Description

NBS0002M

INPUT/OUTPUT SIGNAL CHART

Sensor	Input signal to ECM	ECM function	Actuator
ASCD brake switch	Brake pedal operation	ASCD vehicle speed control	Electric throttle control actuator
Stop lamp switch	Brake pedal operation		
ASCD clutch switch (M/T models)	Clutch pedal operation		
ASCD steering switch	ASCD steering switch operation		
Park/neutral position (PNP) switch	Gear position		
Wheel sensor.	Vehicle speed*		
TCM (A/T models)	Powertrain revolution*		

*: This signal is sent to the ECM through CAN communication line.

BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.
Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).
ECM controls throttle angle of electric throttle control actuator to regulate engine speed.
Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.

NOTE:
Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.

SET OPERATION

Press MAIN switch. (The CRUISE indicator in combination meter illuminates.)
When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET/COAST switch. (Then SET indicator in combination meter illuminates.)

ACCELERATE OPERATION

If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.
And then ASCD will keep the new set speed.

CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Clutch pedal is depressed or gear position is changed to the neutral position (M/T models)
- Selector lever is changed to N, P, R position (A/T models)
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed
- VDC/TCS system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

- Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may blink slowly.
  When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ACCELERATE switch.
- Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than pressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- Clutch pedal is released (M/T models)
- A/T selector lever is in other than P and N positions (A/T models)
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

Component Description

ASCD STEERING SWITCH

Refer to EC-602

ASCD BRAKE SWITCH

Refer to EC-610 and EC-671 .

ASCD CLUTCH SWITCH

Refer to EC-610 and EC-671 .

STOP LAMP SWITCH

Refer to EC-610 , EC-628 and EC-671 .

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EC-561 , EC-571 , EC-580 and EC-592 .

ASCD INDICATOR

Refer to EC-681 .

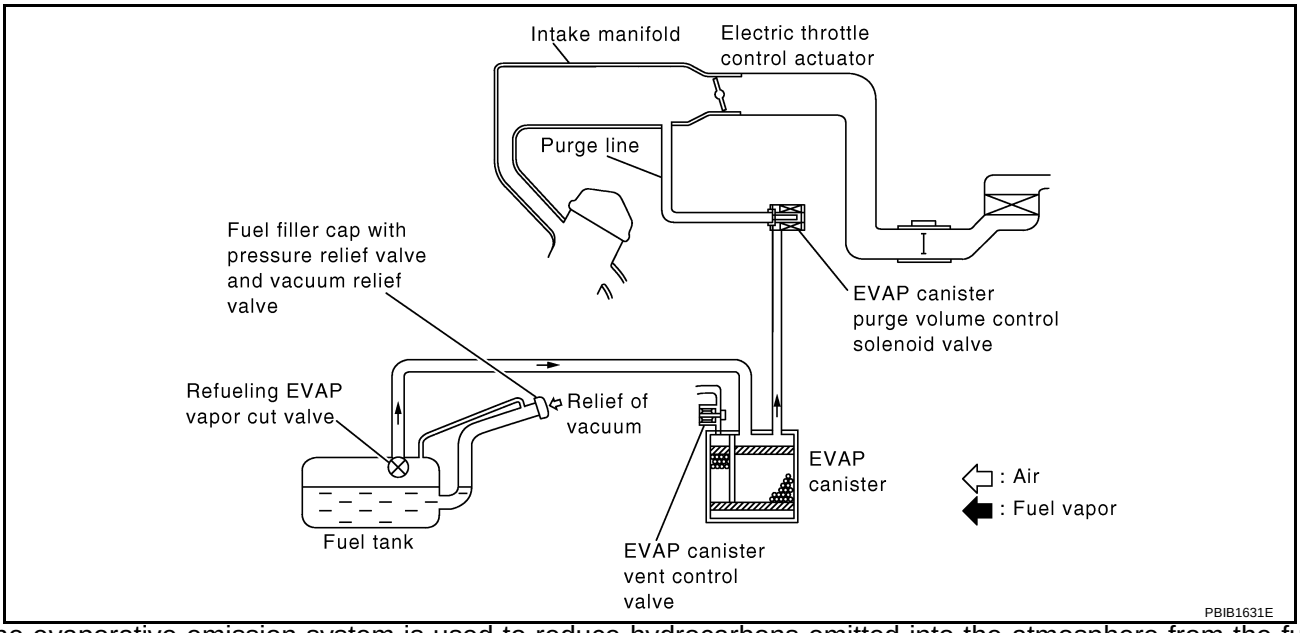
CAN COMMUNICATION

PFP:23710

System Description

NBS0002O

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
Refer to LAN-48, "CAN System Specification Chart" , about CAN communication for detail.



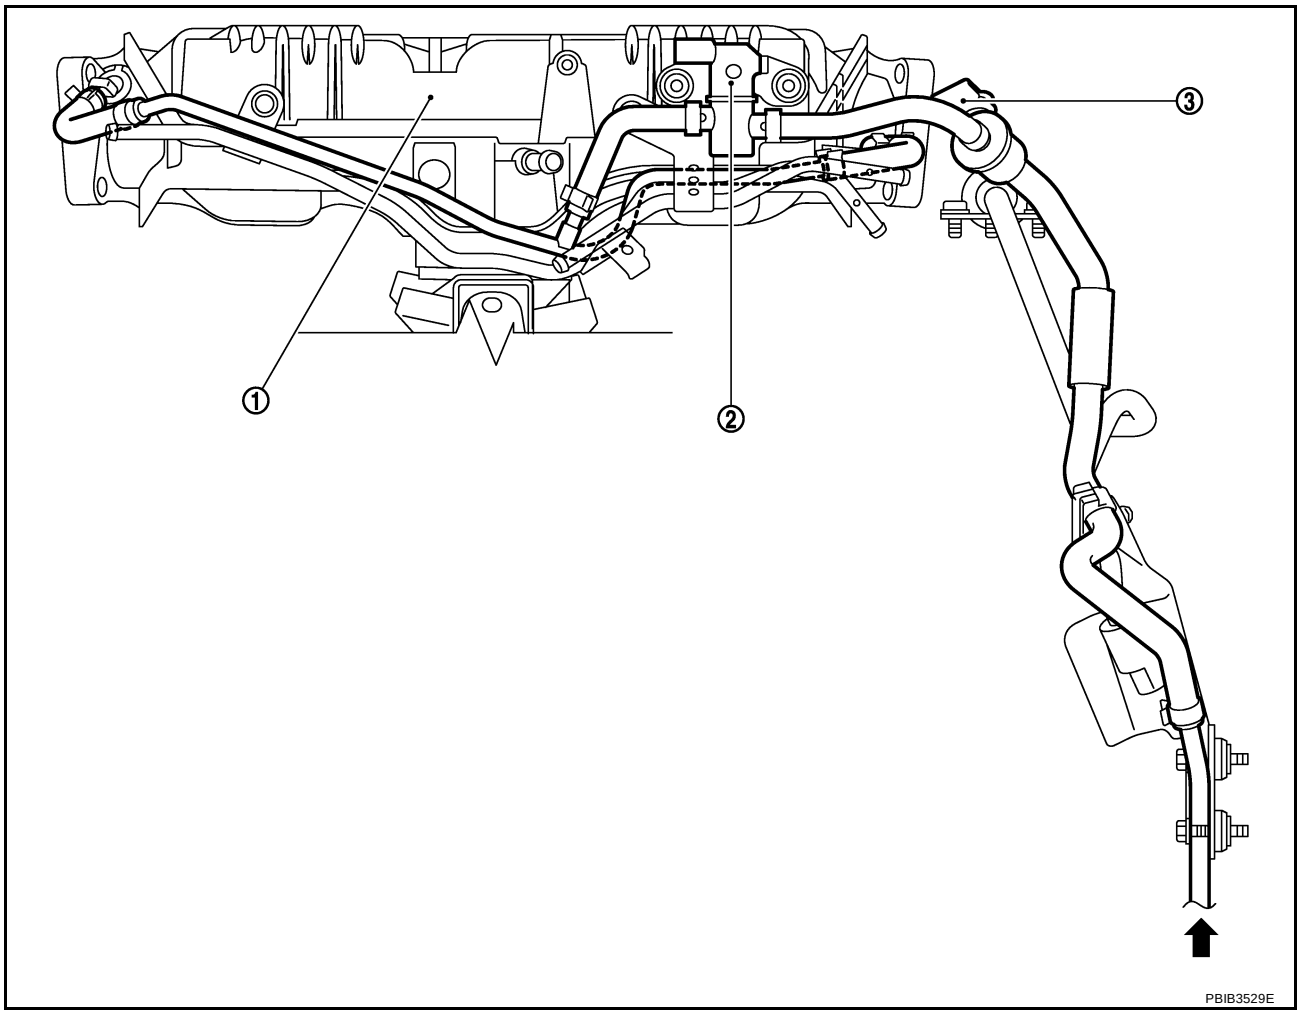
EVAPORATIVE EMISSION SYSTEM

PFP:14950

Description

NBS0002P

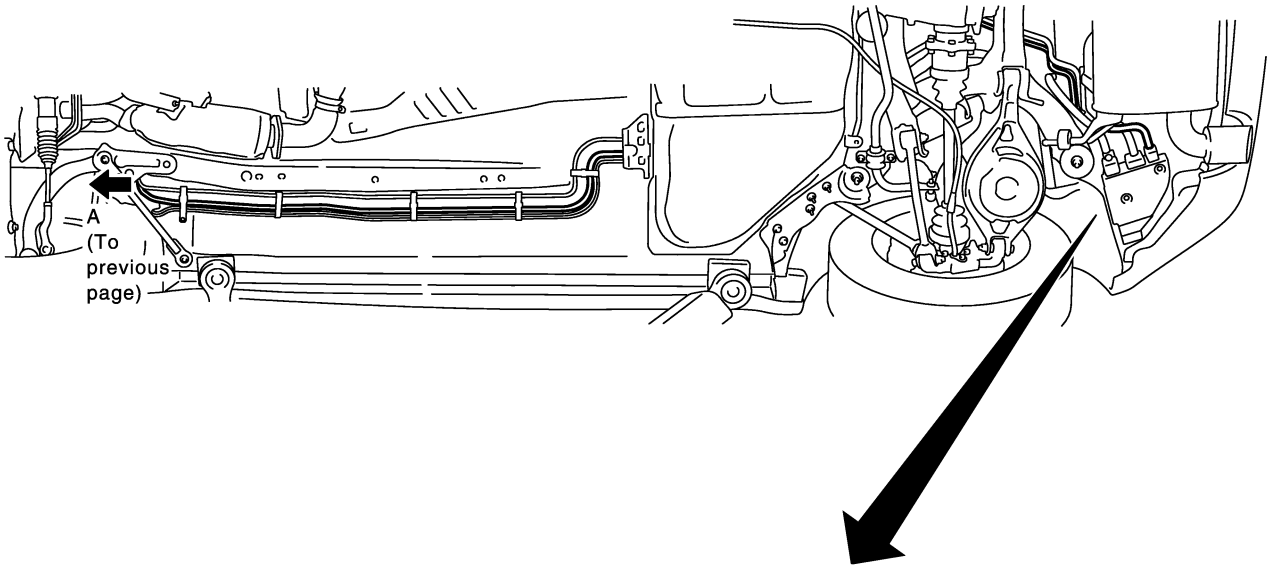
SYSTEM DESCRIPTION



The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

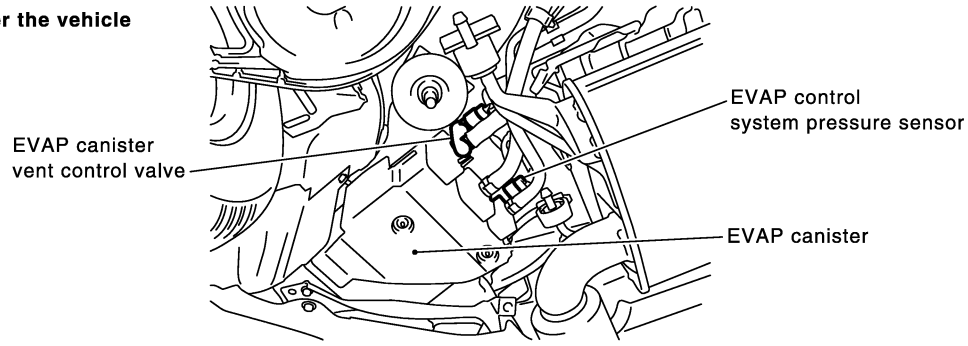
The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.



EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

EVAPORATIVE EMISSION LINE DRAWING



1. Intake manifold collector
2. EVAP canister purge volume control solenoid valve
3. EVAP service port

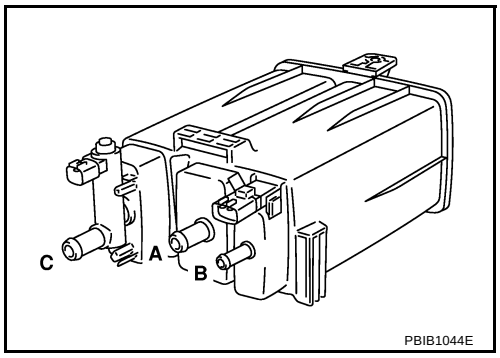
View from under the vehicle

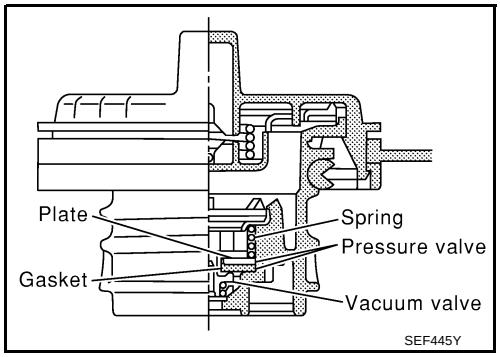
PBIB1066E



Component Inspection

NBS0002Q

EVAP CANISTER

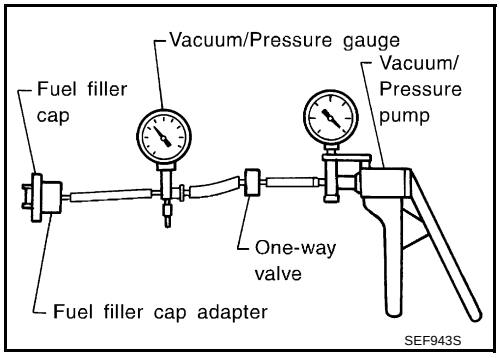


Check EVAP canister as follows:

1. Block port **B** .
2. Blow air into port **A** and check that it flows freely out of port **C** .
3. Release blocked port **B** .
4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports **A** and **C** .
5. Block port **A** and **B** .
6. Apply pressure to port **C** and check that there is no leakage.

FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

1. Wipe clean valve housing.



2. Check valve opening pressure and vacuum.

Pressure: **15.3 - 20.0 kPa (0.156 - 0.204 kg/cm^2 , 2.22 - 2.90 psi)**

Vacuum: **–6.0 to –3.3 kPa (–0.061 to –0.034 kg/cm^2 , –0.87 to –0.48 psi)**

3. If out of specification, replace fuel filler cap as an assembly.

CAUTION:

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

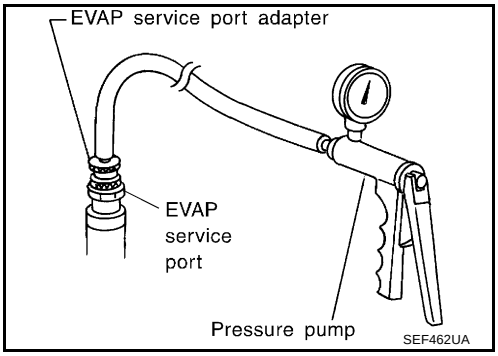
EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436 .

FUEL TANK TEMPERATURE SENSOR

Refer to EC-347 .

EVAP CANISTER VENT CONTROL VALVE



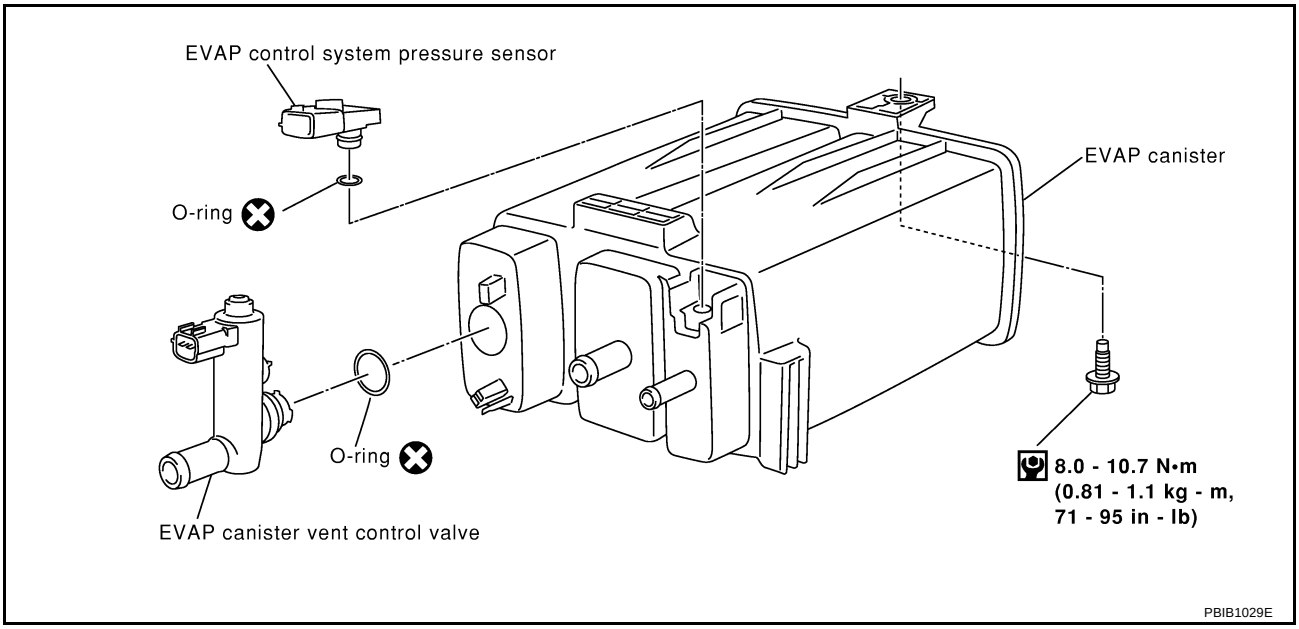
Refer to EC-442 .

EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455 .

EVAP SERVICE PORT

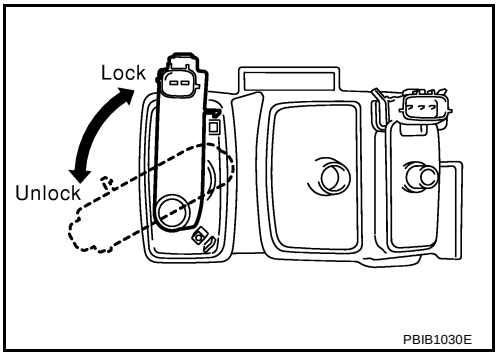
Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.



Removal and Installation

NBS0002R

EVAP CANISTER



Tighten EVAP canister as shown in the figure.

EVAP CANISTER VENT CONTROL VALVE

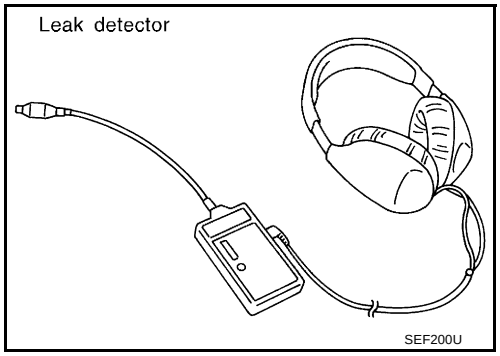
1. Turn EVAP canister vent control valve counterclockwise.
2. Remove the EVAP canister vent control valve.

Always replace O-ring with a new one.

How to Detect Fuel Vapor Leakage

NBS0002S

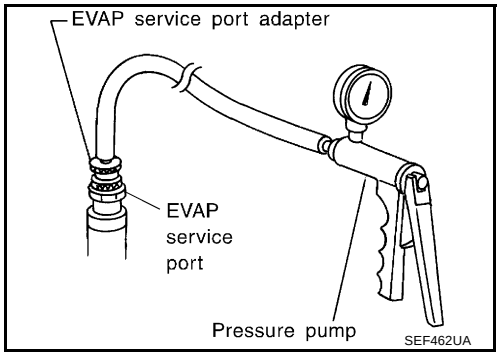
CAUTION:



- **Never use compressed air or a high pressure pump.**
- **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in EVAP system.**

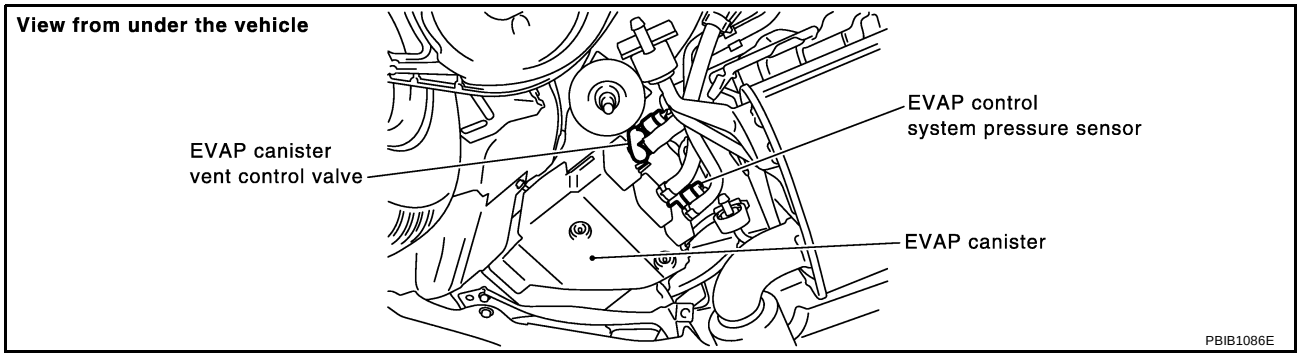
NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.



WITH CONSULT-III

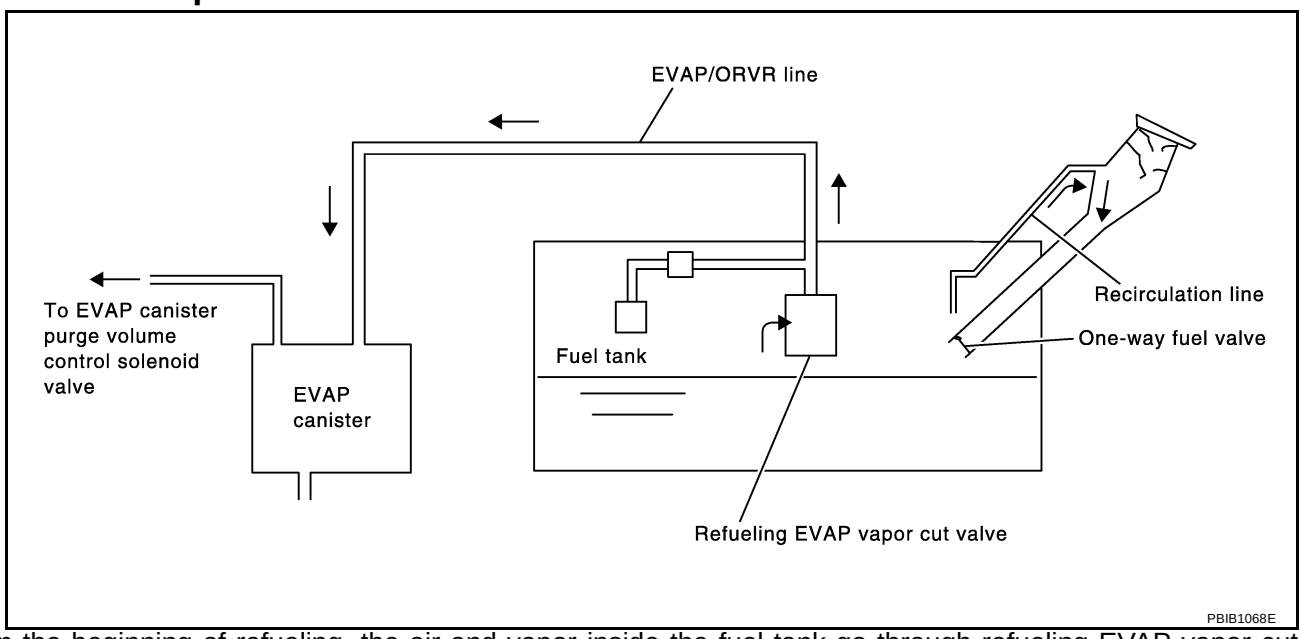
1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump and hose to the EVAP service port adapter.
3. Turn ignition switch ON.
4. Select the “EVAP SYSTEM CLOSE” of “WORK SUPPORT MODE” with CONSULT-III.
5. Touch “START”. A bar graph (Pressure indicating display) will appear on the screen.
6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
7. Remove EVAP service port adapter and hose with pressure pump.
8. Locate the leak using a leak detector. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .



WITHOUT CONSULT-III

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

3. Apply battery voltage between the terminals of EVAP canister vent control valve to make a closed EVAP system.



4. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm^2 , 0.2 to 0.4 psi).
5. Remove EVAP service port adapter and hose with pressure pump.
6. Locate the leak using a leak detector. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

ON BOARD REFUELING VAPOR RECOVERY (ORVR)

PFP:00032

System Description

NBS0002T

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

WARNING:

When conducting inspections below, be sure to observe the following:

- **Put a “CAUTION: FLAMMABLE” sign in workshop.**
- **Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.**
- **Be sure to furnish the workshop with a CO_2 fire extinguisher.**

CAUTION:

- **Before removing fuel line parts, carry out the following procedures:**
  - **Put drained fuel in an explosion-proof container and put lid on securely.**
  - **Release fuel pressure from fuel line. Refer to EC-79, "FUEL PRESSURE RELEASE" .**
  - **Disconnect battery ground cable.**
- **Always replace O-ring when the fuel gauge retainer is removed.**
- **Do not kink or twist hose and tube when they are installed.**
- **Do not tighten hose and clamps excessively to avoid damaging hoses.**
- **After installation, run engine and check for fuel leaks at connection.**
- **Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.**

Diagnostic Procedure

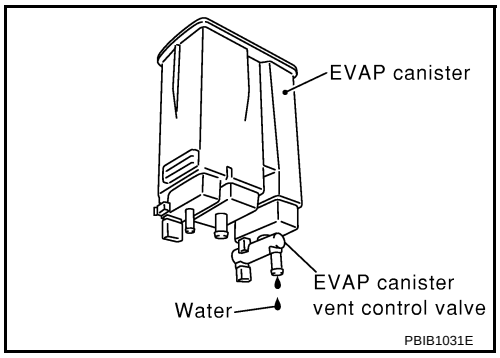
NBS0002U

SYMPTOM: FUEL ODOR FROM EVAP CANISTER IS STRONG.

1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
   The weight should be less than 2.2 kg (4.9 lb).

OK or NG



OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 3.
No >> GO TO 5.

3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

5. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "Component Inspection" .

OK or NG

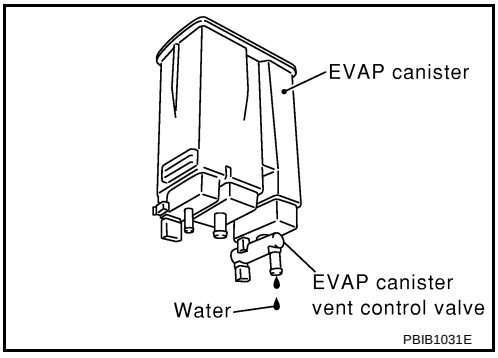
OK >> **INSPECTION END**
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

SYMPTOM: CANNOT REFUEL/FUEL ODOR FROM THE FUEL FILLER OPENING IS STRONG WHILE REFUELING.

1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
   The weight should be less than 2.2 kg (4.9 lb).

OK or NG



OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 3.
No >> GO TO 5.

3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

5. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling EVAP vapor cut valve for clogging, kink, looseness and improper connection.

OK or NG

OK >> GO TO 6.
NG >> Repair or replace hoses and tubes.

6. CHECK FILLER NECK TUBE

Check recirculation line for clogging, dents and cracks.

OK or NG

OK >> GO TO 7.
NG >> Replace filler neck tube.

7. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

8. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

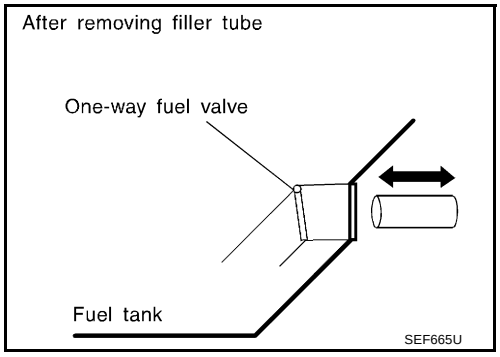
OK or NG

OK >> GO TO 9.
NG >> Replace fuel filler tube.

9. CHECK ONE-WAY FUEL VALVE-I

Check one-way valve for clogging.

OK or NG



OK >> GO TO 10.
NG >> Repair or replace one-way fuel valve with fuel tank.

10. CHECK ONE-WAY FUEL VALVE-II

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.
   When a stick is inserted, the valve should open, when removing stick it should close.
   Do not drop any material into the tank.

OK or NG

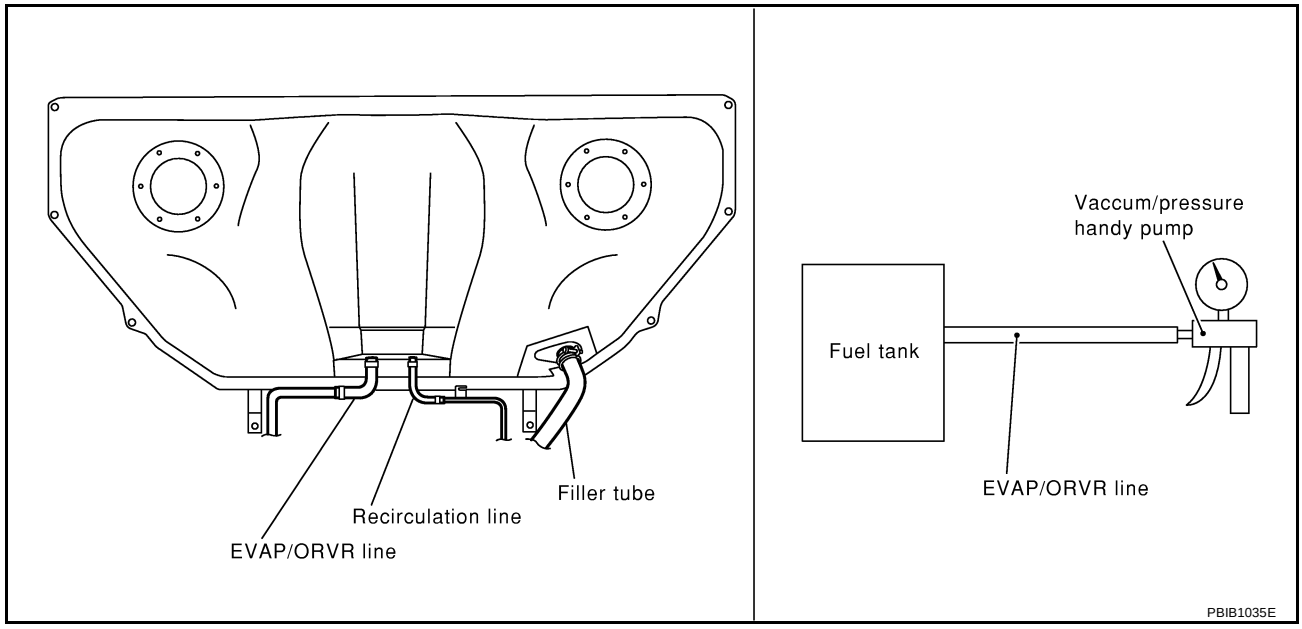
OK >> **INSPECTION END**
NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

Component Inspection

NBS0002V

REFUELING EVAP VAPOR CUT VALVE

With CONSULT-III



1. Remove fuel tank. Refer to FL-10, "FUEL TANK" .
2. Drain fuel from the tank as follows:

a. Remove fuel feed hose located on the fuel gauge retainer.
b. Connect a spare fuel hose, one side to fuel gauge retainer where the hose was removed and the other side to a fuel container.
c. Drain fuel using “FUEL PUMP RELAY” in “ACTIVE TEST” mode with CONSULT-III.

3. Check refueling EVAP vapor cut valve for being stuck to close as follows.
   Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.

a. Connect vacuum pump to hose end.
b. Remove fuel gauge retainer with fuel gauge unit.
   Always replace O-ring with new one.
c. Put fuel tank upside down.

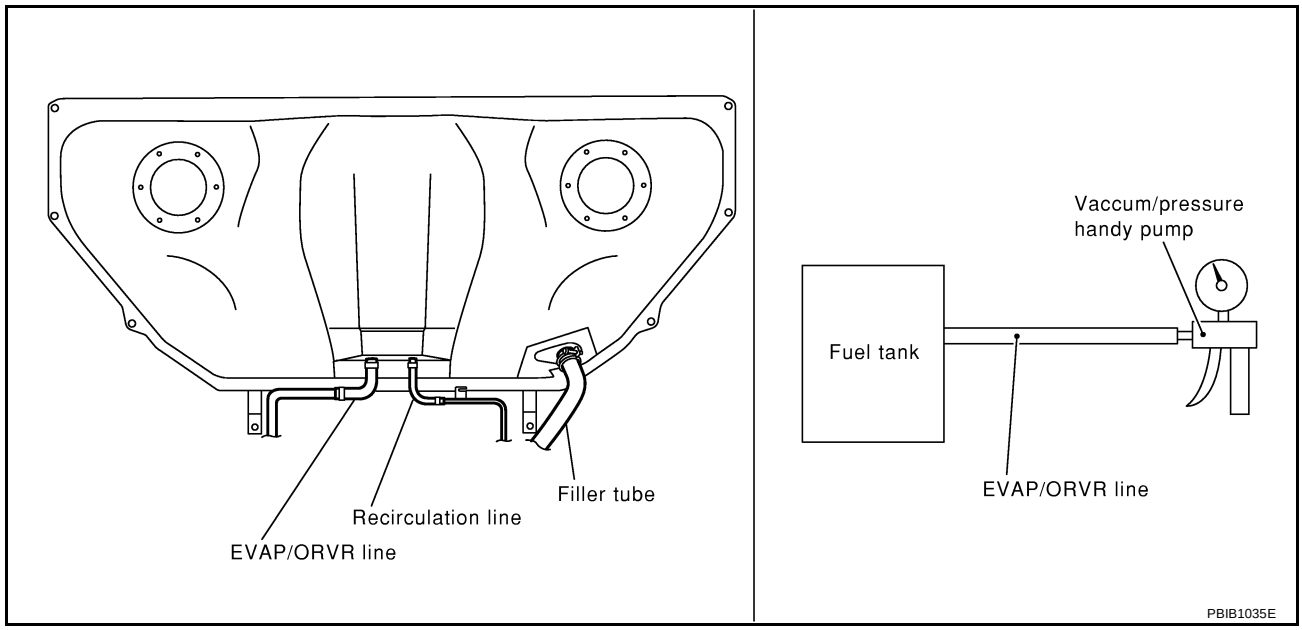
d. Apply vacuum pressure to hose end [–13.3 kPa (–100 mmHg, –3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

Without CONSULT-III

1. Remove fuel tank. Refer to FL-10, "FUEL TANK" .
2. Drain fuel from the tank as follows:

a. Remove fuel gauge retainer.

b. Drain fuel from the tank using a handy pump into a fuel container.



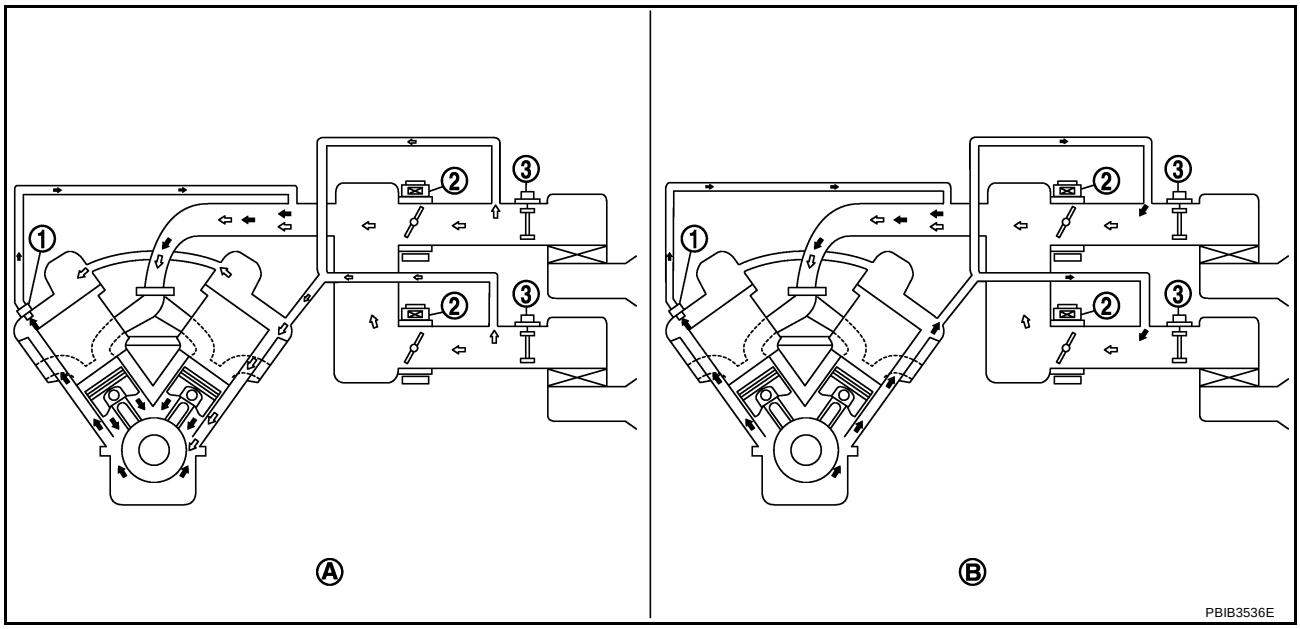
3. Check refueling EVAP vapor cut valve for being stuck to close as follows.
   Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.

a. Connect vacuum pump to hose end.

b. Remove fuel gauge retainer with fuel gauge unit.
   Always replace O-ring with new one.

c. Put fuel tank upside down.

d. Apply vacuum pressure to hose end [–13.3 kPa (–100 mmHg, –3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.



POSITIVE CRANKCASE VENTILATION

PFP:11810

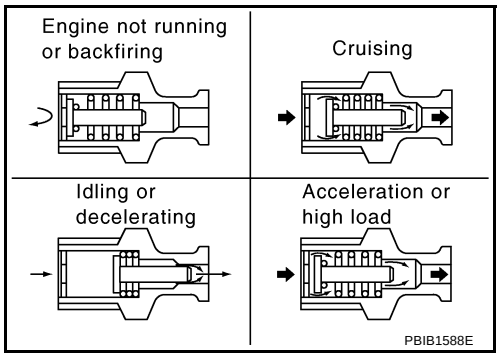
Description

NBS0002W

SYSTEM DESCRIPTION

1. PCV valve
2. Electric throttle control actuator
3. Mass air flow sensor

A. Normal condition
B. Hi-load condition



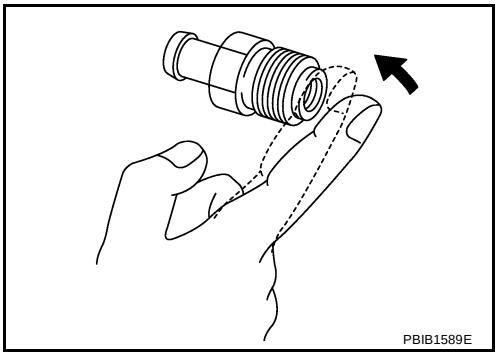
⇦: Fresh air

⬅: Blow-by air

This system returns blow-by gas to the intake manifold.

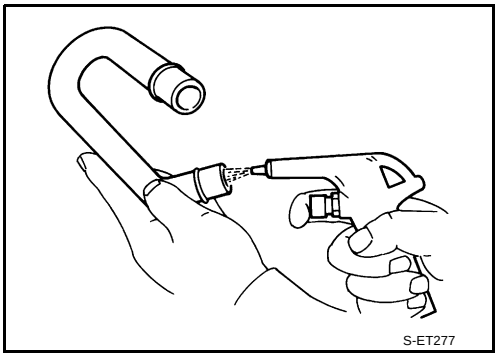
The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.



Component Inspection

NBS0002X



PCV (POSITIVE CRANKCASE VENTILATION) VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

PCV VALVE VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

PFP:25386

Description

NBS0002Y

- **If the security indicator lights up with the ignition switch in the ON position or “NATS MALFUNCTION” is displayed on “SELF-DIAG RESULTS” screen, perform self-diagnostic results mode with CONSULT-III using NATS program card. Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .**
- **Confirm no self-diagnostic results of NVIS (NATS) is displayed before touching “ERASE” in “SELF-DIAG RESULTS” mode with CONSULT-III.**
- **When replacing ECM, initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs must be carried out with CONSULT-III using NATS program card.**
  Therefore, be sure to receive all keys from vehicle owner. Regarding the procedures of NVIS (NATS) initialization and all NVIS (NATS) ignition key ID registration, refer to CONSULT-III Operation Manual, IVIS/NVIS.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction

NBS0002Z

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	Diagnostic service
Diagnostic Trouble Code (DTC)	Service $03 of SAE J1979
Freeze Frame data	Service $02 of SAE J1979
System Readiness Test (SRT) code	Service $01 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Service $07 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Service $06 of SAE J1979
Calibration ID	Service $09 of SAE J1979

The above information can be checked using procedures listed in the table below.

×: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT status	SRT code	Test value
CONSULT-III	×	×	×	×	×	×	—
GST	×	×	×	—	×	×	×
ECM	×	×*	—	—	×	—	—

*: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode.
(Refer to EC-89, "Fail-safe Chart" .)

Two Trip Detection Logic

NBS00030

When a malfunction is detected for the 1st time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>
If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

Items	MIL				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip displaying	2nd trip displaying	1st trip displaying	2nd trip displaying
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0306 is being detected	×	—	—	—	—	—	×	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0306 is being detected	—	—	×	—	—	×	—	—
One trip detection diagnoses (Refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" .)	—	×	—	—	×	—	—	—
Except above	—	—	—	×	—	×	×	—

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: SRT code will not be set if the self-diagnostic result is NG.
*5: The troubleshooting for this DTC needs CONSULT-III.
*6: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.
*7: When the ECM is in the mode of displaying SRT status, MIL may flash. For the details, refer to EC-56, "How to Display SRT Status" .

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic results obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.
If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.
Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
For malfunctions in which 1st trip DTCs are displayed, refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" . These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-III.
1st trip DTC is specified in Service $07 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.
When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to EC-82, "WORK FLOW" . Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

With CONSULT-III

With GST

CONSULT-III or GST (Generic Scan Tool) Examples: P0340, P0850, P1148, etc.
These DTCs are prescribed by SAE J2012.
(CONSULT-III also displays the malfunctioning component or system.)

No Tools

The number of blinks of the MIL in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0340, 0850, 1148, etc.
These DTCs are controlled by NISSAN.

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-III can identify malfunction status as shown below. Therefore, using CONSULT-III (if available) is recommended.**

A sample of CONSULT-III display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-III. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be [0].
If a 1st trip DTC is stored in the ECM, the time data will be [1t].

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, absolute throttle position, base fuel schedule and intake air temperature at the moment a malfunction is detected.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-III or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-III screen, not on the GST. For details, see EC-119, "Freeze Frame Data and 1st Trip Freeze Frame Data" .
Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.
Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Service $01 of SAE J1979.
As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.
If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating “INCMP”, use the information in this Service Manual to set the SRT to “CMPLT”.
In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate “CMPLT” for each application system. Once set as “CMPLT”, the SRT status remains “CMPLT” until the self-diagnosis memory is erased.
Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate “INCMP” for these items.

NOTE:
The SRT will also indicate “INCMP” if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.
If, during the state emissions inspection, the SRT indicates “CMPLT” for all test items, the inspector will continue with the emissions test. However, if the SRT indicates “INCMP” for one or more of the SRT items the vehicle is returned to the customer untested.

NOTE:
If MIL is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates “CMPLT” for all test items. Therefore, it is important to check SRT (“CMPLT”) and DTC (No DTCs) before the inspection.

SRT Item

The table below shows required self-diagnostic items to set the SRT to “CMPLT”.

SRT item (CONSULT-III indication)	Performance Priority*	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420, P0430
EVAP SYSTEM	1	EVAP control system	P0442
	2	EVAP control system	P0456
	2	EVAP control system purge flow monitoring	P0441
HO2S	2	Air fuel ratio (A/F) sensor 1	P0133, P0153
		Heated oxygen sensor 2	P0139, P0159
		Heated oxygen sensor 2	P0137, P0157
		Heated oxygen sensor 2	P0138, P0158

*: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-III.

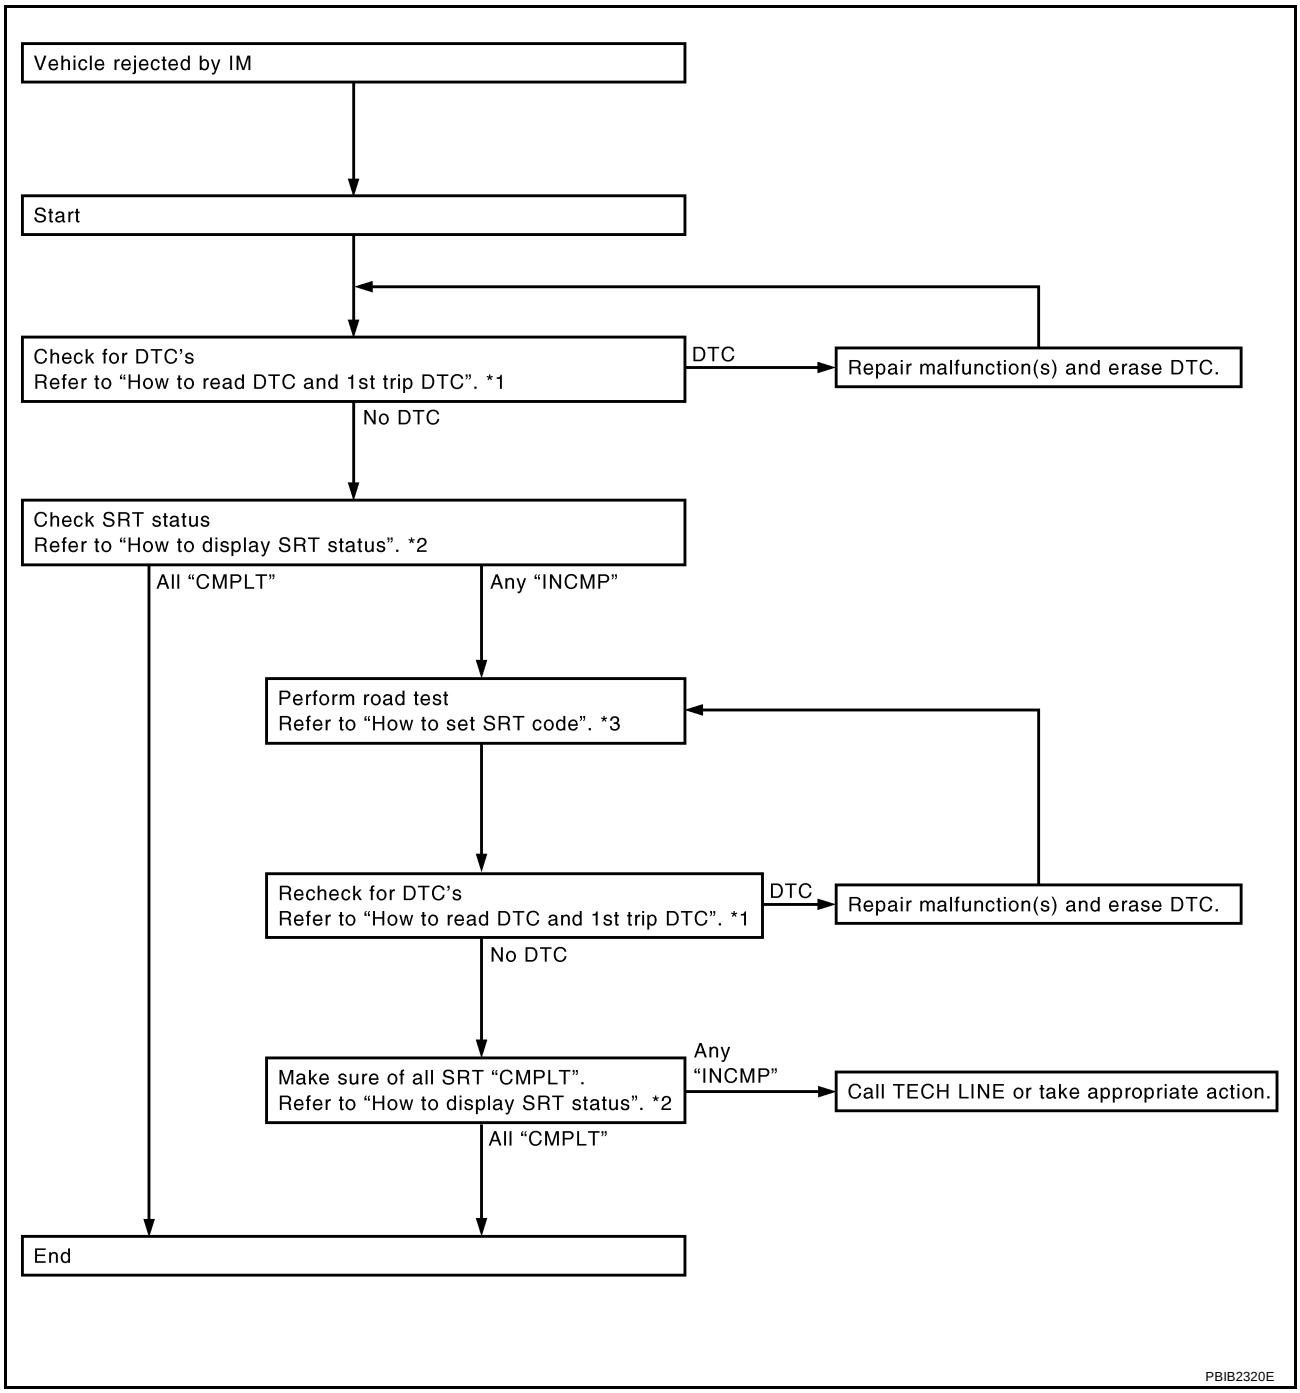
SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example				
		Diagnosis	Ignition cycle ← ON →	OFF	← ON →	OFF ← ON →	OFF ← ON →
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)
		P0402	OK (1)	— (1)	— (1)	OK (2)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)
		P0402	— (0)	— (0)	OK (1)	— (1)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"
NG exists	Case 3	P0400	OK	OK	—	—
		P0402	—	—	—	—
		P1402	NG	—	NG	NG (Consecutive NG)
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL "ON")
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"

OK: Self-diagnosis is carried out and the result is OK.
NG: Self-diagnosis is carried out and the result is NG.
—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above
When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above
If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above
The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:



- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.

- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to “CMPLT” of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate “INCMP”.

NOTE:
SRT can be set as “CMPLT” together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates “CMPLT”.

SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating “INCMP”, review the flowchart diagnostic sequence on the next page.

*1 EC-52 *2 EC-56 *3 EC-57

How to Display SRT Status

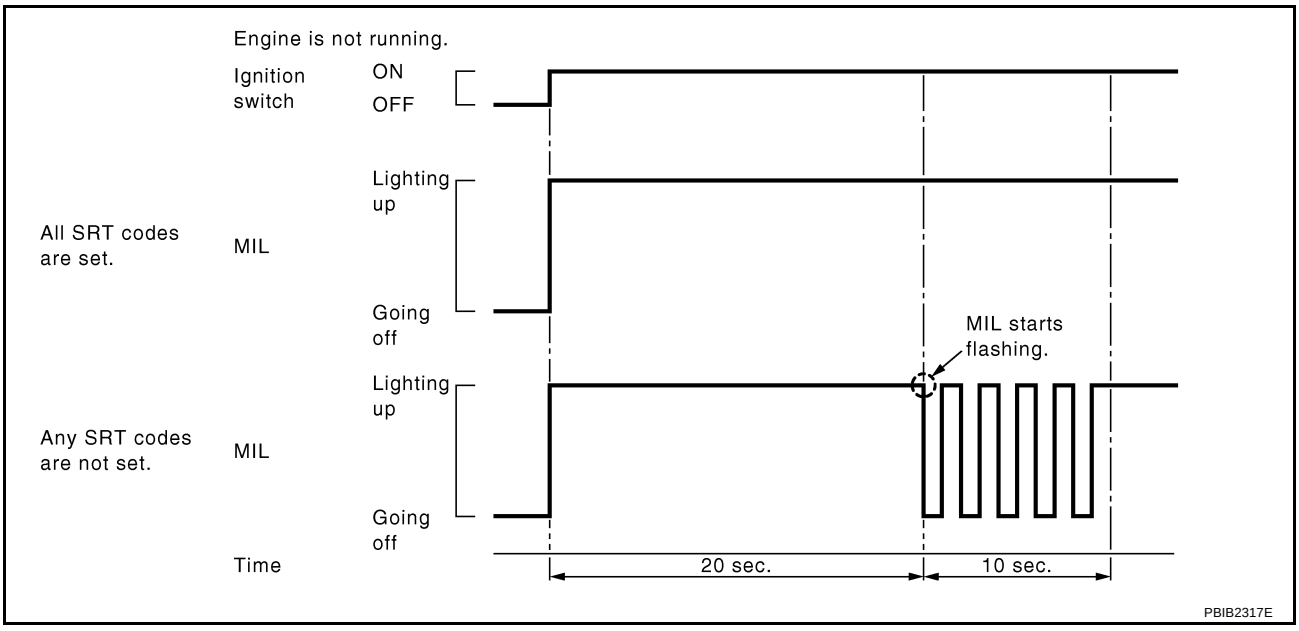
WITH CONSULT-III

Selecting “SRT STATUS” in “DTC & SRT CONFIRMATION” mode with CONSULT-III.
For items whose SRT codes are set, a “CMPLT” is displayed on the CONSULT-III screen; for items whose SRT codes are not set, “INCMP” is displayed.
A sample of CONSULT-III display for SRT code is shown in the figure.
“INCMP” means the self-diagnosis is incomplete and SRT is not set. “CMPLT” means the self-diagnosis is complete and SRT is set.

NOTE:

Though displayed on the CONSULT-III screen, “HO2S HTR” is not SRT item.

WITH GST



Selecting Service $01 with GST (Generic Scan Tool)

NO TOOLS

A SRT code itself can not be displayed while only SRT status can be.

1. Turn ignition switch ON and wait 20 seconds.
2. SRT status is indicated as shown below.

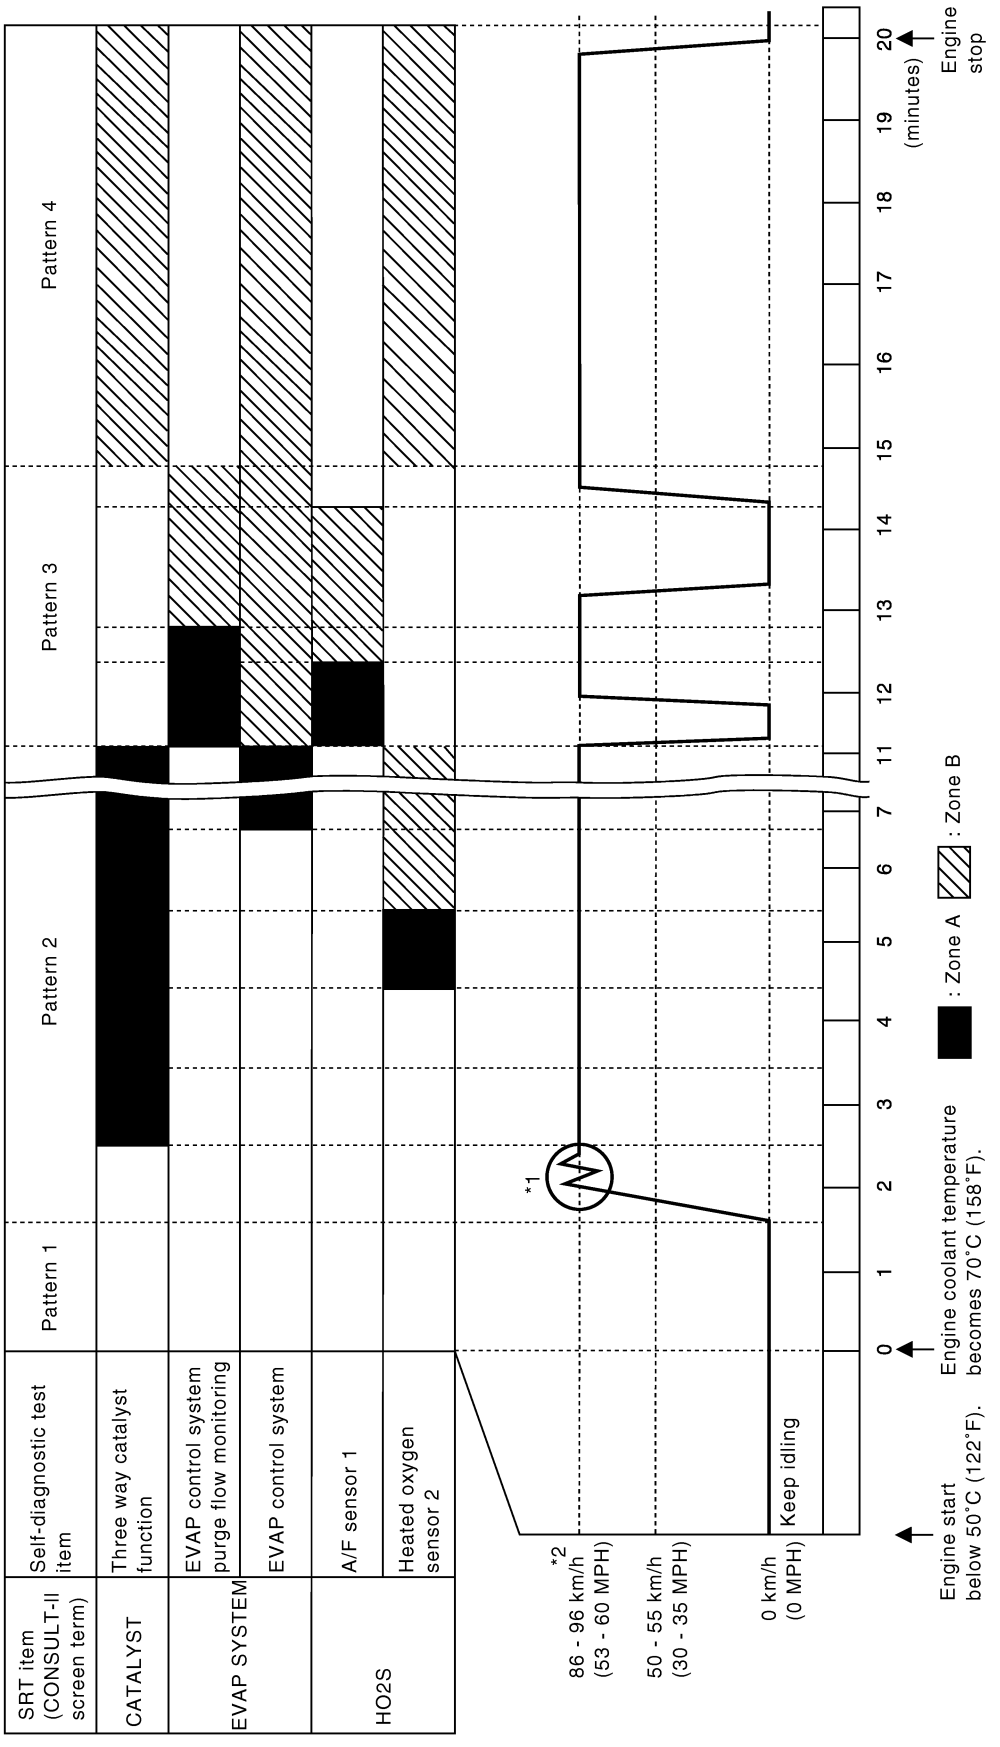
- When all SRT codes are set, MIL lights up continuously.
- When any SRT codes are not set, MIL will flash periodically for 10 seconds.

How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

WITH CONSULT-III

Perform corresponding DTC Confirmation Procedure one by one based on Performance Priority in the table on EC-53, "SRT Item" .



WITHOUT CONSULT-III

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

Driving Pattern

Note: Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.
Refer to next page for more information and explanation of chart.

Driving pattern

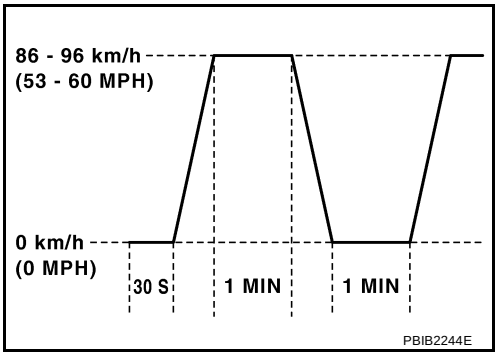
PBIB2906E

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.
  Zone A refers to the range where the time, required for the diagnosis under normal conditions*, is the shortest.
  Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.
  Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:



- **The engine is started at the engine coolant temperature of −10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 71 and ground is 3.0 - 4.3V).**
- **The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 71 and ground is lower than 1.4V).**
- **The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 106 and ground is less than 4.1V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- Operate vehicle following the driving pattern shown in the figure.
- Release the accelerator pedal during decelerating vehicle speed from 90 km/h (56 MPH) to 0 km/h (0 MPH).

Pattern 4:

- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.
*2: Checking the vehicle speed with GST is advised.

Suggested Transmission Gear Position for A/T Models

Set the selector lever in the D position.

Suggested Upshift Speeds for M/T Models

Shown below are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:		For quick acceleration in low altitude areas and high altitude areas [over 1,219 m (4,000 ft)]:
Gear change	ACCEL shift point km/h (MPH)	CRUISE shift point km/h (MPH)	km/h (MPH)
1st to 2nd	21 (13)	13 (8)	24 (15)
2nd to 3rd	37 (23)	26 (16)	40 (25)
3rd to 4th	48 (30)	40 (25)	64 (40)
4th to 5th	60 (37)	45 (28)	72 (45)
6th	68 (42)	53 (33)	80 (50)

Suggested Maximum Speed in Each Gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.
Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits and drive according to the road conditions to ensure sage operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

Gear	km/h (MPH)
1st	65 (40)
2nd	106 (66)
3rd	152 (95)
4th	—
5th	—
6th	—

TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-III)

The following is the information specified in Service $06 of SAE J1979.
The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.
These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

Item	Self-diagnostic test item	DTC	Test value (GST display)		Test limit	Conversion
			TID	CID		
CATALYST	Three way catalyst function (Bank 1)	P0420	01H	01H	Max.	1/128
		P0420	02H	81H	Min.	1
	Three way catalyst function (Bank 2)	P0430	03H	02H	Max.	1/128
		P0430	04H	82H	Min.	1
EVAP SYSTEM	EVAP control system (Small leak)	P0442	05H	03H	Max.	1/128 mm^2
	EVAP control system purge flow monitoring	P0441	06H	83H	Min.	20 mV
	EVAP control system (Very small leak)	P0456	07H	03H	Max.	1/128 mm^2

Item	Self-diagnostic test item	DTC	Test value (GST display)		Test limit	Conversion
			TID	CID		
HO2S	Air fuel ratio (A/F) sensor 1 (Bank 1)	P0131	41H	8EH	Min.	5mV
		P0132	42H	0EH	Max.	5mV
		P2A00	43H	0EH	Max.	0.002
		P2A00	44H	8EH	Min.	0.002
		P0133	45H	8EH	Min.	0.004
		P0130	46H	0EH	Max.	5mV
		P0130	47H	8EH	Min.	5mV
		P0133	48H	8EH	Min.	0.004
	Air fuel ratio (A/F) sensor 1 (Bank 2)	P0151	4CH	8FH	Min.	5mV
		P0152	4DH	0FH	Max	5mV
		P2A03	4EH	0FH	Max.	0.002
		P2A03	4FH	8FH	Min.	0.002
		P0153	50H	8FH	Min.	0.004
		P0150	51H	0FH	Max.	5mV
		P0150	52H	8FH	Min.	5mV
		P0153	53H	8FH	Min.	0.004
	Heated oxygen sensor 2 (Bank 1)	P0138	1CH	06H	Max.	10mV
		P0139	19H	86H	Min.	10mV/500 ms
		P0137	1AH	86H	Min.	10 mV
		P0138	1BH	06H	Max.	10 mV
	Heated oxygen sensor 2 (Bank 2)	P0158	24H	07H	Max	10mV
		P0159	21H	87H	Min.	10 mV/500 ms
		P0157	22H	87H	Min.	10 mV
		P0158	23H	07H	Max.	10 mV
HO2S HTR	Air fuel ratio (A/F) sensor 1 heater (Bank 1)	P0032	57H	10H	Max.	5 mV
		P0031	58H	90H	Max.	5 mV
	Air fuel ratio (A/F) sensor 1 heater (Bank 2)	P0052	59H	11H	Max.	5 mV
		P0051	5AH	91H	Max.	5 mV
	Heated oxygen sensor 2 heater (Bank 1)	P0038	2DH	0AH	Max.	20 mV
		P0037	2EH	8AH	Min.	20 mV
	Heated oxygen sensor 2 heater (Bank 2)	P0058	2FH	0BH	Max.	20 mV
		P0057	30H	8BH	Min.	20 mV

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

How to Erase DTC

WITH CONSULT-III

The emission related diagnostic information in the ECM can be erased by selecting “ERASE” in the “SELF-DIAG RESULTS” mode with CONSULT-III.

If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

NOTE:

If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip steps 2 through 4.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Turn CONSULT-III ON and touch “A/T”.
3. Touch “SELF-DIAG RESULTS”.

4. Touch “ERASE”. [The DTC in the TCM (Transmission control module) will be erased.] Then touch “BACK” twice.
5. Touch “ENGINE”.
6. Touch “SELF-DIAG RESULTS”.
7. Touch “ERASE”. (The DTC in the ECM will be erased.)

WITH GST

The emission related diagnostic information in the ECM can be erased by selecting Service $04 with GST.

NOTE:
If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-38, "HOW TO ERASE DTC (WITH GST)" . (The DTC in the TCM will be erased.)
3. Select Service $04 with GST (Generic Scan Tool).

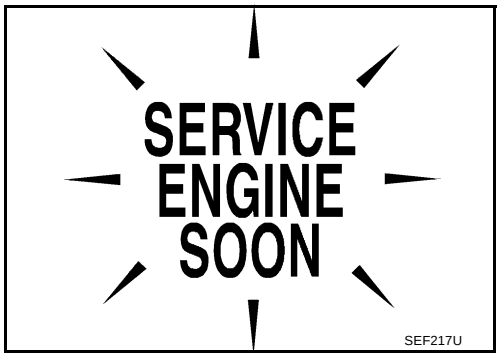
NO TOOLS

NOTE:
If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-38, "HOW TO ERASE DTC (NO TOOLS)" . (The DTC in the TCM will be erased.)
3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to EC-63, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours.**
- **The following data are cleared when the ECM memory is erased.**
  - Diagnostic trouble codes
  - 1st trip diagnostic trouble codes
  - Freeze frame data
  - 1st trip freeze frame data
  - System readiness test (SRT) codes
  - Test values

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.



Malfunction Indicator Lamp (MIL)

NBS00032

DESCRIPTION

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check. If the MIL does not light up, refer to DI-56, "WARNING LAMPS" , or see EC-716, "MIL AND DATA LINK CONNECTOR" .
2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following three functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position  Engine stopped 	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running 	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. ● Misfire (Possible three way catalyst damage) ● One trip detection diagnoses
Mode II	Ignition switch in ON position  Engine stopped 	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

MIL Flashing Without DTC

When any SRT codes are not set, MIL may flash without DTC. For the details, refer to EC-56, "How to Display SRT Status" .

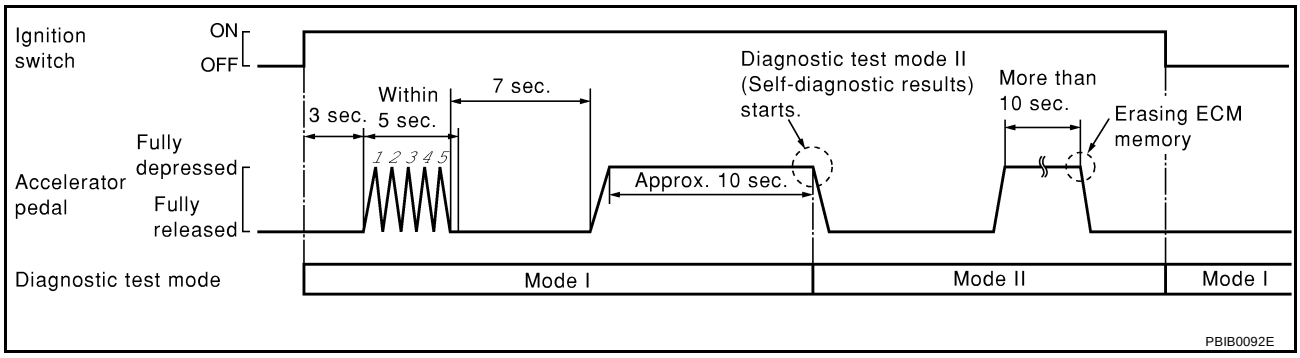
HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**
- **Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.**

How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
2. Repeat the following procedure quickly 5 times within 5 seconds.



a. Fully depress the accelerator pedal.
b. Fully release the accelerator pedal.

3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.

NOTE:
Do not release the accelerator pedal for 10 seconds if MIL may start blinking on the halfway of this 10 seconds. This blinking is displaying SRT status and is continued for another 10 seconds. For the details, refer to EC-56, "How to Display SRT Status" .

4. Fully release the accelerator pedal.
   ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

NOTE:
Wait until the same DTC (or 1st trip DTC) appears to confirm all DTCs certainly.

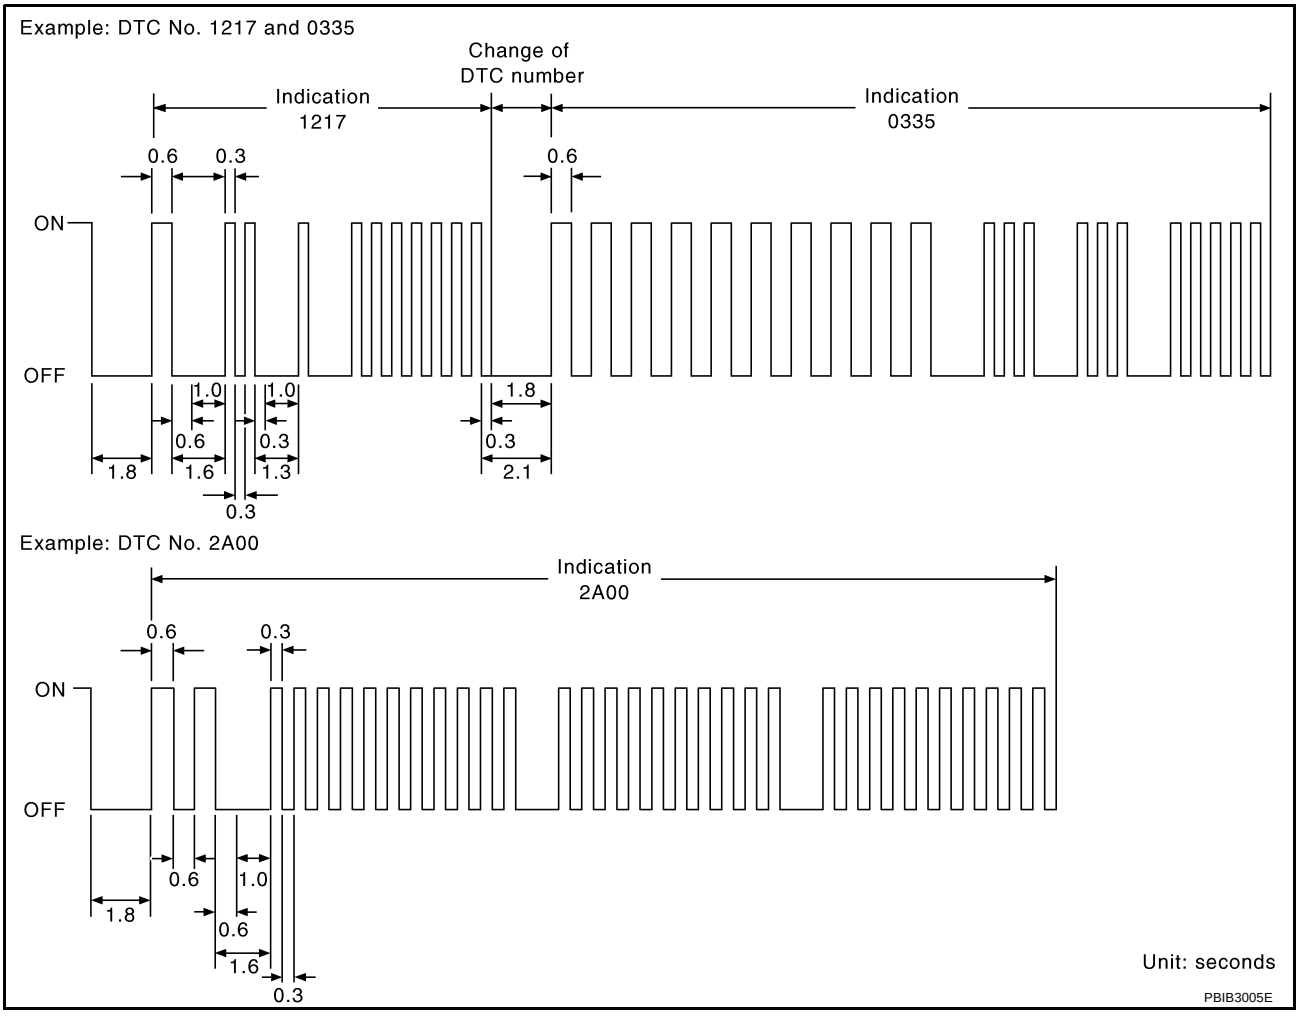
How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results).
   Refer to EC-63, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.
   The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb.
Refer to DI-56, "WARNING LAMPS" or see EC-716, "MIL AND DATA LINK CONNECTOR" .

DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING



MIL	Condition
ON	When the malfunction is detected.
OFF	No malfunction.

These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These uniden-

tified codes can be identified by using the CONSULT-III or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes as follows. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle. The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle. A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

Number	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
Flashes	10	1	2	3	4	5	6	7	8	9	11	12	13	14	15	16

A change from one trouble code to another occurs at an interval of 1.8-second OFF.
In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See EC-8, "INDEX FOR DTC")

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal.
Refer to EC-64, "How to Erase Diagnostic Test Mode II (Self-diagnostic Results)" .

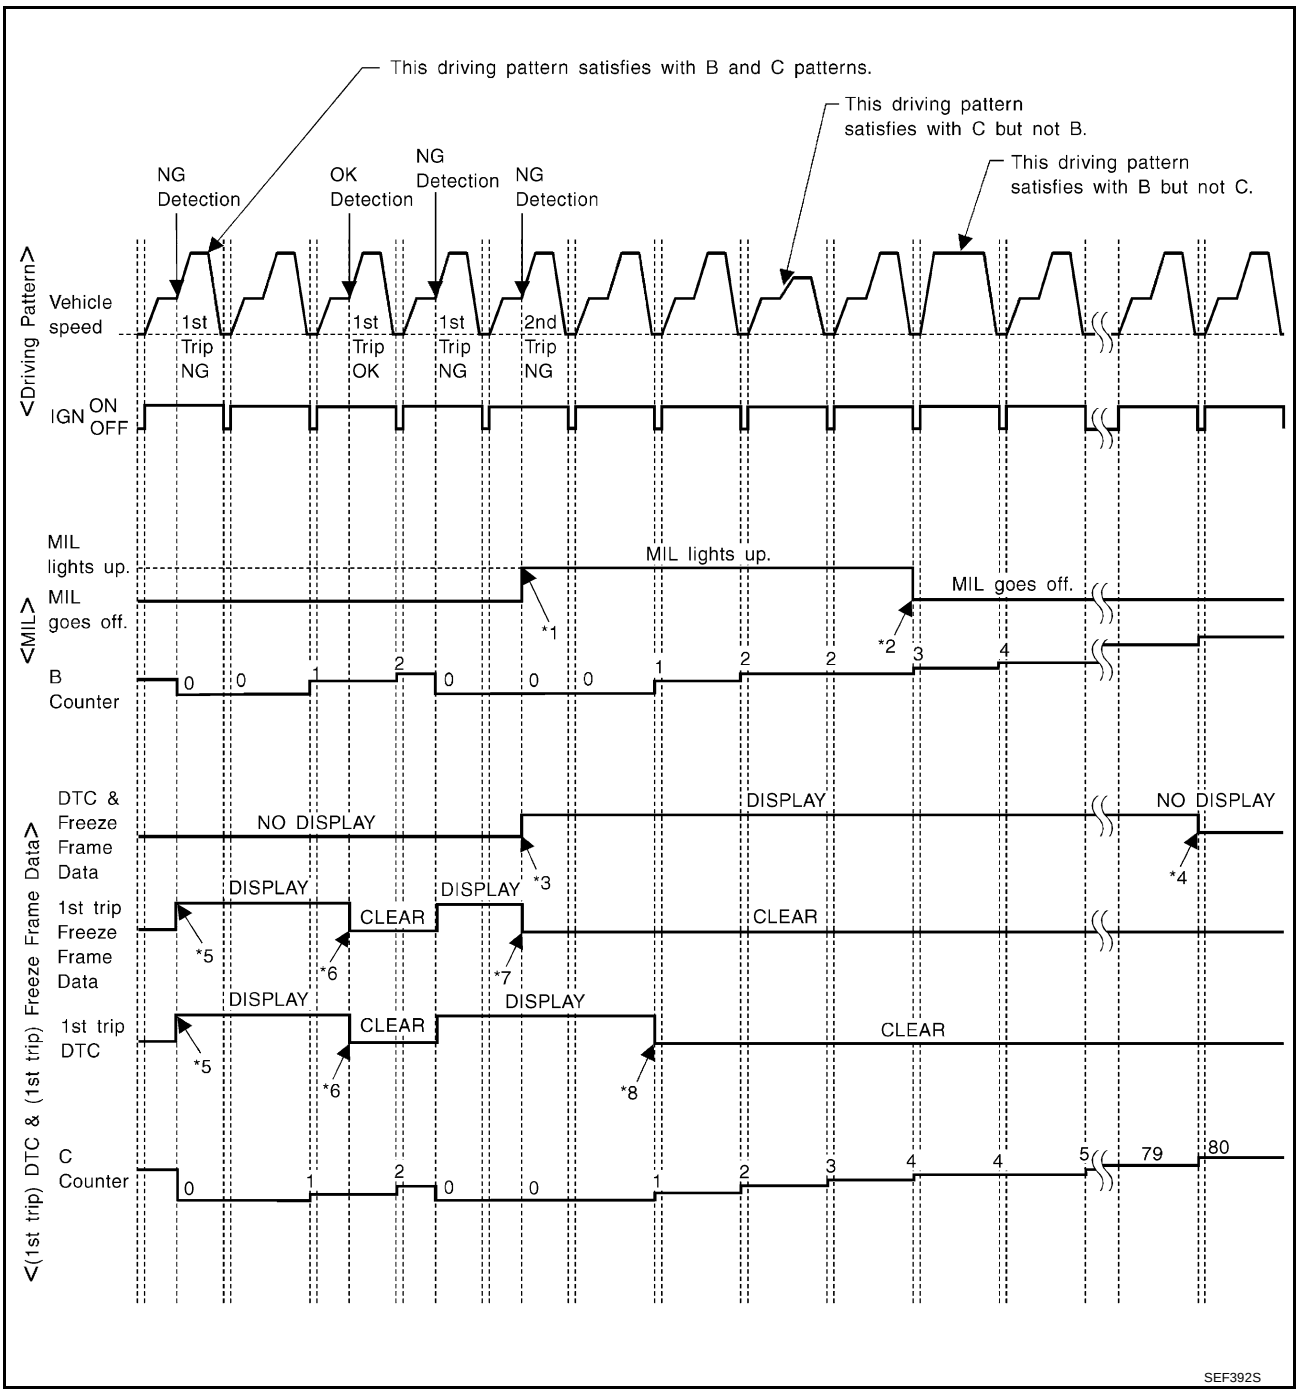
- **If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.**
- **Be careful not to erase the stored memory before starting trouble diagnoses.**

OBD System Operation Chart

NBS00033

RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.



- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to EC-47, "Two Trip Detection Logic" .
- The MIL will go off after the vehicle is driven 3 times (driving pattern B) with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The “TIME” in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-III will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

SUMMARY CHART

Items	Fuel Injection System	Misfire	Other
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)

For details about patterns B and C under “Fuel Injection System” and “Misfire”, see EC-68 .
For details about patterns A and B under “Other”, see EC-70 .
*1: Clear timing is at the moment OK is detected.
*2: Clear timing is when the same malfunction is detected in the 2nd trip.

RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR “MISFIRE ” <EXHAUST QUALITY DETERIORATION>, “FUEL INJECTION SYSTEM”

*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

*5: When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

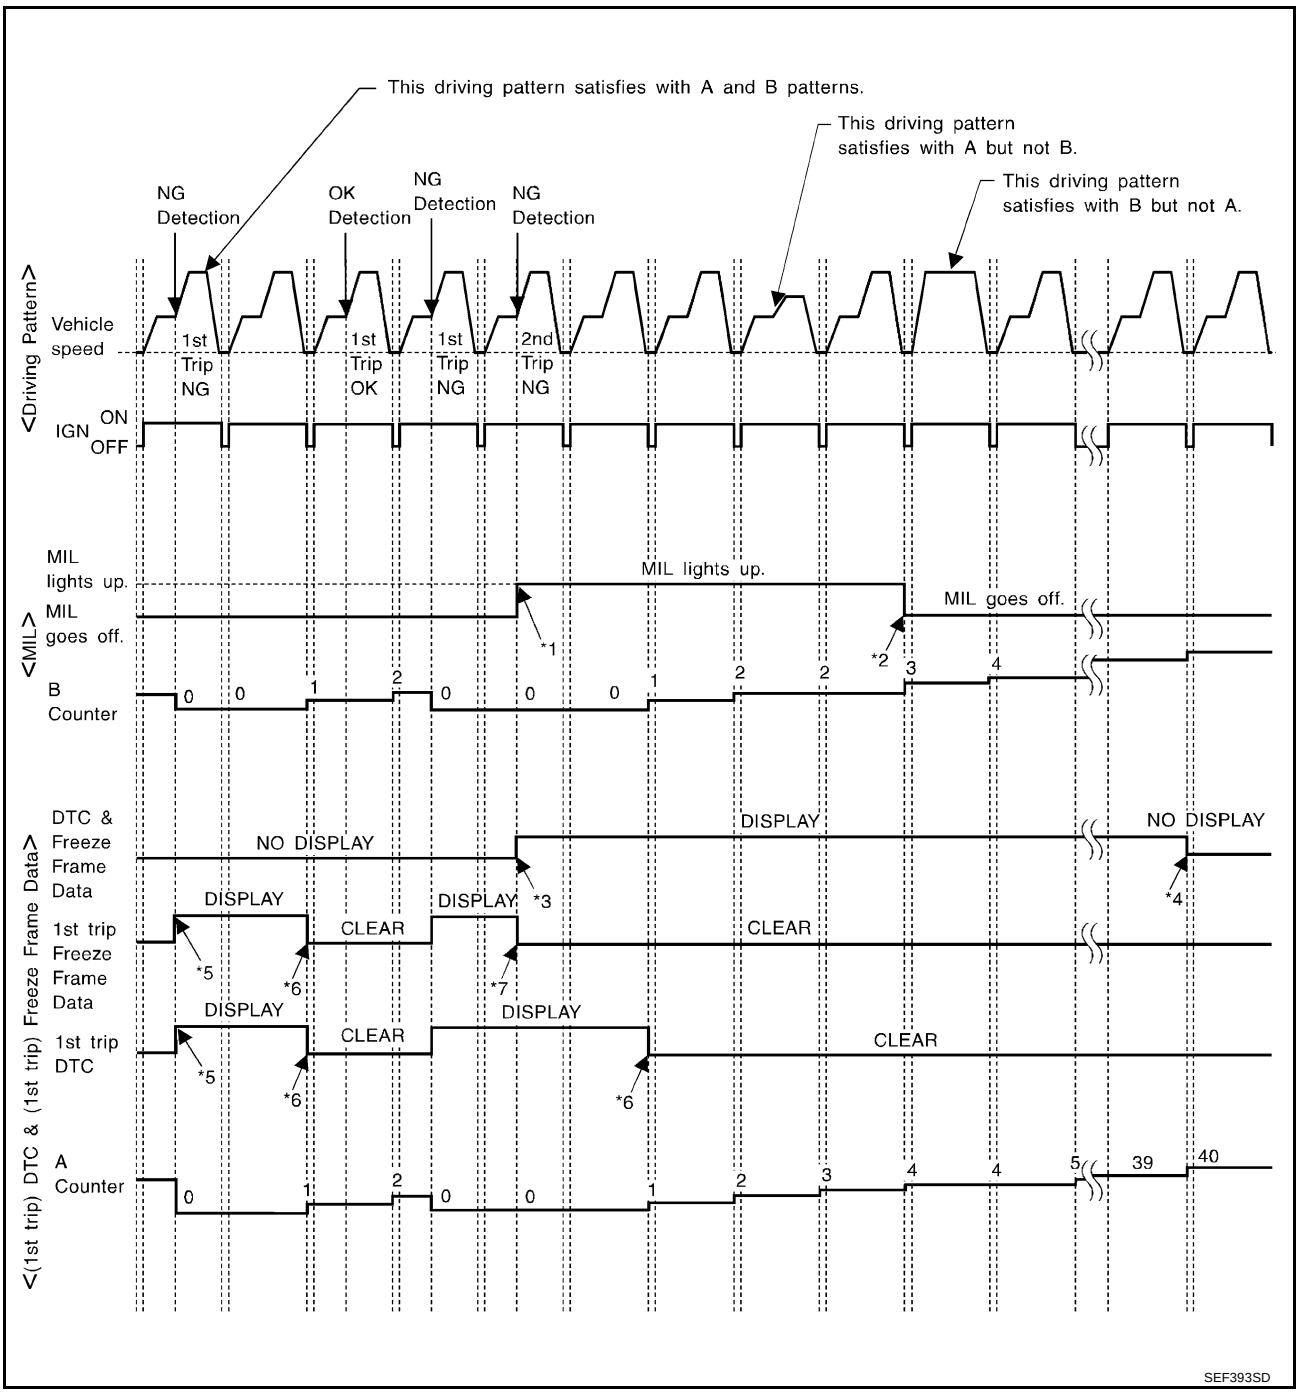
EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MIL will go off when the B counter reaches 3. (*2 in OBD SYSTEM OPERATION CHART)

<Driving Pattern C>



Driving pattern C means the vehicle operation as follows:
The following conditions should be satisfied at the same time:
Engine speed: (Engine speed in the freeze frame data) ±375 rpm
Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%]
Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), T should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), T should be higher than or equal to 70°C (158°F).

Example:
If the stored freeze frame data is as follows:
Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)
To be satisfied with driving pattern C, the vehicle should run under the following conditions:
Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.
- The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.(*2 in OBD SYSTEM OPERATION CHART)
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

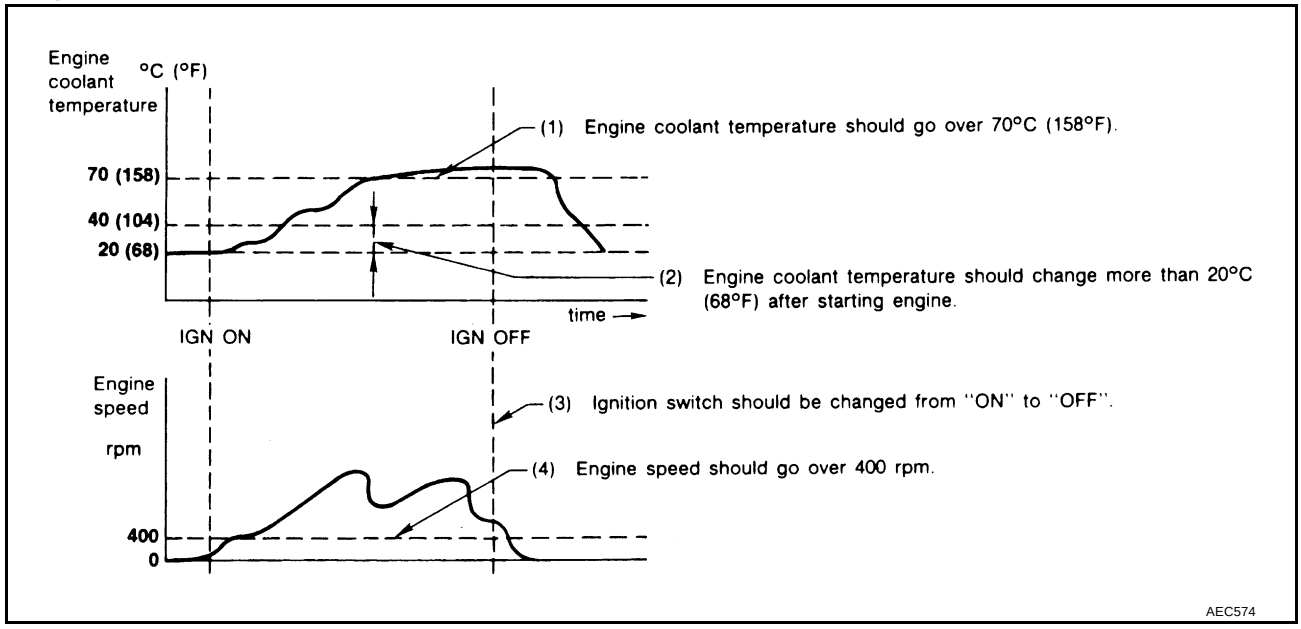
RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)



*5: When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

<Driving Pattern A>

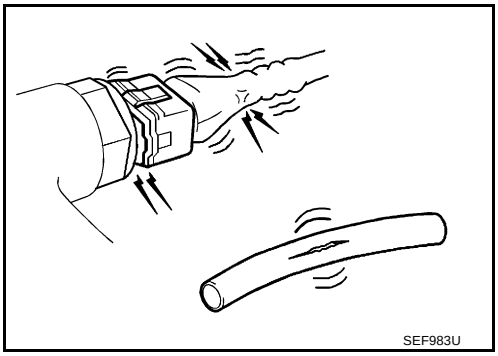
- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.(*2 in OBD SYSTEM OPERATION CHART)

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (*2 in OBD SYSTEM OPERATION CHART).

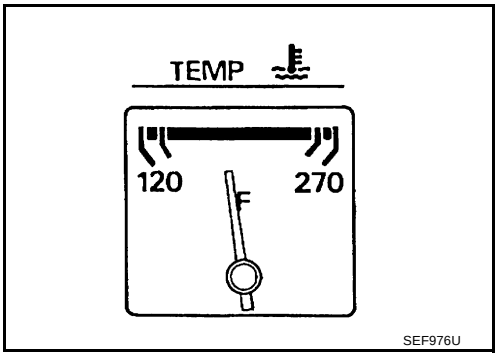
BASIC SERVICE PROCEDURE



PFP:00018

Basic Inspection

NBS00034



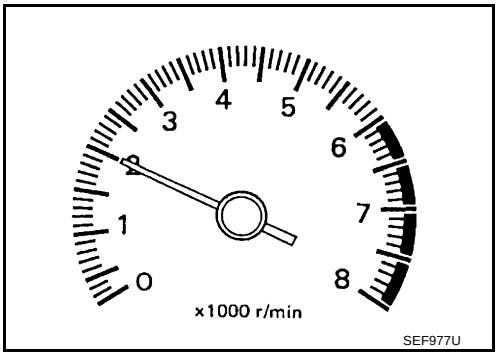
1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
- Harness connectors for improper connections
- Wiring harness for improper connections, pinches and cut
- Vacuum hoses for splits, kinks and improper connections
- Hoses and ducts for leaks
- Air cleaner clogging
- Gasket

SEF983U

3. Confirm that electrical or mechanical loads are not applied.
- Headlamp switch is OFF.
- Air conditioner switch is OFF.
- Rear window defogger switch is OFF.
- Steering wheel is in the straight-ahead position, etc.

4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
Ensure engine stays below 1,000 rpm.



SEF976U

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-III or GST.

OK or NG

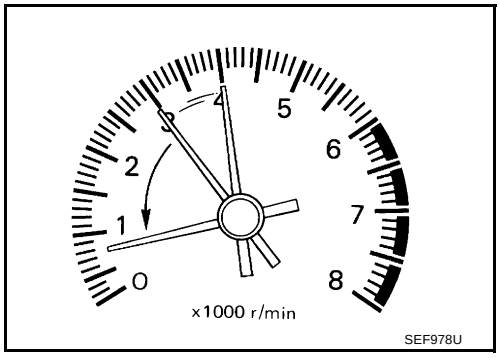
OK >> GO TO 3.
NG >> GO TO 2.

SEF977U

2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding Diagnostic Procedure.

>> GO TO 3.



3. CHECK TARGET IDLE SPEED

With CONSULT-III

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Read idle speed in “DATA MONITOR” mode with CONSULT-III. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

Without CONSULT-III

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .

>> GO TO 5.

5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-77, "Throttle Valve Closed Position Learning" .

>> GO TO 6.

6. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-77, "Idle Air Volume Learning" .

Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 7.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

7. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-III.
   Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit.
  Refer to EC-394, "DTC P0340, P0345 CMP SENSOR (PHASE)" .
- Check crankshaft position sensor (POS) and circuit.
  Refer to EC-386, "DTC P0335 CKP SENSOR (POS)" .

OK or NG

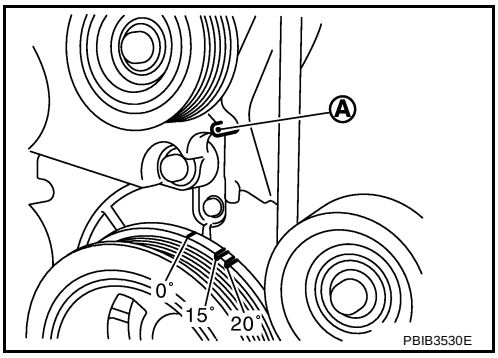
OK >> GO TO 9.
NG >> 1. Repair or replace.
2. GO TO 4.

9. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .

>> GO TO 4.

10. CHECK IGNITION TIMING



1. Run engine at idle.
2. Check ignition timing with a timing light.

   A : Timing indicator

   Refer to EC-76, "IGNITION TIMING" .

A/T: 15 ± 5° BTDC (in P or N position)

M/T: 15 ± 5° BTDC (in Neutral position)

OK or NG

OK >> GO TO 19.
NG >> GO TO 11.

11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .

>> GO TO 12.

12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-77, "Throttle Valve Closed Position Learning" .

>> GO TO 13.

13. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-77, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 14.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

14. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-III.
Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)
M/T: 650 ± 50 rpm (in Neutral position)

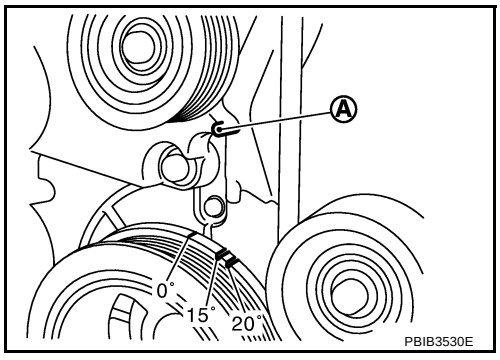
Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)
M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 15.
NG >> GO TO 17.



15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.

A : Timing indicator

Refer to EC-76, "IGNITION TIMING" .

A/T: 15 ± 5° BTDC (in P or N position)
M/T: 15 ± 5° BTDC (in Neutral position)

OK or NG

OK >> GO TO 19.
NG >> GO TO 16.

16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to EM-53, "TIMING CHAIN" .

OK or NG

OK >> GO TO 17.
NG >> 1. Repair the timing chain installation.
2. GO TO 4.

17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit.
  Refer to EC-394, "DTC P0340, P0345 CMP SENSOR (PHASE)" .
- Check crankshaft position sensor (POS) and circuit.
  Refer to EC-386, "DTC P0335 CKP SENSOR (POS)" .

OK or NG

OK >> GO TO 18.
NG >> 1. Repair or replace.
2. GO TO 4.

18. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .

>> GO TO 4.

19. INSPECTION END

Did you replace the ECM, referring this Basic Inspection procedure?

Yes or No

Yes >> 1. Perform EC-76, "VIN Registration"
2. Perform EC-76, "Exhaust Valve Timing Control Learning" .

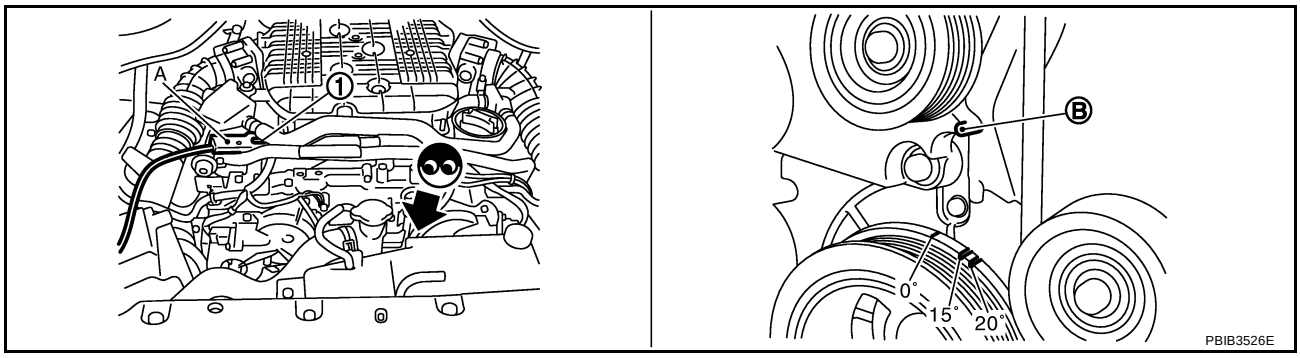
Idle Speed and Ignition Timing Check

NBS00035

IDLE SPEED

With CONSULT-III



Check idle speed in “DATA MONITOR” mode with CONSULT-III.

With GST

Check idle speed in Service $01 with GST.

IGNITION TIMING

1. Attach timing light to loop wire as shown.

1. Loop wire
A. Timing light
B. Timing indicator

2. Check ignition timing.

Procedure After Replacing ECM

NBS006SZ

When replacing ECM, the following procedure must be performed.

1. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to BL-152, "ECM Re-communicating Function" .
2. Perform EC-76, "VIN Registration" .
3. Perform EC-76, "Exhaust Valve Timing Control Learning" .
4. Perform EC-77, "Accelerator Pedal Released Position Learning" .
5. Perform EC-77, "Throttle Valve Closed Position Learning" .
6. Perform EC-77, "Idle Air Volume Learning" .

VIN Registration

NBS00037

DESCRIPTION

VIN Registration is an operation to registering VIN in ECM. It must be performed each time ECM is replaced.

NOTE:

Accurate VIN which is registered in ECM may be required for Inspection & Maintenance (I/M).

OPERATION PROCEDURE

With CONSULT-III

1. Check the VIN of the vehicle and note it. Refer to GI-46, "IDENTIFICATION INFORMATION" .
2. Turn ignition switch ON and engine stopped.
3. Select “VIN REGISTRATION” in “WORK SUPPORT” mode.
4. Follow the instruction of CONSULT-III display.

Exhaust Valve Timing Control Learning

NBS00038

DESCRIPTION

Exhaust Valve Timing Control Learning is an operation to learn the characteristic of exhaust valve timing control magnet retarder by comparing the target angle of exhaust camshaft with the actual retarded angle of exhaust camshaft. It must be performed each time exhaust valve timing control magnet retarder is disconnected or replaced, or ECM is replaced.

OPERATION PROCEDURE

With CONSULT-III

1. Start engine and warm it up to normal operation temperature.
2. Set shift lever in neutral position and confirm that following electrical or mechanical loads are not applied.
   - Headlamp switch is OFF
   - Air conditioner switch is OFF
   - Rear defogger switch is OFF
   - Steering wheel is in the straight-ahead position, etc
3. Keep the engine speed between 1,800 and 2,000 rpm.
4. Select “EXH V/T CONTROL LEARN” in “WORK SUPPORT” mode with CONSULT-III.
5. Touch “START” and wait 20 seconds.
6. Make sure that “CMPLT” is displayed on CONSULT-III screen.

Learning completed : CMPLT
Learning not yet : YET

Without CONSULT-III

1. Start engine and warm it up to normal operation temperature.
2. Set shift lever in neutral position and confirm that following electrical or mechanical loads are not applied.
   - Headlamp switch is OFF
   - Air conditioner switch is OFF
   - Rear defogger switch is OFF
   - Steering wheel is in the straight-ahead position, etc
3. Keep the engine speed between 1,800 and 2,000 rpm at 20 seconds.

Accelerator Pedal Released Position Learning

NBS00039

DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF and wait at least 10 seconds.

Throttle Valve Closed Position Learning

NBS0003A

DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
   Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning

NBS0003B

DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.

- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 100°C (158 - 212°F)
- Park/neutral position (PNP) switch: ON
- Electric load switch: OFF
  (Air conditioner, headlamp, rear window defogger)
  On vehicles equipped with daytime light systems, if the parking brake is applied before the engine is started, the headlamp will not be illuminated.
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up

– For A/T models with CONSULT-III

• Drive vehicle until “ATF TEMP SE 1” in “DATA MONITOR” mode of “A/T” system indicates less than 0.9V.

– For A/T models without CONSULT-III and M/T models

• Drive vehicle for 10 minutes.

OPERATION PROCEDURE

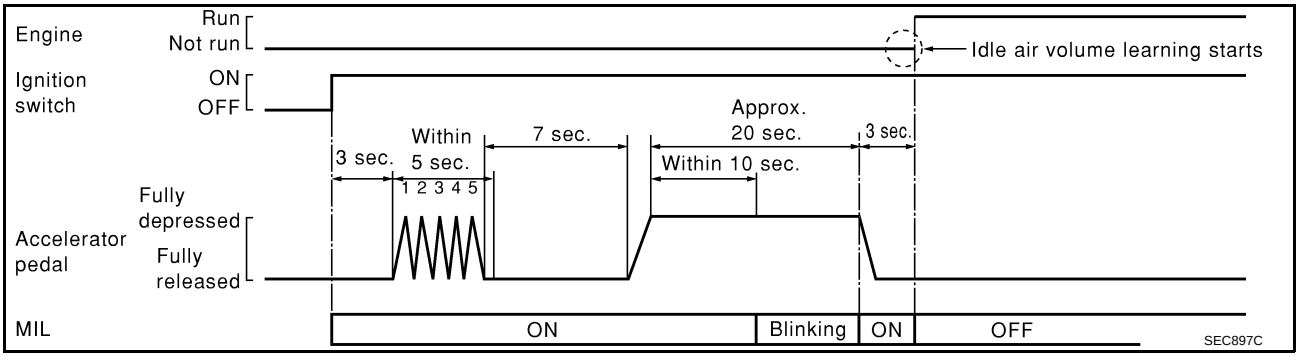
With CONSULT-III

1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Select “IDLE AIR VOL LEARN” in “WORK SUPPORT” mode.
6. Touch “START” and wait 20 seconds.
7. Make sure that “CMPLT” is displayed on CONSULT-III screen. If “CMPLT” is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSIS PROCEDURE below.
8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	A/T: 650 ± 50 rpm (in P or N position) M/T: 650 ± 50 rpm (in Neutral position)
Ignition timing	A/T: 15 ± 5° BTDC (in P or N position) M/T: 15 ± 5° BTDC (in Neutral position)

Without CONSULT-III

NOTE:



- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**

1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
7. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.

b. Fully release the accelerator pedal.

8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MIL turned ON.
10. Start engine and let it idle.
11. Wait 20 seconds.

12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	A/T: 650 ± 50 rpm (in P or N position) M/T: 650 ± 50 rpm (in Neutral position)
Ignition timing	A/T: 15 ± 5° BTDC (in P or N position) M/T: 15 ± 5° BTDC (in Neutral position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSTIC PROCEDURE below.

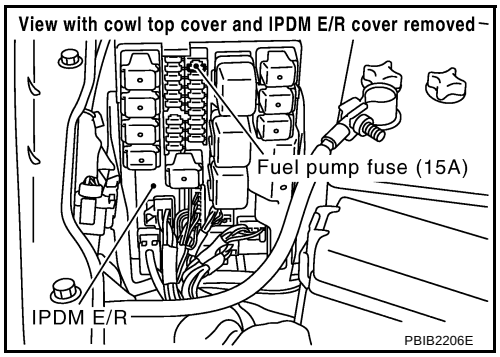
DIAGNOSTIC PROCEDURE

If Idle Air Volume Learning cannot be performed successfully, proceed as follows:

1. **Check that throttle valve is fully closed.**
2. **Check PCV valve operation.**
3. **Check that downstream of throttle valve is free from air leakage.**
4. **When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.**
   It is useful to perform EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .
5. **If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning all over again:**
   - **Engine stalls.**
   - **Erroneous idle.**

Fuel Pressure Check

NBS0003C



FUEL PRESSURE RELEASE

With CONSULT-III

1. Turn ignition switch ON.
2. Perform “FUEL PRESSURE RELEASE” in “WORK SUPPORT” mode with CONSULT-III.
3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.

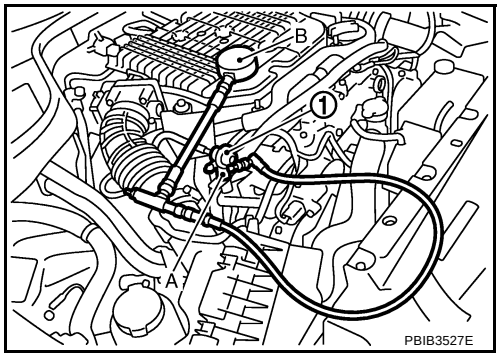
Without CONSULT-III

1. Remove fuel pump fuse (1) located in IPDM E/R (2).
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.

FUEL PRESSURE CHECK

CAUTION:

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.



NOTE:

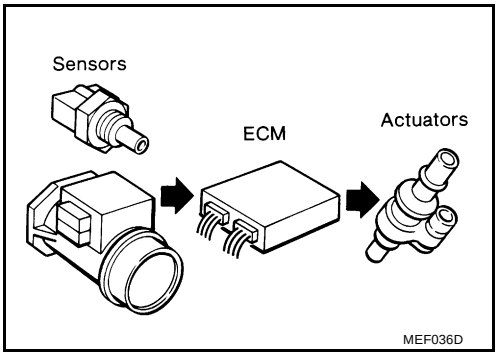
Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because Z33 models do not have fuel return system.
Use Fuel Pressure Gauge Kit (J-44321) to check fuel pressure.

1. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Install the inline fuel quick disconnected fitting (A) between fuel damper (1) and fuel injector tube.
3. Connect the fuel pressure gauge (quick connector adapter hose) (B) to the inline fuel quick disconnected fitting.
4. Turn ignition switch ON and check for fuel leakage.
5. Start engine and check for fuel leakage.
6. Read the indication of fuel pressure gauge.

At idling: Approximately 350 kPa (3.57 kg/cm^2 , 51 psi)

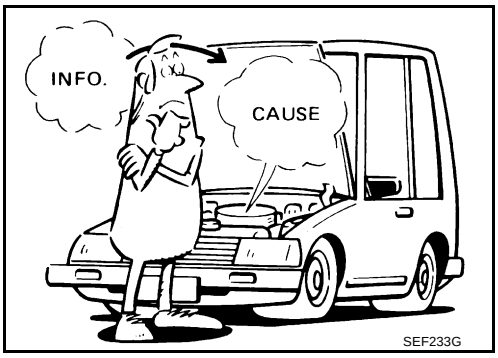
7. If result is unsatisfactory, go to next step.
8. Check fuel hoses and fuel tubes for clogging.
   If OK, replace “fuel filter and fuel pump assembly”.
   If NG, repair or replace.

TROUBLE DIAGNOSIS



PFP:00004

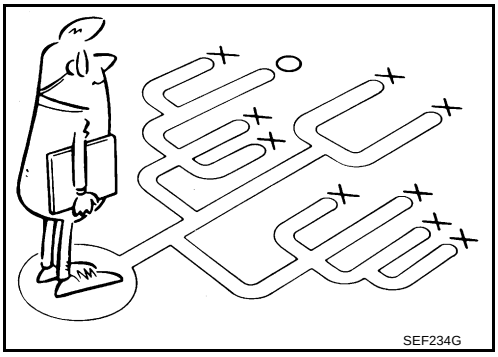
Trouble Diagnosis Introduction



NBS0003D

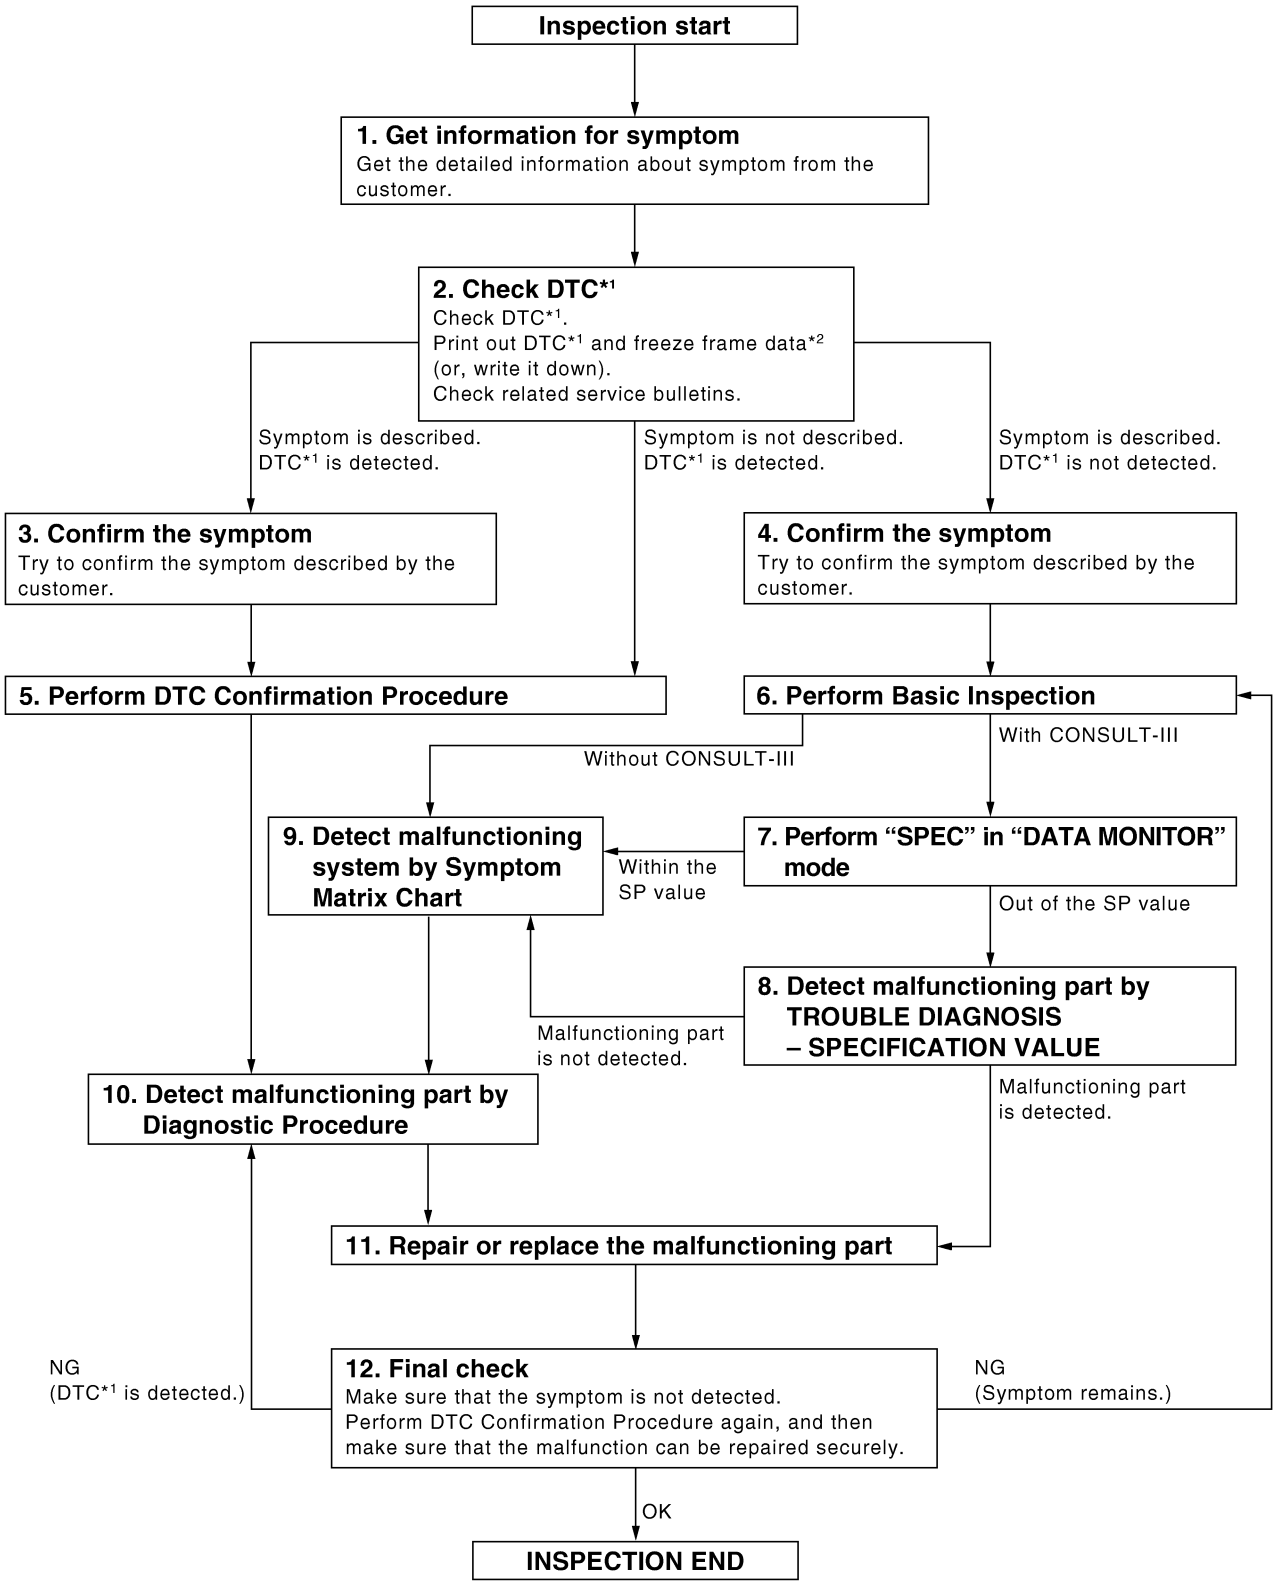
INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.



It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-III (or GST) or a circuit tester connected should be performed. Follow the WORK FLOW on EC-82 .



Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A DIAGNOSTIC WORKSHEET like the example on EC-86 should be used.

Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

WORK FLOW

Overall Sequence

*1: Include 1st trip DTC.
*2: Include 1st trip freeze frame data.

PBIB3456E

Detailed Flow

1. GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the EC-85, "DIAGNOSTIC WORKSHEET" .

>> GO TO 2.

2. CHECK DTC*1

1. Check DTC*1 .
2. Perform the following procedure if DTC*1 is displayed.

- Record DTC*1 and freeze frame data*2 . (Print them out with CONSULT-III or GST.)
- Erase DTC*1 . (Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .)
- Study the relationship between the cause detected by DTC*1 and the symptom described by the customer. (Symptom Matrix Chart is useful. Refer to EC-90, "Symptom Matrix Chart" .)

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC*1 is displayed>>GO TO 3.
Symptom is described, DTC*1 is not displayed>>GO TO 4.
Symptom is not described, DTC*1 is displayed>>GO TO 5.

3. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer (except MIL ON).
DIAGNOSIS WORK SHEET is useful to verify the incident.
Connect CONSULT-III to the vehicle and check diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer.
DIAGNOSIS WORK SHEET is useful to verify the incident.
Connect CONSULT-III to the vehicle and check diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5. PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC*1 , and then make sure that DTC*1 is detected again.

If two or more DTCs*1 are detected, refer to EC-87, "DTC Inspection Priority Chart" and determine trouble diagnosis order.

NOTE:

- Freeze frame data*2 is useful if the DTC*1 is not detected.
- Perform Overall Function Check if DTC Confirmation Procedure is not included on Service Manual. This simplified check procedure is an effective alternative though DTC*1 cannot be detected during this check. If the result of Overall Function Check is NG, it is the same as the detection of DTC*1 by DTC Confirmation Procedure.

Is DTC*1 detected?

Yes >> GO TO 10.
No >> Check according to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

6. PERFORM BASIC INSPECTION

Perform EC-71, "Basic Inspection" .

With CONSULT-III>>GO TO 7.
Without CONSULT-III>>GO TO 9.

7. PERFORM SPEC IN DATA MONITOR MODE

With CONSULT-III
Make sure that “MAS A/F SE-B1”, “MAS A/F SE-B2”, “B/FUEL SCHDL”, and “A/F ALPHA-B1”, “A/F ALPHA-B2” are within the SP value using CONSULT-III “SPEC” in "DATA MONITOR" mode.
Refer to EC-133, "Diagnostic Procedure" .

Are they within the SP value?

Yes >> GO TO 9.
No >> GO TO 8.

8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .

Is malfunctioning part detected?

Yes >> GO TO 11.
No >> GO TO 9.

9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM MATRIX CHART

Detect malfunctioning system according to EC-90, "Symptom Matrix Chart" based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptom.

>> GO TO 10.

10. DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.

NOTE:
The Diagnostic Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident" .

Is malfunctioning part detected?

Yes >> GO TO 11.
No >> Monitor input data from related sensors or check voltage of related ECM terminals using CONSULT-III. Refer to EC-127, "CONSULT-III Reference Value in Data Monitor" , EC-103, "ECM Terminals and Reference Value" .

11. REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it, refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 12.

12. FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Overall Function Check again, and then make sure that the malfunction have been repaired securely.
When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

OK or NG

NG (DTC*1 is detected)>>GO TO 10.
NG (Symptom remains)>>GO TO 6.
OK >> 1. Before returning the vehicle to the customer, make sure to erase unnecessary DTC*1 in ECM and TCM (Transmission Control Module). (Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" and AT-38, "HOW TO ERASE DTC" .)
2. If the completion of SRT is needed, drive vehicle under the specific driving pattern. Refer to EC-58, "Driving Pattern" .
3. **INSPECTION END**

*1: Include 1st trip DTC.
*2: Include 1st trip freeze frame data.

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.
Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.
Some conditions may cause the MIL to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

KEY POINTS

WHAT ..... Vehicle & engine model
WHEN ..... Date, Frequencies
WHERE..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SEF907L

Worksheet Sample

Customer name MR/MS		Model & Year	VIN
Engine #		Trans.	Mileage
Incident Date		Manuf. Date	In Service Date
Fuel and fuel filler cap		☐ Vehicle ran out of fuel causing misfire ☐ Fuel filler cap was left off or incorrectly screwed on.	
Symptoms	☐ Startability	☐ Impossible to start ☐ No combustion ☐ Partial combustion ☐ Partial combustion affected by throttle position ☐ Partial combustion NOT affected by throttle position ☐ Possible but hard to start ☐ Others [ ]	
	☐ Idling	☐ No fast idle ☐ Unstable ☐ High idle ☐ Low idle ☐ Others [ ]	
	☐ Driveability	☐ Stumble ☐ Surge ☐ Knock ☐ Lack of power ☐ Intake backfire ☐ Exhaust backfire ☐ Others [ ]	
	☐ Engine stall	☐ At the time of start ☐ While idling ☐ While accelerating ☐ While decelerating ☐ Just after stopping ☐ While loading	
Incident occurrence		☐ Just after delivery ☐ Recently ☐ In the morning ☐ At night ☐ In the daytime	
Frequency		☐ All the time ☐ Under certain conditions ☐ Sometimes	
Weather conditions		☐ Not affected	
	Weather	☐ Fine ☐ Raining ☐ Snowing ☐ Others [ ]	
	Temperature	☐ Hot ☐ Warm ☐ Cool ☐ Cold ☐ Humid °F	
Engine conditions		☐ Cold ☐ During warm-up ☐ After warm-up Engine speed 0 2,000 4,000 6,000 8,000 rpm	
Road conditions		☐ In town ☐ In suburbs ☐ Highway ☐ Off road (up/down)	
Driving conditions		☐ Not affected ☐ At starting ☐ While idling ☐ At racing ☐ While accelerating ☐ While cruising ☐ While decelerating ☐ While turning (RH/LH) Vehicle speed 0 10 20 30 40 50 60 MPH	
Malfunction indicator lamp		☐ Turned on ☐ Not turned on	

MTBL0017

DTC Inspection Priority Chart

NBS0003E

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION".**

Priority	Detected items (DTC)
1	● U1000 U1001 CAN communication line ● U1010 CAN communication ● P0101 P0102 P0103 P010B P010C P010D Mass air flow sensor ● P0112 P0113 P0127 Intake air temperature sensor ● P0117 P0118 P0125 Engine coolant temperature sensor ● P0122 P0123 P0222 P0223 P0227 P0228 P1225 P1226 P1234 P1235 P1239 P2132 P2133 P2135 Throttle position sensor ● P0128 Thermostat function ● P0181 P0182 P0183 Fuel tank temperature sensor ● P0196 P0197 P0198 Engine oil temperature sensor ● P0327 P0328 P0332 P0333 Knock sensor ● P0335 Crankshaft position sensor (POS) ● P0340 P0345 Camshaft position sensor (PHASE) ● P0460 P0461 P0462 P0463 Fuel level sensor ● P0500 Vehicle speed sensor ● P0605 ECM ● P0643 Sensor power supply ● P0700 TCM ● P0705 P0850 Park/neutral position (PNP) switch ● P1610 - P1615 NATS ● P2122 P2123 P2127 P2128 P2138 Accelerator pedal position sensor

Priority	Detected items (DTC)
2	● P0031 P0032 P0051 P0052 Air fuel ratio (A/F) sensor 1 heater ● P0037 P0038 P0057 P0058 Heated oxygen sensor 2 heater ● P0075 P0081 Intake valve timing control solenoid valve ● P0078 P0084 Exhaust valve timing control magnet retarder* ● P0130 P0131 P0132 P0133 P0150 P0151 P0152 P0153 P2A00 P2A03 Air fuel ratio (A/F) sensor 1 ● P0137 P0138 P0139 P0158 P0159 Heated oxygen sensor 2 ● P0441 EVAP control system purge flow monitoring ● P0443 P0444 P0445 EVAP canister purge volume control solenoid valve ● P0447 P0448 EVAP canister vent control valve ● P0451 P0452 P0453 EVAP control system pressure sensor ● P0550 Power steering pressure sensor ● P0603 ECM power supply ● P0710 P0717 P0720 P0731 P0732 P0733 P0734 P0735 P0740 P0744 P0745 P1730 P1752 P1757 P1762 P1767 P1772 P1774 A/T related sensors, solenoid valves and switches ● P1078 P1084 Exhaust valve timing control position sensor ● P1217 Engine over temperature (OVERHEAT) ● P1233 P2101 Electric throttle control function ● P1236 P2118 Throttle control motor ● P1290 P2103 P2103 Throttle control motor relay ● P1805 Brake switch

Fail-safe Chart

NBS0003F

When the DTC listed below is detected, the ECM enters fail-safe mode and the MIL lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P0102 P0103 P010C P010D	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.
P0117 P0118	Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-III displays the engine coolant temperature decided by ECM.
		Condition: Just as ignition switch is turned ON or START — Engine coolant temperature decided (CONSULT-III display): 40°C (104°F)
		Condition: More than approx. 4 minutes after ignition ON or START — Engine coolant temperature decided (CONSULT-III display): 80°C (176°F)
		Condition: Except as shown above — Engine coolant temperature decided (CONSULT-III display): 40 - 80°C (104 - 176°F) (Depends on the time)
		When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.
P0122 P0123 P0222 P0223 P0227 P0228 P1239 P2132 P2133 P2135	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0643	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1233 P2101	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1236 P2118	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1238 P2119	Electric throttle control actuator	(When electric throttle control actuator does not function properly due to the return spring malfunction:) ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
		(When throttle valve opening angle in fail-safe mode is not in specified range:) ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
		(When ECM detects the throttle valve is stuck open:) While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P (A/T), Neutral (M/T) position, and engine speed will not exceed 1,000 rpm or more.
P1290 P2100 P2103	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

- When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.
  Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
  The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

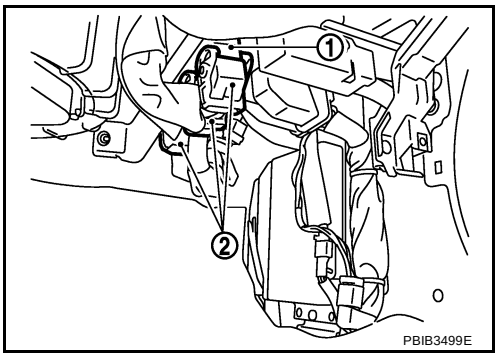
ECM Harness Connector Terminal Layout

NBS0003L



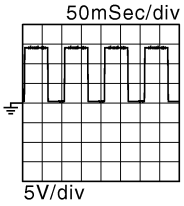
ECM Terminals and Reference Value

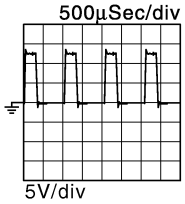
NBS0003M

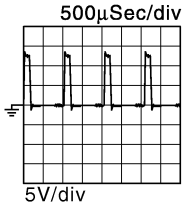
PREPARATION

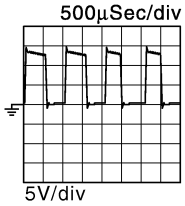
ECM (1) is located behind the passenger side instrument lower panel. For this inspection, remove passenger side instrument lower panel.

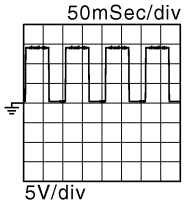
2 : ECM harness connector

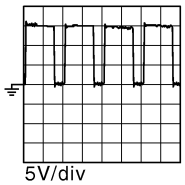




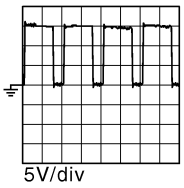


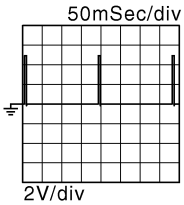


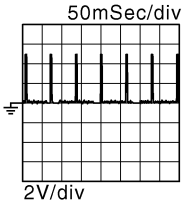


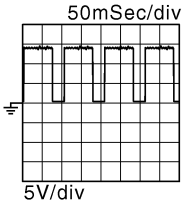


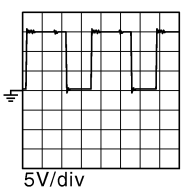
ECM INSPECTION TABLE



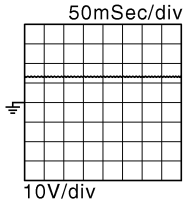


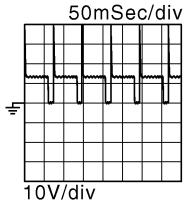


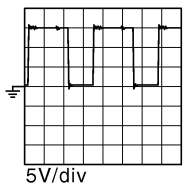




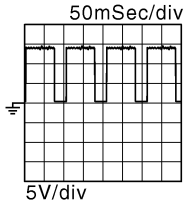
Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



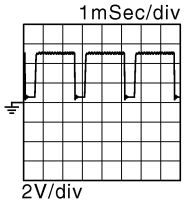


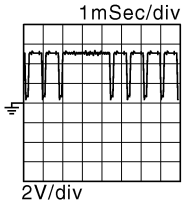


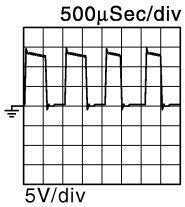
CAUTION:



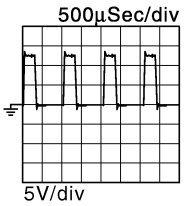
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECMs transistor. Use a ground other than ECM terminals, such as the ground.

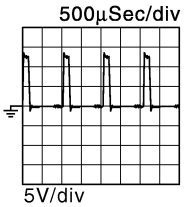


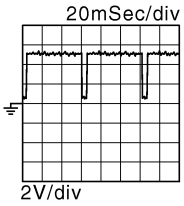


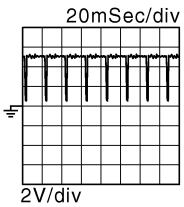


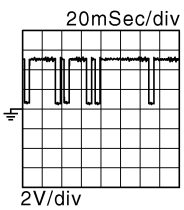
TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	W/R	A/F sensor 1 heater (bank 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed (More than 140 seconds after starting engine)	2.9 - 8.8V★  PBIB3538E

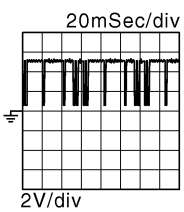












TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	G	Throttle control motor (Open) (bank 1)	**[Ignition switch: ON]** ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB3539E
			[Ignition switch: ON] ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully released	0 - 14V★  PBIB3540E

127 128	B B	ECM ground	**[Engine is running]** ● Idle speed	Body ground

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

*: This may vary depending on internal resistance of the tester.

CONSULT-III Function (ENGINE)

NBS0003N

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-III unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*
Data monitor	Input/Output data in the ECM can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
ECU Identification	ECM part number can be read.

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

X: Applicable

*1: This item includes 1st trip DTCs.

*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-III screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to EC-119, "Freeze Frame Data and 1st Trip Freeze Frame Data" .

*3: Always “CMPLT” is displayed.

INSPECTION PROCEDURE

Refer to GI-36, "CONSULT-III/GST CHECKING SYSTEM" .

WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	● FUEL PUMP WILL STOP BY TOUCHING START DURING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	● THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	● THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEFFICIENT.	When clearing the coefficient of self-learning control value

WORK ITEM	CONDITION	USAGE
EVAP SYSTEM CLOSE	CLOSE THE EVAP CANISTER VENT CONTROL VALVE IN ORDER TO MAKE EVAP SYSTEM CLOSE UNDER THE FOLLOWING CONDITIONS. ● IGN SW ON ● ENGINE NOT RUNNING ● AMBIENT TEMPERATURE IS ABOVE 0°C (32°F). ● NO VACUUM AND NO HIGH PRESSURE IN EVAP SYSTEM ● FUEL TANK TEMP. IS MORE THAN 0°C (32°F). ● WITHIN 10 MINUTES AFTER STARTING EVAP SYSTEM CLOSE ● WHEN TRYING TO EXECUTE EVAP SYSTEM CLOSE UNDER THE CONDITION EXCEPT ABOVE, CONSULT-III WILL DISCONTINUE IT AND DISPLAY APPROPRIATE INSTRUCTION. **NOTE:** **WHEN STARTING ENGINE, CONSULT-III MAY DISPLAY "BATTERY VOLTAGE IS LOW. CHARGE BATTERY", EVEN IN USING CHARGED BATTERY.**	When detecting EVAP vapor leak point of EVAP system
VIN REGISTRATION	● IN THIS MODE, VIN IS REGISTERED IN ECM.	When registering VIN in ECM
EXH V/T CONTROL LEARN	● IN THIS MODE, OPERATION TO LEARN EXHAUST VALVE TIMING CONTROL MAGNET RETARDER CHARACTERISTIC.	When learning the exhaust valve timing control
TARGET IDLE RPM ADJ*	● IDLE CONDITION	When setting target idle speed
TARGET IGN TIM ADJ*	● IDLE CONDITION	When adjusting target ignition timing

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE

Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" .)

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	● The engine control component part/control system has a trouble code, it is displayed as PXXXX. (Refer to EC-8, "INDEX FOR DTC" .)
FUEL SYS-B1	● "Fuel injection system status" at the moment a malfunction is detected is displayed.
FUEL SYS-B2	● One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	● The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	● The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	● "Long-term fuel trim" at the moment a malfunction is detected is displayed.
L-FUEL TRM-B2 [%]	● The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	● "Short-term fuel trim" at the moment a malfunction is detected is displayed.
S-FUEL TRM-B2 [%]	● The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.

Freeze frame data item*	Description
ENGINE SPEED [rpm]	● The engine speed at the moment a malfunction is detected is displayed.
VEHICL SPEED [km/h] or [mph]	● The vehicle speed at the moment a malfunction is detected is displayed.
ABSOL TH-P/S [%]	● The throttle valve operating angle at the moment a malfunction is detected is displayed.
B/FUEL SCHDL [msec]	● The base fuel schedule at the moment a malfunction is detected is displayed.
INT/A TEMP SE [°C] or [°F]	● The intake air temperature at the moment a malfunction is detected is displayed.

*: This item is the same as that of 1st trip freeze frame data.

DATA MONITOR MODE

Monitored Item

×: Applicable

Monitored item [Unit]	Description	Remarks
ENG SPEED [rpm]	● Indicates the engine speed computed from the signals of the crankshaft position sensor (POS) and camshaft position sensor (PHASE).	● Accuracy becomes poor if engine speed drops below the idle rpm. ● If the signal is interrupted while the engine is running, an abnormal value may be indicated.
MAS A/F SE-B1 [V]	● The signal voltage of the mass air flow sensor is displayed.	● When the engine is stopped, a certain value is indicated. ● When engine is running specification range is indicated in “SPEC”.
MAS A/F SE-B2 [V]		
B/FUEL SCHDL [msec]	● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	● When engine is running specification range is indicated in “SPEC”.
A/F ALPHA-B1 [%]	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When the engine is stopped, a certain value is indicated. ● This data also includes the data for the air-fuel ratio learning control. ● When engine is running specification range is indicated in “SPEC”.
A/F ALPHA-B2 [%]		
COOLAN TEMP/S [°C] or [°F]	● The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed.	● When the engine coolant temperature sensor is open or short-circuited, ECM enters fail-safe mode. The engine coolant temperature determined by the ECM is displayed.
A/F SEN1 (B1) [V]	● The A/F signal computed from the input signal of the A/F sensor 1 is displayed.	
A/F SEN1 (B2) [V]		
HO2S2 (B1) [V]	● The signal voltage of the heated oxygen sensor 2 is displayed.	
HO2S2 (B2) [V]		
HO2S2 MNTR(B1) [RICH/LEAN]	● Display of heated oxygen sensor 2 signal: RICH: Means the amount of oxygen after three way catalyst is relatively small. LEAN: Means the amount of oxygen after three way catalyst is relatively large.	● When the engine is stopped, a certain value is indicated.
HO2S2 MNTR(B2) [RICH/LEAN]		
VHCL SPEED SE [km/h] or [mph]	● The vehicle speed computed from the vehicle speed signal sent from combination meter is displayed.	
BATTERY VOLT [V]	● The power supply voltage of ECM is displayed.	
ACCEL SEN 1 [V]	● The accelerator pedal position sensor signal voltage is displayed.	● ACCEL SEN 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.
ACCEL SEN 2 [V]		

Monitored item [Unit]	Description	Remarks
TP SEN 1-B1 [V]	● The throttle position sensor signal voltage is displayed.	● THRTL SEN 2-B1 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.
TP SEN 2-B1 [V]		
FUEL T/TMP SE [°C] or [°F]	● The fuel temperature (determined by the signal voltage of the fuel tank temperature sensor) is displayed.	
INT/A TEMP SE [°C] or [°F]	● The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
EVAP SYS PRES [V]	● The signal voltage of EVAP control system pressure sensor is displayed.	
FUEL LEVEL SE [V]	● The signal voltage of the fuel level sensor is displayed.	
START SIGNAL [ON/OFF]	● Indicates start signal status [ON/OFF] computed by the ECM according to the signals of engine speed and battery voltage.	● After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	● Indicates idle position [ON/OFF] computed by ECM according to the accelerator pedal position sensor signal.	
AIR COND SIG [ON/OFF]	● Indicates [ON/OFF] condition of the air conditioner switch as determined by the air conditioner signal.	
P/N POSI SW [ON/OFF]	● Indicates [ON/OFF] condition from the park/neutral position (PNP) switch signal.	
PW/ST SIGNAL [ON/OFF]	● [ON/OFF] condition of the power steering system (determined by the signal voltage of the power steering pressure sensor) is indicated.	
LOAD SIGNAL [ON/OFF]	● Indicates [ON/OFF] condition from the electrical load signal. ON: Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF: Both rear window defogger switch and lighting switch are OFF.	
IGNITION SW [ON/OFF]	● Indicates [ON/OFF] condition from ignition switch signal.	
HEATER FAN SW [ON/OFF]	● Indicates [ON/OFF] condition from the heater fan switch signal.	
BRAKE SW [ON/OFF]	● Indicates [ON/OFF] condition from the stop lamp switch signal.	
INJ PULSE-B1 [msec]	● Indicates the actual fuel injection pulse width compensated by ECM according to the input signals.	● When the engine is stopped, a certain computed value is indicated.
INJ PULSE-B2 [msec]		
IGN TIMING [BTDC]	● Indicates the ignition timing computed by ECM according to the input signals.	● When the engine is stopped, a certain value is indicated.
CAL/LD VALUE [%]	● “Calculated load value” indicates the value of the current air flow divided by peak air flow.	
MASS AIRFLOW [g·m/s]	● Indicates the mass air flow computed by ECM according to the signal voltage of the mass air flow sensor.	
PURG VOL C/V [%]	● Indicates the EVAP canister purge volume control solenoid valve control value computed by the ECM according to the input signals. ● The opening becomes larger as the value increases.	
INT/V TIM(B1) [°CA]	● Indicates [°CA] of intake camshaft advanced angle.	
INT/V TIM(B2) [°CA]		
EXH/V TIM B1 [°CA]	● Indicates [°CA] of exhaust camshaft retarded angle.	
EXH/V TIM B2 [°CA]		

Monitored item [Unit]	Description	Remarks
INT/V SOL(B1) [%]	● The control value of the intake valve timing control solenoid valve (determined by ECM according to the input signals) is indicated. ● The advance angle becomes larger as the value increases.	
INT/V SOL(B2) [%]		
EX VTC DTY B1 [%]	● The control value of the exhaust valve timing control magnet retarder (determined by ECM according to the input signals) is indicated. ● The retard angle becomes larger as the value increases.	
EX VTC DTY B2 [%]		
TP SEN 1-B2 [V]	● The throttle position sensor signal voltage is displayed.	● THRTL SEN 2-B2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.
TP SEN 2-B2 [V]		
AIR COND RLY [ON/OFF]	● The air conditioner relay control condition (determined by ECM according to the input signals) is indicated.	
FUEL PUMP RLY [ON/OFF]	● Indicates the fuel pump relay control condition determined by ECM according to the input signals.	
VENT CONT/V [ON/OFF]	● The control condition of the EVAP canister vent control valve (determined by ECM according to the input signals) is indicated. ON: Closed OFF: Open	
THRTL RELAY [ON/OFF]	● Indicates the throttle control motor relay control condition determined by the ECM according to the input signals.	
COOLING FAN [HI/LOW/OFF]	● The control condition of the cooling fan (determined by ECM according to the input signals) is indicated. HI: High speed operation LOW: Low speed operation OFF: Stop	
HO2S2 HTR (B1) [ON/OFF]	● Indicates [ON/OFF] condition of heated oxygen sensor 2 heater determined by ECM according to the input signals.	
HO2S2 HTR (B2) [ON/OFF]		
I/P PULLY SPD [rpm]	● Indicates the engine speed computed from the turbine revolution sensor signal.	
VEHICLE SPEED [km/h] or [mph]	● Indicates the vehicle speed computed from the revolution sensor signal.	
IDL A/V LEARN [YET/CMPLT]	● Display the condition of Idle Air Volume Learning YET: Idle Air Volume Learning has not been performed yet. CMPLT: Idle Air Volume Learning has already been performed successfully.	
TRVL AFTER MIL [km] or [mile]	● Distance traveled while MIL is activated.	
ENG OIL TEMP [°C] or [°F]	● The engine oil temperature (determined by the signal voltage of the engine oil temperature sensor) is displayed.	
A/F S1 HTR(B1) [%]	● Indicates A/F sensor 1 heater control value computed by ECM according to the input signals. ● The current flow to the heater becomes larger as the value increases.	
A/F S1 HTR(B2) [%]		
AC PRESS SEN [V]	● The signal voltage from the refrigerant pressure sensor is displayed.	

Monitored item [Unit]	Description	Remarks
VHCL SPEED SE [km/h] or [mph]	● The vehicle speed computed from the vehicle speed signal sent from TCM is displayed.	
SET VHCL SPD [km/h] or [mph]	● The preset vehicle speed is displayed.	
MAIN SW [ON/OFF]	● Indicates [ON/OFF] condition from MAIN switch signal.	
CANCEL SW [ON/OFF]	● Indicates [ON/OFF] condition from CANCEL switch signal.	
RESUME/ACC SW [ON/OFF]	● Indicates [ON/OFF] condition from RESUME/ACCELERATE switch signal.	
SET SW [ON/OFF]	● Indicates [ON/OFF] condition from SET/COAST switch signal.	
BRAKE SW1 [ON/OFF]	● Indicates [ON/OFF] condition from ASCD brake switch signal and ASCD clutch switch signal (M/T)	
BRAKE SW2 [ON/OFF]	● Indicates [ON/OFF] condition of stop lamp switch signal.	
VHCL SPD CUT [NON/CUT]	● Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed decreased to excessively low compared with the ASCD set speed, and ASCD operation is cut off.	
LO SPEED CUT [NON/CUT]	● Indicates the vehicle cruise condition. NON: Vehicle speed is maintained at the ASCD set speed. CUT: Vehicle speed decreased to excessively low, and ASCD operation is cut off.	
AT OD MONITOR [ON/OFF]	● Indicates [ON/OFF] condition of A/T O/D according to the input signal from the TCM.	● For M/T models always “OFF” is displayed.
AT OD CANCEL [ON/OFF]	● Indicates [ON/OFF] condition of A/T O/D cancel request signal.	● For M/T models always “OFF” is displayed.
CRUISE LAMP [ON/OFF]	● Indicates [ON/OFF] condition of CRUISE lamp determined by the ECM according to the input signals.	
SET LAMP [ON/OFF]	● Indicates [ON/OFF] condition of SET lamp determined by the ECM according to the input signals.	
EXH V/T LEARN [YET/CMPLT]	● Display the condition of Exhaust Valve Timing Control Learning YET: Exhaust Valve Timing Control Learning has not been performed yet. CMPLT: Exhaust Valve Timing Control Learning has already been performed successfully.	
A/F ADJ-B1	● Indicates the correction of factor stored in ECM. The factor is calculated from the difference between the target air-fuel ratio stored in ECM and the air-fuel ratio calculated from A/F sensor 1 signal.	
A/F ADJ-B2		
Voltage [V]	● Voltage, frequency, duty cycle or pulse width measured by the probe.	● Only “#” is displayed if item is unable to be measured. ● Figures with “#”s are temporary ones. They are the same figures as an actual piece of data which was just previously measured.
Frequency [msec], [Hz] or [%]		
DUTY-HI		
DUTY-LOW		
PLS WIDTH-HI		
PLS WIDTH-LOW		

NOTE:
Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

ACTIVE TEST MODE

Test Item

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
FUEL INJECTION	● Engine: Return to the original trouble condition ● Change the amount of fuel injection using CONSULT-III.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Fuel injector ● Air fuel ratio (A/F) sensor 1
IGNITION TIMING	● Engine: Return to the original trouble condition ● Timing light: Set ● Retard the ignition timing using CONSULT-III.	If trouble symptom disappears, see CHECK ITEM.	● Perform Idle Air Volume Learning.
POWER BALANCE	● Engine: After warming up, idle the engine. ● A/C switch OFF ● Shift lever: P or N (A/T), Neutral (M/T) ● Cut off each fuel injector signal one at a time using CONSULT-III.	Engine runs rough or dies.	● Harness and connectors ● Compression ● Fuel injector ● Power transistor ● Spark plug ● Ignition coil
COOLING FAN*	● Ignition switch: ON ● Turn the cooling fan “HI”, “LOW” and “OFF” using CONSULT-III.	Cooling fan moves and stops.	● Harness and connectors ● Cooling fan motor ● IPDM E/R
ENG COOLANT TEMP	● Engine: Return to the original trouble condition ● Change the engine coolant temperature using CONSULT-III.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Engine coolant temperature sensor ● Fuel injector
FUEL PUMP RELAY	● Ignition switch: ON (Engine stopped) ● Turn the fuel pump relay “ON” and “OFF” using CONSULT-III and listen to operating sound.	Fuel pump relay makes the operating sound.	● Harness and connectors ● Fuel pump relay
PURG VOL CONT/V	● Engine: After warming up, run engine at 1,500 rpm. ● Change the EVAP canister purge volume control solenoid valve opening percent using CONSULT-III.	Engine speed changes according to the opening percent.	● Harness and connectors ● Solenoid valve
FUEL/T TEMP SEN	● Change the fuel tank temperature using CONSULT-III.		
VENT CONTROL/V	● Ignition switch: ON (Engine stopped) ● Turn solenoid valve “ON” and “OFF” with the CONSULT-III and listen to operating sound.	Solenoid valve makes an operating sound.	● Harness and connectors ● Solenoid valve
INT V/T ASSIGN ANGLE	● Engine: Return to the original trouble condition ● Change intake valve timing using CONSULT-III.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Intake valve timing control solenoid valve
EXH V/T ASSIGN ANGLE	● Engine: Return to the original trouble condition ● Change exhaust valve timing using CONSULT-III.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Exhaust valve timing control magnet retarder

*: Leaving cooling fan “OFF” with CONSULT-III while engine is running may cause the engine to overheat.

DTC & SRT CONFIRMATION MODE

SRT STATUS Mode

For details, refer to EC-53, "SYSTEM READINESS TEST (SRT) CODE" .

SRT WORK SUPPORT Mode

This mode enables a technician to drive a vehicle to set the SRT while monitoring the SRT status.

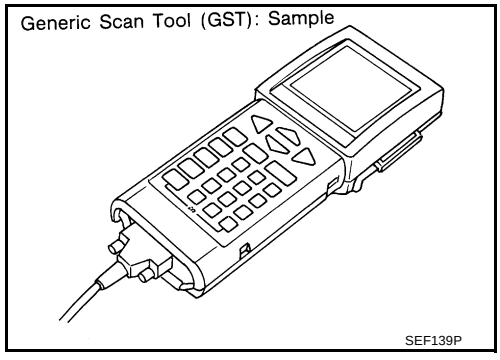
	HO2S2 (B2) P1166	P0158	EC-298
	HO2S2 (B2) P1167	P0157	EC-287



*: DTC P1442 and P1456 does not apply to Z33 models but appears in DTC WORK SUPPORT Mode screens.

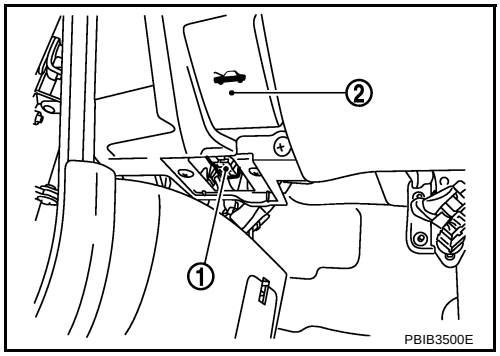
Generic Scan Tool (GST) Function

NBS0003O

DESCRIPTION

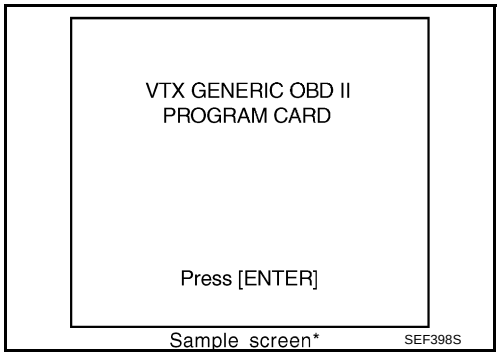
Generic Scan Tool (OBDII scan tool) complying with SAE J1978 has 8 different functions explained below.
ISO9141 is used as the protocol.
The name GST or Generic Scan Tool is used in this service manual.

FUNCTION



Diagnostic test mode		Function
Service $01	READINESS TESTS	This diagnostic service gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
Service $02	(FREEZE DATA)	This diagnostic service gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to EC-53, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA" .
Service $03	DTCs	This diagnostic service gains access to emission-related power train trouble codes which were stored by ECM.

Diagnostic test mode		Function
Service $04	CLEAR DIAG INFO	This diagnostic service can clear all emission-related diagnostic information. This includes: ● Clear number of diagnostic trouble codes (Service $01) ● Clear diagnostic trouble codes (Service $03) ● Clear trouble code for freeze frame data (Service $01) ● Clear freeze frame data (Service $02) ● Reset status of system monitoring test (Service $01) ● Clear on board monitoring test results (Service $06 and $07)
Service $06	(ON BOARD TESTS)	This diagnostic service accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
Service $07	(ON BOARD TESTS)	This diagnostic service enables the off board test drive to obtain test results for emission-related powertrain components/systems that are continuously monitored during normal driving conditions.
Service $08	—	This diagnostic service can close EVAP system in ignition switch ON position (Engine stopped). When this diagnostic service is performed, EVAP canister vent control valve can be closed. In the following conditions, this mode cannot function. ● Low ambient temperature ● Low battery voltage ● Engine running ● Ignition switch OFF ● Low fuel temperature ● Too much pressure is applied to EVAP system
Service $09	(CALIBRATION ID)	This diagnostic service enables the off-board test device to request specific vehicle information such as Vehicle Identification Number (VIN) and Calibration IDs.



INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect GST to data link connector (1), which is located under LH dash panel near the hood opener handle.

   2 : Hood opener handle

3. Turn ignition switch ON.
4. Enter the program according to instruction on the screen or in the operation manual.
   (*: Regarding GST screens in this section, sample screens are shown.)

5. Perform each diagnostic mode according to each service procedure.
For further information, see the GST Operation Manual of the tool maker.

CONSULT-III Reference Value in Data Monitor

NBS0003P

Remarks:
- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
  * Specification data may not be directly related to their components signals/values/operations.
  i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

MONITOR ITEM	CONDITION		SPECIFICATION
ENG SPEED	● Run engine and compare CONSULT-III value with the tachometer indication.		Almost the same speed as the tachometer indication
MAS A/F SE-B1	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
MAS A/F SE-B2	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
B/FUEL SCHDL	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
A/F ALPHA-B1 A/F ALPHA-B2	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
COOLAN TEMP/S	● Engine: After warming up		More than 70°C (158°F)
A/F SEN1 (B1) A/F SEN1 (B2)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 2.2V
HO2S2 (B1) HO2S2 (B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load		0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR(B1) HO2S2 MNTR(B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load		LEAN ←→ RICH
VHCL SPEED SE	● Turn drive wheels and compare CONSULT-III value with the speedometer indication.		Almost the same speed as the speedometer indication
BATTERY VOLT	● Ignition switch: ON (Engine stopped)		11 - 14V
ACCEL SEN 1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.5 - 1.0V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN 2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.3 - 1.2V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
TP SEN 1-B1 TP SEN 2-B1*1	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T) or 1st (M/T) position	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V
FUEL T/TMP SE	● Ignition switch: ON		Indicates fuel tank temperature
INT/A TEMP SE	● Ignition switch: ON		Indicates intake air temperature

MONITOR ITEM	CONDITION		SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON		Approx. 1.8 - 4.8V
FUEL LEVEL SE	● Ignition switch: ON		Depending on fuel level of fuel tank
START SIGNAL	● Ignition switch: ON → START → ON		OFF → ON → OFF
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T), Neutral (M/T) position	ON
		Shift lever: Except above position	OFF
PW/ST SIGNAL	● Engine: After warming up, idle the engine	Steering wheel: Not being turned	OFF
		Steering wheel: Being turned	ON
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch: ON and/or lighting switch: 2nd position	ON
		Rear window defogger switch and lighting switch: OFF	OFF
IGNITION SW	● Ignition switch: ON → OFF → ON		ON → OFF → ON
HEATER FAN SW	● Engine: After warming up, idle the engine	Heater fan switch: ON	ON
		Heater fan switch: OFF	OFF
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON
INJ PULSE-B1 INJ PULSE-B2	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	2.0 - 3.0 msec
		2,000 rpm	1.9 - 2.9 msec
IGN TIMING	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	6° - 16° BTDC
		2,000 rpm	25° - 45° BTDC
CAL/LD VALUE	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	5% - 35%
		2,500 rpm	5% - 35%
MASS AIRFLOW	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	2.0 - 6.0 g·m/s
		2,500 rpm	7.0 - 20.0 g·m/s
PURG VOL C/V	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle (Accelerator pedal is not depressed even slightly, after engine starting)	0%
		2,000 rpm	—

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V TIM(B1) INT/V TIM(B2)	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		2,000 rpm	Approx. 0° - 30°CA
EXH/V TIM B1 EXH/V TIM B2	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		Around 2,500 rpm while the engine speed is rising	Approx. 0° - 30°CA
INT/V SOL(B1) INT/V SOL(B2)	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		2,000 rpm	Approx. 0% - 50%
EX VTC DTY B1 EX VTC DTY B2	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		Around 2,500 rpm while the engine speed is rising	Approx. 0% - 70%
TP SEN 1-B2 TP SEN 2-B2*1	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T) or 1st (M/T) position	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V
AIR COND RLY	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates)	ON
FUEL PUMP RLY	● For 1 second after turning ignition switch ON ● Engine running or cranking		ON
	● Except above conditions		OFF
VENT CONT/V	● Ignition switch: ON		OFF
THRTL RELAY	● Ignition switch: ON		ON
COOLING FAN	● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 97°C (206°F) or less	OFF
		Engine coolant temperature is between 98°C (208°F) and 99°C (210°F)	LOW
		Engine coolant temperature is 100°C (212°F) or more	HI
HO2S2 HTR (B1) HO2S2 HTR (B2)	● Engine speed: Below 3,600 rpm after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load		ON
	● Engine speed: Above 3,600 rpm		OFF
I/P PULLY SPD	● Vehicle speed: More than 20 km/h (12 MPH)		Almost the same speed as the tachometer indication
VEHICLE SPEED	● Turn drive wheels and compare CONSULT-III value with the speedometer indication.		Almost the same speed as the speedometer indication

MONITOR ITEM	CONDITION		SPECIFICATION
IDL A/V LEARN	● Engine: Running	Idle air volume learning has not been performed yet.	YET
		Idle air volume learning has already been performed successfully.	CMPLT
ENG OIL TEMP	● Engine: After warming up		More than 70°C (158°F)
TRVL AFTER MIL	● Ignition switch: ON	Vehicle has traveled after MIL has turned ON.	0 - 65,535 km (0 - 40,723 mile)
A/F S1 HTR(B1) A/F S1 HTR(B2)	● Engine: After warming up, idle the engine (More than 140 seconds after starting engine)		4 - 100%
AC PRESS SEN	● Engine: Idle ● Both A/C switch and blower switch are ON. (Compressor operates.)		1.0 - 4.0V
VHCL SPEED SE	● Turn drive wheels and compare CONSULT-III value with the speedometer indication.		Almost the same speed as the speedometer indication
SET VHCL SPD	● Engine: Running	ASCD: Operating	The preset vehicle speed is displayed.
MAIN SW	● Ignition switch: ON	MAIN switch: Pressed	ON
		MAIN switch: Released	OFF
CANCEL SW	● Ignition switch: ON	CANCEL switch: Pressed	ON
		CANCEL switch: Released	OFF
RESUME/ACC SW	● Ignition switch: ON	RESUME/ACCELERATE switch: Pressed	ON
		RESUME/ACCELERATE switch: Released	OFF
SET SW	● Ignition switch: ON	SET/COAST switch: Pressed	ON
		SET/COAST switch: Released	OFF
BRAKE SW1 (ASCD brake switch)	● Ignition switch: ON	● Brake pedal: Fully released (A/T) ● Brake pedal and clutch pedal: Fully released (M/T)	ON
		● Brake pedal: Slightly depressed (A/T) ● Brake pedal and/or clutch pedal: Slightly depressed (M/T)	OFF
BRAKE SW2 (Stop lamp switch)	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON
VHCL SPD CUT	● Ignition switch: ON		NON
LO SPEED CUT	● Ignition switch: ON		NON
AT OD MONITOR	● Ignition switch: ON		OFF
AT OD CANSEL	● Ignition switch: ON		OFF
CRUISE LAMP	● Ignition switch: ON	MAIN switch: Pressed at the 1st time → at the 2nd time	ON → OFF
SET LAMP	● MAIN switch: ON ● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89MPH)	ASCD: Operating	ON
		ASCD: Not operating	OFF
EXH V/T LEARN	● Engine: Running	Exhaust Valve Timing Control Learning has not been performed yet.	YET
		Exhaust Valve Timing Control Learning has not been performed yet.	CMPLT
A/F ADJ B1	● Engine: Running		–0.330 - 0.330
A/F ADJ B2	● Engine: Running		–0.330 - 0.330

*1: Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

TROUBLE DIAGNOSIS - SPECIFICATION VALUE

PFP:00031

Description

NBS0003R

The specification (SP) value indicates the tolerance of the value that is displayed in “SPEC” in “DATA MONITOR” mode of CONSULT-III during normal operation of the Engine Control System. When the value in “SPEC” in “DATA MONITOR” mode is within the SP value, the Engine Control System is confirmed OK. When the value in “SPEC” in “DATA MONITOR” mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.
The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MIL.
The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1/B2 (The mean value of air-fuel ratio feedback correction factor per cycle)
- MAS A/F SE-B1/B2 (The signal voltage of the mass air flow sensor)

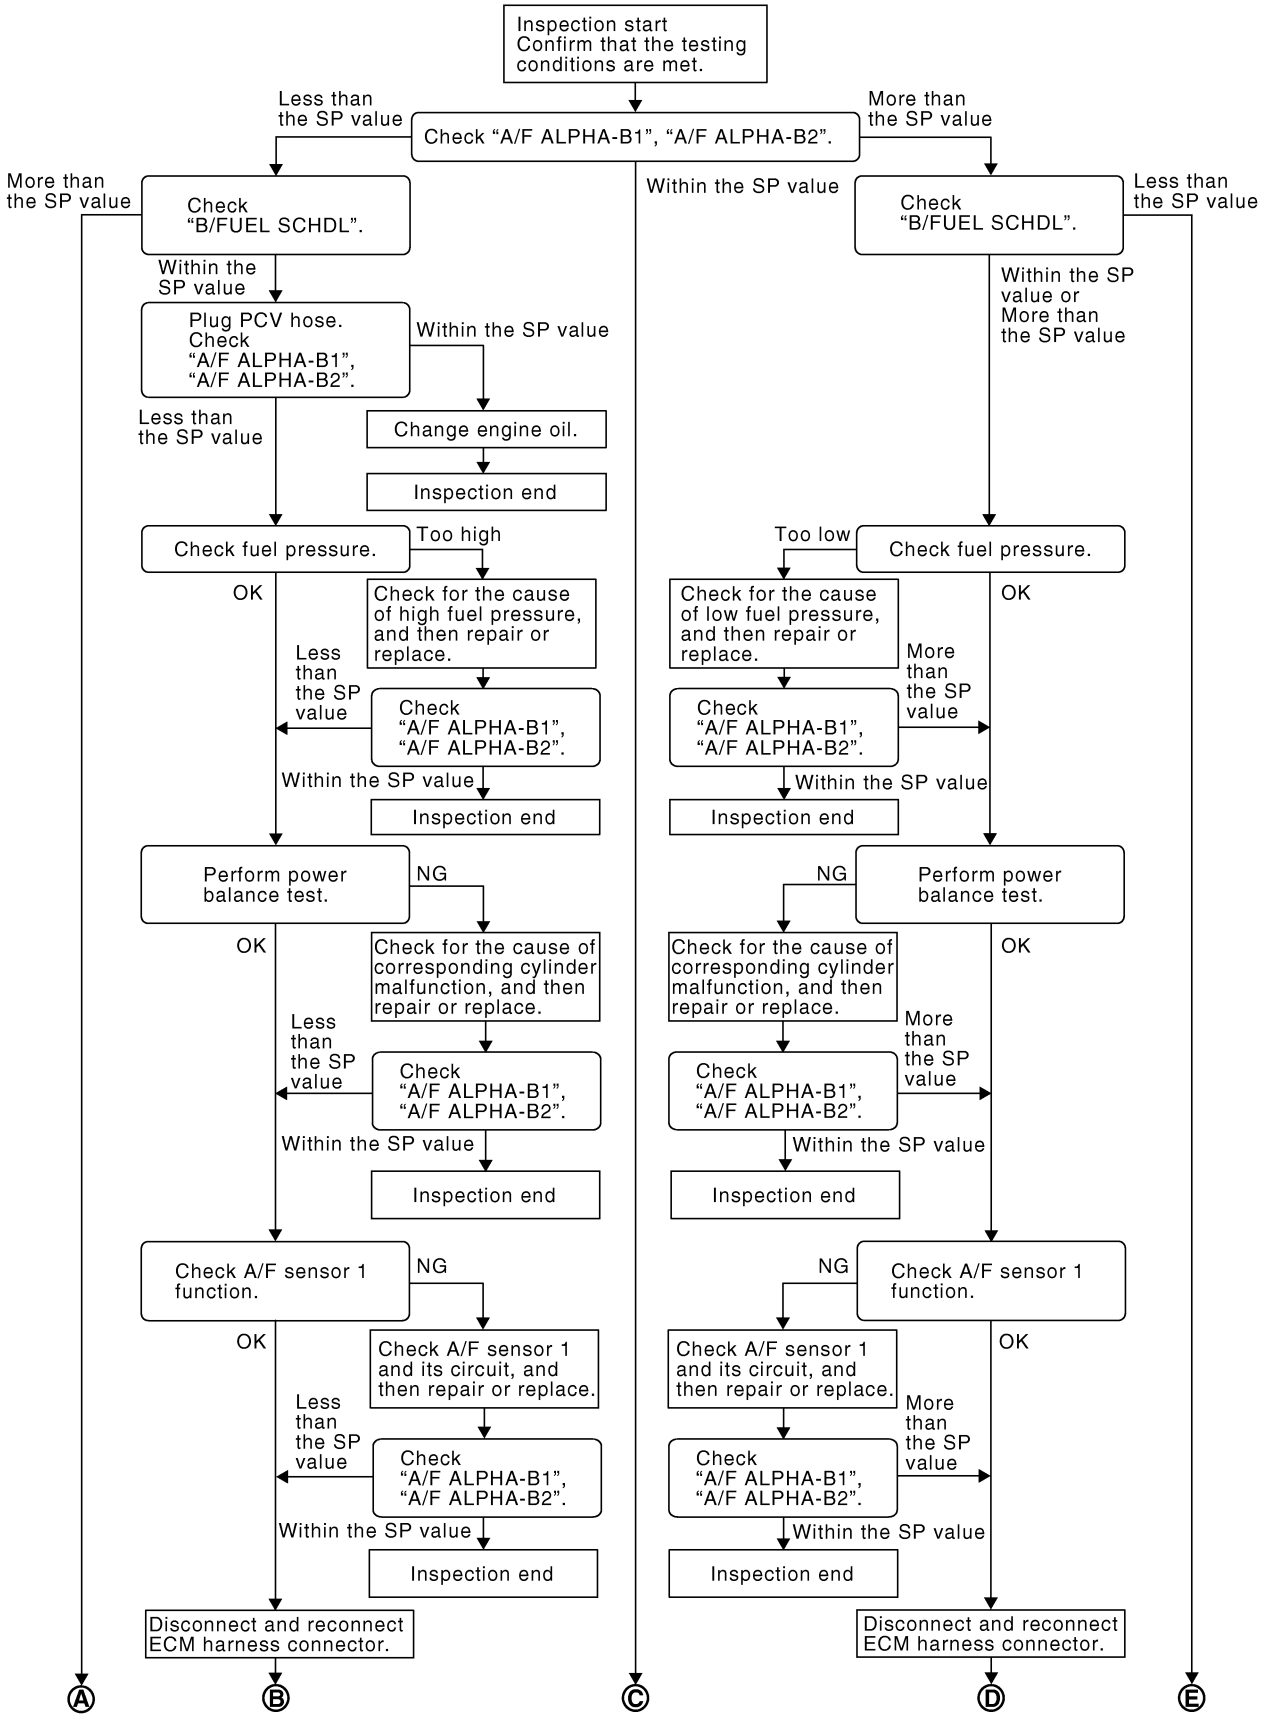
Testing Condition

NBS0003S

- Vehicle driven distance: More than 5,000 km (3,107 miles)
- Barometric pressure: 98.3 - 104.3 kPa (1.003 - 1.064 kg/cm^2 , 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up
  - For A/T models: After the engine is warmed up to normal operating temperature, drive vehicle until “ATF TEMP 1” (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).
  - For M/T models: After the engine is warmed up to normal operating temperature, drive vehicle for 5 minutes.
- Electrical load: Not applied
  - Rear window defogger switch, air conditioner switch, lighting switch are OFF. Steering wheel is straight ahead.
- Engine speed: Idle

Inspection Procedure

NBS0003T



NOTE:
Perform “SPEC” in “DATA MONITOR” mode in maximum scale display.

1. Perform EC-71, "Basic Inspection" .
2. Confirm that the testing conditions indicated above are met.
3. Select “B/FUEL SCHDL”, “A/F ALPHA-B1”, “A/F ALPHA-B2”, “MAS A/F SE-B1” and “MAS A/F SE-B2” in “SPEC” of ”DATA MONITOR” mode with CONSULT-III.
4. Make sure that monitor items are within the SP value.
5. If NG, go to EC-133, "Diagnostic Procedure" .

DETAILED PROCEDURE

1. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Confirm that the testing conditions are met. Refer to EC-132, "Testing Condition" .
3. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” in mode, and make sure that the each indication is within the SP value.

   NOTE:
   Check “A/F ALPHA-B1”, “A/F ALPHA-B2” for approximately 1 minute because they may fluctuate. It is NG if the indication is out of the SP value even a little.

OK or NG

OK >> GO TO 17.
NG (Less than the SP value)>>GO TO 2.
NG (More than the SP value)>>GO TO 3.

2. CHECK “B/FUEL SCHDL”

Select “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> GO TO 4.
NG (More than the SP value)>>GO TO 19.

3. CHECK “B/FUEL SCHDL”

Select “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> GO TO 6.
NG (More than the SP value)>>GO TO 6.
NG (Less than the SP value)>>GO TO 25.

4. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Stop the engine.
2. Disconnect PCV hose, and then plug it.
3. Start engine.
4. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> GO TO 5.
NG >> GO TO 6.

5. CHANGE ENGINE OIL

1. Stop the engine.
2. Change engine oil.

   NOTE:
   This symptom may occur when a large amount of gasoline is mixed with engine oil because of driving conditions (such as when engine oil temperature does not rise enough since a journey distance is too short during winter). The symptom will not be detected after changing engine oil or changing driving condition.

>> **INSPECTION END**

6. CHECK FUEL PRESSURE

Check fuel pressure. (Refer to EC-79, "Fuel Pressure Check" .)

OK or NG

OK >> GO TO 9.
NG (Fuel pressure is too high)>>Replace fuel pressure regulator, refer to EC-79, "Fuel Pressure Check" . GO TO 8.
NG (Fuel pressure is too low)>>GO TO 7.

7. DETECT MALFUNCTIONING PART

1. Check the following.
- Clogged and bent fuel hose and fuel tube
- Clogged fuel filter
- Fuel pump and its circuit (Refer to EC-691, "FUEL PUMP" .)
2. If NG, repair or replace the malfunctioning part. (Refer to EC-79, "Fuel Pressure Check" .)
If OK, replace fuel pressure regulator.

>> GO TO 8.

8. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 9.

9. PERFORM POWER BALANCE TEST

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode.
2. Make sure that the each cylinder produces a momentary engine speed drop.

OK or NG

OK >> GO TO 12.
NG >> GO TO 10.

10. DETECT MALFUNCTIONING PART

1. Check the following.
- Ignition coil and its circuit (Refer to EC-698, "IGNITION SIGNAL" .)
- Fuel injector and its circuit (Refer to EC-686, "FUEL INJECTOR" .)
- Intake air leakage
- Low compression pressure (Refer to EM-89, "CHECKING COMPRESSION PRESSURE" .)
2. If NG, repair or replace the malfunctioning part.
If OK, replace fuel injector. (It may be caused by leakage from fuel injector or clogging.)

>> GO TO 11.

11. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 12.

12. CHECK A/F SENSOR 1 FUNCTION

Perform all DTC Confirmation Procedure related with A/F sensor 1.

- For DTC P0130, P0150, refer to EC-248, "DTC Confirmation Procedure" .
- For DTC P0131, P0151, refer to EC-267, "DTC Confirmation Procedure" .
- For DTC P0132, P0152, refer to EC-660, "DTC Confirmation Procedure" .
- For DTC P0133, P0153, refer to EC-276, "DTC Confirmation Procedure" .
- For DTC P2A00, P2A03, refer to EC-660, "DTC Confirmation Procedure" .

OK or NG

OK >> GO TO 15.
NG >> GO TO 13.

13. CHECK A/F SENSOR 1 CIRCUIT

Perform Diagnostic Procedure according to corresponding DTC.

>> GO TO 14.

14. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 15.

15. DISCONNECT AND RECONNECT ECM HARNESS CONNECTOR

1. Stop the engine.
2. Disconnect ECM harness connector. Check pin terminal and connector for damage, and then reconnect it.

>> GO TO 16.

16. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> Detect malfunctioning part according to EC-90, "Symptom Matrix Chart" .

17. CHECK “B/FUEL SCHDL”

Select “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG (More than the SP value)>>GO TO 18.
NG (Less than the SP value)>>GO TO 25.

18. DETECT MALFUNCTIONING PART

1. Check for the cause of large engine friction. Refer to the following.
- Engine oil level is too high
- Engine oil viscosity
- Belt tension of power steering, alternator, A/C compressor, etc. is excessive
- Noise from engine
- Noise from transmission, etc.
2. Check for the cause of insufficient combustion. Refer to the following.
- Valve clearance malfunction
- Intake valve timing control function malfunction
- Camshaft sprocket installation malfunction, etc.

