Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NBS000J8

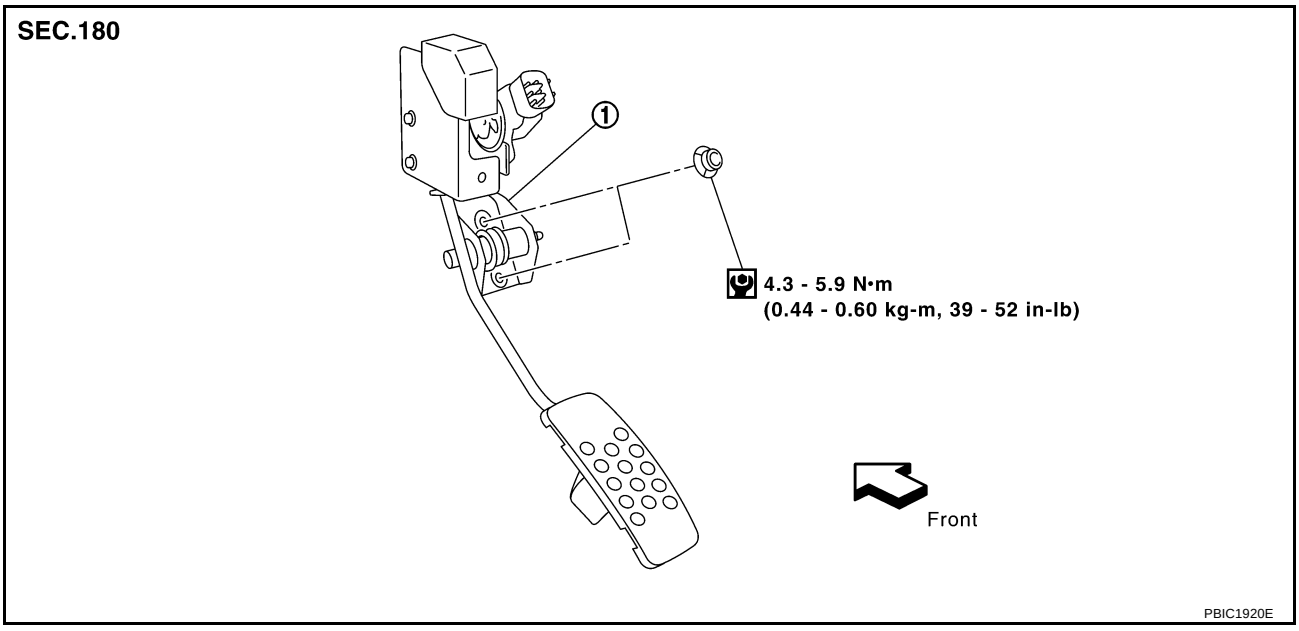
The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NBS000J9



Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

ACCELERATOR CONTROL SYSTEM

PFP:18005

Removal and Installation

NBS000JA

1. Accelerator pedal assembly

REMOVAL

1. Disconnect accelerator pedal position sensor harness connector.
2. Loosen nuts, and remove accelerator pedal assembly.

CAUTION:

- **Do not disassemble accelerator pedal assembly. Do not remove accelerator pedal position sensor from accelerator pedal assembly.**
- **Avoid impact from dropping etc. during handling.**
- **Be careful to keep accelerator pedal assembly away from water.**

INSTALLATION

Installation is the reverse order of removal.

INSPECTION AFTER INSTALLATION

- Make sure that accelerator pedal moves smoothly within the whole operation range.
- Make sure that accelerator pedal securely returns to the original position.
- For the electrical inspection of accelerator pedal assembly, refer to EC-633, "DTC P2122, P2123 APP SENSOR" , EC-641, "DTC P2127, P2128 APP SENSOR" and EC-650, "DTC P2138 APP SENSOR" .

CAUTION:

When harness connector of accelerator pedal position sensor is disconnected, perform "Accelerator Pedal Released Position Learning". Refer to EC-77, "Accelerator Pedal Released Position Learning" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NCS00019

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

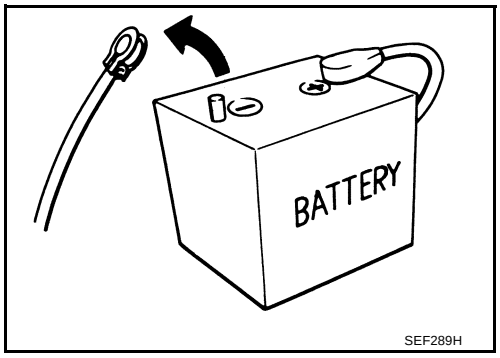
NCS0001A

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for On Board Diagnostic (OBD) System of A/T and Engine

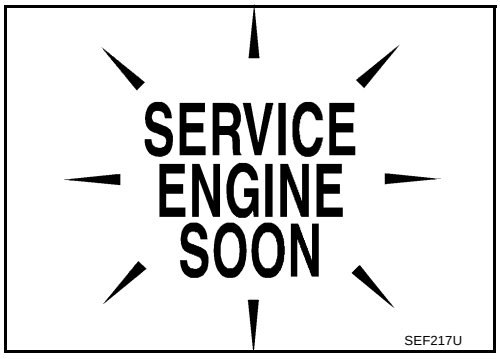
NCS0001B

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.



CAUTION:

- **Be sure to turn the ignition switch OFF and disconnect the battery cable from the negative terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. Will cause the MIL to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. May cause the MIL to light up due to a short circuit.**
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to a malfunction of the EGR system or fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.**



Precautions

NCS0001C

- **Before connecting or disconnecting the A/T assembly harness connector, turn ignition switch OFF and disconnect the battery cable from the negative terminal. Because battery voltage is applied to TCM even if ignition switch is turned OFF.**

- **After performing each TROUBLE DIAGNOSIS, perform "DTC Confirmation Procedure".**
  If the repair is completed the DTC should not be displayed in the "DTC Confirmation Procedure".

- Always use the specified brand of ATF. Refer to MA-11, "Fluids and Lubricants" .
- Use lint-free paper not cloth rags during work.
- After replacing the ATF, dispose of the waste oil using the methods prescribed by law, ordinance, etc.
- Before proceeding with disassembly, thoroughly clean the outside of the A/T. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- Disassembly should be done in a clean work area.
- Use lint-free paper or towels for wiping parts clean. Common shop rags can leave fibers that could interfere with the operation of the A/T.
- Place disassembled parts in order for easier and proper assembly.
- All parts should be carefully cleaned with a general purpose, non-flammable solvent before inspection or reassembly.
- Gaskets, seals and O-rings should be replaced any time the A/T is disassembled.
- It is very important to perform functional tests whenever they are indicated.
- The valve body contains precision parts and requires extreme care when parts are removed and serviced. Place disassembled valve body parts in order for easier and proper assembly. Care will also prevent springs and small parts from becoming scattered or lost.
- Properly installed valves, sleeves, plugs, etc. will slide along bores in valve body under their own weight.
- Before assembly, apply a coat of recommended ATF to all parts. Apply petroleum jelly to protect O-rings and seals, or hold bearings and washers in place during assembly. Do not use grease.
- Extreme care should be taken to avoid damage to O-rings, seals and gaskets when assembling.
- Clean or replace ATF cooler if excessive foreign material is found in oil pan or clogging strainer. Refer to AT-9, "ATF COOLER SERVICE" .
- After overhaul, refill the A/T with new ATF.
- When the A/T drain plug is removed, only some of the ATF is drained. Old ATF will remain in torque converter and ATF cooling system.
  Always follow the procedures under "Changing A/T Fluid" in the AT section when changing A/T fluid. Refer to AT-12, "Changing A/T Fluid" , AT-12, "Checking A/T Fluid" .

Service Notice or Precautions

NCS0001D

ATF COOLER SERVICE

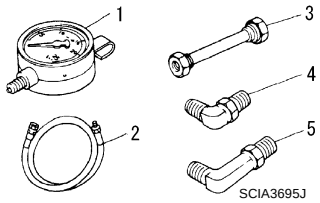
If ATF contains frictional material (clutches, bands, etc.), or if an A/T is repaired, overhauled, or replaced, inspect and clean the A/T fluid cooler mounted in the radiator or replace the radiator. Flush cooler lines using cleaning solvent and compressed air after repair. For A/T fluid cooler cleaning procedure, refer to AT-14, "A/T Fluid Cooler Cleaning" . For radiator replacement, refer to CO-13, "RADIATOR" .

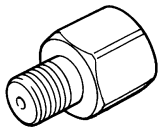
OBD-II SELF-DIAGNOSIS

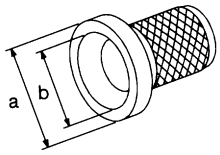
- A/T self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the A/T CHECK indicator or the malfunction indicator lamp (MIL). Refer to the table on AT-86, "SELF-DIAGNOSTIC RESULT MODE" for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MIL are automatically stored in both the ECM and TCM memories.
  Always perform the procedure on AT-38, "HOW TO ERASE DTC" to complete the repair and avoid unnecessary blinking of the MIL.

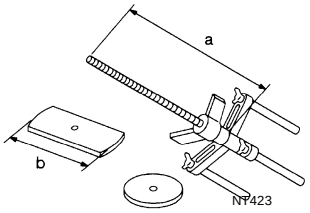
For details of OBD-II, refer to EC-47, "ON BOARD DIAGNOSTIC (OBD) SYSTEM" .

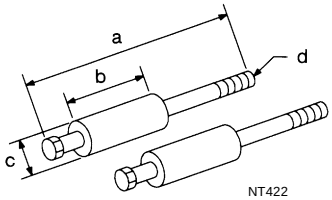
- **Certain systems and components, especially those related to OBD, may use the new style slide-locking type harness connector. For description and how to disconnect, refer to PG-76, "HARNESS CONNECTOR" .**











PREPARATION

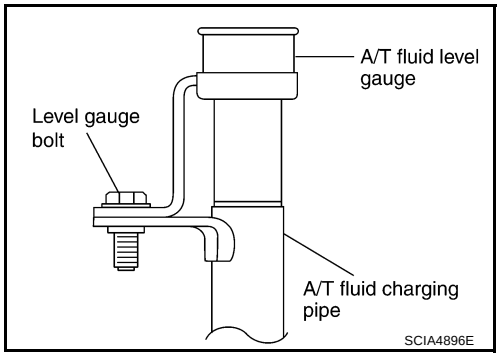
KV31103600 (J-45674) Joint pipe adapter (With ST25054000)  ZZA1227D	Measuring line pressure
ST33400001 (J-26082) Drift a: 60 mm (2.36 in) dia. b: 47 mm (1.85 in) dia.  NT086	● Installing rear oil seal ● Installing oil pump housing oil seal
KV31102400 (J-34285 and J-34285-87) Clutch spring compressor a: 320 mm (12.60 in) b: 174 mm (6.85 in)  NT423	Installing reverse brake return spring retainer
ST25850000 (J-25721-A) Sliding hammer a: 179 mm (7.05 in) b: 70 mm (2.76 in) c: 40 mm (1.57 in) d: M12X1.75P  NT422	Remove oil pump assembly

Commercial Service Tools

NCS0001G

Tool name	Description
Power tool  PBIC0190E	Loosening bolts and nuts
Drift a: 22 mm (0.87 in) dia.  NT083	Installing manual shaft oil seals
Pin punch a: 4 mm (0.16 in) dia.  NT410	Removing retaining pin



A/T FLUID

PFP:KLE40

Changing A/T Fluid

NCS0001H

1. Warm up ATF.
2. Stop engine.
3. Loosen the level gauge bolt.
4. Drain ATF from drain plug and refill with new ATF. Always refill same volume with drained ATF.
   - To replace the ATF, pour in new ATF at the A/T fluid charging pipe with the engine idling and at the same time drain the old ATF from the radiator cooler hose return side.
   - When the color of the ATF coming out is about the same as the color of the new ATF, the replacement is complete. The amount of new ATF to use should be 30 to 50% increase of the stipulated amount.

ATF: **Genuine NISSAN Matic J ATF**

Fluid capacity: **10.3 ℓ (10-7/8 US qt, 9-1/8 Imp qt)**

CAUTION:

- **Use only Genuine NISSAN Matic J ATF. Do not mix with other ATF.**
- **Using ATF other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and A/T durability, and may damage the A/T, which is not covered by the NISSAN new vehicle limited warranty.**
- **When filling ATF, take care not to splash heat generating parts such as exhaust with ATF.**
- **Do not reuse drain plug gasket.**

Drain plug:

: 34 N·m (3.5 kg-m, 25 ft-lb)

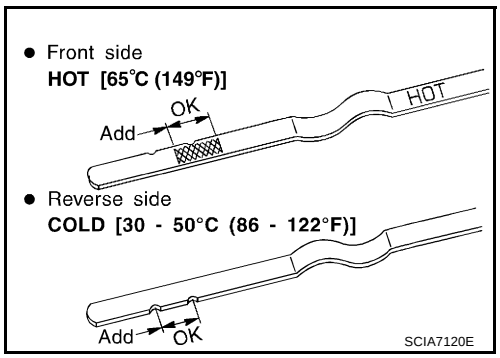
5. Run engine at idle speed for 5 minutes.
6. Check A/T fluid level and condition. Refer to AT-12, "Checking A/T Fluid" . If ATF is still dirty, repeat step 2. through 5.
7. Install the removed A/T fluid level gauge in the A/T fluid charging pipe.
8. Tighten the level gauge bolt.

Level gauge bolt:

: 5.1 N·m (0.52 kg-m, 45 in-lb)

Checking A/T Fluid

NCS0001I



1. Warm up engine.
2. Check for A/T fluid leakage.
3. Loosen the level gauge bolt.
4. Before driving, A/T fluid level can be checked at A/T fluid temperatures of 30 to 50°C (86 to 122°F) using “COLD” range on A/T fluid level gauge as follows.

a. Park vehicle on level surface and set parking brake.

b. Start engine and move selector lever through each gear position. Leave selector lever in “P” position.

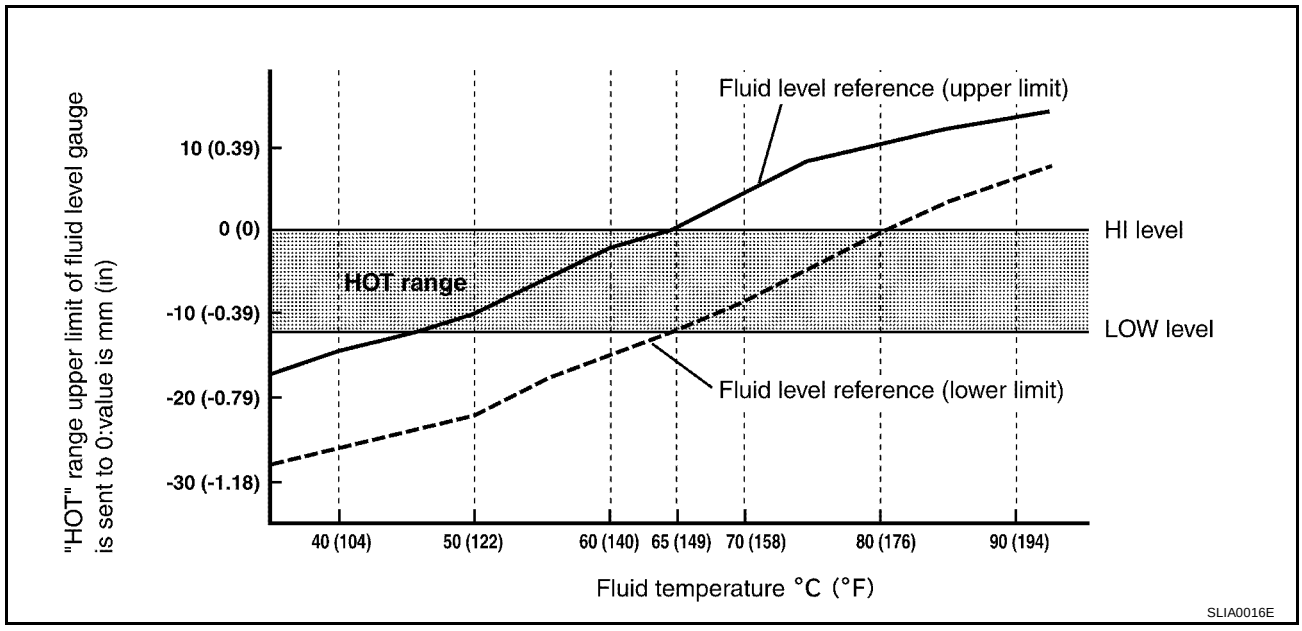
c. Check A/T fluid level with engine idling.

d. Remove A/T fluid level gauge and wipe clean with lint-free paper.

CAUTION:

When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.

e. Re-insert A/T fluid level gauge into A/T fluid charging pipe as far as it will go.

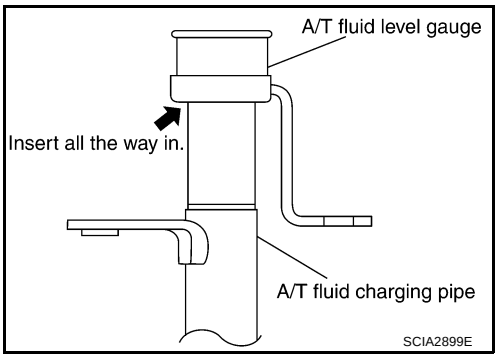


CAUTION:
To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the A/T fluid level gauge reversed from the normal attachment conditions.

f. Remove A/T fluid level gauge and note reading. If reading is at low side of range, add ATF to the A/T fluid charging pipe.

CAUTION:
Do not overfill.

5. Drive vehicle for approximately 5 minutes in urban areas.
6. Make the A/T fluid temperature approximately 65°C (149°F).

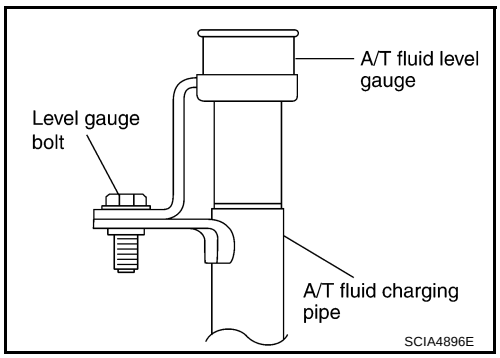


NOTE:
A/T fluid level will be greatly affected by temperature as shown in the figure. Therefore, be certain to perform operation while checking data with CONSULT-III.

a. Select “DATA MONITOR”.
b. Read out the value of “ATF TEMP 1”.

7. Re-check A/T fluid level at A/T fluid temperatures of approximately 65°C (149°F) using “HOT” range on A/T fluid level gauge.

CAUTION:
- **When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.**
- **To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the A/T fluid level gauge rotated from the normal attachment conditions as shown.**



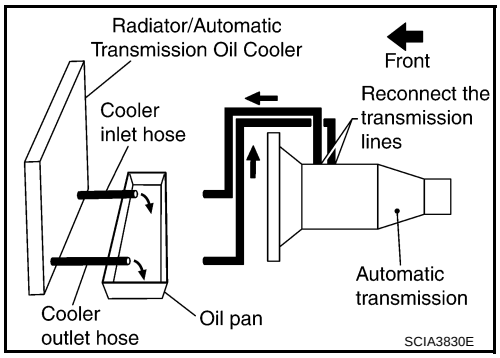
8. Check A/T fluid condition.
   - If ATF is very dark or smells burned, check operation of A/T. Flush cooling system after repair of A/T.
   - If ATF contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-13, "RADIATOR" and AT-14, "A/T Fluid Cooler Cleaning" .
9. Install the removed A/T fluid level gauge in the A/T fluid charging pipe.

10. Tighten level gauge bolt.

Level gauge bolt:

: 5.1 N·m (0.52 kg-m, 45 in-lb)

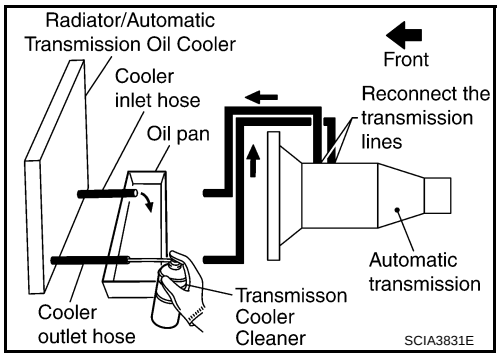
A/T Fluid Cooler Cleaning



NCS0001J

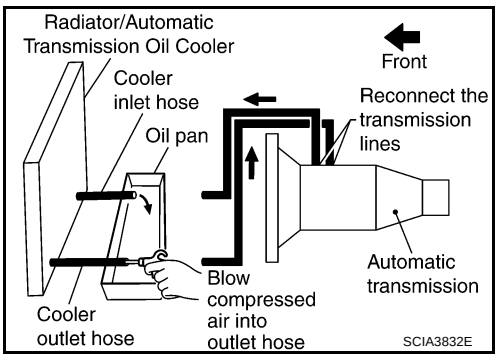
Whenever an A/T is replaced, the A/T fluid cooler mounted in the radiator must be inspected and cleaned. Metal debris and friction material, if present, can become trapped in the A/T fluid cooler. This debris can contaminate the newly serviced A/T or, in severe cases, can block or restrict the flow of ATF. In either case, malfunction of the newly serviced A/T may result.
Debris, if present, may build up as ATF enters the cooler inlet. It will be necessary to back flush the cooler through the cooler outlet in order to flush out any built up debris.

A/T FLUID COOLER CLEANING PROCEDURE



1. Position an oil pan under the A/T inlet and outlet cooler hoses.
2. Identify the inlet and outlet A/T fluid cooler hoses.
3. Disconnect the A/T fluid cooler inlet and outlet rubber hoses from the steel cooler tubes or bypass valve.

   NOTE:
   Replace the cooler hoses if rubber material from the hose remains on the tube fitting.
4. Allow any ATF that remains in the cooler hoses to drain into the oil pan.

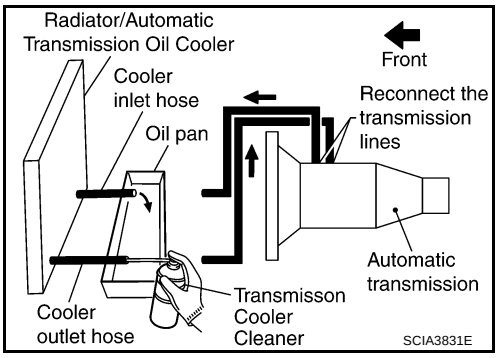


5. Insert the extension adapter hose of a can of Transmission Cooler Cleaner (Nissan P/N 999MP-AM006) into the cooler outlet hose.

   CAUTION:
   - **Wear safety glasses and rubber gloves when spraying the Transmission Cooler Cleaner.**
   - **Spray Transmission Cooler Cleaner only with adequate ventilation.**
   - **Avoid contact with eyes and skin.**
   - **Do not breath vapors or spray mist.**

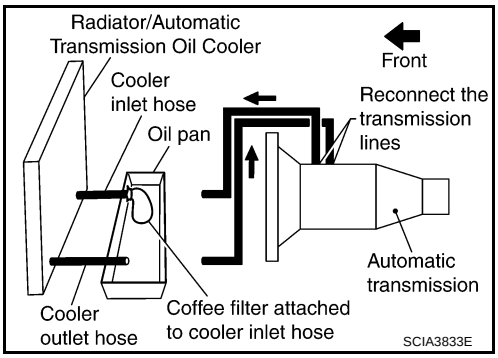
6. Hold the hose and can as high as possible and spray Transmission Cooler Cleaner in a continuous stream into the cooler outlet hose until ATF flows out of the cooler inlet hose for 5 seconds.

7. Insert the tip of an air gun into the end of the cooler outlet hose.
8. Wrap a shop rag around the air gun tip and of the cooler outlet hose.
9. Blow compressed air regulated to 5 to 9 kg/cm^2 (70 to 130 psi) through the cooler outlet hose for 10 seconds to force out any remaining ATF.
10. Repeat steps 5 through 9 three additional times.
11. Position an oil pan under the banjo bolts that connect the A/T fluid cooler steel lines to the A/T.
12. Remove the banjo bolts.
13. Flush each steel line from the cooler side back toward the A/T by spraying Transmission Cooler Cleaner in a continuous stream for 5 seconds.



14. Blow compressed air regulated to 5 to 9 kg/cm^2 (70 to 130 psi) through each steel line from the cooler side back toward the A/T for 10 seconds to force out any remaining ATF.
15. Ensure all debris is removed from the steel cooler lines.
16. Ensure all debris is removed from the banjo bolts and fittings.
17. Perform AT-15, "A/T FLUID COOLER DIAGNOSIS PROCEDURE" .

A/T FLUID COOLER DIAGNOSIS PROCEDURE

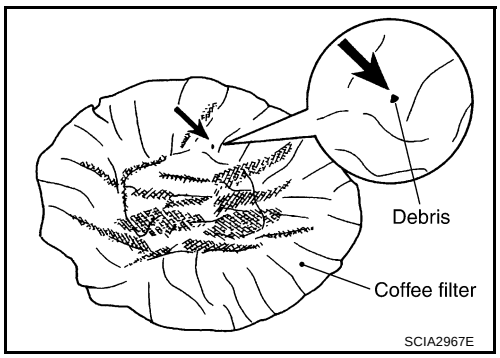


NOTE:
Insufficient cleaning of the cooler inlet hose exterior may lead to inaccurate debris identification.

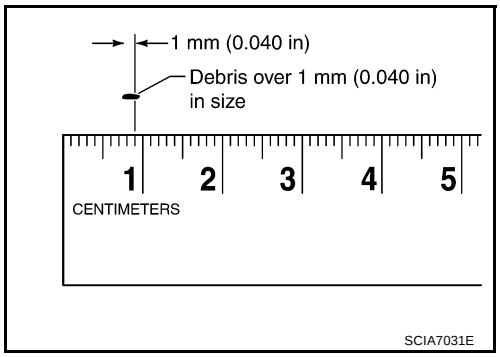
1. Position an oil pan under the A/T inlet and outlet cooler hoses.
2. Clean the exterior and tip of the cooler inlet hose.
3. Insert the extension adapter hose of a can of Transmission Cooler Cleaner (Nissan P/N 999MP-AM006) into the cooler outlet hose.

   CAUTION:
   - **Wear safety glasses and rubber gloves when spraying the Transmission Cooler Cleaner.**
   - **Spray Transmission Cooler Cleaner only with adequate ventilation.**
   - **Avoid contact with eyes and skin.**
   - **Do not breath vapors or spray mist.**

4. Hold the hose and can as high as possible and spray Transmission Cooler Cleaner in a continuous stream into the cooler outlet hose until ATF flows out of the cooler inlet hose for 5 seconds.
5. Tie a common white, basket-type coffee filter to the end of the cooler inlet hose.



6. Insert the tip of an air gun into the end of the cooler outlet hose.
7. Wrap a shop rag around the air gun tip and end of cooler outlet hose.
8. Blow compressed air regulated to 5 to 9 kg/cm^2 (70 to 130 psi) through the cooler outlet hose to force any remaining ATF into the coffee filter.
9. Remove the coffee filter from the end of the cooler inlet hose.
10. Perform AT-16, "A/T FLUID COOLER INSPECTION PROCEDURE" .



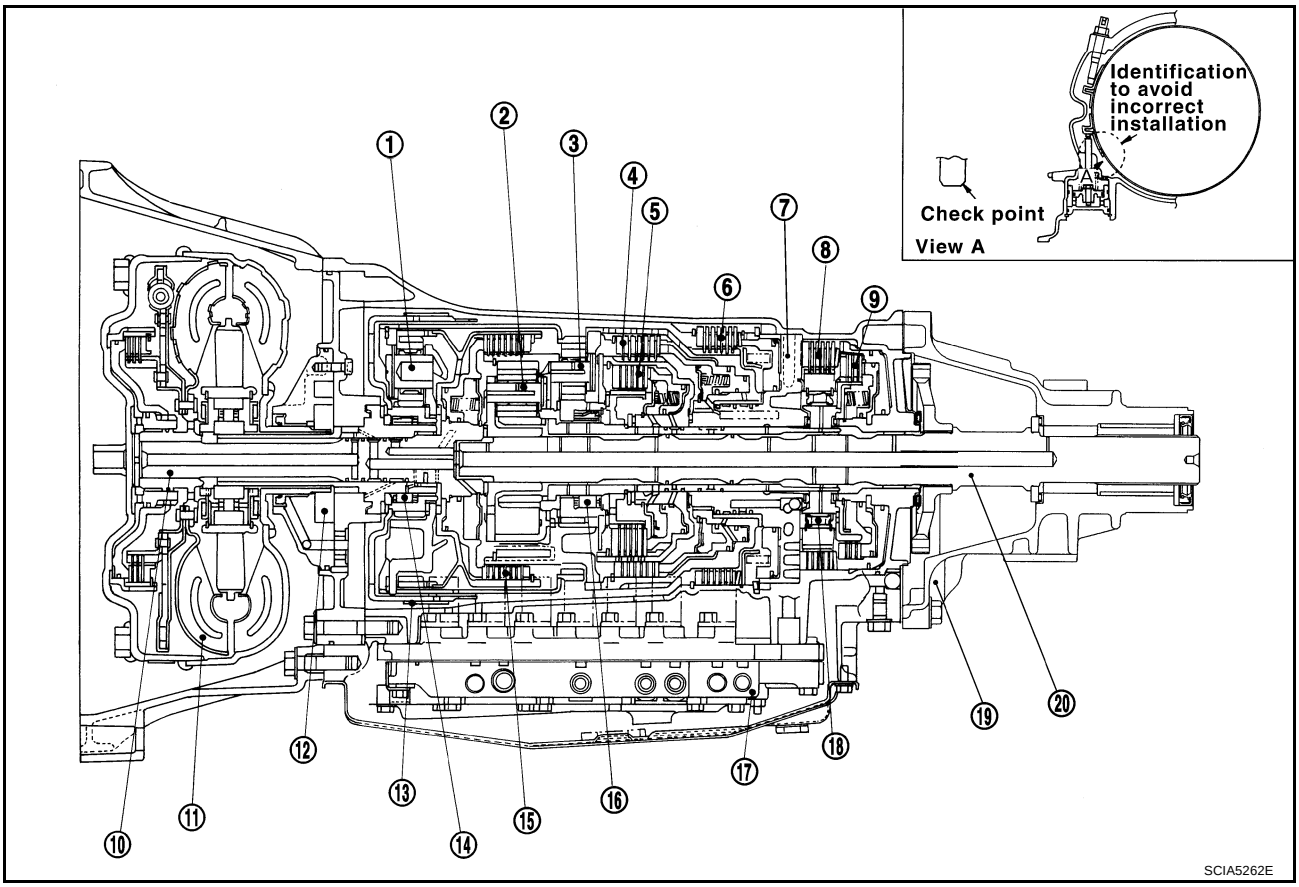
A/T FLUID COOLER INSPECTION PROCEDURE

1. Inspect the coffee filter for debris.

a. If small metal debris less than 1 mm (0.04 in) in size or metal powder is found in the coffee filter, this is normal. If normal debris is found, the A/T fluid cooler/radiator can be re-used and the procedure is ended.

b. If one or more pieces of debris are found that are over 1 mm (0.04 in) in size and/or peeled clutch facing material is found in the coffee filter, the A/T fluid cooler is not serviceable. The A/T fluid cooler/radiator must be replaced and the inspection procedure is ended. Refer to CO-13, "RADIATOR" and CO-17, "RADIATOR (ALUMINUM TYPE)" .

A/T FLUID COOLER FINAL INSPECTION



After performing all procedures, ensure that all remaining oil is cleaned from all components.

Shift Mechanism

NCS0001L

The A/T uses compact triple planetary gear systems to improve power transmission efficiency, simplify construction and reduce weight.
It also employs an optimum shift control and super wide gear ratios. They improve starting performance and acceleration during medium and high-speed operation.

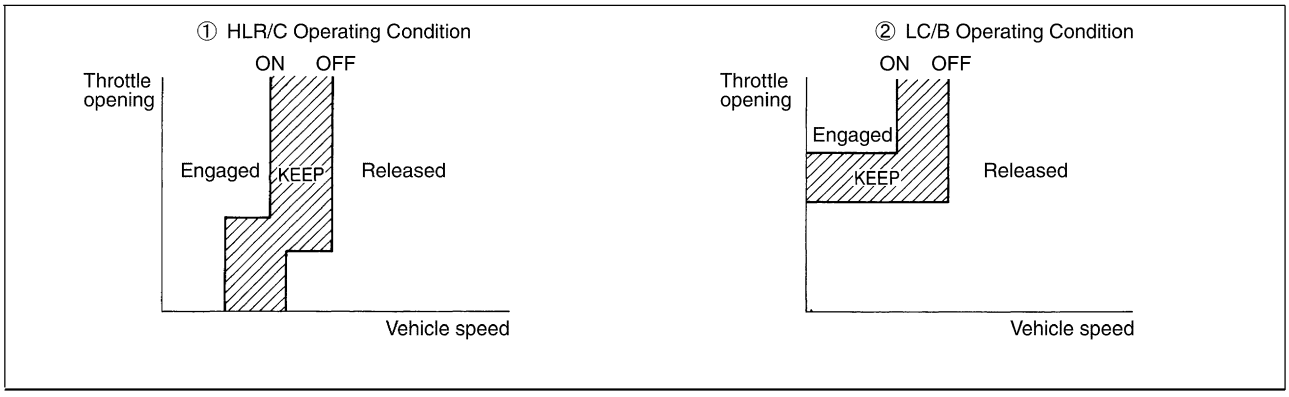
FUNCTION OF CLUTCH AND BRAKE



Name of the Part	Abbreviation	Function
Front brake (1)	FR/B	Fastens the front sun gear (11).
Input clutch (2)	I/C	Connects the input shaft (12), the front internal gear (14) and the mid internal gear (13).
Direct clutch (3)	D/C	Connects the rear carrier (15) and the rear sun gear (16).
High and low reverse clutch (4)	HLR/C	Connects the mid sun gear (17) and the rear sun gear (16).
Reverse brake (5)	R/B	Fastens the rear carrier (15).
Forward brake (6)	Fwd/B	Fastens the mid sun gear (17).
Low coast brake (7)	LC/B	Fastens the mid sun gear (17).
1st one-way clutch (8)	1st OWC	Allows the rear sun gear (16) to turn freely forward relative to the mid sun gear (17) but fastens it for reverse rotation.
Forward one-way clutch (9)	Fwd OWC	Allows the mid sun gear (17) to turn freely in the forward direction but fastens it for reverse rotation.
3rd one-way clutch (10)	3rd OWC	Allows the front sun gear (11) to turn freely in the forward direction but fastens it for reverse rotation.

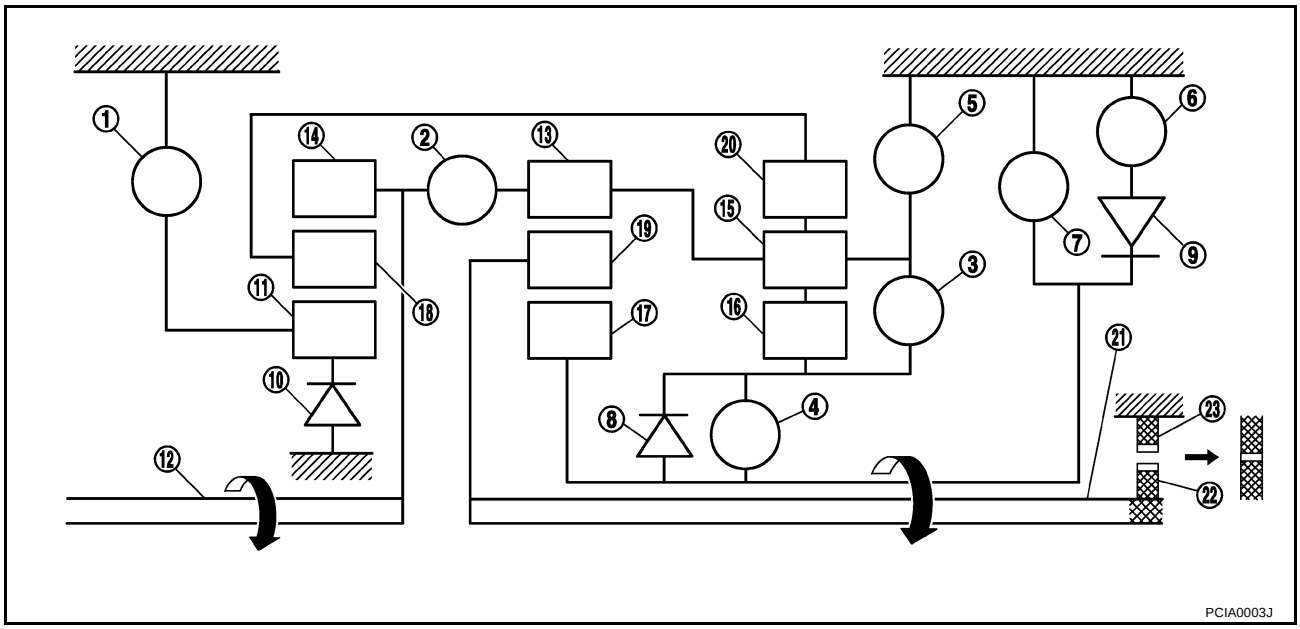
SCIA6962E

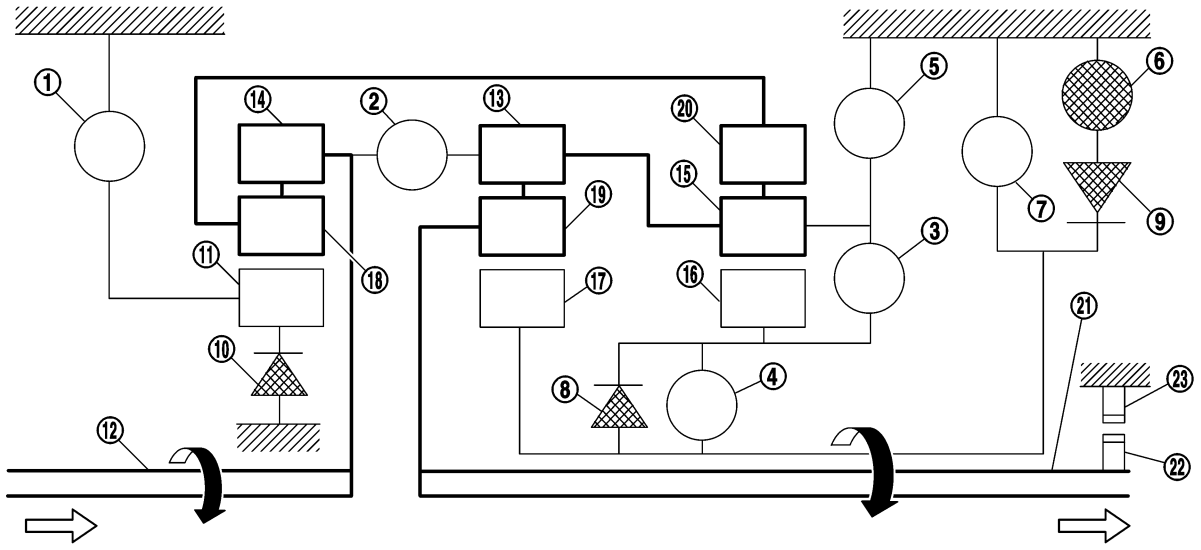


POWER TRANSMISSION

“N” Position

Since both the forward brake and the reverse brake are released, torque from the input shaft drive is not transmitted to the output shaft.