>> Repair or replace malfunctioning part, and then GO TO 30.

19. CHECK INTAKE SYSTEM

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system

OK or NG

OK >> GO TO 21.
NG >> Repair or replace malfunctioning part, and then GO TO 20.

20. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”, AND “B/FUEL SCHDL”

Select “A/F ALPHA-B1”, “A/F ALPHA-B2”, and “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG (“B/FUEL SCHDL” is more, “A/F ALPHA-B1”, “A/F ALPHA-B2” are less than the SP value)>>GO TO 21.

21. DISCONNECT AND RECONNECT MASS AIR FLOW SENSOR HARNESS CONNECTOR

1. Stop the engine.
2. Disconnect mass air flow sensor harness connector. Check pin terminal and connector for damage and then reconnect it again.

>> GO TO 22.

22. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”

1. Start engine.
2. Select “A/F ALPHA-B1”, “A/F ALPHA-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> 1. Detect malfunctioning part of mass air flow sensor circuit and repair it.
Refer to EC-197, "DTC P0101, P010B MAF SENSOR" .
2. GO TO 29.

NG >> GO TO 23.

23. CHECK “MAS A/F SE-B1”, “MAS A/F SE-B2”

Select “MAS A/F SE-B1”, “MAS A/F SE-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> GO TO 24.
NG (More than the SP value)>>Replace mass air flow sensor, and then GO TO 29.

24. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NVIS(NATS) system and registration of all NVIS(NATS) ignition key IDs.
Refer to BL-152, "ECM Re-communicating Function" .
3. Perform EC-76, "VIN Registration" .
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

>> GO TO 29.

25. CHECK INTAKE SYSTEM

Check for the cause of uneven air flow through mass air flow sensor. Refer to the following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system

OK or NG

OK >> GO TO 27.
NG >> Repair or replace malfunctioning part, and then GO TO 26.

26. CHECK “B/FUEL SCHDL”

Select “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG (Less than the SP value)>>GO TO 27.

27. CHECK “MAS A/F SE-B1”, “MAS A/F SE-B2”

Select “MAS A/F SE-B1”, “MAS A/F SE-B2” in “SPEC” of "DATA MONITOR" mode, and make sure that the indication is within the SP value.

OK or NG

OK >> GO TO 28.
NG (Less than the SP value)>>Replace mass air flow sensor, and then GO TO 30.

28. CHECK INTAKE SYSTEM

Check for the cause of air leak after the mass air flow sensor. Refer to the following.

- Disconnection, looseness, and cracks in air duct
- Looseness of oil filler cap
- Disconnection of oil level gauge
- Open stuck, breakage, hose disconnection, or cracks of PCV valve
- Disconnection or cracks of EVAP purge hose, open stuck of EVAP canister purge volume control solenoid valve
- Malfunctioning seal of rocker cover gasket
- Disconnection, looseness, or cracks of hoses, such as vacuum hose, connecting to intake air system parts
- Malfunctioning seal of intake air system, etc.

>> GO TO 30.

29. CHECK “A/F ALPHA-B1”, “A/F ALPHA-B2”, AND “B/FUEL SCHDL”

Select “A/F ALPHA-B1”, “A/F ALPHA-B2”, and “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and make sure that the each indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> Detect malfunctioning part according to EC-90, "Symptom Matrix Chart" .

30. CHECK “B/FUEL SCHDL”

Select “B/FUEL SCHDL” in “SPEC” of "DATA MONITOR" mode, and then make sure that the indication is within the SP value.

OK or NG

OK >> **INSPECTION END**
NG >> Detect malfunctioning part according to EC-90, "Symptom Matrix Chart" .

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

PFP:00006

Description

NBS0003V

Intermittent incidents may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of intermittent incidents occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

Common intermittent incidents Report Situations

STEP in Work Flow	Situation
2	The CONSULT-III is used. The SELF-DIAG RESULTS screen shows time data other than [0] or [1t].
3 or 4	The symptom described by the customer does not recur.
5	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
10	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.

Diagnostic Procedure

NBS0003W

1. INSPECTION START

Erase (1st trip) DTCs.
Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 2.

2. CHECK GROUND TERMINALS

Check ground terminals for corroding or loose connection.
Refer to EC-150, "Ground Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. SEARCH FOR ELECTRICAL INCIDENT

Perform GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident" , “INCIDENT SIMULATION TESTS”.

OK or NG

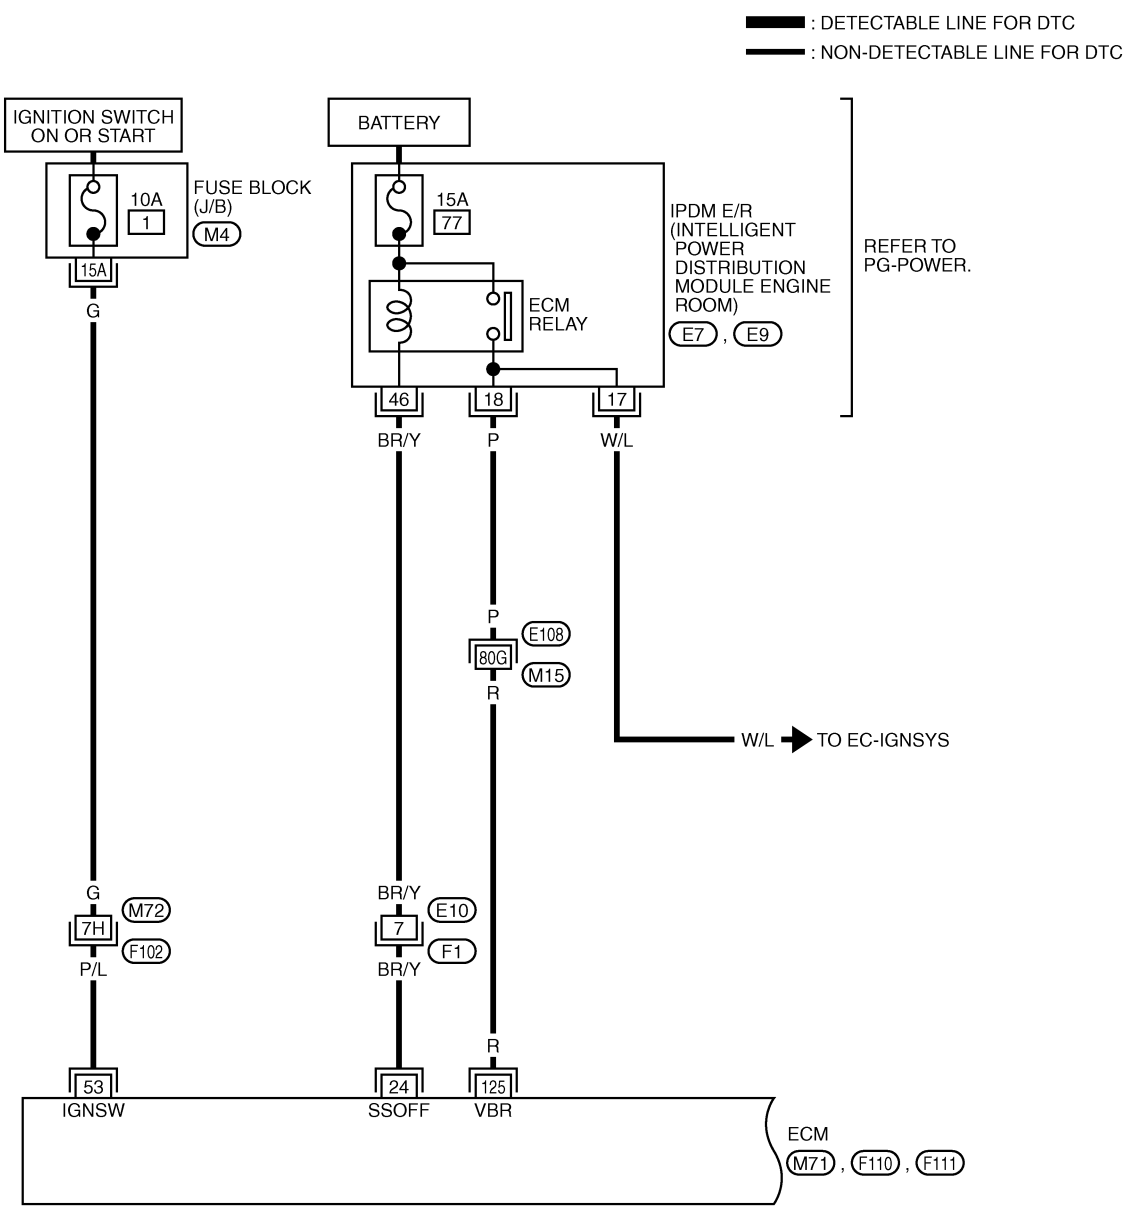
OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK CONNECTOR TERMINALS

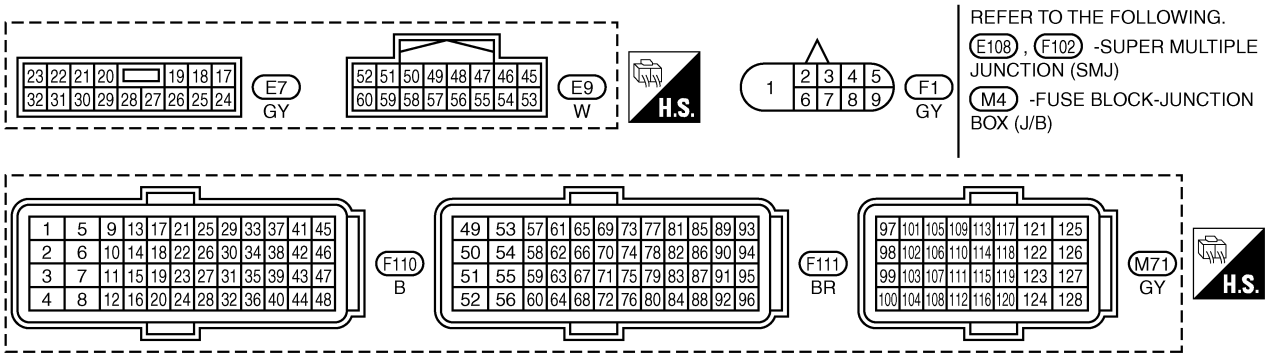
Refer to GI-24, "How to Check Terminal" , “HOW TO PROBE CONNECTORS”, “How to Check Enlarged Contact Spring of Terminal”.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace connector.



POWER SUPPLY AND GROUND CIRCUIT



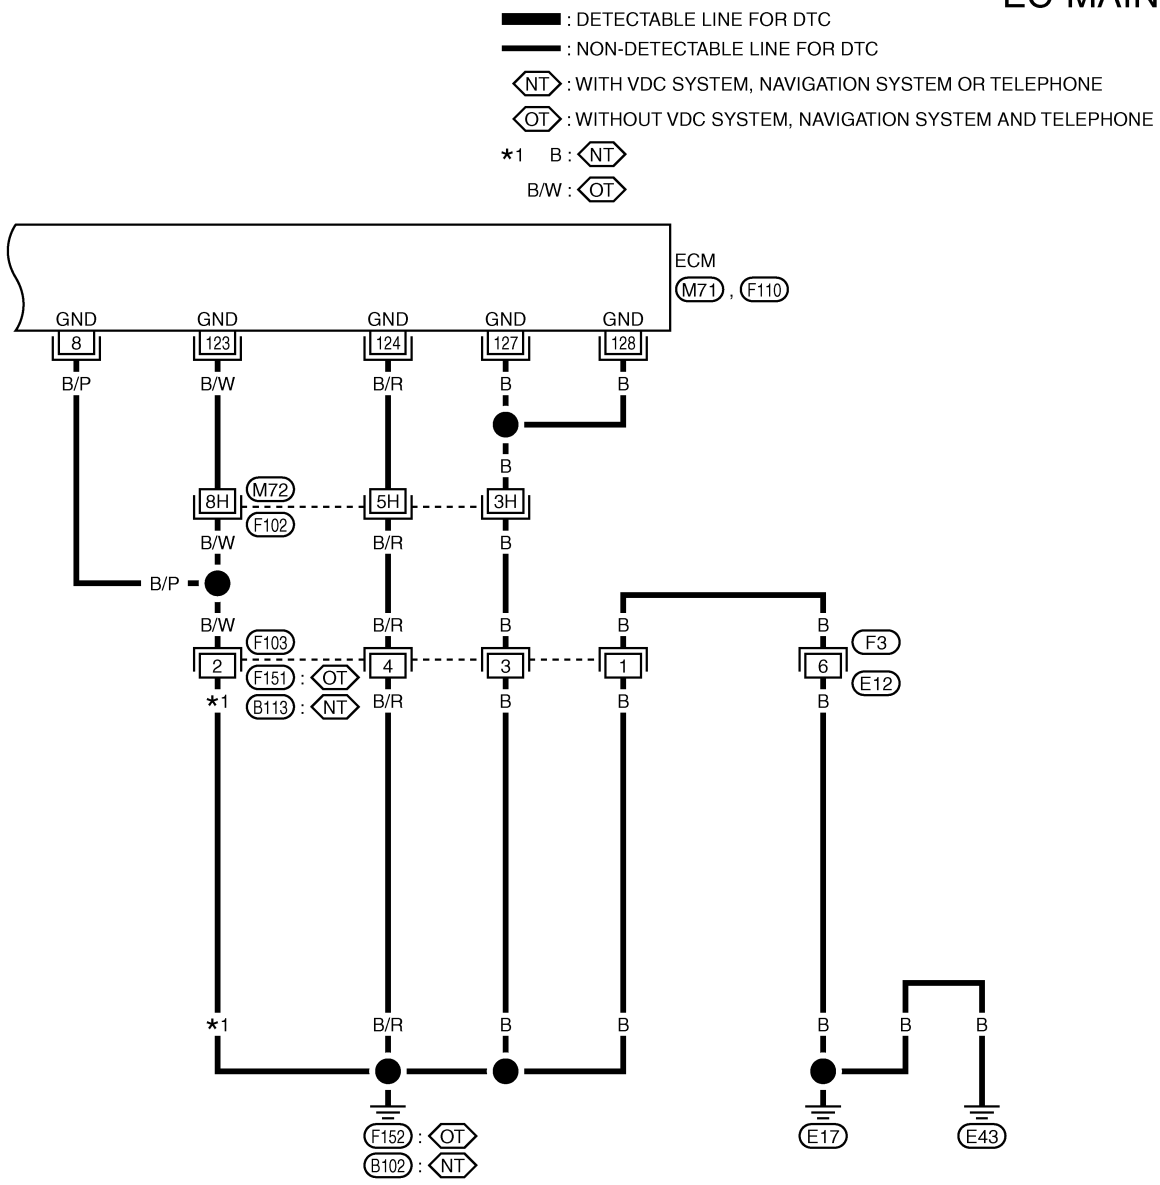
PFP:24110

Wiring Diagram

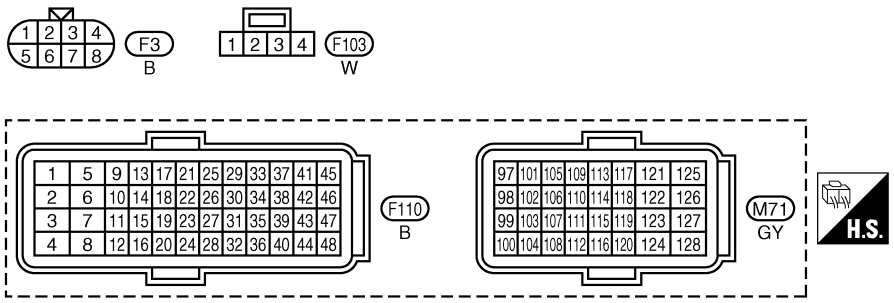
NBS0003X

EC-MAIN-01

TBWT1614E



Specification data are reference values and are measured between each terminal and ground.



CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
24	BR/Y	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch: OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.5V
			[Ignition switch: OFF] ● More than a few seconds after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
53	P/L	Ignition switch	**[Ignition switch: OFF]**	0V
			[Ignition switch: ON]	BATTERY VOLTAGE (11 - 14V)
125	R	Power supply for ECM	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)

EC-MAIN-02

REFER TO THE FOLLOWING.
F102 -SUPER MULTIPLE JUNCTION (SMJ)

TBWT1615E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
8	B/P	ECM ground	**[Engine is running]** ● Idle speed	Body ground
123 124	B/W B/R	ECM ground	**[Engine is running]** ● Idle speed	Body ground
127 128	B B	ECM ground	**[Engine is running]** ● Idle speed	Body ground

Diagnostic Procedure

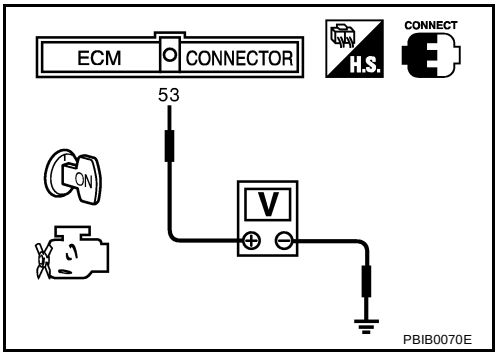
NBS0003Y

1. INSPECTION START

Start engine.

Is engine running?

Yes or No



Yes >> GO TO 8.

No >> GO TO 2.

2. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF and then ON.
2. Check voltage between ECM terminal 53 and ground with CONSULT-III or tester.

Voltage: Battery voltage

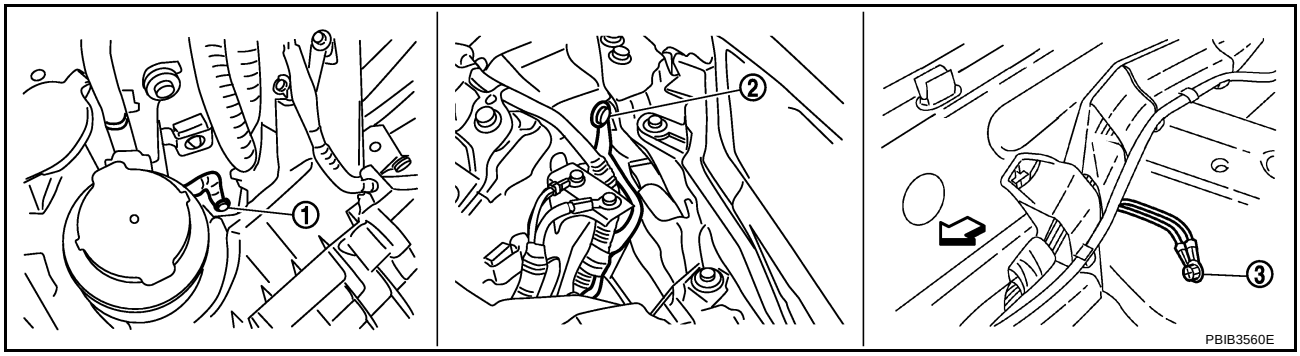
OK or NG

OK >> GO TO 4.

NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.



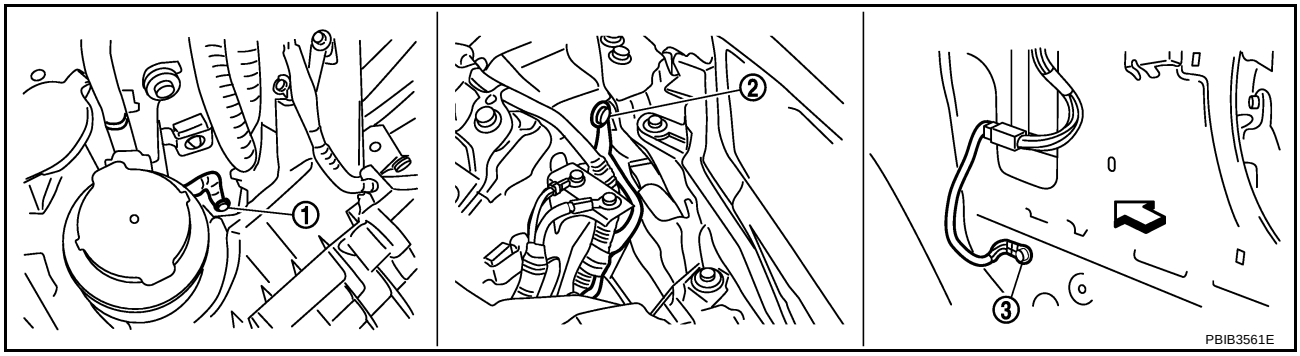
- Harness connectors M72, F102
- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 5.
NG >> Repair or replace ground connections.

5. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 8, 123, 124, 127, 128 and ground. Refer to Wiring Diagram.

Continuity should exist.

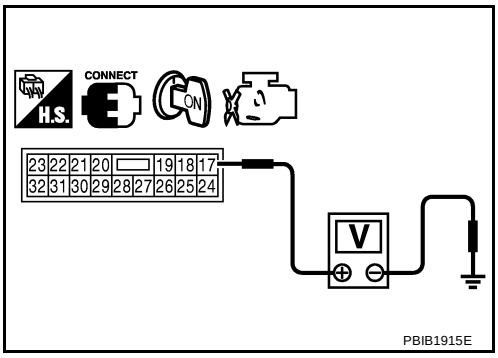
3. Also check harness for short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.



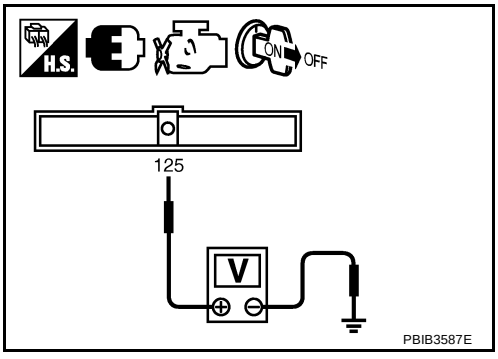
- Harness connectors M72, F102
- Harness connectors F103, B113 (Models with VDC system, navigation system or telephone) or F151 (Models without VDC system, navigation system and telephone)
- Harness connectors F3, E12
- Harness for open or short between ECM and ground

>> Repair open circuit or short to power in harness or connectors.

7. CHECK ECM POWER SUPPLY CIRCUIT-II

1. Reconnect ECM harness connector disconnected.
2. Turn ignition switch ON.
3. Check voltage between IPDM E/R terminal 17 and ground with CONSULT-III or tester.

Voltage: Battery voltage



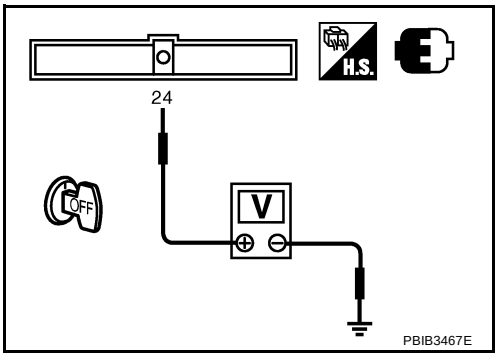
OK or NG

OK >> Go to EC-698, "IGNITION SIGNAL" .
NG >> GO TO 8.

8. CHECK ECM POWER SUPPLY CIRCUIT-III

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON and then OFF.
3. Check voltage between ECM terminals 125 and ground with CONSULT-III or tester.

Voltage: After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop approximately 0V.



OK or NG

OK >> GO TO 15.
NG (Battery voltage does not exist.)>>GO TO 9.
NG (Battery voltage exists for more than a few seconds.)>>GO TO 12.

9. CHECK ECM POWER SUPPLY CIRCUIT-IV

Check voltage between ECM terminal 24 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 10.
NG >> GO TO 12.

10. CHECK ECM POWER SUPPLY CIRCUIT-V

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E7.
3. Check harness continuity between ECM terminals 125 and IPDM E/R terminal 18.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 18.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- Harness or connectors E108, M15
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK ECM POWER SUPPLY CIRCUIT-VI

1. Disconnect IPDM E/R harness connector E9.
2. Check harness continuity between ECM terminal 24 and IPDM E/R terminal 46.
   Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.
NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

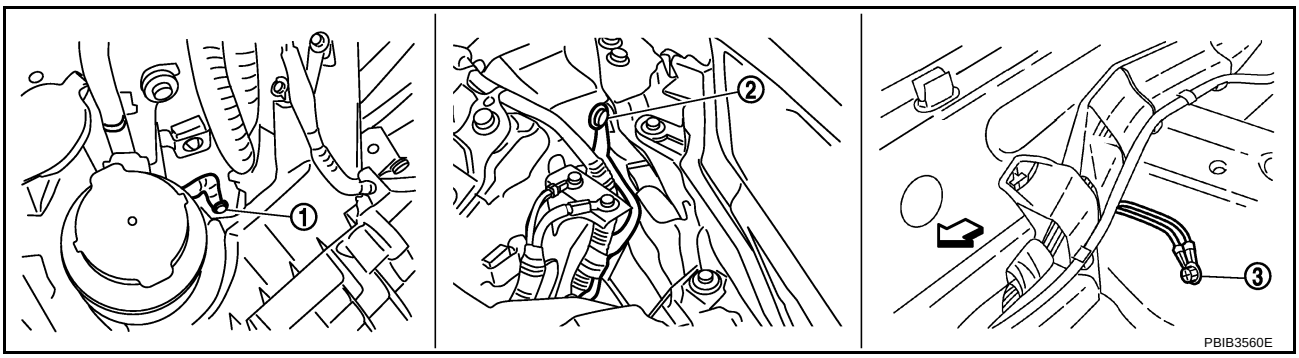
Check the following.

- Harness or connectors E10, F1
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK 15A FUSE

1. Disconnect 15A fuse from IPDM E/R.
2. Check 15A fuse.



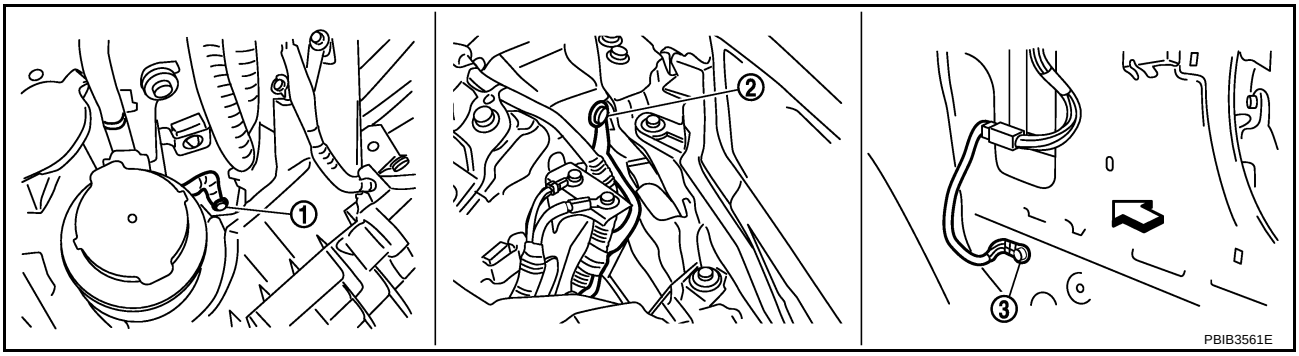
OK or NG

OK >> GO TO 18.
NG >> Replace 15A fuse.

15. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 16.
NG >> Repair or replace ground connections.

16. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 8, 123, 124, 127, 128 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 18.
NG >> GO TO 17.

17. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F103, B113 (Models with VDC system, navigation system or telephone) or F151 (Models without VDC system, navigation system and telephone)
- Harness or connectors F3, E12
- Harness or connectors M72, F102
- Harness for open or short between ECM and ground.

>> Repair open circuit or short to power in harness or connectors.

18. CHECK INTERMITTENT INCIDENT

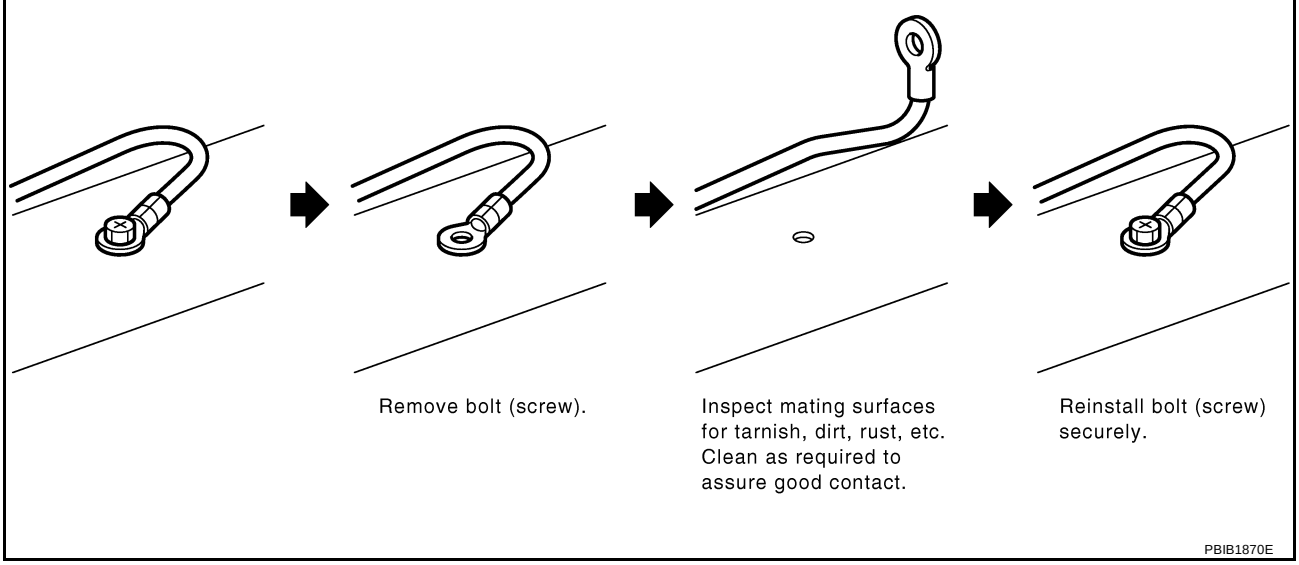
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

Ground Inspection



NBS0003Z

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.
Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.
When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for “add-on” accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to PG-27, "Ground Distribution" .

Ground Inspection

DTC U1000, U1001 CAN COMMUNICATION LINE

PFP:23710

Description

NBS00040

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

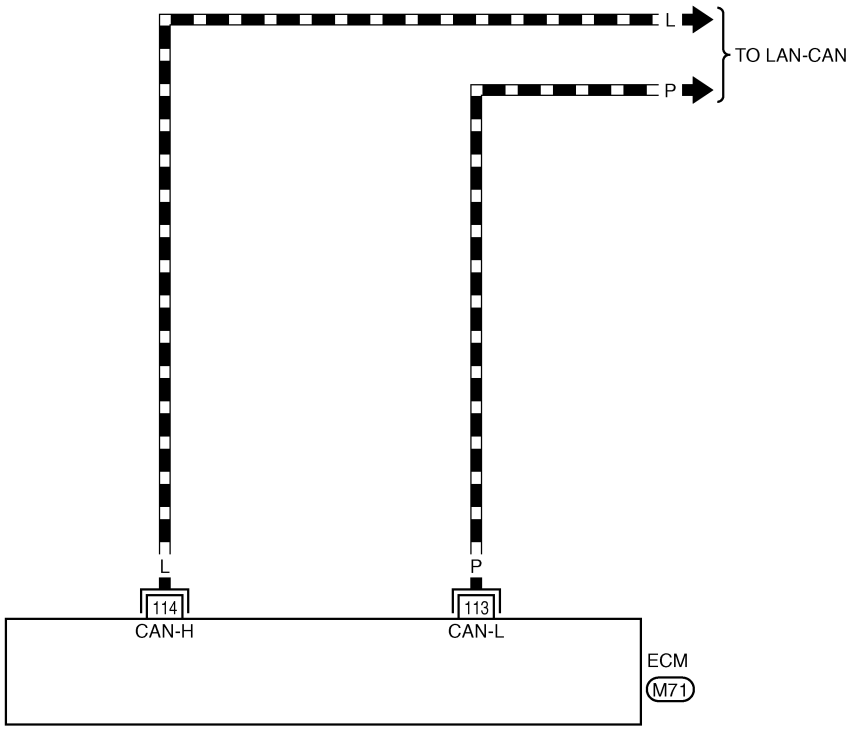
NBS006T0

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000*1 1000*1	CAN communication line	● When ECM is not transmitting or receiving CAN communication signal of OBD (emission-related diagnosis) for 2 seconds or more.	● Harness or connectors (CAN communication line is open or shorted)
U1001*2 1001*2		● When ECM is not transmitting or receiving CAN communication signal other than OBD (emission-related diagnosis) for 2 seconds or more.	

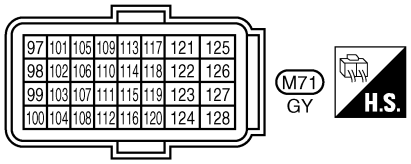
*1: **This self-diagnosis has the one trip detection logic.**
*2: **The MIL will not light up for this self-diagnosis.**

DTC Confirmation Procedure

NBS006T1



1. Turn ignition switch ON and wait at least 3 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-153, "Diagnostic Procedure" .



Wiring Diagram

NBS006T2

EC-CAN-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC
: DATA LINE

TBWT1616E

Diagnostic Procedure

NBS006T3

Go to LAN-48, "CAN System Specification Chart" .

DTC U1010 CAN COMMUNICATION

PFP:23710

Description

NBS002VL

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

NBS006T4

- **This self-diagnosis has one trip detection logic (A/T models).**
- **The MIL will not light up for this self-diagnosis (M/T models).**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1010 1010	CAN communication bus	When detecting error during the initial diagnosis of CAN controller of ECM.	● ECM

DTC Confirmation Procedure

NBS002VN

WITH CONSULT-III

1. Turn ignition switch ON.
2. Check DTC.
3. If DTC is detected, go to EC-155, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS002VO

1. INSPECTION START

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF-DIAG RESULTS” mode with CONSULT-III.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-154, "DTC Confirmation Procedure" .
5. Is the DTC U1010 displayed again?

With GST

1. Turn ignition switch ON.
2. Select Service $04 with GST.
3. **Perform DTC Confirmation Procedure.**
   See EC-154, "DTC Confirmation Procedure" .
4. Is the DTC U1010 displayed again?

Yes or No

Yes >> GO TO 2.
No >> **INSPECTION END**

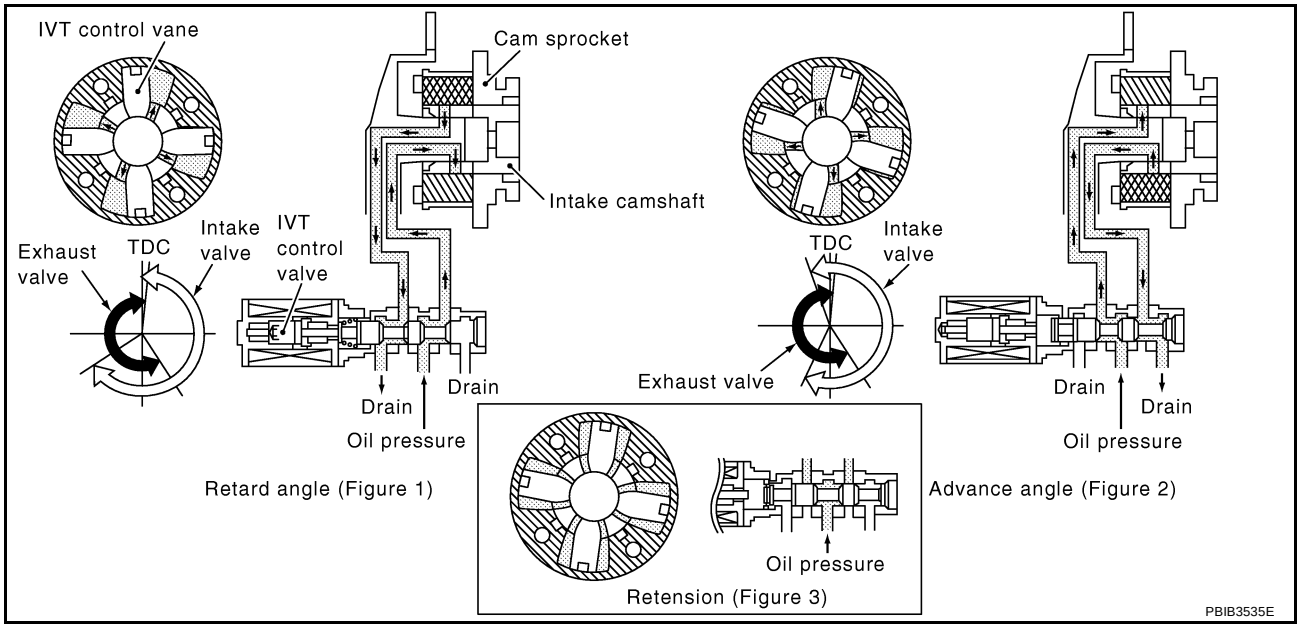
2. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to BL-152, "ECM Re-communicating Function" .
3. Perform EC-76, "VIN Registration" .
4. Perform EC-76, "Exhaust Valve Timing Control Learning"
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P0011, P0021 IVT CONTROL

PFP:23796



Description

NBS00045

SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed and piston position	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Wheel sensor	Vehicle speed*		

*: This signal is sent to the ECM through CAN Communication line

This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-III Reference Value in Data Monitor Mode

NBS00046

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V TIM(B1) INT/V TIM(B2)	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		2,000 rpm	Approx. 0° - 30°CA
INT/V SOL(B1) INT/V SOL(B2)	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		2,000 rpm	Approx. 0% - 50%

On Board Diagnosis Logic

NBS00047

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0011 0011 (Bank 1)	Intake valve timing control performance	There is a gap between angle of target and phase-control angle degree.	● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) ● Intake valve timing control solenoid valve ● Accumulation of debris to the signal pick-up portion of the camshaft ● Timing chain installation ● Foreign matter caught in the oil groove for intake valve timing control
P0021 0021 (Bank 2)			

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function.

DTC Confirmation Procedure

NBS00048

CAUTION:

Always drive at a safe speed.

NOTE:

- **If DTC P0011 or P0021 is displayed with DTC P0075 or P0081, first perform trouble diagnosis for DTC P0075 or P0081. Refer to EC-183, "DTC P0075, P0081 IVT CONTROL SOLENOID VALVE" .**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

WITH CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds.
   Hold the accelerator pedal as steady as possible.

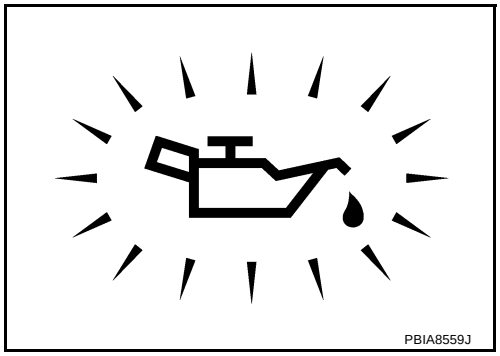
ENG SPEED	500 - 2,000 rpm (A constant rotation is maintained.)
COOLANT TEMP/S	More than 60°C (140°F)
B/FUEL SCHDL	More than 3.5 msec
Shift lever	P or N (A/T), neutral (M/T) position

4. Let engine idle for 10 seconds.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-158, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
7. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLANT TEMP/S	More than 70°C (158°F)
Shift lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

8. Check 1st trip DTC.
9. If 1st trip DTC is detected, go to EC-158, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS00049

1. CHECK OIL PRESSURE WARNING LAMP

1. Start engine.
2. Check oil pressure warning lamp and confirm it is not illuminated.

OK or NG

OK >> GO TO 2.
NG >> Go to LU-7, "OIL PRESSURE CHECK" .

2. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EC-159, "Component Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Replace malfunctioning intake valve timing control solenoid valve.

3. CHECK CRANKSHAFT POSITION SENSOR (POS)

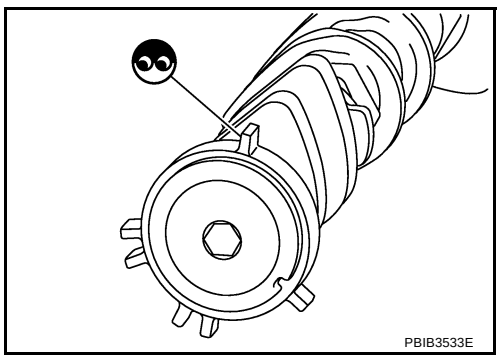
Refer to EC-393, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace crankshaft position sensor (POS).

4. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-405, "Component Inspection" .



OK or NG

OK >> GO TO 5.
NG >> Replace malfunctioning camshaft position sensor (PHASE).

5. CHECK CAMSHAFT (INT)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 6.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

6. CHECK TIMING CHAIN INSTALLATION

Check service records for any recent repairs that may cause timing chain misaligned.
Are there any service records that may cause timing chain misaligned?

Yes or No

Yes >> Check timing chain installation. Refer to EM-53, "TIMING CHAIN" .
No >> GO TO 7.

7. CHECK LUBRICATION CIRCUIT

Refer to EM-74, "INSPECTION AFTER REMOVAL" .

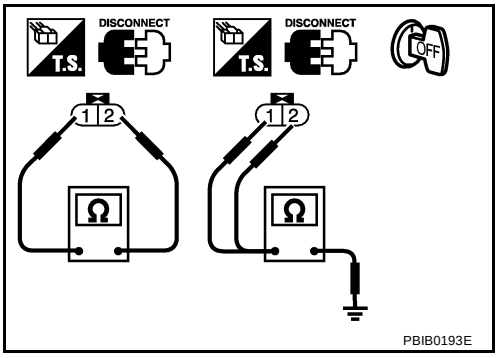
OK or NG

OK >> GO TO 8.
NG >> Clean lubrication line.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
For Wiring Diagram, refer to EC-388 for crankshaft position sensor (POS) and EC-397 for camshaft position sensor (PHASE).

>> **INSPECTION END**

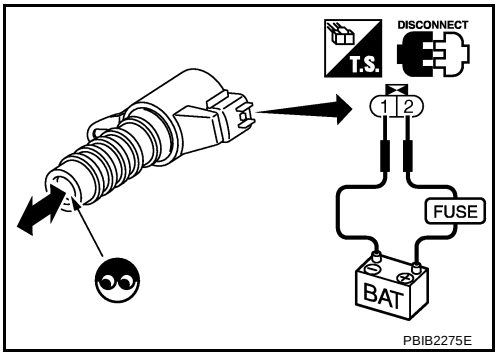


Component Inspection

NBS0004A

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

1. Disconnect intake valve timing control solenoid valve harness connector.
2. Check resistance between intake valve timing control solenoid valve as follows.



Terminal	Resistance
1 and 2	7.0 - 7.5Ω [at 20°C (68°F)]
1 or 2 and ground	∞ Ω (Continuity should not exist.)

PBIB0193E

If NG, replace intake valve timing control solenoid valve.
If OK, go to next step.

3. Remove intake valve timing control solenoid valve.
4. Provide 12V DC between intake valve timing control solenoid valve terminals and then interrupt it. Make sure that the plunger moves as shown in the figure.

PBIB2275E

CAUTION:
Do not apply 12V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.
If NG, replace intake valve timing control solenoid valve.

NOTE:
Always replace O-ring when intake valve timing control solenoid valve is removed.

Removal and Installation

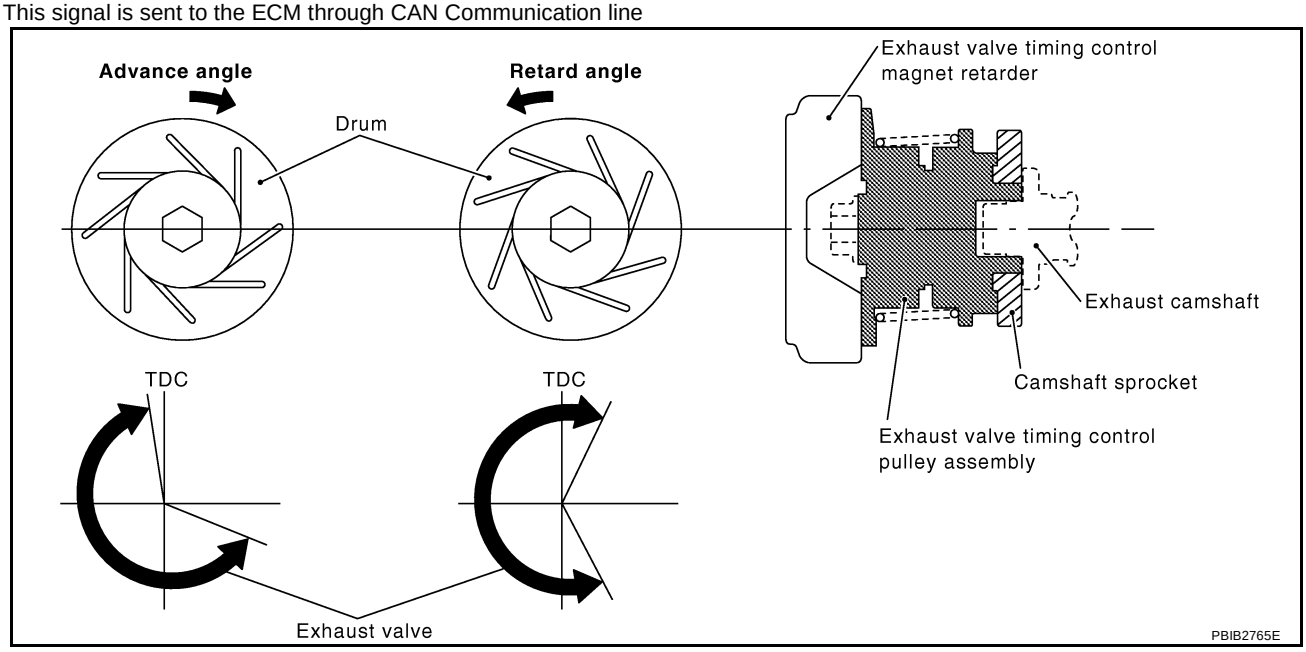
NBS0004B

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EM-53, "TIMING CHAIN" .

DTC P0014 P0024 EVT CONTROL

PFP:23795



Description

NBS0004C

SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed and piston position	Exhaust valve timing control	Exhaust valve timing control magnet retarder
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Exhaust valve timing control position sensor	Exhaust valve timing signal		
Wheel sensor	Vehicle speed*		

*: This signal is sent to the ECM through CAN Communication line

This mechanism magnetically controls cam phases continuously with the fixed operating angle of the exhaust valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the exhaust valve timing control magnet retarder depending on driving status. This makes it possible to control the shut/open timing of the exhaust valve to increase engine torque and output in a range of high engine speed.

CONSULT-III Reference Value in Data Monitor Mode

NBS0004D

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
EXH/V TIM B1 EXH/V TIM B2	● Engine: After warming up ● Shift lever: Neutral ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		Around 2,500 rpm while the engine speed is rising	Approx. 0° - 30°CA

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0014 0014 (Bank 1)	Exhaust valve timing control performance	There is a gap between angle of target and phase-control angle degree.	● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) ● Exhaust valve timing control position sensor ● Exhaust valve timing control magnet retarder ● Accumulation of debris to the signal pick-up portion of the camshaft ● Timing chain installation ● Exhaust valve timing control pulley assembly
P0024 0024 (Bank 2)			

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Exhaust valve timing control	The signal is not energized to the Exhaust valve timing control magnet retarder and the magnet retarder control does not function.

DTC Confirmation Procedure

NBS0004F

CAUTION:

Always drive at a safe speed.

NOTE:

- **If DTC P0014 or P0024 is displayed with DTC P0078, P0084, P1078 or P1084, first perform trouble diagnosis for DTC P0078, P0084 or P1078, P1084. Refer to EC-190, "DTC P0078 P0084 EVT CONTROL MAGNET RETARDER" or EC-528, "DTC P1078 P1084 EVT CONTROL POSITION SENSOR" .**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

WITH CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Maintain the following conditions for at least 6 consecutive seconds.
   Hold the accelerator pedal as steady as possible.

ENG SPEED	500 - 2,000 rpm (A constant rotation is maintained.)
COOLAN TEMP/S	More than 60°C (140°F)
B/FUEL SCHDL	More than 3.5 msec
Shift lever	P or N (A/T), neutral (M/T) position

4. Let engine idle for 10 seconds.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-162, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
7. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,700 - 2,950 rpm (A constant rotation is maintained.)
COOLAN TEMP/S	More than 70°C (158°F)
Shift lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)

8. Check 1st trip DTC.
9. If 1st trip DTC is detected, go to EC-162, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS0004G

1. INSPECTION START

Do you have CONSULT-III?

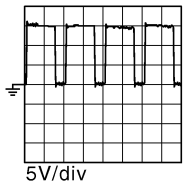
Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK FUNCTION OF EXHAUST VALVE TIMING CONTROL-I

With CONSULT-III

1. Turn ignition switch ON.
2. Select “EXH V/T ANGLE” in “ACTIVE TEST” mode with CONSULT-III.
3. Start engine and keep the engine speed at 2,500 rpm, then touch “START”.
4. Make sure that the values of “EXH/V TIM B1” and “EXH/V TIM B2” change when touching “UP” or “DOWN”.



OK or NG

OK >> GO TO 12.
NG >> GO TO 4.

3. CHECK FUNCTION OF EXHAUST VALVE TIMING CONTROL-II

Without CONSULT-III

1. Start engine and keep the engine speed at 2,500 rpm, then touch “START”.
2. Read the voltage signal between ECM terminal 6 (bank 1), 7 (bank 2) and ground with oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

PBIB3542E

OK or NG

OK >> GO TO 12.
NG >> GO TO 4.

4. CHECK EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

Refer to EC-164, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. REPLACE EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

1. Replace exhaust valve timing control magnet retarder.
2. Perform EC-76, "Exhaust Valve Timing Control Learning" .

>> **INSPECTION END**

6. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR

Refer to EC-539, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace malfunctioning exhaust valve timing control position sensor.

7. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-393, "Component Inspection" .

OK or NG

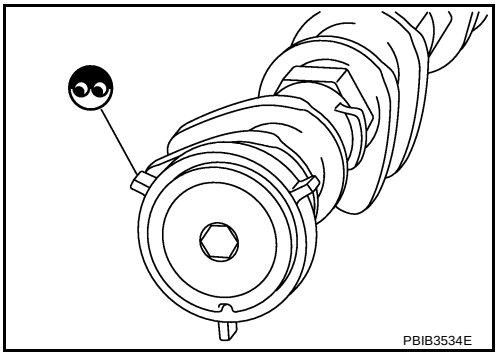
OK >> GO TO 8.
NG >> Replace crankshaft position sensor (POS).

8. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-405, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace malfunctioning camshaft position sensor (PHASE).



9. CHECK CAMSHAFT (EXH)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 10.
NG >> Remove debris and clean the signal plate of camshaft rear end or malfunctioning replace camshaft.

10. CHECK TIMING CHAIN INSTALLATION

Check service records for any recent repairs that may cause timing chain misaligned.
Are there any service records that may cause timing chain misaligned?

Yes or No

Yes >> Check timing chain installation. Refer to EM-53, "TIMING CHAIN" .
No >> GO TO 11.

11. REPLACE EXHAUST VALVE TIMING CONTROL PULLEY ASSEMBLY

1. Replace exhaust valve timing control pulley assembly and exhaust valve timing control magnet retarder. Refer to EM-72, "CAMSHAFT" and EM-44, "FRONT TIMING CHAIN CASE" .
2. Perform EC-76, "Exhaust Valve Timing Control Learning" .

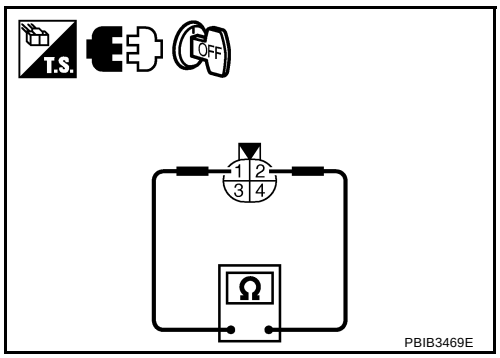
>> **INSPECTION END**

12. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
For Wiring Diagram, refer to EC-388 for crankshaft position sensor (POS) and EC-397 for camshaft position sensor (PHASE).

>> **INSPECTION END**

Component Inspection



NBS0004H

EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

1. Disconnect exhaust valve timing control magnet retarder harness connector.
2. Check resistance between exhaust valve timing control magnet retarder terminals 1 and 2.

   Resistance: 9.0 - 11.0Ω [at 20°C (68°F)]

3. If NG, replace exhaust valve timing control magnet retarder and go to the next step.
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .

Removal and Installation

NBS0004I

EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

Refer to EM-44, "FRONT TIMING CHAIN CASE" .

DTC P0031, P0032, P0051, P0052 A/F SENSOR 1 HEATER

PFP:22693

Description

NBS000B6

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Air fuel ratio (A/F) sensor 1 heater control	Air fuel ratio (A/F) sensor 1 heater
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF duty control of the A/F sensor 1 heater corresponding to the engine operating condition to keep the temperature of A/F sensor 1 element at the specified range.

CONSULT-III Reference Value in Data Monitor Mode

NBS000B7

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
A/F S1 HTR(B1) A/F S1 HTR(B2)	● Engine: After warming up, idle the engine (More than 140 seconds after starting engine)	4 - 100%

On Board Diagnosis Logic

NBS000B8

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0031 0031 (Bank 1) P0051 0051 (Bank 2)	Air fuel ratio (A/F) sensor 1 heater control circuit low input	The current amperage in the air fuel ratio (A/F) sensor 1 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the A/F sensor 1 heater.)	● Harness or connectors (The A/F sensor 1 heater circuit is open or shorted.) ● Air fuel ratio (A/F) sensor 1 heater
P0032 0032 (Bank 1) P0052 0052 (Bank 2)	Air fuel ratio (A/F) sensor 1 heater control circuit high input	The current amperage in the air fuel ratio (A/F) sensor 1 heater circuit is out of the normal range. (An excessively high voltage signal is sent to ECM through the A/F sensor 1 heater.)	● Harness or connectors (The A/F sensor 1 heater circuit is shorted.) ● Air fuel ratio (A/F) sensor 1 heater

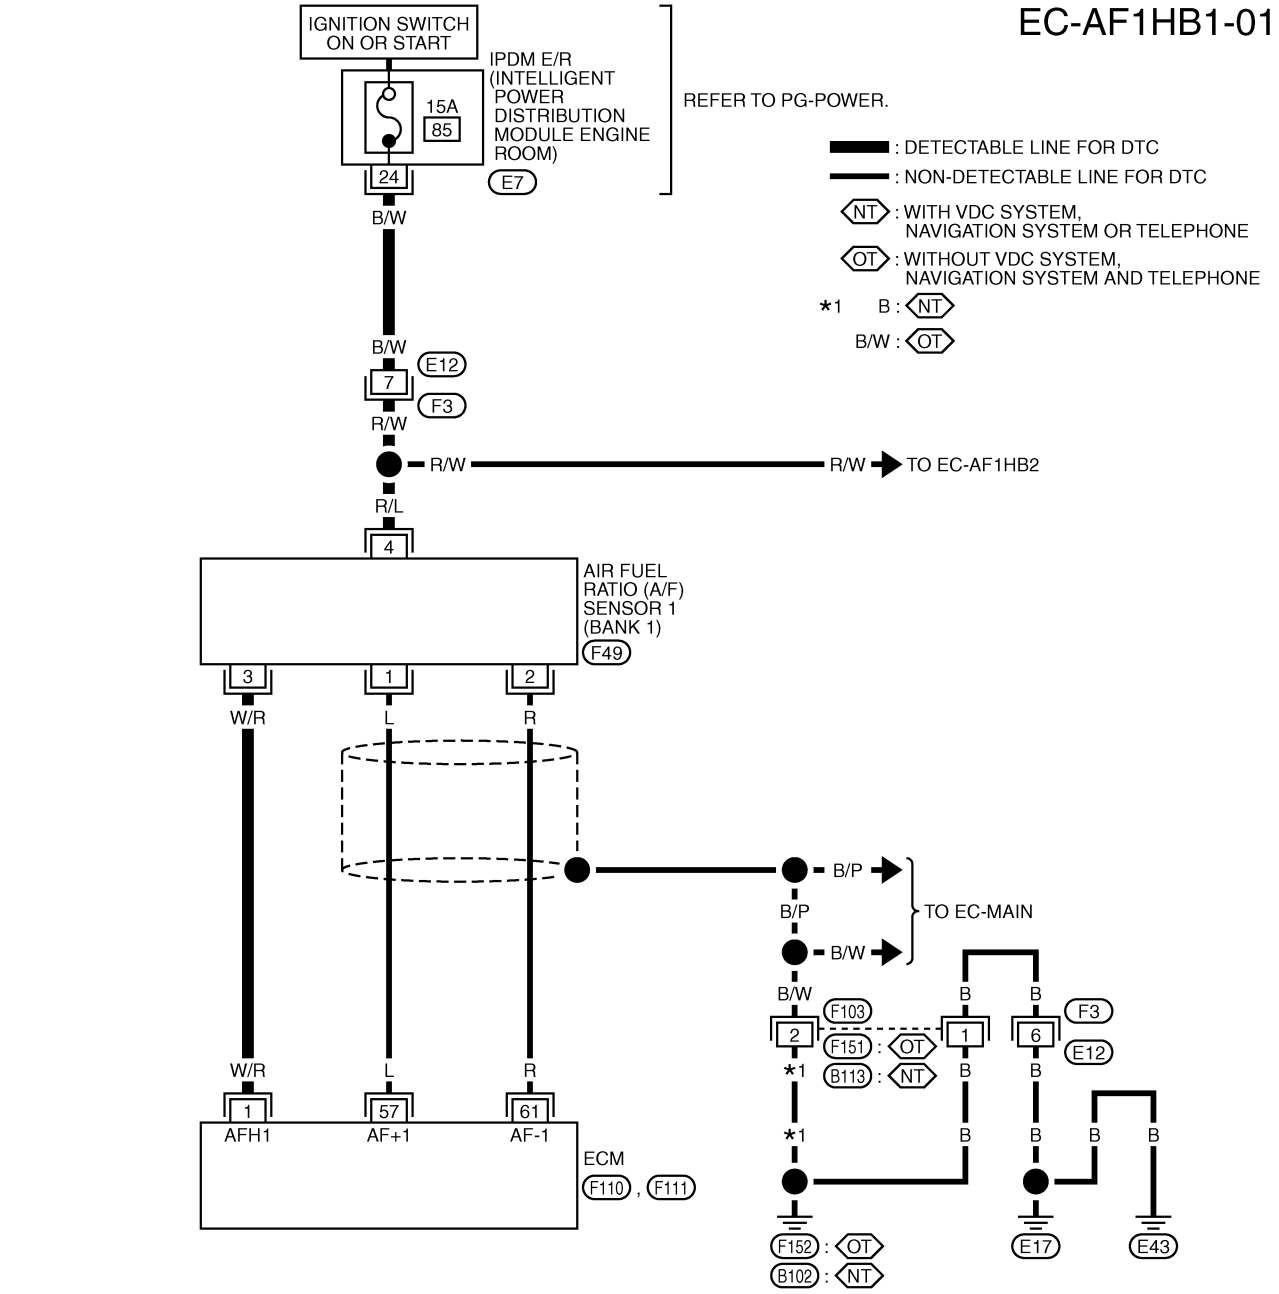
DTC Confirmation Procedure

NBS000B9

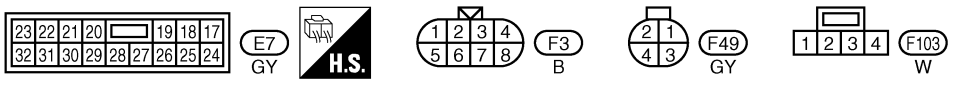
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

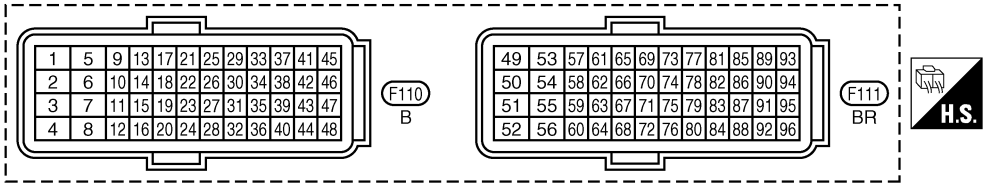
WITH CONSULT-III



1. Start engine and let it idle for at least 10 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-170, "Diagnostic Procedure" .



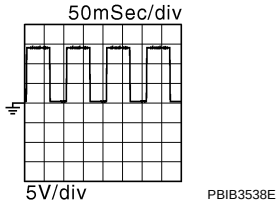
WITH GST



Follow the procedure “WITH CONSULT-III” above.

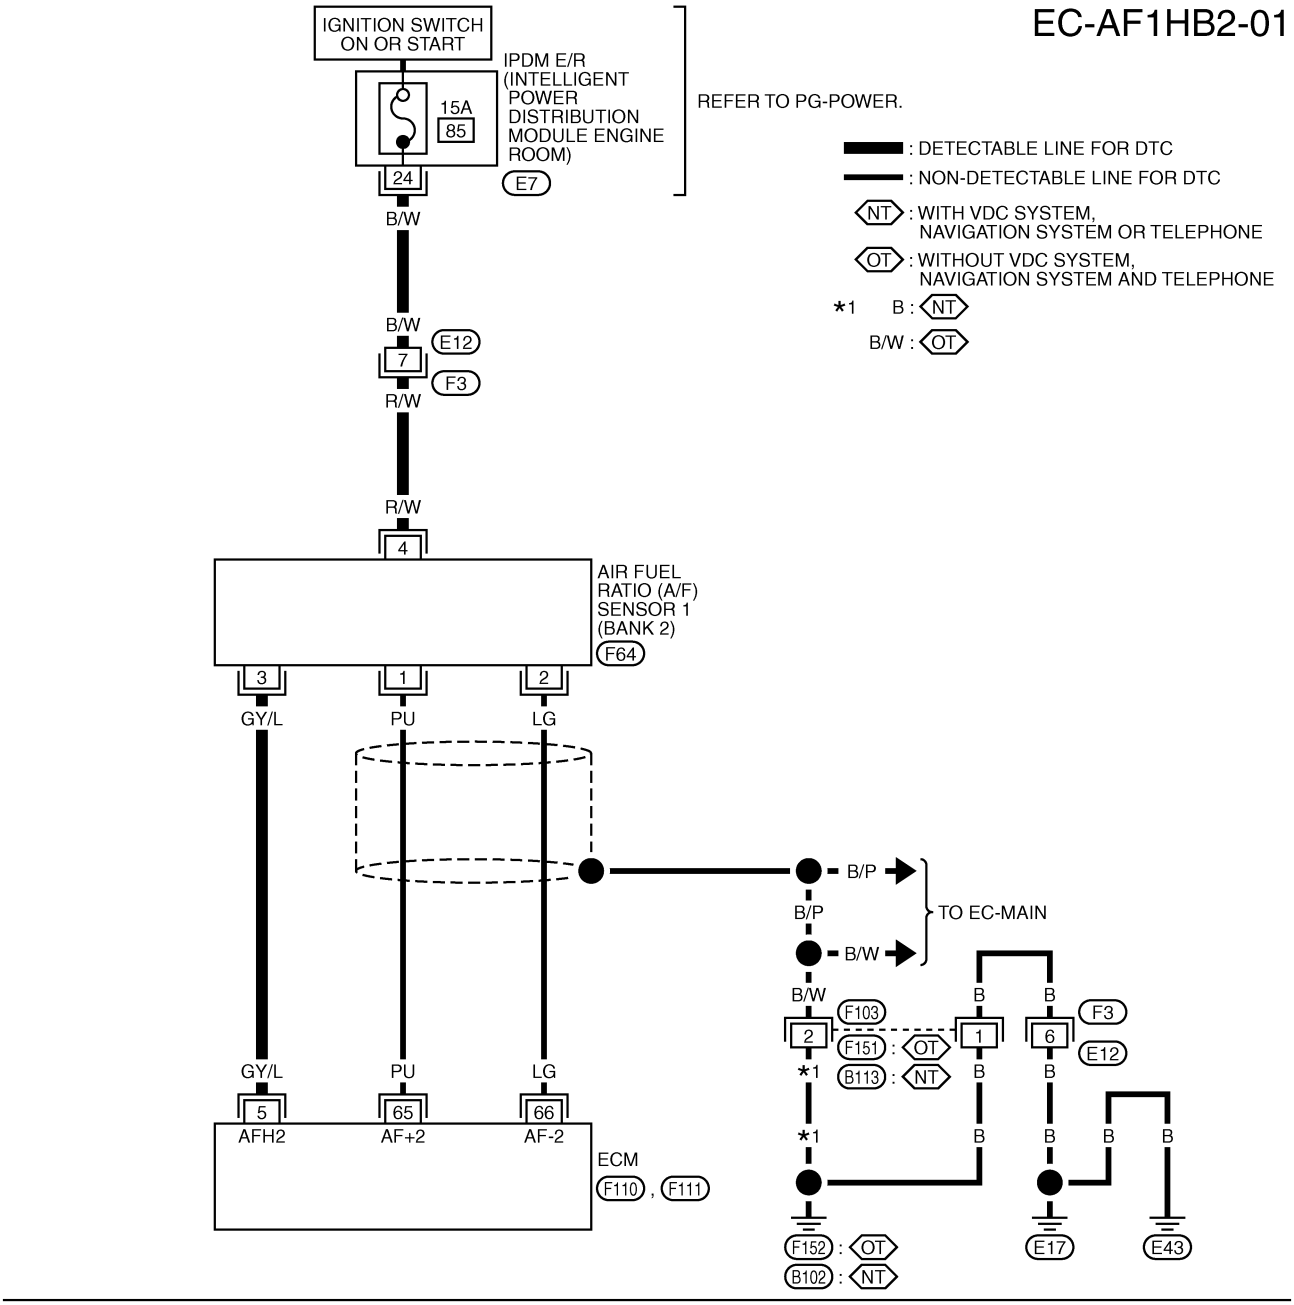
Wiring Diagram
BANK 1

NBS000BA



TBWT1617E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



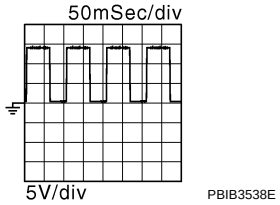
CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	W/R	A/F sensor 1 heater (bank 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed (More than 140 seconds after starting engine)	2.9 - 8.8V★ 
57	L	A/F sensor 1 (bank 1)	**[Ignition switch: ON]**	2.2V
61	R	A/F sensor 1 (bank 1)	**[Ignition switch: ON]** ● **Warm-up condition** ● Engine speed: 2,000 rpm	1.8V Output voltage varies with air fuel ratio.

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

BANK 2



TBWT1618E

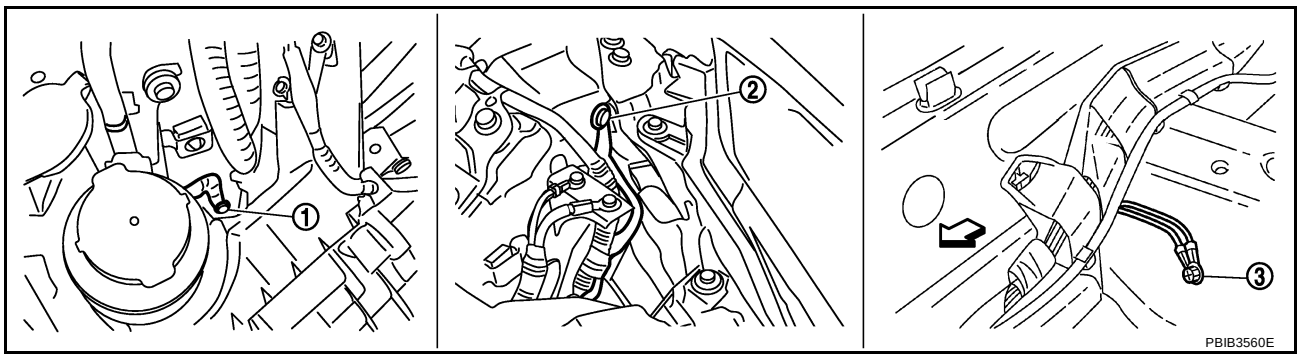
Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
5	GY/L	A/F sensor 1 heater (bank 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed (More than 140 seconds after starting engine)	2.9 - 8.8★ 
65	PU	A/F sensor 1 (bank 2)	**[Ignition switch: ON]**	2.2V
66	LG	A/F sensor 1 (bank 2)	**[Ignition switch: ON]** ● **Warm-up condition** ● Engine speed: 2,000 rpm	1.8V Output voltage varies with air fuel ratio.

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)



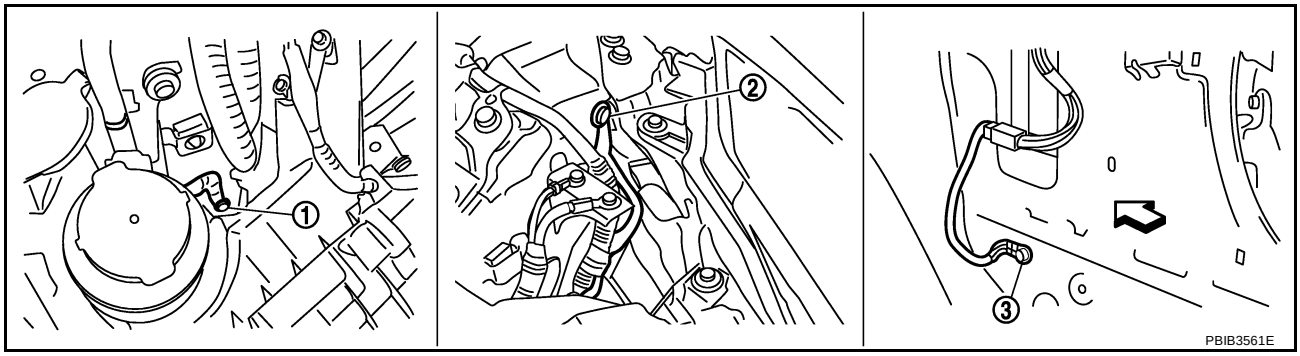
Diagnostic Procedure

NBS000BB

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



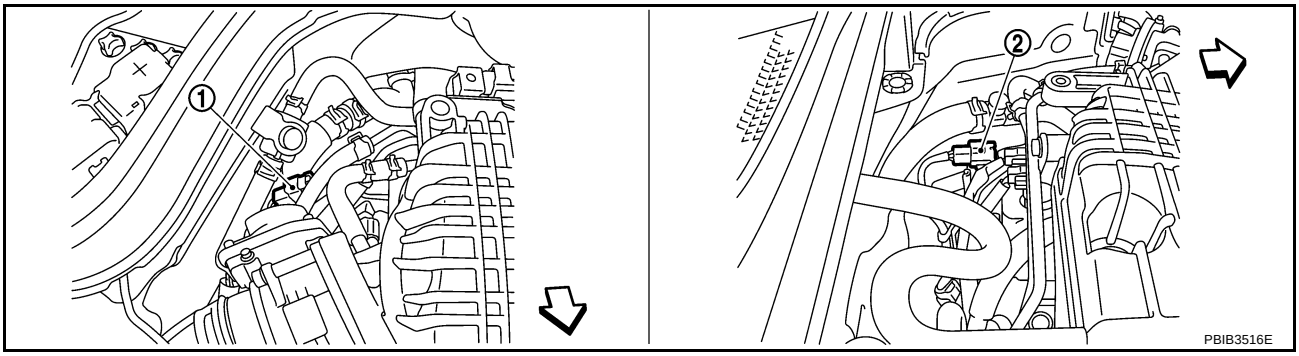
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



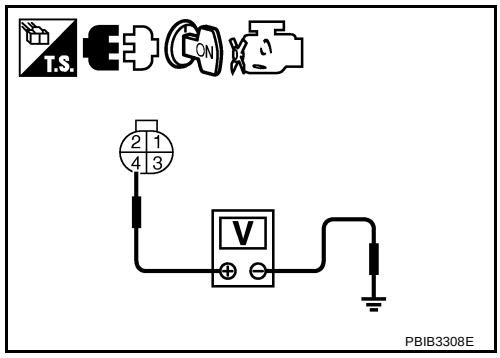
⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect air fuel ratio (A/F) sensor 1 harness connector.



1. A/F sensor 1 (bank 1) harness connector
2. A/F sensor 1 (bank 2) harness connector

⇦: Vehicle fornt

2. Turn ignition switch ON.
3. Check voltage between air fuel ratio sensor (A/F) sensor 1 terminal 4 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- 15A fuse
- Harness for open or short between air fuel ratio (A/F) sensor 1 and fuse

>> Repair or replace harness or connectors.

4. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER OUTPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 1 (bank 1) or 5 (bank 2) and air fuel ratio (A/F) sensor 1 terminal 3.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Refer to EC-172, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning air fuel ratio (A/F) sensor 1.

6. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

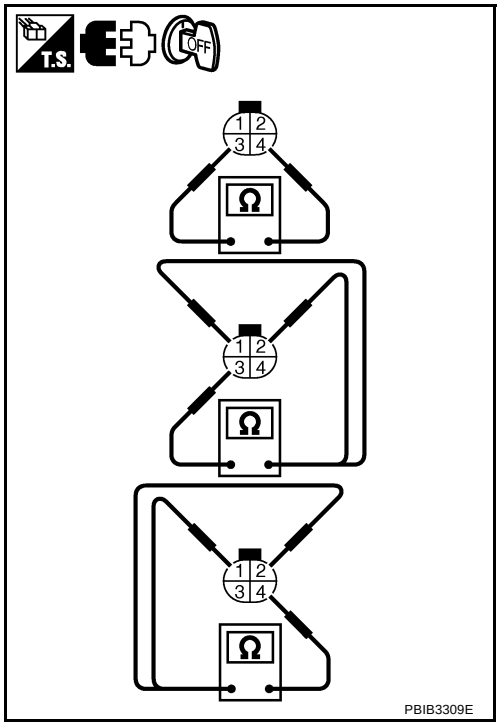
Component Inspection

NBS000BC

AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Check resistance between terminals 3 and 4.

Resistance: 1.8 - 2.44Ω [at 25°C (77°F)]



Check continuity between terminals 3 and 1, 2, terminals 4 and 1, 2.

Continuity should not exist.

If NG, replace the air fuel ratio (A/F) sensor 1.

CAUTION:

- **Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new A/F sensor, clean exhaust system threads using Heated Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

NBS000BD

AIR FUEL RATIO (A/F) SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

DTC P0037, P0038, P0057, P0058 HO2S2 HEATER

PFP:226A0

Description

NBS0004J

SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM function	Actuator
Camshaft position sensor (PHASE)	Engine speed	Heated oxygen sensor 2 (HO2S2) heater control	Heated oxygen sensor 2 (HO2S2) heater
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Mass air flow sensor	Amount of intake air		

The ECM performs ON/OFF control of the heated oxygen sensor 2 (HO2S2) heater corresponding to the engine speed, amount of intake air and engine coolant temperature.

OPERATION

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600	OFF
Below 3,600 rpm after the following conditions are met. ● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	ON

CONSULT-III Reference Value in Data Monitor Mode

NBS0004K

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 HTR (B1) HO2S2 HTR (B2)	● Engine speed: Below 3,600 rpm after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	ON
	● Engine speed: Above 3,600 rpm	OFF

On Board Diagnosis Logic

NBS0004L

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0037 0037 (Bank 1) P0057 0057 (Bank 2)	HO2S2 heater control circuit low	The current amperage in the HO2S2 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the HO2S2 heater.)	● Harness or connectors (The HO2S2 heater circuit is open or shorted.) ● HO2S2 heater
P0038 0038 (Bank 1) P0058 0058 (Bank 2)	HO2S2 heater control circuit high	The current amperage in the HO2S2 heater circuit is out of the normal range. (An excessively high voltage signal is sent to ECM through the HO2S2 heater.)	● Harness or connectors (The HO2S2 heater circuit is shorted.) ● HO2S2 heater

DTC Confirmation Procedure

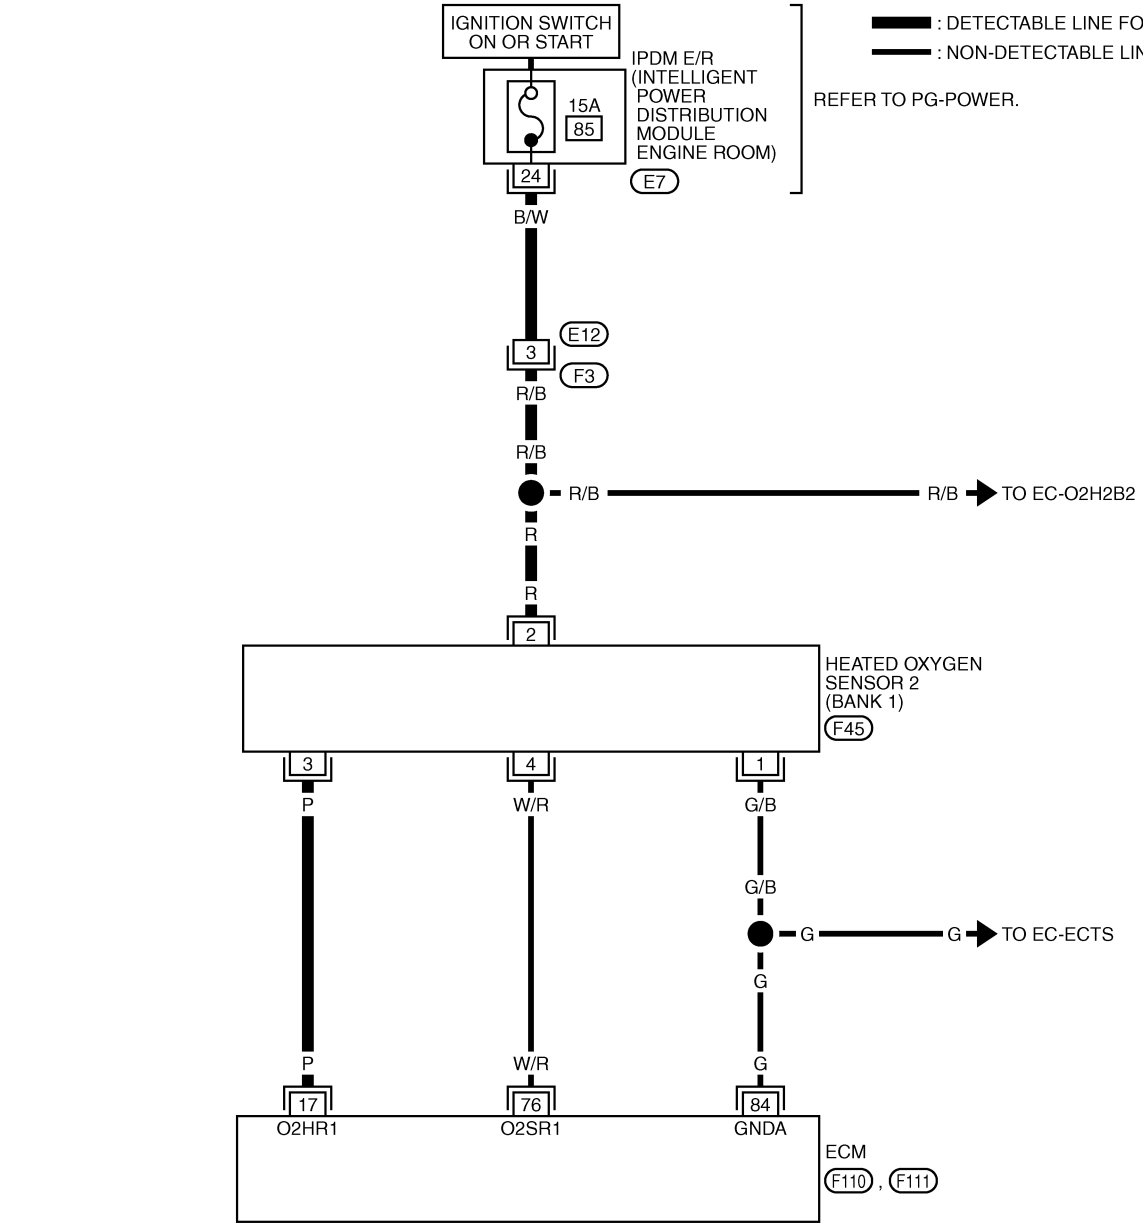
NBS0004M

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is between 11V and 16V at idle.

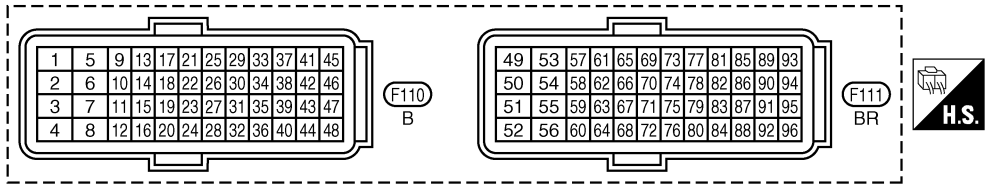
WITH CONSULT-III

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start the engine and keep the engine speed between 3,500 rpm and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-179, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSUT-III” above.



Wiring Diagram

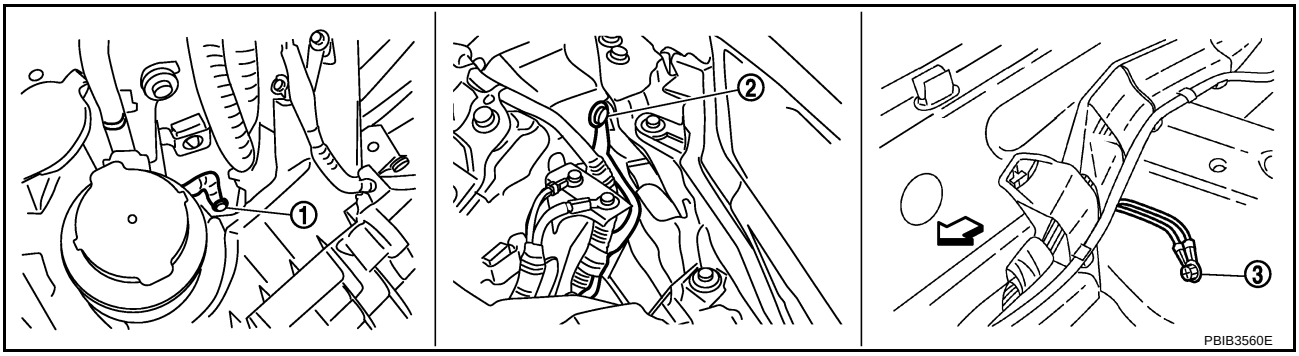
84	G	Sensor ground Heated oxygen sensor 2, Engine coolant temperature sensor, Engine oil temperature sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



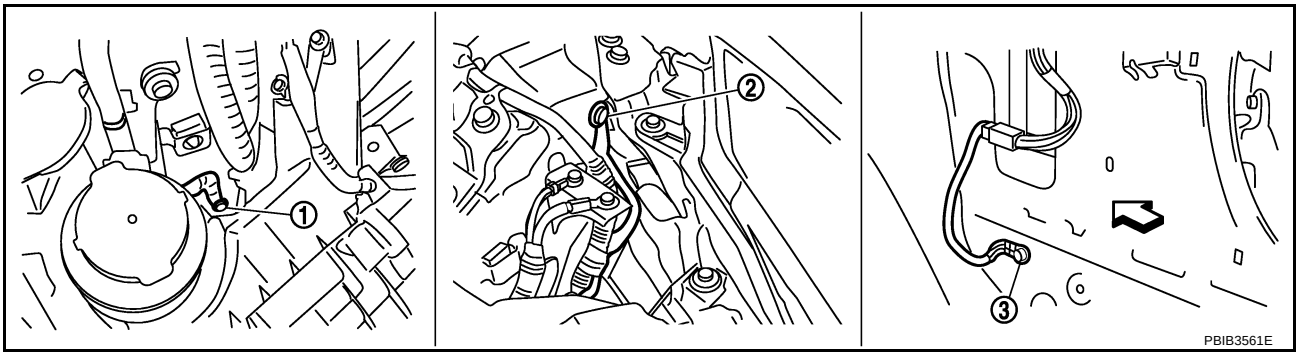
Diagnostic Procedure

NBS0004O

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



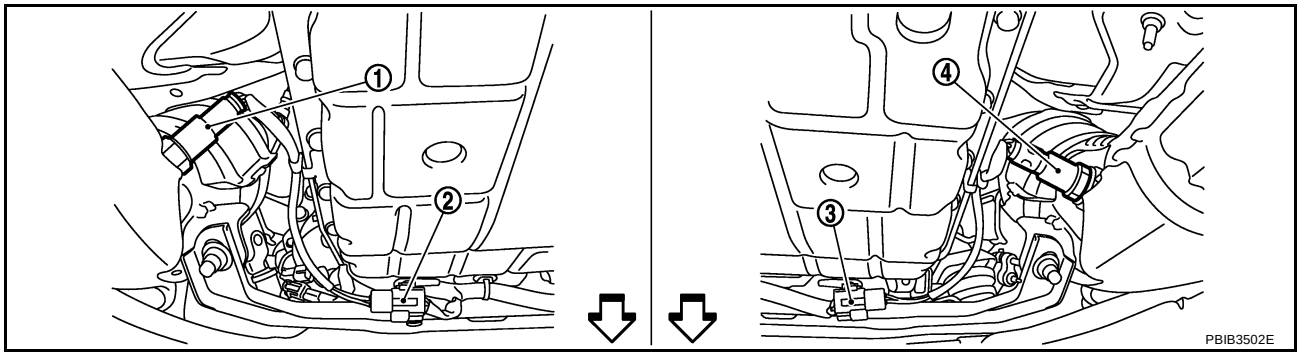
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



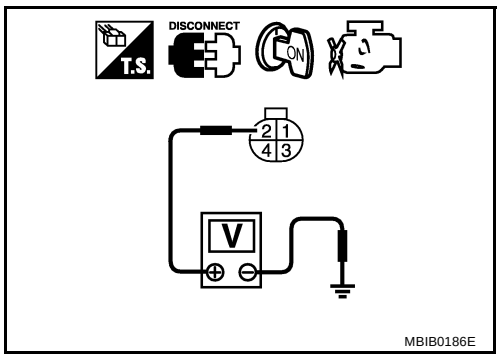
⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK HO2S2 POWER SUPPLY CIRCUIT

1. Disconnect heated oxygen sensor 2 harness connector.



1. Heated oxygen sensor 2 (bank 2)
2. Heated oxygen sensor 2 (bank 2) harness connector
3. Heated oxygen sensor 2 (bank 1)
4. Heated oxygen sensor 2 (bank 1) harness connector

⇦: Vehicle front

2. Turn ignition switch ON.
3. Check voltage between HO2S2 terminal 2 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- 15A fuse
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S2 HEATER OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal and HO2S2 terminal as follows. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0037, P0038	17	3	1
P0057, P0058	33	3	2

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2 HEATER

Refer to EC-181, "Component Inspection" .

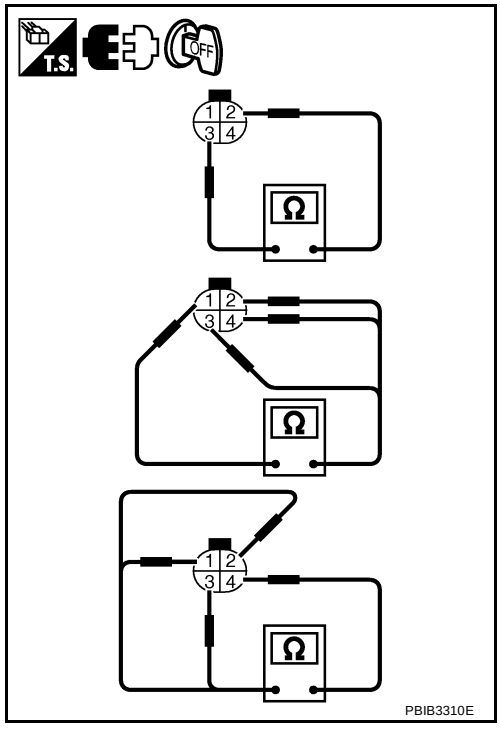
OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS0004P

HEATED OXYGEN SENSOR 2 HEATER

1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
2 and 3	3.4 - 4.4 Ω [at 25°C (77°F)]
1 and 2, 3, 4	∞ Ω (Continuity should not exist)
4 and 1, 2, 3	

2. If NG, replace heated oxygen sensor 2.

CAUTION:

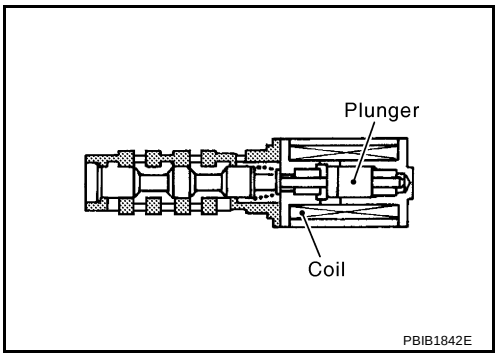
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

NBS0004Q

HEATED OXYGEN SENSOR 2

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .



DTC P0075, P0081 IVT CONTROL SOLENOID VALVE

PFP:23796

Component Description

NBS000BR

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.
The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.
The longer pulse width advances valve angle.
The shorter pulse width retards valve angle.
When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.

CONSULT-III Reference Value in Data Monitor Mode

NBS000BS

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V SOL(B1) INT/V SOL(B2)	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		2,000 rpm	Approx. 0% - 50%

On Board Diagnosis Logic

NBS000BT

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0075 0075 (Bank 1)	Intake valve timing control solenoid valve circuit	An improper voltage is sent to the ECM through intake valve timing control solenoid valve.	● Harness or connectors (The intake valve timing control solenoid valve circuit is open or shorted.) ● Intake valve timing control solenoid valve
P0081 0081 (Bank 2)			

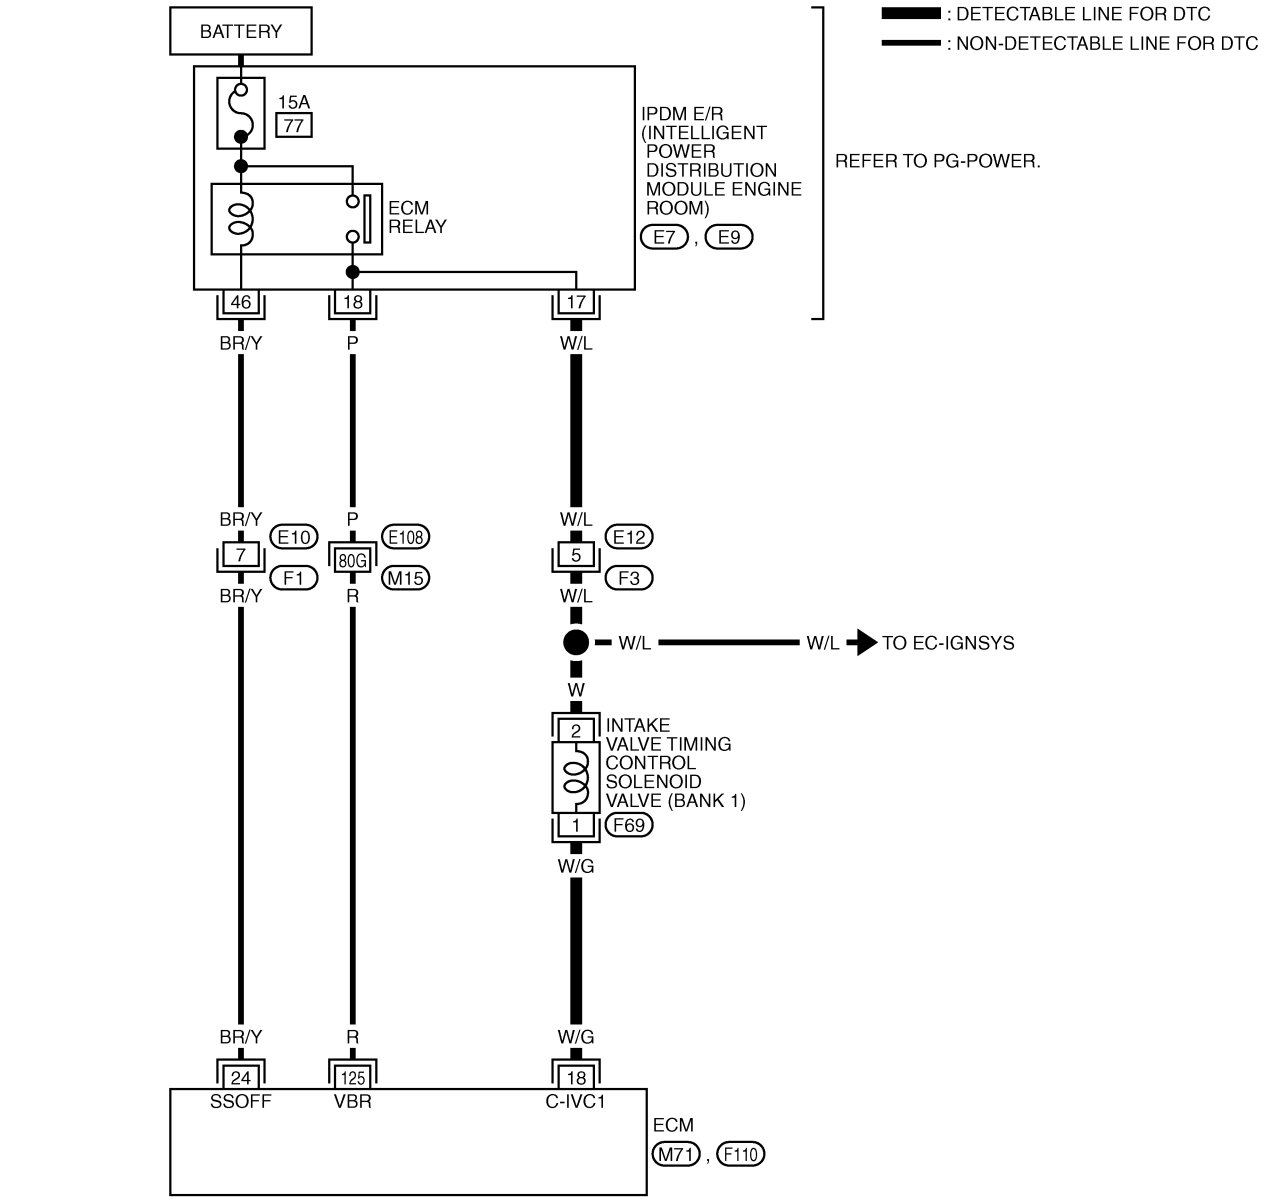
DTC Confirmation Procedure

NBS000BU

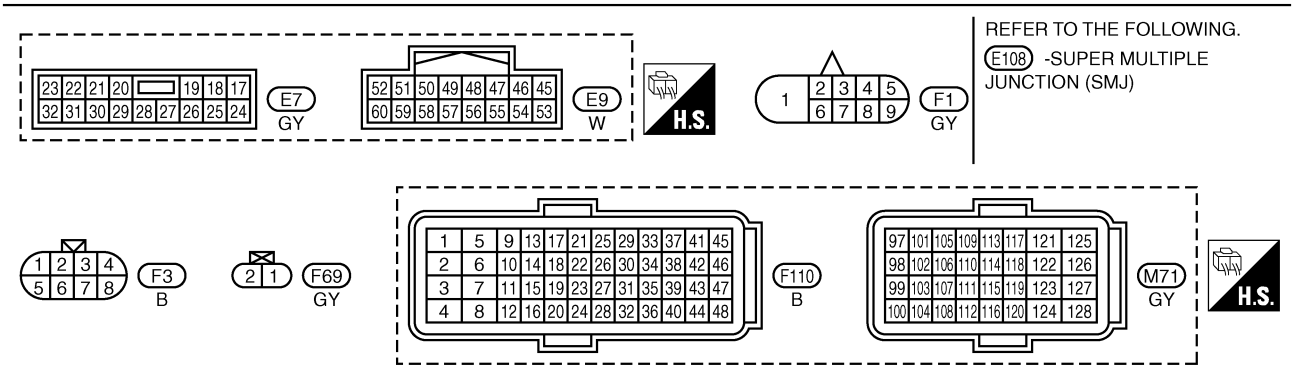
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and let it idle for 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-188, "Diagnostic Procedure" .



WITH GST



Following the procedure “WITH CONSULT-III” above.

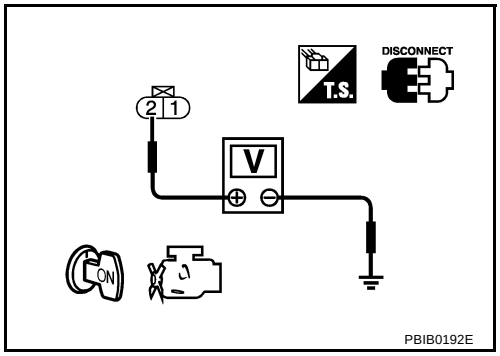
Diagnostic Procedure

NBS000BW

1. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT



1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.

1. Exhaust valve timing control magnet retarder (bank 1) harness connector
2. Intake valve timing control solenoid valve (bank 1) harness connector
3. Intake valve timing control solenoid valve (bank 2) harness connector
4. Exhaust valve timing control magnet retarder (bank 2) harness connector

3. Turn ignition switch ON.
4. Check voltage between intake valve timing control solenoid valve terminal 2 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- Harness for open or short between intake valve timing control solenoid valve and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 18 (bank 1) or 29 (bank 2) and intake valve timing control solenoid valve terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EC-189, "Component Inspection" .

OK or NG

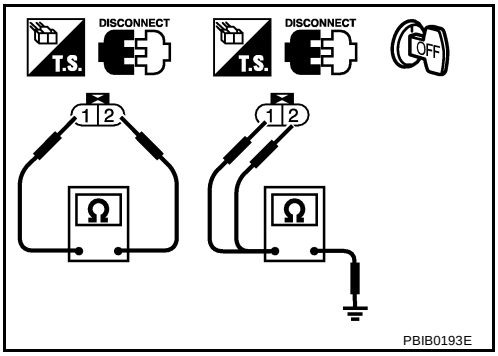
OK >> GO TO 5.
NG >> Replace malfunctioning intake valve timing control solenoid valve.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

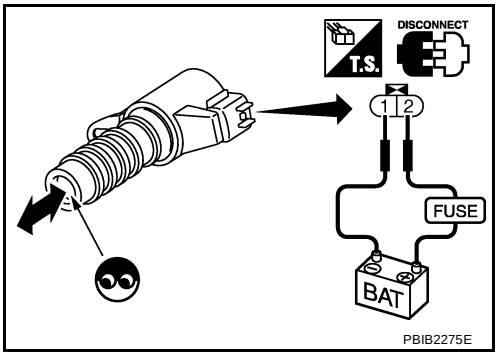


NBS000BX

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

1. Disconnect intake valve timing control solenoid valve harness connector.
2. Check resistance between intake valve timing control solenoid valve as follows.

Terminal	Resistance
1 and 2	7.0 - 7.5Ω [at 20°C (68°F)]
1 or 2 and ground	∞ Ω (Continuity should not exist.)



If NG, replace intake valve timing control solenoid valve.
If OK, go to next step.

3. Remove intake valve timing control solenoid valve.
4. Provide 12V DC between intake valve timing control solenoid valve terminals and then interrupt it. Make sure that the plunger moves as shown in the figure.

CAUTION:
Do not apply 12V DC continuously for 5 seconds or more. Doing so may result in damage to the coil in intake valve timing control solenoid valve.
If NG, replace intake valve timing control solenoid valve.

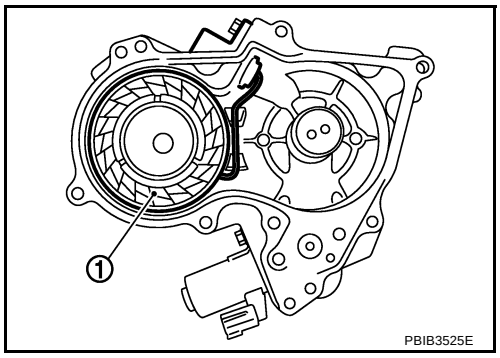
NOTE:
Always replace O-ring when intake valve timing control solenoid valve is removed.

Removal and Installation

NBS000BY

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EM-53, "TIMING CHAIN" .



DTC P0078 P0084 EVT CONTROL MAGNET RETARDER

PFP:23795

Component Description

NBS0004R

Exhaust valve timing control magnet retarder (1) controls the shut/open timing of the exhaust valve by ON/OFF pulse duty signals sent from the ECM.
The longer pulse width retards valve angle.
The shorter pulse width advances valve angle.

CONSULT-III Reference Value in Data Monitor Mode

NBS0004S

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
EX VTC DTY B1 EX VTC DTY B2	● Engine: After warming up ● Shift lever: Neutral ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		Around 2,500 rpm while the engine speed is rising	Approx. 0% - 70%

On Board Diagnosis Logic

NBS0004T

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0078 0078 (Bank 1)	Exhaust valve timing control magnet retarder circuit	An improper voltage is sent to the ECM through exhaust valve timing control magnet retarder.	● Harness or connectors (Exhaust valve timing control magnet retarder circuit is open or shorted.) ● Exhaust valve timing control magnet retarder
P0084 0084 (Bank 2)			

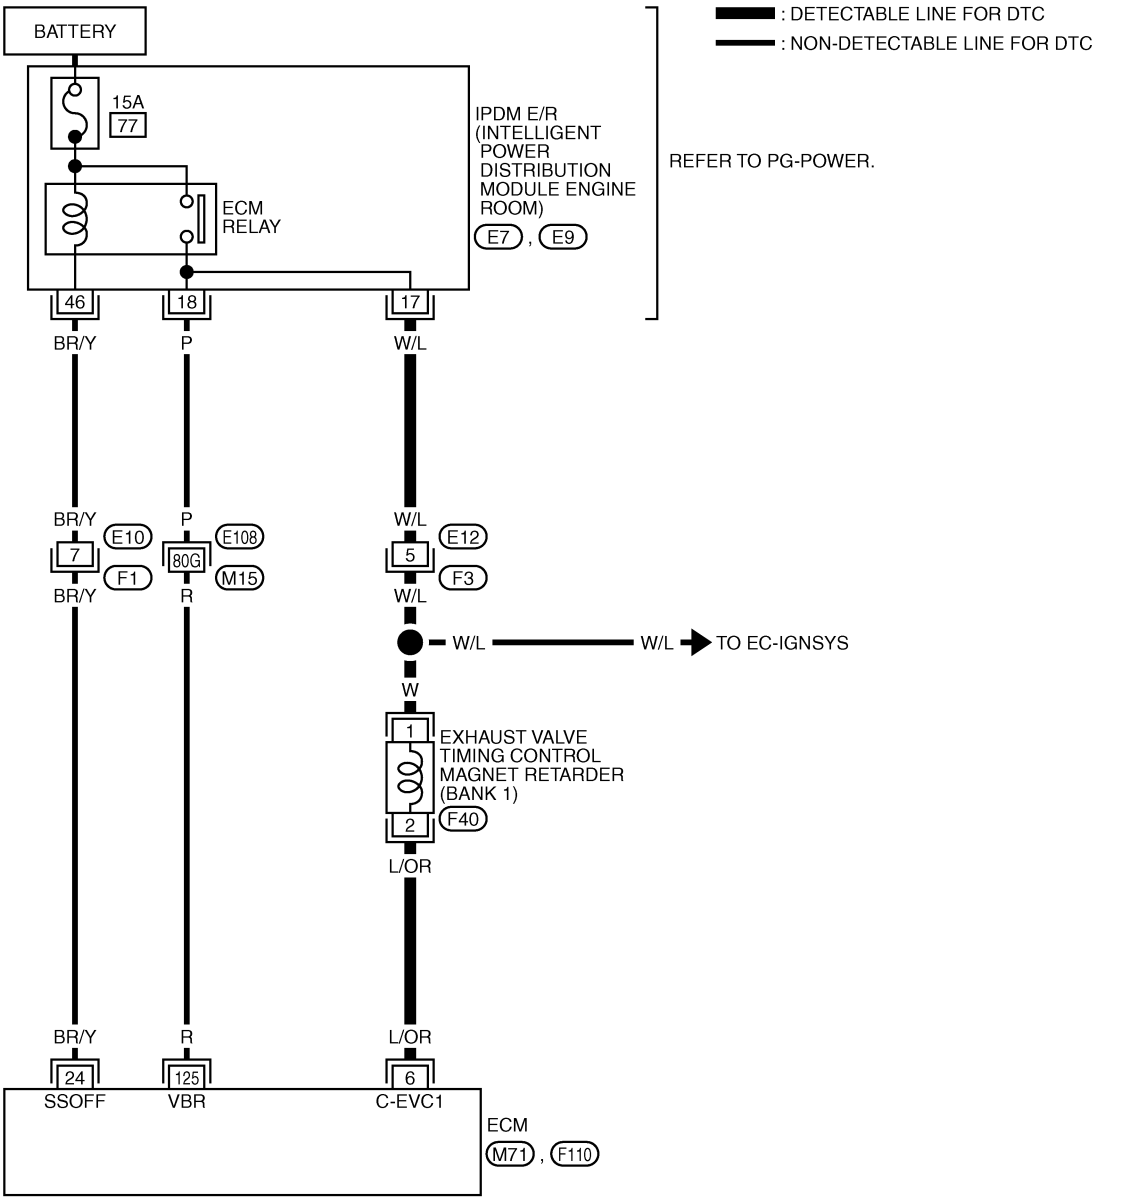
DTC Confirmation Procedure

NBS0004U

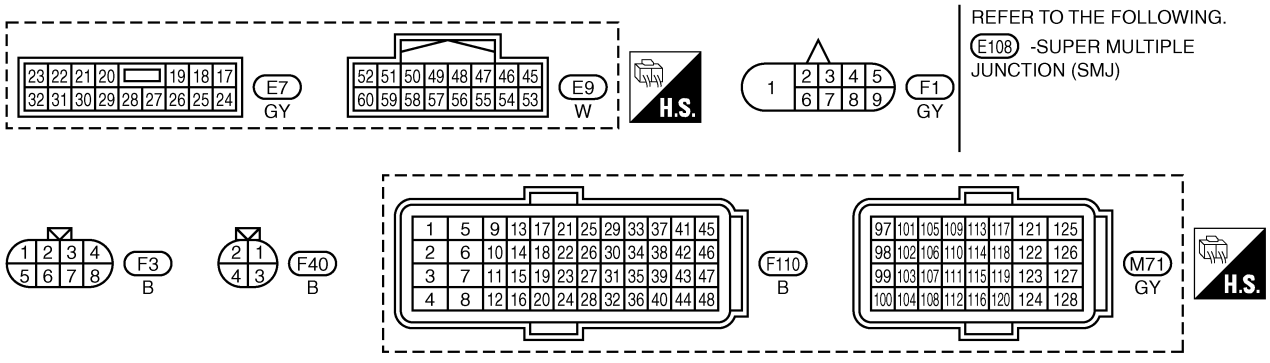
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and let it idle for 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-195, "Diagnostic Procedure" .



WITH GST

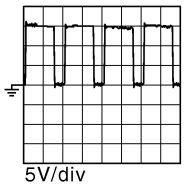


Following the procedure “WITH CONSULT-III” above.

Wiring Diagram
BANK 1

NBS0004V

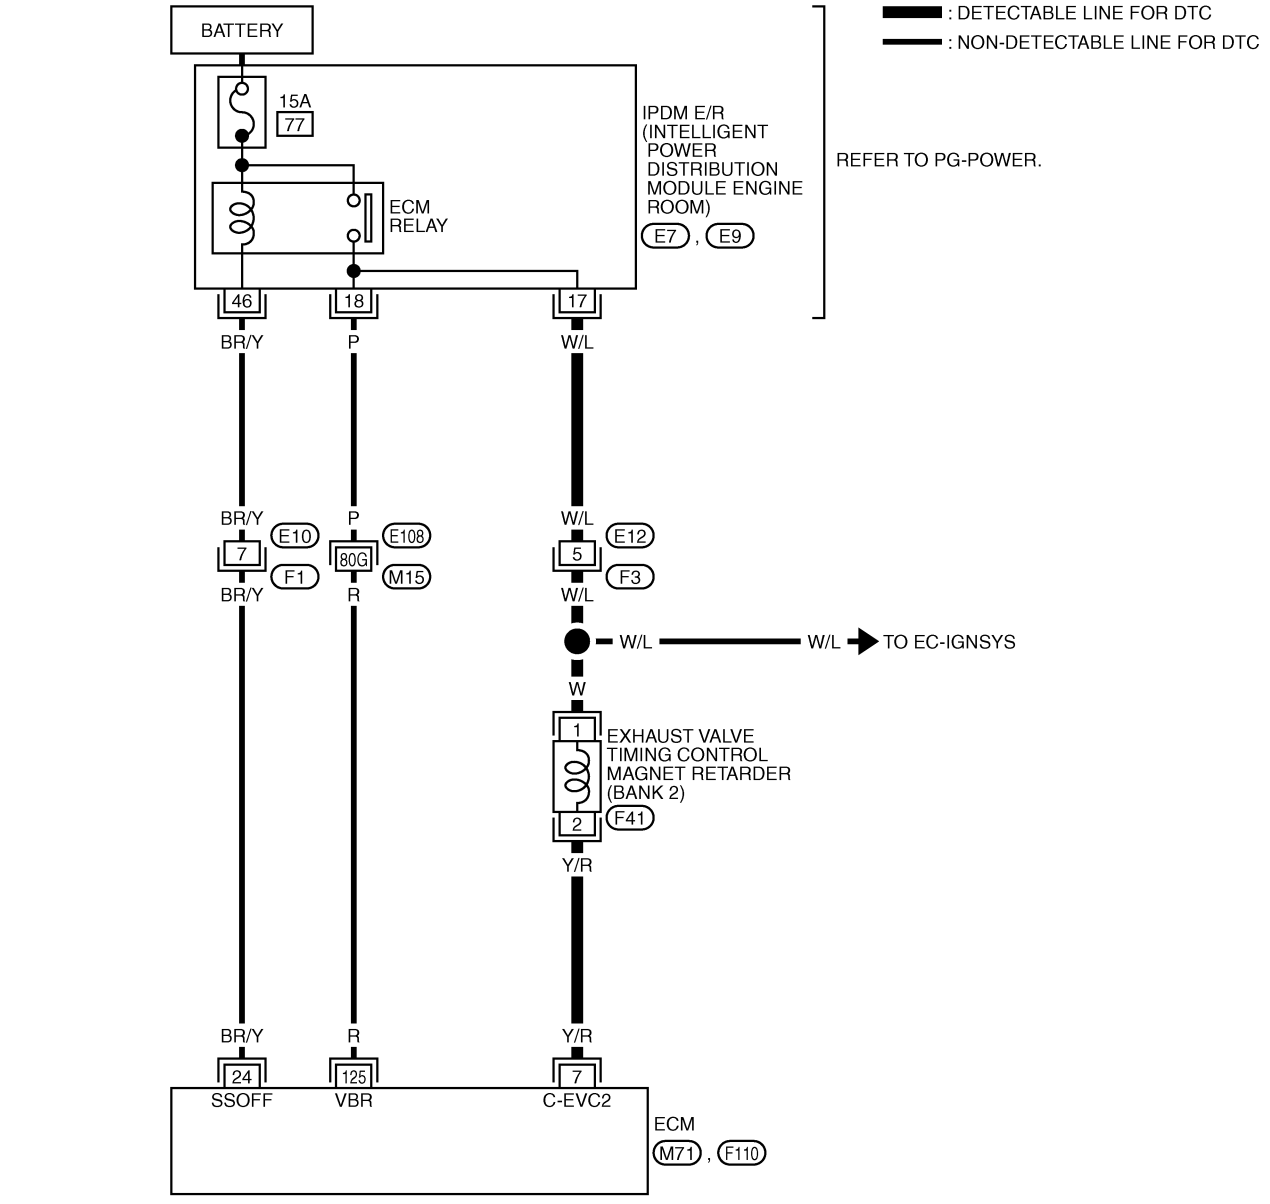
EC-EVCB1-01



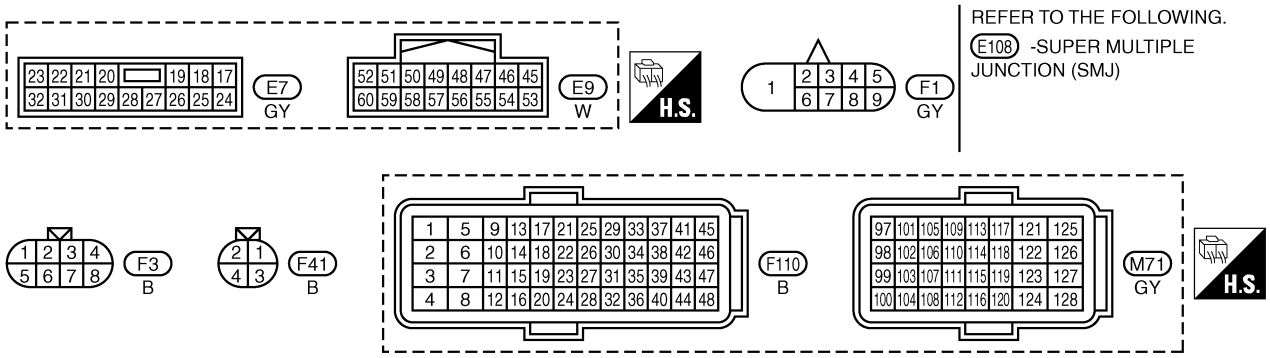
TBWT1623E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:



Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.



TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

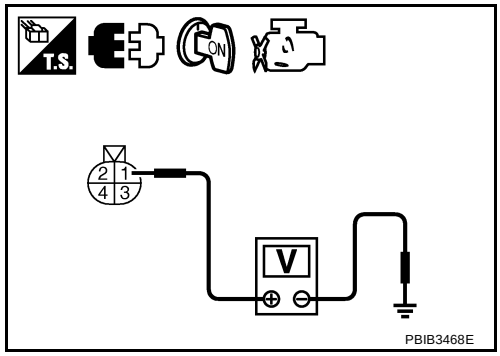
Diagnostic Procedure

NBS0004W

1. CHECK EXHAUST VALVE TIMING CONTROL MAGNET RETARDER POWER SUPPLY CIRCUIT



1. Turn ignition switch OFF.
2. Disconnect exhaust valve timing control magnet retarder harness connector.

1. Exhaust valve timing control magnet retarder (bank 1) harness connector
2. Intake valve timing control solenoid valve (bank 1) harness connector
3. Intake valve timing control solenoid valve (bank 2) harness connector
4. Exhaust valve timing control magnet retarder (bank 2) harness connector

3. Turn ignition switch ON.
4. Check voltage between exhaust valve timing control magnet retarder terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- Harness for open or short between exhaust valve timing control magnet retarder and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK EXHAUST VALVE TIMING CONTROLMAGNET RETARDER OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Checking harness continuity between exhaust valve timing control magnet retarder terminal 2 and ECM terminal 6 (bank 1), 7 (bank 2).
   Refer to Wiring Diagram

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

Refer to EC-196, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. REPLACE EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

1. Replace malfunctioning exhaust valve timing control magnet retarder.
2. Perform EC-76, "Exhaust Valve Timing Control Learning" .

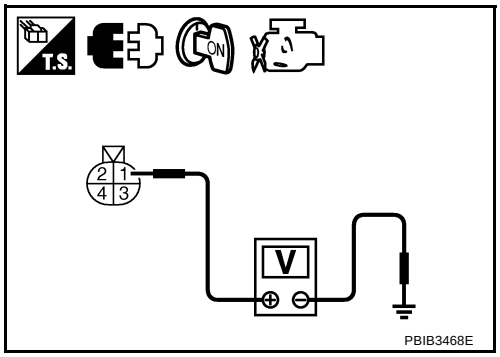
>> **INSPECTION END**

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



NBS0004X

EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

1. Disconnect exhaust valve timing control magnet retarder harness connector.
2. Check resistance between exhaust valve timing control magnet retarder terminals 1and 2.

Resistance: 9.0 - 11.0Ω [at 20°C (68°F)]

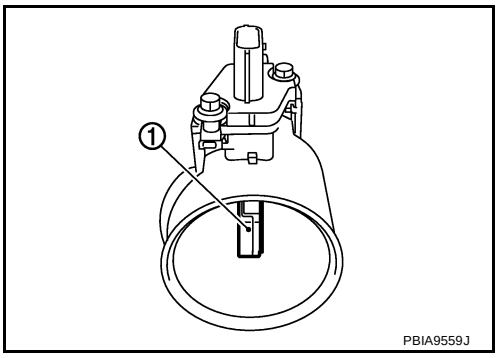
3. If NG, replace exhaust valve timing control magnet retarder and go to the next step.
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .

Removal and Installation

NBS0004Y

EXHAUST VALVE TIMING CONTROL MAGNET RETARDER

Refer to EM-44, "FRONT TIMING CHAIN CASE" .



DTC P0101, P010B MAF SENSOR

PFP:22680

Component Description

NBS0004Z

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire is to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The more air, the greater the heat loss.
Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

CONSULT-III Reference Value in Data Monitor Mode

NBS00050

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAS A/F SE-B1	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
MAS A/F SE-B2			
CAL/LD VALUE	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	5% - 35%
		2,500 rpm	5% - 35%
MASS AIRFLOW	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	2.0 - 6.0 g·m/s
		2,500 rpm	7.0 - 20.0 g·m/s

On Board Diagnosis Logic

NBS00051

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0101 0101 (Bank 1)	Mass air flow sensor circuit range/performance problem	A)	A high voltage from the sensor is sent to ECM under light load driving condition.	● Harness or connectors (The sensor circuit is open or shorted.) ● Mass air flow sensor ● EVAP control system pressure sensor ● Intake air temperature sensor
P010B 010B (Bank 2)		B)	A low voltage from the sensor is sent to ECM under heavy load driving condition.	● Harness or connectors (The sensor circuit is open or shorted.) ● Intake air leaks ● Mass air flow sensor ● EVAP control system pressure sensor ● Intake air temperature sensor

DTC Confirmation Procedure

NBS00052

Perform PROCEDURE FOR MALFUNCTION A first.
If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

NOTE:
If engine will not start or stops soon, wait at least 10 seconds with engine stopped (Ignition switch ON) instead of running engine at idle speed.

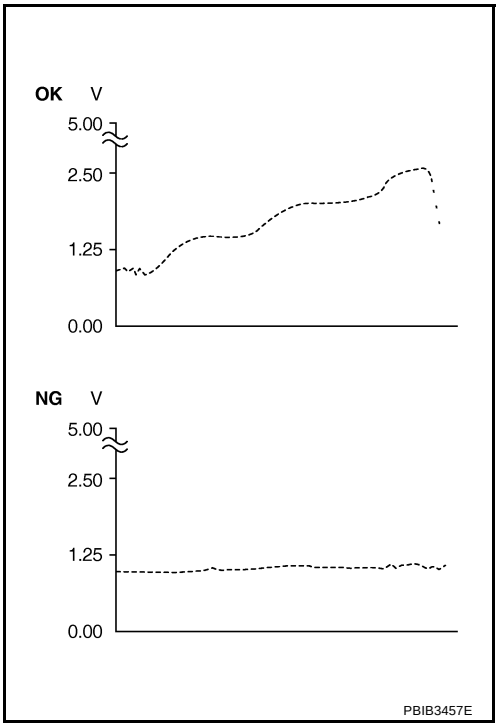
With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Run engine for at least 10 seconds at idle speed.
3. Check 1st trip DTC.
4. If 1st trip DTC is detected, go to EC-203, "Diagnostic Procedure" .

With GST

Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION B



CAUTION:
Always drive vehicle at a safe speed.

With CONSULT-III

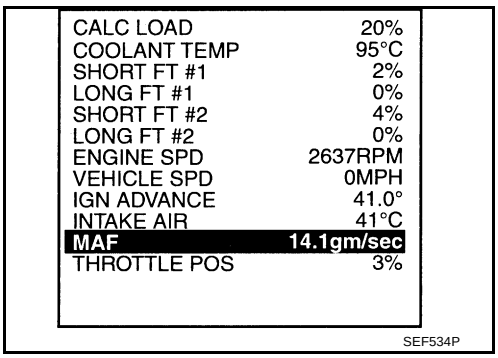
1. Start engine and warm it up to normal operating temperature.
   If engine cannot be started, go to EC-203, "Diagnostic Procedure" .
2. Select “DATA MONITOR” mode with CONSULT-III.
3. Check the voltage of “MAS A/F SE-B1” and “MAS A/F SE-B2” with “DATA MONITOR”.
4. Increases engine speed to about 4,000 rpm.
5. Monitor the linear voltage rise in response to engine speed increases.
   If NG, go to EC-203, "Diagnostic Procedure" .
   If OK, go to following step.
6. Maintain the following conditions for at least 10 consecutive seconds.

ENG SPEED	More than 2,000 rpm
THRTL SEN 1	More than 3V
THRTL SEN 2	More than 3V
Shift lever	Suitable position
Driving location	Driving vehicle uphill (Increased engine load) will help maintain the driving conditions required for this test.

7. Check 1st trip DTC.
8. If 1st trip DTC is detected, go to EC-203, "Diagnostic Procedure" .

Overall Function Check

NBS00053

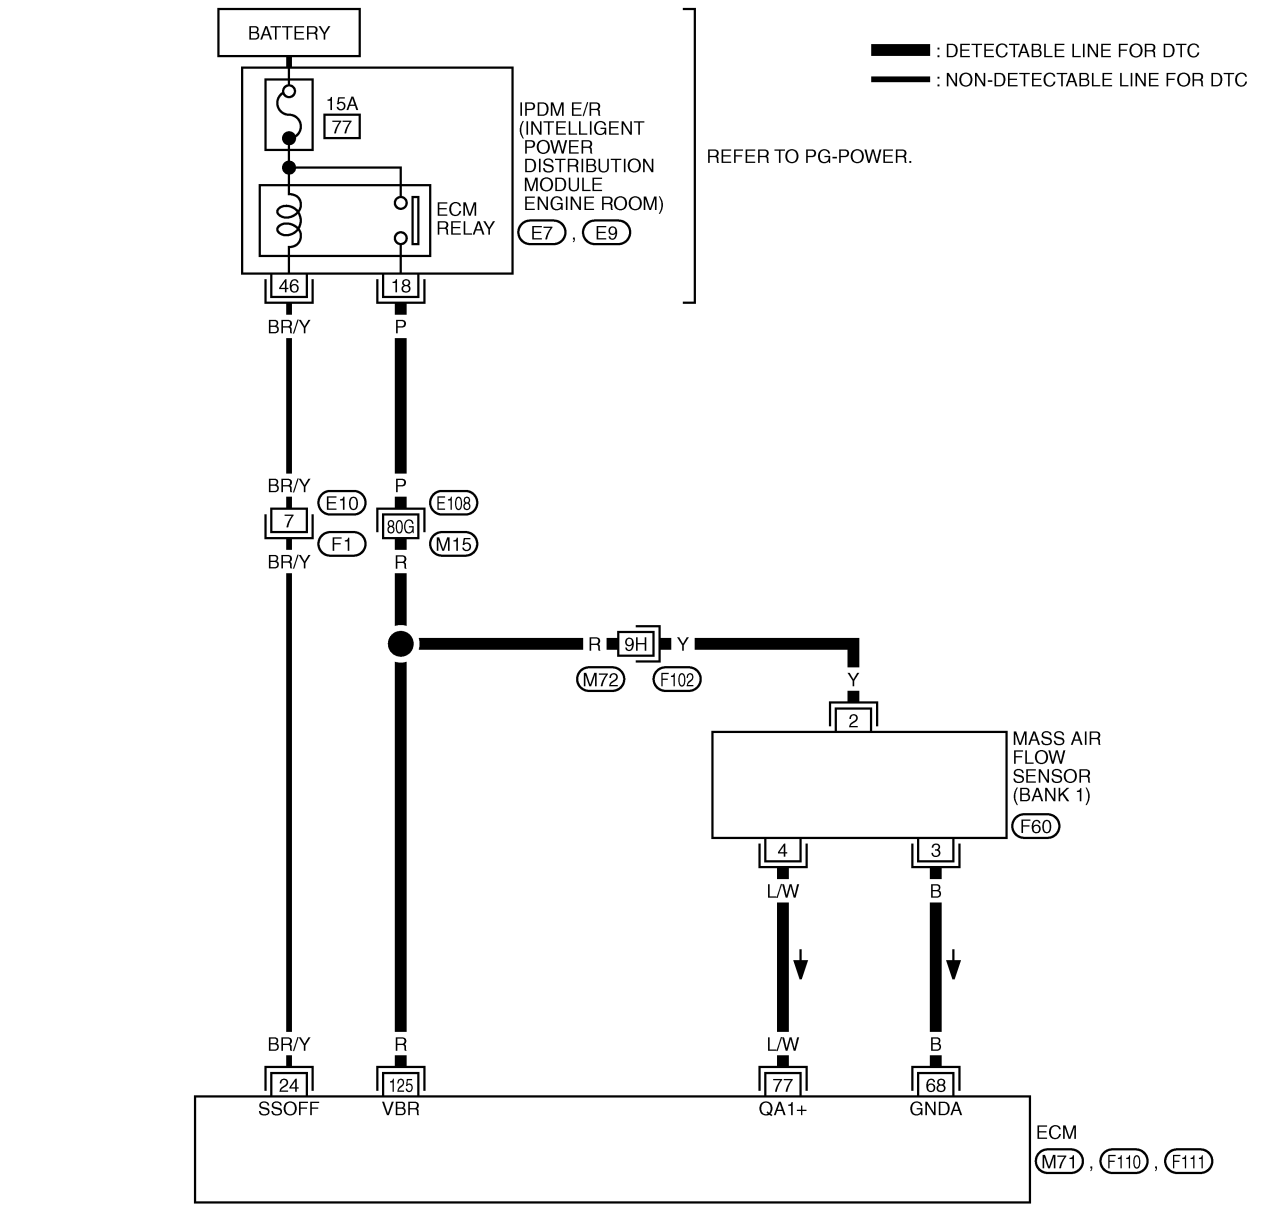


PROCEDURE FOR MALFUNCTION B

Use this procedure to check the overall function of the mass air flow sensor circuit. During this check, a 1st trip DTC might not be confirmed.

With GST

1. Start engine and warm it up to normal operating temperature.
2. Select Service $01 with GST.



3. Check the mass air flow sensor signal with Service $01.
4. Check for linear mass air flow sensor signal value rise in response to increases to about 4,000 rpm in engine speed.
5. If NG, go to EC-203, "Diagnostic Procedure" .

Diagnostic Procedure

NBS00055

1. INSPECTION START

Which malfunction (A or B) is duplicated?

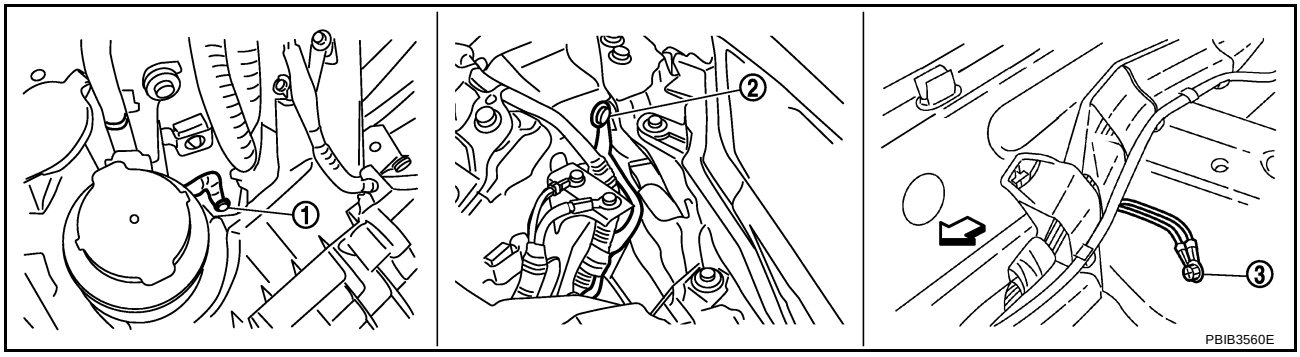
A or B

A >> GO TO 3.
B >> GO TO 2.

2. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and intake manifold



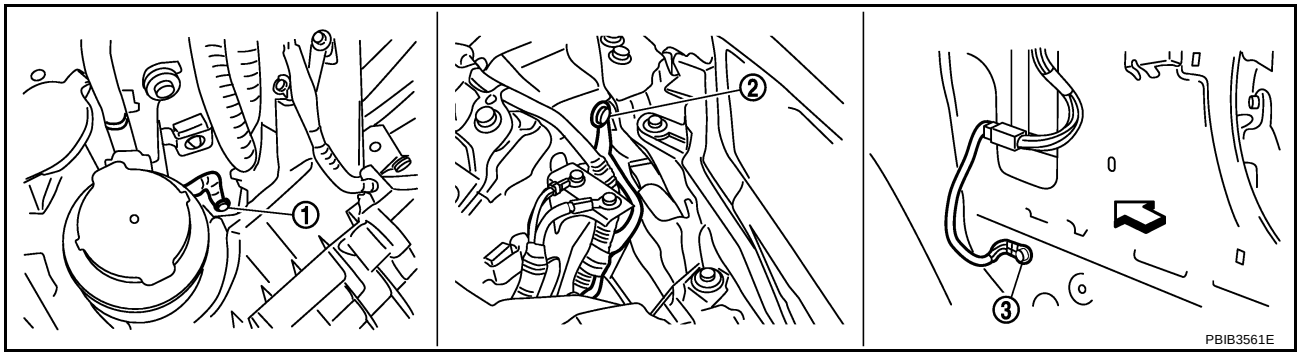
OK or NG

OK >> GO TO 3.
NG >> Reconnect the parts.

3. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



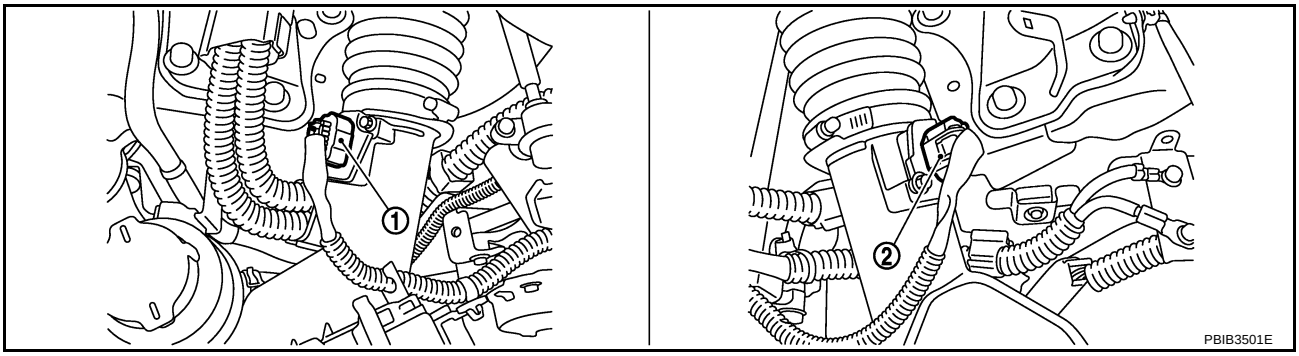
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

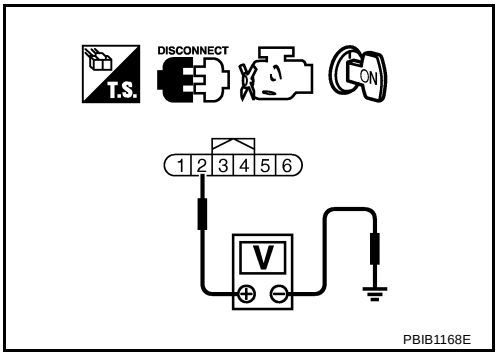


⇦: Vehicle front

OK or NG

OK >> GO TO 4.
NG >> Repair or replace ground connections.

4. CHECK MASS AIR FLOW SENSOR POWER SUPPLY CIRCUIT



1. Disconnect mass air flow sensor harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

2. Turn ignition switch ON.
3. Check voltage between mass air flow sensor terminal 2 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness connectors M72, F102
- Harness for open or short between IPDM E/R and mass air flow sensor
- Harness for open or short between mass air flow sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK MASS AIR FLOW SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between mass air flow sensor terminal 3 and ECM terminal 68 (bank 1), 94 (bank 2).
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK MASS AIR FLOW SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between mass air flow sensor terminal 4 and ECM terminal 77 (bank 1), 79 (bank 2).
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTAKE AIR TEMPERATURE SENSOR

Check mass air flow sensor (with intake air temperature sensor) (bank 1).
Refer to EC-245, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1).

9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace EVAP control system pressure sensor.

10. CHECK MASS AIR FLOW SENSOR

Refer to EC-206, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace malfunctioning mass air flow sensor.

11. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

NBS006UZ

MASS AIR FLOW SENSOR

With CONSULT-III

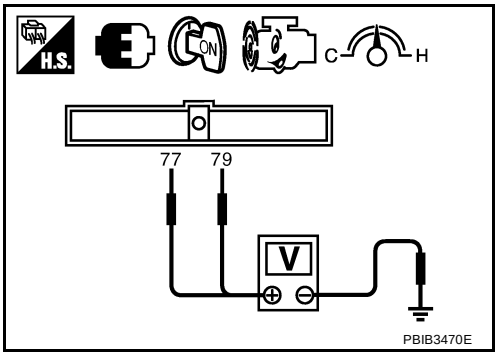
1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Connect CONSULT-III and select “DATA MONITOR” mode.
4. Select “MAS A/F SE-B1” and “MAS A/F SE-B2”, and check indication under the following conditions.

Monitor item	Condition	Indication
MAS A/F SE-B1 MAS A/F SE-B2	Ignition switch ON (Engine stopped.)	Approx. 0.4V
	Idle (Engine is warmed-up to normal operating temperature.)	0.8 - 1.1V
	2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.4 - 1.7V
	Idle to about 4,000 rpm	0.8 - 1.1V to Approx. 2.4V*

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

5. If the voltage is out of specification, proceed the following.

a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.



- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system parts

b. If NG, repair or replace malfunctioning part and perform step 2 to 4 again.
If OK, go to next step.

6. Turn ignition switch OFF.
7. Disconnect mass air flow sensor harness connector and reconnect it again.
8. Perform step 2 to 4 again.
9. If NG, clean or replace mass air flow sensor.

Without CONSULT-III

1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 77 [Mass air flow sensor (bank 1) signal], 79 [Mass air flow sensor (bank 2) signal] and ground.

Condition	Voltage V
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	0.8 - 1.1
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.4 - 1.7
Idle to about 4,000 rpm	0.8 - 1.1 to Approx. 2.4*

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.

a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.

- Crushed air ducts
- Malfunctioning seal of air cleaner element
- Uneven dirt of air cleaner element
- Improper specification of intake air system parts

b. If NG, repair or replace malfunctioning part and perform step 2 and 3 again.
If OK, go to next step.

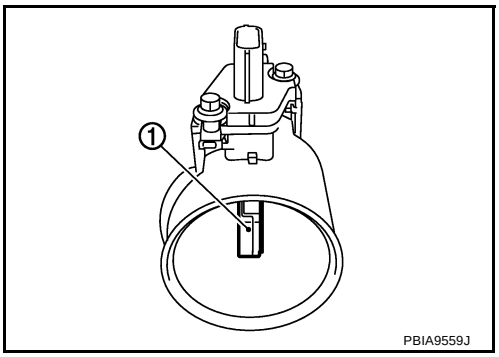
5. Turn ignition switch OFF.
6. Disconnect mass air flow sensor harness connector and reconnect it again.
7. Perform step 2 and 3 again.
8. If NG, clean or replace mass air flow sensor.

Removal and Installation

NBS006V0

MASS AIR FLOW SENSOR

Refer to EM-15, "AIR CLEANER AND AIR DUCT" .



DTC P0102, P0103, P010C, P010D MAF SENSOR

PFP:22680

Component Description

NBS00058

The mass air flow sensor (1) is placed in the stream of intake air. It measures the intake flow rate by measuring a part of the entire intake flow. The mass air flow sensor controls the temperature of the hot wire is to a certain amount. The heat generated by the hot wire is reduced as the intake air flows around it. The more air, the greater the heat loss.
Therefore, the electric current supplied to hot wire is changed to maintain the temperature of the hot wire as air flow increases. The ECM detects the air flow by means of this current change.

CONSULT-III Reference Value in Data Monitor Mode

NBS00059

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAS A/F SE-B1	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
MAS A/F SE-B2			
CAL/LD VALUE	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	5% - 35%
		2,500 rpm	5% - 35%
MASS AIRFLOW	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	2.0 - 6.0 g·m/s
		2,500 rpm	7.0 - 20.0 g·m/s

On Board Diagnosis Logic

NBS0005A

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0102 0102 (Bank 1) P010C 010C (Bank 2)	Mass air flow sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Intake air leaks ● Mass air flow sensor
P0103 0103 (Bank 1) P010D 010D (Bank 2)	Mass air flow sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Mass air flow sensor

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.

DTC Confirmation Procedure

NBS0005B

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P0102, P010C

With CONSULT-III

1. Start engine and wait at least 5 seconds.
2. Check DTC.
3. If DTC is detected, go to EC-213, "Diagnostic Procedure" .

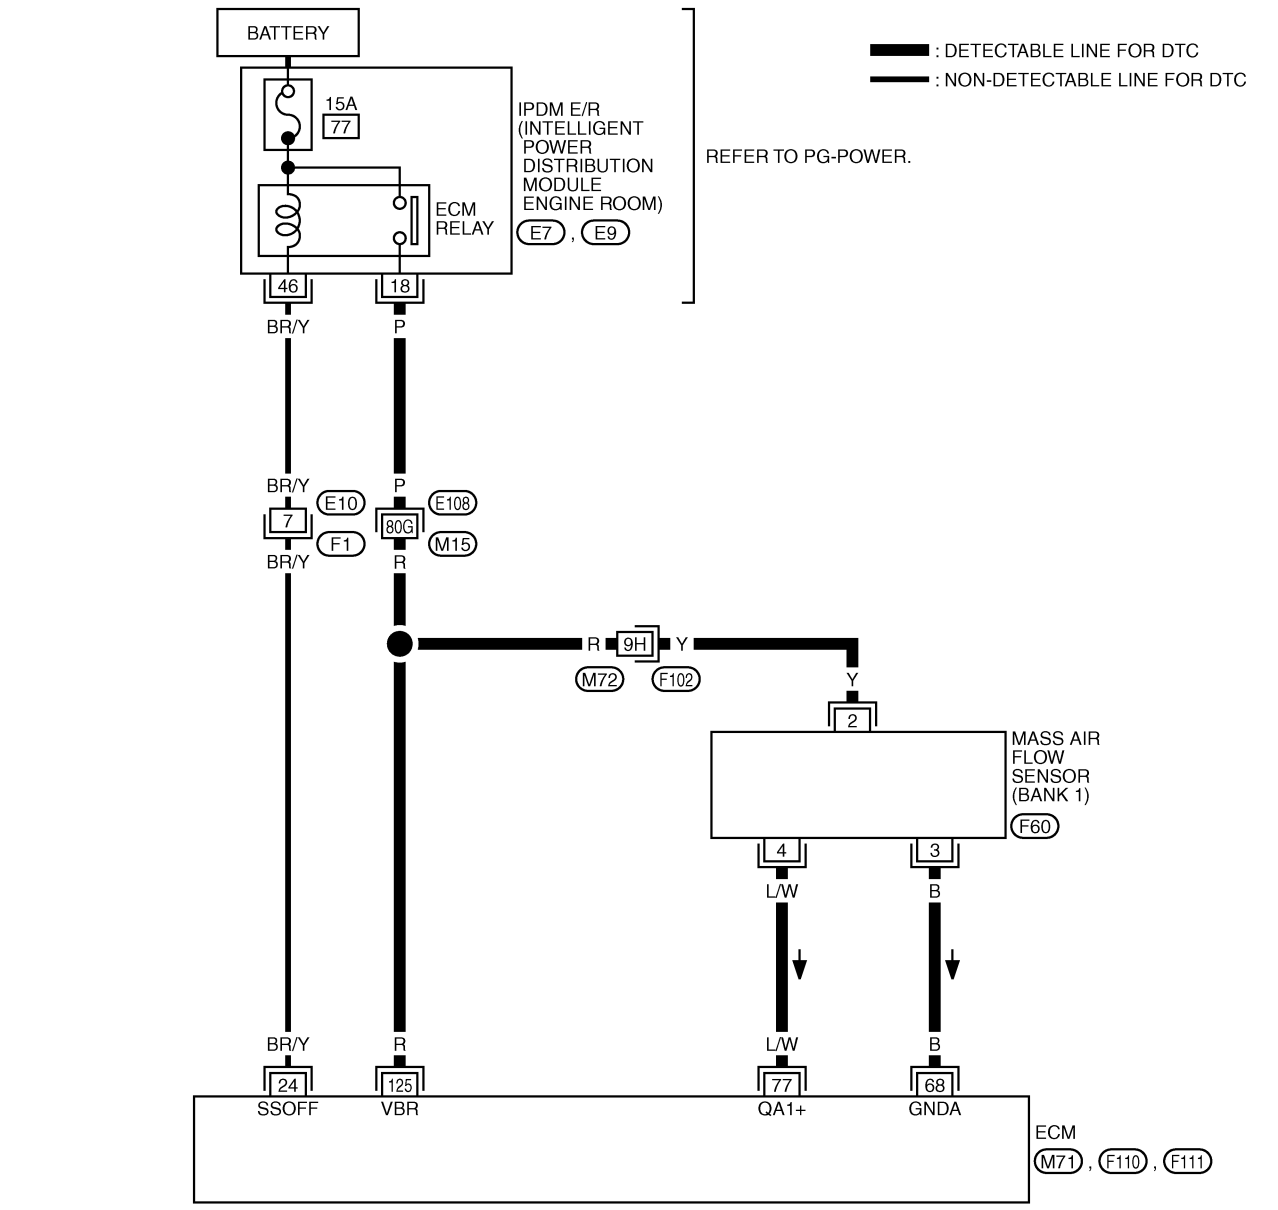
With GST

Follow the procedure “With CONSULT-III” above.

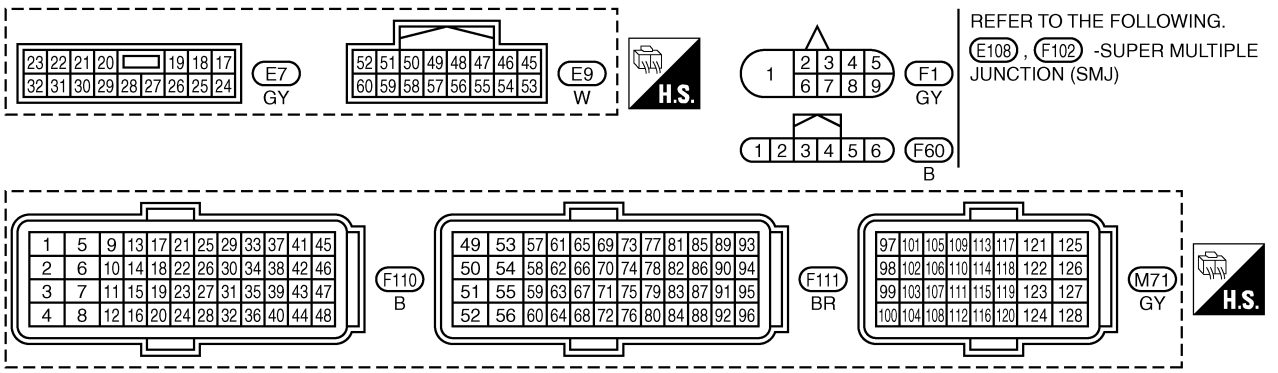
PROCEDURE FOR DTC P0103, P010D

With CONSULT-III

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.
3. If DTC is detected, go to EC-213, "Diagnostic Procedure" .
   If DTC is not detected, go to next step.
4. Start engine and wait at least 5 seconds.
5. Check DTC.
6. If DTC is detected, go to EC-213, "Diagnostic Procedure" .



With GST



Follow the procedure “With CONSULT-III” above.

Diagnostic Procedure

NBS006U2

1. INSPECTION START

Confirm the detected DTC.

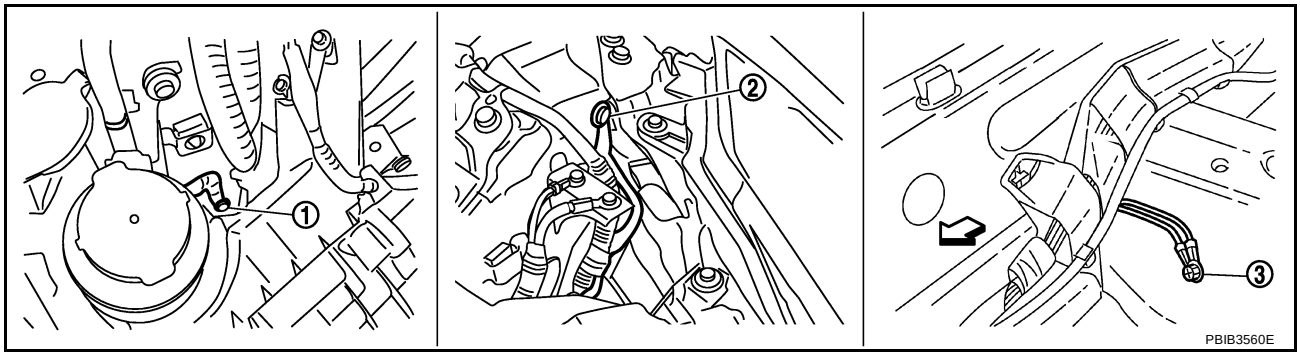
Which DTC is detected?

P0102, P010C>>GO TO 2.
P0103, P010D>>GO TO 3.

2. CHECK INTAKE SYSTEM

Check the following for connection.

- Air duct
- Vacuum hoses
- Intake air passage between air duct and intake manifold



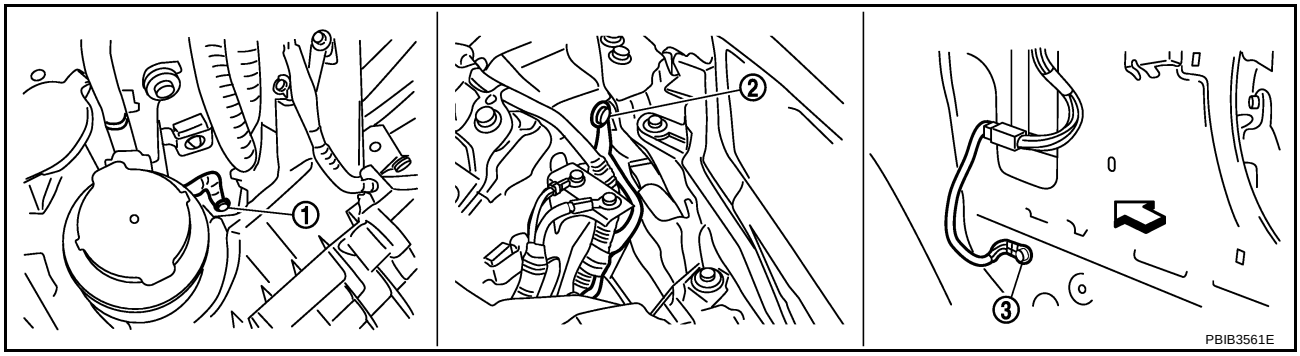
OK or NG

OK >> GO TO 3.
NG >> Reconnect the parts.

3. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



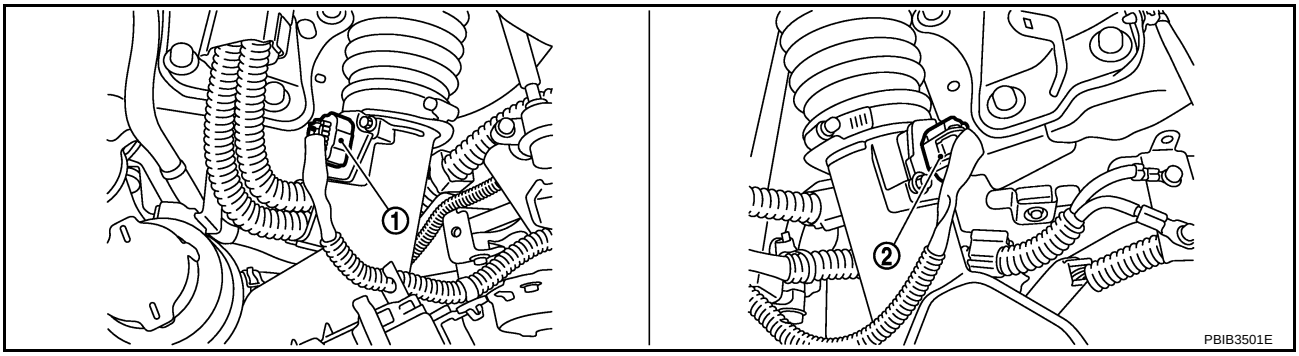
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

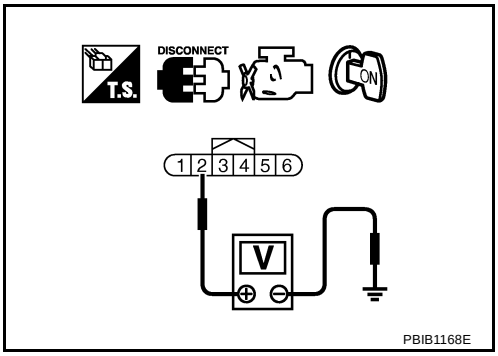


⇦: Vehicle front

OK or NG

OK >> GO TO 4.
NG >> Repair or replace ground connections.

4. CHECK MASS AIR FLOW SENSOR POWER SUPPLY CIRCUIT



1. Disconnect mass air flow sensor harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

2. Turn ignition switch ON.
3. Check voltage between mass air flow sensor terminal 2 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness connectors M72, F102
- Harness for open or short between IPDM E/R and mass air flow sensor
- Harness for open or short between mass air flow sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK MASS AIR FLOW SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between mass air flow sensor terminal 3 and ECM terminal 68 (bank 1), 94 (bank 2).
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK MASS AIR FLOW SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between mass air flow sensor terminal 4 and ECM terminal 77 (bank 1), 79 (bank 2).
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK MASS AIR FLOW SENSOR

Refer to EC-216, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace malfunctioning mass air flow sensor.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

NBS006V1

MASS AIR FLOW SENSOR

With CONSULT-III

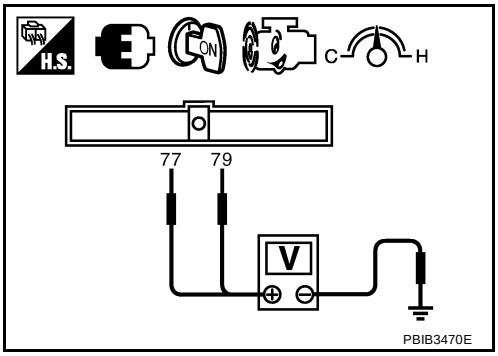
1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Connect CONSULT-III and select “DATA MONITOR” mode.
4. Select “MAS A/F SE-B1” and “MAS A/F SE-B2”, and check indication under the following conditions.

Monitor item	Condition	Indication
MAS A/F SE-B1 MAS A/F SE-B2	Ignition switch ON (Engine stopped.)	Approx. 0.4V
	Idle (Engine is warmed-up to normal operating temperature.)	0.8 - 1.1V
	2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.4 - 1.7V
	Idle to about 4,000 rpm	0.8 - 1.1V to Approx. 2.4V*

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

5. If the voltage is out of specification, proceed the following.

a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.
   - Crushed air ducts
   - Malfunctioning seal of air cleaner element
   - Uneven dirt of air cleaner element
   - Improper specification of intake air system parts



b. If NG, repair or replace malfunctioning part and perform step 2 to 4 again.
   If OK, go to next step.

6. Turn ignition switch OFF.
7. Disconnect mass air flow sensor harness connector and reconnect it again.
8. Perform step 2 to 4 again.
9. If NG, clean or replace mass air flow sensor.

Without CONSULT-III

1. Reconnect all harness connectors disconnected.

2. Start engine and warm it up to normal operating temperature.
3. Check voltage between ECM terminal 77 [Mass air flow sensor (bank 1) signal], 79 [Mass air flow sensor (bank 2) signal] and ground.

Condition	Voltage V
Ignition switch ON (Engine stopped.)	Approx. 0.4
Idle (Engine is warmed-up to normal operating temperature.)	0.8 - 1.1
2,500 rpm (Engine is warmed-up to normal operating temperature.)	1.4 - 1.7
Idle to about 4,000 rpm	0.8 - 1.1 to Approx. 2.4*

*: Check for linear voltage rise in response to engine being increased to about 4,000 rpm.

4. If the voltage is out of specification, proceed the following.

a. Check for the cause of uneven air flow through mass air flow sensor. Refer to following.
   - Crushed air ducts
   - Malfunctioning seal of air cleaner element
   - Uneven dirt of air cleaner element
   - Improper specification of intake air system parts

b. If NG, repair or replace malfunctioning part and perform step 2 and 3 again.
   If OK, go to next step.

5. Turn ignition switch OFF.
6. Disconnect mass air flow sensor harness connector and reconnect it again.
7. Perform step 2 and 3 again.
8. If NG, clean or replace mass air flow sensor.

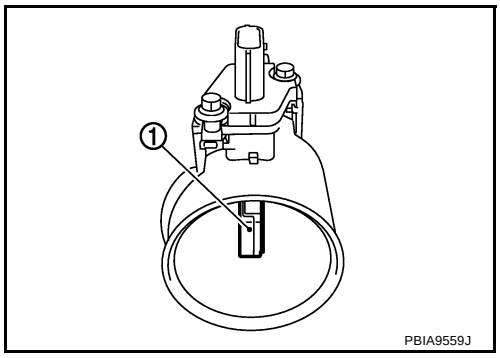
Removal and Installation

NBS006V2

MASS AIR FLOW SENSOR

Refer to EM-15, "AIR CLEANER AND AIR DUCT" .

DTC P0112, P0113 IAT SENSOR

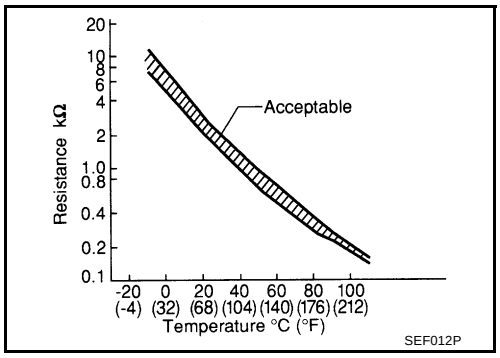


PFP:22630

Component Description

NBS0005G

The intake air temperature sensor is built-into mass air flow sensor (1). The sensor detects intake air temperature and transmits a signal to the ECM.
The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.



NOTE:
ECM uses only the intake air temperature sensor (bank 1) for engine control and self-diagnosis.
It does not use the intake air temperature sensor (bank 2)

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
25 (77)	3.3	1.800 - 2.200
80 (176)	1.2	0.283 - 0.359

*: This data is reference values and is measured between ECM terminal 67 (Intake air temperature sensor) (bank 1) and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS0005H

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0112 0112 (Bank 1)	Intake air temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Intake air temperature sensor
P0113 0113 (Bank 1)	Intake air temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

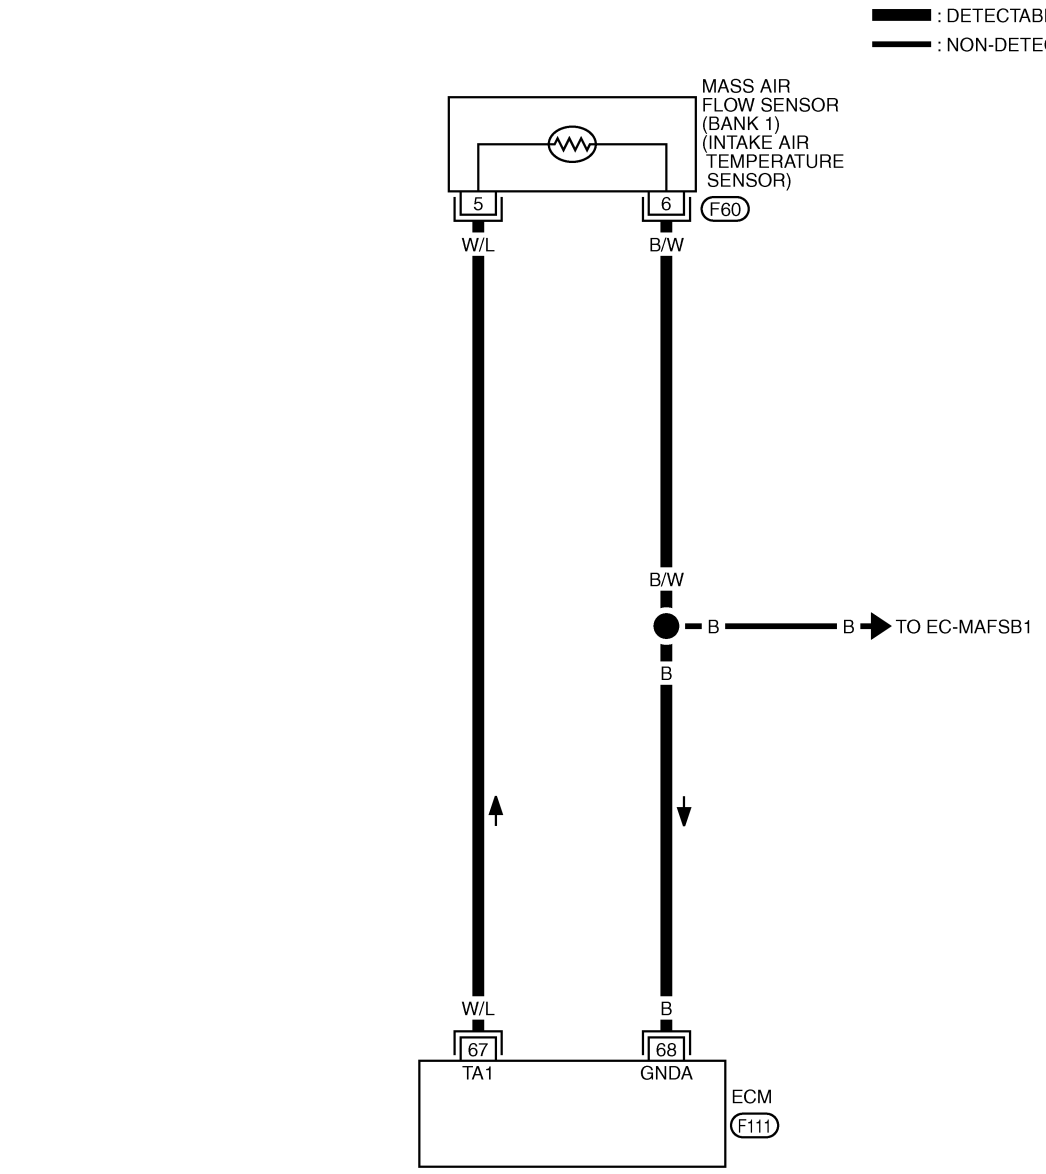
DTC Confirmation Procedure

NBS0005I

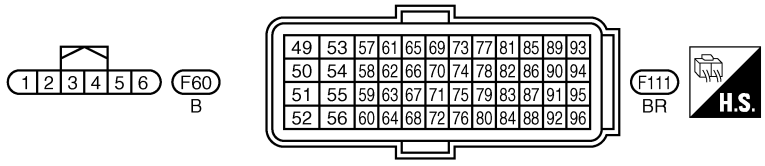
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-220, "Diagnostic Procedure" .



WITH GST



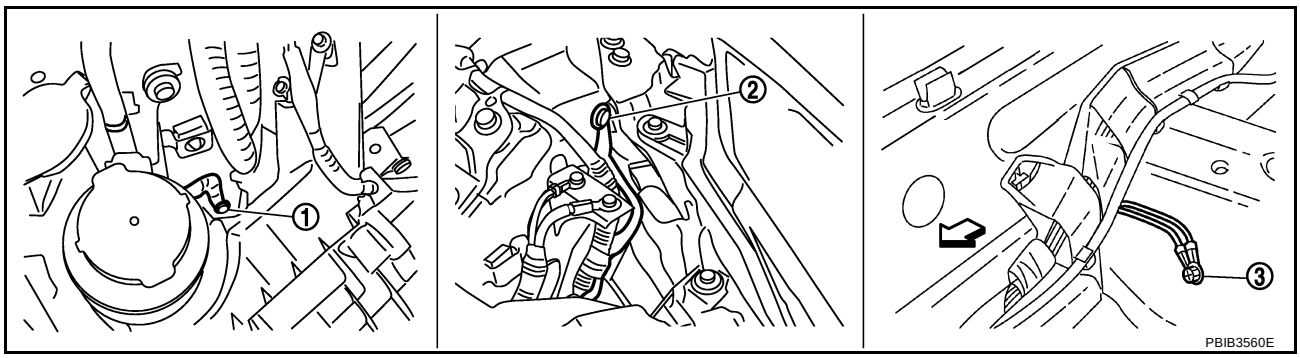
Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS0005J

EC-IATSB1-01

TBWT1627E



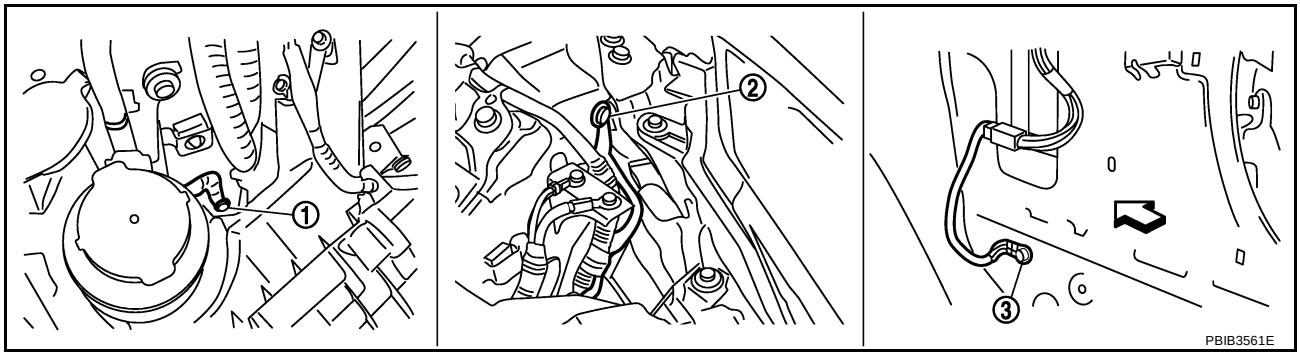
Diagnostic Procedure

NBS0005K

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



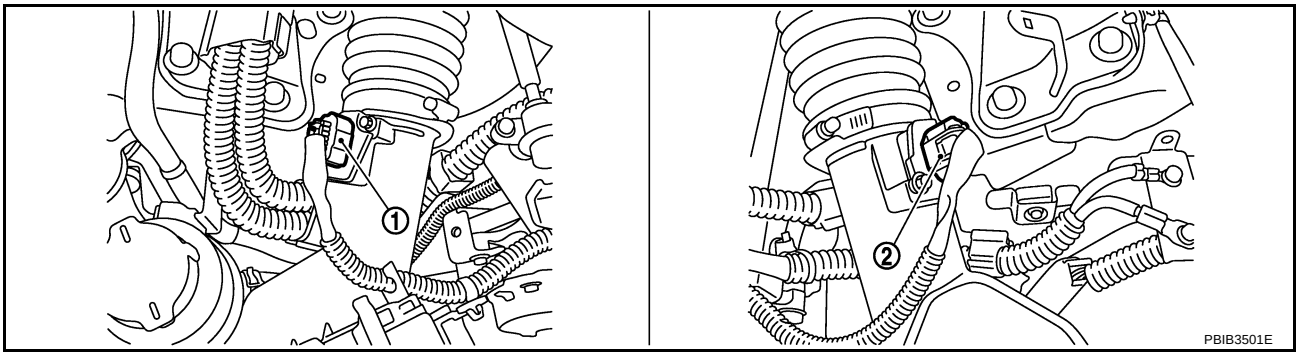
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

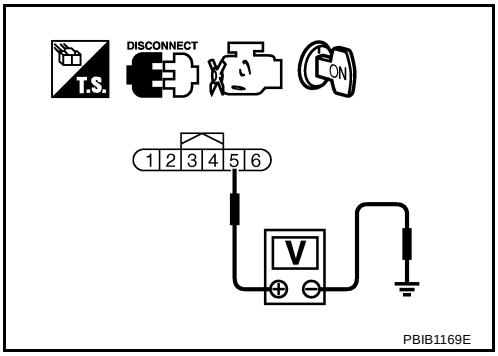


⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT



1. Disconnect mass air flow sensor (with intake air temperature sensor) (bank 1) harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

2. Turn ignition switch ON.
3. Check voltage between mass air flow sensor (with intake air temperature sensor) (bank 1) terminal 5 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between mass air flow sensor (with intake air temperature sensor) (bank 1) terminal 6 and ECM terminal 68.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to EC-222, "Component Inspection" .

OK or NG

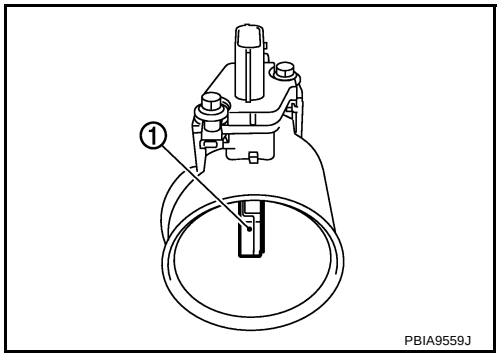
OK >> GO TO 5.
NG >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1).

5. CHECK INTERMITTENT INCIDENT

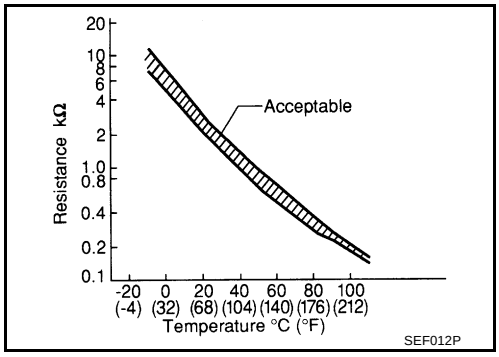
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



NBS0005L



INTAKE AIR TEMPERATURE SENSOR

1. Check resistance between mass air flow sensor (with intake air temperature sensor) (bank 1) (1) terminals 5 and 6 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.800 - 2.200

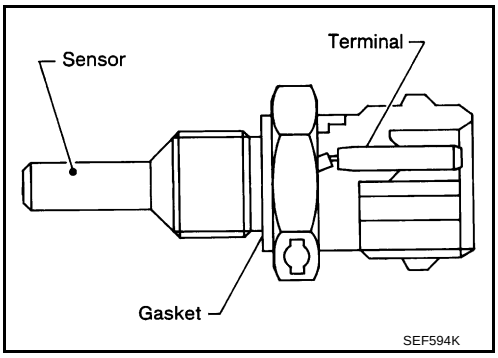
2. If NG, replace mass air flow sensor (with intake air temperature sensor) (bank 1).

Removal and Installation

NBS0005M

MASS AIR FLOW SENSOR

Refer to EM-15, "AIR CLEANER AND AIR DUCT" .

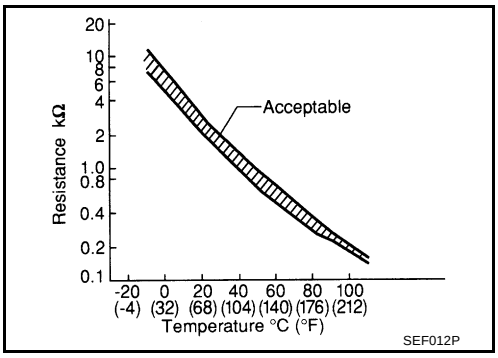


DTC P0117, P0118 ECT SENSOR

PFP:22630

Component Description

NBS0005N



The engine coolant temperature (ECT) sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.37 - 2.63
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: This data is reference values and is measured between ECM terminal 71 (Engine coolant temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS0005O

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Engine coolant temperature sensor
P0118 0118	Engine coolant temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode	
Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-III displays the engine coolant temperature decided by ECM.	
	Condition	Engine coolant temperature decided (CONSULT-III display)
	Just as ignition switch is turned ON or START	40°C (104°F)
	More than approx. 4 minutes after ignition ON or START	80°C (176°F)
	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
	When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.	

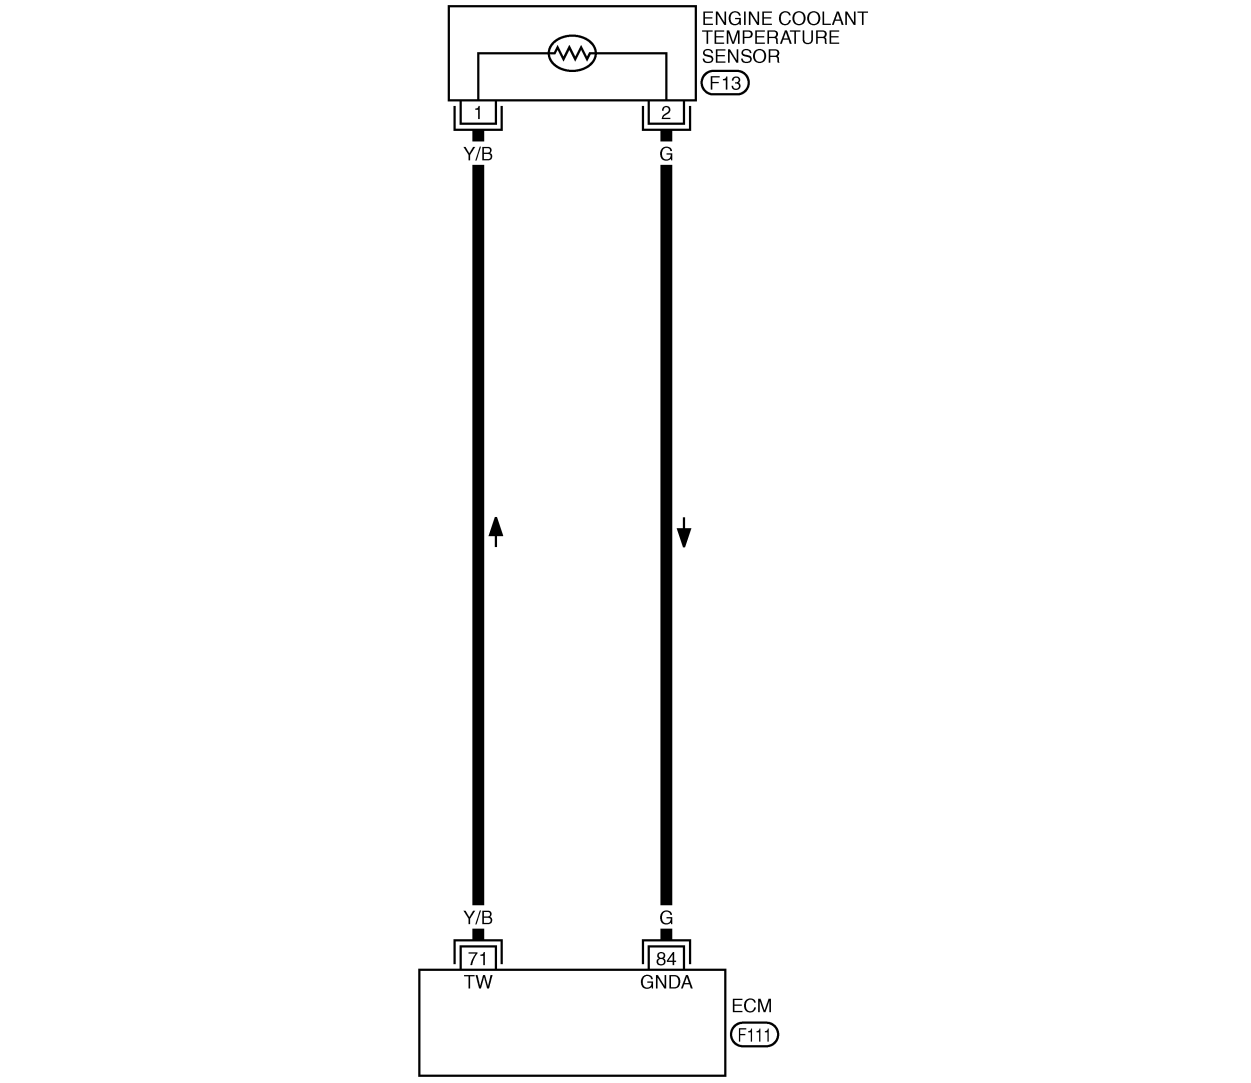
DTC Confirmation Procedure

NBS0005P

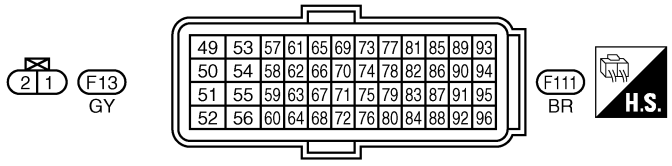
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check DTC.
3. If DTC is detected, go to EC-226, "Diagnostic Procedure" .



WITH GST



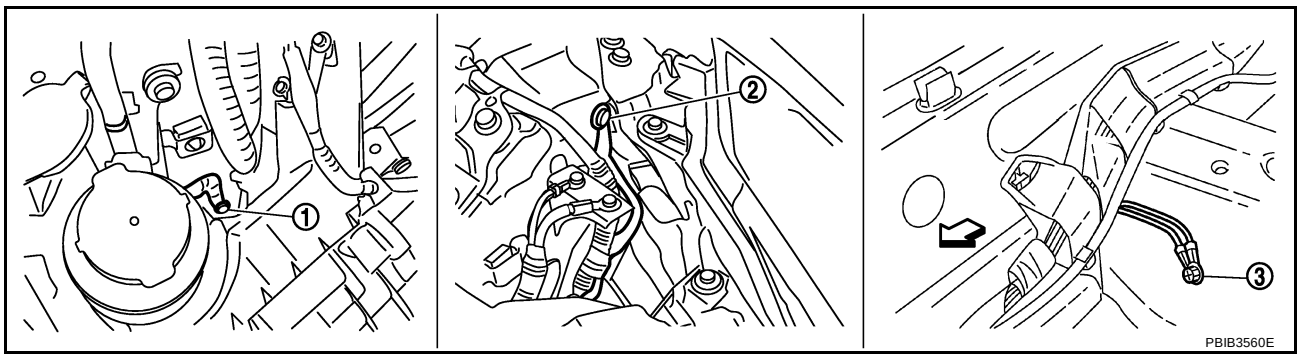
Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS0005Q

EC-ECTS-01

TBWT1629E



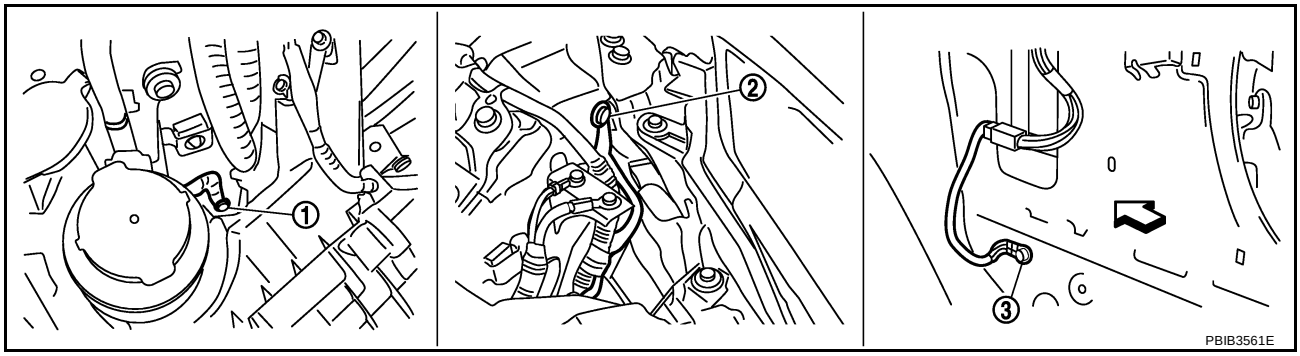
Diagnostic Procedure

NBS0005R

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

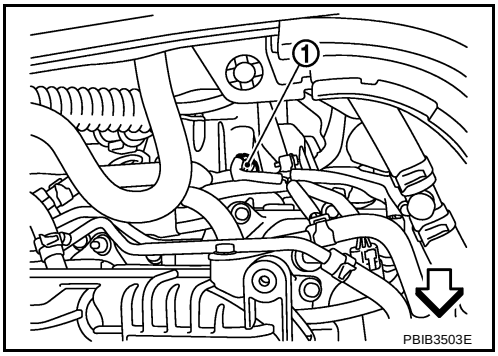
Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG



OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK ENGINE COOLANT TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect engine coolant temperature sensor harness connector (1).

   ⇦ : Vehicle front

2. Turn ignition switch ON.

3. Check voltage between engine coolant temperature sensor terminal 1 and ground with CONSULT-III or tester.

   Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK ENGINE COOLANT TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ENGINE COOLANT TEMPERATURE sensor terminal 2 and ECM terminal 84.
   Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK ENGINE COOLANT TEMPERATURE SENSOR

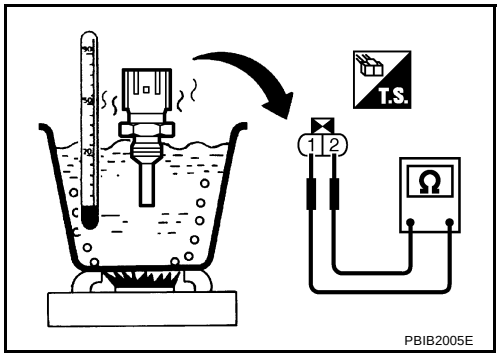
Refer to EC-228, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace engine coolant temperature sensor.

5. CHECK INTERMITTENT INCIDENT

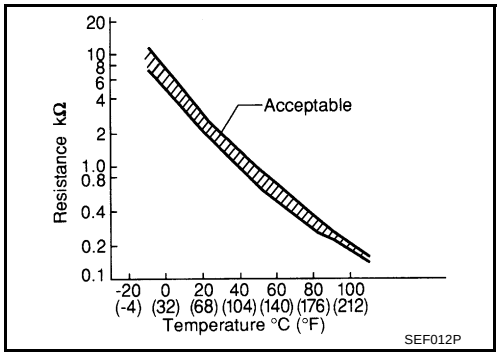
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS0005S



ENGINE COOLANT TEMPERATURE SENSOR

1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.

<Reference data>

Engine coolant temperature °C (°F)	Resistance kΩ
20 (68)	2.37 - 2.63
50 (122)	0.68 - 1.00
90 (194)	0.236 - 0.260

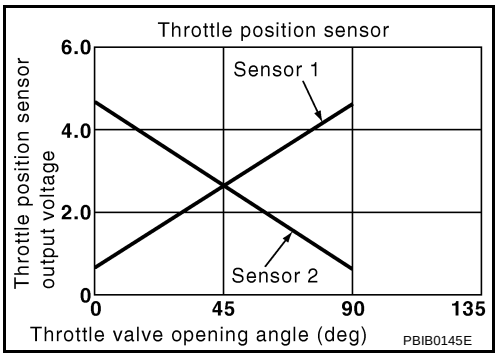
2. If NG, replace engine coolant temperature sensor.

Removal and Installation

NBS0005T

ENGINE COOLANT TEMPERATURE SENSOR

Refer to CO-28, "WATER OUTLET AND WATER PIPING" .



DTC P0122, P0123, P0227, P0228 TP SENSOR

PFP:16119

Component Description

NBS0005U

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-III Reference Value in Data Monitor Mode

NBS0005V

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
TP SEN 1-B1 TP SEN 1-B2 TP SEN 2-B1* TP SEN 2-B2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T), 1st (M/T)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

NBS0005W

These self-diagnoses have the one trip detection logic.

NOTE:
If DTC P0122, P0123, P0227 or P0228 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.
Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122 (Bank 1) P0227 0227 (Bank 2)	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	● Harness or connectors (TP sensor 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 2)
P0123 0123 (Bank 1) P0228 0228 (Bank 2)	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

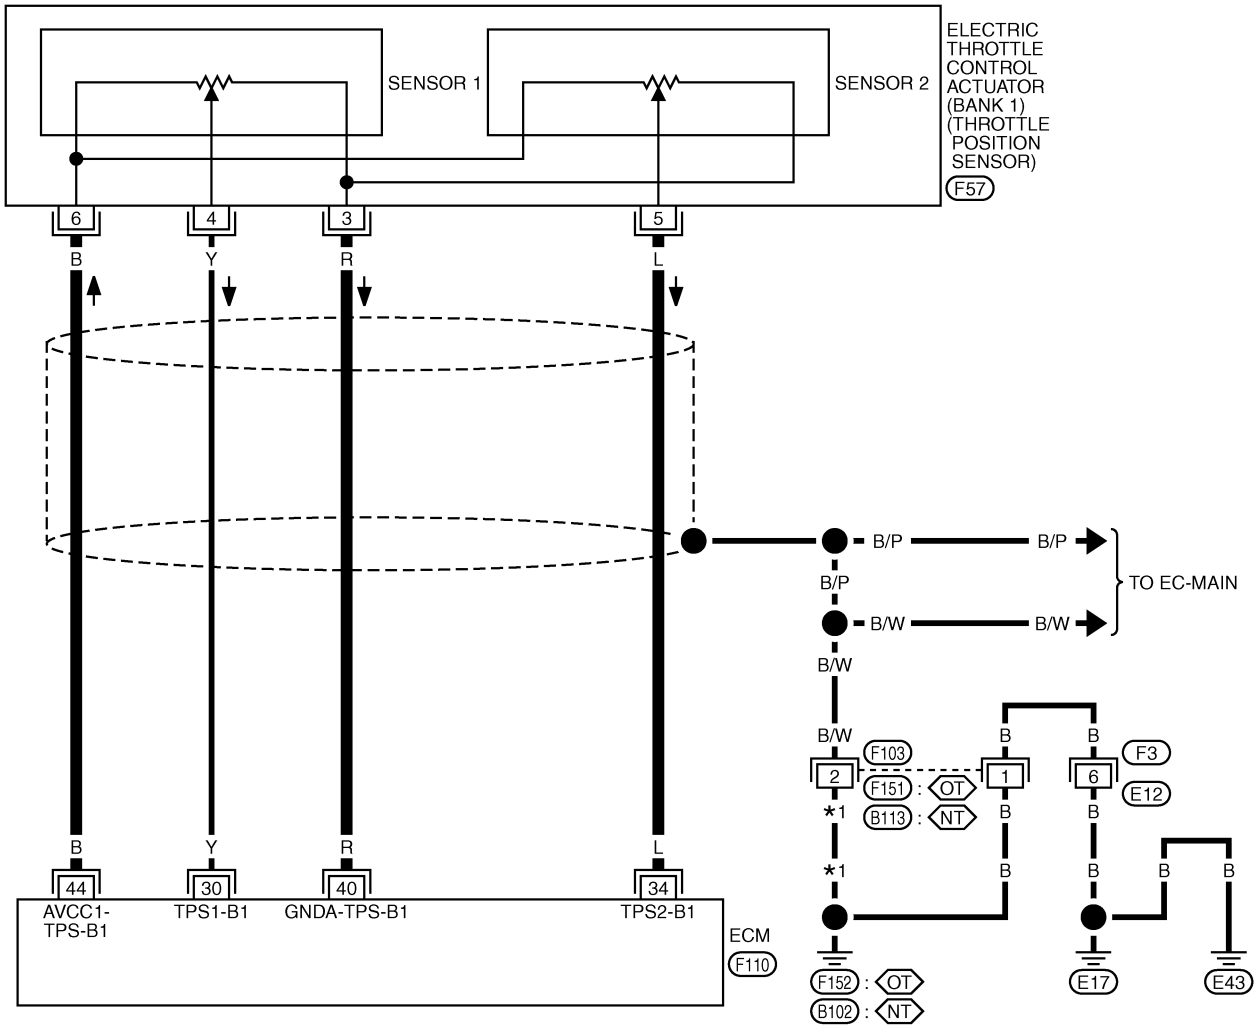
NBS0005X

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-235, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.

2. Body ground E43
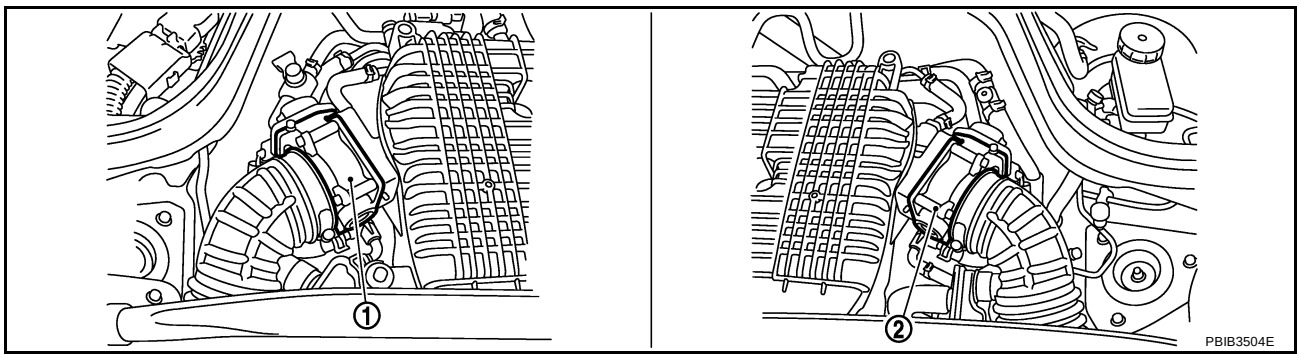
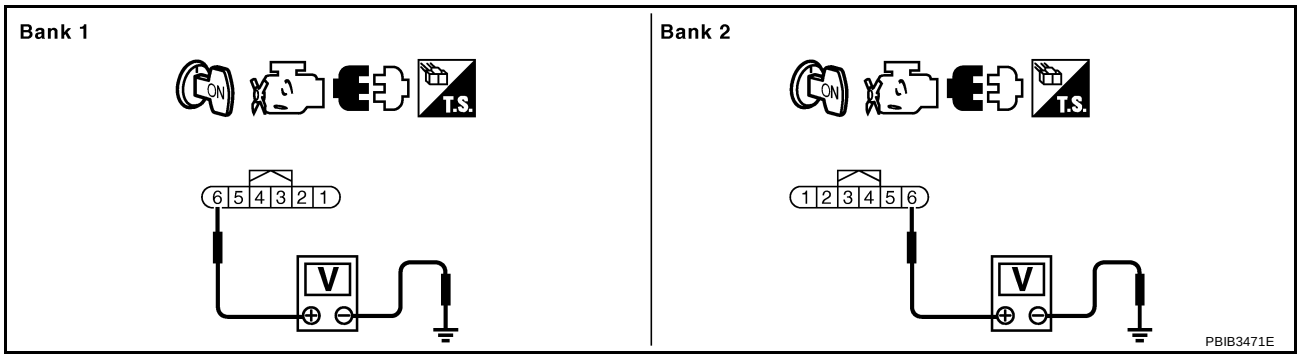
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT-I

1. Disconnect electric throttle control actuator harness connector.

1. Electric throttle control actuator (bank 1)
2. Electric throttle control actuator (bank 2)

2. Turn ignition switch ON.
3. Check voltage between electric throttle control actuator terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness connectors.

3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 3 and ECM terminal 40 (bank 1) or 48 (bank 2).
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 34 (bank 1) or 35 (bank 2) and electric throttle control actuator terminal 5.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-237, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

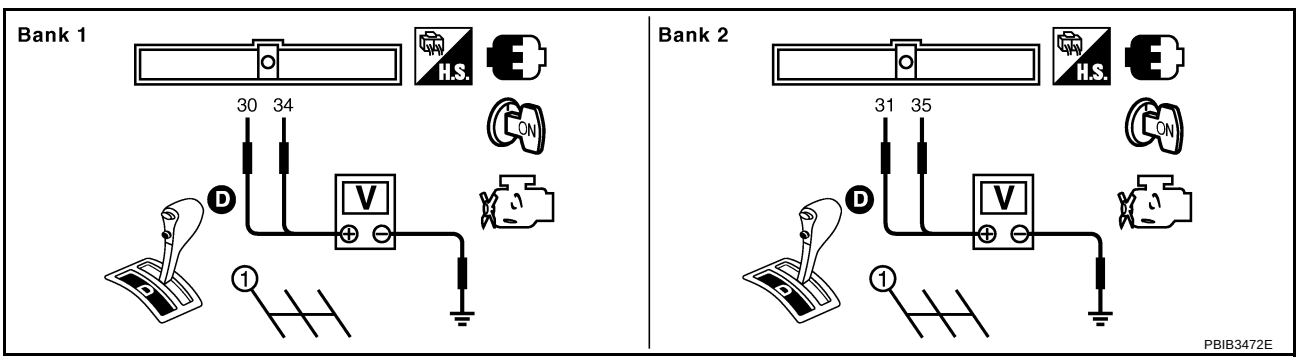
6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS00060

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set shift lever to D (A/T) or 1st (M/T) position.
5. Check voltage between ECM terminals 30 [TP sensor 1 (bank 1) signal], 31 [TP sensor 1 (bank 2) signal], 34 [TP sensor 2 (bank 1) signal], 35 [TP sensor 2 (bank 2) signal] and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
30 [TP sensor 1 (bank 1)] 31 [TP sensor 1 (bank 2)]	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
34 [TP sensor 2 (bank 1)] 35 [TP sensor 2 (bank 2)]	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

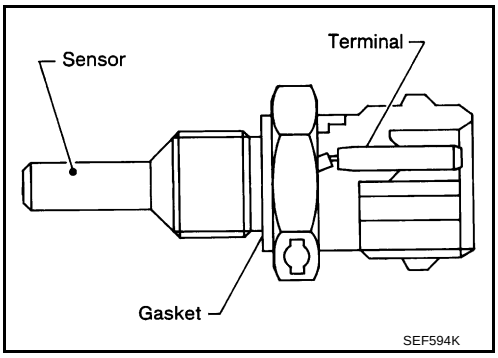
6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-77, "Throttle Valve Closed Position Learning" .
8. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS00061

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

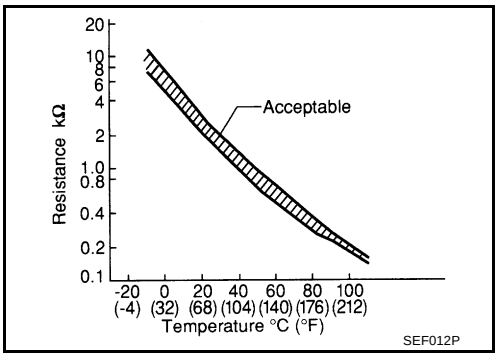


DTC P0125 ECT SENSOR

PFP:22630

Component Description

NBS00062



The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.37 - 2.63
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: This data is reference values and is measured between ECM terminal 71 (Engine coolant temperature sensor) and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS00063

NOTE:
If DTC P0125 is displayed with P0117 or P0118, first perform the trouble diagnosis for DTC P0117 or P0118.
Refer to EC-223, "DTC P0117, P0118 ECT SENSOR" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0125 0125	Insufficient engine coolant temperature for closed loop fuel control	● Voltage sent to ECM from the sensor is not practical, even when some time has passed after starting the engine. ● Engine coolant temperature is insufficient for closed loop fuel control.	● Harness or connectors (High resistance in the circuit) ● Engine coolant temperature sensor ● Thermostat

DTC Confirmation Procedure

NBS00064

CAUTION:

Be careful not to overheat engine.

NOTE:

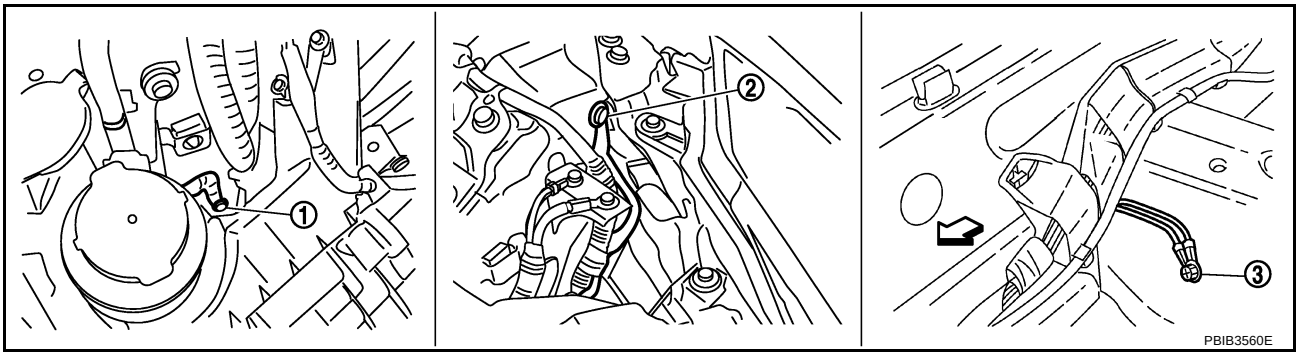
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-III.
3. Check that “COOLAN TEMP/S” is above 10°C (50°F).
   If it is above 10°C (50°F), the test result will be OK.
   If it is below 10°C (50°F), go to following step.
4. Start engine and run it for 65 minutes at idle speed.
   If “COOLAN TEMP/S” increases to more than 10°C (50°F) within 65 minutes, stop engine because the test result will be OK.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-241, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.



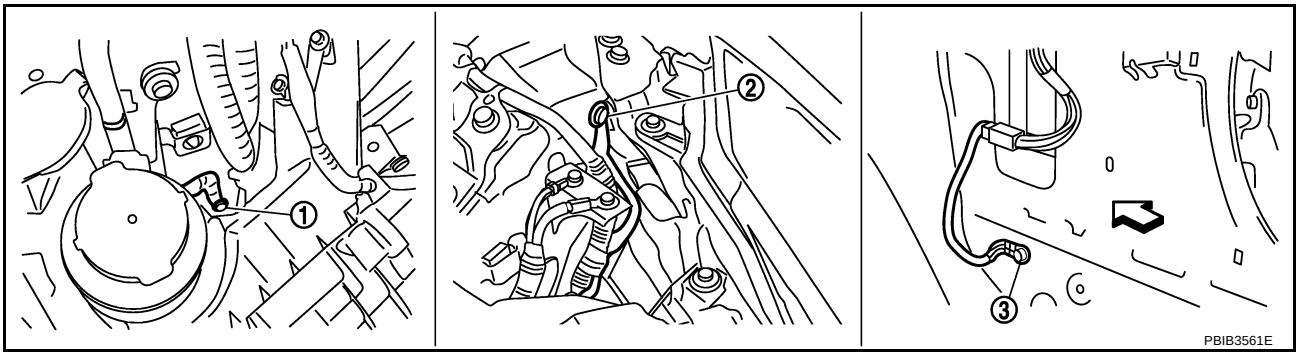
Diagnostic Procedure

NBS00065

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-242, "Component Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Replace engine coolant temperature sensor.

3. CHECK THERMOSTAT OPERATION

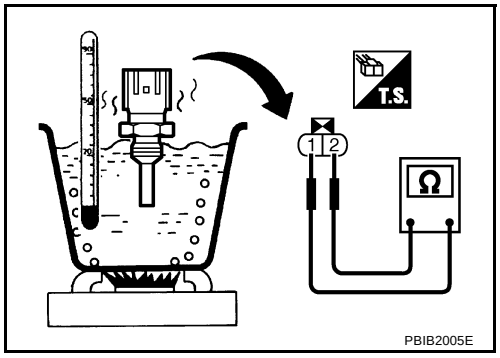
When the engine is cold [lower than 70°C (158°F)] condition, grasp lower radiator hose and confirm the engine coolant does not flow.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace thermostat. Refer to CO-26, "WATER INLET AND THERMOSTAT ASSEMBLY" .

4. CHECK INTERMITTENT INCIDENT

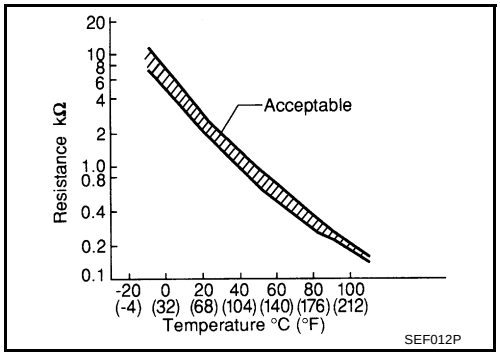
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
Refer to EC-225, "Wiring Diagram" .



>> **INSPECTION END**

Component Inspection

NBS00066



ENGINE COOLANT TEMPERATURE SENSOR

1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.

<Reference data>

Engine coolant temperature °C (°F)	Resistance kΩ
20 (68)	2.37 - 2.63
50 (122)	0.68 - 1.00
90 (194)	0.236 - 0.260

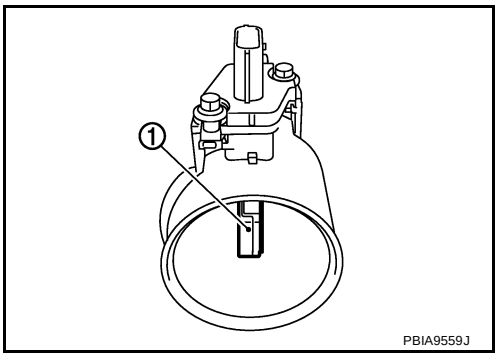
2. If NG, replace engine coolant temperature sensor.

Removal and Installation

NBS00067

ENGINE COOLANT TEMPERATURE SENSOR

Refer to CO-28, "WATER OUTLET AND WATER PIPING" .

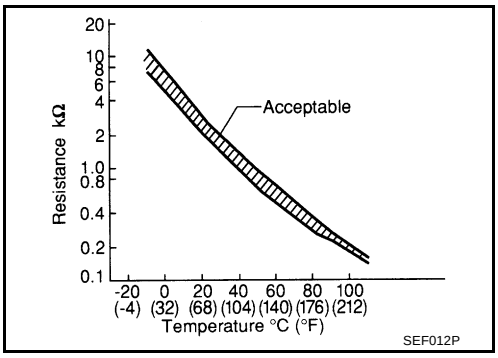


DTC P0127 IAT SENSOR

PFP:22630

Component Description

NBS00068



The intake air temperature sensor (1) is built into mass air flow sensor. The sensor detects intake air temperature and transmits a signal to the ECM.
The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.

<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
25 (77)	3.3	1.800 - 2.200
80 (176)	1.2	0.283 - 0.359

*: This data is reference values and is measured between ECM terminal 67 [Intake air temperature sensor (bank 1)] and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS00069

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0127 0127	Intake air temperature too high	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signal from engine coolant temperature sensor.	● Harness or connectors (The sensor circuit is open or shorted) ● Intake air temperature sensor

DTC Confirmation Procedure

NBS0006A

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

CAUTION:
Always drive vehicle at a safe speed.
TESTING CONDITION:
This test may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-III

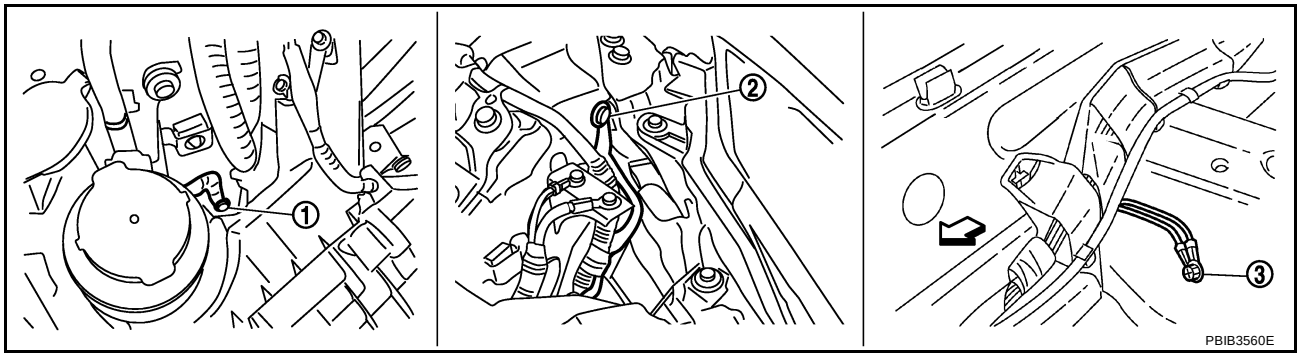
1. Wait until engine coolant temperature is less than 90°C (194°F)
a. Turn ignition switch ON.
b. Select “DATA MONITOR” mode with CONSULT-III.
c. Check the engine coolant temperature.
d. If the engine coolant temperature is not less than 90°C (194°F), turn ignition switch OFF and cool down engine.

   NOTE:
   Perform the following steps before engine coolant temperature is above 90°C (194°F).
2. Turn ignition switch ON.
3. Select “DATA MONITOR” mode with CONSULT-III.

4. Start engine.
5. Hold vehicle speed at more than 70 km/h (43 MPH) for 100 consecutive seconds.
6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-244, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.



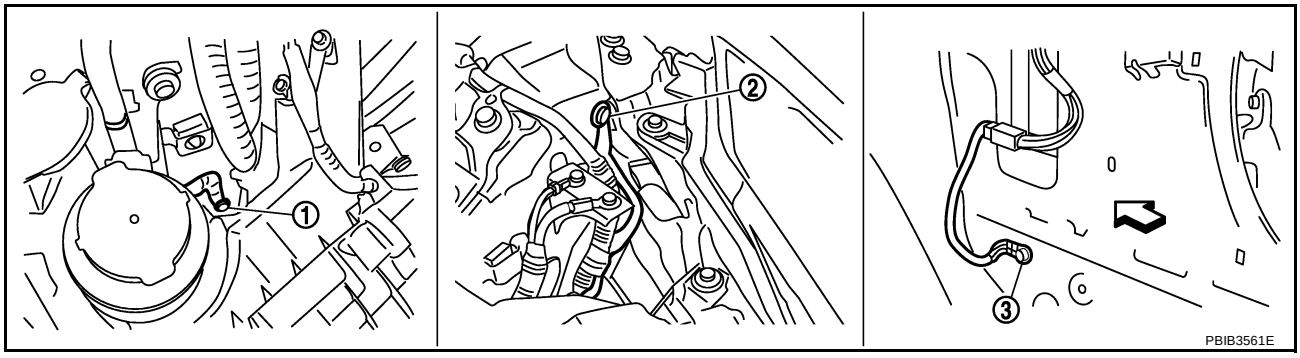
Diagnostic Procedure

NBS0006B

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to EC-222, "Component Inspection" .

OK or NG

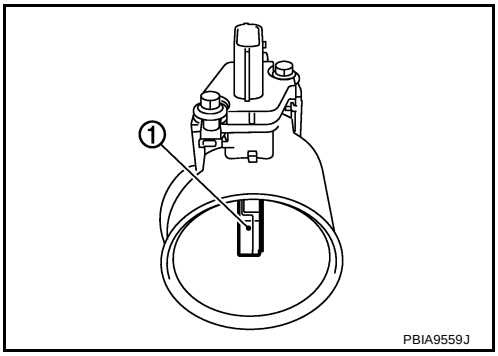
OK >> GO TO 3.
NG >> Replace mass air flow sensor (with intake air temperature sensor) (bank 1).

3. CHECK INTERMITTENT INCIDENT

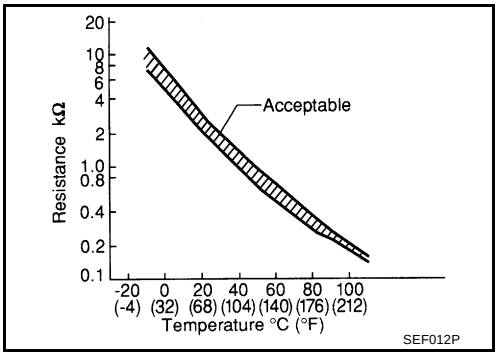
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
Refer to EC-219, "Wiring Diagram" .

>> **INSPECTION END**

Component Inspection



NBS0006C



INTAKE AIR TEMPERATURE SENSOR

1. Check resistance between mass air flow sensor (with intake air temperature sensor) (bank 1) (1) terminals 5 and 6 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.800 - 2.200

2. If NG, replace mass air flow sensor (with intake air temperature sensor) (bank 1).

Removal and Installation

NBS0006D

MASS AIR FLOW SENSOR

Refer to EM-15, "AIR CLEANER AND AIR DUCT" .

DTC P0128 THERMOSTAT FUNCTION

PFP:21200

On Board Diagnosis Logic

NBS0006E

Engine coolant temperature has not risen enough to open the thermostat even though the engine has run long enough.
This is due to a leak in the seal or the thermostat stuck open.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0128 0128	Thermostat function	The engine coolant temperature does not reach to specified temperature even though the engine has run long enough.	● Thermostat ● Leakage from sealing portion of thermostat ● Engine coolant temperature sensor

DTC Confirmation Procedure

NBS0006F

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

CAUTION:
Always drive vehicle at a safe speed.
TESTING CONDITION:

- **For best results, perform at ambient temperature of –10°C (14°F) or higher.**
- **For best results, perform at engine coolant temperature of –10°C (14°F) to 68°C (154°F).**

WITH CONSULT-III

1. Replace thermostat with new one. Refer to CO-26, "WATER INLET AND THERMOSTAT ASSEMBLY" . Use only a genuine NISSAN thermostat as a replacement. If an incorrect thermostat is used, the MIL may come on.
2. Turn ignition switch ON.
3. Select “COOLAN TEMP/S” in “DATA MONITOR” mode with CONSULT-III.
4. Check the indication of “COOLAN TEMP/S”.
   If it is below 68°C (154°F), go to following step.
   If it is above 68°C (154°F), cool down the engine to less than 60°C (140°F), then go to next step.
5. Drive vehicle for 10 consecutive minutes under the following conditions.

VHCL SPEED SE	80 - 120 km/h (50 - 75 MPH)

6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-246, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

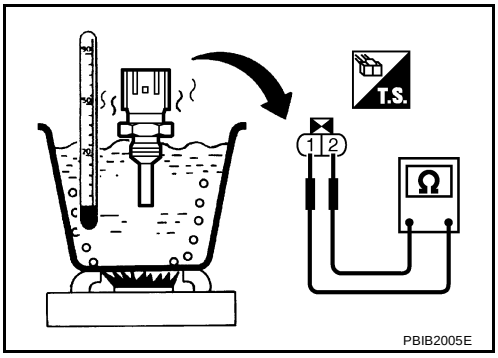
Diagnostic Procedure

NBS0006G

1. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-247, "Component Inspection" .

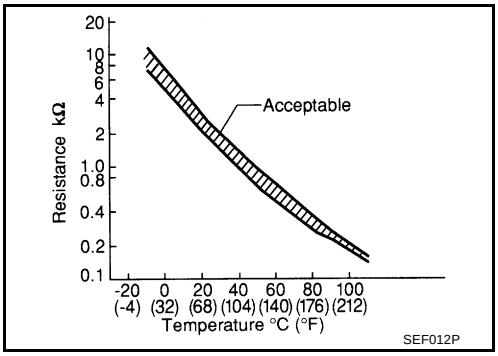
OK or NG



OK >> **INSPECTION END**
NG >> Replace engine coolant temperature sensor.

Component Inspection

NBS0006H



ENGINE COOLANT TEMPERATURE SENSOR

1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.

<Reference data>

Engine coolant temperature °C (°F)	Resistance kΩ
20 (68)	2.37 - 2.63
50 (122)	0.68 - 1.00
90 (194)	0.236 - 0.260

2. If NG, replace engine coolant temperature sensor.

Removal and Installation

NBS0006I

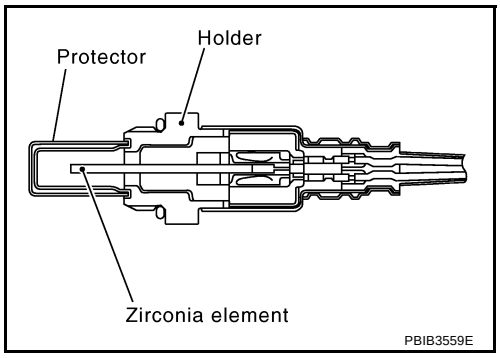
ENGINE COOLANT TEMPERATURE SENSOR

Refer to CO-28, "WATER OUTLET AND WATER PIPING" .

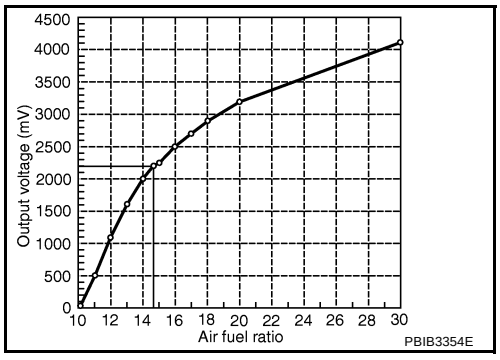
DTC P0130, P0150 A/F SENSOR 1

PFP:22693

Component Description



NBS006U5



The air fuel ratio (A/F) sensor 1 is a planar one-cell limit current sensor. The sensor element of the A/F sensor 1 is composed an electrode layer, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range.

The exhaust gas components diffuse through the diffusion layer at the sensor cell. An electrode layer is applied voltage, and this current relative oxygen density in lean. Also this current relative hydrocarbon density in rich.

Therefore, the A/F sensor 1 is able to indicate air fuel ratio by this electrode layer of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of about 800°C (1,472°F).

CONSULT-III Reference Value in Data Monitor Mode

NBS000ET

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1) A/F SEN1 (B2)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 2.2V

On Board Diagnosis Logic

NBS000EU

To judge the malfunction, the diagnosis checks that the A/F signal computed by ECM from the A/F sensor 1 signal fluctuates according to fuel feedback control.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P0130 0130 (Bank 1)	Air fuel ratio (A/F) sensor 1 circuit	● The A/F signal computed by ECM from the A/F sensor 1 signal is constantly in the range other than approx. 2.2V.	● Harness or connectors (The A/F sensor 1 circuit is open or shorted.) ● Air fuel ratio (A/F) sensor 1
P0150 0150 (Bank 2)		● The A/F signal computed by ECM from the A/F sensor 1 signal is constantly approx. 2.2V.	

DTC Confirmation Procedure

NBS006U6

Perform PROCEDURE FOR MALFUNCTION A first.
If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

PROCEDURE FOR MALFUNCTION A

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Let engine idle for 2 minutes.

3. Check 1st trip DTC.
4. If 1st trip DTC is detected, go to EC-254, "Diagnostic Procedure" .

With GST

Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION B

CAUTION:
Always drive vehicle at a safe speed.

With CONSULT-III

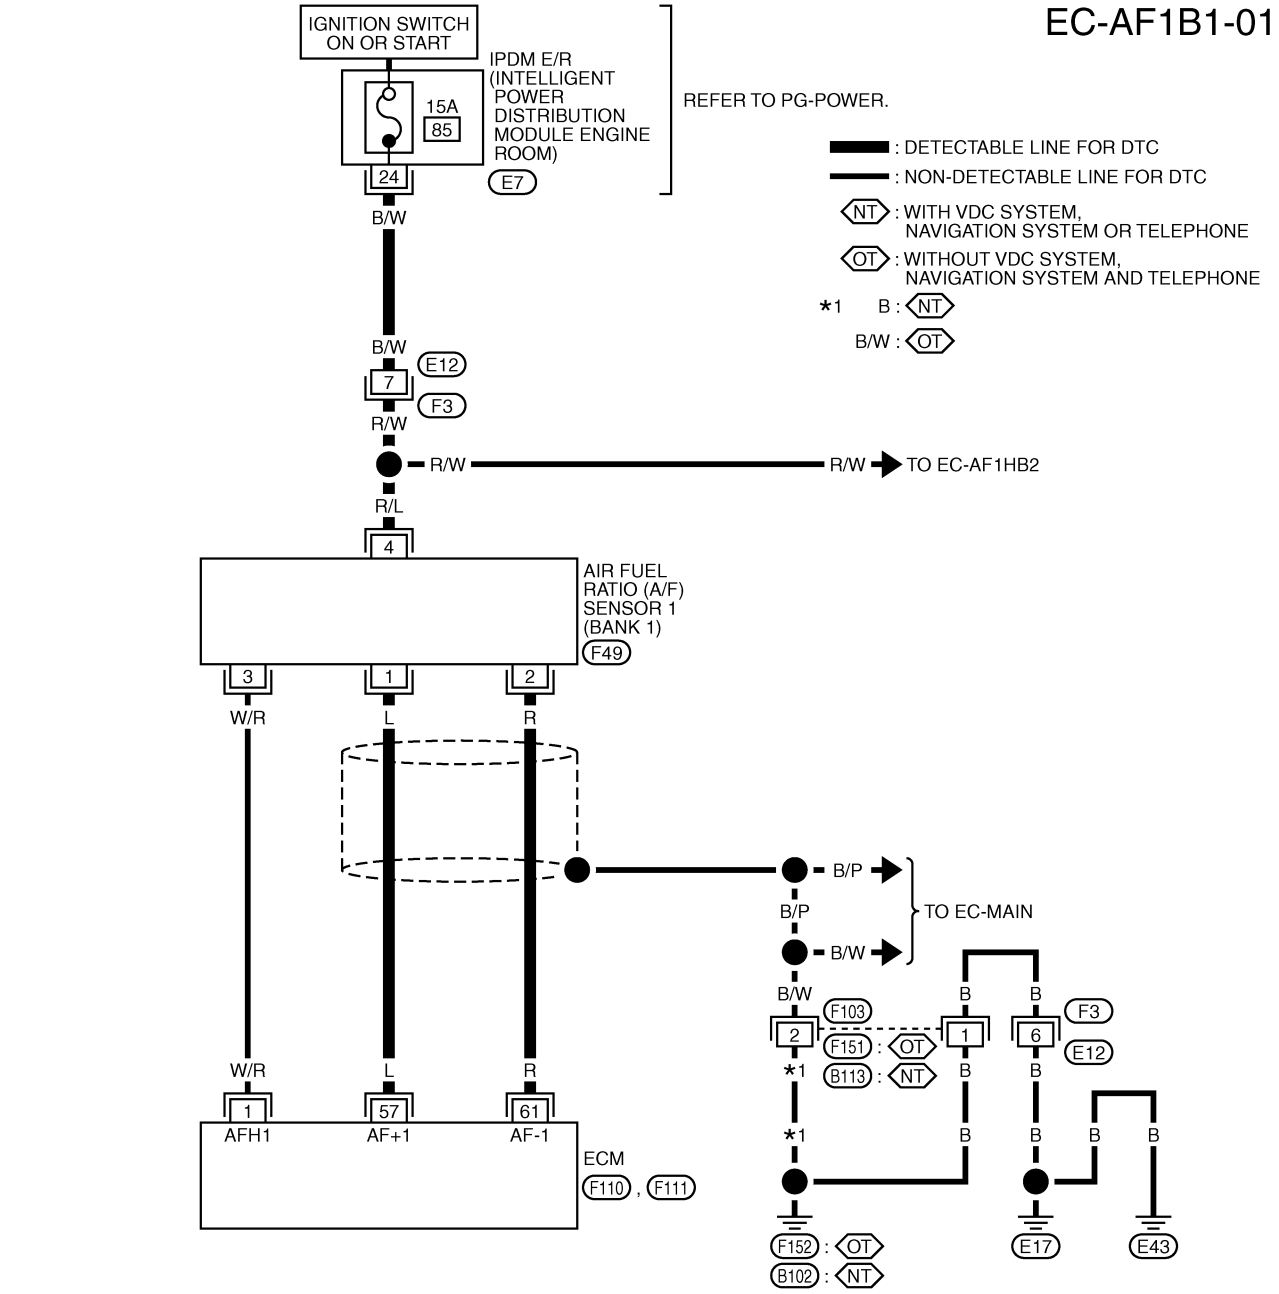
1. Start engine and warm it up to normal operating temperature.
2. Select “A/F SEN1 (B1)” or “A/F SEN1 (B2)” in “DATA MONITOR” mode with CONSULT-III.
3. Check “A/F SEN1 (B1)” or “A/F SEN1 (B2)” indication.
   If the indication is constantly approx. 1.5V and does not fluctuates, go to EC-254, "Diagnostic Procedure" .
   If the indication fluctuates around 1.5V, go to next step.
4. Select “A/F SEN1 (B1) P1276” (for DTC P0130) or “A/F SEN1 (B2) P1286” (for DTC P0150) of “A/F SEN1” in “DTC WORK SUPPORT” mode with CONSULT-III.
5. Touch “START”.
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-III screen.

ENG SPEED	1,100 - 3,200 rpm
VHCL SPEED SE	More than 64 km/h (40 MPH)
B/FUEL SCHDL	1.0 - 8.0 msec
Shift lever	D position (A/T) 5th position (M/T)

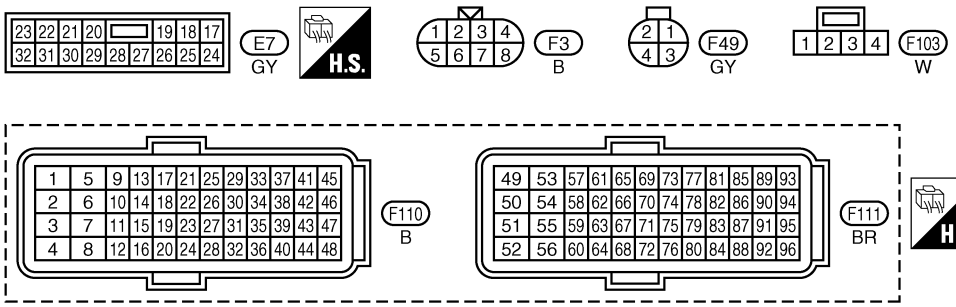
   If “TESTING” is not displayed after 20 seconds, retry from step 2.
7. Release accelerator pedal fully.
   NOTE:
   Never apply brake during releasing the accelerator pedal.
8. Make sure that “TESTING” changes to “COMPLETED”.
   If “TESTING” changed to “OUT OF CONDITION”, retry from step 6.
9. Make sure that “OK” is displayed after touching “SELF-DIAG RESULT”.
   If “NG” is displayed, go to EC-254, "Diagnostic Procedure" .

Overall Function Check

NBS006U7



Use this procedure to check the overall function of the A/F sensor 1 circuit. During this check, a 1st trip DTC might not be confirmed.



WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Drive the vehicle at a speed of 80 km/h (50 MPH) for a few minutes in the suitable gear position.
3. Set shift lever to D position (A/T) or 5th position (M/T), then release the accelerator pedal fully until the vehicle speed decreases to 50 km/h (30 MPH).
   NOTE:
   Never apply brake during releasing the accelerator pedal.
4. Repeat steps 2 and 3 for five times.
5. Stop the vehicle and turn ignition switch OFF.
6. Wait at least 10 seconds and restart engine.
7. Repeat steps 2 and 3 for five times.
8. Stop the vehicle and connect GST to the vehicle.
9. Make sure that no 1st trip DTC is displayed.
   If the 1st trip DTC is displayed, go to EC-254, "Diagnostic Procedure" .

CAUTION:
Always drive vehicle at a safe speed.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Select “A/F SEN1 (B1)” or “A/F SEN1 (B2)” in “DATA MONITOR” mode with CONSULT-III.
3. Check “A/F SEN1 (B1)” or “A/F SEN1 (B2)” indication.
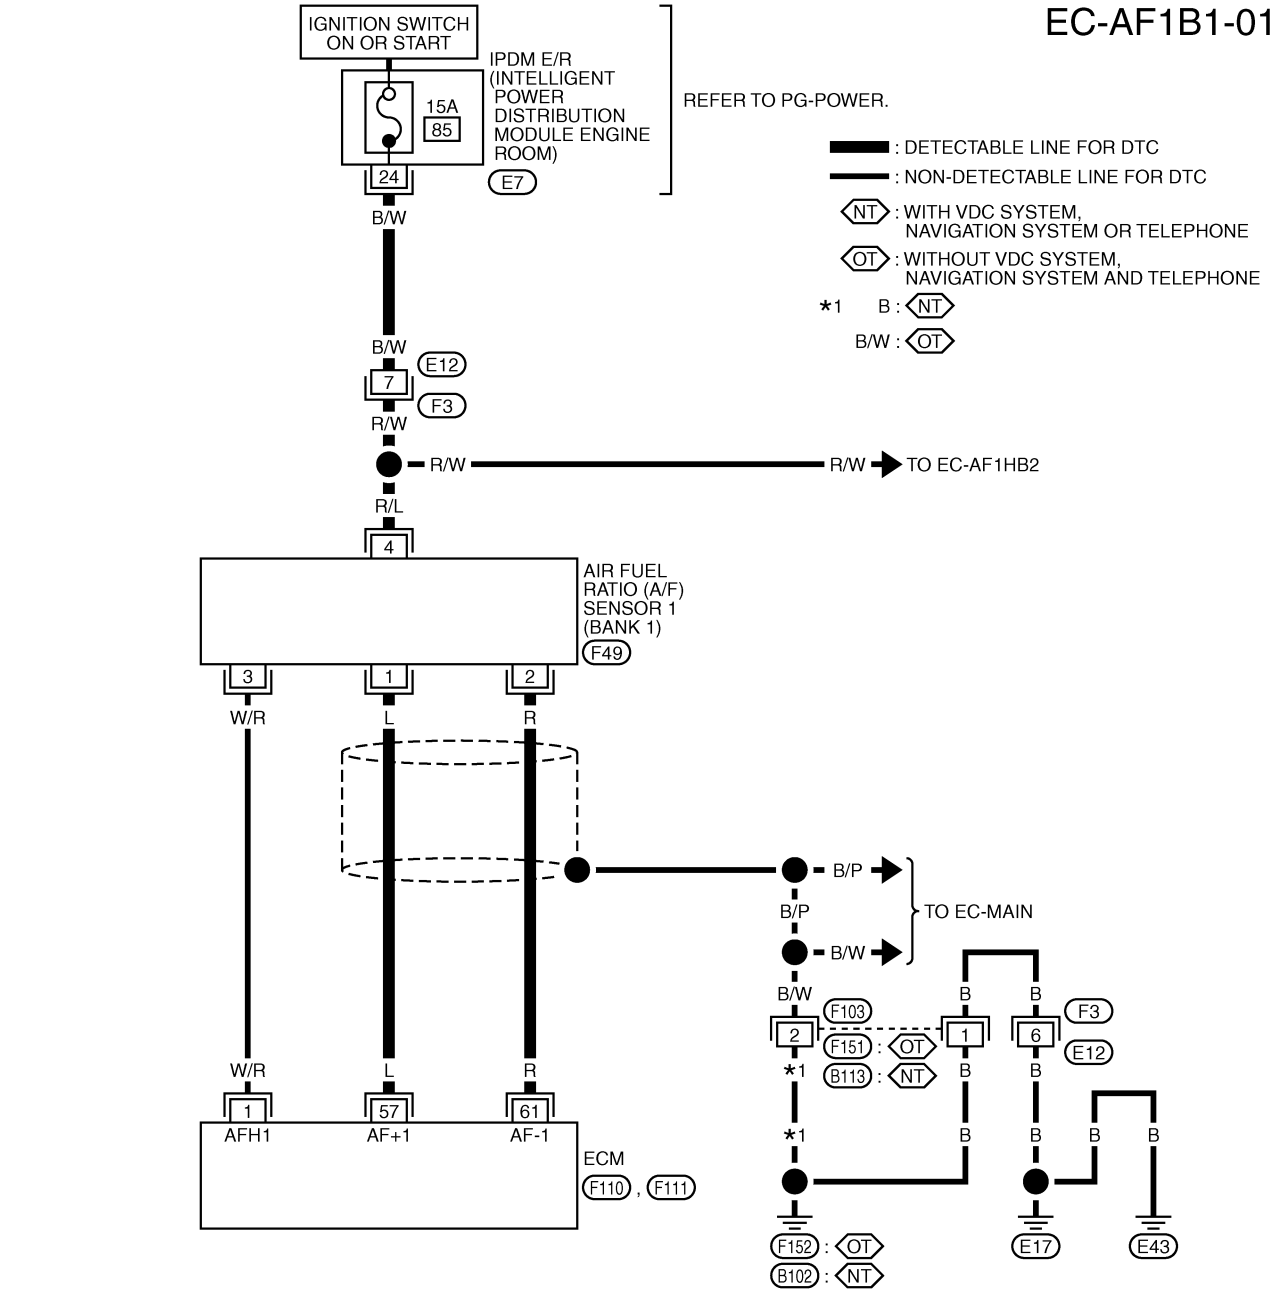
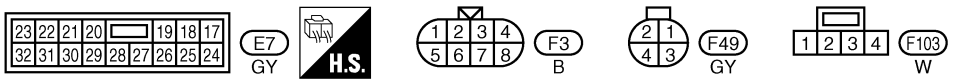
   If the indication is constantly approx. 5V, go to EC-272, "Diagnostic Procedure" .
   If the indication is not constantly approx. 5V, go to next step.
4. Turn ignition switch OFF, wait at least 10 seconds and then restart engine.
5. Drive and accelerate vehicle to more than 40 km/h (25 MPH) within 20 seconds after restarting engine.
6. Maintain the following conditions for about 20 consecutive seconds.

ENG SPEED	1,000 - 3,200 rpm
VHCL SPEED SE	More than 40 km/h (25 MPH)
B/FUEL SCHDL	1.5 - 9.0 msec
Shift lever	Suitable position

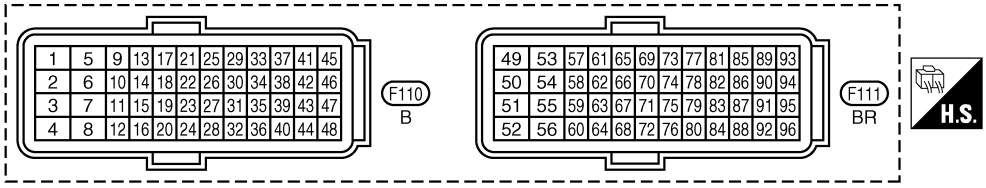
NOTE:
- **Keep the accelerator pedal as steady as possible during the cruising.**
- **If this procedure is not completed within 1 minute after restarting engine at step 4, return to step 4.**



7. Check 1st trip DTC.
8. If 1st trip DTC is displayed, go to EC-272, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

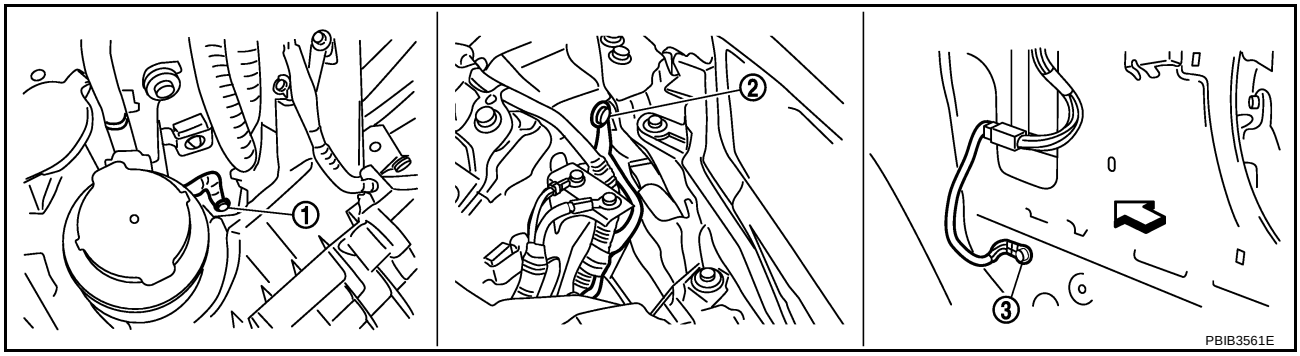
Diagnostic Procedure

NBS006UM

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



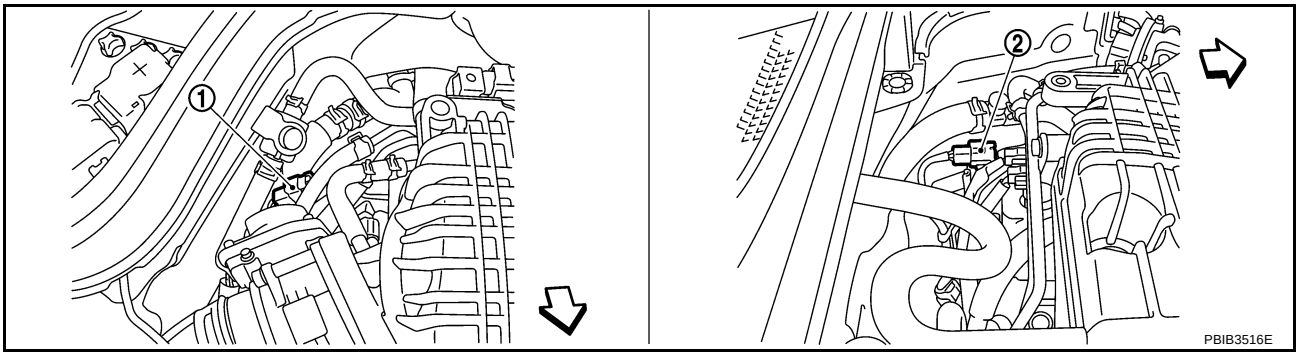
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



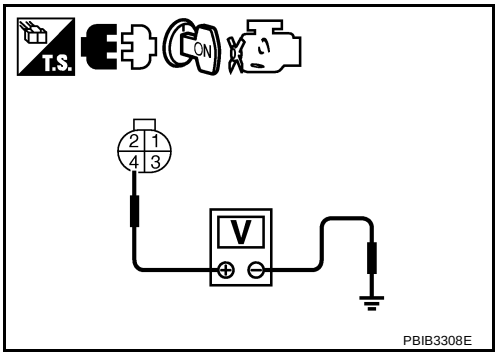
⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK AIR FUEL RATIO (A/F) SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect air fuel ratio (A/F) sensor 1 harness connector.



1. A/F sensor 1 (bank 1) harness connector
2. A/F sensor 1 (bank 2) harness connector

⇦: Vehicle front

2. Turn ignition switch ON.
3. Check voltage between A/F sensor 1 terminal 4 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- 15A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

4. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between the following terminals.
   Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

4. Check harness continuity between the following terminals and ground.
   Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

5. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 6.
NG >> Repair or replace.

6. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning A/F sensor 1.

CAUTION:

- **Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new A/F sensor, clean exhaust system threads (using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12) and approved anti-seize lubricant.**

>> **INSPECTION END**

Removal and Installation

NBS006UN

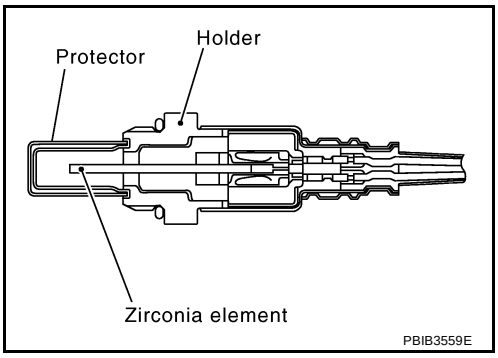
AIR FUEL RATIO (A/F) SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

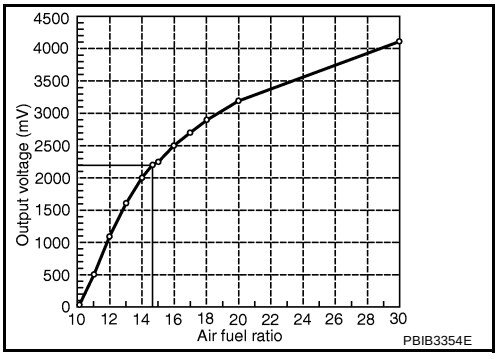
DTC P0133, P0153 A/F SENSOR 1

PFP:22693

Component Description



NBS006UO



The air fuel ratio (A/F) sensor 1 is a planar one-cell limit current sensor. The sensor element of the A/F sensor 1 is composed an electrode layer, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range.

The exhaust gas components diffuse through the diffusion layer at the sensor cell. An electrode layer is applied voltage, and this current relative oxygen density in lean. Also this current relative hydrocarbon density in rich.

Therefore, the A/F sensor 1 is able to indicate air fuel ratio by this electrode layer of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of about 800°C (1,472°F).

CONSULT-III Reference Value in Data Monitor Mode

NBS006UP

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1) A/F SEN1 (B2)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 2.2V

On Board Diagnosis Logic

NBS000F2

To judge the malfunction of A/F sensor 1, this diagnosis measures response time of the A/F signal computed by ECM from the A/F sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and the A/F sensor 1 temperature index. Judgment is based on whether the compensated time (the A/F signal cycling time index) is inordinately long or not.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P0133 0133 (Bank 1)	Air fuel ratio (A/F) sensor 1 circuit slow response	● The response of the A/F signal computed by ECM from A/F sensor 1 signal takes more than the specified time.	● Harness or connectors (The A/F sensor 1 circuit is open or shorted.) ● Air fuel ratio (A/F) sensor 1 ● Air fuel ratio (A/F) sensor 1 heater ● Fuel pressure ● Fuel injector ● Intake air leaks ● Exhaust gas leaks ● PCV valve ● Mass air flow sensor
P0153 0153 (Bank 2)			

DTC Confirmation Procedure

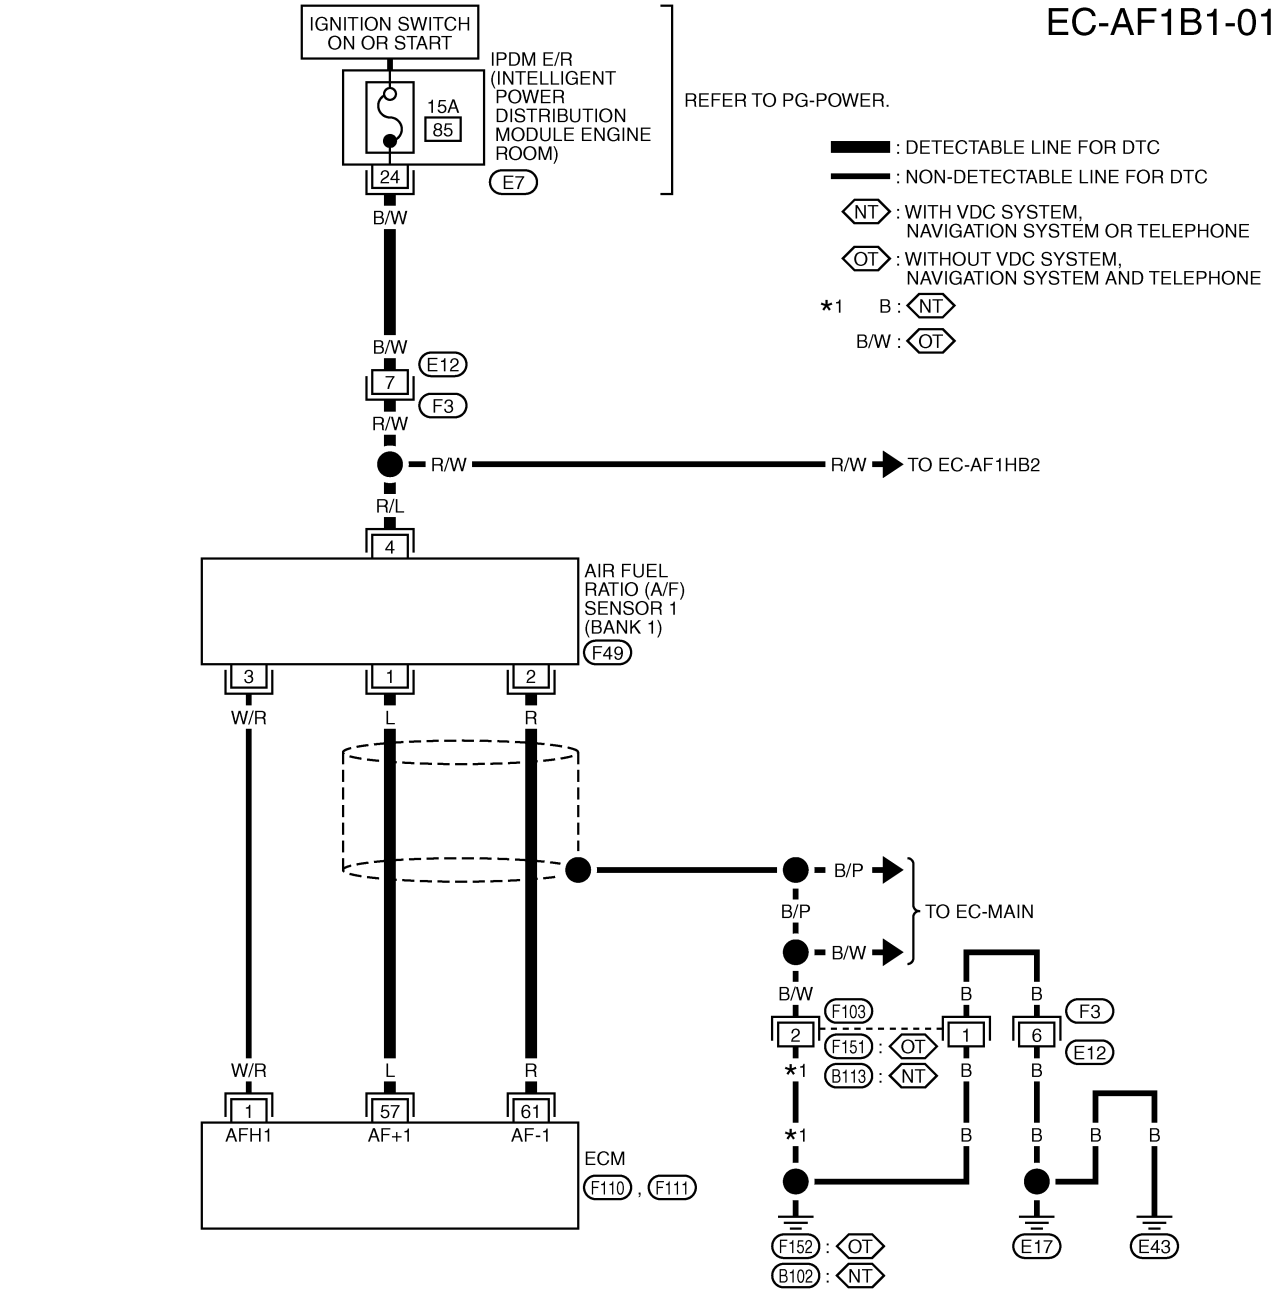
NBS000F3

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

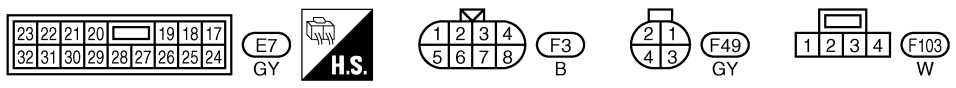
WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1minute under no load.
4. Let engine idle for 1 minute.
5. Select “A/F SEN1(B1) P1278/P1279” (for DTC P0133) or “A/F SEN1(B2) P1288/P1289” (for DTC P0153) of “A/F SEN1” in “DTC WORK SUPPORT” mode with CONSULT-III.
6. Touch “START”.
   If “COMPLETED” appears on CONSULT-III screen, go to step 10.
   If “COMPLETED” does not appear on CONSULT-III screen, go to the following step.
7. After perform the following procedure, “TESTING” will be displayed on the CONSULT-III screen.

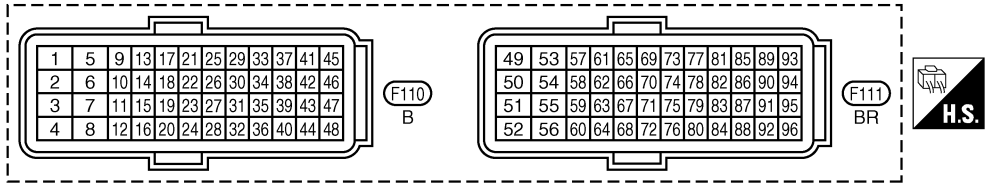
a. Increase the engine speed up to 4,000 to 5,000 rpm and keep it for 10 seconds.
b. Fully release accelerator pedal and then let engine idle for about 10 seconds.
   If “TESTING” is not displayed after 10 seconds, refer to EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .



8. Wait for about 20 seconds at idle at under the condition that “TESTING” is displayed on the CONSULT-III screen.
9. Make sure that “TESTING” changes to “COMPLETED”.
   If “TESTING” changed to “OUT OF CONDITION”, refer to EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .
10. Make sure that “OK” is displayed after touching “SELF-DIAG RESULT”.
    If “NG” is displayed, go to EC-281, "Diagnostic Procedure" .



WITH GST



1. Start engine and warm it up to normal operating temperature.
2. Select Service $01 with GST.
3. Calculate the total value of “Short term fuel trim” and “Long term fuel trim” indications.
   Make sure that the total percentage should be within ±15%.
   If OK, go to the following step.
   If NG, check the following.
   - Intake air leaks
   - Exhaust gas leaks
   - Incorrect fuel pressure
   - Lack of fuel
   - Fuel injector
   - Incorrect PCV hose connection
   - PCV valve
   - Mass air flow sensor
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1minute under no load.
6. Let engine idle for 1 minute.
7. Increase the engine speed up to 4,000 to 5,000 rpm and keep it for 10 seconds.
8. Fully release accelerator pedal and then let engine idle for about 1 minute.
9. Select Service $07 with GST.
   If 1st trip DTC is detected, go to EC-281, "Diagnostic Procedure" .

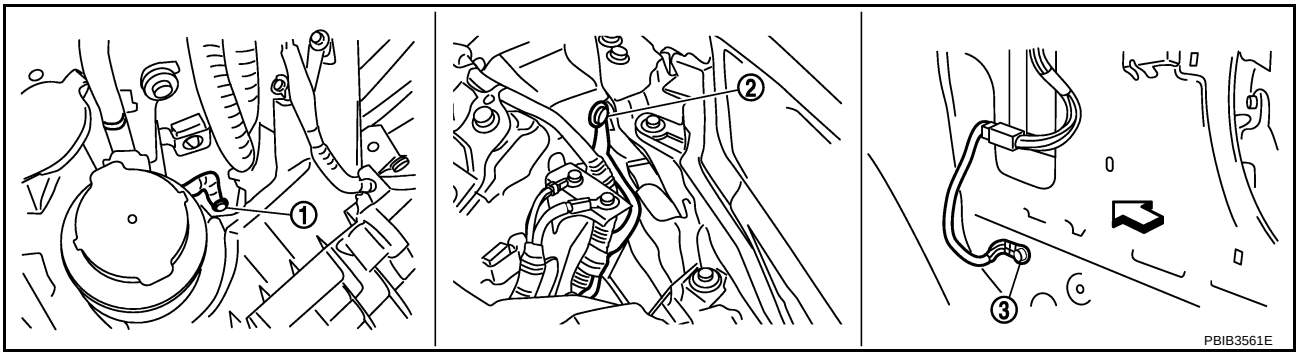
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
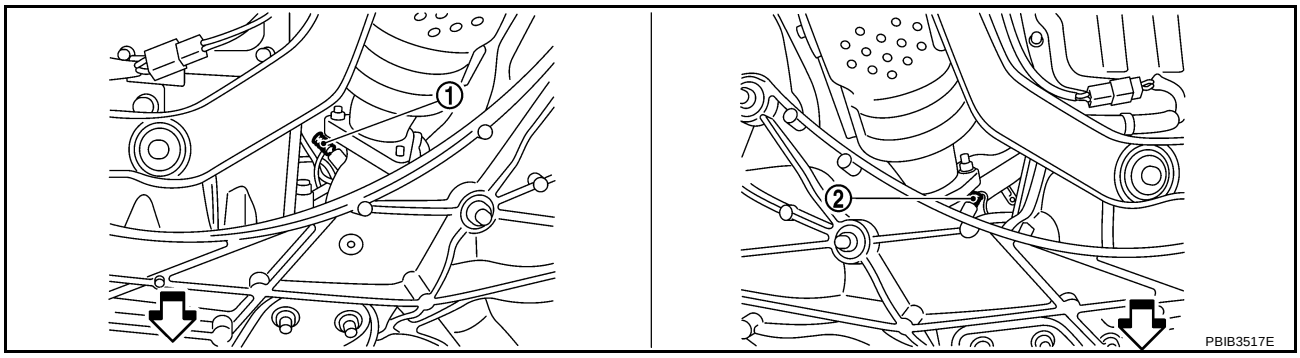
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

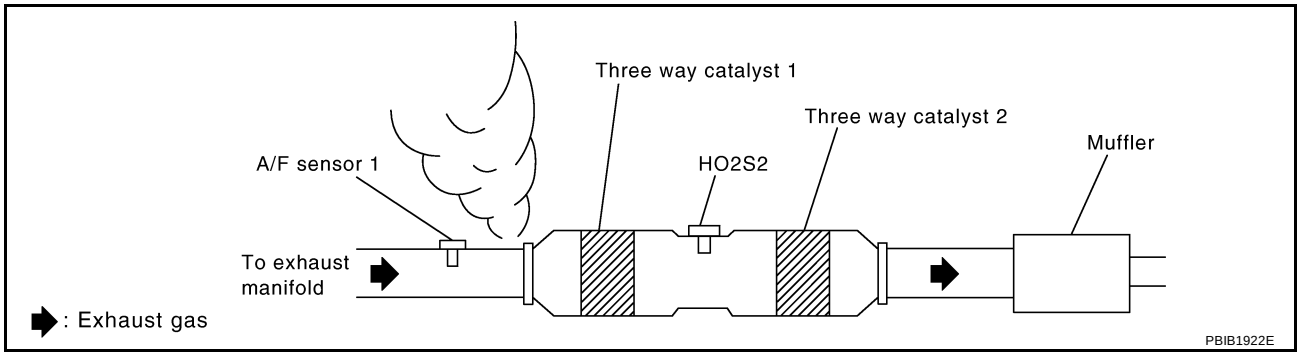
OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. RETIGHTEN AIR FUEL RATIO (A/F) SENSOR 1

Loosen and retighten the air fuel ratio (A/F) sensor 1.

1. A/F sensor 1 (bank 1)
2. A/F sensor 1 (bank 2)



⇦: Vehicle front

Tightening torque: 50 N-m (5.1 kg-m, 37 ft-lb)

>> GO TO 3.

3. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

OK or NG

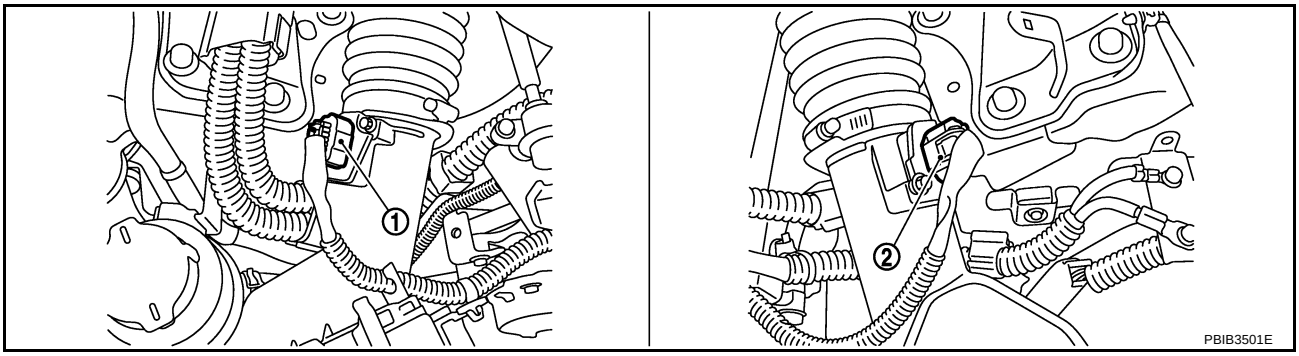
OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace.



5. CLEAR THE SELF-LEARNING DATA

With CONSULT-III

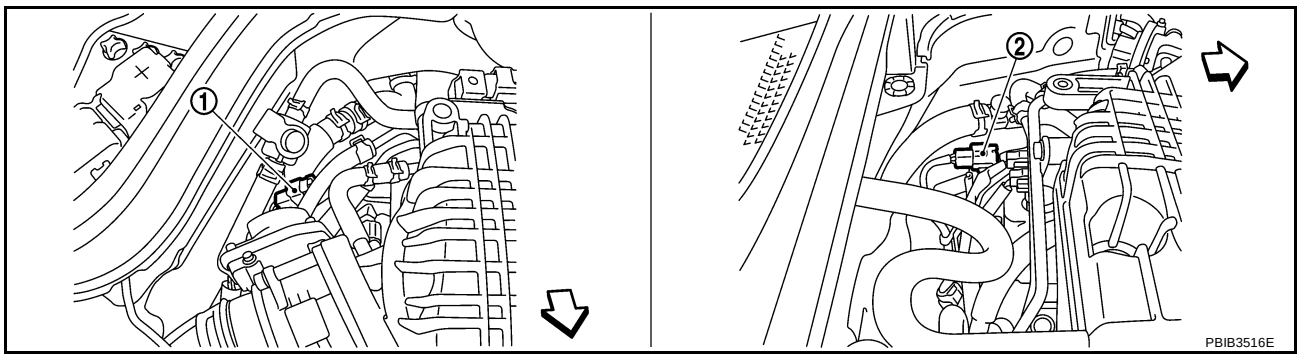
1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR” or “START”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0174 or P0172 or P0175 detected? Is it difficult to start engine?

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor harness connector.
6. Make sure DTC P0102 is displayed.
7. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
8. Make sure DTC P0000 is displayed.
9. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0174 or P0172 or P0175 detected? Is it difficult to start engine?



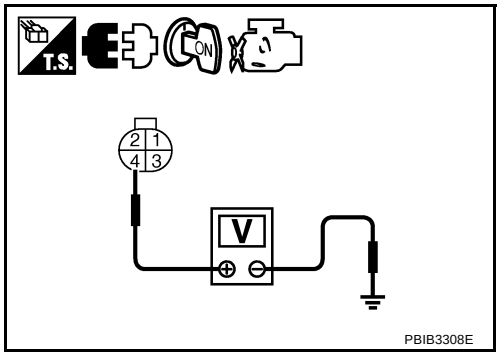
Yes or No

Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to EC-324, "DTC P0171, P0174 FUEL INJECTION SYSTEM FUNCTION" or EC-334, "DTC P0172, P0175 FUEL INJECTION SYSTEM FUNCTION" .

No >> GO TO 6.

6. CHECK A/F SENSOR 1 POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.



1. A/F sensor 1 harness connector (bank 1)
2. A/F sensor 1 harness connector (bank 2)

⇦: Vehicle front

3. Turn ignition switch ON.
4. Check voltage between A/F sensor 1 terminal 4 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- 15A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between the following terminals.
   Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

4. Check harness continuity between the following terminals and ground.
   Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

5. Also check harness for short to power.

OK or NG

OK >> GO TO 9.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Refer to EC-172, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace malfunctioning A/F sensor 1.

10. CHECK MASS AIR FLOW SENSOR

Refer to EC-206, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace malfunctioning mass air flow sensor.

11. CHECK PCV VALVE

Refer to EC-44, "POSITIVE CRANKCASE VENTILATION" .

OK or NG

OK >> GO TO 12.
NG >> Repair or replace PCV valve.

12. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 13.
NG >> Repair or replace.

13. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning A/F sensor 1.

CAUTION:

- **Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new A/F sensor, clean exhaust system threads (using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12) and approved anti-seize lubricant.**

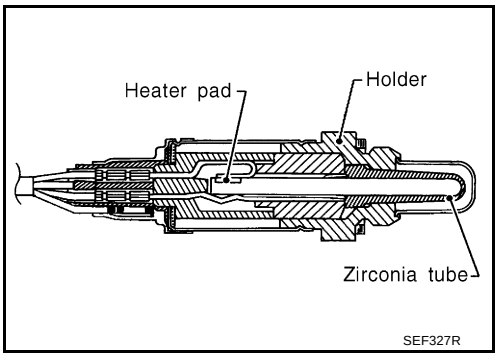
>> **INSPECTION END**

Removal and Installation

NBS006US

AIR FUEL RATIO (A/F) SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .



DTC P0137, P0157 HO2S2

PFP:226A0

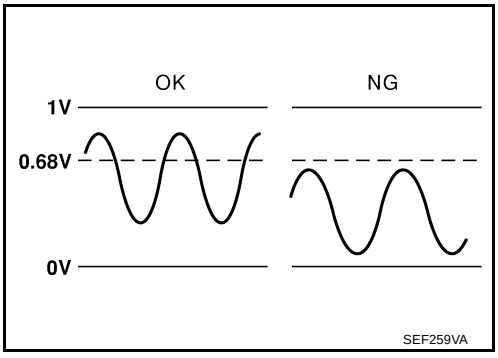
Component Description

NBS000CW

The heated oxygen sensor 2, after three way catalyst 1, monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

CONSULT-III Reference Value in Data Monitor Mode

NBS000CX



Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR(B1) HO2S2 MNTR(B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	LEAN ←→ RICH

On Board Diagnosis Logic

NBS000CY

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst 1 causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0137 0137 (Bank 1) P0157 0157 (Bank 2)	Heated oxygen sensor 2 circuit low voltage	The maximum voltage from the sensor is not reached to the specified voltage.	● Harness or connectors (The sensor circuit is open or shorted) ● Heated oxygen sensor 2 ● Fuel pressure ● Fuel injector ● Intake air leaks

DTC Confirmation Procedure

NBS000CZ

NOTE:
If DTC confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

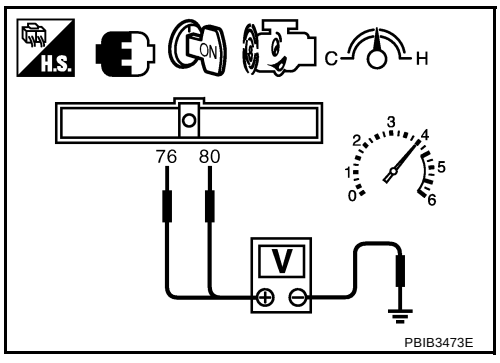
TESTING CONDITION:
For better results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30 °C (32 to 86 °F).

1. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-III
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Make sure that "COOLAN TEMP/S" indicates more than 70°C (158°F).
   If not, warm up engine and go to next step when "COOLAN TEMP/S" indication reaches to 70°C (158°F).
7. Open engine hood.
8. Select "HO2S2 (B1) P1147" (for DTC P0137) or "HO2S2 (B2) P1167" (for DTC P0157) of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-III.
9. Start engine and following the instruction of CONSULT-III.

   NOTE:
   It will take at most 10 minutes until "COMPLETED" is displayed.
10. Make sure that "OK" is displayed after touching "SELF-DIAG RESULTS".
    If "NG" is displayed, refer to EC-293, "Diagnostic Procedure" .
    If "CAN NOT BE DIAGNOSED" is displayed, perform the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).

b. Return to step 1.



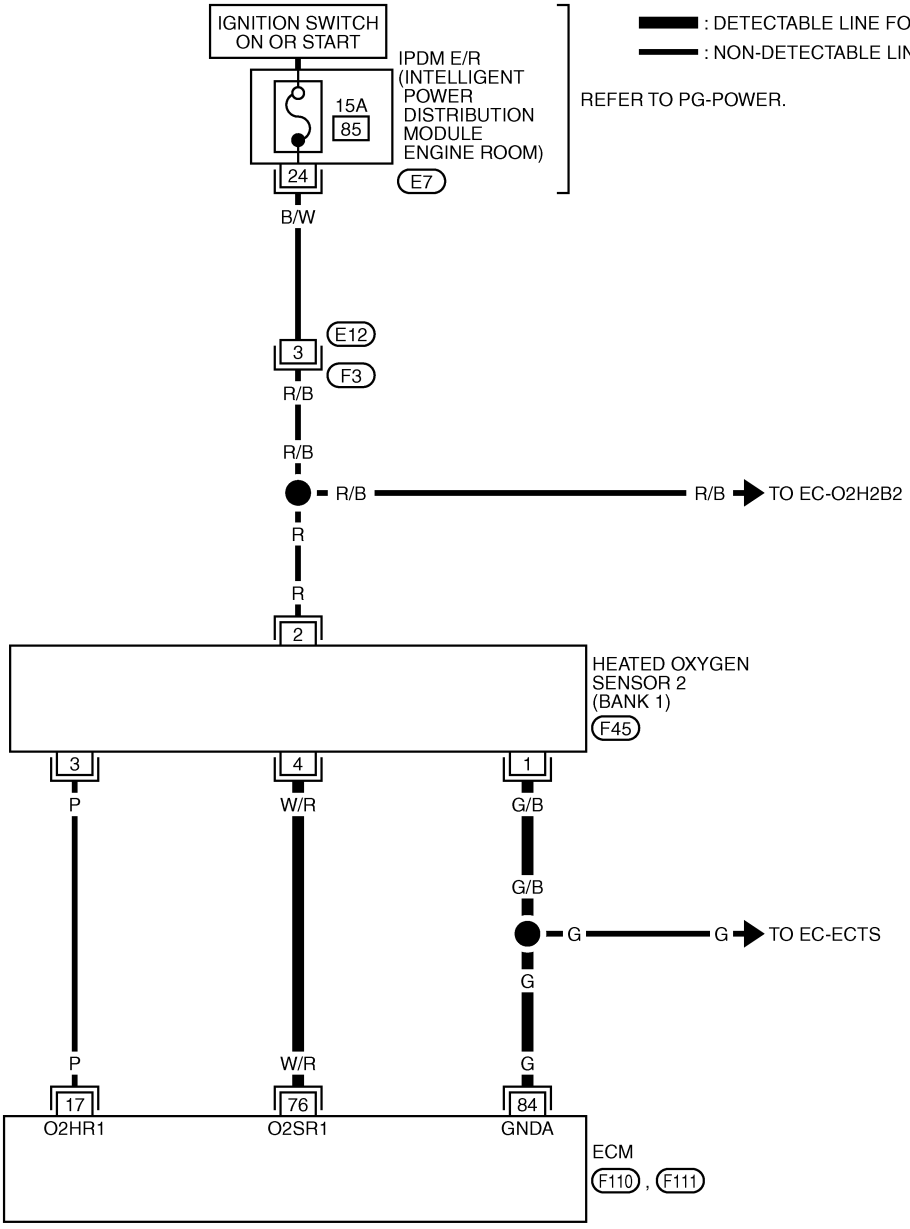
Overall Function Check

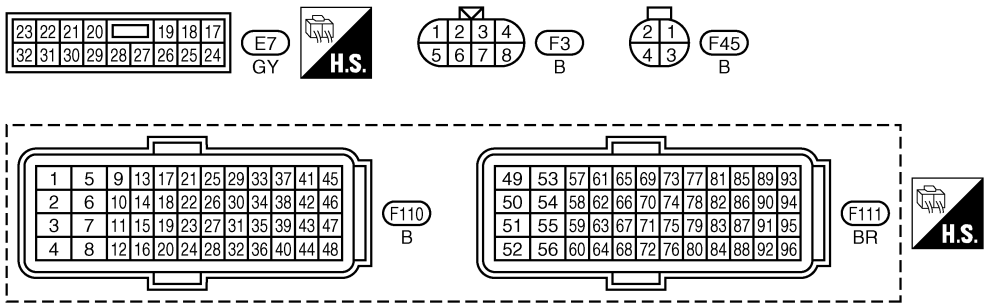
NBS000D0

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B1) signal] or 80 [HO2S2 (B2) signal] and ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be above 0.68V at least once during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.





7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 4th gear position (M/T).
   The voltage should be above 0.68V at least once during this procedure.
8. If NG, go to EC-293, "Diagnostic Procedure" .

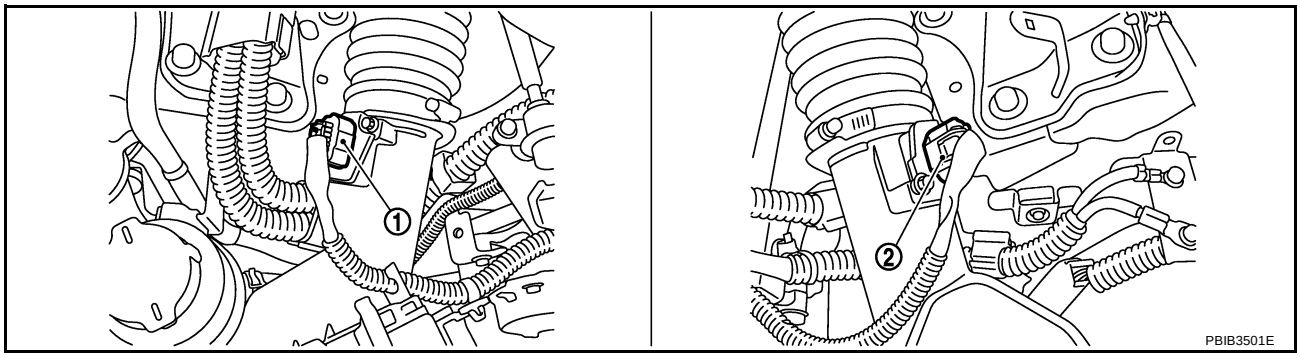
NG >> Repair or replace ground connections.



2. CLEAR THE SELF-LEARNING DATA

With CONSULT-III

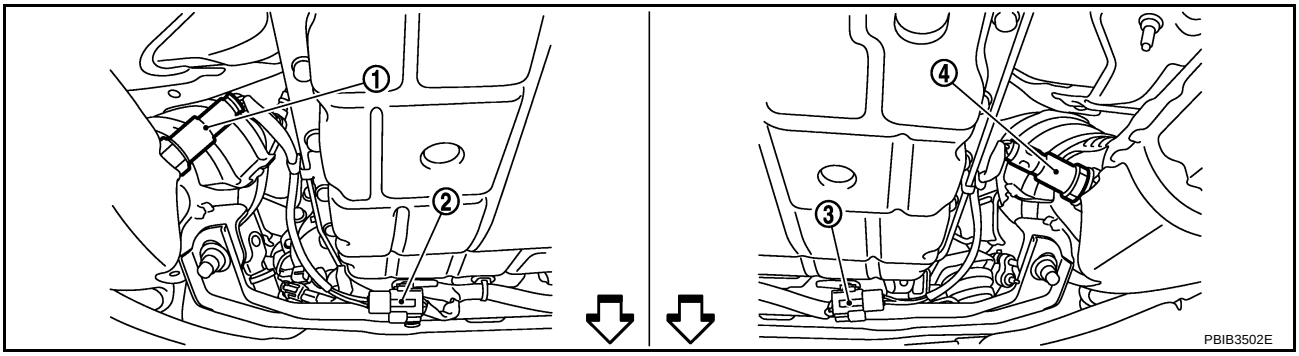
1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0174 detected?
   Is it difficult to start engine?

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector, and restart and run engine for at least 5 seconds at idle speed.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0174 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171or P0174. Refer to EC-324, "DTC P0171, P0174 FUEL INJECTION SYSTEM FUNCTION" .

No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect heated oxygen sensor 2 harness connector.

1. Heated oxygen sensor 2 (bank 2)
2. Heated oxygen sensor 2 (bank 2) harness connector
3. Heated oxygen sensor 2 (bank 1)
4. Heated oxygen sensor 2 (bank 1) harness connector

⇦: Vehicle front

4. Check harness continuity between HO2S2 terminal 1 and ECM terminal 84. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal and HO2S2 terminal as follows. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0137	76	4	1
P0157	80	4	2

Continuity should exist.

2. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0137	76	4	1
P0157	80	4	2

Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-296, "Component Inspection" .

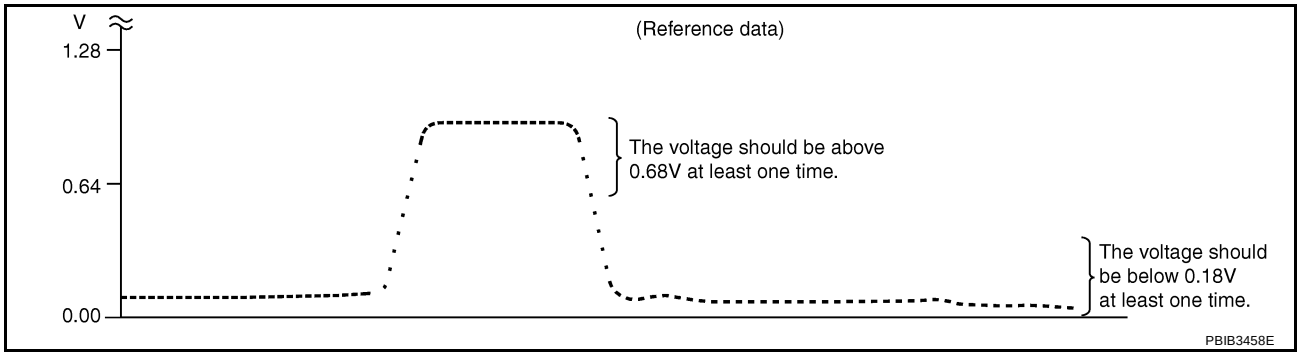
OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

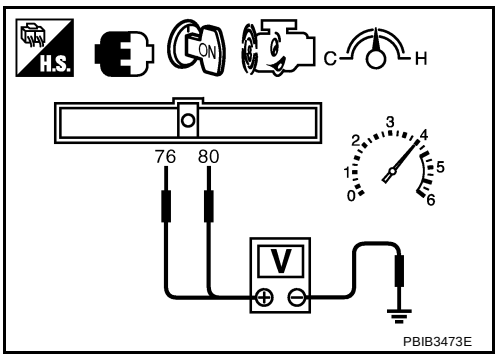
NBS000D3

HEATED OXYGEN SENSOR 2

With CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)/(B2)” as the monitor item with CONSULT-III.
7. Check “HO2S2 (B1)/(B2)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

“HO2S2 (B1)/(B2)” should be above 0.68V at least once when the “FUEL INJECTION” is +25%.
“HO2S2 (B1)/(B2)” should be below 0.18V at least once when the “FUEL INJECTION” is −25%.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-III

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B1) signal] or 80 [HO2S2 (B2) signal] and ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.68V at least once during this procedure.
If the voltage is above 0.68V at step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 4th gear position (M/T).
The voltage should be below 0.18V at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.

CAUTION:

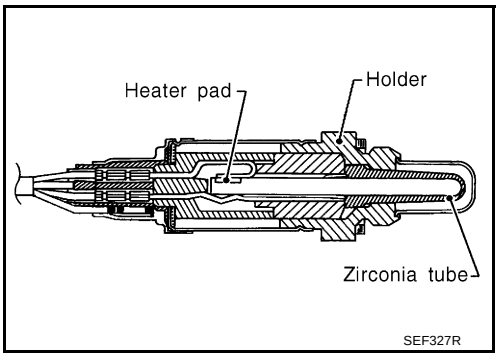
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

NBS000D4

HEATED OXYGEN SENSOR 2

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .



DTC P0138, P0158 HO2S2

PFP:226A0

Component Description

NBS001NK

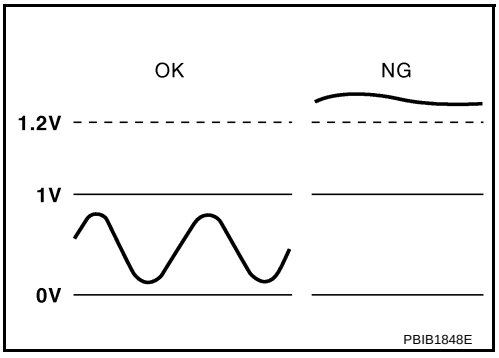
The heated oxygen sensor 2, after three way catalyst 1, monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

CONSULT-III Reference Value in Data Monitor Mode

NBS001NL

Specification data are reference values.

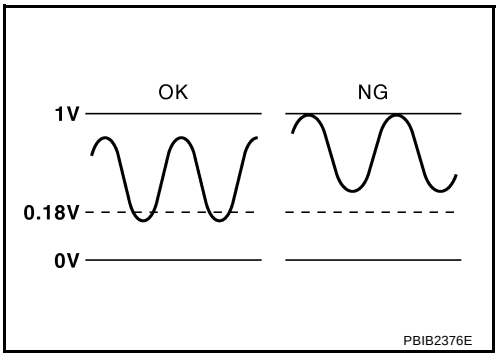
MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR(B1) HO2S2 MNTR(B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	LEAN ←→ RICH



On Board Diagnosis Logic

NBS001NM

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity of the three way catalyst 1 causes the longer switching time.



MALFUNCTION A

To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.

MALFUNCTION B

To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0138 0138 (Bank 1)	Heated oxygen sensor 2 circuit high voltage	A)	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted) ● Heated oxygen sensor 2
P0158 0158 (Bank 2)		B)	The minimum voltage from the sensor is not reached to the specified voltage.	● Harness or connectors (The sensor circuit is open or shorted) ● Heated oxygen sensor 2 ● Fuel pressure ● Fuel injector

DTC Confirmation Procedure

NBS001NN

Perform PROCEDURE FOR MALFUNCTION A first.
If DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

With CONSULT-III

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 2 minutes.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-305, "PROCEDURE FOR MALFUNCTION A" .

With GST

Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION B

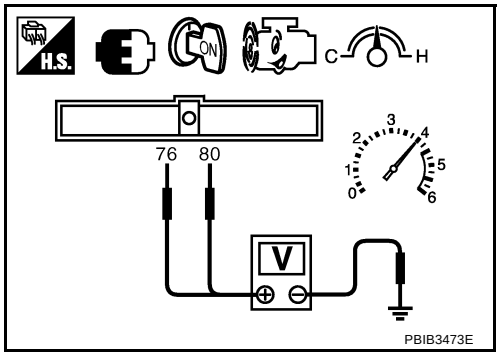
With CONSULT-III

TESTING CONDITION:
For better results, perform “DTC WORK SUPPORT” at a temperature of 0 to 30 °C (32 to 86 °F).

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).
   If not, warm up engine and go to next step when “COOLAN TEMP/S” indication reaches to 70°C (158°F).
6. Open engine hood.
7. Select “HO2S2 (B1) P1146” (for DTC P0138) or “HO2S2 (B2) P1166” (for DTC P0158) of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT-III.
8. Start engine and following the instruction of CONSULT-III.
   NOTE:
   It will take at most 10 minutes until “COMPLETED” is displayed.
9. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.
   If “NG” is displayed, refer to EC-308, "PROCEDURE FOR MALFUNCTION B" .
   If “CAN NOT BE DIAGNOSED” is displayed, perform the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
b. Return to step 1.

Overall Function Check

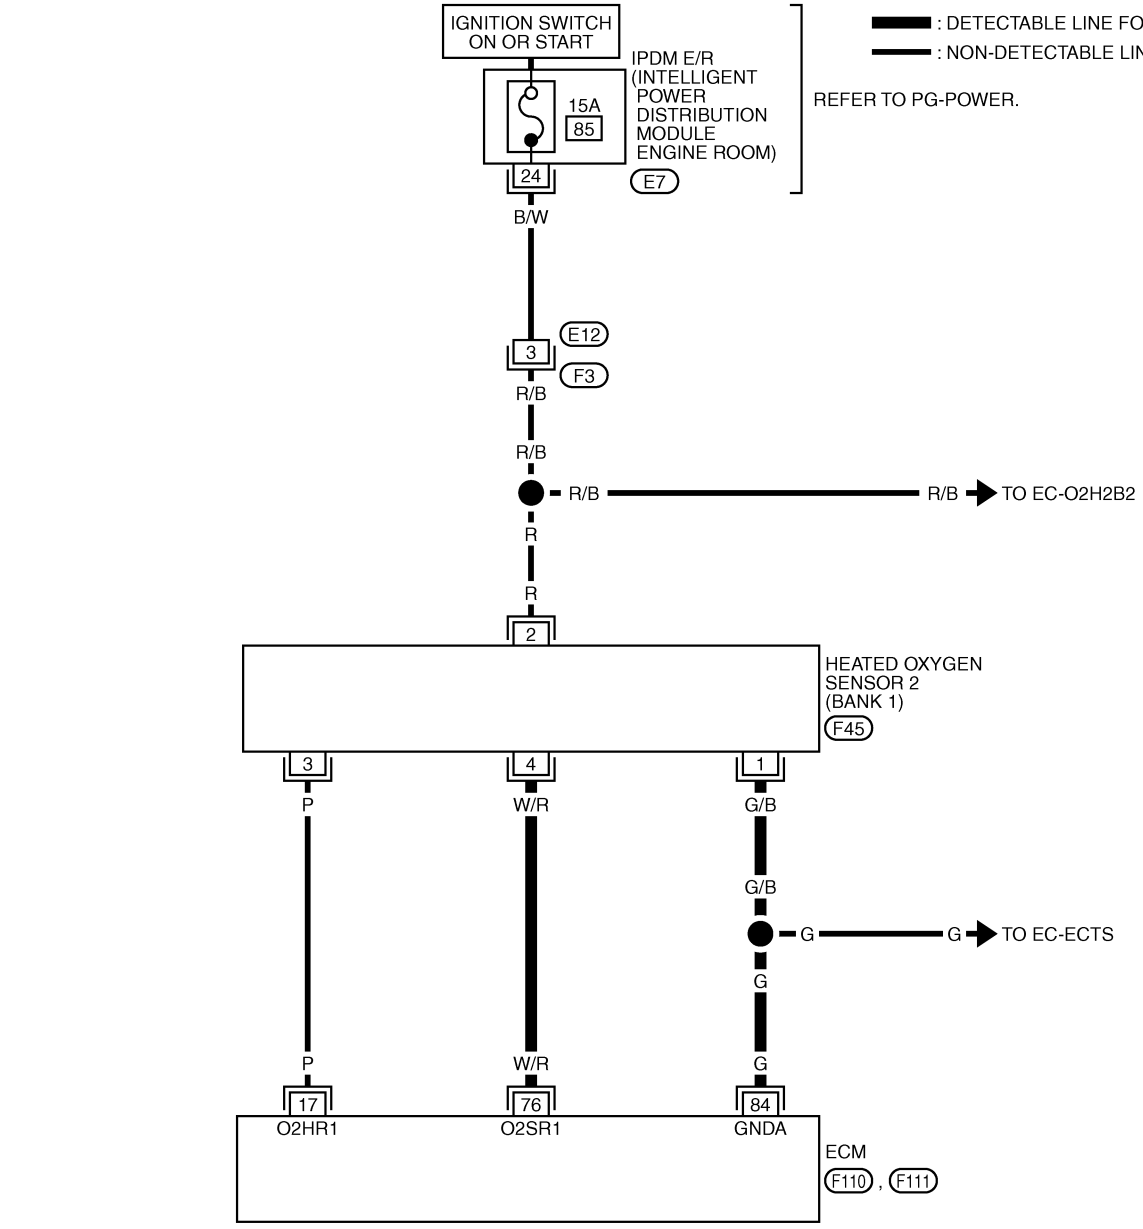


NBS001NW

PROCEDURE FOR MALFUNCTION B

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

With GST



1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B2) signal] or 80 [HO2S2 (B1) signal] and ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be below 0.18V at least once during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position.
   The voltage should be below 0.18V at least once during this procedure.
8. If NG, go to EC-308, "PROCEDURE FOR MALFUNCTION B" .

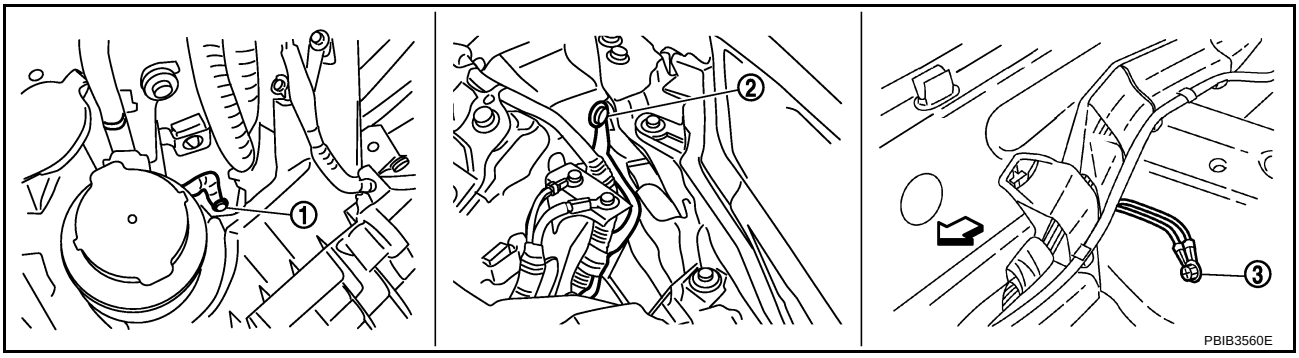
Diagnostic Procedure



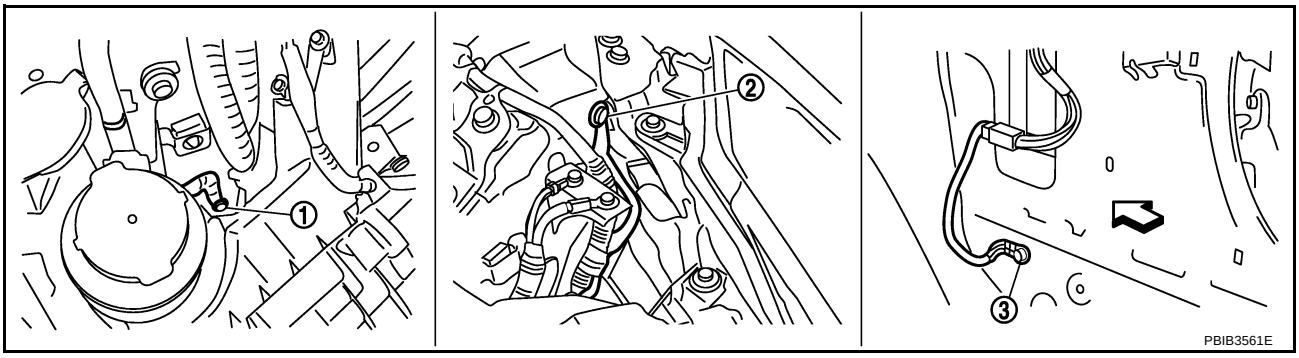
NBS001NO

PROCEDURE FOR MALFUNCTION A

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



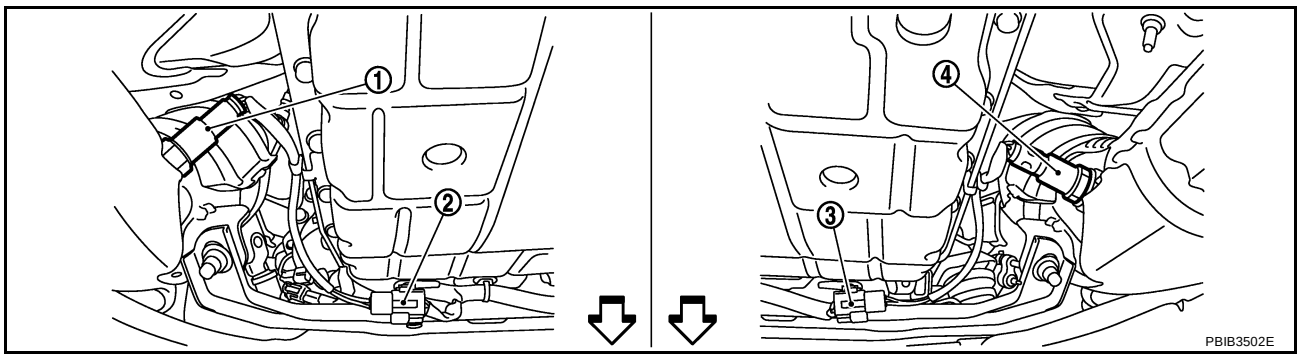
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect heated oxygen sensor 2 harness connector.

1. Heated oxygen sensor 2 (bank 2)
2. Heated oxygen sensor 2 (bank 2) harness connector
3. Heated oxygen sensor 2 (bank 1)
4. Heated oxygen sensor 2 (bank 1) harness connector

⇦: Vehicle front

2. Disconnect ECM harness connector.
3. Check harness continuity between HO2S2 terminal 1 and ECM terminal 84. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal and HO2S2 terminal as follows. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0138	76	4	1
P0158	80	4	2

Continuity should exist.

2. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0138	76	4	1
P0158	80	4	2

Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S2 CONNECTOR FOR WATER

Check connectors for water.

Water should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

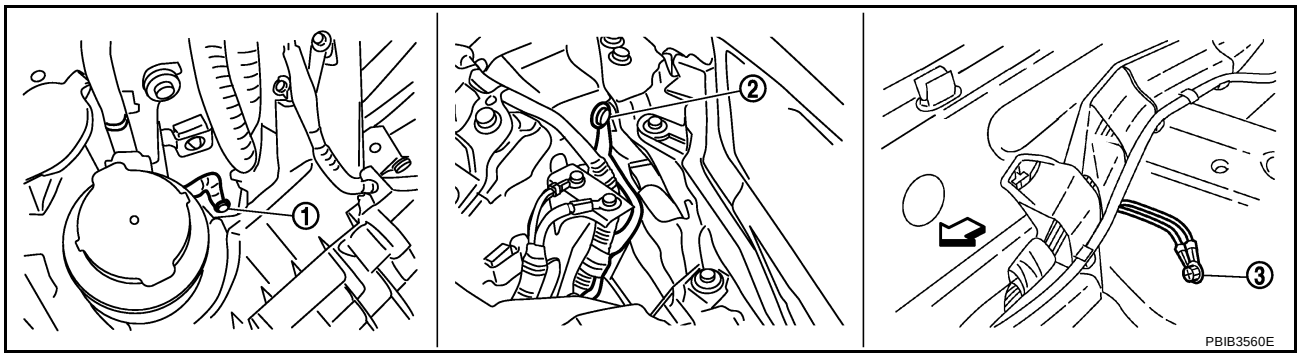
Refer to EC-296, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



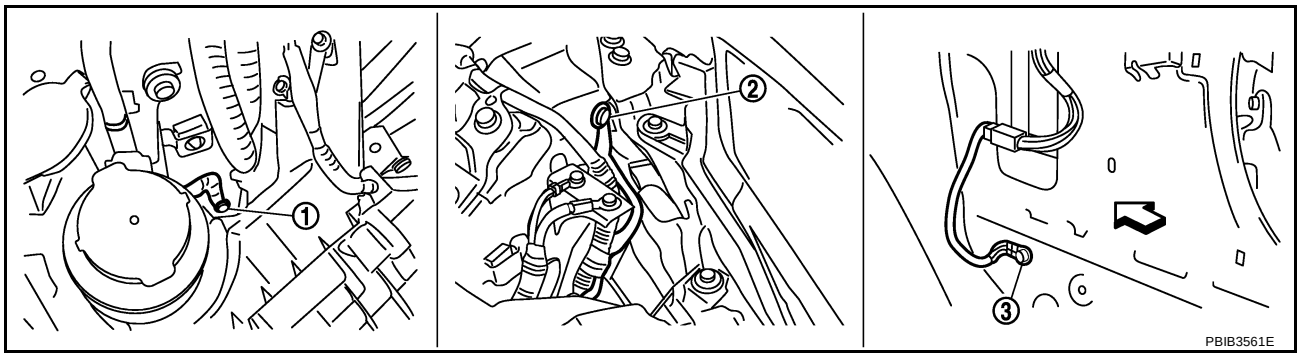
>> **INSPECTION END**

PROCEDURE FOR MALFUNCTION B

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

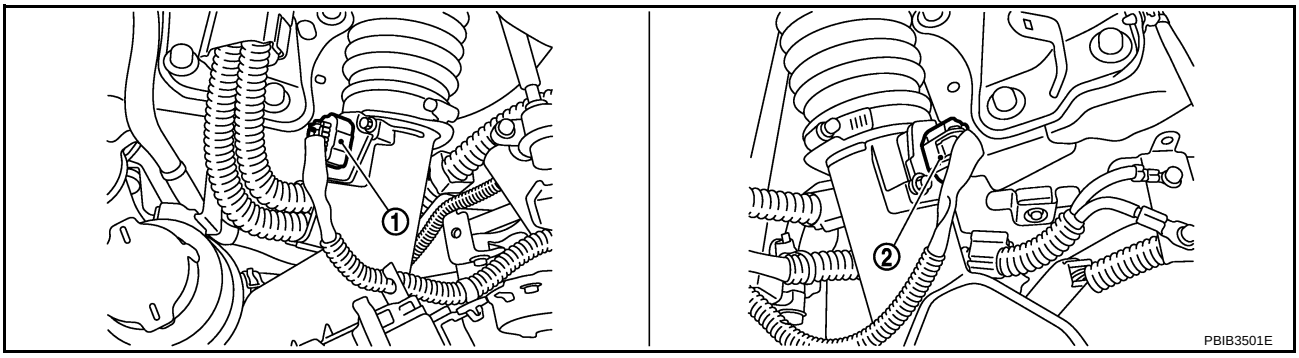
1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CLEAR THE SELF-LEARNING DATA

With CONSULT-III

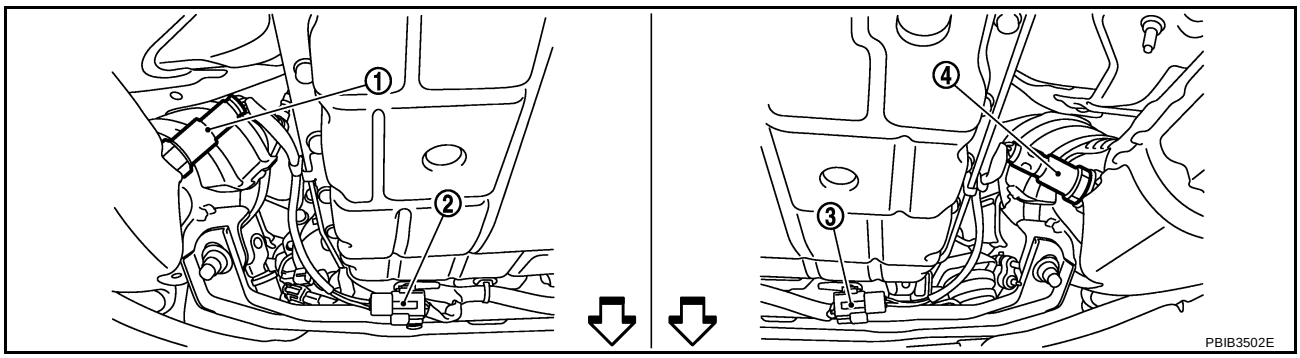
1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 or P0175 detected?
   Is it difficult to start engine?

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector, and restart and run engine for at least 5 seconds at idle speed.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 or P0175 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0172, P0175. Refer to EC-334, "DTC P0172, P0175 FUEL INJECTION SYSTEM FUNCTION" .

No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.

1. Heated oxygen sensor 2 (bank 2)
2. Heated oxygen sensor 2 (bank 2) harness connector
3. Heated oxygen sensor 2 (bank 1)
4. Heated oxygen sensor 2 (bank 1) harness connector

⇦: Vehicle front

3. Disconnect ECM harness connector.
4. Check harness continuity between HO2S2 terminal 1 and ECM terminal 84. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal and HO2S2 terminal as follows. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0138	76	4	1
P0158	80	4	2

Continuity should exist.

2. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0138	76	4	1
P0158	80	4	2

Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-296, "Component Inspection" .

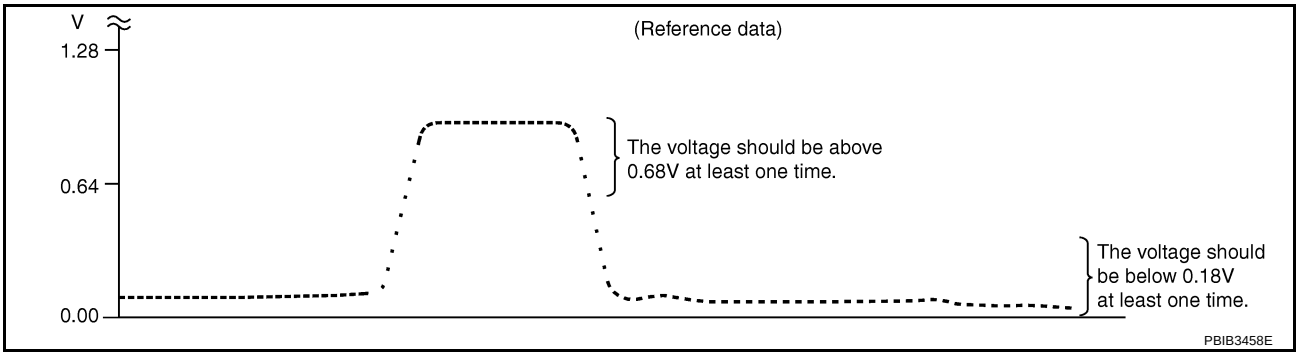
OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

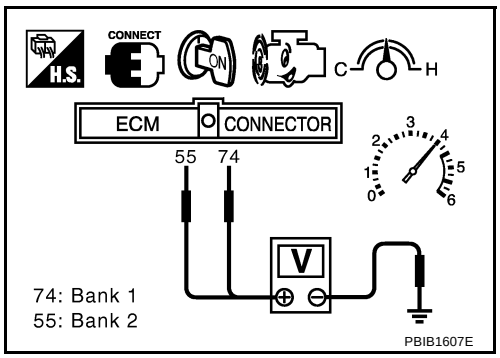
NBS0006P

HEATED OXYGEN SENSOR 2

With CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)/(B2)” as the monitor item with CONSULT-III.
7. Check “HO2S2 (B1)/(B2)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

“HO2S2 (B1)/(B2)” should be above 0.68V at least once when the “FUEL INJECTION” is +25%.
“HO2S2 (B1)/(B2)” should be below 0.18V at least once when the “FUEL INJECTION” is −25%.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-III

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B1) signal] or 80 [HO2S2 (B2) signal] and ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be above 0.68V at least once during this procedure.
   If the voltage is above 0.68V at step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 4th gear position (M/T).
   The voltage should be below 0.18V at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.

CAUTION:

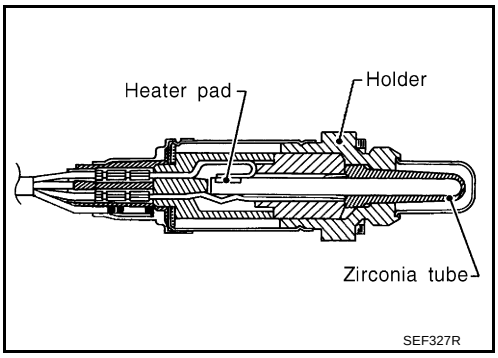
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

NBS0006Q

HEATED OXYGEN SENSOR 2

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .



DTC P0139, P0159 HO2S2

PFP:226A0

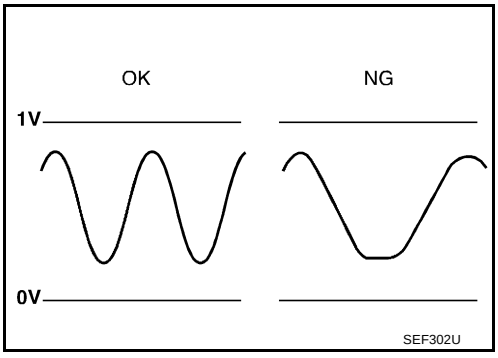
Component Description

NBS0006R

The heated oxygen sensor 2, after three way catalyst 1, monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the air fuel ratio (A/F) sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.

CONSULT-III Reference Value in Data Monitor Mode

NBS0006S



Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 (B1) HO2S2 (B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR(B1) HO2S2 MNTR(B2)	● Revving engine from idle to 3,000 rpm quickly after the following conditions are met – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	LEAN ←→ RICH

On Board Diagnosis Logic

NBS0006T

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the air fuel ratio (A/F) sensor 1. The oxygen storage capacity before the three way catalyst 1 causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0139 0139 (Bank 1) P0159 0159 (Bank 2)	Heated oxygen sensor 2 circuit slow response	It takes more time for the sensor to respond between rich and lean than the specified time.	● Harness or connectors (The sensor circuit is open or shorted) ● Heated oxygen sensor 2 ● Fuel pressure ● Fuel injector ● Intake air leaks

DTC Confirmation Procedure

NBS0006U

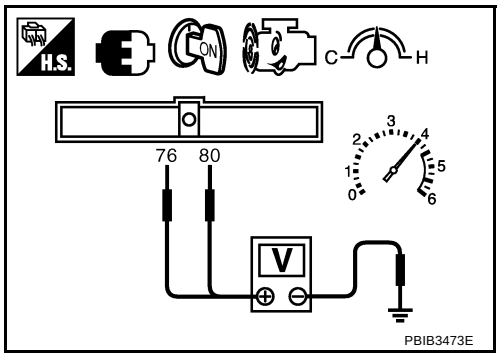
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

TESTING CONDITION:
For better results, perform “DTC WORK SUPPORT” at a temperature of 0 to 30 °C (32 to 86 °F).

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).
   If not, warm up engine and go to next step when “COOLAN TEMP/S” indication reaches to 70°C (158°F).
6. Select “HO2S2 (B1) P0139” or “HO2S2 (B2) P0159” of “HO2S2” in “DTC WORK SUPPORT” mode with CONSULT-III.
7. Start engine and following the instruction of CONSULT-III.
   NOTE:
   It will take at most 10 minutes until “COMPLETED” is displayed.
8. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.
   If “NG” is displayed, refer to EC-319, "Diagnostic Procedure" .
   If “CAN NOT BE DIAGNOSED” is displayed, perform the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
b. Return to step 1.

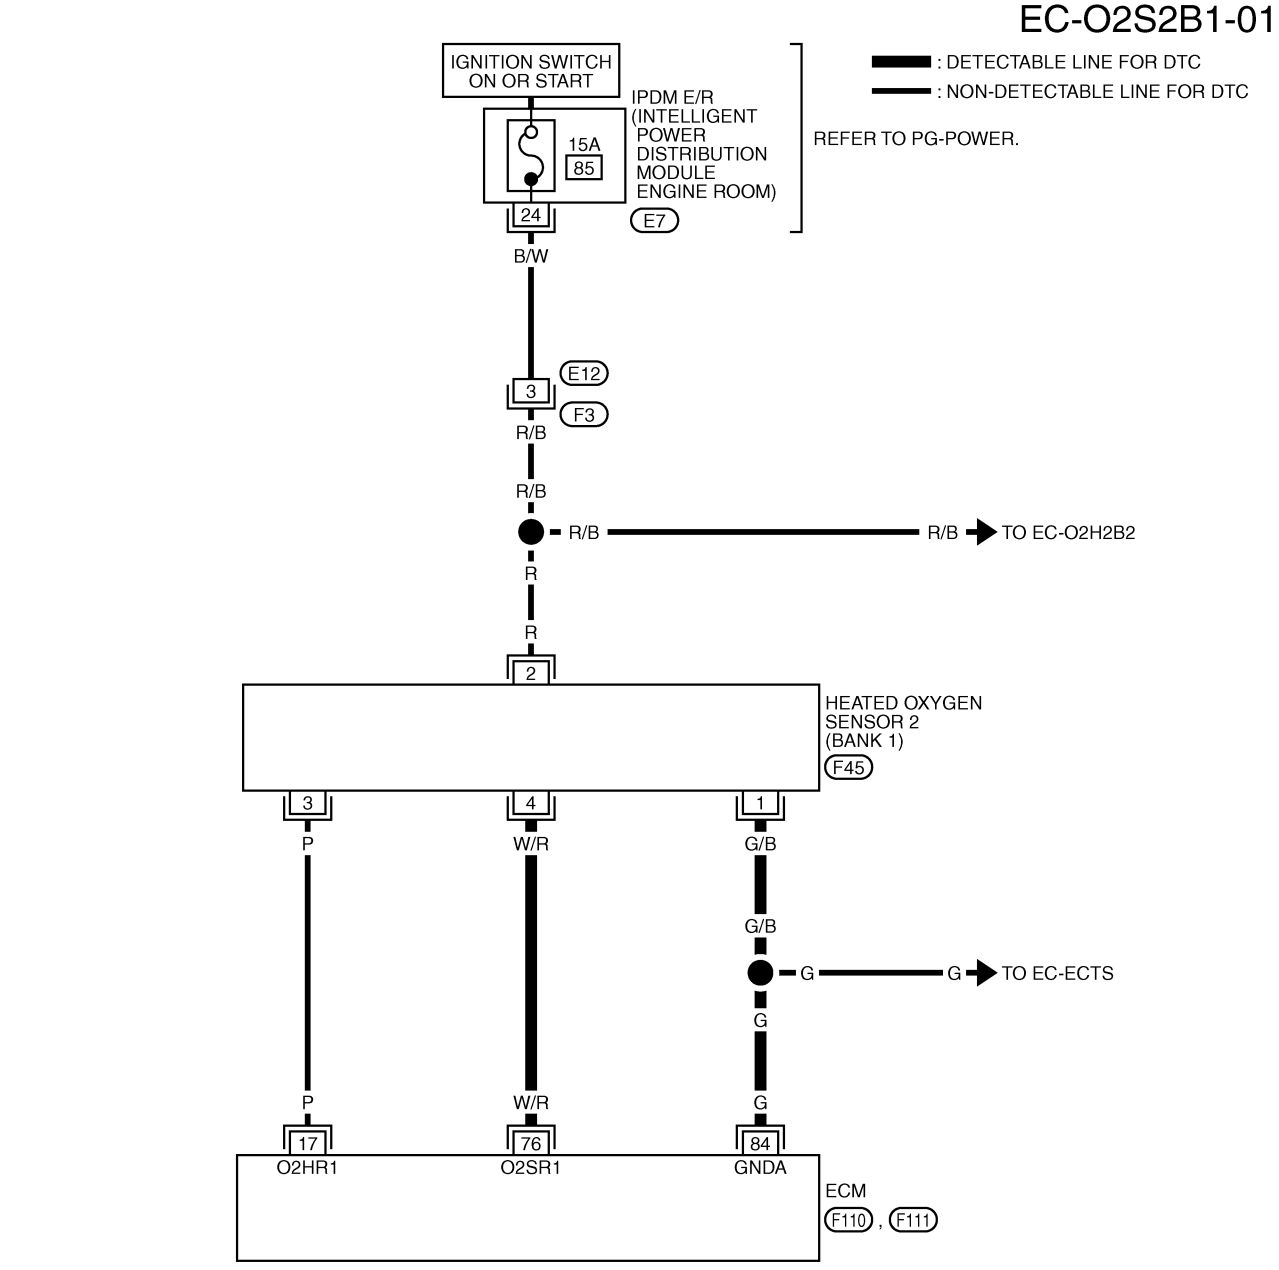


Overall Function Check

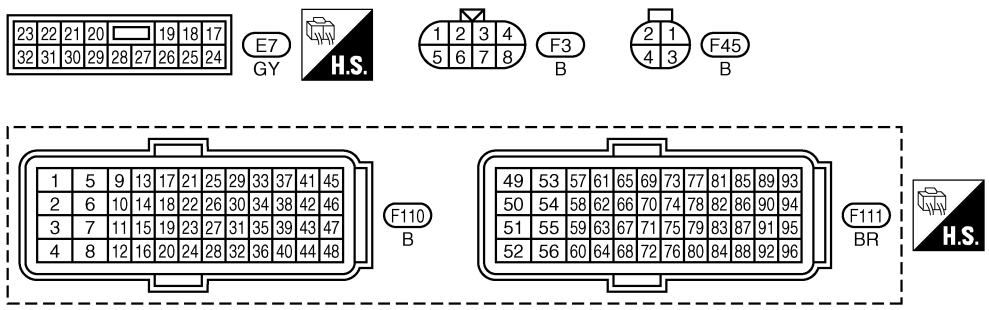
NBS0006V

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST



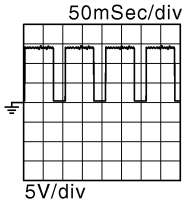
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B1) signal] or 80 [HO2S2 (B2) signal] and ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   A change of voltage should be more than 0.24V for 1 second during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.



7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 4th gear position (M/T).
   A change of voltage should be more than 0.24V for 1 second during this procedure.
8. If NG, go to EC-319, "Diagnostic Procedure" .

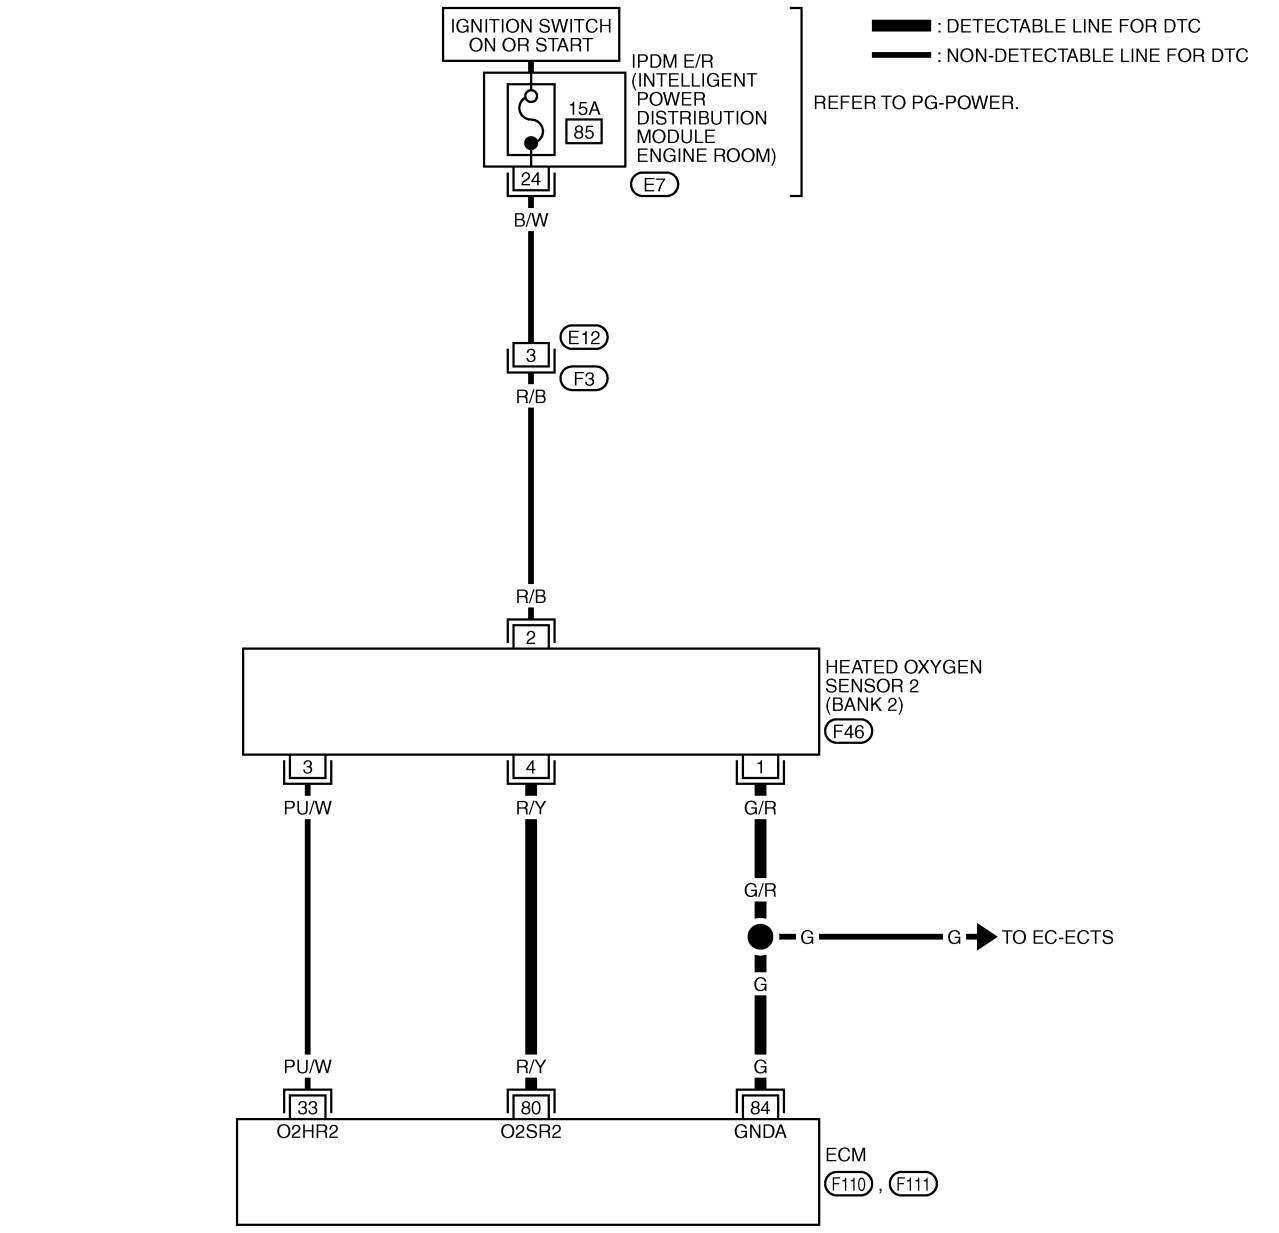
Wiring Diagram
BANK 1

NBS006UU

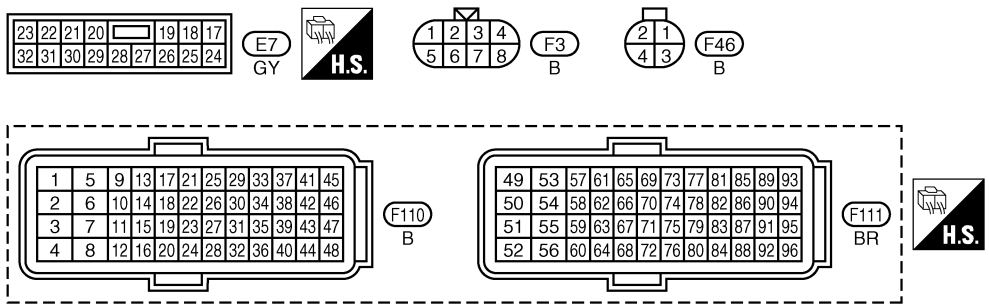


TBWT1634E

Specification data are reference values and are measured between each terminal and ground.



CAUTION:

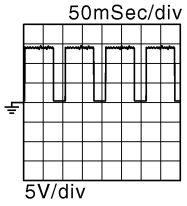


Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
17	P	Heated oxygen sensor 2 heater (bank 1)	**[Engine is running]** ● Engine speed: Below 3,600 rpm after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - 14V★  PBIB3545E
			[Ignition switch: ON] ● Engine stopped **[Engine is running]** ● Engine speed: Above 3,600 rpm	BATTERY VOLTAGE (11 - 14V)
76	W/R	Heated oxygen sensor 2 (bank 1)	**[Engine is running]** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - 1.0V
84	G	Sensor ground (Heated oxygen sensor 2, Engine coolant temperature sensor, Engine oil temperature sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V

BANK 2

EC-O2S2B2-01



TBWT1635E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
33	PU/W	Heated oxygen sensor 2 heater (bank 2)	**[Engine is running]** ● Engine speed: Below 3,600 rpm after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - 14V★  PBIB3545E
			[Ignition switch: ON] ● Engine stopped **[Engine is running]** ● Engine speed: Above 3,600 rpm	BATTERY VOLTAGE (11 - 14V)

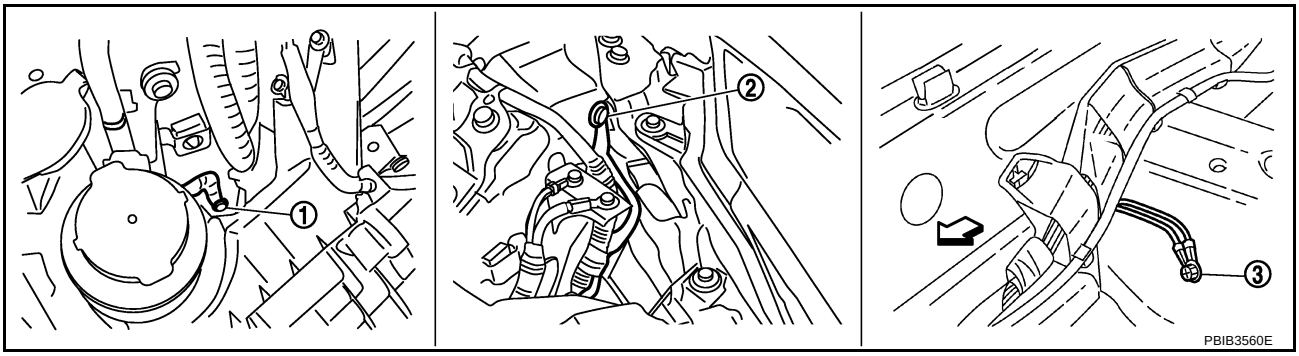
84	G	Sensor ground (Heated oxygen sensor 2, Engine coolant temperature sensor, Engine oil temperature sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



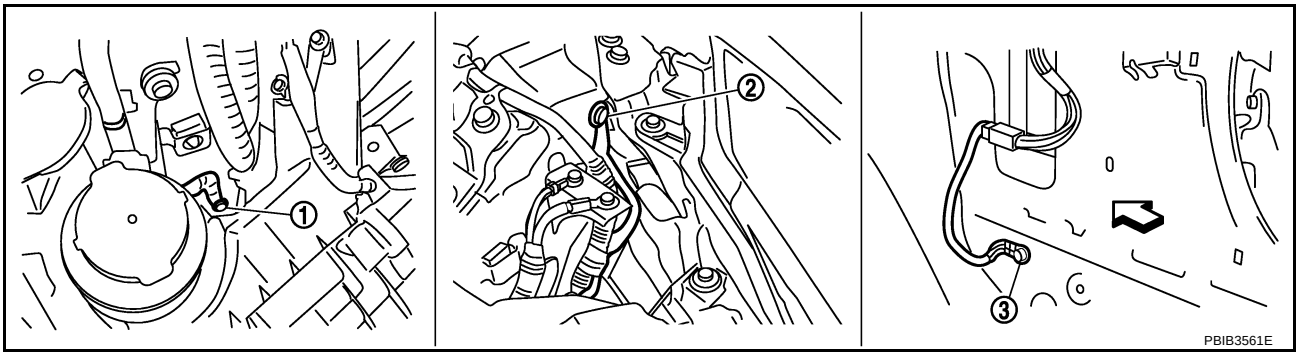
Diagnostic Procedure

NBS006UV

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

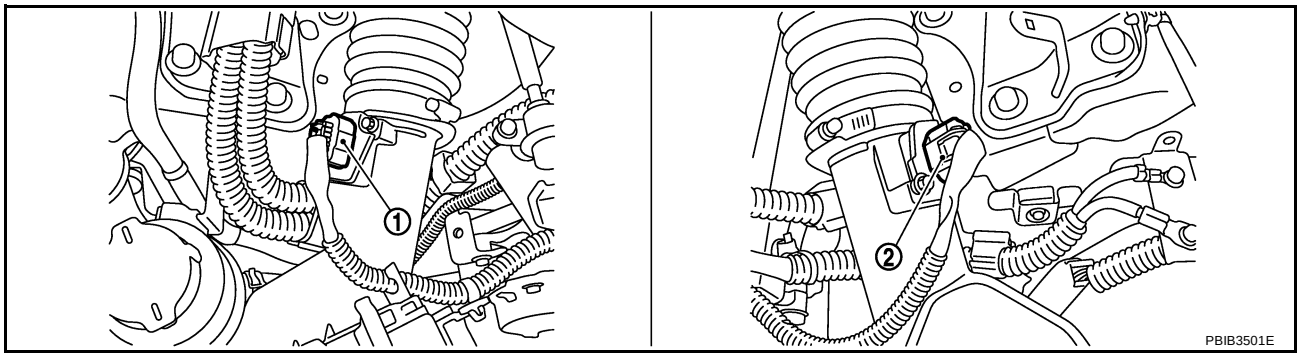
1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CLEAR THE SELF-LEARNING DATA

With CONSULT-III

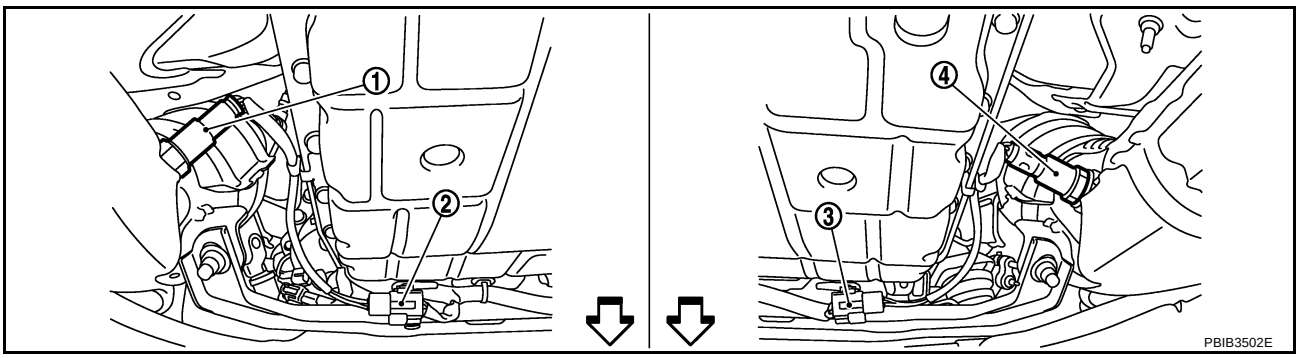
1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
   Is it difficult to start engine?

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector, and restart and run engine for at least 5 seconds at idle speed.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
5. Make sure DTC P0102 is displayed.
6. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to EC-324, "DTC P0171, P0174 FUEL INJECTION SYSTEM FUNCTION" or EC-334, "DTC P0172, P0175 FUEL INJECTION SYSTEM FUNCTION" .

No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.

1. Heated oxygen sensor 2 (bank 2)
2. Heated oxygen sensor 2 (bank 2) harness connector
3. Heated oxygen sensor 2 (bank 1)
4. Heated oxygen sensor 2 (bank 1) harness connector

⇦: Vehicle front

3. Disconnect ECM harness connector.
4. Check harness continuity between HO2S2 terminal 1 and ECM terminal 84. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal and HO2S2 terminal as follows. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0139	76	4	1
P0159	80	4	2

Continuity should exist.

2. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

DTC	Terminals		Bank
	ECM	Sensor	
P0139	76	4	1
P0159	80	4	2

Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-322, "Component Inspection" .

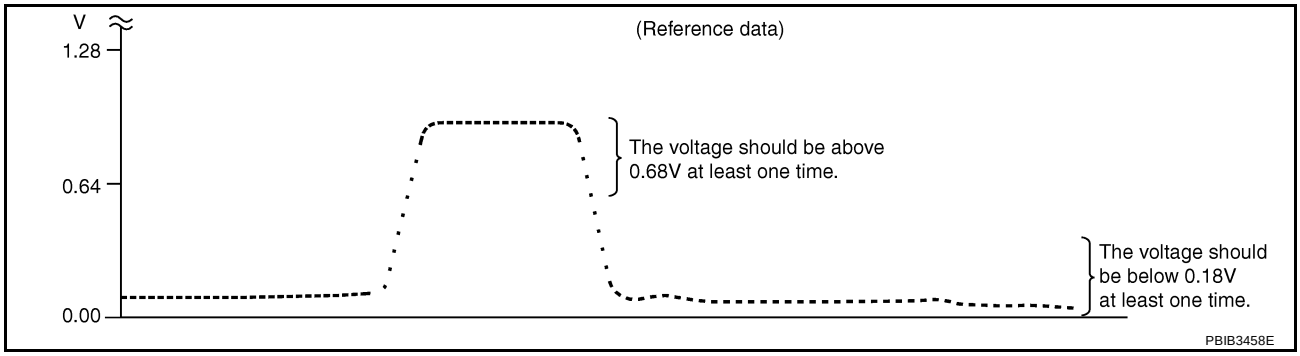
OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

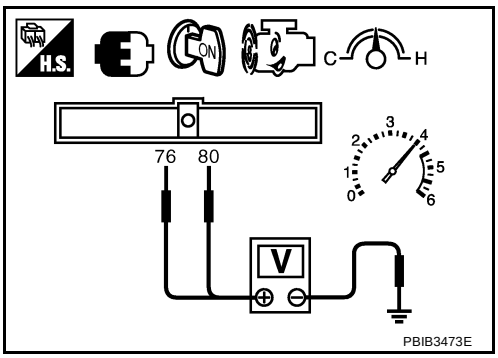
NBS006UW

HEATED OXYGEN SENSOR 2

With CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)/(B2)” as the monitor item with CONSULT-III.
7. Check “HO2S2 (B1)/(B2)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

“HO2S2 (B1)/(B2)” should be above 0.68V at least once when the “FUEL INJECTION” is +25%.
“HO2S2 (B1)/(B2)” should be below 0.18V at least once when the “FUEL INJECTION” is −25%.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-III

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 76 [HO2S2 (B1) signal] or 80 [HO2S2 (B2) signal] and ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.68V at least once during this procedure.
If the voltage is above 0.68V at step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 4th gear position (M/T).
The voltage should be below 0.18V at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.

CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

NBS006UX

HEATED OXYGEN SENSOR 2

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

DTC P0171, P0174 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

On Board Diagnosis Logic

NBS00070

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the air fuel ratio (A/F) sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.
In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0171 0171 (Bank 1)	Fuel injection system too lean	● Fuel injection system does not operate properly. ● The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.)	● Intake air leaks ● Air fuel ratio (A/F) sensor 1 ● Fuel injector ● Exhaust gas leaks ● Incorrect fuel pressure ● Lack of fuel ● Mass air flow sensor ● Incorrect PCV hose connection
P0174 0174 (Bank 2)			

DTC Confirmation Procedure

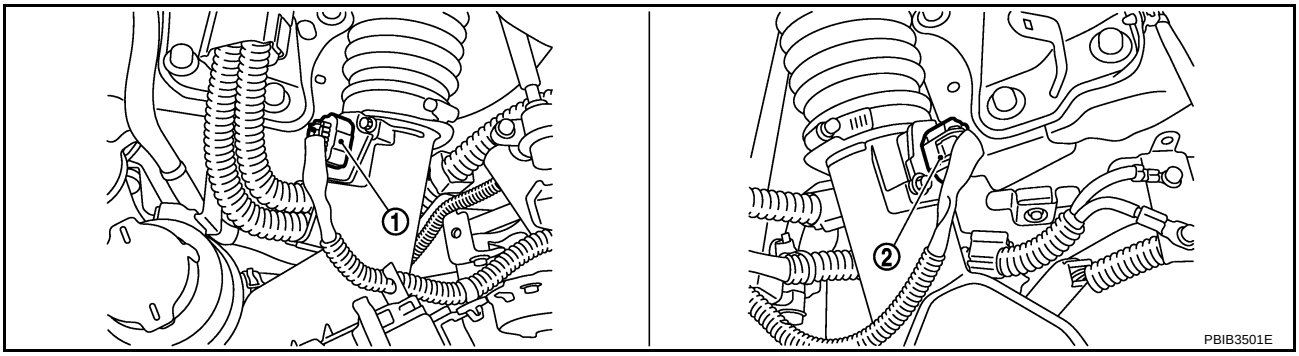
NBS00071

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
4. Clear the self-learning control coefficient by touching “CLEAR”.
5. Start engine again and le it idle for at least 10 minutes.
6. Check 1st trip DTC.
   The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to EC-330, "Diagnostic Procedure" .

   NOTE:
   If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.



a. Turn ignition switch OFF and wait at least 10 seconds.
b. Start engine and select “DATA MONITOR” mode with CONSULT-III.
c. Drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes.
   Refer to the table below.
   Hold the accelerator pedal as steady as possible.
   The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal. If engine starts, go to EC-330, "Diagnostic Procedure" . If engine does not start, check exhaust and intake air leak visually.

WITH GST

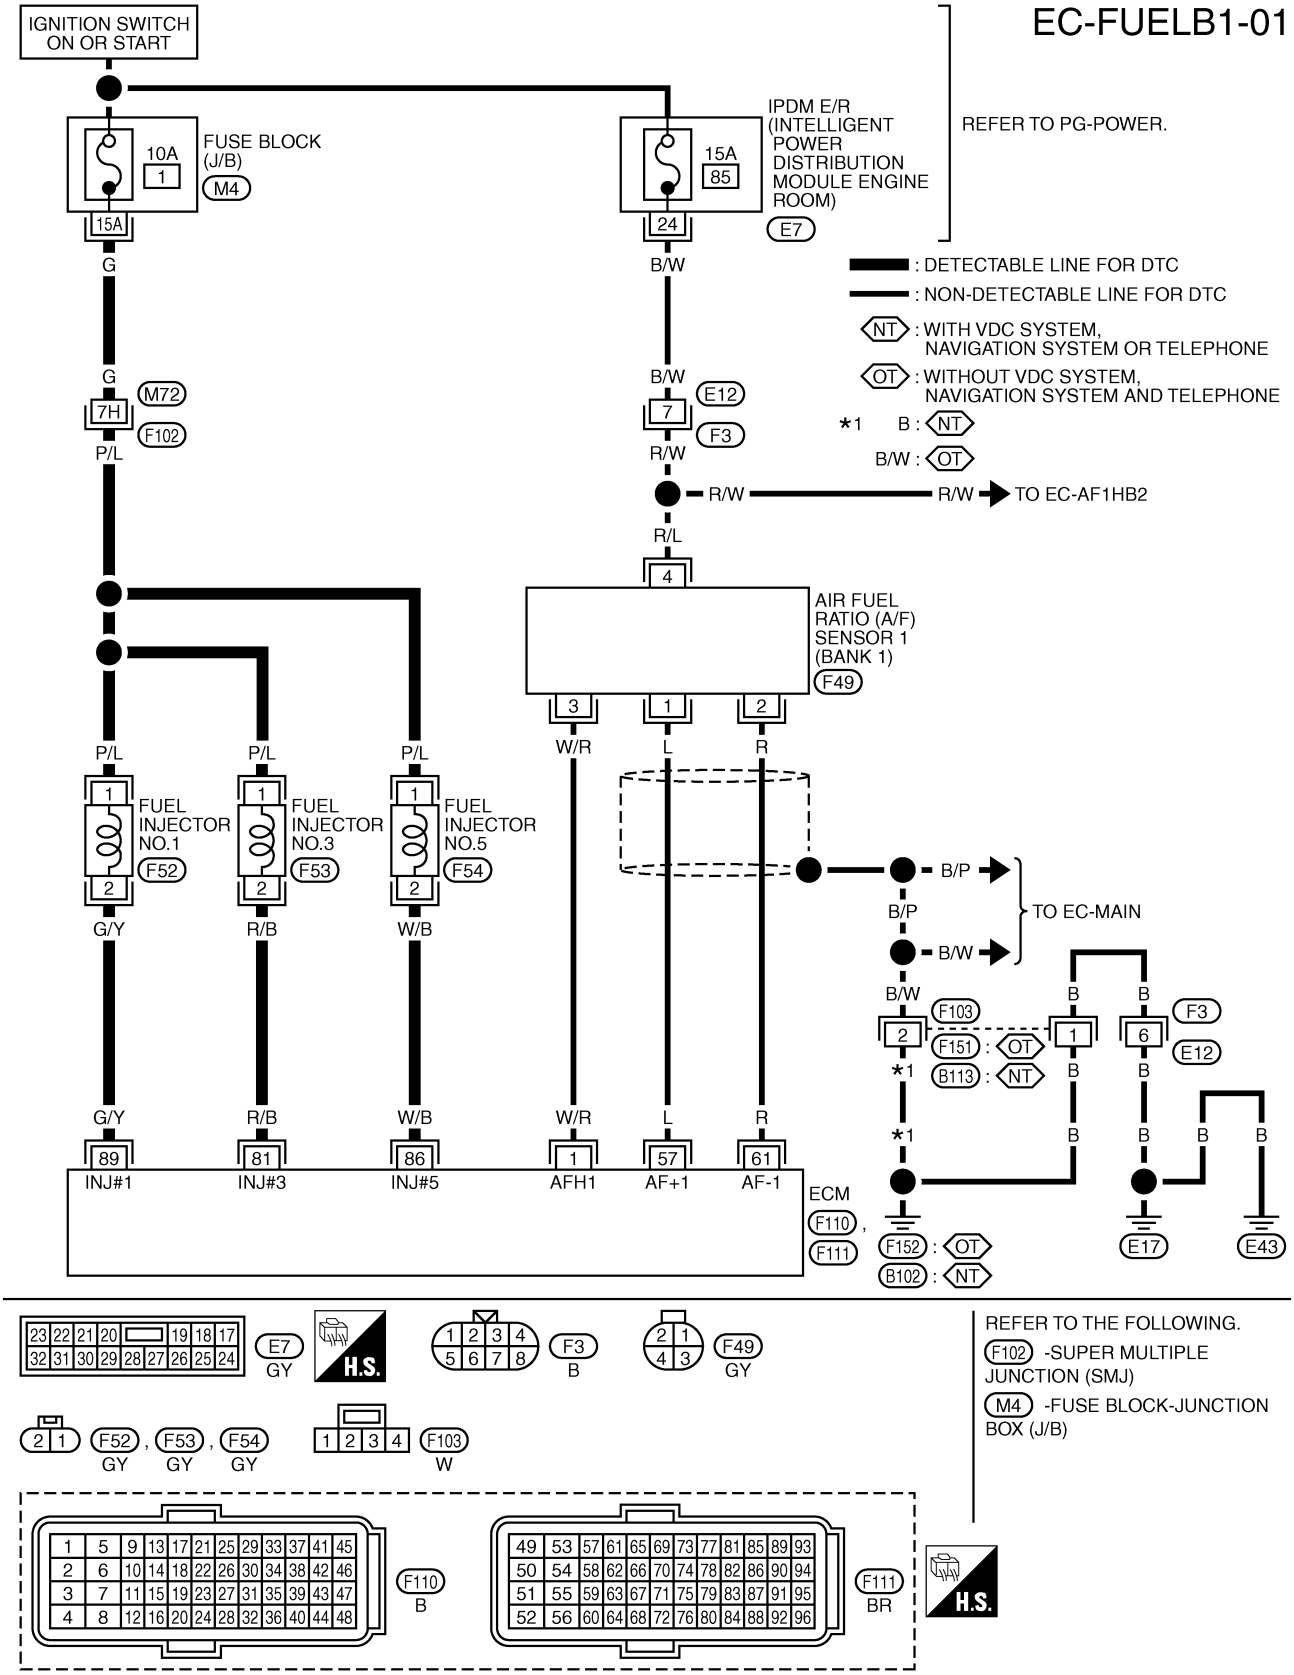
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Disconnect mass air flow sensor (bank 1) harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Select Service $03 with GST. Make sure DTC P0102 is detected.
7. Select Service $04 with GST and erase the DTC P0102.
8. Start engine again and let it idle for at least 10 minutes.
9. Select Service $07 with GST. The 1st trip DTC P0171 or P0174 should be detected at this stage, if a malfunction exists. If so, go to EC-330, "Diagnostic Procedure" .

   NOTE:
   If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

a. Turn ignition switch OFF and wait at least 10 seconds.
b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for 10 minutes. Refer to the table below.
   Hold the accelerator pedal as steady as possible.
   The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.



Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

10. If it is difficult to start engine at step 8, the fuel injection system has a malfunction.
11. Crank engine while depressing accelerator pedal. If engine starts, go to EC-330, "Diagnostic Procedure" . If engine does not start, check exhaust and intake air leak visually.

Diagnostic Procedure

NBS00073

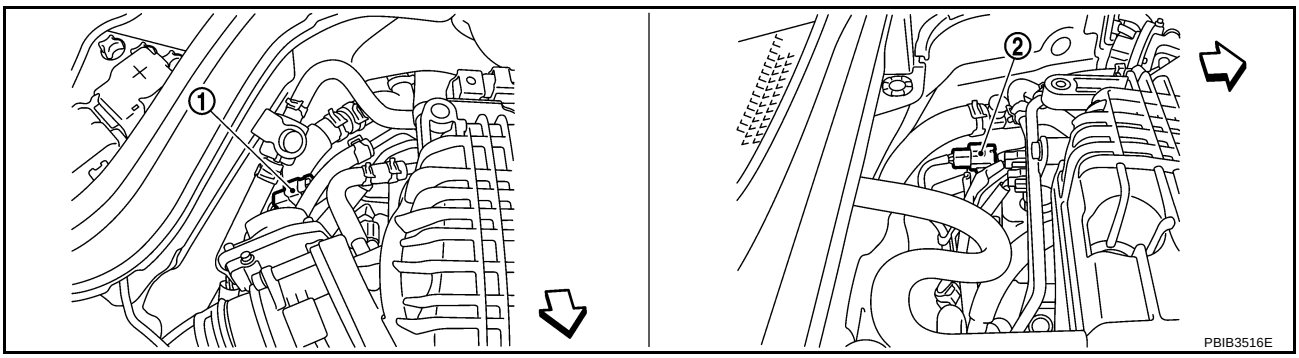
1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK FOR INTAKE AIR LEAK



1. Listen for an intake air leak after the mass air flow sensor.
2. Check PCV hose connection.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.

1. A/F sensor 1 harness connector (bank 1)
2. A/Fsensor 1 harness connector (bank 2)

⇦: Vehicle front

3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank 1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

5. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

6. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Install fuel pressure gauge and check fuel pressure. Refer to EC-80, "FUEL PRESSURE CHECK" .

At idling: Approximately 350 kPa (3.57 kg/cm^2 , 51 psi)

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit (Refer to EC-691, "FUEL PUMP" .)
- Fuel pressure regulator (Refer to EC-80, "FUEL PRESSURE CHECK")
- Fuel lines (Refer to FL-3, "Checking Fuel Lines" .)
- Fuel filter for clogging

>> Repair or replace.

6. CHECK MASS AIR FLOW SENSOR

With CONSULT-III

1. Install all removed parts.
2. Start engine and warm it up normal temperature.
3. Check “MASS AIR FLOW” in “DATA MONITOR” mode with CONSULT-III.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

With GST

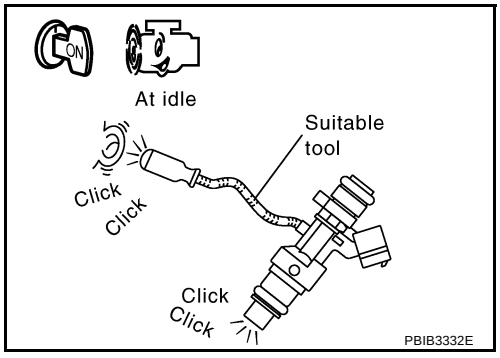
1. Install all removed parts.
2. Start engine and warm it up normal temperature.
3. Check mass air flow sensor signal in Service $01 with GST.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

OK or NG

OK >> GO TO 7.
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to EC-197, "DTC P0101, P010B MAF SENSOR" .

7. CHECK FUNCTION OF FUEL INJECTOR



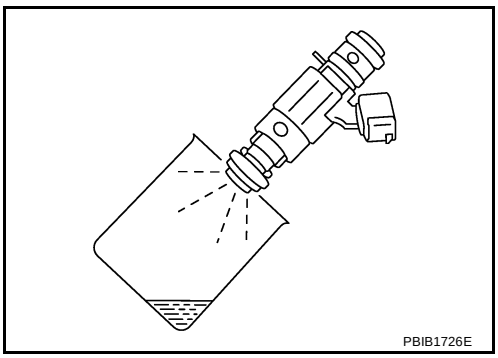
With CONSULT-III

1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-III.
3. Make sure that each circuit produces a momentary engine speed drop.

Without CONSULT-III

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

Clickng sound should be heard.



OK or NG

OK >> GO TO 8.
NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to EC-686, "FUEL INJECTOR" .

8. CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect all fuel injector harness connectors.
4. Remove fuel injector gallery assembly. Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all fuel injectors connected to fuel injector gallery.
5. For DTC P0171, reconnect fuel injector harness connectors on bank 1.
   For DTC P0174, reconnect fuel injector harness connectors on bank 2.
6. Disconnect all ignition coil harness connectors.
7. Prepare pans or saucers under each fuel injector.
8. Crank engine for about 3 seconds.
   For DTC P0171, make sure that fuel sprays out from fuel injectors on bank 1.
   For DTC P0174, make sure that fuel sprays out from fuel injectors on bank 2.

Fuel should be sprayed evenly for each fuel injector.

OK or NG

OK >> GO TO 9.
NG >> Replace fuel injectors from which fuel does not spray out. Always replace O-ring with new ones.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0172, P0175 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

On Board Diagnosis Logic

NBS00074

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the air fuel ratio (A/F) sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.
In case the amount of the compensation value is extremely large (The actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and lights up the MIL (2 trip detection logic).

Sensor	Input signal to ECM	ECM function	Actuator
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injector

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0172 0172 (Bank 1) P0175 0175 (Bank 2)	Fuel injection system too rich	● Fuel injection system does not operate properly. ● The amount of mixture ratio compensation is too large. (The mixture ratio is too rich.)	● Air fuel ratio (A/F) sensor 1 ● Fuel injector ● Exhaust gas leaks ● Incorrect fuel pressure ● Mass air flow sensor

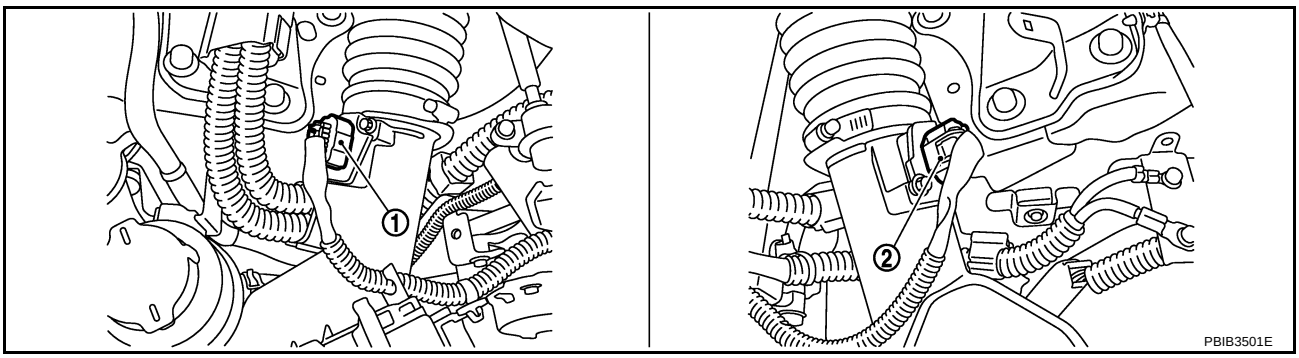
DTC Confirmation Procedure

NBS00075

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
4. Clear the self-learning control coefficient by touching “CLEAR”.
5. Start engine again and let it idle for at least 10 minutes.
6. Check 1st trip DTC.
   The 1st trip DTC P0172, P0175 should be detected at this stage, if a malfunction exists.
   If so, go to EC-340, "Diagnostic Procedure" .
   NOTE:
   If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.



a. Turn ignition switch OFF and wait at least 10 seconds.
b. Start engine and select “DATA MONITOR” mode with CONSULT-III.
c. Drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time.
   Refer to the table below.
   Hold the accelerator pedal as steady as possible.
   The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal.
   If engine starts, go to EC-340, "Diagnostic Procedure" . If engine does not start, remove ignition plugs and check for fouling, etc.

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Disconnect mass air flow sensor (bank 1) harness connector. Then restart and run engine for at least 5 seconds at idle speed.

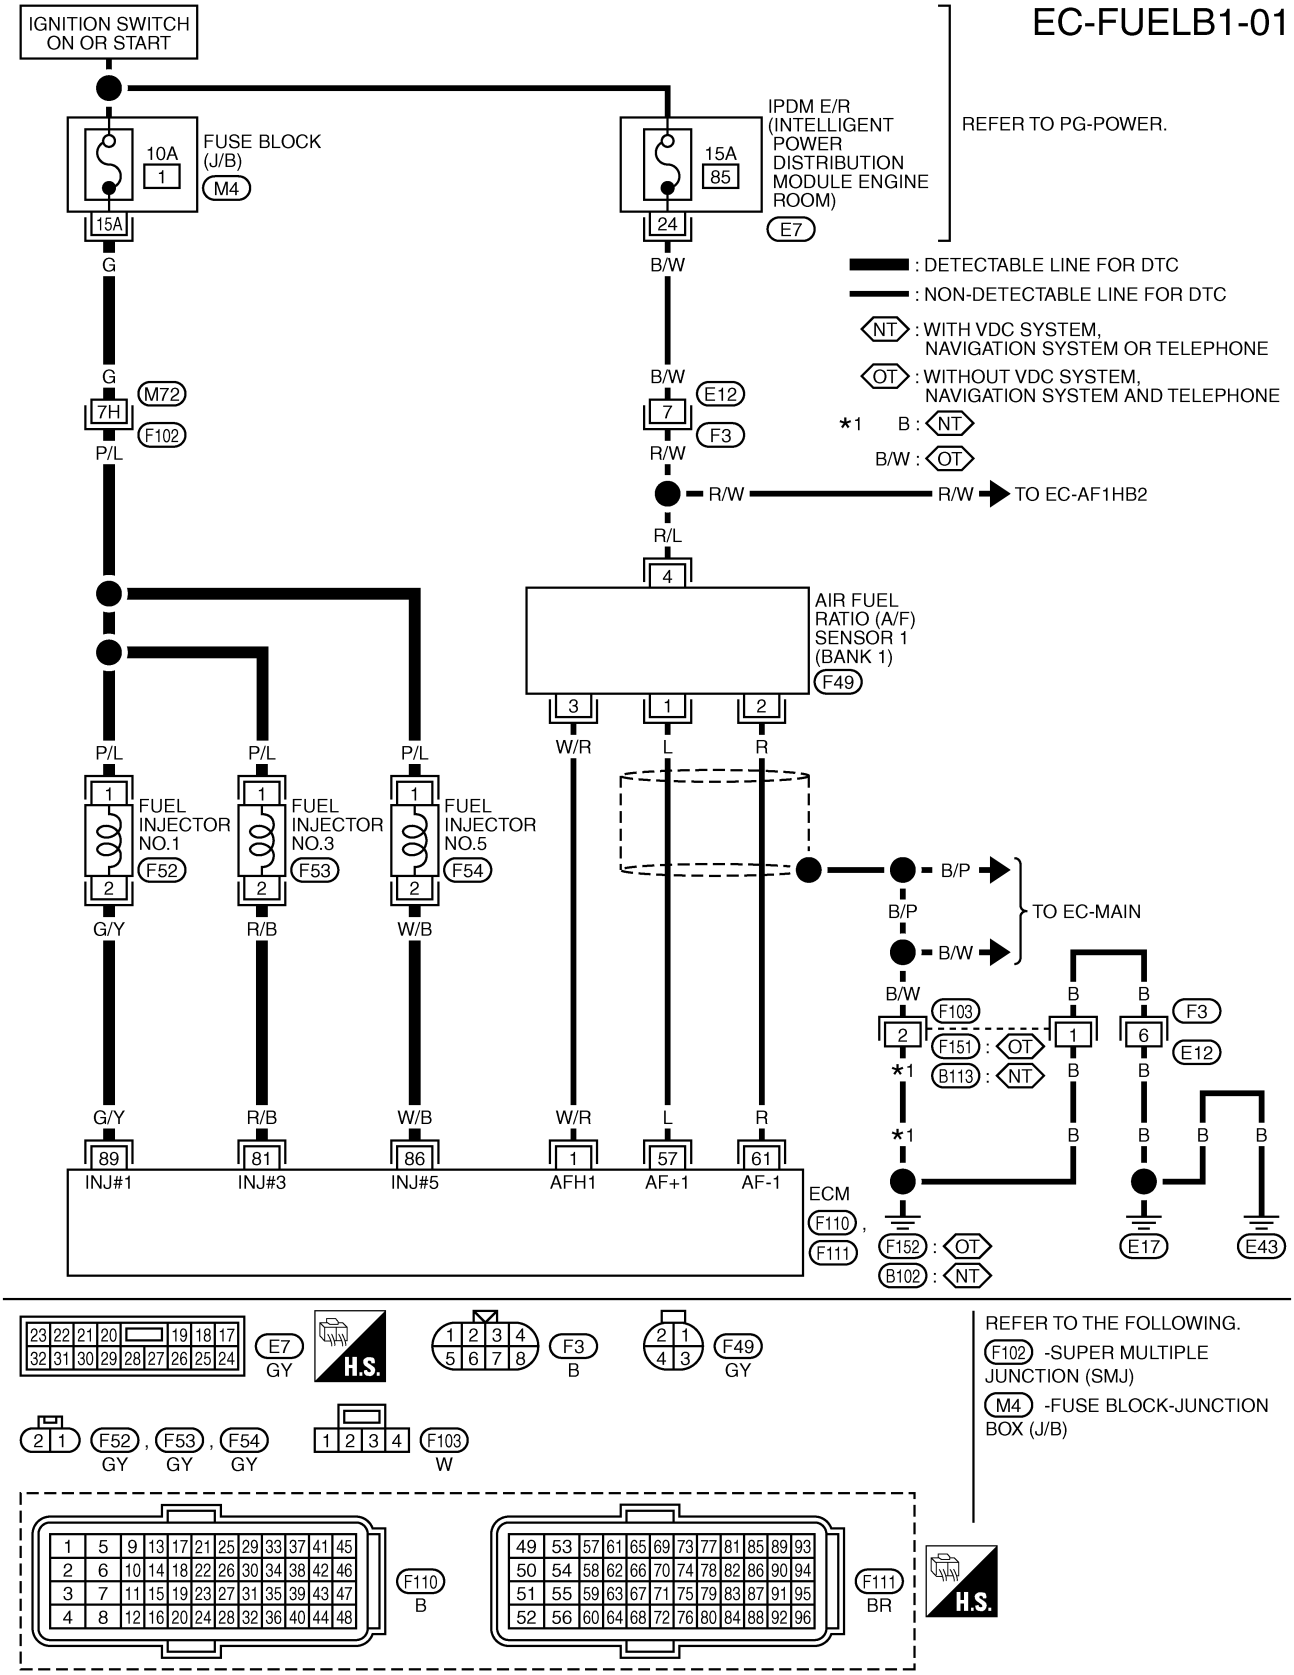
1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
5. Select Service $03 with GST. Make sure DTC P0102 is detected.
6. Select Service $04 with GST and erase the DTC P0102.
7. Start engine again and let it idle for at least 10 minutes.
8. Select Service $07 with GST. The 1st trip DTC P0172 or P0175 should be detected at this stage, if a malfunction exists. If so, go to EC-340, "Diagnostic Procedure" .