“P” Position



- The same as for the “N” position, both the forward brake and the reverse brake are released, so torque from the input shaft drive is not transmitted to the output shaft.
- The parking pawl linked with the selector lever meshes with the parking gear and fastens the output shaft mechanically.

1. Front brake
2. Input clutch
3. Direct clutch
4. High and low reverse clutch
5. Reverse brake

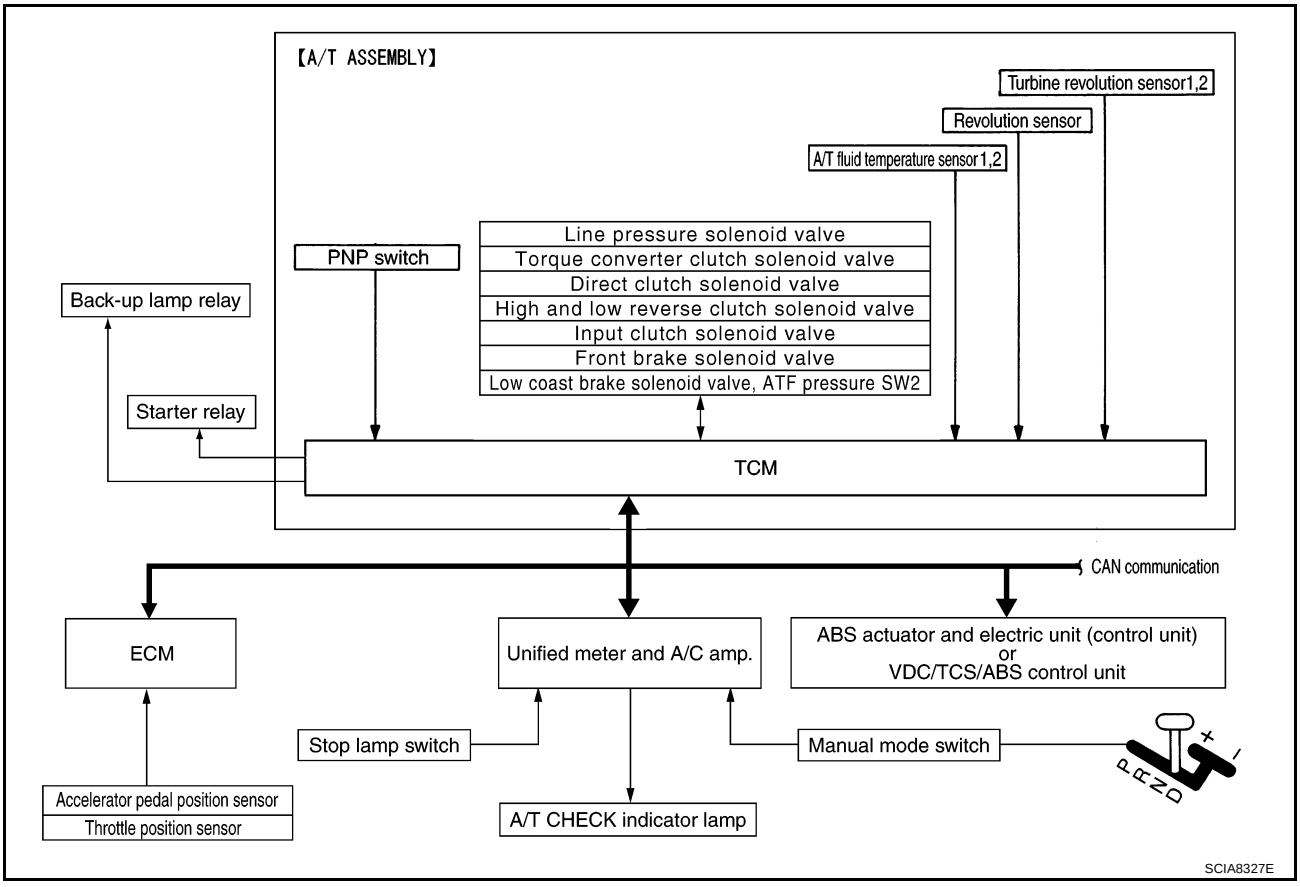
TCM Function

NCS0001M

The function of the TCM is to:



- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, lock-up operation, and engine brake operation.
- Send required output signals to the respective solenoids.

CONTROL SYSTEM OUTLINE

The A/T senses vehicle operating conditions through various sensors or signals. It always controls the optimum shift position and reduces shifting and lock-up shocks.

SENSORS (or SIGNALS)		TCM		ACTUATORS

CONTROL SYSTEM DIAGRAM

CAN Communication

NCS0001N

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. For details, refer to LAN-48, "CAN System Specification Chart" .

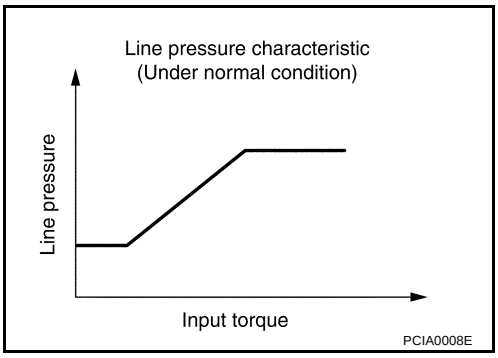
- *1: Spare for vehicle speed sensor A/T (revolution sensor)
- *2: Spare for accelerator pedal position signal
- *3: If these input and output signals are different, the TCM triggers the fail-safe function.
- *4: Used as a condition for starting self-diagnostics; if self-diagnostics are not started, it is judged that there is some kind of error.
- *5: Input by CAN communications
- *6: Output by CAN communications

Line Pressure Control

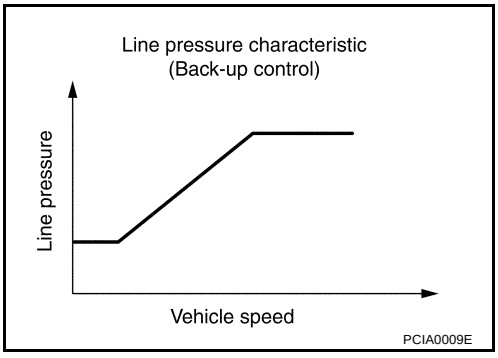
NCS0001P

- When an input torque signal equivalent to the engine drive force is sent from the ECM to the TCM, the TCM controls the line pressure solenoid.
- This line pressure solenoid controls the pressure regulator valve as the signal pressure and adjusts the pressure of the operating oil discharged from the oil pump to the line pressure most appropriate to the driving state.



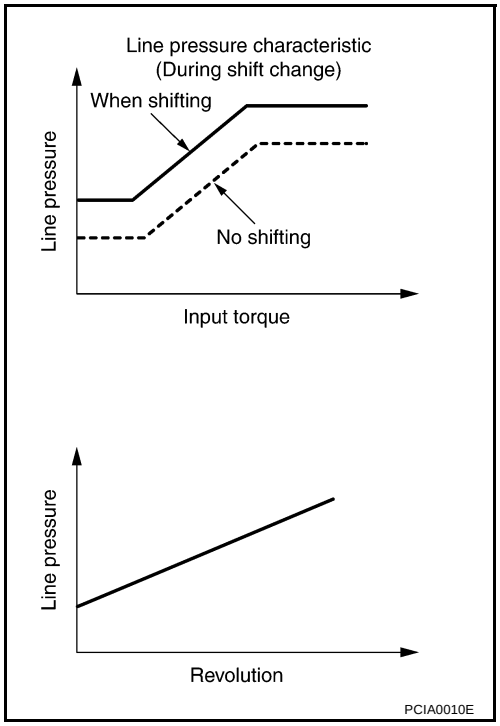
LINE PRESSURE CONTROL IS BASED ON THE TCM LINE PRESSURE CHARACTERISTIC PATTERN

- The TCM has stored in memory a number of patterns for the optimum line pressure characteristic for the driving state.
- In order to obtain the most appropriate line pressure characteristic to meet the current driving state, the TCM controls the line pressure solenoid current valve and thus controls the line pressure.



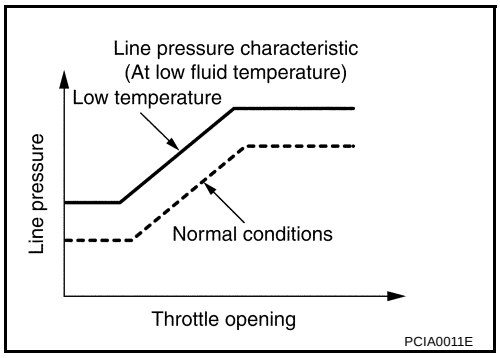
Normal Control

Each clutch is adjusted to the necessary pressure to match the engine drive force.



Back-up Control (Engine Brake)

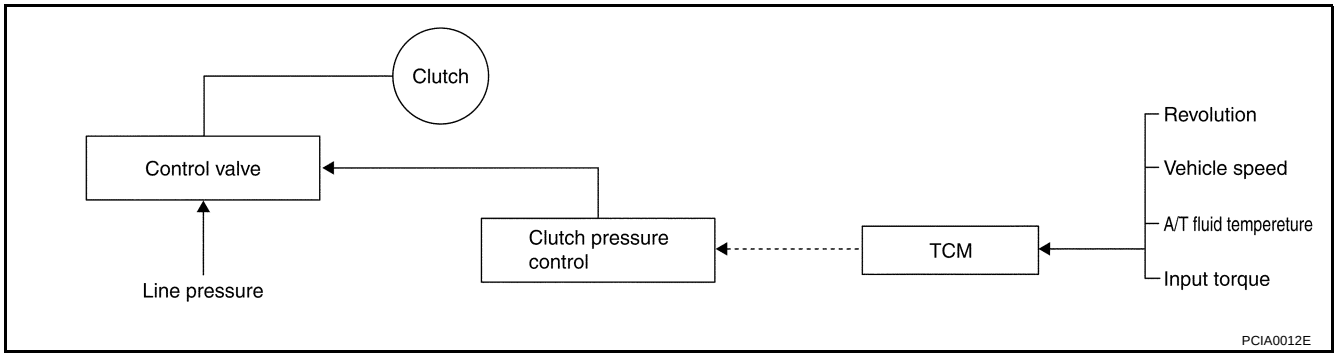
When the select operation is performed during driving and the A/T is shifted down, the line pressure is set according to the vehicle speed.



During Shift Change

The necessary and adequate line pressure for shift change is set. For this reason, line pressure pattern setting corresponds to input torque and gearshift selection. Also, line pressure characteristic is set according to engine speed, during engine brake operation.

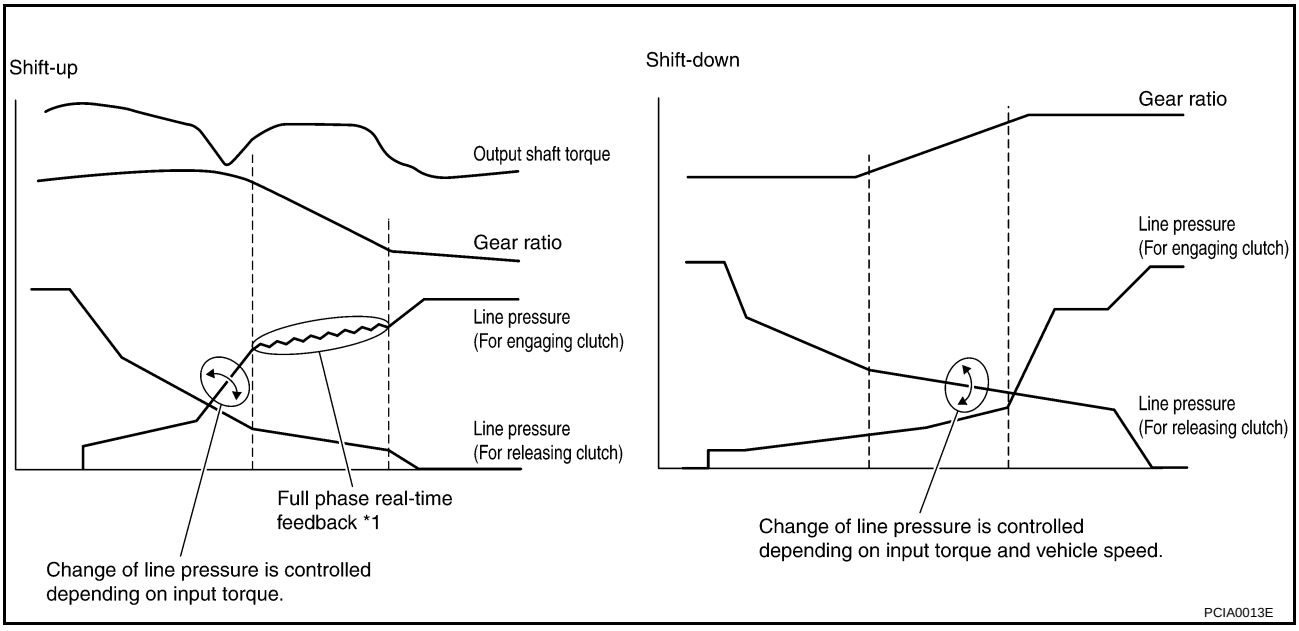
At Low Fluid Temperature



When the A/T fluid temperature drops below the prescribed temperature, in order to speed up the action of each friction element, the line pressure is set higher than the normal line pressure characteristic.

Shift Control

NCS0001Q

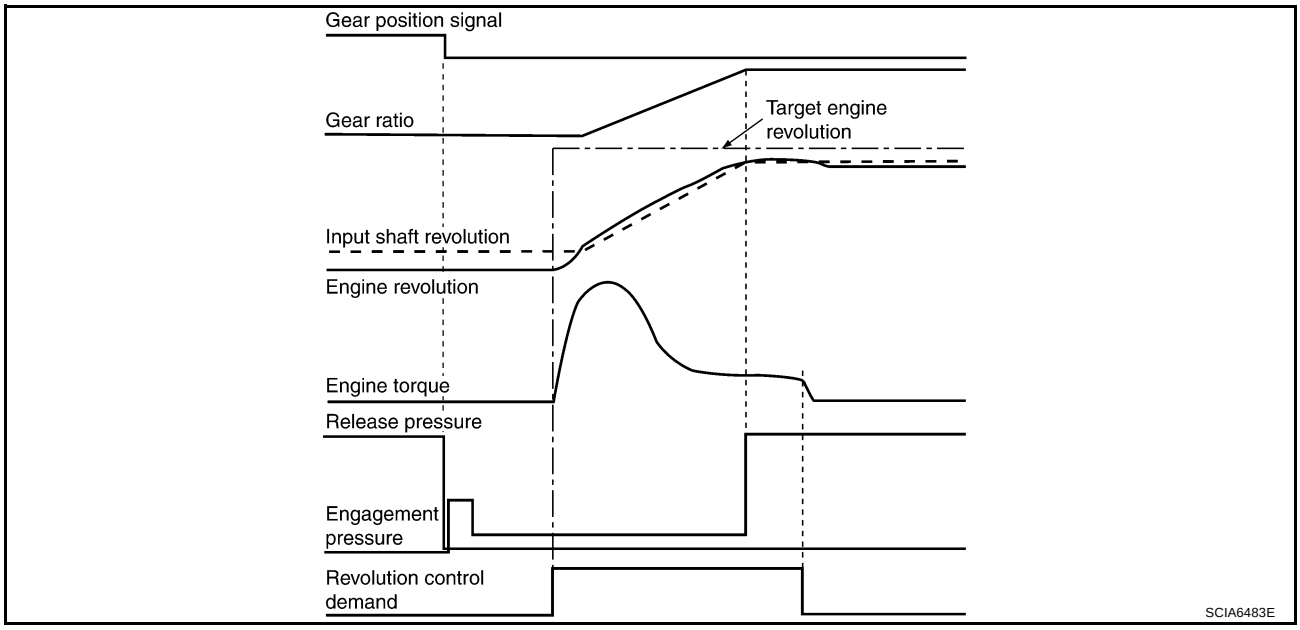


The clutch pressure control solenoid is controlled by the signals from the switches and sensors. Thus, the clutch pressure is adjusted to be appropriate to the engine load state and vehicle driving state. It becomes possible to finely control the clutch hydraulic pressure with high precision and a smoother shift change characteristic is attained.

NORMAL SHIFT CONTROL

The clutch is controlled with the optimum timing and oil pressure by the engine speed, engine torque information, etc.

Shift Change System Diagram



*1: Full phase real-time feedback control monitors movement of gear ratio at gear change, and controls oil pressure at real-time to achieve the best gear ratio.

BLIPPING CONTROL

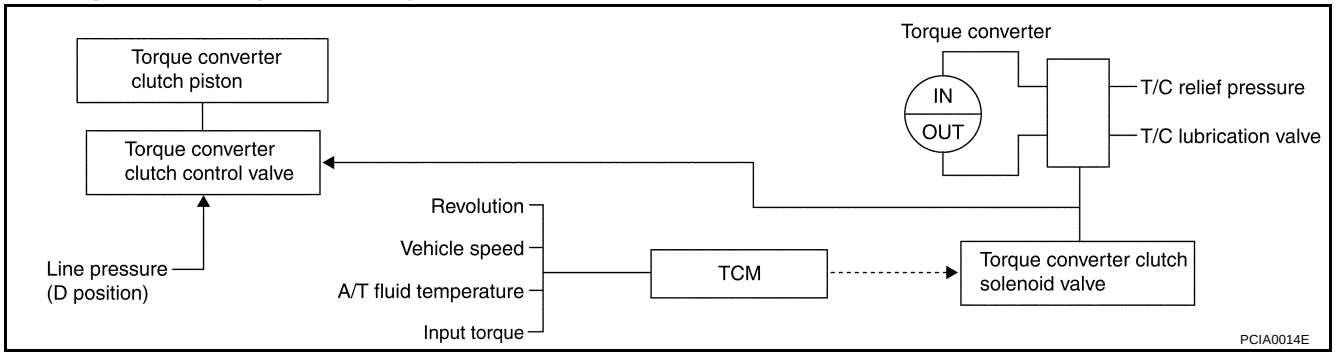
This system makes transmission clutch engage readily by controlling (synchronizing) engine revolution according to the (calculation of) engine revolution after shifting down.

- "BLIPPING CONTROL" functions.
  - When downshifting by accelerator pedal depression at "D" position.
  - When downshifting under the manual mode.
- TCM selects "BLIPPING CONTROL" or "NORMAL SHIFT CONTROL" according to the gear position, the select lever position, the engine torque and the speed when accelerating by pedal depression.
- Revolution control demand signal is transmitted from TCM to ECM under "BLIPPING CONTROL".
- TCM synchronizes engine revolution according to the revolution control demand signal.

Shift Change System Diagram

Lock-up Control

NCS0001R



The torque converter clutch piston in the torque converter is engaged to eliminate torque converter slip to increase power transmission efficiency.
The torque converter clutch control valve operation is controlled by the torque converter clutch solenoid valve, which is controlled by a signal from TCM, and the torque converter clutch control valve engages or releases the torque converter clutch piston.

Lock-up operation condition table

selector lever	"D" position		"M" position			
Gear position	5	4	5	4	3	2
Lock-up	×	–	×	×	×	×
Slip lock-up	×	×	–	–	–	–

TORQUE CONVERTER CLUTCH CONTROL VALVE CONTROL

Lock-up Control System Diagram

Lock-up Released

In the lock-up released state, the torque converter clutch control valve is set into the unlocked state by the torque converter clutch solenoid and the lock-up apply pressure is drained.
In this way, the torque converter clutch piston is not coupled.

Lock-up Applied

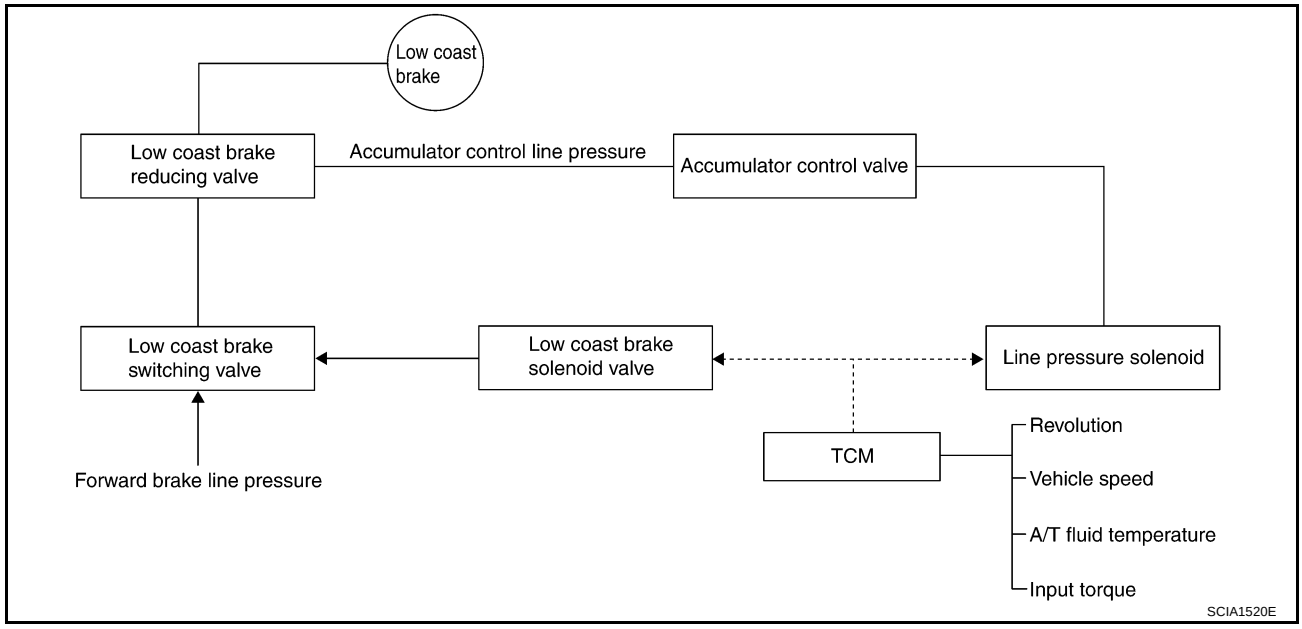
In the lock-up applied state, the torque converter clutch control valve is set into the locked state by the torque converter clutch solenoid and lock-up apply pressure is generated.
In this way, the torque converter clutch piston is pressed and coupled.

SMOOTH LOCK-UP CONTROL

When shifting from the lock-up released state to the lock-up applied state, the current output to the torque converter clutch solenoid is controlled with the TCM. In this way, when shifting to the lock-up applied state, the torque converter clutch is temporarily set to the half-clutched state to reduce the shock.

Half-clutched State

The current output from the TCM to the torque converter clutch solenoid is varied to gradually increase the torque converter clutch solenoid pressure.
In this way, the lock-up apply pressure gradually rises and while the torque converter clutch piston is put into half-clutched status, the torque converter clutch piston operating pressure is increased and the coupling is completed smoothly.



Slip Lock-up Control

In the slip region, the torque converter clutch solenoid current is controlled with the TCM to put it into the half-clutched state. This absorbs the engine torque fluctuation and lock-up operates from low speed.
This raises the fuel efficiency for 4th and 5th gears at both low speed and when the accelerator has a low degree of opening.

Engine Brake Control

NCS0001S

- The forward one-way clutch transmits the drive force from the engine to the rear wheels. But the reverse drive from the rear wheels is not transmitted to the engine because the one-way clutch is idling.
  Therefore, the low coast brake solenoid is operated to prevent the forward one-way clutch from idling and the engine brake is operated in the same manner as conventionally.

- The operation of the low coast brake solenoid switches the low coast brake switching valve and controls the coupling and releasing of the low coast brake.
  The low coast brake reducing valve controls the low coast brake coupling force.

Control Valve

NCS0001T

FUNCTION OF CONTROL VALVE

Name	Function
Torque converter regulator valve	In order to prevent the pressure supplied to the torque converter from being excessive, the line pressure is adjusted to the optimum pressure (torque converter operating pressure).
Pressure regulator valve Pressure regulator plug Pressure regulator sleeve	Adjusts the oil discharged from the oil pump to the optimum pressure (line pressure) for the driving state.
Front brake control valve	When the front brake is coupled, adjusts the line pressure to the optimum pressure (front brake pressure) and supplies it to the front brake. (In 1st, 2nd, 3rd, and 5th gears, adjusts the clutch pressure.)

Name	Function
Accumulator control valve	Adjusts the pressure (accumulator control pressure) acting on the accumulator piston and low coast reducing valve to the pressure appropriate to the driving state.
Pilot valve A	Adjusts the line pressure and produces the constant pressure (pilot pressure) required for line pressure control, shift change control, and lock-up control.
Pilot valve B	Adjusts the line pressure and produces the constant pressure (pilot pressure) required for shift change control.
Low coast brake switching valve	During engine braking, supplies the line pressure to the low coast brake reducing valve.
Low coast brake reducing valve	When the low coast brake is coupled, adjusts the line pressure to the optimum pressure (low coast brake pressure) and supplies it to the low coast brake.
N-R accumulator	Produces the stabilizing pressure for when N-R is selected.
Direct clutch piston switching valve	Operates in 4th gear and switches the direct clutch coupling capacity.
High and low reverse clutch control valve	When the high and low reverse clutch is coupled, adjusts the line pressure to the optimum pressure (high and low reverse clutch pressure) and supplies it to the high and low reverse clutch. (In 1st, 3rd, 4th and 5th gears, adjusts the clutch pressure.)
Input clutch control valve	When the input clutch is coupled, adjusts the line pressure to the optimum pressure (input clutch pressure) and supplies it to the input clutch. (In 4th and 5th gears, adjusts the clutch pressure.)
Direct clutch control valve	When the direct clutch is coupled, adjusts the line pressure to the optimum pressure (direct clutch pressure) and supplies it to the direct clutch. (In 2nd, 3rd, and 4th gears, adjusts the clutch pressure.)
TCC control valve TCC control plug TCC control sleeve	Switches the lock-up to operating or released. Also, by performing the lock-up operation transiently, lock-up smoothly.
Torque converter lubrication valve	Operates during lock-up to switch the torque converter, cooling, and lubrication system oil passage.
Cool bypass valve	Allows excess oil to bypass cooler circuit without being fed into it.
Line pressure relief valve	Discharges excess oil from line pressure circuit.
N-D accumulator	Produces the stabilizing pressure for when N-D is selected.
Manual valve	Sends line pressure to each circuit according to the select position. The circuits to which the line pressure is not sent drain.

FUNCTION OF ATF PRESSURE SWITCH

Name	Function
ATF pressure switch 2 (LC/B)	Detects any malfunction in the low coast brake hydraulic pressure. When it detects any malfunction, it puts the system into fail-safe mode.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction

NCS0001U

The A/T system has two self-diagnostic systems.
The first is the emission-related on board diagnostic system (OBD-II) performed by the TCM in combination with the ECM. The malfunction is indicated by the MIL (malfunction indicator lamp) and is stored as a DTC in the ECM memory but not the TCM memory.
The second is the TCM original self-diagnosis indicated by the A/T CHECK indicator lamp. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD-II self-diagnostic items. For detail, refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .

OBD-II Function for A/T System

NCS0001V

The ECM provides emission-related on board diagnostic (OBD-II) functions for the A/T system. One function is to receive a signal from the TCM used with OBD-related parts of the A/T system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MIL (malfunction indicator lamp) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.
The MIL automatically illuminates in “One or Two Trip Detection Logic” when a malfunction is sensed in relation to A/T system parts.

One or Two Trip Detection Logic of OBD-II

NCS0001W

ONE TRIP DETECTION LOGIC

If a malfunction is sensed during the first test drive, the MIL will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

TWO TRIP DETECTION LOGIC

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MIL will not illuminate. — 1st trip
If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MIL will illuminate. — 2nd trip
The “Trip” in the “One or Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.

OBD-II Diagnostic Trouble Code (DTC)

NCS0001X

HOW TO READ DTC AND 1ST TRIP DTC

DTC and 1st trip DTC can be read by the following methods.
(with CONSULT-III or GST GST) CONSULT-III or GST (Generic Scan Tool) Examples: P0705, P0720 etc.
These DTC are prescribed by SAE J2012.
(CONSULT-III also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST, they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal.**
  CONSULT-III can identify them as shown below, therefore, CONSULT-III (if available) is recommended.

Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-III or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-III screen, not on the GST. For detail, refer to EC-116, "CONSULT-III Function (ENGINE)" .
Only one set of freeze frame data (either 1st trip freeze frame data of freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

Both 1st trip freeze frame data and freeze frame data (along with the DTC) are cleared when the ECM memory is erased.

HOW TO ERASE DTC

The diagnostic trouble code can be erased by CONSULT-III, GST or ECM DIAGNOSTIC TEST MODE as described following.

- **If the battery cable is disconnected, the diagnostic trouble code will be lost within 24 hours.**
- **When you erase the DTC, using CONSULT-III or GST is easier and quicker than switching the mode selector on the ECM.**

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD-II. For details, refer to EC-48, "Emission-related Diagnostic Information" .

- **Diagnostic trouble codes (DTC)**
- **1st trip diagnostic trouble codes (1st trip DTC)**
- **Freeze frame data**
- **1st trip freeze frame data**
- **System readiness test (SRT) codes**
- **Test values**

HOW TO ERASE DTC (WITH CONSULT-III)

1. The emission related diagnostic information in the TCM and ECM can be erased by selecting “ALL Erase” in the “Description” of “FINAL CHECK” mode with CONSULT-III.

HOW TO ERASE DTC (WITH GST)

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-92, "OBD-II SELF-DIAGNOSTIC PROCEDURE (WITH GST)" . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with GST (Generic Scan Tool). For details, refer to EC-125, "Generic Scan Tool (GST) Function" .

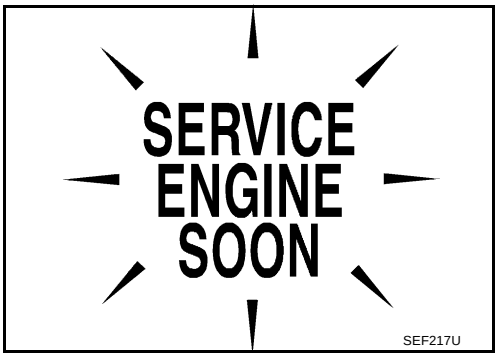
HOW TO ERASE DTC (NO TOOLS)

The A/T CHECK indicator lamp is located on the instrument panel.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-92, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Perform “OBD-II SELF-DIAGNOSTIC PROCEDURE (No tools)”. Refer to EC-61, "How to Erase DTC" .

Malfunction Indicator Lamp (MIL)

NCS0001Y



DESCRIPTION

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check.

- If the MIL does not light up, refer to DI-56, "WARNING LAMPS" , or see EC-716, "MIL AND DATA LINK CONNECTOR" .

2. When the engine is started, the MIL should go off.
   If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

SEF217U

TROUBLE DIAGNOSIS

PFP:00004

DTC Inspection Priority Chart

NCS0001Z

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:
If DTC "U1000 CAN COMM CIRCUIT" is displayed with other DTCs, first perform the trouble diagnosis for "DTC U1000 CAN COMMUNICATION LINE". Refer to AT-94 .

Priority	Detected items (DTC)
1	U1000 CAN communication line
2	Except above

Fail-safe

NCS00020

The TCM has an electrical fail-safe mode. This mode makes it possible to operate even if there is a an error in a main electronic control input/output signal circuit.
In fail-safe mode, even if the selector lever is "D" or "M" mode, the A/T is fixed in 2nd, 4th or 5th (depending on the breakdown position), so the customer should feel "slipping" or "poor acceleration".
Even when the electronic circuits are normal, under special conditions (for example, when slamming on the brake with the wheels spinning drastically and stopping the tire rotation), the A/T can go into fail-safe mode. If this happens, switch OFF the ignition switch for 10 seconds, then switch it ON again to return to the normal shift pattern. Therefore, the customer's vehicle has returned to normal, so handle according to the AT-43, "WORK FLOW" .

FAIL-SAFE FUNCTION

If any malfunction occurs in a sensor or solenoid, this function controls the A/T to mark driving possible.

Vehicle Speed Sensor A/T

Signals are input from two systems - from vehicle speed sensor A/T (revolution sensor) installed on the A/T and from combination meter so normal driving is possible even if there is a malfunction in one of the systems. And if vehicle speed sensor A/T (revolution sensor) has unusual cases, 5th gear and manual mode are prohibited.

Accelerator Pedal Position Sensor

If there is a malfunction in one of the systems, the accelerator opening angle is controlled by ECM according to a pre-determined accelerator angle to make driving possible. And if there are malfunctions in tow systems, the engine speed is fixed by ECM to a pre-determined engine speed to make driving possible.

Throttle Position Sensor

If there is a malfunction in one of the systems, the accelerator opening angle is controlled by ECM according to a pre-determined accelerator angle to make driving possible. And if there are malfunctions in tow systems, the accelerator opening angle is controlled by the idle signal sent from the ECM which is based on input indicating either idle condition or off-idle condition (pre-determined accelerator opening) in order to make driving possible.

PNP Switch

In the unlikely event that a malfunction signal enters the TCM, the position indicator is switched OFF, the starter relay is switched OFF (starter starting is disabled), the back-up lamp relay switched OFF (back-up lamp is OFF) and the position is fixed to the "D" position to make driving possible.

Starter Relay

The starter relay is switched OFF. (Starter starting is disabled.)

A/T Interlock

- If there is an A/T interlock judgment malfunction, the transmission is fixed in 2nd gear to make driving possible.

  NOTE:
  When the vehicle is driven fixed in 2nd gear a turbine revolution sensor malfunction is displayed, but this is not a turbine revolution sensor malfunction.

- When interlock is detected at the 3rd gear or more, it is locked at the 2nd gear.

A/T 1st Engine Braking

When there is an A/T first gear engine brake judgment malfunction, the low coast brake solenoid is switched OFF to avoid the engine brake operation.

Line Pressure Solenoid

The solenoid is switched OFF and the line pressure is set to the maximum hydraulic pressure to make driving possible.

Torque Converter Clutch Solenoid

The solenoid is switched OFF to release the lock-up.

Low Coast Brake Solenoid

When a malfunction (electrical or functional) occurs, in order to make driving possible, if the solenoid is ON, the A/T is held in 2nd gear; if the solenoid is OFF, the A/T is held in 4th gear. (Engine brake is not applied in 1st and 2nd gear.)

Input Clutch Solenoid

If a malfunction (electrical or functional) occurs with the solenoid either ON or OFF, the A/T is held in 4th gear to make driving possible.

Direct Clutch Solenoid

If a malfunction (electrical or functional) occurs with the solenoid either ON or OFF, the A/T is held in 4th gear to make driving possible.

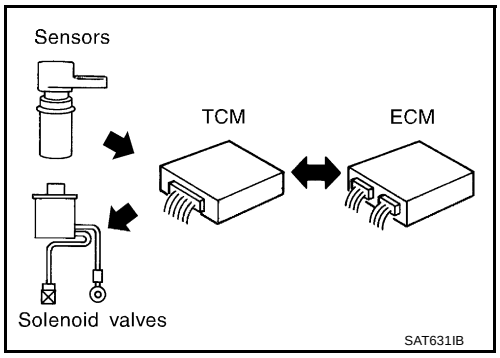
Front Brake Solenoid

If a malfunction (electrical or functional) occurs with the solenoid ON, in order to make driving possible, the A/T is held in 5th gear; if the solenoid is OFF, 4th gear.

High and Low Reverse Clutch Solenoid

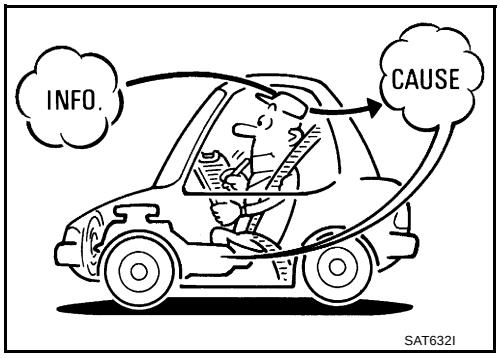
If a malfunction (electrical or functional) occurs with the solenoid either ON or OFF, the A/T is held in 4th gear to make driving possible.

Turbine Revolution Sensor 1 or 2



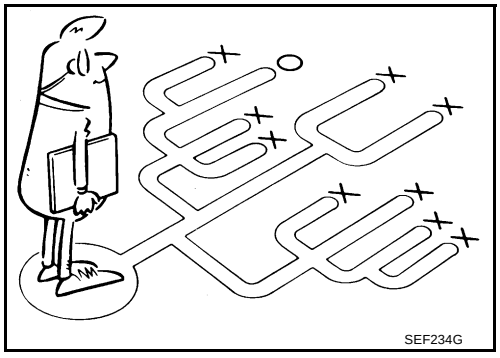
The control is the same as if there were no turbine revolution sensors, 5th gear and manual mode are prohibited.