   NOTE:
   If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

a. Turn ignition switch OFF and wait at least 10 seconds.

b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.
   Hold the accelerator pedal as steady as possible.
   The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

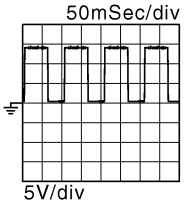


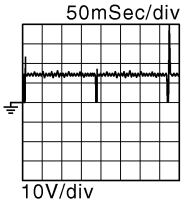
Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

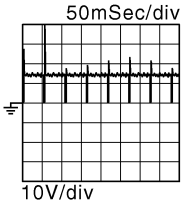
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal.
    If engine starts, go to EC-340, "Diagnostic Procedure" . If engine does not start, remove ignition plugs and check for fouling, etc.

Wiring Diagram

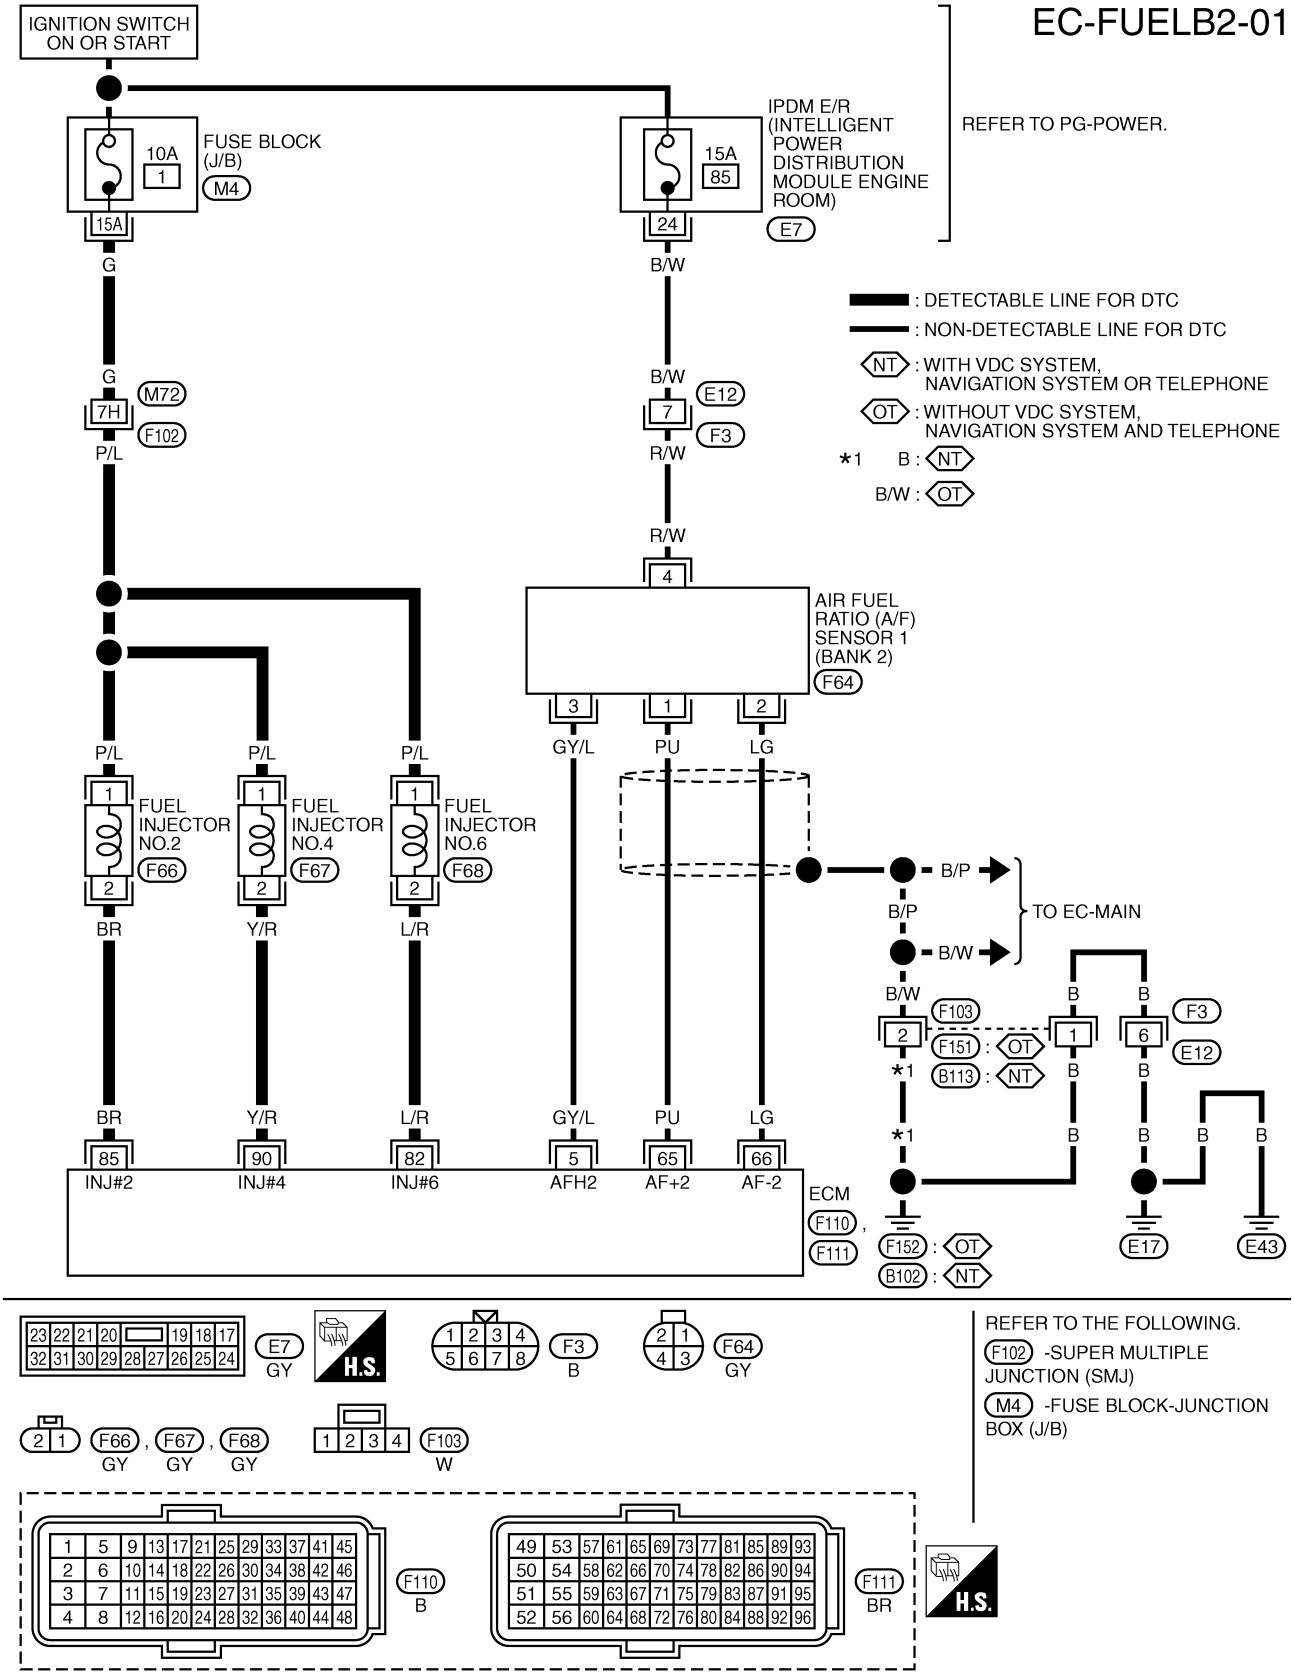
NBS006UY







BANK 1



TBWT1636E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

Diagnostic Procedure

NBS00077

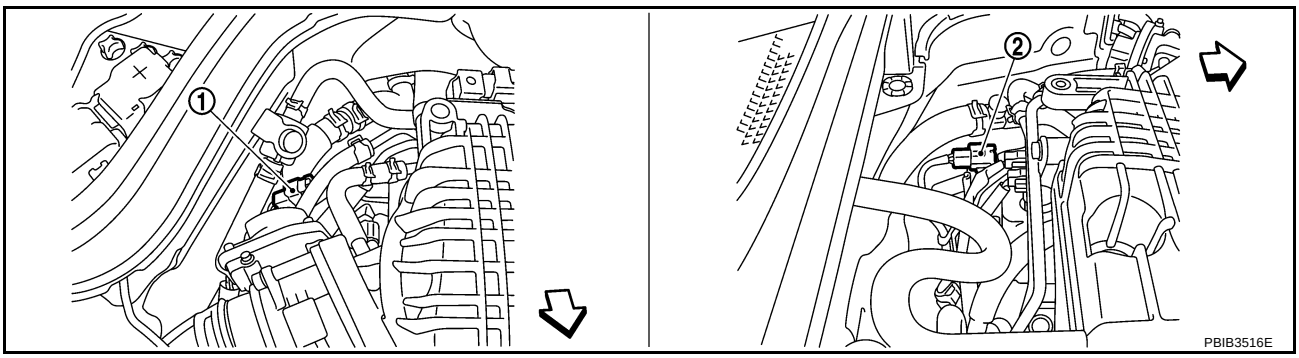
1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst 1.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK FOR INTAKE AIR LEAK



Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect corresponding A/F sensor 1 harness connector.

1. A/F sensor 1 harness connector (bank 1)
2. A/F sensor 1 harness connector (bank 2)

⇦: Vehicle front

3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank 1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

5. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

6. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Install fuel pressure gauge and check fuel pressure. Refer to EC-80, "FUEL PRESSURE CHECK" .

At idling: Approximately 350 kPa (3.57 kg/cm^2 , 51 psi)

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Fuel pump and circuit (Refer to EC-691, "FUEL PUMP" .)
- Fuel pressure regulator (Refer to EC-80, "FUEL PRESSURE CHECK" .)

>> Repair or replace.

6. CHECK MASS AIR FLOW SENSOR

With CONSULT-III

1. Install all removed parts.
2. Start engine and warm it up to normal temperature.
3. Check “MASS AIR FLOW” in “DATA MONITOR” mode with CONSULT-III.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

With GST

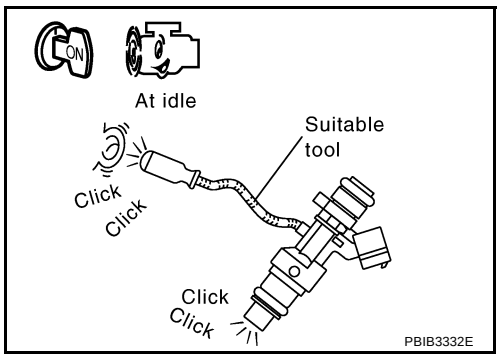
1. Install all removed parts.
2. Start engine and warm it up to normal temperature.
3. Check mass air flow sensor signal in Service $01 with GST.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

OK or NG

OK >> GO TO 7.
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to EC-197, "DTC P0101, P010B MAF SENSOR" .

7. CHECK FUNCTION OF FUEL INJECTOR



With CONSULT-III

1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-III.
3. Make sure that each circuit produces a momentary engine speed drop.

Without CONSULT-III

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

Clickng sound should be heard.

OK or NG

OK >> GO TO 8.
NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to EC-686, "FUEL INJECTOR" .

8. CHECK FUEL INJECTOR

1. Remove fuel injector assembly. Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all fuel injectors connected to fuel injector gallery.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect all fuel injector harness connectors.
4. Disconnect all ignition coil harness connectors.
5. Prepare pans or saucers under each fuel injectors.
6. Crank engine for about 3 seconds.
   Make sure fuel does not drip from fuel injector.

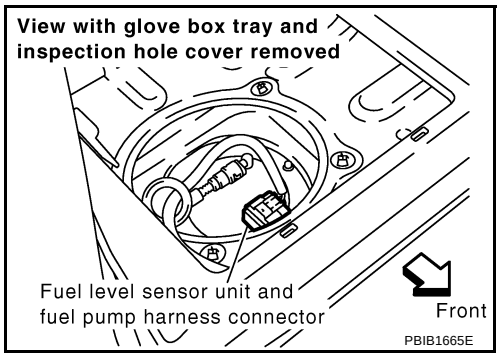
OK or NG

OK (Does not drip.)>>GO TO 9.
NG (Drips.)>>Replace the fuel injectors from which fuel is dripping. Always replace O-ring with new one.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

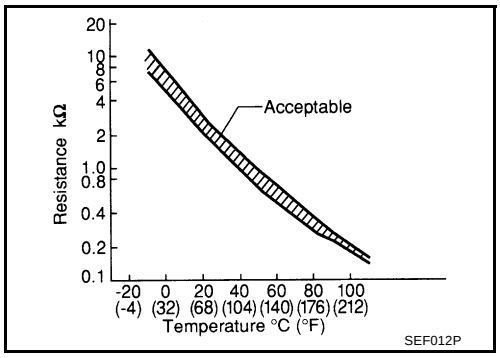


DTC P0181 FTT SENSOR

PFP:22630

Component Description

NBS00078



The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

*: This data is reference values and is measured between ECM terminal 106 (Fuel tank temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS00079

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0181 0181	Fuel tank temperature sensor circuit range/ performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.	● Harness or connectors (The sensor circuit is open or shorted) ● Fuel tank temperature sensor

DTC Confirmation Procedure

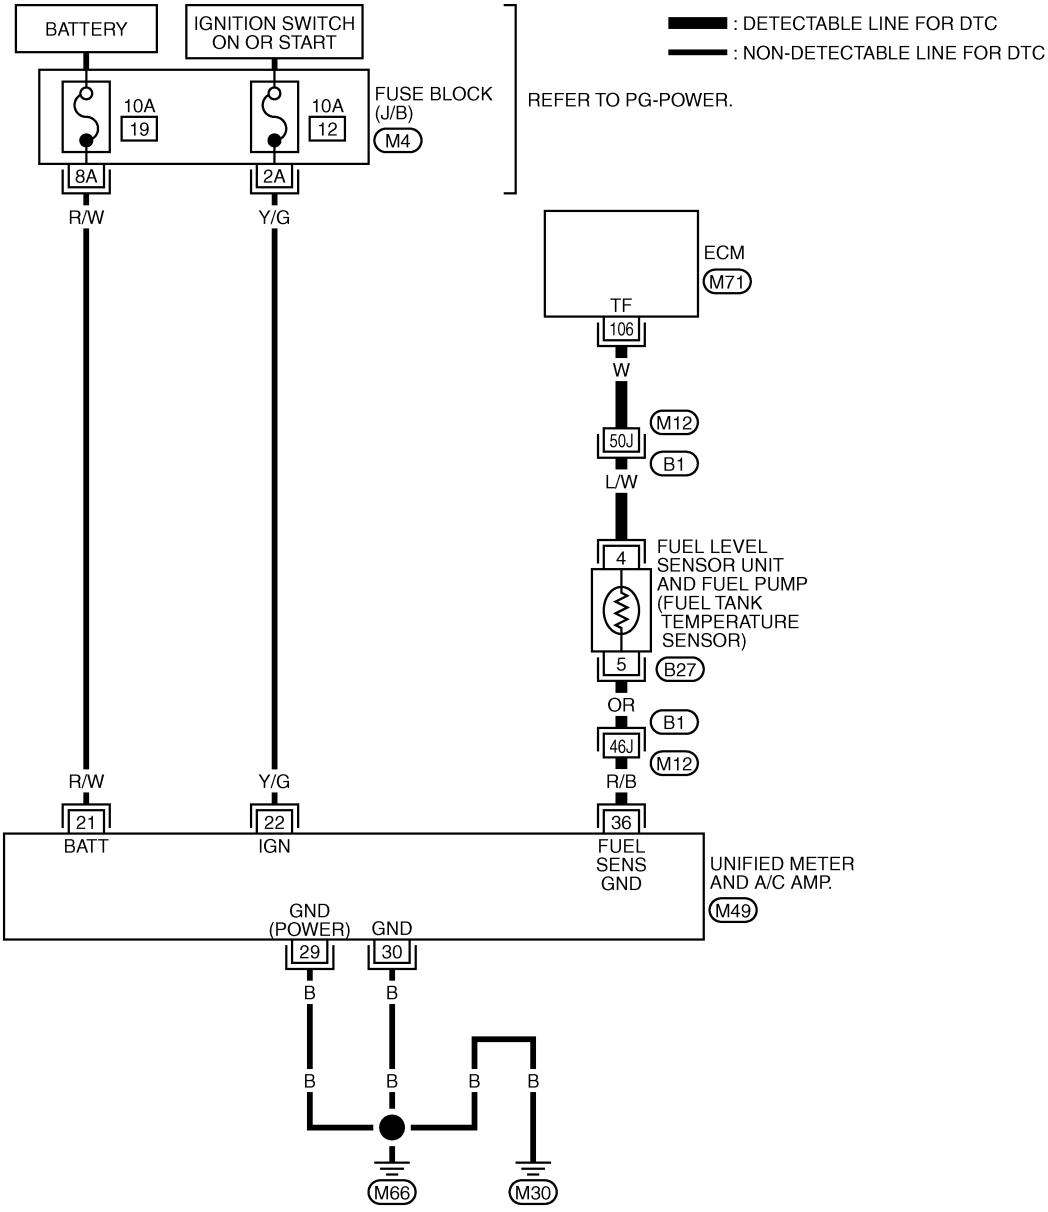
NBS0007A

NOTE:

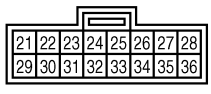
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

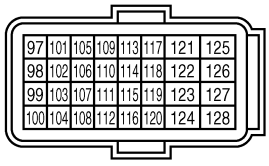
1. Turn ignition switch ON and wait at least 10 seconds.
2. Check 1st trip DTC.
   If 1st trip DTC is detected, go to EC-346, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to following step.
3. Select “DATA MONITOR” mode with CONSULT-III.
4. Check “COOLAN TEMP/S” value.
   If “COOLAN TEMP/S” is less than 60°C (140°F), the result will be OK.
   If “COOLAN TEMP/S” is above 60°C (140°F), go to the following step.
5. Cool engine down until “COOLAN TEMP/S” is less than 60°C (140°F).
6. Wait at least 10 seconds.
7. Check 1st trip DTC.
8. If 1st trip DTC is detected, go to EC-346, "Diagnostic Procedure" .



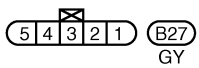
WITH GST



Follow the procedure “WITH CONSULT-III” above.



Wiring Diagram



NBS0007B

EC-FTTS-01

REFER TO THE FOLLOWING.

B1 -SUPER MULTIPLE JUNCTION (SMJ)

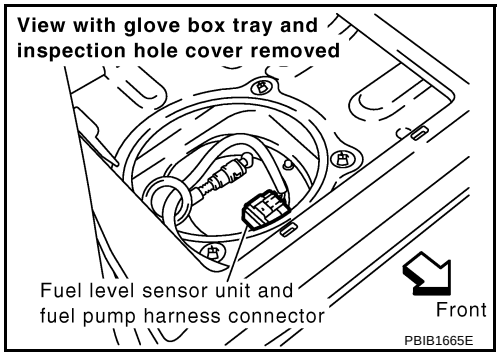
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1640E

Diagnostic Procedure

NBS0007C

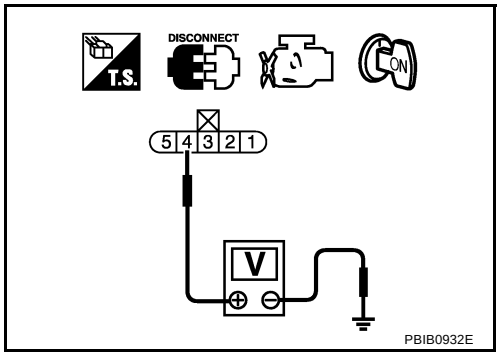
1. CHECK DTC WITH “UNIFIED METER AND A/C AMP.”



Refer to DI-47, "SELF-DIAGNOSTIC RESULTS" .

OK or NG

OK >> GO TO 2.
NG >> Go to DI-19, "Fuel Level Sensor Signal Inspection" .



2. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect “fuel level sensor unit and fuel pump” harness connector.
2. Turn ignition switch ON.

3. Check voltage between “fuel level sensor unit and fuel pump” terminal 4 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M12
- Harness for open or short between ECM and “fuel level sensor unit and fuel pump”

>> Repair open circuit or short to ground or short to power in harness or connector.

4. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect “unified meter and A/C amp.” harness connector M49.
3. Check harness continuity between “fuel level sensor unit and fuel pump” terminal 5 and “unified meter and A/C amp.” terminal 36. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M12
- Harness for open or short between “fuel level sensor unit and fuel pump” and “unified meter and A/C amp.”

>> Repair open circuit or short to ground or short to power in harness or connector.

6. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to EC-347, "Component Inspection" .

OK or NG

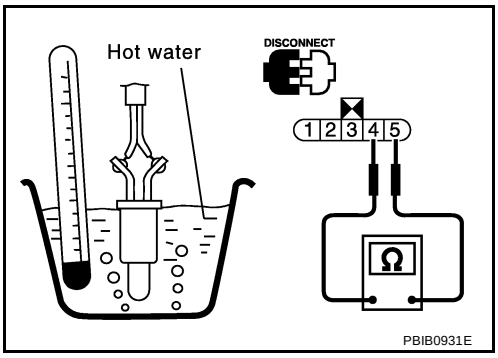
OK >> GO TO 7.
NG >> Replace fuel level sensor unit.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



NBS0007D

FUEL TANK TEMPERATURE SENSOR

1. Remove fuel level sensor unit.
2. Check resistance between “fuel level sensor unit and fuel pump” terminals 4 and 5 by heating with hot water as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

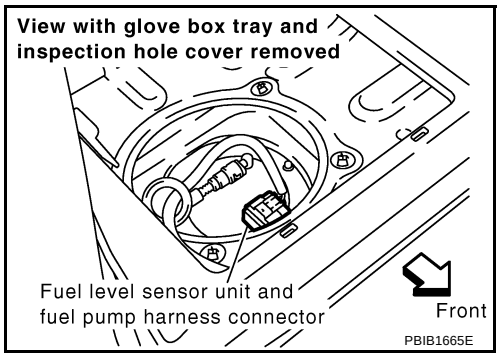
3. If NG, replace fuel level sensor unit.

Removal and Installation

NBS0007E

FUEL TANK TEMPERATURE SENSOR

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

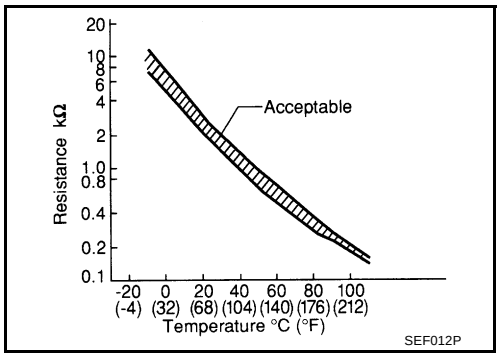


DTC P0182, P0183 FTT SENSOR

PFP:22630

Component Description

NBS0007F



The fuel tank temperature sensor is used to detect the fuel temperature inside the fuel tank. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the fuel temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Fluid temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.3 - 2.7
50 (122)	2.2	0.79 - 0.90

*: This data is reference values and is measured between ECM terminal 106 (Fuel tank temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS0007G

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0182 0182	Fuel tank temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Fuel tank temperature sensor
P0183 0183	Fuel tank temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

DTC Confirmation Procedure

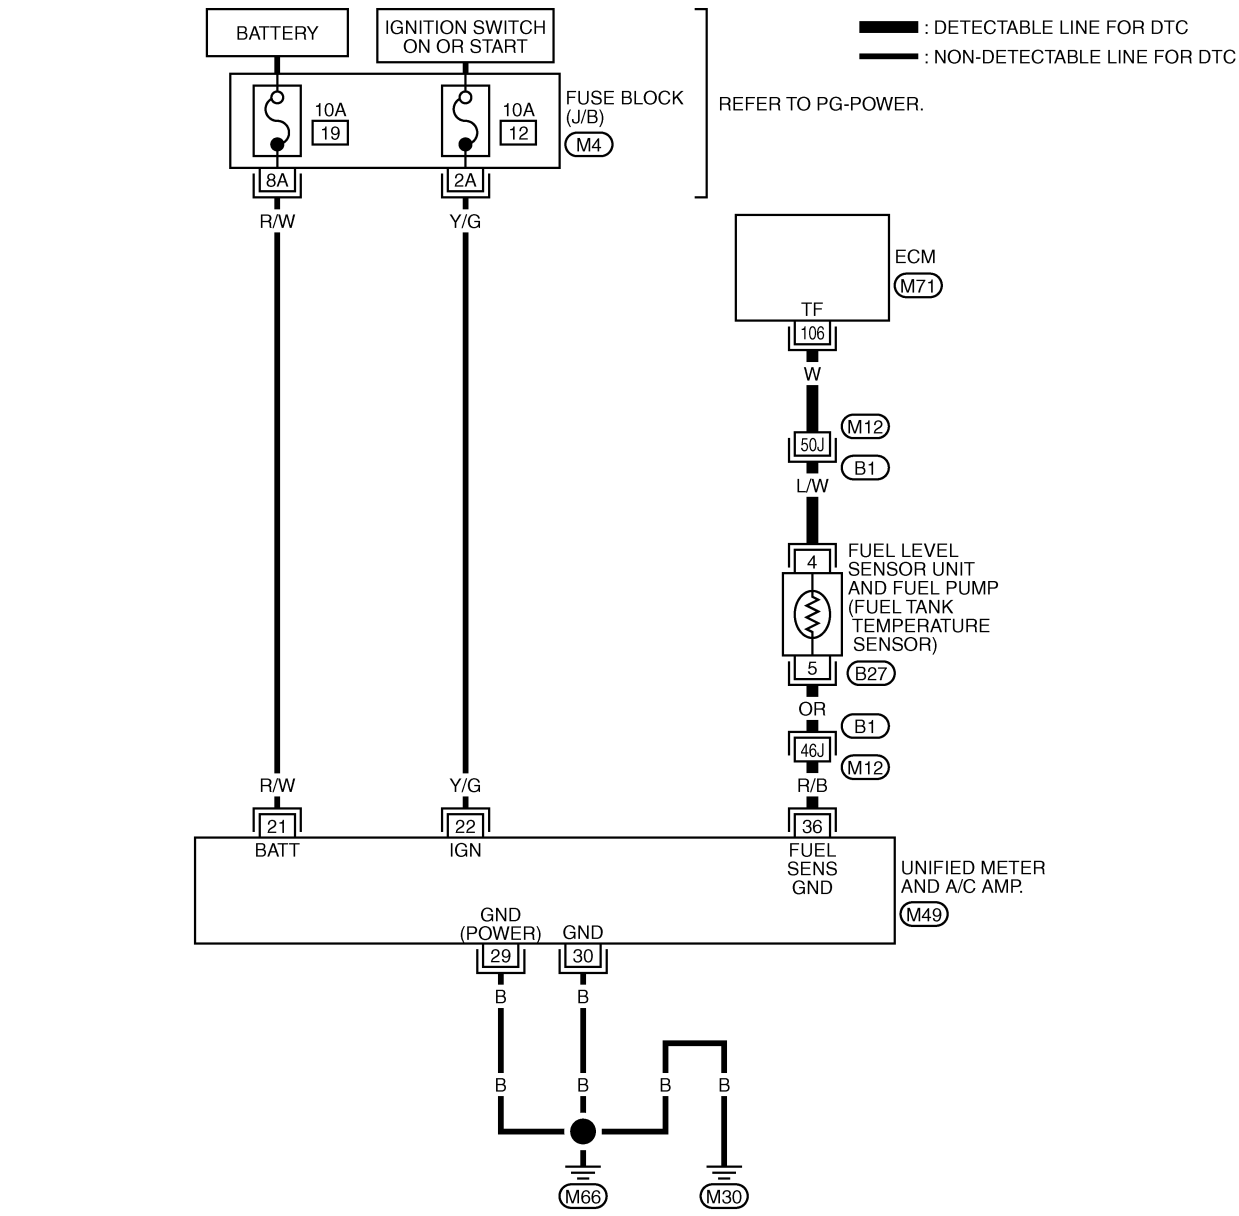
NBS0007H

NOTE:

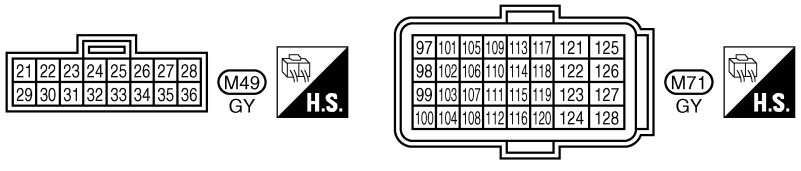
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

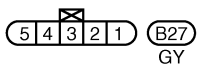
1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-350, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.



Wiring Diagram

NBS0007I

EC-FTTS-01

REFER TO THE FOLLOWING.

B1 -SUPER MULTIPLE JUNCTION (SMJ)

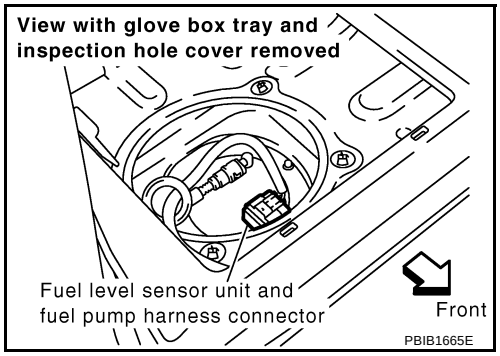
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1640E

Diagnostic Procedure

NBS0007J

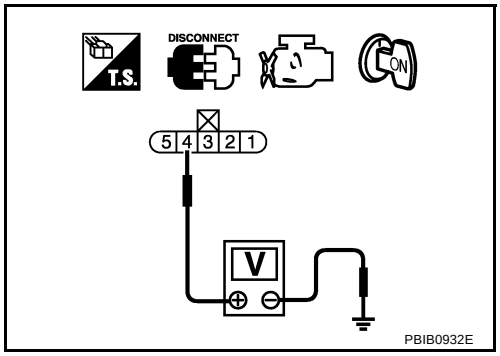
1. CHECK DTC WITH “UNIFIED METER AND A/C AMP.”



Refer to DI-47, "SELF-DIAGNOSTIC RESULTS" .

OK or NG

OK >> GO TO 2.
NG >> Go to DI-19, "Fuel Level Sensor Signal Inspection" .



2. CHECK FUEL TANK TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect “fuel level sensor unit and fuel pump” harness connector.
2. Turn ignition switch ON.

3. Check voltage between “fuel level sensor unit and fuel pump” terminal 4 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M12
- Harness for open or short between ECM and “fuel level sensor unit and fuel pump”

>> Repair open circuit or short to ground or short to power in harness or connector.

4. CHECK FUEL TANK TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect “unified meter and A/C amp.” harness connector M49.
3. Check harness continuity between “fuel level sensor unit and fuel pump” terminal 5 and “unified meter and A/C amp.” terminal 36. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors B1, M12
- Harness for open or short between “fuel level sensor unit and fuel pump” and “unified meter and A/C amp.”

>> Repair open circuit short to ground or short to power in harness or connector.

6. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to EC-347, "Component Inspection" .

OK or NG

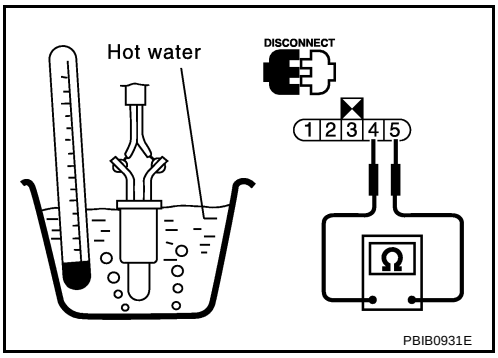
OK >> GO TO 7.
NG >> Replace fuel level sensor unit.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



NBS0007K

FUEL TANK TEMPERATURE SENSOR

1. Remove fuel level sensor unit.
2. Check resistance between “fuel level sensor unit and fuel pump” terminals 4 and 5 by heating with hot water as shown in the figure.

Temperature °C (°F)	Resistance kΩ
20 (68)	2.3 - 2.7
50 (122)	0.79 - 0.90

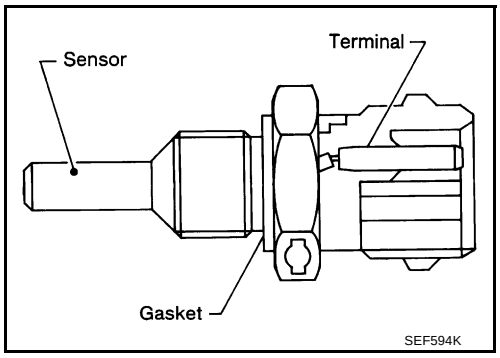
3. If NG, replace fuel level sensor unit.

Removal and Installation

NBS0007L

FUEL TANK TEMPERATURE SENSOR

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

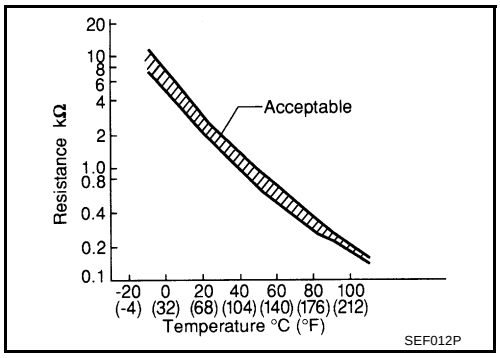


DTC P0196 EOT SENSOR

PFP:22630

Component Description

NBS006TK



The engine oil temperature sensor is used to detect the engine oil temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine oil temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

< Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260
110 (230)	0.6	0.143 - 0.153

*: This data is reference values and is measured between ECM terminal 78 (Engine oil temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS006TL

NOTE:

If DTC P0196 is displayed with P0197 or P0198, first perform the trouble diagnosis for DTC P0197 or P0198. Refer to EC-356, "DTC P0197, P0198 EOT SENSOR" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0196 0196	Engine oil temperature sensor range/performance	Rationally incorrect voltage from the sensor is sent to ECM, compared with the voltage signals from engine coolant temperature sensor and intake air temperature sensor.	● Harness or connectors (The sensor circuit is open or shorted) ● Engine oil temperature sensor

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Engine oil temperature sensor	Exhaust valve timing control does not function.

DTC Confirmation Procedure

NBS006TM

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

WITH CONSULT-III

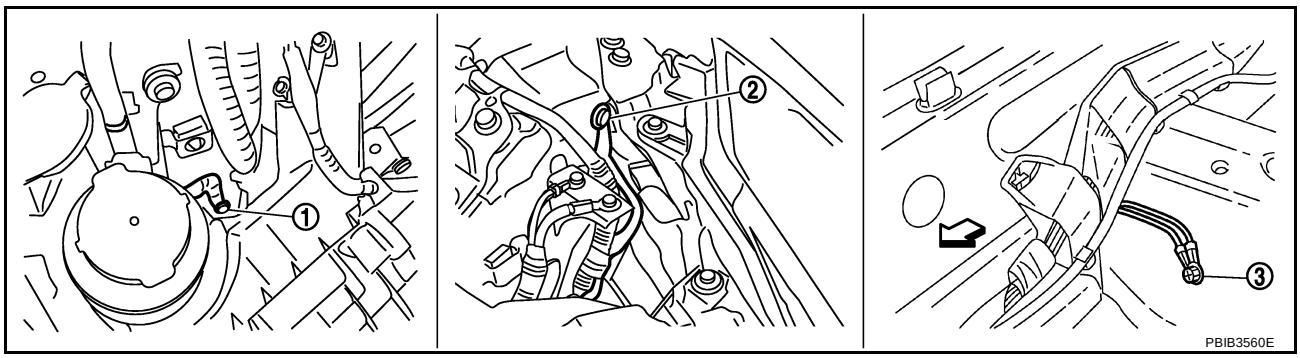
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and let it idle for 5 minutes and 10 seconds.
4. Check 1st trip DTC.
   If 1st trip DTC is detected, go to EC-354, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to following steps.
5. Select “DATA MONITOR” mode with CONSULT-III.
6. Check that “COOLAN TEMP/S” indicates above 80°C (176°F).
   If it is above 80°C (176°F), go to the following steps.
   If it is below 80°C (176°F), warm engine up until “COOLAN TEMP/S” indicates more than 80°C (176°F). Then go to the following steps.
7. Turn ignition switch OFF and soak the vehicle at cool place.
8. Turn ignition switch ON.
   NOTE:
   Do not turn ignition switch OFF until step 12
9. Select “DATA MONITOR” mode with CONSULT-III.
10. Check the following.

COOLAN TEMP/S	Below 40°C (104°F)
INT/A TEMP SE	Below 40°C (104°F)
Difference between “COOLAN TEMP/S” and “INT/A TEMP SE”	Within 6°C (11°F)

   If they are within the specified range, go to following steps.
   If they are out of the specified range, soak the vehicle to met the above conditions. Then go to following steps.
   NOTE:
   - **Do not turn ignition switch OFF.**
   - **If it is supposed to need a long period of time, do not deplete the battery.**
11. Start engine and let it idle for 5 minutes.
12. Check 1st trip DTC.
13. If 1st trip DTC is detected, go to EC-354, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.



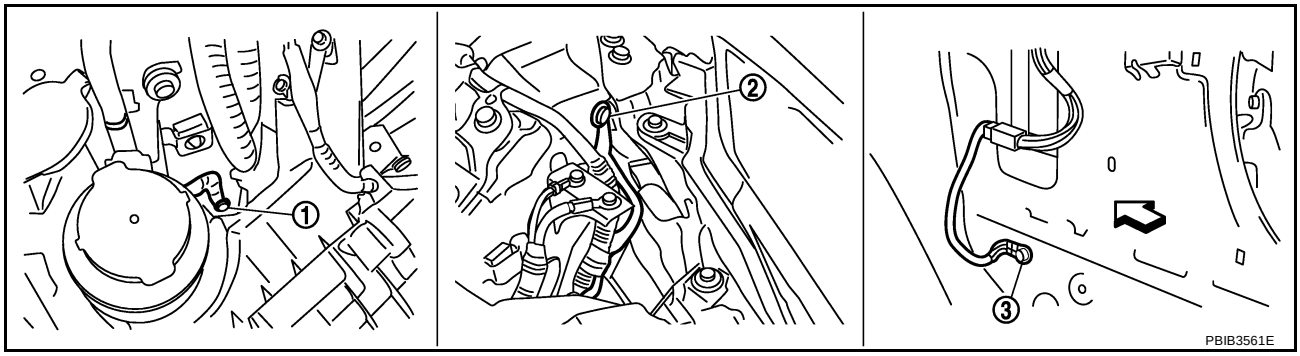
Diagnostic Procedure

NBS006TN

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK ENGINE OIL TEMPERATURE SENSOR

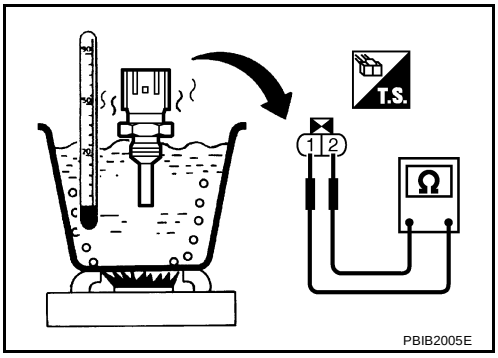
Refer to EC-355, "Component Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Replace engine oil temperature sensor.

3. CHECK INTERMITTENT INCIDENT

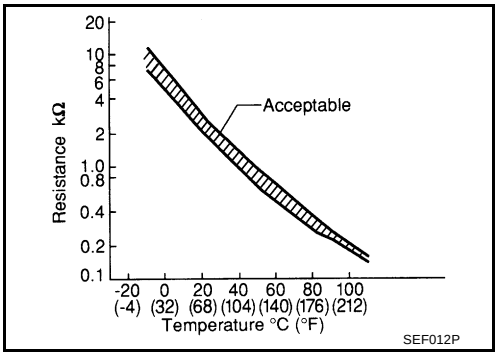
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
Refer to EC-357, "Wiring Diagram" .



>> **INSPECTION END**

Component Inspection

NBS006TO



ENGINE OIL TEMPERATURE SENSOR

1. Check resistance between engine oil temperature sensor terminals 1 and 2 as shown in the figure.

<Reference data>

Engine coolant temperature °C (°F)	Resistance kΩ
20 (68)	2.1 - 2.9
50 (122)	0.68 - 1.00
90 (194)	0.236 - 0.260

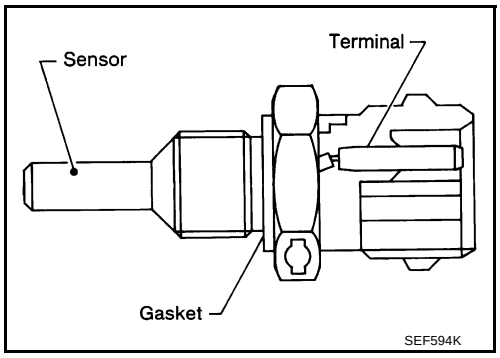
2. If NG, replace engine oil temperature sensor.

Removal and Installation

NBS006TP

ENGINE OIL TEMPERATURE SENSOR

Refer to EM-26, "OIL PAN AND OIL STRAINER" .

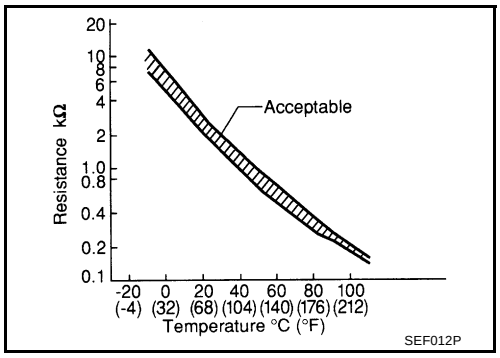


DTC P0197, P0198 EOT SENSOR

PFP:22630

Component Description

NBS006TQ



The engine oil temperature sensor is used to detect the engine oil temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine oil temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.

<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260
110 (230)	0.6	0.143 - 0.153

*: This data is reference value and is measured between ECM terminal 78 (Engine oil temperature sensor) and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

NBS006TR

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0197 0197	Engine oil temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (Engine coolant temperature sensor circuit is open or shorted.) ● Engine oil temperature sensor
P0198 0198	Engine oil temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

FAIL-SAFE MODE

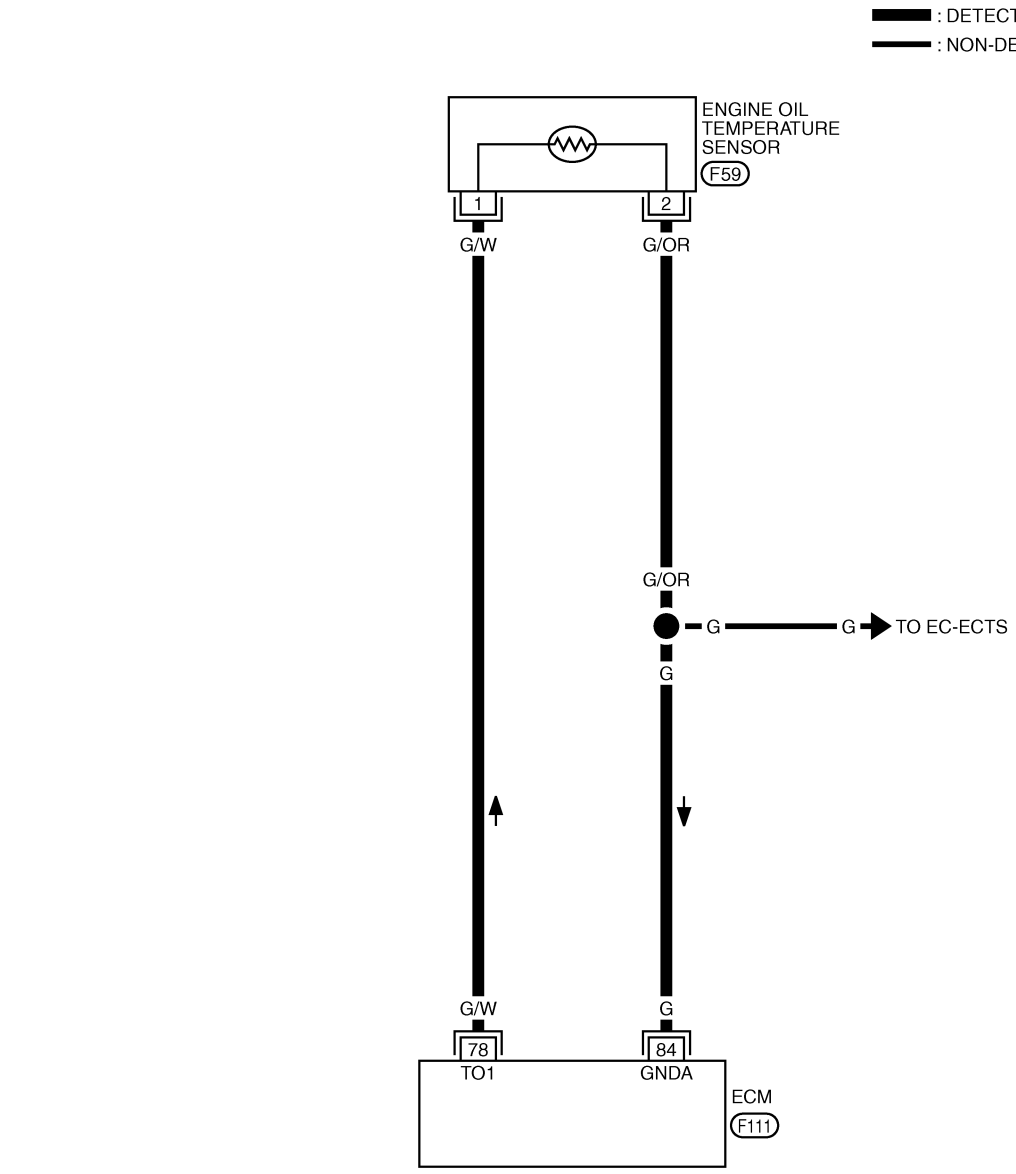
When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Engine oil temperature sensor	Exhaust valve timing control does not function.

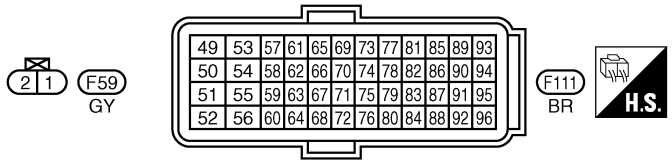
DTC Confirmation Procedure

NBS006TS

NOTE:



If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.



1. Start engine and wait at least 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-358, "Diagnostic Procedure" .

Component Description

NBS0007M

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-III Reference Value in Data Monitor Mode

NBS0007N

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
TP SEN 1-B1 TP SEN 1-B2 TP SEN 2-B1* TP SEN 2-B2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T), 1st (M/T)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

NBS0007O

These self-diagnoses have the one trip detection logic.

NOTE:
If DTC P0222, P0223, P2132 or P2133 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222 (Bank 1) P2132 2133 (Bank 2)	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	● Harness or connectors (TP sensor 1 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1)
P0223 0223 (Bank 1) P2133 2133 (Bank 2)	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode an the MIL lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

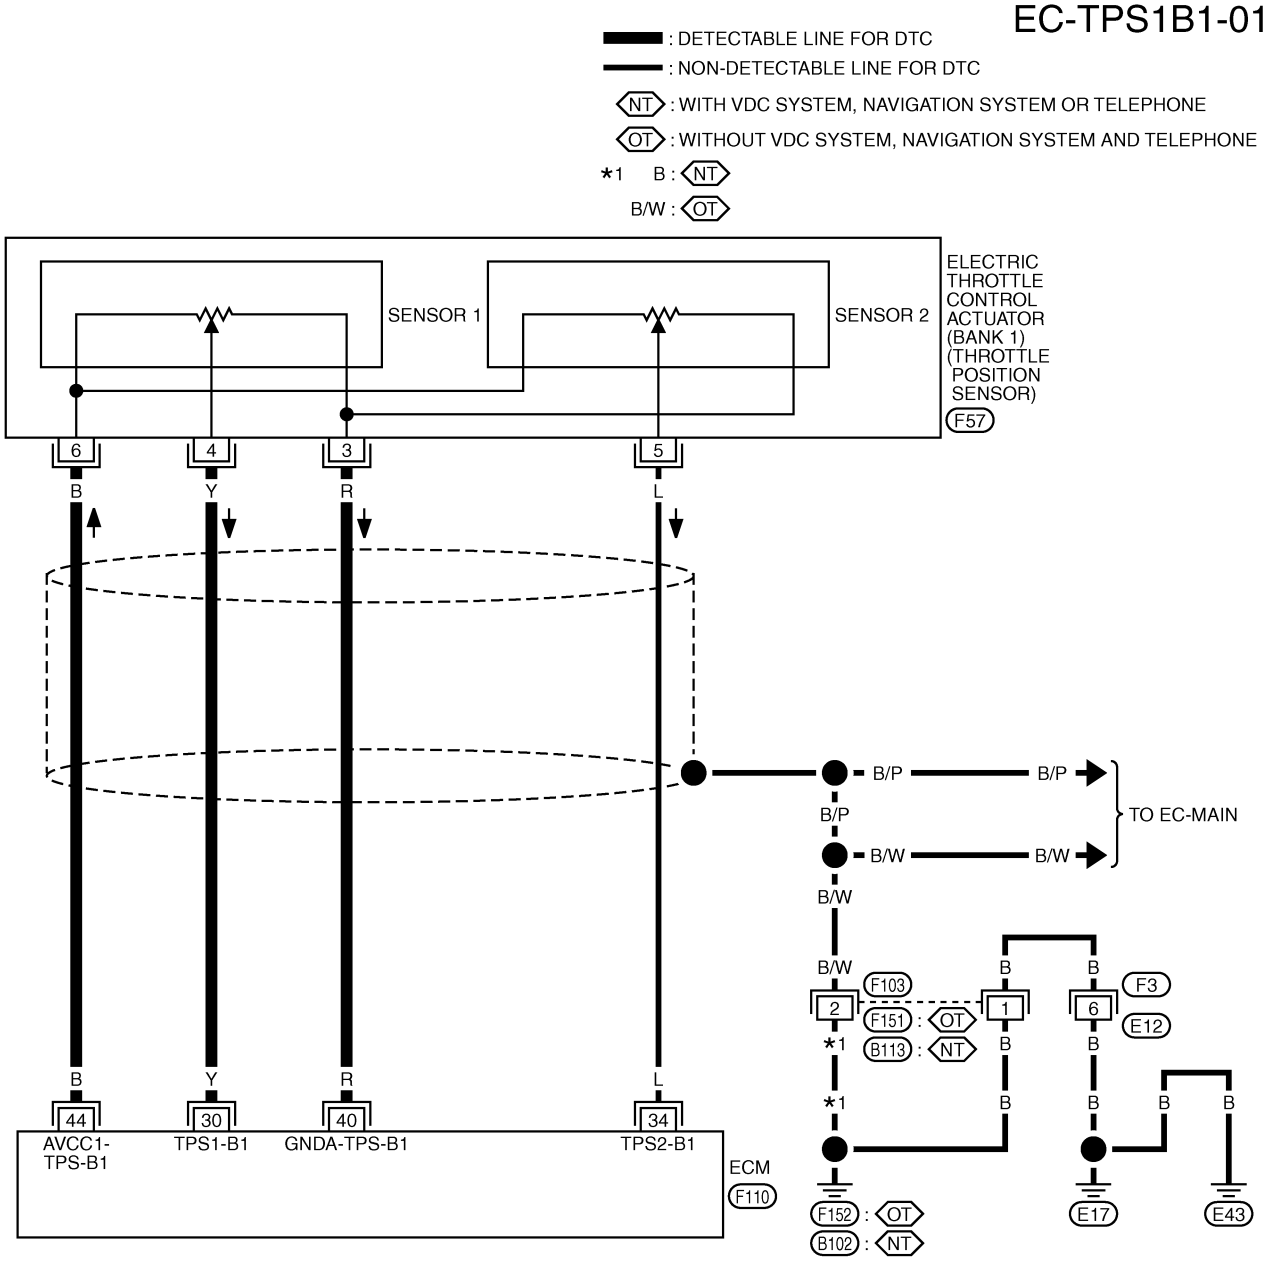
NBS0007P

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

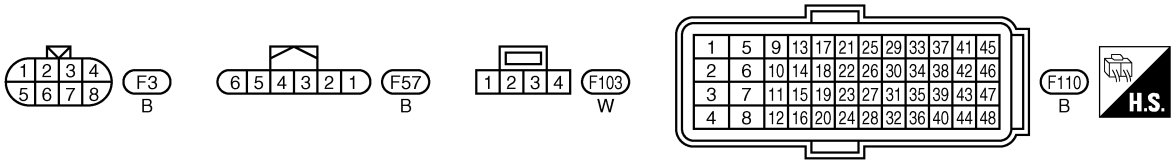
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-367, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram
BANK 1

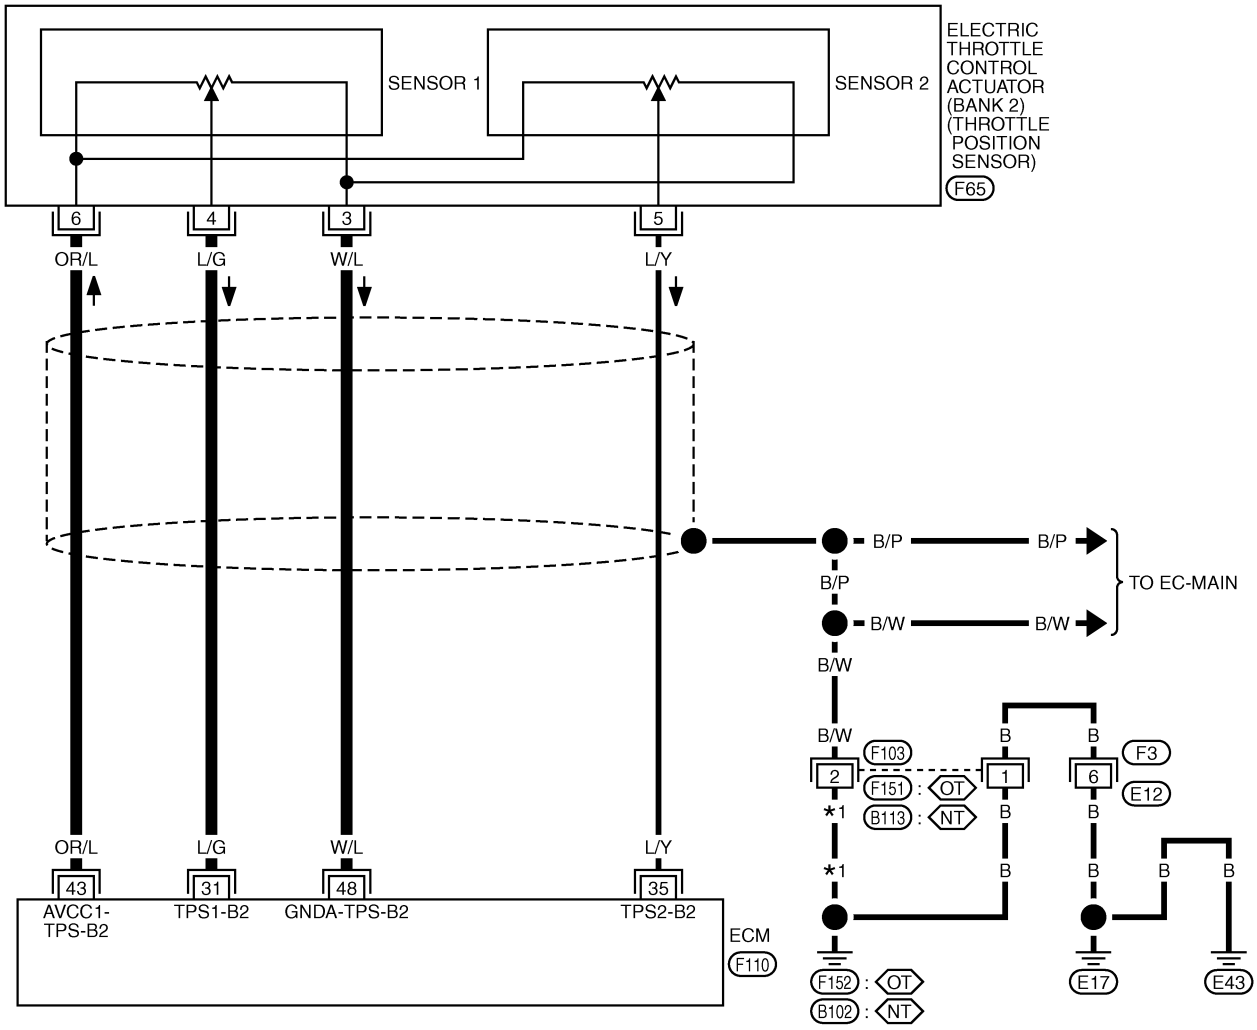
NBS006V3

EC-TPS1B1-01

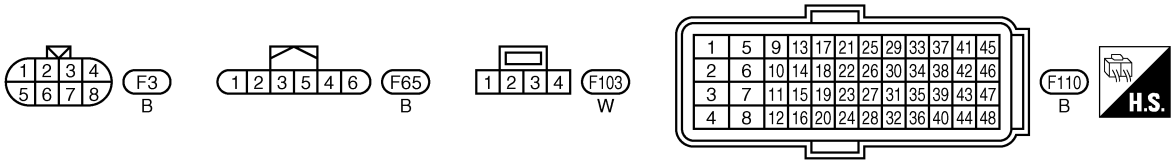
TBWT1641E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:



Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.



TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

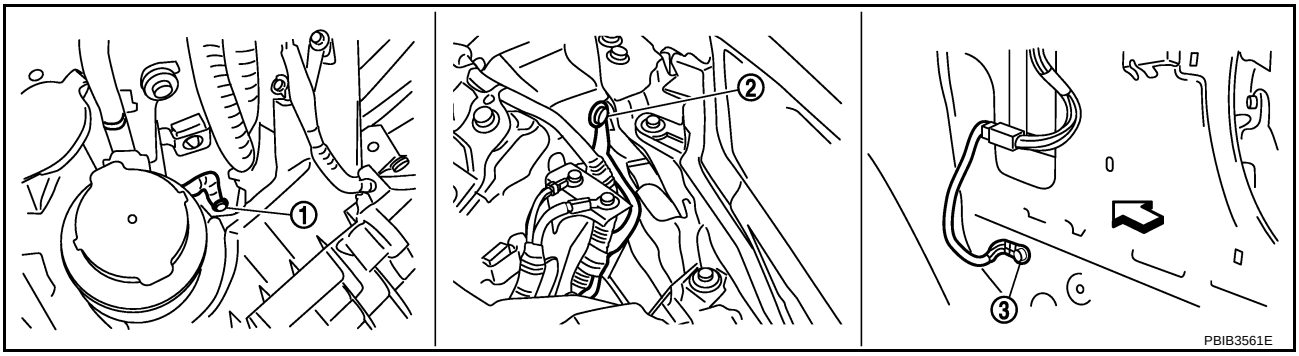
Diagnostic Procedure

NBS0007R

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



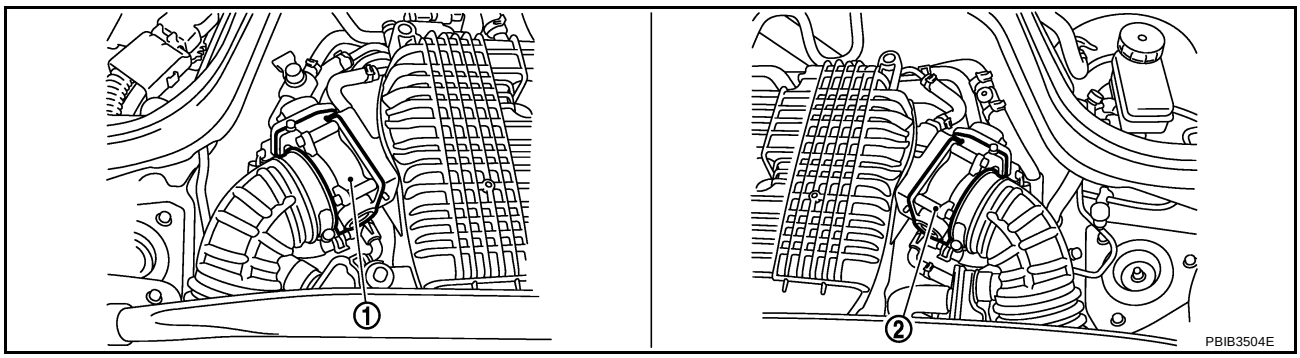
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

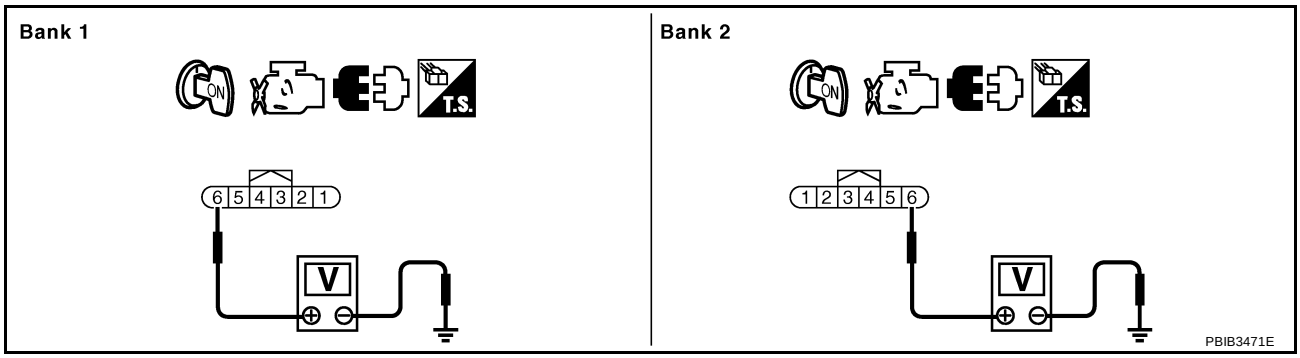
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-I

1. Disconnect electric throttle control actuator harness connector.

1. Electric throttle control actuator (bank 1)
2. Electric throttle control actuator (bank 2)

2. Turn ignition switch ON.
3. Check voltage between electric throttle control actuator terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness.

3. CHECK THROTTLE POSITION SENSOR 1 POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 6 and ECM terminal 44 (bank 1) or 43 (bank 2).
   Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit.

4. CHECK THROTTLE POSITION SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 3 and ECM terminal 40 (bank 1) or 48 (bank 2). Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 30 (bank 1) or 31 (bank 2) and electric throttle control actuator terminal 4. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK THROTTLE POSITION SENSOR

Refer to EC-369, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

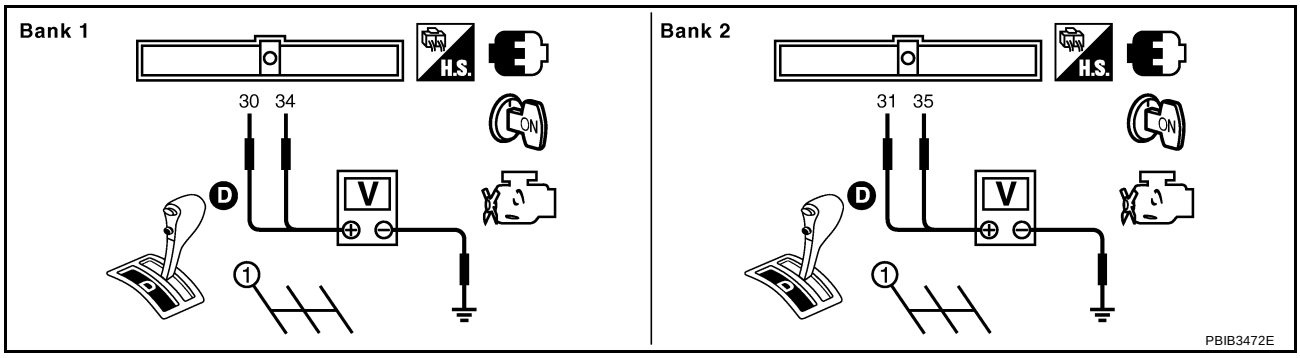
1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS006V4

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set shift lever to D (A/T) or 1st (M/T) position.

5. Check voltage between ECM terminals 30 [TP sensor 1 (bank 1) signal], 31 [TP sensor 1 (bank 2) signal], 34 [TP sensor 2 (bank 1) signal], 35 [TP sensor 2 (bank 2) signal] and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
30 [TP sensor 1 (bank 1)] 31 [TP sensor 1 (bank 2)]	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
34 [TP sensor 2 (bank 1)] 35 [TP sensor 2 (bank 2)]	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-77, "Throttle Valve Closed Position Learning" .
8. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS006V5

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P0300 - P0306 MULTIPLE CYLINDER MISFIRE, NO. 1 - 6 CYLINDER MISFIRE

PFP:00000

On Board Diagnosis Logic

NBS0007U

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM function
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire

The misfire detection logic consists of the following two conditions.

1. One Trip Detection Logic (Three Way Catalyst Damage)
   On the 1st trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MIL will blink.
   When a misfire condition occurs, the ECM monitors the CKP sensor signal every 200 engine revolutions for a change.
   When the misfire condition decreases to a level that will not damage the TWC, the MIL will turn off.
   If another misfire condition occurs that can damage the TWC on a 2nd trip, the MIL will blink.
   When the misfire condition decreases to a level that will not damage the TWC, the MIL will remain on.
   If another misfire condition occurs that can damage the TWC, the MIL will begin to blink again.
2. Two Trip Detection Logic (Exhaust quality deterioration)
   For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MIL will only light when the misfire is detected on a 2nd trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.
   A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	● Improper spark plug ● Insufficient compression ● Incorrect fuel pressure ● The fuel injector circuit is open or shorted ● Fuel injector ● Intake air leak ● The ignition signal circuit is open or shorted ● Lack of fuel ● Signal plate ● Air fuel ratio (A/F) sensor 1 ● Incorrect PCV hose connection
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	
P0305 0305	No. 5 cylinder misfire detected	No. 5 cylinder misfires.	
P0306 0306	No. 6 cylinder misfire detected	No. 6 cylinder misfires.	

DTC Confirmation Procedure

NBS0007V

CAUTION:

Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Restart engine and let it idle for about 15 minutes.
4. Check 1st trip DTC.
5. If 1st trip DTC is detected, go to EC-372, "Diagnostic Procedure" .

   NOTE:

   If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

a. Turn ignition switch OFF and wait at least 10 seconds.

b. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to the table below.

   Hold the accelerator pedal as steady as possible.

   The similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time.

Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (6 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70 °C (158 °F), T should be lower than 70 °C (158 °F).
	When the freeze frame data shows higher than or equal to 70 °C (158 °F), T should be higher than or equal to 70 °C (158 °F).

The time to driving varies according to the engine speed in the freeze frame data.

Engine speed	Time
Around 1,000 rpm	Approximately 10 minutes
Around 2,000 rpm	Approximately 5 minutes
More than 3,000 rpm	Approximately 3.5 minutes

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS0007W

1. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

OK or NG

OK >> GO TO 2.
NG >> Discover air leak location and repair.

2. CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

OK or NG

OK (With CONSULT-III)>>GO TO 3.
OK (Without CONSULT-III)>>GO TO 4.
NG >> Repair or replace it.

3. PERFORM POWER BALANCE TEST

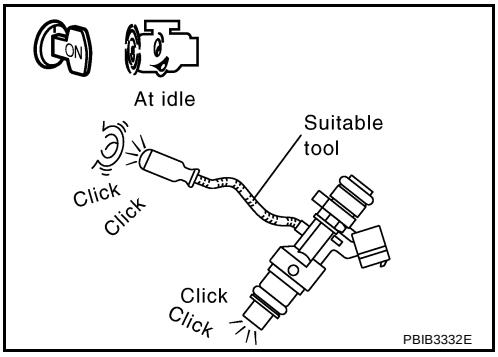
With CONSULT-III

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode.
2. Is there any cylinder which does not produce a momentary engine speed drop?

Yes or No

Yes >> GO TO 4.
No >> GO TO 9.

4. CHECK FUNCTION OF FUEL INJECTOR



With CONSULT-III

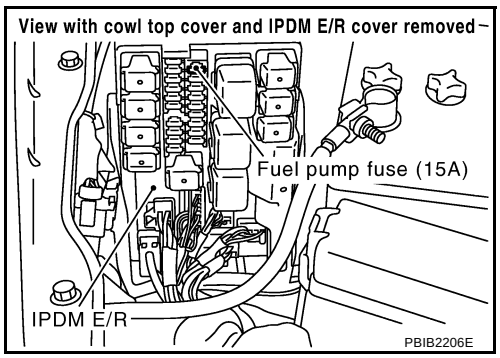
1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-III.
3. Make sure that each circuit produces a momentary engine speed drop.

Without CONSULT-III

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

Clickng sound should be heard.

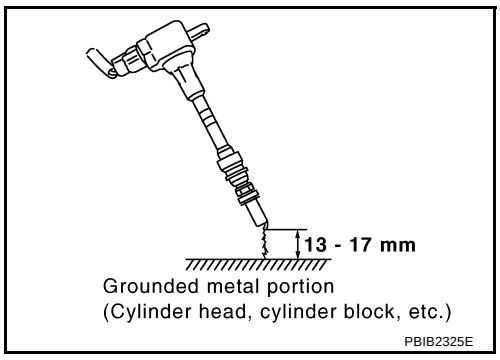
OK or NG



OK >> GO TO 5.
NG >> Perform trouble diagnosis for FUEL INJECTOR, refer to EC-686, "FUEL INJECTOR" .

5. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:
Do the following procedure in the place where ventilation is good without the combustible.



1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Remove fuel pump fuse in IPDM E/R to release fuel pressure.

   NOTE:
   Do not use CONSULT-III to release fuel pressure, or fuel pressure applies again during the following procedure.
4. Start engine.
5. After engine stalls, crank it two or three times to release all fuel pressure.
6. Turn ignition switch OFF.
7. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
8. Remove ignition coil and spark plug of the cylinder to be checked.

9. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
10. Connect spark plug and harness connector to ignition coil.
11. Fix ignition coil using a rope etc. with gap of 13 - 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
12. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

    Spark should be generated.

CAUTION:

- **Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.**
- **It might cause to damage the ignition coil if the gap of more than 17 mm is taken.**

NOTE:
When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

OK or NG

OK >> GO TO 9.
NG >> GO TO 6.

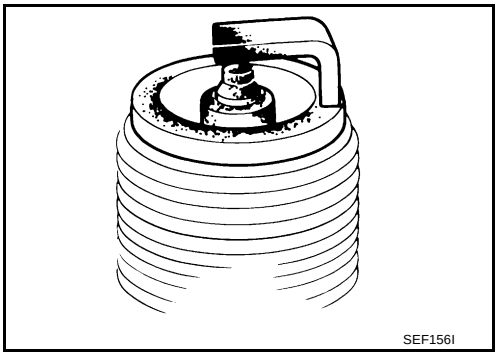
6. CHECK FUNCTION OF IGNITION COIL-II

1. Turn ignition switch OFF.
2. Disconnect spark plug and connect a known-good spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

   Spark should be generated.

OK or NG

OK >> GO TO 7.
NG >> Check ignition coil, power transistor and their circuits. Refer to EC-698, "IGNITION SIGNAL" .



7. CHECK SPARK PLUG

Check the initial spark plug for fouling, etc.

OK or NG

OK >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-18, "Changing Spark Plugs (Iridium-Tipped Type)" .

NG >> 1. Repair or clean spark plug.
2. GO TO 8.

8. CHECK FUNCTION OF IGNITION COIL-III

1. Reconnect the initial spark plugs.
2. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

Spark should be generated.

OK or NG

OK >> **INSPECTION END**

NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-18, "Changing Spark Plugs (Iridium-Tipped Type)" .

9. CHECK COMPRESSION PRESSURE

Check compression pressure. Refer to EM-89, "CHECKING COMPRESSION PRESSURE" .

OK or NG

OK >> GO TO 10.

NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

10. CHECK FUEL PRESSURE

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Install fuel pressure gauge and check fuel pressure. Refer to EC-80, "FUEL PRESSURE CHECK" .

At idle: Approximately 350 kPa (3.57 kg/cm^2 , 51 psi)

OK or NG

OK >> GO TO 12.

NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

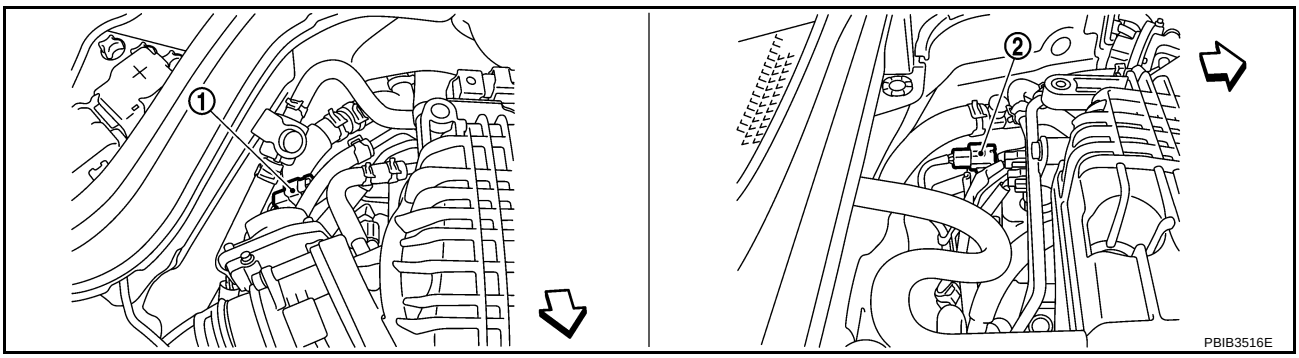
Check the following.

- Fuel pump and circuit (Refer to EC-691, "FUEL PUMP" .)
- Fuel pressure regulator (Refer to EC-80, "FUEL PRESSURE CHECK" .)
- Fuel lines (Refer tor FL-3, "Checking Fuel Lines" .)
- Fuel filter for clogging

>> Repair or replace.

12. CHECK IGNITION TIMING

Check the following items. Refer to EC-71, "Basic Inspection" .



Items	Specifications
Target idle speed	A/T: 650 ± 50 rpm (in P or N position) M/T: 650 ± 50 rpm (in neutral position)
Ignition timing	A/T: 15 ± 5° BTDC (in P or N position) M/T: 15 ± 5° BTDC (in neutral position)

OK or NG

OK >> GO TO 13.
NG >> Follow the EC-71, "Basic Inspection" .

13. CHECK A/F SENSOR 1 INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.

1. A/F sensor 1 (bank 1) harness connector
2. A/F sensor 1 (bank 2) harness connector

⇦: Vehicle front

3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank 1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

5. Check harness continuity between the following terminals and ground. Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

6. Also check harness for short to power.

OK or NG

OK >> GO TO 14.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK A/F SENSOR 1 HEATER

Refer to EC-172, "Component Inspection" .

OK or NG

OK >> GO TO 15.
NG >> Replace malfunctioning A/F sensor 1.

15. CHECK MASS AIR FLOW SENSOR

With CONSULT-III

1. Start engine and warm it up to normal temperature.
2. Check mass air flow sensor signal in “DATA MONITOR” mode with CONSULT-III.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

With GST

1. Start engine and warm it up to normal temperature.
2. Check mass air flow sensor signal in Service $01 with GST.

2.0 - 6.0 g·m/sec: at idling
7.0 - 20.0 g·m/sec: at 2,500 rpm

OK or NG

OK >> GO TO 16.
NG >> Check connectors for rusted terminals or loose connections in the mass air flow sensor circuit or ground. Refer to EC-197, "DTC P0101, P010B MAF SENSOR" .

16. CHECK SYMPTOM MATRIX CHART

Check items on the rough idle symptom in EC-90, "Symptom Matrix Chart" .

OK or NG

OK >> GO TO 17.
NG >> Repair or replace.

17. ERASE THE 1ST TRIP DTC

Some tests may cause a 1st trip DTC to be set.
Erase the 1st trip DTC from the ECM memory after performing the tests.
Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

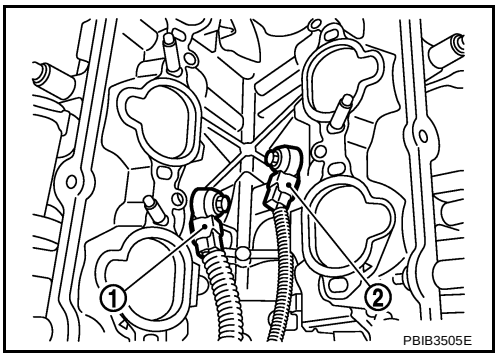
>> GO TO 18.

18. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0327, P0328, P0332, P0333 KS



PFP:22060

Component Description

NBS0007X

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.

1 : Knock sensor (bank 1)
2 : Knock sensor (bank 2)

On Board Diagnosis Logic

NBS0007Y

The MIL will not light up for these self-diagnoses.

DTC No.	Trouble diagnosis name	DTC detected condition	Possible cause
P0327 0327 (Bank 1)	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Knock sensor
P0332 0332 (Bank 2)			
P0328 0328 (Bank 1)	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	
P0333 0333 (Bank 2)			

DTC Confirmation Procedure

NBS0007Z

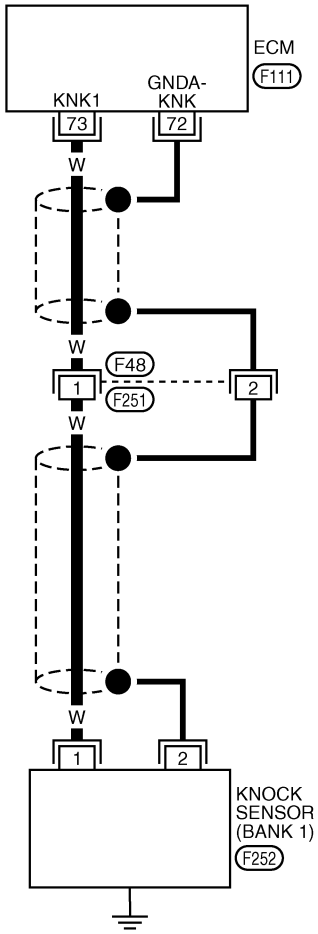
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

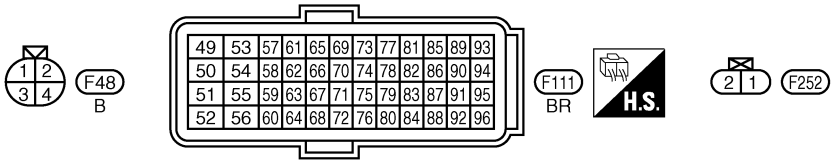
WITH CONSULT-III

1. Start engine and run it for at least 5 seconds at idle speed.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-383, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.



Wiring Diagram
BANK 1

NBS00080

BANK 2

EC-KSB2-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

TBWT1644E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
69	W	Knock sensor (bank 2)	**[Engine is running]** ● Idle speed	Approximately 2.5V
72	—	Sensor ground [Knock sensor (bank 1), Knock sensor (bank 2)]	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

Diagnostic Procedure

NBS00081

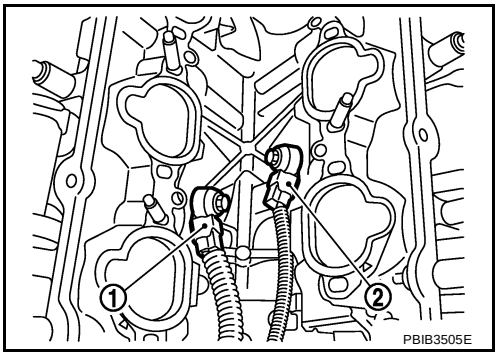
1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check resistance between ECM terminal 73 (bank 1), 69 (bank 2) and ground. Refer to Wiring Diagram.

   NOTE:
   It is necessary to use an ohmmeter which can measure more than 10 MΩ.

   Resistance: Approximately 532 - 588 kΩ [at 20°C (68°F)]

4. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 5.
NG >> GO TO 2.

2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-II

1. Disconnect knock sensor harness connector.

   1 : Knock sensor (bank 1)
   2 : Knock sensor (bank 2)

2. Check harness continuity between ECM terminal 73 (bank 1), 69 (bank 2) and knock sensor terminal 1. Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

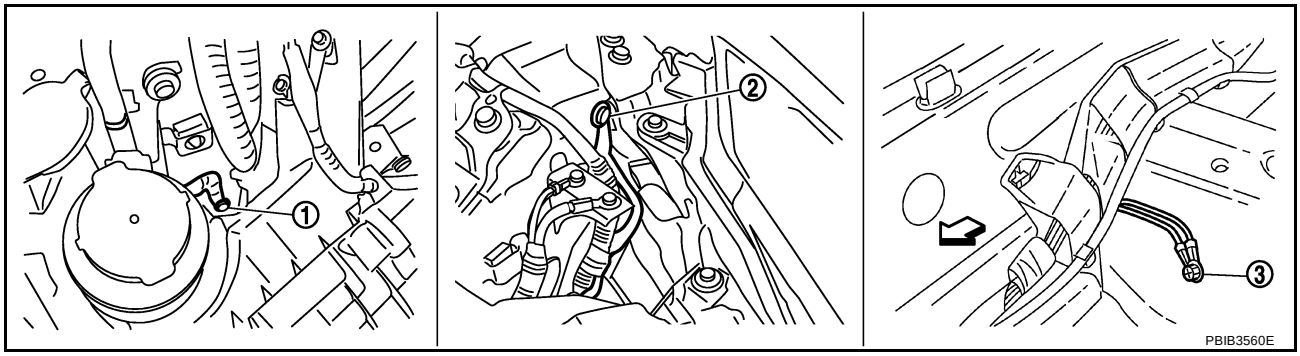
Check the following.

- Harness connectors F48, F251
- Harness for open or short between ECM and knock sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK KNOCK SENSOR

Refer to EC-385, "Component Inspection" .



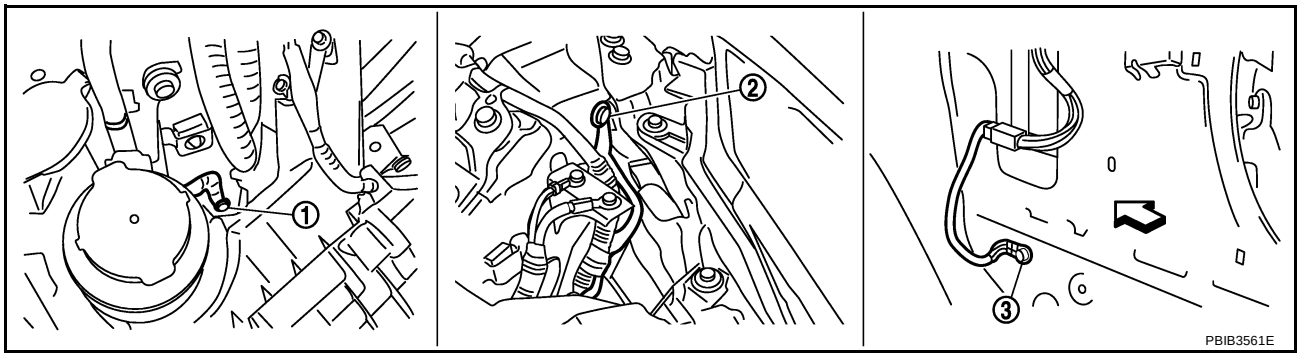
OK or NG

OK >> GO TO 5.
NG >> Replace knock sensor.

5. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 6.
NG >> Repair or replace ground connections.

6. CHECK KNOCK SENSOR SHIELD CIRCUIT FOR OPEN AND SHORT

1. Disconnect knock sensor harness connector.
2. Check harness continuity between ECM terminal 72 and knock sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F48, F251
- Harness for open or short between ECM and knock sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

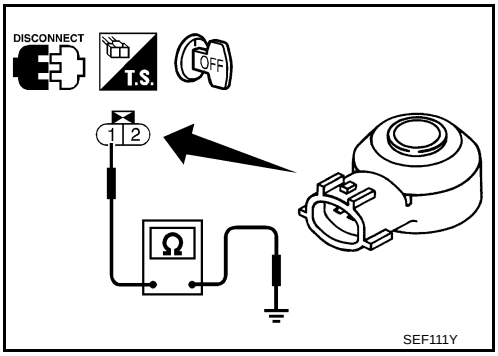
8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

NBS00082



KNOCK SENSOR

Check resistance between knock sensor terminal 1 and ground.

NOTE:
It is necessary to use an ohmmeter which can measure more than 10 MΩ.

Resistance: Approximately 532 - 588 kΩ [at 20°C (68°F)]

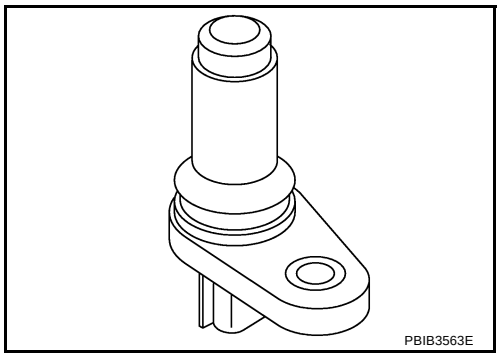
CAUTION:
Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.

Removal and Installation

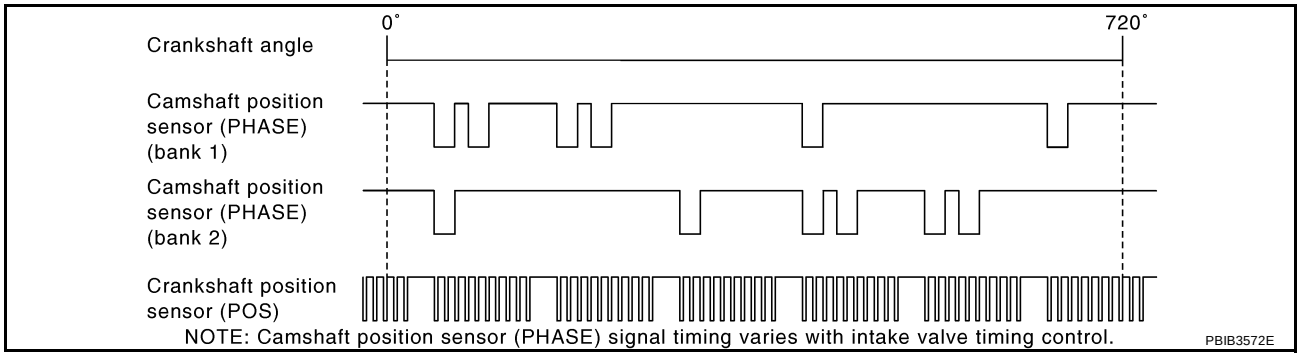
NBS00083

KNOCK SENSOR

Refer to EM-107, "CYLINDER BLOCK" .



DTC P0335 CKP SENSOR (POS)



PFP:23731

Component Description

NBS00084

The crankshaft position sensor (POS) is located on the oil pan facing the gear teeth (cogs) of the signal plate. It detects the fluctuation of the engine revolution.
The sensor consists of a permanent magnet and Hall IC.
When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.
The ECM receives the voltage signal and detects the fluctuation of the engine revolution.
ECM receives the signals as shown in the figure.

PBIB3563E

CONSULT-III Reference Value in Data Monitor Mode

NBS00085

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	● Run engine and compare CONSULT-III value with the tachometer indication.	Almost the same speed as the tachometer indication.

On Board Diagnosis Logic

NBS00086

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0335 0335	Crankshaft position sensor (POS) circuit	● The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking. ● The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running. ● The crankshaft position sensor (POS) signal is not in the normal pattern during engine running.	● Harness or connectors [CKP sensor (POS) circuit is open or shorted.] [CMP sensor (PHASE) (bank 2) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (APP sensor 2 circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 2) ● Exhaust valve timing control position sensor (bank 2) ● Accelerator pedal position sensor ● EVAP control system pressure sensor ● Refrigerant pressure sensor ● Signal plate

DTC Confirmation Procedure

NBS00087

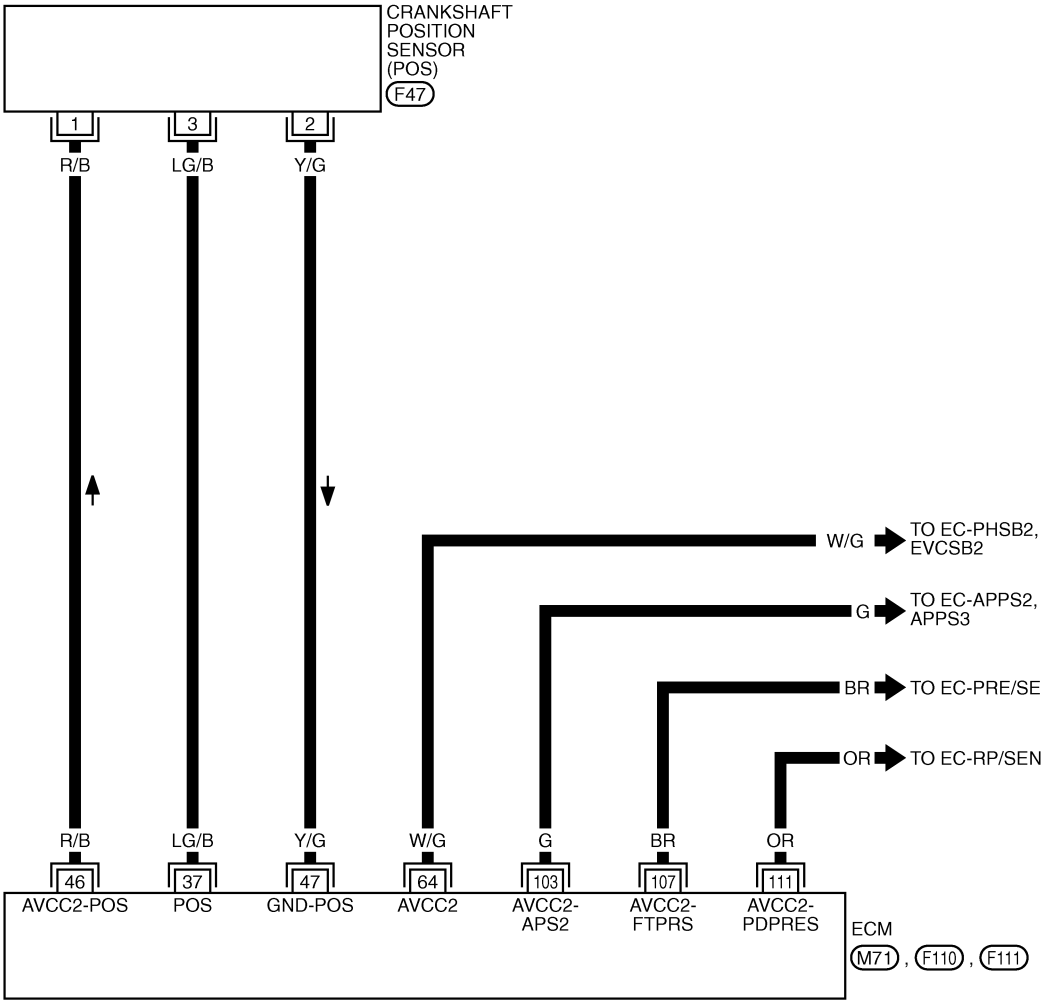
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-III

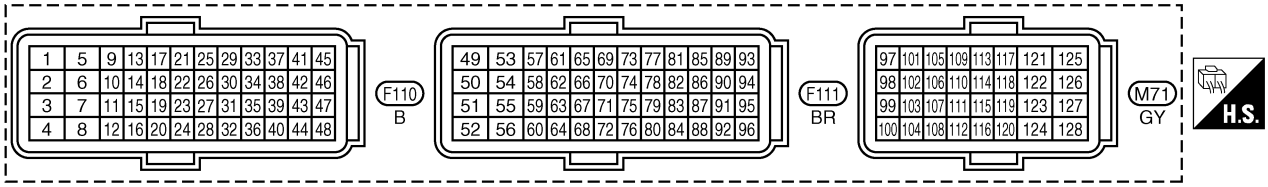
1. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-390, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.

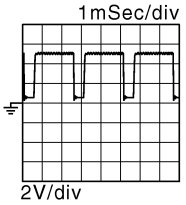
Wiring Diagram

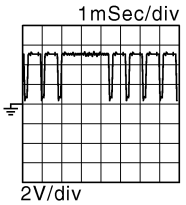


NBS00088

EC-POS-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC





TBWT1645E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

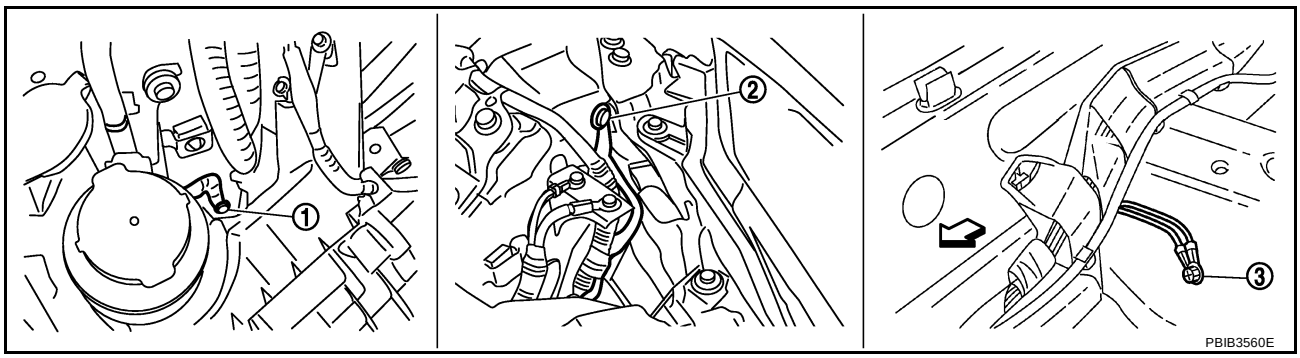
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)



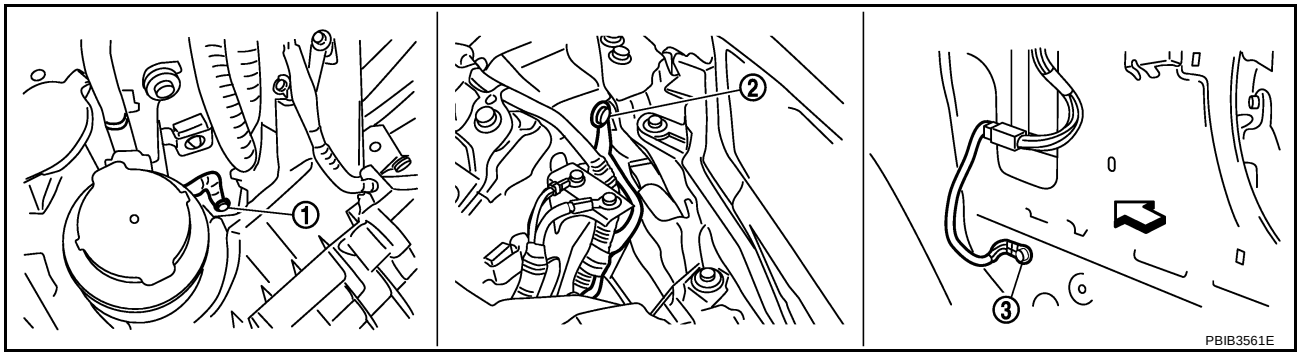
Diagnostic Procedure

NBS00089

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

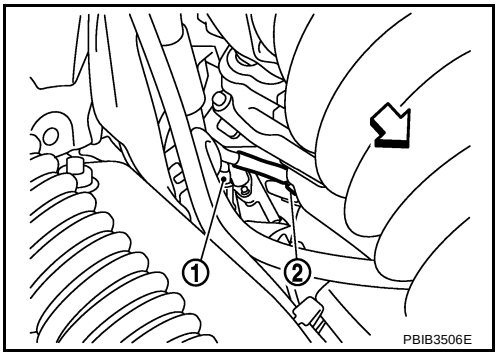
1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT-I

1. Disconnect crankshaft position (CKP) sensor (POS) (2) harness connector.

   1 : A/F sensor 1 (bank 1)

   ⇦ : Vehicle front

2. Turn ignition switch ON.

3. Check voltage between CKP sensor (POS) terminal 1 and ground with CONSULT-III or tester.

   Voltage: Approximately 5V

OK or NG

OK >> GO TO 8.
NG >> GO TO 3.

3. CHECK CKP SENSOR (POS) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between CKP sensor (POS) terminal 1 and ECM terminal 46. Refer to Wiring Diagram.

   Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit.

4. CHECK CKP SENSOR (POS) POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor terminal 1	EC-711

OK or NG

OK >> GO TO 5.
NG >> Repair short to ground or short to power in harness or connectors.

5. CHECK COMPONENTS

Check the following.

- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- EVAP control system pressure sensor (Refer to EC-464, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning component.

6. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 12.
NG >> GO TO 7.

7. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

8. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check the continuity between CKP sensor (POS) terminal 2 and ECM terminal 47.
   Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground short to power.

OK or NG

OK >> GO TO 9.
NG >> Repair open circuit or short to ground or short to power in harness connectors.

9. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check the continuity between CKP sensor (POS) terminal 3 and ECM terminal 37.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 10.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-393, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace CKP sensor (POS).

11. CHECK GEAR TOOTH

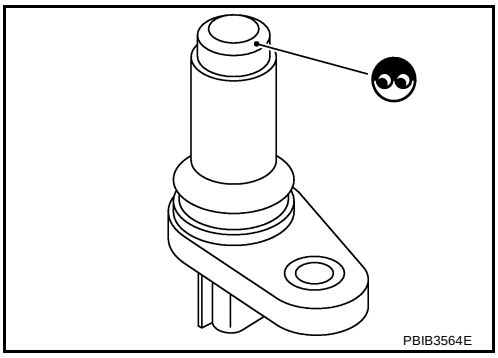
Visually check for chipping signal plate gear tooth.

OK or NG

OK >> GO TO 12.
NG >> Replace the signal plate.

12. CHECK INTERMITTENT INCIDENT

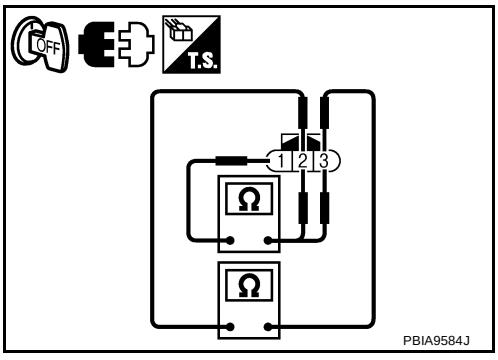
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS0008A



CRANKSHAFT POSITION SENSOR (POS)

1. Loosen the fixing bolt of the sensor.
2. Disconnect CKP sensor (POS) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

5. Check resistance as shown in the figure.

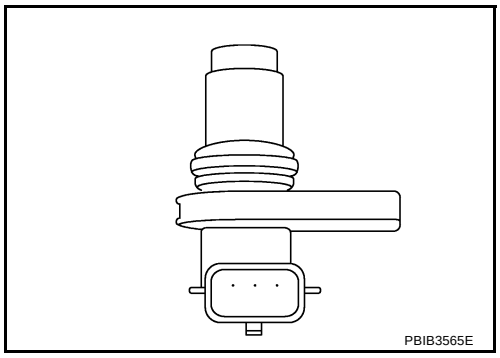
Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 (+) - 2 (-)	Except 0 or ∞
1 (+) - 3 (-)	
2 (+) - 3 (-)	

Removal and Installation

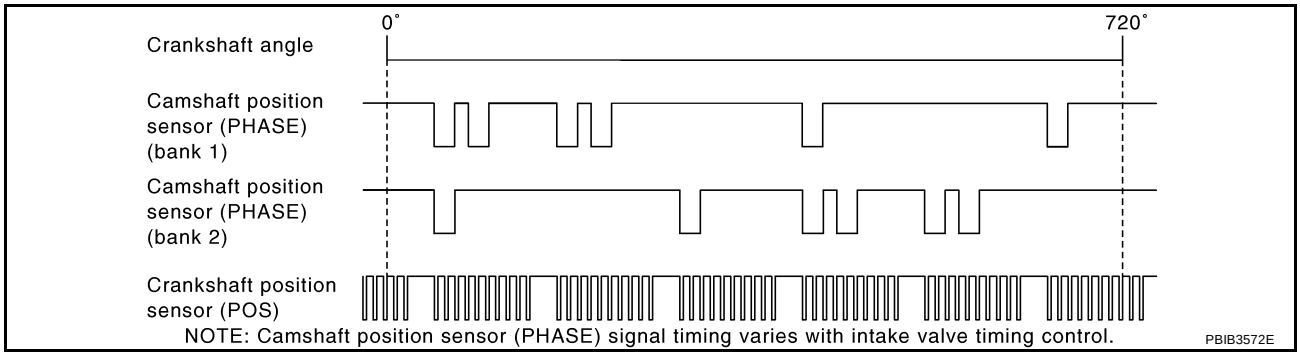
NBS0008B

CRANKSHAFT POSITION SENSOR (POS)

Refer to EM-26, "OIL PAN AND OIL STRAINER" .



DTC P0340, P0345 CMP SENSOR (PHASE)



PFP:23731

Component Description

NBS0008C

The camshaft position sensor (PHASE) senses the retraction of camshaft (INT) to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.
When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.
The sensor consists of a permanent magnet and Hall IC.
When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.
ECM receives the signals as shown in the figure.

PBIB3565E

CONSULT-III Reference Value in Data Monitor Mode

NBS0008D

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	● Run engine and compare CONSULT-III value with the tachometer indication.	Almost the same speed as the tachometer indication.

On Board Diagnosis Logic

NBS0008E

NOTE:
If DTC P0340 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.
Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0340 0340 (Bank 1)	Camshaft position sensor (PHASE) circuit	● The cylinder No. signal is not sent to ECM for the first few seconds during engine cranking. ● The cylinder No. signal is not sent to ECM during engine running. ● The cylinder No. signal is not in the normal pattern during engine running.	● Harness or connectors [CMP sensor (PHASE) (bank 1) circuit is open or shorted.] ● Camshaft position sensor (PHASE) (bank 1) ● Camshaft (INT) ● Starter motor (Refer to SC-8, "STARTING SYSTEM" .) ● Starting system circuit (Refer to SC-8, "STARTING SYSTEM" .) ● Dead (Weak) battery
P0345 0345 (Bank 2)			● Harness or connectors [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] [CKP sensor (POS) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (APP sensor 2 circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● Camshaft position sensor (PHASE) (bank 2) ● Crankshaft position sensor (POS) ● Exhaust valve timing control position sensor (bank 2) ● Accelerator pedal position sensor ● EVAP control system pressure sensor ● Refrigerant pressure sensor ● Camshaft (INT) ● Starter motor (Refer to SC-8, "STARTING SYSTEM" .) ● Starting system circuit (Refer to SC-8, "STARTING SYSTEM" .) ● Dead (Weak) battery

DTC Confirmation Procedure

NBS0008F

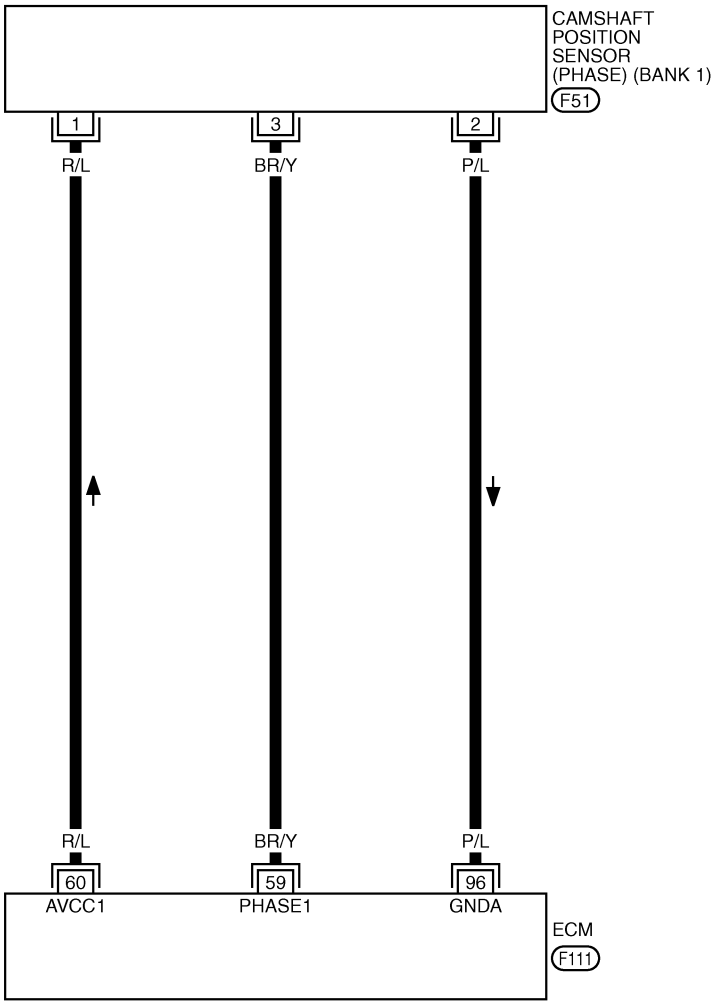
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-III

1. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-400, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
4. Maintaining engine speed at more than 800 rpm for at least 5 seconds.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-400, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS0008H

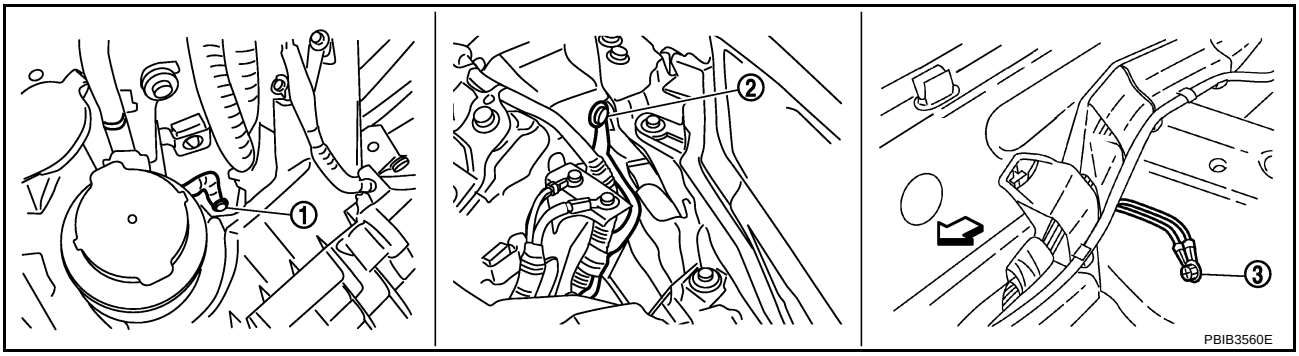
1. CHECK STARTING SYSTEM

Turn ignition switch to START position.

Does the engine turn over?

Does the starter motor operate?

Yes or No



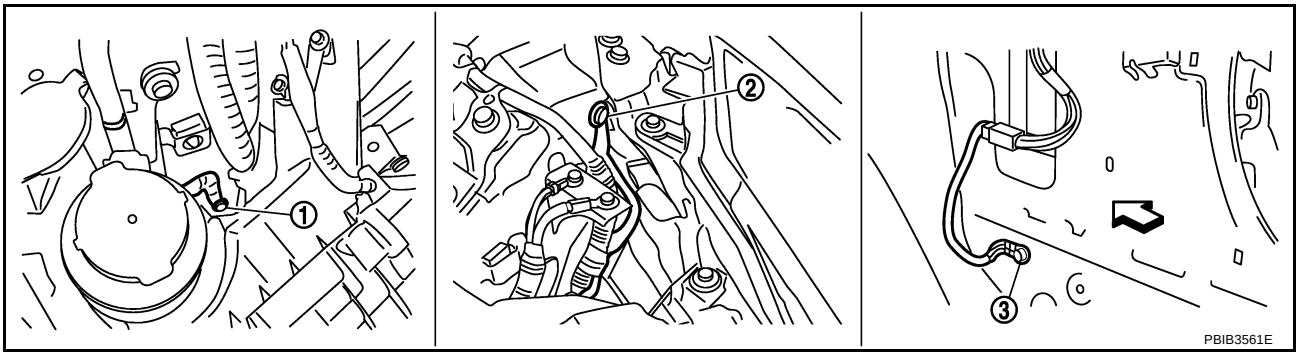
Yes >> GO TO 2.

No >> Check starting system. (Refer to SC-8, "STARTING SYSTEM" .)

2. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

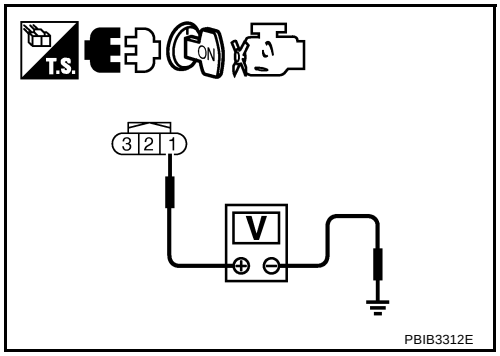
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 3.
NG >> Repair or replace ground connections.

3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT-I



1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.

1. Exhaust valve timing control position sensor (bank 1)
2. Camshaft position sensor (PHASE) (bank 1)
3. Camshaft position sensor (PHASE) (bank 2)
4. Exhaust valve timing control position sensor (bank 2)

2. Turn ignition switch ON.
3. Check voltage between CMP sensor (PHASE) terminal 1 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 9.
NG-1 >> P0340: Repair open circuit or short to ground or short to power in harness or connectors.
NG-2 >> P0345: GO TO 4.

4. CHECK CMP SENSOR (PHASE) POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between CMP sensor (PHASE) terminal 1 and ECM terminal 64. Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit.

5. CHECK CMP SENSOR (PHASE) POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor 1	EC-711

OK or NG

OK >> GO TO 6.
NG >> Repair short to ground or short to power in harness or connectors.

6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- EVAP control system pressure sensor (Refer to EC-464, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 7.
NG >> Replace malfunctioning component.

7. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 15.
NG >> GO TO 8.

8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

9. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ECM terminal 92 (bank 2) or 96 (bank 1) and CMP sensor (PHASE) terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground short to power.

OK or NG

OK >> GO TO 10.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 59 (bank 1) or 63 (bank 2) and CMP sensor (PHASE) terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.
3. Also check harness for short to ground and short to power.

OK or NG

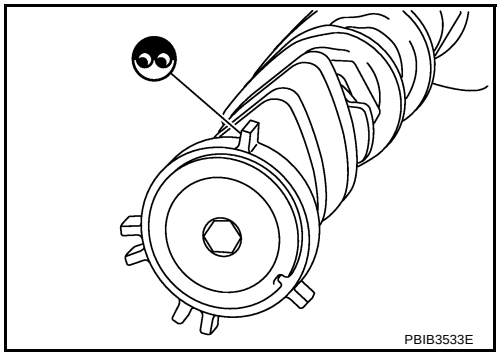
OK >> GO TO 11.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

11. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-405, "Component Inspection" .

OK or NG

OK >> GO TO 12.
NG >> Replace malfunctioning CMP sensor (PHASE).



12. CHECK CAMSHAFT (INT)

Check the following.

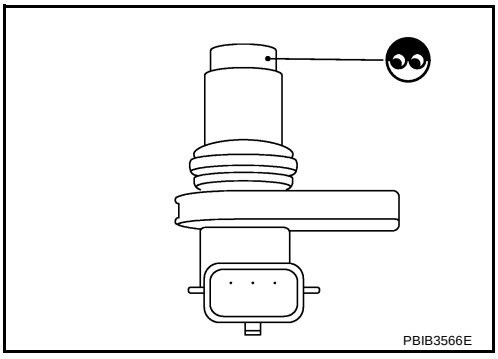
- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 13.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.

13. CHECK INTERMITTENT INCIDENT

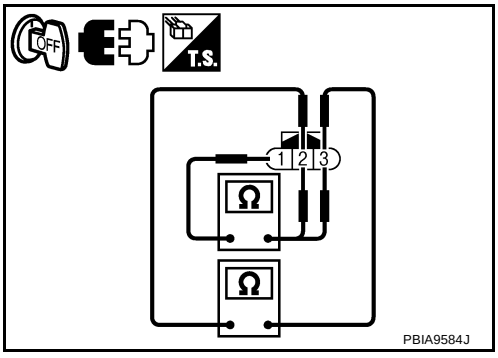
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS0008I



CAMSHAFT POSITION SENSOR (PHASE)

1. Loosen the fixing bolt of the sensor.
2. Disconnect CMP sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.

5. Check resistance as shown in the figure.

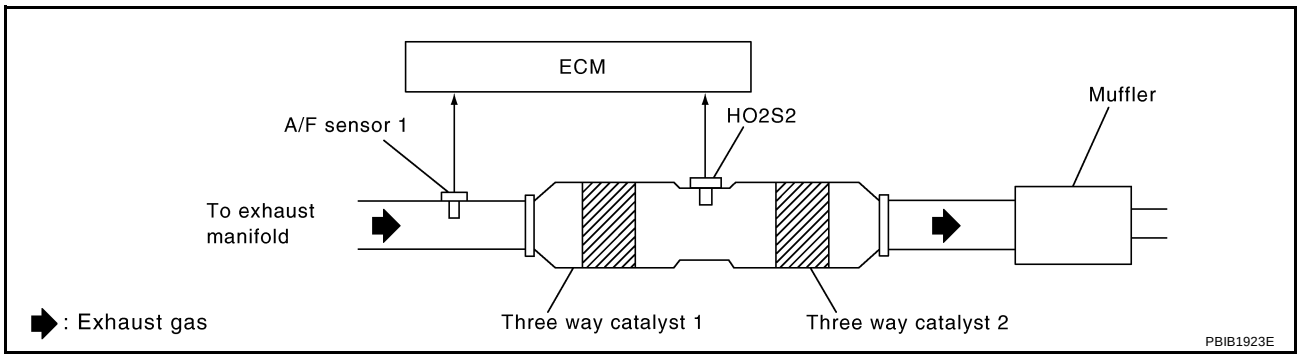
Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 (+) - 2 (-)	Except 0 or ∞
1 (+) - 3 (-)	
2 (+) - 3 (-)	

Removal and Installation

NBS0008J

CAMSHAFT POSITION SENSOR (PHASE)

Refer to EM-72, "CAMSHAFT" .



DTC P0420, P0430 THREE WAY CATALYST FUNCTION

PFP:20905

On Board Diagnosis Logic

NBS0008K

The ECM monitors the switching frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2. A three way catalyst 1 with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.
When the frequency ratio of air fuel ratio (A/F) sensor 1 and heated oxygen sensor 2 approaches a specified limit value, the three way catalyst 1 malfunction is diagnosed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420 (Bank 1)	Catalyst system efficiency below threshold	● Three way catalyst 1 does not operate properly. ● Three way catalyst 1 does not have enough oxygen storage capacity.	● Three way catalyst 1 ● Exhaust tube ● Intake air leaks ● Fuel injector ● Fuel injector leaks ● Spark plug ● Improper ignition timing
P0430 0430 (Bank 2)			

DTC Confirmation Procedure

NBS0008L

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

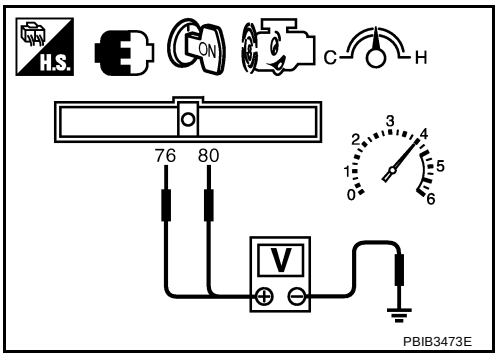
WITH CONSULT-III

TESTING CONDITION:
Do not hold engine speed for more than the specified minutes below.

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. Make sure that “COOLAN TEMP/S” indicates more than 70°C (158°F).
   If not, warm up engine and go to next step when “COOLAN TEMP/S” indication reaches to 70°C (158°F).
7. Open engine hood.
8. Select “DTC & SRT CONFIRMATION” then “SRT WORK SUPPORT” mode with CONSULT-III.
9. Rev engine up to 2,000 to 3,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely.
   If “INCMP” of “CATALYST” changed to “CMPLT”, go to step 12.
10. Wait 5 seconds at idle.
11. Rev engine up to 2,000 to 3,000 rpm and maintain it until “INCMP” of “CATALYST” changes to “CMPLT” (It will take approximately 5 minutes).
    If not “CMPLT”, stop engine and cool it down to less than 70°C (158°F) and then retest from step 1.
12. Select “SELF-DIAG RESULTS” mode with CONSULT-III.

13. Confirm that the 1st trip DTC is not detected.
If the 1st trip DTC is detected, go to EC-407, "Diagnostic Procedure" .

Overall Function Check



NBS0008M

Use this procedure to check the overall function of the three way catalyst 1. During this check, a 1st trip DTC might not be confirmed.

WITH GST

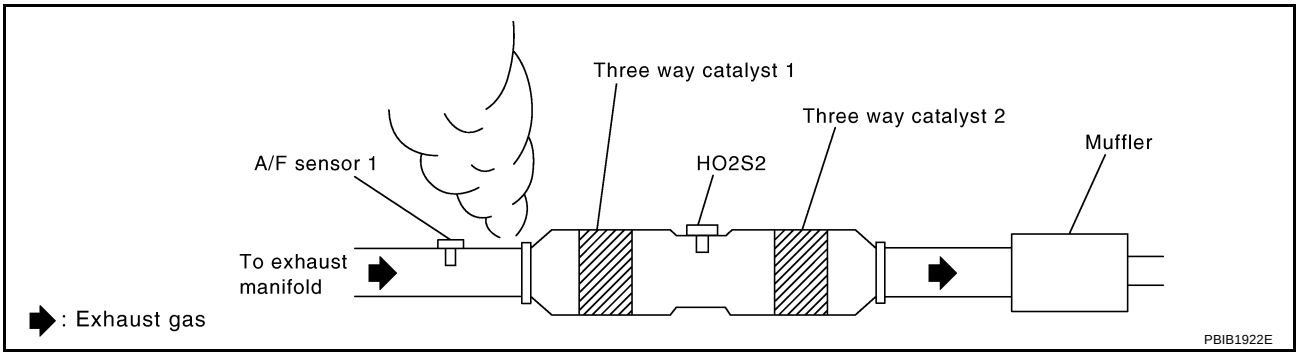
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1minute.
5. Open engine hood.
6. Set voltmeters probes between ECM terminal 76 [HO2S2 (bank 1) signal], 80 [HO2S2 (bank 2) signal] and ground.
7. Keep engine speed at 2,500 rpm constant under no load.
8. Make sure that the voltage does not vary for more than 5 seconds. It the voltage fluctuation cycle take less than 5 seconds. Go to EC-407, "Diagnostic Procedure" .

- 1cycle: 0.6 - 1.0 → 0 - 0.3 → 0.6 - 1.0

Diagnostic Procedure

NBS0008N

1. CHECK EXHAUST SYSTEM



Visually check exhaust tubes and muffler for dent.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before the three way catalyst 1.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the mass air flow sensor.

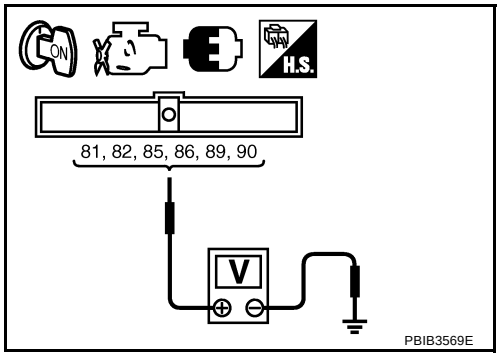
OK or NG

OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK IGNITION TIMING

Check the following items. Refer to EC-71, "Basic Inspection" .

Items	Specifications	
Target idle speed	A/T	650 ± 50 rpm (in P or N position)
	M/T	650 ± 50 rpm (in Neutral position)
Ignition timing	A/T	15 ± 5° BTDC (in P or N position)
	M/T	15 ± 5° BTDC (in Neutral position)



OK or NG

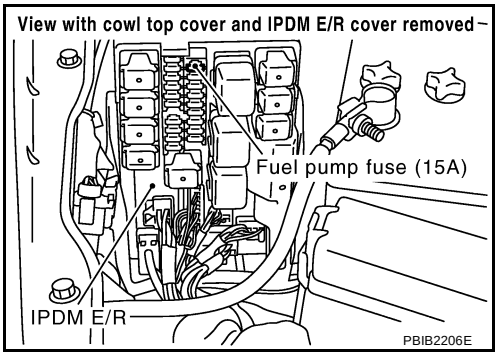
OK >> GO TO 5.
NG >> Follow the EC-71, "Basic Inspection" .

5. CHECK FUEL INJECTOR

1. Stop engine and turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Turn ignition switch ON.
4. Check voltage between ECM terminals 81, 82, 85, 86, 89, 90 and ground with CONSULT-III or tester.
   Refer to Wiring Diagram for fuel injectors, EC-687, "Wiring Diagram" .

   Voltage: Battery voltage

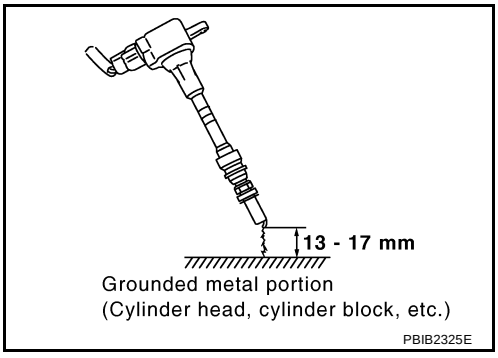
OK or NG



OK >> GO TO 6.
NG >> Perform EC-688, "Diagnostic Procedure" .

6. CHECK FUNCTION OF IGNITION COIL-I

CAUTION:
Do the following procedure in the place where ventilation is good without the combustible.



1. Turn ignition switch OFF.
2. Reconnect ECM harness connector disconnected.
3. Remove fuel pump fuse in IPDM E/R to release fuel pressure.

   NOTE:
   Do not use CONSULT-III to release fuel pressure, or fuel pressure applies again during the following procedure.
4. Start engine.
5. After engine stalls, crank it two or three times to release all fuel pressure.
6. Turn ignition switch OFF.
7. Remove all ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
8. Remove ignition coil and spark plug of the cylinder to be checked.

9. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
10. Connect spark plug and harness connector to ignition coil.
11. Fix ignition coil using a rope etc. with gap of 13 - 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
12. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded metal portion.

    Spark should be generated.

CAUTION:

- **Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.**
- **It might cause to damage the ignition coil if the gap of more than 17 mm is taken.**

NOTE:
When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

OK or NG

OK >> GO TO 10.
NG >> GO TO 7.

7. CHECK FUNCTION OF IGNITION COIL-II

1. Turn ignition switch OFF.
2. Disconnect spark plug and connect a known-good spark plug.
3. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded metal portion.

   Spark should be generated.

OK or NG

OK >> GO TO 8.
NG >> Check ignition coil, power transistor and their circuits. Refer to EC-698, "IGNITION SIGNAL" .

8. CHECK SPARK PLUG

1. Turn ignition switch OFF.
2. Check the spark plugs and check for fouling, etc.

OK or NG

OK >> GO TO 9.
NG >> Repair or replace spark plug (s) with standard type one (s). For spark plug type ignition coil. Refer to MA-18, "Changing Spark Plugs (Iridium-Tipped Type)" .

9. CHECK FUNCTION OF IGNITION COIL-III

1. Reconnect the initial spark plugs.
2. Crank engine for about 3 seconds, and recheck whether spark is generated between the spark plug and the grounded portion.

Spark should be generated.

OK or NG

OK >> **INSPECTION END**
NG >> Replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-18, "Changing Spark Plugs (Iridium-Tipped Type)" .

10. CHECK FUEL INJECTOR

1. Turn ignition switch OFF.
2. Remove fuel injector assembly.
   Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all fuel injectors connected to fuel injector gallery.
3. Disconnect all ignition coil harness connectors.
4. Reconnect all fuel injector harness connectors disconnected.
5. Turn ignition switch ON.
   Make sure fuel does not drip from fuel injector.

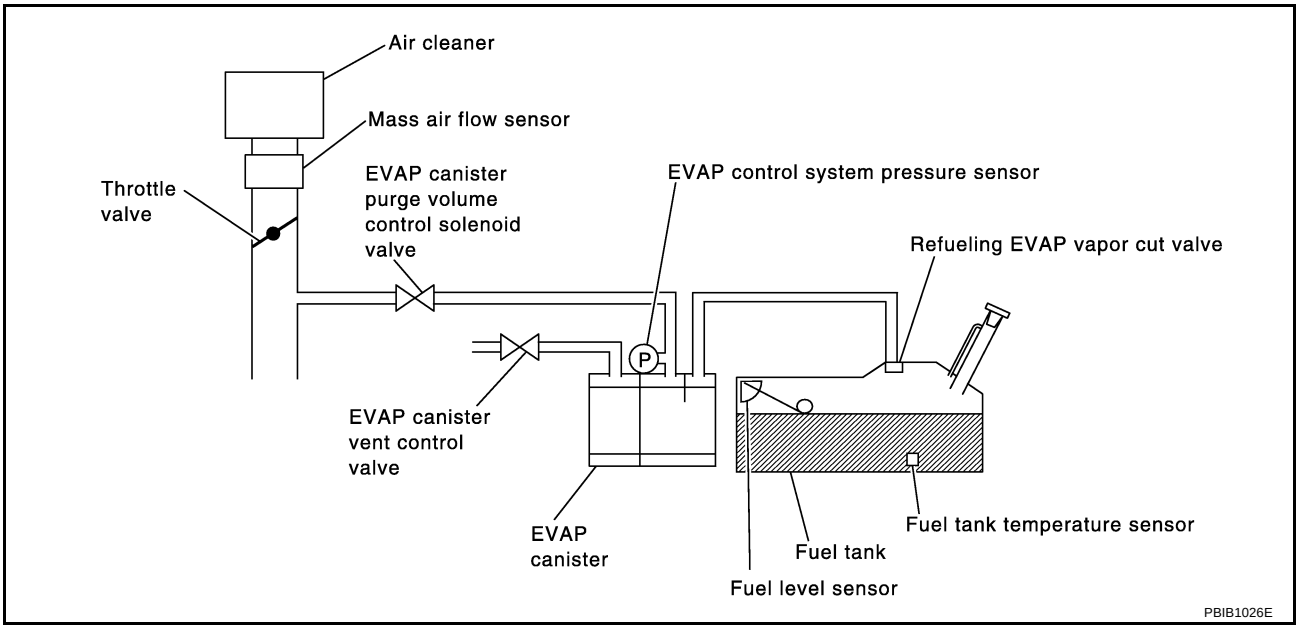
OK or NG

OK (Does not drip.)>>GO TO 11.
NG (Drips.)>>Replace the fuel injector(s) from which fuel is dripping.

11. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

Trouble is fixed.>>**INSPECTION END**
Trouble is not fixed.>>Replace three way catalyst assembly.



DTC P0441 EVAP CONTROL SYSTEM

PFP:14950

System Description

NBS0008O

NOTE:
If DTC P0441 is displayed with other DTC such as P2122, P2123, P2127, P2128 or P2138, first perform trouble diagnosis for other DTC.

In this evaporative emission (EVAP) control system, purge flow occurs during non-closed throttle conditions. Purge volume is related to air intake volume. Under normal purge conditions (non-closed throttle), the EVAP canister purge volume control solenoid valve is open to admit purge flow. Purge flow exposes the EVAP control system pressure sensor to intake manifold vacuum.

On Board Diagnosis Logic

NBS0008P

Under normal conditions (non-closed throttle), sensor output voltage indicates if pressure drop and purge flow are adequate. If not, a malfunction is determined.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0441 0441	EVAP control system incorrect purge flow	EVAP control system does not operate properly, EVAP control system has a leak between intake manifold and EVAP control system pressure sensor.	● EVAP canister purge volume control solenoid valve stuck closed ● EVAP control system pressure sensor and the circuit ● Loose, disconnected or improper connection of rubber tube ● Blocked rubber tube ● Cracked EVAP canister ● EVAP canister purge volume control solenoid valve circuit ● Accelerator pedal position sensor ● Blocked purge port ● EVAP canister vent control valve

DTC Confirmation Procedure

NBS0008Q

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Always perform test at a temperature of 5°C (41°F) or more.

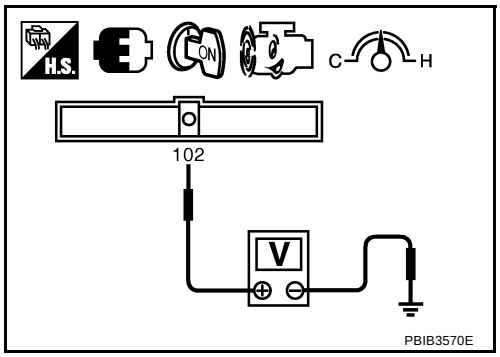
WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and let it idle for at least 70 seconds.
4. Select “PURG FLOW P0441” of “EVAPORATIVE SYSTEM” in “DTC & SRT CONFIRMATION” mode with CONSULT-III.
5. Touch “START”.
   If “COMPLETED” is displayed, go to step 7.
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-III screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take at least 35 seconds.)

Shift lever	Suitable position
VHCL SPEED SE	32 - 120 km/h (20 - 75 MPH)
ENG SPEED	500 - 3,000 rpm
B/FUEL SCHDL	1.3 - 9.0 msec
COOLAN TEMP/S	70 - 100°C (158 - 212°F)

If “TESTING” is not changed for a long time, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-413, "Diagnostic Procedure" .



Overall Function Check

NBS0008R

Use this procedure to check the overall monitoring function of the EVAP control system purge flow monitoring. During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Lift up drive wheels.
2. Start engine (VDC switch or TCS switch OFF) and warm it up to normal operating temperature.
3. Turn ignition switch OFF, wait at least 10 seconds.
4. Start engine and wait at least 70 seconds.
5. Set voltmeter probes to ECM terminals 102 (EVAP control system pressure sensor signal) and ground.
6. Check EVAP control system pressure sensor value at idle speed and note it.
7. Establish and maintain the following conditions for at least 1 minute.

Air conditioner switch	ON
Headlamp switch	ON
Rear window defogger switch	ON
Engine speed	Approx. 3,000 rpm
Shift lever	Any position other than P, N or R

8. Verify that EVAP control system pressure sensor value stays 0.1V less than the value at idle speed (measured at step 6) for at least 1 second.
9. If NG, go to EC-413, "Diagnostic Procedure" .

Diagnostic Procedure

NBS0008S

1. CHECK EVAP CANISTER

1. Turn ignition switch OFF.
2. Check EVAP canister for cracks.

OK or NG

OK (With CONSULT-III)>>GO TO 2.
OK (Without CONSULT-III)>>GO TO 3.
NG >> Replace EVAP canister.

2. CHECK PURGE FLOW

With CONSULT-III

1. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .
2. Start engine and let it idle.
3. Select “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-III.
4. Rev engine up to 2,000 rpm.
5. Touch “Qd” and “Qu” on CONSULT-III screen to adjust “PURG VOL CONT/V” opening and check vacuum existence.

PURG VOL CONT/V	Vacuum
100%	Should exist.
0%	Should not exist.

OK or NG

OK >> GO TO 7.
NG >> GO TO 4.

3. CHECK PURGE FLOW

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose connected to EVAP canister purge volume control solenoid valve at EVAP service port and install vacuum gauge. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .
4. Start engine and let it idle.

   Do not depress accelerator pedal even slightly

5. Check vacuum gauge indication before 60 seconds passed after starting engine.

   Vacuum should not exist.

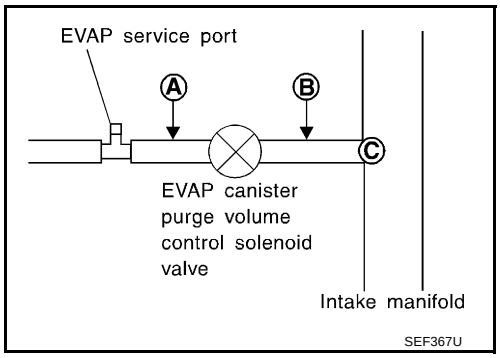
6. Revving engine up to 2,000 rpm after 100 seconds passed after starting engine.

   Vacuum should exist.

OK or NG

OK >> GO TO 7.
NG >> GO TO 4.

4. CHECK EVAP PURGE LINE

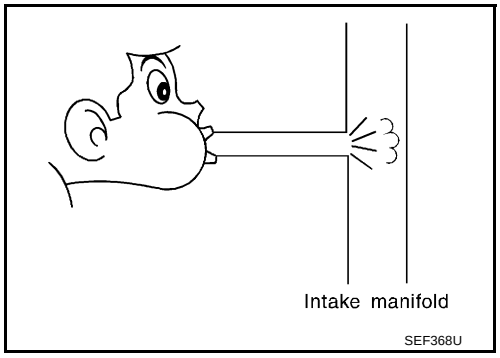


1. Turn ignition switch OFF.
2. Check EVAP purge line for improper connection or disconnection. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 5.
NG >> Repair it.

5. CHECK EVAP PURGE HOSE AND PURGE PORT



1. Disconnect purge hoses connected to EVAP service port **A** and EVAP canister purge volume control solenoid valve **B** .
2. Blow air into each hose and EVAP purge port **C** .

3. Check that air flows freely.

OK or NG

OK (With CONSULT-III)>>GO TO 6.
OK (Without CONSULT-III)>>GO TO 7.
NG >> Repair or clean hoses and/or purge port.

6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-III

1. Start engine.
2. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-III. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace EVAP canister purge volume control solenoid valve.

8. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

Water should not exist.

OK or NG

OK >> GO TO 9.
NG >> Replace EVAP control system pressure sensor.

9. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR FUNCTION

Refer to EC-457, "DTC Confirmation Procedure" for DTC P0452 and EC-466, "DTC Confirmation Procedure" for P0453.

OK or NG

OK >> GO TO 10.
NG >> Replace EVAP control system pressure sensor.

10. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 11.
NG >> Clean the rubber tube using an air blower.

11. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to EC-442, "Component Inspection" .

OK or NG

OK >> GO TO 12.
NG >> Replace EVAP canister vent control valve.

12. CHECK EVAP PURGE LINE

Inspect EVAP purge line (pipe and rubber tube). Check for evidence of leaks.
Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 13.
NG >> Replace it.

13. CLEAN EVAP PURGE LINE

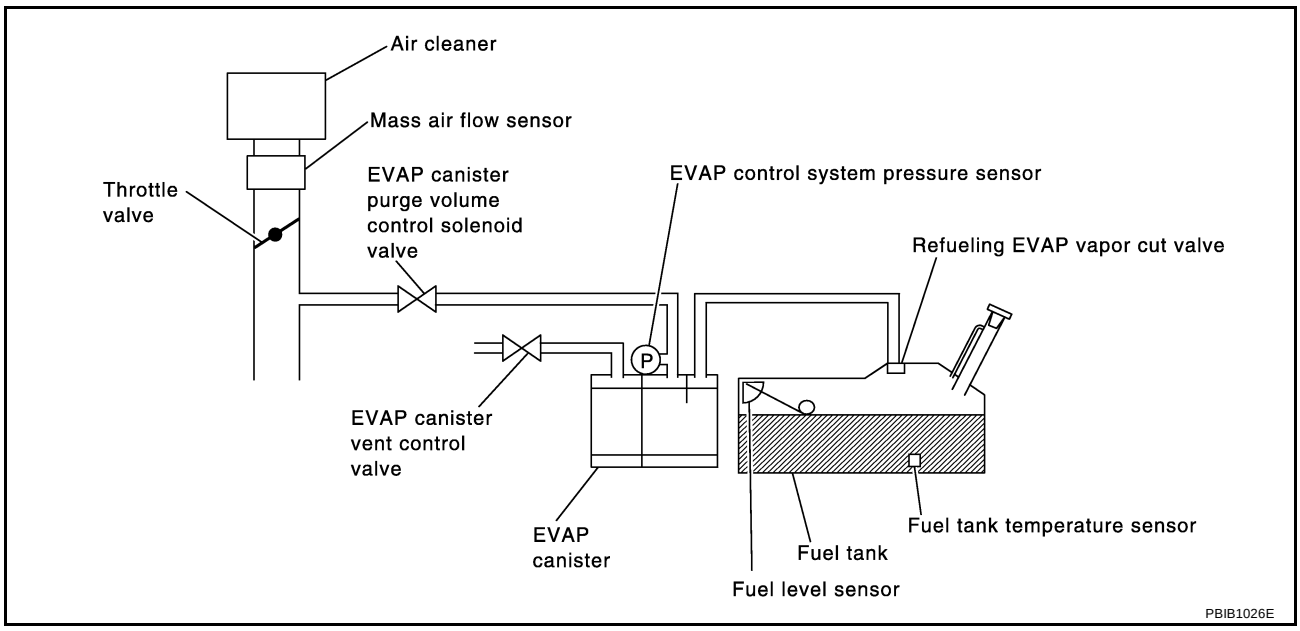
Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 14.

14. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



DTC P0442 EVAP CONTROL SYSTEM

PFP:14950

On Board Diagnosis Logic

NBS0008T

This diagnosis detects leaks in the EVAP purge line using engine intake manifold vacuum.
If pressure does not increase, the ECM will check for leaks in the line between the fuel tank and EVAP canister purge volume control solenoid valve, under the following Vacuum test conditions.
The EVAP canister vent control valve is closed to shut the EVAP purge line off. The EVAP canister purge volume control solenoid valve will then be opened to depressurize the EVAP purge line using intake manifold vacuum. After this occurs, the EVAP canister purge volume control solenoid valve will be closed.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0442 0442	EVAP control system small leak detected (negative pressure)	EVAP control system has a leak, EVAP control system does not operate properly.	● Incorrect fuel tank vacuum relief valve ● Incorrect fuel filler cap used ● Fuel filler cap remains open or fails to close. ● Foreign matter caught in fuel filler cap. ● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve. ● Foreign matter caught in EVAP canister vent control valve. ● EVAP canister or fuel tank leaks ● EVAP purge line (pipe and rubber tube) leaks ● EVAP purge line rubber tube bent ● Loose or disconnected rubber tube ● EVAP canister vent control valve and the circuit ● EVAP canister purge volume control solenoid valve and the circuit ● Fuel tank temperature sensor ● O-ring of EVAP canister vent control valve is missing or damaged ● EVAP canister is saturated with water ● EVAP control system pressure sensor ● Fuel level sensor and the circuit ● Refueling EVAP vapor cut valve ● ORVR system leaks

CAUTION:

- **Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.**
- **If the fuel filler cap is not tightened properly, the MIL may come on.**
- **Use only a genuine NISSAN rubber tube as a replacement.**

DTC Confirmation Procedure

NBS0008U

NOTE:

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

- **Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 and 3/4 full, and vehicle is placed on flat level surface.**
- **Always perform test at a temperature of 0 to 30°C (32 to 86°F).**

WITH CONSULT-III

1. Turn ignition switch ON.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-III.
4. Make sure that the following conditions are met.
   COOLAN TEMP/S: 0 - 70°C (32 - 158°F)
   INT/A TEMP SE: 0 - 30°C (32 - 86°F)
5. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-III.
   Follow the instruction displayed.

   NOTE:
   If the engine speed cannot be maintained within the range displayed on the CONSULT-III screen, go to EC-71, "Basic Inspection" .
6. Make sure that "OK" is displayed.
   If "NG" is displayed, refer to EC-418, "Diagnostic Procedure" .

   NOTE:
   Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.

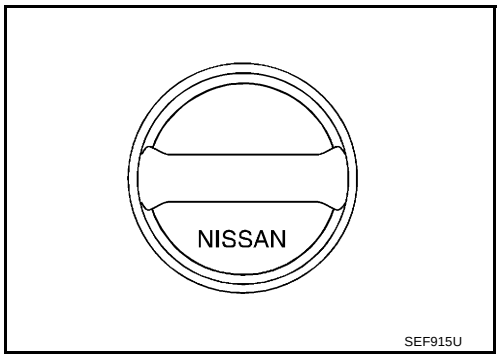
WITH GST

NOTE:
Be sure to read the explanation of EC-58, "Driving Pattern" before driving vehicle.

1. Start engine.
2. Drive vehicle according to EC-58, "Driving Pattern" .
3. Stop vehicle.
4. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
5. Select Service $07 with GST.

- If P0442 is displayed on the screen, go to EC-418, "Diagnostic Procedure" .
- If P0441 is displayed on the screen, go to EC-413, "Diagnostic Procedure" .

Diagnostic Procedure



NBS0008V

1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch OFF.
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

OK >> GO TO 2.
NG >> Replace with genuine NISSAN fuel filler cap.

2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

OK >> GO TO 3.
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.
2. Retighten until ratcheting sound is heard.

3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

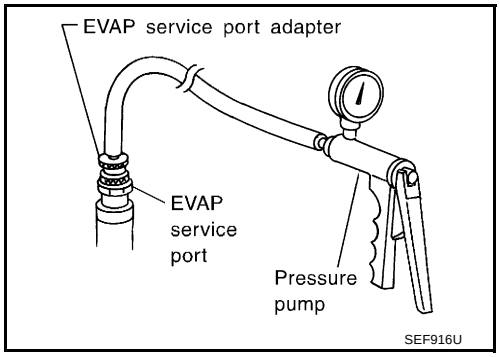
OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to EC-36, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)" .

OK or NG



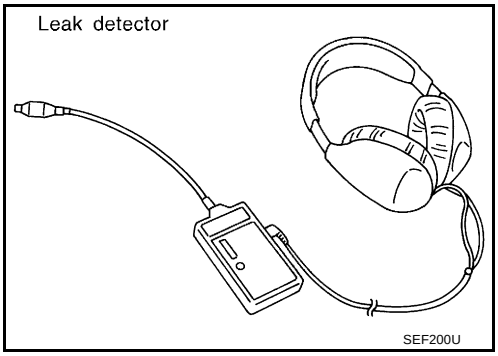
OK >> GO TO 5.
NG >> Replace fuel filler cap with a genuine one.

5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

NOTE:
Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

With CONSULT-III>>GO TO 6.
Without CONSULT-III>>GO TO 7.

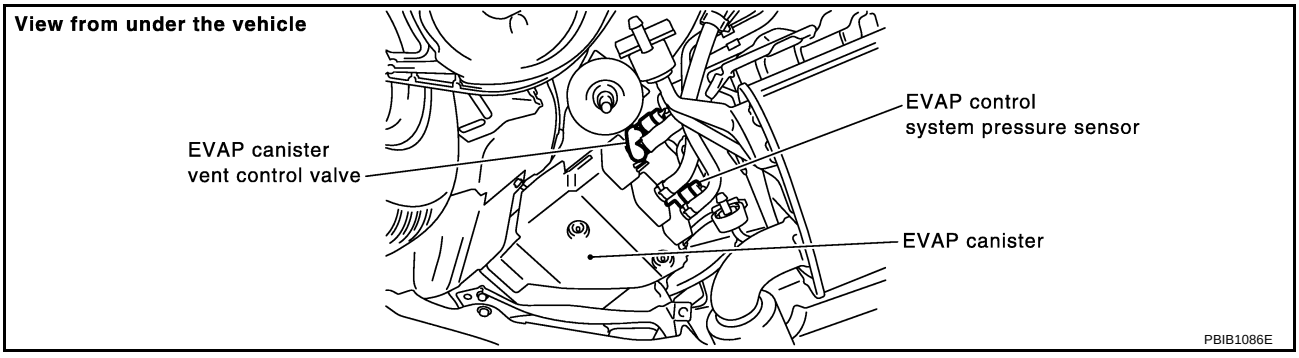


6. CHECK FOR EVAP LEAK

With CONSULT-III

1. Turn ignition switch ON.
2. Select “EVAP SYSTEM CLOSE” of “WORK SUPPORT” mode with CONSULT-III.
3. Touch “START” and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

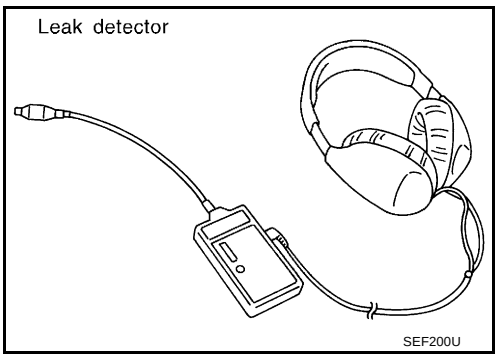
   CAUTION:
   - **Never use compressed air or a high pressure pump.**
   - **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**
4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .



OK or NG

OK >> GO TO 8.
NG >> Repair or replace.

7. CHECK FOR EVAP LEAK



Without CONSULT-III

1. Turn ignition switch OFF.
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)

3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

   CAUTION:
   - **Never use compressed air or a high pressure pump.**
   - **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**
4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

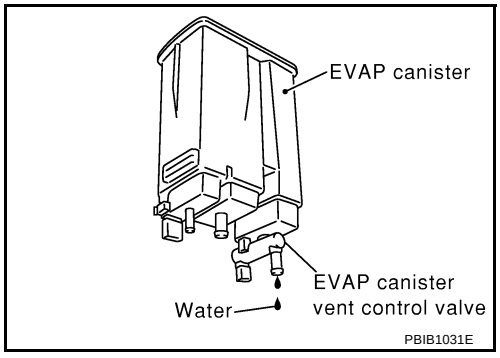
OK >> GO TO 8.
NG >> Repair or replace.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly.
  Refer to EC-37, "Removal and Installation" .
- EVAP canister vent control valve.
  Refer to EC-442, "Component Inspection" .

OK or NG



OK >> GO TO 9.
NG >> Repair or replace EVAP canister vent control valve and O-ring.

9. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 10.
No (With CONSULT-III)>>GO TO 12.
No (Without CONSULT-III)>>GO TO 13.

10. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.
The weight should be less than 2.2 kg (4.9 lb).

OK or NG

OK (With CONSULT-III)>>GO TO 12.
OK (Without CONSULT-III)>>GO TO 13.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-III

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode.
4. Touch “Qu” on CONSULT-III screen to increase “PURG VOL CONT/V” opening to 100%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 15.
NG >> GO TO 14.

13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 16.
NG >> GO TO 14.

14. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to EC-100, "Vacuum Hose Drawing" .

OK or NG

OK >> GO TO 15.
NG >> Repair or reconnect the hose.

15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436, "Component Inspection" .

OK or NG

OK >> GO TO 16.
NG >> Replace EVAP canister purge volume control solenoid valve.

16. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to EC-347, "Component Inspection" .

OK or NG

OK >> GO TO 17.
NG >> Replace fuel level sensor unit.

17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-464, "Component Inspection" .

OK or NG

OK >> GO TO 18.
NG >> Replace EVAP control system pressure sensor.

18. CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 19.
NG >> Repair or reconnect the hose.

19. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

20. CHECK EVAP/ORVR LINE

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to EC-39, "ON BOARD REFUELING VAPOR RECOVERY (ORVR)" .

OK or NG

OK >> GO TO 21.
NG >> Repair or replace hoses and tubes.

21. CHECK RECIRCULATION LINE

Check recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.
NG >> Repair or replace hose, tube or filler neck tube.

22. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "REFUELING EVAP VAPOR CUT VALVE" .

OK or NG

OK >> GO TO 23.
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

23. CHECK FUEL LEVEL SENSOR

Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .

OK or NG

OK >> GO TO 24.
NG >> Replace fuel level sensor unit.

24. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0443 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

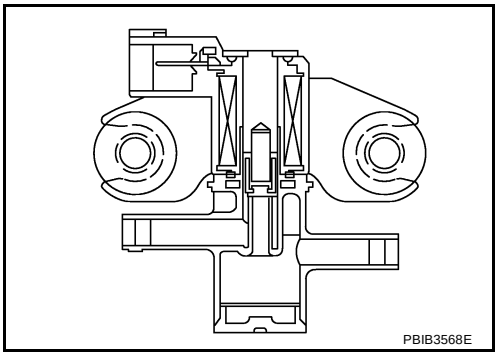
PFP:14920

Description

NBS000FE

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Fuel tank temperature sensor	Fuel temperature in fuel tank		
Wheel sensor	Vehicle speed*2		



*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

CONSULT-III Reference Value in Data Monitor Mode

NBS000FF

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PURG VOL C/V	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle (Accelerator pedal is not depressed even slightly, after engine starting)	0%
		2,000 rpm	—

On Board Diagnosis Logic

NBS000FG

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0443 0443	EVAP canister purge volume control solenoid valve	The canister purge flow is detected during the specified driving conditions, even when EVAP canister purge volume control solenoid valve is completely closed.	● EVAP control system pressure sensor ● EVAP canister purge volume control solenoid valve (The valve is stuck open.) ● EVAP canister vent control valve ● EVAP canister ● Hoses (Hoses are connected incorrectly or clogged.)

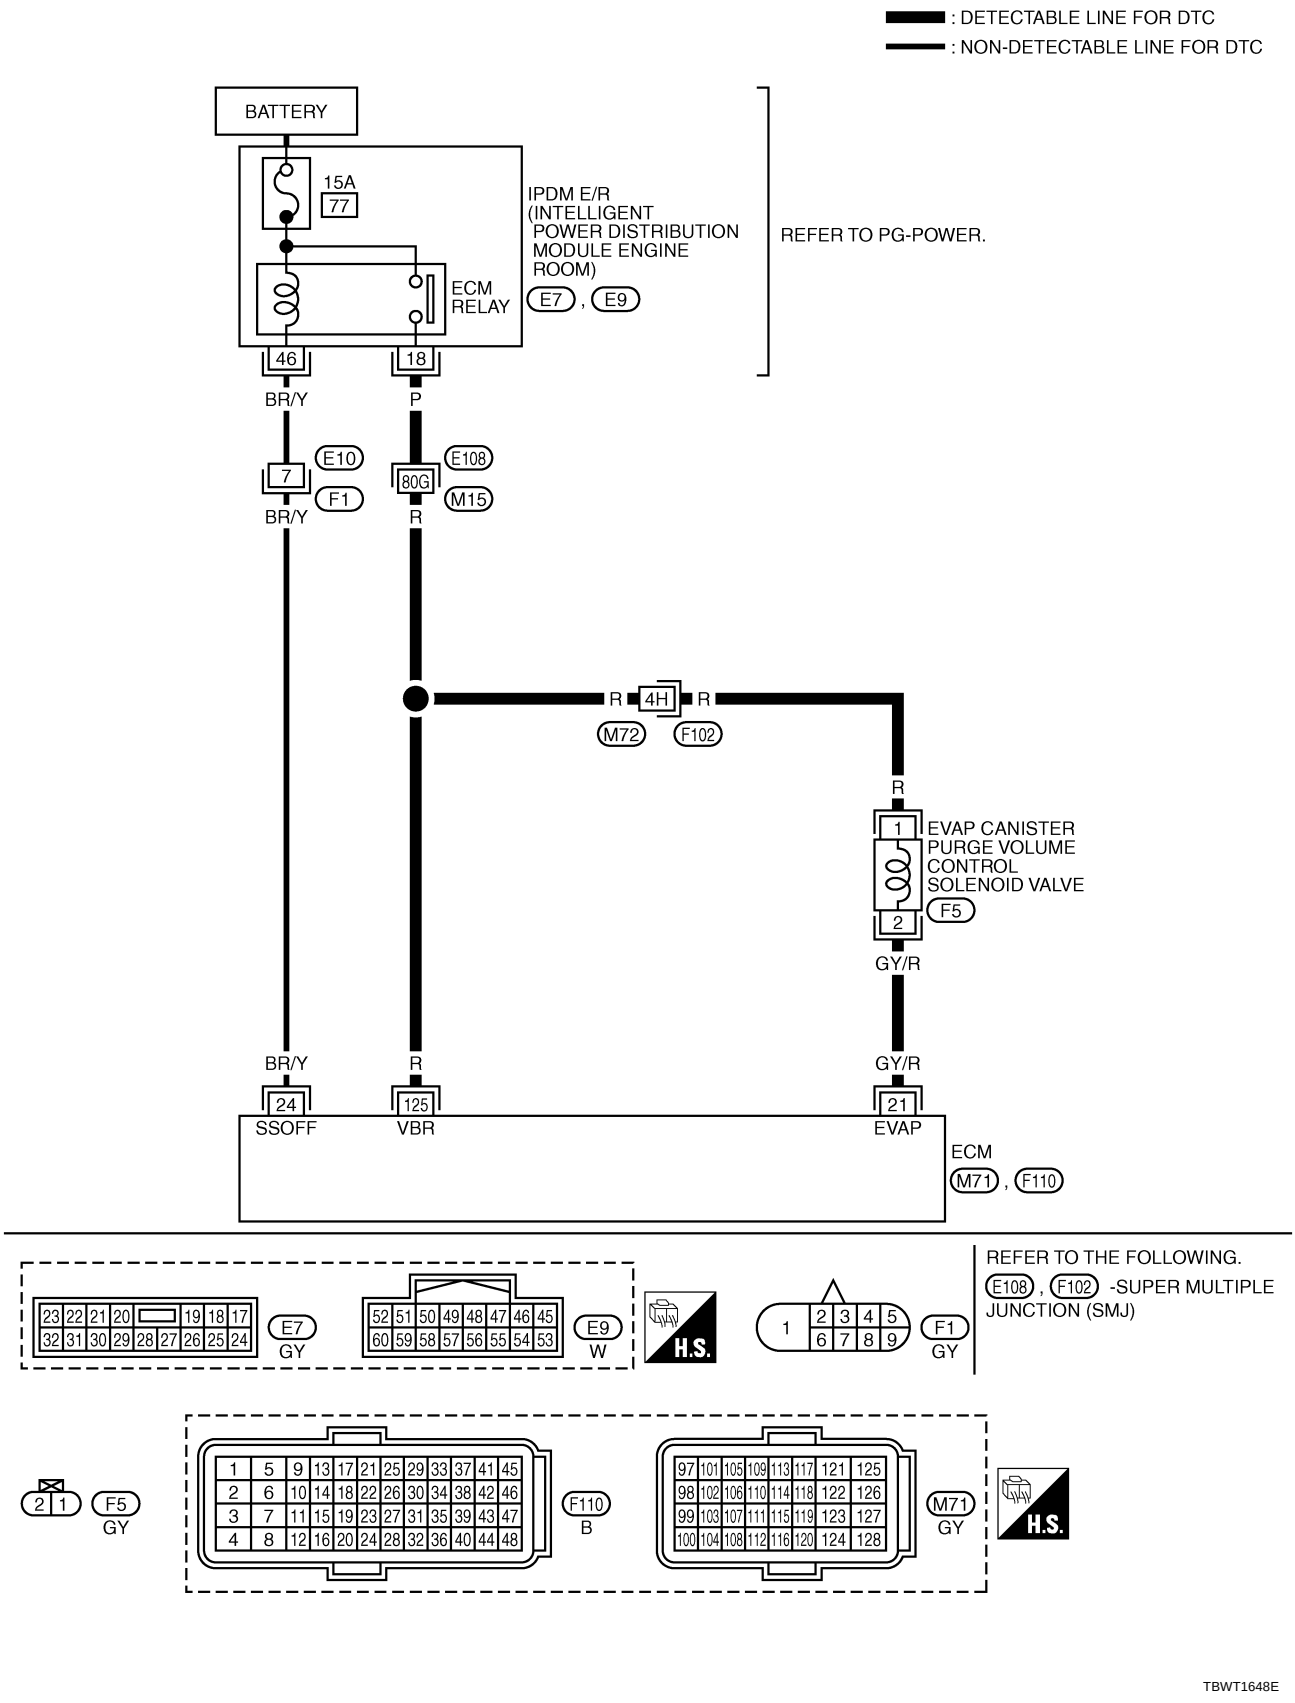
DTC Confirmation Procedure

NBS000FH

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Always perform test at a temperature of 5°C (41°F) or more.

WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Select “PURG VOL CN/V P1444” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-III.
5. Touch “START”.
6. Start engine and let it idle until “TESTING” on CONSULT-III changes to “COMPLETED”. (It will take approximately 10 seconds.)
   If “TESTING” is not displayed after 5 minutes, retry from step 2.
7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-427, "Diagnostic Procedure" .



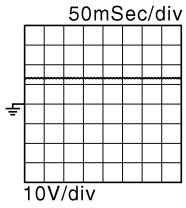
WITH GST

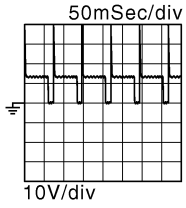
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and let it idle for at least 20 seconds.
4. Select Service $07 with GST.
5. If 1st trip DTC is detected, go to EC-427, "Diagnostic Procedure" .

Wiring Diagram

NBS000FI

EC-PGC/V-01





TBWT1648E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

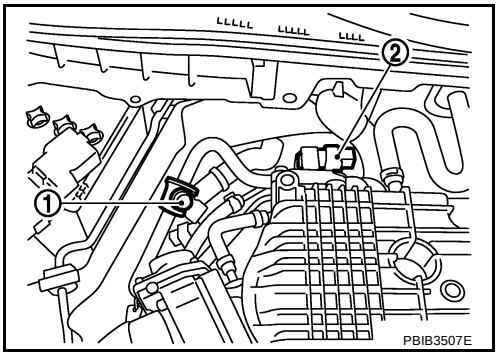
CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
21	GY/R	EVAP canister purge volume control solenoid valve	**[Engine is running]** ● Idle speed ● Accelerator pedal: Not depressed even slightly, after engine starting.	BATTERY VOLTAGE (11 - 14V)★  PBIB3547E
			[Engine is running] ● Engine speed: About 2,000 rpm (More than 100 seconds after starting engine)	BATTERY VOLTAGE (11 - 14V)★  PBIB3548E
24	BR/Y	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch: OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.5V
			[Ignition switch: OFF] ● More than a few seconds after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
125	R	Power supply for ECM	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure



NBS000FJ

1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve (2) harness connector.

   1 : EVAP service port

3. Turn ignition switch ON.

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-III or tester.

   Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness connectors M72, F102
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 21 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

Water should not exist.

OK or NG

OK >> GO TO 5.
NG >> Replace EVAP control system pressure sensor.

5. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455, "Component Inspection" .

OK or NG

OK (With CONSULT-III)>>GO TO 6.
OK (Without CONSULT-III)>>GO TO 7.
NG >> Replace EVAP control system pressure sensor.

6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-III

1. Turn ignition switch OFF.
2. Reconnect harness connectors disconnected.
3. Start engine.
4. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-III. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-430, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace EVAP canister purge volume control solenoid valve.

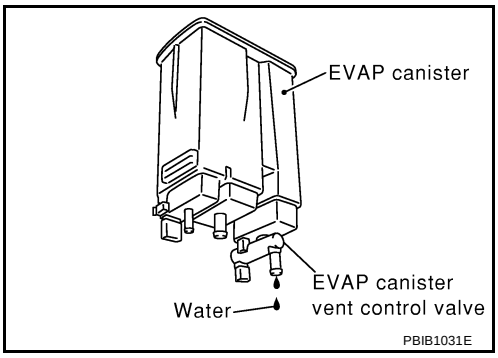
8. CHECK RUBBER TUBE FOR CLOGGING

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 9.
NG >> Clean the rubber tube using an air blower.

9. CHECK EVAP CANISTER VENT CONTROL VALVE



Refer to EC-442, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace EVAP canister vent control valve.

10. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

OK or NG

OK >> GO TO 11.
NG >> GO TO 13.

11. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

The weight should be less than 2.2 kg (4.9 lb).

OK or NG

OK >> GO TO 13.
NG >> GO TO 12.

12. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

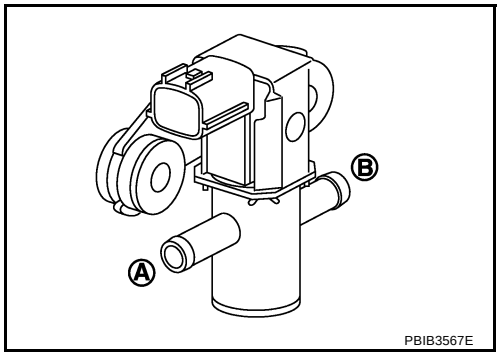
>> Repair hose or replace EVAP canister.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

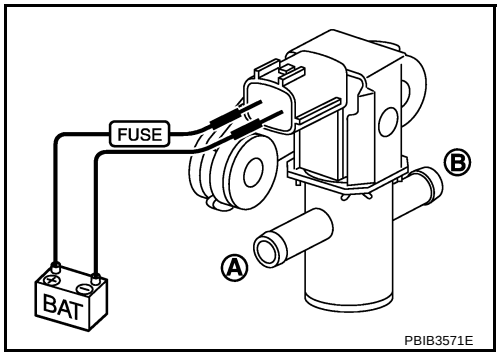


NBS000FK

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-III

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.



Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100%	Yes
0%	No

Without CONSULT-III

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

Removal and Installation

NBS000FL

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P0444, P0445 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

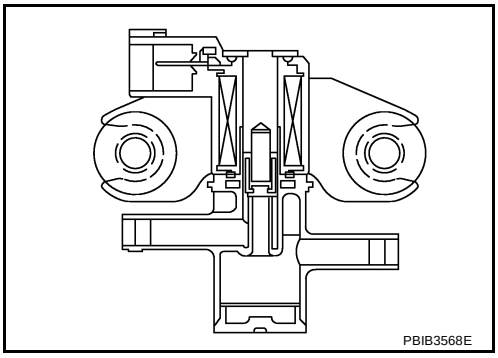
PFP:14920

Description

NBS0008W

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Air fuel ratio (A/F) sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Fuel tank temperature sensor	Fuel temperature in fuel tank		
Wheel sensor	Vehicle speed*2		



*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.

PBIB3568E

CONSULT-III Reference Value in Data Monitor Mode

NBS0008X

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PURG VOL C/V	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle (Accelerator pedal is not depressed even slightly, after engine starting)	0%
		2,000 rpm	—

On Board Diagnosis Logic

NBS0008Y

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0444 0444	EVAP canister purge volume control solenoid valve circuit open	An excessively low voltage signal is sent to ECM through the valve	● Harness or connectors (The solenoid valve circuit is open or shorted.) ● EVAP canister purge volume control solenoid valve
P0445 0445	EVAP canister purge volume control solenoid valve circuit shorted	An excessively high voltage signal is sent to ECM through the valve	● Harness or connectors (The solenoid valve circuit is shorted.) ● EVAP canister purge volume control solenoid valve

DTC Confirmation Procedure

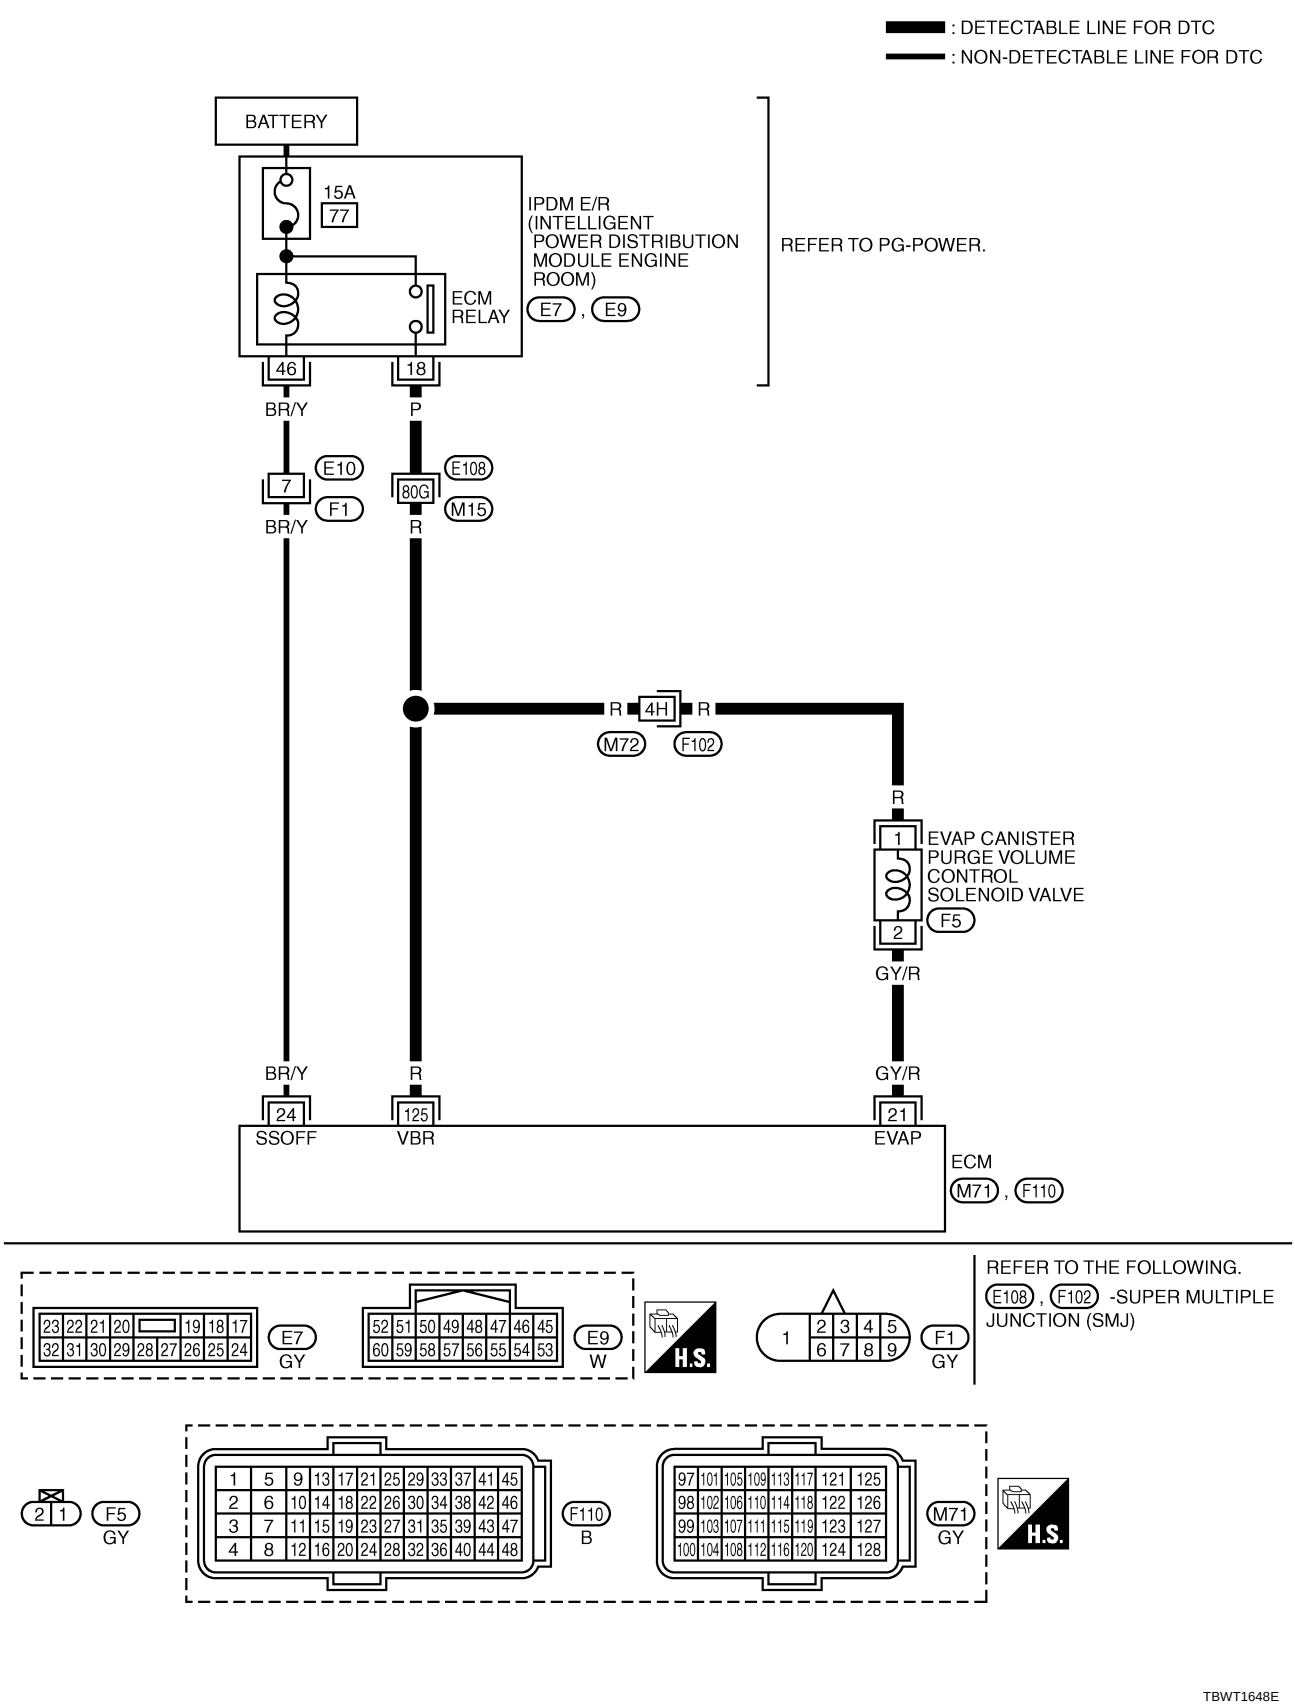
NBS0008Z

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm battery voltage is more than 11V at idle.

WITH CONSULT-III

1. Start engine and let it idle for at least 13 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-435, "Diagnostic Procedure" .