How to Perform Trouble Diagnosis for Quick and Accurate Repair



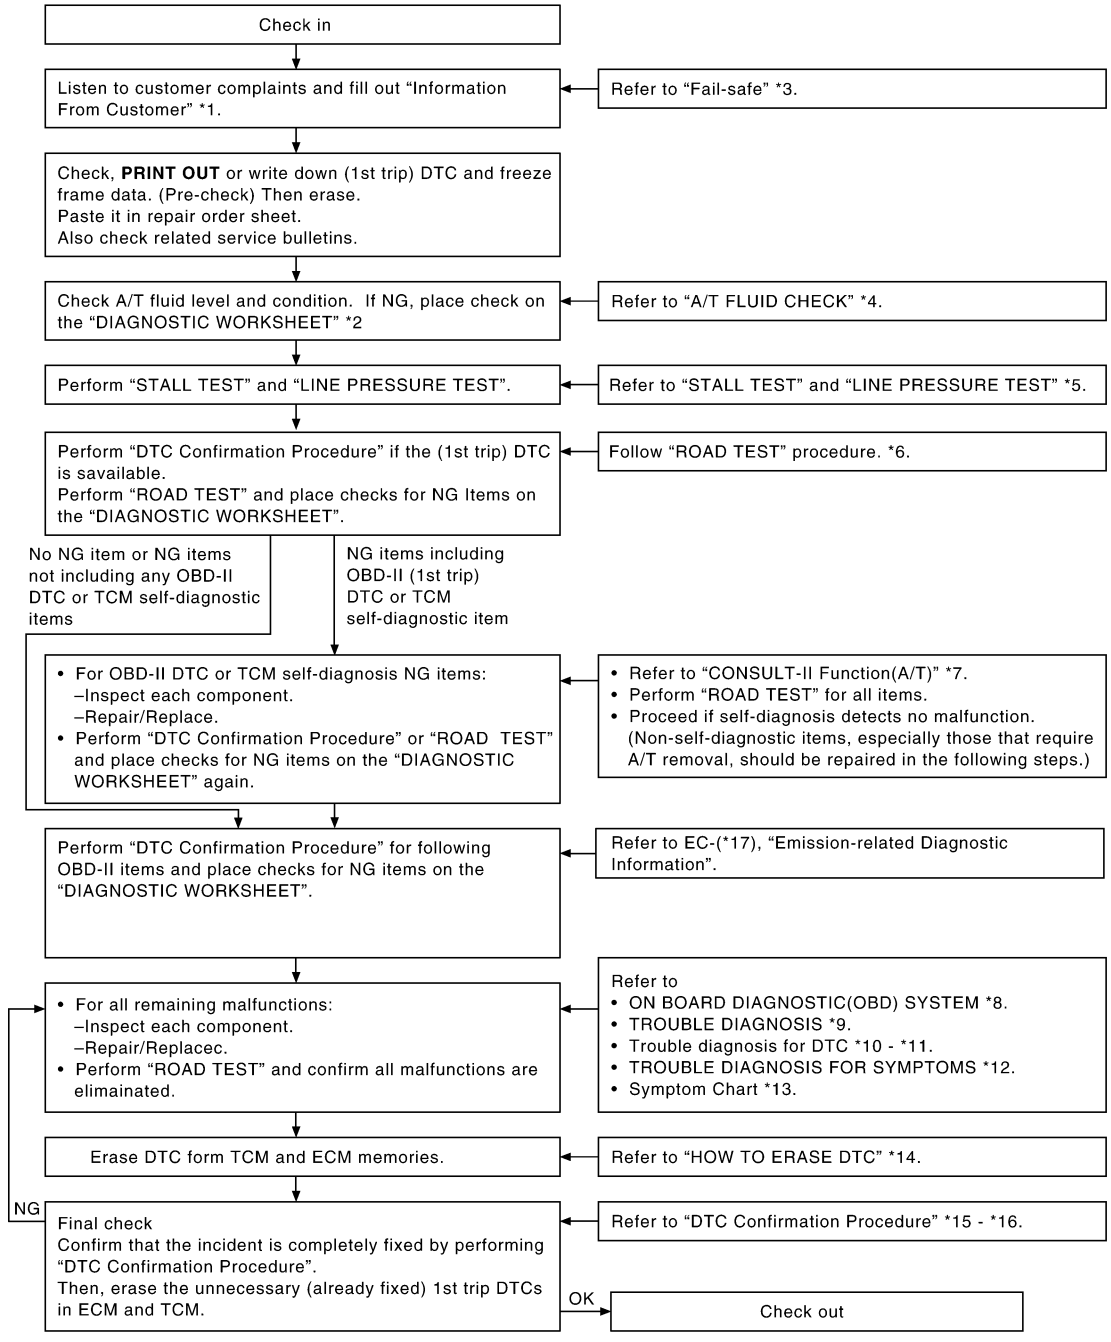
NCS00021

INTRODUCTION



The TCM receives a signal from the vehicle speed sensor, accelerator pedal position sensor (throttle position sensor) or PNP switch and provides shift control or lock-up control via A/T solenoid valves.
The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the OBD-related parts of the A/T system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.
Input and output signals must always be correct and stable in the operation of the A/T system. The A/T system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.

It is much more difficult to diagnose a error that occurs intermittently rather than continuously. Most intermittent errors are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.
A visual check only may not find the cause of the errors. A road test with CONSULT-III (or GST) or a circuit tester connected should be performed. Follow the AT-43, "WORK FLOW" .



Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such errors, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A “DIAGNOSTIC WORKSHEET” as shown on the example (Refer to AT-44) should be used.
Start your diagnosis by looking for “conventional” errors first. This will help troubleshoot driveability errors on an electronically controlled engine vehicle.
Also check related Service bulletins.

WORK FLOW

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.
Make good use of the two sheets provided, AT-44, "Information from Customer" and AT-44, "Diagnostic Worksheet Chart" , to perform the best troubleshooting possible.

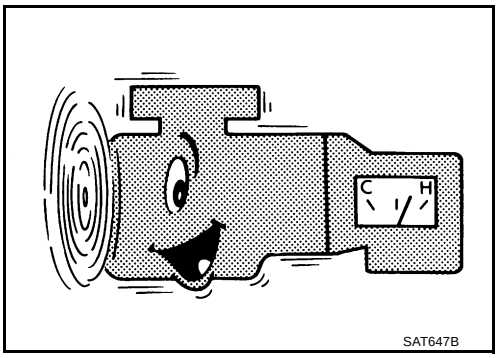
A/T Fluid Condition Check

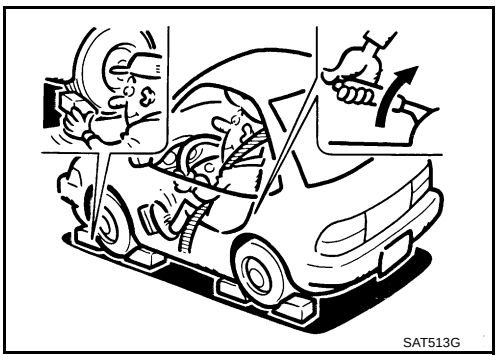
Inspect the A/T fluid condition.



Fluid condition	Conceivable Cause	Required Operation
Varnished (viscous varnish state)	Clutch, brake scorched	Replace the ATF and check the A/T main unit and the vehicle for malfunctions (wire harnesses, cooler pipes, etc.)
Milky white or cloudy	Water in the fluid	Replace the ATF and check for places where water is getting in.
Large amount of metal powder mixed in	Unusual wear of sliding parts within A/T	Replace the ATF and check for improper operation of the A/T.

SAT638A

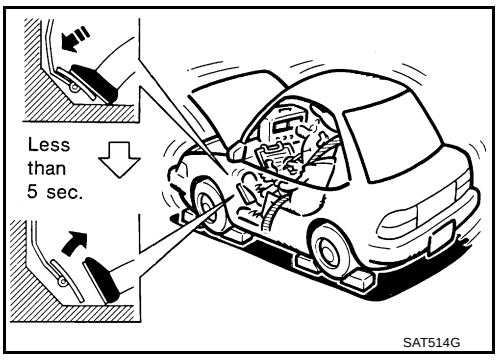
STALL TEST



Stall Test Procedure

1. Inspect the amount of engine oil. Replenish the engine oil if necessary.
2. Drive for about 10 minutes to warm up the vehicle so that the A/T fluid temperature is 50 to 80°C (122 to 176°F). Inspect the amount of ATF. Replenish if necessary.

SAT647B



3. Securely engage the parking brake so that the tires do not turn.
4. Engine start, apply foot brake, and place selector lever in “D” position.

SAT513G

5. While holding down the foot brake, gradually press down accelerator pedal.
6. Quickly read off the stall speed, then quickly remove your foot from accelerator pedal.

CAUTION:
Do not hold down accelerator pedal for more than 5 seconds during this test.

Stall speed: 2,700 – 3,000 rpm

SAT514G

7. Move selector lever to “N” position.

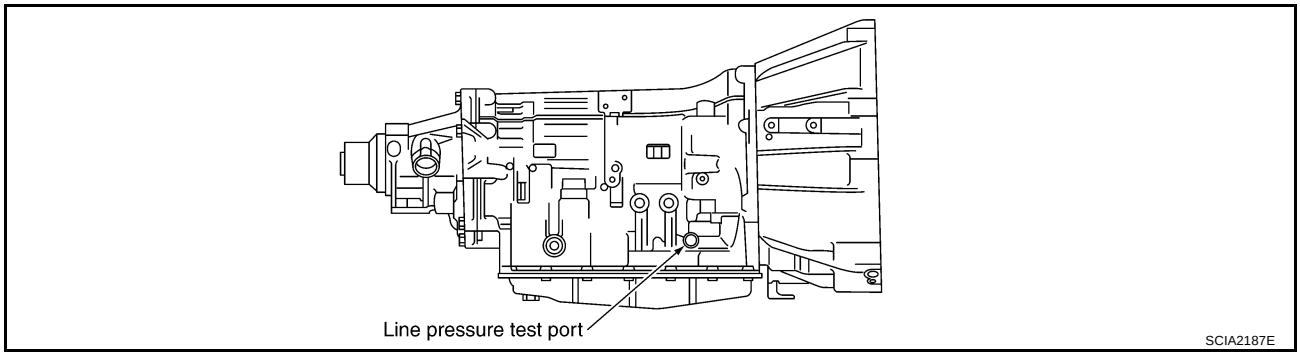
8. Cool down the ATF.

CAUTION:
Run the engine at idle for at least one minute.

9. Repeat steps 5 through 8 with selector lever in “R” position.

Judgment Stall Test

	Selector lever position		Expected problem location
	“D” and “M”	“R”	
Stall speed	H	O	● Forward brake ● Forward one-way clutch ● 1st one-way clutch ● 3rd one-way clutch
	O	H	● Reverse brake
	L	L	● Engine and torque converter one-way clutch
	H	H	● Line pressure low



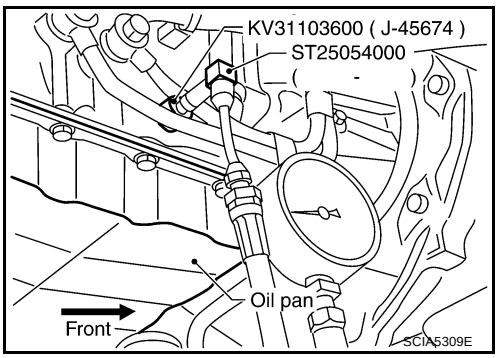
O: Stall speed within standard value position
H: Stall speed higher than standard value
L: Stall speed lower than standard value

Stall Test Standard Value Position

Does not shift-up “D” or “M” position 1 → 2	Slipping in 2nd, 3rd or 4th gear	Direct clutch slippage
Does not shift-up “D” or “M” position 2 → 3	Slipping in 3rd, 4th or 5th gear	High and low reverse clutch slippage
Does not shift-up “D” or “M” position 3 → 4	Slipping in 4th or 5th gear	Input clutch slippage
Does not shift-up “D” or “M” position 4 → 5	Slipping in 5th gear	Front brake slippage

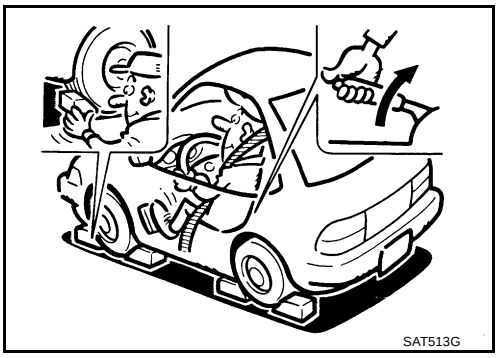
LINE PRESSURE TEST

Line Pressure Test Port



Line Pressure Test Procedure

1. Inspect the amount of engine oil and replenish if necessary.
2. Drive the car for about 10 minutes to warm it up so that the ATF reaches in range of 50 to 80°C (122 to 176°F), then inspect the amount of ATF and replenish if necessary.

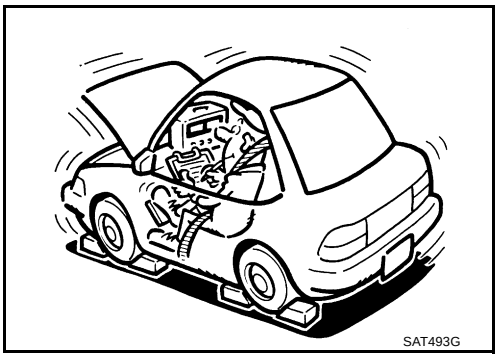


NOTE:
The A/T fluid temperature rises in range of 50 to 80°C (122 to 176°F) during 10 minutes of driving.

3. After warming up remove the oil pressure detection plug and install the oil pressure gauge [ST2505S001(J-34301-C)].

CAUTION:
When using the oil pressure gauge, be sure to use O- ring attached to the oil pressure detection plug.

4. Securely engage the parking brake so that the tires do not turn.



5. Start the engine, then measure the line pressure at both idle and the stall speed.

CAUTION:
- **Keep brake pedal pressed all the way down during measurement.**
- **When measuring the line pressure at the stall speed, refer to AT-49, "STALL TEST" .**

6. After the measurements are complete, install the oil pressure detection plug and tighten to the specified torque. Refer to AT-246, "Components" .

CAUTION:
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**

Line Pressure

Engine speed	Line pressure kPa (kg/cm^2 , psi)	
	"R" position	"D" and "M" positions
At idle speed	425 – 465 (4.3 – 4.7, 62 – 67)	379 – 428 (3.9 – 4.4, 55 – 62)
At stall speed	1,605 – 1,950 (16.4 – 19.9, 233 – 283)	1,310 – 1,500 (13.4 – 15.3, 190 – 218)

Judgment of Line Pressure Test

Judgment		Possible cause
Idle speed	Low for all positions (“P”, “R”, “N”, “D”, “M”)	Possible causes include malfunctions in the pressure supply system and low oil pump output. For example ● Oil pump wear ● Pressure regulator valve or plug sticking or spring fatigue ● Oil strainer ⇒ oil pump ⇒ pressure regulator valve passage oil leak ● Engine idle speed too low
	Only low for a specific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.
	High	Possible causes include a sensor malfunction or malfunction in the line pressure adjustment function. For example ● Accelerator pedal position signal malfunction ● A/T fluid temperature sensor malfunction ● Line pressure solenoid malfunction (sticking in OFF state, filter clog, cut line) ● Pressure regulator valve or plug sticking
Stall speed	Line pressure does not rise higher than the line pressure for idle.	Possible causes include a sensor malfunction or malfunction in the pressure adjustment function. For example ● Accelerator pedal position signal malfunction ● TCM breakdown ● Line pressure solenoid malfunction (shorting, sticking in ON state) ● Pressure regulator valve or plug sticking ● Pilot valve sticking or pilot filter clogged
	The pressure rises, but does not enter the standard position.	Possible causes include malfunctions in the pressure supply system and malfunction in the pressure adjustment function. For example ● Accelerator pedal position signal malfunction ● Line pressure solenoid malfunction (sticking, filter clog) ● Pressure regulator valve or plug sticking ● Pilot valve sticking or pilot filter clogged
	Only low for a specific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.

ROAD TEST

Description

- The road test inspects overall performance of A/T and analyzes possible malfunction causes.
- The road test is performed in the following three stages.

1. Check before engine is started. Refer to AT-53, "Check Before Engine is Started" .
2. Check at idle. Refer to AT-53, "Check at Idle" .
3. Cruise test

- Inspect all the items from Part 1 to Part 3. Refer to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" and AT-58, "Cruise Test — Part 3" .

- Before beginning the road test, check the test procedure and inspection items.
- Test all inspection items until the symptom is uncovered. Diagnose NG items when all road tests are complete.

Check Before Engine is Started

NCS00025

1. CHECK A/T CHECK INDICATOR LAMP

1. Park vehicle on level surface.
2. Move selector lever to “P” position.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON. (Do not start engine.)

Does A/T CHECK indicator lamp light up for about 2 seconds?

YES >> 1. Turn ignition switch OFF.
2. Perform self-diagnostics and record all NG items on the AT-44, "DIAGNOSTIC WORKSHEET" . Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .
3. Go to AT-53, "Check at Idle" .

NO >> Stop the road test and go to AT-172, "A/T Check Indicator Lamp Does Not Come On" .

Check at Idle

NCS00026

1. CHECK STARTING THE ENGINE

1. Park vehicle on level surface.
2. Move selector lever to “P” or “N” position.
3. Turn ignition switch OFF.
4. Start engine.

Does the engine start?

YES >> GO TO 2.
NO >> Stop the road test and go to AT-173, "Engine Cannot Be Started in “P” or “N” Position" .

2. CHECK STARTING THE ENGINE

1. Turn ignition switch ON. (Do not start engine.)
2. Move selector lever in “D”, “M” or “R” position.
3. Start engine.

Does the engine start in each position?

YES >> Stop the road test and go to AT-173, "Engine Cannot Be Started in “P” or “N” Position" .
NO >> GO TO 3.

3. CHECK “P” POSITION FUNCTIONS

1. Move selector lever to “P” position.
2. Turn ignition switch OFF.
3. Release the parking brake.
4. Push the vehicle forward or backward.
5. Engage the parking brake.

When you push the vehicle with disengaging the parking brake, does it move?

YES >> Enter a check mark at AT-173, "In “P” Position, Vehicle Moves When Pushed" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.
NO >> GO TO 4.

4. CHECK “N” POSITION FUNCTIONS

1. Start engine.
2. Move selector lever to “N” position.
3. Release the parking brake.

Does vehicle move forward or backward?

YES >> Enter a check mark at AT-174, "In “N” Position, Vehicle Moves" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.
NO >> GO TO 5.

5. CHECK SHIFT SHOCK

1. Engage the brake.
2. Move selector lever to “D” position.

When the A/T is shifted from “N” to “D”, is there an excessive shock?

YES >> Enter a check mark at AT-175, "Large Shock (“N” to “D” Position)" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.
NO >> GO TO 6.

6. CHECK “R” POSITION FUNCTIONS

1. Engage the brake.
2. Move selector lever to “R” position.
3. Release the brake for 4 to 5 seconds.

Does the vehicle creep backward?

YES >> GO TO 7.
NO >> Enter a check mark at AT-177, "Vehicle Does Not Creep Backward in “R” Position" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

7. CHECK “D” POSITION FUNCTIONS

Inspect whether the vehicle creep forward when the A/T is put into the “D” position.

Does the vehicle creep forward in the “D” position?

YES >> Go to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" and AT-58, "Cruise Test — Part 3" .
NO >> Enter a check mark at AT-179, "Vehicle Does Not Creep Forward in “D” Position" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test. Go to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" and AT-58, "Cruise Test — Part 3" .

Cruise Test — Part 1

NCS00027

1. CHECK STARTING OUT FROM D_1

1. Drive the vehicle for about 10 minutes to warm up the engine oil and ATF.
   Appropriate temperature for the ATF: 50 to 80°C (122 to 176°F)
2. Park the vehicle on a level surface.
3. Move selector lever to “P” position.
4. Start engine.
5. Move selector lever to “D” position.
6. Press the accelerator pedal about half-way down to accelerate the vehicle.

With CONSULT-III

Read the gear position. Refer to AT-88, "DATA MONITOR MODE" .

Starts from D_1 ?

YES >> GO TO 2.
NO >> Enter a check mark at AT-181, "Vehicle Cannot Be Started from D1" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

2. CHECK SHIFT-UP $D_1 \rightarrow D_2$

Press down the accelerator pedal about half-way and inspect if the vehicle shifts up ($D_1 \rightarrow D_2$) at the appropriate speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position, and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up $D_1 \rightarrow D_2$ at the correct speed?

YES >> GO TO 3.
NO >> Enter a check mark at AT-183, "A/T Does Not Shift: D1 → D2" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

3. CHECK SHIFT-UP $D_2 \rightarrow D_3$

Press down the accelerator pedal about half-way and inspect if the vehicle shifts up ($D_2 \rightarrow D_3$) at the appropriate speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position, and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up $D_2 \rightarrow D_3$ at the correct speed?

YES >> GO TO 4.
NO >> Enter a check mark at AT-185, "A/T Does Not Shift: D2 → D3" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

4. CHECK SHIFT-UP $D_3 \rightarrow D_4$

Press down the accelerator pedal about half-way and inspect if the vehicle shifts up ($D_3 \rightarrow D_4$) at the appropriate speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position, and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up $D_3 \rightarrow D_4$ at the correct speed?

YES >> GO TO 5.
NO >> Enter a check mark at AT-187, "A/T Does Not Shift: D3 → D4" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

5. CHECK SHIFT-UP $D_4 \rightarrow D_5$

Press down the accelerator pedal about half-way and inspect if the vehicle shifts up ($D_4 \rightarrow D_5$) at the appropriate speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position, and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up $D_4 \rightarrow D_5$ at the correct speed?

YES >> GO TO 6.

NO >> Enter a check mark at AT-189, "A/T Does Not Shift: $D_4 \rightarrow D_5$" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

6. CHECK LOCK-UP

When releasing accelerator pedal (closed throttle position signal: OFF) from D_5 , check lock-up from D_5 to L/U. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Select “TCC SOLENOID” with the “MAIN SIGNALS” mode for “A/T”. Refer to AT-84, "CONSULT-III REFERENCE VALUE" .

Does it lock-up?

YES >> GO TO 7.

NO >> Enter a check mark at AT-191, "A/T Does Not Lock-up" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

7. CHECK LOCK-UP HOLD

Check hold lock-up.

With CONSULT-III

Select “TCC SOLENOID” with the “MAIN SIGNALS” mode for “A/T”. Refer to AT-84, "CONSULT-III REFERENCE VALUE" .

Does it maintain lock-up status?

YES >> GO TO 8.

NO >> Enter a check mark at AT-193, "A/T Does Not Hold Lock-up Condition" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

8. CHECK LOCK-UP RELEASE

Check lock-up cancellation by depressing brake pedal lightly to decelerate.

With CONSULT-III

Select “TCC SOLENOID” with the “MAIN SIGNALS” mode for “A/T”. Refer to AT-84, "CONSULT-III REFERENCE VALUE" .

Does lock-up cancel?

YES >> GO TO 9.

NO >> Enter a check mark at AT-194, "Lock-up Is Not Released" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

9. CHECK SHIFT-DOWN $D_5 \rightarrow D_4$

Decelerate by pressing lightly on the brake pedal.

With CONSULT-III

Read the gear position and engine speed. AT-88, "DATA MONITOR MODE" .

When the A/T shift-down $D_5 \rightarrow D_4$, does the engine speed drop smoothly back to idle?

YES >> 1. Stop the vehicle.
2. Go to AT-57, "Cruise Test — Part 2" .

NO >> Enter a check mark at AT-195, "Engine Speed Does Not Return to Idle" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test. Go to AT-57, "Cruise Test — Part 2" .

Cruise Test — Part 2

NCS00028

1. CHECK STARTING FROM D1

1. Move selector lever into “D” position.
2. Accelerate at half throttle.

With CONSULT-III

Read the gear position. Refer to AT-88, "DATA MONITOR MODE" .

Does it start from D1?

YES >> GO TO 2.

NO >> Enter a check mark at AT-181, "Vehicle Cannot Be Started from D1" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

2. CHECK SHIFT-UP D1 → D2

Press the accelerator pedal down all the way and inspect whether or not the A/T shifts up (D1 → D2) at the correct speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up D1 → D2 at the correct speed?

YES >> GO TO 3.

NO >> Enter a check mark at AT-183, "A/T Does Not Shift: D1 → D2" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

3. CHECK SHIFT UP D2 → D3

Press the accelerator pedal down all the way and inspect whether or not the A/T shifts up (D2 → D3) at the correct speed. Refer to AT-58, "Vehicle Speed at When Gears Shifting Occurs" .

With CONSULT-III

Read the gear position, throttle position and vehicle speed. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up D2 → D3 at the correct speed?

YES >> GO TO 4.

NO >> Enter a check mark at AT-185, "A/T Does Not Shift: D2 → D3" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

4. CHECK SHIFT-UP D3 → D4 AND ENGINE BRAKE

When the A/T changes speed D3 → D4 , return the accelerator pedal.

With CONSULT-III

Read the gear position. Refer to AT-88, "DATA MONITOR MODE" .

Does the A/T shift-up D3 → D4 and apply the engine brake?

YES >> 1. Stop the vehicle.
2. Go to AT-58, "Cruise Test — Part 3" .

NO >> Enter a check mark at AT-187, "A/T Does Not Shift: D3 → D4" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test. Go to AT-58, "Cruise Test — Part 3" .

Cruise Test — Part 3

NCS00029

1. MANUAL MODE FUNCTION

Move to manual mode from “D” position.

Does it switch to manual mode?

YES >> GO TO 2.

NO >> Continue road test and add check mark to AT-196, "Cannot Be Changed to Manual Mode" on the AT-44, "DIAGNOSTIC WORKSHEET" .

2. CHECK SHIFT-DOWN

During manual mode driving, is downshift from $M_5 \rightarrow M_4 \rightarrow M_3 \rightarrow M_2 \rightarrow M_1$ performed?

With CONSULT-III

Read the gear position. Refer to AT-88, "DATA MONITOR MODE" .

Is downshifting correctly performed?

YES >> GO TO 2.

NO >> Enter a check mark at “A/T Does Not Shift” at the corresponding position (5th → 4th, 4th → 3rd, 3rd → 2nd, 2nd → 1st) on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue the road test.

3. CHECK ENGINE BRAKE

Check engine brake.

Does engine braking effectively reduce speed in M_1 position?

YES >> 1. Stop the vehicle.
2. Perform self-diagnostics. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

NO >> Enter a check mark at AT-202, "Vehicle Does Not Decelerate by Engine Brake" on the AT-44, "DIAGNOSTIC WORKSHEET" , then continue trouble diagnosis.

Vehicle Speed at When Gears Shifting Occurs

NCS0002A

Throttle position	Vehicle speed km/h (MPH)							
	$D_1 \rightarrow D_2$	$D_2 \rightarrow D_3$	$D_3 \rightarrow D_4$	$D_4 \rightarrow D_5$	$D_5 \rightarrow D_4$	$D_4 \rightarrow D_3$	$D_3 \rightarrow D_2$	$D_2 \rightarrow D_1$
Full throttle	50 – 54 (31 – 34)	97 – 105 (60 – 65)	154 – 164 (96 – 102)	224 – 234 (139 – 145)	220 – 230 (137 – 143)	145 – 155 (90 – 96)	86 – 94 (53 – 58)	39 – 43 (24 – 27)
Half throttle	29 – 33 (18 – 21)	63 – 69 (39 – 43)	100 – 108 (62 – 67)	136 – 144 (85 – 89)	88 – 96 (55 – 60)	64 – 72 (40 – 45)	28 – 34 (17 – 21)	9 – 13 (6 – 8)

- At half throttle, the accelerator opening is 4/8 of the full opening.

Vehicle Speed at Which Lock-up Occurs/Releases

NCS0002B

Throttle position	Vehicle speed km/h (MPH)	
	Lock-up ON	Lock-up OFF
Closed throttle	62 – 70 (39 – 44)	59 – 67 (37 – 42)
Half throttle	136 – 144 (85 – 89)	88 – 96 (55 – 60)

- At closed throttle, the accelerator opening is less than 1/8 condition. (Closed throttle position signal: OFF)
- At half throttle, the accelerator opening is 4/8 of the full opening.

Symptom Chart

NCS0002C

- **The diagnostics item numbers show the sequence for inspection. Inspect in order from item 1.**
- **Overhaul and inspect inside the A/T only if A/T fluid condition is NG. Refer to** AT-49, "A/T Fluid Condition Check".

No.	Items	Symptom	Condition	Diagnostic Item	Reference page
1	Shift Shock	Large shock. (“N” → “D” position) Refer to AT-175, "Large Shock (“N” to “D” Position)" .	ON vehicle	1. Engine idle speed	EC-76

				9. Direct clutch	AT-288

No.	Items	Symptom	Condition	Diagnostic Item	Reference page
10	No Up Shift	Gear does not change from $D_1 \rightarrow D_2$ or from $M_1 \rightarrow M_2$. Refer to AT-183, "A/T Does Not Shift: $D_1 \rightarrow D_2$".	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Direct clutch solenoid valve	AT-149
				4. Line pressure test	AT-50
				5. CAN communication line	AT-94
				6. Control valve with TCM	AT-215
			OFF vehicle	7. Direct clutch	AT-288
11		Gear does not change from $D_2 \rightarrow D_3$ or from $M_2 \rightarrow M_3$. Refer to AT-185, "A/T Does Not Shift: $D_2 \rightarrow D_3$".	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. High and low reverse clutch solenoid valve	AT-151
				4. Line pressure test	AT-50
				5. CAN communication line	AT-94
				6. Control valve with TCM	AT-215
			OFF vehicle	7. High and low reverse clutch	AT-286
12		Gear does not change from $D_3 \rightarrow D_4$ or from $M_3 \rightarrow M_4$. Refer to AT-187, "A/T Does Not Shift: $D_3 \rightarrow D_4$".	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Input clutch solenoid valve	AT-145
				4. Front brake solenoid valve	AT-147
				5. Line pressure test	AT-50
				6. CAN communication line	AT-94
				7. Control valve with TCM	AT-215
			OFF vehicle	8. Input clutch	AT-276
13		Gear does not change from $D_4 \rightarrow D_5$ or from $M_4 \rightarrow M_5$. Refer to AT-189, "A/T Does Not Shift: $D_4 \rightarrow D_5$".	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Front brake solenoid valve	AT-147
				4. Direct clutch solenoid valve	AT-149
				5. Turbine revolution sensor	AT-106
				6. Line pressure test	AT-50
				7. CAN communication line	AT-94
				8. Control valve with TCM	AT-215
			OFF vehicle	9. Front brake (brake band)	AT-255
				10. Input clutch	AT-276

No.	Items	Symptom	Condition	Diagnostic Item	Reference page
14	No Down Shift	In “D” or “M” position, does not downshift to 4th gear.	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Front brake solenoid valve	AT-147
				4. Direct clutch solenoid valve	AT-149
				5. CAN communication line	AT-94
				6. Line pressure test	AT-50
				7. Control valve with TCM	AT-215
			OFF vehicle	8. Front brake (brake band)	AT-255
				9. Input clutch	AT-276
15		In “D” or “M” position, does not downshift to 3rd gear.	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Input clutch solenoid valve	AT-145
				4. Front brake solenoid valve	AT-147
				5. CAN communication line	AT-94
				6. Line pressure test	AT-50
				7. Control valve with TCM	AT-215
			OFF vehicle	8. Input clutch	AT-276
16		In “D” or “M” position, does not downshift to 2nd gear.	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. High and low reverse clutch solenoid valve	AT-151
				4. CAN communication line	AT-94
				5. Line pressure test	AT-50
				6. Control valve with TCM	AT-215
			OFF vehicle	7. High and low reverse clutch	AT-286
17		In “D” or “M” position, does not downshift to 1st gear.	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Direct clutch solenoid valve	AT-149
				4. CAN communication line	AT-94
				5. Line pressure test	AT-50
				6. Control valve with TCM	AT-215
			OFF vehicle	7. Direct clutch	AT-288

No.	Items	Symptom	Condition	Diagnostic Item	Reference page
18	Slips/Will Not Engage	When “D” or “M” position, remains in 1st gear.	ON vehicle	1. A/T fluid level and state	AT-49
				2. Vehicle speed sensor A/T and vehicle speed sensor MTR	AT-108, AT-139
				3. Direct clutch solenoid valve	AT-149
				4. Line pressure test	AT-50

				9. Direct clutch	AT-288

TCM Input/Output Signal Reference Values

NCS0002D

A/T ASSEMBLY HARNESS CONNECTOR TERMINAL LAYOUT

TCM INSPECTION TABLE

Data are reference value and are measured between each terminal and ground.

Terminal	Wire color	Item	Condition		Data (Approx.)
1	G	Power supply (Memory back-up)	Always		Battery voltage
2	G	Power supply (Memory back-up)	Always		Battery voltage
3	L	CAN-H	—		—
4	PU/W	K-line (CONSULT-III signal)	The terminal is connected to the data link connector for CONSULT-III.		—
5	B	Ground	Always		0 V
6	Y/R	Power supply		—	Battery voltage
				—	0 V
7	Y	Back-up lamp relay		Selector lever in “R” position.	0 V
				Selector lever in other positions.	Battery voltage
8	P	CAN-L	—		—
9	GY/R	Starter relay		Selector lever in “N” and “P” positions.	Battery voltage
				Selector lever in other positions.	0 V
10	B	Ground	Always		0 V

CONSULT-III Function (TRANSMISSION)

NCS0002E

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the ECU can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Function test	Performed by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.
DTC work support	Select the operating condition to confirm Diagnosis Trouble Codes.
ECU part number	TCM part number can be read.

CONSULT-III REFERENCE VALUE

NOTICE:

1. The CONSULT-III electrically displays shift timing and lock-up timing (that is, operation timing of each solenoid).
   Check for time difference between actual shift timing and the CONSULT-III display. If the difference is noticeable, mechanical parts (except solenoids, sensors, etc.) may be malfunctioning. Check mechanical parts using applicable diagnostic procedures.
2. Shift schedule (which implies gear position) displayed on CONSULT-III and that indicated in Service Manual may differ slightly. This occurs because of the following reasons:

- Actual shift schedule has more or less tolerance or allowance,
- Shift schedule indicated in Service Manual refers to the point where shifts start, and
- Gear position displayed on CONSULT-III indicates the point where shifts are completed.

3. Display of solenoid valves on CONSULT-III changes at the start of shifting, while gear position is displayed upon completion of shifting (which is computed by TCM).

Item name	Condition	Display value (Approx.)
ATF TEMP SE 1	0°C (32° F) – 20°C (68°F) – 80°C (176°F)	3.3 – 2.7 – 0.9 V
ATF TEMP SE 2		3.3 – 2.5 – 0.7 V
ATF TEMP 1	Ignition switch ON	Measured ATF temperature is displayed.
TCC SOLENOID	Lock-up is active	0.4 – 0.6 A
SLCT LVR POSI	Selector lever in “N” and “P” positions.	N/P
	Selector lever in “R” position.	R
	Selector lever in “D” position.	D
VHCL/S SE-A/T	During driving	Approximately matches the speedometer reading.
VEHICLE SPEED	During driving	Approximately matches the speedometer reading.
ENGINE SPEED	Engine running	Closely matches the tachometer reading.
LINE PRES SOL	During driving	0.2 – 0.6 A
TURBINE REV	During driving (lock-up ON)	Approximately matches the engine speed.
VHCL/S SE-MTR	During driving	Approximately matches the speedometer reading.
ATF PRES SW 2	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

Item name	Condition	Display value (Approx.)
I/C SOLENOID	Input clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Input clutch engaged. Refer to AT-19 .	0 – 0.05 A
FR/B SOLENOID	Front brake engaged. Refer to AT-19 .	0.6 – 0.8 A
	Front brake disengaged. Refer to AT-19 .	0 – 0.05 A
D/C SOLENOID	Direct clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Direct clutch engaged. Refer to AT-19 .	0 – 0.05 A
HLR/C SOL	High and low reverse clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	High and low reverse clutch engaged. Refer to AT-19 .	0 – 0.05 A
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF
MANU MODE SW	Manual shift gate position (neutral)	ON
	Other than the above	OFF
NON M-MODE SW	Manual shift gate position	OFF
	Other than the above	ON
UP SW LEVER	Selector lever: + side	ON
	Other than the above	OFF
DOWN SW LEVER	Selector lever: - side	ON
	Other than the above	OFF
STARTER RELAY	Selector lever in “N” and “P” positions.	ON
	Selector lever in other positions.	OFF
ACCELE POSI	Released accelerator pedal.	0.0/8
	Fully depressed accelerator pedal.	8.0/8
CLSD THL POS	Released accelerator pedal.	ON
	Fully depressed accelerator pedal.	OFF
W/O THL POS	Fully depressed accelerator pedal.	ON
	Released accelerator pedal.	OFF
BRAKE SW	Depressed brake pedal.	ON
	Released brake pedal.	OFF
GEAR	During driving	1, 2, 3, 4, 5

SELF-DIAGNOSTIC RESULT MODE

After performing self-diagnosis, place check marks for results on the AT-44, "DIAGNOSTIC WORKSHEET" . Reference pages are provided following the items.

Display Items List

X: Applicable, —: Not applicable

Items (CONSULT-III screen terms)	Malfunction is detected when...	TCM self-diagnosis	OBD-II (DTC)	Reference page
		"TRANSMISSION" with CONSULT-III	MIL*1, "ENGINE" with CONSULT-III or GST	
CAN COMM CIRCUIT	When TCM is not transmitting or receiving CAN communication signal for 2 seconds or more.	U1000	U1000	AT-94
STARTER RELAY/ CIRC	If this signal is ON other than in "P" or "N" position, this is judged to be a malfunction. (And if it is OFF in "P" or "N" position, this too is judged to be a malfunction.)	P0615	—	AT-97
TCM	TCM is malfunctioning	P0700	P0700	AT-101
PNP SW/CIRC	● PNP switch 1–4 signals input with impossible pattern. ● "P" position is detected from "N" position without any other position being detected in between.	P0705	P0705	AT-102
TURBINE REV S/CIRC	● TCM does not receive the proper voltage signal from the sensor. ● TCM detects an irregularity only at position of 4th gear for turbine revolution sensor 2.	P0717	P0717	AT-106
VEH SPD SEN/CIR AT	● Signal from vehicle speed sensor A/T (Revolution sensor) not input due to cut line or the like. ● Unexpected signal input during running. ● After ignition switch is turned ON, unexpected signal input from vehicle speed sensor MTR before the vehicle starts moving.	P0720	P0720	AT-108
ENGINE SPEED SIG	TCM does not receive the CAN communication signal from the ECM.	P0725	P0725	AT-113
A/T 1ST GR FNCTN	A/T cannot shift to 1st gear	P0731	P0731	AT-115
A/T 2ND GR FNCTN	A/T cannot shift to 2nd gear	P0732	P0732	AT-117
A/T 3RD GR FNCTN	A/T cannot shift to 3rd gear	P0733	P0733	AT-119
A/T 4TH GR FNCTN	A/T cannot shift to 4th gear	P0734	P0734	AT-121
A/T 5TH GR FNCTN	A/T cannot shift to 5th gear	P0735	P0735	AT-123
TCC SOLENOID/CIRC	Normal voltage not applied to solenoid due to cut line, short, or the like.	P0740	P0740	AT-125
A/T TCC S/V FNCTN	● A/T cannot perform lock-up even if electrical circuit is good. ● TCM detects as irregular by comparing difference value with slip rotation.	P0744	P0744*2	AT-127
L/PRESS SOL/CIRC	● Normal voltage not applied to solenoid due to cut line, short, or the like. ● TCM detects as irregular by comparing target value with monitor value.	P0745	P0745	AT-129
TP SEN/CIRC A/T	TCM does not receive the proper accelerator pedal position signals (input by CAN communication) from ECM.	P1705	P1705	AT-131
ATF TEMP SEN/CIRC	During running, the A/T fluid temperature sensor signal voltage is excessively high or low.	P1710	P0710	AT-134

Items (CONSULT-III screen terms)	Malfunction is detected when...	TCM self-diagnosis	OBD-II (DTC)	Reference page
		"TRANSMISSION" with CONSULT-III	MIL[*1], "ENGINE" with CONSULT-III or GST	
VEH SPD SE/CIR-MTR	● Signal (CAN communication) from vehicle speed sensor MTR not input due to cut line or the like. ● Unexpected signal input during running.	P1721	—	AT-139
A/T INTERLOCK	Except during shift change, the gear position and ATF pressure switch states are monitored and comparative judgment made.	P1730	P1730	AT-141
A/T 1ST E/BRAKING	Each ATF pressure switch and solenoid current is monitored and if a pattern is detected having engine braking 1st gear other than in the M_1 position, a malfunction is detected.	P1731	—	AT-143
I/C SOLENOID/CIRC	● Normal voltage not applied to solenoid due to functional malfunction, cut line, short, or the like. ● TCM detects as irregular by comparing target value with monitor value.	P1752	P1752	AT-145
FR/B SOLENOID/CIRC	● Normal voltage not applied to solenoid due to functional malfunction, cut line, short, or the like. ● TCM detects as irregular by comparing target value with monitor value.	P1757	P1757	AT-147
D/C SOLENOID/CIRC	● Normal voltage not applied to solenoid due to cut line, short, or the like. ● TCM detects as irregular by comparing target value with monitor value.	P1762	P1762	AT-149
HLR/C SOL/CIRC	● Normal voltage not applied to solenoid due to functional malfunction, cut line, short, or the like. ● TCM detects as irregular by comparing target value with monitor value.	P1767	P1767	AT-151
LC/B SOLENOID/CIRC	Normal voltage not applied to solenoid due to functional malfunction, cut line, short, or the like.	P1772	P1772	AT-153
LC/B SOLENOID FNCT	● TCM detects an improper voltage drop when it tries to operate the solenoid valve. ● Condition of ATF pressure switch 2 is different from monitor value, and relation between gear position and actual gear ratio is irregular.	P1774	P1774[*2]	AT-155
MANU MODE SW/ CIRC	When an impossible pattern of switch signals is detected, a malfunction is detected.	P1815	—	AT-157
NO DTC IS DETECTED FURTHER TESTING MAY BE REQUIRED	No NG item has been detected.	X	X	—

DTC WORK SUPPORT MODE

Display Items List

DTC work support item	Description	Check item
1ST GR FUNCTN P0731	Following items for “1st gear function” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being performed or not) ● Self-diagnostic results (OK or NG)	● Input clutch solenoid valve ● Front brake solenoid valve ● Direct clutch solenoid valve ● High and low reverse clutch solenoid valve ● Each clutch ● Hydraulic control circuit
2ND GR FUNCTN P0732	Following items for “2nd gear function” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being performed or not) ● Self-diagnostic results (OK or NG)	
3RD GR FUNCTN P0733	Following items for “3rd gear function” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being performed or not) ● Self-diagnostic results (OK or NG)	
4TH GR FUNCTN P0734	Following items for “4th gear function” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being performed or not) ● Self-diagnostic results (OK or NG)	
5TH GR FUNCTN P0735	Following items for “5th gear function” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being performed or not) ● Self-diagnostic results (OK or NG)	

Diagnostic Procedure Without CONSULT-III

NCS0002F

OBD-II SELF-DIAGNOSTIC PROCEDURE (WITH GST)

Refer to EC-125, "Generic Scan Tool (GST) Function" .

OBD-II SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

Refer to EC-62, "Malfunction Indicator Lamp (MIL)" .

TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

Description

When the ignition switch is turned ON, the indicator lamp lights up 2 seconds. As a method for locating the suspect circuit, when the self-diagnostics start signal is input, the memory for the malfunction location is output and A/T CHECK indicator lamp flashes to display the corresponding DTC.

Diagnostic Procedure

1. CHECK A/T CHECK INDICATOR LAMP

1. Start the engine with selector lever in “P” position. Warm engine to normal operating temperature.
2. Turn ignition switch ON and OFF at least twice, then leave it in the OFF position.
3. Wait 10 seconds.
4. Turn ignition switch ON. (Do not start engine.)

Does A/T CHECK indicator lamp come on for about 2 seconds?

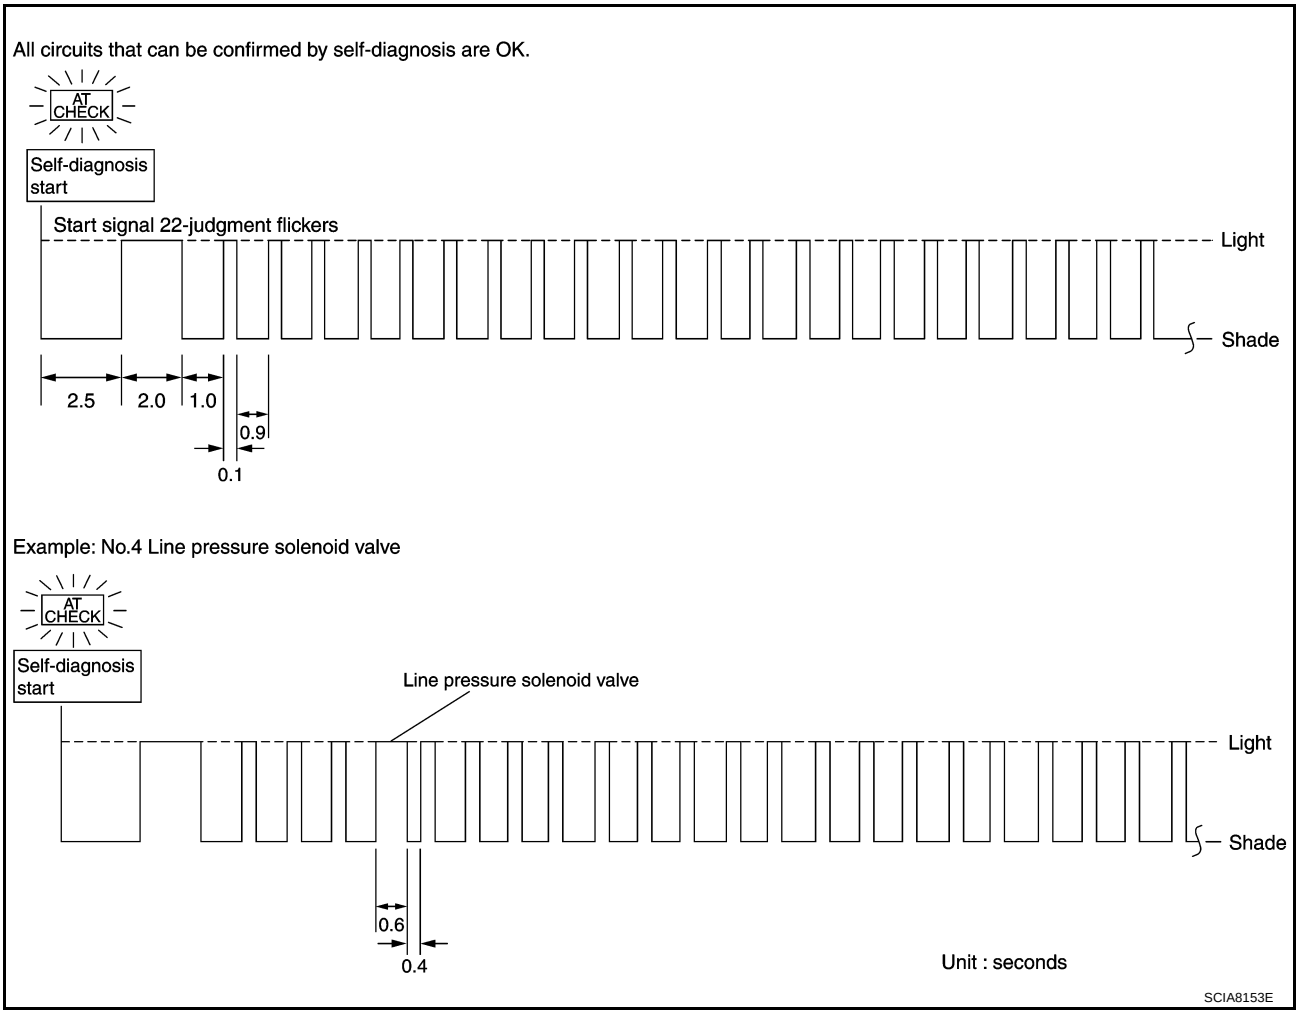
YES >> GO TO 2.
NO >> Go to AT-172, "A/T Check Indicator Lamp Does Not Come On" .

2. JUDGMENT PROCEDURE

1. Turn ignition switch OFF.
2. Keep pressing shift lock release button.
3. Move selector lever from “P” to “D” position.
4. Release accelerator pedal. (Set the closed throttle position signal ON.)
5. Depress brake pedal. (Stop lamp switch signal ON.)
6. Turn ignition switch ON. (Do not start engine.)
7. Wait 3 seconds.
8. Move the selector lever to the manual shift gate side. (Manual mode switch ON.)
9. Release brake pedal. (Stop lamp switch signal OFF.)
10. Move the selector lever to “D” position. (Manual mode switch OFF.)
11. Depress brake pedal. (Stop lamp switch signal ON.)
12. Release brake pedal. (Stop lamp switch signal OFF.)
13. Depress accelerator pedal fully and release it.

>> GO TO 3.

3. CHECK SELF-DIAGNOSIS CODE



Check A/T CHECK indicator lamp. Refer to AT-93, "Judgment Self-diagnosis Code" .
If the system does not go into self-diagnostics. Refer to AT-102, "DTC P0705 PARK/NEUTRAL POSITION SWITCH" , AT-157, "DTC P1815 MANUAL MODE SWITCH" , AT-166, "CLOSED THROTTLE POSITION AND WIDE OPEN THROTTLE POSITION CIRCUIT" , AT-167, "BRAKE SIGNAL CIRCUIT" .

>> **DIAGNOSIS END**

Judgment Self-diagnosis Code

If there is a malfunction, the lamp lights up for the time corresponding to the suspect circuit.

No.	Malfunctioning item	No.	Malfunctioning item
1	Revolution sensor AT-108	12	A/T interlock AT-141
2	Direct clutch solenoid valve AT-149	13	A/T 1st engine braking AT-143
3	Torque converter clutch solenoid valve AT-125	14	Start signal AT-97
4	Line pressure solenoid valve AT-129	15	Accelerator pedal position sensor AT-131
5	Input clutch solenoid valve AT-145	16	Engine speed signal AT-113
6	Front brake solenoid valve AT-147	17	CAN communication line AT-94
7	Low coast brake solenoid valve AT-153 , AT-155	18	1st gear function AT-115
8	High and low reverse clutch solenoid valve AT-151	19	2nd gear function AT-117
9	PNP switch AT-102	20	3rd gear function AT-119
10	A/T fluid temperature sensor AT-134	21	4th gear function AT-121
11	Turbine revolution sensor AT-106	22	5th gear function AT-123

Erase Self-diagnosis

- In order to make it easier to find the cause of hard-to-duplicate malfunctions, malfunction information is stored into the control unit as necessary during use by the user. This memory is not erased no matter how many times the ignition switch is turned ON and OFF.
- However, this information is erased by turning ignition switch OFF after performing self-diagnostics or by erasing the memory using the CONSULT-III.

DTC U1000 CAN COMMUNICATION LINE

PFP:23710

Description

NCS0002G

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent malfunction detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

NCS0002H

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “U1000 CAN COMM CIRCUIT” with CONSULT-III or 17th judgment flicker without CONSULT-III is detected when TCM cannot communicate to other control units.

Possible Cause

NCS0002I

Harness or connectors
(CAN communication line is open or shorted.)

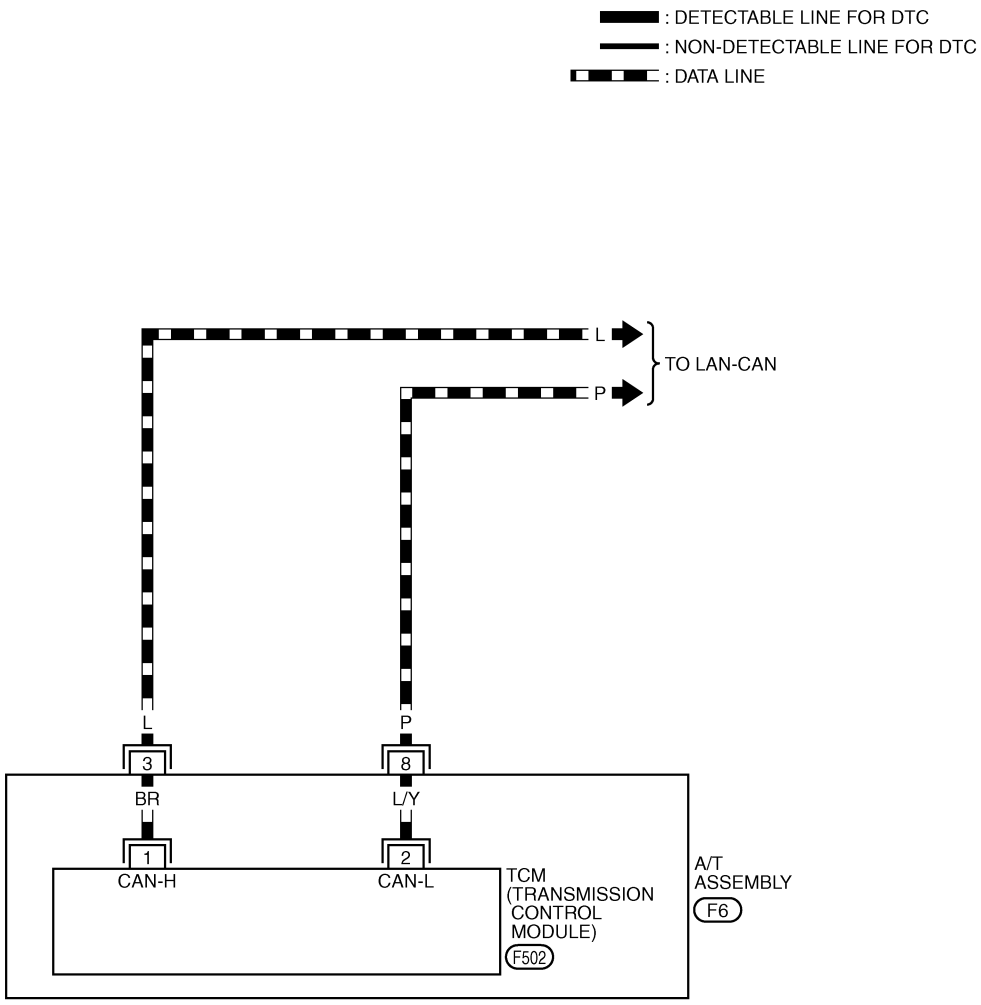
DTC Confirmation Procedure

NCS0002J

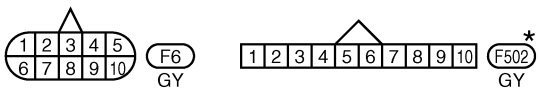
NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” or “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine and wait for at least 6 seconds.
4. If DTC is detected, go to AT-96, "Diagnostic Procedure" .



WITH GST



Follow the procedure “WITH CONSULT-III”.

Wiring Diagram — AT — CAN

NCS0002K

AT-CAN-01

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWM0259E

TCM terminals and data are reference value. Measured between each terminal and ground.

Terminal	Wire color	Item	Condition	Data (Approx.)
3	L	CAN-H	—	—
8	P	CAN-L	—	—

Diagnostic Procedure

NCS0002L

1. CHECK CAN COMMUNICATION CIRCUIT

With CONSULT-III

1. Turn ignition switch ON and start engine.
2. Select “SELF-DIAG RESULTS” mode for “TRANSMISSION” with CONSULT-III.

Is any malfunction of the “CAN COMM CIRCUIT” indicated?

YES >> Print out CONSULT-III screen, GO TO LAN section. Refer to LAN-48, "CAN System Specification Chart" .

NO >> **INSPECTION END**

DTC P0615 START SIGNAL CIRCUIT

PFP:25230

Description

NCS0002M

Prohibits cranking other at “P” or “N” position.

CONSULT-III Reference Value

NCS0002N

Item name	Condition	Display value
STARTER RELAY	Selector lever in “N” and “P” positions.	ON
	Selector lever in other positions.	OFF

On Board Diagnosis Logic

NCS0002O

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0615 STARTER RELAY/CIRC” with CONSULT-III or 14th judgment flicker without CONSULT-III is detected when starter relay is switched ON other than at “P” or “N” position. (Or when switched OFF at “P” or “N” position.)

Possible Cause

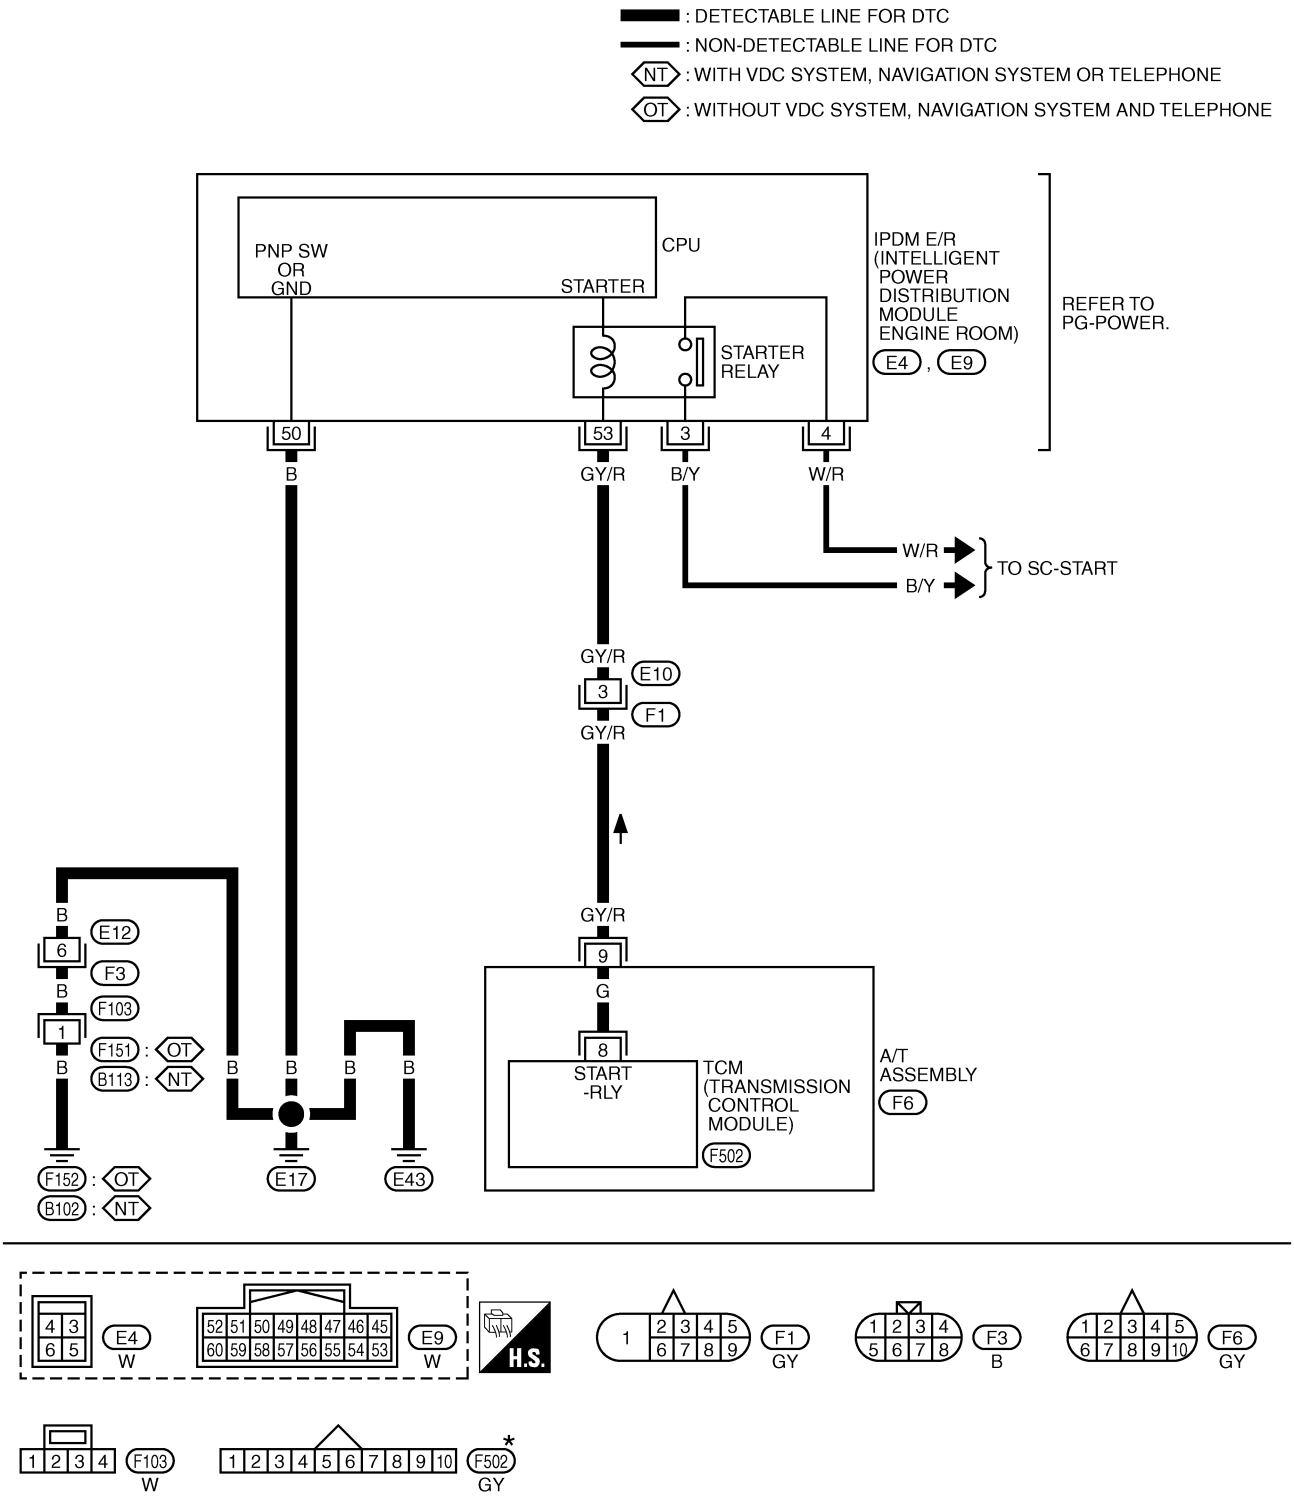
NCS0002P

- Harness or connectors
  (Starter relay and TCM circuit is open or shorted.)
- Starter relay circuit

DTC Confirmation Procedure

NCS0002Q

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.



WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” or “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine.
5. Vehicle start for at least 2 consecutive seconds.
6. If DTC is detected, go to AT-99, "Diagnostic Procedure" .

Wiring Diagram — AT — STSIG

NCS0002R

AT-STSIG-01

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWT0438E

TCM terminals and data are reference value. Measured between each terminal and ground.

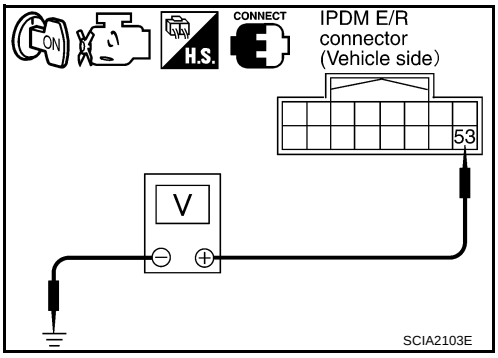
Terminal	Wire color	Item	Condition		Data (Approx.)
9	GY/R	Starter relay		Selector lever in “N” and “P” positions.	Battery voltage
				Selector lever in other positions.	0 V

Diagnostic Procedure

NCS0002S

1. CHECK STARTER RELAY

With CONSULT-III



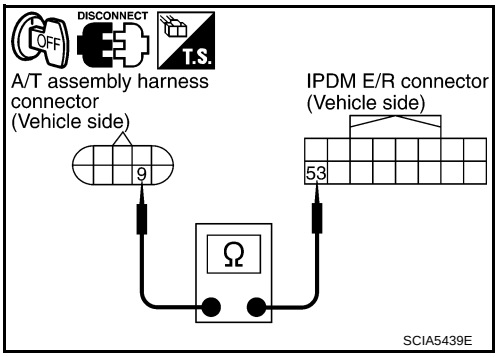
1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “STARTER RELAY” ON/OFF.

Item name	Condition	Display value
STARTER RELAY	Selector lever in “N” and “P” positions.	ON
	Selector lever in other positions.	OFF

Without CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between the IPDM E/R connector and ground.

Item	Connector	Terminal	Shift position	Voltage (Approx.)
Starter relay	E9	53 – Ground	“N”, “P”	Battery voltage
			Other positions	0 V



OK or NG

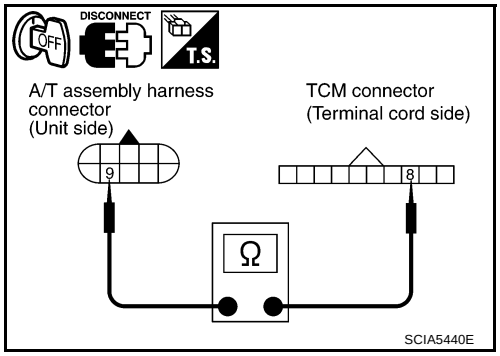
OK >> GO TO 5.
NG >> GO TO 2.

2. CHECK HARNESS BETWEEN A/T ASSEMBLY HARNESS CONNECTOR AND IPDM E/R CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect A/T assembly harness connector and IPDM E/R connector.
3. Check continuity between A/T assembly harness connector and IPDM E/R connector.

Item	Connector	Terminal	Continuity
A/T assembly harness connector	F6	9	Yes
IPDM E/R connector	E9	53	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK TERMINAL CORD ASSEMBLY

1. Remove control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disconnect A/T assembly harness connector and TCM connector.
3. Check continuity between A/T assembly harness connector terminal and TCM connector terminal.

Item	Connector	Terminal	Continuity
A/T assembly harness connector	F6	9	Yes
TCM connector	F502	8	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

OK or NG

OK >> GO TO 4.
NG >> Replace open circuit or short to ground and short to power in harness or connectors.

4. DETECT MALFUNCTIONING ITEM

Check the following.

- Starter relay, Refer to SC-8, "STARTING SYSTEM" .
- IPDM E/R, Refer to PG-16, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

5. CHECK DTC

Perform AT-97, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P0700 TCM

PFP:31036

Description

NCS0002T

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The TCM controls A/T.

On Board Diagnosis Logic

NCS0002U

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0700 TCM” with CONSULT-III is detected when TCM is malfunctioning.

Possible Cause

NCS0002V

TCM.

DTC Confirmation Procedure

NCS0002W

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” or “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine.
5. Run engine for at least 2 consecutive seconds at idle speed.
6. If DTC is detected, go to AT-101, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0002X

1. CHECK DTC

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “ERASE”.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Perform AT-101, "DTC Confirmation Procedure" .

Is the “TCM” displayed again?

YES >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NO >> **INSPECTION END**

DTC P0705 PARK/NEUTRAL POSITION SWITCH

PFP:32006

Description

NCS0002Y

- PNP switch includes a transmission range switch.
- The transmission range switch detects the selector lever position and sends a signal to the TCM.

CONSULT-III Reference Value

NCS0002Z

Item name	Condition	Display value
SLCT LVR POSI	Selector lever in “N” and “P” positions.	N/P
	Selector lever in “R” position.	R
	Selector lever in “D” position.	D

On Board Diagnosis Logic

NCS00030

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0705 PNP SW/CIRC” with CONSULT-III or 9th judgment flicker without CONSULT-III is detected under the following conditions.

– When TCM does not receive the correct voltage signal from PNP switch 1, 2, 3 and 4 based on the gear position.

– When no other position but “P” position is detected from “N” position.

Possible Cause

NCS00031

- Harness or connectors
  PNP switch 1, 2, 3, 4 and TCM circuit is open or shorted.
- PNP switch 1, 2, 3 and 4

DTC Confirmation Procedure

NCS00032

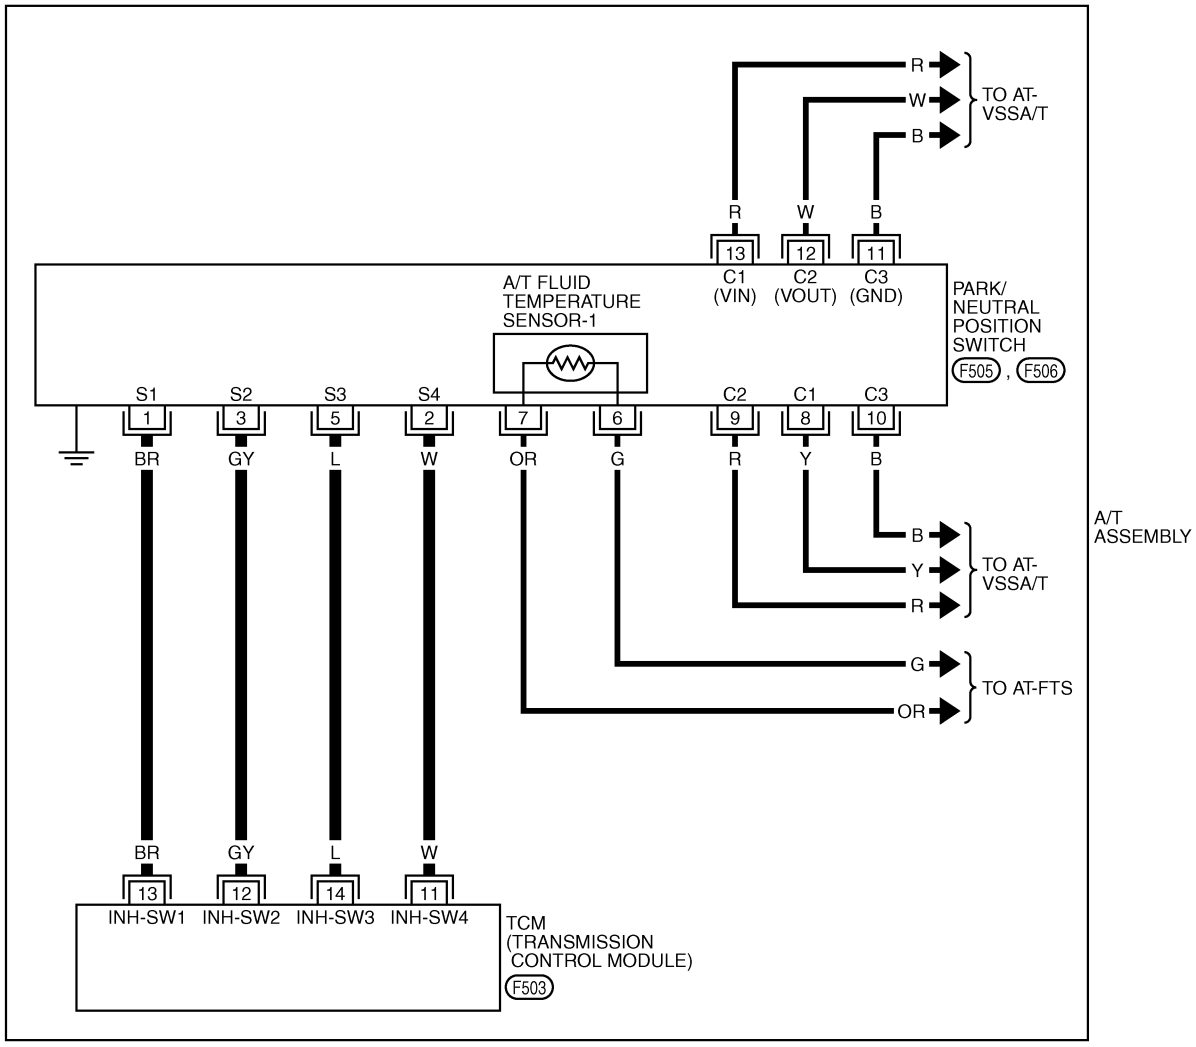
CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

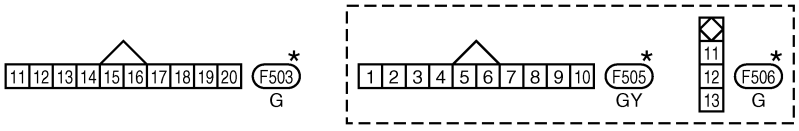
WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” or “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.
   ACCELE POSI: More than 1.0/8
6. If DTC is detected, go to AT-104, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III”.



Wiring Diagram — AT — PNP/SW

NCS00033

AT-PNP/SW-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWM0248E

Diagnostic Procedure

NCS00034

1. CHECK PNP SW CIRCUIT

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Check if correct selector lever position (N/P, R or D) is displayed as selector lever is moved into each position.

Item name	Condition	Display value
SLCT LVR POSI	Selector lever in “N” and “P” positions.	N/P
	Selector lever in “R” position.	R
	Selector lever in “D” position.	D

OK or NG

OK >> GO TO 5.
NG >> GO TO 2.

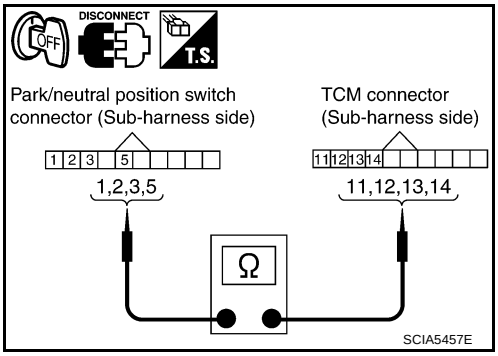
2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM



Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK SUB-HARNESS

1. Remove control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disconnect park/neutral position switch connector and TCM connector.
3. Check continuity between park/neutral position switch connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
Park/neutral position switch connector	F505	1	Yes
TCM connector	F503	13	
Park/neutral position switch connector	F505	2	Yes
TCM connector	F503	11	
Park/neutral position switch connector	F505	3	Yes
TCM connector	F503	12	
Park/neutral position switch connector	F505	5	Yes
TCM connector	F503	14	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

NG >> Replace open circuit or short to ground and short to power in harness or connectors.

5. CHECK DTC

Perform AT-102, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 2.

DTC P0717 TURBINE REVOLUTION SENSOR

PFP:31935

Description

NCS0019V

The turbine revolution sensor detects input shaft rpm (revolutions per minute). It is located on the input side of the A/T. Monitors revolution of sensor 1 and sensor 2 for non-standard conditions.

CONSULT-III Reference Value

NCS0019W

Item name	Condition	Display value
TURBINE REV	During driving (lock-up ON)	Approximately matches the engine speed.

On Board Diagnosis Logic

NCS0019X

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0717 TURBINE REV S/CIRC” with CONSULT-III or 11th judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM does not receive the proper voltage signal from the sensor.
  - When TCM detects an irregularity only at position of 4th gear for turbine revolution sensor 2.

Possible Cause

NCS0019Y

- Harness or connectors
  (Sensor circuit is open or shorted.)
- Turbine revolution sensor 1 and/or 2

DTC Confirmation Procedure

NCS0019Z

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “VHCL/S SE-A/T”, “ACCELE POSI”, “ENGINE SPEED”, “SLCT LVR POSI” and “GEAR”.
3. Touch “START”.
4. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL/S SE-A/T: 40 km/h (25 MPH) or more
   ACCELE POSI: More than 0.5/8
   ENGINE SPEED: 1,500 rpm or more
   SLCT LVR POSI: “D” position
   GEAR (Turbine revolution sensor 1): “4” or “5” position
   GEAR (Turbine revolution sensor 2): All positions
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
5. If DTC is detected, go to AT-107, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS001A0

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Start engine.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Vehicle start and read out the value of “TURBINE REV”.

Item name	Condition	Display value
TURBINE REV	During driving (lock-up ON)	Approximately matches the engine speed.

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-106, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P0720 VEHICLE SPEED SENSOR A/T (REVOLUTION SENSOR)

PFP:32702

Description

NCS00035

The revolution sensor detects the revolution of the parking gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed.

CONSULT-III Reference Value

NCS00036

Item name	Condition	Display value
VHCL/S SE-A/T	During driving	Approximately matches the speedometer reading.

On Board Diagnosis Logic

NCS00037

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0720 VEH SPD SEN/CIR AT” with CONSULT-III or 1st judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM does not receive the proper voltage signal from the sensor.
  - After ignition switch is turned ON, irregular signal input from vehicle speed sensor MTR before the vehicle starts moving.