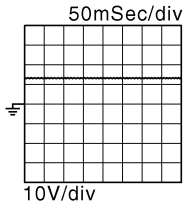
WITH GST

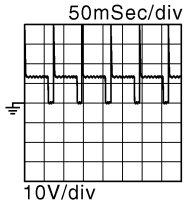
Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS00090

EC-PGC/V-01





TBWT1648E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

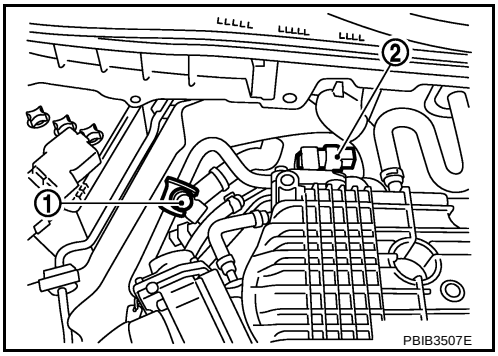
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure



NBS00091

1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve (2) harness connector.

   1 : EVAP service port

3. Turn ignition switch ON.

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-III or tester.

   Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness connectors M72, F102
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 21 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-III)>>GO TO 4.
OK (Without CONSULT-III)>>GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-III

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-III. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436, "Component Inspection" .

OK or NG

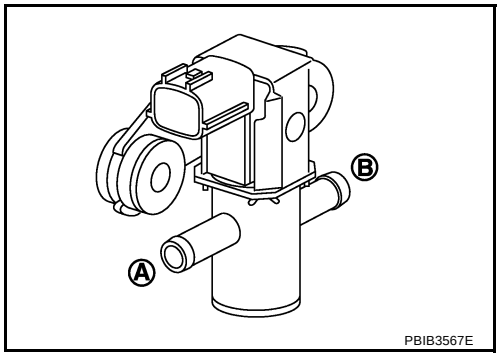
OK >> GO TO 6.
NG >> Replace EVAP canister purge volume control solenoid valve.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

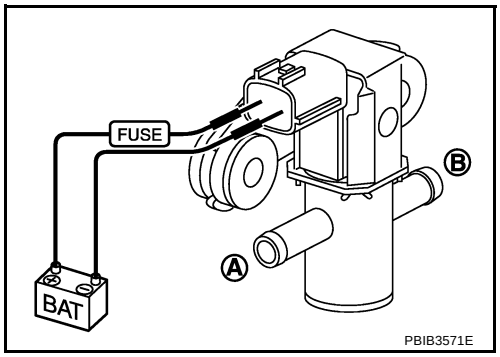


NBS00092

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-III

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.



Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100%	Yes
0%	No

Without CONSULT-III

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

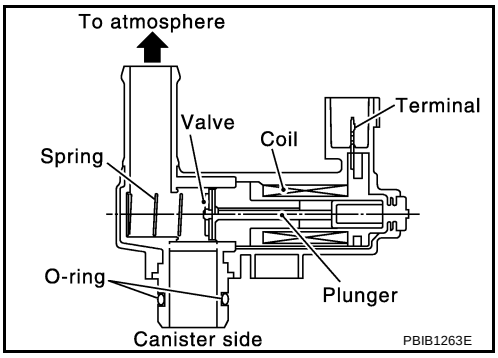
Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No

Removal and Installation

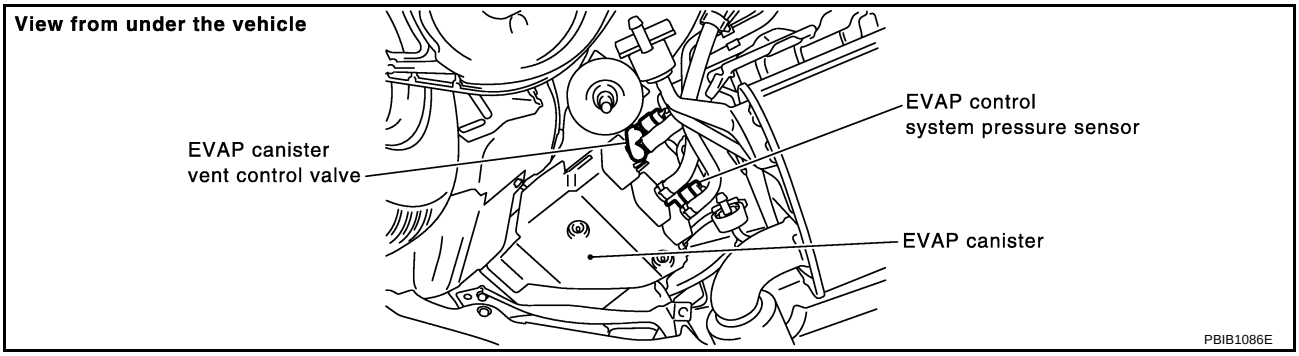
NBS00093

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .



DTC P0447 EVAP CANISTER VENT CONTROL VALVE



PFP:14935

Component Description

NBS00094

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.
This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.
This solenoid valve is used only for diagnosis, and usually remains opened.
When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows “EVAP Control System” diagnosis.

CONSULT-III Reference Value in Data Monitor Mode

NBS00095

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

On Board Diagnosis Logic

NBS00096

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0447 0447	EVAP canister vent control valve circuit open	An improper voltage signal is sent to ECM through EVAP canister vent control valve.	● Harness or connectors (The valve circuit is open or shorted.) ● EVAP canister vent control valve

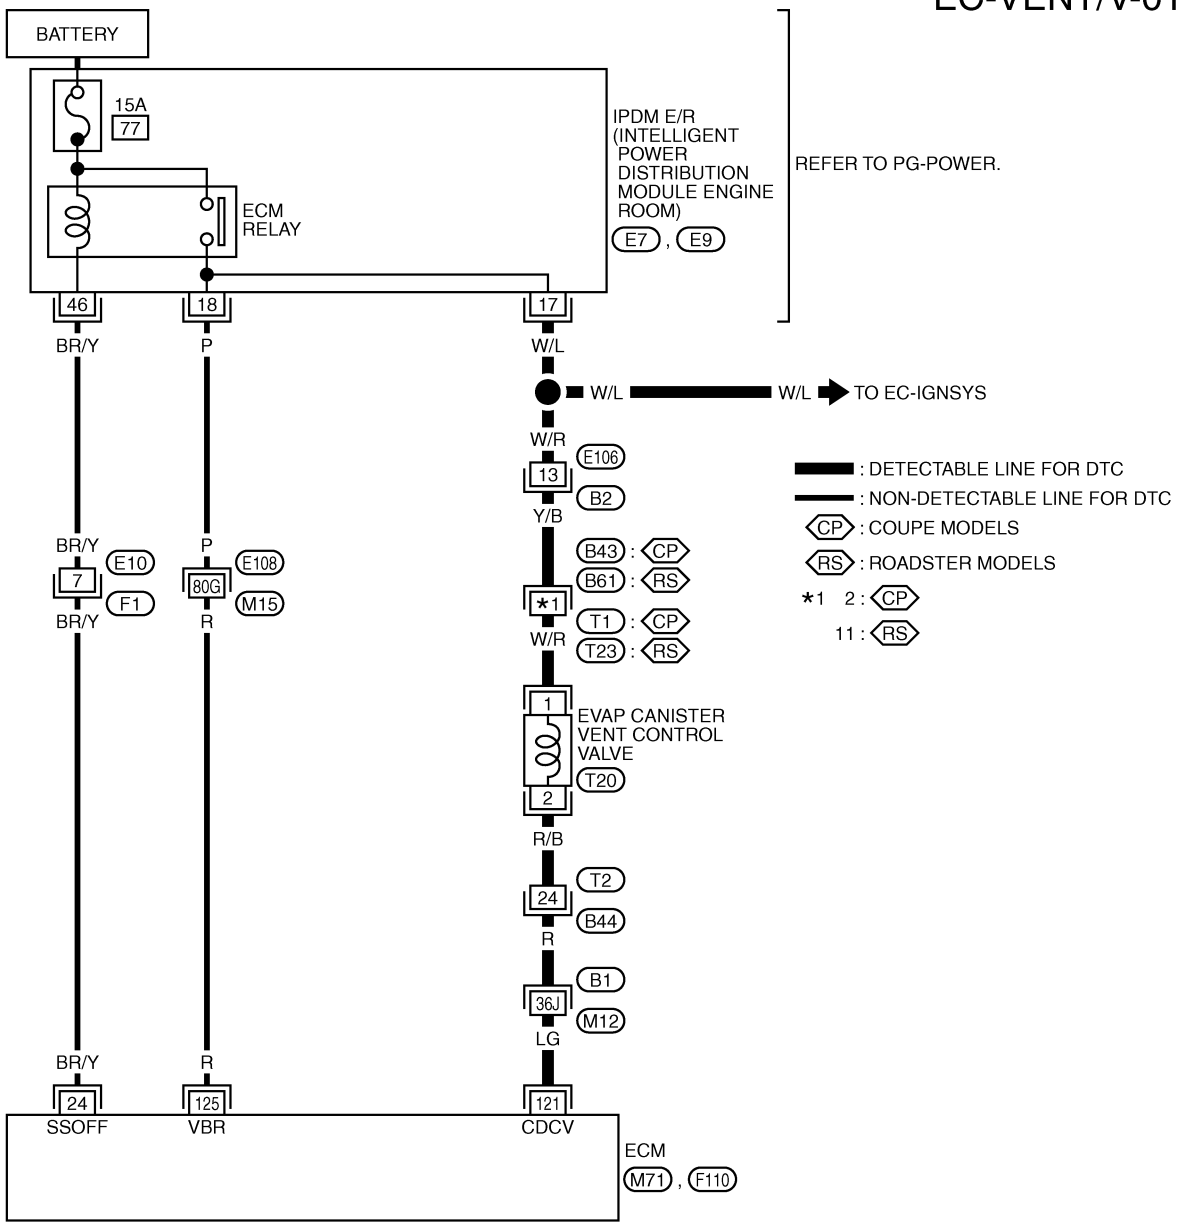
DTC Confirmation Procedure

NBS00097

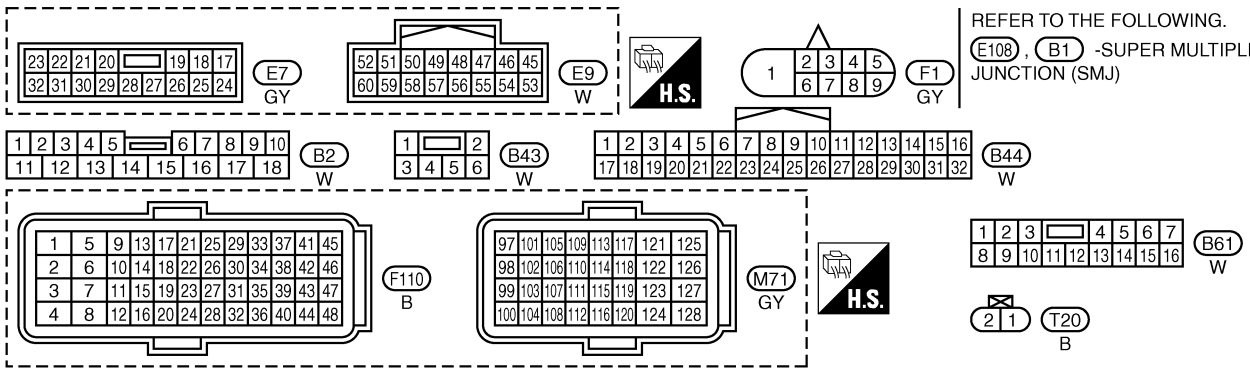
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm battery voltage is more than 11V at idle.

WITH CONSULT-III

1. Start engine and wait at least 8 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-440, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS00098

EC-VENT/V-01

TBWT1649E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
24	BR/Y	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch: OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.5V
			[Ignition switch: OFF] ● More than a few seconds after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
121	LG	EVAP canister vent control valve	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)
125	R	Power supply for ECM	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

NBS00099

1. INSPECTION START

Do you have CONSULT-III?

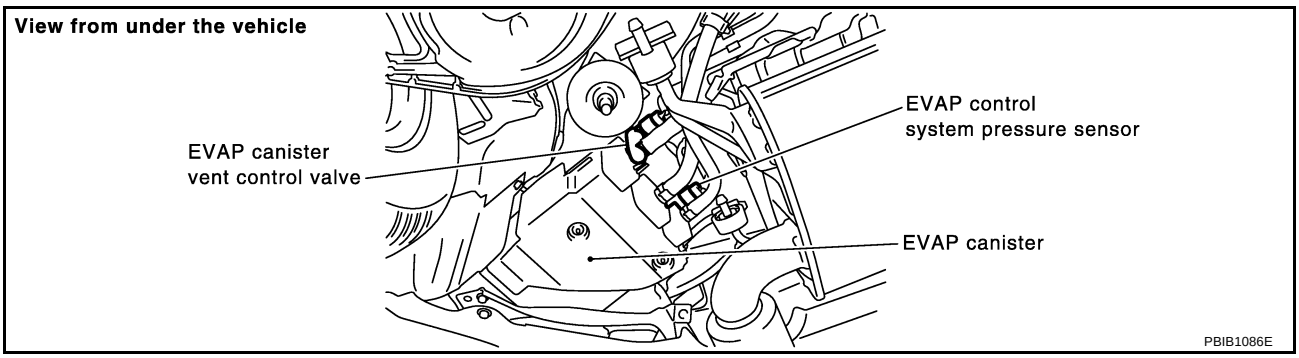
Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK EVAP CANISTER VENT CONTROL VALVE CIRCUIT

With CONSULT-III

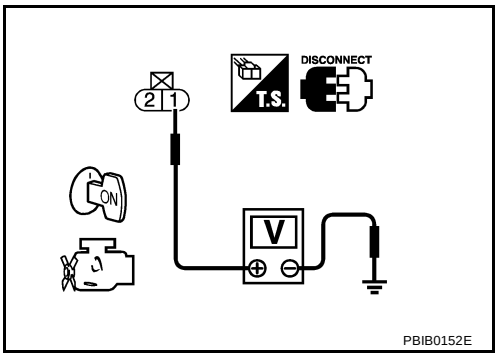
1. Turn ignition switch ON.
2. Select “VENT CONTROL/V” in “ACTIVE TEST” mode with CONSULT-III.
3. Touch “ON/OFF” on CONSULT-III screen.
4. Check for operating sound of the valve.



Clicking noise should be heard.

OK or NG

OK >> GO TO 7.
NG >> GO TO 3.



3. CHECK EVAP CANISTER VENT CONTROL VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister vent control valve harness connector.

3. Turn ignition switch ON.
4. Check voltage between EVAP canister vent control valve terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E106, B2
- Harness connectors B43, T1 (Coupe models)
- Harness connectors B61, T23 (Roadster models)
- IPDM E/R harness connector E7
- Harness for open or short between EVAP canister vent control valve and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK EVAP CANISTER VENT CONTROL VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 121 and EVAP canister vent control valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors T2, B44
- Harness connectors B1, M12
- Harness for open or short between EVAP canister vent control valve and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK RUBBER TUBE FOR CLOGGING

1. Turn ignition switch OFF.
2. Disconnect rubber tube connected to EVAP canister vent control valve.
3. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 8.
NG >> Clean the rubber tube using an air blower.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to EC-442, "Component Inspection" .

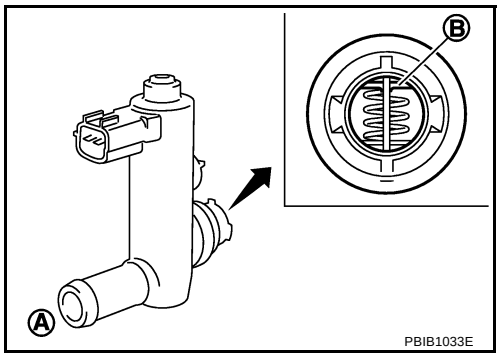
OK or NG

OK >> GO TO 9.
NG >> Replace EVAP canister vent control valve.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

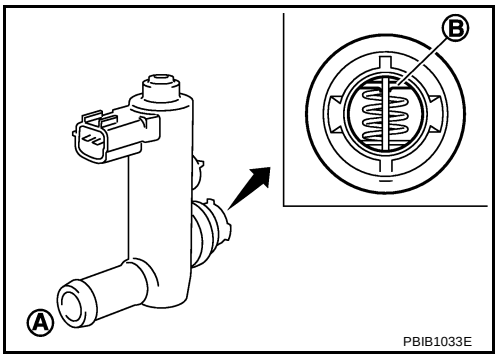
NBS0009A

EVAP CANISTER VENT CONTROL VALVE

With CONSULT-III

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
   If NG, replace EVAP canister vent control valve.
   If OK, go to next step.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch ON.
5. Perform “VENT CONTROL/V” in “ACTIVE TEST” mode.
6. Check air passage continuity and operation delay time.
   Make sure new O-ring is installed properly.

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes

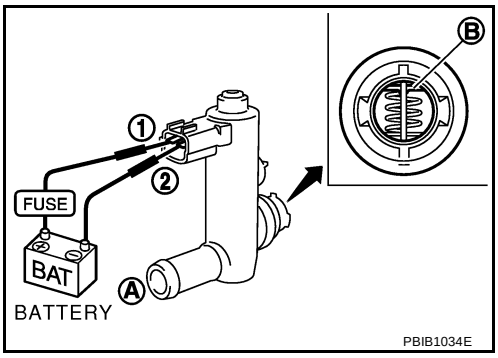


Operation takes less than 1 second.

If NG, replace EVAP canister vent control valve.
If OK, go to next step.

7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform step 6 again.

Without CONSULT-III



1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

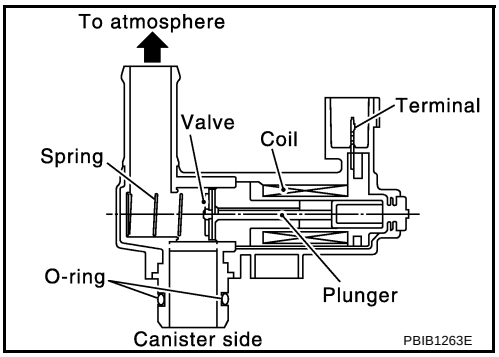
3. Check air passage continuity and operation delay time under the following conditions.
   Make sure new O-ring is installed properly.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	No
OFF	Yes

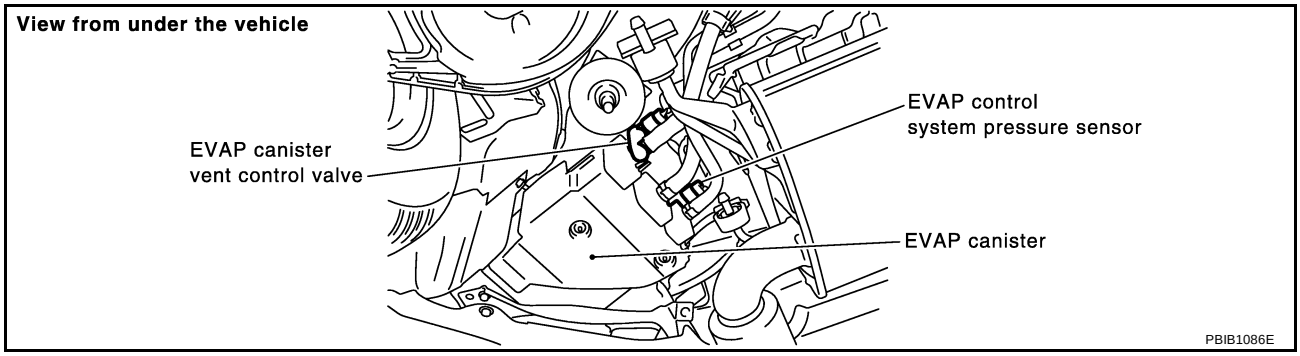
Operation takes less than 1 second.

If NG, replace EVAP canister vent control valve.
If OK, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform step 3 again.



DTC P0448 EVAP CANISTER VENT CONTROL VALVE



PFP:16935

Component Description

NBS000FM

The EVAP canister vent control valve is located on the EVAP canister and is used to seal the canister vent.
This solenoid valve responds to signals from the ECM. When the ECM sends an ON signal, the coil in the solenoid valve is energized. A plunger will then move to seal the canister vent. The ability to seal the vent is necessary for the on board diagnosis of other evaporative emission control system components.
This solenoid valve is used only for diagnosis, and usually remains opened.
When the vent is closed, under normal purge conditions, the evaporative emission control system is depressurized and allows “EVAP Control System” diagnosis.

CONSULT-III Reference Value in Data Monitor Mode

NBS000FN

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
VENT CONT/V	● Ignition switch: ON	OFF

On Board Diagnosis Logic

NBS000FO

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0448 0448	EVAP canister vent control valve close	EVAP canister vent control valve remains closed under specified driving conditions.	● EVAP canister vent control valve ● EVAP control system pressure sensor and the circuit ● Blocked rubber tube to EVAP canister vent control valve ● EVAP canister is saturated with water

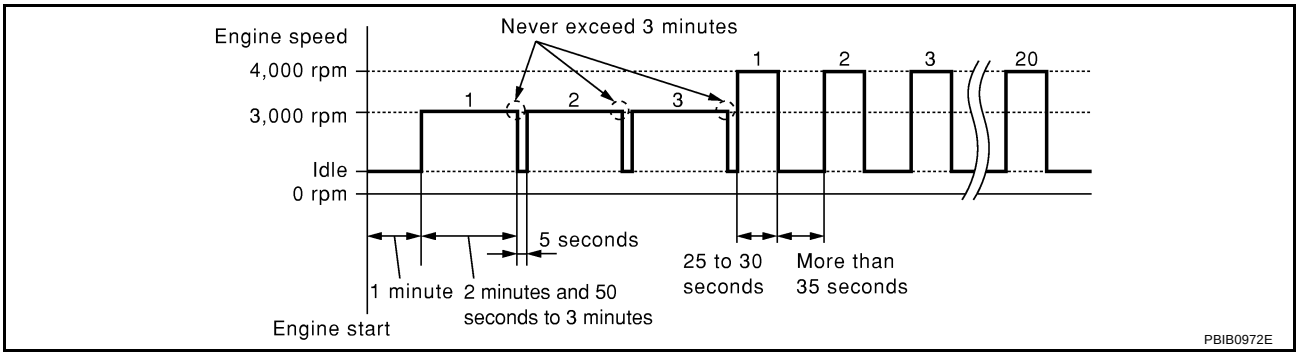
DTC Confirmation Procedure

NBS000FP

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 5 seconds.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
4. Start engine and let it idle for at least 1 minute.
5. Repeat next procedures for three times.



a. Increase the engine speed up to 3,000 to 3,500 rpm and keep it for 2 minutes and 50 seconds to 3 minutes.
Never exceed 3 minutes.

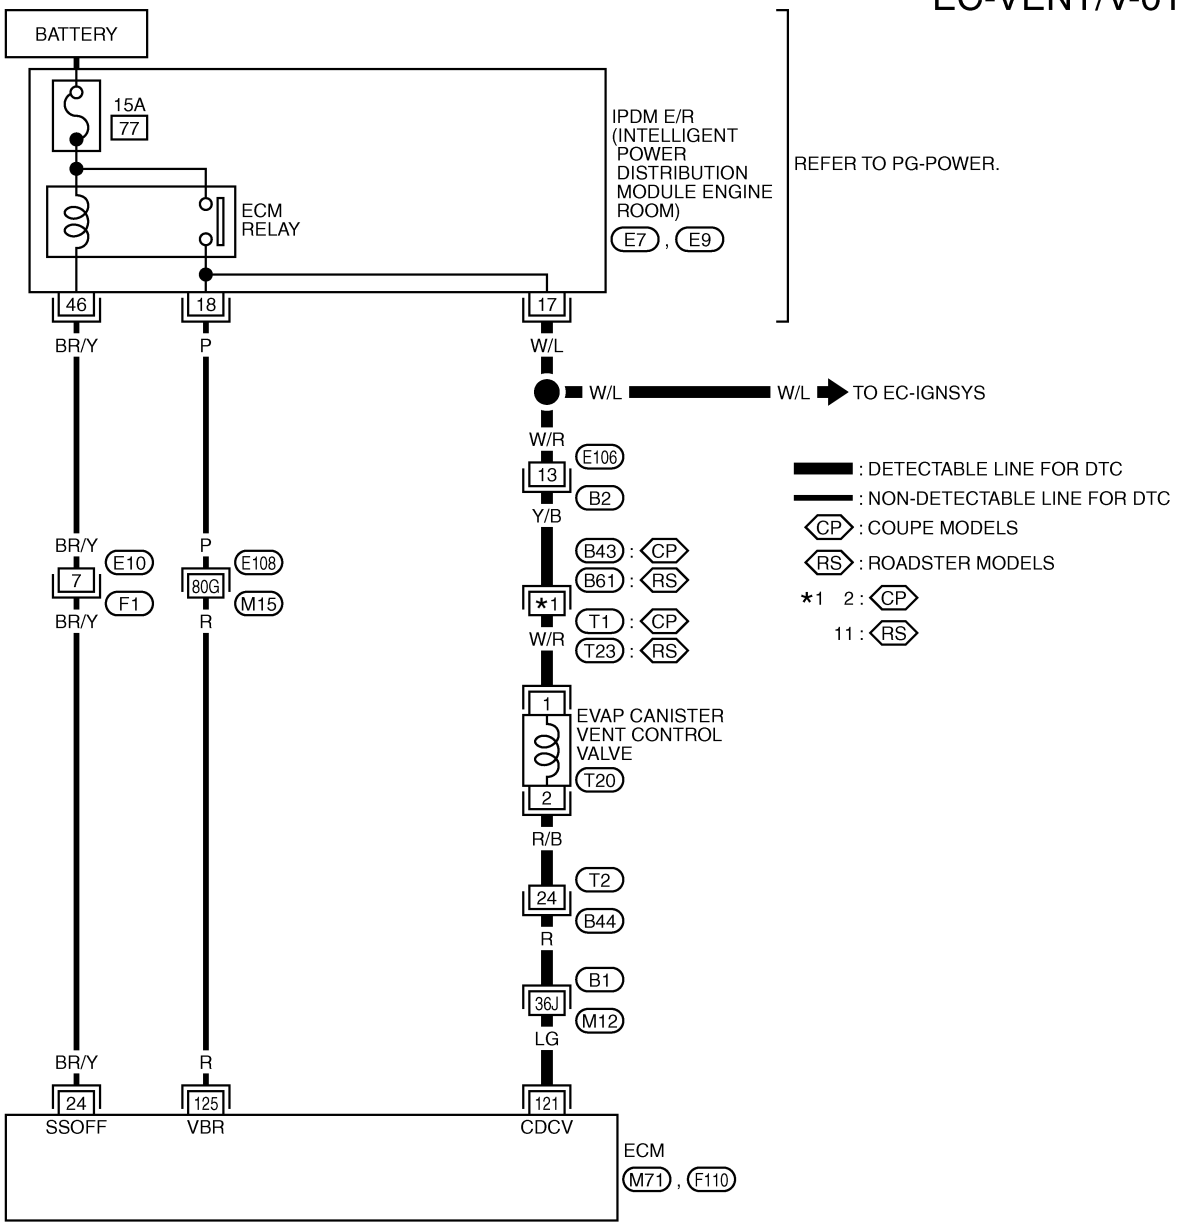
b. Fully released accelerator pedal and keep engine idle for about 5 seconds.

6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-447, "Diagnostic Procedure" .
If 1st trip DTC is not detected, go to the next step.
8. Repeat next procedure for 20 times.

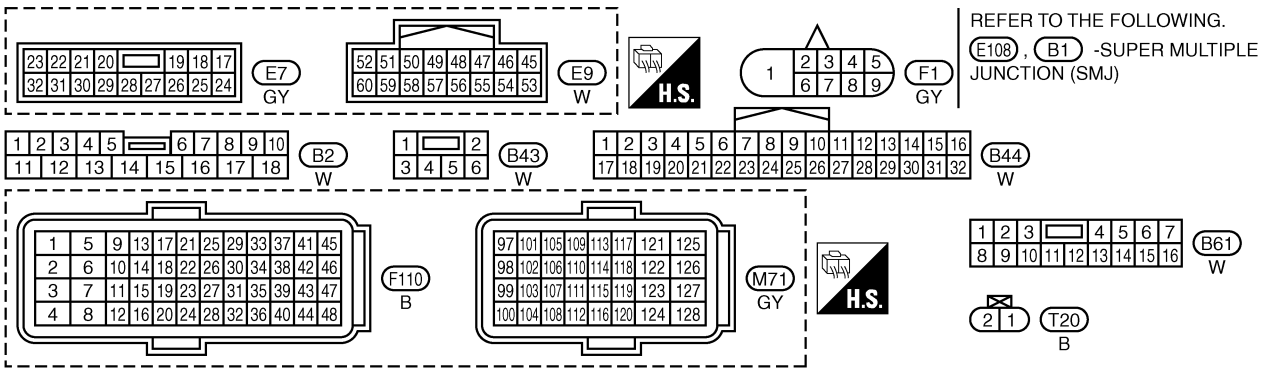
a. Quickly increase the engine speed up to 4,000 to 4,500 rpm or more and keep it for 25 to 30 seconds.

b. Fully released accelerator pedal and keep engine idle for at least 35 seconds.

9. Check 1st trip DTC.
10. If 1st trip DTC is detected, go to EC-447, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS000FQ

EC-VENT/V-01

TBWT1649E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

125	R	Power supply for ECM	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

NBS000FR

1. CHECK RUBBER TUBE

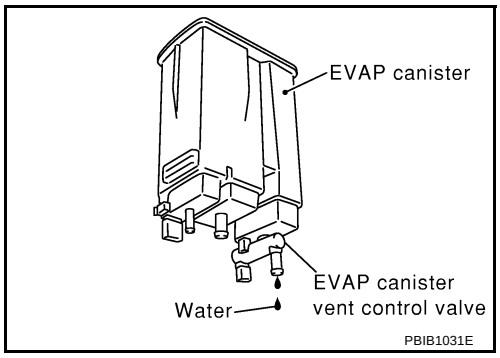
1. Turn ignition switch OFF.
2. Disconnect rubber tube connected to EVAP canister vent control valve.

3. Check the rubber tube for clogging.

OK or NG

OK >> GO TO 2.
NG >> Clean rubber tube using an air blower.

2. CHECK EVAP CANISTER VENT CONTROL VALVE



Refer to EC-449, "EVAP CANISTER VENT CONTROL VALVE" .

OK or NG

OK >> GO TO 3.
NG >> Replace EVAP canister vent control valve.

3. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

OK or NG

OK >> GO TO 4.
NG >> GO TO 6.

4. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.
The weight should be less than 2.2 kg (4.9 lb).

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.
2. Check connectors for water.

Water should not exist.

OK or NG

OK >> GO TO 7.
NG >> Replace EVAP control system pressure sensor.

7. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455, "Component Inspection" .

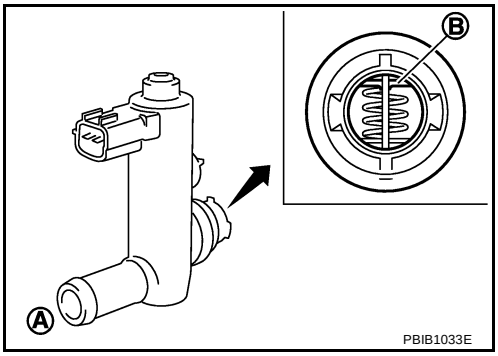
OK or NG

OK >> GO TO 8.
NG >> Replace EVAP control system pressure sensor.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

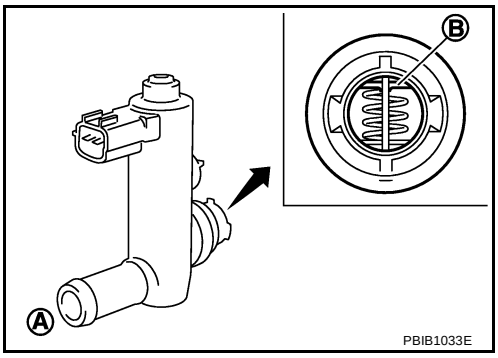
NBS000FS

EVAP CANISTER VENT CONTROL VALVE

With CONSULT-III

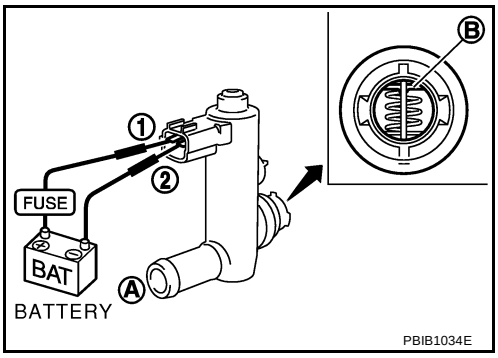
1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.
   If NG, replace EVAP canister vent control valve.
   If OK, go to next step.
3. Reconnect harness connectors disconnected.
4. Turn ignition switch ON.
5. Perform “VENT CONTROL/V” in “ACTIVE TEST” mode.
6. Check air passage continuity and operation delay time.
   Make sure new O-ring is installed properly.

Condition VENT CONTROL/V	Air passage continuity between A and B
ON	No
OFF	Yes



Operation takes less than 1 second.

If NG, replace EVAP canister vent control valve.
If OK, go to next step.



7. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
8. Perform step 6 again.

Without CONSULT-III

1. Remove EVAP canister vent control valve from EVAP canister.
2. Check portion **B** of EVAP canister vent control valve for being rusted.

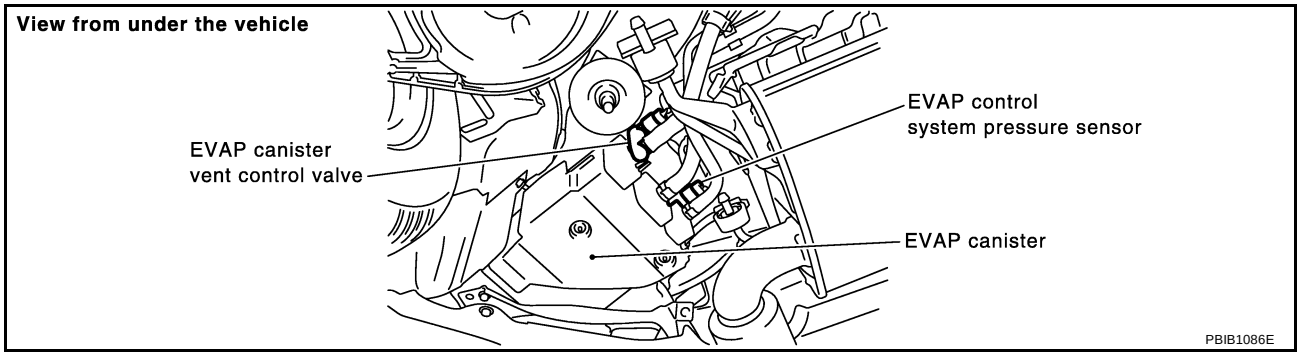
3. Check air passage continuity and operation delay time under the following conditions.
   Make sure new O-ring is installed properly.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	No
OFF	Yes

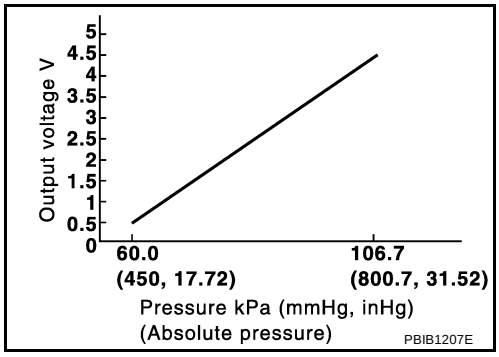
Operation takes less than 1 second.

If NG, replace EVAP canister vent control valve.
If OK, go to next step.

4. Clean the air passage (Portion **A** to **B**) of EVAP canister vent control valve using an air blower.
5. Perform step 3 again.



DTC P0451 EVAP CONTROL SYSTEM PRESSURE SENSOR



PFP:22365

Component Description

NBS0009B

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

CONSULT-III Reference Value in Data Monitor Mode

NBS0009C

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

On Board Diagnosis Logic

NBS0009D

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0451 0451	EVAP control system pressure sensor performance	ECM detects a sloshing signal from the EVAP control system pressure sensor	● Harness or connectors (EVAP control system pressure sensor circuit is shorted.) [CKP sensor (POS) circuit is shorted.] [CMP sensor (PHASE) (bank 2) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (APP sensor 2 circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● EVAP control system pressure sensor ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 2) ● Exhaust valve timing control position sensor (bank 2) ● Accelerator pedal position sensor ● Refrigerant pressure sensor

DTC Confirmation Procedure

NBS0009E

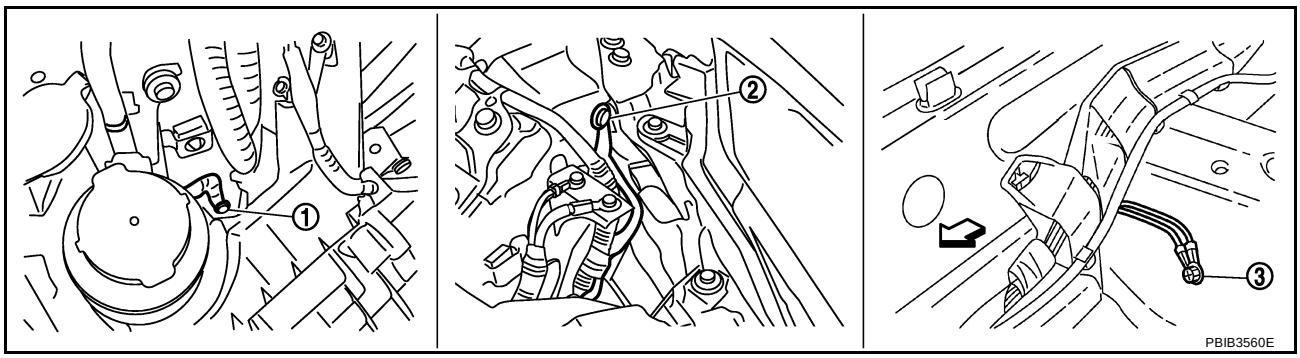
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Start engine and wait at least 40 seconds.
   NOTE:
   Do not depress accelerator pedal even slightly.
3. Check 1st trip DTC.
4. If 1st trip DTC is detected, go to EC-452, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.



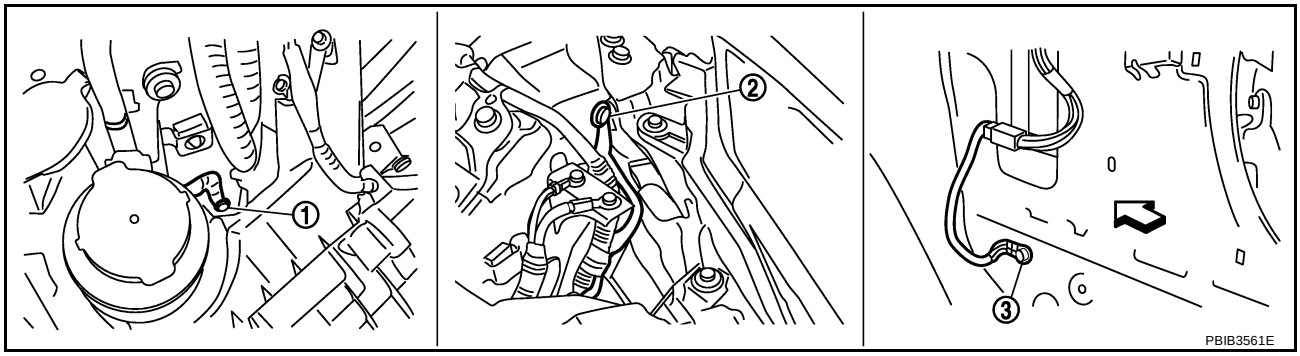
Diagnostic Procedure

NBS0009F

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



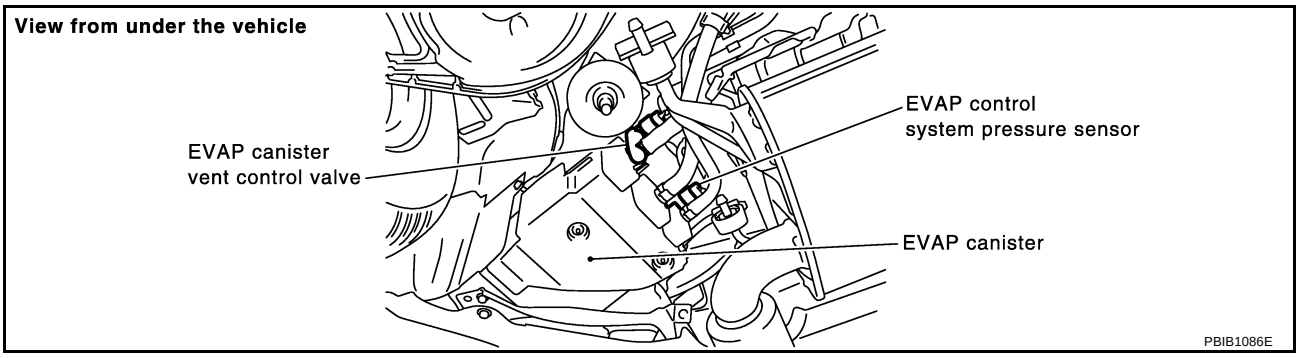
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

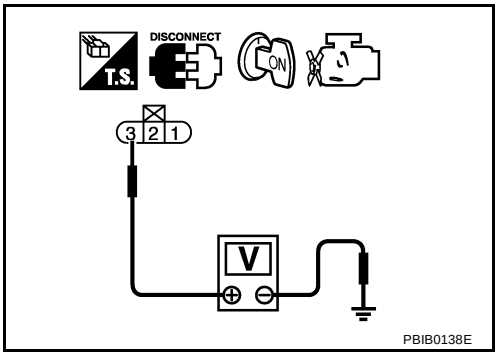
OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR CONNECTOR FOR WATER

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check sensor harness connector for water.

Water should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness connector.

3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between EVAP control system pressure sensor terminal 3 and ECM terminal 107. Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

1. Harness connectors T2, B44
2. Harness connectors B1, M12
3. Harness for open between ECM and EVAP control system pressure sensor.

>> Repair open circuit.

6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor 1	EC-711

OK or NG

OK >> GO TO 7.
NG >> Repair short to ground or short to power in harness or connectors.

7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 8.
NG >> Replace malfunctioning component.

8. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> GO TO 9.

9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455, "Component Inspection" .

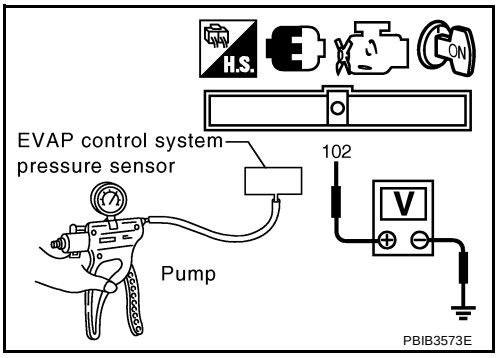
OK or NG

OK >> GO TO 11.
NG >> Replace EVAP control system pressure sensor.

11. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
Refer to EC-458, "Wiring Diagram" .

>> **INSPECTION END**



Component Inspection

NBS0009G

EVAP CONTROL SYSTEM PRESSURE SENSOR

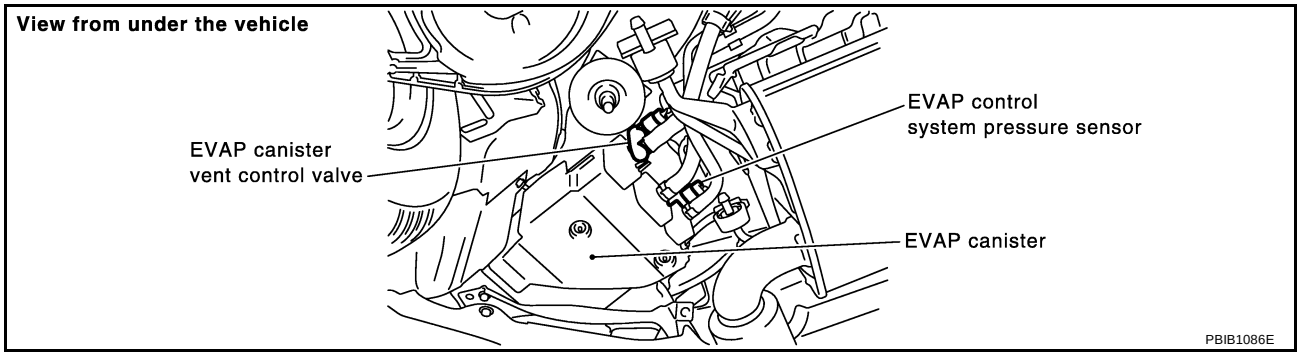
1. Remove EVAP control system pressure sensor with its harness connector connected from EVAP canister. **Always replace O-ring with a new one.**
2. Install a vacuum pump to EVAP control system pressure sensor.
3. Turn ignition switch ON and check output voltage between ECM terminal 102 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

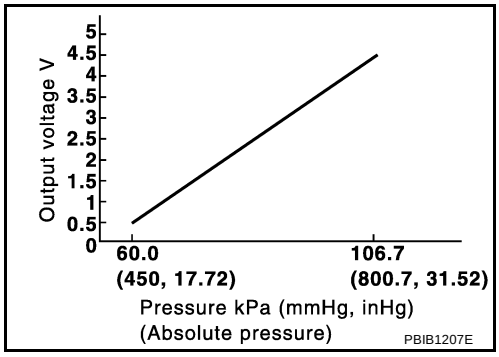
CAUTION:

- **Always calibrate the vacuum pump gauge when using it.**
- **Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).**

4. If NG, replace EVAP control system pressure sensor.



DTC P0452 EVAP CONTROL SYSTEM PRESSURE SENSOR



PFP:25085

Component Description

NBS0009H

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

CONSULT-III Reference Value in Data Monitor Mode

NBS0009I

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

On Board Diagnosis Logic

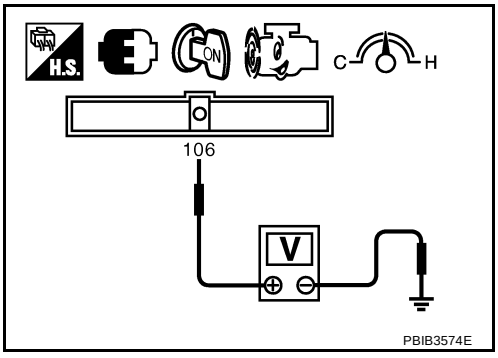
NBS0009J

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0452 0452	EVAP control system pressure sensor low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (EVAP control system pressure sensor circuit is shorted.) [CKP sensor (POS) circuit is shorted.] [CMP sensor (PHASE) (bank 2) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (APP sensor 2 circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● EVAP control system pressure sensor ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 2) ● Exhaust valve timing control position sensor (bank 2) ● Accelerator pedal position sensor ● Refrigerant pressure sensor

DTC Confirmation Procedure

NBS0009K

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.



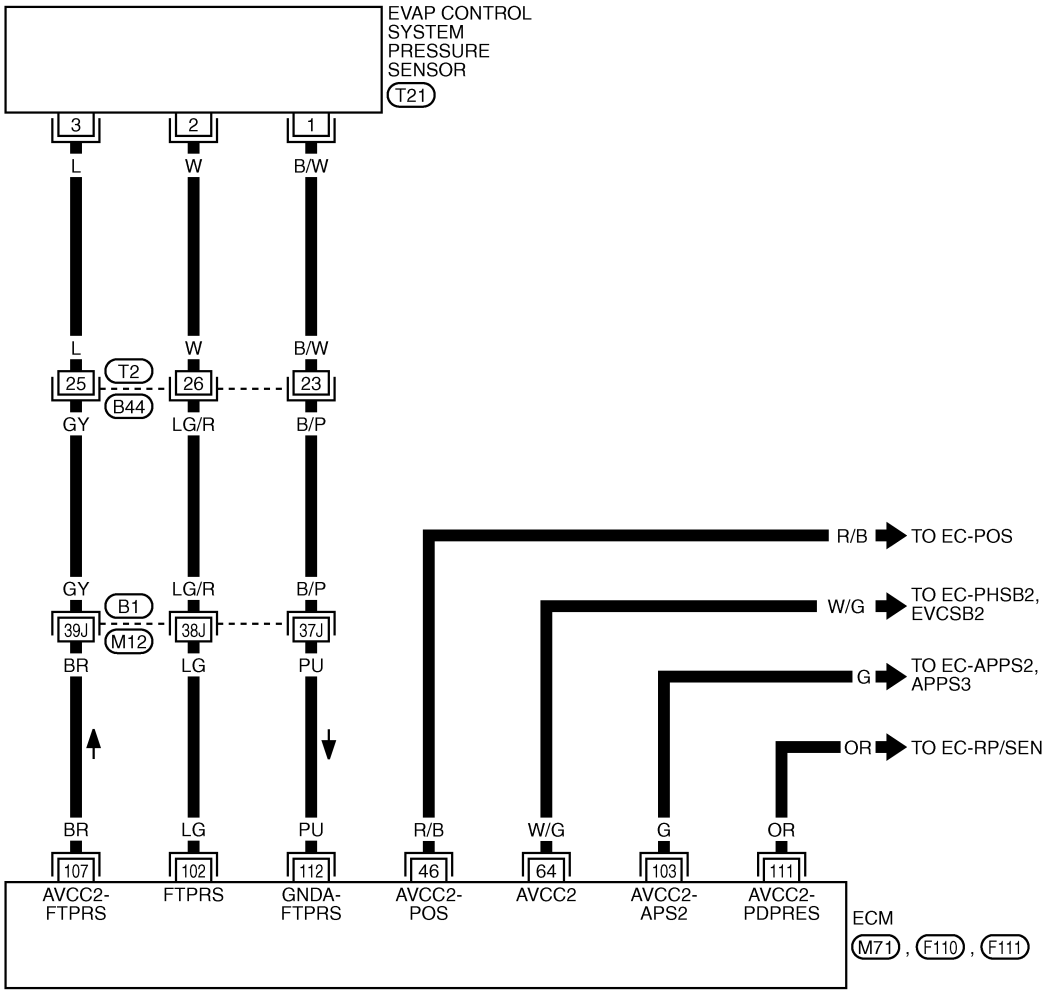
TESTING CONDITION:
Always perform test at a temperature of 5°C (41°F) or more.

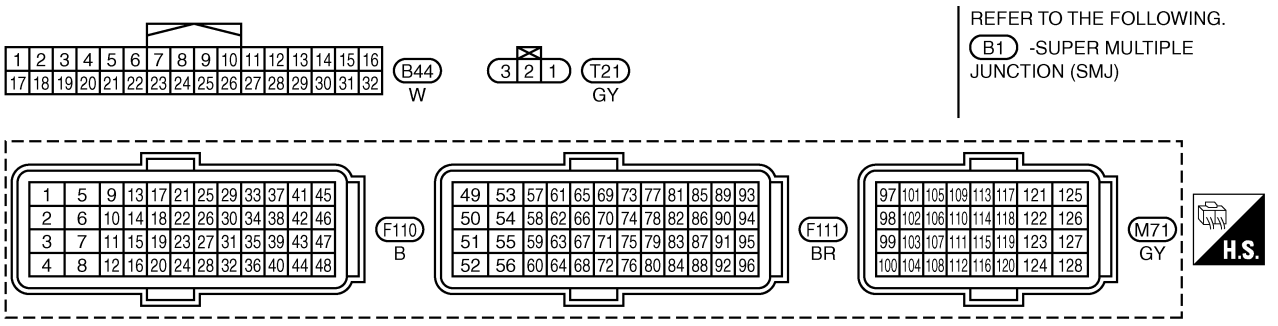
WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Select “DATA MONITOR” mode with CONSULT-III.
5. Make sure that “FUEL T/TEMP SE” is more than 0°C (32°F).
6. Start engine and wait at least 20 seconds.
7. Check 1st trip DTC.
8. If 1st trip DTC is detected, go to EC-460, "Diagnostic Procedure" .

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Check that voltage between ECM terminal 106 (Fuel tank temperature sensor signal) and ground is less than 4.2V.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and wait at least 20 seconds.
5. Select Service $07 with GST.
   If 1st trip DTC is detected, go to EC-460, "Diagnostic Procedure"
   .





Wiring Diagram

NBS0009L

EC-PRE/SE-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

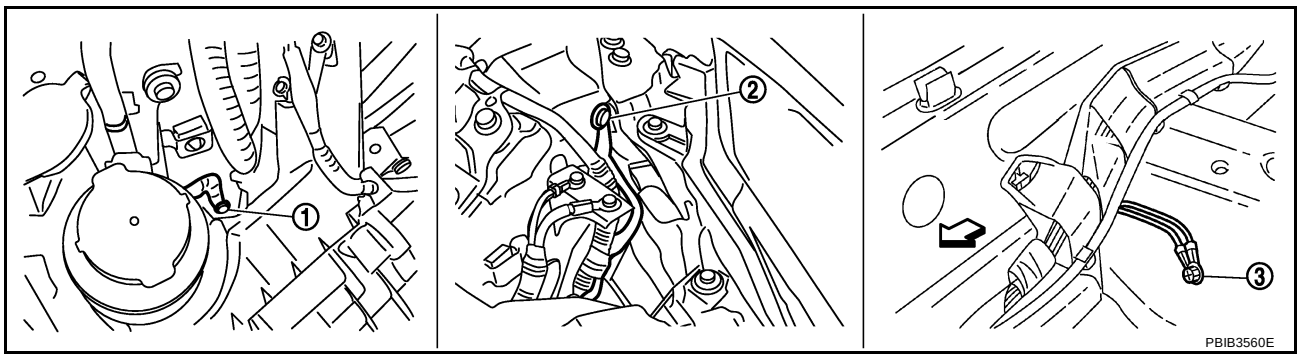
TBWT1650E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
46	R/B	Sensor power supply [Crankshaft position sensor (POS)]	**[Ignition switch: ON]**	5V
64	W/G	Sensor power supply [Camshaft position sensor (PHASE) (bank 2), Exhaust valve timing control position sensor (bank 2)]	**[Ignition switch: ON]**	5V
102	LG	EVAP control system pressure sensor	**[Ignition switch: ON]**	1.8 - 4.8V
103	G	Sensor power supply (Accelerator pedal position sensor 2)	**[Ignition switch: ON]**	5V
107	BR	Sensor power supply (EVAP control system pressure sensor)	**[Ignition switch: ON]**	5V
111	OR	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch: ON]**	5V
112	PU	Sensor ground (EVAP control system pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



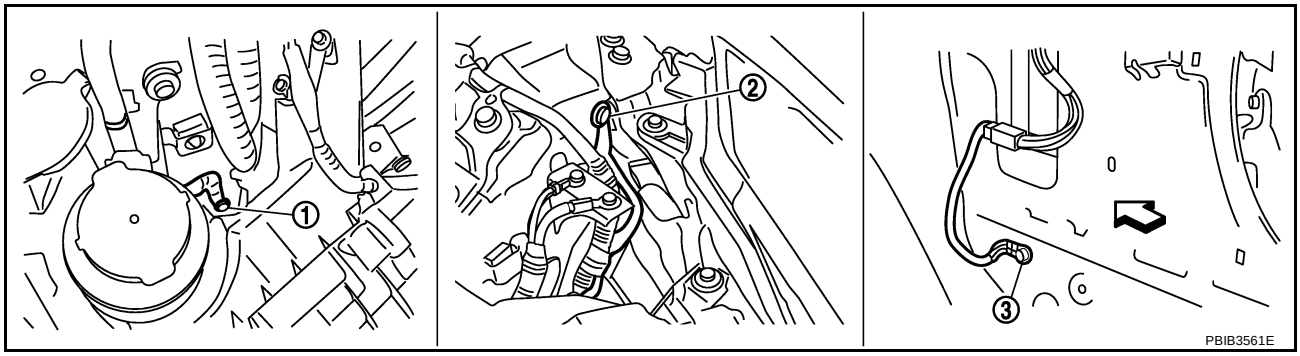
Diagnostic Procedure

NBS0009M

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



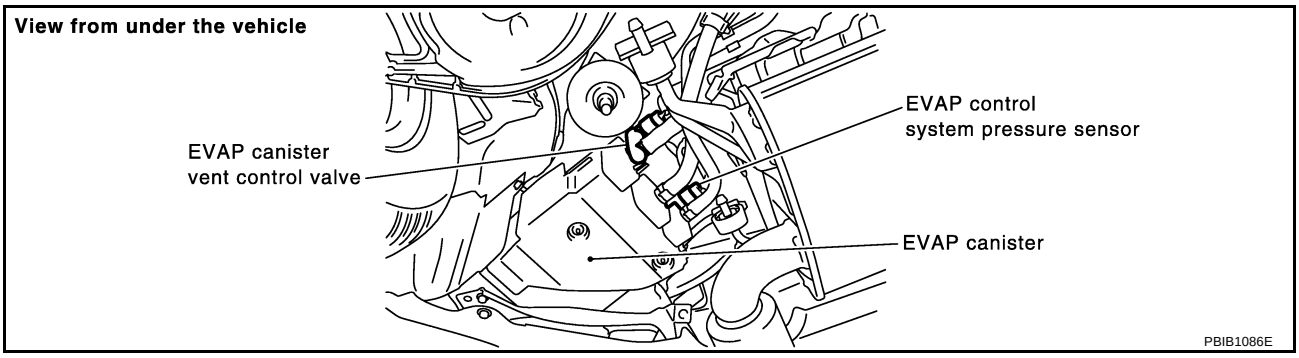
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

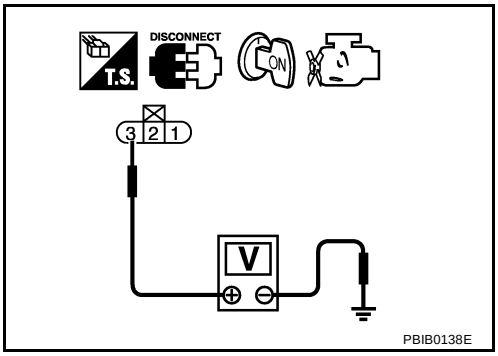
OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check sensor harness connector for water.

Water should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness connector.

3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between EVAP control system pressure sensor terminal 3 and ECM terminal 107. Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

1. Harness connectors T2, B44
2. Harness connectors B1, M12
3. Harness for open between ECM and EVAP control system pressure sensor.

>> Repair open circuit.

6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor 1	EC-711

OK or NG

OK >> GO TO 7.
NG >> Repair short to ground or short to power in harness or connectors.

7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 8.
NG >> Replace malfunctioning component.

8. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 15.
NG >> GO TO 9.

9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between EVAP control system pressure sensor terminal 1 and ECM terminal 112. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors T2, B44
- Harness connectors B1, M12
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 102 and EVAP control system pressure sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.
NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors T2, B44
- Harness connectors B1, M12
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-464, "Component Inspection" .

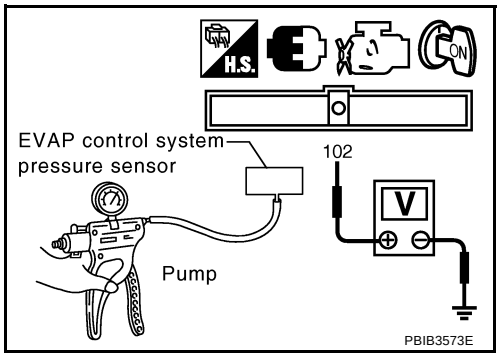
OK or NG

OK >> GO TO 15.
NG >> Replace EVAP control system pressure sensor.

15. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS0009N

EVAP CONTROL SYSTEM PRESSURE SENSOR

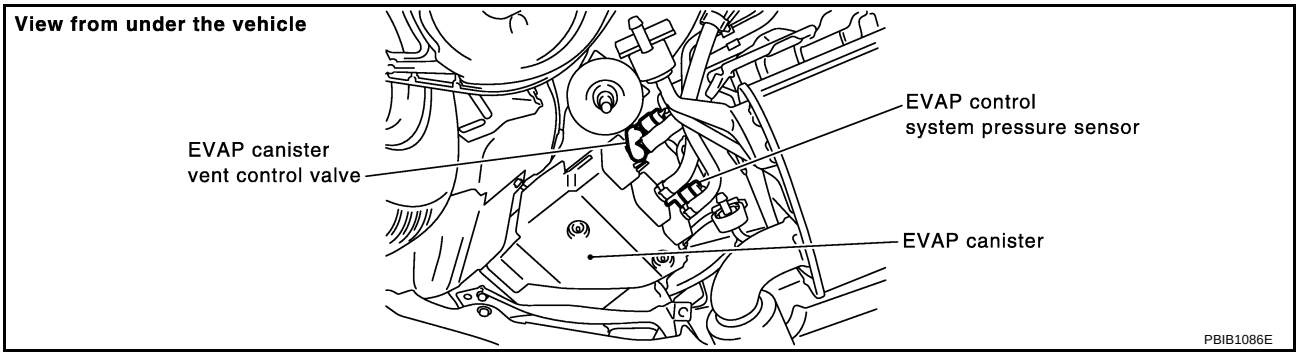
1. Remove EVAP control system pressure sensor with its harness connector connected from EVAP canister. **Always replace O-ring with a new one.**
2. Install a vacuum pump to EVAP control system pressure sensor.
3. Turn ignition switch ON and check output voltage between ECM terminal 102 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

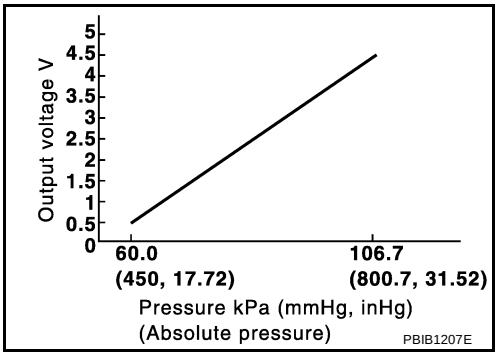
CAUTION:

- **Always calibrate the vacuum pump gauge when using it.**
- **Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).**

4. If NG, replace EVAP control system pressure sensor.



DTC P0453 EVAP CONTROL SYSTEM PRESSURE SENSOR



PFP:25085

Component Description

NBS0009O

The EVAP control system pressure sensor detects pressure in the purge line. The sensor output voltage to the ECM increases as pressure increases.

CONSULT-III Reference Value in Data Monitor Mode

NBS0009P

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
EVAP SYS PRES	● Ignition switch: ON	Approx. 1.8 - 4.8V

On Board Diagnosis Logic

NBS0009Q

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0453 0453	EVAP control system pressure sensor high input	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (EVAP control system pressure sensor circuit is shorted.) [CKP sensor (POS) circuit is shorted.] [CMP sensor (PHASE) (bank 2) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (APP sensor 2 circuit is shorted.) 2. Body ground E43
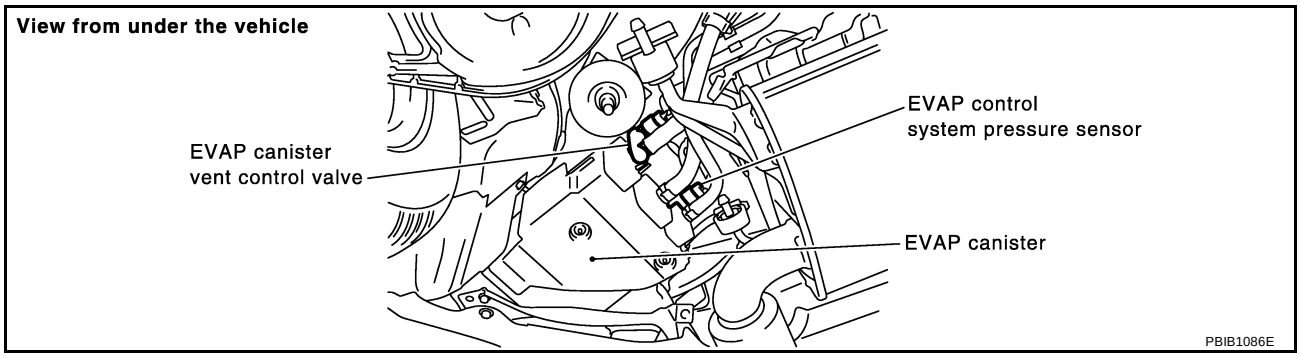
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

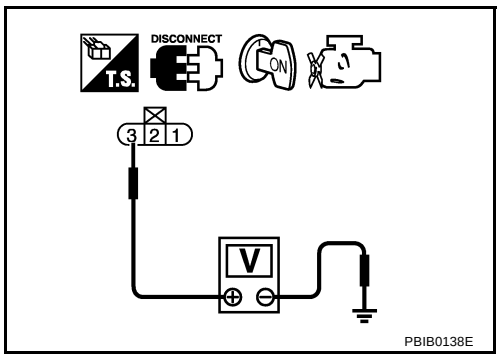
OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK CONNECTOR

1. Disconnect EVAP control system pressure sensor harness connector.

2. Check sensor harness connector for water.

Water should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness connector.

3. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-I

1. Turn ignition switch ON.
2. Check voltage between EVAP control system pressure sensor terminal 3 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between EVAP control system pressure sensor terminal 3 and ECM terminal 107. Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

1. Harness connectors T2, B44
2. Harness connectors B1, M12
3. Harness for open between ECM and EVAP control system pressure sensor.

>> Repair open circuit.

6. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor 1	EC-711

OK or NG

OK >> GO TO 7.
NG >> Repair short to ground or short to power in harness or connectors.

7. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .

OK or NG

OK >> GO TO 8.
NG >> Replace malfunctioning component.

8. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 20.
NG >> GO TO 9.

9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between EVAP control system pressure sensor terminal 1 and ECM terminal 112. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors T2, B44
- Harness connectors B1, M12
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 102 and EVAP control system pressure sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.
NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors T2, B44
- Harness connectors B1, M12
- Harness for open or short between EVAP control system pressure sensor and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK RUBBER TUBE

1. Disconnect rubber tube connected to EVAP canister vent control valve.
2. Check the rubber tube for clogging, vent and kinked.

OK or NG

OK >> GO TO 15.
NG >> Clean the rubber tube using an air blower.

15. CHECK EVAP CANISTER VENT CONTROL VALVE

Refer to EC-442, "Component Inspection" .

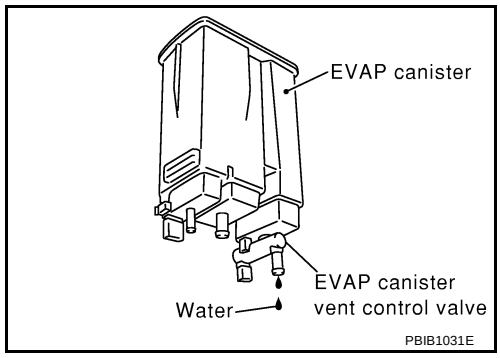
OK or NG

OK >> GO TO 16.
NG >> Replace EVAP canister vent control valve.

16. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-474, "Component Inspection" .

OK or NG



OK >> GO TO 17.
NG >> Replace EVAP control system pressure sensor.

17. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 18.
No >> GO TO 20.

18. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.
The weight should be less than 2.2 kg (4.9 lb).

OK or NG

OK >> GO TO 20.
NG >> GO TO 19.

19. DETECT MALFUNCTIONING PART

Check the following.

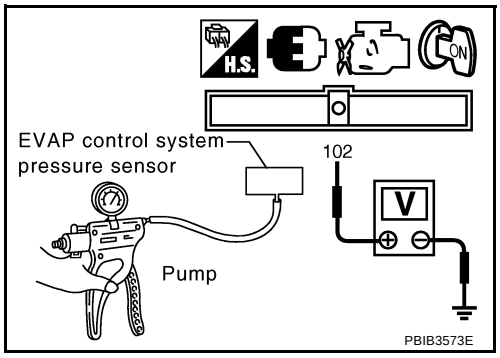
- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

20. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS0009U

EVAP CONTROL SYSTEM PRESSURE SENSOR

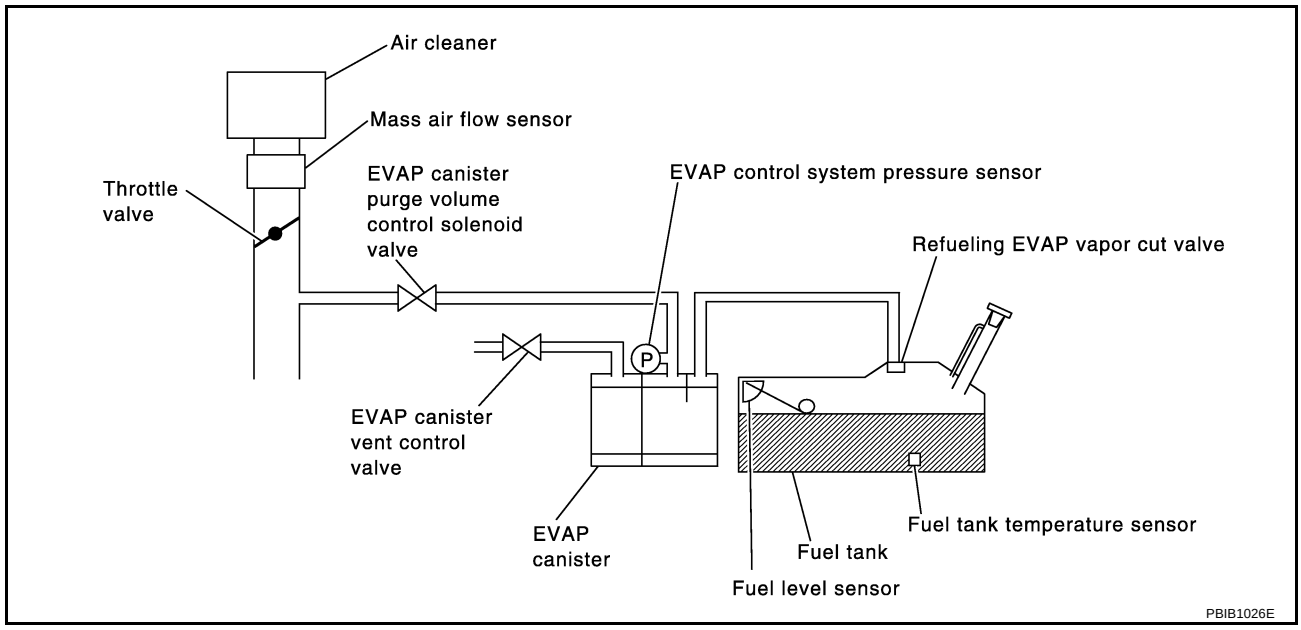
1. Remove EVAP control system pressure sensor with its harness connector connected from EVAP canister. **Always replace O-ring with a new one.**
2. Install a vacuum pump to EVAP control system pressure sensor.
3. Turn ignition switch ON and check output voltage between ECM terminal 102 and ground under the following conditions.

Applied vacuum kPa (mmHg, inHg)	Voltage V
Not applied	1.8 - 4.8
-26.7 (-200, -7.87)	2.1 to 2.5V lower than above value

CAUTION:

- **Always calibrate the vacuum pump gauge when using it.**
- **Do not apply below -93.3 kPa (-700 mmHg, -27.56 inHg) or pressure over 101.3 kPa (760 mmHg, 29.92 inHg).**

4. If NG, replace EVAP control system pressure sensor.



DTC P0455 EVAP CONTROL SYSTEM

PFP:14950

On Board Diagnosis Logic

NBS0009V

This diagnosis detects a very large leak (fuel filler cap fell off etc.) in EVAP system between the fuel tank and EVAP canister purge volume control solenoid valve.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0455 0455	EVAP control system gross leak detected	EVAP control system has a very large leak such as fuel filler cap fell off, EVAP control system does not operate properly.	● Fuel filler cap remains open or fails to close. ● Incorrect fuel tank vacuum relief valve ● Incorrect fuel filler cap used ● Foreign matter caught in fuel filler cap. ● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve. ● Foreign matter caught in EVAP canister vent control valve. ● EVAP canister or fuel tank leaks ● EVAP purge line (pipe and rubber tube) leaks ● EVAP purge line rubber tube bent. ● Loose or disconnected rubber tube ● EVAP canister vent control valve and the circuit ● EVAP canister purge volume control solenoid valve and the circuit ● Fuel tank temperature sensor ● O-ring of EVAP canister vent control valve is missing or damaged. ● EVAP control system pressure sensor ● Refueling EVAP vapor cut valve ● ORVR system leaks

CAUTION:

- **Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.**
- **If the fuel filler cap is not tightened properly, the MIL may come on.**

- **Use only a genuine NISSAN rubber tube as a replacement.**

DTC Confirmation Procedure

NBS0009W

CAUTION:

Never remove fuel filler cap during the DTC Confirmation Procedure.

NOTE:

- **Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

- **Perform "DTC WORK SUPPORT" when the fuel level is between 1/4 and 3/4 full, and vehicle is placed on flat level surface.**
- **Open engine hood before conducting the following procedures.**

WITH CONSULT-III

1. Tighten fuel filler cap securely until ratcheting sound is heard.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON and select "DATA MONITOR" mode with CONSULT-III.
5. Make sure that the following conditions are met.
   COOLAN TEMP/S: 0 - 70°C (32 - 158°F)
   INT/A TEMP SE: 0 - 60°C (32 - 140°F)
6. Select "EVAP SML LEAK P0442/P1442" of "EVAPORATIVE SYSTEM" in "DTC WORK SUPPORT" mode with CONSULT-III.
   Follow the instruction displayed.

   NOTE:
   If the engine speed cannot be maintained within the range displayed on the CONSULT-III screen, go to EC-71, "Basic Inspection" .
7. Make sure that "OK" is displayed.
   If "NG" is displayed, select "SELF-DIAG RESULTS" mode and make sure that "EVAP GROSS LEAK [P0455]" is displayed. If it is displayed, refer to EC-477, "Diagnostic Procedure" .
   If P0442 is displayed, perform EC-418, "Diagnostic Procedure" for DTC P0442.

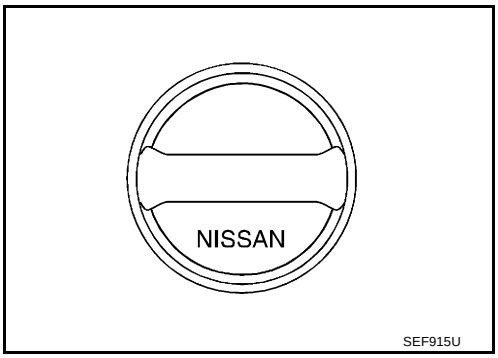
WITH GST

NOTE:

Be sure to read the explanation of EC-58, "Driving Pattern" before driving vehicle.

1. Start engine.
2. Drive vehicle according to EC-58, "Driving Pattern" .
3. Stop vehicle.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Select Service $07 with GST.
   - If P0441 is displayed on the screen, go to EC-413, "Diagnostic Procedure" , for DTC P0441.
   - If P0442 is displayed on the screen, go to EC-418, "Diagnostic Procedure" , for DTC P0442.
   - If P0455 is displayed on the screen, go to EC-477, "Diagnostic Procedure" .

Diagnostic Procedure



NBS0009X

1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch OFF.
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

OK >> GO TO 2.
NG >> Replace with genuine NISSAN fuel filler cap.

2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

OK >> GO TO 3.
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.
2. Retighten until ratcheting sound is heard.

3. CHECK FUEL FILLER CAP FUNCTION

Check for air releasing sound while opening the fuel filler cap.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to EC-36, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)" .

OK or NG

OK >> GO TO 5.
NG >> Replace fuel filler cap with a genuine one.

5. CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks, improper connection or disconnection.
Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 6.
NG >> Repair or reconnect the hose.

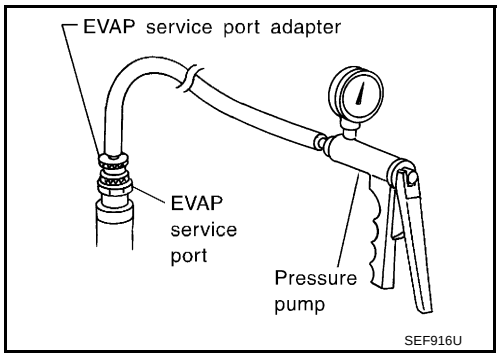
6. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 7.

7. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.



- EVAP canister vent control valve is installed properly.
  Refer to EC-37, "Removal and Installation" .
- EVAP canister vent control valve.
  Refer to EC-442, "Component Inspection" .

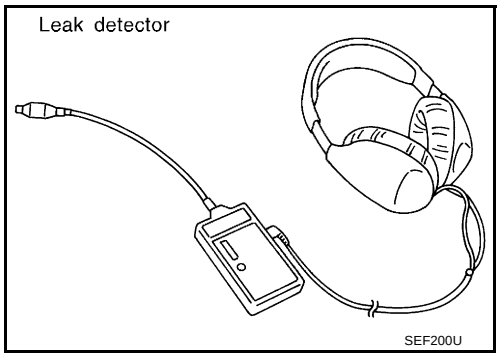
OK or NG

OK >> GO TO 8.
NG >> Repair or replace EVAP canister vent control valve and O-ring.

8. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

NOTE:
Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.



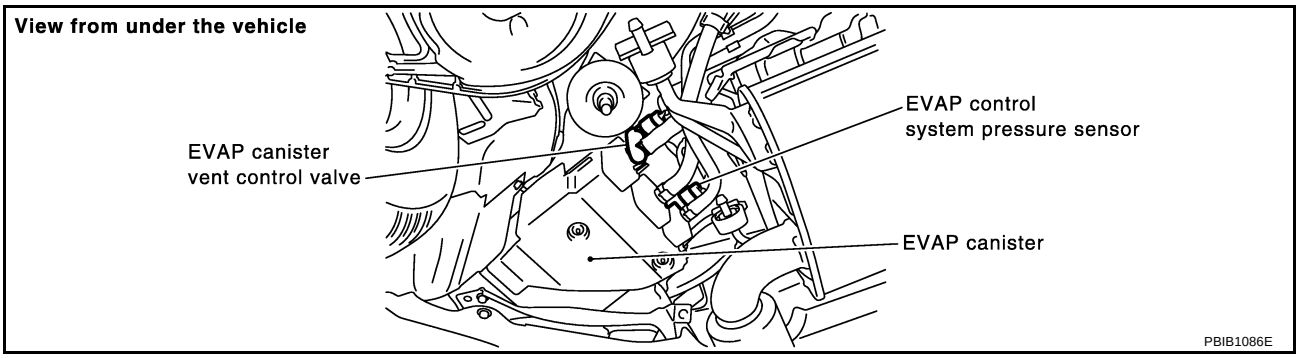
With CONSULT-III>>GO TO 9.
Without CONSULT-III>>GO TO 10.

9. CHECK FOR EVAP LEAK

With CONSULT-III

1. Turn ignition switch ON.
2. Select “EVAP SYSTEM CLOSE” of “WORK SUPPORT” mode with CONSULT-III.
3. Touch “START” and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.

   CAUTION:
   - **Never use compressed air or a high pressure pump.**
   - **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**
4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details.
   Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .



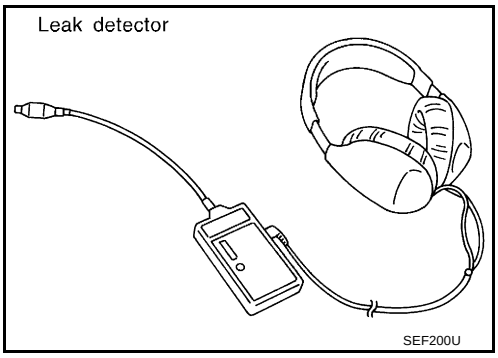
OK or NG

OK >> GO TO 11.
NG >> Repair or replace.

10. CHECK FOR EVAP LEAK

Without CONSULT-III

1. Turn ignition switch OFF.
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)



3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

CAUTION:

- **Never use compressed air or a high pressure pump.**
- **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 12.
NG >> Repair or replace.

11. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-III

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode.
4. Touch “Qu” on CONSULT-III screen to increase “PURG VOL CONT/V” opening to 100%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 14.
NG >> GO TO 13.

12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 15.
NG >> GO TO 13.

13. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to EC-100, "Vacuum Hose Drawing" .

OK or NG

OK (With CONSULT-III)>>GO TO 14.
OK (Without CONSULT-III)>>GO TO 15.
NG >> Repair or reconnect the hose.

14. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-III

1. Start engine.
2. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-III. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 16.
NG >> GO TO 15.

15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436, "Component Inspection" .

OK or NG

OK >> GO TO 16.
NG >> Replace EVAP canister purge volume control solenoid valve.

16. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to EC-347, "Component Inspection" .

OK or NG

OK >> GO TO 17.
NG >> Replace fuel level sensor unit.

17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-464, "Component Inspection" .

OK or NG

OK >> GO TO 18.
NG >> Replace EVAP control system pressure sensor.

18. CHECK EVAP/ORVR LINE

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to EC-39, "ON BOARD REFUELING VAPOR RECOVERY (ORVR)" .

OK or NG

OK >> GO TO 19.
NG >> Repair or replace hoses and tubes.

19. CHECK RECIRCULATION LINE

Check recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 20.
NG >> Repair or replace hose, tube or filler neck tube.

20. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "REFUELING EVAP VAPOR CUT VALVE" .

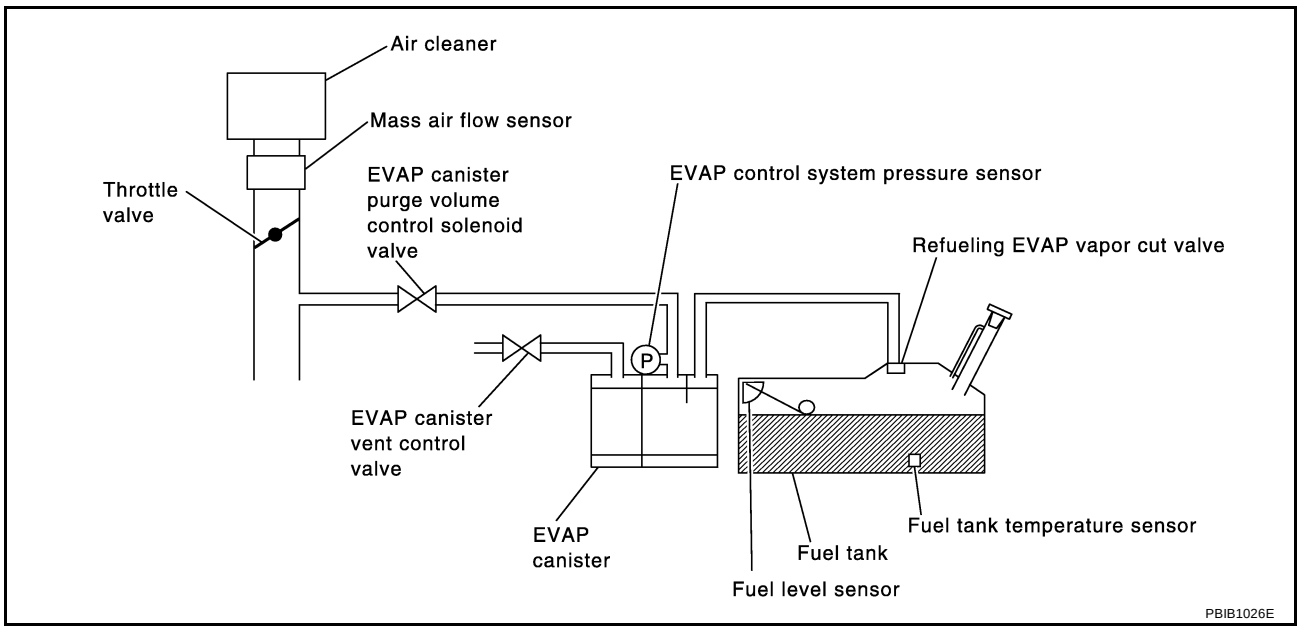
OK or NG

OK >> GO TO 21.
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

21. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



DTC P0456 EVAP CONTROL SYSTEM

PFP:14950

On Board Diagnosis Logic

NBS0009Y

This diagnosis detects very small leaks in the EVAP line between fuel tank and EVAP canister purge volume control solenoid valve, using the intake manifold vacuum in the same way as conventional EVAP small leak diagnosis.
If ECM judges a leak which corresponds to a very small leak, the very small leak P0456 will be detected.
If ECM judges a leak equivalent to a small leak, EVAP small leak P0442 will be detected.
If ECM judges there are no leaks, the diagnosis will be OK.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0456 0456	Evaporative emission control system very small leak (negative pressure check)	● EVAP system has a very small leak. ● EVAP system does not operate properly.	● Incorrect fuel tank vacuum relief valve ● Incorrect fuel filler cap used ● Fuel filler cap remains open or fails to close. ● Foreign matter caught in fuel filler cap. ● Leak is in line between intake manifold and EVAP canister purge volume control solenoid valve. ● Foreign matter caught in EVAP canister vent control valve. ● EVAP canister or fuel tank leaks ● EVAP purge line (pipe and rubber tube) leaks ● EVAP purge line rubber tube bent ● Loose or disconnected rubber tube ● EVAP canister vent control valve and the circuit ● EVAP canister purge volume control solenoid valve and the circuit ● Fuel tank temperature sensor ● O-ring of EVAP canister vent control valve is missing or damaged ● EVAP canister is saturated with water ● EVAP control system pressure sensor ● Refueling EVAP vapor cut valve ● ORVR system leaks ● Fuel level sensor and the circuit ● Foreign matter caught in EVAP canister purge volume control solenoid valve

CAUTION:

- **Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.**
- **If the fuel filler cap is not tightened properly, the MIL may come on.**
- **Use only a genuine NISSAN rubber tube as a replacement.**

DTC Confirmation Procedure

NBS0009Z

NOTE:

- **If DTC P0456 is displayed with P0442, first perform trouble diagnosis for DTC P0456.**
- **After repair, make sure that the hoses and clips are installed properly.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

- **Open engine hood before conducting following procedure.**
- **If any of following conditions are met just before the DTC confirmation procedure, leave the vehicle for more than 1 hour.**
  - **Fuel filler cap is removed.**
  - **Refilled or drained the fuel.**
  - **EVAP component parts is/are removed.**
- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**

WITH CONSULT-III

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-III.
2. Make sure the following conditions are met.
   FUEL LEVEL SE: 0.25 - 1.4V
   COOLAN TEMP/S: 0 - 32°C (32 - 90°F)
   FUEL T/TMP SE: 0 - 35°C (32 - 95°F)
   INT/A TEMP SE: More than 0°C (32°F)
   If NG, turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle) or refilling/draining fuel until the output voltage condition of the “FUEL LEVEL SE” meets within the range above and leave the vehicle for more than 1 hour. Then start from step 1).
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON.
5. Select “EVAP V/S LEAK P0456/P1456” of “EVAPORATIVE SYSTEM” in “DTC WORK SUPPORT” mode with CONSULT-III.
   Follow the instruction displayed.
6. Make sure that “OK” is displayed.
   If “NG” is displayed, refer to EC-484, "Diagnostic Procedure" .

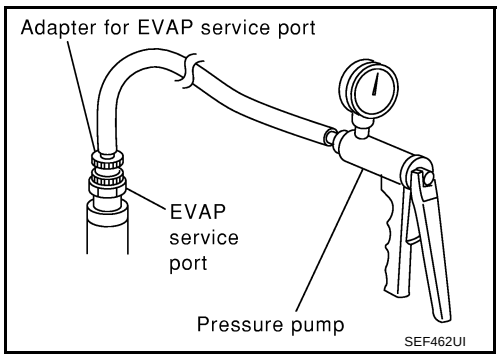
   NOTE:
   - **If the engine speed cannot be maintained within the range displayed on CONSULT-III screen, go to EC-71, "Basic Inspection" .**
   - **Make sure that EVAP hoses are connected to EVAP canister purge volume control solenoid valve properly.**

Overall Function Check

NBS000A0

WITH GST

Use this procedure to check the overall function of the EVAP very small leak function. During this check, a 1st trip DTC might not be confirmed.



CAUTION:

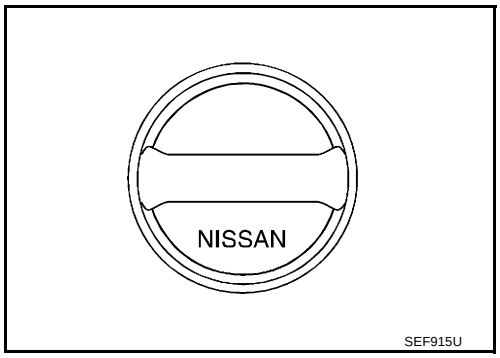
- **Never use compressed air, doing so may damage the EVAP system.**
- **Do not start engine.**
- **Do not exceeded 4.12 kPa (0.042 kg/cm^2 , 0.6 psi).**

1. Attach the EVAP service port adapter securely to the EVAP service port. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

2. Set the pressure pump and a hose.
3. Also set a vacuum gauge via 3-way connector and a hose.
4. Turn ignition switch ON.
5. Connect GST and select Service $08.
6. Using Service $08 control the EVAP canister vent control valve (close).
7. Apply pressure and make sure the following conditions are satisfied.
   Pressure to be applied: 2.7 kPa (20 mmHg, 0.79 inHg)
   Time to be waited after the pressure drawn in to the EVAP system and the pressure to be dropped: 60 seconds and the pressure should not be dropped more than 0.4 kPa (3 mmHg, 0.12 inHg).
   If NG, go to EC-484, "Diagnostic Procedure" .
   If OK, go to next step.
8. Disconnect GST.
9. Start engine and warm it up to normal operating temperature.
10. Turn ignition switch OFF and wait at least 10 seconds.
11. Restart engine and let it idle for 90 seconds.
12. Keep engine speed at 2,000 rpm for 30 seconds.
13. Turn ignition switch OFF.

    NOTE:
    For more information, refer to GST Instruction Manual.

Diagnostic Procedure



NBS000A1

1. CHECK FUEL FILLER CAP DESIGN

1. Turn ignition switch OFF.
2. Check for genuine NISSAN fuel filler cap design.

OK or NG

OK >> GO TO 2.
NG >> Replace with genuine NISSAN fuel filler cap.

2. CHECK FUEL FILLER CAP INSTALLATION

Check that the cap is tightened properly by rotating the cap clockwise.

OK or NG

OK >> GO TO 3.
NG >> 1. Open fuel filler cap, then clean cap and fuel filler neck threads using air blower.
2. Retighten until ratcheting sound is heard.

3. CHECK FUEL FILLER CAP FUNCTION

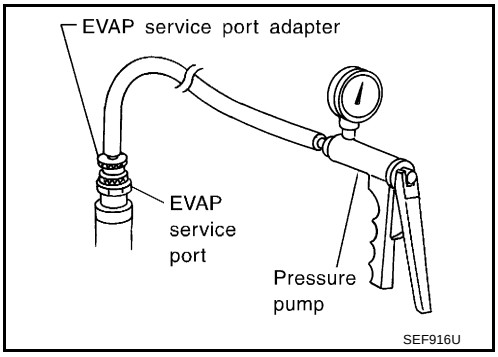
Check for air releasing sound while opening the fuel filler cap.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK FUEL TANK VACUUM RELIEF VALVE

Refer to EC-36, "FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)" .



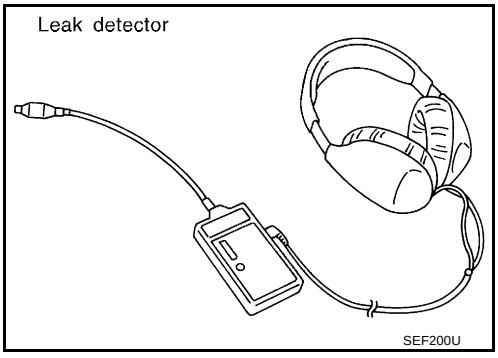
OK or NG

OK >> GO TO 5.
NG >> Replace fuel filler cap with a genuine one.

5. INSTALL THE PRESSURE PUMP

To locate the EVAP leak, install EVAP service port adapter and pressure pump to EVAP service port securely. For the location of EVAP service port, refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

NOTE:
Improper installation of the EVAP service port adapter to the EVAP service port may cause leaking.

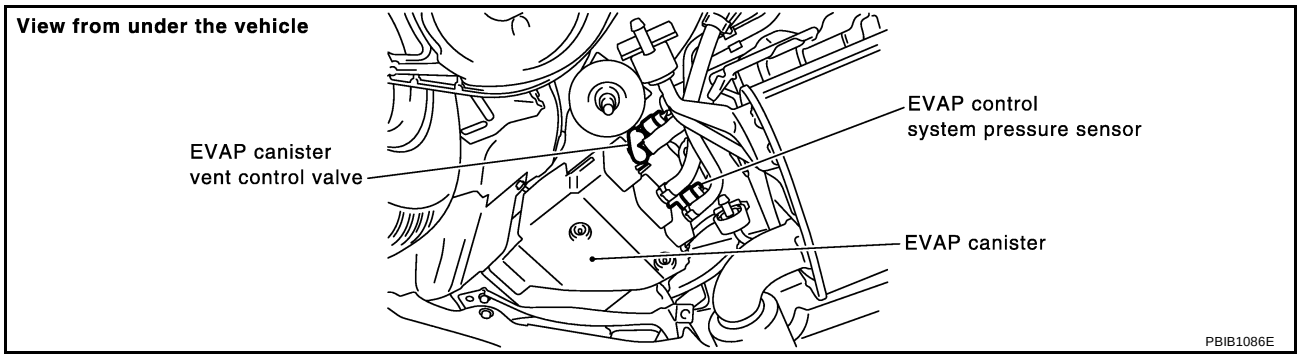


With CONSULT-III>>GO TO 6.
Without CONSULT-III>>GO TO 7.

6. CHECK FOR EVAP LEAK

With CONSULT-III

1. Turn ignition switch ON.
2. Select “EVAP SYSTEM CLOSE” of “WORK SUPPORT” mode with CONSULT-III.
3. Touch “START” and apply pressure into the EVAP line until the pressure indicator reaches the middle of the bar graph.
   CAUTION:
   - **Never use compressed air or a high pressure pump.**
   - **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**
4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details.
   Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .



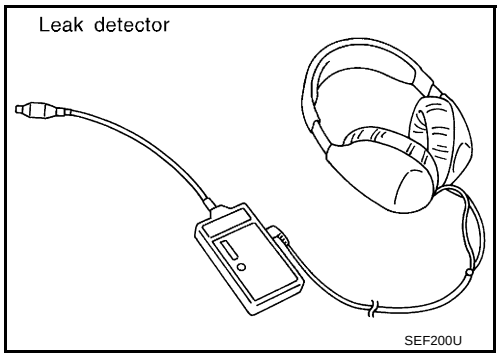
OK or NG

OK >> GO TO 8.
NG >> Repair or replace.

7. CHECK FOR EVAP LEAK

Without CONSULT-III

1. Turn ignition switch OFF.
2. Apply 12 volts DC to EVAP canister vent control valve. The valve will close. (Continue to apply 12 volts until the end of test.)



3. Pressurize the EVAP line using pressure pump with 1.3 to 2.7 kPa (10 to 20 mmHg, 0.39 to 0.79 inHg), then remove pump and EVAP service port adapter.

CAUTION:

- **Never use compressed air or a high pressure pump.**
- **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in the system.**

4. Using EVAP leak detector, locate the EVAP leak. For the leak detector, refer to the instruction manual for more details. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

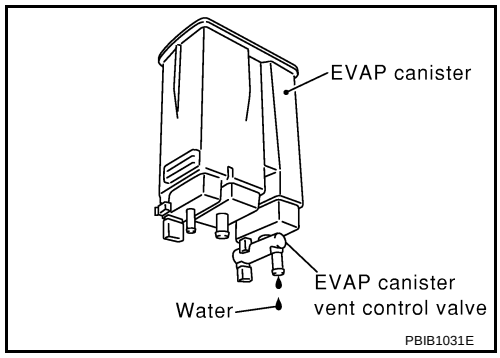
OK >> GO TO 8.
NG >> Repair or replace.

8. CHECK EVAP CANISTER VENT CONTROL VALVE

Check the following.

- EVAP canister vent control valve is installed properly.
  Refer to EC-37, "Removal and Installation" .
- EVAP canister vent control valve.
  Refer to EC-442, "Component Inspection" .

OK or NG



OK >> GO TO 9.
NG >> Repair or replace EVAP canister vent control valve and O-ring.

9. CHECK IF EVAP CANISTER SATURATED WITH WATER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 10.
No (With CONSULT-III)>>GO TO 12.
No (Without CONSULT-III)>>GO TO 13.

10. CHECK EVAP CANISTER

Weigh the EVAP canister with the EVAP canister vent control valve and EVAP control system pressure sensor attached.

The weight should be less than 2.2 kg (4.9 lb).

OK or NG

OK (With CONSULT-III)>>GO TO 12.
OK (Without CONSULT-III)>>GO TO 13.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- EVAP canister for damage
- EVAP hose between EVAP canister and vehicle frame for clogging or poor connection

>> Repair hose or replace EVAP canister.

12. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-III

1. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode.
4. Touch “Qu” on CONSULT-III screen to increase “PURG VOL CONT/V” opening to 100%.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 15.
NG >> GO TO 14.

13. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Stop engine.
3. Disconnect vacuum hose to EVAP canister purge volume control solenoid valve at EVAP service port.
4. Start engine and let it idle for at least 80 seconds.
5. Check vacuum hose for vacuum when revving engine up to 2,000 rpm.

Vacuum should exist.

OK or NG

OK >> GO TO 16.
NG >> GO TO 14.

14. CHECK VACUUM HOSE

Check vacuum hoses for clogging or disconnection. Refer to EC-100, "Vacuum Hose Drawing" .

OK or NG

OK >> GO TO 15.
NG >> Repair or reconnect the hose.

15. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436, "Component Inspection" .

OK or NG

OK >> GO TO 16.
NG >> Replace EVAP canister purge volume control solenoid valve.

16. CHECK FUEL TANK TEMPERATURE SENSOR

Refer to EC-347, "Component Inspection" .

OK or NG

OK >> GO TO 17.
NG >> Replace fuel level sensor unit.

17. CHECK EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-464, "Component Inspection" .

OK or NG

OK >> GO TO 18.
NG >> Replace EVAP control system pressure sensor.

18. CHECK EVAP PURGE LINE

Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

OK or NG

OK >> GO TO 19.
NG >> Repair or reconnect the hose.

19. CLEAN EVAP PURGE LINE

Clean EVAP purge line (pipe and rubber tube) using air blower.

>> GO TO 20.

20. CHECK EVAP/ORVR LINE

Check EVAP/ORVR line between EVAP canister and fuel tank for clogging, kink, looseness and improper connection. For location, refer to EC-39, "ON BOARD REFUELING VAPOR RECOVERY (ORVR)" .

OK or NG

OK >> GO TO 21.
NG >> Repair or replace hoses and tubes.

21. CHECK RECIRCULATION LINE

Check recirculation line between filler neck tube and fuel tank for clogging, kink, cracks, looseness and improper connection.

OK or NG

OK >> GO TO 22.
NG >> Repair or replace hose, tube or filler neck tube.

22. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "Component Inspection" .

OK or NG

OK >> GO TO 23.
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

23. CHECK FUEL LEVEL SENSOR

Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .

OK or NG

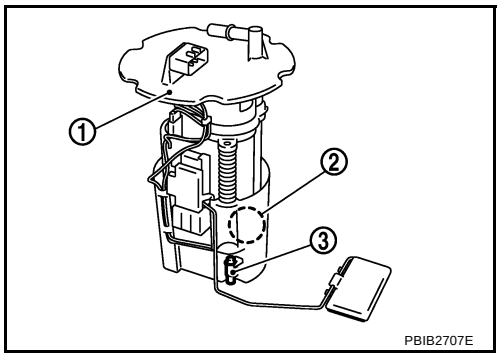
OK >> GO TO 24.
NG >> Replace fuel level sensor unit.

24. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0460 FUEL LEVEL SENSOR



PFP:25060

Component Description

NBS000A2

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the “unified meter and A/C amp.”. The “unified meter and A/C amp.” sends the fuel level sensor signal to the ECM through CAN communication line.

1 : Fuel level sensor unit and fuel pump
2 : Fuel pressure regulator
3 : Fuel tank temperature sensor

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NBS000A3

NOTE:

- **If DTC P0460 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P0460 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

When the vehicle is parked, naturally the fuel level in the fuel tank is stable. It means that output signal of the fuel level sensor does not change. If ECM senses sloshing signal from the sensor, fuel level sensor malfunction is detected.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0460 0460	Fuel level sensor circuit noise	Even though the vehicle is parked, a signal being varied is sent from the fuel level sensor to ECM.	● Harness or connectors (The CAN communication line is open or shorted) ● Harness or connectors (The sensor circuit is open or shorted) ● Unified meter and A/C amp. ● Fuel level sensor

DTC Confirmation Procedure

NBS000A4

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and wait maximum of 2 consecutive minutes.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-490, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000A5

1. CHECK FUEL GAUGE OPERATION

Refer to DI-15, "Self-Diagnosis Mode of Combination Meter" .

OK or NG

OK >> GO TO 2.
NG >> Follow the instruction of DI-15, "Self-Diagnosis Mode of Combination Meter" .

2. CHECK FUEL LEVEL SENSOR AND CIRCUIT

Refer to DI-19, "Fuel Level Sensor Signal Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace malfunctioning parts.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

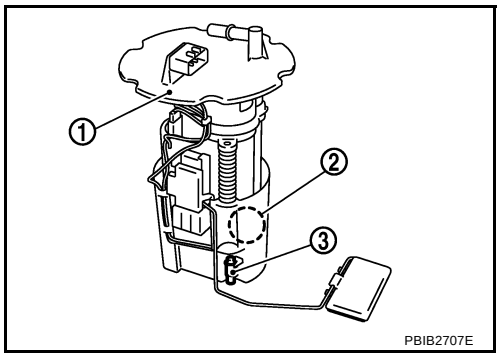
Removal and Installation

NBS000A6

FUEL LEVEL SENSOR

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

DTC P0461 FUEL LEVEL SENSOR



PFP:25060

Component Description

NBS006VA

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the “unified meter and A/C amp.”. The “unified meter and A/C amp.” sends the fuel level sensor signal to the ECM through CAN communication line.

1 : Fuel level sensor unit and fuel pump
2 : Fuel pressure regulator
3 : Fuel tank temperature sensor

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NBS000A8

NOTE:

- **If DTC P0461 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE".**
- **If DTC P0461 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

Driving long distances naturally affect fuel gauge level.
This diagnosis detects the fuel gauge malfunction of the gauge not moving even after a long distance has been driven.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0461 0461	Fuel level sensor circuit range/performance	The output signal of the fuel level sensor does not change within the specified range even though the vehicle has been driven a long distance.	● Harness or connectors (The CAN communication line is open or shorted) ● Harness or connectors (The sensor circuit is open or shorted) ● Unified meter and A/C amp. ● Fuel level sensor

Overall Function Check

NBS000A9

Use this procedure to check the overall function of the fuel level sensor function. During this check, a 1st trip DTC might not be confirmed.

WARNING:
When performing following procedure, be sure to observe the handling of the fuel. Refer to FL-10, "FUEL TANK" .
TESTING CONDITION:
Before starting overall function check, preparation of draining fuel and refilling fuel is required.

WITH CONSULT-III

NOTE:
Start from step 10, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line, refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch OFF and wait at least 10 seconds then turn ON.
6. Select “FUEL LEVEL SE” in “DATA MONITOR” mode with CONSULT-III.
7. Check “FUEL LEVEL SE” output voltage and note it.
8. Select “FUEL PUMP” in “ACTIVE TEST” mode with CONSULT-III.

9. Touch “ON” and drain fuel approximately 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) and stop it.
10. Check “FUEL LEVEL SE” output voltage and note it.
11. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
12. Check “FUEL LEVEL SE” output voltage and note it.
13. Confirm whether the voltage changes more than 0.03V during step 7 to 10 and 10 to 12.
    If NG, go to EC-493, "Diagnostic Procedure" .

WITH GST

NOTE:
Start from step 8, if it is possible to confirm that the fuel cannot be drained by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) in advance.

1. Prepare a fuel container and a spare hose.
2. Release fuel pressure from fuel line. Refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Remove the fuel feed hose on the fuel level sensor unit.
4. Connect a spare fuel hose where the fuel feed hose was removed.
5. Turn ignition switch ON.
6. Drain fuel by 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal) from the fuel tank using proper equipment.
7. Confirm that the fuel gauge indication varies.
8. Fill fuel into the fuel tank for 30 ℓ (7-7/8 US gal, 6-5/8 Imp gal).
9. Confirm that the fuel gauge indication varies.
10. If NG, go to EC-493, "Diagnostic Procedure" .

Diagnostic Procedure

NBS000AA

1. CHECK FUEL GAUGE OPERATION

Refer to DI-15, "Self-Diagnosis Mode of Combination Meter" .

OK or NG

OK >> GO TO 2.
NG >> Follow the instruction of DI-15, "Self-Diagnosis Mode of Combination Meter" .

2. CHECK FUEL LEVEL SENSOR AND CIRCUIT

Refer to DI-19, "Fuel Level Sensor Signal Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace malfunctioning parts.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

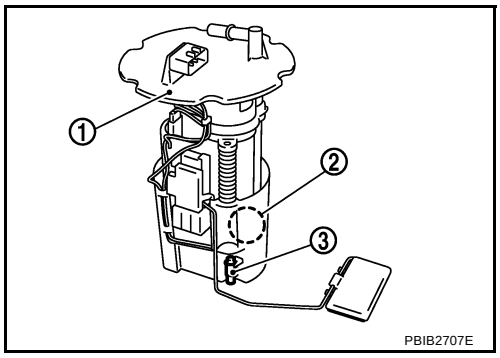
Removal and Installation

NBS000AB

FUEL LEVEL SENSOR

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY"

DTC P0462, P0463 FUEL LEVEL SENSOR



PFP:25060

Component Description

NBS006VB

The fuel level sensor is mounted in the fuel level sensor unit. The sensor detects a fuel level in the fuel tank and transmits a signal to the “unified meter and A/C amp.”. The “unified meter and A/C amp.” sends the fuel level sensor signal to the ECM through CAN communication line.

1 : Fuel level sensor unit and fuel pump
2 : Fuel pressure regulator
3 : Fuel tank temperature sensor

It consists of two parts, one is mechanical float and the other is variable resistor. Fuel level sensor output voltage changes depending on the movement of the fuel mechanical float.

On Board Diagnosis Logic

NBS000AD

NOTE:

- **If DTC P0462 or P0463 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE".**
- **If DTC P0462 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

This diagnosis indicates the former, to detect open or short circuit malfunction.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0462 0462	Fuel level sensor circuit low input	An excessively low voltage is sent from the sensor is sent to ECM.	● Harness or connectors (The CAN communication line is open or shorted) ● Harness or connectors (The sensor circuit is open or shorted) ● Unified meter and A/C amp. ● Fuel level sensor
P0463 0463	Fuel level sensor circuit high input	An excessively high voltage is sent from the sensor is sent to ECM.	

DTC Confirmation Procedure

NBS000AE

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at ignition switch ON.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-494, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000AF

1. CHECK FUEL GAUGE OPERATION

Refer to DI-15, "Self-Diagnosis Mode of Combination Meter" .

OK or NG

OK >> GO TO 2.
NG >> Follow the instruction of DI-15, "Self-Diagnosis Mode of Combination Meter" .

2. CHECK FUEL LEVEL SENSOR AND CIRCUIT

Refer to DI-19, "Fuel Level Sensor Signal Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace malfunctioning parts.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Removal and Installation

NBS000AG

FUEL LEVEL SENSOR

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

DTC P0500 VSS

PFP:32702

Description

NBS000AH

NOTE:

- **If DTC P0500 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P0500 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

The vehicle speed signal is sent to the “unified meter and A/C amp”. from the VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models) by CAN communication line. The unified meter and A/C amp. then sends the signal to the ECM by CAN communication line.

On Board Diagnosis Logic

NBS000AI

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	● Harness or connectors (The CAN communication line is open or shorted) ● Harness or connectors (The vehicle speed signal circuit is open or shorted) ● Wheel sensor ● Unified meter and A/C amp. ● VDC/TCS/ABS control unit (with VDC models) ● ABS actuator and electric unit (control unit) (without VDC models)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

Detected items	Engine operating condition in fail-safe mode
Vehicle speed sensor	When the fail-safe system for vehicle speed sensor is activated, the cooling fan operates (High) while engine is running.

DTC Confirmation Procedure

NBS000AJ

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Steps 1 and 2 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-III

1. Start engine (VDC switch or TCS switch OFF).
2. Read “VHCL SPEED SE” in “DATA MONITOR” mode with CONSULT-III. The vehicle speed on CONSULT-III should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
   If NG, go to EC-497, "Diagnostic Procedure" .
   If OK, go to following step.
3. Select “DATA MONITOR” mode with CONSULT-III.
4. Warm engine up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	1,800 - 6,000 rpm (A/T) 1,800 - 6,000 rpm (M/T)
COOLAN TEMP/S	More than 70°C (158°F)

B/FUEL SCHDL	5.0 - 31.8 msec (A/T) 5.0 - 31.8 msec (M/T)
Shift lever	Except P or N position (A/T) Neutral position (M/T)
PW/ST SIGNAL	OFF

6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-497, "Diagnostic Procedure" .

Overall Function Check

NBS000AK

Use this procedure to check the overall function of the vehicle speed sensor circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Lift up drive wheels.
2. Start engine.
3. Read vehicle speed sensor signal in Service $01 with GST.
   The vehicle speed sensor on GST should be able to exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
4. If NG, go to EC-497, "Diagnostic Procedure" .

Diagnostic Procedure

NBS000AL

1. CHECK DTC WITH “VDC/TCS/ABS CONTROL UNIT (WITH VDC MODELS)” OR “ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) (WITHOUT VDC MODELS)”

Refer to BRC-82, "TROUBLE DIAGNOSIS" (with VDC models) or refer to BRC-42, "TROUBLE DIAGNOSIS" (without VDC models).

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK DTC WITH UNIFIED METER AND A/C AMP.

Refer to DI-4, "COMBINATION METERS" .

>> **INSPECTION END**

DTC P0506 ISC SYSTEM

PFP:23781

Description

NBS000AM

NOTE:
If DTC P0506 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.
The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.
The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

NBS000AN

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0506 0506	Idle speed control system RPM lower than expected	The idle speed is less than the target idle speed by 100 rpm or more.	● Electric throttle control actuator ● Intake air leak

DTC Confirmation Procedure

NBS000AO

NOTE:
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- **If the target idle speed is out of the specified value, perform EC-77, "Idle Air Volume Learning" , before conducting DTC Confirmation Procedure. For the target idle speed, refer to EC-718, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

TESTING CONDITION:
- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**
- **Always perform the test at a temperature above −10°C (14°F).**

WITH CONSULT-III

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine and run it for at least 1 minute at idle speed.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-498, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000AP

1. CHECK INTAKE AIR LEAK

1. Start engine and let it idle.
2. Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 2.
NG >> Discover air leak location and repair.

2. REPLACE ECM

1. Stop engine.
2. Replace ECM.
3. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to BL-152, "ECM Re-communicating Function" .
4. Perform EC-76, "VIN Registration" .
5. Perform EC-76, "Exhaust Valve Timing Control Learning" .
6. Perform EC-77, "Accelerator Pedal Released Position Learning" .
7. Perform EC-77, "Throttle Valve Closed Position Learning" .
8. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P0507 ISC SYSTEM

PFP:23781

Description

NBS000AQ

NOTE:
If DTC P0507 is displayed with other DTC, first perform the trouble diagnosis for the other DTC.
The ECM controls the engine idle speed to a specified level through the fine adjustment of the air, which is let into the intake manifold, by operating the electric throttle control actuator. The operating of the throttle valve is varied to allow for optimum control of the engine idling speed. The crankshaft position sensor (POS) detects the actual engine speed and sends a signal to the ECM.
The ECM controls the electric throttle control actuator so that the engine speed coincides with the target value memorized in the ECM. The target engine speed is the lowest speed at which the engine can operate steadily. The optimum value stored in the ECM is determined by taking into consideration various engine conditions, such as during warming up, deceleration, and engine load (air conditioner, power steering and cooling fan operation, etc.).

On Board Diagnosis Logic

NBS000AR

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0507 0507	Idle speed control system RPM higher than expected	The idle speed is more than the target idle speed by 200 rpm or more.	● Electric throttle control actuator ● Intake air leak ● PCV system

DTC Confirmation Procedure

NBS000AS

NOTE:
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- **If the target idle speed is out of the specified value, perform EC-77, "Idle Air Volume Learning" , before conducting DTC Confirmation Procedure. For the target idle speed, refer to EC-718, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

TESTING CONDITION:
- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**
- **Always perform the test at a temperature above −10°C (14°F).**

WITH CONSULT-III

1. Open engine hood.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine and run it for at least 1 minute at idle speed.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-500, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000AT

1. CHECK PCV HOSE CONNECTION

Confirm that PCV hose is connected correctly.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK INTAKE AIR LEAK

1. Start engine and let it idle.
2. Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 3.
NG >> Discover air leak location and repair.

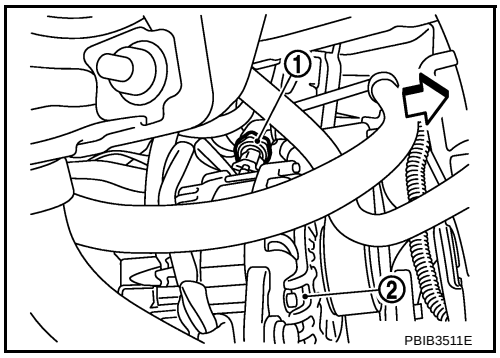
3. REPLACE ECM

1. Stop engine.
2. Replace ECM.
3. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to BL-152, "ECM Re-communicating Function" .
4. Perform EC-76, "VIN Registration" .
5. Perform EC-76, "Exhaust Valve Timing Control Learning" .
6. Perform EC-77, "Accelerator Pedal Released Position Learning" .
7. Perform EC-77, "Throttle Valve Closed Position Learning" .
8. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P0550 PSP SENSOR

PFP:49763



Component Description

NBS000AU

Power steering pressure (PSP) sensor (1) is installed to the power steering high-pressure tube and detects a power steering load. This sensor is a potentiometer which transforms the power steering load into output voltage, and emits the voltage signal to the ECM. The ECM controls the electric throttle control actuator and adjusts the throttle valve opening angle to increase the engine speed and adjusts the idle speed for the increased load.

2 : Alternator

⇦ : Vehicle front

CONSULT-III Reference Value in Data Monitor Mode

NBS000AV

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PW/ST SIGNAL	● Engine: After warming up, idle the engine	Steering wheel: Not being turned	OFF
		Steering wheel: Being turned	ON

On Board Diagnosis Logic

NBS000AW

The MIL will not light up for this self-diagnosis.

NOTE:
If DTC P0550 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.
Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0550 0550	Power steering pressure sensor circuit	An excessively low or high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted) ● Power steering pressure sensor

DTC Confirmation Procedure

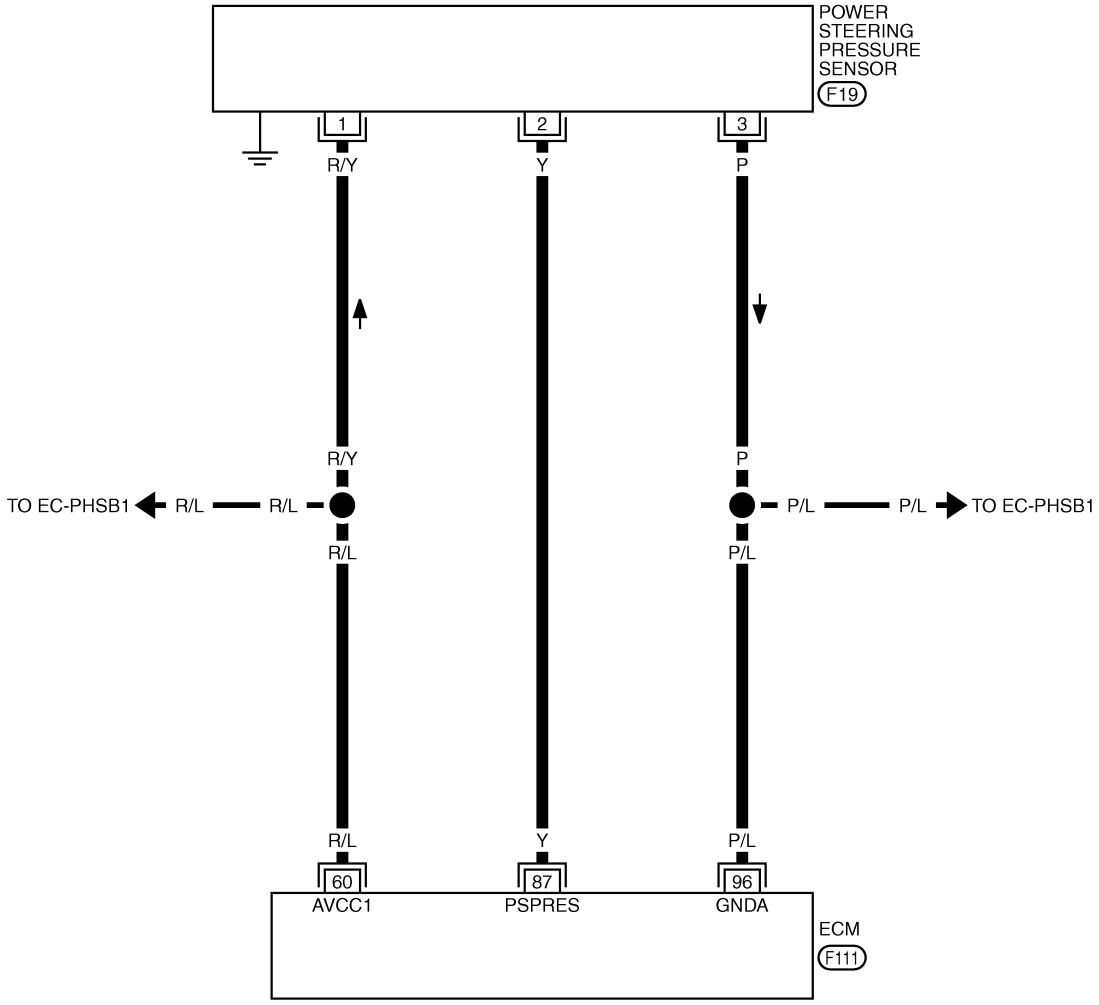
NBS000AX

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

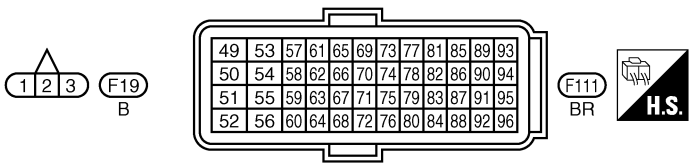
WITH CONSULT-III

1. Start engine and let it idle for at least 5 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-505, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.



Wiring Diagram

NBS000AY

EC-PS/SEN-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

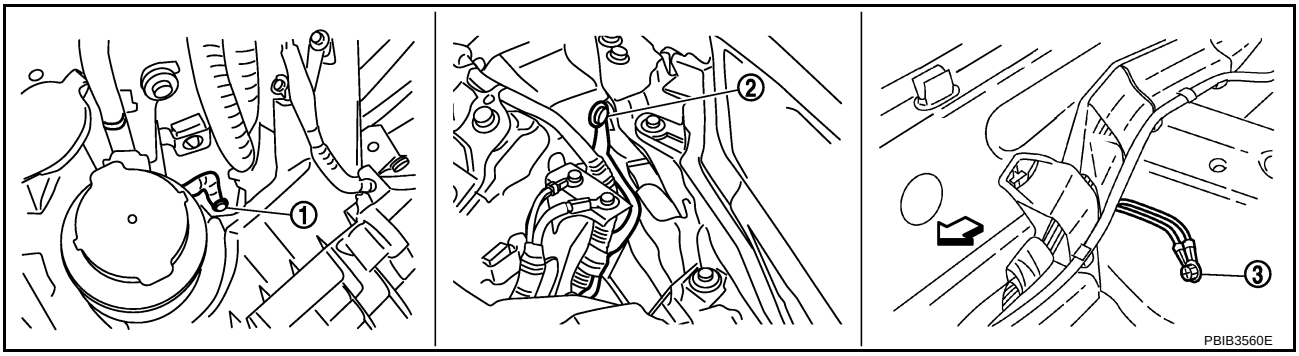
TBWT1651E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
60	R/L	Sensor power supply [Camshaft position sensor (PHASE) (bank 1), Exhaust valve timing control position sensor (bank 1), Power steering pressure sensor]	**[Ignition switch: ON]**	5V
87	Y	Power steering pressure sensor	**[Engine is running]** ● Steering wheel: Being turned	0.5 - 4.5V
			[Engine is running] ● Steering wheel: Not being turned	0.4 - 0.8V
96	P/L	Sensor ground [Camshaft position sensor (PHASE) (bank 1), Power steering pressure sensor]	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



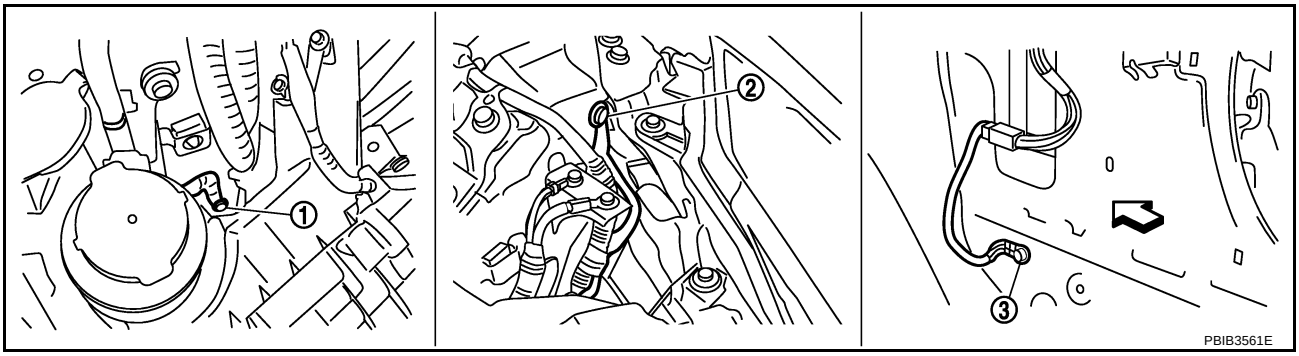
Diagnostic Procedure

NBS000AZ

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

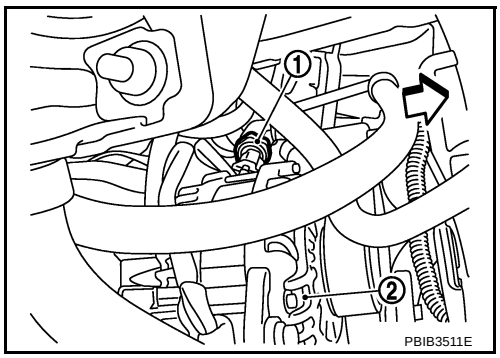
1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK PSP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect power steering pressure (PNP) sensor (1) harness connector.

   1 : Alternator

   ⇦ : Vehicle front

2. Turn ignition switch ON.

3. Check voltage between PSP sensor terminal 1 and ground with CONSULT-III or tester.

   Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK PSP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between PSP sensor terminal 3 and ECM terminal 96. Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK PSP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 87 and PSP sensor terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK PSP SENSOR

Refer to EC-507, "Component Inspection" .

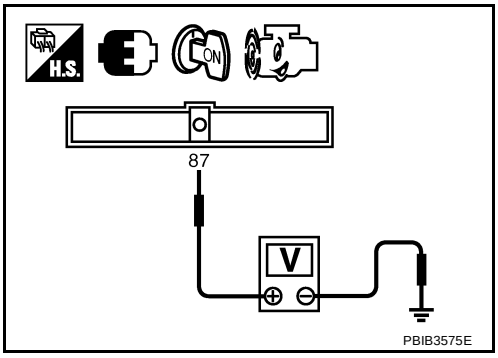
OK or NG

OK >> GO TO 6.
NG >> Replace PNP sensor.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS000B0

POWER STEERING PRESSURE SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and let it idle.
3. Check voltage between ECM terminal 87 and ground under the following conditions.

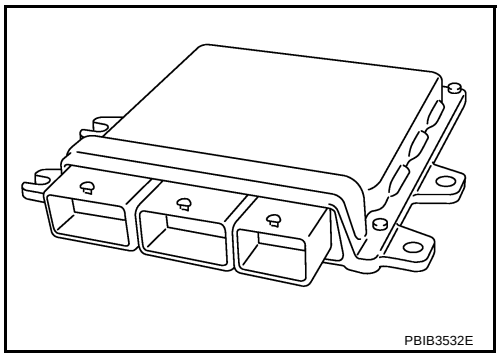
Condition	Voltage
Steering wheel: Being turned	0.5 - 4.5V
Steering wheel: Not being turned	0.4 - 0.8V

Removal and Installation

NBS000B1

POWER STEERING PRESSURE SENSOR

Refer to PS-33, "HYDRAULIC LINE" .



DTC P0603 ECM POWER SUPPLY

PFP:23710

Component Description

NBS000BE

Battery voltage is supplied to the ECM even when the ignition switch is turned OFF for the ECM memory function of the DTC memory, the air-fuel ratio feedback compensation value memory, the Idle Air Volume Learning value memory, etc.

PBIB3532E

On Board Diagnosis Logic

NBS000BF

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0603 0603	ECM power supply circuit	ECM back-up RAM system does not function properly.	● Harness or connectors [The ECM power supply (back-up) circuit is open or shorted.] ● ECM

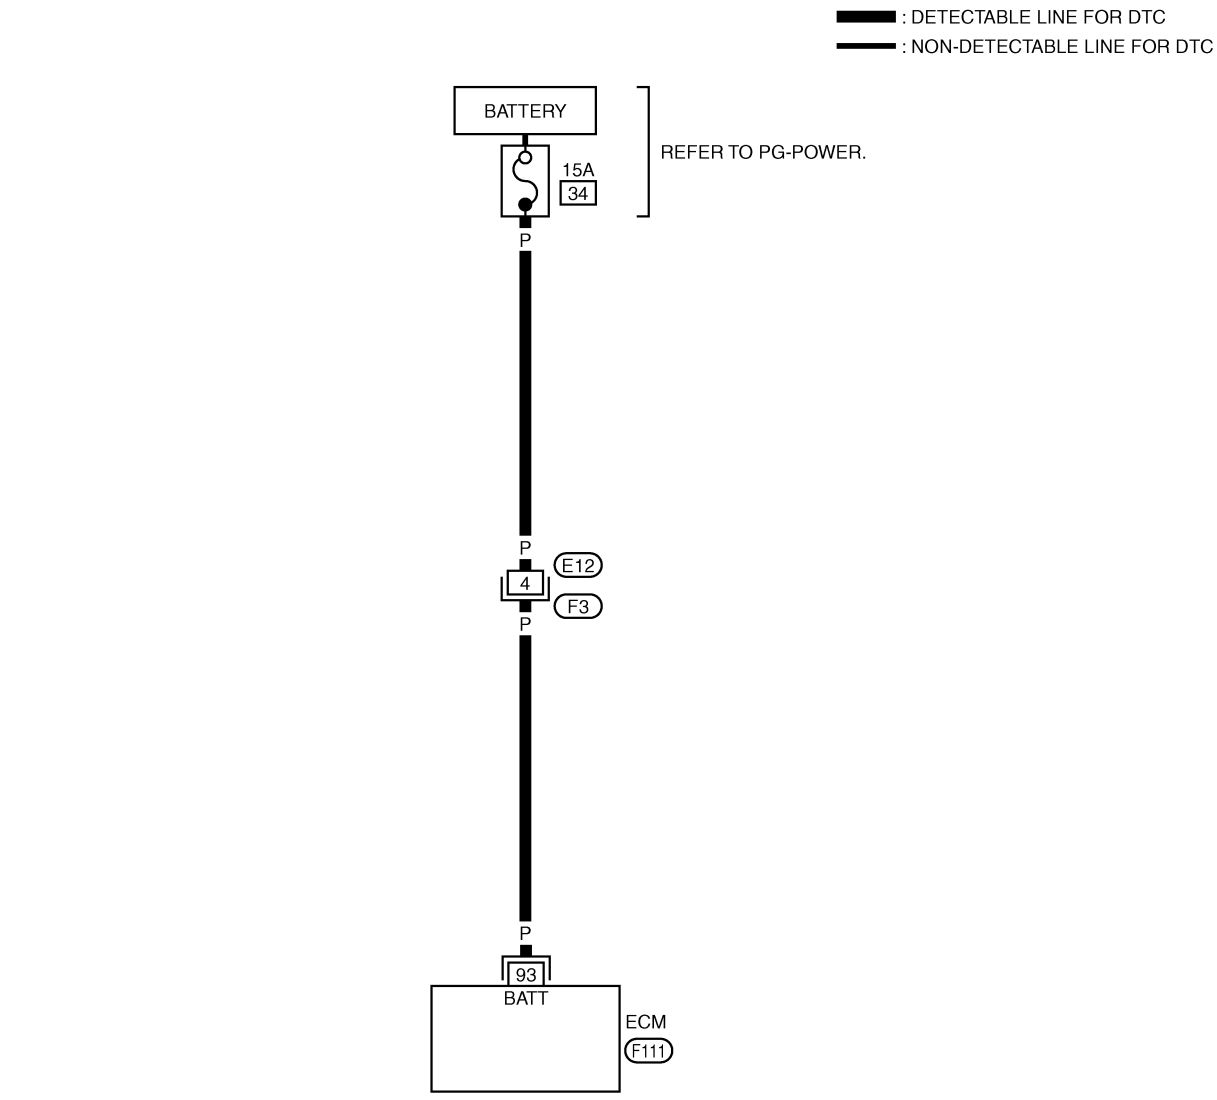
DTC Confirmation Procedure

NBS000BG

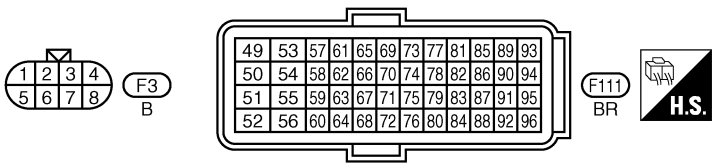
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
3. Repeat steps 3 and 4 for four times.
4. Check 1st trip DTC.
5. If 1st trip DTC is detected, go to EC-510, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS000BH

EC-ECM/PW-01

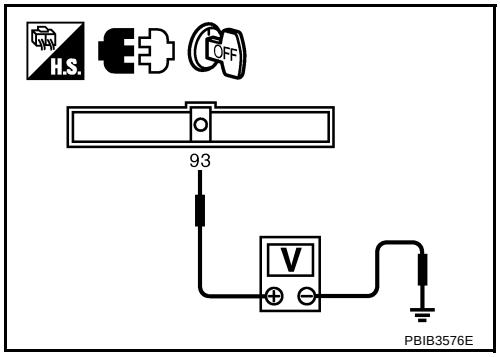
TBWT1652E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
93	P	Power supply for ECM (Back-up)	**[Ignition switch: OFF]**	BATTERY VOLTAGE (11 - 14V)



Diagnostic Procedure

NBS000BI

1. CHECK ECM POWER SUPPLY

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 93 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- 15A fuse
- Harness for open or short between ECM and battery

>> Repair or replace harness or connectors.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connectors.

4. PERFORM DTC CONFIRMATION PROCEDURE

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-III.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-508, "DTC Confirmation Procedure" .
5. Is the 1st trip DTC P0603 displayed again?

With GST

1. Turn ignition switch ON.
2. Select Service $04 with GST.
3. **Perform DTC Confirmation Procedure.**
   See EC-508, "DTC Confirmation Procedure" .
4. Is the 1st trip DTC P0603 displayed again?

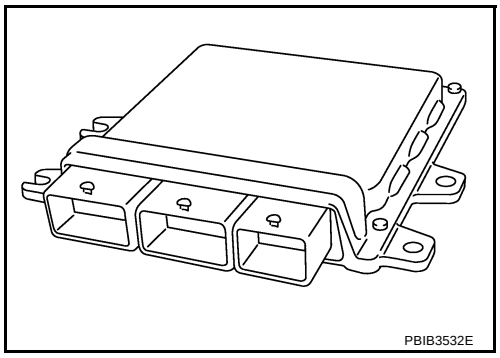
Yes or No

Yes >> GO TO 5.
No >> **INSPECTION END**

5. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-152, "ECM Re-communicating Function" .
3. Perform EC-76, "VIN Registration" .
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**



DTC P0605 ECM

PFP:23710

Component Description

NBS000B2

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.

On Board Diagnosis Logic

NBS000B3

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEP-ROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

FAIL-SAFE MODE

ECM enters fail-safe mode when the malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	● ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring. ● ECM deactivates ASCD operation.

DTC Confirmation Procedure

NBS000B4

Perform PROCEDURE FOR MALFUNCTION A first. If the 1st trip DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. If there is no malfunction on PROCEDURE FOR MALFUNCTION B, perform PROCEDURE FOR MALFUNCTION C.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

With CONSULT-III

1. Turn ignition switch ON.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-513, "Diagnostic Procedure" .

With GST

Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION B

With CONSULT-III

1. Turn ignition switch ON and wait at least 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
3. Check 1st trip DTC.
4. If 1st trip DTC is detected, go to EC-513, "Diagnostic Procedure" .

With GST

Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION C

With CONSULT-III

1. Turn ignition switch ON and wait at least 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
3. Repeat step 3 for 32 times.
4. Check 1st trip DTC.
5. If 1st trip DTC is detected, go to EC-513, "Diagnostic Procedure" .

With GST

Follow the procedure “With CONSULT-III” above.

Diagnostic Procedure

NBS000B5

1. INSPECTION START

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-III.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-512, "DTC Confirmation Procedure" .
5. Is the 1st trip DTC P0605 displayed again?

With GST

1. Turn ignition switch ON.
2. Select Service $04 with GST.
3. **Perform DTC Confirmation Procedure.**
   See EC-512, "DTC Confirmation Procedure" .
4. Is the 1st trip DTC P0605 displayed again?

Yes or No

Yes >> GO TO 2.
No >> **INSPECTION END**

2. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-152, "ECM Re-communicating Function" .
3. Perform EC-76, "VIN Registration" .
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P0643 SENSOR POWER SUPPLY

PFP:18919

On Board Diagnosis Logic

NBS000DW

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0643 0643	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	● Harness or connectors (APP sensor 1 circuit is shorted.) (TP sensor circuit is shorted.) [CMP sensor (PHASE) (bank 1) circuit is shorted.] [EVT control position sensor (bank 1) circuit is shorted.] (PSP sensor circuit is shorted.) ● Accelerator pedal position sensor ● Throttle position sensor ● Camshaft position sensor (PHASE) (bank 1) ● Exhaust valve timing control position sensor (bank 1) ● Power steering pressure sensor

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

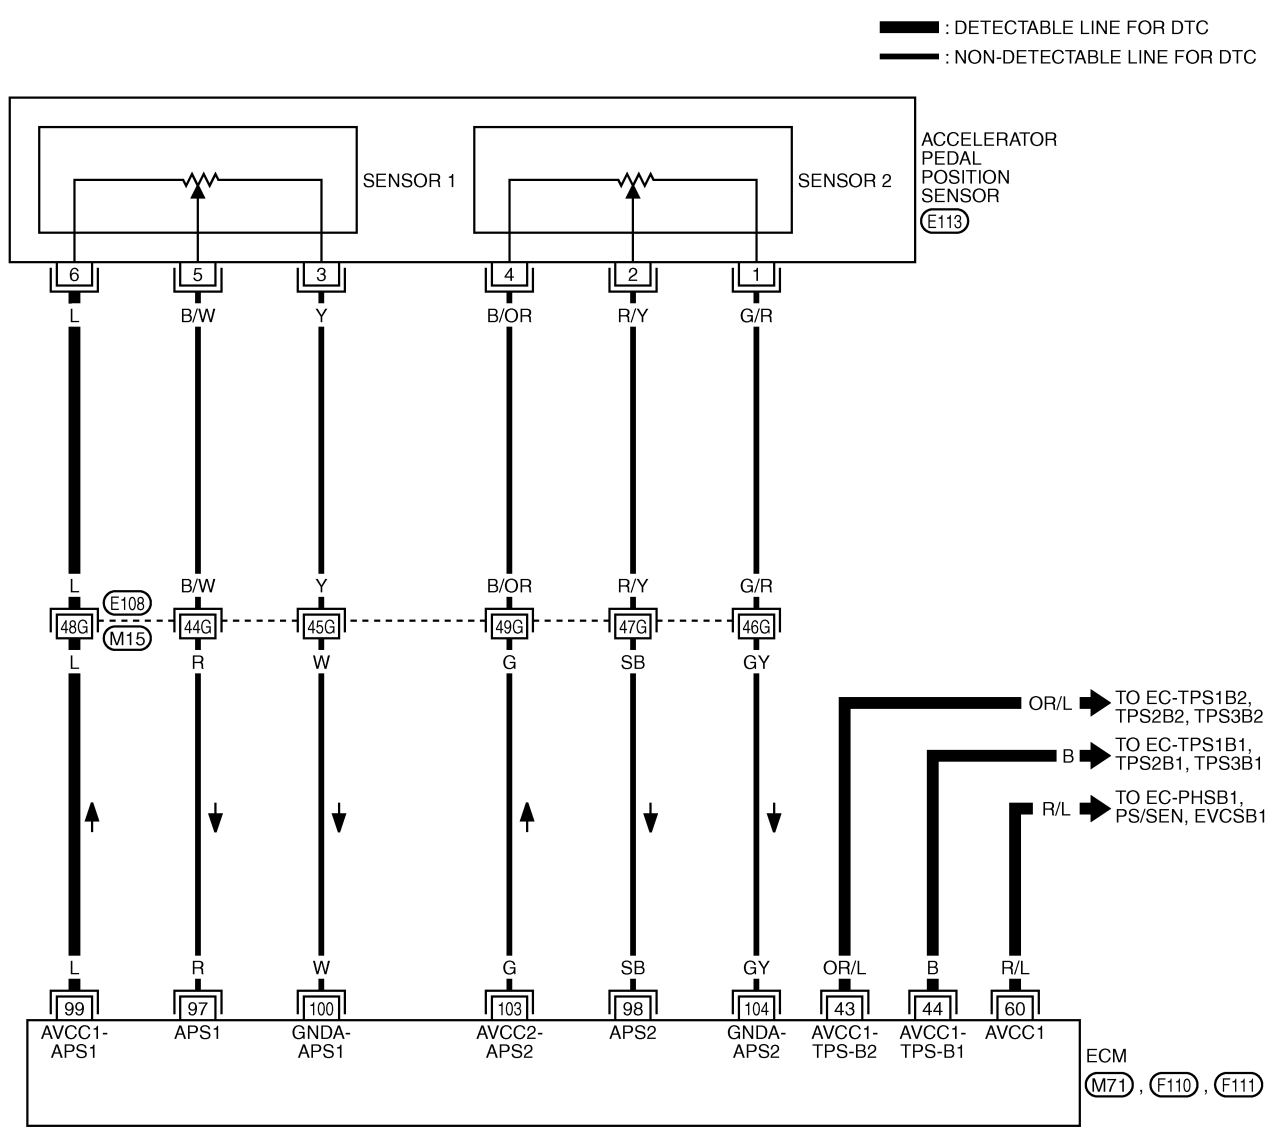
DTC Confirmation Procedure

NBS000DX

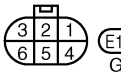
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-517, "Diagnostic Procedure" .

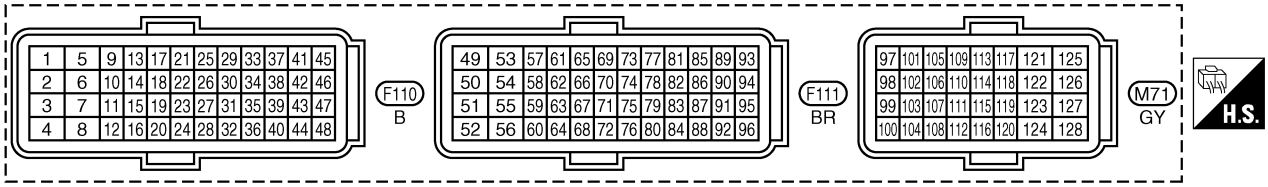


WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram



NBS000DY

EC-SEN/PW-01

REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)

TBWT1653E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

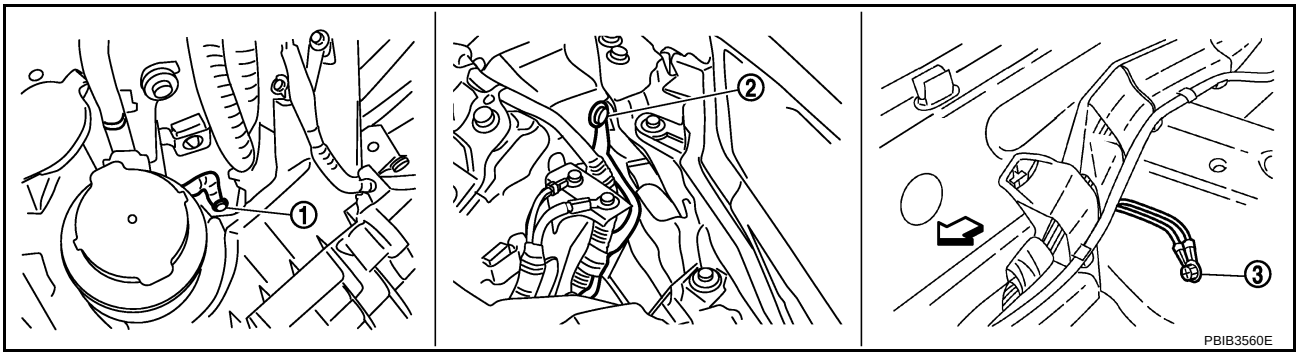
100	W	Sensor ground (Accelerator pedal position sensor 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V
103	G	Sensor power supply (Accelerator pedal position sensor 2)	**[Ignition switch: ON]**	5V
104	GY	Sensor ground (Accelerator pedal position sensor 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



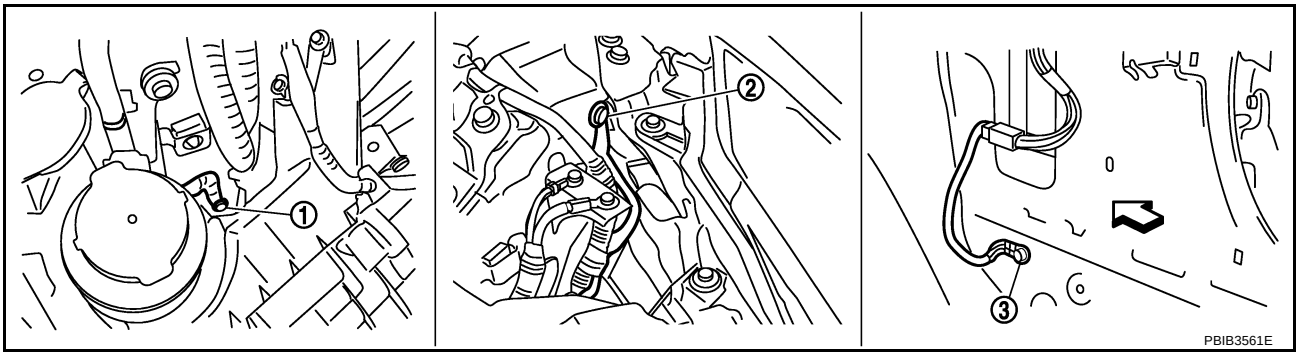
Diagnostic Procedure

NBS000DZ

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



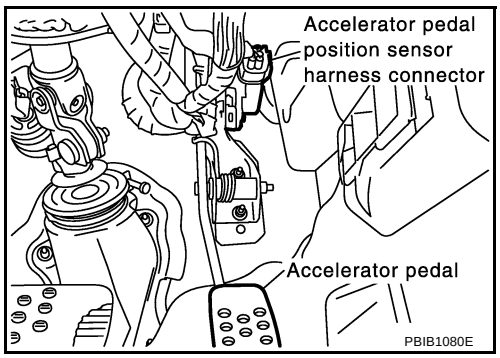
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

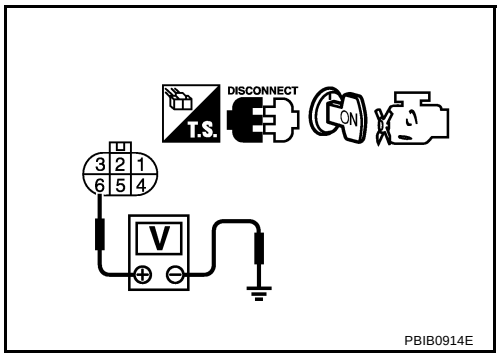
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK ACCELERATOR PEDAL POSITION SENSOR 1 POWER SUPPLY CIRCUIT-I

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.

3. Check voltage between APP sensor terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 7.
NG >> GO TO 3.

3. CHECK SENSOR POWER SUPPLY CIRCUITS

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
43	Electric throttle control actuator (bank 2) terminal 6	EC-365
44	Electric throttle control actuator (bank 1) terminal 6	EC-363
60	CMP sensor (PHASE) (bank 1) terminal 1	EC-397
	EVT control position sensor (bank 1) terminal 1	EC-530
	PSP sensor terminal 1	EC-503
99	APP sensor terminal 6	EC-515

OK or NG

OK >> GO TO 4.
NG >> Repair short to ground or short to power in harness or connectors.

4. CHECK COMPONENTS

Check the following.

- Camshaft position senosr (PHASE) (bank 1) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 1) (Refer to EC-539, "Component Inspection" .)
- Power steering pressure sensor (Refer to EC-507, "Component Inspection" .)

OK or NG

OK >> GO TO 5.
NG >> Replace malfunctioning component.

5. CHECK TP SENSOR

Refer to EC-369, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace malfunctioning electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK APP SENSOR

Refer to EC-640, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

8. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0850 PNP SWITCH

PFP:23006

Component Description

NBS000GB

When the shift position is P or N (A/T), Neutral (M/T), park/neutral position (PNP) switch is ON.
ECM detects the position because the continuity of the line (the ON signal) exists.

CONSULT-III Reference Value in Data Monitor Mode

NBS000GC

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T), Neutral (M/T) position	ON
		Shift lever: Except above position	OFF

On Board Diagnosis Logic

NBS000GD

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0850 0850	Park/neutral position switch	The signal of the park/neutral position (PNP) switch is not changed in the process of engine starting and driving.	● Harness or connectors [The park/neutral position (PNP) switch circuit is open or shorted.] ● Park/neutral position (PNP) switch ● TCM (A/T models)

DTC Confirmation Procedure

NBS000GE

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “P/N POSI SW” in “DATA MONITOR” mode with CONSULT-III. Then check the “P/N POSI SW” signal under the following conditions.

Position (Shift lever)	Known-good signal
N or P position (A/T) Neutral position (M/T)	ON
Except above position	OFF

If NG, go to EC-525, "Diagnostic Procedure" .
If OK, go to following steps.

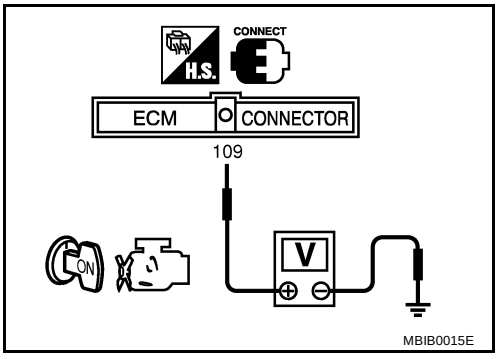
3. Select “DATA MONITOR” mode with CONSULT-III.
4. Start engine and warm it up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	1,400 - 6375 rpm
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	2.0 - 31.8 msec
VHCL SPEED SE	More than 64 km/h (40 MPH)
Shift lever	Suitable position

6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-525, "Diagnostic Procedure" .

Overall Function Check

NBS000GF



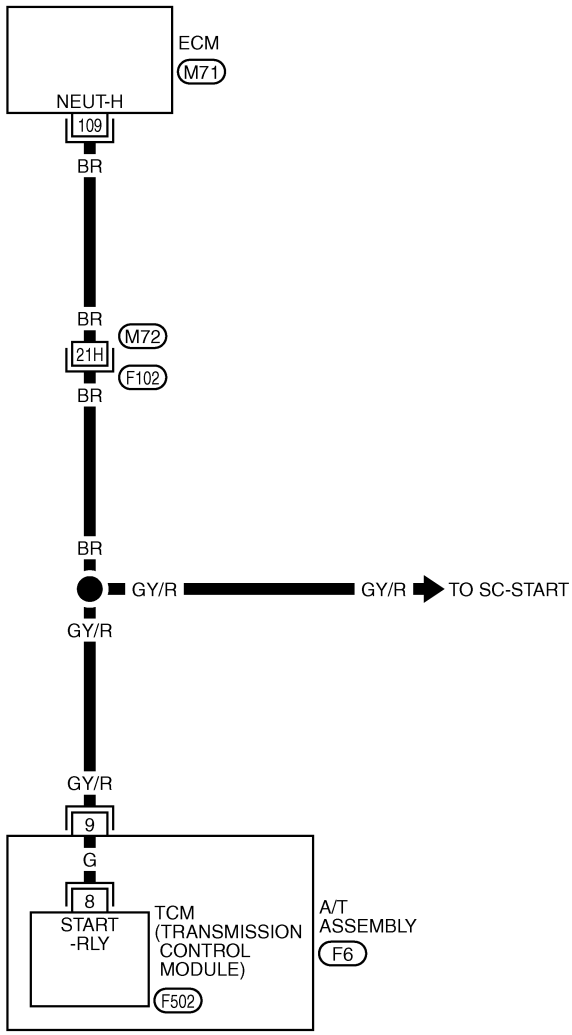
Use this procedure to check the overall function of the park/neutral position (PNP) switch circuit. During this check, a 1st trip DTC might not be confirmed.

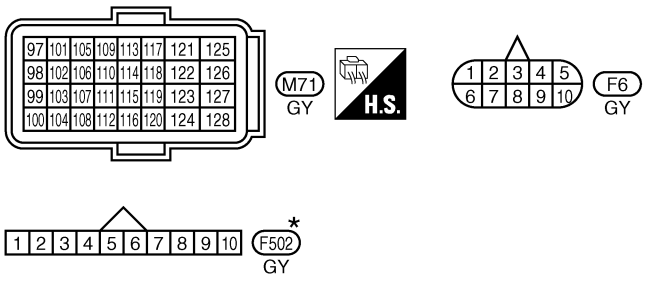
WITH GST

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 109 (PNP switch signal) and ground under the following conditions.

Condition (Shift lever)	Voltage V (Known-good data)
P or N position (A/T) Neutral position (M/T)	Approx. 0
Except above position	BATTERY VOLTAGE (11 - 14V)

3. If NG, go to EC-525, "Diagnostic Procedure" .





Wiring Diagram
A/T MODELS

NBS000GG

EC-PNP/SW-01

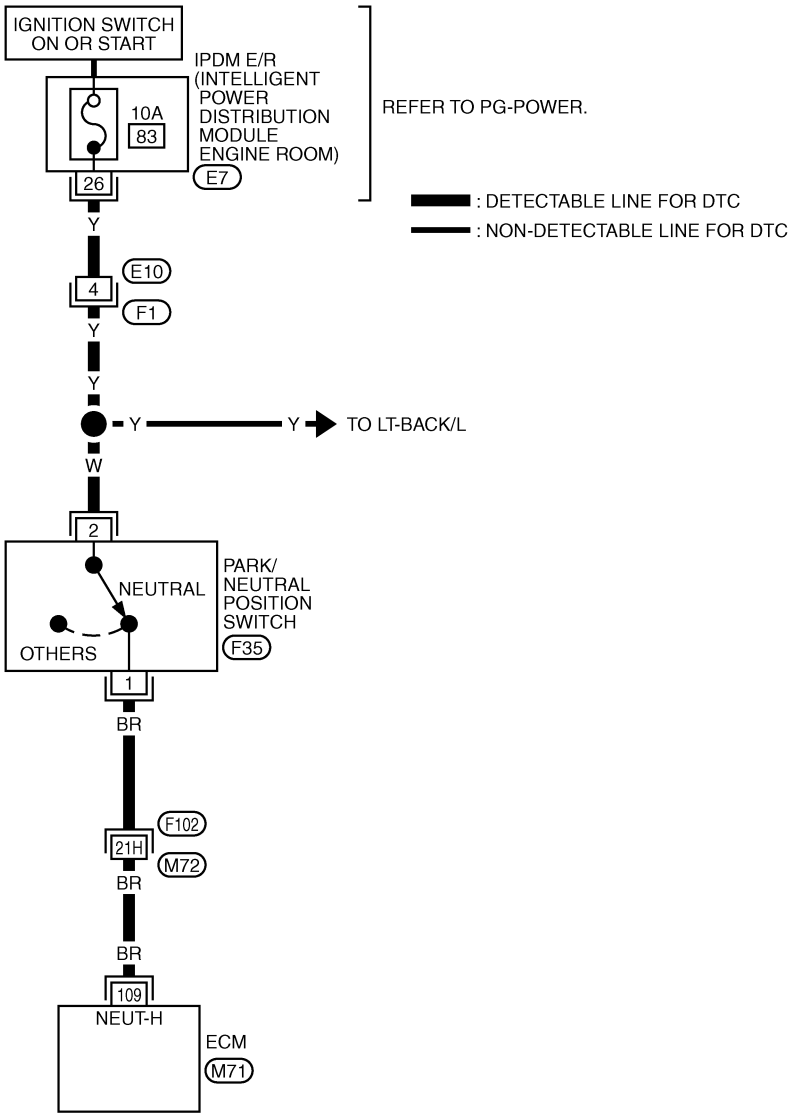
: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

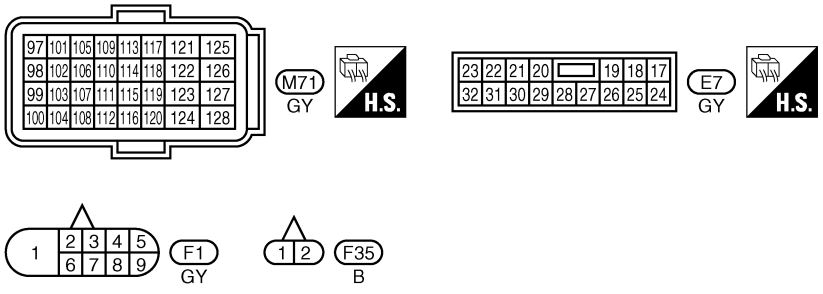
REFER TO THE FOLLOWING.
F102 -SUPER MULTIPLE JUNCTION (SMJ)

TBWT1654E

Specification data are reference values and are measured between each terminal and ground.



CAUTION:



Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
109	BR	PNP switch	**[Ignition switch: ON]** ● Shift lever: P or N position	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch: ON] ● Shift lever: Except above position	0V

M/T MODELS

EC-PNP/SW-02

REFER TO THE FOLLOWING.
F102 -SUPER MULTIPLE JUNCTION (SMJ)

TBWT1655E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
109	BR	PNP switch	**[Ignition switch: ON]** ● Shift lever: Neutral position	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch: ON] ● Shift lever: Except above position	0V

Diagnostic Procedure

NBS000GH

A/T MODELS

1. CHECK DTC WITH TCM

Refer to AT-37, "OBD-II Diagnostic Trouble Code (DTC)" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK STARTING SYSTEM

Turn ignition switch OFF, then turn it to START.

Does starter motor operate?

Yes or No

Yes >> GO TO 3.
No >> Refer to SC-8, "STARTING SYSTEM" .

3. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect A/T assembly harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between A/T assembly terminal 9 and ECM terminal 109. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F102, M72
- Harness for open or short between A/T assembly and ECM.

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT-II

1. Check harness continuity between A/T assembly terminal 9 and TCM terminal 8.
   Refer to AT-97, "DTC P0615 START SIGNAL CIRCUIT" .

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness connectors.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

M/T MODELS

1. CHECK PNP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect park/neutral position (PNP) switch harness connector.
3. Turn ignition switch ON.
4. Check the voltage between PNP switch terminal 2 and ground with CONSULT-III or tester.

   Voltage: Battery voltage

OK or NG

OK >> GO TO 3
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector E10, F1
- 10A fuse
- IPDM harness connector E7
- Harness for open or short between ECM and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 109 and PNP switch terminal 1.
   Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector F102, M72
- Harness for open or short between PNP switch and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK PNP SWITCH

Refer to MT-11, "PARK/NEUTRAL POSITION SWITCH" .

OK or NG

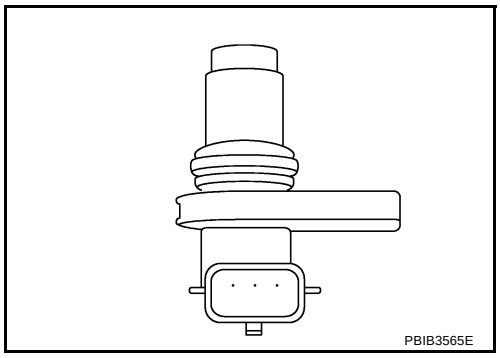
OK >> GO TO 6.
NG >> Replace PNP switch.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair open dircuit or short to ground or short to power in harness or connectors.



DTC P1078 P1084 EVT CONTROL POSITION SENSOR

PFP:23731

Component Description

NBS000BJ

Exhaust valve timing control position sensor detects the concave groove of the exhaust camshaft rear end.
This sensor signal is used for sensing a position of the exhaust camshaft.
This sensor uses a Hall IC.
Based on the position of the exhaust camshaft, ECM controls exhaust valve timing control magnet retarder to optimize the shut/open timing of exhaust valve for the driving condition.

CONSULT-III Reference Value in Data Monitor Mode

NBS000BK

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
EXH/V TIM B1 EXH/V TIM B2	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		Around 2,500 rpm while the engine speed is rising	Approx. 0° - 30°CA

On Board Diagnosis Logic

NBS000BL

NOTE:
If DTC P1078 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.
Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1078 1078 (Bank 1)	Exhaust valve timing control position sensor circuit	An excessively high or low voltage from the sensor is sent to ECM.	● Harness or connectors [Exhaust valve timing control position sensor (bank 1) circuit is open or shorted) ● Exhaust valve timing control position sensor (bank 1) ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 1) ● Accumulation of debris to the signal pick-up portion of the camshaft
P1084 1084 (Bank 2)			● Harness or connectors [EVT control position sensor (bank 2) circuit is shorted.] [CKP sensor (POS) circuit is shorted.] [CMP sensor (PHASE) (bank 2) circuit is open or shorted.] (APP sensor 2 circuit is shorted.) (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● Exhaust valve timing control position sensor (bank 2) ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 2) ● Accelerator pedal position sensor ● EVAP control system pressure sensor ● Refrigerant pressure sensor ● Accumulation of debris to the signal pick-up portion of the camshaft

DTC Confirmation Procedure

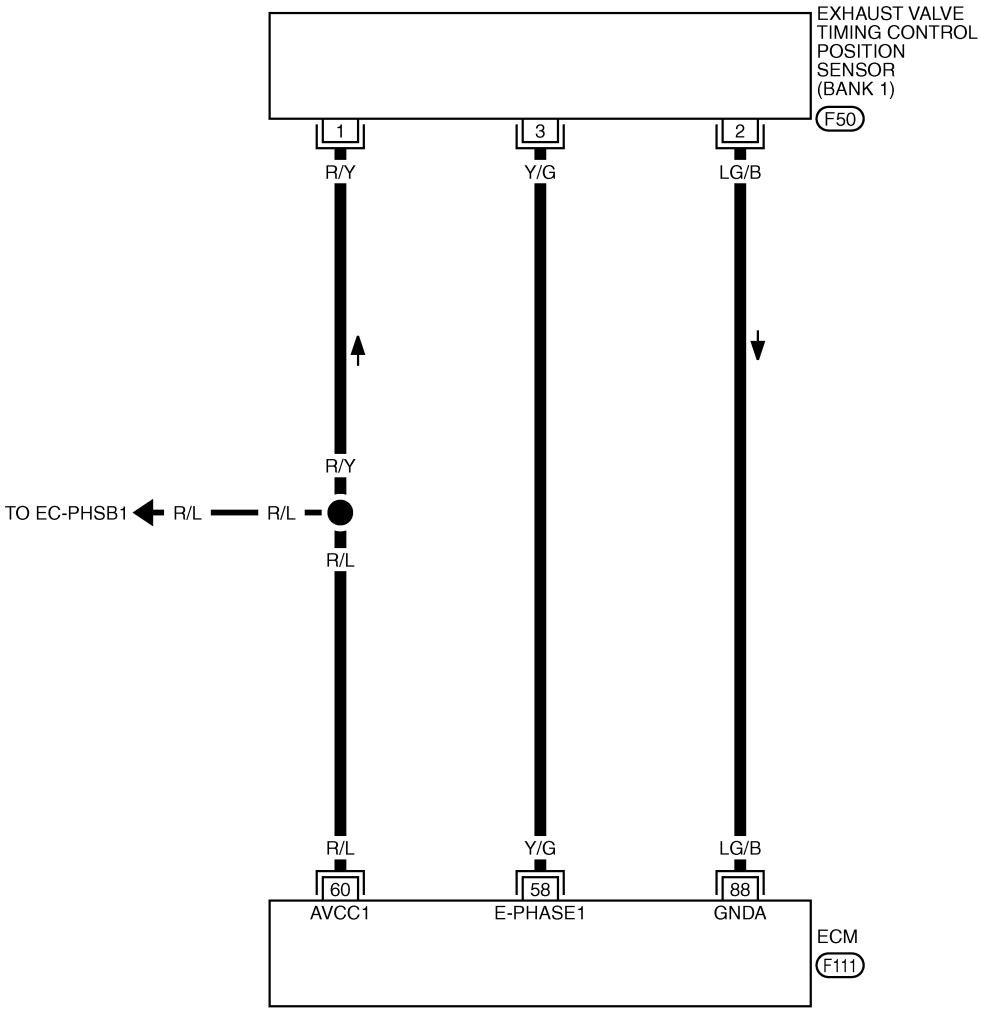
NBS000BM

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

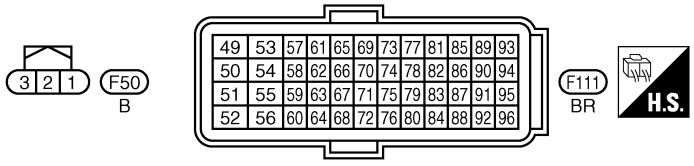
WITH CONSULT-III

1. Start engine and let it idle for 10 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-534, "Diagnostic Procedure" .

WITH GST



Follow the procedure WITH CONSULT-III above.



Wiring Diagram

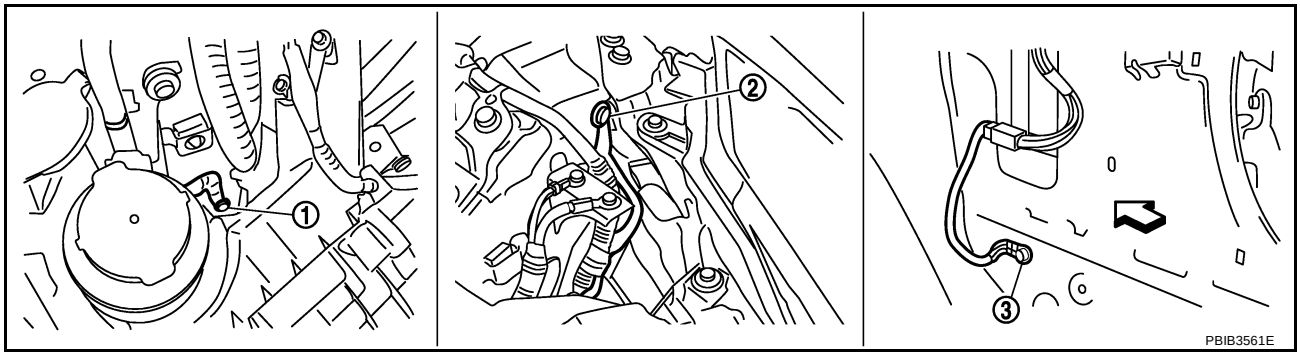
Diagnostic Procedure

NBS000BO

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

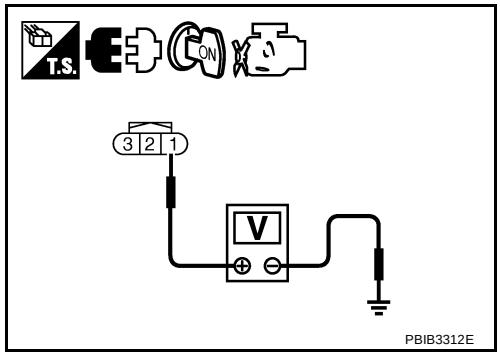
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR POWER SUPPLY CIRCUIT-I



1. Disconnect exhaust valve timing control position sensor harness connector.

1. Exhaust valve timing control position sensor (bank 1)
2. Camshaft position sensor (PHASE) (bank 1)
3. Camshaft position sensor (PHASE) (bank 2)
4. Exhaust valve timing control position sensor (bank 2)

2. Turn ignition switch ON.
3. Check voltage between exhaust valve timing control position sensor terminal 1 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 8.
NG-1 >> P1078: Repair open circuit or short to ground or short to power in harness connector.
NG-2 >> P1084: GO TO 3.

3. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between exhaust valve timing control position sensor terminal 1 and ECM terminal 64.
   Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit.

4. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor terminal 1	EC-711

OK or NG

OK >> GO TO 5.
NG >> Repair short to ground or short to power in harness or connectors.

5. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- EVAP control system pressure sensor (Refer to EC-464, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning component.

6. CHECK APP SENSOR

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 14.
NG >> GO TO 7.

7. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

8. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between exhaust valve timing control position sensor terminal 2 and ECM terminal 88. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.
NG >> Repair open circuit or short to ground or short to power in harness or connectors..

9. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 58 (bank 1) or 62 (bank 2) and exhaust valve timing control position sensor terminal 3.
Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 10.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK EXHAUST VALVE TIMING CONTROL POSITION SENSOR

Refer to EC-539, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace exhaust valve timing control position sensor.

11. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-393, "Component Inspection" .

OK or NG

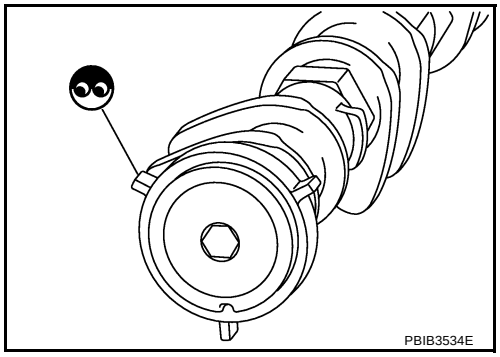
OK >> GO TO 12.
NG >> Replace crankshaft position sensor (POS).

12. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-405, "Component Inspection" .

OK or NG

OK >> GO TO 13.
NG >> Replace malfunctioning camshaft position sensor (PHASE).



13. CHECK CAMSHAFT (EXH)

Check the following;

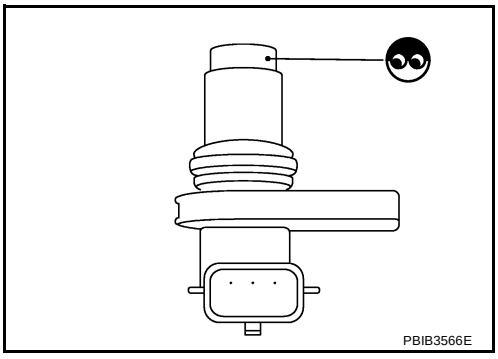
- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 14.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace malfunctioning camshaft.

14. CHECK INTERMITTENT INCIDENT

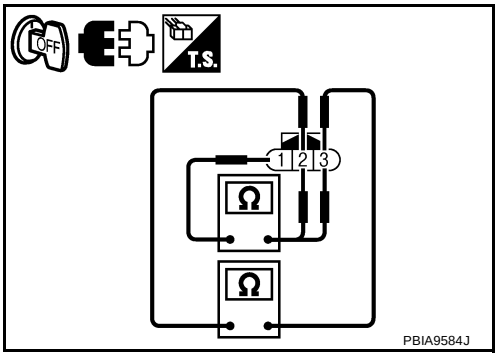
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS000BP



EXHAUST VALVE TIMING CONTROL POSITION SENSOR

1. Disconnect exhaust valve timing control position sensor harness connector.
2. Loosen the fixing bolt of the sensor.
3. Remove the sensor.
4. Visually check the sensor for chipping.

5. Check resistance as shown below.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 (+) - 2 (-)	Except 0 or ∞
1 (+) - 3 (-)	
2 (+) - 3 (-)	

6. If NG, replace exhaust valve timing control position sensor.

Removal and Installation

NBS000BQ

EXHAUST VALVE TIMING CONTROL POSITION SENSOR

Refer to EM-72, "CAMSHAFT" .

DTC P1148, P1168 CLOSED LOOP CONTROL

PFP:22690

On Board Diagnosis Logic

NBS000D5

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1148 1148 (Bank 1)	Closed loop control function	The closed loop control function for bank 1 does not operate even when vehicle is driving in the specified condition.	● Harness or connectors [The air fuel ratio (A/F) sensor 1 circuit is open or shorted.] ● Air fuel ratio (A/F) sensor 1 ● Air fuel ratio (A/F) sensor 1 heater
P1168 1168 (Bank 2)		The closed loop control function for bank 2 does not operate even when vehicle is driving in the specified condition.	

NOTE:
DTC P1148 or P1168 is displayed with another DTC for air fuel ratio (A/F) sensor 1.
Perform the trouble diagnosis for the corresponding DTC.

DTC P1211 TCS CONTROL UNIT

PFP:47850

Description

NBS000D6

The malfunction information related to TCS is transferred through the CAN communication line from VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models) to ECM.

Be sure to erase the malfunction information such as DTC not only for VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models) but also for ECM after TCS related repair.

On Board Diagnosis Logic

NBS000D7

- **Freeze frame data is not stored in the ECM for this self-diagnosis.**
- **The MIL will not light up for this self-diagnosis.**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1211 1211	TCS control unit	ECM receives a malfunction information from VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models).	● VDC/TCS/ABS control unit (with VDC models) ● ABS actuator and electric unit (control unit) (without VDC models) ● TCS related parts

DTC Confirmation Procedure

NBS000D8

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-III

1. Start engine and let it idle for at least 60 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-541, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000D9

Go to BRC-82, "TROUBLE DIAGNOSIS" (With VDC models) or BRC-42, "TROUBLE DIAGNOSIS" (Without VDC models).

DTC P1212 TCS COMMUNICATION LINE

PFP:47850

Description

NBS000DA

NOTE:

- **If DTC P1212 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P1212 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models).

Be sure to erase the malfunction information such as DTC not only for VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models) but also for ECM after TCS related repair.

On Board Diagnosis Logic

NBS000DB

- **Freeze frame data is not stored in the ECM for this self-diagnosis.**
- **The MIL will not light up for this self-diagnosis.**

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1212 1212	TCS communication line	ECM can not receive the information from VDC/TCS/ABS control unit (with VDC models) or “ABS actuator and electric unit (control unit)” (without VDC models) continuously.	● Harness or connectors (The CAN communication line is open or shorted.) ● VDC/TCS/ABS control unit (with VDC models) ● ABS actuator and electric unit (control unit) (without VDC models) ● Dead (Weak) battery

DTC Confirmation Procedure

NBS000DC

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-III

1. Start engine and let it idle for at least 10 seconds.
2. Check 1st trip DTC.
3. If 1st trip DTC is detected, go to EC-542, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000DD

Go to BRC-82, "TROUBLE DIAGNOSIS" (With VDC models) or BRC-42, "TROUBLE DIAGNOSIS" (Without VDC models).

DTC P1217 ENGINE OVER TEMPERATURE

PFP:00000

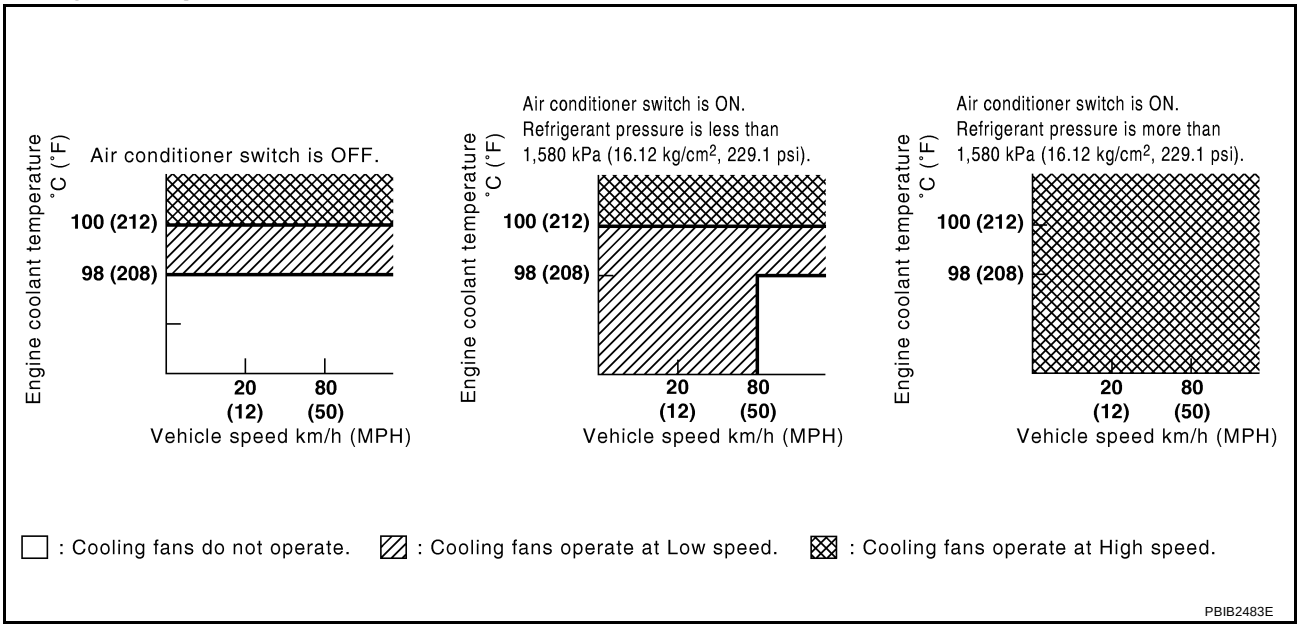
Description

NBS000DE

SYSTEM DESCRIPTION

NOTE:

- **If DTC P1217 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P1217 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**



Cooling Fan Control

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	Cooling fan control	IPDM E/R (Cooling fan relays)
Battery	Battery voltage*1		
Wheel sensor	Vehicle speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch	Air conditioner ON signal*2		
Refrigerant pressure sensor	Refrigerant pressure		

*1: The ECM determines the start signal status by the signals of engine speed and battery voltage.
*2: This signal is sent to ECM through CAN communication line.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF].

Cooling Fan Operation

Cooling Fan Relay Operation

The ECM controls cooling fan relays in the IPDM E/R through CAN communication line.

Cooling fan speed	Cooling fan relay		
	1	2	3
Stop	OFF	OFF	OFF
Low	ON	OFF	OFF
High	ON	ON	ON

COMPONENT DESCRIPTION

Cooling Fan Motor

The cooling fan operates at each speed when the current flows in the cooling fan motor as follows.

Cooling fan speed	Cooling fan motor terminals	
	(+)	(–)
Low	1	4
	2	3
High	1 and 2	3 and 4

CONSULT-III Reference Value in Data Monitor Mode

NBS000DF

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
COOLING FAN	● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 97°C (206°F) or less	OFF
		Engine coolant temperature is between 98°C (208°F) and 99°C (210°F)	LOW
		Engine coolant temperature is 100°C (212°F) or more	HI

On Board Diagnosis Logic

NBS000DG

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise.
When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.
This self-diagnosis has the one trip detection logic.

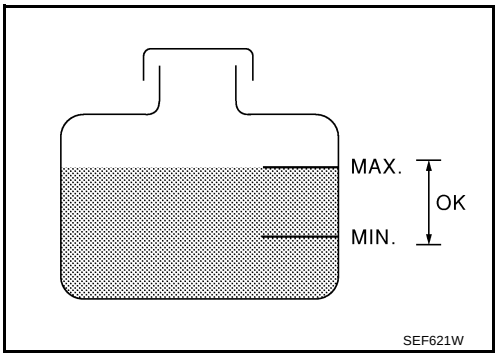
DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1217 1217	Engine over temperature (Overheat)	● Cooling fan does not operate properly (Overheat). ● Cooling fan system does not operate properly (Overheat). ● Engine coolant was not added to the system using the proper filling method. ● Engine coolant is not within the specified range.	● Harness or connectors (The cooling fan circuit is open or shorted.) ● Cooling fan ● IPDM E/R (Cooling fan relays) ● Radiator hose ● Radiator ● Radiator cap ● Water pump ● Thermostat For more information, refer to EC-555, "Main 12 Causes of Overheating" .

CAUTION:
When a malfunction is indicated, be sure to replace the coolant. Refer to CO-10, "Changing Engine Coolant" . Also, replace the engine oil. Refer to LU-7, "Changing Engine Oil" .

1. **Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to MA-12, "ANTI-FREEZE COOLANT MIXTURE RATIO" .**
2. **After refilling coolant, run engine to ensure that no water-flow noise is emitted.**

Overall Function Check

NBS000DH



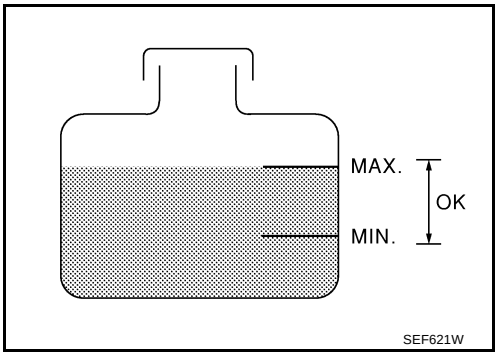
Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.
Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

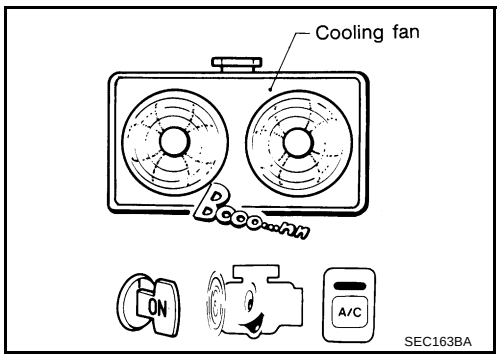
WITH CONSULT-III

1. Check the coolant level in the reservoir tank and radiator.

   NOTE:
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-549, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-549, "Diagnostic Procedure" .
3. Turn ignition switch ON.
4. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-III.
5. If the results are NG, go to EC-549, "Diagnostic Procedure" .



WITH GST

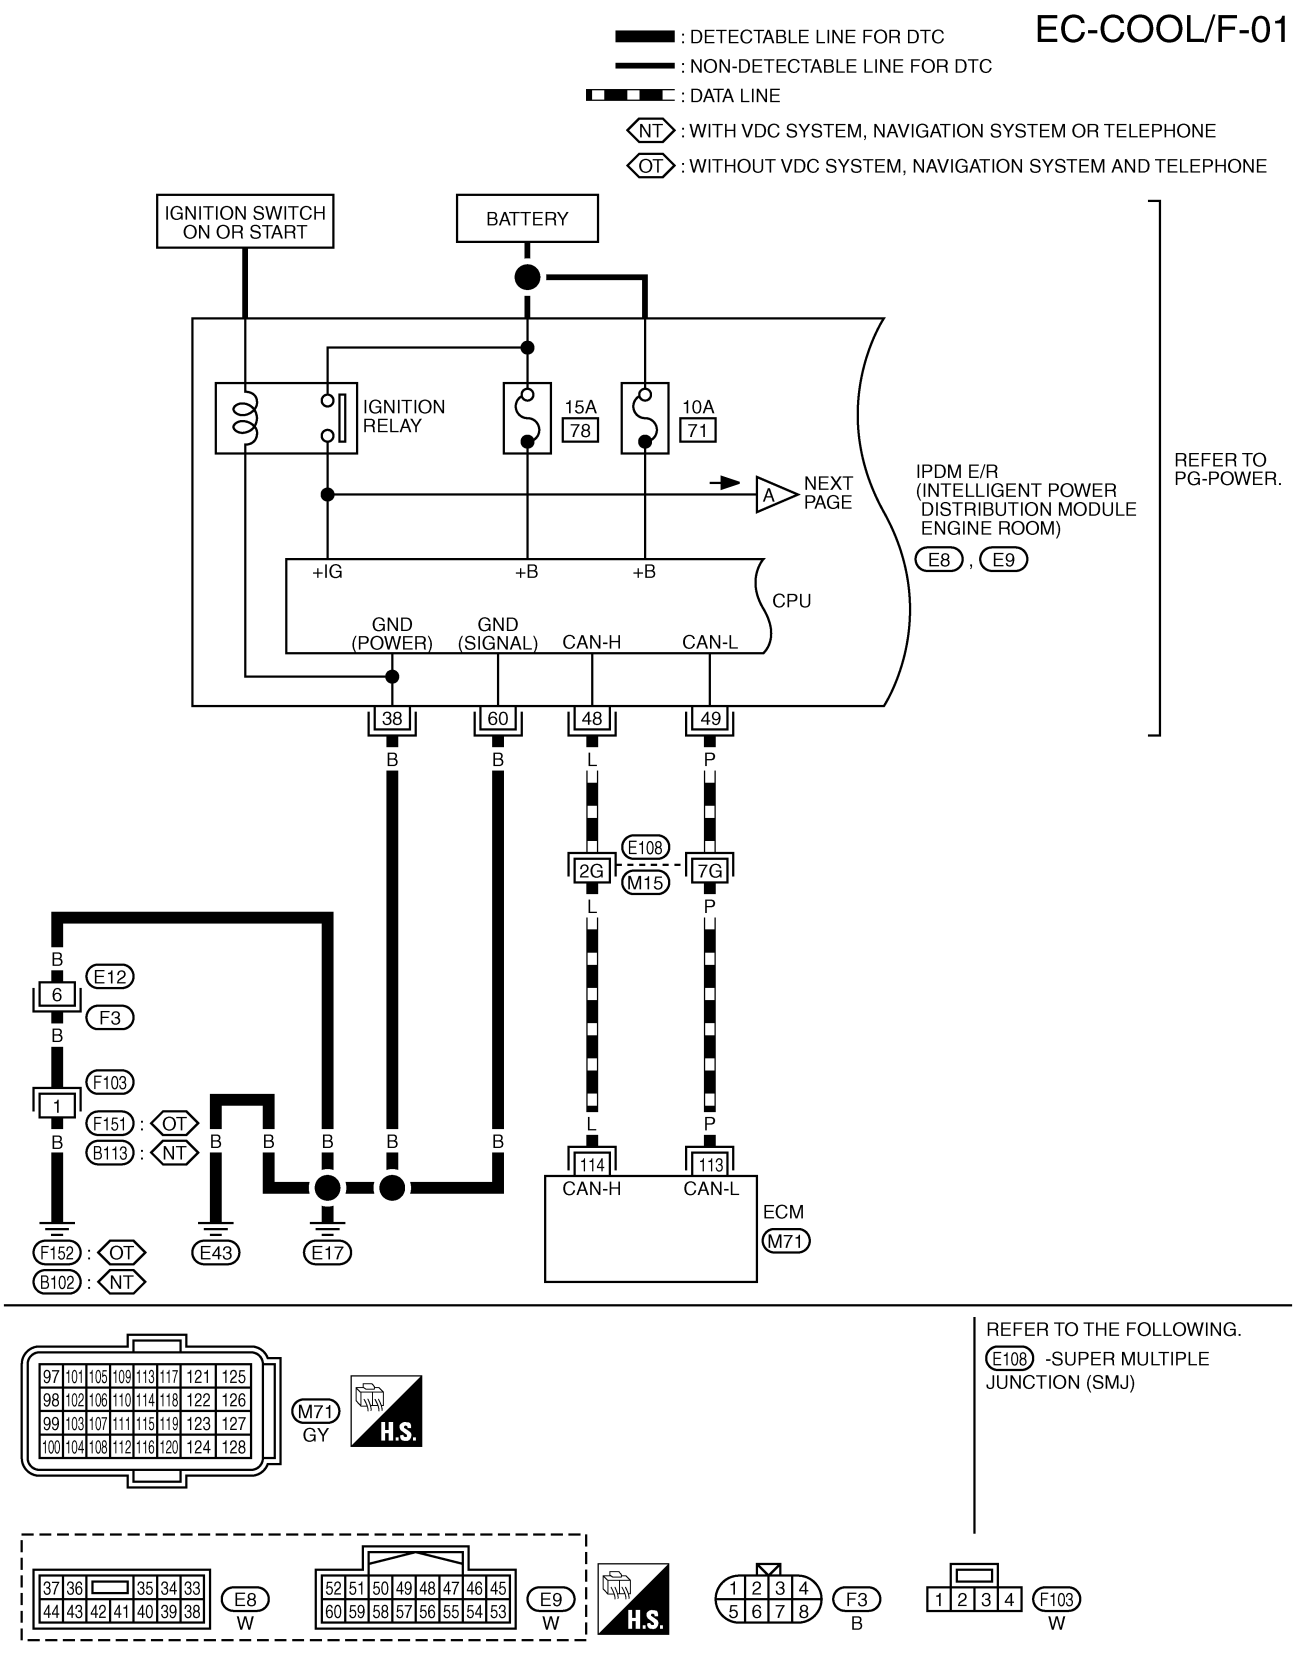


1. Check the coolant level in the reservoir tank and radiator.

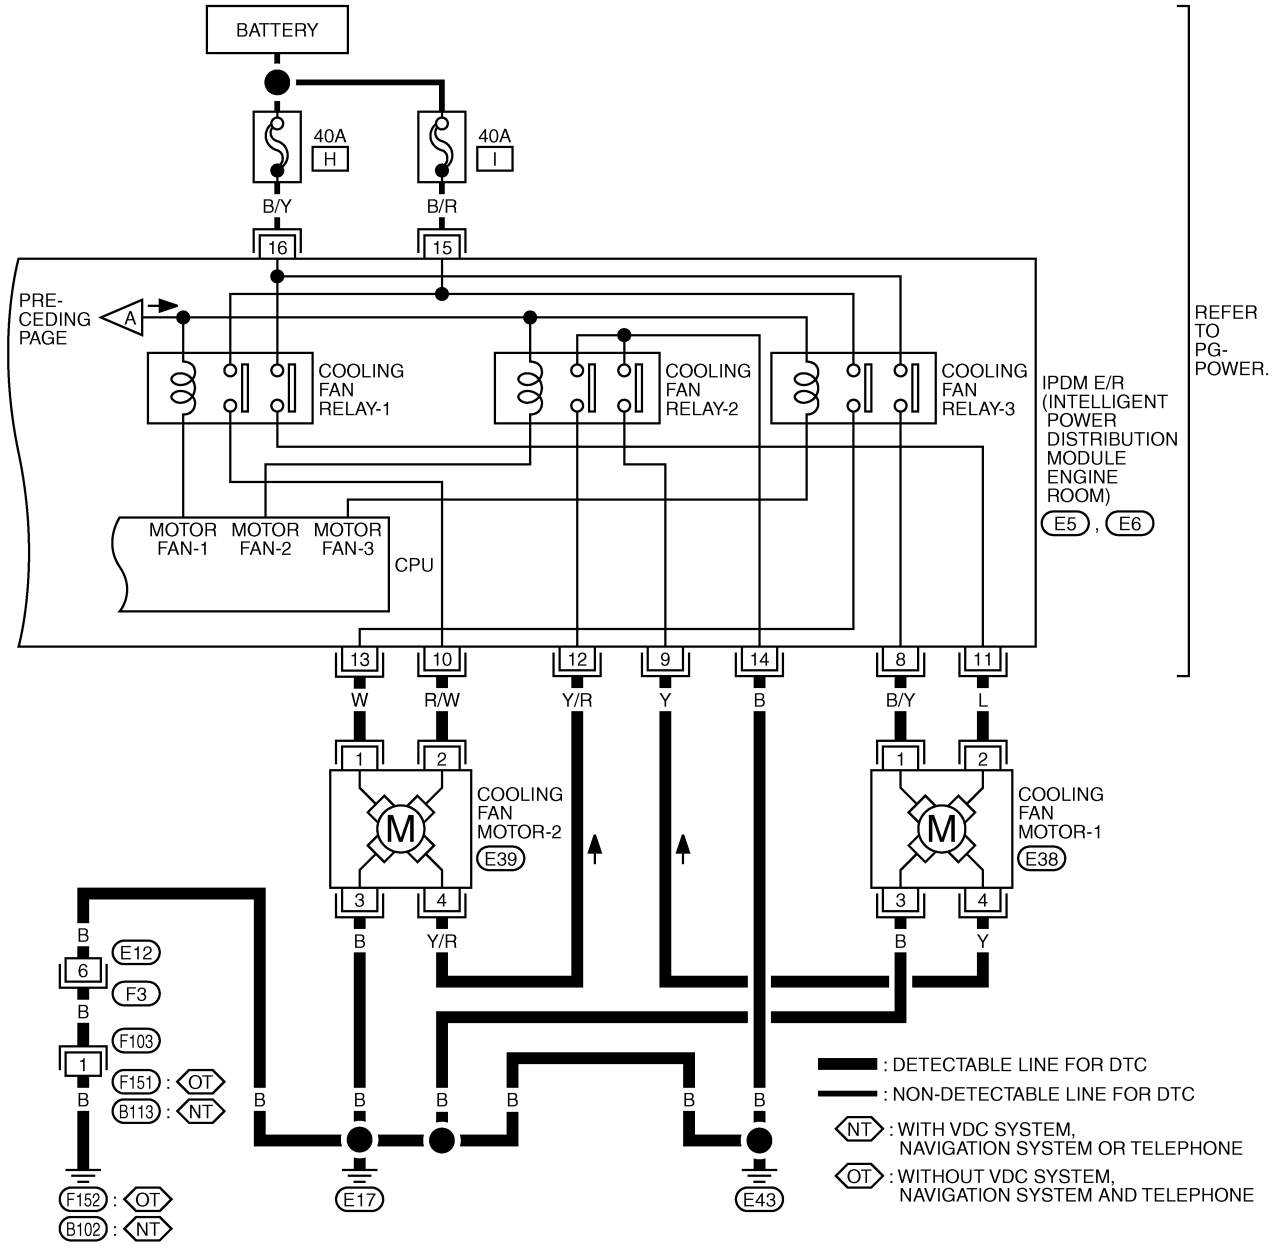
   NOTE:
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-549, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-549, "Diagnostic Procedure" .
3. Start engine.

   CAUTION:
   Be careful not to overheat engine.
4. Turn air conditioner switch ON.
5. Turn blower fan switch ON.

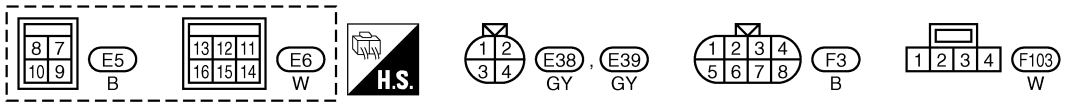
6. Make sure that cooling fans operates at low speed.
   If NG, go to EC-549, "Diagnostic Procedure" .
   If OK, go to the following steps.
7. Turn ignition switch OFF.
8. Turn air conditioner switch and blower fan switch OFF.
9. Disconnect engine coolant temperature sensor harness connector.
10. Connect 150Ω resistor to engine coolant temperature sensor harness connector.



11. Restart engine and make sure that cooling fans operates at higher speed than low speed.
    CAUTION:
    Be careful not to overheat engine.
12. If NG, go to EC-549, "Diagnostic Procedure" .



Wiring Diagram



NBS000DI

TBWT1658E

EC-COOL/F-02

TBWT1659E

Diagnostic Procedure

NBS000DJ

1. INSPECTION START

Do you have CONSULT-III?

Yes or No

Yes >> GO TO 2.
No >> GO TO 4.

2. CHECK COOLING FAN LOW SPEED OPERATION

With CONSULT-III

1. Start engine and let it idle.
2. Select “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-III and touch “LOW” on the CONSULT-III screen.
3. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG

OK >> GO TO 3.
NG >> Check cooling fan low speed control circuit. (Go to EC-551, "PROCEDURE A" .)

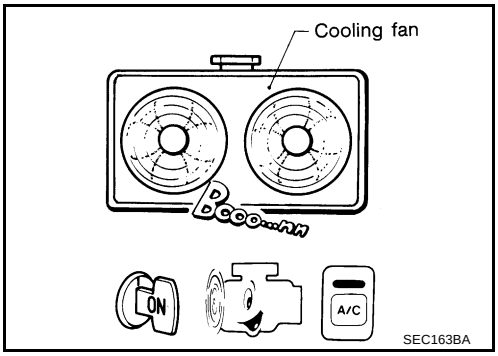
3. CHECK COOLING FAN HIGH SPEED OPERATION

With CONSULT-III

1. Touch “HIGH” on the CONSULT-III screen.
2. Make sure that cooling fans-1 and -2 operate at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-554, "PROCEDURE B" .)

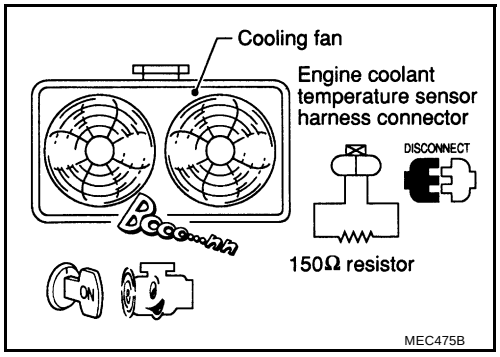


4. CHECK COOLING FAN LOW SPEED OPERATION

Without CONSULT-III

1. Start engine and let it idle.
2. Turn air conditioner switch ON.
3. Turn blower fan switch ON.
4. Make sure that cooling fans-1 and -2 operate at low speed.

OK or NG



OK >> GO TO 5.
NG >> Check cooling fan low speed control circuit. (Go to EC-551, "PROCEDURE A" .)

5. CHECK COOLING FAN HIGH SPEED OPERATION

Without CONSULT-III

1. Turn ignition switch OFF.
2. Turn air conditioner switch and blower fan switch OFF.
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
5. Restart engine and make sure that cooling fans-1 and -2 operate at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-554, "PROCEDURE B" .)

6. CHECK COOLING SYSTEM FOR LEAK

Refer to CO-10, "LEAK CHECK" .

OK or NG

OK >> GO TO 7.
NG >> Check the following for leak.

- Hose
- Radiator
- Water pump

7. CHECK RADIATOR CAP

Refer to CO-15, "Checking Radiator Cap" .

OK or NG

OK >> GO TO 8.
NG >> Replace radiator cap.

8. CHECK THERMOSTAT

Refer to CO-26, "WATER INLET AND THERMOSTAT ASSEMBLY" .

OK or NG

OK >> GO TO 9.
NG >> Replace thermostat

9. CHECK ENGINE COOLANT TEMPERATURE SENSOR

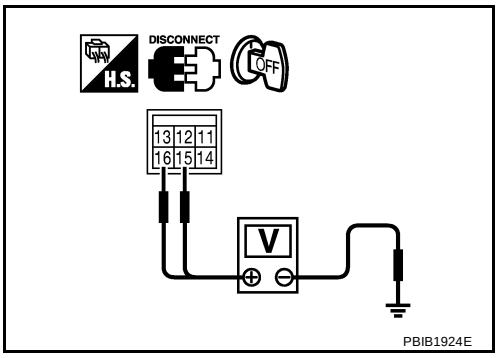
Refer to EC-228, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace engine coolant temperature sensor.

10. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, go to EC-555, "Main 12 Causes of Overheating" .



>> **INSPECTION END**

PROCEDURE A

1. CHECK POWER SUPPLY CIRCUIT

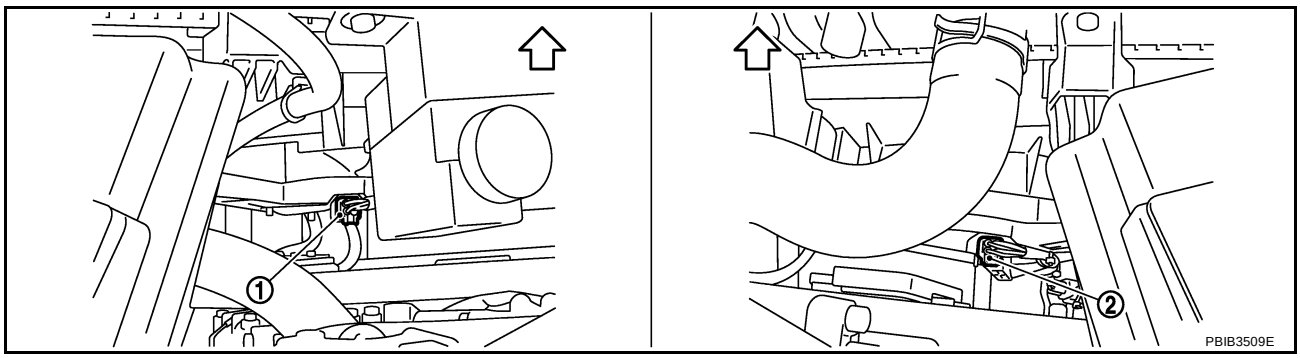
1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E6.
3. Check voltage between IPDM E/R terminals 15, 16 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART



Check the following.

- 40A fusible links
- Harness for open or short between IPDM E/R and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK COOLING FAN MOTORS CIRCUIT

1. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.

1. Cooling fan motor-1
2. Cooling fan motor-2

⇦: Vehicle front

2. Disconnect all IPDM E/R harness connectors.
3. Check harness continuity between the following;
   cooling fan motor-1 terminal 2 and IPDM E/R terminal 11,
   cooling fan motor-1 terminal 3 and ground,
   IPDM E/R terminal 38, 60 and ground,
   Refer to wiring diagram.

   Continuity should exist.

4. Check harness continuity between the following;
   cooling fan motor-2 terminal 2 and IPDM E/R terminal 10,
   cooling fan motor-2 terminal 3 and ground.
   Refer to wiring diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector E12, F3
- Harness connectors F103, B113 (Models with VDC system, navigation system or telephone) or F151 (Models wiithout VDC system, navigation system and telephone)
- Harness for open or short between cooling fan motors-1, 2 and IPDM E/R
- Harness for open or short between cooling fan motors-1, 2 and ground
- Harness for open or short between IPDM E/R and ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK COOLING FAN MOTORS

Refer to EC-556, "Component Inspection" .

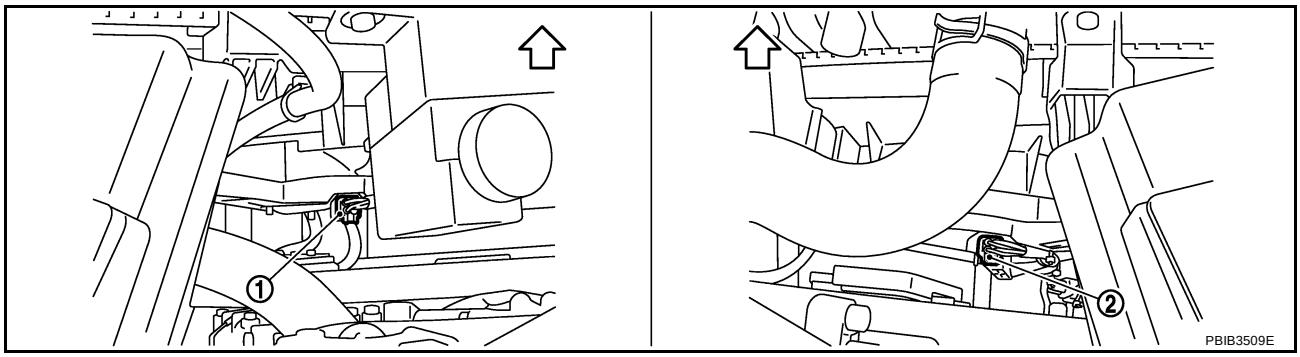
OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning cooling fan motors.

6. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG



OK >> Replace IPDM E/R. Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

NG >> Repair or replace harness or connector.

PROCEDURE B

1. CHECK COOLING FAN MOTORS CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect cooling fan motor-1 harness connector and cooling fan motor-2 harness connector.

1. Cooling fan motor-1
2. Cooling fan motor-2

⇦: Vehicle front

3. Disconnect all IPDM E/R harness connectors.
4. Check harness continuity between the following;
   cooling fan motor-1 terminal 1 and IPDM E/R terminal 8,
   cooling fan motor-1 terminal 4 and IPDM E/R terminal 9,
   IPDM E/R terminal 14 and ground,
   Refer to wiring diagram.

   Continuity should exist.

5. Also check harness connector for short to ground or short to power.
6. Check harness continuity between the following;
   cooling fan motor-2 terminal 1 and IPDM E/R terminal 13,
   cooling fan motor-2 terminal 4 and IPDM E/R terminal 12,
   Refer to wiring diagram.

   Continuity should exist.

7. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between cooling fan motors-1, 2 and IPDM E/R
- Harness for open or short between IPDM E/R and ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK COOLING FAN MOTORS

Refer to EC-556, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace malfunctioning cooling fan motors.

4. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

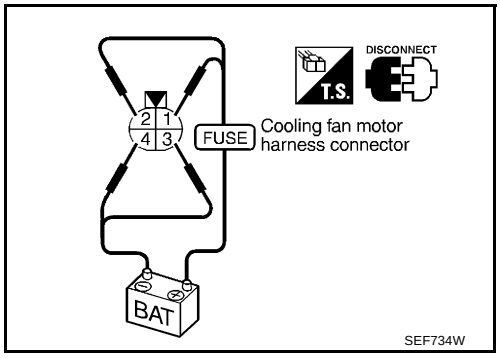
NG >> Repair or replace harness or connectors.

Main 12 Causes of Overheating

NBS000DK

Engine	Step	Inspection item	Equipment	Standard	Reference page
OFF	1	● Blocked radiator ● Blocked condenser ● Blocked radiator grille ● Blocked bumper	● Visual	No blocking	—
	2	● Coolant mixture	● Coolant tester	50 - 50% coolant mixture	MA-12
	3	● Coolant level	● Visual	Coolant up to MAX level in reservoir tank and radiator filler neck	CO-10
	4	● Radiator cap	● Pressure tester	88 - 127 kPa (0.90 - 1.30 kg/cm^2 , 12.8 - 18.4 psi) (Limit)	CO-15
ON*2	5	● Coolant leaks	● Visual	No leaks	CO-10
ON*2	6	● Thermostat	● Touch the upper and lower radiator hoses	Both hoses should be hot	CO-26
ON*1	7	● Cooling fan	● CONSULT-III	Operating	See trouble diagnosis for DTC P1217 (EC-543).
OFF	8	● Combustion gas leak	● Color checker chemical tester 4 Gas analyzer	Negative	—
ON*3	9	● Coolant temperature gauge	● Visual	Gauge less than 3/4 when driving	—
		● Coolant overflow to reservoir tank	● Visual	No overflow during driving and idling	CO-10
OFF*4	10	● Coolant return from reservoir tank to radiator	● Visual	Should be initial level in reservoir tank	CO-10
OFF	11	● Cylinder head	● Straight gauge feeler gauge	0.1 mm (0.004 in) Maximum distortion (warping)	EM-89
	12	● Cylinder block and pistons	● Visual	No scuffing on cylinder walls or piston	EM-107

*1: Turn the ignition switch ON.
*2: Engine running at 3,000 rpm for 10 minutes.
*3: Drive at 90 km/h (55 MPH) for 30 minutes and then let idle for 10 minutes.
*4: After 60 minutes of cool down time.
For more information, refer to CO-6, "OVERHEATING CAUSE ANALYSIS" .



Component Inspection

NBS000DL

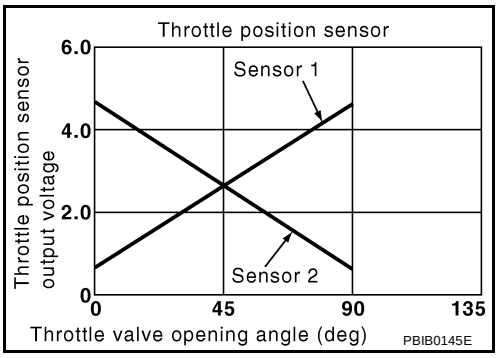
COOLING FAN MOTORS-1 AND -2

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Speed	terminals	
		(+)	(–)
Cooling fan motor	Low	1	4
		2	3
	High	1 and 2	3 and 4

Cooling fan motor should operate.

If NG, replace cooling fan motors.



DTC P1225, P1234 TP SENSOR

PFP:16119

Component Description

NBS000DM

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

NBS000DN

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance	Closed throttle position learning value is excessively low.	● Electric throttle control actuator (TP sensor 1 and 2)

DTC Confirmation Procedure

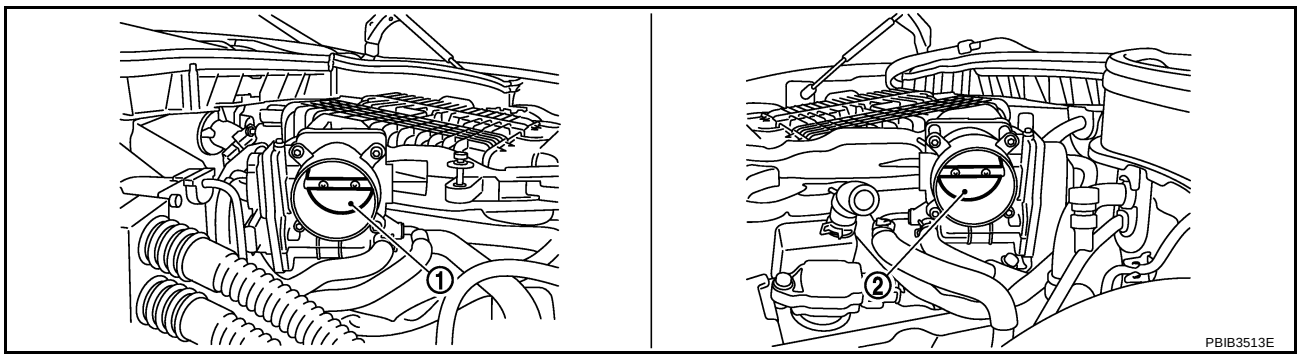
NBS000DO

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Check 1st trip DTC.
5. If 1st trip DTC is detected, go to EC-558, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000DP

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

1. Throttle valve (bank 1)
2. Throttle valve (bank 2)

OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

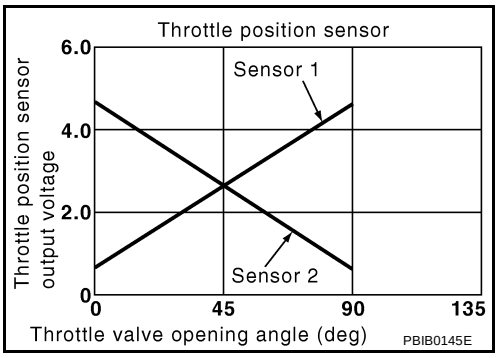
>> **INSPECTION END**

Removal and Installation

NBS000DQ

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .



DTC P1226, P1235 TP SENSOR

PFP:16119

Component Description

NBS000DR

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

NBS000DS

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1226 1226	Closed throttle position learning performance	Closed throttle position learning is not performed successfully, repeatedly.	● Electric throttle control actuator (TP sensor 1 and 2)

DTC Confirmation Procedure

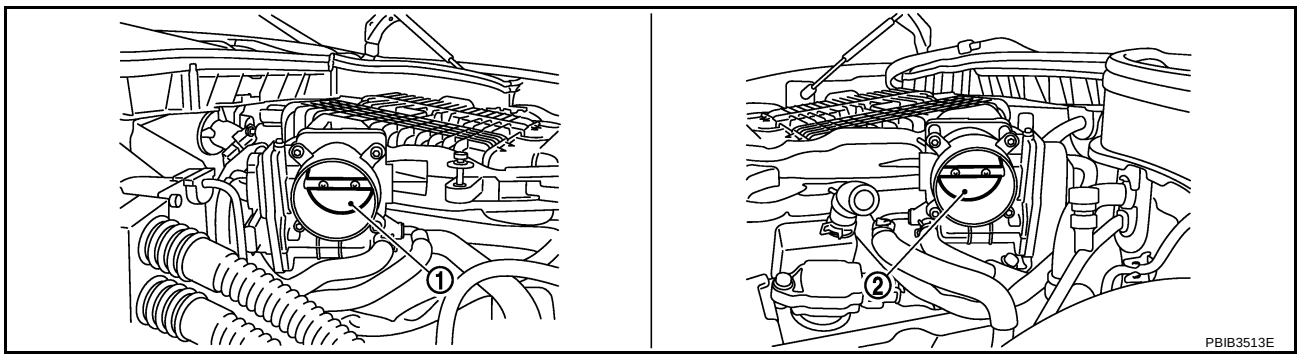
NBS000DT

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Repeat steps 3 and 4 for 32 times.
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-560, "Diagnostic Procedure" .

WITH GST



Follow the procedure “With CONSULT-III” above.

Diagnostic Procedure

NBS000DU

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

1. Throttle valve (bank 1)
2. Throttle valve (bank 2)

OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

Removal and Installation

NBS000DV

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P1233, P2101 ELECTRIC THROTTLE CONTROL FUNCTION

PFP:16119

Description

NBS000C3

NOTE:
If DTC P1233 or P2101 is displayed with DTC P1238, P1290, P2100, P2119 first perform the trouble diagnosis for DTC P1238, P2119 or P1290, P2100. Refer to EC-580, "DTC P1238, P2119 ELECTRIC THROTTLE CONTROL ACTUATOR" or EC-592, "DTC P1290, P2100, P2103 THROTTLE CONTROL MOTOR RELAY" .

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

NBS000C4

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1233 1233 (Bank 2) P2101 2101 (Bank 1)	Electric throttle control performance	Electric throttle control function does not operate properly.	● Harness or connectors (The throttle control motor circuit is open or shorted) ● Electric throttle control actuator

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

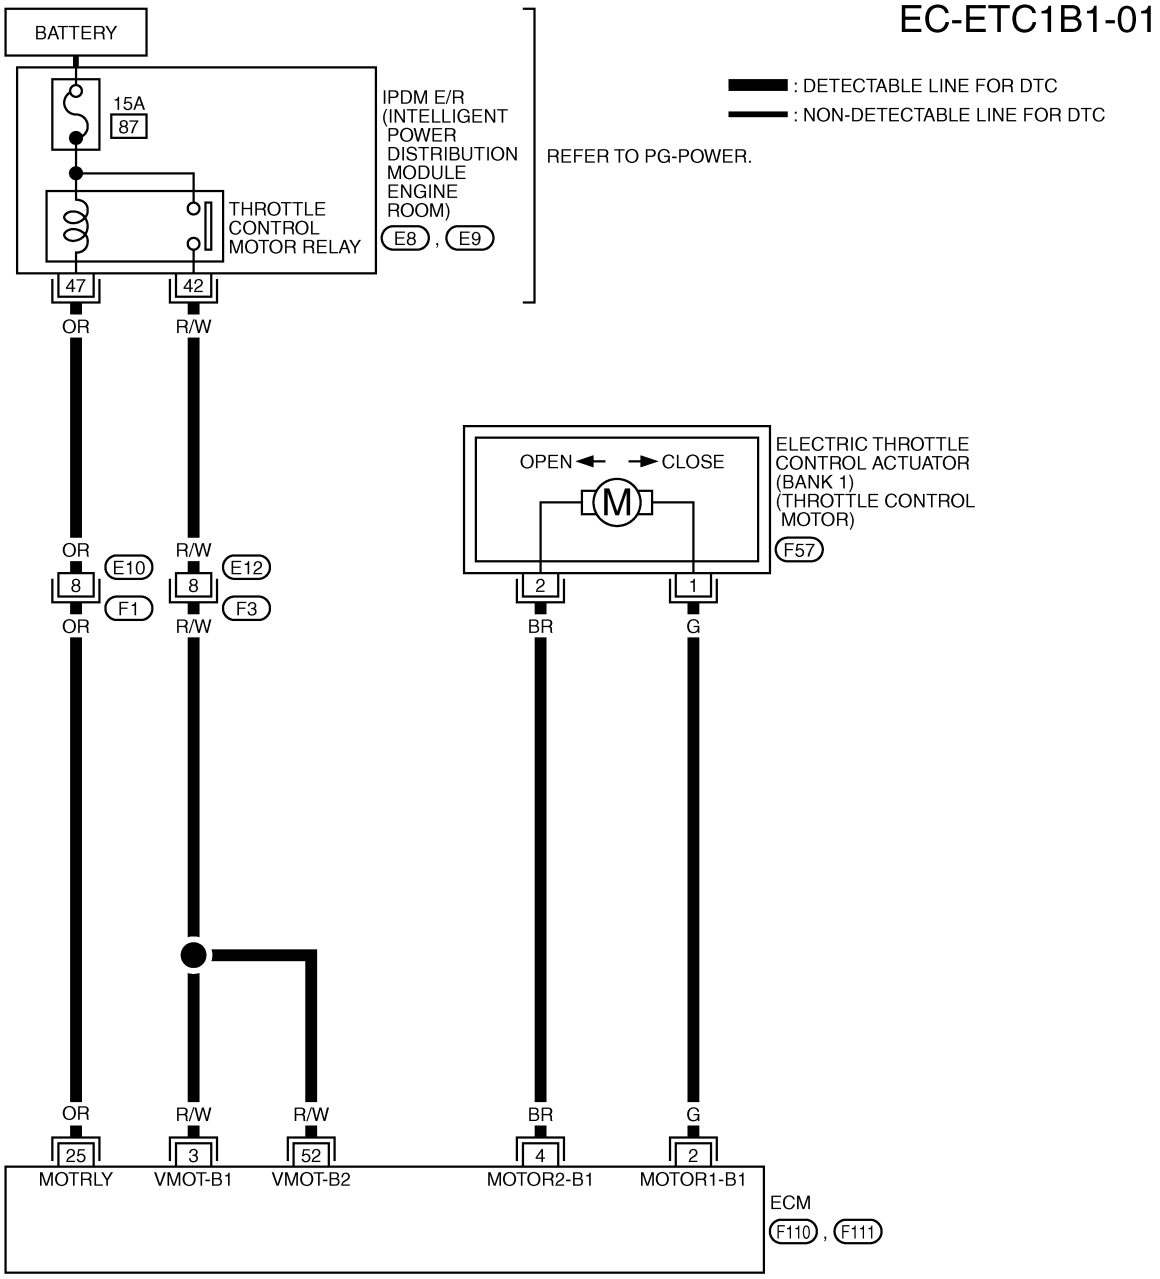
DTC Confirmation Procedure

NBS000C5

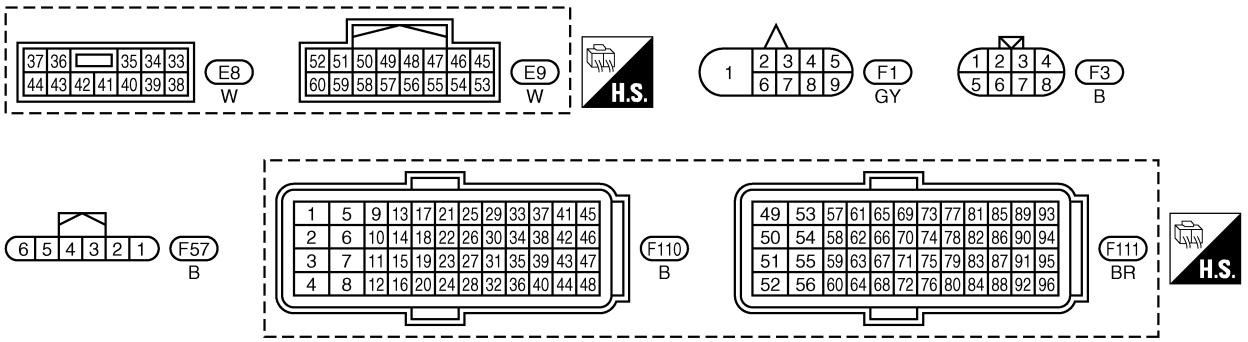
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V when engine is running.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Check DTC.
4. If DTC is detected, go to EC-566, "Diagnostic Procedure" .



WITH GST

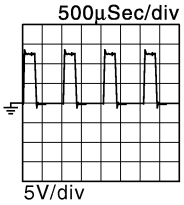


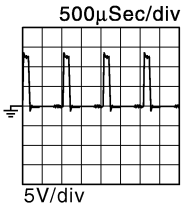
Follow the procedure “WITH CONSULT-III” above.

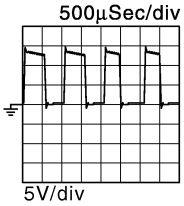
Wiring Diagram

NBS000C6

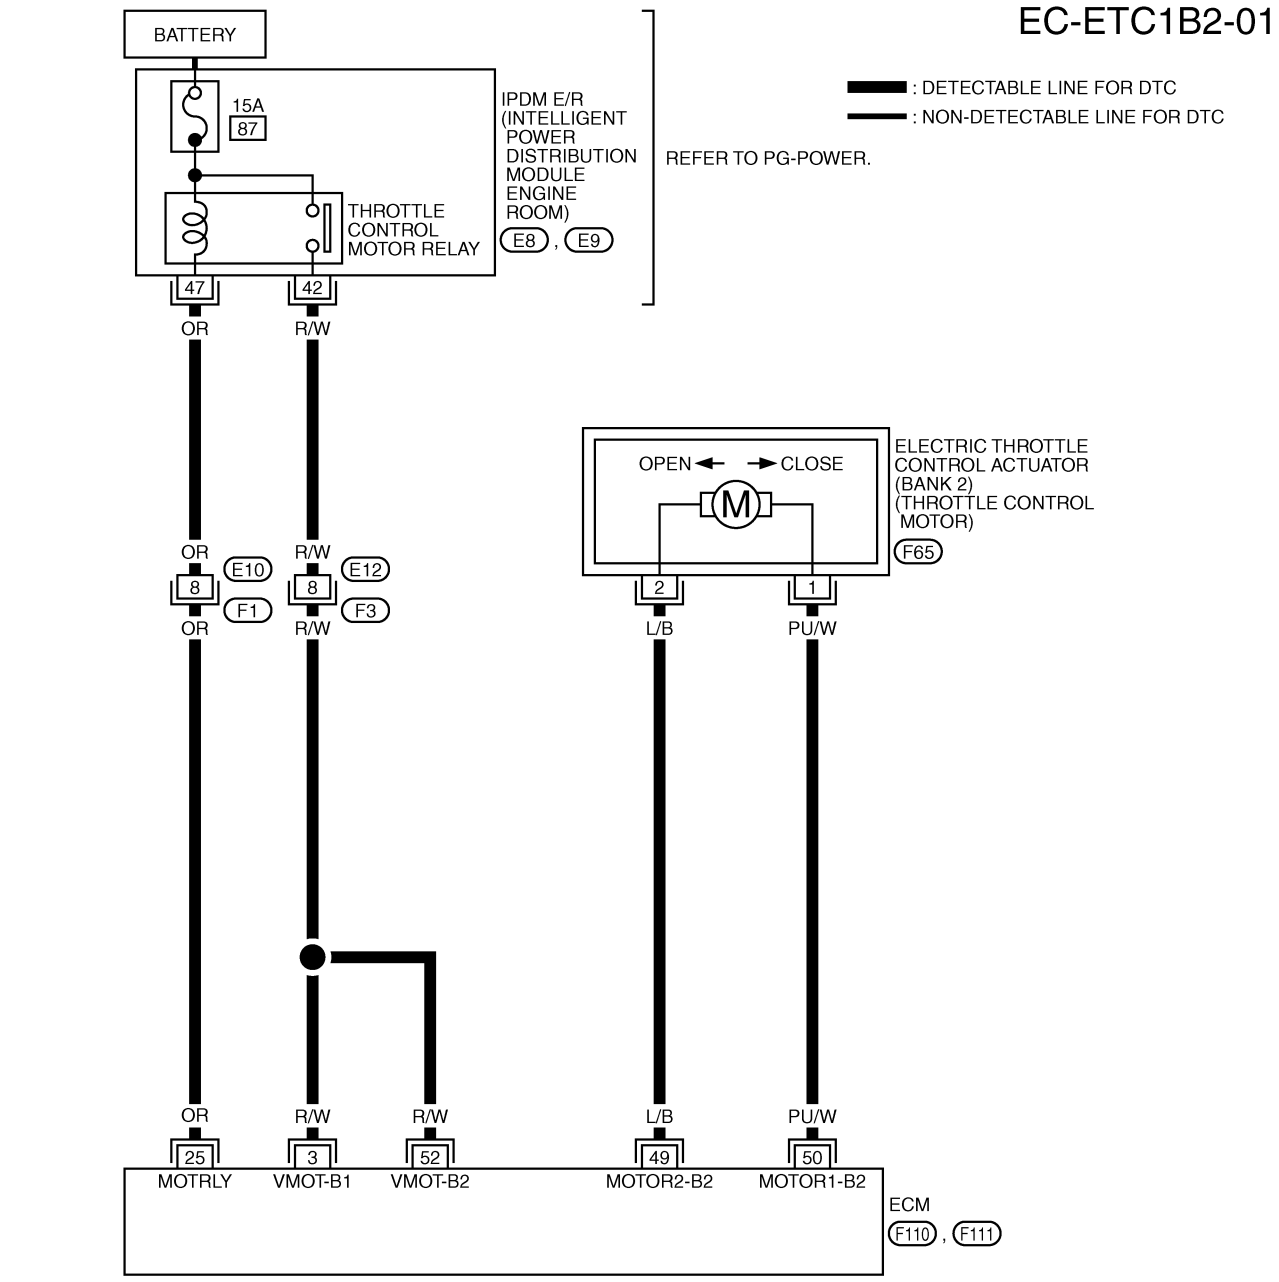
BANK 1



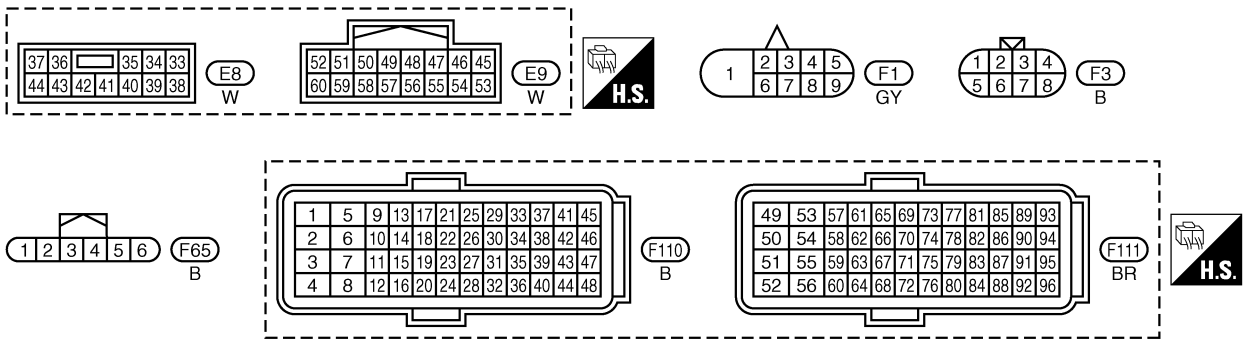




TBWT1666E



Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	G	Throttle control motor (Open) (bank 1)	**[Ignition switch: ON]** ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB3539E
			[Ignition switch: ON] ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully released	0 - 14V★  PBIB3540E
3	R/W	Throttle control motor relay power supply (bank 1)	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)
4	BR	Throttle control motor (Close) (bank 1)	**[Ignition switch: ON]** ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: In the middle of releasing operation	0 - 14V★  PBIB3541E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

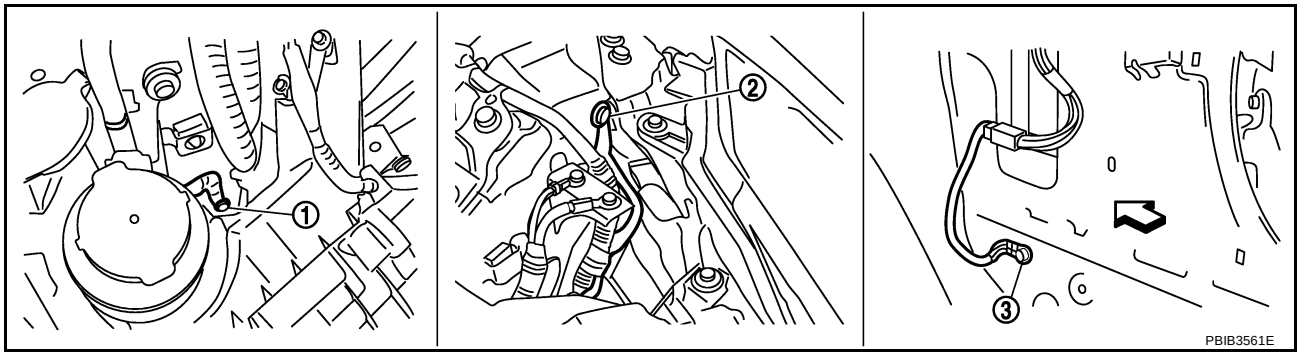
Diagnostic Procedure

NBS000C7

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

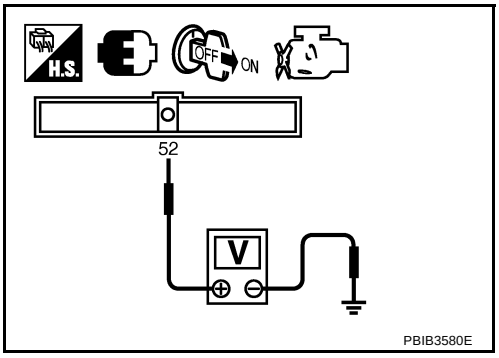
⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

⇦: Vehicle front



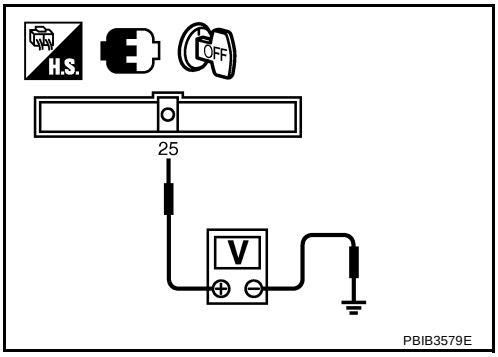
OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-I

Check voltage between ECM terminal 3 (bank 1), 52 (bank 2) and ground under the following conditions with CONSULT-III or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)



OK or NG

OK >> GO TO 12.
NG >> GO TO 3.

3. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 25 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 7.
NG >> GO TO 4.

4. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E9.
3. Check continuity between ECM terminal 25 and IPDM E/R terminal 47. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E10, F1
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK FUSE

1. Disconnect 15A fuse.
2. Check 15A fuse for blown.

OK or NG

OK >> GO TO 9.
NG >> Replace 15A fuse.

7. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E8.
3. Check continuity between ECM terminal 3 (bank 1), 52 (bank 2) and IPDM E/R terminal 42. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

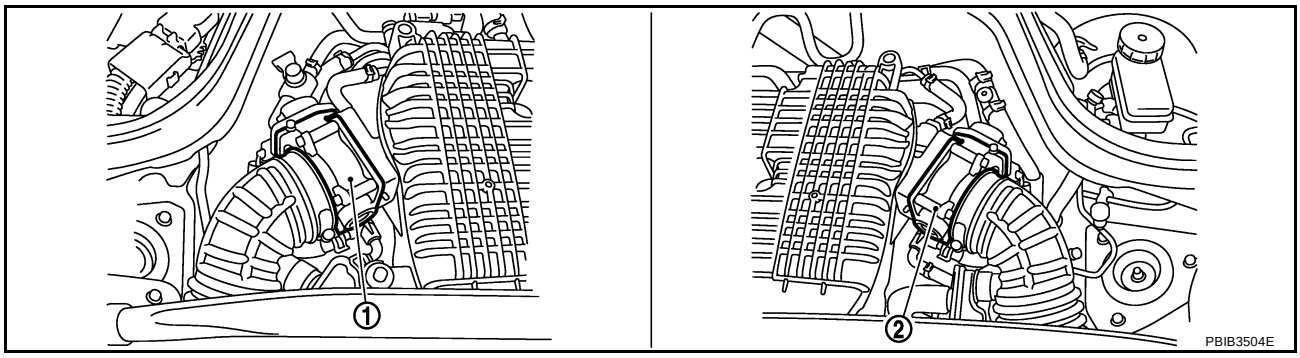
Check the following.

- Harness connectors E12, F3
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



OK or NG

OK >> Replace IPDM E/R. Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

NG >> Repair or replace harness or connectors.

10. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

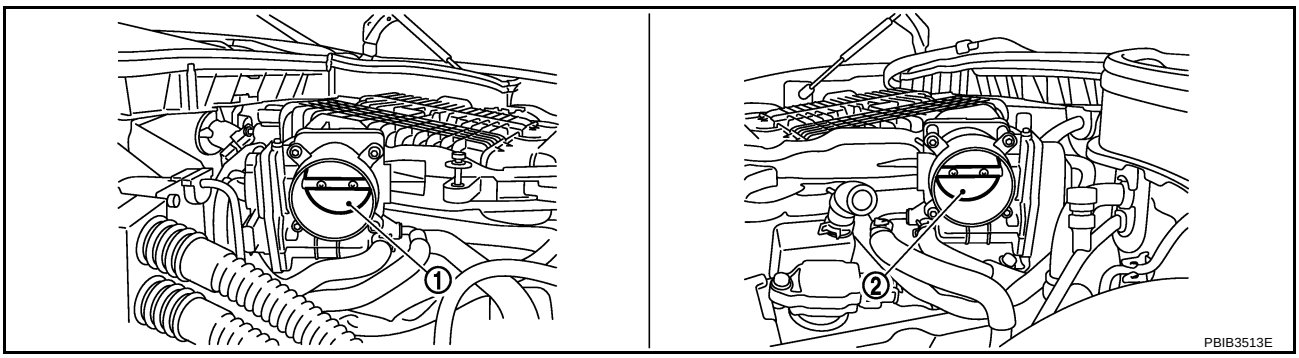
1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.

1. Electric throttle control acutator (bank 1)
2. Electric throttle control acutator (bank 2)

3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Bank	Electric throttle control actuator terminal	ECM terminal	Continuity
1	1	2	Should exist
		4	Should not exist
	2	2	Should not exist
		4	Should exist
2	1	49	Should not exist
		50	Should exist
	2	49	Should exist
		50	Should not exist

5. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 11.

NG >> Repair or replace.

11. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.

1. Throttle valve (bank 1)
2. Throttle valve (bank 2)

OK or NG

OK >> GO TO 12.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

12. CHECK THROTTLE CONTROL MOTOR

Refer to EC-570, "Component Inspection" .

OK or NG

OK >> GO TO 13.
NG >> GO TO 14.

13. CHECK INTERMITTENT INCIDENT

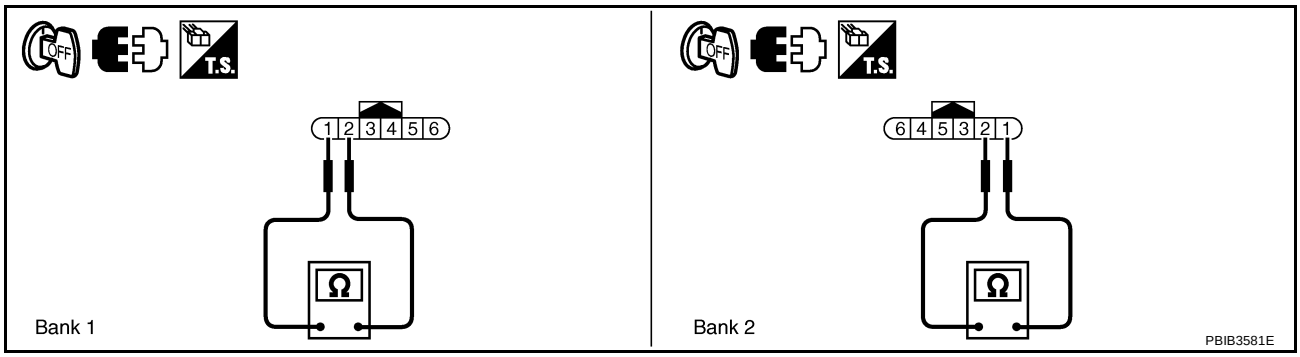
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 14.
NG >> Repair or replace harness or connectors.

14. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .



>> **INSPECTION END**

Component Inspection

NBS000C8

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 1 and 2.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-77, "Throttle Valve Closed Position Learning" .
5. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS000C9

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P1236, P2118 THROTTLE CONTROL MOTOR

PFP:16119

Component Description

NBS000CG

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

NBS000CH

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1236 1236 (Bank 2) P2118 2118 (Bank 1)	Throttle control motor circuit short	ECM detects short in both circuits between ECM and throttle control motor.	● Harness or connectors (The throttle control motor circuit is shorted.) ● Electric throttle control actuator (Throttle control motor)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

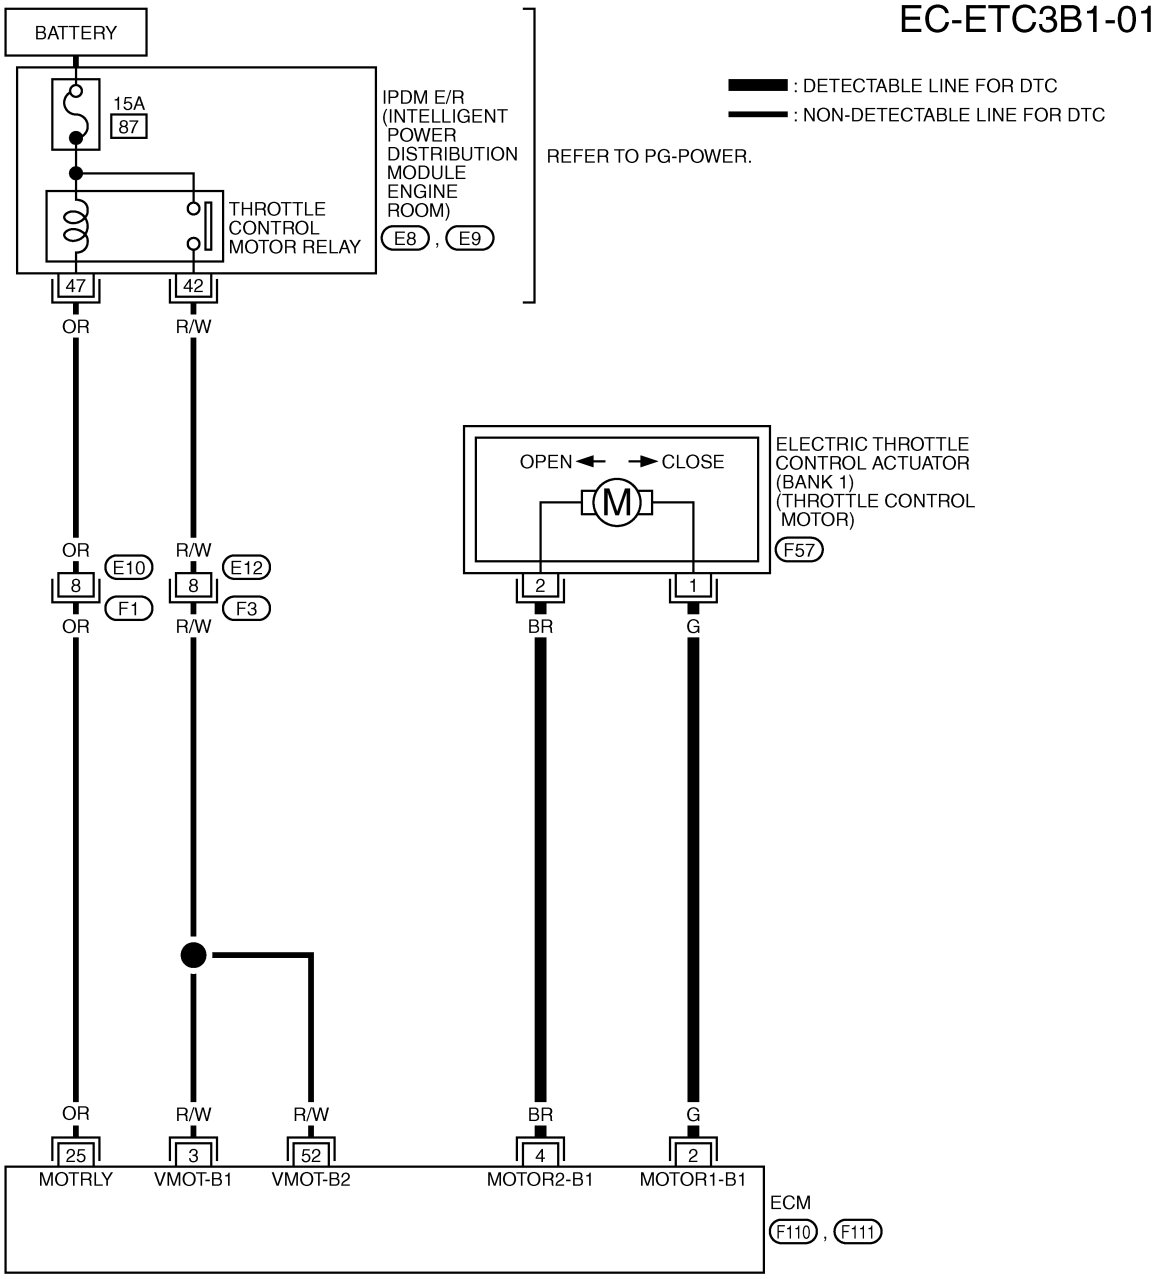
DTC Confirmation Procedure

NBS000CI

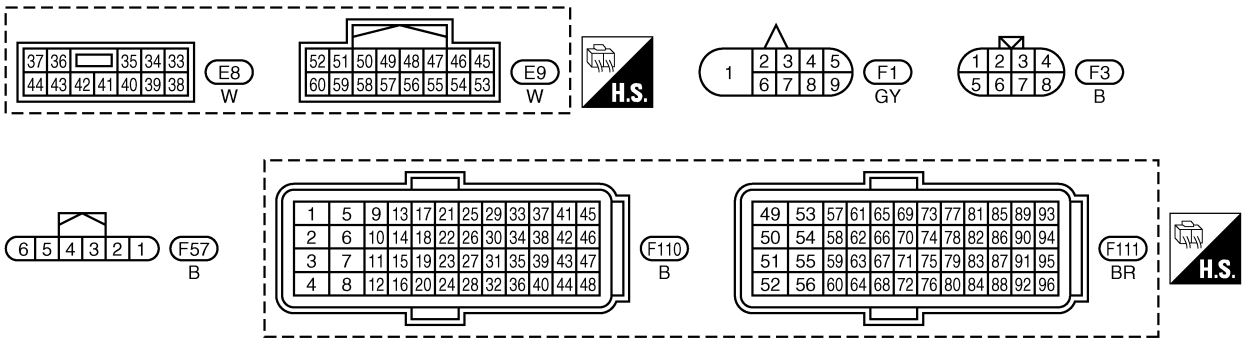
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Check DTC.
4. If DTC is detected, go to EC-576, "Diagnostic Procedure" .



WITH GST

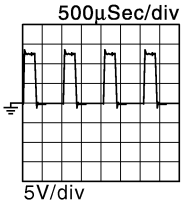


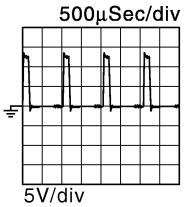
Follow the procedure “WITH CONSULT-III” above.

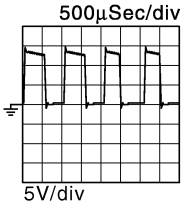
Wiring Diagram

NBS000CJ

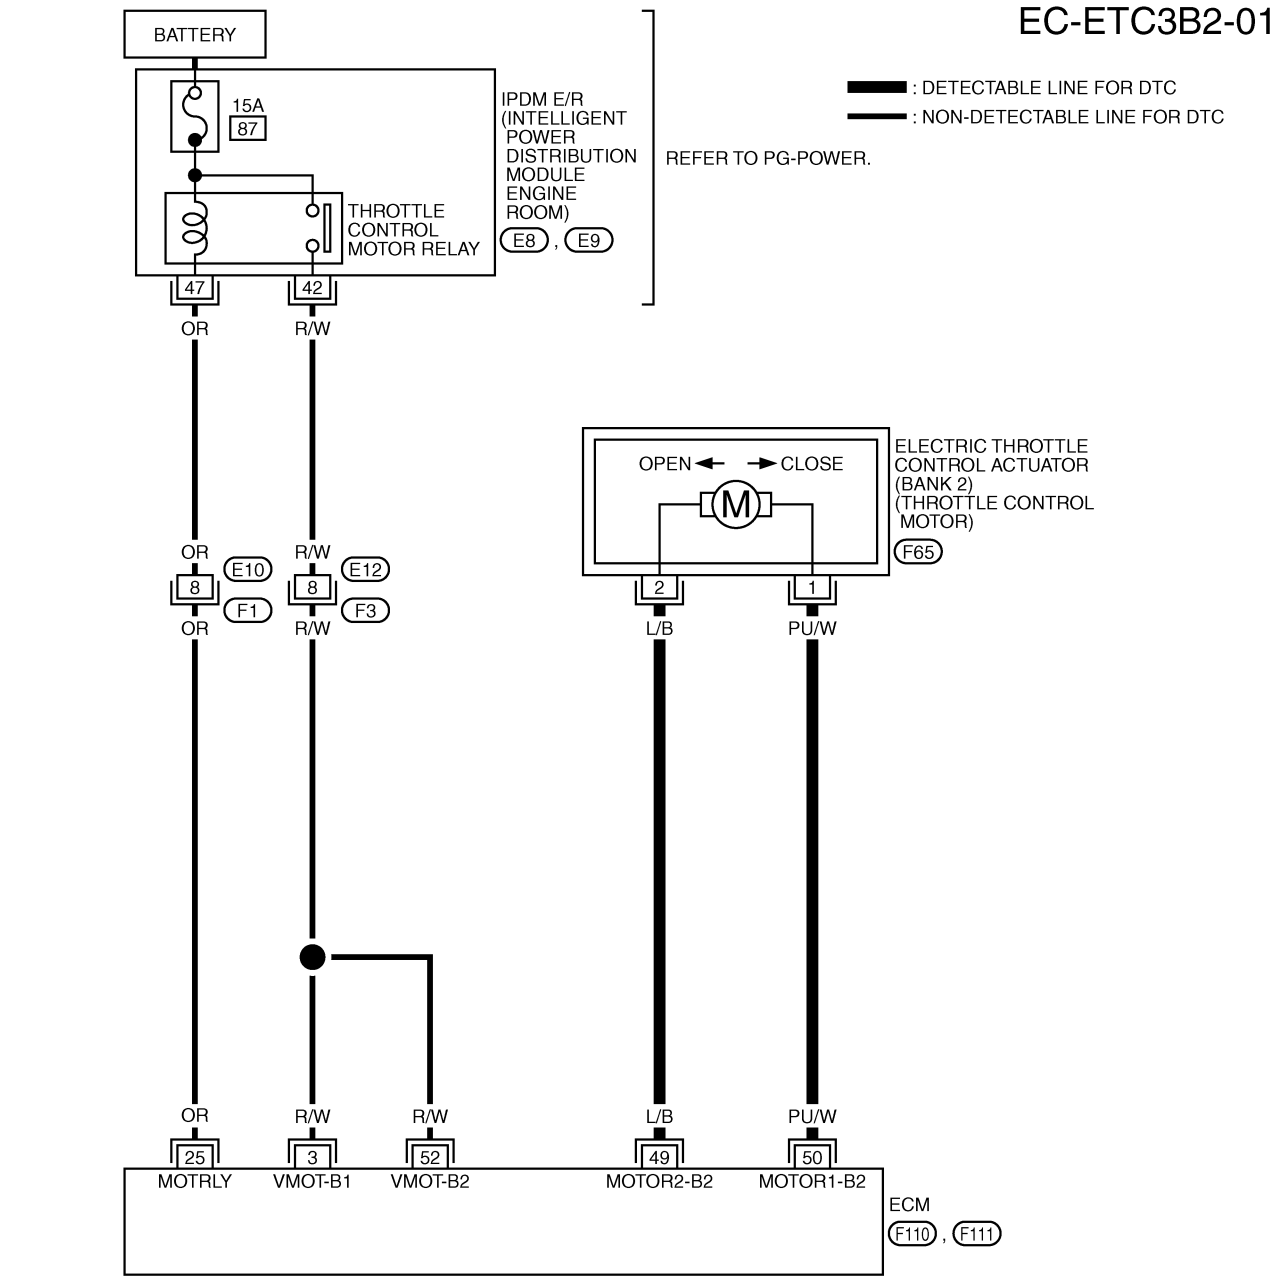
BANK 1



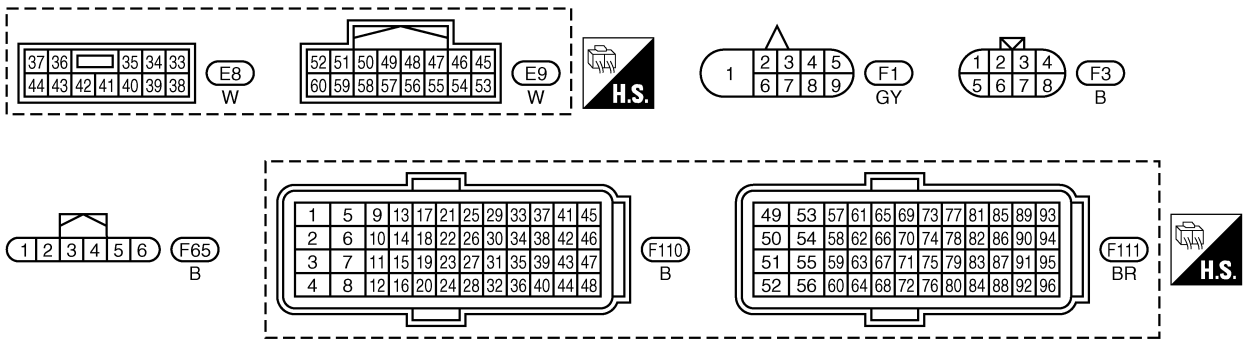




TBWT1668E



Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

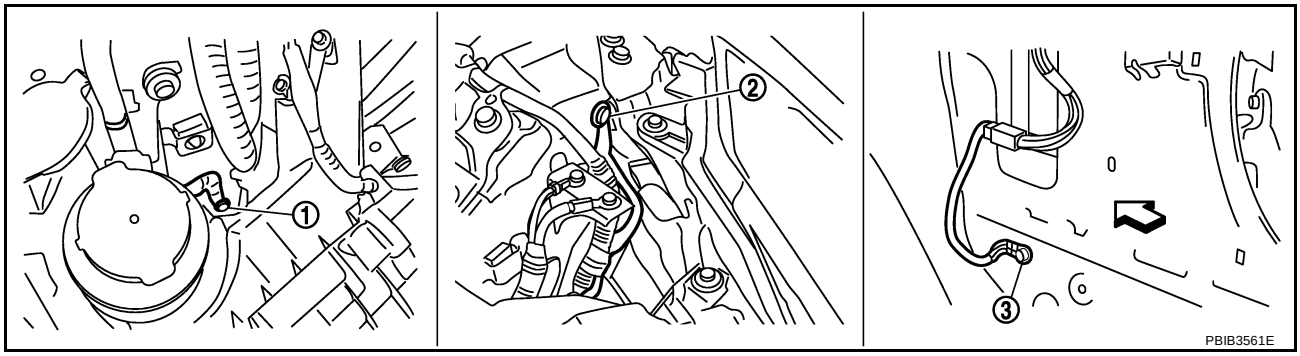
Diagnostic Procedure

NBS000CK

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



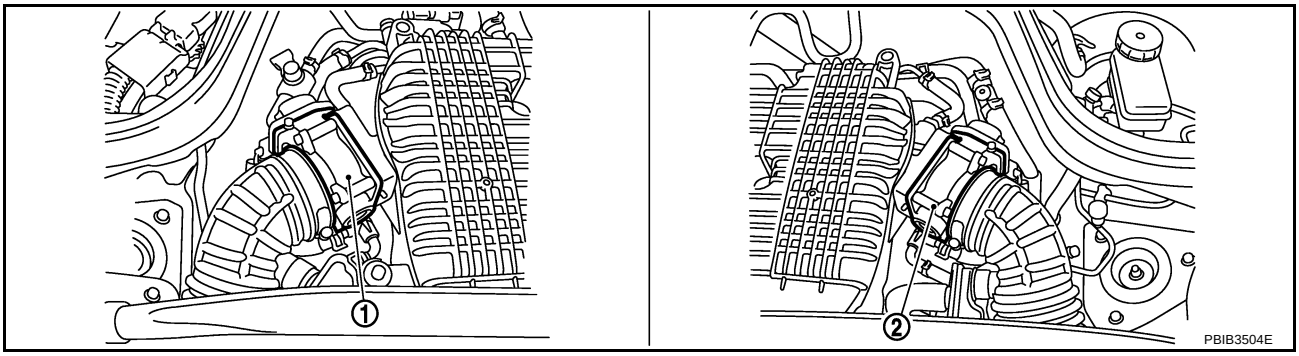
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Disconnect electric throttle control actuator harness connector.

1. Electric throttle control acutator (bank 1)
2. Electric throttle control acutator (bank 2)

2. Disconnect ECM harness connector.
3. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Bank	Electric throttle control actuator terminal	ECM terminal	Continuity
1	1	2	Should exist
		4	Should not exist
	2	2	Should not exist
		4	Should exist
2	1	49	Should not exist
		50	Should exist
	2	49	Should exist
		50	Should not exist

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK THROTTLE CONTROL MOTOR

Refer to EC-579, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK INTERMITTENT INCIDENT

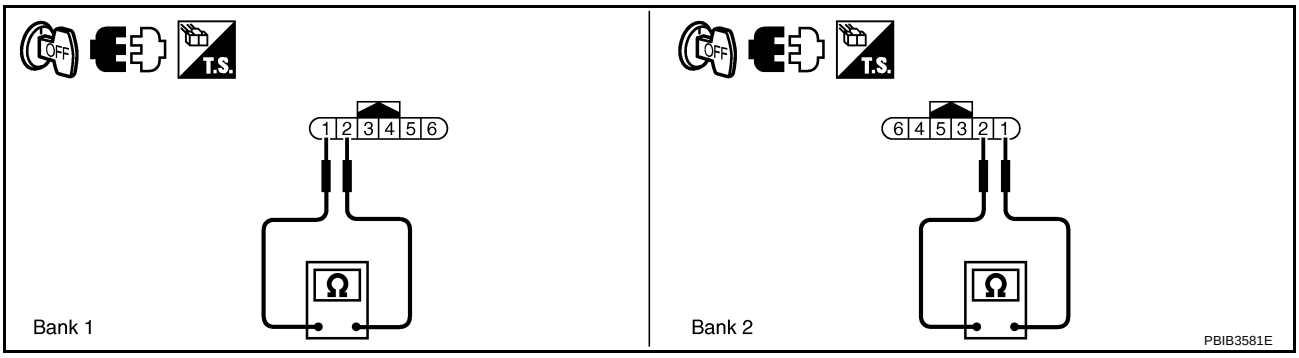
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .



>> **INSPECTION END**

Component Inspection

NBS006V8

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 1 and 2.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]

3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-77, "Throttle Valve Closed Position Learning" .
5. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS006V9

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P1238, P2119 ELECTRIC THROTTLE CONTROL ACTUATOR

PFP:16119

Component Description

NBS000BZ

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

NBS000C0

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1238 1238 (Bank 2)	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
P2119 2119 (Bank 1)		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detects the throttle valve is stuck open.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P (A/T), Neutral (M/T) position, and engine speed will not exceed 1,000 rpm or more.

DTC Confirmation Procedure

NBS000C1

NOTE:

- **Perform PROCEDURE FOR MALFUNCTION A AND B first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION C.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A AND B

With CONSULT-III

1. Turn ignition switch ON and wait at least 1 second.
2. Set shift lever to D position (A/T) or 1st position (M/T), and wait at least 3 seconds.
3. Set shift lever to P position (A/T) or Neutral position (M/T).
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition switch ON and wait at least 1 second.
6. Set shift lever to D position (A/T) or 1st position (M/T), and wait at least 3 seconds.
7. Set shift lever to P position (A/T) or Neutral position (M/T).
8. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
9. Check DTC.
10. If DTC is detected, go to EC-581, "Diagnostic Procedure" .

With GST

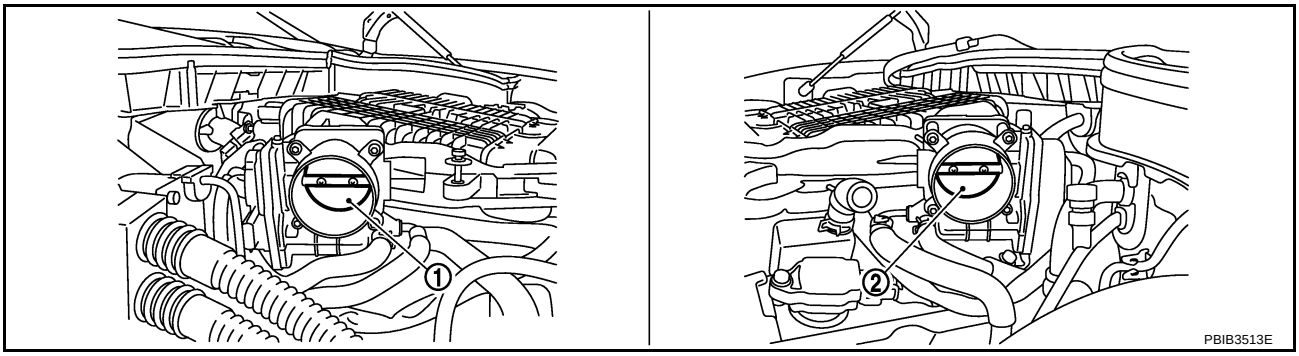
Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR MALFUNCTION C

With CONSULT-III

1. Turn ignition switch ON and wait at least 1 second.
2. Set shift lever to D position (A/T) or 1st position (M/T) and wait at least 3 seconds.
3. Set shift lever to N, P position (A/T) or Neutral (M/T) position.
4. Start engine and let it idle for 3 seconds.
5. Check DTC.
6. If DTC is detected, go to EC-581, "Diagnostic Procedure" .

With GST



Follow the procedure “With CONSULT-III” above.

Diagnostic Procedure

NBS000C2

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.

1. Throttle valve (bank 1)
2. Throttle valve (bank 2)

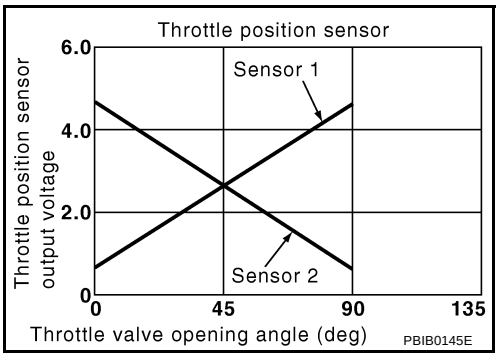
OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**



DTC P1239, P2135 TP SENSOR

PFP:16119

Component Description

NBS000H5

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

CONSULT-III Reference Value in Data Monitor Mode

NBS000H6

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
TP SEN 1-B1 TP SEN 2-B1*1 TP SEN 1-B2 TP SEN 2-B2*1	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T) or 1st (M/T) position	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

NBS000H7

This self-diagnosis has the one trip detection logic.

NOTE:
If DTC P1239 or P2135 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2135 2135	Throttle position sensor circuit range/perfor-mance	Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2.	● Harness or connector (TP sensor 1 and 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

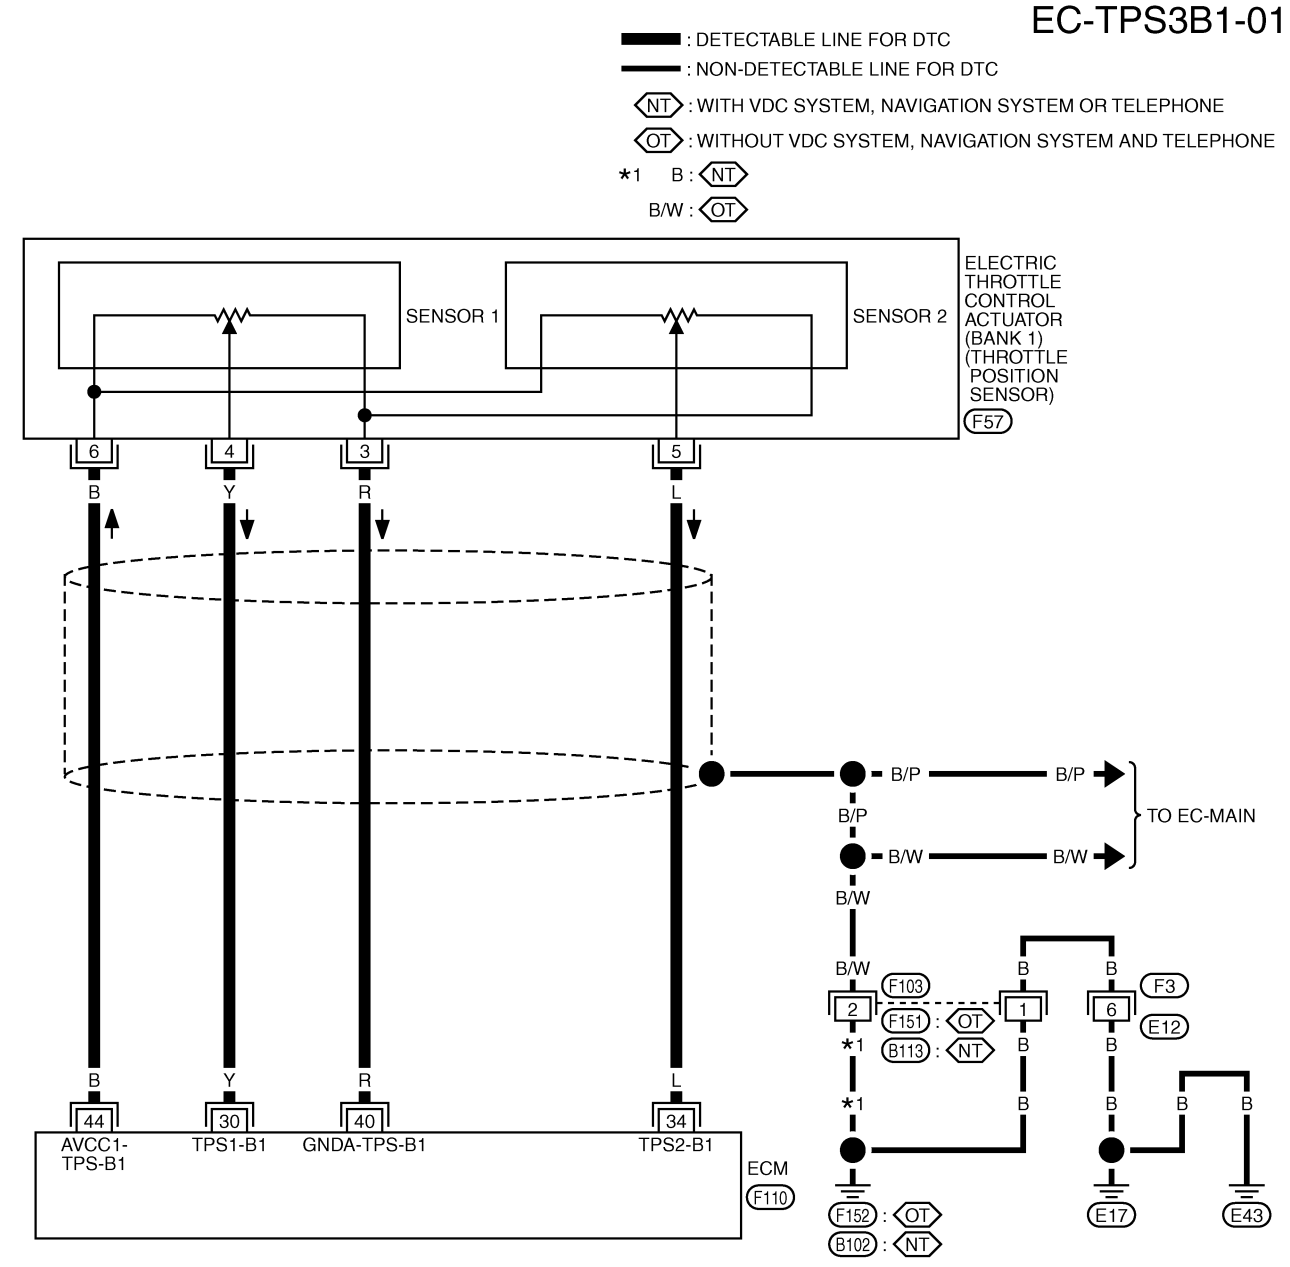
DTC Confirmation Procedure

NBS000H8

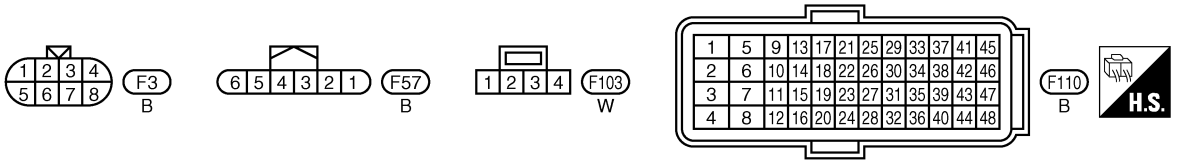
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

WITH CONSULT-III



1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-588, "Diagnostic Procedure" .



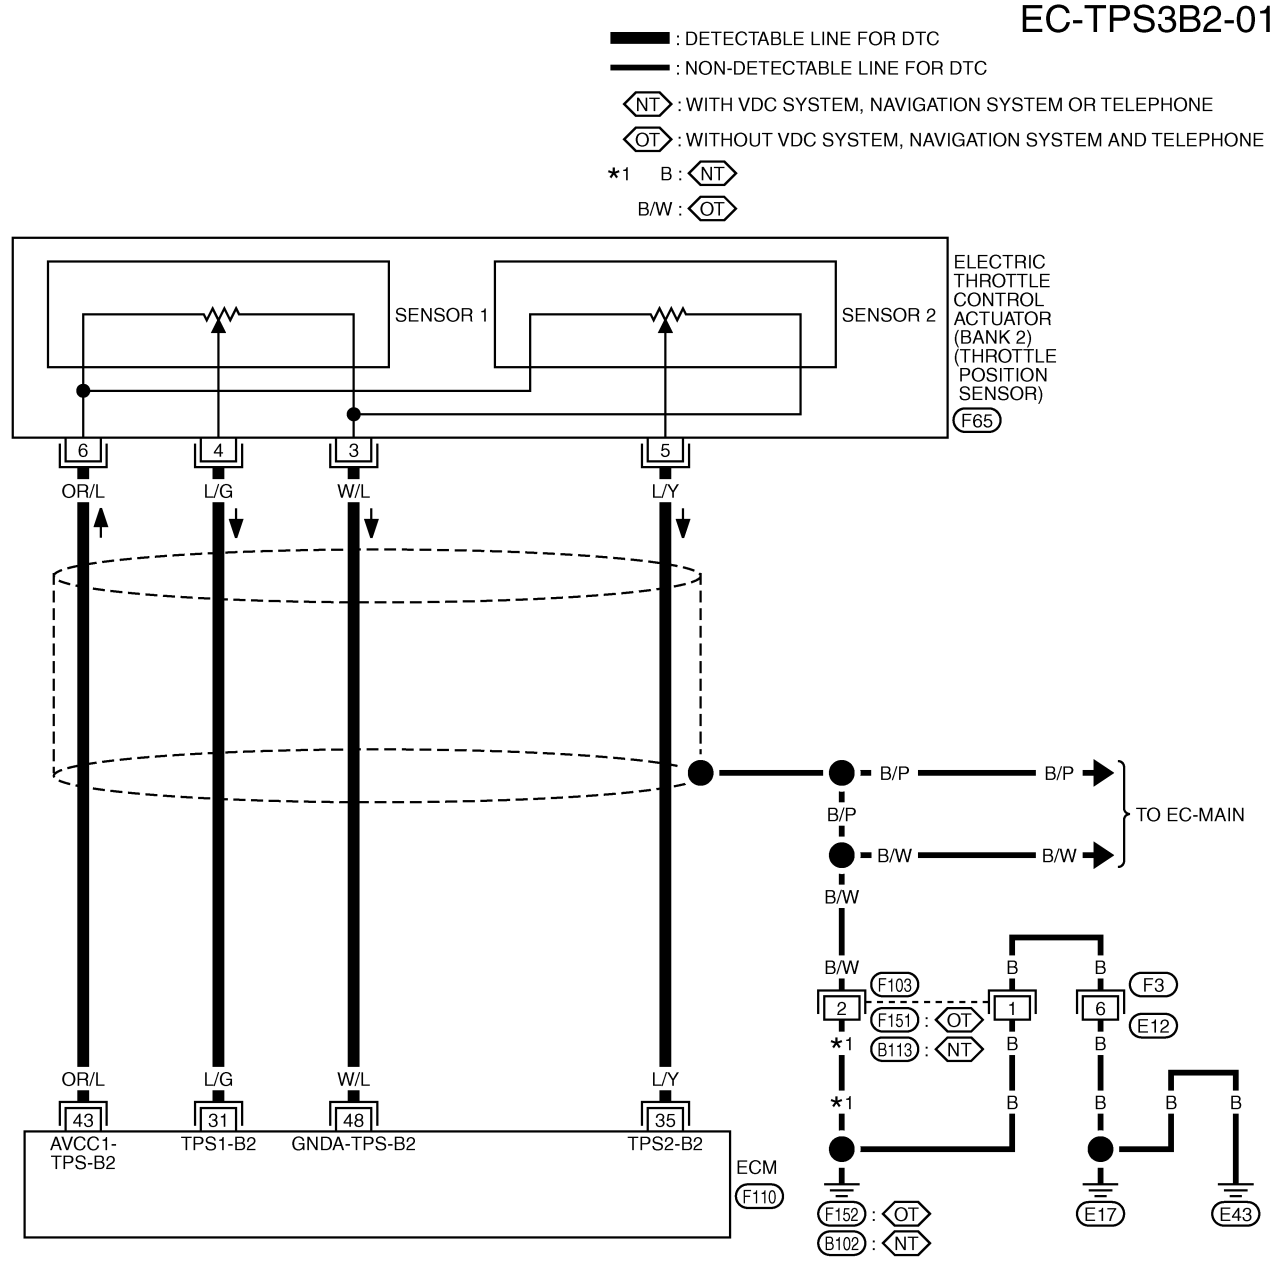
WITH GST

Follow the procedure “WITH CONSULT-III” above.

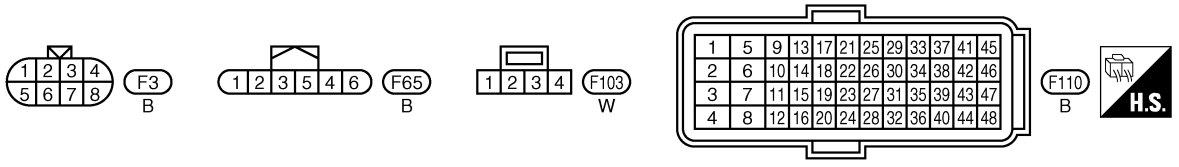
Wiring Diagram
BANK 1

NBS000H9

TBWT1672E



Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

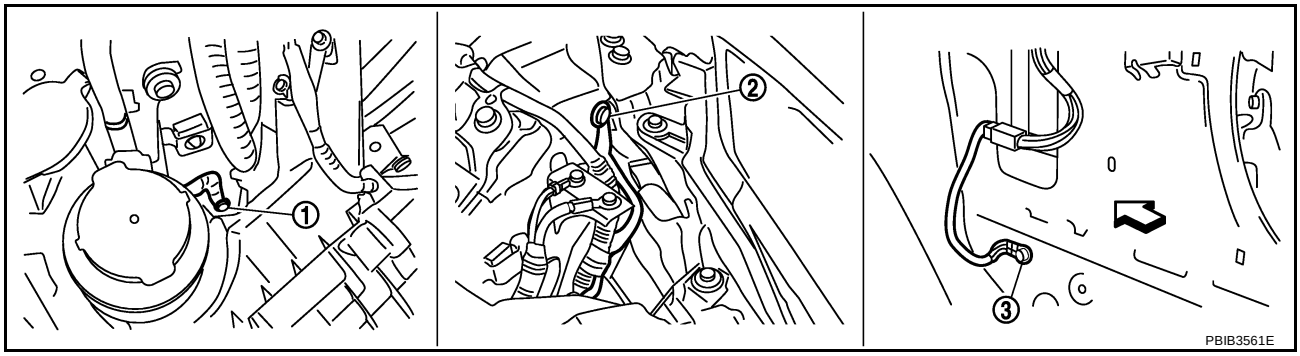
Diagnostic Procedure

NBS000HA

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



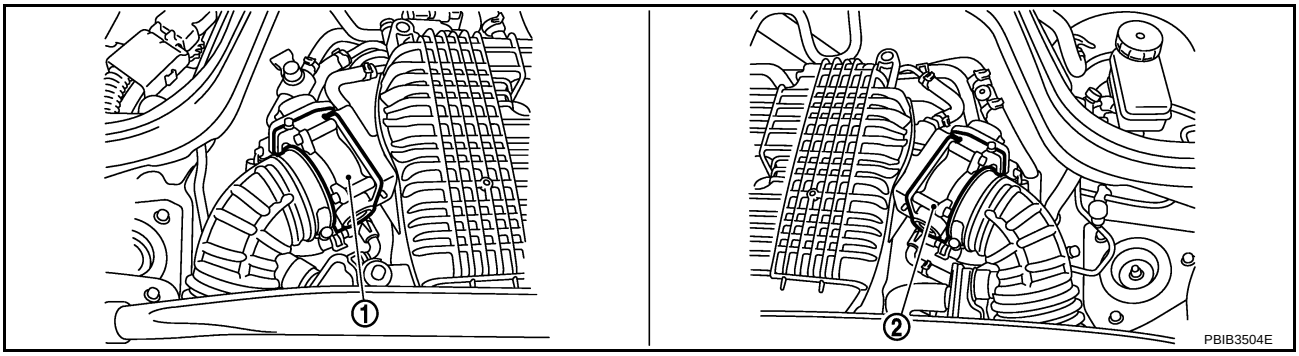
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

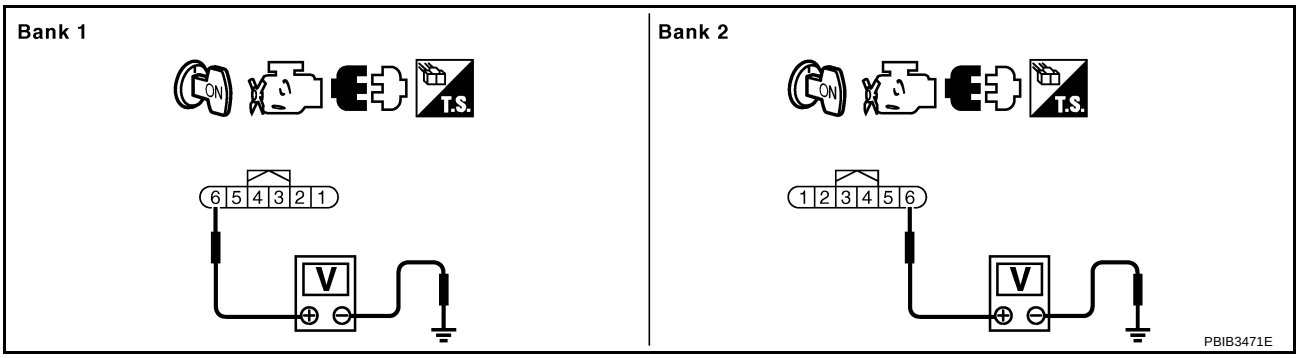
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK THROTTLE POSITION SENSOR POWER SUPPLY CIRCUIT-I

1. Disconnect electric throttle control actuator harness connector.

1. Electric throttle control actuator (bank 1)
2. Electric throttle control actuator (bank 2)

2. Turn ignition switch ON.
3. Check voltage between electric throttle control actuator terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between electric throttle control actuator terminal 3 and ECM terminal 40 (bank 1) or 48 (bank 2).
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between the following;
   ECM terminal 30 (bank 1) or 31 (bank 2) and electric throttle control actuator terminal 4,
   ECM terminal 34 (bank 1) or 35 (bank 2) and electric throttle control actuator terminal 5.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-590, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

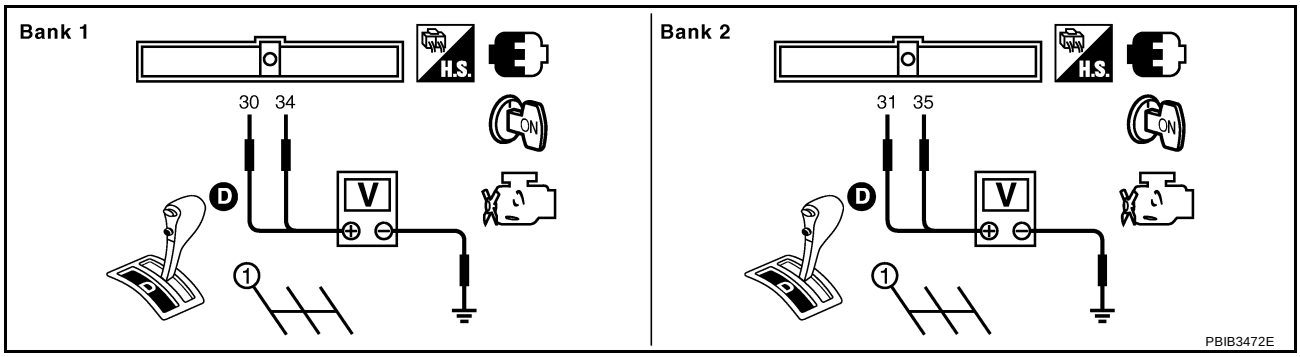
6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS000HB

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set shift lever to D (A/T) or 1st (M/T) position.
5. Check voltage between ECM terminals 30 [TP sensor 1 (bank 1) signal], 31 [TP sensor 1 (bank 2) signal], 34 [TP sensor 2 (bank 1) signal]. 35 [TP sensor 2 (bank 2) signal] and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
30 [TP sensor 1 (bank 1)] 31 [TP sensor 1 (bank 2)]	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
34 [TP sensor 2 (bank 1)] 35 [TP sensor 2 (bank 2)]	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V

6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-77, "Throttle Valve Closed Position Learning" .
8. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS000HC

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .

DTC P1290, P2100, P2103 THROTTLE CONTROL MOTOR RELAY

PFP:16119

Component Description

NBS000CA

Power supply for the throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

CONSULT-III Reference Value in Data Monitor Mode

NBS000CB

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

On Board Diagnosis Logic

NBS000CC

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1290 1290 (Bank 2) P2100 2100 (Bank 1)	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	● Harness or connectors (The throttle control motor relay circuit is open) ● Throttle control motor relay
P2103 2103	Throttle control motor relay circuit short	ECM detect the throttle control motor relay is stuck ON.	● Harness or connectors (The throttle control motor relay circuit is shorted) ● Throttle control motor relay

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

NBS000CD

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P1290, P2100

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V.

With CONSULT-III

1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Check DTC.
4. If DTC is detected, go to EC-597, "Diagnostic Procedure" .

With GST

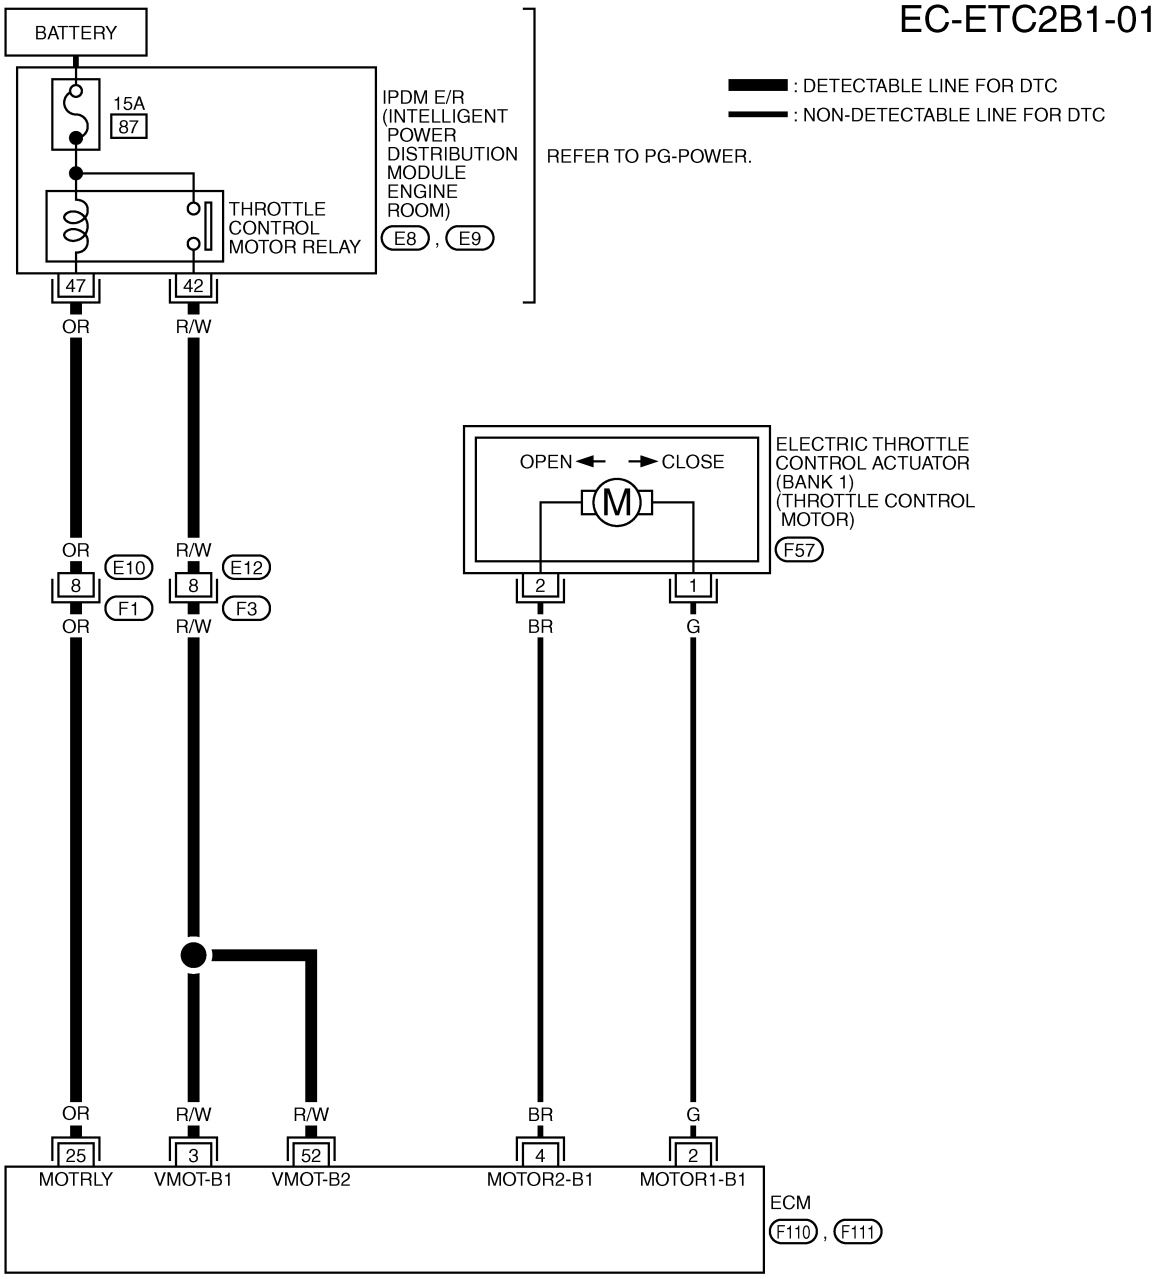
Follow the procedure “With CONSULT-III” above.

PROCEDURE FOR DTC P2103

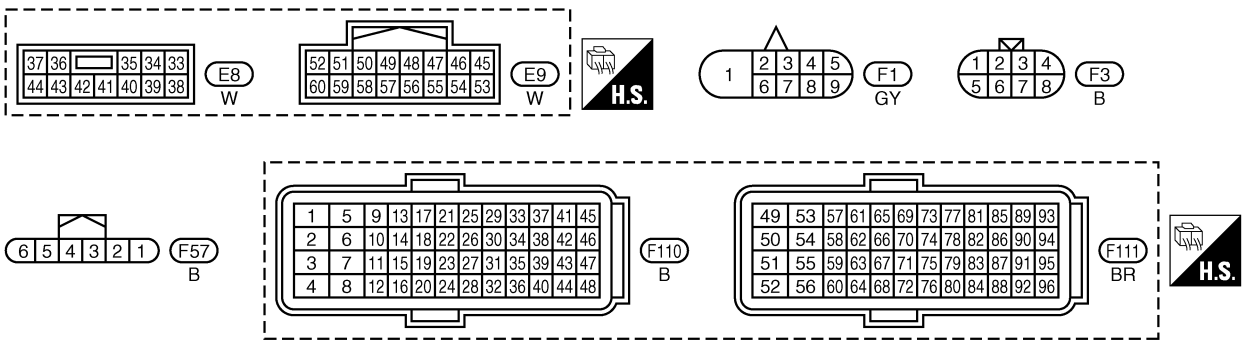
With CONSULT-III

1. Turn ignition switch ON and wait at least 1 second.
2. Start engine and let it idle for 5 seconds.

3. Check DTC.
4. If DTC is detected, go to EC-597, "Diagnostic Procedure" .



With GST



Follow the procedure “With CONSULT-III” above.

Diagnostic Procedure

NBS000CF

1. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 25 and ground with CONSULT-III or tester.

Voltage: Battery voltage

PBIB3579E

OK or NG

OK >> GO TO 5.
NG >> GO TO 2.

2. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E9.
3. Check continuity between ECM terminal 25 and IPDM E/R terminal 47.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

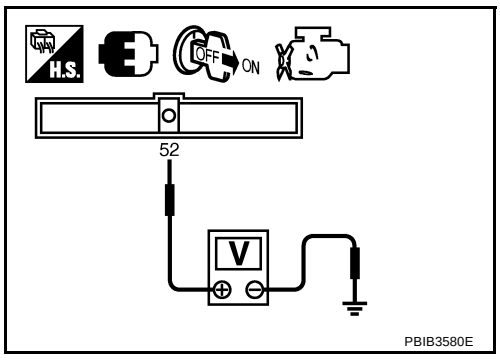
Check the following.

- Harness connectors E10, F1
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUSE

1. Disconnect 15A fuse.
2. Check 15A fuse for blown.



OK or NG

OK >> GO TO 8.
NG >> Replace 15A fuse.

5. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-I

Check voltage between ECM terminal 3 (bank 1), 52 (bank 2) and ground under the following conditions with CONSULT-III or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)

OK or NG

OK >> GO TO 8.
NG >> GO TO 6.

6. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E8.
3. Check continuity between ECM terminal 3 (bank 1), 52 (bank 2) and IPDM E/R terminal 42.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

NG >> Repair or replace harness or connectors.

DTC P1421 COLD START CONTROL

PFP:23710

Description

NBS006TX

ECM controls ignition timing and engine idle speed when engine is started with prewarming up condition. This control promotes the activation of three way catalyst by heating the catalyst and reduces emissions.

On Board Diagnosis Logic

NBS006TY

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1421 1421	Cold start emission reduction strategy monitoring	ECM does not control ignition timing and engine idle speed properly when engine is started with prewarming up condition.	● Lack of intake air volume ● Fuel injection system ● ECM

DTC Confirmation Procedure

NBS006TZ

NOTE:

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- **If DTC P1421 is displayed with other DTC, first perform the trouble diagnosis for other DTC.**

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

WITH CONSULT-III

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Turn ignition switch ON.
3. Select “DATA MONITOR” mode with CONSULT-III.
4. Check that the “COOLAN TEMP/S” indication is between 4°C (39°F) and 36°C (97°F).
   If “COOLAN TEMP/S” indication is within the specified value, go to the following step.
   If “COOLANT TEMP/S” indication is out of the specified value, cool engine down or warm engine up and go to step 1.
5. Start engine and let it idle for 5 minutes.
6. Check 1st trip DTC.
7. If 1st trip DTC is detected, go to EC-600, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS006U0

1. PERFORM IDLE AIR VOLUME LEARNING

Perform EC-77, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 2.
No >> Follow the instruction of Idle Air Volume Learning.

2. CHECK INTAKE SYSTEM

Check for the cause of intake air volume lacking. Refer to the following.

- Crushed intake air passage
- Intake air passage clogging

OK or NG

OK >> GO TO 3.
NG >> Repair or replace malfunctioning part

3. CHECK FUEL INJECTION SYSTEM FUNCTION

Perform EC-324, "DTC Confirmation Procedure" for DTC P0171.

OK or NG

OK >> GO TO 4.
NG >> Go to EC-330, "Diagnostic Procedure" for DTC P0171.

4. PERFORM DTC CONFIRMATION PROCEDURE

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-III.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-600, "DTC Confirmation Procedure" .
5. Is the 1st trip DTC P1421 displayed again?

With GST

1. Turn ignition switch ON.
2. Select Service $04 with GST.
3. **Perform DTC Confirmation Procedure.**
   See EC-600, "DTC Confirmation Procedure" .
4. Is the 1st trip DTC P1421 displayed again?

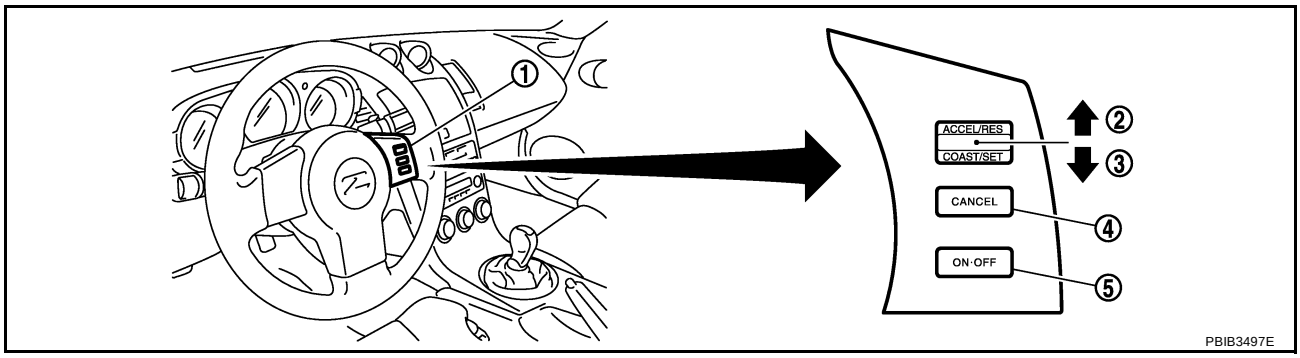
Yes or No

Yes >> GO TO 5.
No >> **INSPECTION END**

5. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-152, "ECM Re-communicating Function" .
3. Perform EC-76, "VIN Registration" .
4. Perform EC-76, "Exhaust Valve Timing Control Learning" .
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**



DTC P1564 ASCD STEERING SWITCH

PFP:25551

Component Description

NBS000FT

ASCD steering switch has variant values of electrical resistance for each button. ECM reads voltage variation of switch, and determines which button is operated.

1. ASCD steering switch
2. RESUME/ACCELERATE switch
3. SET/COAST switch
4. CANCEL switch
5. MAIN switch

Refer to EC-30, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-III Reference Value in Data Monitor Mode

NBS000FU

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
MAIN SW	● Ignition switch: ON	MAIN switch: Pressed	ON
		MAIN switch: Released	OFF
CANCEL SW	● Ignition switch: ON	CANCEL switch: Pressed	ON
		CANCEL switch: Released	OFF
RESUME/ACC SW	● Ignition switch: ON	RESUME/ACCELERATE switch: Pressed	ON
		RESUME/ACCELERATE switch: Released	OFF
SET SW	● Ignition switch: ON	SET/COAST switch: Pressed	ON
		SET/COAST switch: Released	OFF

On Board Diagnosis Logic

NBS000FV

- **This self-diagnosis has the one trip detection logic.**
- **The MIL will not light up for this self-diagnosis.**

NOTE:
If DTC P1564 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605.
Refer to EC-512, "DTC P0605 ECM".

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1564 1564	ASCD steering switch	● An excessively high voltage signal from the ASCD steering switch is sent to ECM. ● ECM detects that input signal from the ASCD steering switch is out of the specified range. ● ECM detects that the ASCD steering switch is stuck ON.	● Harness or connectors (The switch circuit is open or shorted.) ● ASCD steering switch ● ECM

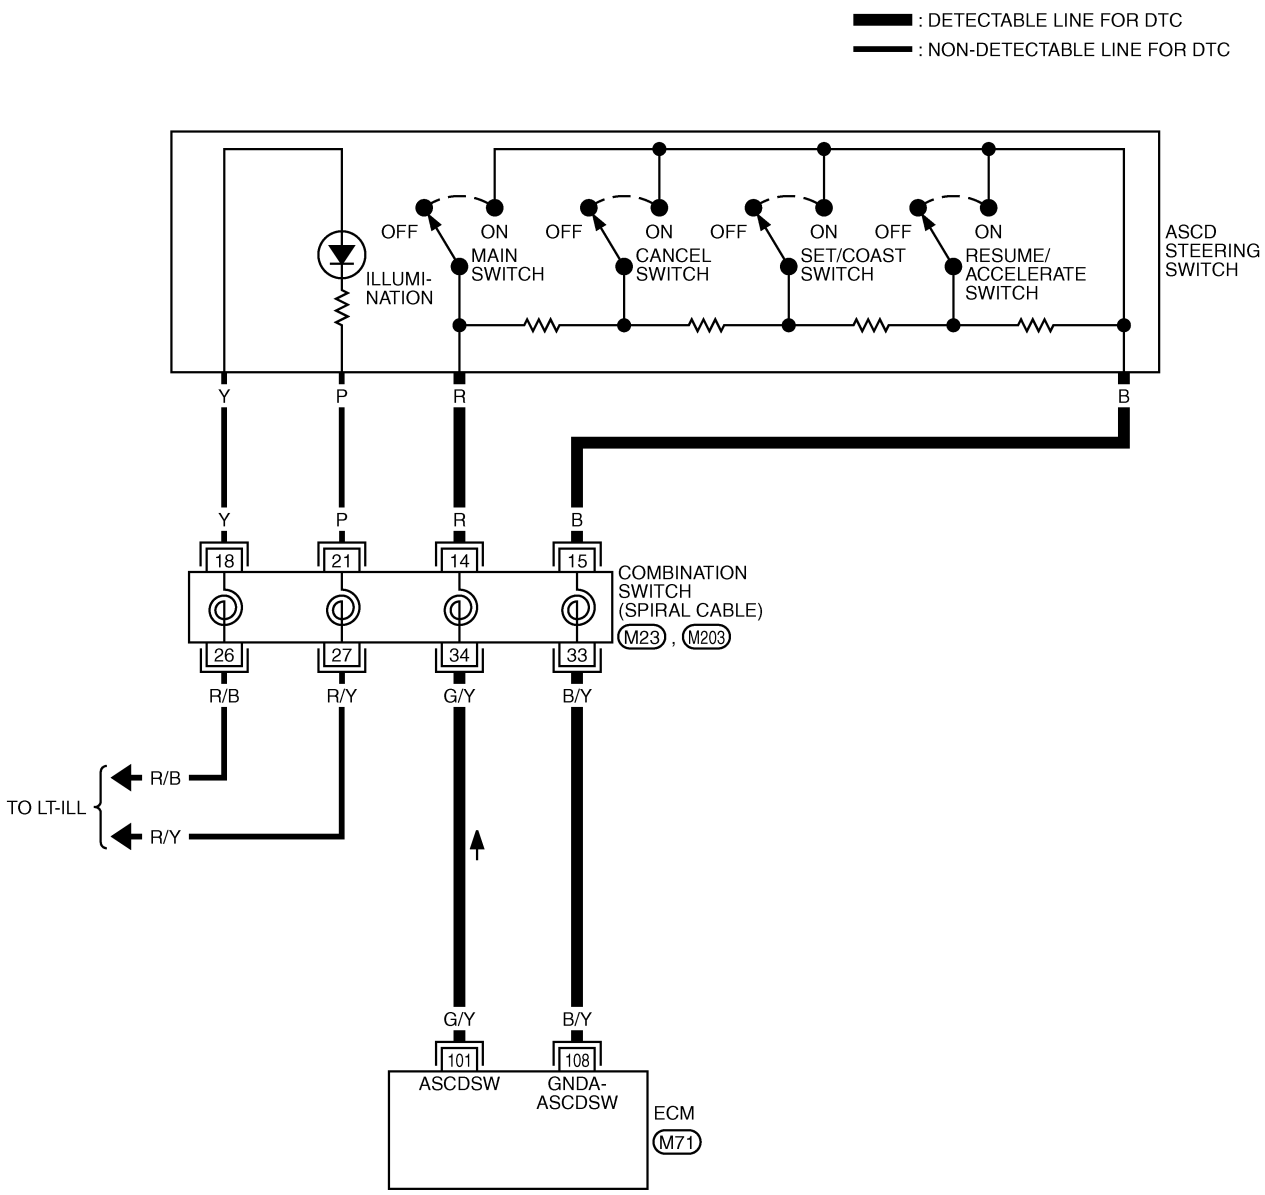
DTC Confirmation Procedure

NBS000FW

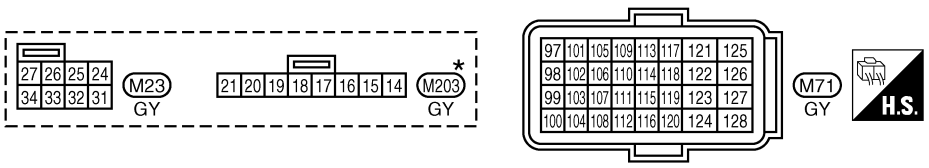
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-III

1. Turn ignition switch ON and wait at least 10 seconds.
2. Press MAIN switch for at least 10 seconds, then release it and wait at least 10 seconds.
3. Press CANCEL switch for at least 10 seconds, then release it and wait at least 10 seconds.
4. Press RESUME/ACCELERATE switch for at least 10 seconds, then release it and wait at least 10 seconds.
5. Press SET/COAST switch for at least 10 seconds, then release it and wait at least 10 seconds.
6. Check DTC.
7. If DTC is detected, go to EC-606, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS000FX

EC-ASC/SW-01

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

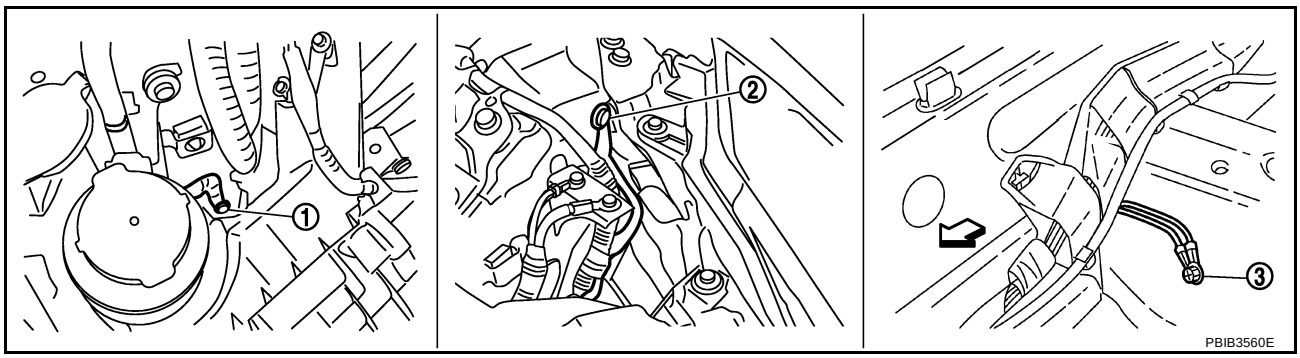
TBWT1660E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	G/Y	ASCD steering switch	**[Ignition switch: ON]** ● ASCD steering switch: OFF	4V
			[Ignition switch: ON] ● MAIN switch: Pressed	0V
			[Ignition switch: ON] ● CANCEL switch: Pressed	1V
			[Ignition switch: ON] ● RESUME/ACCELERATE switch: Pressed	3V
			[Ignition switch: ON] ● SET/COAST switch: Pressed	2V
108	B/Y	Sensor ground (ASCD steering switch)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



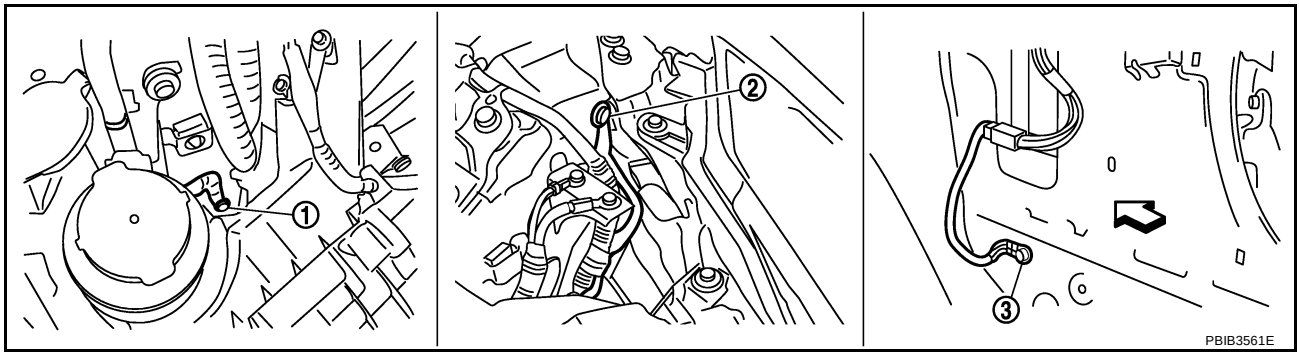
Diagnostic Procedure

NBS000FY

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)

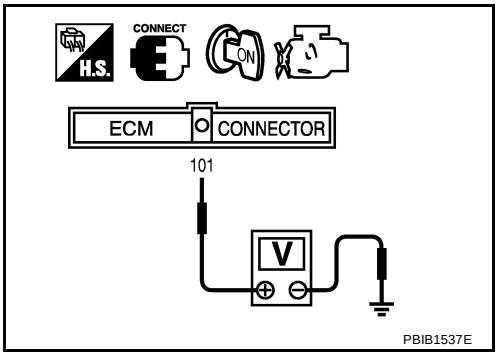
⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK ASCD STEERING SWITCH CIRCUIT

With CONSULT-III



1. Turn ignition switch ON.
2. Select “MAIN SW”, “RESUME/ACC SW”, “SET SW” and “CANCEL SW” in “DATA MONITOR” mode with CONSULT-III.
3. Check each item indication under the following conditions.

Switch	Monitor item	Condition	Indication
MAIN switch	MAIN SW	Pressed	ON
		Released	OFF
CANCEL switch	CANCEL SW	Pressed	ON
		Released	OFF
RESUME/ACCELERATE switch	RESUME/ACC SW	Pressed	ON
		Released	OFF
SET/COAST switch	SET SW	Pressed	ON
		Released	OFF

Without CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 101 and ground with pressing each button.

Switch	Condition	Voltage [V]
MAIN switch	Pressed	Approx. 0
	Released	Approx. 4
CANCEL switch	Pressed	Approx. 1
	Released	Approx. 4
RESUME/ACCELERATE switch	Pressed	Approx. 3
	Released	Approx. 4
SET/COAST switch	Pressed	Approx. 2
	Released	Approx. 4

OK or NG

OK >> GO TO 8.
NG >> GO TO 3.

3. CHECK ASCD STEERING SWITCH GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect combination switch harness connector M203.
4. Check harness continuity between combination switch terminal 15 and ECM terminal 108. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)
- Harness for open and short between ECM and combination switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK ASCD STEERING SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 101 and combination switch terminal 14. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Combination switch (spiral cable)
- Harness for open and short between ECM and combination switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK ASCD STEERING SWITCH

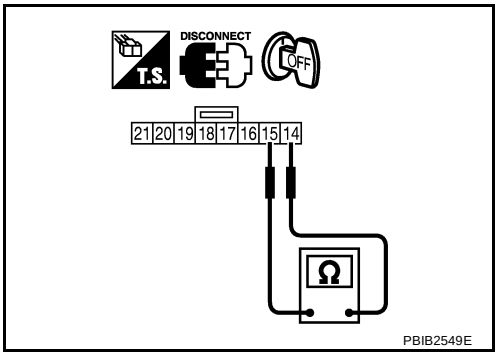
Refer to EC-609, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace steering wheel.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

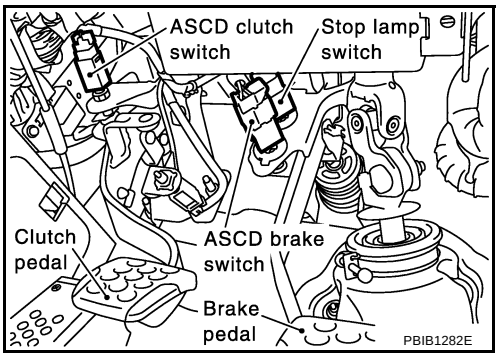
NBS000FZ

ASCD STEERING SWITCH

1. Disconnect combination switch (spiral cable) harness connector M203.
2. Check continuity between combination switch harness connector terminals 14 and 15 with pushing each switch.

Switch	Condition	Resistance [Ω]
MAIN switch	Pressed	Approx. 0
	Released	Approx. 4,000
CANCEL switch	Pressed	Approx. 250
	Released	Approx. 4,000
RESUME/ACCELERATE switch	Pressed	Approx. 1,480
	Released	Approx. 4,000
SET/COAST switch	Pressed	Approx. 660
	Released	Approx. 4,000

3. If NG, replace ASCD steering switch.



DTC P1572 ASCD BRAKE SWITCH

PFP:25320

Component Description

NBS000G0

When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal).
Refer to EC-30, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-III Reference Value in Data Monitor Mode

NBS000G1

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1 (ASCD brake switch)	● Ignition switch: ON	● Brake pedal: Fully released (A/T) ● Brake pedal and clutch pedal: Fully released (M/T)	ON
		● Brake pedal: Slightly depressed (A/T) ● Brake pedal and/or clutch pedal: Slightly depressed (M/T)	OFF
BRAKE SW2 (Stop lamp switch)	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

NBS000G2

- **This self-diagnosis has the one trip detection logic.**
- **The MIL will not light up for this self-diagnosis.**

NOTE:

- **If DTC P1572 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to EC-512, "DTC P0605 ECM".**
- **This self-diagnosis has the one trip detection logic. When malfunction A is detected, DTC is not stored in ECM memory. And in that case, 1st trip DTC and 1st trip freeze frame data are displayed. 1st trip DTC is erased when ignition switch OFF. And even when malfunction A is detected in two consecutive trips, DTC is not stored in ECM memory.**

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition		Possible Cause
P1572 1572	ASCD brake switch	A)	When the vehicle speed is above 30km/h (19 MPH), ON signals from the stop lamp switch and the ASCD brake switch are sent to ECM at the same time.	● Harness or connectors (The stop lamp switch circuit is shorted.) ● Harness or connectors (The ASCD brake switch circuit is shorted.) ● Harness or connectors (The ASCD clutch switch circuit is shorted.) (M/T models) ● Stop lamp switch ● ASCD brake switch ● ASCD clutch switch (M/T models) ● Incorrect stop lamp switch installation ● Incorrect ASCD brake switch installation ● Incorrect ASCD clutch switch installation (M/T models) ● ECM
		B)	ASCD brake switch signal is not sent to ECM for extremely long time while the vehicle is driving	

DTC Confirmation Procedure

NBS000G3

CAUTION:
Always drive vehicle at a safe speed.

NOTE:

- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
- Procedure for malfunction B is not described here. It takes extremely long time to complete procedure for malfunction B. By performing procedure for malfunction A, the incident that causes malfunction B can be detected.

TESTING CONDITION:
Steps 4 and 5 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-III

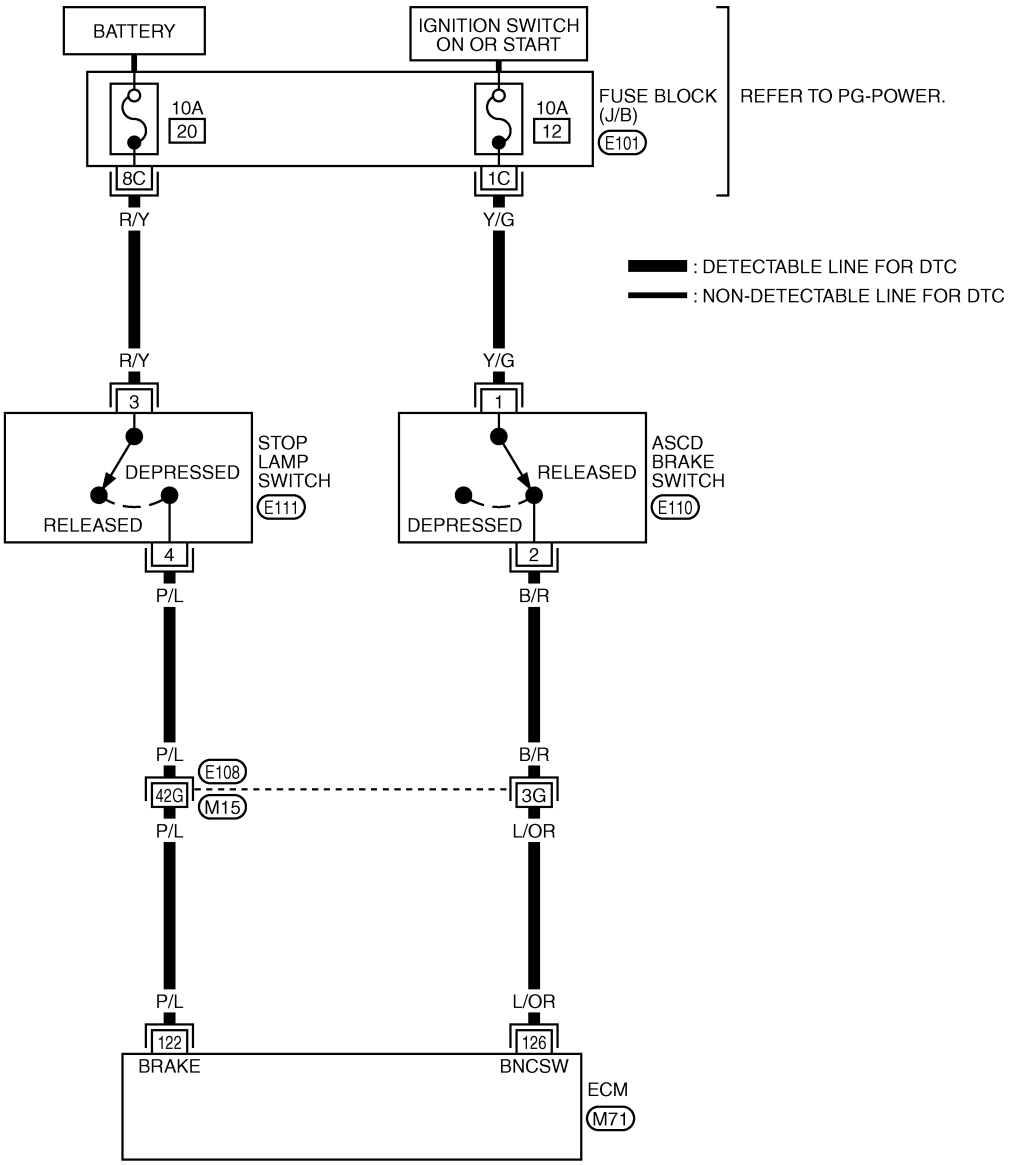
1. Start engine (VDC switch or TCS switch OFF).
2. Select “DATA MONITOR” mode with CONSULT-III.
3. Press MAIN switch and make sure that CRUISE indicator lights up.
4. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Shift lever	Suitable position

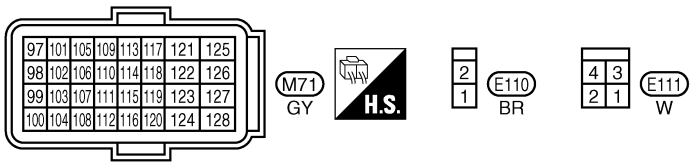
5. Check 1st trip DTC.
6. If 1st trip DTC is detected, go to EC-615, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to the following step.
7. Drive the vehicle for at least 5 consecutive seconds under the following condition.

VHCL SPEED SE	More than 30 km/h (19 MPH)
Shift lever	Suitable position
Driving location	Depress the brake pedal for more than five seconds so as not to come off from the above-mentioned vehicle speed.

8. Check 1st trip DTC.
9. If 1st trip DTC is detected, go to EC-615, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram
A/T MODELS

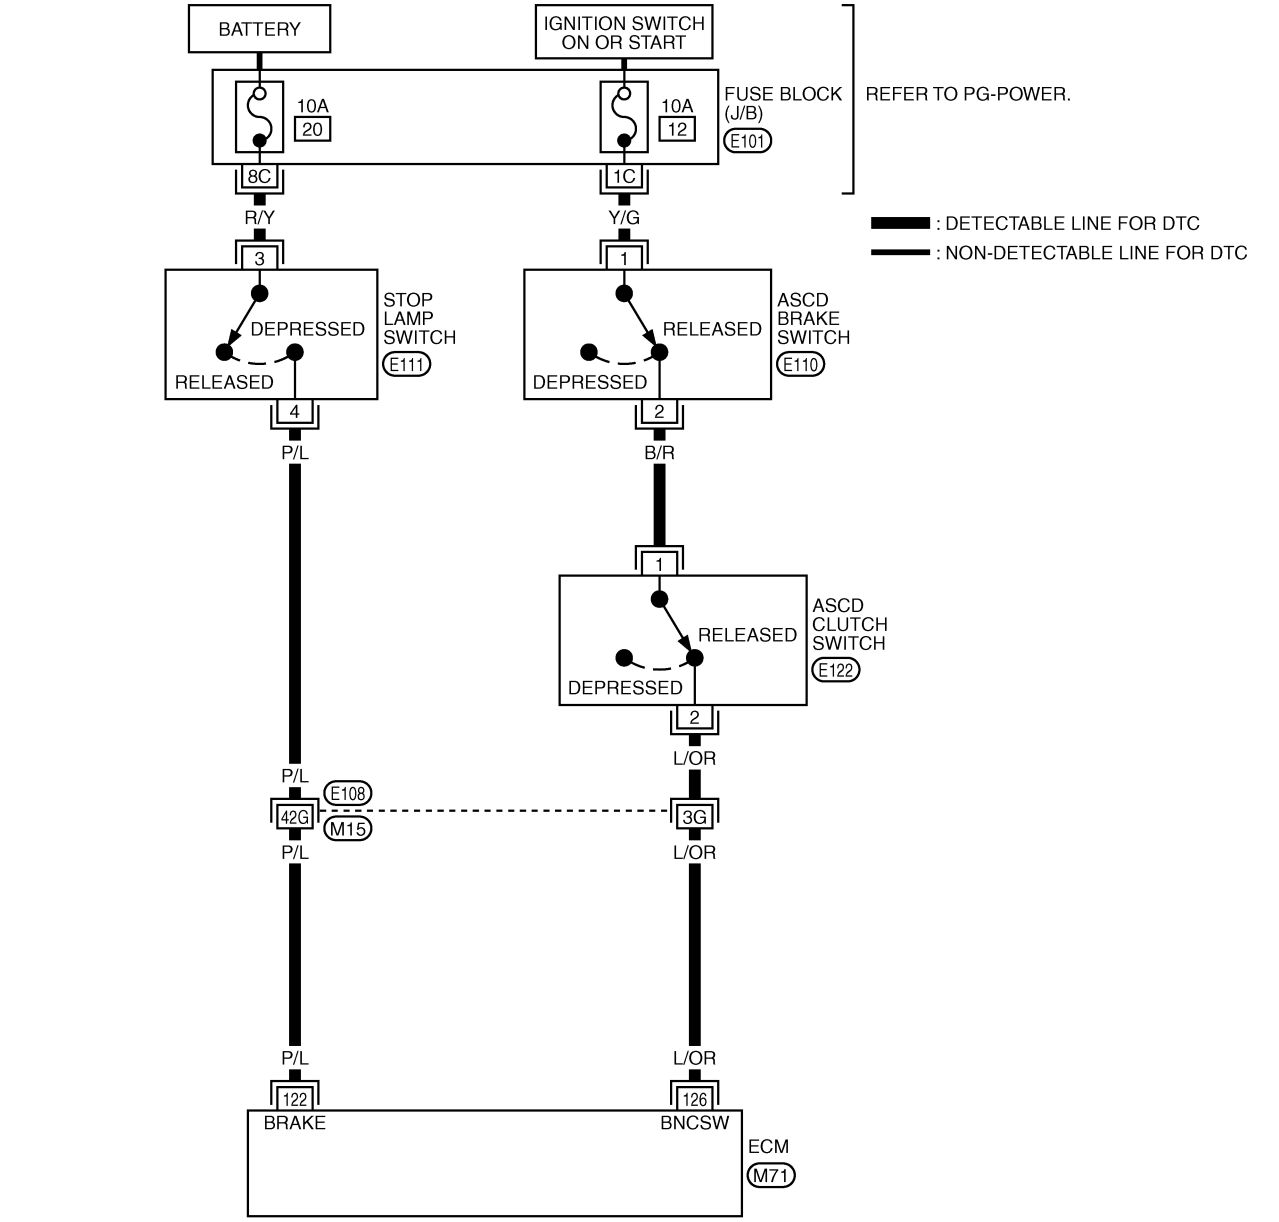
NBS000G4

EC-ASC/BS-01

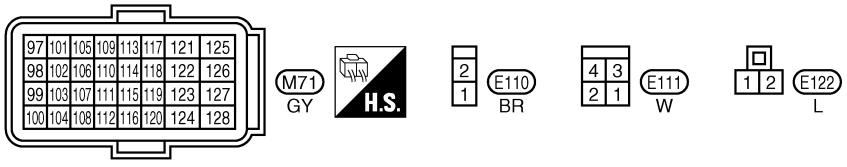
REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)
E101 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1661E

Specification data are reference values and are measured between each terminal and ground.



CAUTION:



Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
122	P/L	Stop lamp switch	**[Ignition switch: OFF]** ● Brake pedal: Fully released	0V
			[Ignition switch: OFF] ● Brake pedal: Slightly depressed	BATTERY VOLTAGE (11 - 14V)
126	L/OR	ASCD brake switch	**[Ignition switch: ON]** ● Brake pedal: Slightly depressed	0V
			[Ignition switch: ON] ● Brake pedal: Fully released	BATTERY VOLTAGE (11 - 14V)

M/T MODELS

EC-ASC/BS-02

REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)
E101 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1662E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
122	P/L	Stop lamp switch	**[Ignition switch: OFF]** ● Brake pedal: Fully released	0V
			[Ignition switch: OFF] ● Brake pedal: Slightly depressed	BATTERY VOLTAGE (11 - 14V)
126	L/OR	ASCD brake switch	**[Ignition switch: ON]** ● Brake pedal and/or clutch pedal: Slightly depressed	0V
			[Ignition switch: ON] ● Brake pedal and clutch pedal: Fully released	BATTERY VOLTAGE (11 - 14V)

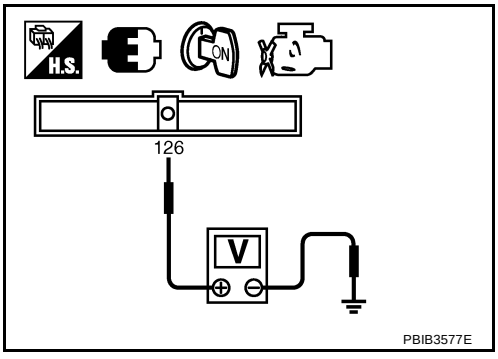
Diagnostic Procedure

NBS000G5

A/T MODELS

1. CHECK OVERALL FUNCTION-I

With CONSULT-III



1. Turn ignition switch ON.
2. Select “BRAKE SW1” in “DATA MONITOR” mode with CONSULT-III.
3. Check “BRAKE SW1” indication under the following conditions.

CONDITION	INDICATION
Brake pedal: Slightly depressed	OFF
Brake pedal: Fully released	ON

Without CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 126 and ground under the following conditions.

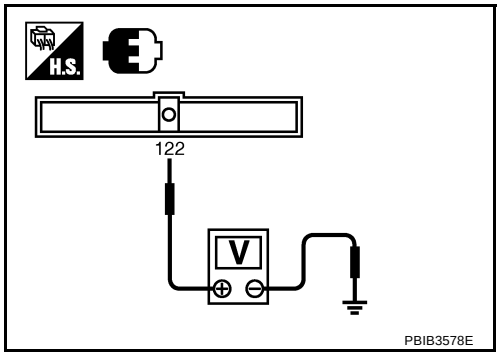
CONDITION	VOLTAGE
Brake pedal: Slightly depressed	Approximately 0V
Brake pedal: Fully released	Battery voltage

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK OVERALL FUNCTION-II

With CONSULT-III



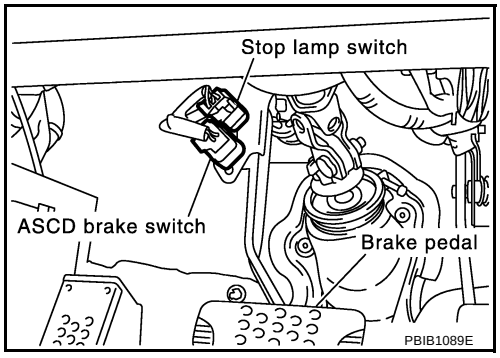
1. Select “BRAKE SW2” in “DATA MONITOR” mode with CONSULT-III.
2. Check “BRAKE SW2” indication under the following conditions.

CONDITION	INDICATION
Brake pedal: Fully released	OFF
Brake pedal: Slightly depressed	ON

Without CONSULT-III

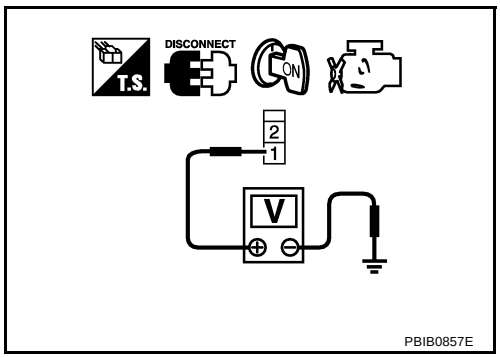
Check voltage between ECM terminal 122 and ground under the following conditions.

CONDITION	VOLTAGE
Brake pedal: Fully released	Approximately 0V
Brake pedal: Slightly depressed	Battery voltage



OK or NG

OK >> GO TO 13.
NG >> GO TO 8.



3. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 126 and ASCD brake switch terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

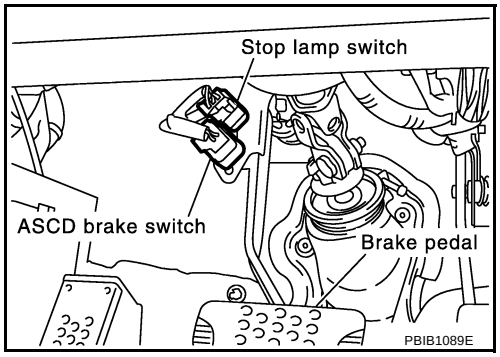
6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

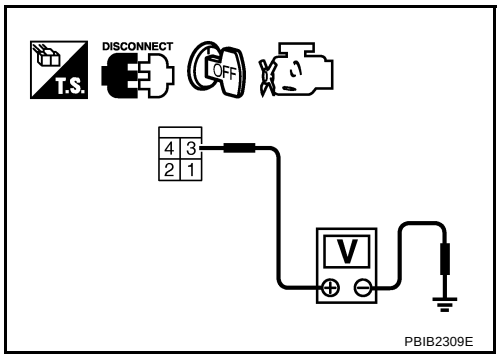
7. CHECK ASCD BRAKE SWITCH



Refer to EC-624, "Component Inspection"

OK or NG

OK >> GO TO 13.
NG >> Replace ASCD brake switch.



8. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.

3. Check voltage between stop lamp switch terminal 3 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between stop lamp switch and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 122 and stop lamp switch terminal 4. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.
NG >> GO TO 11.

11. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK STOP LAMP SWITCH

Refer to EC-624, "Component Inspection"

OK or NG

OK >> GO TO 13.
NG >> Replace stop lamp switch.

13. CHECK INTERMITTENT INCIDENT

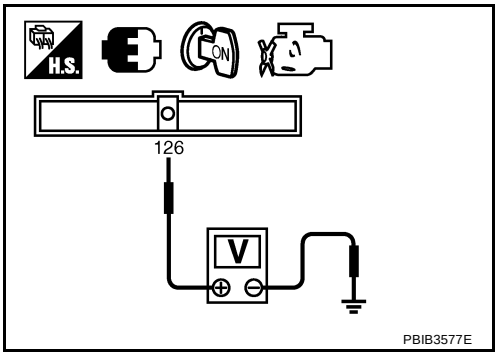
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

M/T MODELS

1. CHECK OVERALL FUNCTION-I

With CONSULT-III



1. Turn ignition switch ON.
2. Select “BRAKE SW1” in “DATA MONITOR” mode with CONSULT-III.
3. Check “BRAKE SW1” indication under the following conditions.

CONDITION	INDICATION
Brake pedal and/or clutch pedal: Slightly depressed	OFF
Brake pedal and clutch pedal: Fully released	ON

Without CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 126 and ground under the following conditions.

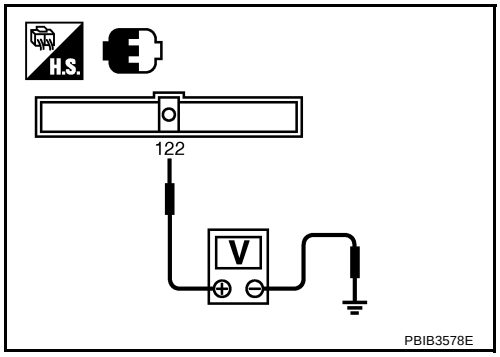
CONDITION	VOLTAGE
Brake pedal and/or clutch pedal: Slightly depressed	Approximately 0V
Brake pedal and clutch pedal: Fully released	Battery voltage

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK OVERALL FUNCTION-II

With CONSULT-III



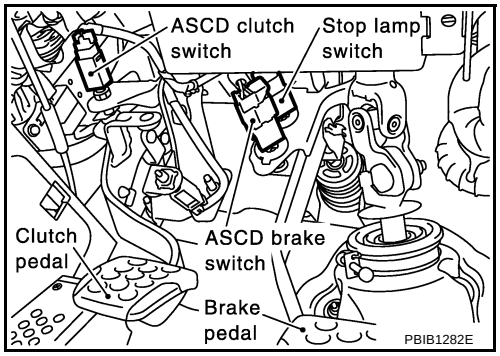
1. Select “BRAKE SW2” in “DATA MONITOR” mode with CONSULT-III.
2. Check “BRAKE SW2” indication under the following conditions.

CONDITION	INDICATION
Brake pedal: Fully released	OFF
Brake pedal: Slightly depressed	ON

Without CONSULT-III

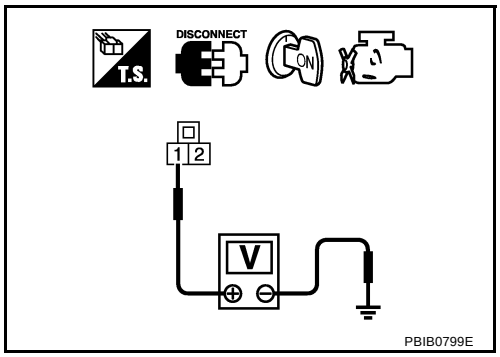
Check voltage between ECM terminal 122 and ground under the following conditions.

CONDITION	VOLTAGE
Brake pedal: Fully released	Approximately 0V
Brake pedal: Slightly depressed	Battery voltage



OK or NG

OK >> GO TO 16.
NG >> GO TO 11.

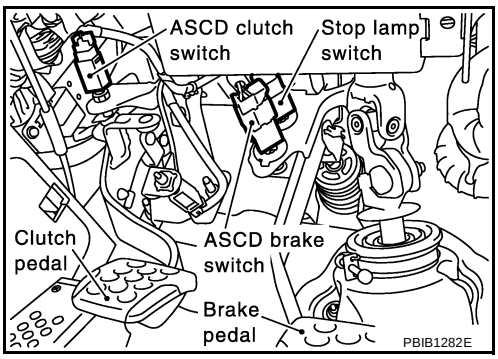


3. CHECK ASCD BRAKE SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch ON.

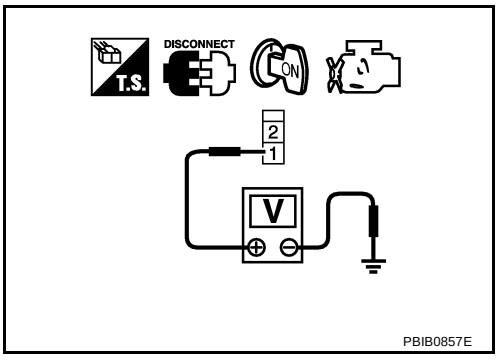
4. Check voltage between ASCD clutch switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 8.
NG >> GO TO 4.



4. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK ASCD BRAKE SWITCH

Refer to EC-624, "Component Inspection"

OK or NG

OK >> GO TO 16.
NG >> Replace ASCD brake switch.

8. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ASCD clutch switch terminal 2 and ECM terminal 126. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

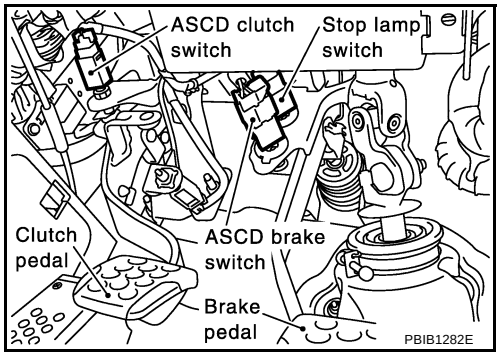
9. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK ASCD CLUTCH SWITCH



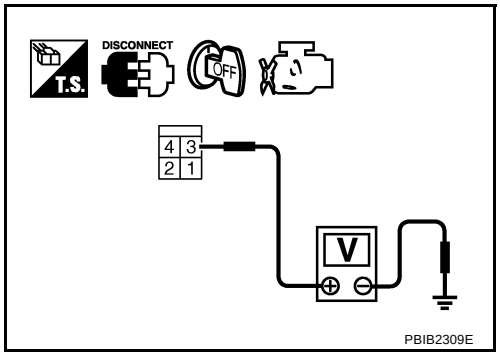
Refer to EC-624, "Component Inspection" .

OK or NG

OK >> GO TO 16.
NG >> Replace ASCD clutch switch.

11. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.



3. Check voltage between stop lamp switch terminal 3 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 13.
NG >> GO TO 12.

12. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between stop lamp switch and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

13. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 122 and stop lamp switch terminal 4. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 15.
NG >> GO TO 14.

14. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

15. CHECK STOP LAMP SWITCH

Refer to EC-624, "Component Inspection"

OK or NG

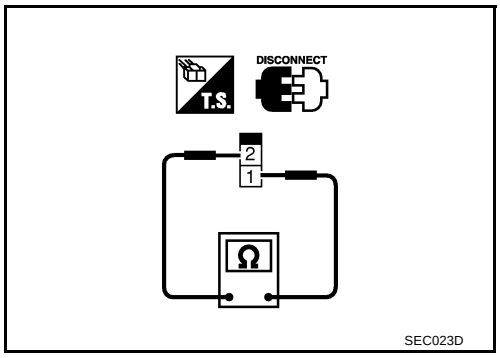
OK >> GO TO 16.
NG >> Replace stop lamp switch.

16. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



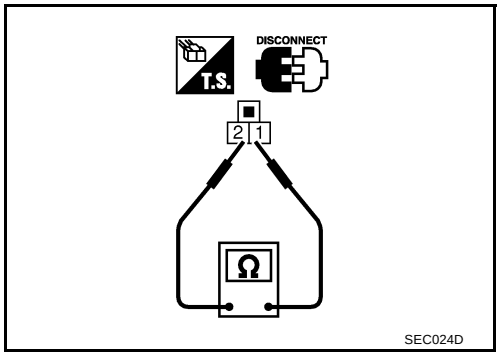
NBS000G6

ASCD BRAKE SWITCH

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Check continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
Brake pedal: Fully released	Should exist
Brake pedal: Slightly depressed	Should not exist

If NG, adjust ASCD brake switch installation, refer to BR-7, "BRAKE PEDAL" , and perform step 3 again.

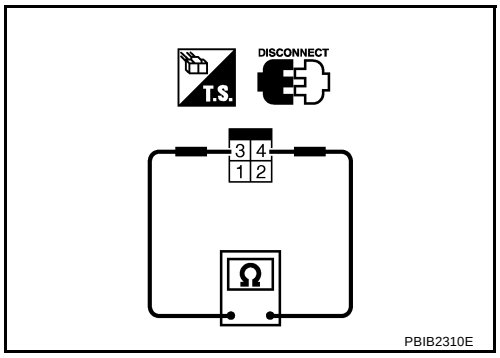


ASCD CLUTCH SWITCH (M/T MODELS)

1. Turn ignition switch OFF.
2. Disconnect ASCD clutch switch harness connector.
3. Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
Clutch pedal: Fully released	Should exist
Clutch pedal: Slightly depressed	Should not exist

If NG, adjust ASCD clutch switch installation, refer to CL-5, "CLUTCH PEDAL" , and perform step 3 again.



STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check continuity between stop lamp switch terminals 3 and 4 under the following conditions.

Condition	Continuity
Brake pedal: Fully released	Should not exist
Brake pedal: Slightly depressed	Should exist

If NG, adjust stop lamp switch installation, refer to BR-7, "BRAKE PEDAL" , and perform step 3 again.

DTC P1574 ASCD VEHICLE SPEED SENSOR

PFP:31036

Component Description

NBS000G7

The ECM receives two vehicle speed sensor signals via CAN communication line. One is sent from “unified meter and A/C amp.”, and the other is from TCM (Transmission control module). The ECM uses these signals for ASCD control. Refer to EC-30, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for ASCD functions.

On Board Diagnosis Logic

NBS000G8

- **This self-diagnosis has the one trip detection logic.**
- **The MIL will not light up for this self-diagnosis.**

NOTE:

- **If DTC P1574 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P1574 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**
- **If DTC P1574 is displayed with DTC P0500, first perform the trouble diagnosis for DTC P0500. Refer to EC-496, "DTC P0500 VSS"**
- **If DTC P1574 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to EC-512, "DTC P0605 ECM"**

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P1574 1574	ASCD vehicle speed sensor	ECM detects a difference between two vehicle speed signals is out of the specified range.	● Harness or connectors (The CAN communication line is open or shorted.) ● Unified meter and A/C amp. ● VDC/TCS/ABS control unit (with VDC models) ● ABS actuator and electric unit (control unit) (without VDC models) ● Wheel sensor ● TCM(A/T models) ● ECM

DTC Confirmation Procedure

NBS000G9

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Step 3 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-III

1. Start engine (VDC switch or TCS switch OFF).
2. Select “DATA MONITOR” mode with CONSULT-III.
3. Drive the vehicle at more than 40 km/h (25 MPH).
4. Check DTC.
5. If DTC is detected, go to EC-626, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III” above.

Diagnostic Procedure

NBS000GA

1. CHECK DTC WITH TCM

Check DTC with TCM. Refer to AT-37 .

OK or NG

OK >> GO TO 2.
NG >> Perform trouble shooting relevant to DTC indicated.

2. CHECK DTC WITH “VDC/TSC/ABS CONTROL UNIT (WITH VDC MODELS)” OR “ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) (WITHOUT VDC MODELS)”

Refer to BRC-82, "TROUBLE DIAGNOSIS" or refer to BRC-42, "TROUBLE DIAGNOSIS" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK DTC WITH “UNIFIED METER AND A/C AMP.”

Refer to DI-4, "COMBINATION METERS" .

>> **INSPECTION END**

DTC P1715 INPUT SPEED SENSOR (TURBINE REVOLUTION SENSOR)

PFP:31935

Description

NBS002VP

ECM receives turbine revolution sensor signal from TCM through CAN communication line. ECM uses this signal for engine control.

CONSULT-III Reference Value in Data Monitor Mode

NBS002VQ

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
I/P PULLY SPD	● Vehicle speed: More than 20 km/h (12 MPH)	Almost the same speed as the tachometer indication

On Board Diagnosis Logic

NBS002VR

NOTE:

- **If DTC P1715 is displayed with DTC U1000, U1001 first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC P1715 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**
- **If DTC P1715 is displayed with DTC P0605, first perform the trouble diagnosis for DTC P0605. Refer to EC-512, "DTC P0605 ECM" .**
- **If DTC P1715 is displayed with DTC P0335, first perform the trouble diagnosis for DTC P0335. Refer to EC-386, "DTC P0335 CKP SENSOR (POS)" .**
- **If DTC P1715 is displayed with DTC P0340 or P0345 first perform the trouble diagnosis for DTC P0340 or P0345. Refer to EC-394, "DTC P0340, P0345 CMP SENSOR (PHASE)" .**

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1715 1715	Input speed sensor (Turbine revolution sensor) (TCM output)	Turbine revolution sensor signal is different from the theoretical value calculated by ECM from revolution sensor signal and engine rpm signal.	● Harness or connectors (The CAN communication line is open or shorted) ● Harness or connectors (Turbine revolution sensor circuit is open or shorted) ● TCM

Diagnostic Procedure

NBS002VS

1. CHECK DTC WITH TCM

Check DTC with TCM. Refer to AT-37, "ON BOARD DIAGNOSTIC (OBD) SYSTEM" .

OK or NG

OK >> GO TO 2.
NG >> Perform trouble shooting relevant to DTC indicated.

2. REPLACE TCM

Replace TCM. Refer to AT-40, "TROUBLE DIAGNOSIS" .

>> **INSPECTION END**

DTC P1805 BRAKE SWITCH

PFP:25320

Description

NBS000GI

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.

CONSULT-III Reference Value in Data Monitor Mode

NBS000GJ

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

NBS000GK

The MIL will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for extremely long time while the vehicle is driving.	● Harness or connectors (The stop lamp switch circuit is open or shorted.) ● Stop lamp switch

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode.

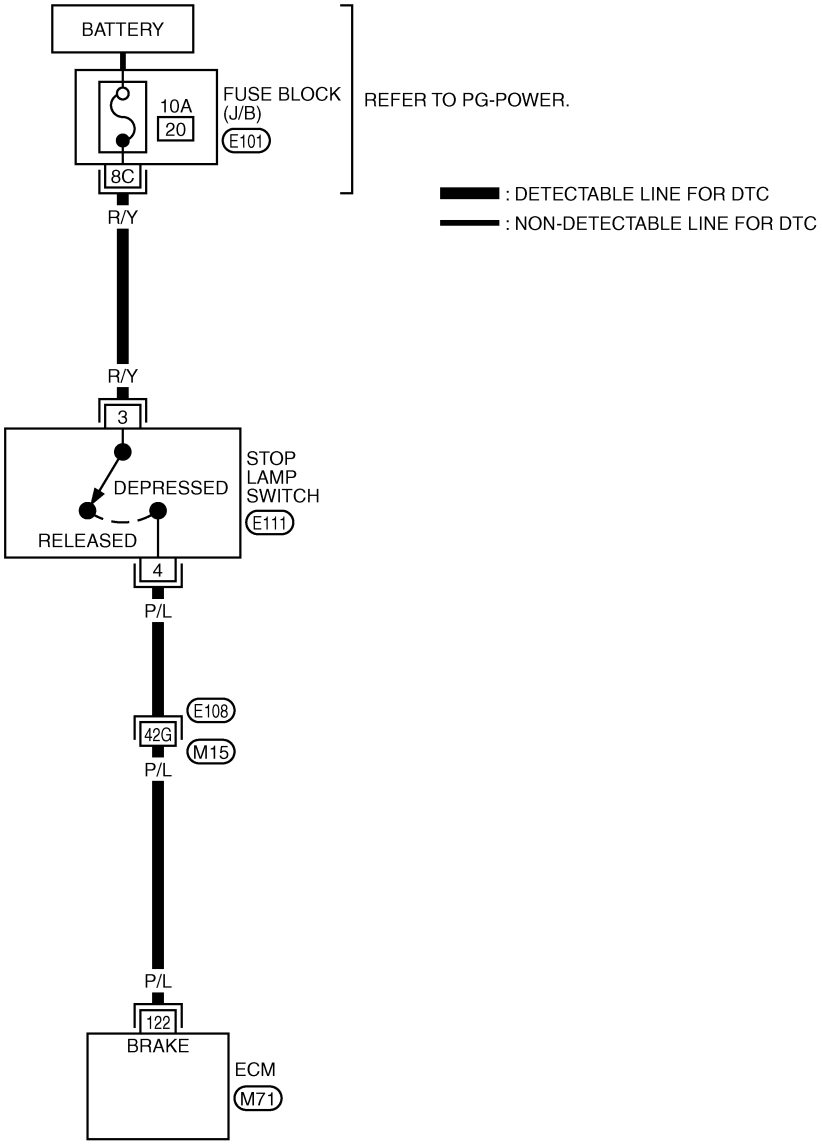
Engine operating condition in fail-safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range. Therefore, acceleration will be poor.	
Vehicle condition	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

DTC Confirmation Procedure

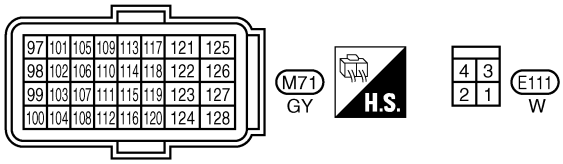
NBS000GL

WITH CONSULT-III

1. Turn ignition switch ON.
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-III.
4. Check 1st trip DTC.
5. If 1st trip DTC is detected, go to EC-630, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

NBS000GM

EC-BRK/SW-01

REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)
E101 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1663E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

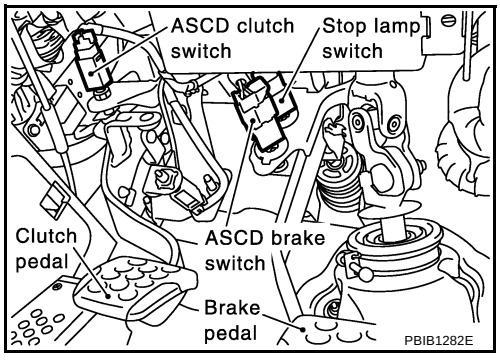
TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
122	P/L	Stop lamp switch	**[Ignition switch: OFF]** ● Brake pedal: Fully released	0V
			[Ignition switch: OFF] ● Brake pedal: Slightly depressed	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

NBS000GN

1. CHECK STOP LAMP SWITCH CIRCUIT

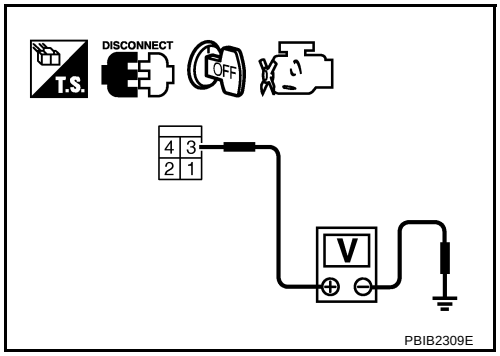
1. Turn ignition switch OFF.
2. Check the stop lamp when depressing and releasing the brake pedal.



Brake pedal	Stop lamp
Fully released	Not illuminated
Slightly depressed	Illuminated

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.



2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.

2. Check voltage between stop lamp switch terminal 3 and ground with CONSULT-III or tester.

Voltage: Battery voltage

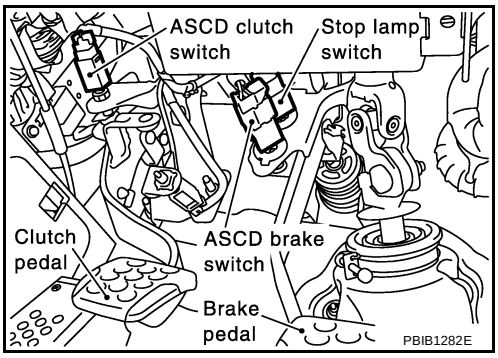
OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector E101
- Harness for open and short between stop lamp switch and fuse



>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Disconnect stop lamp switch harness connector.
3. Check harness continuity between ECM terminal 122 and stop lamp switch terminal 4.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK STOP LAMP SWITCH

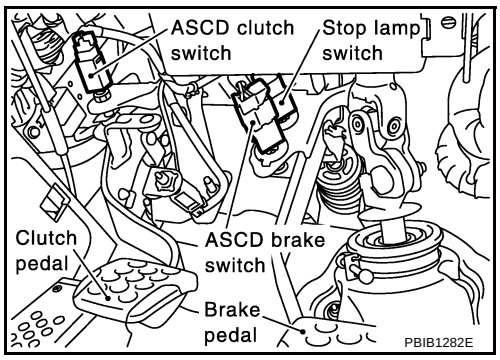
Refer to EC-632, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace stop lamp switch.