Possible Cause

NCS00038

- Harness or connectors
  (Sensor circuit is open or shorted.)
- Revolution sensor
- Vehicle speed sensor MTR

DTC Confirmation Procedure

NCS00039

CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

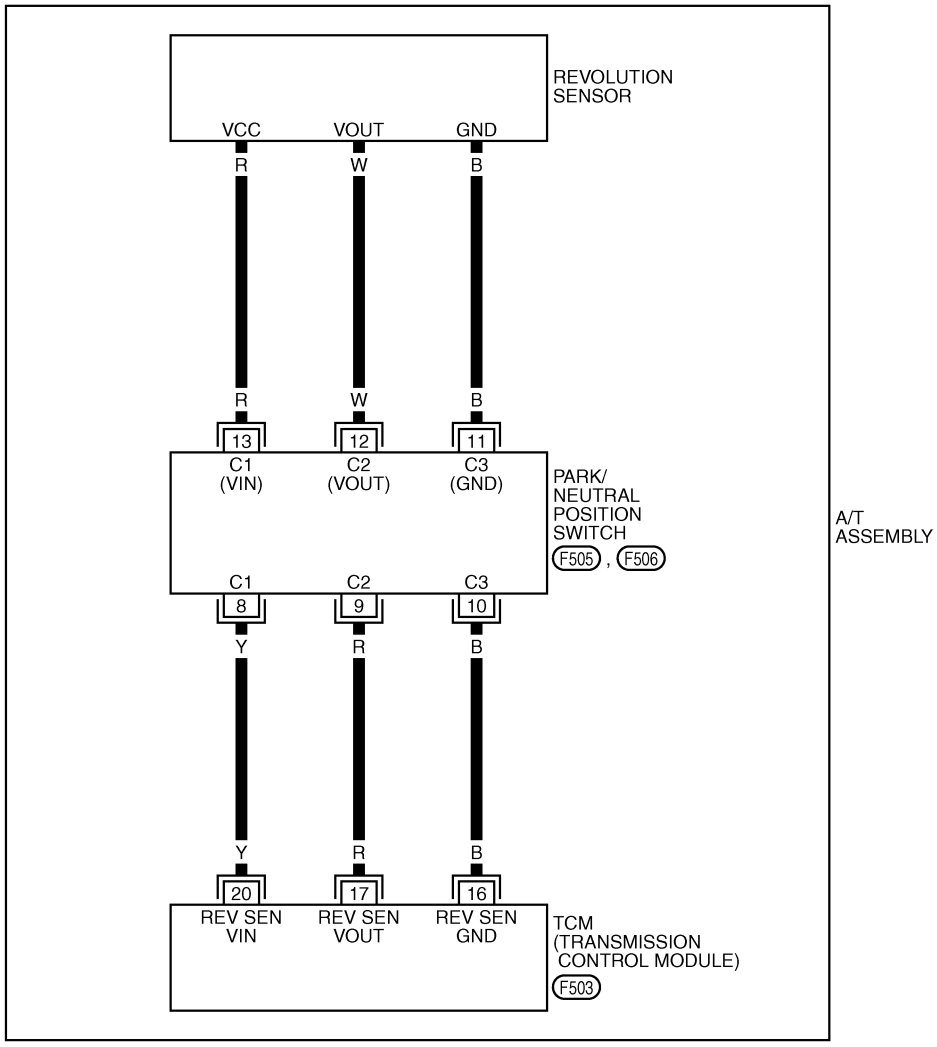
WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Drive vehicle and check for an increase of “VHCL/S SE-A/T” value in response to “VHCL/S SE-MTR” value.
   If the check result is NG, go to AT-111, "Diagnostic Procedure" .
   If the check result is OK, go to following step.
5. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “VHCL/S SE-A/T”, “ACCELE POSI”, “ENGINE SPEED” and “SLCT LVR POSI”.
6. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL/S SE-A/T: 30 km/h (19 MPH) or more
   ACCELE POSI: More than 1.0/8
   SLCT LVR POSI: “D” position
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
   If the check result is NG, go to AT-111, "Diagnostic Procedure" .
   If the check result is OK, go to following step.
7. Maintain the following conditions for at least 5 consecutive seconds.
   ENGINE SPEED: 3,500 rpm or more
   ACCELE POSI: More than 1.0/8
   SLCT LVR POSI: “D” position

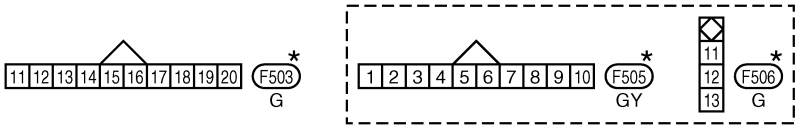
Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

8. If DTC is detected, go to AT-111, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III”.



Wiring Diagram — AT — VSSA/T

NCS0003A

AT-VSSA/T-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWM0249E

Diagnostic Procedure

NCS0003B

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “VHCL/S SE-A/T” while driving. Check the value changes according to driving speed.

Item name	Condition	Display value
VHCL/S SE-A/T	During driving	Approximately matches the speedometer reading.

OK or NG

OK >> GO TO 6.
NG >> GO TO 2.

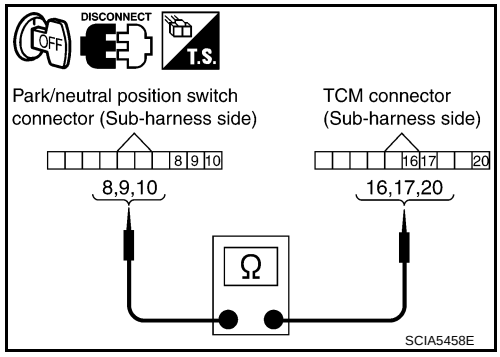
2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM



Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK SUB-HARNESS

1. Remove control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disconnect park/neutral position switch connector and TCM connector.
3. Check continuity between park/neutral position switch connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
Park/neutral position switch connector	F505	8	Yes
TCM connector	F503	20	
Park/neutral position switch connector	F505	9	Yes
TCM connector	F503	17	
Park/neutral position switch connector	F505	10	Yes
TCM connector	F503	16	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

OK or NG

OK >> GO TO 5.
NG >> Replace open circuit or short to ground and short to power in harness or connectors.

5. REPLACE THE REVOLUTION SENSOR AND CHECK DTC

1. Replace revolution sensor. Refer to AT-235, "Revolution Sensor" .
2. Perform AT-108, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

6. CHECK DTC

Perform AT-108, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P0725 ENGINE SPEED SIGNAL

PFP:24825

Description

NCS0003C

The engine speed signal is sent from the ECM to the TCM.

CONSULT-III Reference Value

NCS0003D

Item name	Condition	Display value
ENGINE SPEED	Engine running	Closely matches the tachometer reading.

On Board Diagnosis Logic

NCS0003E

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0725 ENGINE SPEED SIG” with CONSULT-III or 16th judgment flicker without CONSULT-III is detected when TCM does not receive the ignition signal from ECM during engine cranking or running.

Possible Cause

NCS0003F

Harness or connectors
(ECM to TCM circuit is open or shorted.)

DTC Confirmation Procedure

NCS0003G

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “VHCL/S SE-A/T”, “ACCELE POSI” and “SLCT LVR POSI”.
3. Touch “START”.
4. Start engine and maintain the following conditions for at least 10 consecutive seconds.
   VHCL/S SE-A/T: 10 km/h (6 MPH) or more
   ACCELE POSI: More than 1.0/8
   SLCT LVR POSI: “D” position
5. If DTC is detected, go to AT-114, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0003H

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK DTC WITH TCM

With CONSULT-III

1. Start engine.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. While monitoring engine speed, check for engine speed change corresponding to wide-open throttle position signal.

Item name	Condition	Display value
ENGINE SPEED	Engine running	Closely matches the tachometer reading.

OK or NG

OK >> GO TO 3.
NG >> Check the ignition signal circuit. Refer to EC-698, "IGNITION SIGNAL" .

3. CHECK DTC

Perform AT-113, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 4.

4. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

DTC P0731 A/T 1ST GEAR FUNCTION

PFP:31940

Description

NCS001SB

This malfunction is detected when the A/T does not shift into 1st gear position as instructed by TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

On Board Diagnosis Logic

NCS001SC

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0731 A/T 1ST GR FNCTN” with CONSULT-III or 18th judgment flicker without CONSULT-III is detected when TCM detects any inconsistency in the actual gear ratio.

Possible Cause

NCS001SD

- Harness or connectors
  (Solenoid circuits are open or shorted.)
- Input clutch solenoid valve
- Front brake solenoid valve
- Direct clutch solenoid valve
- High and low reverse clutch solenoid valve
- Each clutch
- Hydraulic control circuit

DTC Confirmation Procedure

NCS001SE

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start the engine and select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
2. Make sure that “ATF TEMP 1” is within the following range.
   ATF TEMP 1: 20°C – 140°C
   If out of range, drive vehicle to warm ATF or stop engine to cool ATF.
3. Select “1ST GR FNCTN P0731” of “DTC WORK SUPPORT” mode for “TRANSMISSION” with CONSULT-III.
4. Drive vehicle and maintain the following conditions.
   VEHICLE SPEED: 10 km/h (6 MPH) or more
   ACCELE POSI: 0.6/8 or more
   ENGINE SPEED: TURBINE REV – 50 rpm or more
   TURBINE REV: 300 rpm or more
   GEAR: “1” position
   MANU MODE SW: ON
5. Keep the current driving status for at least 5 consecutive seconds if CONSULT-III screen changes from “OUT OF CONDITION” to “TESTING”.

   CAUTION:
   If “TESTING” does not appear on CONSULT-III for a long time, select “SELF-DIAG RESULTS”. In case a 1st trip DTC other than P0731 is shown, refer to “AT-86, "Display Items List" ”.
   If “COMPLETED RESULT NG” is detected, go to AT-116, "Diagnostic Procedure" .
   If “STOP VEHICLE” is detected, go to the following step.
6. Stop vehicle.
7. Drive vehicle in “D” position allowing it to shift from 1st to 5th gear and check shift timing and shift shock.

– Touch “OK” to complete the inspection when normally shifted from the 1st to 5th gear.
– Touch “NG” when an unusual shift shock, etc. occurs in spite of shifting from the 1st to 5th gear. Go to AT-52, "ROAD TEST" .

– Perform AT-86, "SELF-DIAGNOSTIC RESULT MODE" when not shifted from the 1st to 5th gear. (Neither “OK” nor “NG” are indicated.)

Diagnostic Procedure

NCS001SF

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTION ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. REPLACE CONTROL VALVE WITH TCM

1. Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Perform AT-115, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Confirm malfunction phenomena by “ROAD TEST” to repair malfunctioning part. Refer to AT-52, "ROAD TEST" .

DTC P0732 A/T 2ND GEAR FUNCTION

PFP:31940

Description

NCS001SG

This malfunction is detected when the A/T does not shift into 2nd gear position as instructed by TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

On Board Diagnosis Logic

NCS001SH

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0732 A/T 2ND GR FNCTN” with CONSULT-III or 19th judgment flicker without CONSULT-III is detected when TCM detects any inconsistency in the actual gear ratio.

Possible Cause

NCS001SI

- Harness or connectors
  (Solenoid circuits are open or shorted.)
- Input clutch solenoid valve
- Front brake solenoid valve
- Direct clutch solenoid valve
- High and low reverse clutch solenoid valve
- Each clutch
- Hydraulic control circuit

DTC Confirmation Procedure

NCS001SJ

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start the engine and select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
2. Make sure that “ATF TEMP 1” is within the following range.
   ATF TEMP 1: 20°C – 140°C
   If out of range, drive vehicle to warm ATF or stop engine to cool ATF.
3. Select “2ND GR FNCTN P0732” of “DTC WORK SUPPORT” mode for “TRANSMISSION” with CONSULT-III.
4. Drive vehicle and maintain the following conditions.
   VEHICLE SPEED: 10 km/h (6 MPH) or more
   ACCELE POSI: 0.6/8 or more
   ENGINE SPEED: TURBINE REV – 50 rpm or more
   TURBINE REV: 300 rpm or more
   GEAR: “2” position
   MANU MODE SW: ON
5. Keep the current driving status for at least 5 consecutive seconds if CONSULT-III screen changes from “OUT OF CONDITION” to “TESTING”.

   CAUTION:
   If “TESTING” does not appear on CONSULT-III for a long time, select “SELF-DIAG RESULTS”. In case a 1st trip DTC other than P0732 is shown, refer to “AT-86, "Display Items List" ”.
   If “COMPLETED RESULT NG” is detected, go to AT-118, "Diagnostic Procedure" .
   If “STOP VEHICLE” is detected, go to the following step.
6. Stop vehicle.
7. Drive vehicle in “D” position allowing it to shift from 1st to 5th gear and check shift timing and shift shock.

– Touch “OK” to complete the inspection when normally shifted from the 1st to 5th gear.
– Touch “NG” when an unusual shift shock, etc. occurs in spite of shifting from the 1st to 5th gear. Go to AT-52, "ROAD TEST" .

– Perform AT-86, "SELF-DIAGNOSTIC RESULT MODE" when not shifted from the 1st to 5th gear. (Neither “OK” nor “NG” are indicated.)

Diagnostic Procedure

NCS001T0

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTION ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. REPLACE CONTROL VALVE WITH TCM

1. Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Perform AT-117, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Confirm malfunction phenomena by “ROAD TEST” to repair malfunctioning part. Refer to AT-52, "ROAD TEST" .

DTC P0733 A/T 3RD GEAR FUNCTION

PFP:31940

Description

NCS001SL

This malfunction is detected when the A/T does not shift into 3rd gear position as instructed by TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

On Board Diagnosis Logic

NCS001SM

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0733 A/T 3RD GR FNCTN” with CONSULT-III or 20th judgment flicker without CONSULT-III is detected when TCM detects any inconsistency in the actual gear ratio.

Possible Cause

NCS001SN

- Harness or connectors
  (Solenoid circuits are open or shorted.)
- Input clutch solenoid valve
- Front brake solenoid valve
- Direct clutch solenoid valve
- High and low reverse clutch solenoid valve
- Each clutch
- Hydraulic control circuit

DTC Confirmation Procedure

NCS001SO

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start the engine and select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
2. Make sure that “ATF TEMP 1” is within the following range.
   ATF TEMP 1: 20°C – 140°C
   If out of range, drive vehicle to warm ATF or stop engine to cool ATF.
3. Select “3RD GR FNCTN P0733” of “DTC WORK SUPPORT” mode for “TRANSMISSION” with CONSULT-III.
4. Drive vehicle and maintain the following conditions.
   VEHICLE SPEED: 10 km/h (6 MPH) or more
   ACCELE POSI: 0.6/8 or more
   ENGINE SPEED: TURBINE REV – 50 rpm or more
   TURBINE REV: 300 rpm or more
   GEAR: “3” position
   MANU MODE SW: ON
5. Keep the current driving status for at least 5 consecutive seconds if CONSULT-III screen changes from “OUT OF CONDITION” to “TESTING”.

   CAUTION:
   If “TESTING” does not appear on CONSULT-III for a long time, select “SELF-DIAG RESULTS”. In case a 1st trip DTC other than P0732 is shown, refer to “AT-86, "Display Items List" ”.
   If “COMPLETED RESULT NG” is detected, go to AT-120, "Diagnostic Procedure" .
   If “STOP VEHICLE” is detected, go to the following step.
6. Stop vehicle.
7. Drive vehicle in “D” position allowing it to shift from 1st to 5th gear and check shift timing and shift shock.

– Touch “OK” to complete the inspection when normally shifted from the 1st to 5th gear.
– Touch “NG” when an unusual shift shock, etc. occurs in spite of shifting from the 1st to 5th gear. Go to AT-52, "ROAD TEST" .

– Perform AT-86, "SELF-DIAGNOSTIC RESULT MODE" when not shifted from the 1st to 5th gear. (Neither “OK” nor “NG” are indicated.)

Diagnostic Procedure

NCS001T1

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTION ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. REPLACE CONTROL VALVE WITH TCM

1. Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Perform AT-119, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Confirm malfunction phenomena by “ROAD TEST” to repair malfunctioning part. Refer to AT-52, "ROAD TEST" .

DTC P0734 A/T 4TH GEAR FUNCTION

PFP:31940

Description

NCS001SQ

This malfunction is detected when the A/T does not shift into 4th gear position as instructed by TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

On Board Diagnosis Logic

NCS001SR

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0734 A/T 4TH GR FNCTN” with CONSULT-III or 21th judgment flicker without CONSULT-III is detected when TCM detects any inconsistency in the actual gear ratio.

Possible Cause

NCS001SS

- Harness or connectors
  (Solenoid circuits are open or shorted.)
- Input clutch solenoid valve
- Front brake solenoid valve
- Direct clutch solenoid valve
- High and low reverse clutch solenoid valve
- Each clutch
- Hydraulic control circuit

DTC Confirmation Procedure

NCS001ST

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start the engine and select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
2. Make sure that “ATF TEMP 1” is within the following range.
   ATF TEMP 1: 20°C – 140°C
   If out of range, drive vehicle to warm ATF or stop engine to cool ATF.
3. Select “4TH GR FNCTN P0734” of “DTC WORK SUPPORT” mode for “TRANSMISSION” with CONSULT-III.
4. Drive vehicle and maintain the following conditions.
   VEHICLE SPEED: 10 km/h (6 MPH) or more
   ACCELE POSI: 0.6/8 or more
   ENGINE SPEED: TURBINE REV – 50 rpm or more
   TURBINE REV: 300 rpm or more
   GEAR: “4” position
   MANU MODE SW: ON
5. Keep the current driving status for at least 5 consecutive seconds if CONSULT-III screen changes from “OUT OF CONDITION” to “TESTING”.

   CAUTION:
   If “TESTING” does not appear on CONSULT-III for a long time, select “SELF-DIAG RESULTS”. In case a 1st trip DTC other than P0734 is shown, refer to “AT-86, "Display Items List" ”.
   If “COMPLETED RESULT NG” is detected, go toAT-122, "Diagnostic Procedure" .
   If “STOP VEHICLE” is detected, go to the following step.
6. Stop vehicle.
7. Drive vehicle in “D” position allowing it to shift from 1st to 5th gear and check shift timing and shift shock.

– Touch “OK” to complete the inspection when normally shifted from the 1st to 5th gear.
– Touch “NG” when an unusual shift shock, etc. occurs in spite of shifting from the 1st to 5th gear. Go to AT-52, "ROAD TEST" .

- Perform AT-86, "SELF-DIAGNOSTIC RESULT MODE" when not shifted from the 1st to 5th gear. (Neither “OK” nor “NG” are indicated.)

Diagnostic Procedure

NCS001T2

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTION ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. REPLACE CONTROL VALVE WITH TCM

1. Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Perform AT-121, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Confirm malfunction phenomena by “ROAD TEST” to repair malfunctioning part. Refer to AT-52, "ROAD TEST" .

DTC P0735 A/T 5TH GEAR FUNCTION

PFP:31940

Description

NCS001SV

This malfunction is detected when the A/T does not shift into 5th gear position as instructed by TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

On Board Diagnosis Logic

NCS001SW

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0735 A/T 5TH GR FNCTN” with CONSULT-III or 22th judgment flicker without CONSULT-III is detected when TCM detects any inconsistency in the actual gear ratio.

Possible Cause

NCS001SX

- Harness or connectors
  (Solenoid circuits are open or shorted.)
- Input clutch solenoid valve
- Front brake solenoid valve
- Direct clutch solenoid valve
- High and low reverse clutch solenoid valve
- Each clutch
- Hydraulic control circuit

DTC Confirmation Procedure

NCS001SY

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start the engine and select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
2. Make sure that “ATF TEMP 1” is within the following range.
   ATF TEMP 1: 20°C – 140°C
   If out of range, drive vehicle to warm ATF or stop engine to cool ATF.
3. Select “5TH GR FNCTN P0735” of “DTC WORK SUPPORT” mode for “TRANSMISSION” with CONSULT-III.
4. Drive vehicle and maintain the following conditions.
   VEHICLE SPEED: 10 km/h (6 MPH) or more
   ACCELE POSI: 0.6/8 or more
   ENGINE SPEED: TURBINE REV – 50 rpm or more
   TURBINE REV: 300 rpm or more
   GEAR: “5” position
   MANU MODE SW: ON
5. Keep the current driving status for at least 5 consecutive seconds if CONSULT-III screen changes from “OUT OF CONDITION” to “TESTING”.

   CAUTION:
   If “TESTING” does not appear on CONSULT-III for a long time, select “SELF-DIAG RESULTS”. In case a 1st trip DTC other than P0735 is shown, refer to “AT-86, "Display Items List" ”.
   If “COMPLETED RESULT NG” is detected, go to AT-124, "Diagnostic Procedure" .
   If “STOP VEHICLE” is detected, go to the following step.
6. Stop vehicle.
7. Drive vehicle in “D” position allowing it to shift from 1st to 5th gear and check shift timing and shift shock.

– Touch “OK” to complete the inspection when normally shifted from the 1st to 5th gear.
– Touch “NG” when an unusual shift shock, etc. occurs in spite of shifting from the 1st to 5th gear. Go to AT-52, "ROAD TEST" .

– Perform AT-86, "SELF-DIAGNOSTIC RESULT MODE" when not shifted from the 1st to 5th gear. (Neither “OK” nor “NG” are indicated.)

Diagnostic Procedure

NCS001T3

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTION ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. REPLACE CONTROL VALVE WITH TCM

1. Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Perform AT-123, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> Confirm malfunction phenomena by “ROAD TEST” to repair malfunctioning part. Refer to AT-52, "ROAD TEST" .

DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

Description

NCS0003I

- Torque converter clutch solenoid valve is activated, with the gear in D_4 , D_5 , M_2 , M_3 , M_4 and M_5 by the TCM in response to signals sent from the vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Torque converter clutch piston operation will then be controlled.
- Lock-up operation, however, is prohibited when A/T fluid temperature is too low.
- When the accelerator pedal is depressed (less than 1.0/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

CONSULT-III Reference Value

NCS0003J

Item name	Condition	Display value (Approx.)
TCC SOLENOID	Lock-up is active	0.4 – 0.6 A

On Board Diagnosis Logic

NCS0003K

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0740 TCC SOLENOID/CIRC” with CONSULT-III or 3rd judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS0003L

- Torque converter clutch solenoid valve
- Harness or connectors
  (Solenoid circuit is open or shorted.)

DTC Confirmation Procedure

NCS0003M

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “VHCL/S SE-A/T”, “ACCELE POSI” and “SLCT LVR POSI”.
3. Touch “START”.
4. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL/S SE-A/T: 80 km/h (50 MPH) or more
   ACCELE POSI: 0.5/8 – 1.0/8
   SLCT LVR POSI: “D” position
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
5. If DTC is detected go to AT-126, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0003N

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “TCC SOLENOID” while driving.

Item name	Condition	Display value (Approx.)
TCC SOLENOID	Lock-up is active	0.4 – 0.6 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-125, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

PFP:31940

Description

NCS0003O

This malfunction is detected when the A/T does not shift into 5th gear position or the torque converter clutch does not lock-up as instructed by the TCM. This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

CONSULT-III Reference Value

NCS0003P

Item name	Condition	Display value (Approx.)
TCC SOLENOID	Lock-up is active	0.4 – 0.6 A

On Board Diagnosis Logic

NCS0003Q

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0744 A/T TCC S/V FNCTN” with CONSULT-III or 3rd judgment flicker without CONSULT-III is detected under the following conditions.
  - When A/T cannot perform lock-up even if electrical circuit is good.
  - When TCM detects as irregular by comparing difference value with slip rotation.

Possible Cause

NCS0003R

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Torque converter clutch solenoid valve
- Hydraulic control circuit

DTC Confirmation Procedure

NCS0003S

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start engine.
2. Select “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Drive vehicle and maintain the following conditions for at least 30 consecutive seconds.
   ACCELE POSI: More than 1.0/8
   SLCT LVR POSI: “D” position
   TCC SOLENOID: 0.4 – 0.6 A
   VEHICLE SPEED: 80 km/h (50 MPH) or more
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
4. If DTC is detected, go to AT-128, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0003T

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “TCC SOLENOID” while driving.

Item name	Condition	Display value (Approx.)
TCC SOLENOID	Lock-up is active	0.4 – 0.6 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-127, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P0745 LINE PRESSURE SOLENOID VALVE

PFP:31940

Description

NCS0003U

The line pressure solenoid valve regulates oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

CONSULT-III Reference Value

NCS0003V

Item name	Condition	Display value (Approx.)
LINE PRES SOL	During driving	0.2 – 0.6 A

On Board Diagnosis Logic

NCS0003W

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P0745 L/PRESS SOL/CIRC” with CONSULT-III or 4th judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS0003X

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Line pressure solenoid valve

DTC Confirmation Procedure

NCS0003Y

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine and wait at least 5 seconds.
5. If DTC is detected, go to “AT-130, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0003Z

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “LINE PRES SOL” while driving.

Item name	Condition	Display value (Approx.)
LINE PRES SOL	During driving	0.2 – 0.6 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-129, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1705 THROTTLE POSITION SENSOR

PFP:22620

Description

NCS0004A

Electric throttle control actuator consists of throttle control motor, accelerator pedal position sensor, throttle position sensor, etc. The actuator sends a signal to the ECM, and ECM sends signals to TCM with CAN communication.

CONSULT-III Reference Value

NCS0004B

Item name	Condition	Display value (Approx.)
ACCELE POSI	Released accelerator pedal.	0.0/8
	Fully depressed accelerator pedal.	8.0/8

On Board Diagnosis Logic

NCS0004C

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1705 TP SEN/CIRC A/T” with CONSULT-III or 15th judgment flicker without CONSULT-III is detected when TCM does not receive the proper accelerator pedal position signals (input by CAN communication) from ECM.

Possible Cause

NCS0004D

Harness or connectors
(Sensor circuit is open or shorted.)

DTC Confirmation Procedure

NCS0004E

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine and let it idle for 1 second.
5. If DTC is detected, go to AT-132, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0004F

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK DTC WITH TCM

With CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Depress accelerator pedal and read out the value of “ACCELE POSI”.

Item name	Condition	Display value (Approx.)
ACCELE POSI	Released accelerator pedal.	0.0/8
	Fully depressed accelerator pedal.	8.0/8

4. Select “SELF-DIAG RESULTS” mode for “A/T” with CONSULT-III. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE"

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK DTC WITH ECM

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELF-DIAG RESULTS” mode for “ENGINE” with CONSULT-III. Refer to EC-116, "CONSULT-III Function (ENGINE)" .

OK or NG

OK >> GO TO 4.
NG >> Check the DTC detected item. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
- If CAN communication line is detected, go to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .

4. CHECK DTC

Perform AT-131, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 5.

5. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

NG >> Repair or replace damaged parts.

DTC P1710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

PFP:31940

Description

NCS0004G

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.

CONSULT-III Reference Value

NCS0004H

Item name	Condition °C (°F)	Display value (Approx.)
ATF TEMP SE 1	0 (32) – 20 (68) – 80 (176)	3.3 – 2.7 – 0.9 V
ATF TEMP SE 2		3.3 – 2.5 – 0.7 V

On Board Diagnosis Logic

NCS0004I

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1710 (A/T), P0710 (ENGINE) ATF TEMP SEN/CIRC” with CONSULT-III or 10th judgment flicker without CONSULT-III is detected when TCM receives an excessively low or high voltage from the sensor.

Possible Cause

NCS0004J

- Harness or connectors
  (Sensor circuit is open or shorted.)
- A/T fluid temperature sensors 1 and/or 2

DTC Confirmation Procedure

NCS0004K

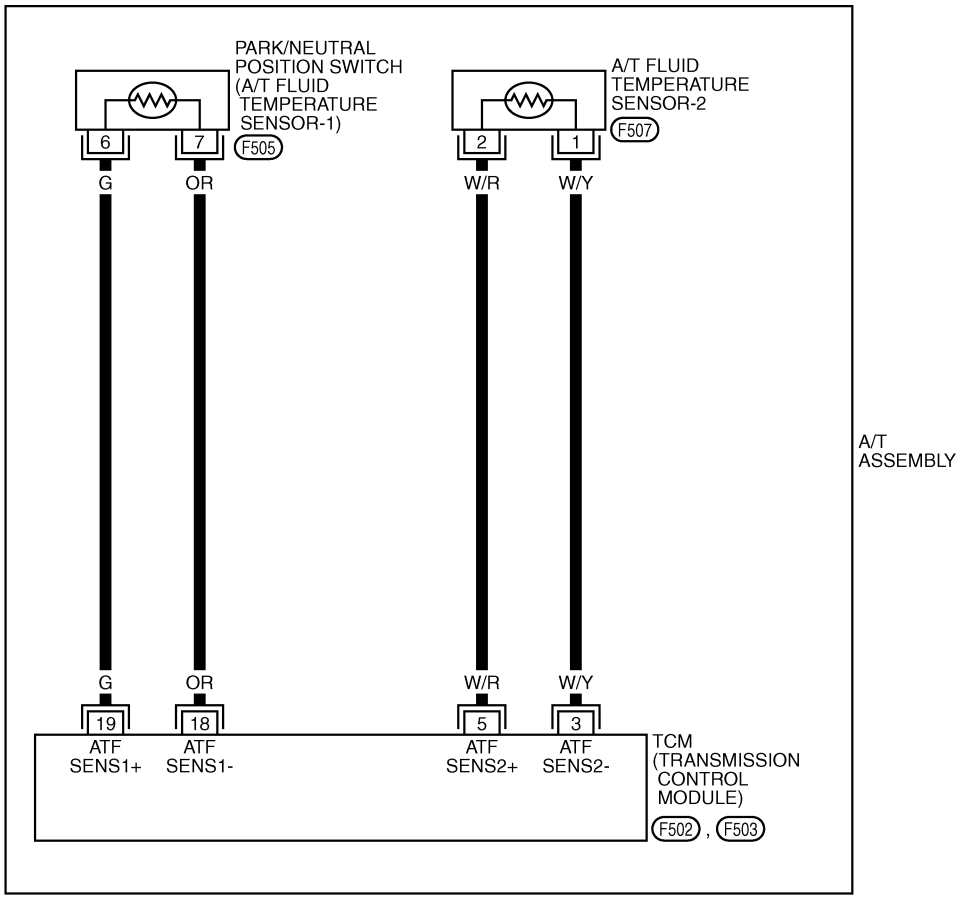
CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

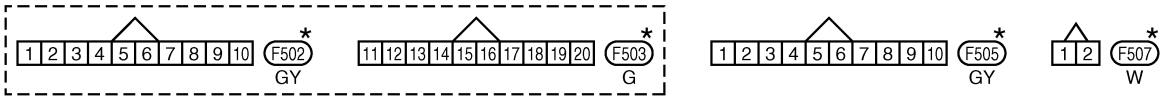
WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “VHCL/S SE-A/T”, “ACCELE POSI” and “SLCT LVR POSI”.
3. Start engine and maintain the following conditions for at least 10 minutes (Total). (It is not necessary to maintain continuously.)
   VHCL/S SE-A/T: 10 km/h (6 MPH) or more
   ACCELE POSI: More than 1.0/8
   SLCT LVR POSI: “D” position
4. If DTC is detected, go to AT-136, "Diagnostic Procedure" .

WITH GST



Follow the procedure “WITH CONSULT-III”.



Wiring Diagram — AT — FTS

NCS0004L

AT-FTS-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWT0374E

Diagnostic Procedure

NCS0004M

1. CHECK A/T FLUID TEMPERATURE SENSOR 1 SIGNAL

With CONSULT-III

1. Start engine.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Read out the value of “ATF TEMP SE 1”.

Item name	Condition °C (°F)	Display value (Approx.)
ATF TEMP SE 1	0 (32) – 20 (68) – 80 (176)	3.3 – 2.7 – 0.9 V

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK A/T FLUID TEMPERATURE SENSOR 2 SIGNAL

With CONSULT-III

1. Start engine.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Read out the value of “ATF TEMP SE 2”.

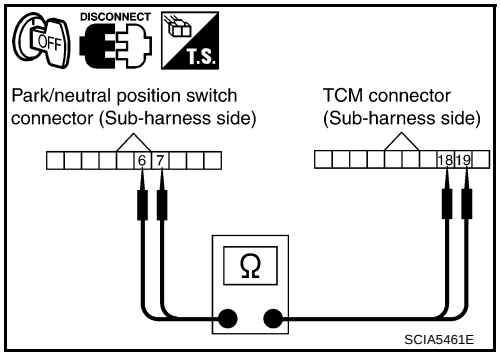
Item name	Condition °C (°F)	Display value (Approx.)
ATF TEMP SE 2	0 (32) – 20 (68) – 80 (176)	3.3 – 2.5 – 0.7 V

OK or NG

OK >> GO TO 8.
NG >> GO TO 5.

3. CHECK A/T FLUID TEMPERATURE SENSOR 1

Check A/T fluid temperature sensor 1. Refer to AT-138, "A/T FLUID TEMPERATURE SENSOR 1" .



OK or NG

OK >> GO TO 4.
NG >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

4. CHECK SUB-HARNESS

1. Disconnect park/neutral position switch connector and TCM connector.
2. Check continuity between park/neutral position switch connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
Park/neutral position switch connector	F505	6	Yes
TCM connector	F503	19	
Park/neutral position switch connector	F505	7	Yes
TCM connector	F503	18	

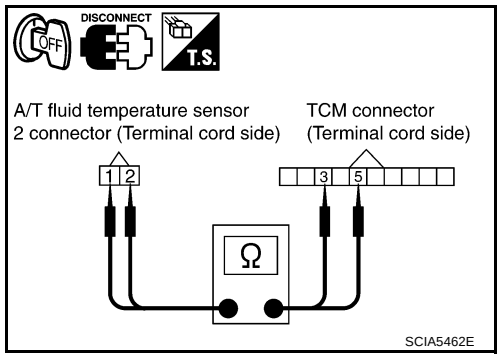
3. If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Replace open circuit or short to ground and short to power in harness or connectors.

5. CHECK A/T FLUID TEMPERATURE SENSOR 2

Check A/T fluid temperature sensor 2. Refer to AT-138, "A/T FLUID TEMPERATURE SENSOR 2" .



OK or NG

OK >> GO TO 6.
NG >> Replace A/T fluid temperature sensor 2. Refer to AT-223, "A/T FLUID TEMPERATURE SENSOR 2 REMOVAL AND INSTALLATION" .

6. CHECK TERMINAL CORD ASSEMBLY

1. Disconnect A/T fluid temperature sensor 2 connector and TCM connector.
2. Check continuity between A/T fluid temperature sensor 2 connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
A/T fluid temperature sensor 2 connector	F507	1	Yes
TCM connector	F502	3	
A/T fluid temperature sensor 2 connector	F507	2	Yes
TCM connector	F502	5	

3. If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Replace open circuit or short to ground and short to power in harness or connectors.

7. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

1. Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .
2. Reinstall any part removed.

OK or NG

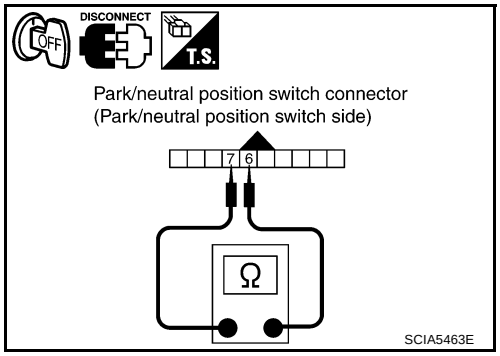
OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

8. CHECK DTC

Perform AT-134, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 1.



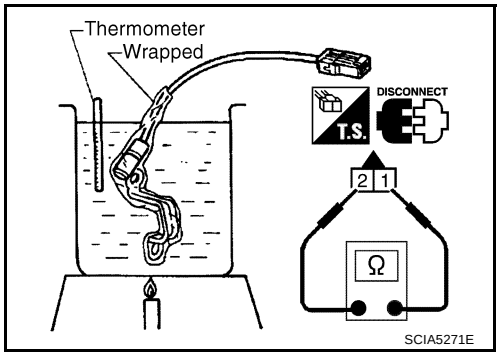
Component Inspection

NCS0004N

A/T FLUID TEMPERATURE SENSOR 1

1. Remove control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check resistance between terminals.

Name	Connector	Terminal	Temperature °C (°F)	Resistance (Approx.)
A/T fluid temperature sensor 1	F505	6 – 7	0 (32)	15 kΩ
			20 (68)	6.5 kΩ
			80 (176)	0.9 kΩ



3. If NG, replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

A/T FLUID TEMPERATURE SENSOR 2

1. Remove A/T fluid temperature sensor 2. Refer to AT-223, "A/T FLUID TEMPERATURE SENSOR 2 REMOVAL AND INSTALLATION" .
2. Check resistance between terminals.

Name	Connector	Terminal	Temperature °C (°F)	Resistance (Approx.)
A/T fluid temperature sensor 2	F507	1 – 2	0 (32)	10 kΩ
			20 (68)	4 kΩ
			80 (176)	0.5 kΩ

3. If NG, replace A/T fluid temperature sensor 2. Refer to AT-223, "A/T FLUID TEMPERATURE SENSOR 2 REMOVAL AND INSTALLATION" .

DTC P1721 VEHICLE SPEED SENSOR MTR

PFP:24814

Description

NCS0004U

The vehicle speed sensor·MTR signal is transmitted from combination meter to TCM by CAN communication line. The signal functions as an auxiliary device to revolution sensor when it is malfunctioning. The TCM will then use the vehicle speed sensor·MTR signal.

CONSULT-III Reference Value

NCS0004V

Item name	Condition	Display value
VHCL/S SE-MTR	During driving	Approximately matches the speedometer reading.

On Board Diagnosis Logic

NCS0004W

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1721 VEH SPD SE/CIR-MTR” with CONSULT-III is detected when TCM does not receive the proper vehicle speed sensor MTR signal (input by CAN communication) from unified meter and A/C amp.

Possible Cause

NCS0004X

Harness or connectors
(Sensor circuit is open or shorted.)

DTC Confirmation Procedure

NCS0004Y

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL/S SE-MTR: 30 km/h (19 MPH) or more
   ACCELE POSI: 1.0/8 or less
5. If DTC is detected, go to AT-140, "Diagnostic Procedure" .

Diagnostic Procedure

NCS0004Z

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is malfunction in the CAN communication indicated in the result?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK INPUT SIGNAL

With CONSULT-III

1. Start engine.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Drive vehicle and read out the value of “VHCL/S SE-MTR”.

Item name	Condition	Display value
VHCL/S SE-MTR	During driving	Approximately matches the speedometer reading.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK UNIFIED METER AND A/C AMP.

Check unified meter and A/C amp. Refer to DI-44, "UNIFIED METER AND A/C AMP" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-139, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 5.

5. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

DTC P1730 A/T INTERLOCK

PFP:00000

Description

NCS00050

Fail-safe function to detect interlock conditions.

On Board Diagnosis Logic

NCS00051

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1730 A/T INTERLOCK” with CONSULT-III or 12th judgment flicker without CONSULT-III is detected when TCM does not receive the proper voltage signal from the sensor and switch.
- TCM monitors and compares gear position and conditions of each ATF pressure switch when gear is steady.

Possible Cause

NCS00052

- Harness or connectors
  (Solenoid and switch circuit is open or shorted.)
- Low coast brake solenoid valve
- ATF pressure switch 2

DTC Confirmation Procedure

NCS00053

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.
   SLCT LVR POSI: “D” position
6. If DTC is detected, go to AT-142, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Judgment of A/T Interlock

NCS00054

- When A/T Interlock is judged to be malfunctioning, the vehicle should be fixed in 2nd gear, and should be set in a condition in which it can travel.

  NOTE:
  When the vehicle is driven fixed in 2nd gear, a turbine revolution sensor malfunction is displayed, but this is not a turbine revolution sensor malfunction.
- When interlock is detected at the 3rd gear or more, it is locked at the 2nd gear.

Diagnostic Procedure

NCS00055

1. SELF-DIAGNOSIS

With CONSULT-III

1. Drive vehicle.
2. Stop vehicle and turn ignition switch OFF.
3. Turn ignition switch ON.
4. Select “SELF-DIAG RESULTS” mode for “TRANSMISSION” with CONSULT-III.

Without CONSULT-III

1. Drive vehicle.
2. Stop vehicle and turn ignition switch OFF.
3. Turn ignition switch ON.
4. Perform self-diagnosis. Refer to AT-92, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

OK or NG

OK >> GO TO 2.
NG >> Check low coast brake solenoid valve circuit and function. Refer to AT-153, "DTC P1772 LOW COAST BRAKE SOLENOID VALVE" , AT-155, "DTC P1774 LOW COAST BRAKE SOLENOID VALVE FUNCTION" .

2. CHECK DTC

Perform AT-141, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 3.

3. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

DTC P1731 A/T 1ST ENGINE BRAKING

PFP:00000

Description

NCS00056

Fail-safe function to prevent sudden decrease in speed by engine brake other than at M1 position.

CONSULT-III Reference Value

NCS00057

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF
ATF PRES SW 2	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

On Board Diagnosis Logic

NCS00058

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1731 A/T 1ST E/BRAKING” with CONSULT-III or 13th judgment flicker without CONSULT-III is detected under the following conditions.

– When TCM does not receive the proper voltage signal from the sensor.

– When TCM monitors each ATF pressure switch and solenoid monitor value, and detects as irregular when engine brake of 1st gear acts other than at M1 position.

Possible Cause

NCS00059

- Harness or connectors
  (The sensor circuit is open or shorted.)
- Low coast brake solenoid valve
- ATF pressure switch 2

DTC Confirmation Procedure

NCS0005A

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously preformed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “ENGINE SPEED”, “MANU MODE SW” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.
   ENGINE SPEED: 1,200 rpm
   MANU MODE SW: ON
   GEAR: “1” position
6. If DTC is detected, go to AT-144, "Diagnostic Procedure" .

Diagnostic Procedure

NCS0005B

1. CHECK INPUT SIGNALS

With CONSULT-III

1. Start engine.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Drive vehicle in the “M” position (1st gear), and confirm the ON/OFF actuation of “ATF PRES SW 2” and “ON OFF SOL”.

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF
ATF PRES SW 2	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-143, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1752 INPUT CLUTCH SOLENOID VALVE

PFP:31940

Description

NCS0005C

Input clutch solenoid valve is controlled by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.

CONSULT-III Reference Value

NCS0005D

Item name	Condition	Display value (Approx.)
I/C SOLENOID	Input clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Input clutch engaged. Refer to AT-19 .	0 – 0.05 A

On Board Diagnosis Logic

NCS0005E

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1752 I/C SOLENOID/CIRC” with CONSULT-III or 5th judgment flicker CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS0005F

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Input clutch solenoid valve

DTC Confirmation Procedure

NCS0005G

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “ACCELE POSI”, “SLCT LVR POSI” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
   ACCELE POSI: 1.5/8 – 2.0/8
   SLCT LVR POSI: “D” position
   GEAR: “3” ⇒ “4” (I/C ON/OFF)
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
6. If DTC is detected go to “AT-146, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0005H

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “I/C SOLENOID” while driving.

Item name	Condition	Display value (Approx.)
I/C SOLENOID	Input clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Input clutch engaged. Refer to AT-19 .	0 – 0.05 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-145, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1757 FRONT BRAKE SOLENOID VALVE

PFP:31940

Description

NCS0005O

Front brake solenoid valve is controlled by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.

CONSULT-III Reference Value

NCS0005P

Item name	Condition	Display value (Approx.)
FR/B SOLENOID	Front brake engaged. Refer to AT-19 .	0.6 – 0.8 A
	Front brake disengaged. Refer to AT-19 .	0 – 0.05 A

On Board Diagnosis Logic

NCS0005Q

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1757 FR/B SOLENOID/CIRC” with CONSULT-III or 6th judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS0005R

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Front brake solenoid valve

DTC Confirmation Procedure

NCS0005S

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before preforming the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “ACCELE POSI”, “SLCT LVR POSI” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
   ACCELE POSI: 1.5/8 – 2.0/8
   SLCT LVR POSI: “D” position
   GEAR: “3” ⇒ “4” (FR/B ON/OFF)
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
6. If DTC is detected go to AT-148, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0005T

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “FR/B SOLENOID” while driving.

Item name	Condition	Display value (Approx.)
FR/B SOLENOID	Front brake engaged. Refer to AT-19 .	0.6 – 0.8 A
	Front brake disengaged. Refer to AT-19 .	0 – 0.05 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-147, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1762 DIRECT CLUTCH SOLENOID VALVE

PFP:31940

Description

NCS00060

Direct clutch solenoid valve is controlled by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.

CONSULT-III Reference Value

NCS00061

Item name	Condition	Display value (Approx.)
D/C SOLENOID	Direct clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Direct clutch engaged. Refer to AT-19 .	0 – 0.05 A

On Board Diagnosis Logic

NCS00062

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1762 D/C SOLENOID/CIRC” with CONSULT-III or 2nd judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS00063

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Direct clutch solenoid valve

DTC Confirmation Procedure

NCS00064

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “ACCELE POSI”, “SLCT LVR POSI” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
   ACCELE POSI: 1.5/8 – 2.0/8
   SLCT LVR POSI: “D” position
   GEAR: “1” ⇒ “2” (D/C ON/OFF)
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
6. If DTC is detected, go to AT-150, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS00065

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “D/C SOLENOID” while driving.

Item name	Condition	Display value (Approx.)
D/C SOLENOID	Direct clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	Direct clutch engaged. Refer to AT-19 .	0 – 0.05 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-149, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1767 HIGH AND LOW REVERSE CLUTCH SOLENOID VALVE

PFP:31940

Description

NCS0006C

High and low reverse clutch solenoid valve is controlled by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.

CONSULT-III Reference Value

NCS0006D

Item name	Condition	Display value (Approx.)
HLR/C SOL	High and low reverse clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	High and low reverse clutch engaged. Refer to AT-19 .	0 – 0.05 A

On Board Diagnosis Logic

NCS0006E

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1767 HLR/C SOL/CIRC” with CONSULT-III or 8th judgment flicker without CONSULT-III is detected under the following conditions.
  - When TCM detects an improper voltage drop when it tries to operate the solenoid valve.
  - When TCM detects as irregular by comparing target value with monitor value.

Possible Cause

NCS0006F

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- High and low reverse clutch solenoid valve

DTC Confirmation Procedure

NCS0006G

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “ACCELE POSI”, “SLCT LVR POSI” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
   ACCELE POSI: 1.5/8 – 2.0/8
   SLCT LVR POSI: “D” position
   GEAR: “2” ⇒ “3” (HLR/C ON/OFF)
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
6. If DTC is detected, go to AT-152, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0006H

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “HLR/C SOL” while driving.

Item name	Condition	Display value (Approx.)
HLR/C SOL	High and low reverse clutch disengaged. Refer to AT-19 .	0.6 – 0.8 A
	High and low reverse clutch engaged. Refer to AT-19 .	0 – 0.05 A

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK TCM

Perform AT-151, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1772 LOW COAST BRAKE SOLENOID VALVE

PFP:31940

Description

NCS0006O

Low coast brake solenoid valve is turned ON or OFF by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.

CONSULT-III Reference Value

NCS0006P

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

On Board Diagnosis Logic

NCS0006Q

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1772 LC/B SOLENOID/CIRC” with CONSULT-III or 7th judgment flicker without CONSULT-III is detected when TCM detects an improper voltage drop when it tries to operate the solenoid valve.

Possible Cause

NCS0006R

- Harness or connectors
  (Solenoid circuit is open or shorted.)
- Low coast brake solenoid valve

DTC Confirmation Procedure

NCS0006S

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and check monitor “MANU MODE SW” and “GEAR”.
3. Touch “START”.
4. Start engine.
5. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
   MANU MODE SW: ON
   GEAR: “1” or “2” (LC/B ON/OFF)
6. If DTC is detected, go to AT-154, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0006T

1. CHECK INPUT SIGNAL

With CONSULT-III

1. Turn ignition switch ON.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Read out the value of “ON OFF SOL” while driving.

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-153, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1774 LOW COAST BRAKE SOLENOID VALVE FUNCTION

PFP:31940

Description

NCS0006U

- Low coast brake solenoid valve is turned ON or OFF by the TCM in response to signals sent from the PNP switch, vehicle speed sensor and accelerator pedal position sensor (throttle position sensor). Gears will then be shifted to the optimum position.
- This is not only caused by electrical malfunction (circuits open or shorted) but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation.

CONSULT-III Reference Value

NCS0006V

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF
ATF PRES SW 2	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

On Board Diagnosis Logic

NCS0006W

- This is an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1774 LC/B SOLENOID FNCT” with CONSULT-III or 7th judgment flicker without CONSULT-III is detected under the following conditions.

– When TCM detects that actual gear ratio is irregular, and relation between gear position and condition of ATF pressure switch 2 is irregular during depressing accelerator pedal (Other than during shift change)

– When TCM detects that relation between gear position and condition of ATF pressure switch 2 is irregular during releasing accelerator pedal (Other than during shift change)

Possible Cause

NCS0006X

- Harness or connectors
  (The solenoid and switch circuits are open or shorted.)
- Low coast brake solenoid valve
- ATF pressure switch 2

DTC Confirmation Procedure

NCS0006Y

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-III

1. Start engine.
2. Accelerate vehicle to maintain the following conditions.
   MANU MODE SW: ON
   GEAR: “1” or “2” (LC/B ON/OFF)
3. Perform step 2 again.
4. Turn ignition switch OFF, then perform step 1 to 3 again.
5. Check “SELF-DIAG RESULTS” mode for “TRANSMISSION” with CONSULT-III.
   If DTC (P1774) is detected, refer to AT-156, "Diagnostic Procedure" .
   If DTC (P1772) is detected, go to AT-154, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-III”.

Diagnostic Procedure

NCS0006Z

1. CHECK INPUT SIGNALS

With CONSULT-III

1. Start engine.
2. Select “SELECTION FROM MENU” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Drive vehicle in the manual mode (“1” or “2” gear), and confirm the ON/OFF actuation of the “ATF PRES SW 2” and “ON OFF SOL”.

Item name	Condition	Display value
ON OFF SOL	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF
ATF PRES SW 2	Low coast brake engaged. Refer to AT-19 .	ON
	Low coast brake disengaged. Refer to AT-19 .	OFF

OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-155, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

DTC P1815 MANUAL MODE SWITCH

PFP:34901

Description

NCS00070

Manual mode switch is installed in A/T device. It sends manual mode switch, shift up and shift down switch signals to TCM.
TCM sends the switch signals to unified meter and A/C amp. By CAN communication line. Then manual mode switch position is indicated on the A/T position indicator. For inspection, refer to AT-168, "A/T INDICATOR CIRCUIT" .

CONSULT-III Reference Value in Data Monitor Mode

NCS00071

Item name	Condition	Display Value
MANU MODE SW	Manual shift gate position (neutral)	ON
	Other than the above	OFF
NON M-MODE SW	Manual shift gate position	OFF
	Other than the above	ON
UP SW LEVER	Selector lever: + side	ON
	Other than the above	OFF
DOWN SW LEVER	Selector lever: - side	ON
	Other than the above	OFF

On Board Diagnosis Logic

NCS00072

- This is not an OBD-II self-diagnostic item.
- Diagnostic trouble code “P1815 MANU MODE SW/CIRC” with CONSULT-III is detected when TCM monitors Manual mode, Non manual mode, Up or Down switch signal, and detects as irregular when impossible input pattern occurs 1 second or more.

Possible Cause

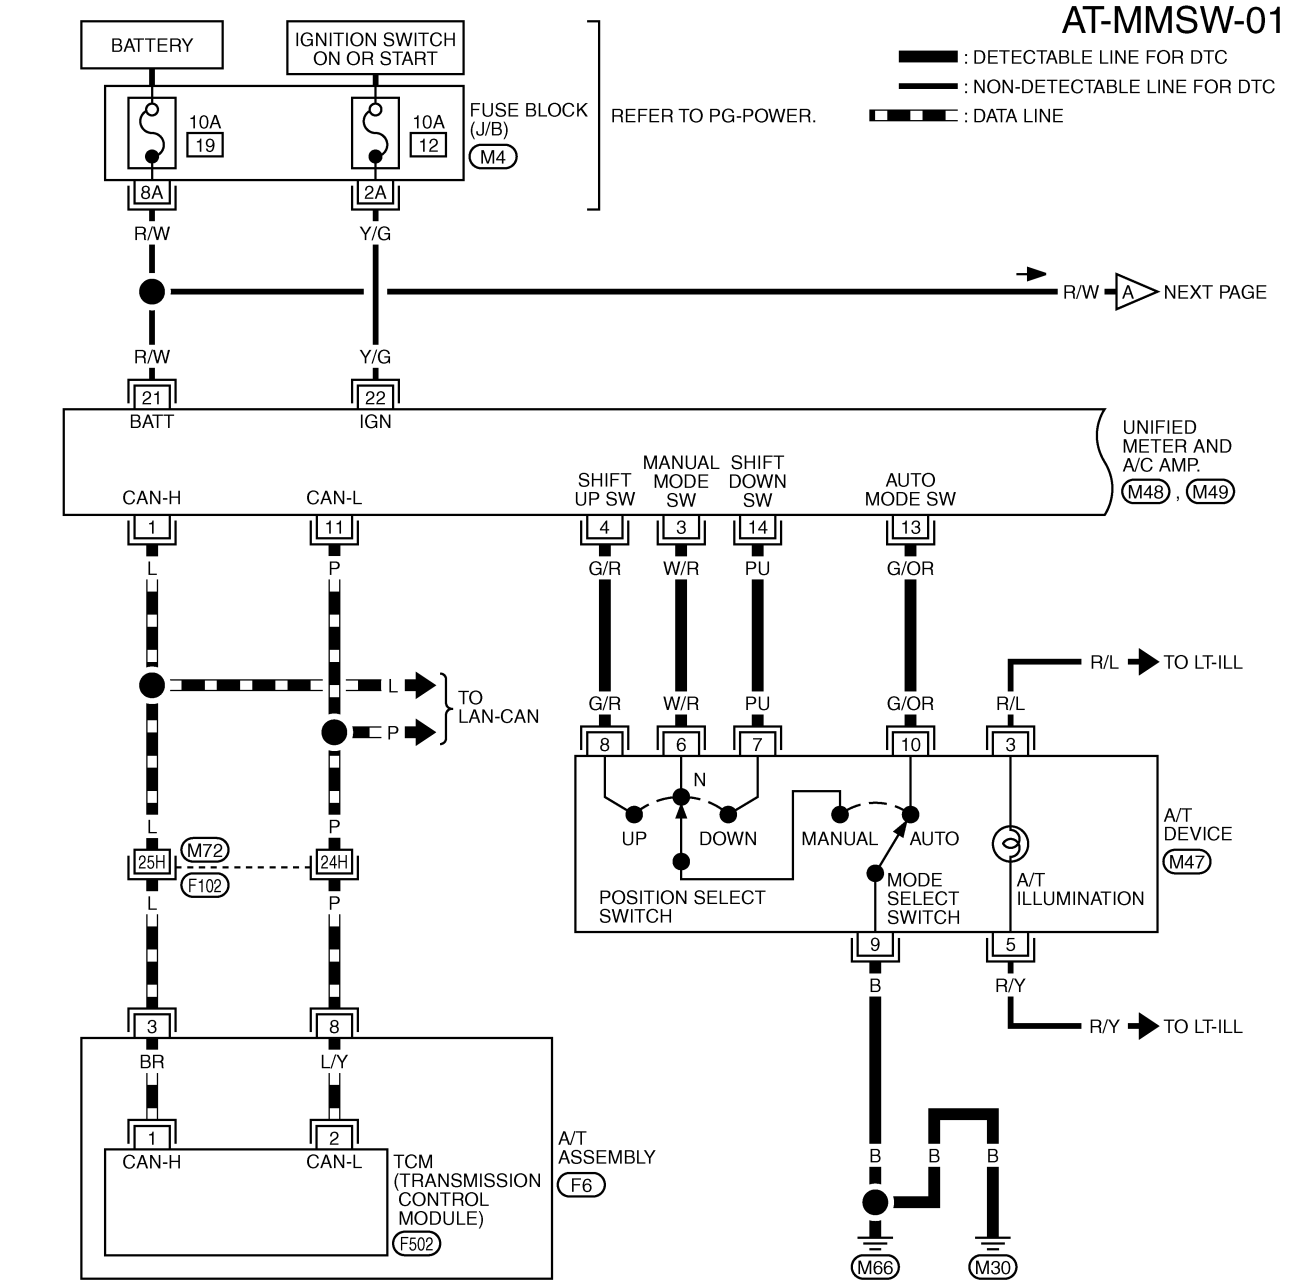
NCS00073

- Harness or connectors
  (These switches circuit is open or shorted.)
- Manual mode select switch (Into control device)
- Manual mode position select switch (Into control device)

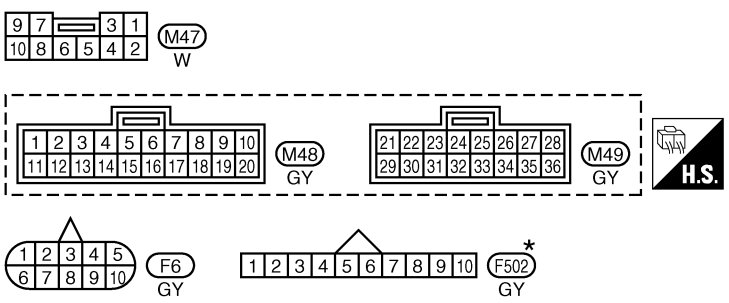
DTC Confirmation Procedure

NCS00074

CAUTION:
Always drive vehicle at a safe speed.



NOTE:
If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.



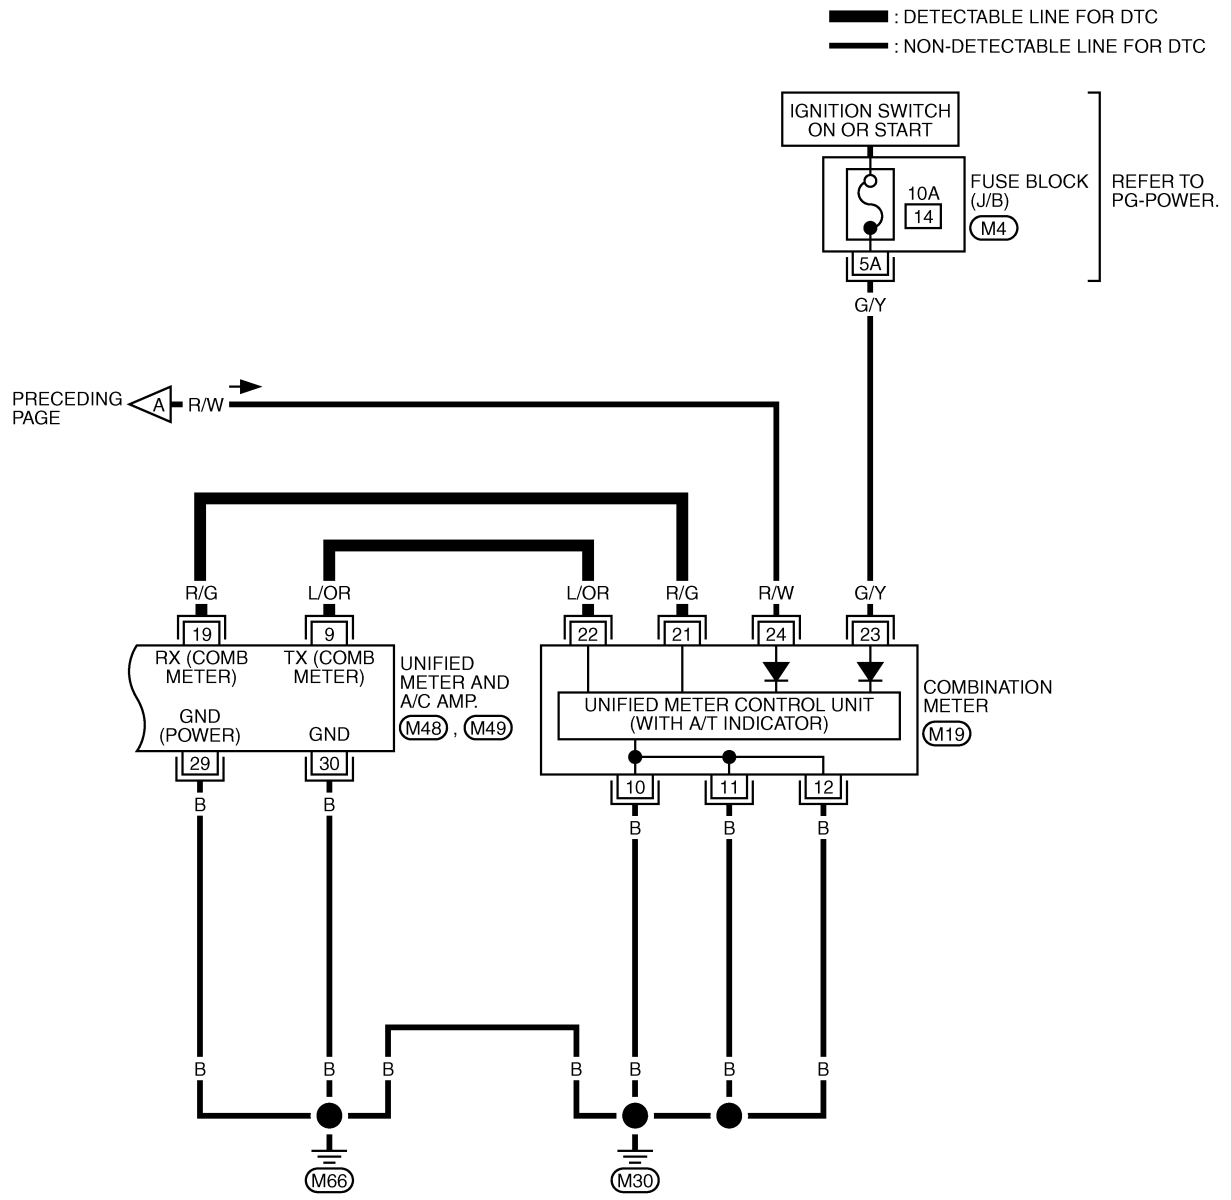
WITH CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Start engine.
4. Move selector lever to “M” position.
5. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.
   MANU MODE SW: ON
6. If DTC is detected, go to AT-160, "Diagnostic Procedure" .

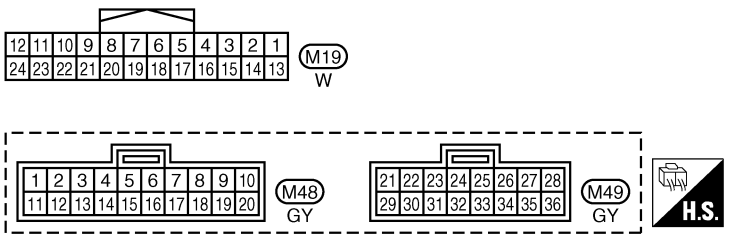
Wiring Diagram — AT — MMSW

NCS00075

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.



REFER TO THE FOLLOWING.



F102 -SUPER MULTIPLE JUNCTION (SMJ)

M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TCWT0439E

AT-MMSW-02

REFER TO THE FOLLOWING.
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TCWM0263E

TCM terminals and data are reference value. Measured between each terminal and ground.

Terminal	Wire color	Item	Condition	Data (Approx.)
3	L	CAN-H	—	—
8	P	CAN-L	—	—

Diagnostic Procedure

NCS00076

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK MANUAL MODE SWITCH CIRCUIT

With CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Read out ON/OFF switching action of “MANU MODE SW”, “NON M-MODE SW”, “UP SW LEVER”, “DOWN SW LEVER”.

Item name	Condition	Display Value
MANU MODE SW	Manual shift gate position (neutral)	ON
	Other than the above	OFF
NON M-MODE SW	Manual shift gate position	OFF
	Other than the above	ON
UP SW LEVER	selector lever: +side	ON
	Other than the above	OFF
DOWN SW LEVER	selector lever: -side	ON
	Other than the above	OFF

Without CONSULT-III

Drive vehicle in the manual mode, and confirm that the actual gear position and the meter's indication of the position mutually coincide when the selector lever is shifted to the “+ (up)” or “- (down)” side (1st ⇔ 5th gear).

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING ITEM

Check the following.

- Manual mode switch. Refer to AT-161, "Component Inspection" .
- Pin terminals for damage or loose connection with harness connector.
- Open circuit or short to ground or short to power in harness or connector for A/T device (manual mode switch).
- Unified meter and A/C amp. Refer to DI-44, "UNIFIED METER AND A/C AMP" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK DTC

Perform AT-157, "DTC Confirmation Procedure" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 5.

5. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

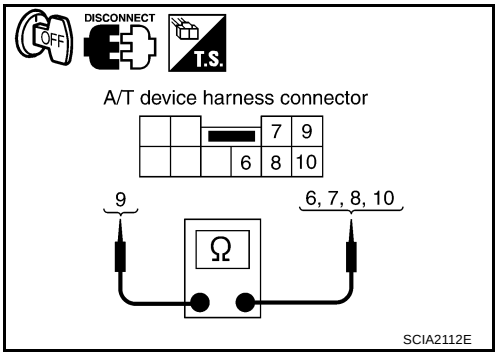
OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
NG >> Repair or replace damaged parts.



Component Inspection

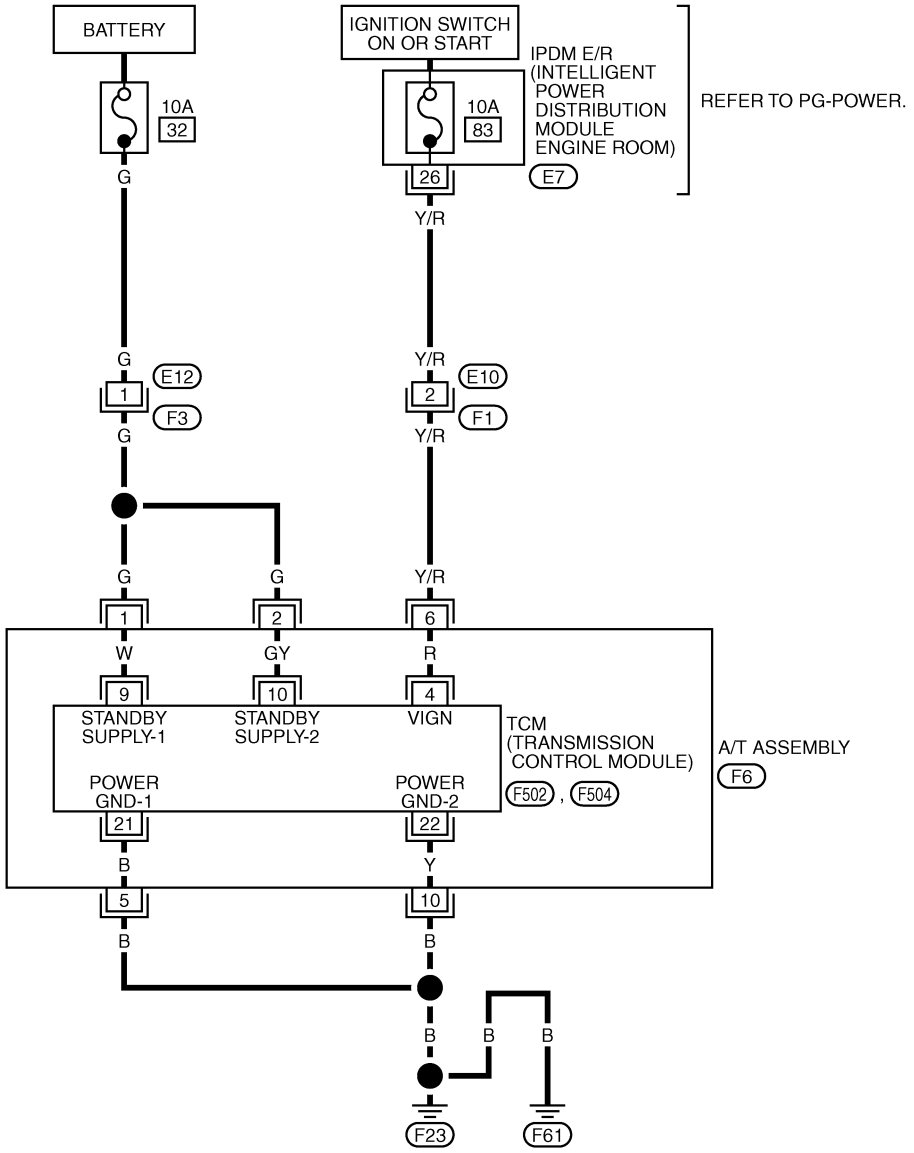
NCS00077

MANUAL MODE SWITCH

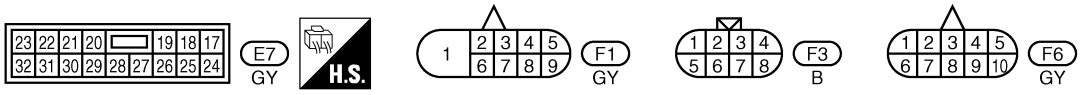
Check continuity between terminals.

Item	Position	Connector	Terminal	Continuity
Manual mode select switch	Auto	M47	9 – 10	Yes
	Manual		6 – 9	
Manual mode position select switch	UP		8 – 9	
	DOWN		7 – 9	

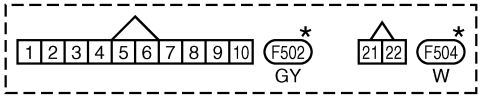
MAIN POWER SUPPLY AND GROUND CIRCUIT



PFP:00100



Wiring Diagram — AT — MAIN



NCS0007W

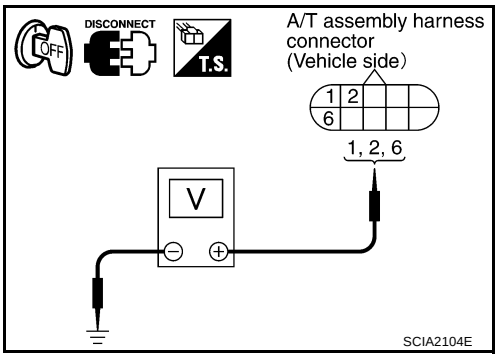
AT-MAIN-01

: DETECTABLE LINE FOR DTC
: NON-DETECTABLE LINE FOR DTC

*: THIS CONNECTOR IS NOT SHOWN IN "HARNESS LAYOUT", PG SECTION.

TCWT0440E

TCM terminals and data are reference value. Measured between each terminal and ground.



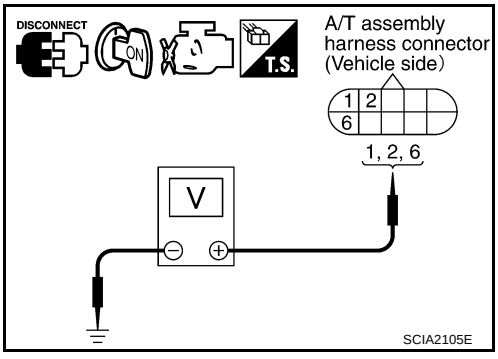
Terminal	Wire color	Item	Condition		Data (Approx.)
1	G	Power supply (Memory back-up)	Always		Battery voltage
2	G	Power supply (Memory back-up)	Always		Battery voltage
5	B	Ground	Always		0 V
6	Y/R	Power supply		—	Battery voltage
				—	0 V
10	B	Ground	Always		0 V

Diagnostic Procedure

NCS0007X

1. CHECK TCM POWER SOURCE STEP 1

1. Turn ignition switch OFF.
2. Disconnect A/T assembly harness connector.
3. Check voltage between A/T assembly harness connector and ground.



Item	Connector	Terminal	Voltage (Approx.)
TCM	F6	1 – Ground	Battery voltage
		2 – Ground	
		6 – Ground	0 V

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK TCM POWER SOURCE STEP 2

1. Disconnect A/T assembly harness connector.
2. Turn ignition switch ON.
3. Check voltage between A/T assembly harness connector and ground.

Item	Connector	Terminal	Voltage (Approx.)
TCM	F6	1 – Ground	Battery voltage
		2 – Ground	
		6 – Ground	

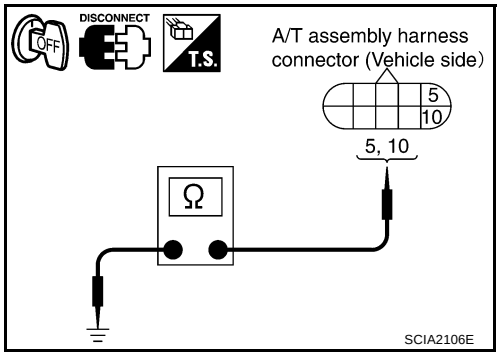
OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING ITEM

Check the following.

- Harness for short or open between battery and A/T assembly harness connector terminals 1, 2
- Harness for short or open between ignition switch and A/T assembly harness connector terminal 6
- 10 A fuse (No. 32, located in the fuse and fusible link block) and 10 A fuse (No. 83, located in the IPDM E/R)
- Ignition switch, Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .



OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect A/T assembly harness connector.
3. Check continuity between A/T assembly harness connector terminals and ground.

Item	Connector	Terminal	Continuity
TCM	F6	5, 10 – Ground	Yes

If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. DETECT MALFUNCTIONING ITEM

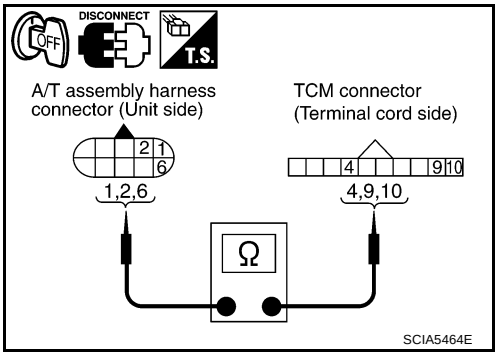
Check A/T assembly harness connector pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. PERFORM SELF-DIAGNOSIS

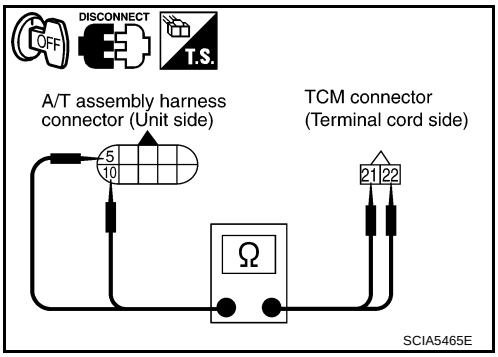
Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .



OK or NG

OK >> **INSPECTION END**
NG-1 >> Self-diagnosis does not activate: GO TO 7.
NG-2 >> DTC is displayed: Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .

7. CHECK TERMINAL CORD ASSEMBLY



1. Remove control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disconnect A/T assembly harness connector and TCM connector.
3. Check continuity between A/T assembly harness connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
A/T assembly harness connector	F6	1	Yes
TCM connector	F502	9	
A/T assembly harness connector	F6	2	Yes
TCM connector	F502	10	
A/T assembly harness connector	F6	6	Yes
TCM connector	F502	4	

4. Check continuity between A/T assembly harness connector terminals and TCM connector terminals.

Item	Connector	Terminal	Continuity
A/T assembly harness connector	F6	5	Yes
TCM connector	F504	21	
A/T assembly harness connector	F6	10	Yes
TCM connector	F504	22	

5. If OK, check harness for short to ground and short to power.

OK or NG

OK >> Replace control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .

NG >> Replace open circuit or short to ground and short to power in harness or connectors.

CLOSED THROTTLE POSITION AND WIDE OPEN THROTTLE POSITION CIRCUIT

PFP:18002

CONSULT-III Reference Value

NCS0007Y

Item name	Condition	Display value
CLSD THL POS	Released accelerator pedal.	ON
	Fully depressed accelerator pedal.	OFF
W/O THL POS	Fully depressed accelerator pedal.	ON
	Released accelerator pedal.	OFF

Diagnostic Procedure

NCS0007Z

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK THROTTLE POSITION SIGNAL CIRCUIT

With CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Depress accelerator pedal and read out the value of “CLSD THL POS” and “W/O THL POS”.

Accelerator Pedal Operation	Monitor Item	
	CLSD THL POS	W/O THL POS
Released	ON	OFF
Fully depressed	OFF	ON

OK or NG

OK >> **INSPECTION END**
NG >> Check the following. If NG, repair or replace damaged parts.