7. CHECK INTERMITTENT INCIDENT

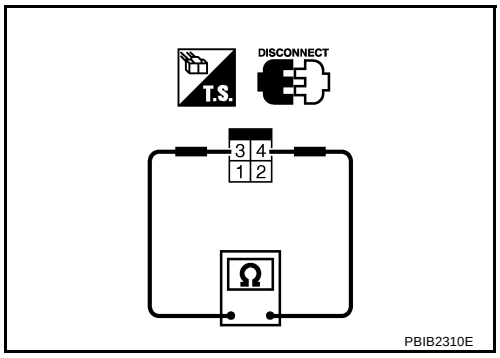
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS000GO



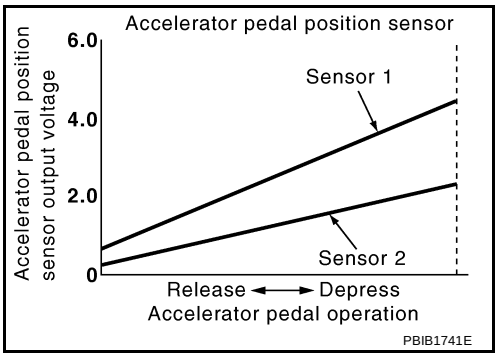
STOP LAMP SWITCH

1. Disconnect stop lamp switch harness connector.

2. Check continuity between stop lamp switch terminals 3 and 4 under the following conditions.

Conditions	Continuity
Brake pedal: Fully released	Should not exist
Brake pedal: Slightly depressed	Should exist

3. If NG, adjust stop lamp switch installation, refer to BR-7, "BRAKE PEDAL" , and perform step 2 again.



DTC P2122, P2123 APP SENSOR

PFP:18002

Component Description

NBS000GP

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-III Reference Value in Data Monitor Mode

NBS000GQ

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.5 - 1.0V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN 2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.3 - 1.2V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

NBS000GR

These self-diagnoses have the one trip detection logic.

NOTE:
If DTC P2122 or P2123 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643. Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	● Harness or connectors (The APP sensor 1 circuit is open or shorted.) ● Accelerator pedal position sensor (APP sensor 1)
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

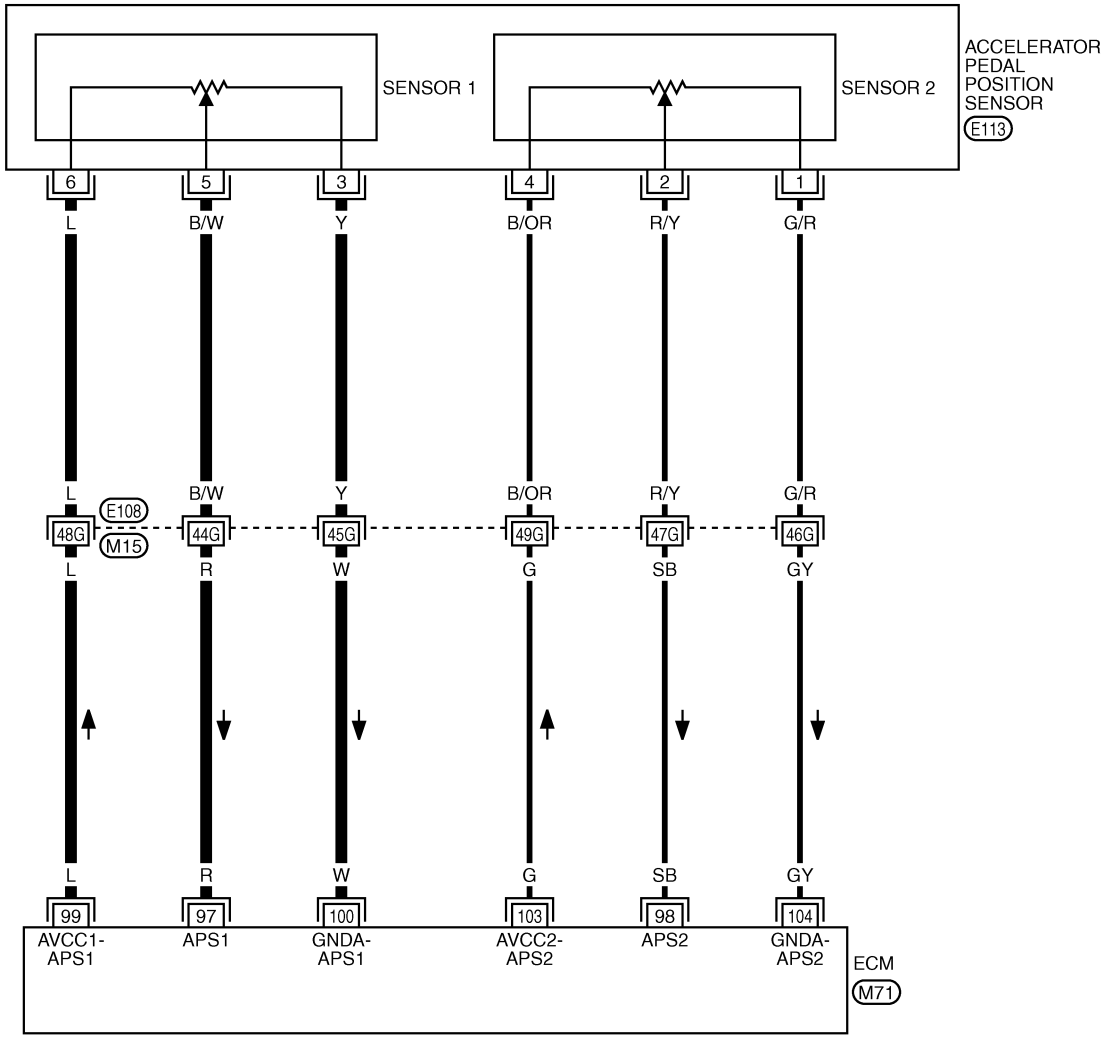
NBS000GS

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

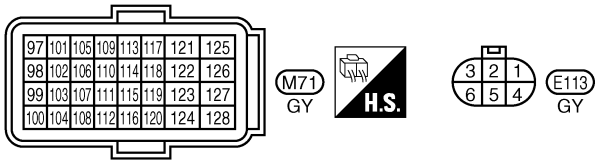
WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-637, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III” above.



Wiring Diagram

NBS000GT

EC-APPS1-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)

TBWT1670E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
97	R	Accelerator pedal position sensor 1	**[Ignition switch: ON]** ● Engine stopped ● Accelerator pedal: Fully released	0.5 - 1.0V
			[Ignition switch: ON] ● Engine stopped ● Accelerator pedal: Fully depressed	3.9 - 4.7V
98	SB	Accelerator pedal position sensor 2	**[Ignition switch: ON]** ● Engine stopped ● Accelerator pedal: Fully released	0.15 - 0.60V
			[Ignition switch: ON] ● Engine stopped ● Accelerator pedal: Fully depressed	1.95 - 2.40V

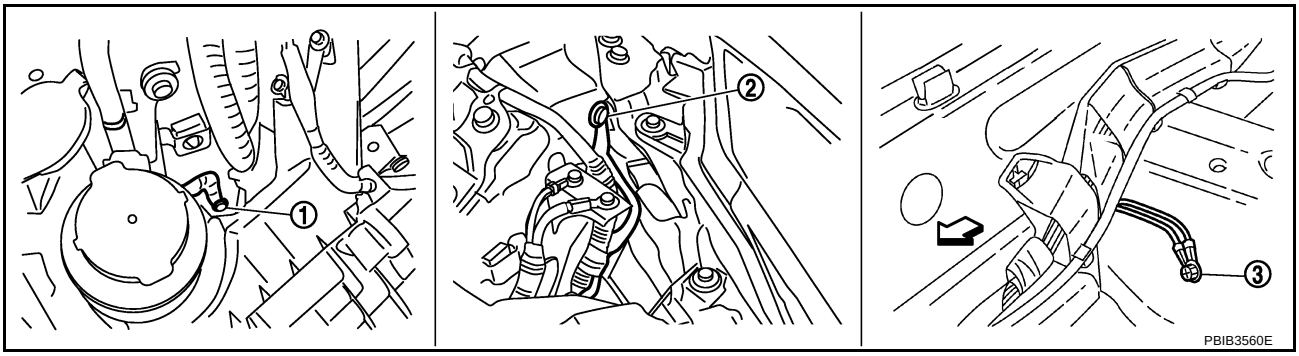
104	GY	Sensor ground (Accelerator pedal position sensor 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



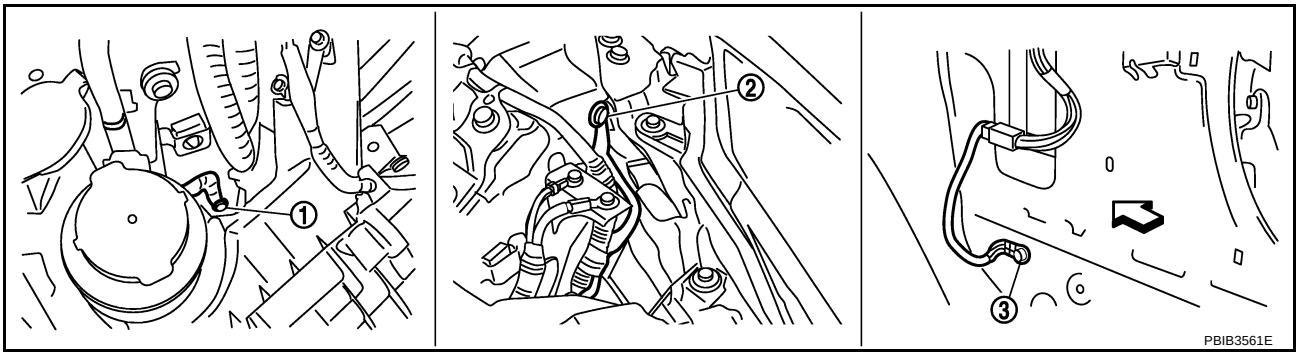
Diagnostic Procedure

NBS000GU

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



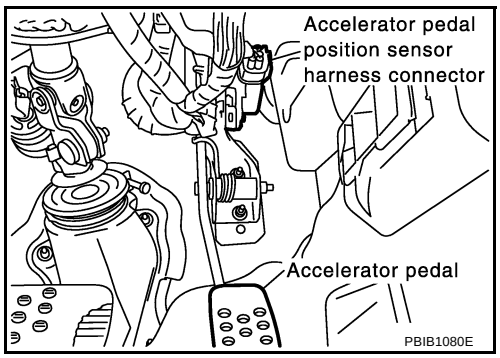
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

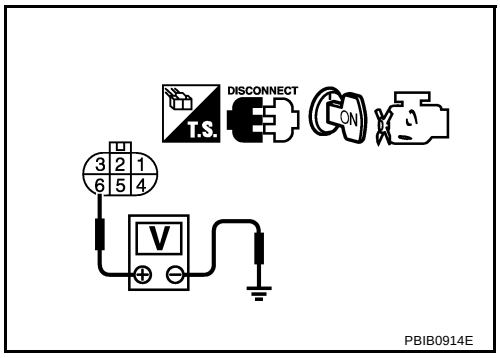
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.

3. Check voltage between APP sensor terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 3 and ECM terminal 100. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 97 and APP sensor terminal 5. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-658, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

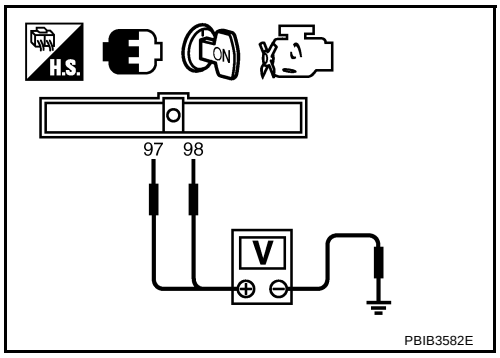
9. REPLACE ACCELERATOR PEDAL ASSEMBLY

1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .



>> **INSPECTION END**

Component Inspection

NBS000GV

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Check voltage between ECM terminals 97 (APP sensor 1 signal), 98 (APP sensor 2 signal) and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
97 (Accelerator pedal position sensor 1)	Fully released	0.5 - 1.0V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.15 - 0.60V
	Fully depressed	1.95 - 2.40V

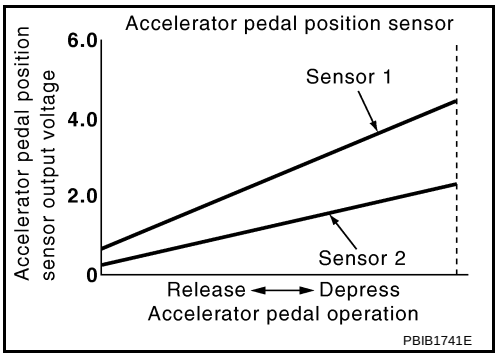
4. If NG, replace accelerator pedal assembly and go to next step.
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS000GW

ACCELERATOR PEDAL

Refer to ACC-3, "ACCELERATOR CONTROL SYSTEM" .



DTC P2127, P2128 APP SENSOR

PFP:18002

Component Description

NBS000GX

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-III Reference Value in Data Monitor Mode

NBS000GY

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.5 - 1.0V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN 2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.3 - 1.2V

2. Body ground E43
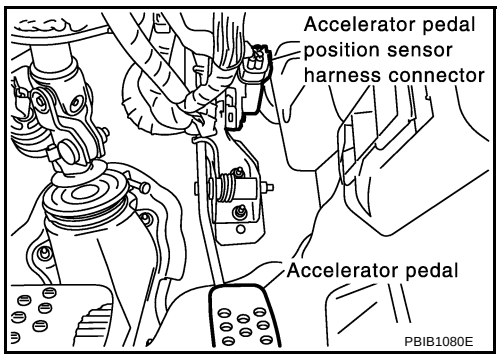
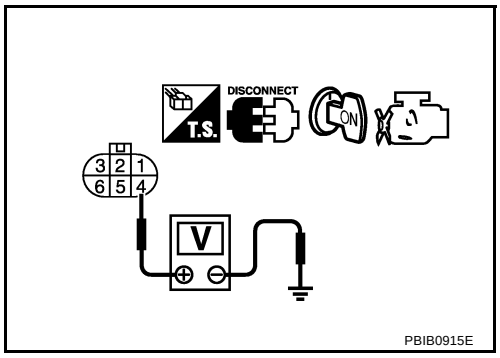
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.



2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT- I

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.

3. Check voltage between APP sensor terminal 4 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 7.
NG >> GO TO 3.

3. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 4 and ECM terminal 103. Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open between ECM and APP sensor

>> Repair open circuit.

5. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor terminal 1	EC-711

OK or NG

OK >> GO TO 6.
NG >> Repair short to ground or short to power in harness or connectors.

6. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- EVAP control system pressure sensor (Refer to EC-464, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 13.
NG >> Replace malfunctioning component.

7. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 1 and ECM terminal 104.
   Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 98 and APP sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 11.
NG >> GO TO 10.

10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

11. CHECK APP SENSOR

Refer to EC-658, "Component Inspection" .

OK or NG

OK >> GO TO 13.
NG >> GO TO 12.

12. REPLACE ACCELERATOR PEDAL ASSEMBLY

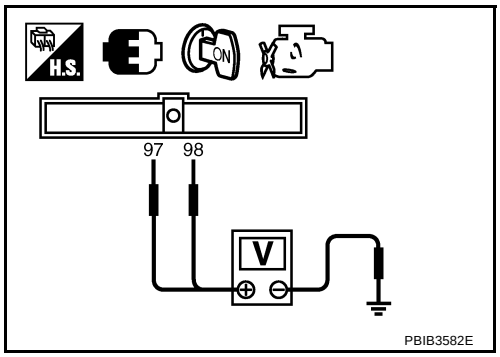
1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

13. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS000H3

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Check voltage between ECM terminals 97 (APP sensor 1 signal), 98 (APP sensor 2 signal) and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
97 (Accelerator pedal position sensor 1)	Fully released	0.5 - 1.0V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.15 - 0.60V
	Fully depressed	1.95 - 2.40V

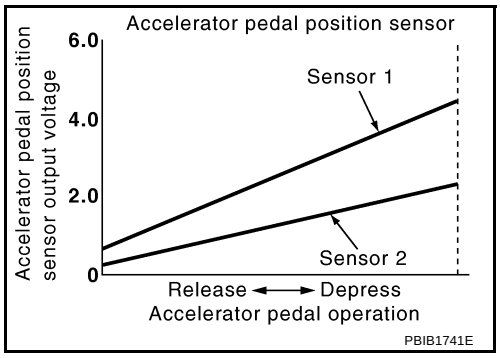
4. If NG, replace accelerator pedal assembly and go to next step.
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS000H4

ACCELERATOR PEDAL

Refer to ACC-3, "ACCELERATOR CONTROL SYSTEM" .



DTC P2138 APP SENSOR

PFP:18002

Component Description

NBS000HD

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-III Reference Value in Data Monitor Mode

NBS000HE

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN 1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.5 - 1.0V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN 2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.3 - 1.2V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

NBS000HF

This self-diagnosis has the one trip detection logic.

NOTE:
If DTC P2138 is displayed with DTC P0643, first perform the trouble diagnosis for DTC P0643.
Refer to EC-514, "DTC P0643 SENSOR POWER SUPPLY" .

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2138 2138	Accelerator pedal position sensor circuit range/performance	Rationally incorrect voltage is sent to ECM compared with the signals from APP sensor 1 and APP sensor 2.	● Harness or connector (The APP sensor 1 and 2 circuit is open or shorted.) Harness or connectors (APP sensor 2 dircuit is open or shorted.) [CKP sensor (POS) circuit is open or shorted.] [CMP sensor (PHASE) (bank 2) circuit is shorted.] [EVT control position sensor (bank 2) circuit is shorted.] (EVAP control system pressure sensor circuit is shorted.) (Refrigerant pressure sensor circuit is shorted.) ● Accelerator pedal position sensor (APP sensor 1 and 2) ● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) (bank 2) ● Exhaust valve timing control position sensor (bank 2) ● EVAP control system pressure sensor ● Refrigerant pressure sensor

FAIL-SAFE MODE

When the malfunction is detected, ECM enters fail-safe mode and the MIL lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

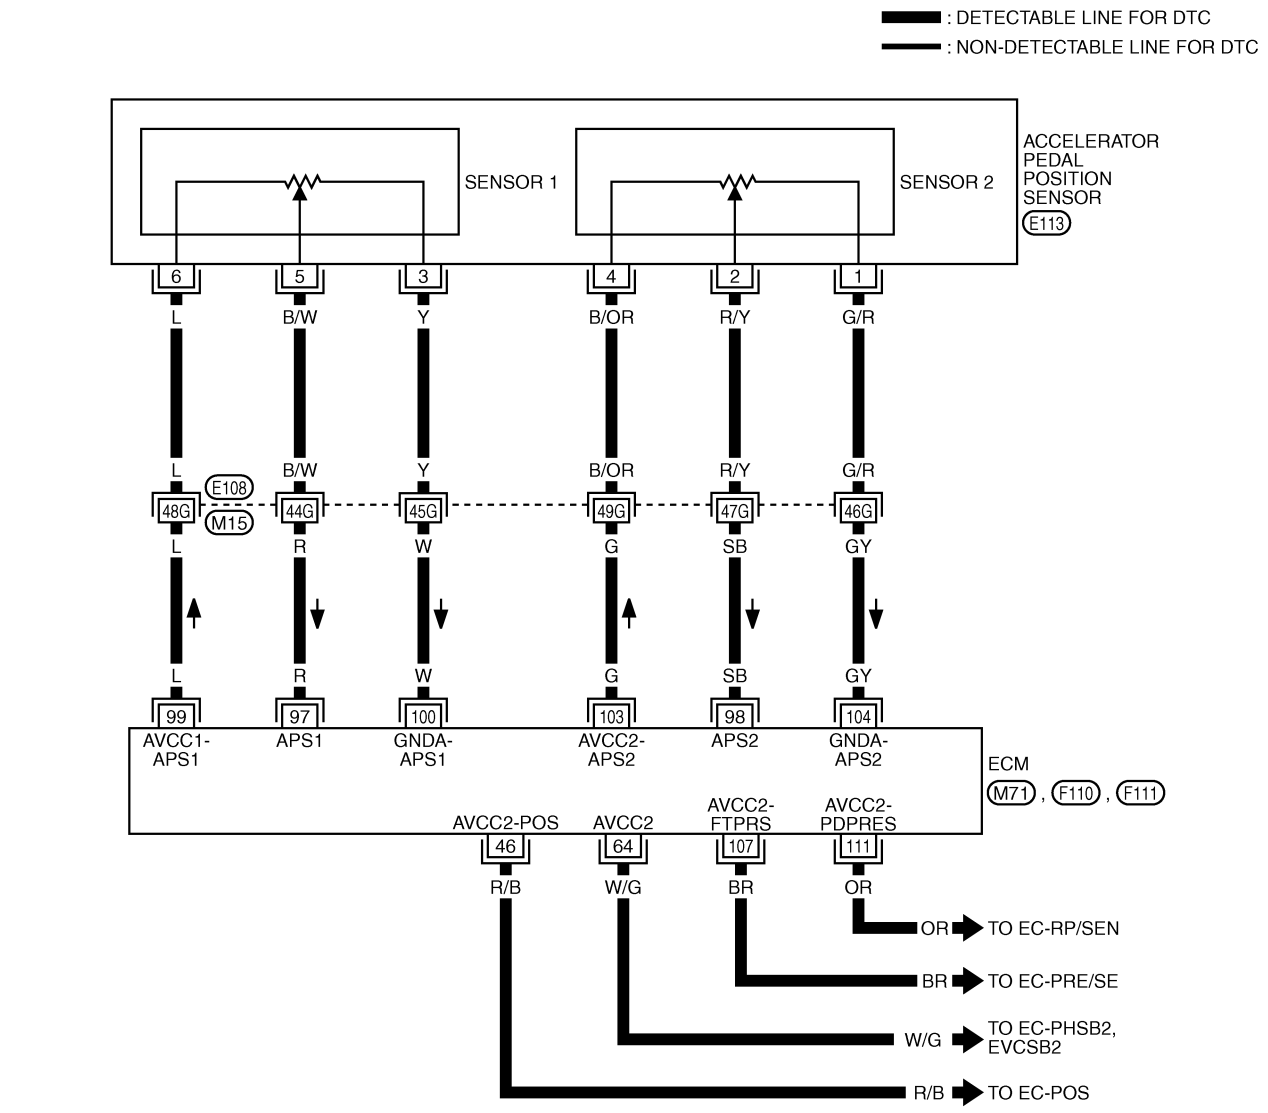
NBS000HG

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

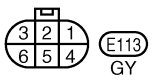
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V at idle.

WITH CONSULT-III

1. Start engine and let it idle for 1 second.
2. Check DTC.
3. If DTC is detected, go to EC-654, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III” above.

Wiring Diagram

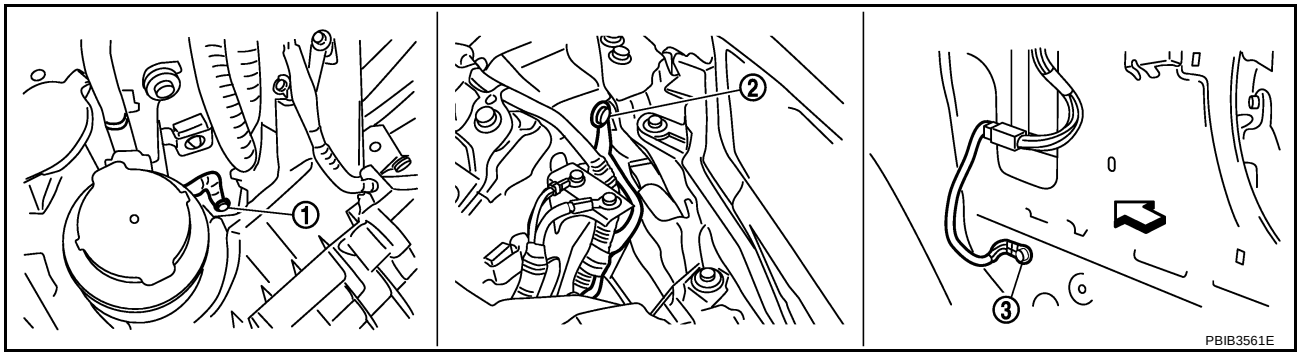
Diagnostic Procedure

NBS000HI

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



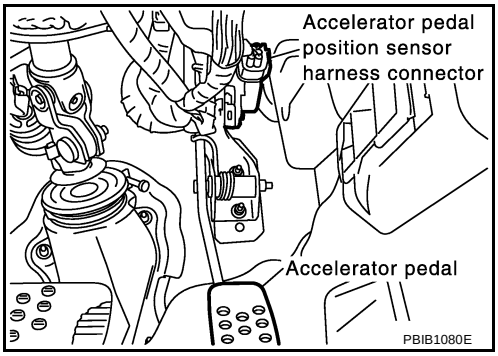
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



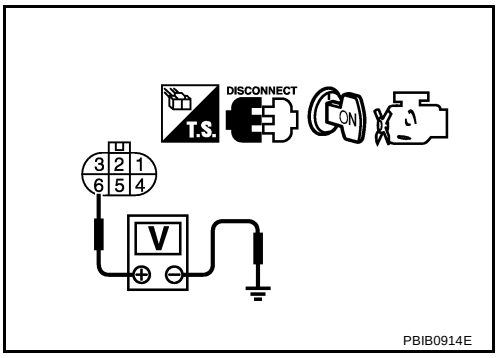
⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 6 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

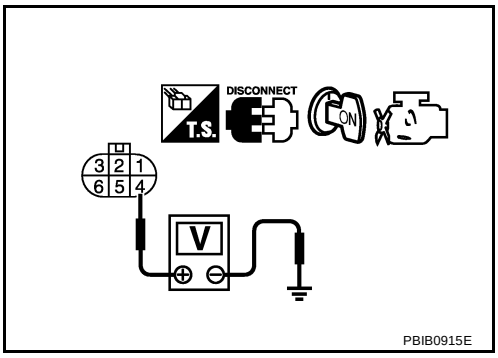
OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.



4. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-I

Check voltage between APP sensor terminal 4 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 9.
NG >> GO TO 5.

5. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between APP sensor terminal 4 and ECM terminal 103.
   Refer to Wiring Diagram.

Continuity should exist.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open between ECM and APP sensor

>> Repair open circuit.

7. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT-III

Check harness for short to power and short to ground, between the following terminals.

ECM terminal	Sensor terminal	Reference Wiring Diagram
46	CKP sensor (POS) terminal 1	EC-388
64	CMP sensor (PHASE) (bank 2) terminal 1	EC-399
	EVT control position sensor (bank 2) terminal 1	EC-532
103	APP sensor terminal 4	EC-643
107	EVAP control system pressure sensor terminal 3	EC-458
111	Refrigerant pressure sensor terminal 1	EC-711

OK or NG

OK >> GO TO 8.
NG >> Repair short to ground or short to power in harness or connectors.

8. CHECK COMPONENTS

Check the following.

- Crankshaft position sensor (POS) (Refer to EC-393, "Component Inspection" .)
- Camshaft position sensor (PHASE) (bank 2) (Refer to EC-405, "Component Inspection" .)
- Exhaust valve timing control position sensor (bank 2) (Refer to EC-539, "Component Inspection" .)
- EVAP control system pressure sensor (Refer to EC-464, "Component Inspection" .)
- Refrigerant pressure sensor (Refer to ATC-80, "COMPONENT INSPECTION" .)

OK or NG

OK >> GO TO 15.
NG >> Replace malfunctioning component.

9. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between the following;
   APP sensor terminal 3 and ECM terminal 100.
   APP sensor terminal 1 and ECM terminal 104,
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 11.
NG >> GO TO 10.

10. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

11. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between the following;
   ECM terminal 97 and APP sensor terminal 5,
   ECM terminal 98 and APP sensor terminal 2.
   Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 13.
NG >> GO TO 12.

12. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and APP sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

13. CHECK APP SENSOR

Refer to EC-658, "Component Inspection" .

OK or NG

OK >> GO TO 15.
NG >> GO TO 14.

14. REPLACE ACCELERATOR PEDAL ASSEMBLY

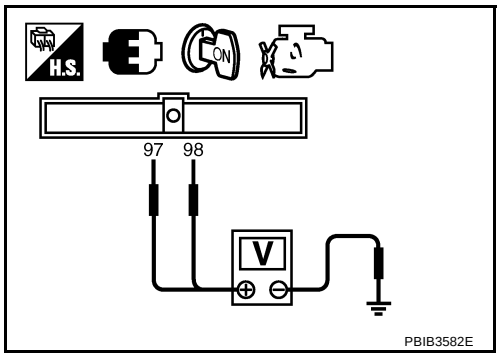
1. Replace accelerator pedal assembly.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .
3. Perform EC-77, "Throttle Valve Closed Position Learning" .
4. Perform EC-77, "Idle Air Volume Learning" .

>> **INSPECTION END**

15. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS000HJ

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
3. Check voltage between ECM terminals 97 (APP sensor 1 signal), 98 (APP sensor 2 signal) and ground under the following conditions.

Terminal	Accelerator pedal	Voltage
97 (Accelerator pedal position sensor 1)	Fully released	0.5 - 1.0V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.15 - 0.60V
	Fully depressed	1.95 - 2.40V

4. If NG, replace accelerator pedal assembly and go to next step.
5. Perform EC-77, "Accelerator Pedal Released Position Learning" .
6. Perform EC-77, "Throttle Valve Closed Position Learning" .
7. Perform EC-77, "Idle Air Volume Learning" .

Removal and Installation

NBS000HK

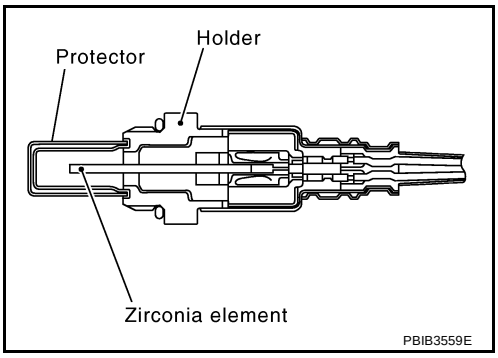
ACCELERATOR PEDAL

Refer to ACC-3, "ACCELERATOR CONTROL SYSTEM" .

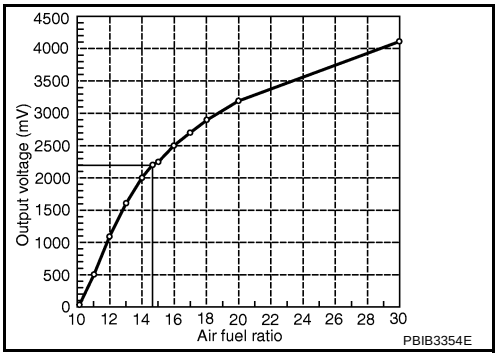
DTC P2A00, P2A03 A/F SENSOR 1

PFP:22693

Component Description



NBS006V7



The air fuel ratio (A/F) sensor 1 is a planar one-cell limit current sensor. The sensor element of the A/F sensor 1 is composed an electrode layer, which transports ions. It has a heater in the element.

The sensor is capable of precise measurement $\lambda = 1$, but also in the lean and rich range. Together with its control electronics, the sensor outputs a clear, continuous signal throughout a wide λ range.

The exhaust gas components diffuse through the diffusion layer at the sensor cell. An electrode layer is applied voltage, and this current relative oxygen density in lean. Also this current relative hydrocarbon density in rich.

Therefore, the A/F sensor 1 is able to indicate air fuel ratio by this electrode layer of current. In addition, a heater is integrated in the sensor to ensure the required operating temperature of about 800°C (1,472°F).

CONSULT-III Reference Value in Data Monitor Mode

NBS000EF

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
A/F SEN1 (B1) A/F SEN1 (B2)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	Fluctuates around 2.2V

On Board Diagnosis Logic

NBS000EG

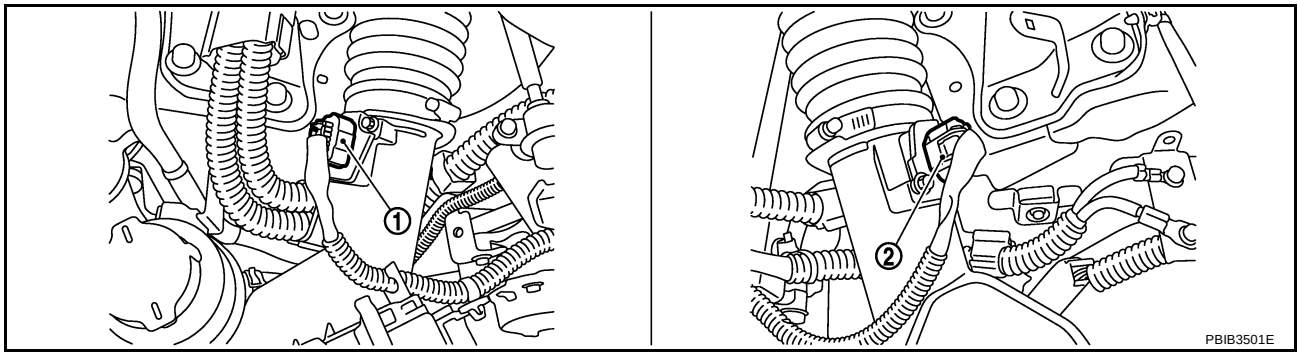
To judge the malfunction, the A/F signal computed by ECM from the A/F sensor 1 signal is monitored not to be shifted to LEAN side or RICH side.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible Cause
P2A00 2A00 (Bank 1) P2A03 2A03 (Bank 2)	Air fuel ratio (A/F) sensor 1 circuit range/performance	● The output voltage computed by ECM from the A/F sensor 1 signal is shifted to the lean side for a specified period. ● The output voltage computed by ECM from the A/F sensor 1 signal is shifted to the rich side for a specified period.	● Air fuel ratio (A/F) sensor 1 ● Air fuel ratio (A/F) sensor 1 heater ● Fuel pressure ● Fuel injector ● Intake air leaks

DTC Confirmation Procedure

NBS000EH

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.



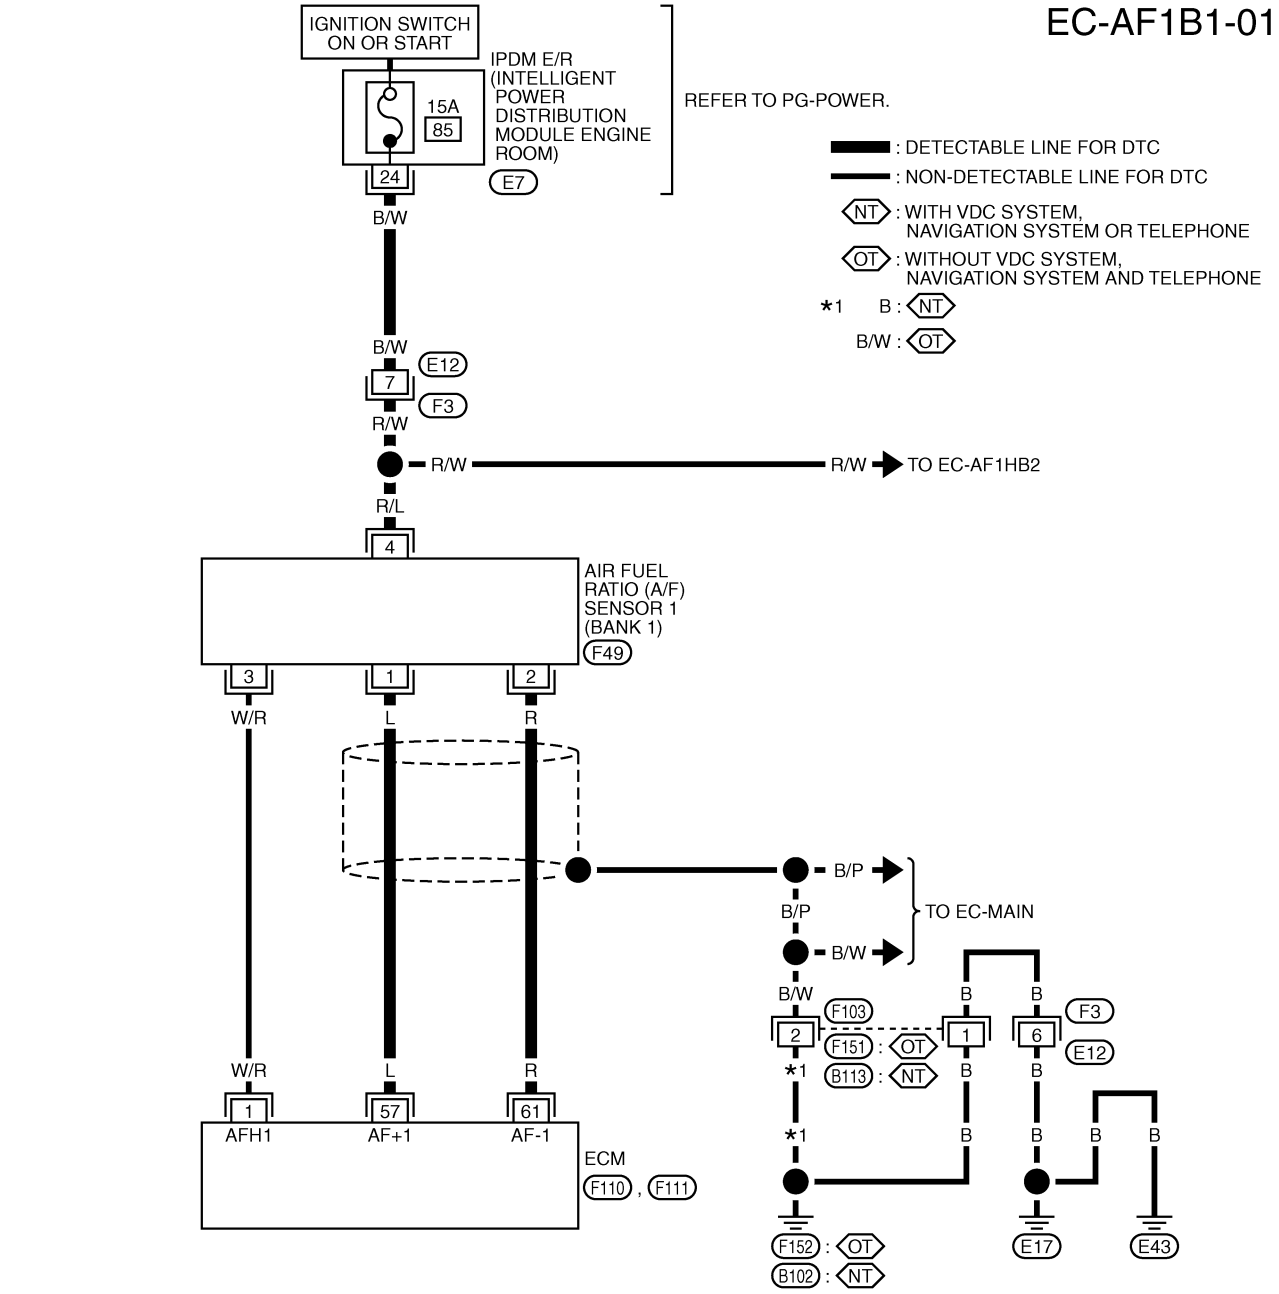
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

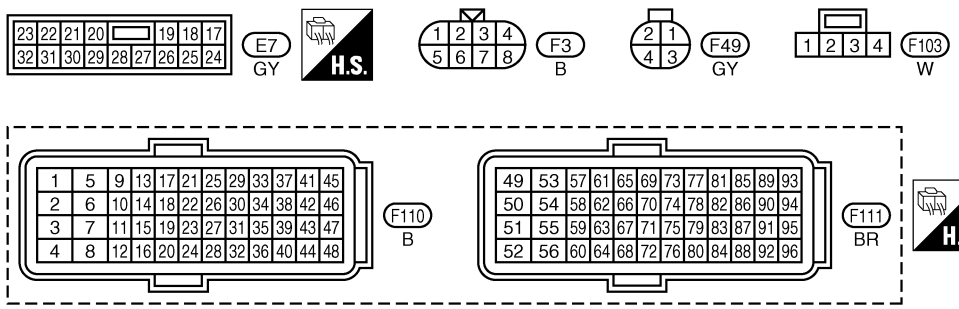
WITH CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
4. Clear the self-learning coefficient by touching “CLEAR”.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for 1 minute under no load.
7. Let engine idle for 1 minute.
8. Keep engine speed between 2,500 and 3,000 rpm for 20 minutes.
9. Check 1st trip DTC.
10. If 1st trip DTC is detected, go to EC-665, "Diagnostic Procedure" .

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Disconnect mass air flow sensor (bank 1) harness connector.





1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Start engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Select Service $03 with GST and make sure that DTC P0102 is detected.
7. Select Service $04 with GST and erase the DTC P0102.
8. Start engine and keep the engine speed between 3,500 and 4,000 rpm for 1 minute under no load.
9. Let engine idle for 1 minute.
10. Keep engine speed between 2,500 and 3,000 rpm for 20 minutes.
11. Select Service $07 with GST.
    If 1st trip DTC is detected, go to EC-665, "Diagnostic Procedure" .

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

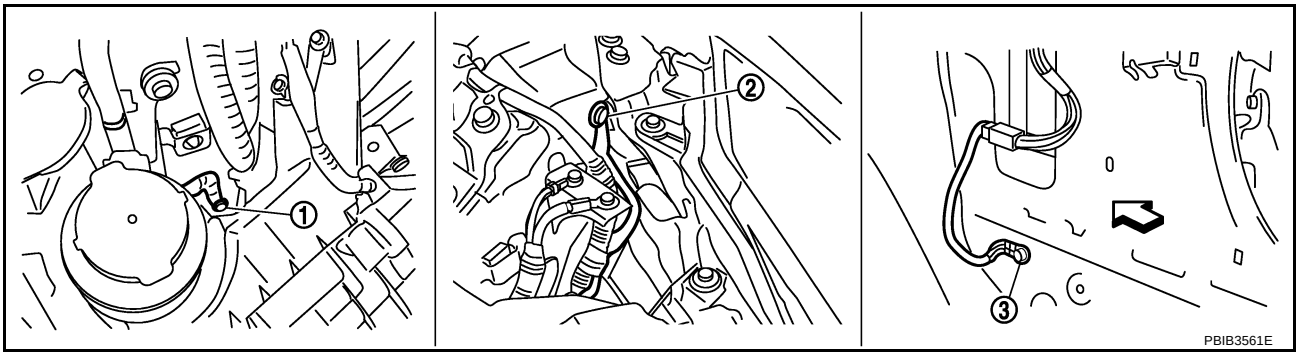
Diagnostic Procedure

NBS001NX

1. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



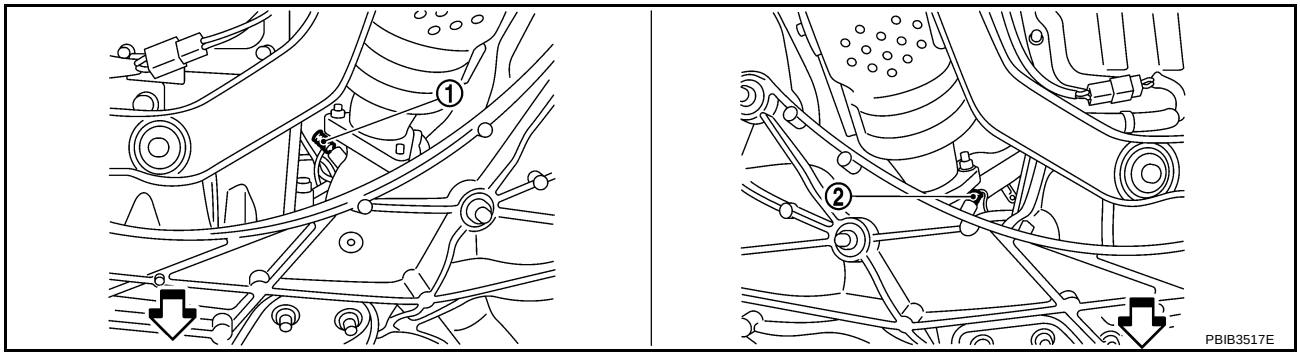
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn ignition switch OFF.
2. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 2.
NG >> Repair or replace ground connections.

2. RETIGHTEN AIR FUEL RATIO SENSOR 1

1. Loosen and retighten the air fuel ratio (A/F) sensor 1.

1. A/F sensor 1 (bank1)
2. A/F sensor 1 (bank 2)

⇦: Vehicle front

Tightening torque: 50 N-m (5.1 kg-m, 37 ft-lb)

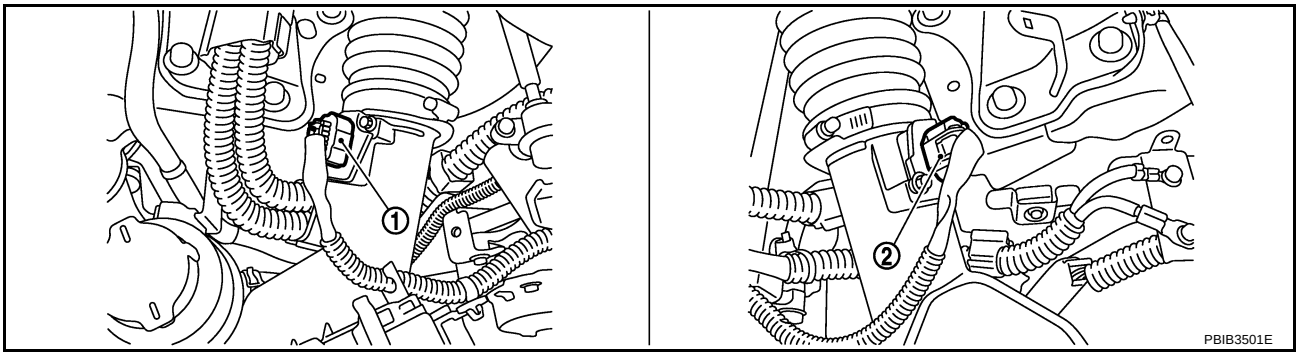
>> GO TO 3.

3. CHECK FOR INTAKE AIR LEAK

1. Start engine and run it at idle.
2. Listen for an intake air leak after the mass air flow sensor.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace.



4. CLEAR THE SELF-LEARNING DATA

With CONSULT-III

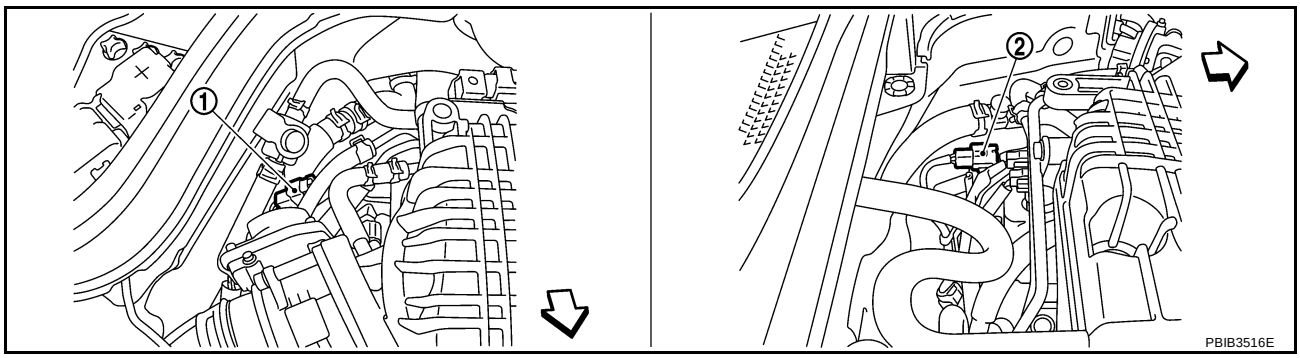
1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
   Is it difficult to start engine?

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Make sure DTC P0102 is displayed.
7. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
8. Make sure DTC P0000 is displayed.
9. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171, P0172, P0174 or P0175 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171, P0174 or P0172, P0175. Refer to EC-324, "DTC P0171, P0174 FUEL INJECTION SYSTEM FUNCTION" or EC-334, "DTC P0172, P0175 FUEL INJECTION SYSTEM FUNCTION" .

No >> GO TO 5.

5. CHECK HARNESS CONNECTOR

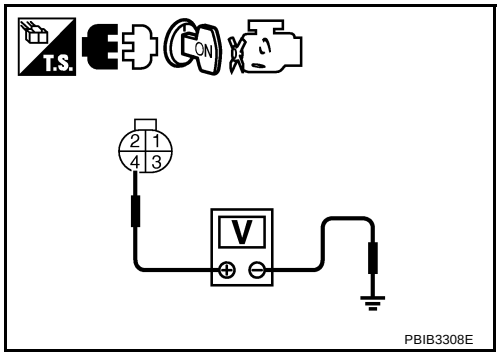
1. Turn ignition switch OFF.
2. Disconnect A/F sensor 1 harness connector.

1. A/F sensor 1 (bank 1) harness connector
2. A/F sensor 1 (bank 2) harness connector

⇦: Vehicle front

3. Check harness connector for water.

Water should not exit.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness connector.

6. CHECK A/F SENSOR 1 POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between A/F sensor 1 terminal 4 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- IPDM E/R harness connector E7
- 15A fuse
- Harness for open or short between A/F sensor 1 and fuse

>> Repair or replace harness or connectors.

8. CHECK A/F SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between the following terminals.
   Refer to Wiring Diagram.

	A/F sensor 1 terminal	ECM terminal
Bank1	1	57
	2	61
Bank 2	1	65
	2	66

Continuity should exist.

4. Check harness continuity between the following terminals and ground.
   Refer to Wiring Diagram.

Bank 1		Bank 2	
A/F sensor 1 terminal	ECM terminal	A/F sensor 1 terminal	ECM terminal
1	57	1	65
2	61	2	66

Continuity should not exist.

5. Also check harness for short to power.

OK or NG

OK >> GO TO 9.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK AIR FUEL RATIO (A/F) SENSOR 1 HEATER

Refer to EC-172, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 11.

10. CHECK INTERMITTENT INCIDENT

Perform EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 11.
NG >> Repair or replace.

11. REPLACE AIR FUEL RATIO (A/F) SENSOR 1

Replace malfunctioning A/F sensor 1.

CAUTION:

- **Discard any A/F sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new A/F sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

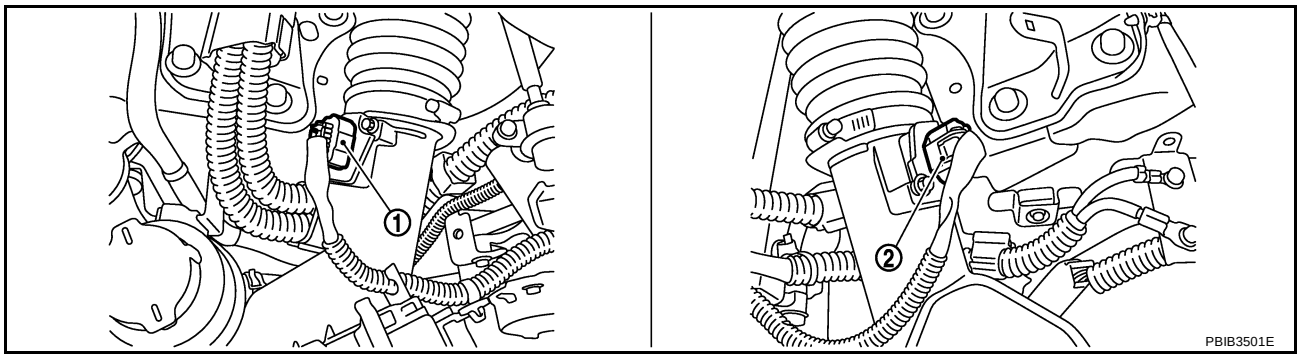
>> GO TO 12.

12. CONFIRM A/F ADJUSTMENT DATA

1. Turn ignition switch ON.
2. Select “A/F ADJ-B1” and “A/F ADJ-B2” in “DATA MONITOR” mode with CONSULT-III.
3. Make sure that “0.000” is displayed on CONSULT-III screen.

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 13.



13. CLEAR THE SELF-LEARNING DATA.

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-III.
3. Clear the self-learning control coefficient by touching “CLEAR”.

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect mass air flow sensor (bank 1) harness connector.

1. Mass air flow sensor (with intake air temperature sensor) (bank 1)
2. Mass air flow sensor (with intake air temperature sensor) (bank 2)

4. Restart engine and let it idle for at least 5 seconds.
5. Stop engine and reconnect mass air flow sensor (bank 1) harness connector.
6. Make sure DTC P0102 is displayed.
7. Erase the DTC memory. Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
8. Make sure DTC P0000 is displayed.

>> GO TO 14.

14. CONFIRM A/F ADJUSTMENT DATA

1. Turn ignition switch OFF and then ON.
2. Select “A/F ADJ-B1” and “A/F ADJ-B2” in “DATA MONITOR” mode with CONSULT-III.
3. Make sure that “0.000” is displayed on CONSULT-III screen.

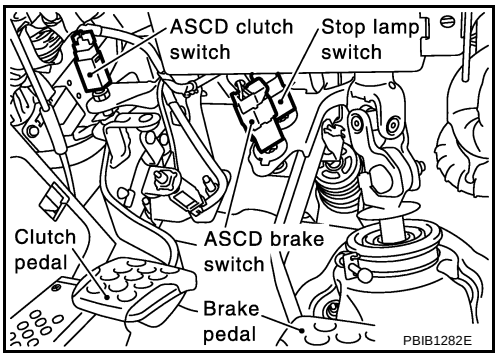
>> **INSPECTION END**

Removal and Installation

NBS000EK

AIR FUEL RATIO (A/F) SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .



ASCD BRAKE SWITCH

PFP:25320

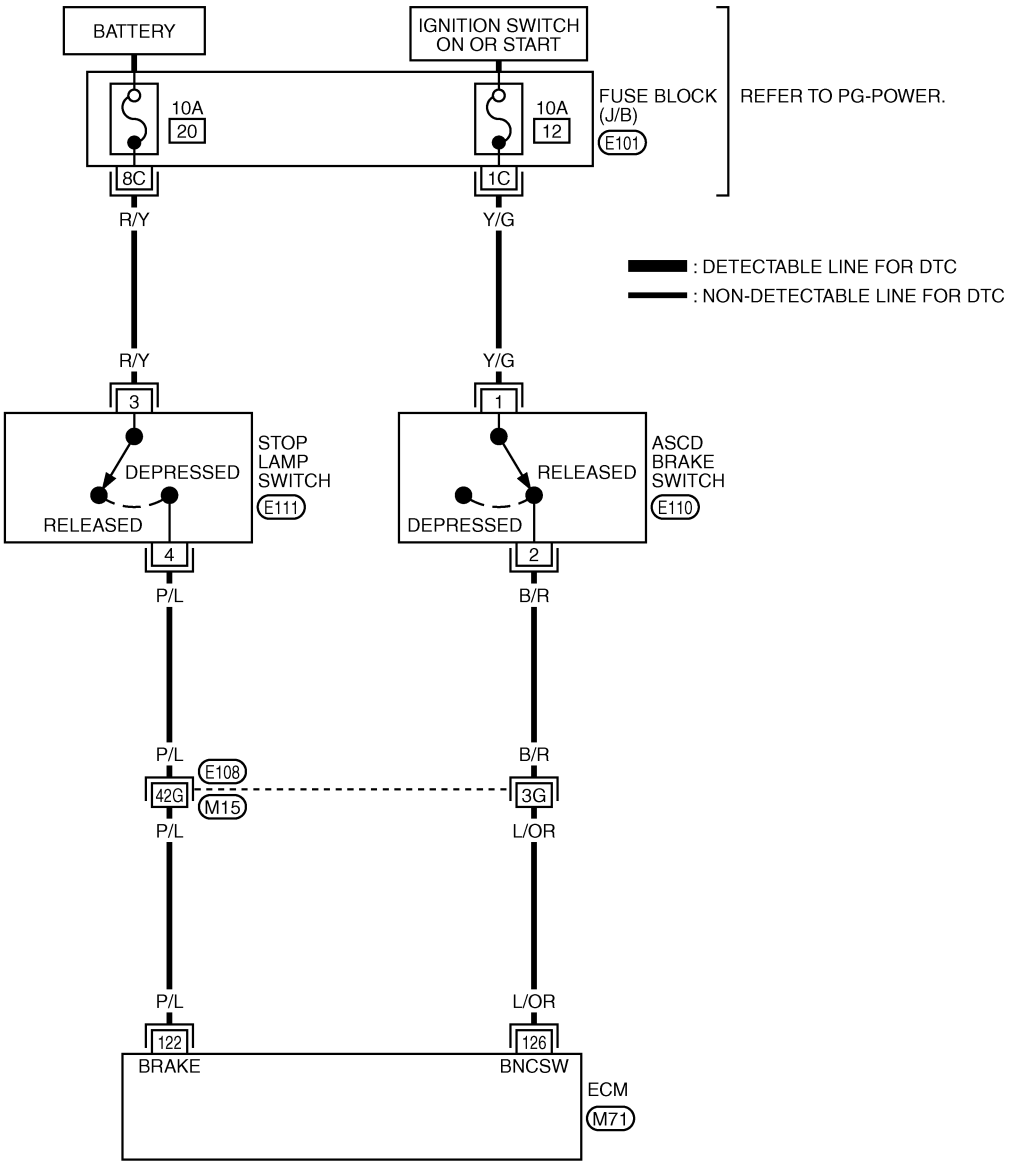
Component Description

NBS000I9

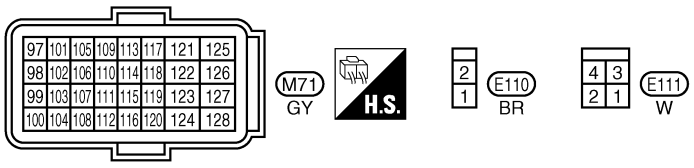
When the brake pedal is depressed, ASCD brake switch is turned OFF and stop lamp switch is turned ON. ECM detects the state of the brake pedal by this input of two kinds (ON/OFF signal).
Refer to EC-30, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-III Reference Value in Data Monitor Mode

NBS000IA



Specification data are reference values.



MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW1 (ASCD brake switch)	● Ignition switch: ON	● Brake pedal: Fully released (A/T) ● Brake pedal and clutch pedal: Fully released (M/T)	ON
		● Brake pedal: Slightly depressed (A/T) ● Brake pedal and/or clutch pedal: Slightly depressed (M/T)	OFF
BRAKE SW2 (Stop lamp switch)	● Ignition switch: ON	Brake pedal: Fully released	OFF

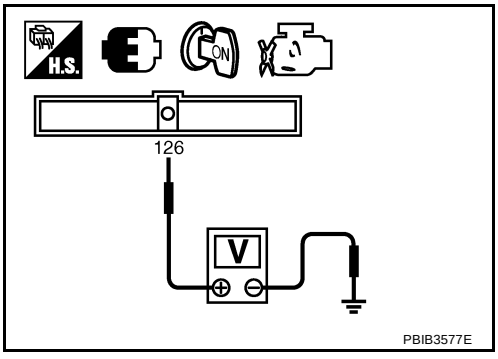
1. CHECK OVERALL FUNCTION-I

With CONSULT-III



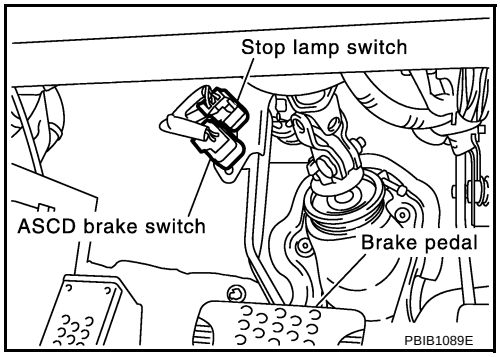
1. Turn ignition switch ON.
2. Select “BRAKE SW1” in “DATA MONITOR” mode with CONSULT-III.
3. Check “BRAKE SW1” indication under the following conditions.

CONDITION	INDICATION
Brake pedal: Slightly depressed	OFF
Brake pedal: Fully released	ON

Without CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 126 and ground under the following conditions.

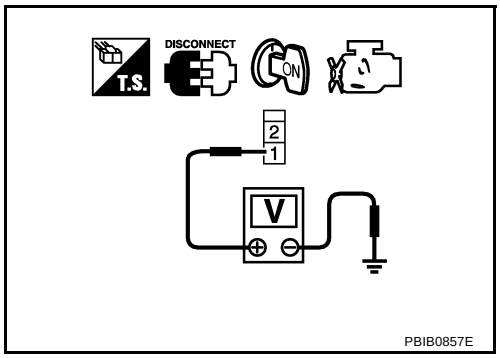
CONDITION	VOLTAGE
Brake pedal: Slightly depressed	Approximately 0V
Brake pedal: Fully released	Battery voltage



OK or NG

OK >> **INSPECTION END**

NG >> GO TO 2.



2. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 126 and ASCD brake switch terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and ASCD brake switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK ASCD BRAKE SWITCH

Refer to EC-680, "Component Inspection"

OK or NG

OK >> GO TO 7.
NG >> Replace ASCD brake switch.

7. CHECK INTERMITTENT INCIDENT

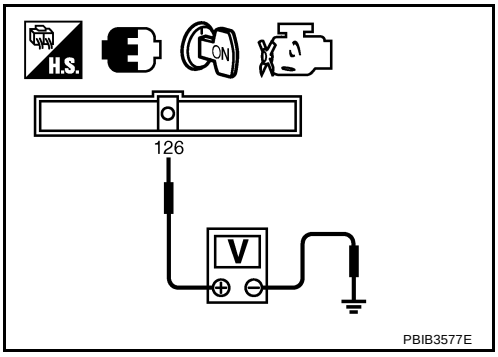
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

M/T MODELS

1. CHECK OVERALL FUNCTION-I

With CONSULT-III



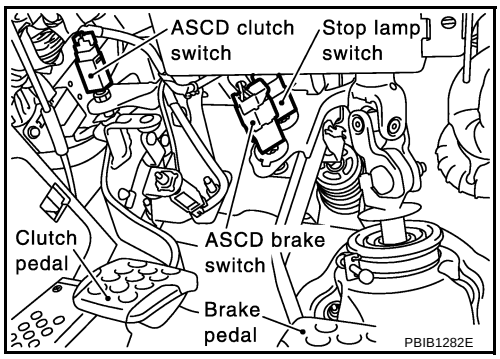
1. Turn ignition switch ON.
2. Select “BRAKE SW1” in “DATA MONITOR” mode with CONSULT-III.
3. Check “BRAKE SW1” indication under the following conditions.

CONDITION	INDICATION
Brake pedal and/or clutch pedal: Slightly depressed	OFF
Brake pedal and clutch pedal: Fully released	ON

Without CONSULT-III

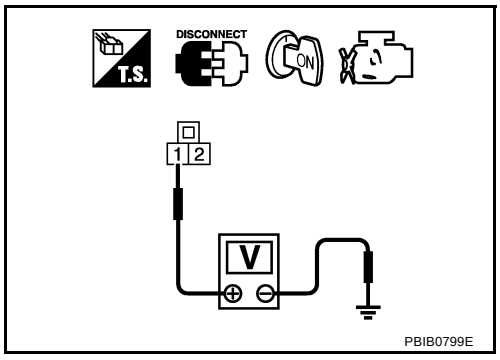
1. Turn ignition switch ON.
2. Check voltage between ECM terminal 126 and ground under the following conditions.

CONDITION	VOLTAGE
Brake pedal and/or clutch pedal: Slightly depressed	Approximately 0V
Brake pedal and clutch pedal: Fully released	Battery voltage



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

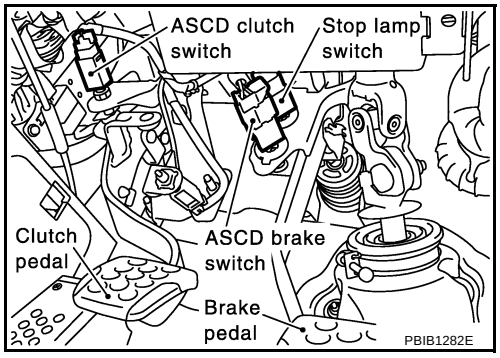


2. CHECK ASCD BRAKE SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD clutch switch harness connector.
3. Turn ignition switch ON.

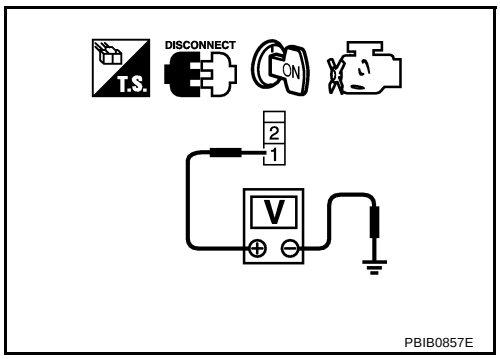
4. Check voltage between ASCD clutch switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 7.
NG >> GO TO 3.



3. CHECK ASCD BRAKE SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Turn ignition switch ON.

4. Check voltage between ASCD brake switch terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Fuse block (J/B) connector E101
- 10A fuse
- Harness for open or short between ASCD brake switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK ASCD BRAKE SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ASCD brake switch terminal 2 and ASCD clutch switch terminal 1. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK ASCD BRAKE SWITCH

Refer to EC-680, "Component Inspection"

OK or NG

OK >> GO TO 10.
NG >> Replace ASCD brake switch.

7. CHECK ASCD CLUTCH SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ASCD clutch switch terminal 2 and ECM terminal 126. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E108, M15
- Harness for open or short between ECM and ASCD clutch switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK ASCD CLUTCH SWITCH

Refer to EC-680, "Component Inspection" .

OK or NG

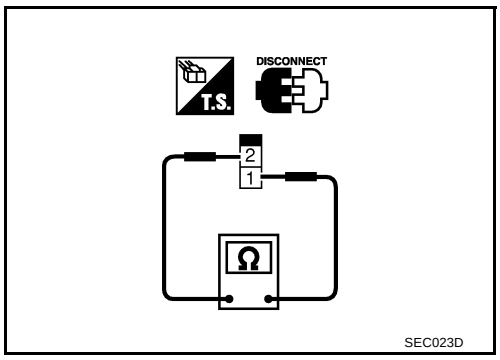
OK >> GO TO 10.
NG >> Replace ASCD clutch switch.

10. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection



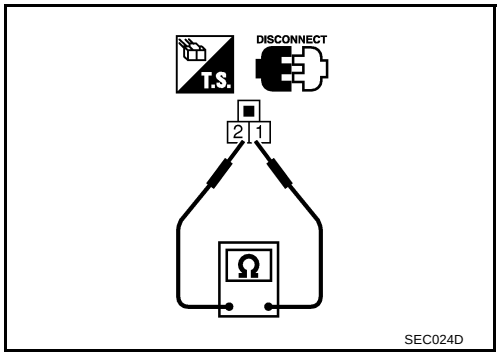
NBS000ID

ASCD BRAKE SWITCH

1. Turn ignition switch OFF.
2. Disconnect ASCD brake switch harness connector.
3. Check continuity between ASCD brake switch terminals 1 and 2 under the following conditions.

Condition	Continuity
Brake pedal: Fully released	Should exist
Brake pedal: Slightly depressed	Should not exist

If NG, adjust ASCD brake switch installation, refer to BR-7, "BRAKE PEDAL" , and perform step 3 again.



ASCD CLUTCH SWITCH (M/T MODELS)

1. Turn ignition switch OFF.
2. Disconnect ASCD clutch switch harness connector.
3. Check continuity between ASCD clutch switch terminals 1 and 2 under the following conditions.

Condition	Continuity
Clutch pedal: Fully released	Should exist
Clutch pedal: Slightly depressed	Should not exist

If NG, adjust ASCD clutch switch installation, refer to CL-5, "CLUTCH PEDAL" , and perform step 3 again.

ASCD INDICATOR

PFP:24814

Component Description

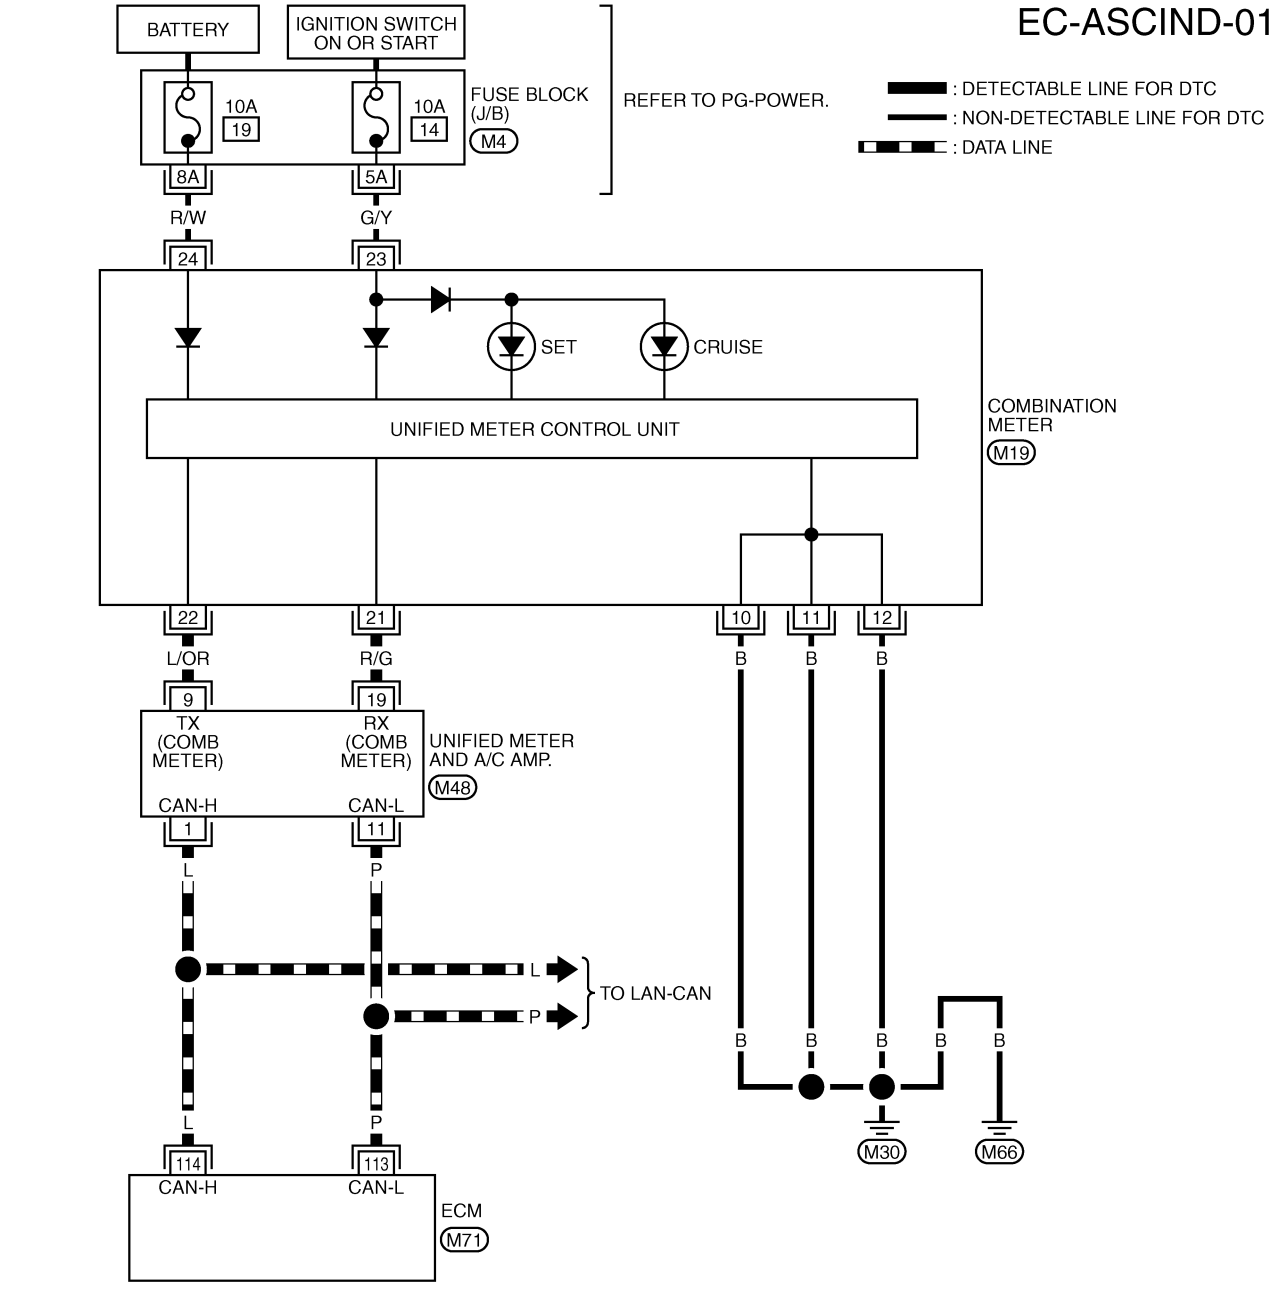
NBS000IE

ASCD indicator lamp illuminates to indicate ASCD operation status. Lamp has two indicators, CRUISE, SET, and is integrated in combination meter.
CRUISE indicator illuminates when MAIN switch on ASCD steering switch is turned ON to indicated that ASCD system is ready for operation.
SET indicator illuminates when following conditions are met.

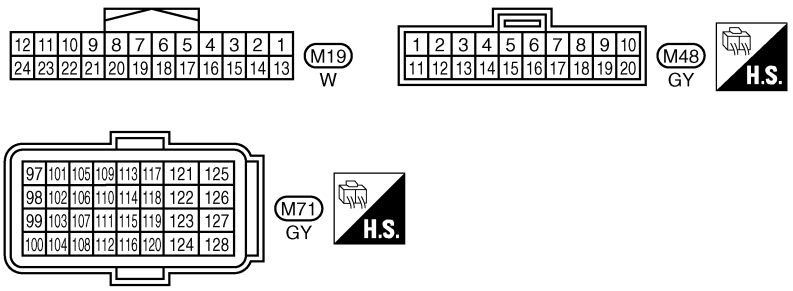
- CRUISE indicator is illuminated.
- SET/COAST switch on ASCD steering switch is turned ON while vehicle speed is within the range of ASCD setting.

SET indicator remains lit during ASCD control.
Refer to EC-30, "AUTOMATIC SPEED CONTROL DEVICE (ASCD)" for the ASCD function.

CONSULT-III Reference Value in Data Monitor Mode



NBS000IF



Specification data are reference value.

MONITOR ITEM	CONDITION		SPECIFICATION
CRUISE LAMP	● Ignition switch: ON	MAIN switch: Pressed at the 1st time → at the 2nd time	ON → OFF
SET LAMP	● MAIN switch: ON	ASCD: Operating	ON
	● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89MPH)	ASCD: Not operating	OFF

Wiring Diagram

NBS000IG

REFER TO THE FOLLOWING.
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1677E

Diagnostic Procedure

NBS000IH

1. CHECK OVERALL FUNCTION

Check ASCD indicator under the following conditions.

ASCD INDICATOR	CONDITION		SPECIFICATION
CRUISE LAMP	● Ignition switch: ON	● MAIN switch: Pressed at the 1st time → at the 2nd time	ON → OFF
SET LAMP	● MAIN switch: ON ● When vehicle speed is between 40 km/h (25 MPH) and 144 km/h (89 MPH)	ASCD: Operating	ON
		ASCD: Not operating	OFF

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

2. CHECK DTC

Check that DTC U1000 or U1001 is not displayed.

OK or NG

OK >> GO TO 3.
NG >> Perform trouble diagnoses for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

3. CHECK DTC WITH “UNIFIED METER AND A/C AMP.”

Refer to DI-47, "SELF-DIAGNOSTIC RESULTS" .

OK or NG

OK >> GO TO 4.
NG >> Go to DI-52, "DTC [B2202] Meter Communication Circuit" .

4. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

ELECTRICAL LOAD SIGNAL

PFP:25350

Description

NBS000I6

The electrical load signal (Headlamp switch signal, rear window defogger switch signal, etc.) is transferred through the CAN communication line from BCM to ECM via IPDM E/R.

CONSULT-III Reference Value in Data Monitor Mode

NBS000I7

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch: ON and/or lighting switch: 2nd position	ON
		Rear window defogger switch and lighting switch: OFF	OFF
HEATER FAN SW	● Engine: After warming up, idle the engine	Heater fan switch: ON	ON
		Heater fan switch: OFF	OFF

Diagnostic Procedure

NBS000I8

1. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-I

1. Turn ignition switch ON.
2. Connect CONSULT-III and select “DATA MONITOR” mode.
3. Select “LOAD SIGNAL” and check indication under the following conditions.

Condition	Indication
Rear window defogger switch: ON	ON
Rear window defogger switch: OFF	OFF

OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II

Check “LOAD SIGNAL” indication under the following conditions.

Condition	Indication
Lighting switch: ON at 2nd position	ON
Lighting switch: OFF	OFF

OK or NG

OK >> GO TO 3.
NG >> GO TO 5.

3. CHECK HEATER FAN SIGNAL CIRCUIT OVERALL FUNCTION

With CONSULT-III

Check “HEATER FAN SW” in “DATA MONITOR” mode with CONSULT-III under the following conditions.

Condition	Indication
Heater fan: Operating	ON
Heater fan: Not operating	OFF

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 6.

4. CHECK REAR WINDOW DEFOGGER SYSTEM

Refer to GW-56, "REAR WINDOW DEFOGGER" .

>> **INSPECTION END**

5. CHECK HEADLAMP SYSTEM

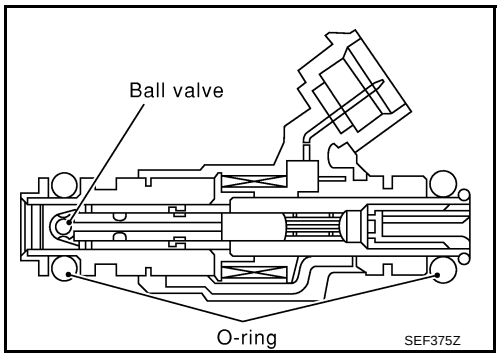
Refer to LT-5, "HEADLAMP (FOR USA)" or LT-32, "HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -" .

>> **INSPECTION END**

6. CHECK HEATER FAN CONTROL SYSTEM

Refer to ATC-33, "TROUBLE DIAGNOSIS" .

>> **INSPECTION END**



FUEL INJECTOR

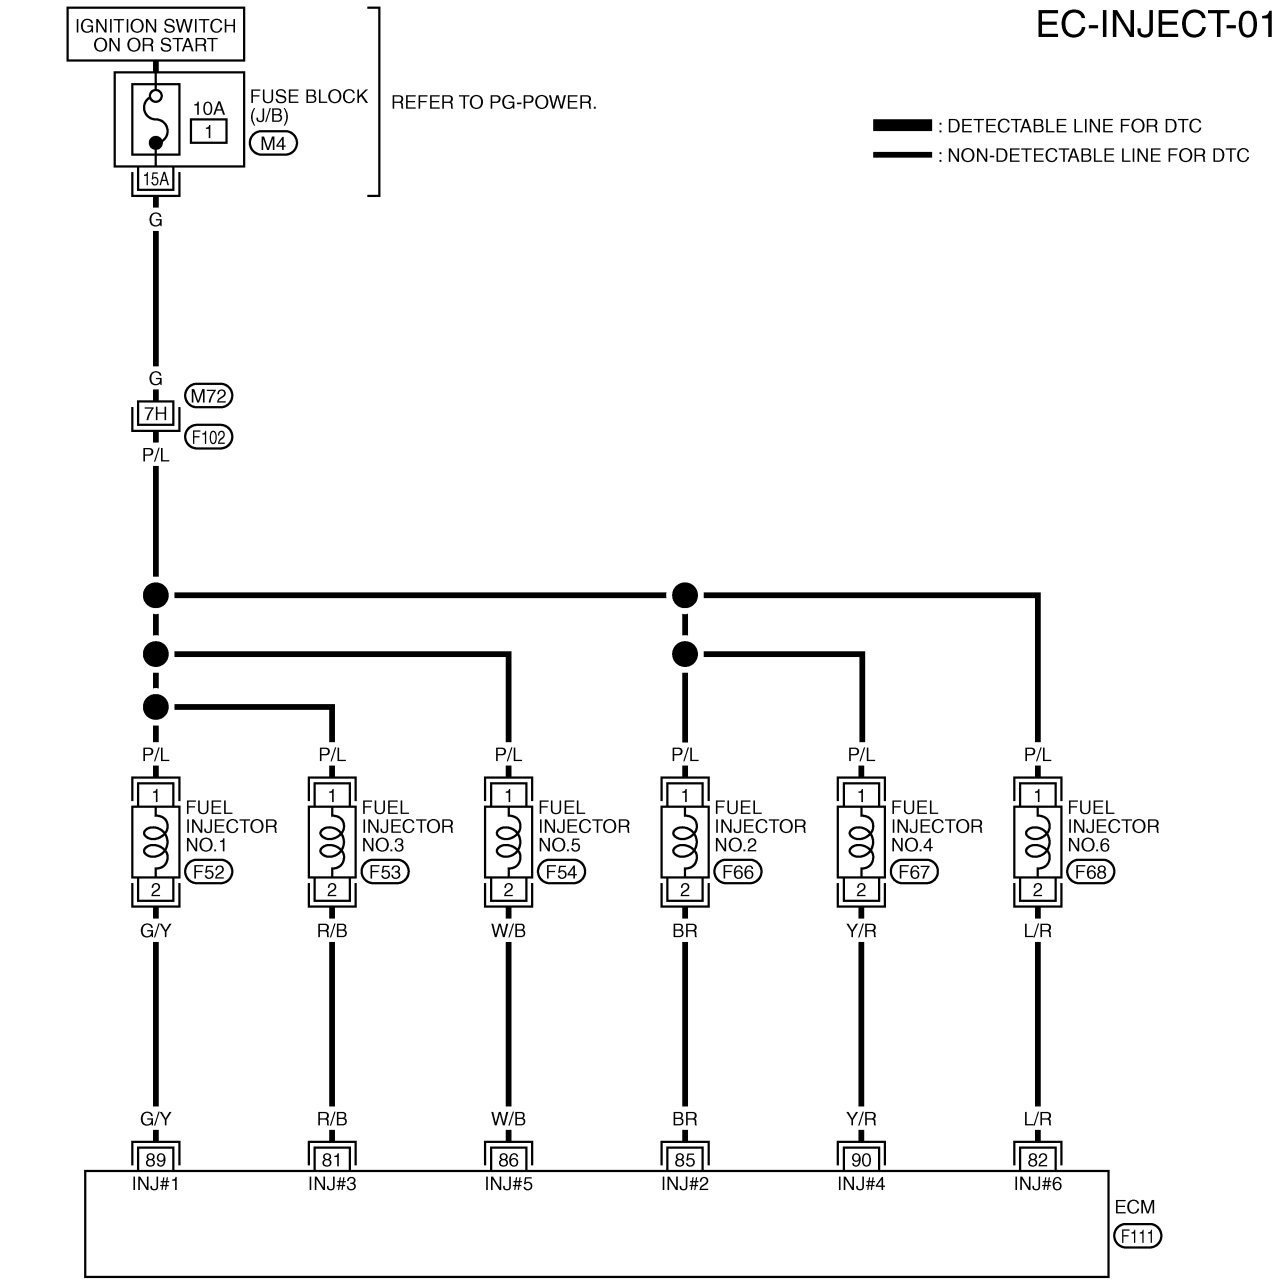
PFP:16600

Component Description

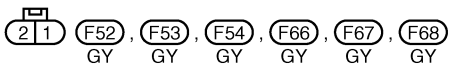
NBS000HQ

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the fuel injector circuit, the coil in the fuel injector is energized. The energized coil pulls the ball valve back and allows fuel to flow through the fuel injector into the intake manifold. The amount of fuel injected depends upon the fuel injection pulse duration. Pulse duration is the length of time the fuel injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.

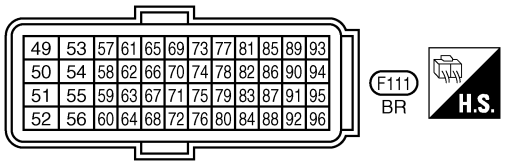
CONSULT-III Reference Value in Data Monitor Mode



NBS000HR



Specification data are reference values.

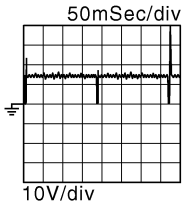


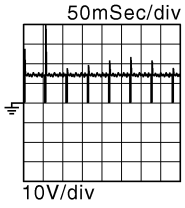
MONITOR ITEM	CONDITION		SPECIFICATION
B/FUEL SCHDL	See EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .		
INJ PULSE-B1 INJ PULSE-B2	● Engine: After warming up ● Shift lever: P or N (A/T), Neutral (M/T) position ● Air conditioner switch: OFF ● No load	Idle	2.0 - 3.0 msec
		2,000 rpm	1.9 - 2.9 msec

Wiring Diagram

NBS000HS

REFER TO THE FOLLOWING.





F102 -SUPER MULTIPLE JUNCTION (SMJ)

M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TBWT1678E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)

			[Engine is running] ● **Warm-up condition** ● Engine speed: 2,000 rpm	BATTERY VOLTAGE (11 - 14V)★  PBIB3556E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

NBS000HT

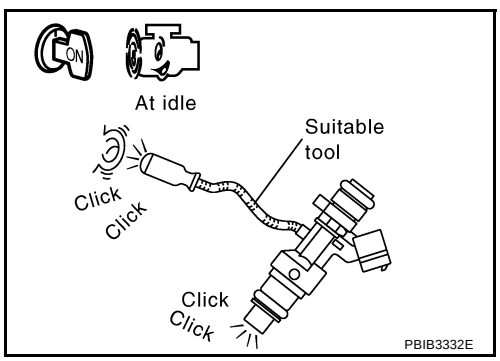
1. INSPECTION START

Turn ignition switch to START.
Is any cylinder ignited?

Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK OVERALL FUNCTION



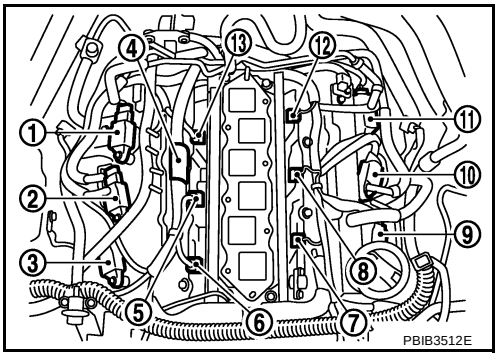
With CONSULT-III

1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-III.
3. Make sure that each circuit produces a momentary engine speed drop.

Without CONSULT-III

1. Start engine and let it idle.
2. Listen to each fuel injector operating sound.

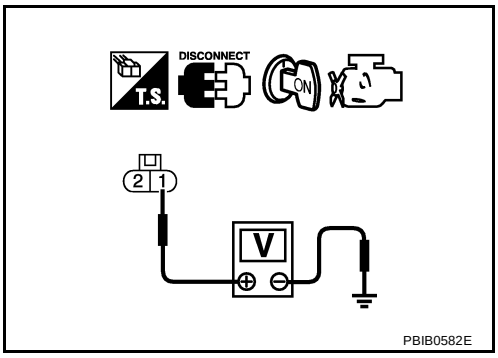
Clickng sound should be heard.



PBIB3332E

OK or NG

OK >> INSPECTION END.
NG >> GO TO 3.



3. CHECK FUEL INJECTOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect fuel injector harness connector.

1 : Ignition coil No.5 (with power transistor)
2 : Ignition col No.3 (with power transistor)
3 : Ignition coil No.1 (with power transistor)
4 : Condenser
5 : Fuel injector No.3
6 : Fuel injector No.1
7 : Fuel injector No.2
8 : Fuel injector No.4
9 : Ignition coil No.2 (with power transistor)
10 : Ignition coil No.4 (with power transistor)
11 : Ignition coil No.6 (with power transistor)
12 : Fuel injector No.6
13 : Fuel injector No.5

3. Turn ignition switch ON.
4. Check voltage between fuel injector terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M72, F102
- Fuse block (J/B) connector M4
- 10A fuse
- Harness for open or short between fuel injector and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK FUEL INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between fuel injector terminal 2 and ECM terminals 81, 82, 85, 86, 89, 90. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK FUEL INJECTOR

Refer to EC-690, "Component Inspection" .

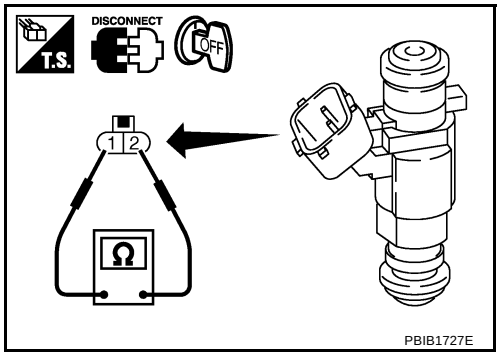
OK or NG

OK >> GO TO 7.
NG >> Replace malfunctioning fuel injector.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**



Component Inspection

NBS000HU

FUEL INJECTOR

1. Disconnect fuel injector harness connector.
2. Check resistance between terminals as shown in the figure.

Resistance: 11.1 - 14.3Ω [at 10 - 60°C (50 - 140°F)]

Removal and Installation

NBS000HV

FUEL INJECTOR

Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .

FUEL PUMP

PFP:17042

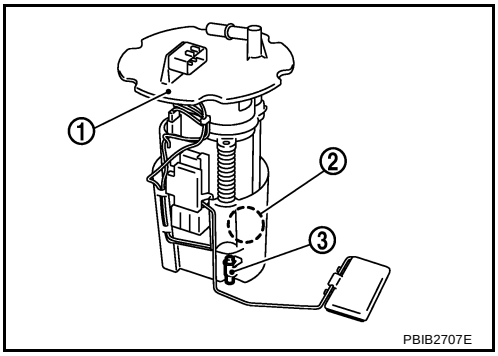
Description

NBS000HW

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

*: ECM determines the start signal status by the signals of engine speed and battery voltage.



The ECM activates the fuel pump for several seconds after the ignition switch is turned ON to improve engine startability. If the ECM receives a engine speed signal from the camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch: ON	Operates for 1 second.
Engine running or cranking	Operates.
Engine: Stopped	Stops in 1.5 seconds.
Except as shown above	Stops.

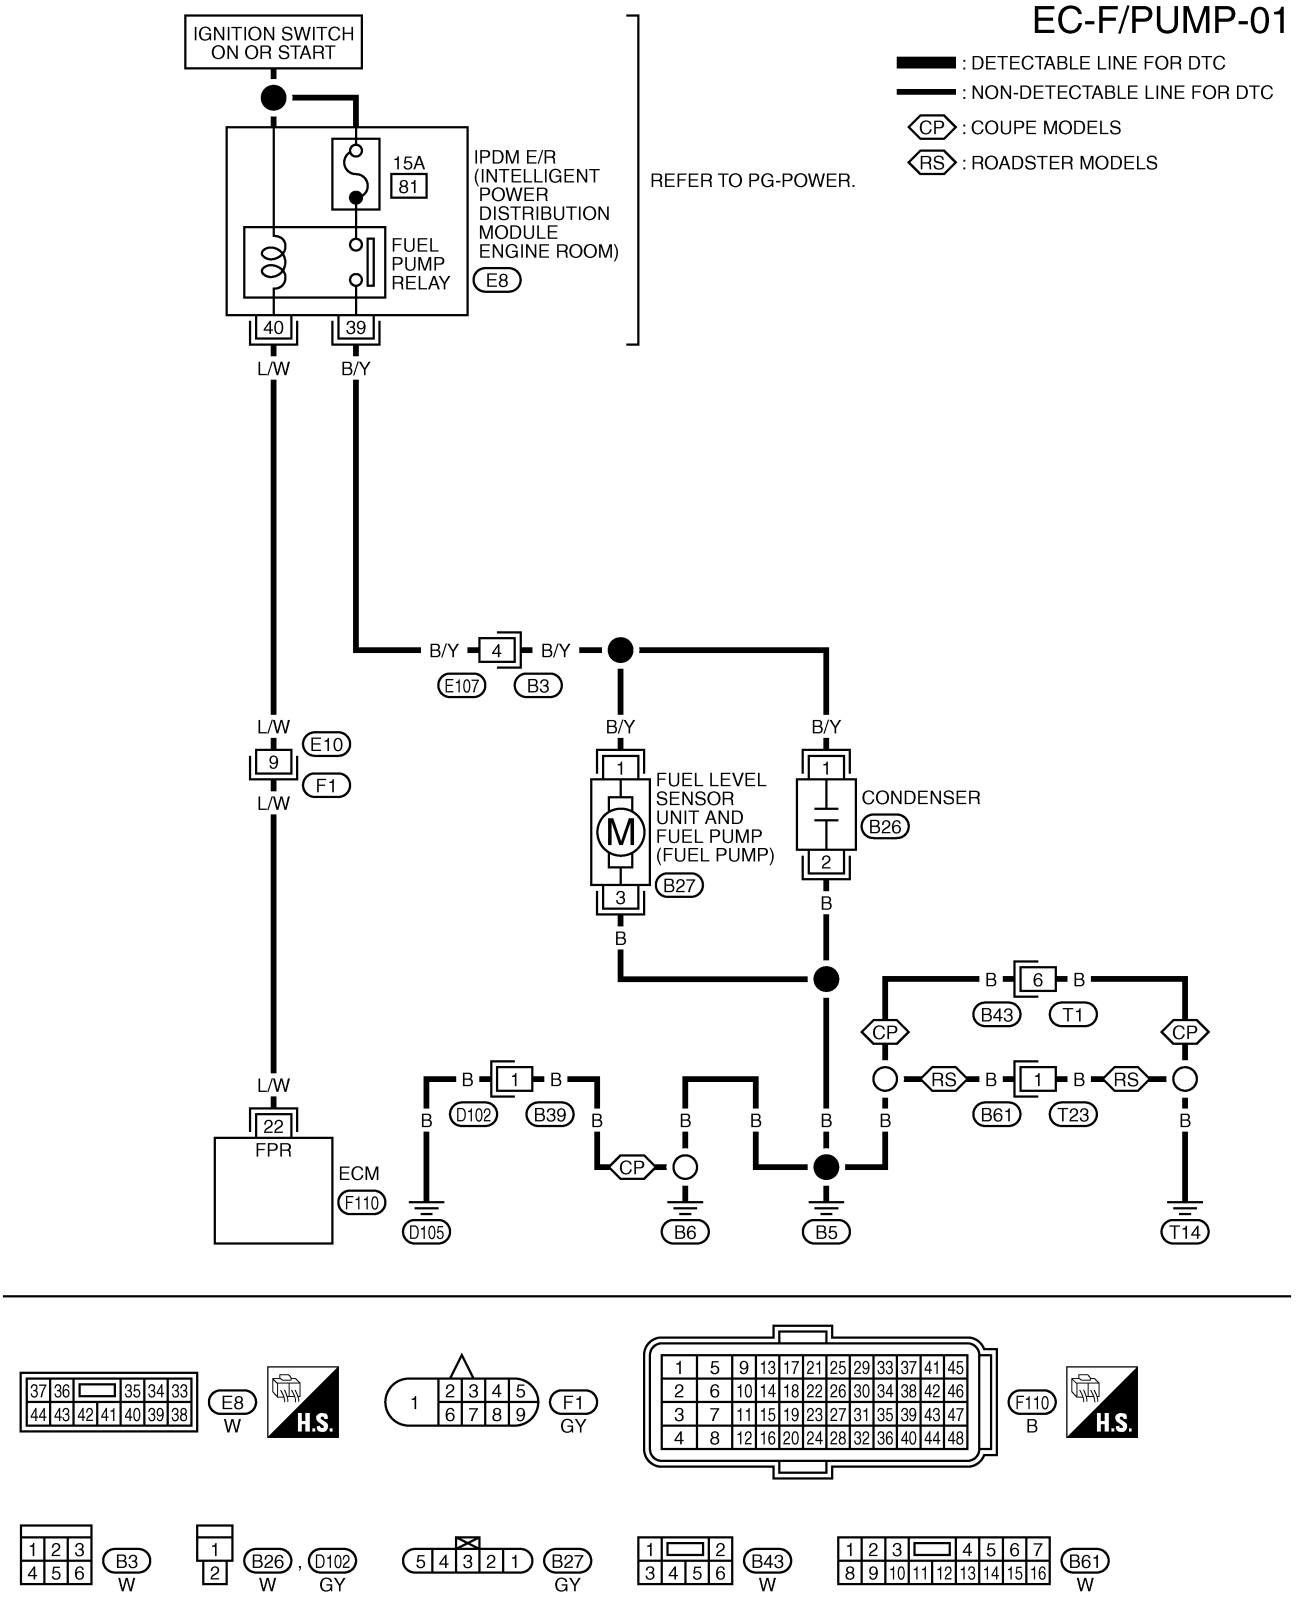
COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.

1 : Fuel level sensor unit and fuel pump
2 : Fuel pressure regulator
3 : Fuel tank temperature sensor

PBIB2707E

CONSULT-III Reference Value in Data Monitor Mode



NBS000HX

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
FUEL PUMP RLY	● For 1 second after turning ignition switch ON ● Engine running or cranking	ON
	● Except above conditions	OFF

Wiring Diagram

NBS000HY

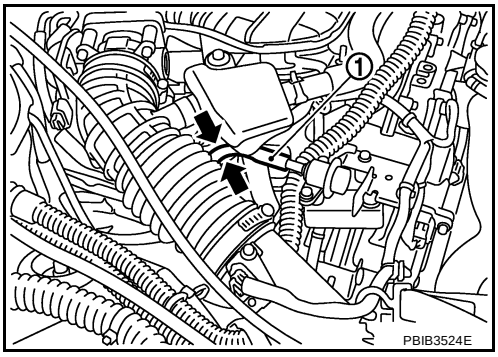
TBWT1679E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
22	L/W	Fuel pump relay	**[Ignition switch: ON]** ● For 1 second after turning ignition switch ON **[Engine is running]**	0 - 1.5V
			[Ignition switch: ON] ● More than 1 second after turning ignition switch ON.	BATTERY VOLTAGE (11 - 14V)



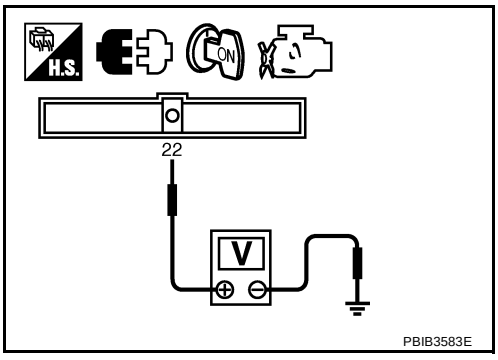
Diagnostic Procedure

NBS000HZ

1. CHECK OVERALL FUNCTION

1. Turn ignition switch ON.
2. Pinch fuel feed hose (1) with two fingers.

Fuel pressure pulsation should be felt on the fuel feed hose for 1 second after ignition switch is turned ON.



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

2. CHECK FUEL PUMP POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Turn ignition switch ON.
4. Check voltage between ECM terminal 22 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 3.

3. CHECK FUEL PUMP POWER SUPPLY CIRCUIT-I

1. Disconnect IPDM E/R harness connector E8.
2. Check harness continuity between IPDM E/R terminal 40 and ECM terminal 22. Refer to Wiring Diagram.

Continuity should exist.

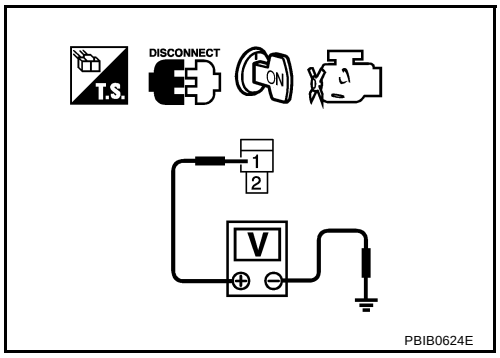
3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 15.

4. DETECT MALFUNCTIONING PART

Check the following.



- Harness connectors E10, F1
- Harness for open or short between IPDM E/R and ECM

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK CONDENSER POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect condenser harness connector.
4. Turn ignition switch ON.
5. Check voltage between condenser terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage should exist for 1 second after ignition switch is turned ON.

OK or NG

OK >> GO TO 9.
NG >> GO TO 6.

6. CHECK 15A FUSE

1. Turn ignition switch OFF.
2. Disconnect 15A fuse.
3. Check 15A fuse.

OK or NG

OK >> GO TO 7.
NG >> Replace fuse.

7. CHECK CONDENSER POWER SUPPLY CIRCUIT-II

1. Disconnect IPDM E/R harness connector E8.
2. Check harness continuity between IPDM E/R terminal 39 and condenser terminal 1. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 15.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E107, B3
- Harness for open or short between IPDM E/R and condenser

>> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK CONDENSER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check harness continuity between condenser terminal 2 and ground. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 11.
NG >> GO TO 10

10. DETECT MALFUNCTIONING PART

Check the following.

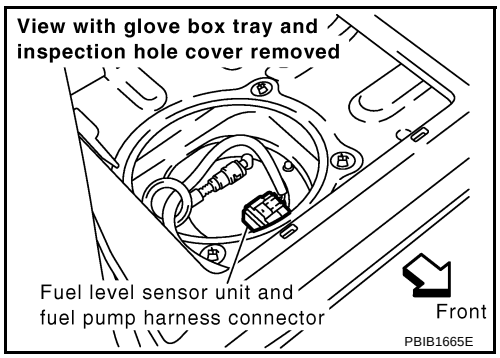
- Harness connectors B43, T1 (Coupe models)
- Harness connectors B39, D102 (Coupe models)
- Harness connectors B61, T23 (Roadster models)
- Harness for open or short between condenser and ground

>> Repair open circuit or short to power in harness or connectors.

11. CHECK CONDENSER

Refer to EC-697, "Component Inspection" .

OK or NG



OK >> GO TO 12.
NG >> Replace condenser.

12. CHECK FUEL PUMP POWER SUPPLY AND GROUND CIRCUIT FOR OPEN AND SHORT

1. Disconnect “fuel level sensor unit and fuel pump” harness connector.
2. Disconnect harness connectors E107, B3.
3. Check harness continuity between the following;
   “fuel level sensor unit and fuel pump” terminal 1 and harness connector B3 terminal 4,
   “fuel level sensor unit and fuel pump” terminal 3 and ground.
   Refer to Wiring Diagram.

   Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.
NG >> GO TO 13.

13. DETECT MALFUNCTIONING PART

Check the following.

- Harness connector B3
- Harness connectors B43, T1 (Coupe models)
- Harness connectors B39, D102 (Coupe models)
- Harness connectors B61, T23 (Roadster models)
- Harness for open or short between “fuel level sensor unit and fuel pump” and harness connector B3
- Harness for open or short between “fuel level sensor unit and fuel pump” and ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

14. CHECK FUEL PUMP

Refer to EC-697, "Component Inspection" .

OK or NG

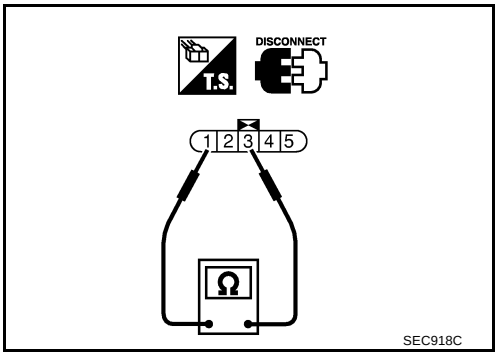
OK >> GO TO 15.
NG >> Replace “fuel level sensor unit and fuel pump”.

15. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connectors.

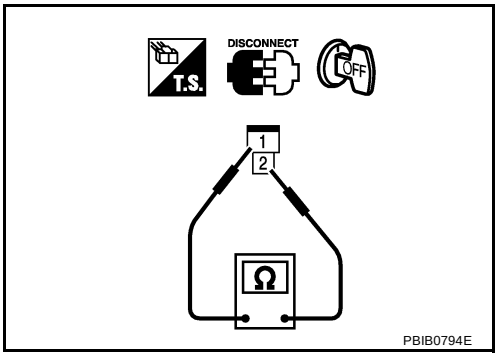


Component Inspection

NBS000I0

FUEL PUMP

1. Disconnect “fuel level sensor unit and fuel pump” harness connector.
2. Check resistance between “fuel level sensor unit and fuel pump” terminals 1 and 3.



Resistance: 0.2 - 5.0Ω [at 25°C (77°F)]

CONDENSER

1. Disconnect condenser harness connector.
2. Check resistance between condenser terminals 1 and 2.

Resistance: Above 1 MΩ [at 25°C (77°F)]

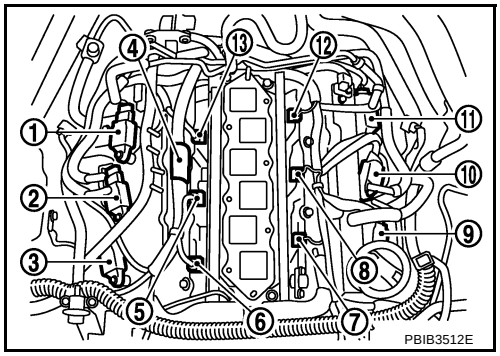
Removal and Installation

NBS000I1

FUEL PUMP

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

IGNITION SIGNAL

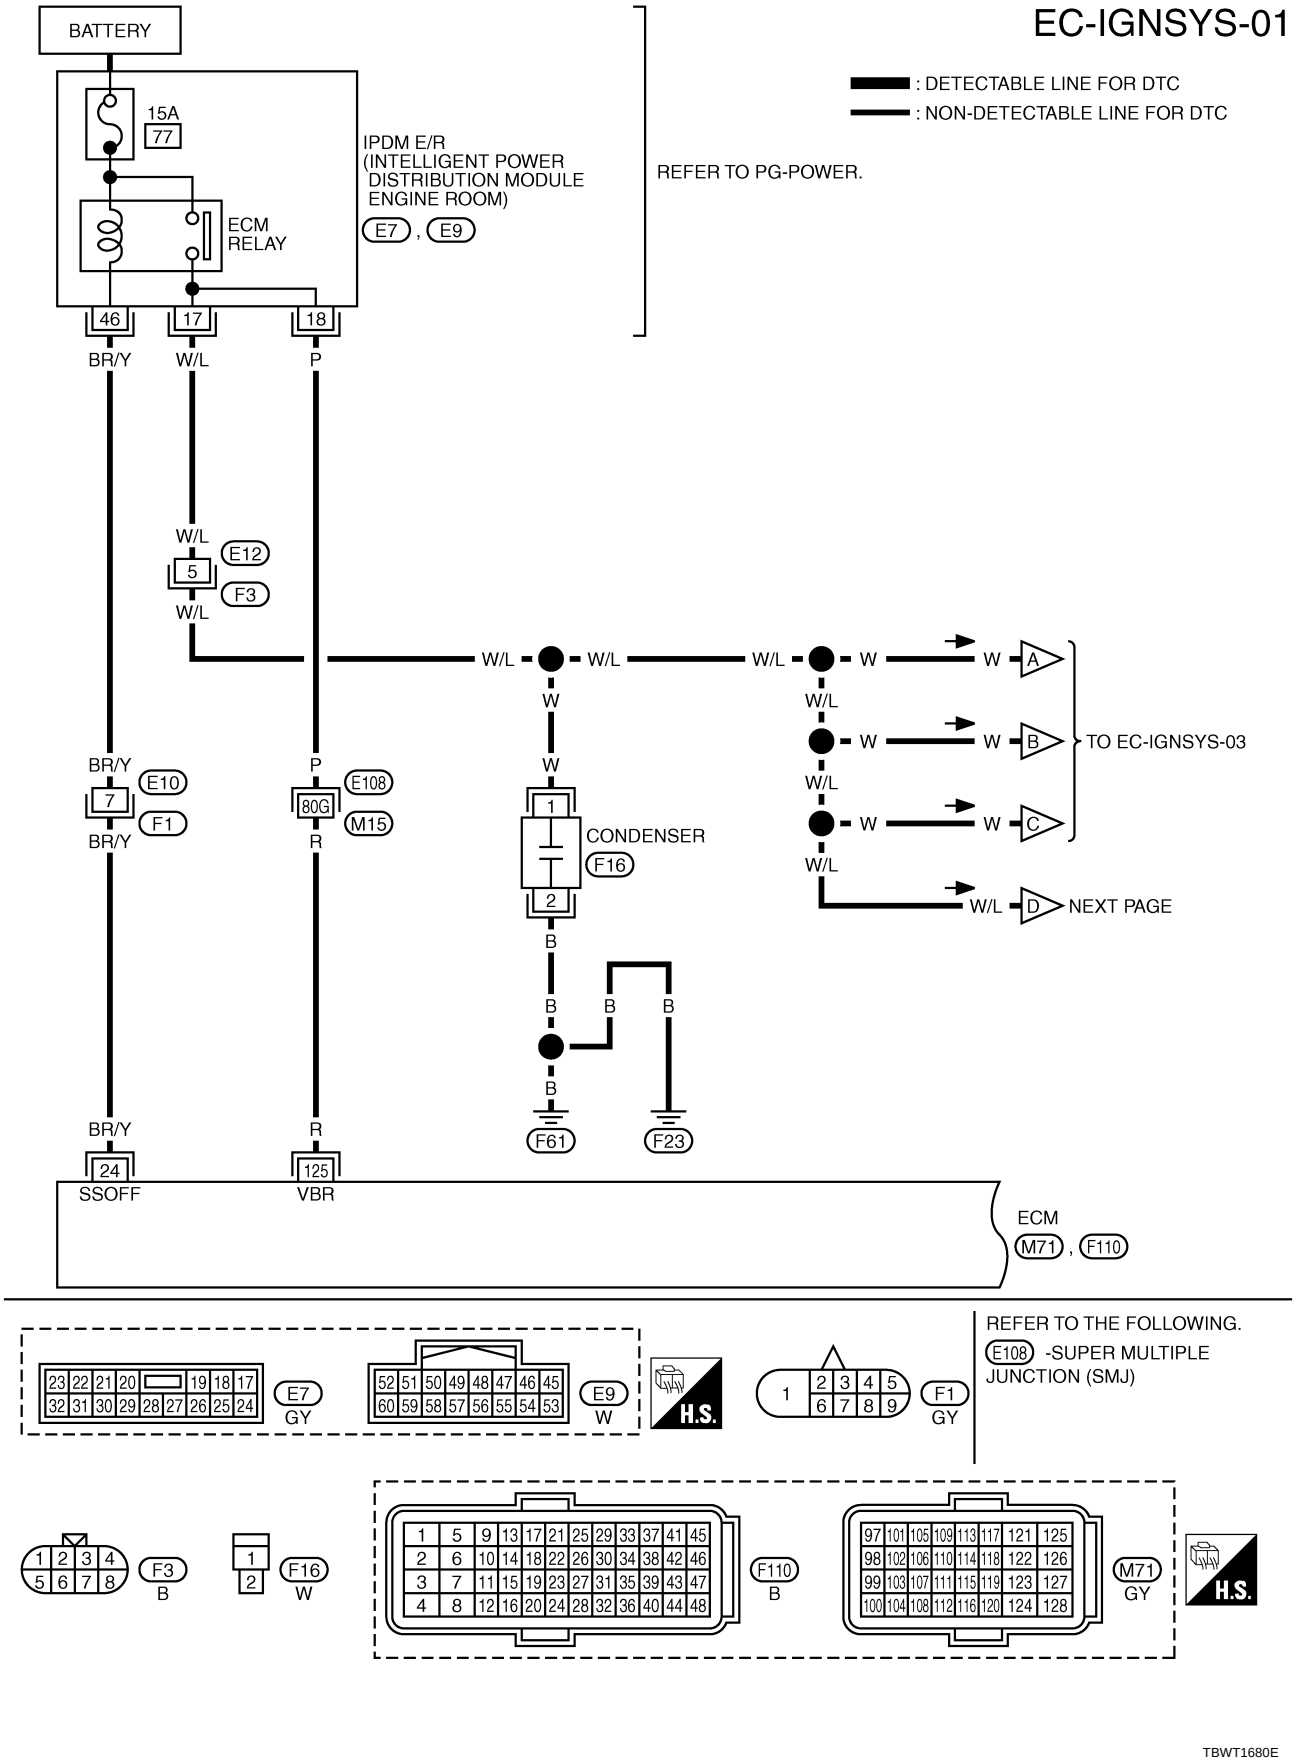


PFP:22448

Component Description

NBS000HL

IGNITION COIL & POWER TRANSISTOR



The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns ON and OFF the ignition coil primary circuit. This ON/OFF operation induces the proper high voltage in the coil secondary circuit.

1 : Ignition coil No.5 (with power transistor)
2 : Ignition col No.3 (with power transistor)
3 : Ignition coil No.1 (with power transistor)
4 : Condenser
5 : Fuel injector No.3
6 : Fuel injector No.1
7 : Fuel injector No.2
8 : Fuel injector No.4
9 : Ignition coil No.2 (with power transistor)
10 : Ignition coil No.4 (with power transistor)
11 : Ignition coil No.6 (with power transistor)
12 : Fuel injector No.6
13 : Fuel injector No.5

Wiring Diagram

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

NBS000HN

1. CHECK ENGINE START

Turn ignition switch OFF and restart engine.
Is engine running?

Yes or No

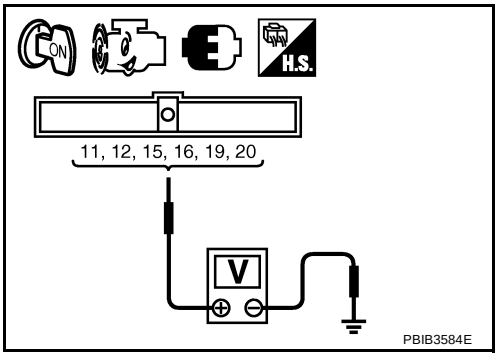
Yes (With CONSULT-III)>>GO TO 2.
Yes (Without CONSULT-III)>>GO TO 3.
No >> GO TO 4.

2. CHECK OVERALL FUNCTION

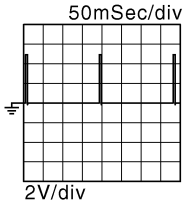
With CONSULT-III

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-III.
2. Make sure that each circuit produces a momentary engine speed drop.

OK or NG



OK >> **INSPECTION END**
NG >> GO TO 10.

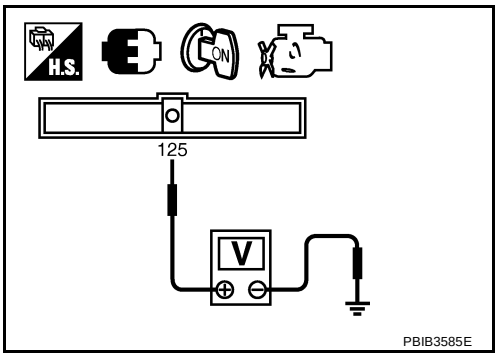


3. CHECK OVERALL FUNCTION

Without CONSULT-III

1. Let engine idle.
2. Read the voltage signal between ECM terminals 11, 12, 15, 16, 19, 20 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

   NOTE:
   The pulse cycle changes depending on rpm at idle.



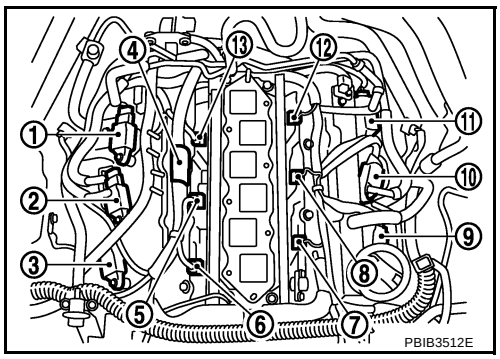
OK or NG

OK >> **INSPECTION END**
NG >> GO TO 10.

4. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

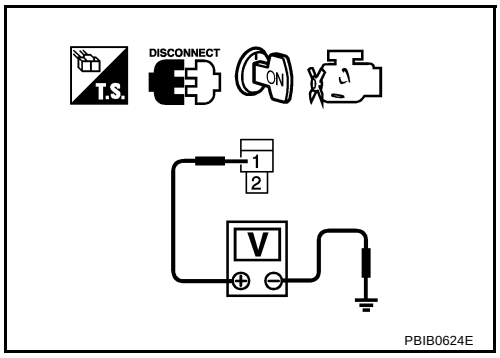
1. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
2. Check voltage between ECM terminals 125 and ground with CONSULT-III or tester.

   Voltage: Battery voltage



OK or NG

OK >> GO TO 5.
NG >> Go to EC-142, "POWER SUPPLY AND GROUND CIRCUIT" .



5. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.

1 : Ignition coil No.5 (with power transistor)
2 : Ignition col No.3 (with power transistor)
3 : Ignition coil No.1 (with power transistor)
4 : Condenser
5 : Fuel injector No.3
6 : Fuel injector No.1
7 : Fuel injector No.2
8 : Fuel injector No.4
9 : Ignition coil No.2 (with power transistor)
10 : Ignition coil No.4 (with power transistor)
11 : Ignition coil No.6 (with power transistor)
12 : Fuel injector No.6
13 : Fuel injector No.5

3. Turn ignition switch ON.
4. Check voltage between condenser terminal 1 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 8.
NG >> GO TO 6.

6. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-III

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E7.
3. Check harness continuity between IPDM E/R terminal 17 and condenser terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 14.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E12, F3
- Harness for open or short between IPDM E/R and condenser

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK CONDENSER GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between condenser terminal 2 and ground. Refer to Wiring Diagram.

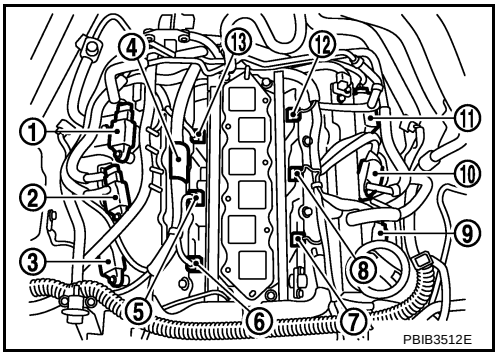
Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 9.
NG >> Repair open circuit or short to power in harness or connectors.

9. CHECK CONDENSER

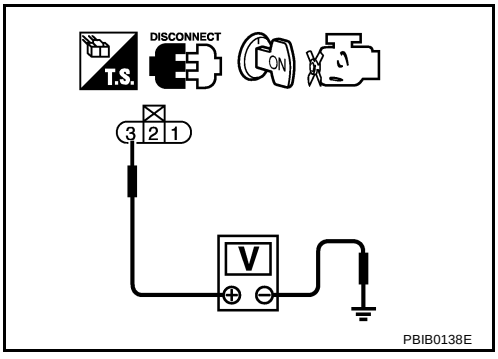


Refer to EC-708, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace condenser.

10. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-IV



1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect ignition coil harness connector.

1 : Ignition coil No.5 (with power transistor)
2 : Ignition col No.3 (with power transistor)
3 : Ignition coil No.1 (with power transistor)
4 : Condenser
5 : Fuel injector No.3
6 : Fuel injector No.1
7 : Fuel injector No.2
8 : Fuel injector No.4
9 : Ignition coil No.2 (with power transistor)
10 : Ignition coil No.4 (with power transistor)
11 : Ignition coil No.6 (with power transistor)
12 : Fuel injector No.6
13 : Fuel injector No.5

4. Turn ignition switch ON.
5. Check voltage between ignition coil terminal 3 and ground with CONSULT-III or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 11.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

11. CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ignition coil terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 12.
NG >> Repair open circuit or short to power in harness or connectors.

12. CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 11, 12, 15, 16, 19, 20 and ignition coil terminal 1.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 13.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

13. CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to EC-708, "Component Inspection" .

OK or NG

OK >> GO TO 14.
NG >> Replace malfunctioning ignition coil with power transistor.

14. CHECK INTERMITTENT INCIDENT

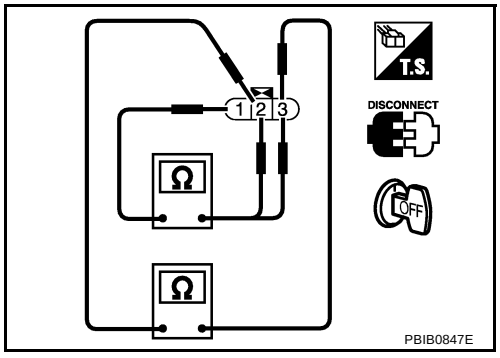
Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair open circuit or short to ground or short to power in harness connectors.

Component Inspection

NBS000HO



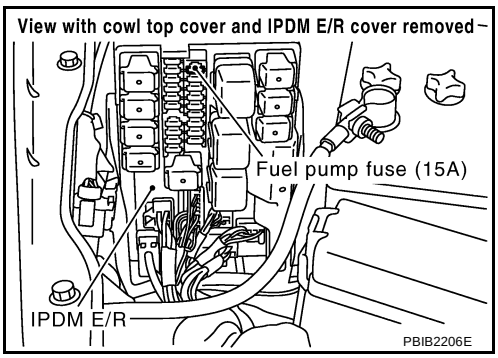
IGNITION COIL WITH POWER TRANSISTOR

CAUTION:

Do the following procedure in the place where ventilation is good without the combustible.

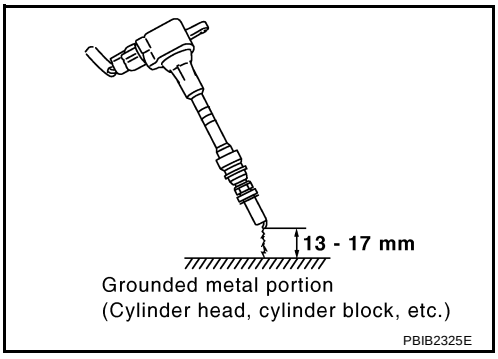
1. Turn ignition switch OFF.
2. Disconnect ignition coil harness connector.
3. Check resistance between ignition coil terminals as follows.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
1 and 2	Except 0 or ∞
1 and 3	Except 0
2 and 3	



4. If NG, Replace ignition coil with power transistor.
   If OK, go to next step.
5. Turn ignition switch OFF.
6. Reconnect all harness connectors disconnected.

7. Remove fuel pump fuse in IPDM E/R to release fuel pressure.



NOTE:
Do not use CONSULT-III to release fuel pressure, or fuel pressure applies again during the following procedure.

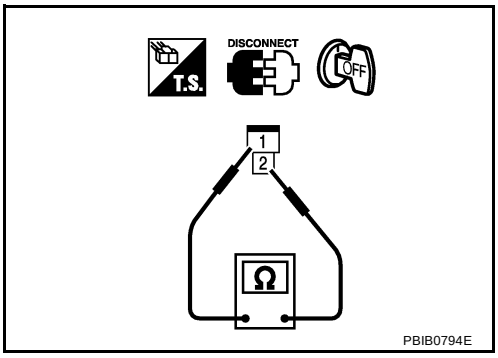
8. Start engine.
9. After engine stalls, crank it two or three times to release all fuel pressure.
10. Turn ignition switch OFF.
11. Remove ignition coil harness connectors to avoid the electrical discharge from the ignition coils.
12. Remove ignition coil and spark plug of the cylinder to be checked.

13. Crank engine for 5 seconds or more to remove combustion gas in the cylinder.
14. Connect spark plug and harness connector to ignition coil.
15. Fix ignition coil using a rope etc. with gap of 13 - 17 mm between the edge of the spark plug and grounded metal portion as shown in the figure.
16. Crank engine for about 3 seconds, and check whether spark is generated between the spark plug and the grounded part.

Spark should be generated.

CAUTION:

- **Do not approach to the spark plug and the ignition coil within 50cm. Be careful not to get an electrical shock while checking, because the electrical discharge voltage becomes 20kV or more.**
- **It might cause to damage the ignition coil if the gap of 17 mm or more is taken.**



NOTE:
When the gap is less than 13 mm, the spark might be generated even if the coil is malfunctioning.

17. If NG, Replace ignition coil with power transistor.

CONDENSER

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.
3. Check resistance between condenser terminals 1 and 2.

Resistance: Above 1 MΩ [at 25°C (77°F)]

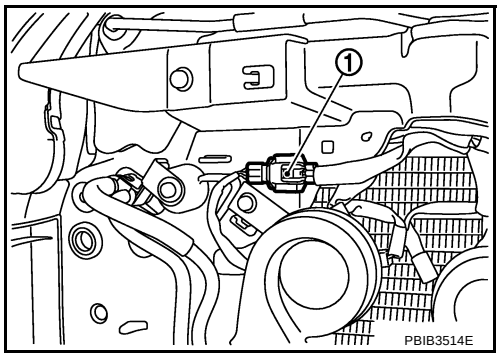
Removal and Installation

NBS000HP

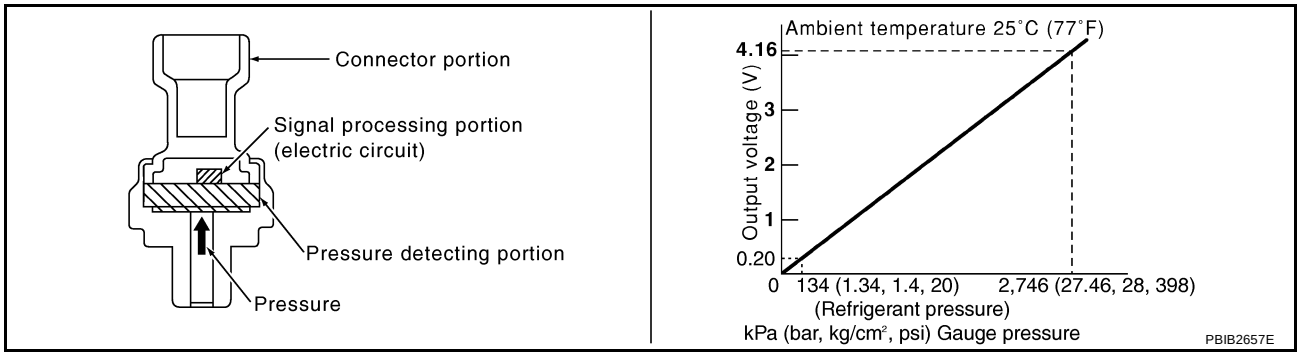
IGNITION COIL WITH POWER TRANSISTOR

Refer to EM-31, "IGNITION COIL" .

REFRIGERANT PRESSURE SENSOR



PFP:92136

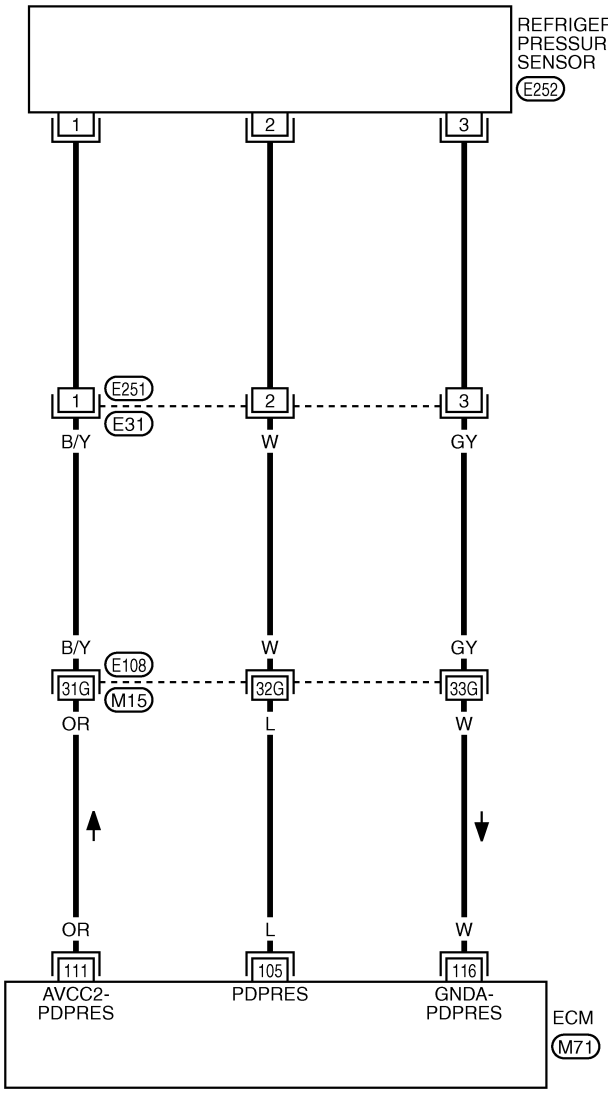


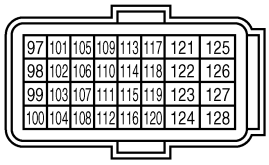
Component Description

NBS000I2

The refrigerant pressure sensor is installed at the condenser of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

1 : Refrigerant pressure sensor harness connector





Wiring Diagram

NBS000I3

EC-RP/SEN-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

M71

REFER TO THE FOLLOWING.
E108 -SUPER MULTIPLE JUNCTION (SMJ)

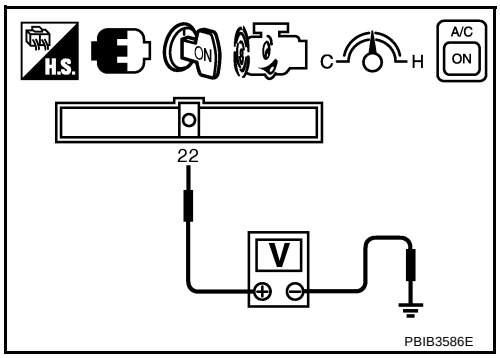
TBWT1683E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
105	L	Refrigerant pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Both A/C switch and blower switch: ON (Compressor operates.)	1.0 - 4.0V
111	OR	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch: ON]**	5V
116	W	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V



Diagnostic Procedure

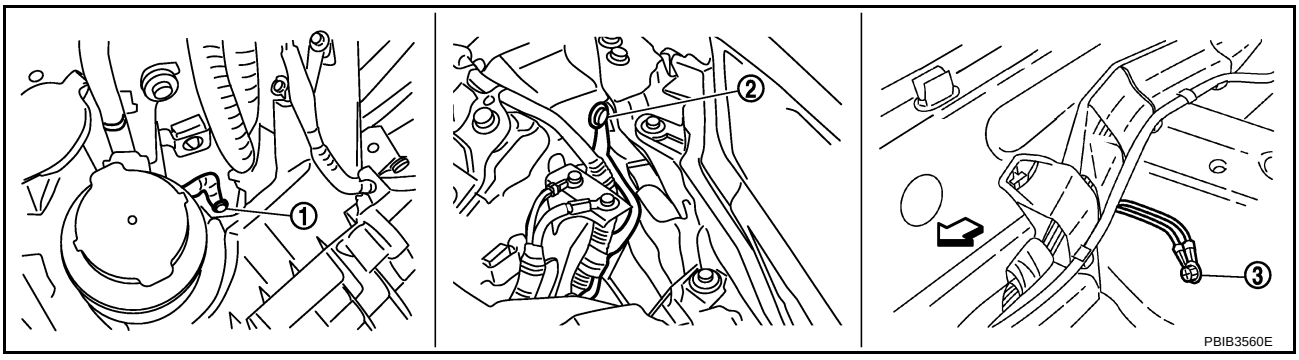
NBS000I4

1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower fan switch ON.
3. Check voltage between ECM terminal 105 and ground with CONSULT-III or tester.

Voltage: 1.0 - 4.0V

OK or NG



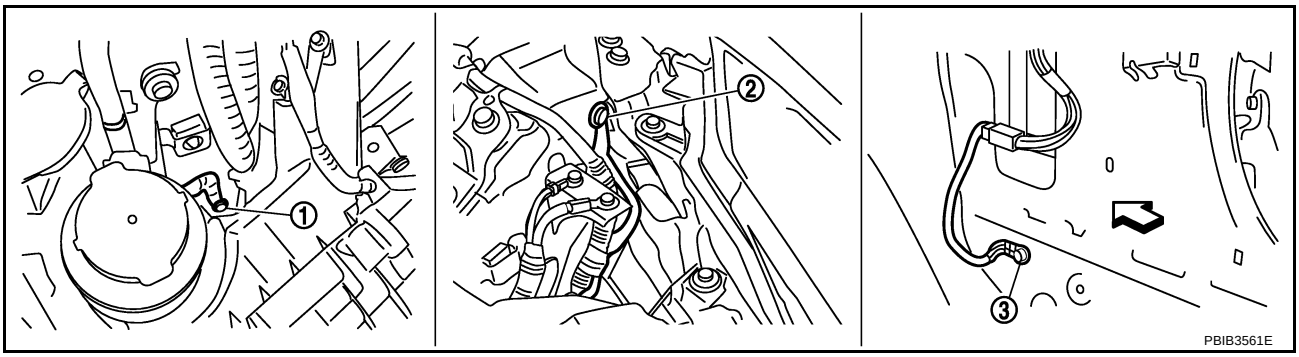
OK >> **INSPECTION END**

NG >> GO TO 2.

2. CHECK GROUND CONNECTIONS

Models with VDC system, navigation system or telephone

1. Turn A/C switch and blower fan switch OFF.
2. Stop engine.
3. Turn ignition switch OFF.
4. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .



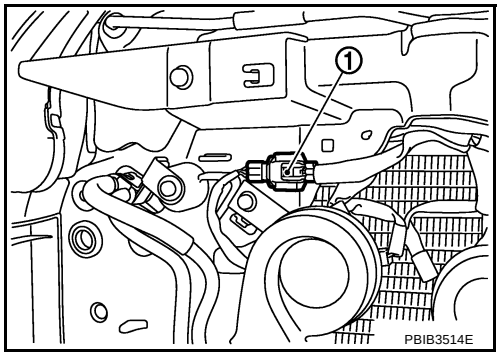
1. Body ground E17
2. Body ground E43
3. Body ground B102

⇦: Vehicle front

Models without VDC system, navigation system and telephone

1. Turn A/C switch and blower fan switch OFF.
2. Stop engine.
3. Turn ignition switch OFF.
4. Loosen and retighten ground screws on the body. Refer to EC-150, "Ground Inspection" .

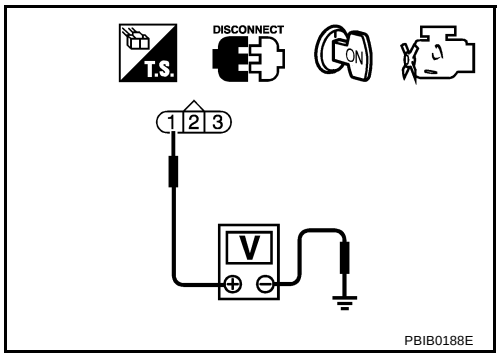
1. Body ground E17
2. Body ground E43
3. Body ground F152 (Passenger side view with dash side finisher removed)



⇦: Vehicle front

OK or NG

OK >> GO TO 3.
NG >> Repair or replace ground connections.



3. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Disconnect refrigerant pressure sensor harness connector (1).
2. Turn ignition switch ON.

3. Check voltage between refrigerant pressure sensor terminal 1 and ground with CONSULT-III or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E251, E31
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between refrigerant pressure sensor terminal 3 and ECM terminal 116. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E251, E31
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 105 and refrigerant pressure sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E251, E31
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace refrigerant pressure sensor.
NG >> Repair or replace.

Removal and Installation

NBS000I5

REFRIGERANT PRESSURE SENSOR

Refer to ATC-135, "Removal and Installation of Refrigerant Pressure Sensor" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

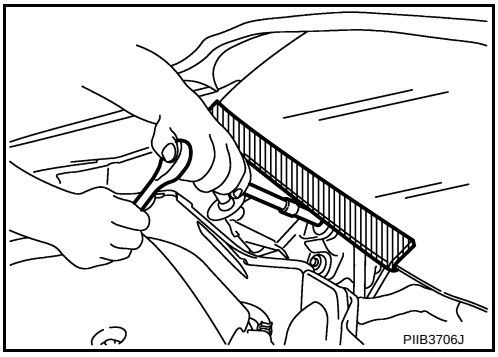
NIS00086

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NIS001H4

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

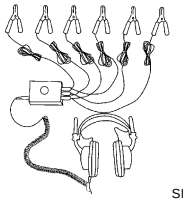
NIS001H5

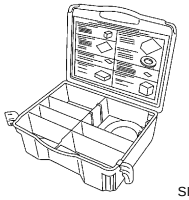
When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Precautions for Work

NIS00088

- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operation.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.

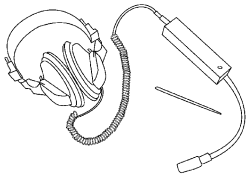




PREPARATION

PFP:00002

Special Service Tools



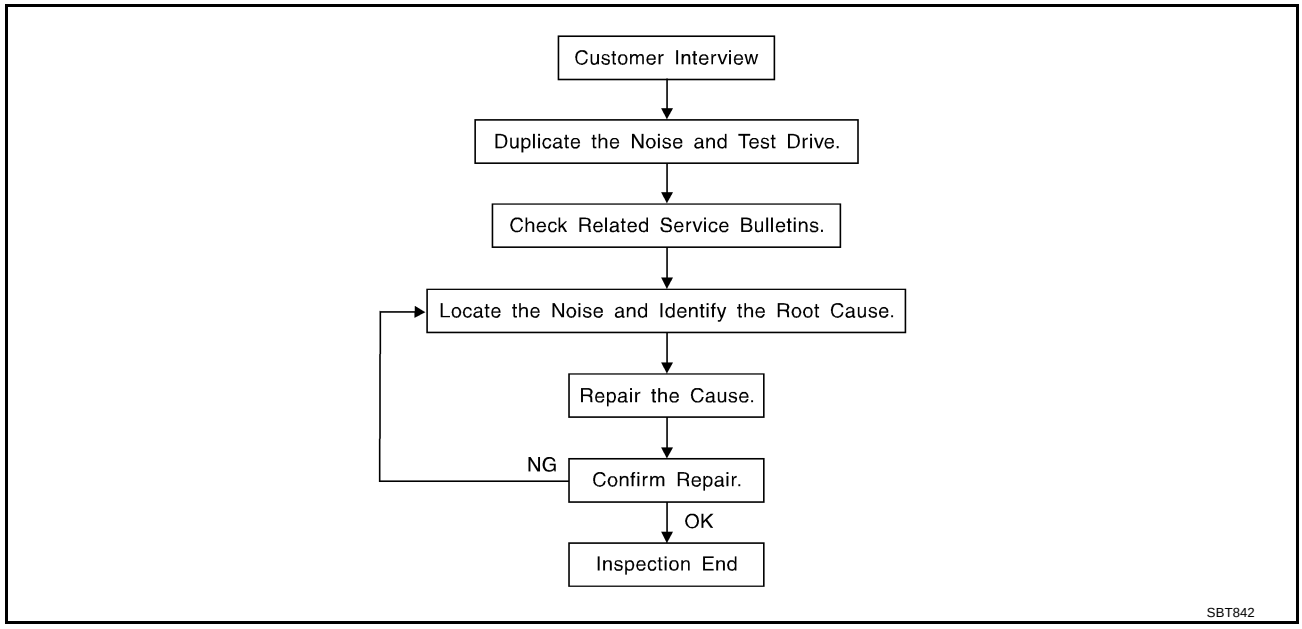
NIS00089

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
(J-39570) Chassis ear  SIIA0993E	Locationg the noise
(J-43980) NISSAN Squeak and Rattle Kit  SIIA0994E	Repairing the cause of noise

Commercial Service Tools

NIS0008A



Tool name	Description
Engine ear  SIIA0995E	Locationg the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS0008B

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to EI-9, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to EI-7, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS0008C

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:
Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sun-visor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

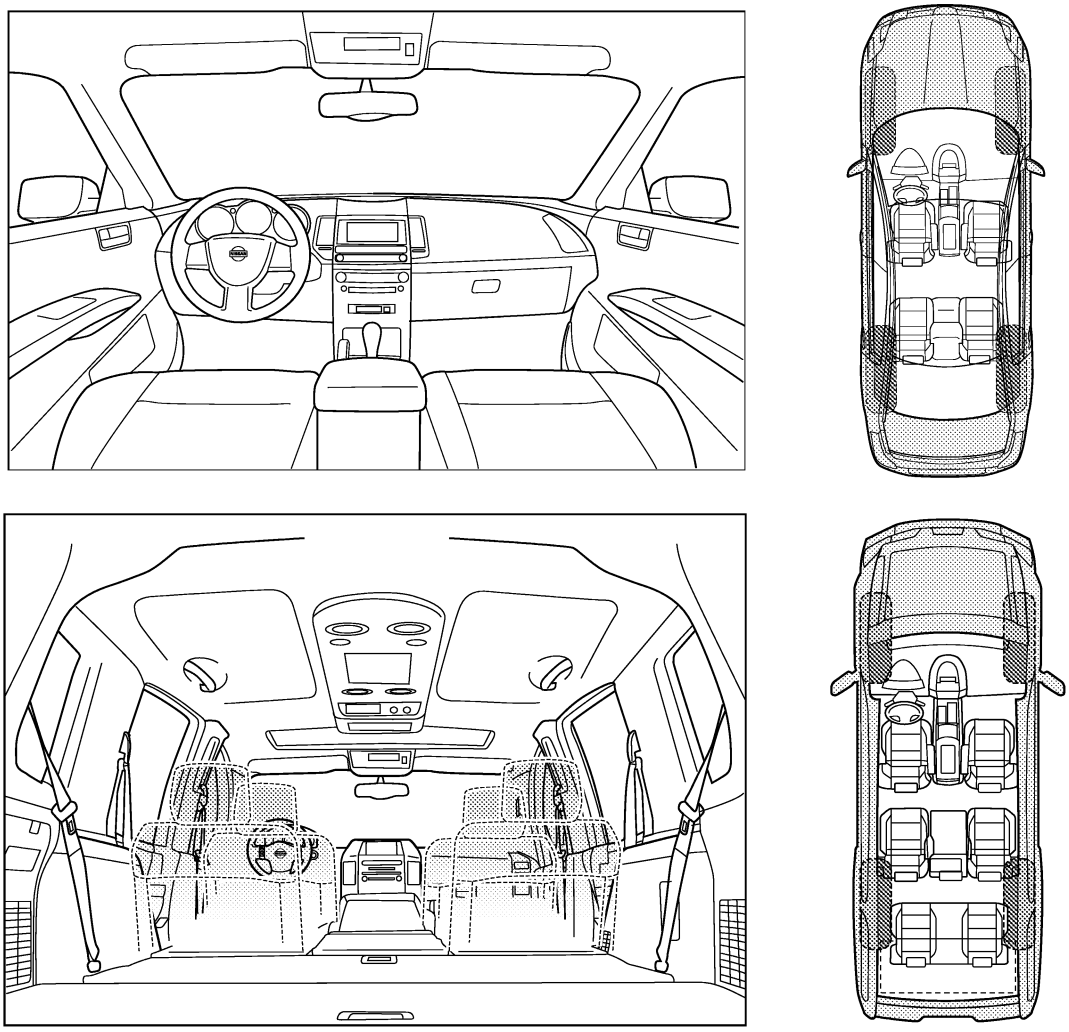
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted under-hood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



Diagnostic Worksheet

NIS0008D

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

13. Grommet
14. Air spoiler
15. Retainer

Pawl

REMOVAL

1. Remove clips of bumper fascia upper portion.
2. Remove screw of bumper fascia lower portion.
3. Remove screws of bumper fascia both side.
4. Remove screws and bolts of both right/left fender protectors on front side. Refer to EI-21, "FENDER PROTECTOR" .
5. Pull out both right/left sides of bumper fascia and remove bumper fascia assembly.

   CAUTION:
   When removing bumper fascia, 2 workers are required so as to prevent it from dropping.
6. Remove energy absorber.
7. Remove bolts and nuts of bumper reinforcement and remove bumper fascia.
8. Remove clips of bumper shield-sight and remove bumper shield-sight.
9. Remove bolts of bumper stay and remove bumper stay.

INSTALLATION

Install in the reverse order of removal.

NOTE:
After installing, perform fitting adjustment.

	Portion	Clearance
Front bumper - Front fender	A - A	0 - 0.5 mm (0 - 0.020 in)
Front bumper - Head lamp	B - B	5.9 - 8.9 mm (0.232 - 0.350 in)
Hood - Head lamp	C - C	1.7 - 5.3 mm (0.067 - 0.209 in)

Removal and Installation of Bumper Side Reflector (Left Side)

NIS001H6

REMOVAL

1. Remove the front part of fender protector by removing screws and clips.
2. Remove screw of bumper side reflector (left side).

INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Bumper Side Reflector (Right Side)

NIS001H7

REMOVAL

1. Remove bumper assembly.
2. Remove screw of bumper side reflector (right side).

INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Bumper Molding (Upper side, Lower)

NIS001H8

REMOVAL

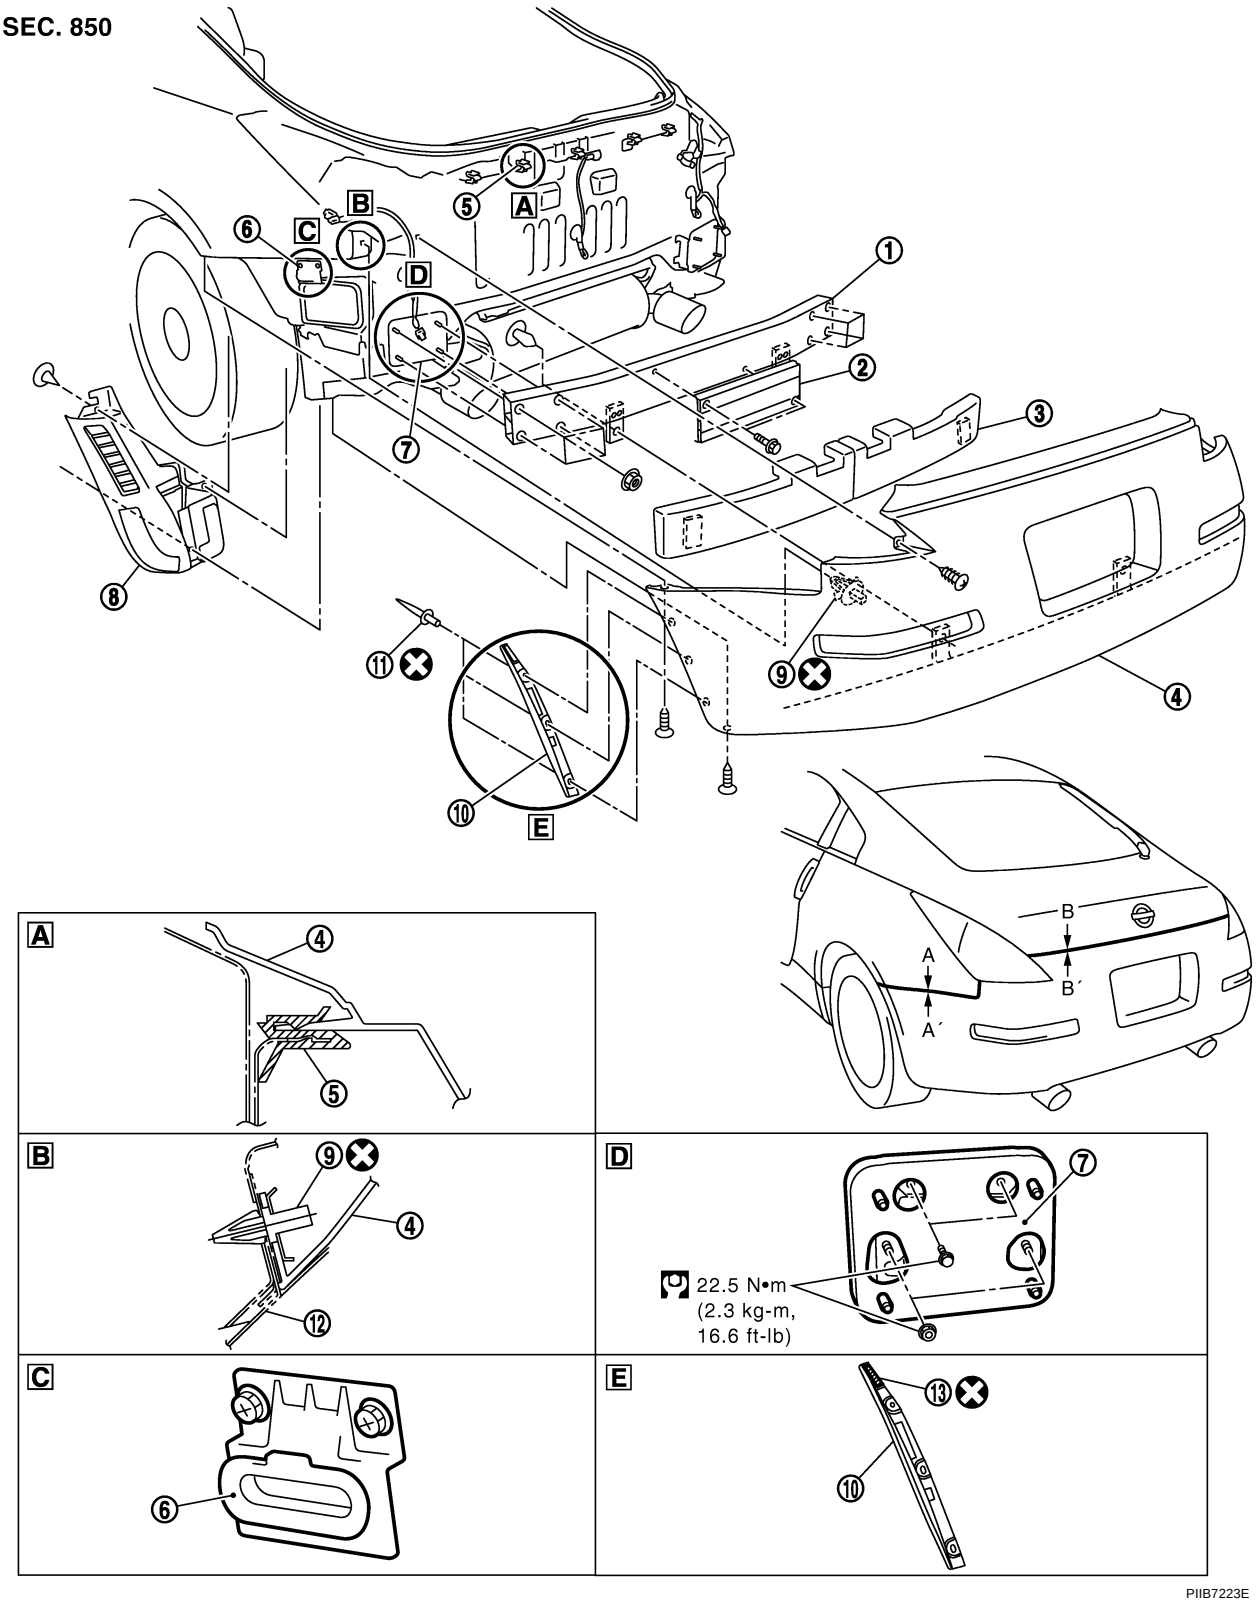
1. Remove front bumper fascia. Refer to EI-14, "Removal and Installation" .
2. Remove screw of bumper molding (upper side, lower).
3. Disengage the plastic pawls to remove the bumper molding (upper side, lower).

INSTALLATION

Install in the reverse order of removal.

REAR BUMPER

PFP:H5022



Removal and Installation

NIS0008G

CAUTION:

Bumper fascia is made of resin. Do not apply strong force to it, and be careful to prevent contact with oil.

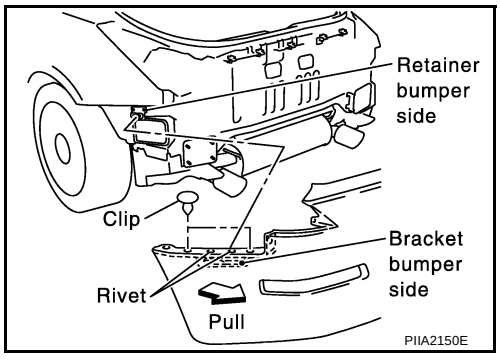
8. Closing rear bumper
9. Clip (A)
10. Fillet molding (only 19in models)
11. Rivet
12. Rear fender panel
13. Double-faced adhesive tape



REMOVAL

1. Remove rear combination lamp assembly. Refer to LT-127, "Removal and Installation" .
2. Remove screw rear combination portion.
3. Remove clips of closing rear bumper.
4. Remove bolt and screw of both edges bumper fascia.
5. Rotate clip (A) in corner of bumper fascia 90 degrees and remove from bracket.
6. Remove clips from lower portion bumper fascia.
7. Pull out upper portion bumper fascia toward rear and disengage from clip.

8. Pull out both edges bumper fascia toward rear and disengage retainer from braked.
9. Disconnect license lamp and turn signal lamp harness connector and remove bumper fascia assembly.

   CAUTION:
   When removing bumper fascia, 2 workers are required so as to prevent it from dropping.
10. Remove bumper energy absorber.
11. Remove screws of bumper over rider.
12. Remove nuts and bolts of bumper reinforcement.
13. Remove bumper stay bolts.

INSTALLATION

Install in the reverse order of removal.

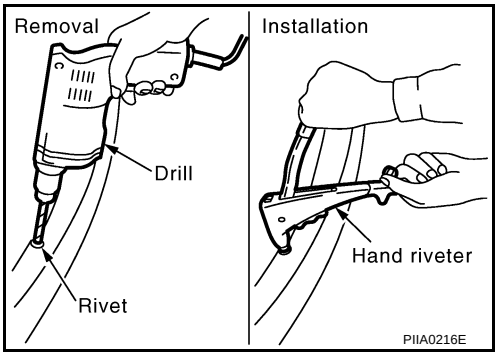
NOTE:
After installing, perform fitting adjustment.

	Portion	Clearance
Rear bumper - Rear fender	A - A	0 - 0.5 mm (0 - 0.020 in)
Rear bumper - Back door	B - B	3.9 - 7.1 mm (0.154 - 0.280 in)

REMOVAL AND INSTALLATION OF BUMPER SIDE BRACKETS AND FILLET MOLDING

REMOVAL

Shave head of rivet with drill [4.0 to 4.5 mm (0.157 to 0.177 in) dia.]



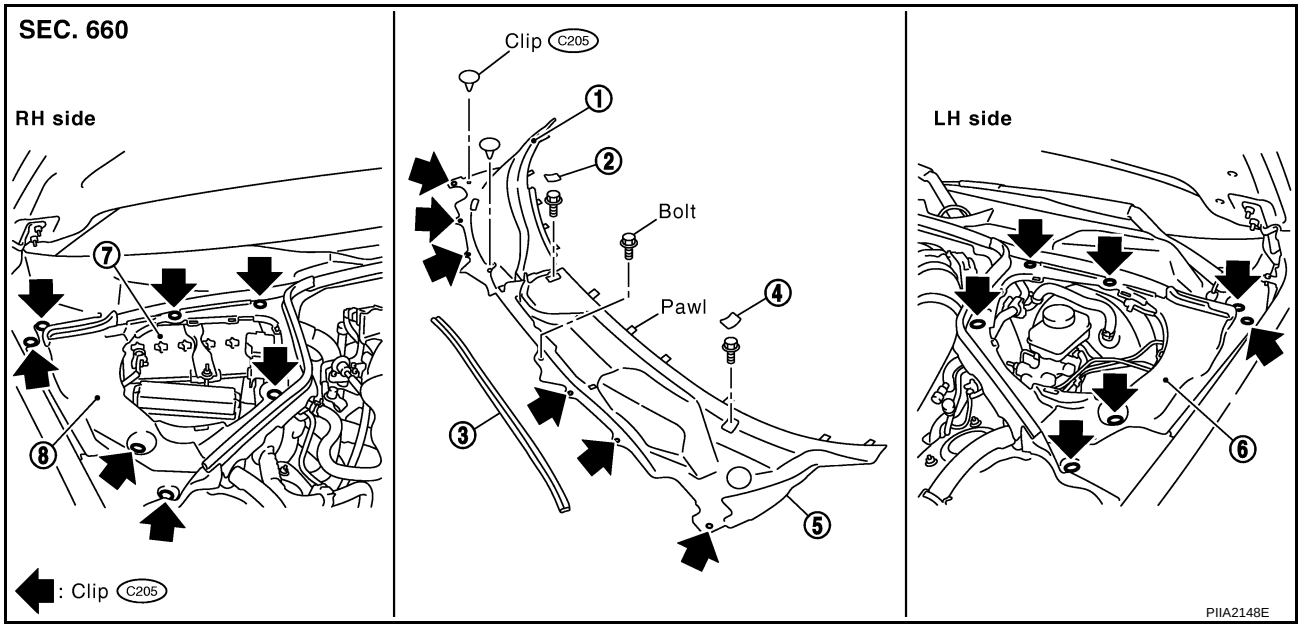
INSTALLATION

Install parts to fascia firmly with hand riveter.

NOTE:

Use the following rivet, when installing of parts.

Rivet thickness	**: 1.2 – 6.4 mm (0.047 – 0.252 in)**
Under hole diameter	**: 4.1 – 4.4 mm (0.161 – 0.173 in) dia.**



COWL TOP

PFP:66100

Removal and Installation

NIS0008H

1. Cowl top cover (RH)
2. Cap
3. Cowl top seal rubber
4. Cap
5. Cowl top cover (LH)
6. Hoodledge cover (LH)
7. Battery
8. Hoodledge cover (RH)

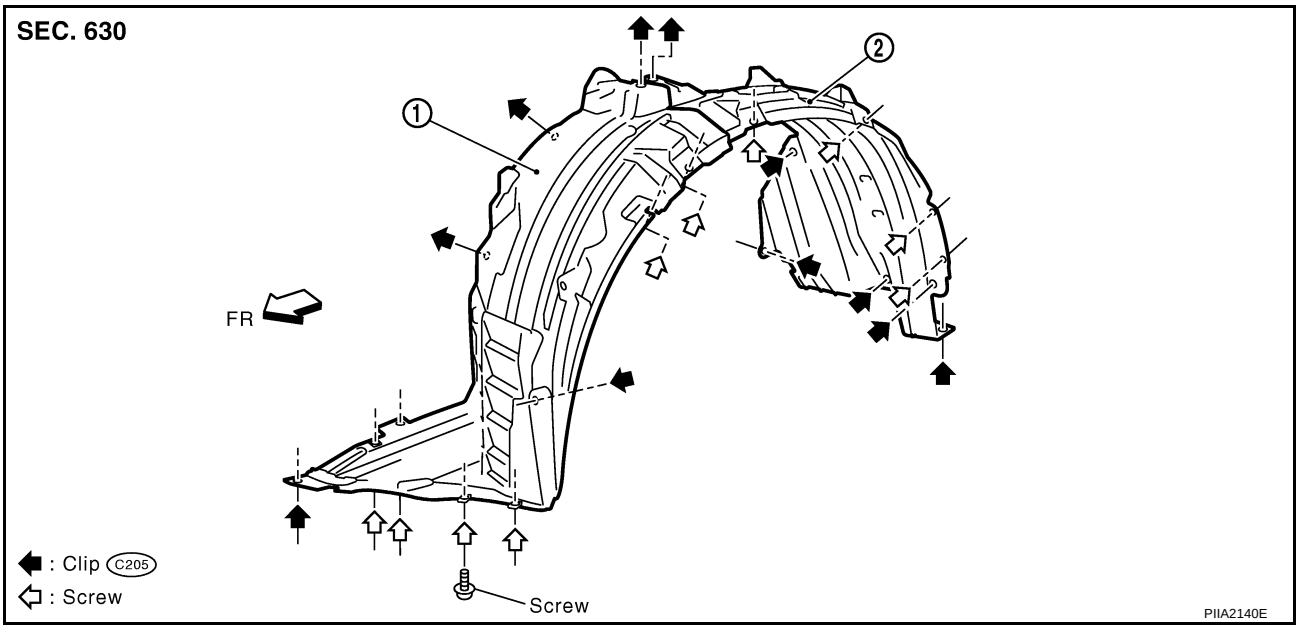
REMOVAL

1. Remove clips of hoodledge cover (LH/RH).
2. Remove both wiper arms (LH/RH). Refer to WW-30, "Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location" .
3. Remove cowl top seal rubber.
4. Remove clips of cowl top cover (RH) and remove cowl top cover (RH).
5. Remove clips, cap, screws and remove cowl top cover (LH).
6. Remove washer hose from cowl top cover.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



After installing, perform adjustment of wiper arm. Refer to WW-30, "Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location" .

FENDER PROTECTOR

PFP:63840

Removal and Installation

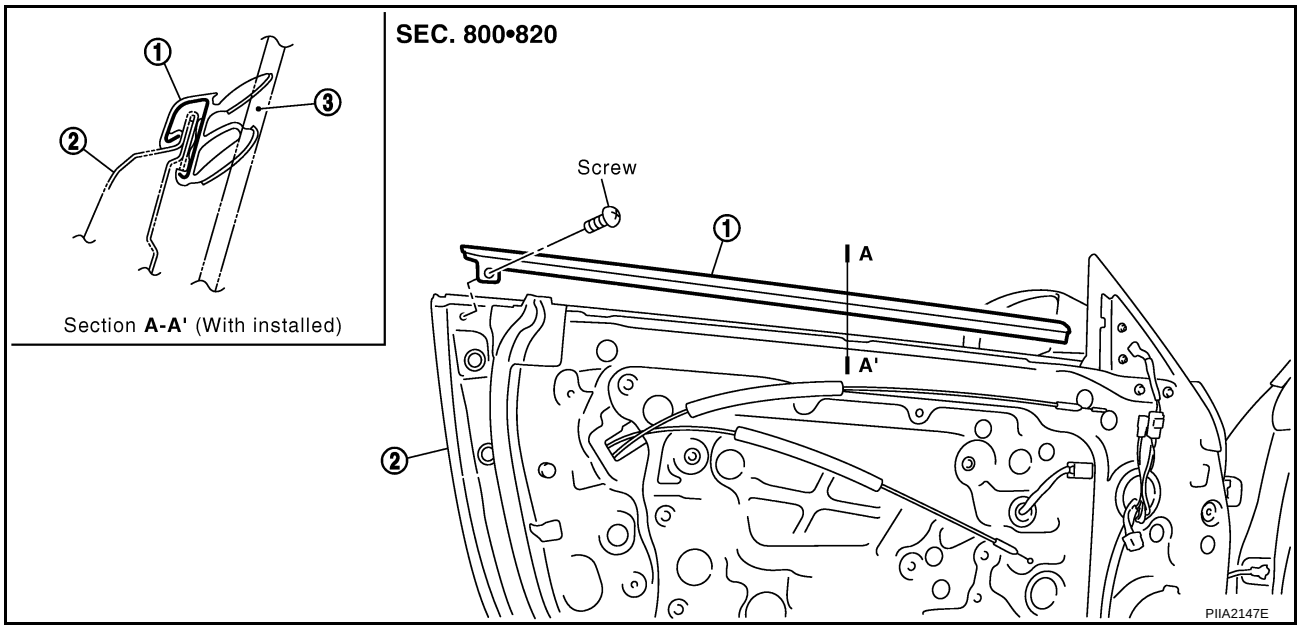
NIS0008I

1. Fender protector (front)
2. Fender protector (rear)

REMOVAL

1. Remove screws and clips of fender protector.
2. Remove fender protector front and remove fender protector rear.

INSTALLATION



Install in the reverse order of removal.

DOOR OUTSIDE MOLDING

PFP:82820

Removal and Installation

NIS0008J

1. Door outside molding
2. Front door panel
3. Glass

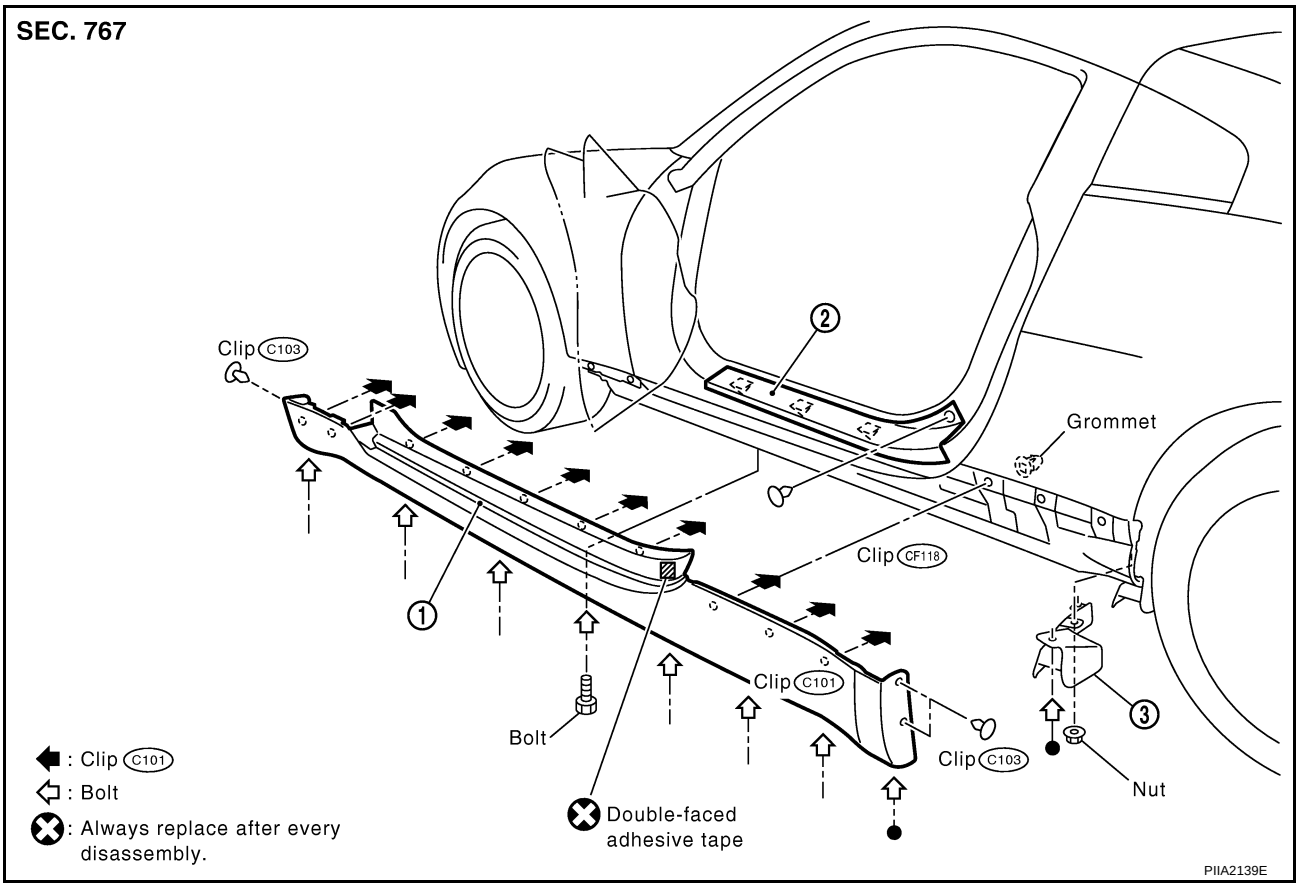
REMOVAL

1. Open windows fully.
2. Remove door finisher. Refer to EI-33, "Removal and Installation" .
3. Remove rear end of door outside molding screw.
4. Disconnect pawls on front edge of molding.
5. Disconnect pawls in the order from front side of door panel portion, with clip clamp remover.
6. Remove slide molding rearward side, after disconnecting all pawls.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



- **Be careful not to apply excessive force when removing because it is easy to deform parts.**
- **After removal, visually inspect molding, and if it is deformed, replace it with new molding.**

SIDE SILL FINISHER

PFP:76852

Removal and Installation

NIS0008K

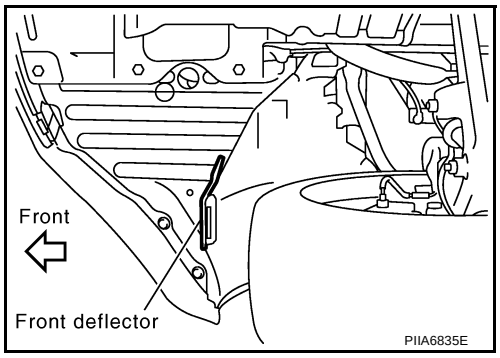
1. Side sill finisher
2. Kicking plate outer
3. Reflector mudguard rear

REMOVAL

1. Remove body side welt. Refer to EI-35, "BODY SIDE TRIM" .
2. Remove kicking plate outer. Refer to EI-35, "BODY SIDE TRIM" .
3. Remove bolts of side sill finisher lower portion.
4. Remove clips of side sill finisher front and rear portion.
5. Remove bolt and nut of reflector mudguard rear.
6. Insert clip clamp remover between panel and side sill finisher, and pull up side sill finisher.

INSTALLATION

Install in the reverse order of removal.



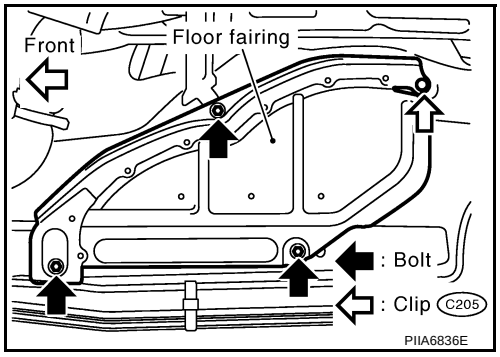
CAUTION:

When installing side sill finisher, check that clips are securely fitted in panel holes on body, and then press them in.

FRONT DEFLECTOR

Removal

Remove screws and clips of front deflector and remove front deflector.



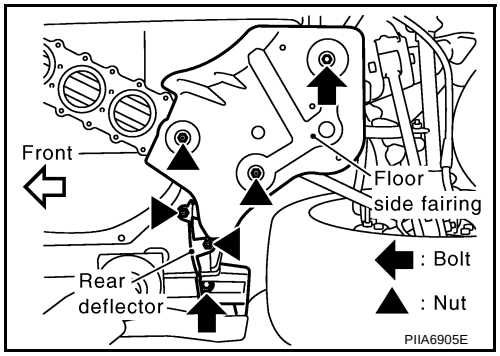
Installation

Install in the reverse order of removal.

FLOOR FAIRING

Removal

Remove bolts and clip of floor fairing and remove floor fairing.



Installation

Install in the reverse order of removal.

FLOOR SIDE FAIRING

Removal

Remove nuts and bolt of floor side fairing and remove floor side fairing.

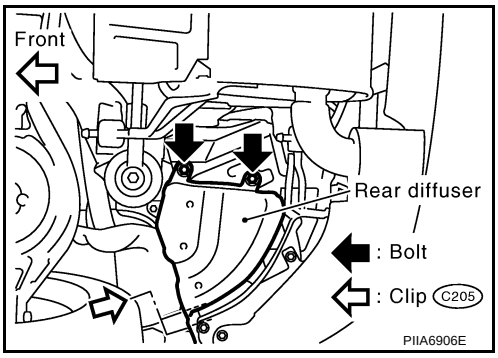
Installation

Install in the reverse order of removal.