- Perform self-diagnosis for “ENGINE” with CONSULT-III. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
- Open circuit or short to ground or short to power in harness or connectors.
- Pin terminals for damage or loose connection with harness connector.

BRAKE SIGNAL CIRCUIT

PFP:25320

CONSULT-III Reference Value

NCS00080

Item name	Condition	Display value
BRAKE SW	Depressed brake pedal.	ON
	Released brake pedal.	OFF

Diagnostic Procedure

NCS00081

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

Is a malfunction in the CAN communication indicated in the results?

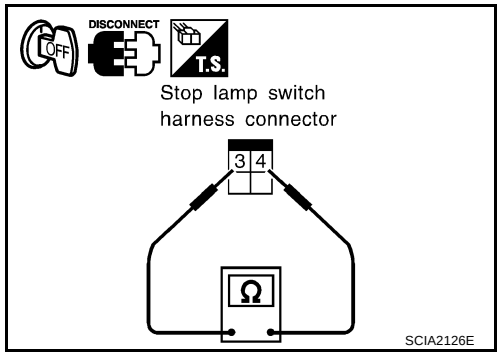
YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK STOP LAMP SWITCH CIRCUIT

With CONSULT-III

1. Turn ignition switch ON.
2. Select “ECU INPUT SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III.
3. Read out ON/OFF switching action of the “BRAKE SW”.

Item name	Condition	Display value
BRAKE SW	Depressed brake pedal.	ON
	Released brake pedal.	OFF



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 3.

3. CHECK STOP LAMP SWITCH

Check continuity between stop lamp switch harness connector E111 terminals 3 and 4. Refer to AT-169, "Wiring Diagram — AT — NON-DTC" .

Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal — refer to BR-7, "BRAKE PEDAL" .

OK or NG

OK >> Check the following. If NG, repair or replace damaged parts.
- Harness for short or open between battery and stop lamp switch.
- Harness for short or open between stop lamp switch and unified meter and A/C amp.
- 10 A fuse (No. 20, located in fuse block).

NG >> Repair or replace the stop lamp switch.

A/T INDICATOR CIRCUIT

PFP:24810

Description

NCS00082

The TCM sends the switch signals to unified meter and A/C amp. By CAN communication line. Then manual mode switch position is indicated on the A/T position indicator.

CONSULT-III Reference Value

NCS00083

Item name	Condition	Display value
GEAR	During driving	1, 2, 3, 4, 5

Diagnostic Procedure

NCS00084

1. CHECK INPUT SIGNALS

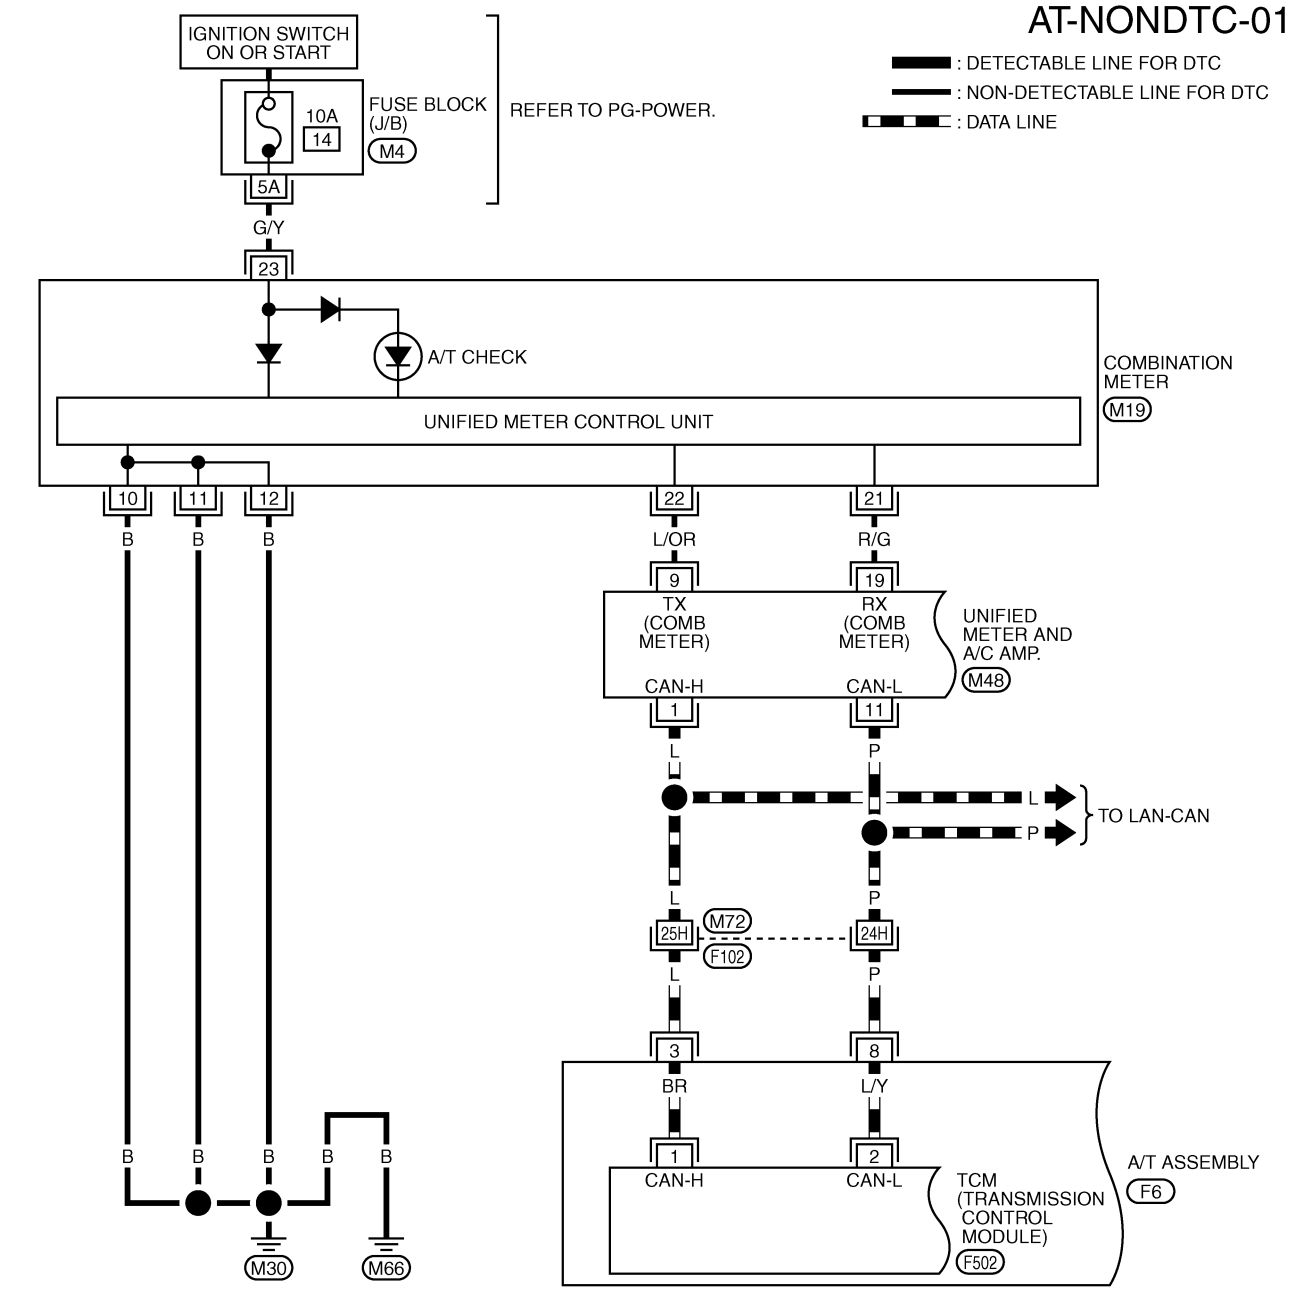
With CONSULT-III

1. Start engine.
2. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “TRANSMISSION” with CONSULT-III and read out the value of “GEAR”.
3. Drive vehicle in the manual mode, and confirm that the actual gear position and the meter's indication of the position mutually coincide when the selector lever is shifted to the “+ (up)” or “- (down)” side (1st ⇔ 5th gear).

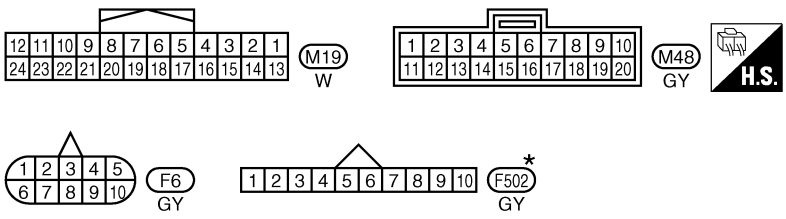
OK or NG

OK >> **INSPECTION END**
NG >> Check the following.

A/T INDICATOR SYMPTOM CHART



Items	Presumed Location of Trouble
The actual gear position does not change, or shifting into the manual mode is not possible (no gear shifting in the manual mode possible). The A/T position indicator is not indicated.	Manual mode switch Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" . A/T main system (Fail-safe function actuated) ● Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .
The actual gear position changes, but the A/T position indicator is not indicated.	Perform the self-diagnosis function. ● Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .
The actual gear position and the indication on the A/T position indicator do not coincide.	Perform the self-diagnosis function. ● Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" .
Only a specific position or positions is/are not indicated on the A/T position indicator.	Check the unified meter and A/C amp. ● Refer to DI-4, "COMBINATION METERS" .



TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

E101 -FUSE BLOCK-JUNCTION BOX (J/B)

TCWT0378E

TCM terminals and data are reference value. Measured between each terminal and ground.

Terminal	Wire color	Item	Condition		Data (Approx.)
3	L	CAN-H	—		—
4	PU/W	K-line (CONSULT-III signal)	The terminal is connected to the data link connector for CONSULT-III.		—
7	Y	Back-up lamp relay		Selector lever in “R” position.	0 V
				Selector lever in other positions.	Battery voltage
8	P	CAN-L	—		—

A/T Check Indicator Lamp Does Not Come On

NCS00086

SYMPTOM:

A/T CHECK indicator lamp does not come on for about 2 seconds when turning ignition switch to ON.

DIAGNOSTIC PROCEDURE

1. CHECK CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is a malfunction in the CAN communication indicated in the results?

YES >> Check CAN communication line. Refer to AT-94, "DTC U1000 CAN COMMUNICATION LINE" .
NO >> GO TO 2.

2. CHECK A/T CHECK INDICATOR LAMP CIRCUIT

Check combination meter. Refer to DI-4, "COMBINATION METERS" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. CHECK TCM POWER SUPPLY AND GROUND CIRCUIT

Check TCM power supply and ground circuit. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

Engine Cannot Be Started in “P” or “N” Position

NCS00087

SYMPTOM:

- **Engine cannot be started with selector lever in “P” or “N” position.**
- **Engine can be started with selector lever in “D” or “R” position.**

DIAGNOSTIC PROCEDURE

1. CHECK PNP SWITCH CIRCUIT

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Do the self-diagnostic results indicate PNP switch?

YES >> Check the malfunctioning system. Refer to AT-102, "DTC P0705 PARK/NEUTRAL POSITION SWITCH" .

NO >> GO TO 2.

2. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 3.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

3. CHECK STARTING SYSTEM

Check starting system. Refer to SC-8, "STARTING SYSTEM" .

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

In “P” Position, Vehicle Moves When Pushed

NCS00088

SYMPTOM:

Even though the selector lever is set in the “P” position, the parking mechanism is not actuated, allowing the vehicle to be moved when it is pushed.

DIAGNOSTIC PROCEDURE

1. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 2.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

2. CHECK PARKING COMPONENTS

Check parking components. Refer to AT-227, "Parking Components" .

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

In “N” Position, Vehicle Moves

NCS00089

SYMPTOM:

Vehicle moves forward or backward when selecting “N” position.

DIAGNOSTIC PROCEDURE

1. CHECK PNP SWITCH CIRCUIT

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Do the self-diagnostic results indicate PNP switch?

YES >> Check the malfunctioning system. Refer to AT-102, "DTC P0705 PARK/NEUTRAL POSITION SWITCH" .

NO >> GO TO 2.

2. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 3.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.

NG >> Refill ATF.

4. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 5.

NG >> Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 67).

5. CHECK SYMPTOM

Check again. Refer to AT-53, "Check at Idle" .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 6.

6. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

Large Shock (“N” to “D” Position)

NCS0008A

SYMPTOM:

A noticeable shock occurs when the selector lever is shifted from the “N” to “D” position.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. ENGINE IDLE SPEED

Check engine idle speed. Refer to EC-76, "Idle Speed and Ignition Timing Check" .

OK or NG

OK >> GO TO 3.

NG >> Adjust engine idle speed. Refer to EC-76, "Idle Speed and Ignition Timing Check" .

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 5.

NG >> Refill ATF.

5. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 8.

NG - 1 >> Line pressure high: GO TO 6.

NG - 2 >> Line pressure low: GO TO 7.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

– Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 8.

NG >> Repair or replace damaged parts.

7. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

8. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 1).

OK or NG

OK >> GO TO 10.
NG >> Repair or replace damaged parts.

10. CHECK SYMPTOM

Check again. Refer to AT-53, "Check at Idle" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 11.

11. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

Vehicle Does Not Creep Backward in “R” Position

NCS0008B

SYMPTOM:

The vehicle does not creep in the “R” position. Or an extreme lack of acceleration is observed.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 3.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.

NG >> Refill ATF.

4. CHECK STALL TEST

Check stall revolution with selector lever in “M” and “R” positions.
Refer to AT-49, "STALL TEST" .

OK or NG

OK >> GO TO 6.

OK in “M” position, NG in “R” position>>GO TO 5.

NG in both “M” and “R” positions>>GO TO 8.

5. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
2. Check the following.

- Reverse brake. Refer to AT-255, "Disassembly" .

OK or NG

OK >> GO TO 9.

NG >> Repair or replace damaged parts.

6. CHECK LINE PRESSURE

Check line pressure with the engine idling. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 9.

NG - 1 >> Line pressure high. GO TO 7.

NG - 2 >> Line pressure low. GO TO 8.

7. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

8. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

9. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 13.

10. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 43).

OK or NG

OK >> GO TO 11.
NG >> Repair or replace damaged parts.

11. CHECK SYMPTOM

Check again. Refer to AT-53, "Check at Idle" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 12.

12. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

13. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 43).

OK or NG

OK >> GO TO 11.
NG >> Repair or replace damaged parts.

Vehicle Does Not Creep Forward in “D” Position

NCS0008C

SYMPTOM:

Vehicle does not creep forward when selecting “D” position.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 2.

2. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 3.
NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.
NG >> Refill ATF.

4. CHECK STALL TEST

Check stall revolution with selector lever in “D” position. Refer to AT-49, "STALL TEST" .

OK or NG

OK >> GO TO 5.
NG >> GO TO 7.

5. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 8.
NG - 1 >> Line pressure high. GO TO 6.
NG - 2 >> Line pressure low. GO TO 7.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

7. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

8. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 9.
NG >> GO TO 12.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 43).

OK or NG

OK >> GO TO 10.
NG >> Repair or replace damaged parts.

10. CHECK SYMPTOM

Check again. Refer to AT-53, "Check at Idle" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 11.

11. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

12. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 43).

OK or NG

OK >> GO TO 10.
NG >> Repair or replace damaged parts.

Vehicle Cannot Be Started from D1

NCS0008D

SYMPTOM:

Vehicle cannot be started from D1 on cruise test - Part 1.

DIAGNOSTIC PROCEDURE

1. CHECK SYMPTOM

Check if vehicle creeps in “R” position.

OK or NG

OK >> GO TO 2.
NG >> Refer to AT-177, "Vehicle Does Not Creep Backward in “R” Position" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III"

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK ACCELERATOR POSITION SENSOR

Check accelerator pedal position sensor. Refer to AT-131, "DTC P1705 THROTTLE POSITION SENSOR"

OK or NG

OK >> GO TO 4.
NG >> Repair or replace accelerator pedal position sensor.

4. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 5.
NG >> Refill ATF.

5. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 8.
NG - 1 >> Line pressure high. GO TO 6.
NG - 2 >> Line pressure low. GO TO 7.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

7. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

8. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 9.
NG >> GO TO 12.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 23).

OK or NG

OK >> GO TO 10.
NG >> Repair or replace damaged parts.

10. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 11.

11. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

12. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 23).

OK or NG

OK >> GO TO 10.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_1 \rightarrow D_2$

NCS0008E

SYMPTOM:

The vehicle does not shift-up from the D_1 to D_2 gear at the specified speed.

DIAGNOSTIC PROCEDURE

1. CHECK SYMPTOM

Check if vehicle creeps forward in “D” position and vehicle can be started from D_1.

OK or NG

OK >> GO TO 2.
NG >> Refer to AT-179, "Vehicle Does Not Creep Forward in “D” Position" , AT-181, "Vehicle Cannot Be Started from D_1" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.
NG >> Refill ATF.

4. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 7.
NG - 1 >> Line pressure high. GO TO 5.
NG - 2 >> Line pressure low. GO TO 6.

5. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following items:

– Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 8.
NG >> GO TO 11.

8. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 10).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

9. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 10.

10. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

11. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 10).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_2 \rightarrow D_3$

NCS0008F

SYMPTOM:

The vehicle does not shift-up from D_2 to D_3 gear at the specified speed.

DIAGNOSTIC PROCEDURE

1. CHECK SYMPTOM

Check if vehicle creeps forward in “D” position and vehicle can be started from D_1.

OK or NG

OK >> GO TO 2.
NG >> Refer to AT-179, "Vehicle Does Not Creep Forward in “D” Position" , AT-181, "Vehicle Cannot Be Started from D_1" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.
NG >> Refill ATF.

4. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 7.
NG - 1 >> Line pressure high. GO TO 5.
NG - 2 >> Line pressure low. GO TO 6.

5. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 8.
NG >> GO TO 11.

8. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 11).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

9. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 10.

10. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

11. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 11).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_3 \rightarrow D_4$

NCS0008G

SYMPTOM:

The vehicle does not shift-up from the D_3 to D_4 gear at the specified speed.

DIAGNOSTIC PROCEDURE

1. CHECK SYMPTOM

Check if vehicle creeps forward in “D” position and vehicle can be started from D_1.

OK or NG

OK >> GO TO 2.
NG >> Refer to AT-179, "Vehicle Does Not Creep Forward in “D” Position" , AT-181, "Vehicle Cannot Be Started from D_1" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.
NG >> Refill ATF.

4. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 7.
NG - 1 >> Line pressure high. GO TO 5.
NG - 2 >> Line pressure low. GO TO 6.

5. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 8.
NG >> GO TO 11.

8. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 12).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

9. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" , AT-57, "Cruise Test — Part 2" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 10.

10. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

11. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 12).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_4 \rightarrow D_5$

NCS0008H

SYMPTOM:

- **The vehicle does not shift-up from the D_4 to D_5 gear at the specified speed.**
- **The vehicle does not shift-up from the D_4 to D_5 gear unless A/T is warmed up.**

DIAGNOSTIC PROCEDURE

1. CHECK SYMPTOM

Check if vehicle creeps forward in “D” position and vehicle can be started from D_1.

OK or NG

OK >> GO TO 2.
NG >> Refer to AT-179, "Vehicle Does Not Creep Forward in “D” Position" , AT-181, "Vehicle Cannot Be Started from D_1" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 4.
NG >> Refill ATF.

4. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 7.
NG - 1 >> Line pressure high. GO TO 5.
NG - 2 >> Line pressure low. GO TO 6.

5. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

– Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

6. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 8.
NG >> GO TO 11.

8. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 13).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

9. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 10.

10. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

11. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 13).

OK or NG

OK >> GO TO 9.
NG >> Repair or replace damaged parts.

A/T Does Not Lock-up

NCS0008I

SYMPTOM:

A/T does not lock-up at the specified speed.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.

NG >> Refill ATF.

3. CHECK LINE PRESSURE

Check line pressure at the engine stall point. Refer to AT-50, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 6.

NG - 1 >> Line pressure high. GO TO 4.

NG - 2 >> Line pressure low. GO TO 5.

4. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .

OK or NG

OK >> GO TO 6.

NG >> Repair or replace damaged parts.

5. DETECT MALFUNCTIONING ITEM

1. Check control valve with TCM. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Disassemble A/T. Refer to AT-255, "DISASSEMBLY" .
3. Check the following.

- Oil pump assembly. Refer to AT-271, "Oil Pump" .
- Power train system. Refer to AT-255, "DISASSEMBLY" .
- Transmission case. Refer to AT-255, "DISASSEMBLY" .

OK or NG

OK >> GO TO 6.

NG >> Repair or replace damaged parts.

6. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 10.

7. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 24).

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

8. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 9.

9. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

10. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 24).

OK or NG

OK >> GO TO 8.
NG >> Repair or replace damaged parts.

A/T Does Not Hold Lock-up Condition

NCS0008J

SYMPTOM:

The lock-up condition cannot be maintained for more than 30 seconds.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.

NG >> Refill ATF.

3. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 4.

NG >> GO TO 7.

4. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 25).

OK or NG

OK >> GO TO 5.

NG >> Repair or replace damaged parts.

5. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 6.

6. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

7. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 25).

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Lock-up Is Not Released

NCS0008K

SYMPTOM:

The lock-up condition cannot be cancelled even after releasing the accelerator pedal.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 2.

2. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 3.

3. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

Engine Speed Does Not Return to Idle

NCS0008L

SYMPTOM:

When a shift-down is performed, the engine speed does not smoothly return to the idling speed.

DIAGNOSTIC PROCEDURE

1. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 2.
NG >> Refill ATF.

2. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III"

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 3.

3. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 7.

4. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 72).

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK SYMPTOM

Check again. Refer to AT-55, "Cruise Test — Part 1" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 6.

6. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

7. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 72).

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Cannot Be Changed to Manual Mode

NCS0008M

SYMPTOM:

Does not change to manual mode when manual shift gate is used.

DIAGNOSTIC PROCEDURE

1. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace damaged parts.

2. CHECK SELF-DIAGNOSIS RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> **INSPECTION END**

A/T Does Not Shift: 5th Gear → 4th Gear

NCS0008N

SYMPTOM:

When shifted from M_5 to M_4 position in manual mode, does not downshift from 5th to 4th gear.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.
NG >> Refill ATF.

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.
NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 9.

6. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 47).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again. Refer to AT-58, "Cruise Test — Part 3" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 8.

8. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 47).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: 4th Gear → 3rd Gear

NCS0008O

SYMPTOM:

When shifted from M4 to M3 position in manual mode, does not downshift from 4th to 3rd gear.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.

NG >> Refill ATF.

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 5.

NG >> Repair or replace damaged parts.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 6.

NG >> GO TO 9.

6. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 48).

OK or NG

OK >> GO TO 7.

NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again. Refer to AT-58, "Cruise Test — Part 3" .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 8.

8. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 48).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: 3rd Gear → 2nd Gear

NCS0008P

SYMPTOM:

When shifted from M_3 to M_2 position in manual mode, does not downshift from 3rd to 2nd gear.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-86, "SELF-DIAGNOSTIC RESULT MODE" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.
NG >> Refill ATF.

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.
NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 9.

6. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 49).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again. Refer to AT-58, "Cruise Test — Part 3" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 8.

8. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 49).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: 2nd Gear → 1st Gear

NCS0008Q

SYMPTOM:

When shifted from M_2 to M_1 position in manual mode, does not downshift from 2nd to 1st gear.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .

NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.

NG >> Refill ATF.

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.

NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 5.

NG >> Repair or replace damaged parts.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 6.

NG >> GO TO 9.

6. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 50).

OK or NG

OK >> GO TO 7.

NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again. Refer to AT-58, "Cruise Test — Part 3" .

OK or NG

OK >> **INSPECTION END**

NG >> GO TO 8.

8. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 50).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

Vehicle Does Not Decelerate by Engine Brake

NCS0008R

SYMPTOM:

No engine brake is applied when the gear is shifted from the 2nd to 1st gear.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-92, "Diagnostic Procedure Without CONSULT-III" .

Is any malfunction detected by self-diagnostic results?

YES >> Check the malfunctioning system. Refer to AT-86, "SELF-DIAGNOSTIC RESULT MODE" , AT-93, "Judgment Self-diagnosis Code" .
NO >> GO TO 2.

2. CHECK A/T FLUID LEVEL

Check A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

OK or NG

OK >> GO TO 3.
NG >> Refill ATF.

3. CHECK A/T POSITION

Check A/T position. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 4.
NG >> Adjust A/T position. Refer to AT-206, "Adjustment of A/T Position" .

4. MANUAL MODE SWITCH

Check manual mode switch. Refer to AT-157, "DTC P1815 MANUAL MODE SWITCH" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan. Refer to AT-215, "Control Valve with TCM and A/T Fluid Temperature Sensor 2" .
2. Check A/T fluid condition. Refer to AT-49, "A/T Fluid Condition Check" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 9.

6. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 58).

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again. Refer to AT-58, "Cruise Test — Part 3" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 8.

8. CHECK TCM

1. Check TCM input/output signals. Refer to AT-83, "TCM Input/Output Signal Reference Values" .
2. If NG, recheck A/T assembly harness connector terminals for damage or loose connection with harness connector.

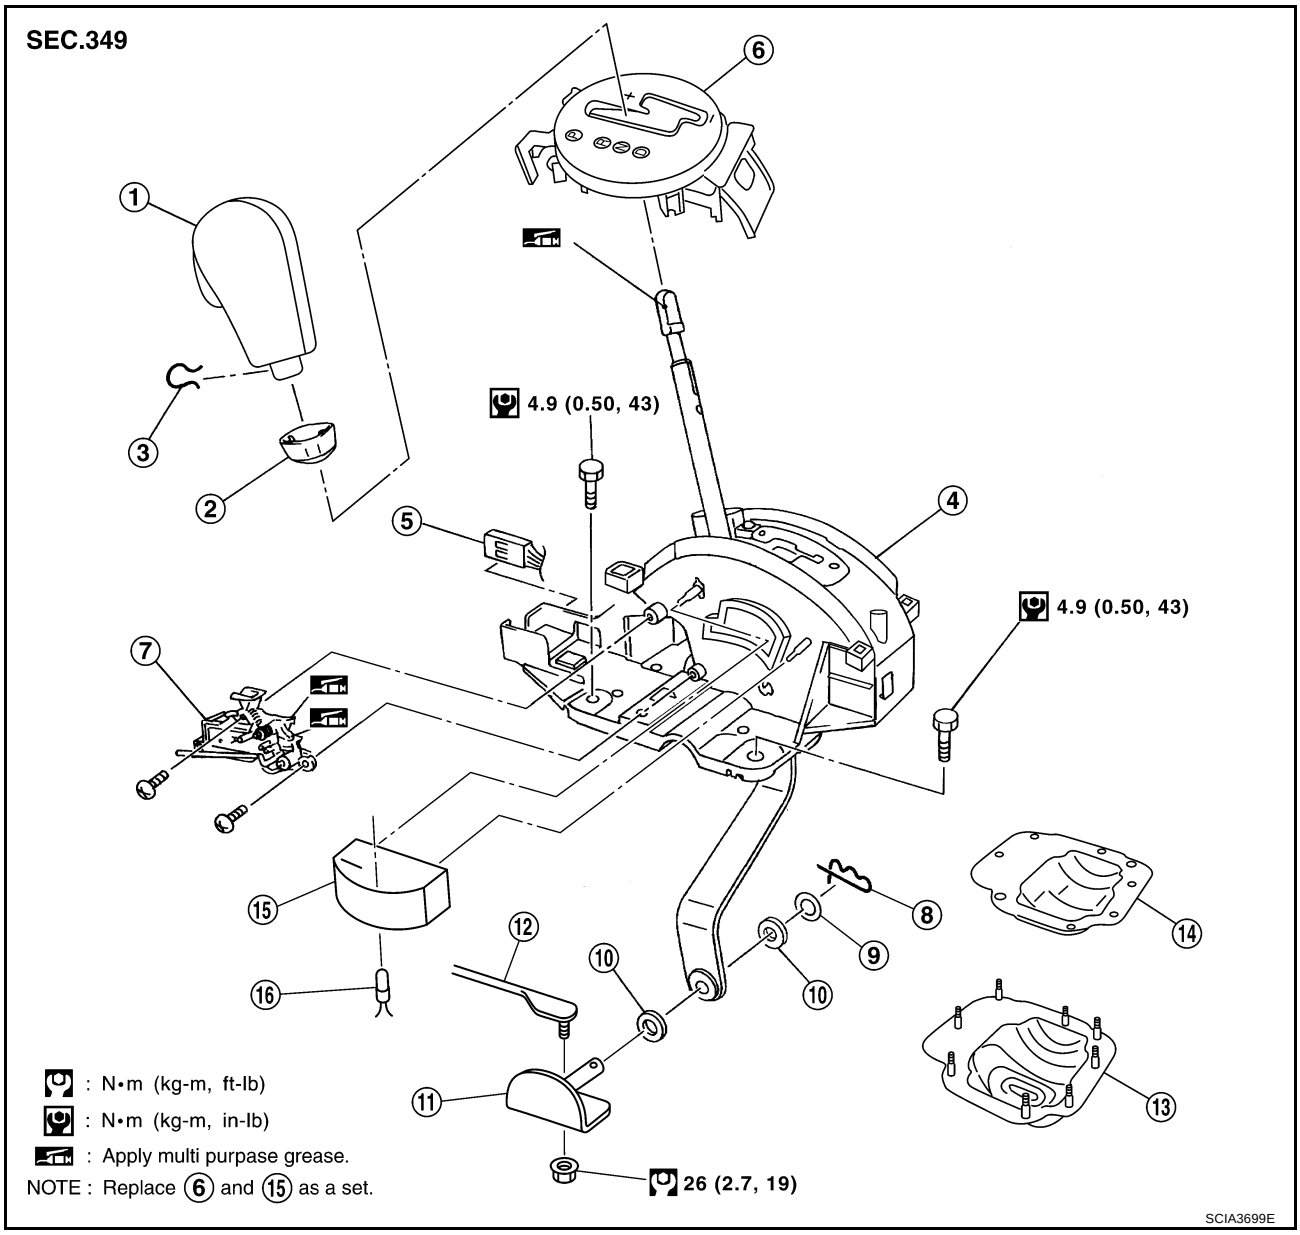
OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

9. DETECT MALFUNCTIONING ITEM

Check the malfunction items. If any items are damaged, repair or replace damaged parts. Refer to AT-59, "Symptom Chart" (Symptom No. 58).

OK or NG



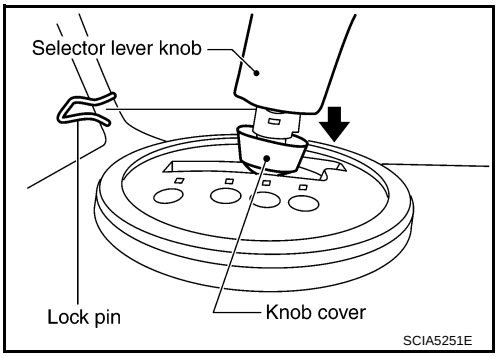
OK >> GO TO 7.
NG >> Repair or replace damaged parts.

SHIFT CONTROL SYSTEM

PFP:34901

Control Device Removal and Installation

NCS0008S



1. Selector lever knob	2. Knob cover	3. Lock pin
4. Control device assembly	5. A/T device harness connector	6. Position indicator plate
7. Shift lock solenoid and park position switch assembly	8. Snap pin	9. Conical washer
10. Plain washer	11. Bracket	12. Control rod
13. Dust cover	14. Dust cover plate	15. Bulb case
16. Position lamp		

REMOVAL

CAUTION:

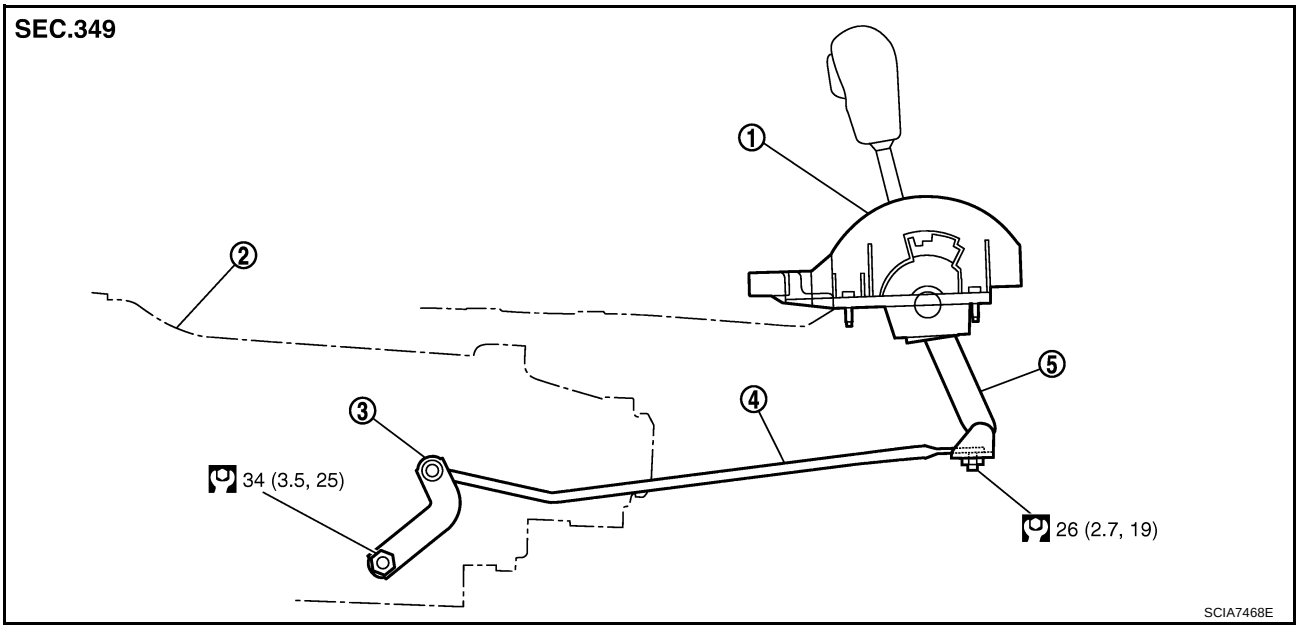
Make sure that parking brake is applied before removal/installation.

1. Disconnect lower lever of control device and control rod.
2. Remove knob cover below selector lever downward.
3. Pull lock pin out of selector lever knob.
4. Remove selector lever knob.
5. Remove console finisher (A/T ring) and console finisher (A/T). Refer to IP-10, "Component Parts Drawing" .
6. Remove center console. Refer to IP-10, "Component Parts Drawing" .
7. Remove key interlock cable from control device. Refer to AT-213, "Removal and Installation" .
8. Disconnect A/T device harness connector.
9. Remove control device assembly.

CAUTION:

Do not impact, or damage propeller shaft tube.

INSTALLATION



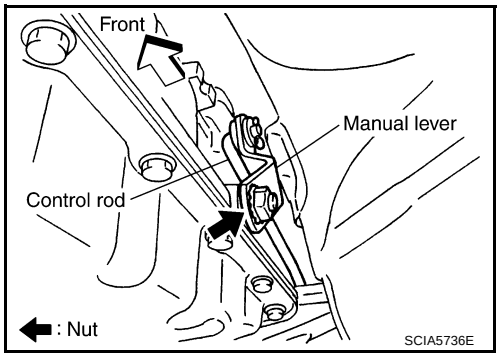
Note the following, and install in the reverse order of removal.

- After installation is completed, adjust and check A/T position. Refer to AT-206, "Adjustment of A/T Position" , AT-206, "Checking of A/T Position" .

Control Rod Removal and Installation

NCS0008T

CONTROL ROD COMPONENTS



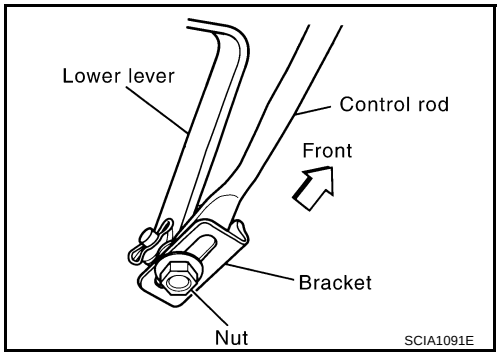
1. Control device assembly
2. A/T
3. Manual lever
4. Control rod
5. Lower lever

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

REMOVAL

1. Disconnect lower lever of control device and control rod.
2. Remove manual lever from A/T.
3. Remove control rod from vehicle.

INSTALLATION

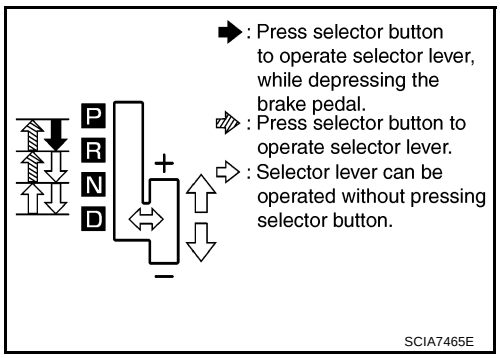


Note the following, and install in the reverse order of removal.

- After installation is completed, adjust and check A/T position. Refer to AT-206, "Adjustment of A/T Position" and AT-206, "Checking of A/T Position" .