REAR DEFLECTOR

Removal

Remove nuts and bolt of rear deflector and remove rear deflector.



Installation

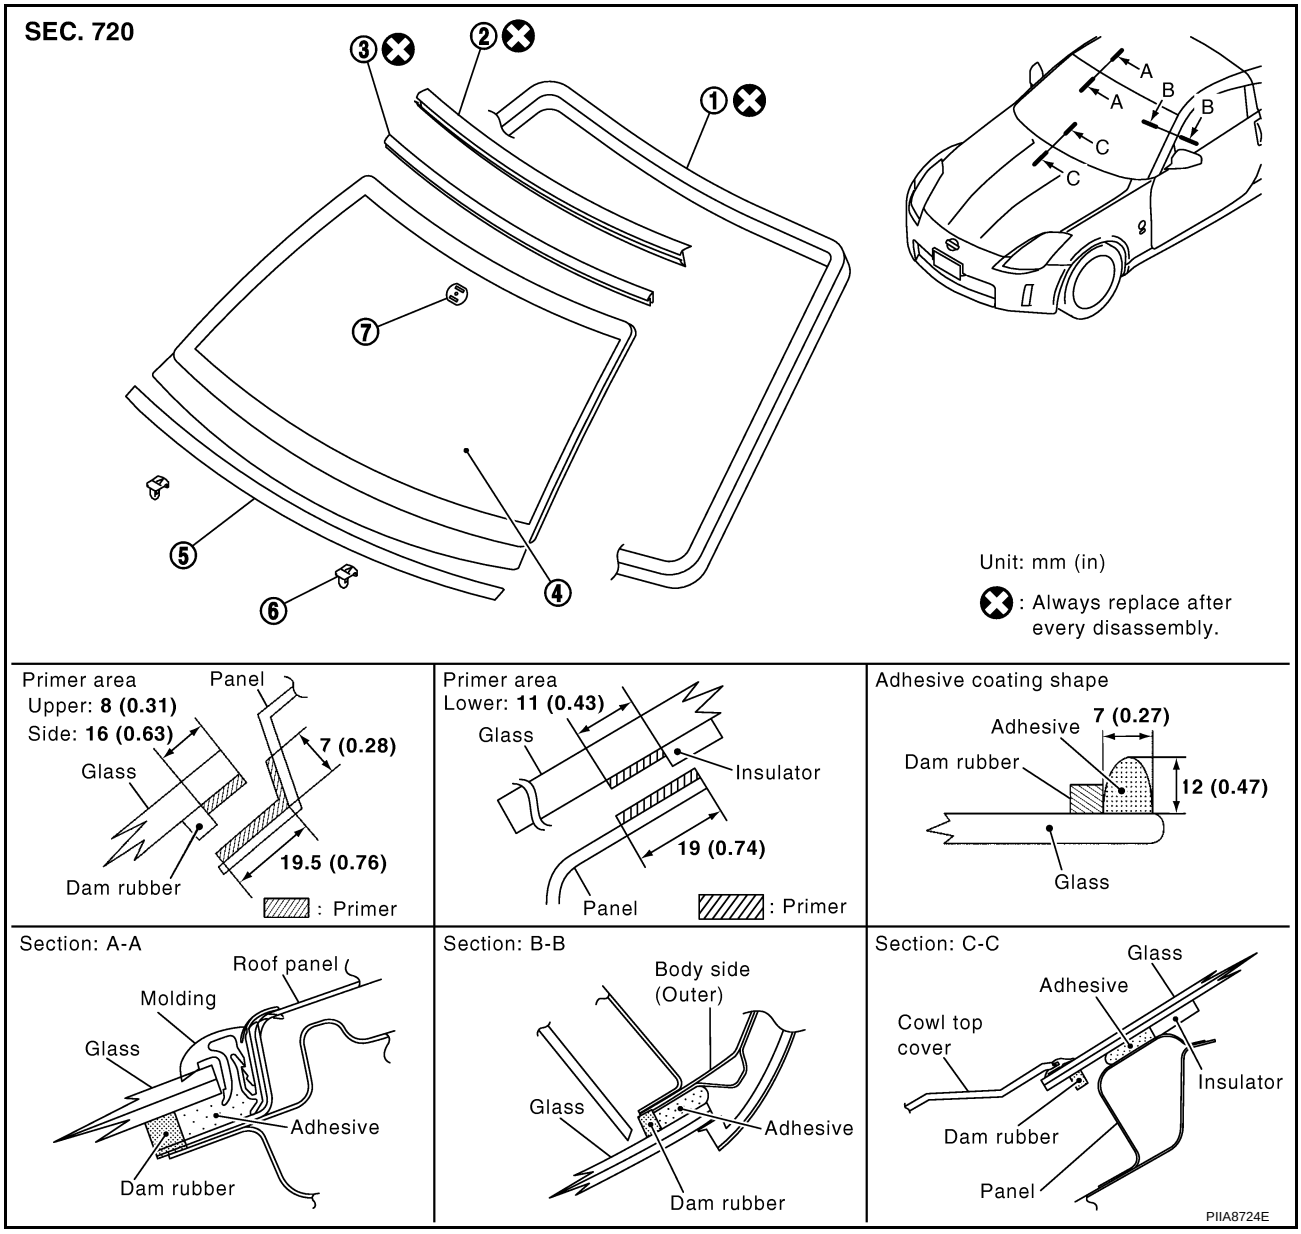
Install in the reverse order of removal.

REAR DIFFUSER

Removal

Remove bolts and clips of rear diffuser and remove rear diffuser.

Installation



Install in the revers order of removal.

WINDSHIELD MOLDING

PFP:72700

Removal and Installation

NIS0008L

1. Dam rubber
2. Fastener
3. Molding (upper)
4. Windshield glass
5. Insulator
6. Spacer
7. Mirror base

REMOVAL

Remove windshield molding. Refer to GW-11, "WINDSHIELD GLASS" .

NOTE:

- Apply protective tape around circumference of windshield.
- Guiding a cutter knife along glass, cut surface of molding.
- Using pliers, draw out all remaining molding left in flanged area of body, and remove it completely from adhering surface on glass.

INSTALLATION

Install windshield molding. Refer to GW-11, "WINDSHIELD GLASS" .

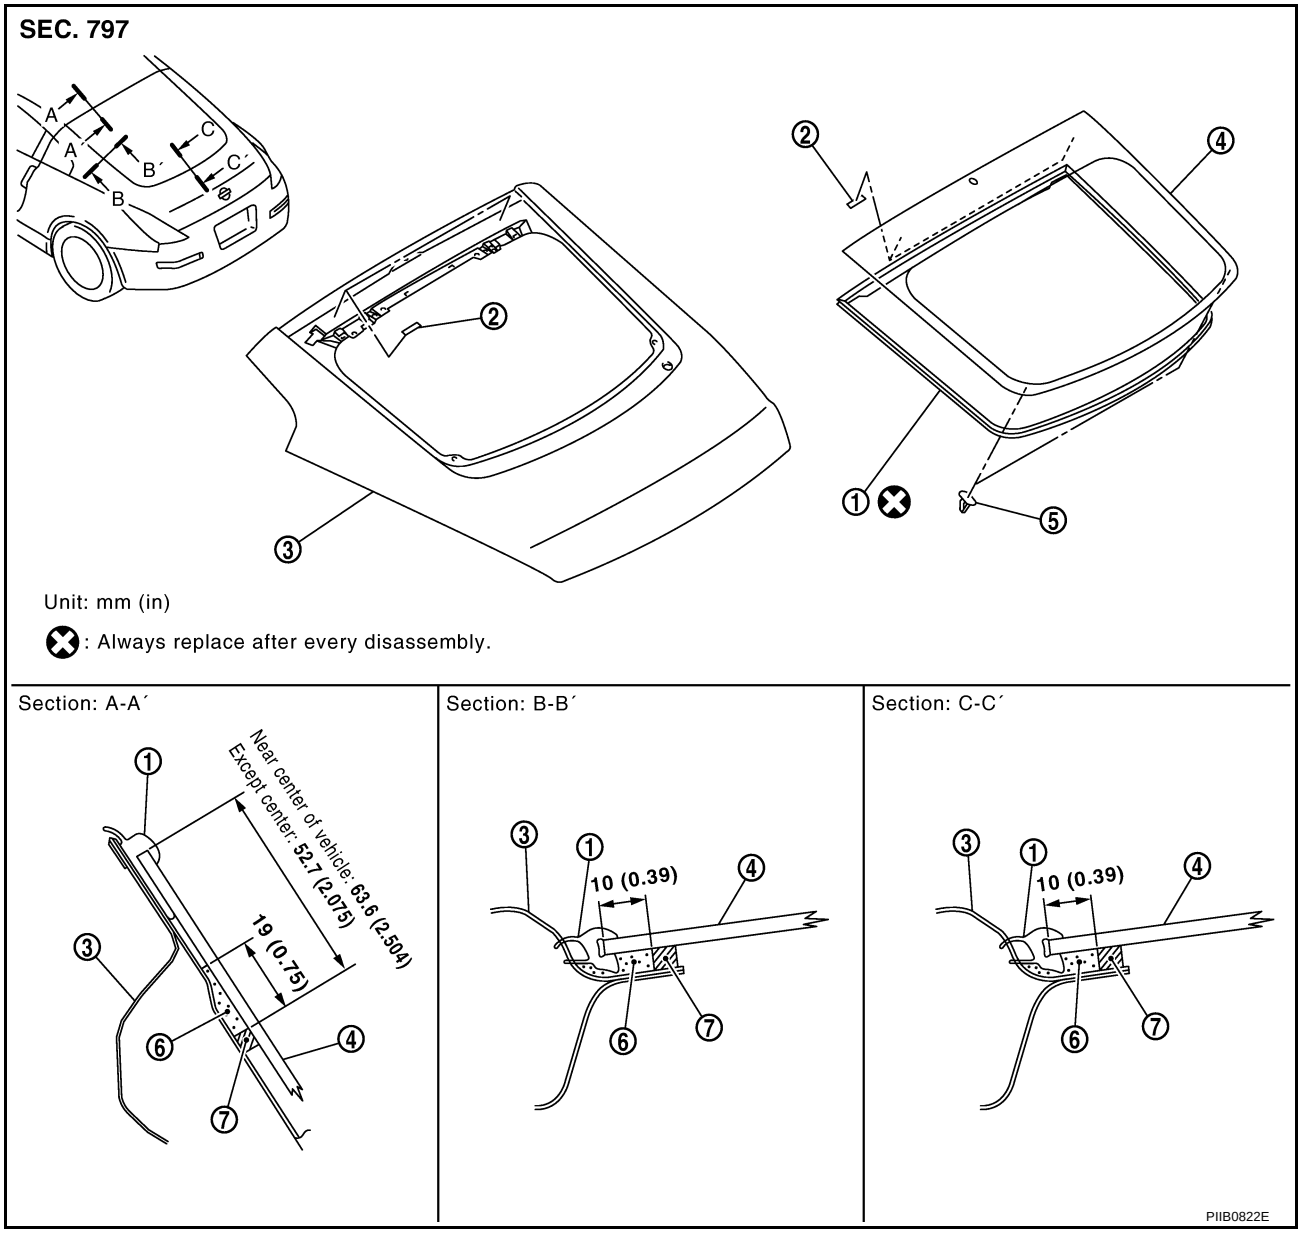
NOTE:

- Align matching marks on body and glass. Install glass to body.

- Press entire surface of glass lightly to fit it completely.

Using a spatula, repair any adhesive overflow or shortage to make surface smooth. Position windshield moldings and allow their adhesion.

CAUTION:



- **Be sure to install windshield molding before adhesive hardens.**
- **After installing glass, keep door windows open and avoid driving vehicle until adhesive has completely cured.**

REAR WINDOW MOLDING

PFP:79762

Removal and Installation

NIS0008M

1. Back door window molding
2. Dual lock fastener
3. Back door
4. Back door window glass
5. Holder
6. Adhesive
7. Dam rubber

REMOVAL OF BACK DOOR WINDOW MOLDING

Remove back door window molding. Refer to GW-14, "BACK DOOR WINDOW GLASS" .

NOTE:

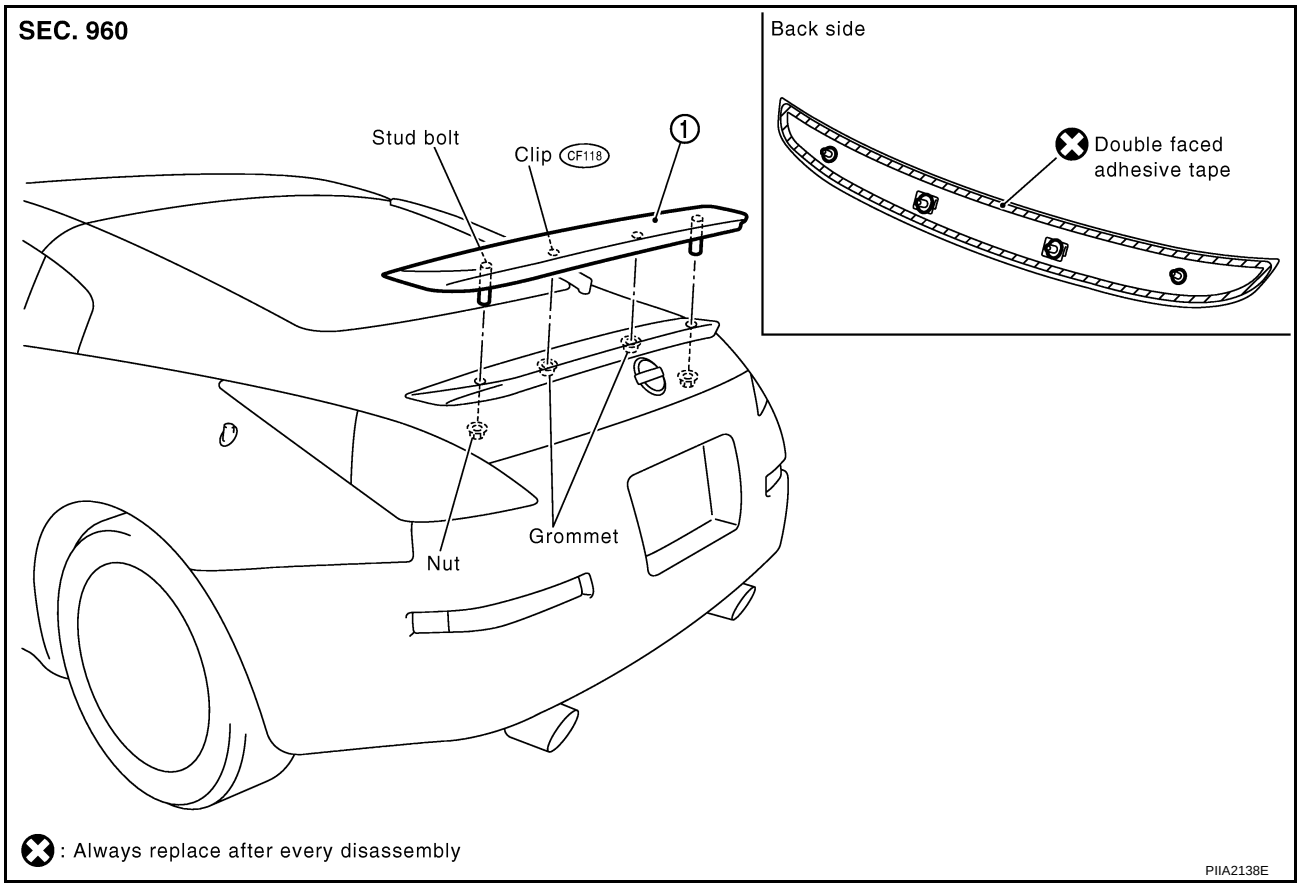
Apply a strip of protective tape along the contour of back door window glass (molding) to prevent paint surface from being damaged.

INSTALLATION OF BACK DOOR WINDOW MOLDING

Install back door window molding. Refer to GW-14, "BACK DOOR WINDOW GLASS" .

NOTE:

- Clean adhesive portion of back door window glass and around circumference with white gasoline.
- Apply dam rubber to all surfaces of glass.
- Attach back door window molding to side face of glass.



- Back door window molding should not overlap on the surface of back door window glass.

REAR SPOILER

PFP:96030

Removal and Installation

NIS0008N

1. Rear spoiler

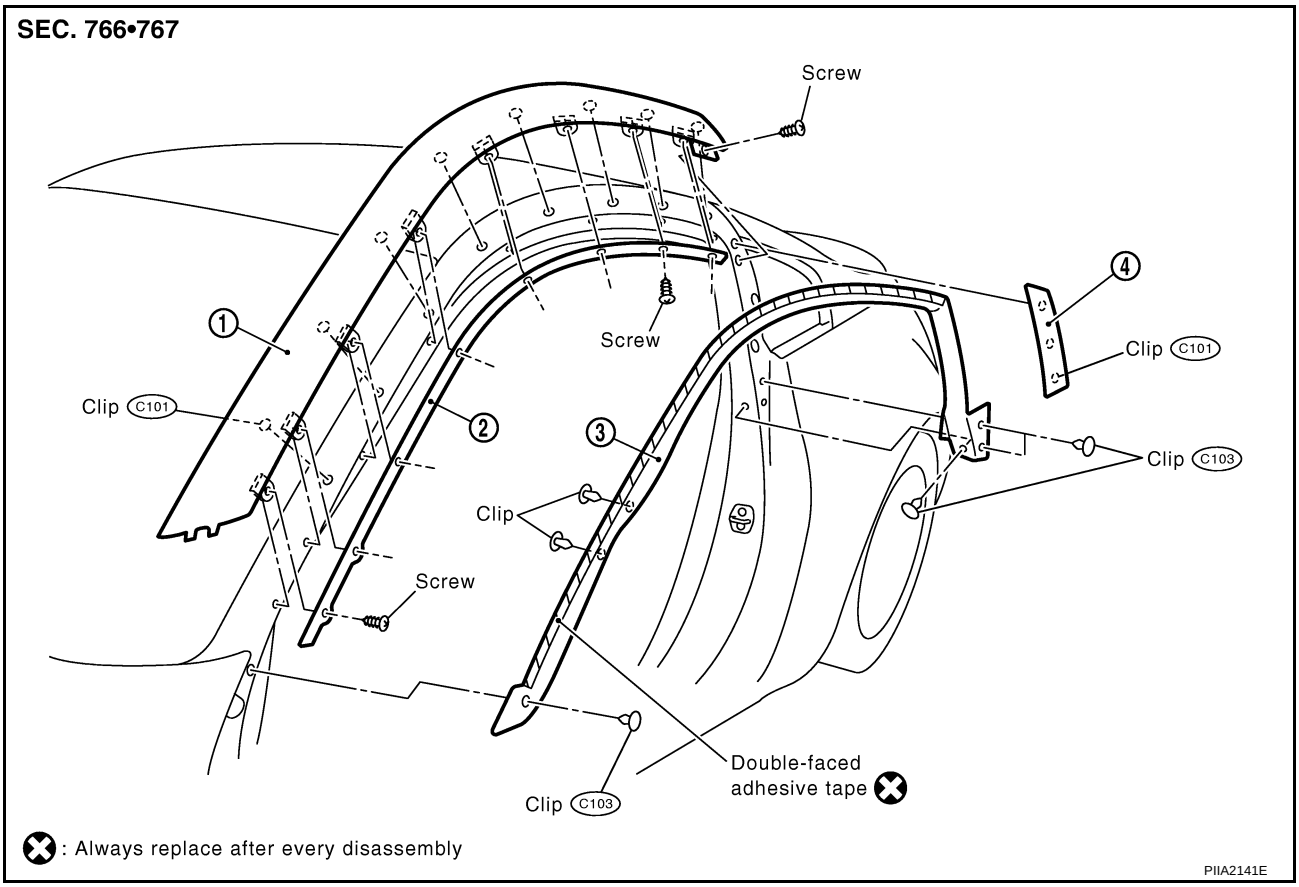
REMOVAL

1. Remove back door finisher lower. Refer to EI-47, "Removal and Installation (for Coupe Models)" .
2. Remove nuts of rear spoiler.
3. Remove clip of rear spoiler.
4. Remove double-faced adhesive tapes with wide plastic spatula between back door and rear spoiler.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



- **Do not let air between contact surfaces when installing.**
- **To secure contact, do not wash vehicle within 24 hours after installation.**

ROOF SIDE MOLDING

PFP:73854

Removal and Installation (for Coupe Models)

NIS0008O

1. Front pillar finisher
2. Retainer body side weatherstrip
3. Body side weatherstrip
4. Lock pillar finisher

FRONT PILLAR FINISHER

Removal

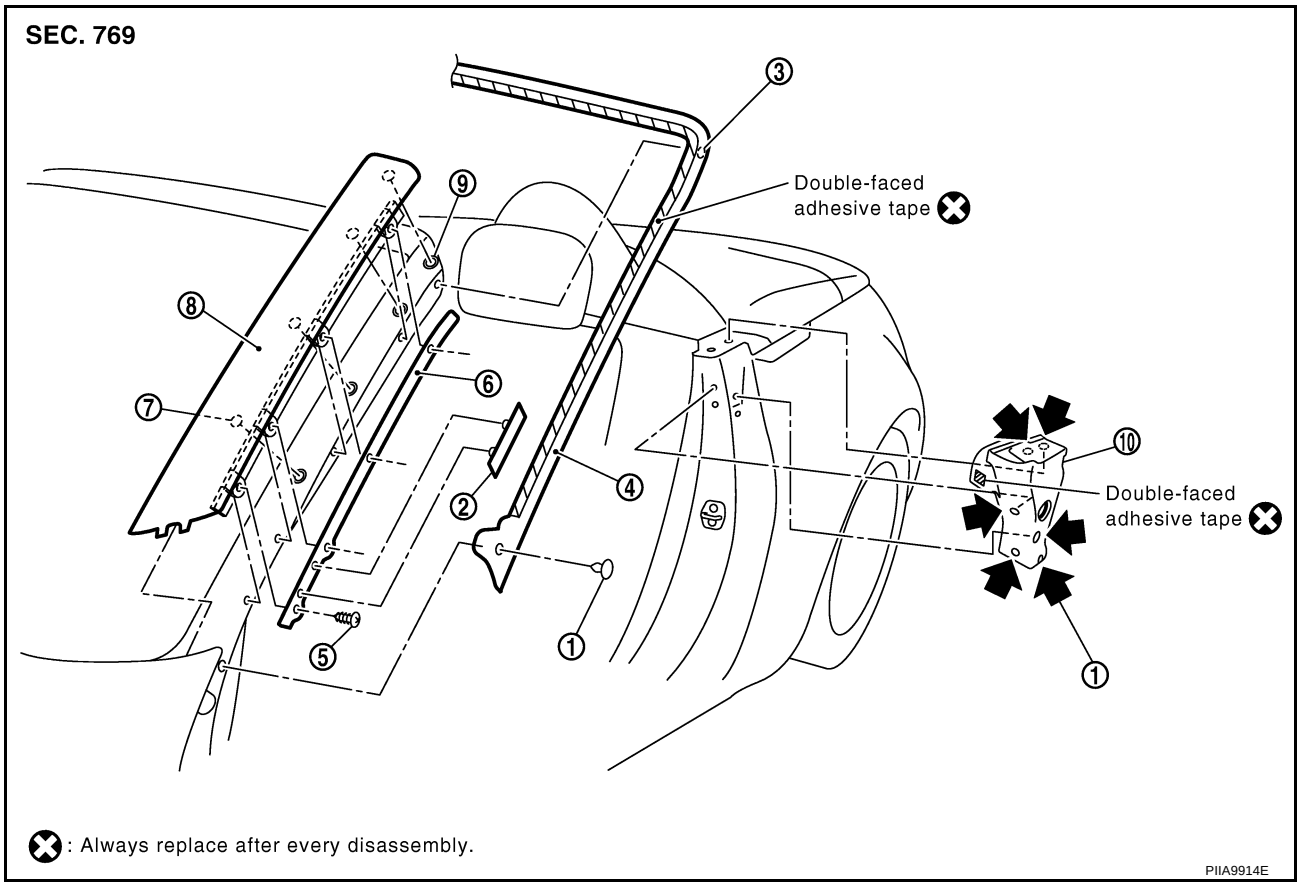
1. Remove lock pillar finisher.
2. Remove clip and double-faced adhesive tapes of body side weatherstrip.
3. Remove body side weatherstrip.
4. Remove screw of retainer body side weatherstrip.
5. Remove screw and clip of front pillar finisher.
6. Remove front pillar finisher.

Installation

Install in the reverse order of removal.

LOCK PILLER FINISHER

Removal



Lift and twist lock pillar finisher up from lock pillar disconnect clips.

Installation

Install in the reverse order of removal.

Removal and Installation (for Roadster Models)

NIS0008P

1. Clip (C103)
2. Clip
3. Clip (CE103)
4. Body side glass-run rubber
5. Screw
6. Retainer
7. Clip (C101)
8. Front pillar finisher
9. Grommet
10. Body side weatherstrip

FRONT PILLAR FINISHER

Removal

1. Open soft top.
2. Remove clip and double-faced adhesive tapes of body side glass-run rubber.
   NOTE:
   Slide body side glass run slightly upward to remove clip on middle portion of glass run rubber side from retainer.
3. Remove body side glass-run rubber.
4. Remove screw of retainer.
5. Remove screw and clips of front pillar finisher.
6. Remove front pillar finisher.

Installation

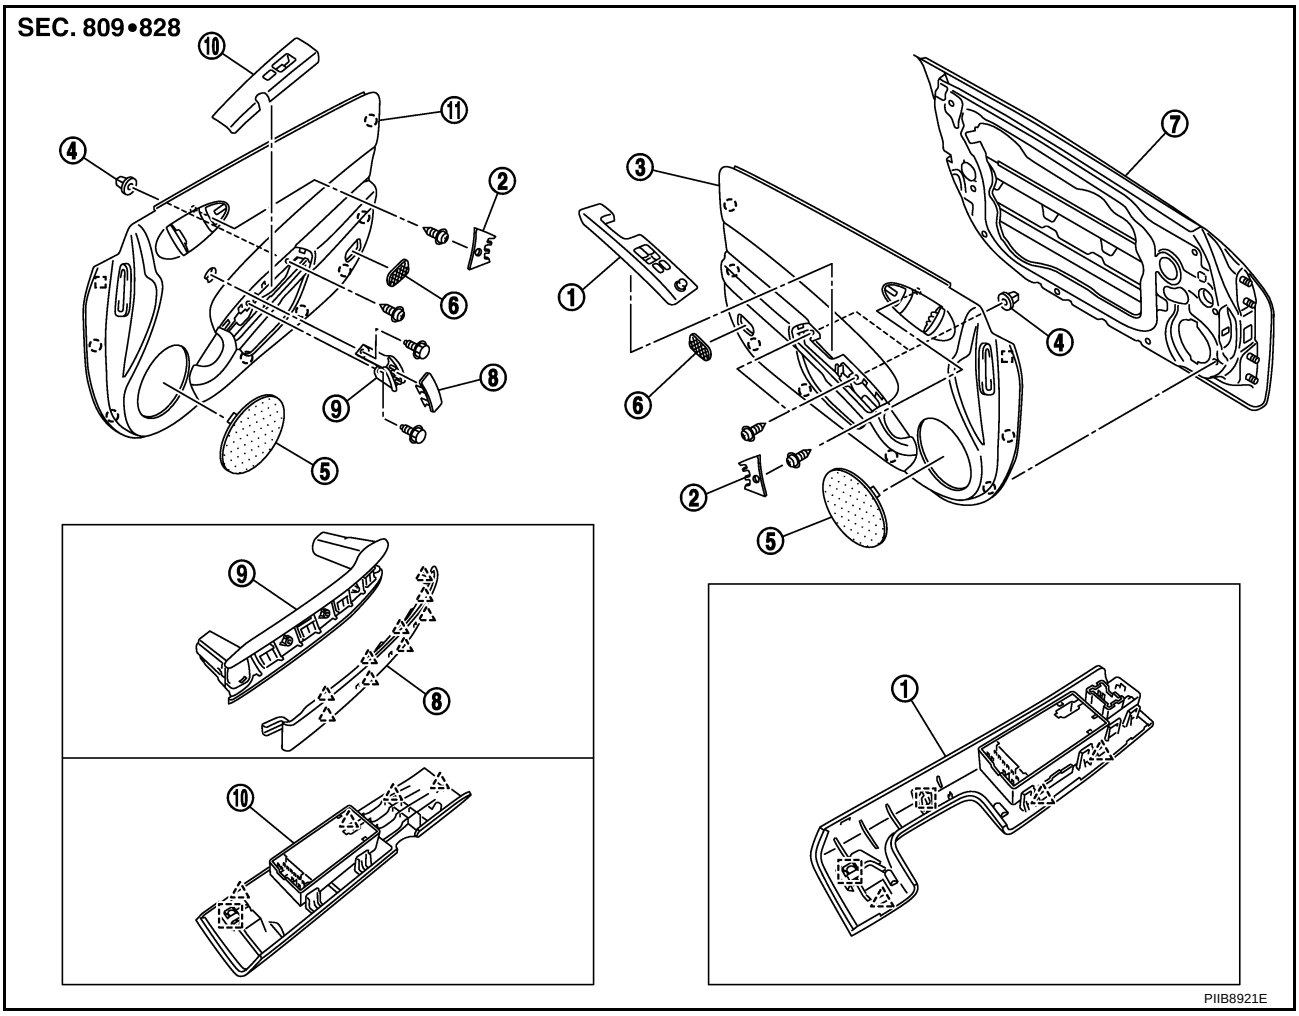
Install in the reverse order of removal.

BODY SIDE WEATHERSTRIP

Removal

1. Open soft top.
2. Disconnect clips and remove body side weatherstrip.

Installation



Install in the reverse order of removal.

DOOR FINISHER

PFP:80900

Removal and Installation

NIS0008Q

1. Power window main switch finisher	2. Inside handle escutcheon	3. Driver door finisher assembly
4. Grommet	5. Speaker grille	6. Step lamp lens
7. Door panel assembly (LH)	8. Door grip finisher	9. Door grip
10. Power window sub switch finisher	11. Passenger door finisher assembly	
Clip	Pawl	Metal clip

DRIVER DOOR FINISHER

Removal

1. Remove cap inside handle portion and remove screw.
2. Remove power window main switch finisher.
3. Disconnect harness connector power window main switch.
4. Remove screw of power window main switch portion.
5. Disengage both of the door main harness clip on the rear surface of the door finisher.
6. Disengage part of the bottle holder's illumination harness connector.
7. Pull up door finisher and remove connector inside handle cable and lock knob cable.

Installation

Install in the reverse order of removal.

CAUTION:

To install finisher, check if all clips are matched over holes of panel on vehicle, then push it.

PASSENGER DOOR FINISHER

Removal

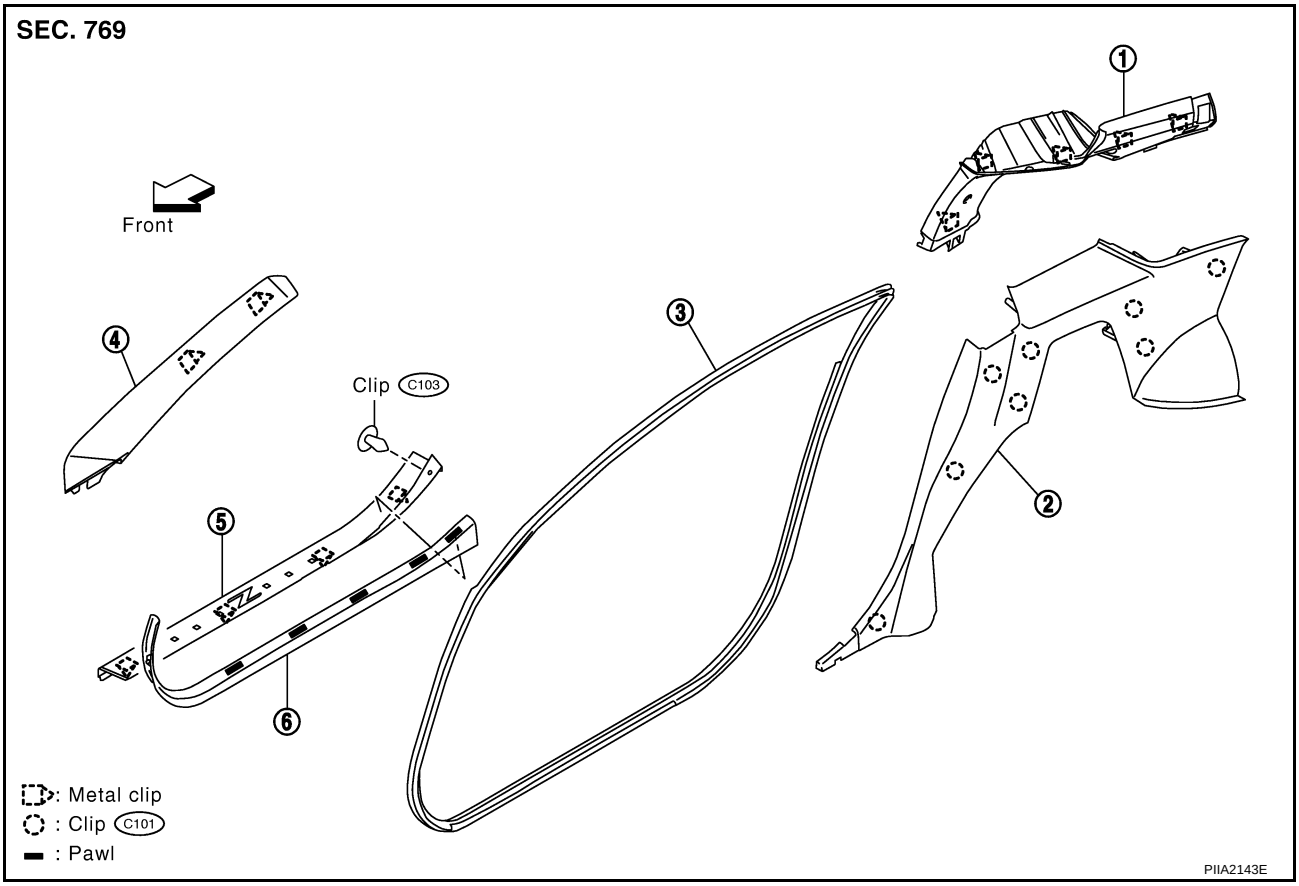
1. Remove cap inside handle portion and remove screw.
2. Insert taping flat-bladed screwdriver into edge portion, disconnect pawls, and remove door grip finisher.
3. Remove screw of door grip portion.
4. Remove power window sub switch finisher.
5. Disconnect harness connector power window sub switch.
6. Disengage both of the door main harness clip on the rear surface of the door finisher.
7. Disengage part of the bottle holder's illumination harness connector.
8. Remove screw of power window sub switch portion.
9. Pull up door finisher and remove connector inside handle cable and lock knob cable.

Installation

Install in the reverse order of removal.

CAUTION:

To install finisher, check if all clips are matched over holes of panel on vehicle, then push it.



BODY SIDE TRIM

PFP:76913

Removal and Installation (for Coupe Models)

NIS0008R

CAUTION:
Wrap the tip of flat-bladed screwdriver with a cloth when removing metal clips from garnishes.

1. Rear pillar finisher
2. Rear side finisher

4. Front pillar garnish
5. Kicking plate outer
6. Kicking plate inner

REAR SIDE FINISHER

Removal

1. Remove kicking plate inner.
2. Remove body side welt.
3. Remove rear side finisher.

Installation

Install in the reverse order of removal.

REAR PILLAR FINISHER

Removal

1. Remove back door weatherstrip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove luggage finisher lower center. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
3. Disconnect harness connector at luggage room lamp.
4. Remove luggage side finisher upper. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
5. Remove seat belt shoulder anchor. Refer to SB-4, "Removal and Installation of Seat Belt (Coupe)" .
6. Remove kicking plate inner.
7. Remove body side welt.
8. Remove rear side finisher.
9. Remove rear pillar finisher.

Installation

Install in the reverse order of removal.

FRONT PILLAR GARNISH

Removal

1. Remove body side welt.
2. Remove front pillar garnish.

Installation

Install in the reverse order of removal.

KICKING PLATE

Removal

1. Remove kicking plate inner.
2. Remove body side welt.
3. Remove clip of kicking plate outer.
4. Remove kicking plate outer.

Installation

Install in the reverse order of removal.

BODY SIDE WELT

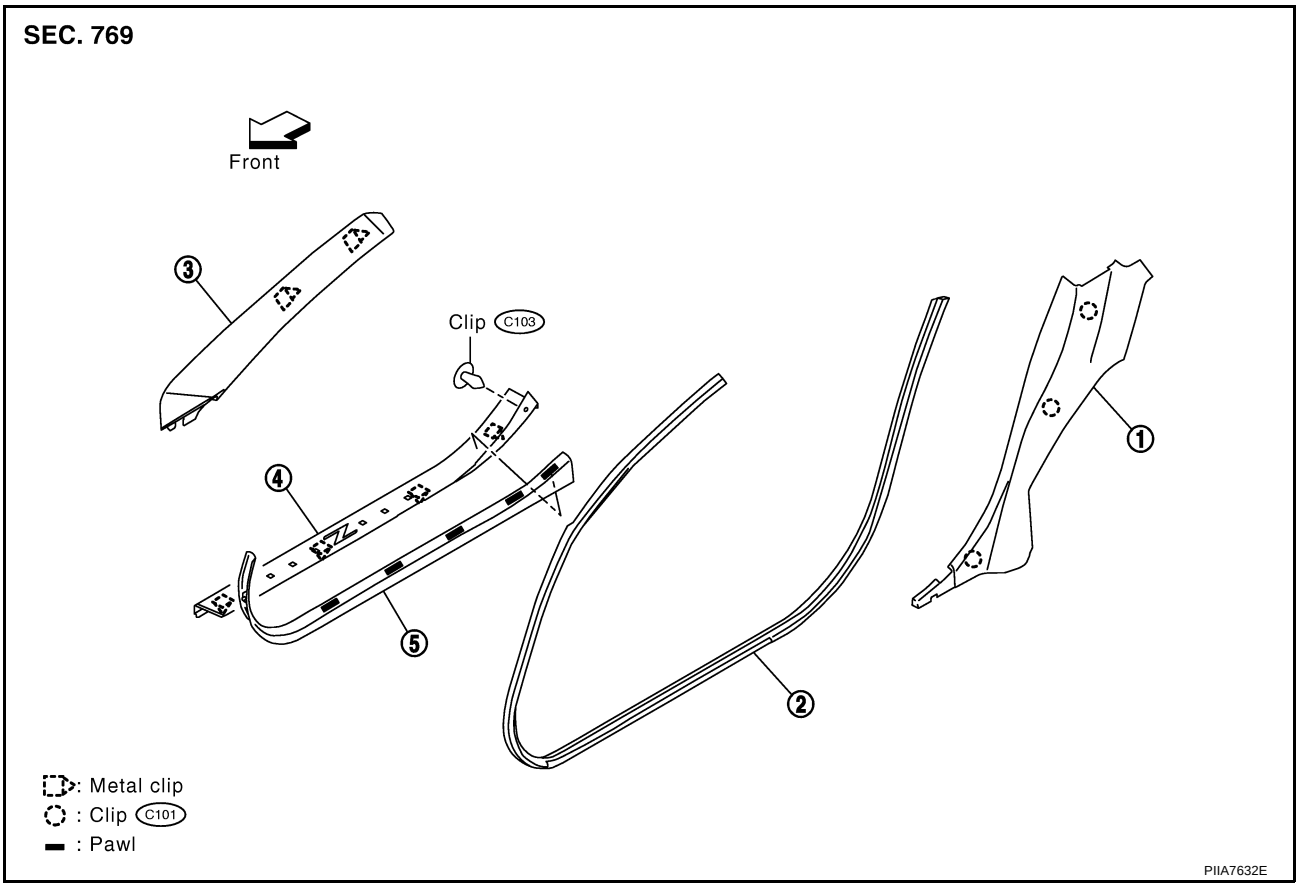
Removal

1. Remove kicking plate inner.
2. Remove body side welt.

Installation

Install in the reverse order of removal.

CAUTION:



To install, check if all clips are matched over holes of panel on vehicle, then push on.

Removal and Installation (for Roadster Models)

NIS0008S

CAUTION:

Wrap the tip of flat-bladed screwdriver with a cloth when removing metal clips from garnishes.

1. Rear side finisher

REAR FLOOR BOX

Removal

1. Remove center console finisher. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove kicking plate inner and partially remove rear of body side welt (RH/LH). Refer to EI-37, "Removal and Installation (for Roadster Models)" .
3. Remove rear side finisher. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
4. Remove luggage floor finisher lower.

5. Remove rear floor box lid and luggage floor finisher mask from luggage floor finisher lower.
6. Remove rear floor box mat and tray.
7. Remove screws, and remove rear floor box striker.
8. Loosen mounting screws and remove rear floor box.

Installation

Install in the reverse order of removal.

LUGGAGE FLOOR FINISHER UPPER

Removal

1. Remove kicking plate inner and partially remove rear of body side welt (RH/LH). Refer to EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove rear side finisher. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
3. Remove luggage floor finisher lower.
4. Remove rear parcel box (RH/LH).
5. Remove luggage floor finisher upper.

Installation

Install in the reverse order of removal.

BACK PANEL FINISHER

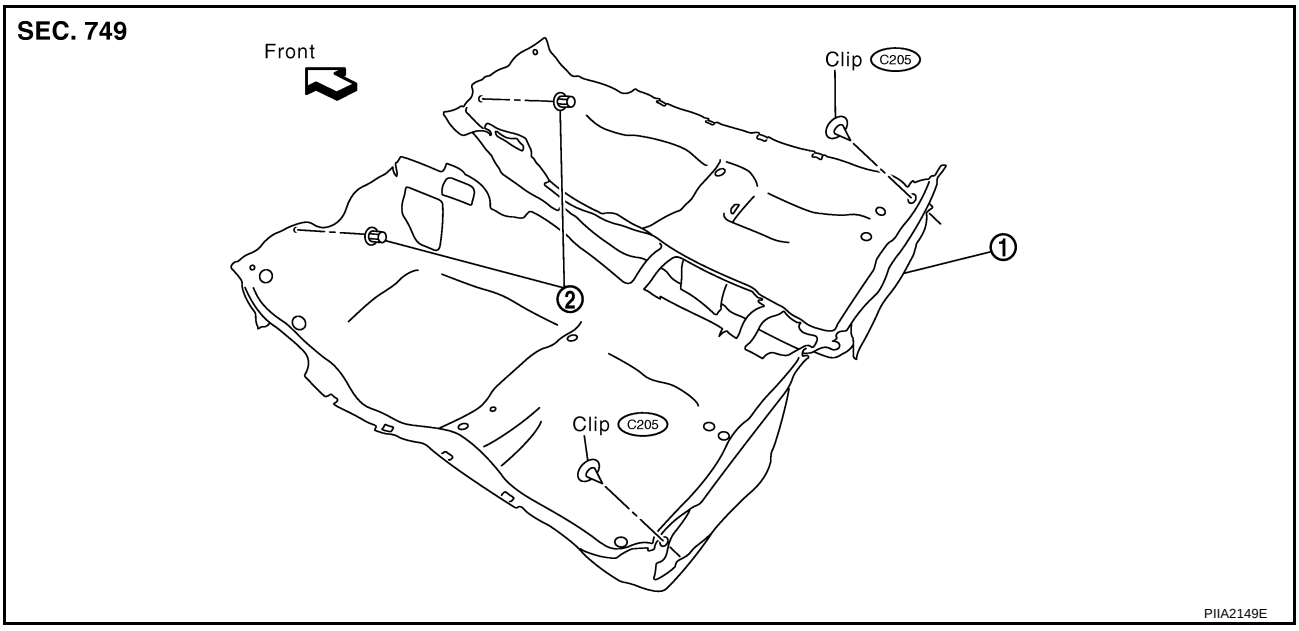
Removal

1. Remove kicking plate inner and partially remove rear of body side welt (RH/LH). Refer to EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove rear side finisher. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
3. Remove cover and shoulder anchor bolt of seat belt (RH/LH). Refer to SB-6, "Removal and Installation of Seat Belt (Roadster)" .
4. Remove front guard frame protector (RH/LH).
5. Loosen mounting bolts and remove storage lid deflector.
6. Loosen screws and remove rear guard frame protector (RH/LH).
7. Remove clips, remove back panel finisher assembly.

Installation

Install in the reverse order of removal.

CAUTION:

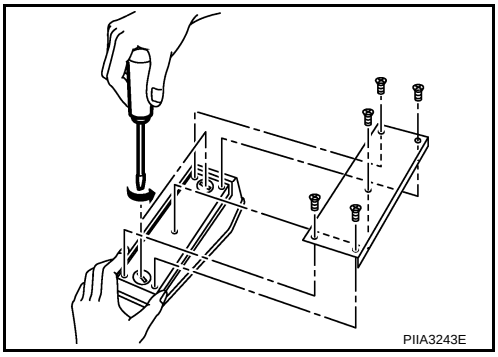


To install, check if all clips are matched over holes panel on vehicle, then push on.

FLOOR TRIM

PFP:74902

Removal and Installation



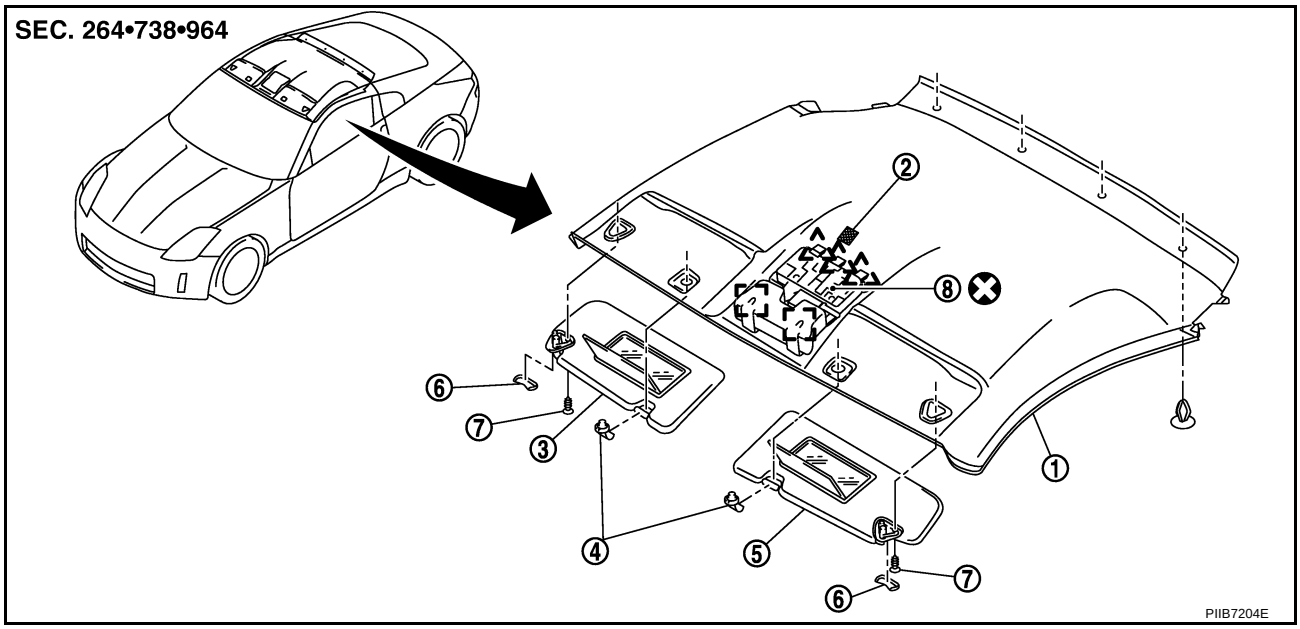
NIS0008V

1. Floor carpet assembly
2. Nut

REMOVAL

1. Remove driver seat and passenger seat. Refer to SE-67, "SEAT" .
2. Remove center console. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
3. Remove instrument side panel (left and right). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove body side welt. Refer to EI-35, "BODY SIDE TRIM" .
5. Remove kicking plate inner. Refer to EI-35, "BODY SIDE TRIM" .
6. Remove screw of footrest and remove plate.
7. Remove clips of footrest and remove footrest.
8. Remove dash side finisher. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
9. Remove nut and clips of floor carpet.
10. Remove floor carpet assembly.

INSTALLATION



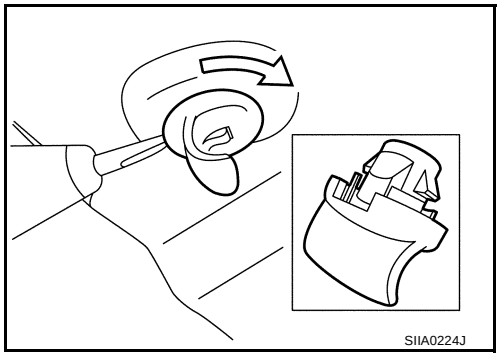
Install in the reverse order of removal.

HEADLINING

PFP:73910

Removal and Installation (for Coupe Models)

NIS0008W



1. Headlining	2. Dual lock fastener	3. Sun-visor (RH)
4. Sun-visor holder	5. Sun-visor (LH)	6. cap
7. Screw	8. Map lamp assembly	
Pawl	Metal clip	

REMOVAL

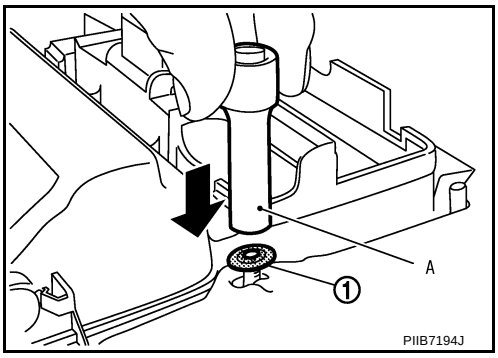
1. Remove back door welt. Refer to EI-47, "BACK DOOR" .
2. Remove luggage floor carpet. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
3. Remove luggage finisher lower center. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
4. Disconnect harness connector at luggage room lamp.
5. Remove luggage side finisher upper. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
6. Remove kicking plate inner. Refer to EI-36, "KICKING PLATE" .
7. Remove body side welt. Refer to EI-35, "Removal and Installation (for Coupe Models)" .
8. Remove rear side finisher. Refer to EI-35, "REAR SIDE FINISHER" .
9. Remove seat belt anchor. Refer to SB-4, "Removal and Installation of Seat Belt (Coupe)" .
10. Remove rear pillar finisher. Refer to EI-35, "REAR PILLAR FINISHER" .
11. Remove front pillar garnish. Refer to EI-35, "Removal and Installation (for Coupe Models)" .
12. Disconnect harness connector at map lamp.
13. Remove sun-visor (RH/LH).
14. Remove sun-visors holder (RH/LH).

    NOTE:
    Insert flat-bladed screw driver to edge, and turn it 90 degrees and remove sun-visor holder.

15. Remove dual lock fastener.
16. Remove clips of headlining rear potion.

17. Remove headlining, turn to 90 degrees and take out from back door.

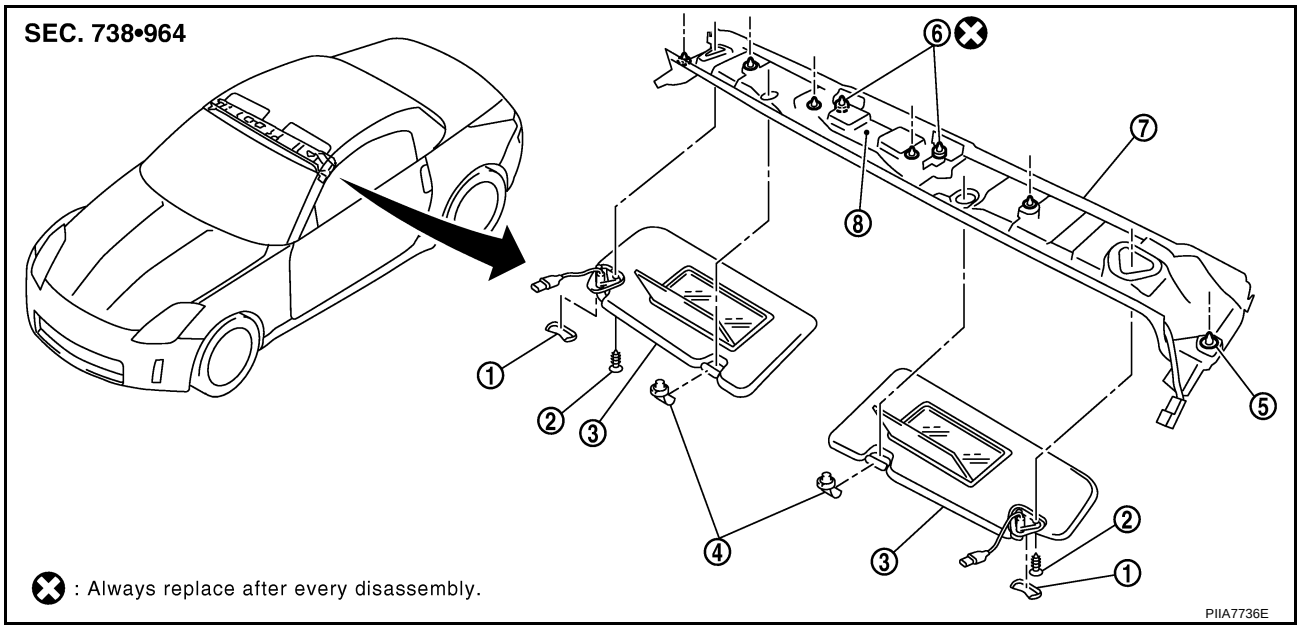
CAUTION:



- **Always remove or install in a pair.**
- **Cover surroundings with waste to avoid scratches or damages.**
- **Do not bend headlining too hard.**

INSTALLATION

Install in the reverse order of removal.

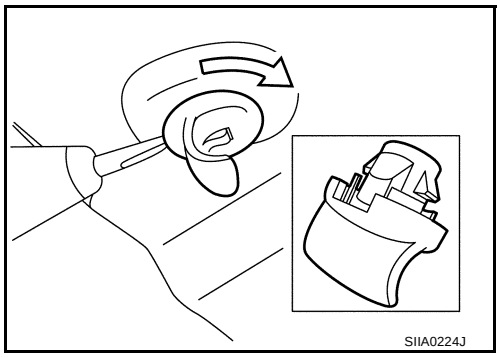


CAUTION:

- **Do not bend headlining when installing.**
- **When installing the map lamp assembly (new unit) or assist grip assembly (new unit), use tools like drafter or deep socket A to eliminate the gap between the headlining and the above new units while the push on nuts (1).**

Removal and Installation (for Roadster Models)

NIS0008X



1. Cap	2. Screw	3. Sun-visor
4. Sun-visor holder	5. Clip (C101)	6. Clip (C101)
7. Roof front finisher	8. Map lamp	

ROOF FRONT FINISHER

Removal

1. Remove cap and screws and disconnect harness connector, then remove sun-visor.
2. Remove sun-visors holder (RH/LH).

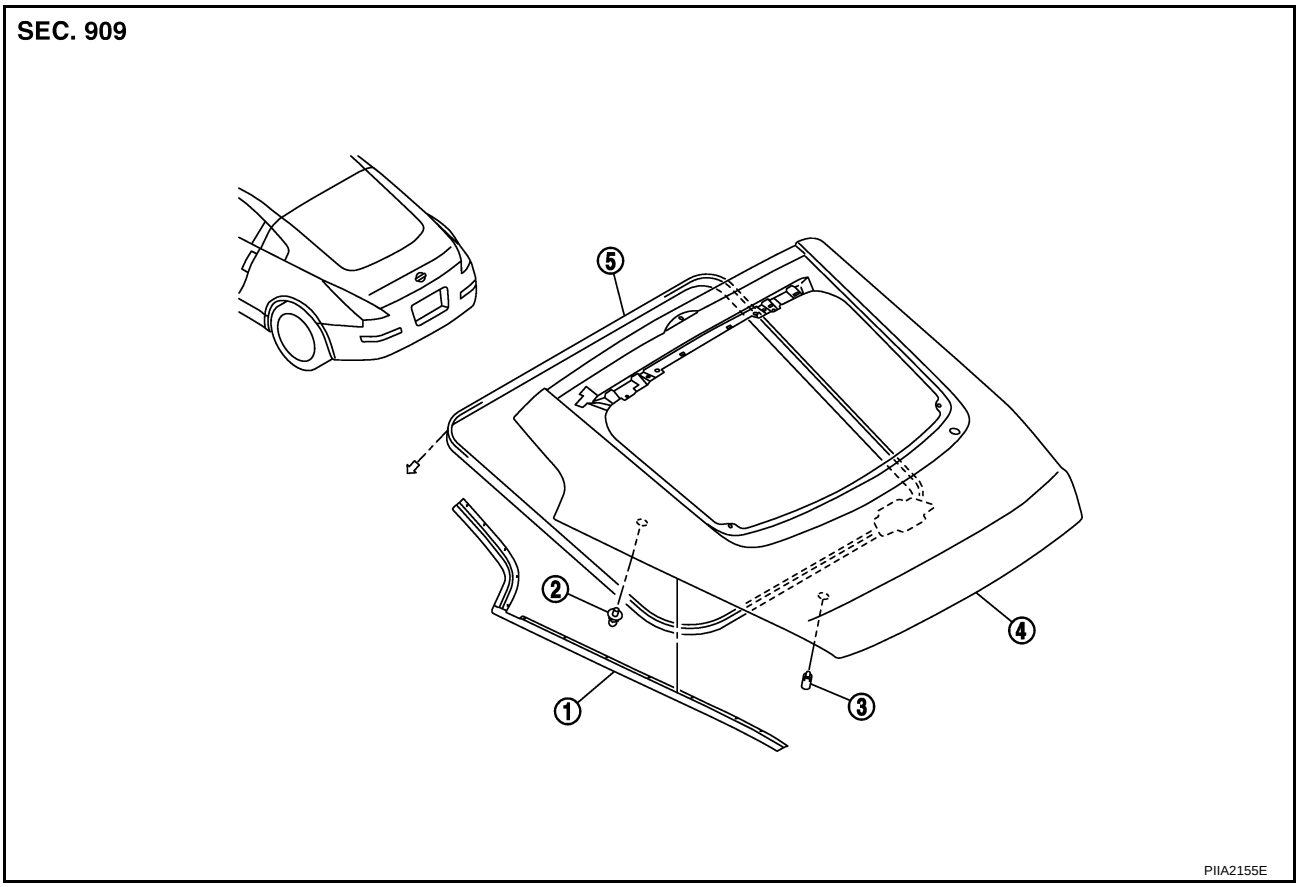
   NOTE:
   Insert flat-bladed screw driver to edge, and turn it 90 degrees and remove sun-visor holder.

3. Remove body side welt and front pillar garnish. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
4. Disconnect harness connector and remove roof front finisher.

Installation

Install in the reverse order of removal.

CAUTION:



To install, check if all clips are matched over holes panel on vehicle, then push on.

BACK DOOR

PFP:90100

Removal and Installation (for Coupe Models)

NIS0008Y

1. Back door molding
2. Bumper rubber
3. Bumper rubber
4. Back door panel
5. Back door welt

BACK DOOR MOLDING

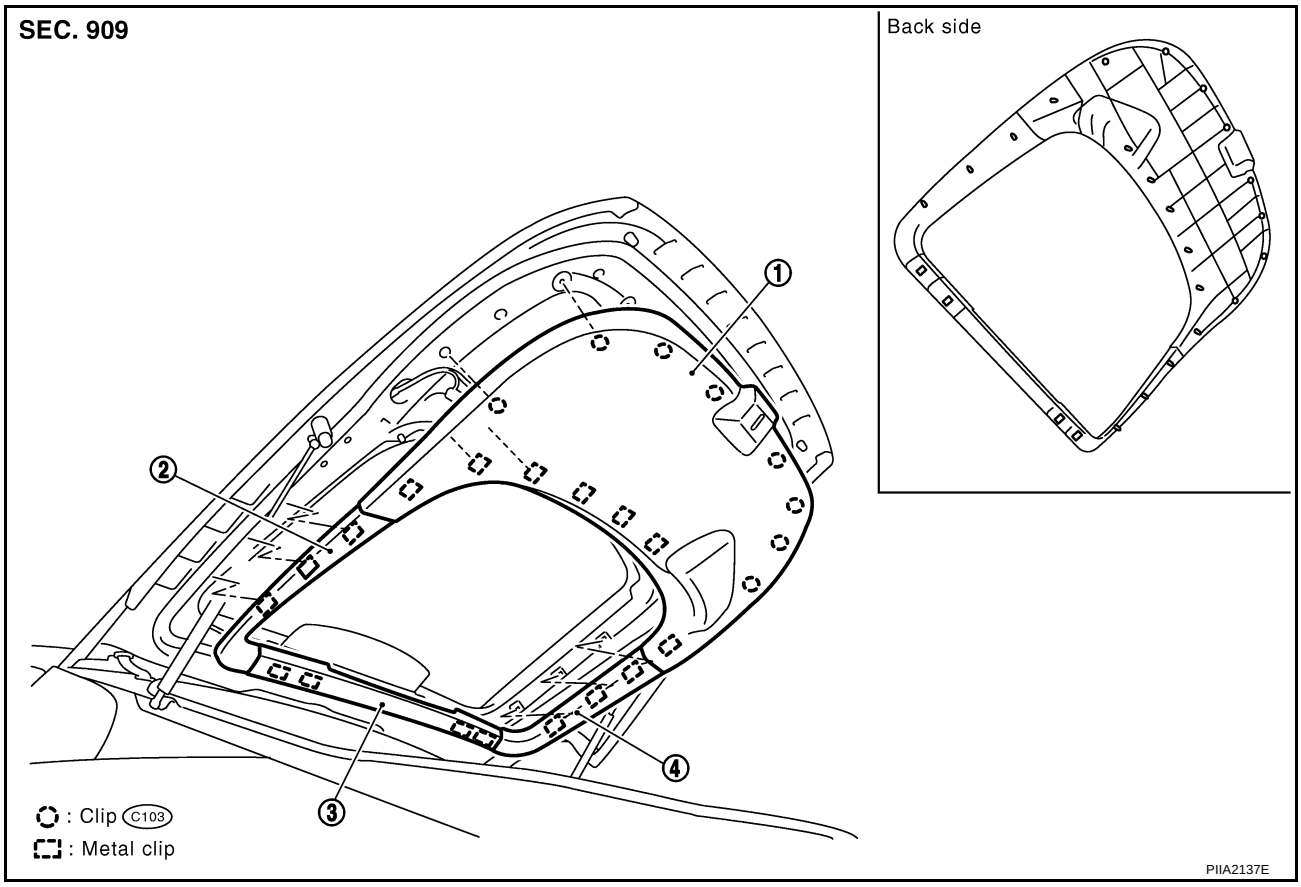
Removal

Remove clips of back door molding and remove back door molding.

Installation

Install in the reverse order of removal.

BACK DOOR WELT



Removal

Remove back door welt.

Installation

Install in the reverse order of removal.

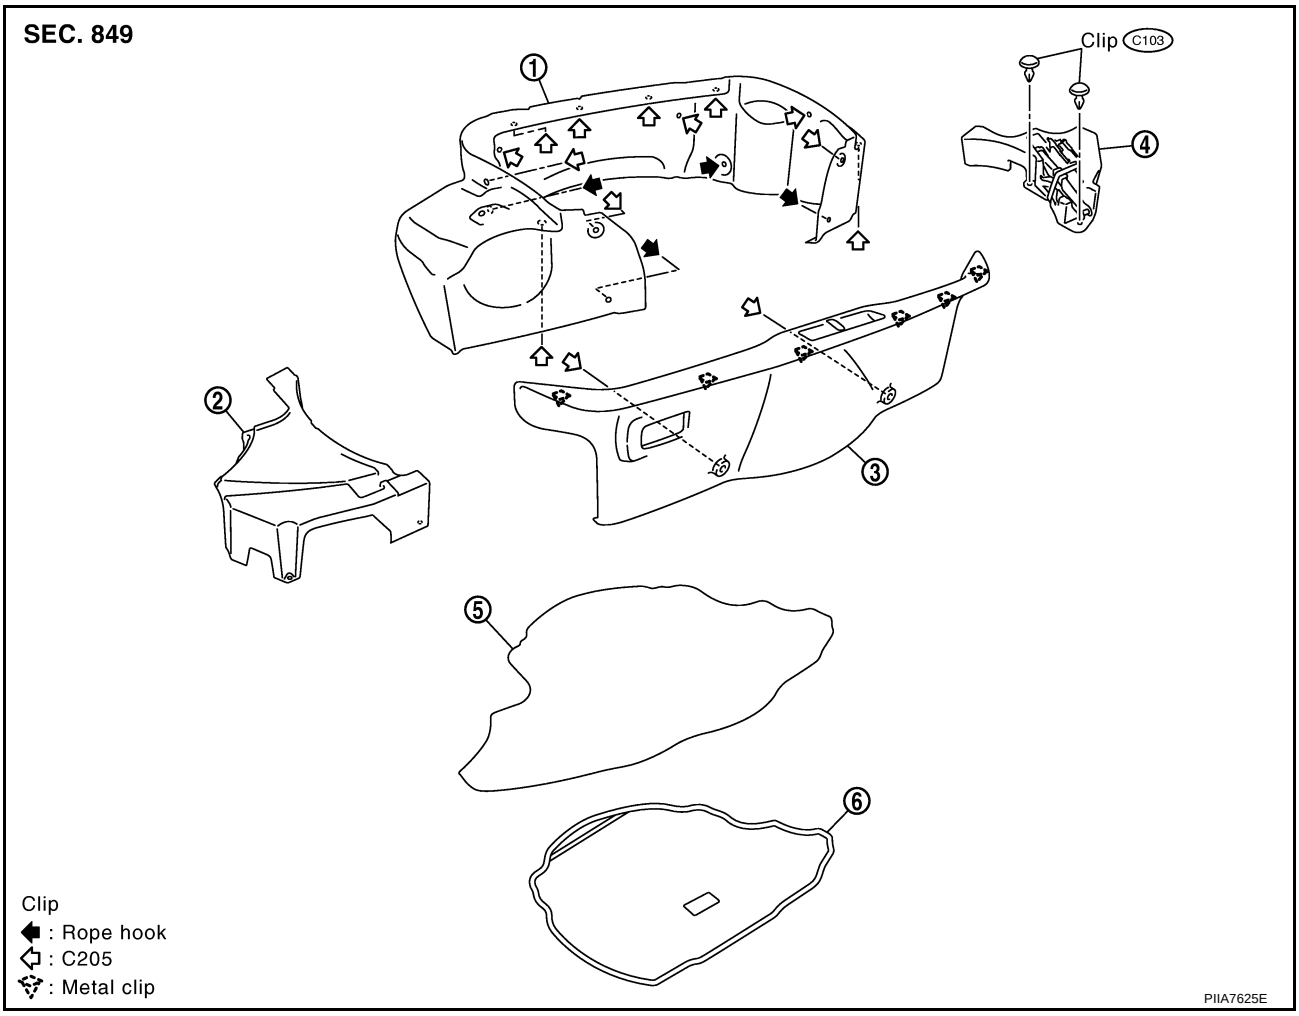
BACK DOOR FINISHER

1. Back door finisher lower
2. Back door finisher side (LH)
3. Back door finisher side (RH)
4. Back door finisher upper

Removal

1. Remove back door finisher lower.
2. Remove back door finisher upper.
3. Remove back door finisher side (RH/LH).

Installation



Install in the reverse order of removal.

TRUNK ROOM TRIM & TRUNK LID FINISHER

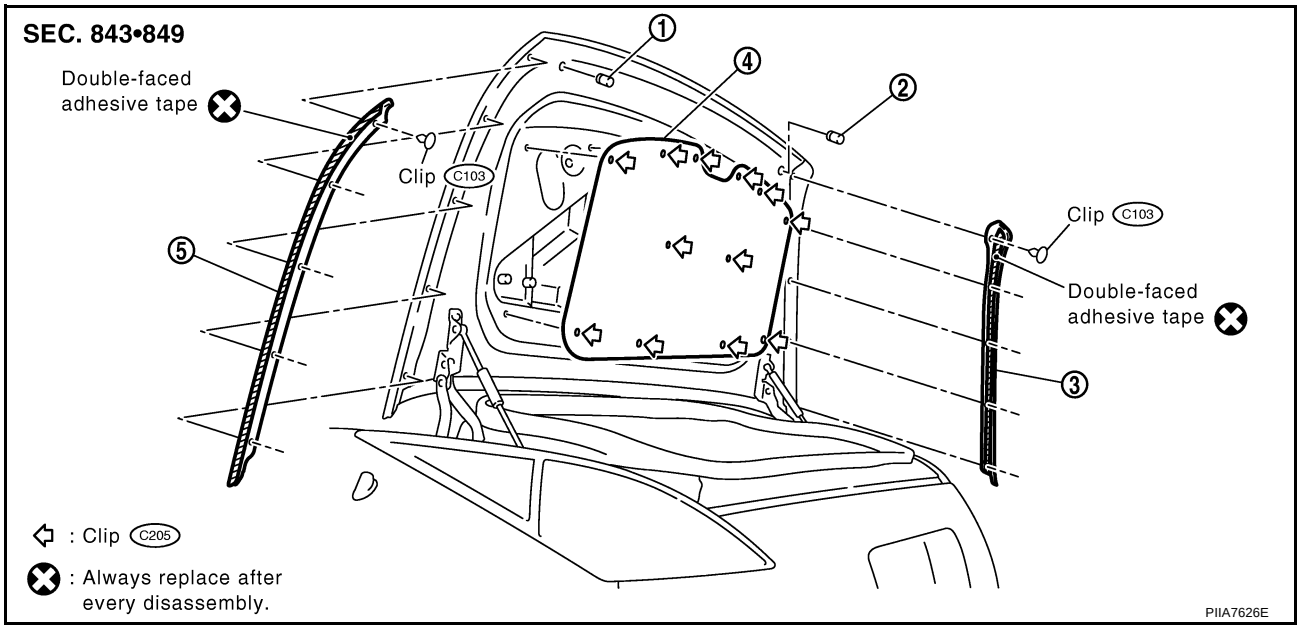
PFP:84920

Removal and Installation (for Roadstar Models)

NIS0008Z

1. Trunk front finisher
2. Trunk side box
3. Trunk rear finisher
4. Tool box
5. Trunk floor carpet
6. Spare tire cover

TRUNK ROOM TRIM



Removal

1. Remove trunk lid weatherstrip. Refer to BL-113, "Removal and Installation of Trunk Lid Weatherstrip" .
2. Remove trunk floor carpet.
3. Remove spare tire cover.
4. Remove trunk lid release lever from trunk rear finisher.
5. Remove clips and remove trunk rear finisher.
6. Remove clips of trunk front finisher and remove trunk front finisher.
7. Remove trunk side box.
8. Remove clips and remove tool box.

Installation

Install in the reverse order of removal.

TRUNK LID FINISHER

1. Bumper rubber
2. Bumper rubber
3. Trunk lid molding (RH)
4. Trunk lid finisher
5. Trunk lid molding (LH)

Removal

Remove clips of trunk lid finisher and remove trunk lid finisher.

Installation

Install in the reverse order of removal.

TRUNK LID MOLDING

Removal

1. Remove clips and double-faced adhesive tape of trunk lid molding.
2. Remove trunk lid molding (LH/RH).

Installation

Install in the reverse order of removal.

PRECAUTIONS

PFP:00001

Precautions for Procedures without Cowl Top Cover

NBS003FC

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Precautions for Battery Service

NBS003FD

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Drain Engine Coolant and Engine Oil

NBS00002

Drain engine coolant and engine oil when engine is cooled.

Precautions for Disconnecting Fuel Piping

NBS00003

- Before starting work, make sure no fire or spark producing items are in the work area.
- Release fuel pressure before disconnecting and disassembly.
- After disconnecting pipes, plug openings to stop fuel leakage.

Precautions for Removal and Disassembly

NBS00004

- When instructed to use special service tools, use specified tools. Always be careful to work safely, avoid forceful or uninstructed operations.
- Exercise maximum care to avoid damage to mating or sliding surfaces.
- Cover openings of engine system with tape or equivalent, if necessary, to seal out foreign materials.
- Mark and arrange disassembly parts in an organized way for easy troubleshooting and re-assembly.
- When loosening bolts and nuts, as a basic rule, start with the one furthest outside, then the one diagonally opposite, and so on. If the order of loosening is specified, do exactly as specified. Power tools may be used in the step.

Precautions for Inspection, Repair and Replacement

NBS00005

Before repairing or replacing, thoroughly inspect parts. Inspect new replacement parts in the same way, and replace if necessary.

Precautions for Assembly and Installation

NBS00006

- Use torque wrench to tighten bolts or nuts to specification.
- When tightening bolts and nuts, as a basic rule, equally tighten in several different steps starting with the ones in center, then ones on inside and outside diagonally in this order. If the order of tightening is specified, do exactly as specified.
- Replace with new gasket, packing, oil seal or O-ring.
- Dowel pins are used for several parts alignment. When replacing and reassembling with dowel pins, make sure that dowel pins are installed in the original portion.
- Thoroughly wash, clean, and air-blow each part. Carefully check engine oil or engine coolant passages for any restriction and blockage.
- Avoid damaging sliding or mating surfaces. Completely remove foreign materials such as cloth lint or dust. Before assembly, oil sliding surfaces well.
- Release air within route when refilling after draining engine coolant.

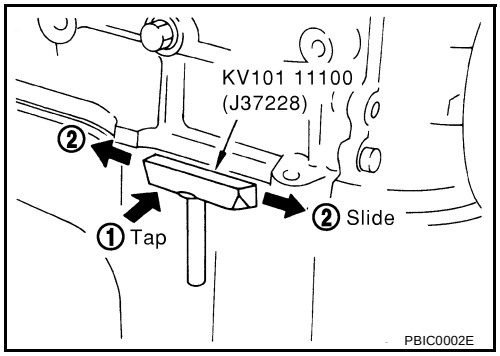
- After repairing, start engine and increase engine speed to check engine coolant, fuel, engine oil, and exhaust gases for leakage.

Parts Requiring Angle Tightening

NBS00007

- Use angle wrench [SST: KV10112100 (BT8653-A)] for the final tightening of the following engine parts:
  - Cylinder head bolts
  - Lower cylinder block bolts
  - Connecting rod cap bolts
- Do not use a torque value for final tightening.
- The torque value for these parts are for a preliminary step.
- Ensure thread and seat surfaces are clean and coated with engine oil.

Precautions for Liquid Gasket



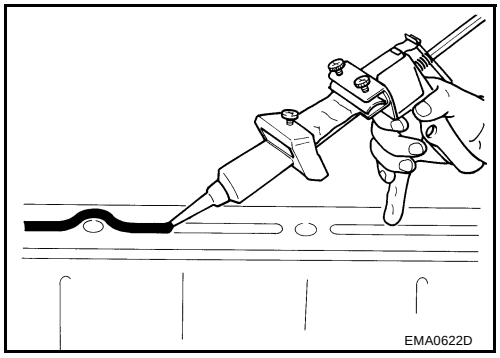
NBS00008

REMOVAL OF LIQUID GASKET SEALING

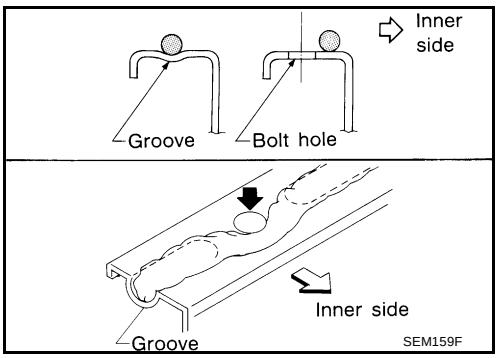
- After removing mounting bolts and nuts, separate the mating surface using seal cutter (SST) and remove old liquid gasket sealing.

  CAUTION:
  Be careful not to damage the mating surfaces.
- Tap seal cutter to insert it, and then slide it by tapping on the side as shown in the figure.
- In areas where seal cutter (SST) is difficult to use, use plastic hammer to lightly tap the parts, to remove it.

  CAUTION:
  If for some unavoidable reason tool such as screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE



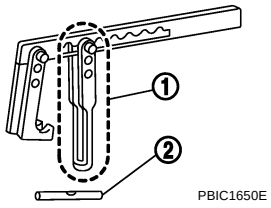
1. Using scraper, remove old liquid gasket adhering to the gasket application surface and the mating surface.
   - Remove liquid gasket completely from the groove of the gasket application surface, mounting bolts, and bolt holes.
2. Wipe the liquid gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.

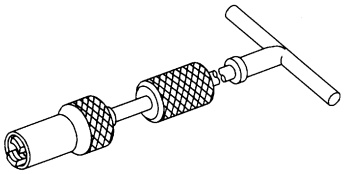
3. Attach liquid gasket tube to tube presser [SST: WS39930000 (—)].
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
4. Apply liquid gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for liquid gasket application, apply liquid gasket to the groove.

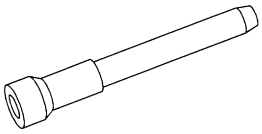
- As for bolt holes, normally apply liquid gasket inside the holes. Occasionally, it should be applied outside the holes. Make sure to read the text of this manual.
- Within five minutes of liquid gasket application, install the mating component.
- If liquid gasket protrudes, wipe it off immediately.
- Do not retighten mounting bolts or nuts after the installation.
- After 30 minutes or more have passed from the installation, fill engine oil and engine coolant.

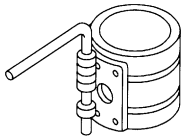
CAUTION:

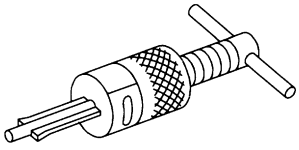
If there are specific instructions in this manual, observe them.

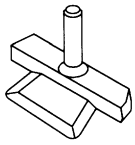




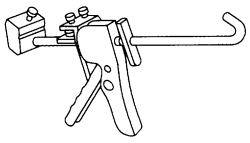


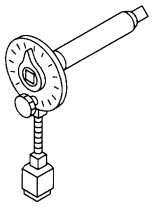


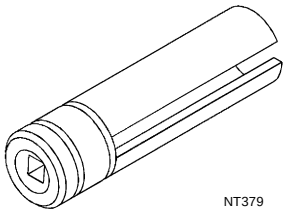


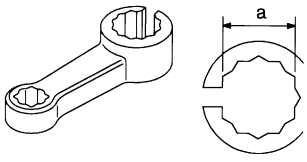


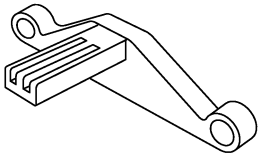
PREPARATION

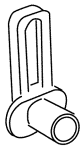








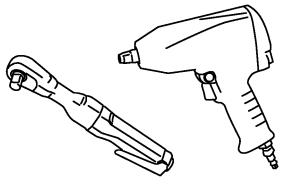


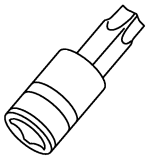


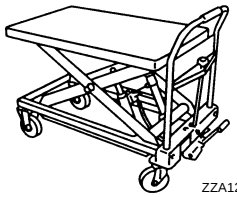
PFP:00002

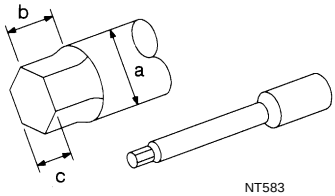
Special Service Tools

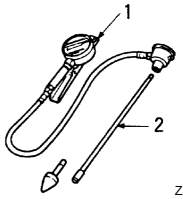
NBS00009

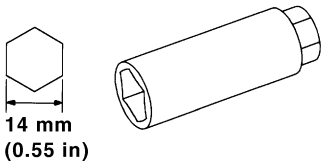




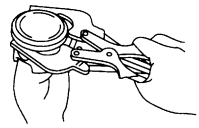


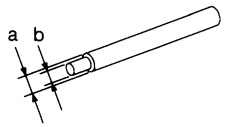


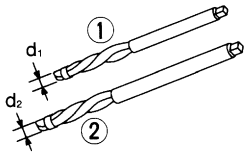


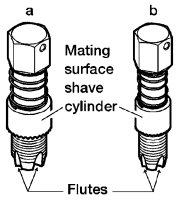


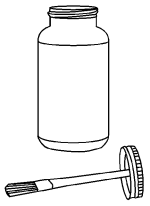
The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.











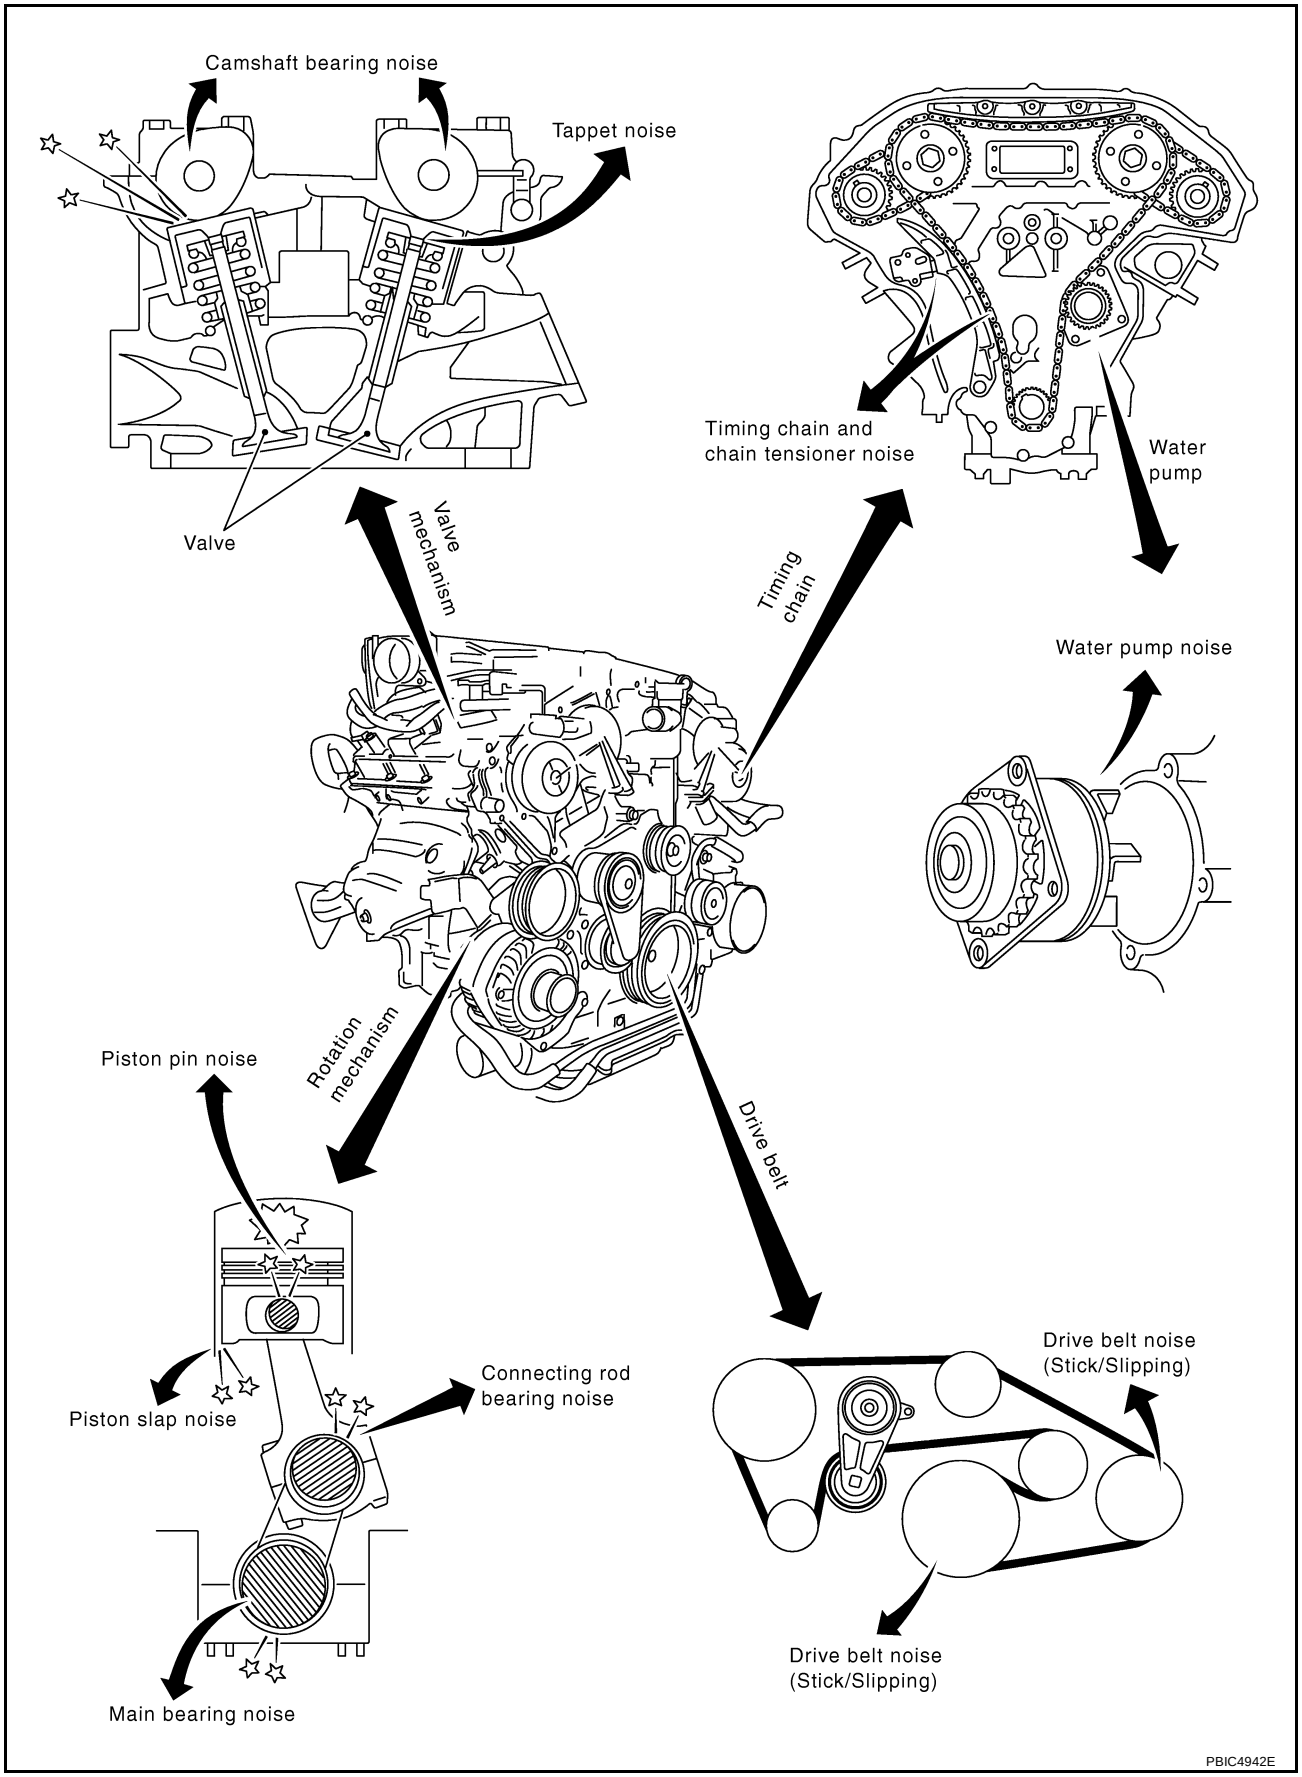
Tool number (Kent-Moore No.) Tool name		Description
KV10116200 (J26336-A) Valve spring compressor 1. KV10115900 (J26336-20) Attachment 2. KV10109220 (—) Adapter	 PBIC1650E	Disassembling valve mechanism Part (1) is a component of KV10116200 (J26336-A), but Part (2) is not so.
KV10107902 (J38959) Valve oil seal puller	 NT011	Replacing valve oil seal
— (J39386) Valve oil seal drift	 NT024	Installing valve oil seal
EM03470000 (J8037) Piston ring compressor	 NT044	Installing piston assembly into cylinder bore
ST16610001 (J23907) Pilot bushing puller	 NT045	Removing pilot bushing (M/T models) or pilot converter (A/T models)
KV10111100 (J37228) Seal cutter	 NT046	Removing oil pan (lower and upper), front and rear timing chain case, etc.

Tool number (Kent-Moore No.) Tool name		Description
WS39930000 (—) Tube presser	 NT052	Pressing the tube of liquid gasket
KV10112100 (BT8653-A) Angle wrench	 NT014	Tightening bolts for bearing cap, cylinder head, etc. in angle
KV10117100 (J3647-A) Heated oxygen sensor wrench	 NT379	Loosening or tightening heated oxygen sensor 2 **For 22 mm (0.87 in) width hexagon nut**
KV10114400 (J38365) Heated oxygen sensor wrench	 NT636	Loosening or tightening air fuel ratio sensor 1 **a: 22 mm (0.87 in)**
KV10118600 (J-48641) Ring gear stopper	 PBIC5052E	Removing and installing crankshaft pulley
— (J-45488) Quick connector release	 PBIC0198E	Removing fuel tube quick connectors in engine room

Commercial Service Tools

NBS0000A

(Kent-Moore No.) Tool name	Description
Power tool  PBIC0190E	Loosening bolts and nuts
TORX socket  PBIC1113E	Removing and installing flywheel **Size: T55**
(—) Manual lift table caddy  ZZA1210D	Removing and installing engine
(J24239-01) Cylinder head bolt wrench  NT583	Loosening and tightening cylinder head bolt, and used with angle wrench [SST: KV10112100 (BT8653-A)] **a: 13 (0.51) dia.** **b: 12 (0.47)** **c: 10 (0.39)** Unit: mm (in)
(—) 1. Compression gauge 2. Adapter  ZZA0008D	Checking compression pressure
(—) Spark plug wrench  **14 mm** **(0.55 in)** PBIC3874E	Removing and installing spark plug
(—) Valve seat cutter set  NT048	Finishing valve seat dimensions



(Kent-Moore No.) Tool name	Description
(—) Piston ring expander  NT030	Removing and installing piston ring
(—) Valve guide drift  NT015	Removing and installing valve guide **Intake and Exhaust:** **a: 9.5 mm (0.374 in) dia.** **b: 5.5 mm (0.217 in) dia.**
(—) Valve guide reamer  NT016	(1): Reaming valve guide inner hole (2): Reaming hole for oversize valve guide **Intake and Exhaust:** **d_1 : 6.0 mm (0.236 in) dia.** **d_2 : 10.2 mm (0.402 in) dia.**
(J-43897-18) (J-43897-12) Oxygen sensor thread cleaner  AEM488	Reconditioning the exhaust system threads before installing a new air fuel ratio sensor and heated oxygen sensor (Use with anti-seize lubricant shown below.) **a: J-43897-18 [18 mm (0.71 in) dia.] for zirconia heated oxygen sensor and air fuel ratio sensor** **b: J-43897-12 [12 mm (0.47 in) dia.] for titania heated oxygen sensor**
(—) Anti-seize lubricant (Permatex 133AR or equivalent meeting MIL specification MIL-A-907)  AEM489	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting — Engine Noise

NBS0000B

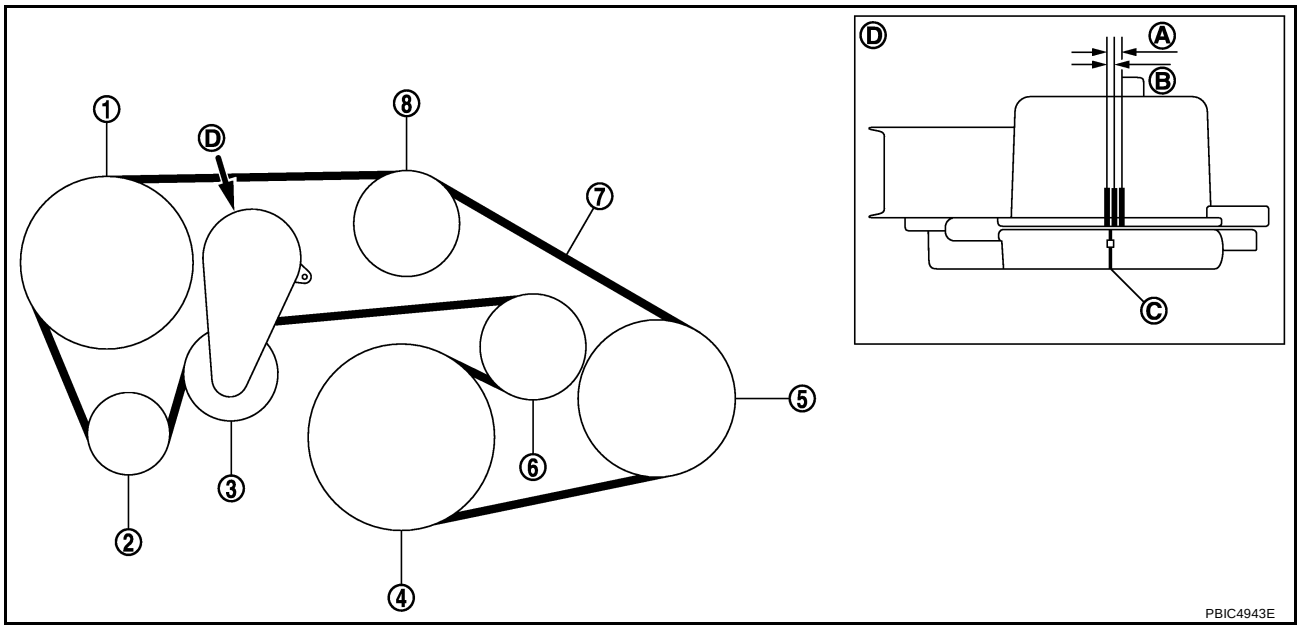
Use the Chart Below to Help You Find the Cause of the Symptom.

NBS0000C

1. Locate the area where noise occurs.
2. Confirm the type of noise.
3. Specify the operating condition of engine.
4. Check specified noise source.

If necessary, repair or replace these parts.

Location of noise	Type of noise	Operating condition of engine						Source of noise	Check item	Reference page
		Before warm-up	After warm-up	When starting	When idling	When racing	While driving			
Top of engine Rocker cover Cylinder head	Ticking or clicking	C	A	—	A	B	—	Tappet noise	Valve clearance	EM-80
	Rattle	C	A	—	A	B	C	Camshaft bearing noise	Camshaft runout Camshaft journal oil clearance	EM-74 EM-74
Crankshaft pulley Cylinder block (Side of engine) Oil pan	Slap or knock	—	A	—	B	B	—	Piston pin noise	Piston to piston pin oil clearance Connecting rod bushing oil clearance	EM-125 EM-127
	Slap or rap	A	—	—	B	B	A	Piston slap noise	Piston to cylinder bore clearance Piston ring side clearance Piston ring end gap Connecting rod bend and torsion	EM-129 EM-126 EM-126 EM-127
	Knock	A	B	C	B	B	B	Connecting rod bearing noise	Connecting rod bushing oil clearance Connecting rod bearing oil clearance	EM-127 EM-131
	Knock	A	B	—	A	B	C	Main bearing noise	Main bearing oil clearance Crankshaft runout	EM-132 EM-131
Front of engine Timing chain case	Tapping or ticking	A	A	—	B	B	B	Timing chain and chain tensioner noise	Timing chain cracks and wear Timing chain tensioner operation	EM-60 EM-53
Front of engine	Squeaking or fizzing	A	B	—	B	—	C	Drive belts (Sticking or slipping)	Drive belts deflection	EM-12
	Creaking	A	B	A	B	A	B	Drive belts (Slipping)	Idler pulley bearing operation	
	Squall Creak	A	B	—	B	A	B	Water pump noise	Water pump operation	CO-23, "WATER PUMP"



A: Closely related B: Related C: Sometimes related —: Not related

DRIVE BELTS

PFP:02117

Checking Drive Belts

NBS0000D

1.	Power steering oil pump	2.	Alternator	3.	Drive belt auto-tensioner
4.	Crankshaft pulley	5.	A/C compressor	6.	Idler pulley
7.	Drive belt	8.	Idler pulley		
A.	Possible use range	B.	Range when new drive belt is installed	C.	Indicator
D.	View D				

WARNING:

Be sure to perform this step when engine is stopped.

- Make sure that the indicator (C) (notch on fixed side) of drive belt auto-tensioner is within the possible use range (A).

  NOTE:

  Check the drive belt auto-tensioner indication when the engine is cold.
- When new drive belt is installed, the indicator (C) (notch on fixed side) should be within the range (B) in the figure.
- Visually check entire drive belt for wear, damage or cracks.
- If the indicator (C) (notch on fixed side) is out of the possible use range or belts is damaged, replace drive belt.

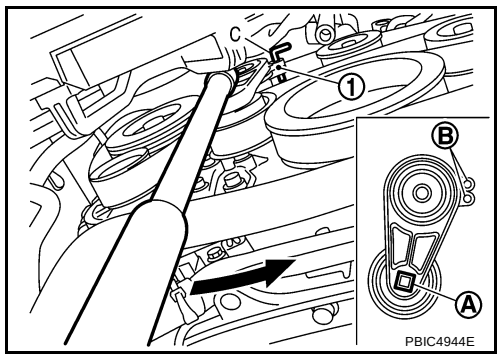
Tension Adjustment

NBS0000E

Belt tension is not necessary, as it is automatically adjusted by drive belt auto-tensioner.

Removal and Installation

NBS0000F



REMOVAL

1. Remove undercover with power tool.
2. Remove reservoir tank. Refer to CO-13, "RADIATOR" .

3. While securely holding the square hole (A) in pulley center of auto tensioner (1) with a spinner handle, move spinner handle in the direction of arrow (loosening direction of drive belt).

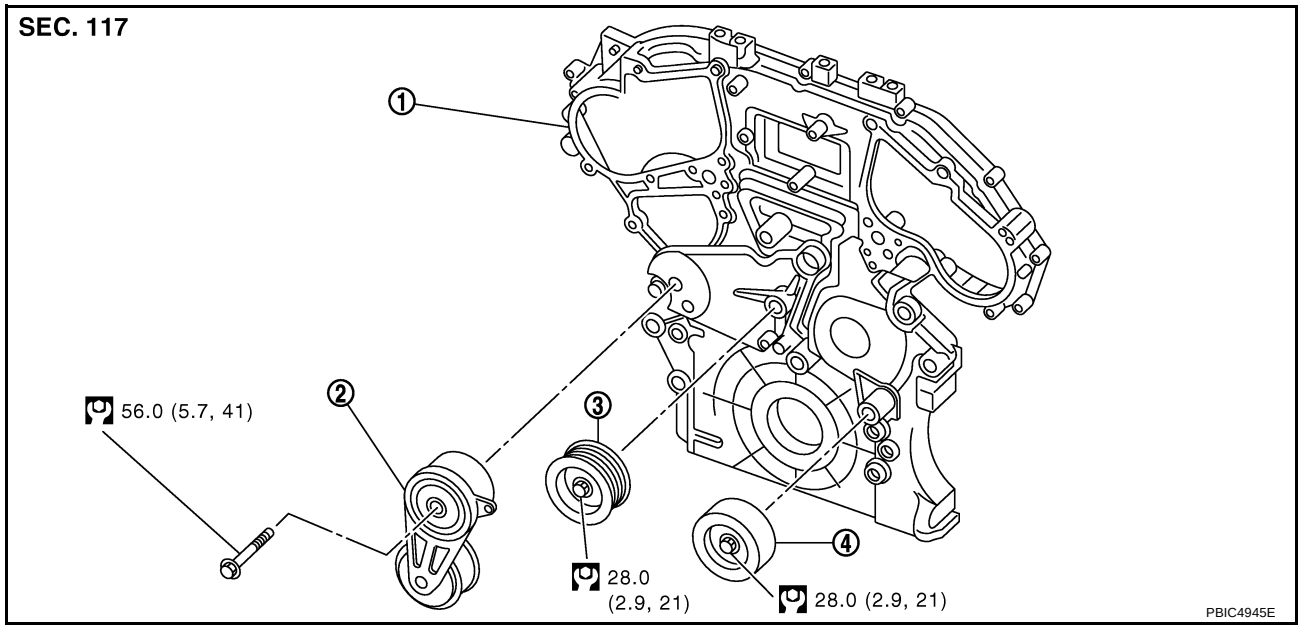
CAUTION:
Avoid placing hand in a location where pinching may occur if the holding tool accidentally comes off.

⬅ : Loosing direction of drive belt

4. Under the above condition, insert a metallic bar of approximately 6 mm (0.24 in) diameter [hexagonal wrench (C) shown as example in the figure] through the holding boss (B) to lock auto-tensioner pulley arm.
5. Remove drive belt.

INSTALLATION

Note the following, and install in the reverse order of removal.



CAUTION:
- **Make sure drive belt is securely installed around all pulleys.**
- **Make sure drive belt is correctly engaged with the pulley groove.**
- **Check for engine oil and engine coolant are not adhered drive belt and pulley groove.**

INSPECTION AFTER INSTALLATION

Turn crankshaft pulley clockwise several times to equalize tension between each pulley, and then confirm tension of drive belt at indicator (notch on fixed side) is within the possible use range. Refer to EM-12, "Checking Drive Belts" .

Components

NBS006TG

1. Front timing chain case
2. Drive belt auto-tensioner
3. Idler pulley
4. Idler pulley

- Refer to GI-11, "Components" for symbol marks in the figure.

Removal and Installation of Drive Belt Auto-Tensioner

NBS006TH

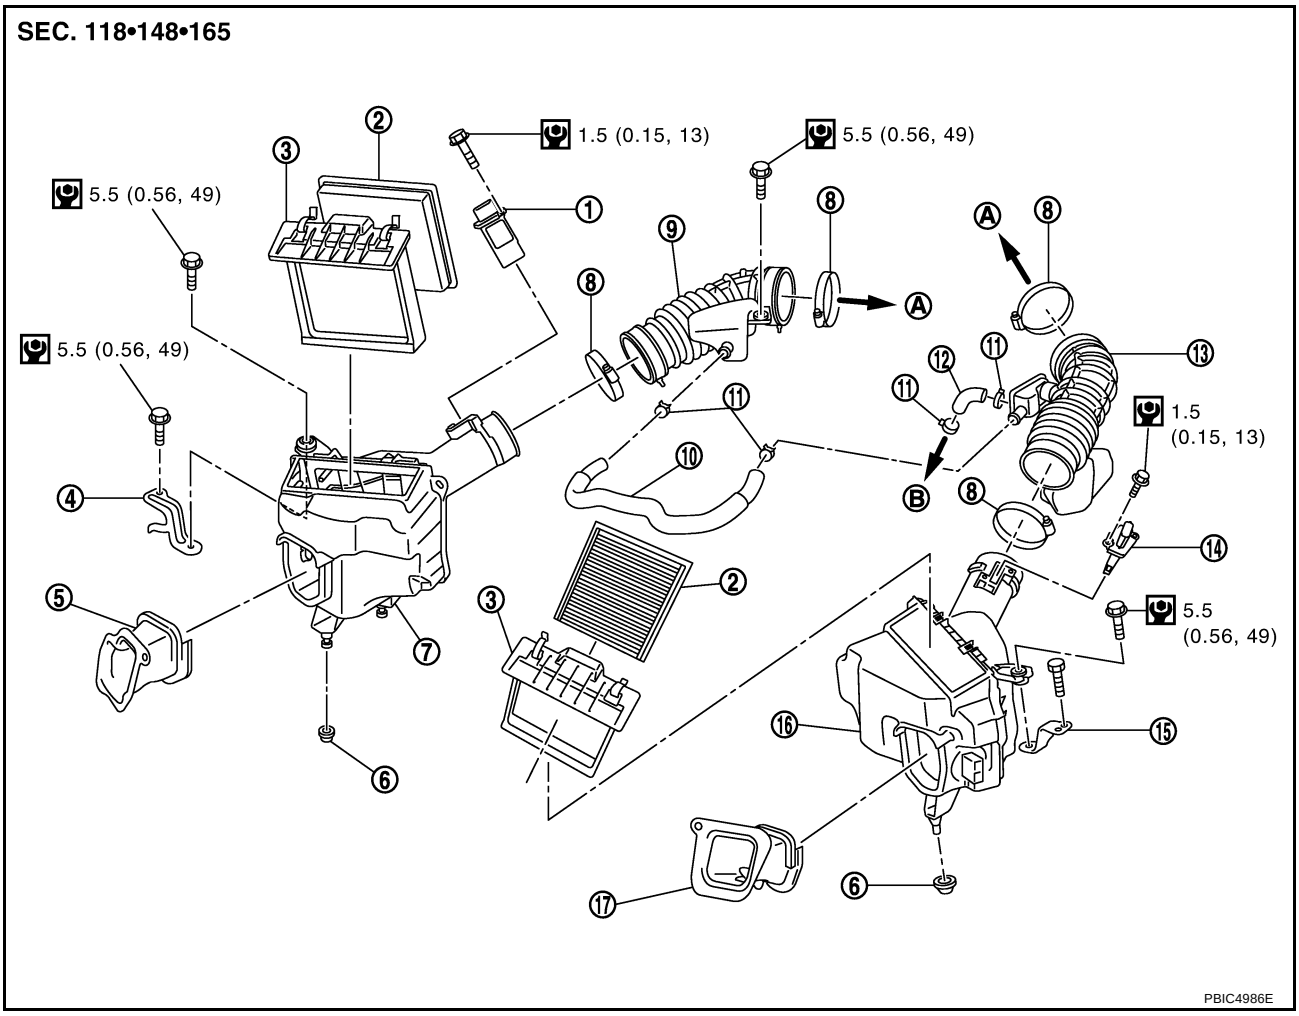
REMOVAL

1. Remove drive belt. Refer to EM-12, "Removal and Installation" .
   - Keep auto-tensioner pulley arm locked after drive belt is removed.
2. Remove auto-tensioner and idler pulley.
   - Keep auto-tensioner pulley arm locked to install or remove auto-tensioner.

INSTALLATION

Installation is the reverse order of removal.

CAUTION:



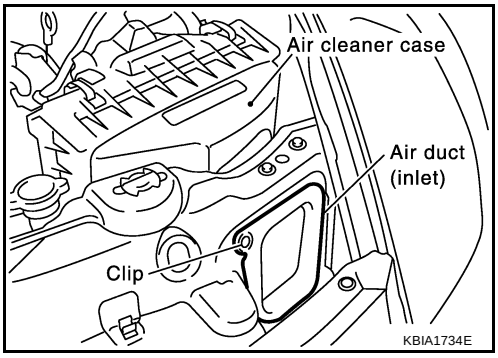
If there is damage greater than peeled paint, replace drive belt auto-tensioner.

AIR CLEANER AND AIR DUCT

PFP:16500

Removal and Installation

NBS0000G



1. Mass air flow sensor (RH)	2. Air cleaner filter	3. Holder
4. Bracket	5. Air duct (inlet)	6. Grommet
7. Air cleaner case (RH)	8. Clamp	9. Air duct (RH)
10. Air hose	11. Clamp	12. PCV hose
13. Air duct (LH)	14. Mass air flow sensor (LH)	15. Bracket
16. Air cleaner case (LH)	17. Air duct (inlet)	
A. To electric throttle control actuator	B. To rocker cover (left bank)	

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove clips, and slide air duct (inlet) frontward, disengage clips and air cleaner case.

   NOTE:
   When removing air duct (inlet), remove front bumper and bumper fascia stay radiator core support center. Refer to EI-14, "FRONT BUMPER" and BL-19, "RADIATOR CORE SUPPORT".

2. Disconnect harness connector from mass air flow sensor.

3. Disconnect PCV hose.
4. Remove air cleaner case/mass air flow sensor assembly and air duct assembly disconnecting their joints.
   - Add marks as necessary for easier installation.
5. Remove mass air flow sensor from air cleaner case.

CAUTION:
Handle mass air flow sensor with care.
- **Do not shock it.**
- **Do not disassemble it.**
- **Do not touch its sensor.**

INSPECTION AFTER REMOVAL

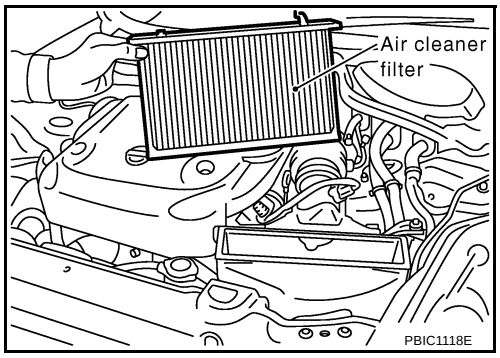
Inspect air duct for crack or tear.

- If anything found, replace air duct.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Align marks. Attach each joint. Screw clamps firmly.



CAUTION:
Keep the clearance more than 5 mm between tower bar and air duct.

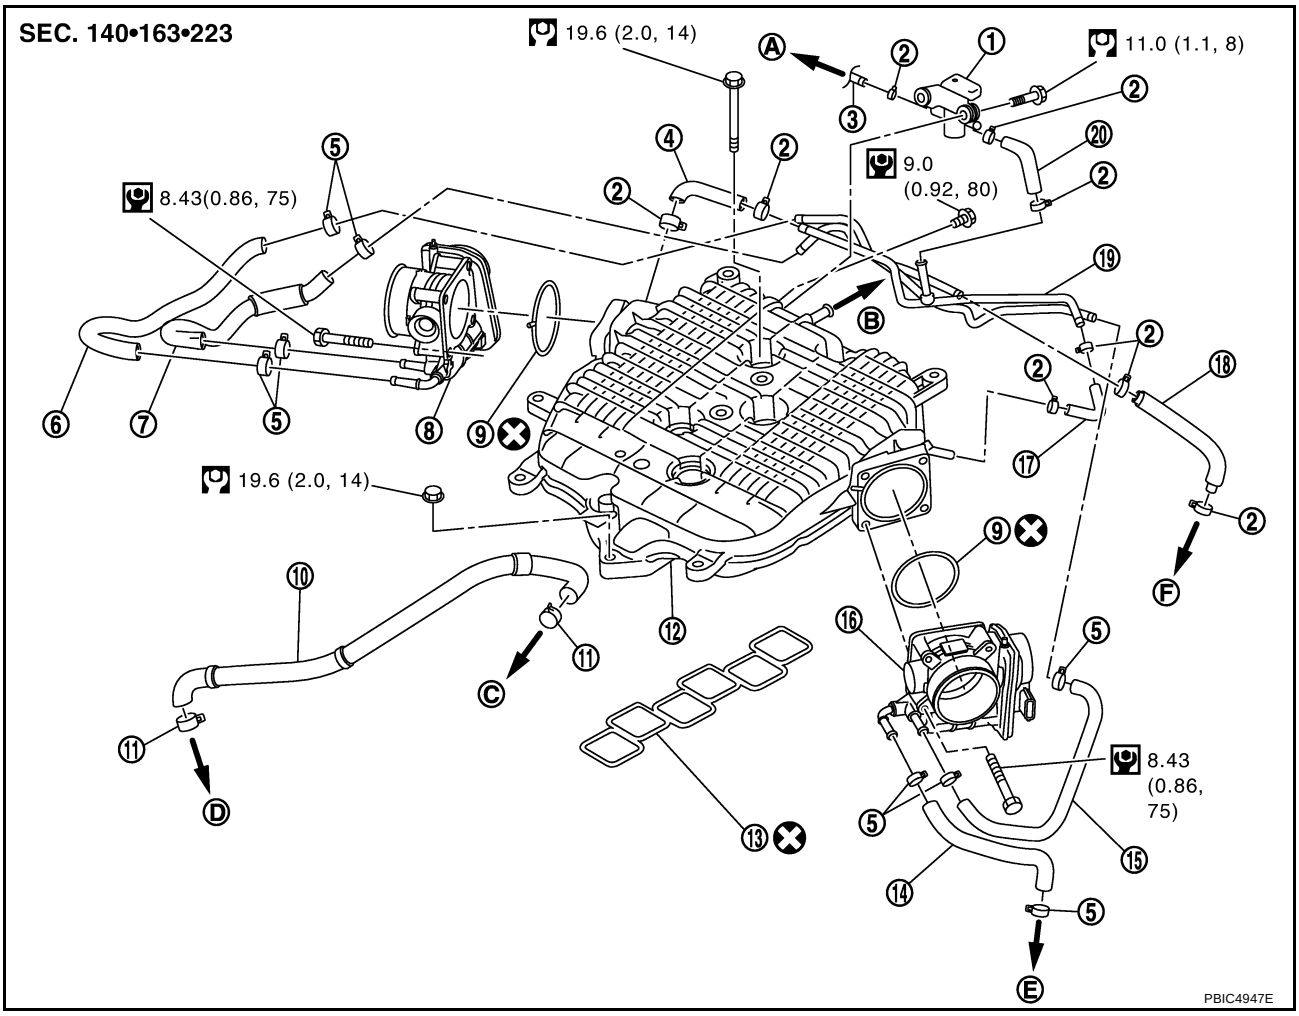
Changing Air Cleaner Filter

NBS0000H

REMOVAL

1. Unhook clips, and lift holder.
2. Remove air cleaner filter.

INSTALLATION



Installation is the reverse order of removal.

INTAKE MANIFOLD COLLECTOR

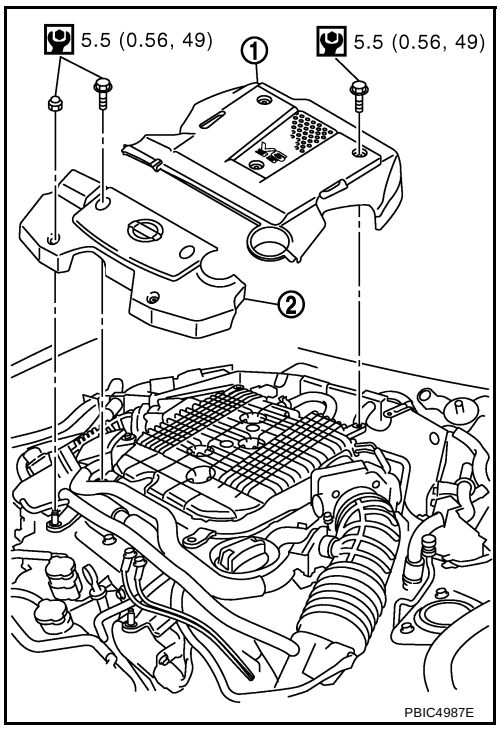
PFP:14003

Removal and Installation

NBS006VD

1.	EVAP canister purge control solenoid valve	2.	Clamp	3.	EVAP hose
4.	EVAP hose	5.	Clamp	6.	Water hose
7.	Water hose	8.	Electric throttle control actuator (bank1)	9.	Gasket
10.	PCV hose	11.	Clamp	12.	Intake manifold collector
13.	Gasket	14.	Water hose	15.	Water hose
16.	Electric throttle control actuator (bank2)	17.	EVAP hose	18.	Water hose
19.	EVAP tube assembly	20.	EVAP hose		
A.	To vacuum pipe	B.	To brake booster	C.	To intake manifold collector
D.	To PCV valve	E.	To heater pipe	F.	To water outlet (rear)

- Refer to GI-11, "Components" for symbol marks in the figure.



REMOVAL

WARNING:

To avoid the danger of being scalded, do not drain the engine coolant when the engine is hot.

1. Remove tower bar. Refer to FSU-20, "TOWER BAR" .

2. Remove engine cover (1) (2) with power tool.

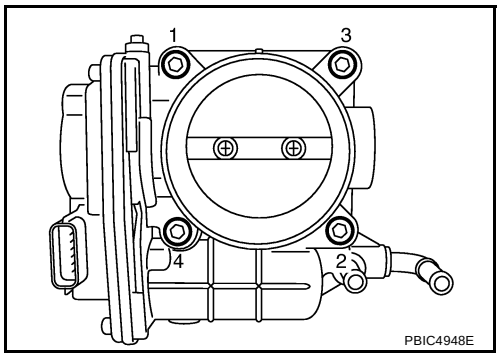
3. Remove air cleaner case and air duct (RH, LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove electric throttle control actuator (bank1, bank2) as follows:

NOTE:
When removing only intake manifold collector, move electric throttle control actuator without disconnecting water hose.

a. Drain engine coolant.

CAUTION:
Perform this step when engine is cold.

b. Disconnect water hoses from electric throttle control actuator. When engine coolant is not drained from radiator, attach plug to water hoses to prevent engine coolant leakage.



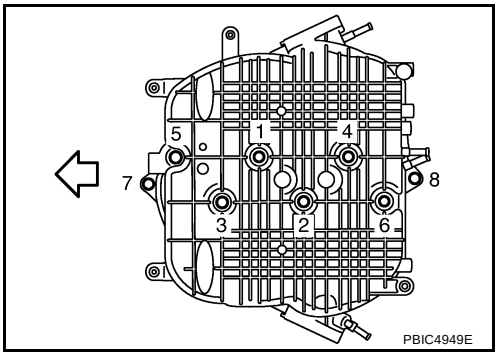
CAUTION:
Do not spill engine coolant on drive belt.

c. Disconnect harness connector.

d. Loosen mounting bolts in reverse order as shown in the figure.

CAUTION:
- **Handle carefully to avoid any shock to electric throttle control actuator.**
- **Do not disassemble.**

NOTE:
- Figure shows electric throttle control actuator (bank1) viewed from the air duct side.
- Viewed from the air duct side, order of loosening mounting bolts of electric throttle control actuator (bank2) is the same as that of the electric throttle control actuator (bank1).



5. Disconnect vacuum hose, PCV hose and EVAP hose from intake manifold collector.
6. Remove EVAP canister purge volume control solenoid valve and EVAP tube assembly from intake manifold collector.

7. Loosen mounting bolts with power tool in reverse order as shown in the figure to remove intake manifold collector.

⇦ : Engine front

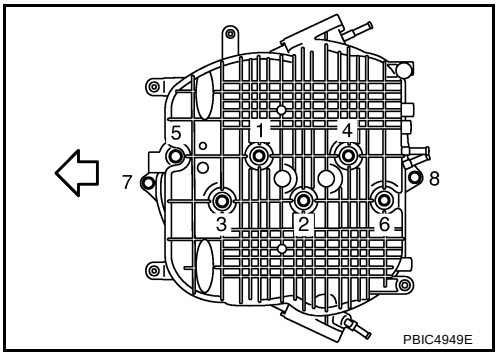
CAUTION:
Cover engine openings to avoid entry of foreign materials.

8. Remove PCV hose [between intake manifold collector and rocker cover (right bank)].

INSTALLATION

Note the following, and install in the reverse order of removal.

Intake Manifold Collector



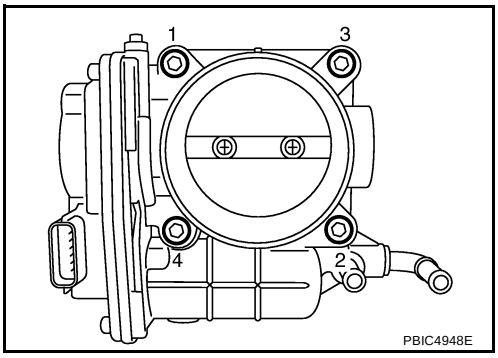
If stud bolts were removed, install them and tighten to the specified torque below.

: 10.8 N·m (1.1 kg-m, 8 ft-lb)

- Tighten mounting bolts in numerical order as shown in the figure.

⇦ : Engine front

NOTE:
Tighten mounting bolts to secure gasket and intake manifold collector.



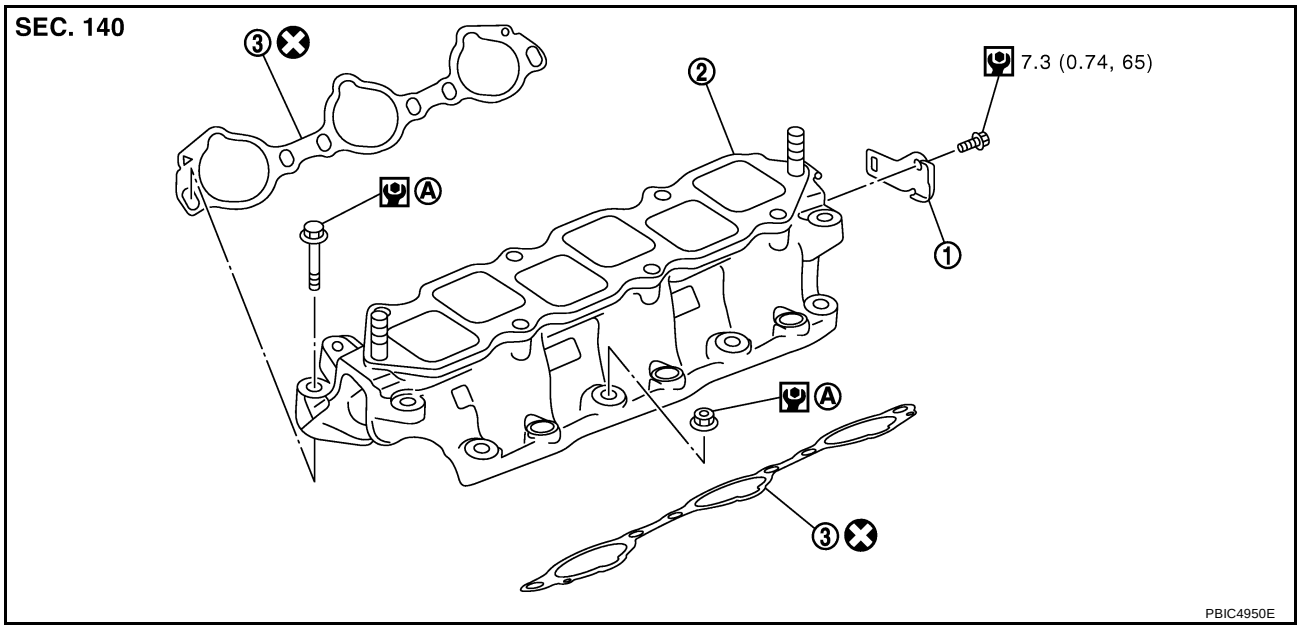
Water Hose

- Insert hose by 27 to 32 mm (1.06 to 1.26 in) from connector end.
- Clamp hose at location of 3 to 7 mm (0.12 to 0.28 in) from hose end.

Electric Throttle Control Actuator

- Install in the reverse order of removal.
- Tighten mounting bolts in numerical order as shown in the figure.

CAUTION:
- **Handle carefully to avoid any shock to electric throttle control actuator.**
- **Do not disassemble.**
- **The figure shows the electric throttle control actuator (bank1) viewed from the air duct side.**
- **Viewed from the air duct side, order of tightening mounting bolts of electric throttle control actuator (bank2) is the same as that of the electric throttle control actuator (bank1).**



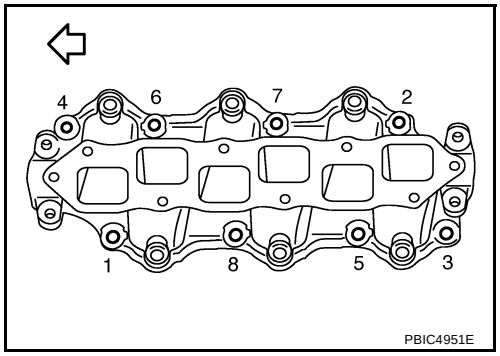
- Perform the “Throttle Valve Closed Position Learning” when harness connector of electric throttle control actuator is disconnected. Refer to EC-77, "Throttle Valve Closed Position Learning" .
- Perform the “Idle Air Volume Learning” and “Throttle Valve Closed Position Learning” when electric throttle control actuator is replaced. Refer to EC-77, "Idle Air Volume Learning" .

INTAKE MANIFOLD

PFP:14003

Removal and Installation

NBS0000J



1. Harness bracket
2. Intake manifold
3. Gasket

A. Refer to EM-21

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

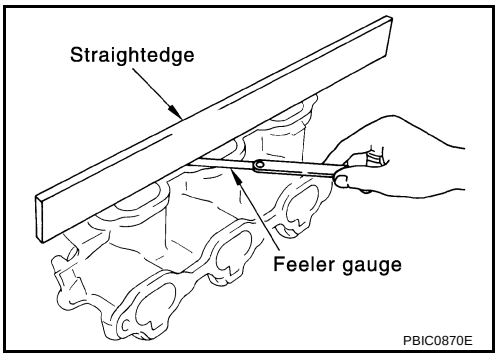
1. Release fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Remove intake manifold collector. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
3. Remove fuel tube and fuel injector assembly. Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
4. Remove harness bracket.
5. Loosen mounting nuts and bolts with power tool in reverse order as shown in the figure to remove intake manifold.

⇦ : Engine front

CAUTION:

- **Cover engine openings to avoid entry of foreign materials.**
- **Put a mark on the intake manifold and the cylinder head with paint before removal because they need installed in the specified direction.**
- **Loosen mounting bolts and nuts from the inside of manifold to the outside.**

6. Remove gaskets.



INSPECTION AFTER REMOVAL

Surface Distortion

- Check the surface distortion of the intake manifold mating surface with straightedge and feeler gauge.

  Limit : 0.1 mm (0.004 in)

- If it exceeds the limit, replace intake manifold.

INSTALLATION

Note the following, and install in the reverse order of removal.

Intake Manifold

- If stud bolts were removed, install them and tighten to the specified torque below.

  : 9.8 N·m (1.0 kg-m, 7 ft-lb)

- Tighten all mounting nuts and bolts to the specified torque in two or more steps in numerical order shown in the figure.

  ⇦ : Engine front

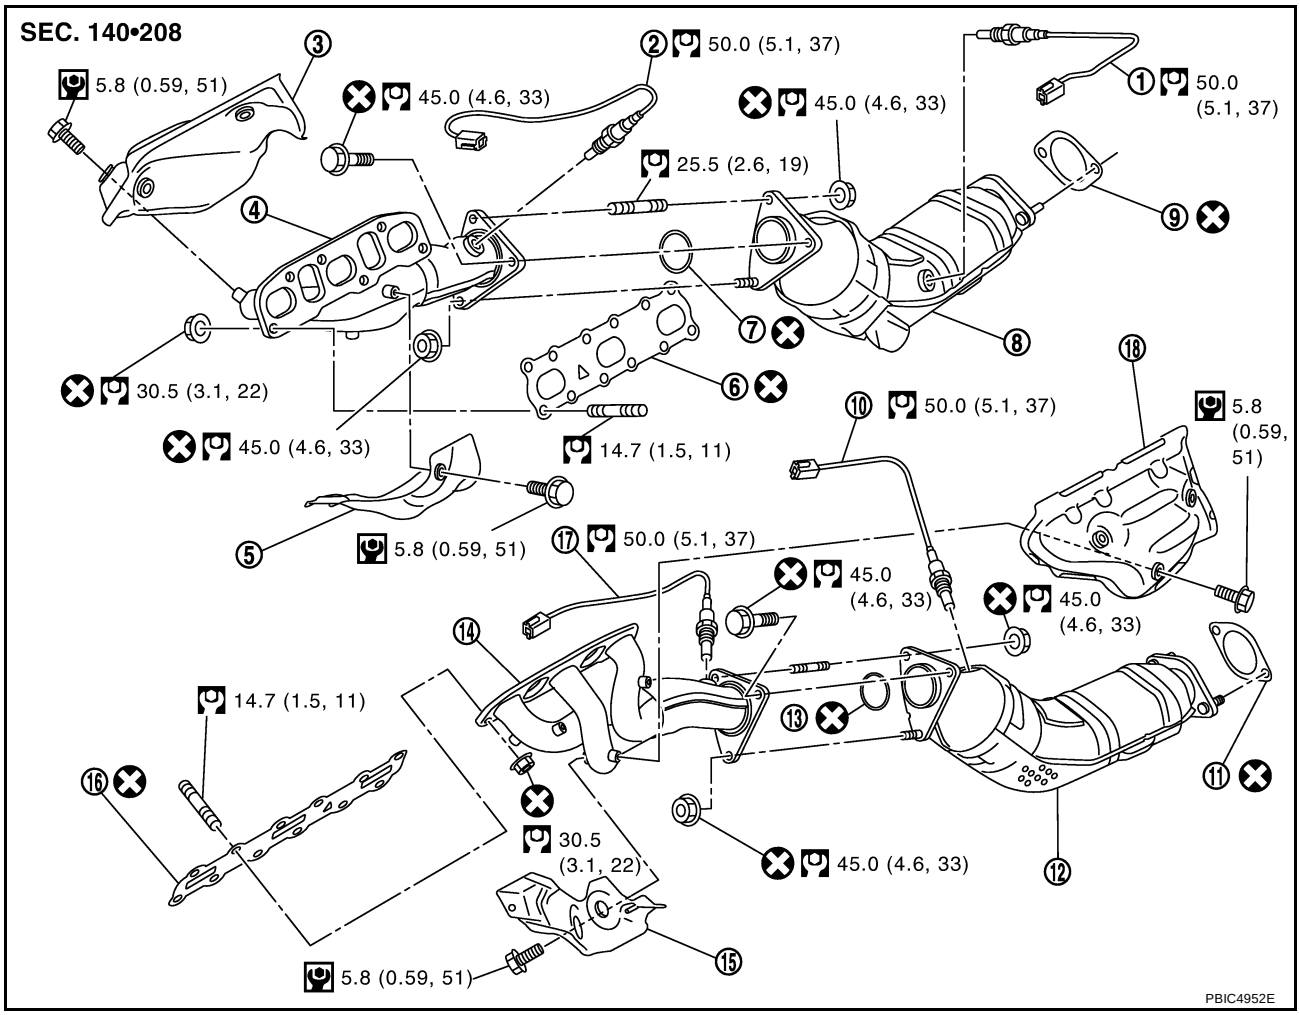
  CAUTION:
  - **Install intake manifold with the marks (put on the intake manifold and the cylinder head before removal) aligned.**
  - **Tighten mounting bolts and nuts from the outside of manifold to the inside.**

  1st step

  : 7.4 N·m (0.75 kg-m, 5 ft-lb)

  2nd step and after

  : 29.0 N·m (3.0 kg-m, 21 ft-lb)



EXHAUST MANIFOLD AND THREE WAY CATALYST

PFP:14004

Removal and Installation

NBS0000K

1.	Heated oxygen sensor (bank 1)	2.	Air fuel ratio sensor (bank 1)	3.	Exhaust manifold cover (upper)
4.	Exhaust manifold (right bank)	5.	Exhaust manifold cover (lower)	6.	Gasket
7.	Ring gasket	8.	Three way catalyst (right bank)	9.	Gasket
10.	Heated oxygen sensor (bank 2)	11.	Gasket	12.	Three way catalyst (left bank)
13.	Ring gasket	14.	Exhaust manifold (left bank)	15.	Exhaust manifold cover (lower)
16.	Gasket	17.	Air fuel ratio sensor (bank 2)	18.	Exhaust manifold cover (upper)

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

WARNING:

Perform the work when the exhaust and cooling system have completely cooled down.

NOTE:

When removing right bank side parts only, step 3, 10 and 11 are unnecessary.

1. Remove tower bar. Refer to FSU-20, "TOWER BAR" .
2. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
3. Drain engine coolant. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:

   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
4. Remove air cleaner case and air duct. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .

5. Remove undercover with power tool.
6. Disconnect heated oxygen sensor harness connectors.

   CAUTION:
   - **Be careful not to damage heated oxygen sensor 2.**
   - **Discard any heated oxygen sensor 2 which has been dropped onto a hard surface such as a concrete floor. Replace with a new sensor.**
7. Remove exhaust mounting bracket between three way catalysts (right and left bank) and transmission. Refer to EX-3, "EXHAUST SYSTEM" .
8. Remove exhaust front tube and three way catalysts (right and left bank).
9. Disconnect harness connector and remove air fuel ratio sensor 1 on both banks using heated oxygen sensor wrench (SST).
   - Put marks to identify installation positions of each air fuel ratio sensor 1.

   CAUTION:
   - **Be careful not to damage air fuel ratio sensor 1.**
   - **Discard any air fuel ratio sensor 1 which has been dropped onto a hard surface such as a concrete floor. Replace with a new sensor.**

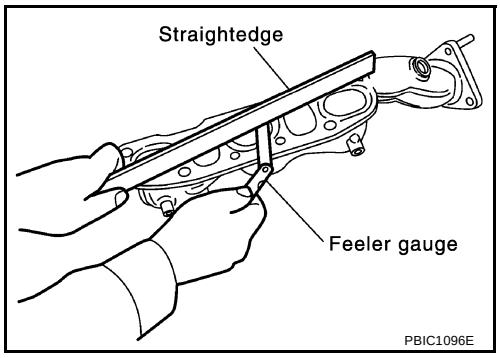
10. Disconnect steering lower joint at power steering gear assembly side, and release steering lower shaft. Refer to PS-17, "POWER STEERING GEAR AND LINKAGE"
11. Remove water bypass pipe and heater pipe. Refer to CO-28, "WATER OUTLET AND WATER PIPING" .
12. Remove exhaust manifold cover.
13. Loosen mounting nuts in reverse order as shown in the figure to remove exhaust manifold.

    NOTE:
    Disregard the numerical order No. 7 and 8 in removal.

    A : Right bank
    B : Left bank
    ⇦ : Engine front

14. Remove gaskets.

    CAUTION:
    Cover engine openings to avoid entry of foreign materials.



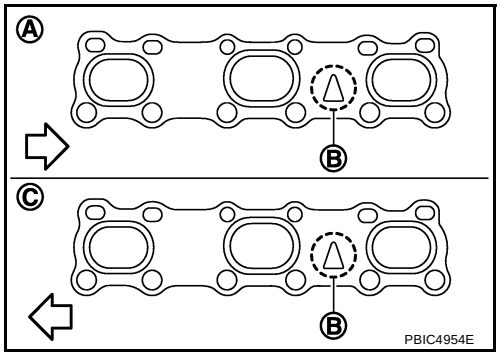
INSPECTION AFTER REMOVAL

Surface Distortion

- Check the surface distortion of the exhaust manifold mating surface with straightedge and feeler gauge.

  Limit : 0.7 mm (0.028 in)

- If it exceeds the limit, replace exhaust manifold.



INSTALLATION

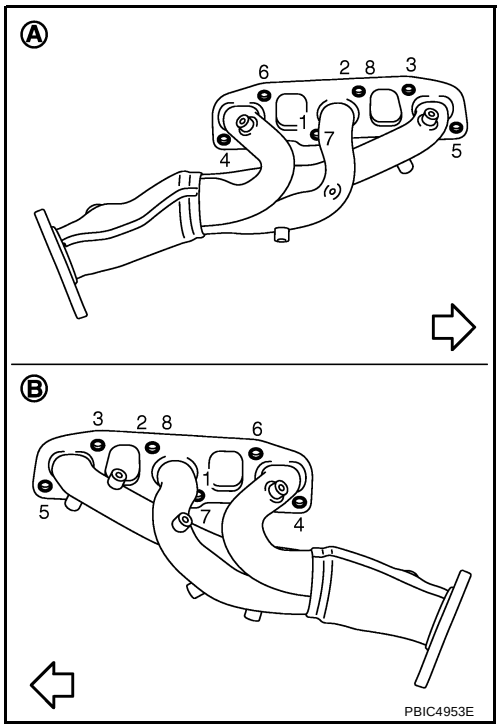
Note the following, and install in the reverse order of removal.

Exhaust Manifold Gasket

- Install exhaust manifold gasket in direction shown in the figure.

  A : Right bank
  B : Triangle press
  C : Left bank
  ⇦ : Engine front

Exhaust Manifold



- If stud bolts were removed, install them and tighten to the specified torque below.

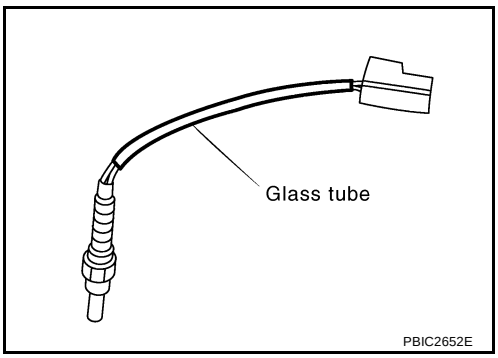
  : 14.7 N·m (1.5 kg-m, 11 ft-lb)

- Install mounting exhaust manifold in numerical order as shown in the figure.

  NOTE:
  Tighten nuts No. 1 and 2 in two steps. The numerical order No. 7 and 8 shown second step.

  A : Right bank
  B : Left bank
  ⇦ : Engine front

Air Fuel Ratio Sensor 1 and Heated Oxygen Sensor 2



- Install air fuel ratio sensor 1 and heated oxygen sensor 2 in the original position.

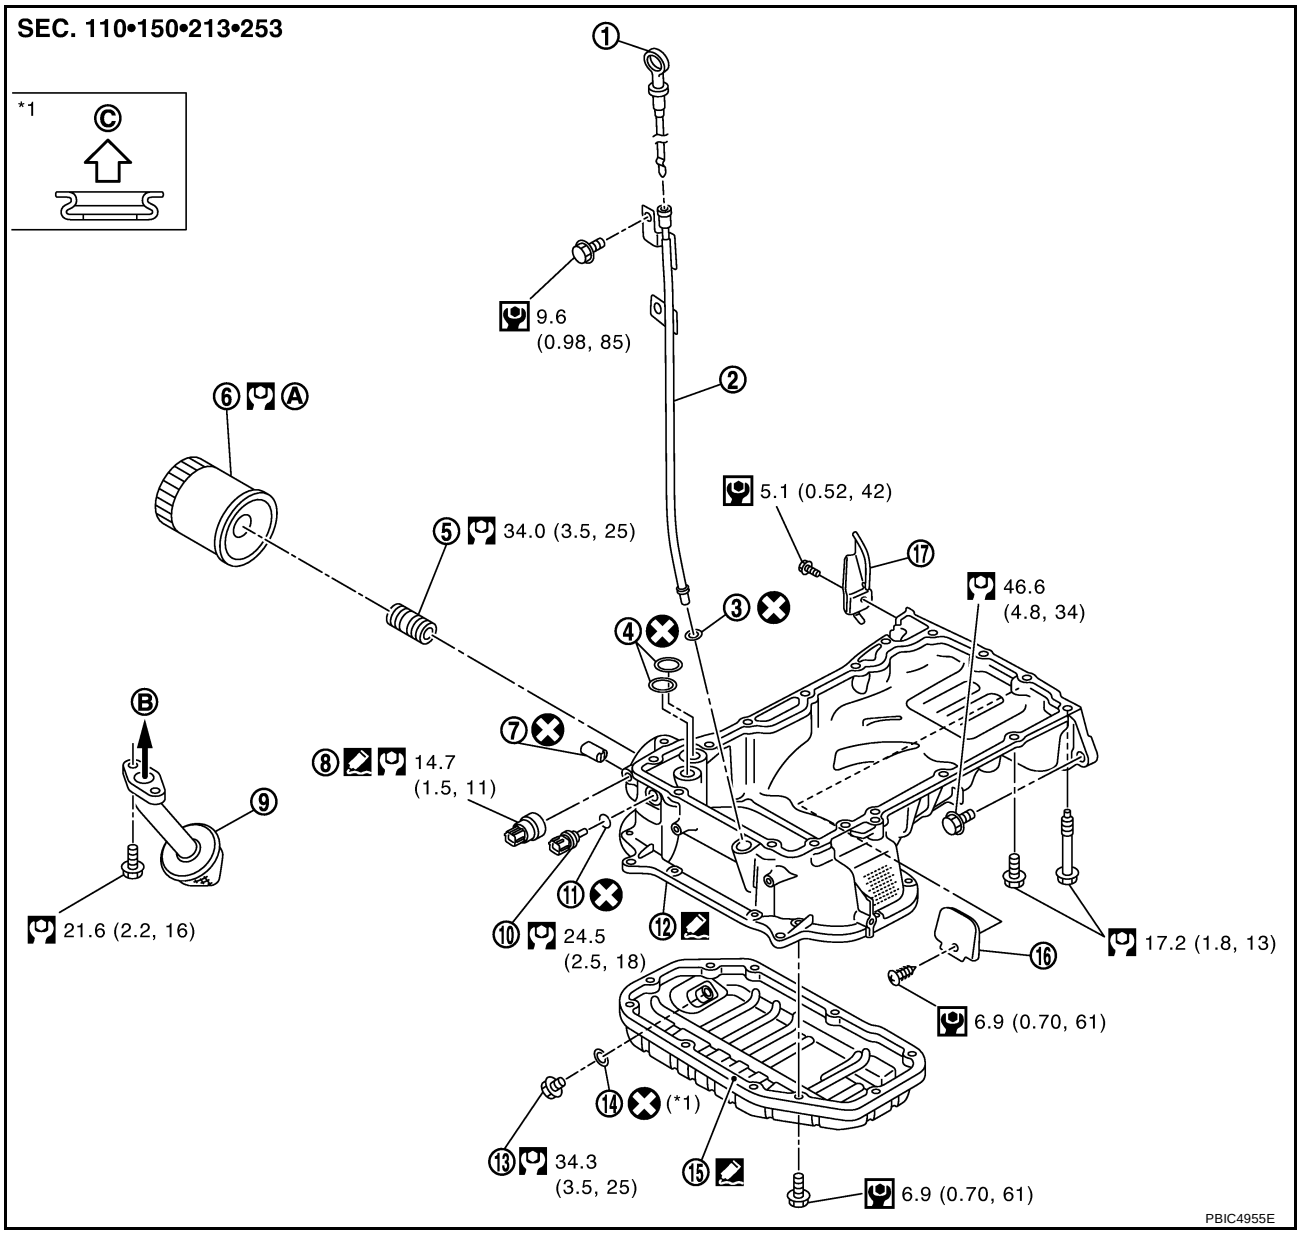
- Install referring to the following if the installation positions cannot be identified.

Glass tube color

Air fuel ratio sensor 1*	**: Black**
Heated oxygen sensor 2 (bank 1)	**: White**
Heated oxygen sensor 2 (bank 2)	**: White**

***: Air fuel ratio sensor 1 is the same for both bank 1 and bank 2.**

CAUTION:



- **Before installing a new air fuel ratio sensor 1 and heated oxygen sensor 2, clean exhaust system threads using oxygen sensor thread cleaner (commercial service tool: J-43897-18 or J43897-12) and apply anti-seize lubricant (commercial service tool).**
- **Do not over torque air fuel ratio sensor 1 and heated oxygen sensor 2. Doing so may cause damage to air fuel ratio sensor 1 and heated oxygen sensor 2, resulting in the "MIL" coming on.**

OIL PAN AND OIL STRAINER

PFP:11110

Removal and Installation

NBS0000L

1.	Oil level gauge	2.	Oil level gauge guide	3.	O-ring
4.	O-ring	5.	Connector bolt	6.	Oil filter
7.	Plug	8.	Oil pressure switch	9.	Oil strainer
10.	Oil temperature sensor	11.	Washer	12.	Oil pan (upper)
13.	Drain plug	14.	Drain plug washer	15.	Oil pan (lower)
16.	Rear cover plate	17.	Rear plate cover		
A.	Refer to LU-9	B.	To oil pump	C.	Oil pan side

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

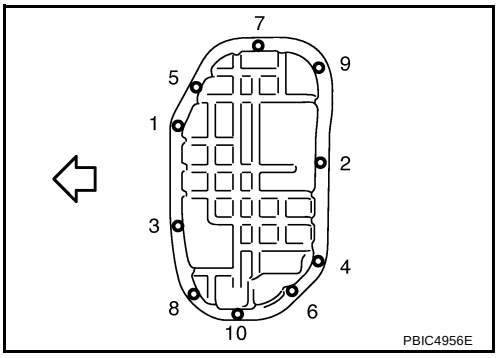
WARNING:

To avoid the danger of being scalded, do not drain engine oil when engine is hot.

CAUTION:

To remove oil pan (upper), remove engine assembly first.

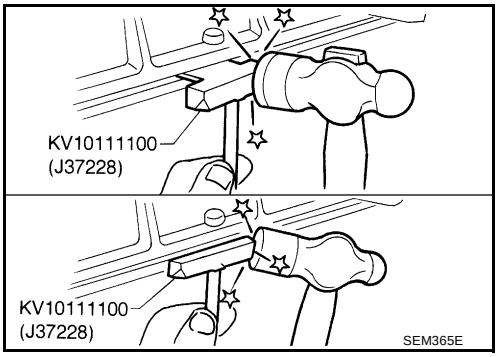
NOTE:



When removing oil pan (lower) only, remove engine assembly is not necessary. Perform step 1, 2 and 10.

1. Drain engine oil. Refer to LU-7, "Changing Engine Oil" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine oil on drive belts.**
2. Remove undercover with power tool.
3. Remove engine assembly from the vehicle, and separate front suspension member and transmission from engine. Refer to EM-101, "ENGINE ASSEMBLY" .
4. Lift the engine with hoist, and mount it onto widely use engine stand. Refer to EM-108, "DISASSEMBLY" .
5. Remove alternator. Refer to SC-20, "CHARGING SYSTEM" .
6. Remove starter motor. Refer to SC-8, "STARTING SYSTEM" .
7. Remove idler pulley and bracket assembly. Refer to EM-53, "TIMING CHAIN" .
8. Remove oil filter, as necessary. Refer to LU-9, "OIL FILTER" .
9. Remove oil temperature sensor, as necessary.
10. Remove oil pan (lower) as follows:



a. Loosen mounting bolts with power tool in reverse order as shown in the figure to remove.

⇦ : Engine front

b. Insert seal cutter (SST) between oil pan (upper) and oil pan (lower).

   CAUTION:
   - **Be careful not to damage the mating surfaces.**
   - **Do not insert screwdriver, this will damage the mating surface.**

11. Remove oil strainer.
12. Remove rear cover plate.
13. Loosen mounting bolts with power tool in reverse order as shown in the figure to remove oil pan (upper).
    - Insert seal cutter [SST: KV10111100 (J37228)] between oil pan (upper) and cylinder block. Slide seal cutter by tapping on the side of tool with hammer. Remove oil pan (upper).

    CAUTION:
    - **Be careful not to damage mating surfaces.**
    - **Do not insert screwdriver, this will damage the mating surface.**

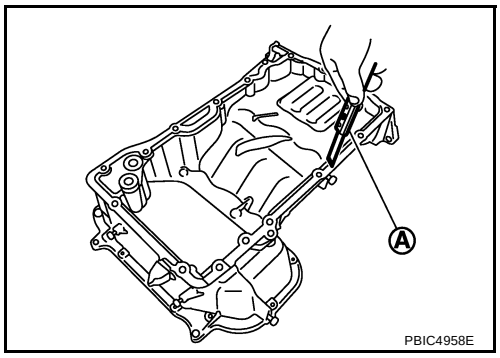
⇦ : Engine front

14. Remove O-rings (2) from bottom of lower cylinder block (1) and oil pump (3).

⇦ : Engine front

INSPECTION AFTER REMOVAL

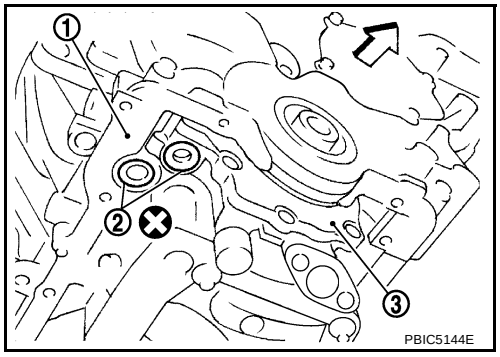
Clean oil strainer if any object attached.



INSTALLATION

1. Install oil pan (upper) as follows:

a. Use scraper to remove old liquid gasket from mating surfaces.

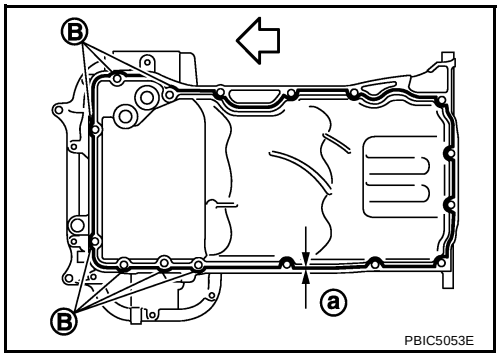


- Also remove the old liquid gasket from mating surface of lower cylinder block.
- Remove old liquid gasket from the bolt holes and threads.

CAUTION:
Do not scratch or damage the mating surfaces when cleaning off old liquid gasket.

b. Install new O-rings (2) on the bottom of lower cylinder block (1) and oil pump (3).

⇦ : Engine front

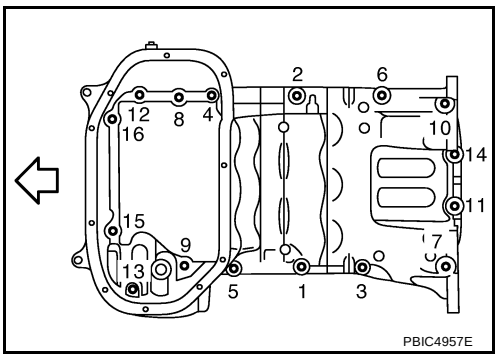


c. Apply a continuous bead of liquid gasket with tube presser [SST: WS39930000 (—)] to the lower cylinder block mating surface of oil pan (upper) to a limited portion as shown in the figure. **Use Genuine RTV Silicone Sealant or equivalent. Refer to** **GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"** **.**

a : 4.0 - 5.0 mm (0.157 - 0.197 in)

⇦ : Engine front

CAUTION:
- **For bolt holes (B) (7 locations), apply liquid gasket outside the holes.**
- **Attaching should be done within 5 minutes after coating.**



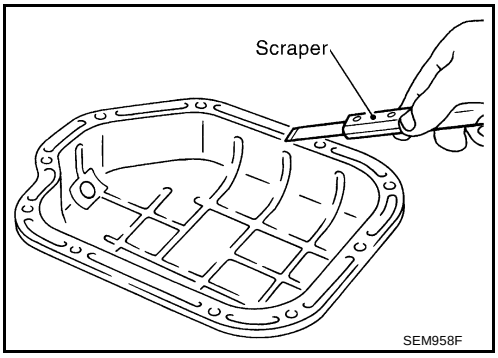
d. Install oil pan (upper).

CAUTION:
Install avoiding misalignment of both oil pan gasket and O-rings.

- Tighten mounting bolts in numerical order as shown in the figure.
- There are two types of mounting bolts. Refer to the following for locating bolts.

⇦ : Engine front

M8 × 92 mm (3.62 in) : 7, 10, 13
M8 × 25 mm (0.98 in) : Except the above

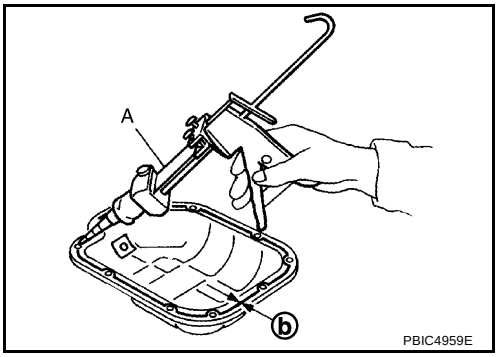


e. Tighten transmission joint bolts. Refer to MT-18, "TRANSMISSION ASSEMBLY" (M/T models) or AT-242, "TRANSMISSION ASSEMBLY" (A/T models).

2. Install oil strainer to oil pump.
- Apply locking sealant to the thread of mounting bolts.
Use Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

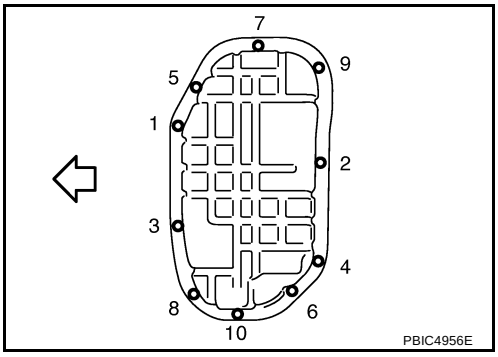
3. Install oil pan (lower) as follows:

a. Use scraper to remove old liquid gasket from mating surfaces.
- Also remove old liquid gasket from mating surface of oil pan (upper).
- Remove old liquid gasket from the bolt holes and thread.



CAUTION:
Do not scratch or damage the mating surfaces when cleaning off old liquid gasket.

b. Apply a continuous bead of liquid gasket with tube presser [SST: WS39930000 (—)] (A) to the oil pan (lower) as shown in the figure.
Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .



CAUTION:
Attaching should be done within 5 minutes after coating.

b : 4.0 – 5.0 mm (0.157 – 0.197 in)

c. Install oil pan (lower).
- Tighten mounting bolts in numerical order as shown in the figure.

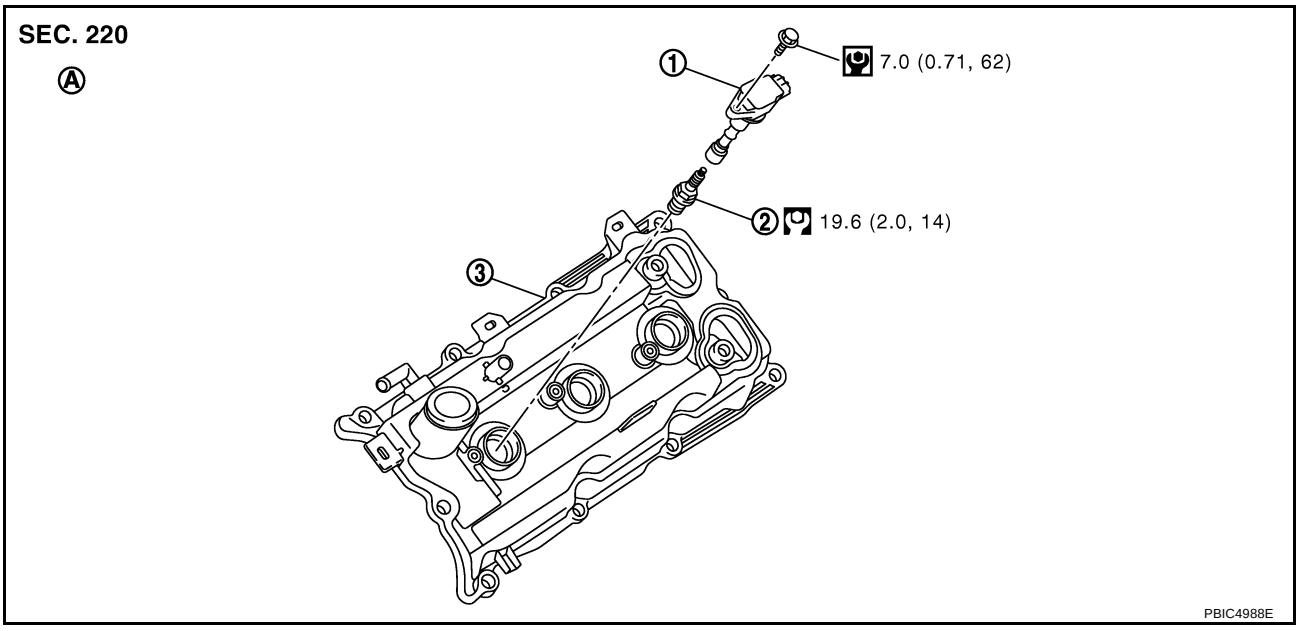
⇦ : Engine front

4. Install oil pan drain plug.
- Refer to the figure of components of former page for installation direction of drain plug washer. Refer to EM-26, "Removal and Installation" .

5. Install in the reverse order of removal after this step.

NOTE:
At least 30 minutes after oil pan is installed, pour engine oil.

INSPECTION AFTER INSTALLATION



1. Check engine oil level and adjust engine oil. Refer to LU-6, "ENGINE OIL" .
2. Start engine, and check there is no leak of engine oil.
3. Stop engine and wait for 10 minutes.
4. Check engine oil level again. Refer to LU-6, "ENGINE OIL" .

IGNITION COIL

PFP:22448

Removal and Installation

NBS0000M

1. Ignition coil
2. Spark plug
3. Rocker cover

A. Left bank

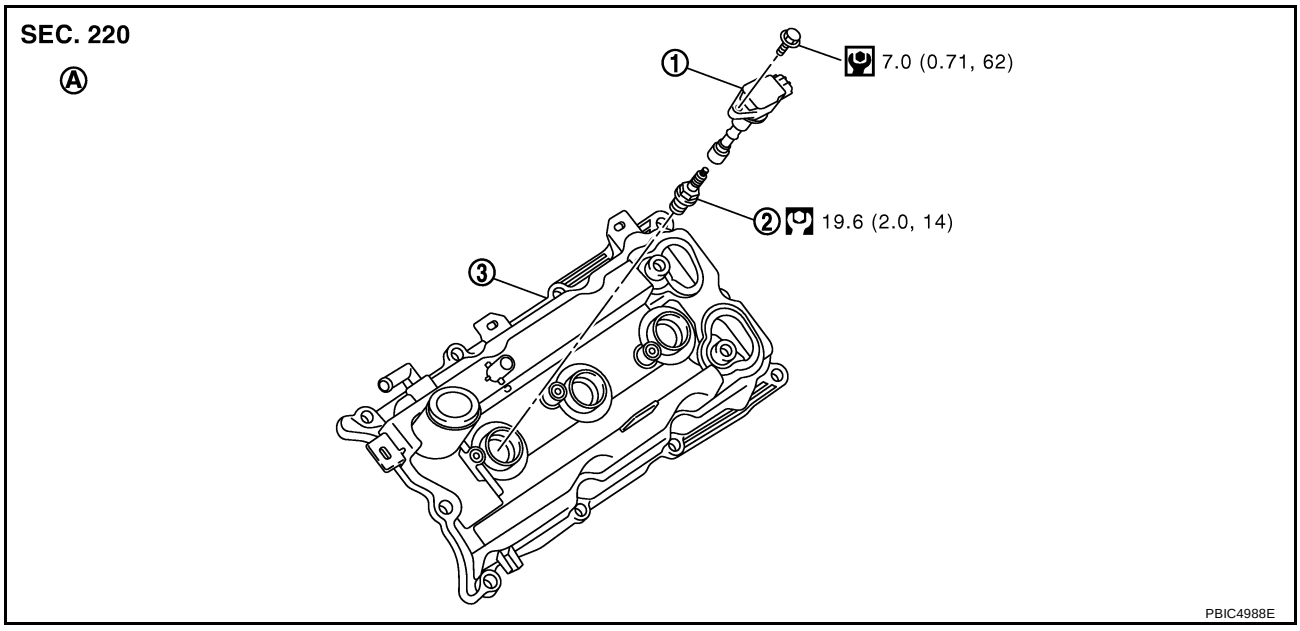
- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Remove air cleaner case and air duct. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
3. Move aside harness, harness bracket, and hoses located above ignition coil.
4. Remove electric throttle control actuator. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
5. Disconnect harness connector from ignition coil.
6. Remove ignition coil.

CAUTION:
Do not shock it.

INSTALLATION



Installation is the reverse order of removal.

SPARK PLUG (IRIDIUM-TIPPED TYPE)

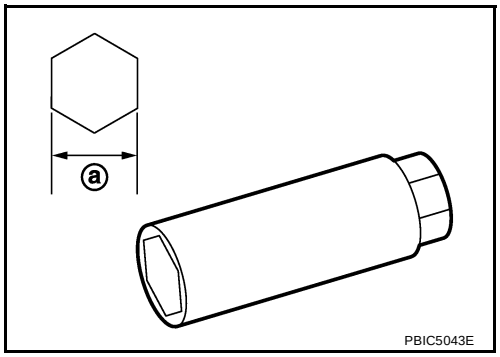
PFP:21478

Removal and Installation

NBS0000N

1. Ignition coil
2. Spark plug
3. Rocker cover

A. Left bank



- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Remove ignition coil. Refer to EM-31, "IGNITION COIL" .
3. Remove spark plug using spark plug wrench (commercial service tool).

   CAUTION:
   Do not drop or shock it.

   a : 14 mm (0.55 in)

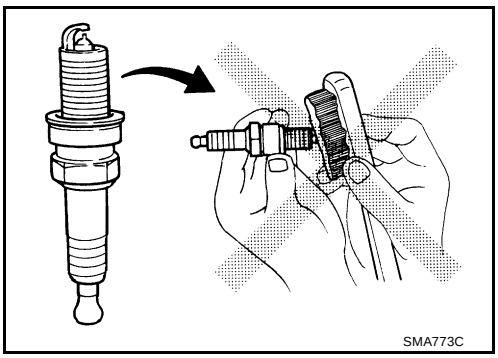
INSPECTION AFTER REMOVAL

Make	DENSO
Standard type	FXE22HR-11

Gap (Nominal) : 1.1 mm (0.043 in)

CAUTION:

- **Do not drop or shock spark plug.**



- **Do not use wire brush for cleaning.**
- **If plug tip is covered with carbon, spark plug cleaner may be used.**

  Cleaner air pressure:

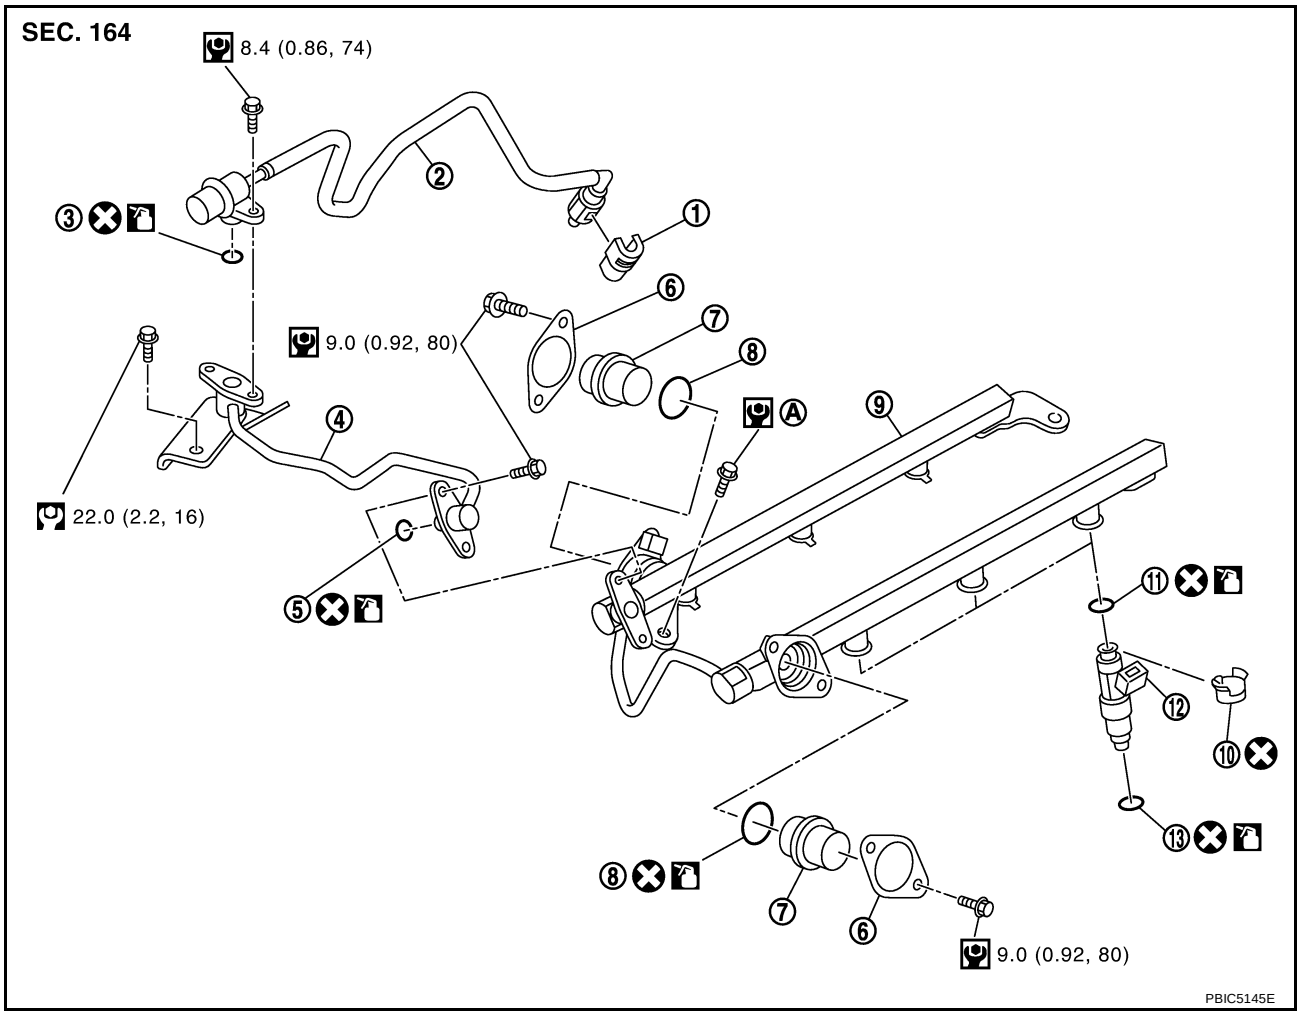
  Less than 588 kPa (6 kg/cm^2 , 85 psi)

  Cleaning time:

  Less than 20 seconds

- **Checking and adjusting plug gap is not required between change intervals.**

INSTALLATION



Installation is the reverse order of removal.

FUEL INJECTOR AND FUEL TUBE

PFP:16600

Removal and Installation

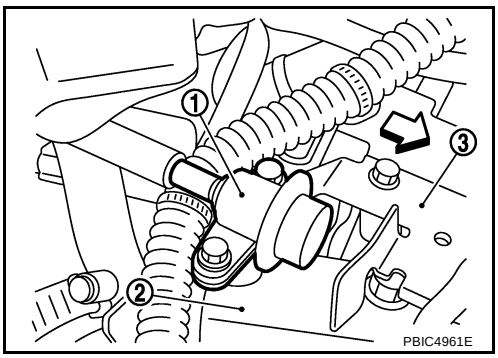
NBS0000O

1. Quick connector cap	2. Fuel feed hose (with damper)	3. O-ring
4. Fuel sub tube	5. O-ring	6. Fuel damper cap
7. Fuel damper	8. O-ring	9. Fuel tube
10. Clip	11. O-ring (black)	12. Fuel injector
13. O-ring (green)		
A. Refer to EM-37		

- Refer to GI-11, "Components" for symbol marks in the figure.

CAUTION:
Do not remove or disassemble parts unless instructed as shown in the figure.

REMOVAL



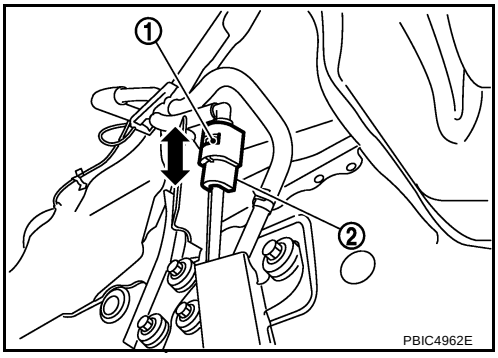
WARNING:

- **Put a “CAUTION: FLAMMABLE” sign in the workshop.**
- **Be sure to work in a well ventilated area and furnish workshop with a CO_2 fire extinguisher.**
- **Do not smoke while servicing fuel system. Keep open flames and sparks away from the work area.**
- **To avoid the danger of being scalded, do not drain engine coolant when engine is hot.**

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Release fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Drain engine coolant, or when water hoses are disconnected, attach plug to prevent engine coolant leakage. Refer to CO-10, "Changing Engine Coolant" and EM-17, "INTAKE MANIFOLD COLLECTOR" .

CAUTION:
Perform this step when engine is cold.

4. Remove intake manifold collector. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
5. Remove fuel feed hose (with damper) (1) from fuel sub-tube (2) and harness bracket (3).



⇦ : Engine front

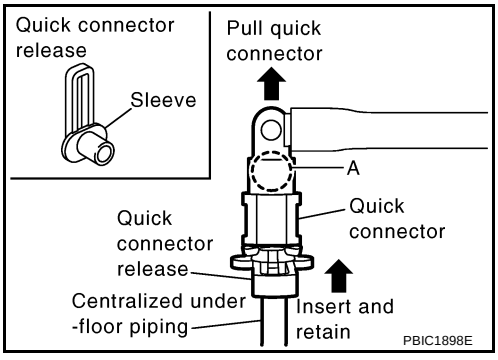
NOTE:
There is no fuel return route.

CAUTION:
- **While hoses are disconnected, plug them to prevent fuel from draining.**
- **Do not separate fuel damper and fuel feed hose.**

6. When separating fuel feed hose (with damper) and centralized under-floor piping connection, disconnect quick connector as follows:

a. Remove quick connector cap (2) from quick connector connection on right member side.
b. Disconnect fuel feed hose (with damper) (1) from bracket hose clamp.

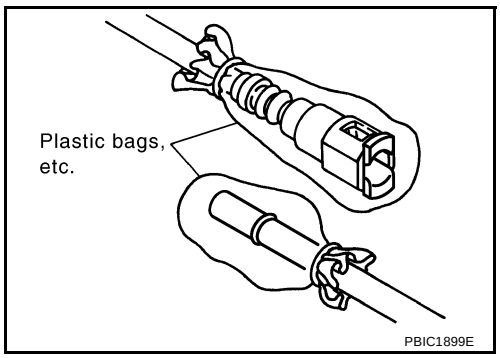
c. Disconnect quick connector from centralized under-floor piping as follows:



CAUTION:
Disconnect quick connector by using quick connector release [SST: — (J-45488)], not by picking out retainer tabs.

i. With the sleeve side of quick connector release facing quick connector, install quick connector release onto centralized under-floor piping.

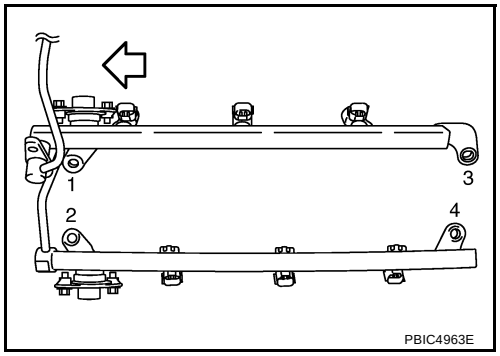
ii. Insert quick connector release into quick connector until sleeve contacts and goes no further. Hold quick connector release on that position.



CAUTION:
Inserting quick connector release hard will not disconnect quick connector. Hold quick connector release where it contacts and goes no further.

iii. Draw and pull out quick connector straight from centralized under-floor piping.

CAUTION:
- **Pull quick connector holding “A” position as shown in the figure.**
- **Do not pull with lateral force applied. O-ring inside quick connector may be damaged.**
- **Prepare container and cloth beforehand as fuel will leak out.**
- **Avoid fire and sparks.**
- **Keep parts away from heat source. Especially, be careful when welding is performed around them.**
- **Do not expose parts to battery electrolyte or other acids.**
- **Do not bend or twist connection between quick connector and fuel feed hose (with damper) during installation/removal.**



- **To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.**