Adjustment of A/T Position

NCS0008U



1. Loosen nut of control rod.
2. Place PNP switch and selector lever in “P” position.
3. While pressing lower lever toward rear of vehicle (in “P” position direction), tighten nut to the specified torque. Refer toAT-205, "CONTROL ROD COMPONENTS"

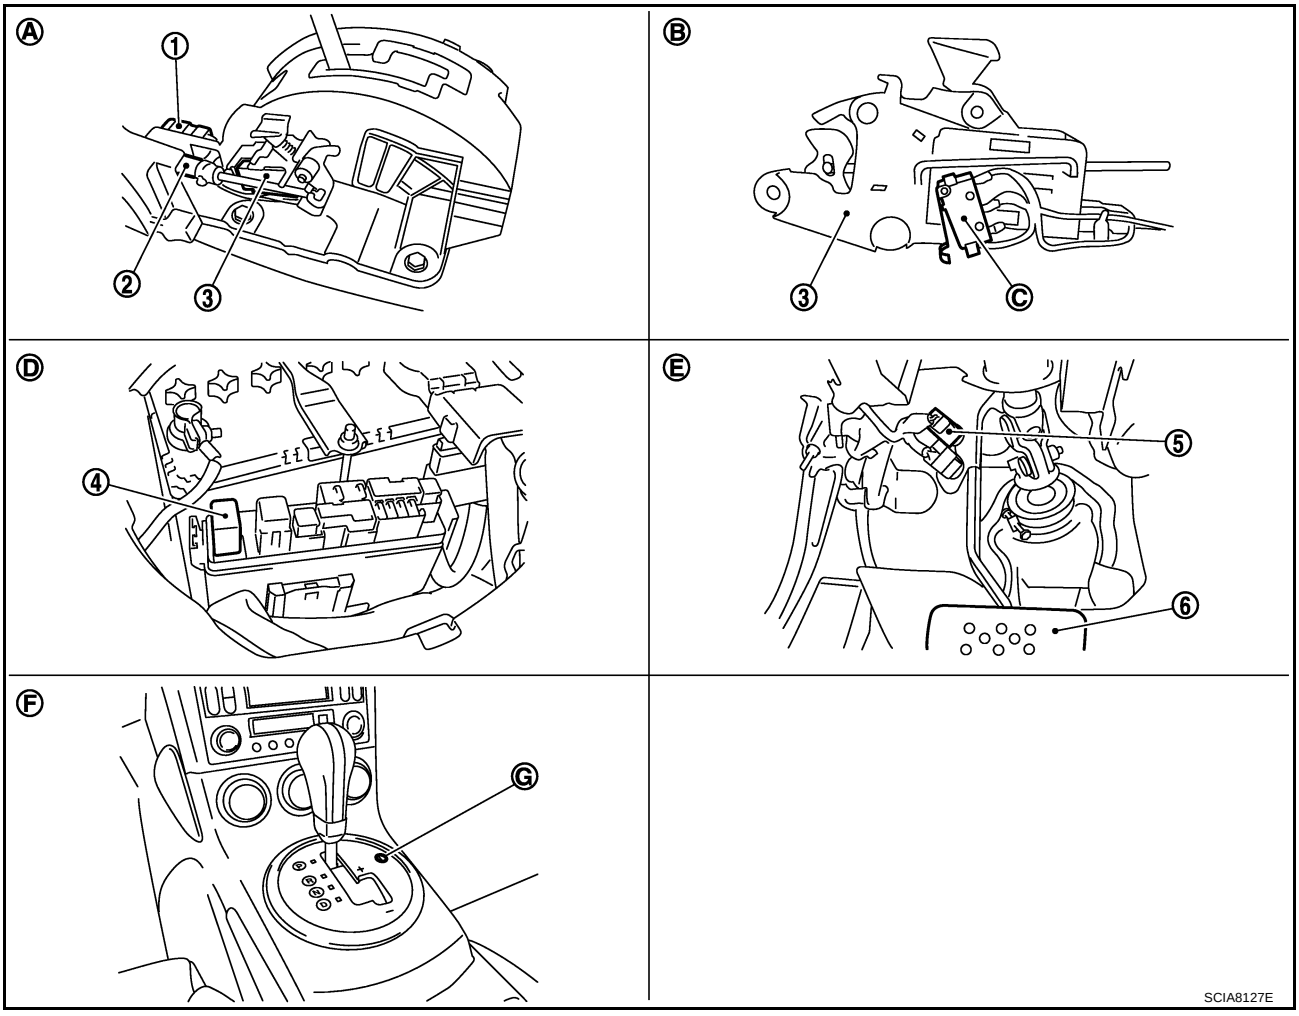
Checking of A/T Position

NCS0008V

1. Place selector lever in “P” position, and turn ignition switch ON.
2. Make sure that selector lever can be shifted to other than “P” position when brake pedal is depressed. Also make sure that selector lever can be shifted from “P” position only when brake pedal is depressed.
3. Move the selector lever and check for excessive effort, sticking, noise or rattle.
4. Confirm the selector lever stops at each position with the feel of engagement when it is moved through all the positions. Check whether or not the actual position the selector lever is in matches the position shown by the shift position indicator and the transmission body.
5. The method of operating the lever to individual positions correctly should be as shown in the figure.
6. When selector button is pressed in “P”, “R”, or “N” position without applying forward/backward force to selector lever, check button operation for sticking.
7. Confirm the back-up lamps illuminate only when lever is placed in the “R” position. Confirm the back-up lamps does not illuminate when selector lever is pushed against “R” position in the “P” or “N” position.
8. Confirm the engine can only be started with the selector lever in the “P” and “N” positions. (With selector lever in the “P” position, engine can be started even when selector lever is moved forward and backward.)
9. Make sure that transmission is locked completely in “P” position.
10. When selector lever is set to manual shift gate, make sure that manual mode is displayed on combination meter.
    Shift selector lever to “+” and “-” sides, and check that set shift position changes.

A/T SHIFT LOCK SYSTEM

PFP:34950

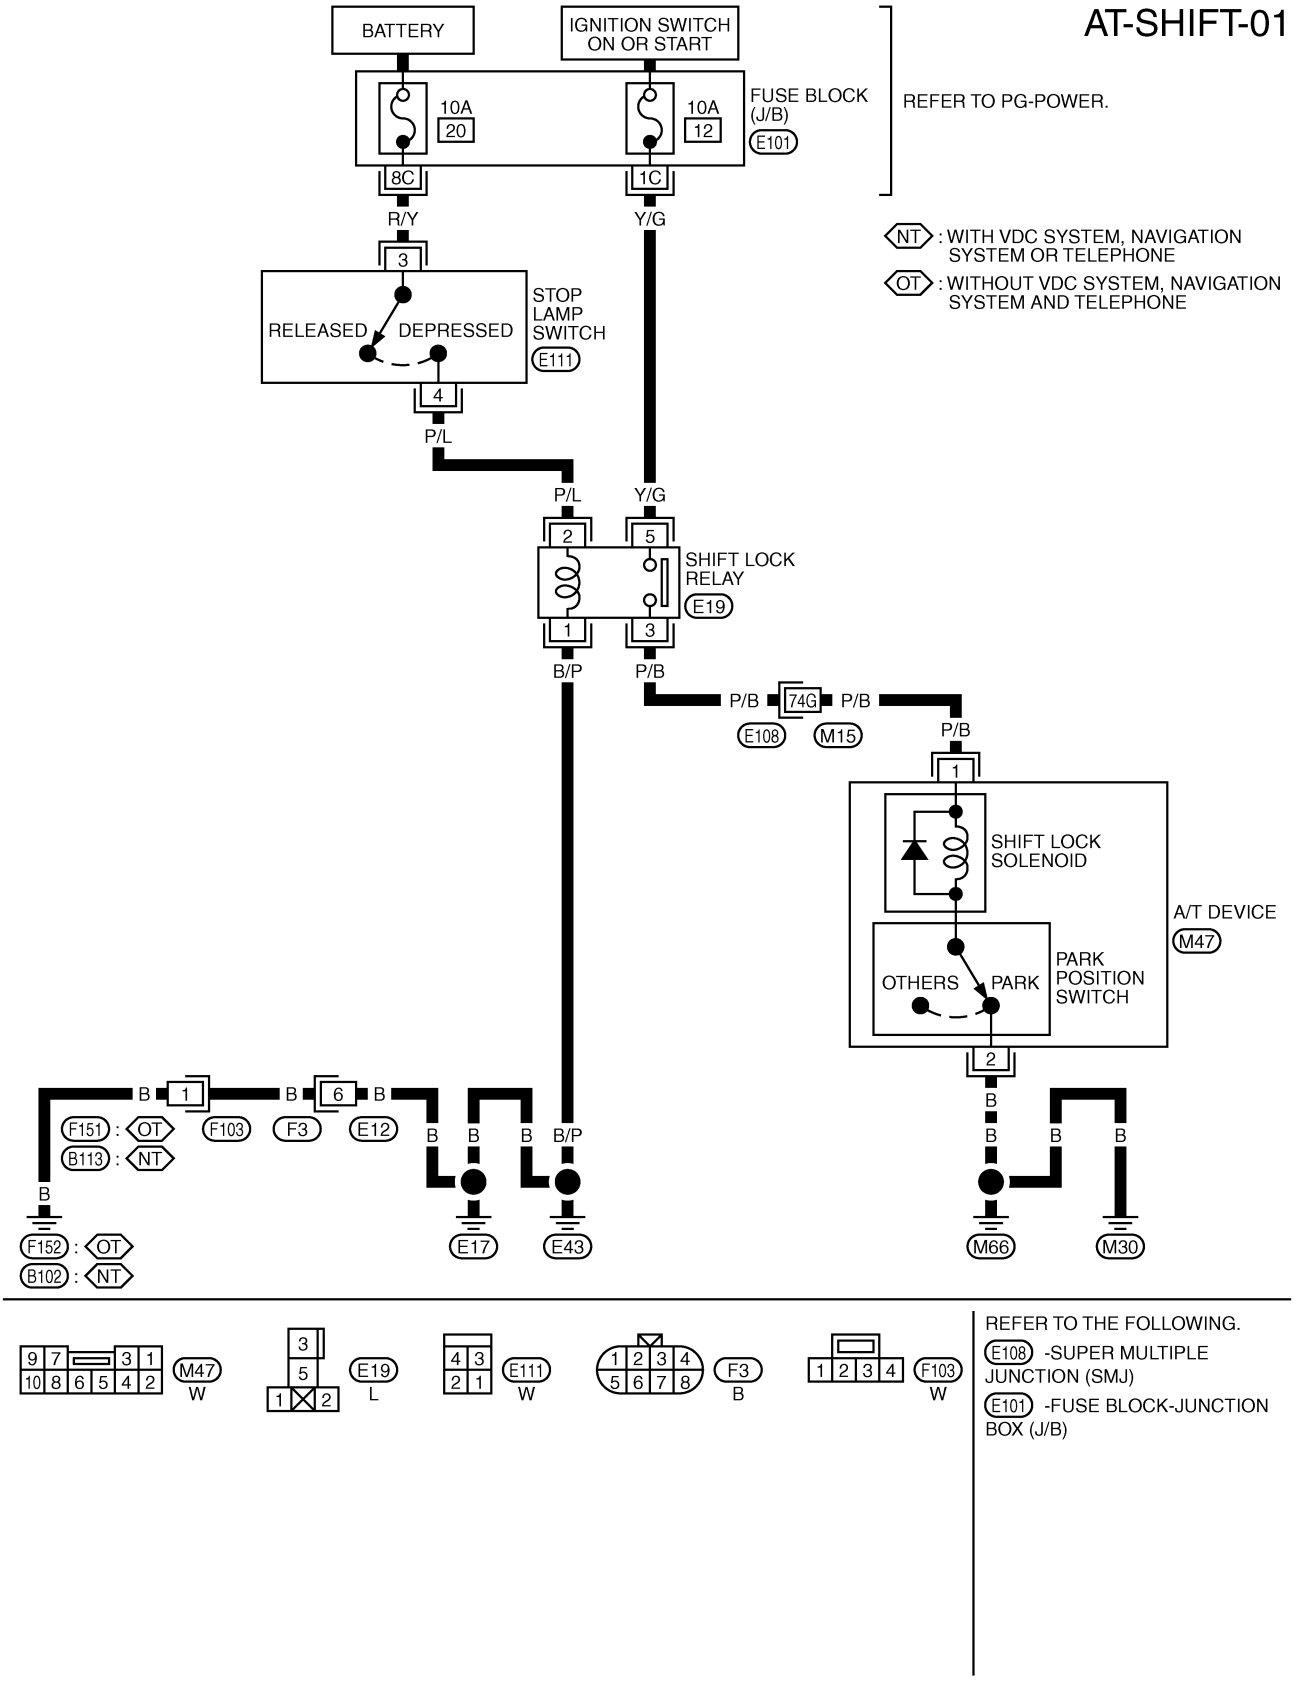


Description

NCS0008W

- The mechanical key interlock mechanism also operates as a shift lock:
  With the ignition switch turned to ON, the selector lever cannot be shifted from “P” position to any other position unless the brake pedal is depressed.
  With the key removed, the selector lever cannot be shifted from “P” position to any other position.
  The key cannot be removed unless the selector lever is placed in “P” position.
- The shift lock and key interlock mechanisms are controlled by the ON-OFF operation of the shift lock solenoid and by the operation of the rotator and slider located inside the key cylinder.

Shift Lock System Electrical Parts Location



NCS001RP

1. A/T device harness connector
2. Key inter lock cable
3. Shift lock solenoid
4. Shift lock relay
5. Stop lamp switch
6. Brake pedal
A. Control device assembly
B. Shift lock solenoid, revers side
C. Park position switch
D. Fuse, fusible link and relay box
E. Brake pedal, upper
F. A/T console finisher
G. Shift lock release button

Wiring Diagram — AT — SHIFT

NCS0008Y

TCWT0443E

Diagnostic Procedure

NCS0008Z

SYMPTOM 1:

- **Selector lever cannot be moved from “P” position with key in ON position and brake pedal applied.**
- **Selector lever can be moved from “P” position with key in ON position and brake pedal released.**
- **Selector lever can be moved from “P” position when key is removed from key cylinder.**

SYMPTOM 2:

- **Ignition key cannot be removed when selector lever is set to “P” position.**
- **Ignition key can be removed when selector lever is set to any position except “P” position.**

1. CHECK KEY INTERLOCK CABLE

Check the key interlock cable for damage.

OK or NG

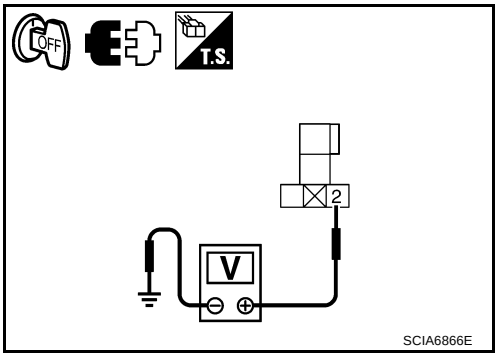
OK >> GO TO 2.
NG >> Replace key interlock cable. Refer to AT-212, "KEY INTERLOCK CABLE" .

2. CHECK SELECTOR LEVER POSITION

Check the selector lever position for damage. Refer to AT-206, "Checking of A/T Position" .

OK or NG

OK >> GO TO 3.
NG >> Check selector lever. Refer to AT-206, "Adjustment of A/T Position" .



3. CHECK POWER SOURCE

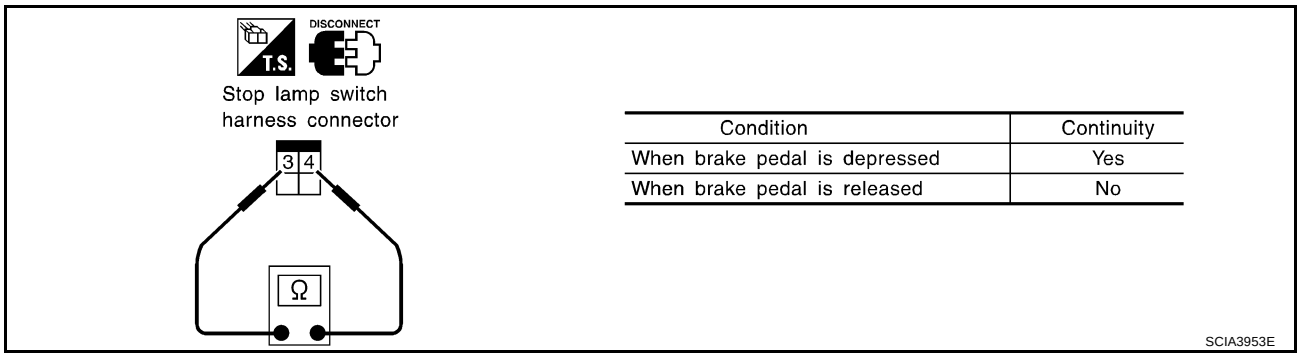
1. Turn ignition switch OFF.
2. Disconnect shift lock relay.
3. Check voltage between shift lock relay E19 terminal 2 and ground.

Voltage

Brake pedal depressed: Battery voltage

Brake pedal released: 0 V

OK or NG



OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING ITEM

Check the following.

- Harness for short or open between battery and stop lamp switch harness connector E111 terminal 3.
- Harness for short or open between stop lamp switch harness connector E111 terminal 4 and shift lock relay E19 terminal 2.
- 10 A fuse [No. 20, located in the fuse block (J/B)].
- Stop lamp switch.

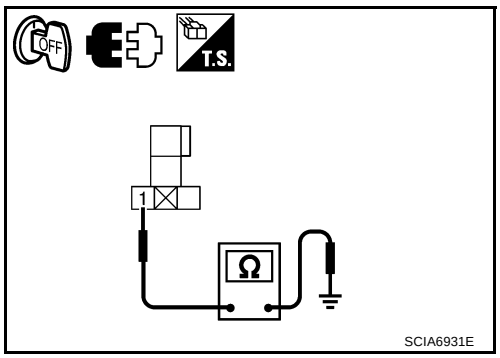
– Check continuity between stop lamp switch harness connector E111 terminals 3 and 4.

Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal — refer to BR-7, "BRAKE PEDAL".

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.



5. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect shift lock relay.
3. Check continuity between shift lock relay E19 terminal 1 and ground.

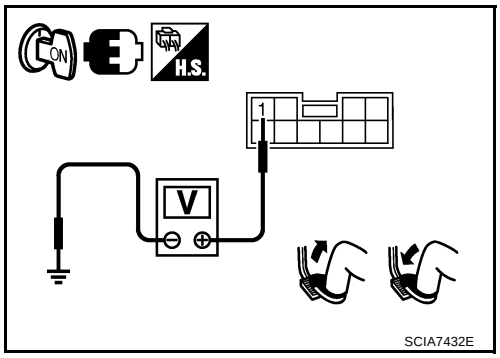
CAUTION:
Connect test probe (BLACK) to shift lock relay, and test probe (RED) to ground.

Continuity should exist.

If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



6. CHECK INPUT SIGNAL A/T DEVICE

1. Turn ignition switch ON.
2. Selector lever is set in “P” position.
3. Check voltage between A/T device harness connector M47 terminal 1 and ground.

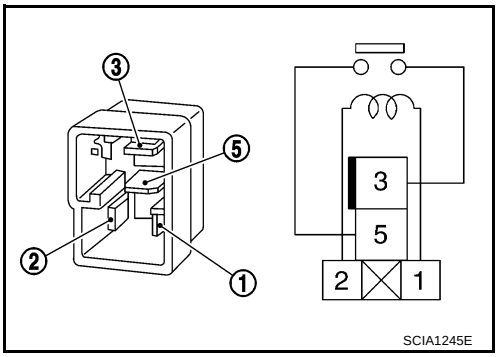
Voltage

Brake pedal depressed: Battery voltage

Brake pedal released: 0 V

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.



7. DETECT MALFUNCTIONING ITEM

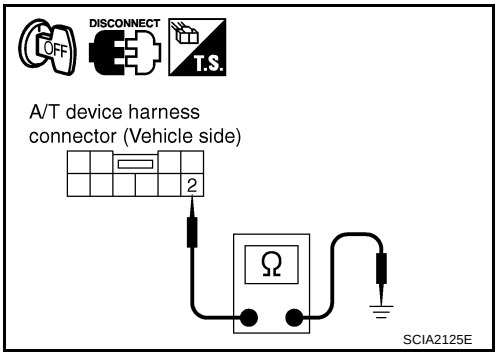
Check the following.

- Harness for short or open between ignition switch and shift lock relay E19 terminal 5.
- Harness for short or open between shift lock relay E19 terminal 3 and A/T device harness connector M47 terminal 1.
- 10 A fuse [No. 12, located in the fuse block (J/B)].
- Ignition switch (Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT").
- Shift lock relay.

– Check continuity between shift lock relay E19 terminal 3 and 5.

Condition	Continuity
12V direct current supply between terminal 1 and 2	Yes
OFF	No

OK or NG



OK >> GO TO 8.
NG >> Repair or replace damaged parts.

8. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect A/T device harness connector.
3. Check continuity between A/T device harness connector M47 terminal 2 and ground.

Continuity should exist.

If OK, check harness for short to ground and short to power.

OK or NG

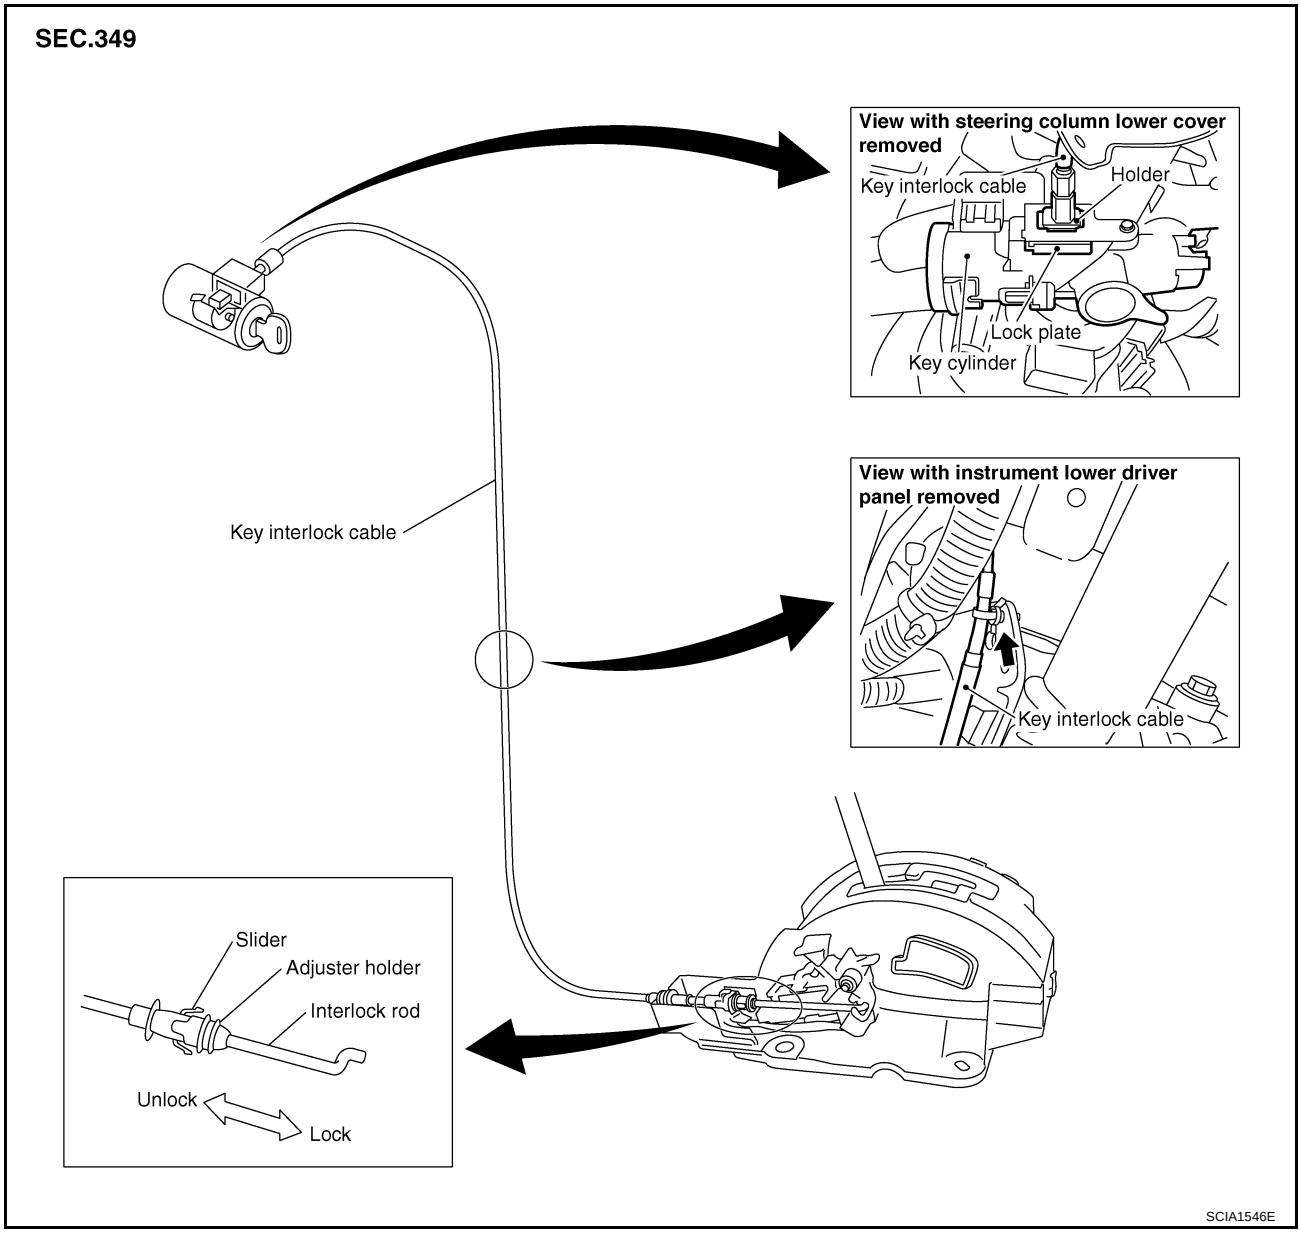
OK >> GO TO 9.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK SHIFT LOCK SOLENOID AND PARK POSITION SWITCH

1. Connect A/T device harness connector.
2. Turn ignition switch ON.
3. Selector lever is set in “P” position.
4. Check operation.

Condition	Brake pedal	Operation
When ignition switch is turned to “ON” position and selector lever is set in “P” position.	Depressed	Yes
	Released	No

OK or NG



OK >> **INSPECTION END**.
NG >> Repair or replace damaged parts.

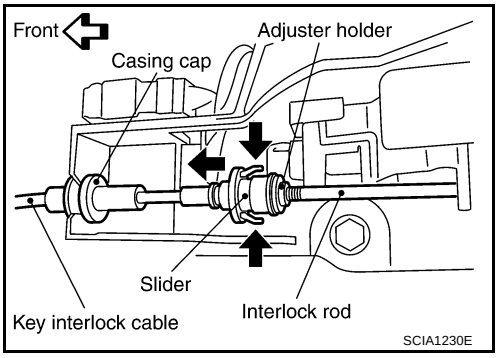
KEY INTERLOCK CABLE

PFP:34908

Components

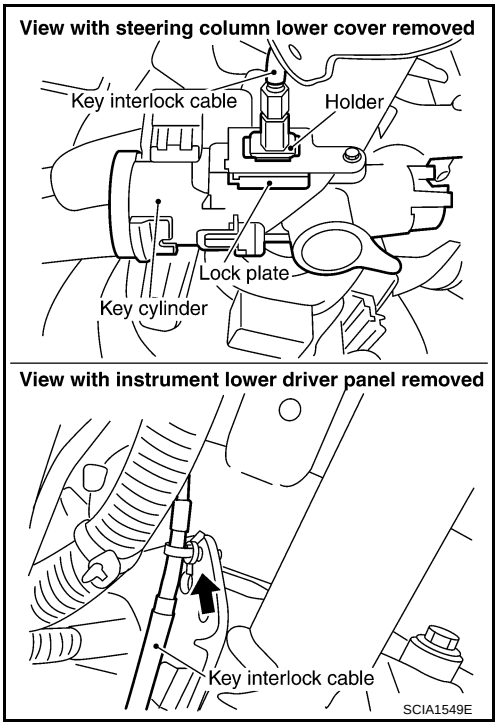
NCS00090

CAUTION:



- **Install key interlock cable in such a way that it will not be damaged by sharp bends, twists or interference with adjacent parts.**
- **After installing key interlock cable to control device, make sure that casing cap and bracket are firmly secured in their positions. If casing cap be removed with an external load of less than 39.2 N (4.0 kg, 8.8 lb), replace key interlock cable with new one.**

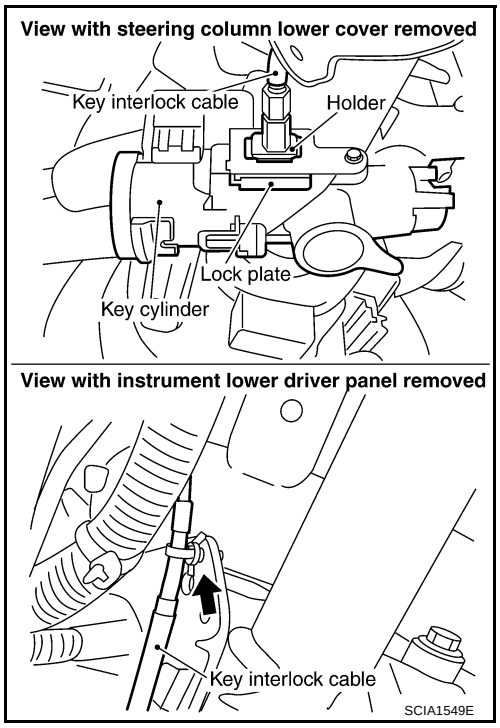
Removal and Installation



NCS00091

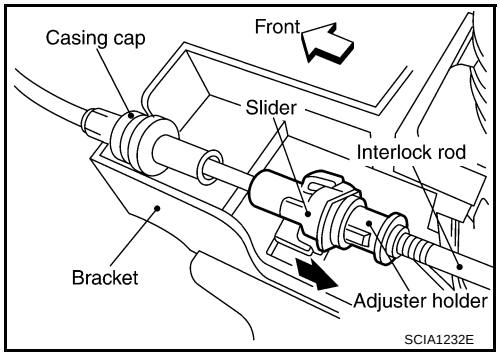
REMOVAL

1. Unlock slider by squeezing lock tabs on slider from adjuster holder.
2. Remove casing cap from bracket of control device assembly and remove interlock rod from adjuster holder.



3. Remove lock plate from key cylinder.
4. Remove holder from key cylinder and remove key interlock cable.

INSTALLATION

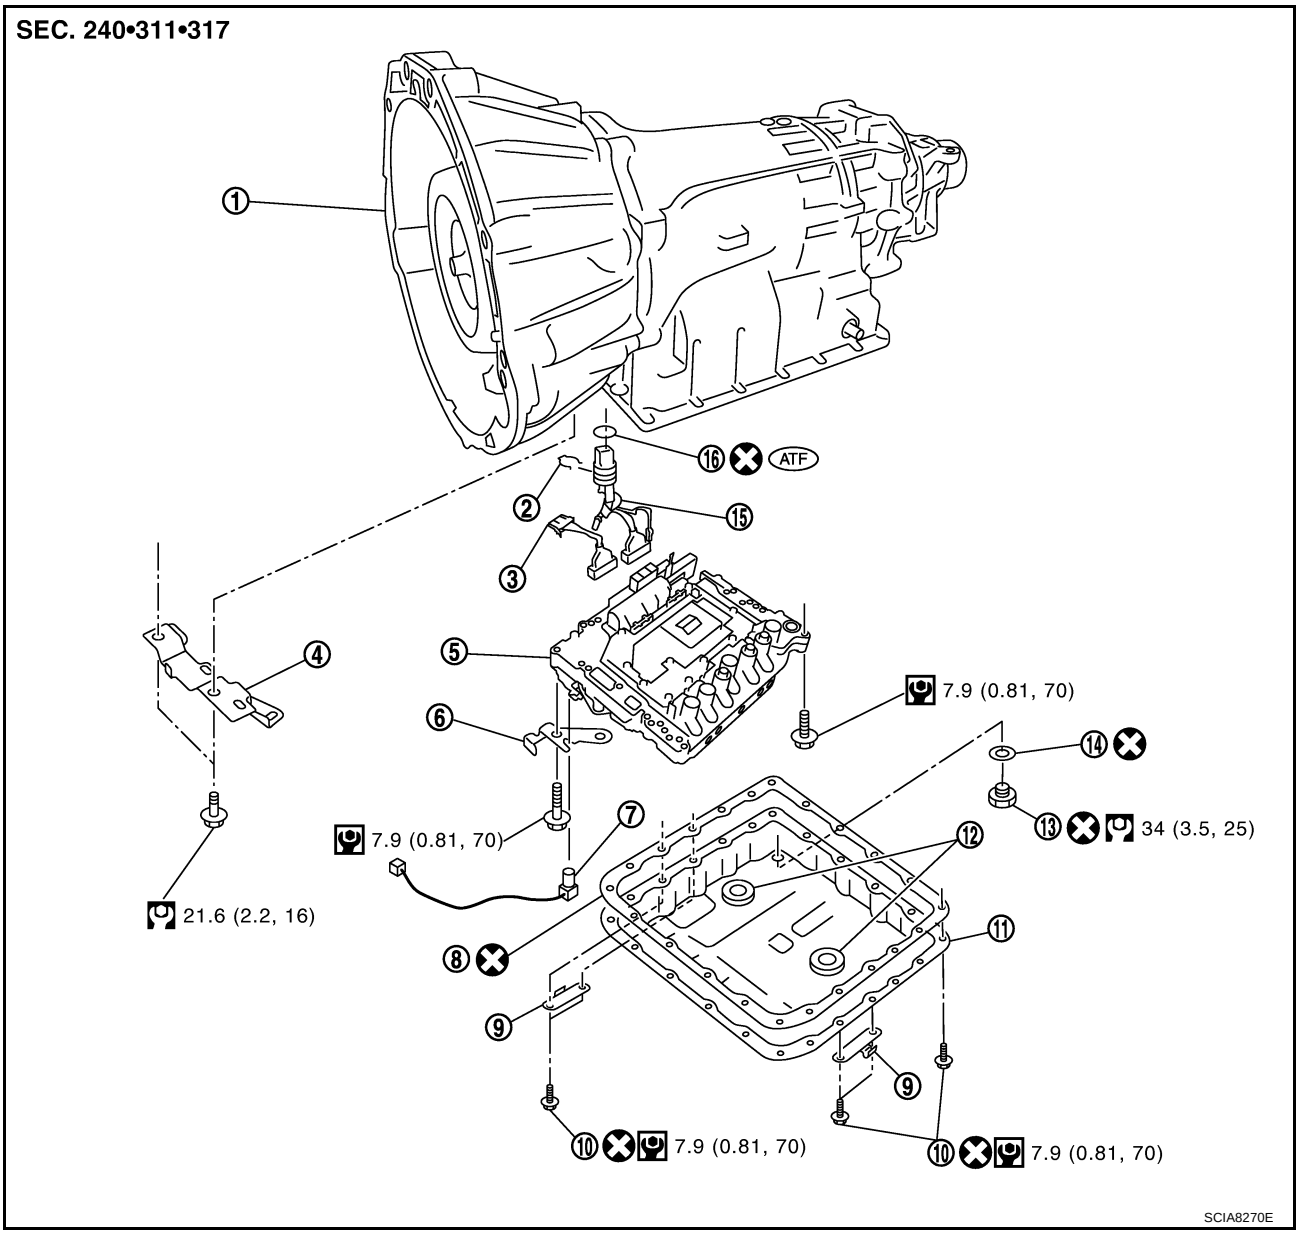


1. Set holder of key interlock cable to key cylinder and install lock plate.

   CAUTION:
   Do not reuse the lock plate
2. Clamp key interlock cable and fix to key interlock cable with band.
3. Turn ignition key to lock position.
4. Set selector lever to “P” position.

5. Insert interlock rod into adjuster holder.
6. Install casing cap to bracket.
7. Move slider in order to fix adjuster holder to interlock rod.

   CAUTION:
   Do not touch any parts except slider. Do not add any force to slider except force toward slider.



ON-VEHICLE SERVICE

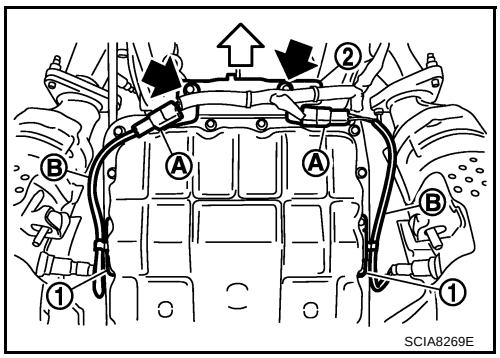
PFP:00000

Control Valve with TCM and A/T Fluid Temperature Sensor 2

NCS00092

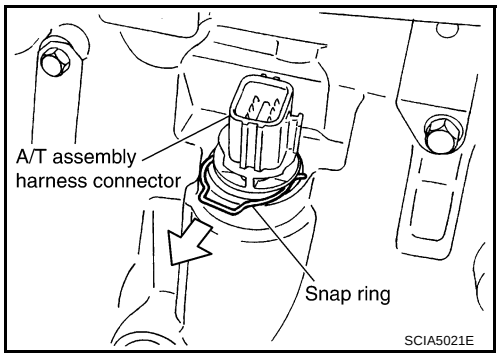
COMPONENTS

1. A/T	2. Snap ring	3. Sub-harness
4. Bracket	5. Control valve with TCM	6. Bracket
7. A/T fluid temperature sensor 2	8. Oil pan gasket	9. Clip
10. Oil pan mounting bolt	11. Oil pan	12. Magnet
13. Drain plug	14. Drain plug gasket	15. Terminal cord assembly
16. O-ring		



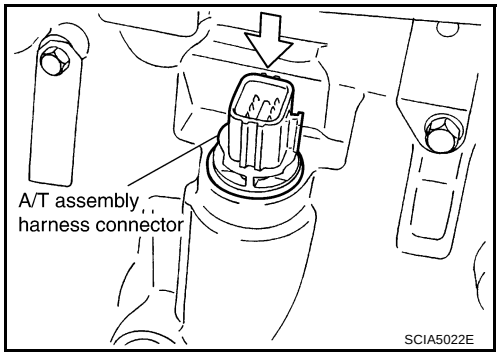
Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

CONTROL VALVE WITH TCM ASSEMBLY REMOVAL AND INSTALLATION

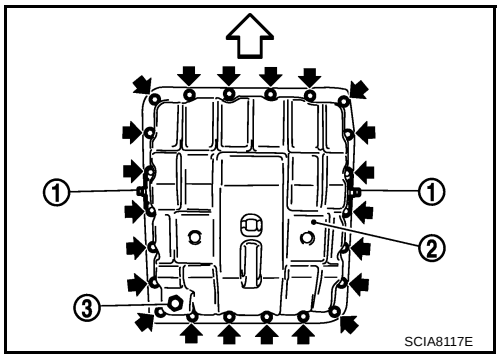


Removal

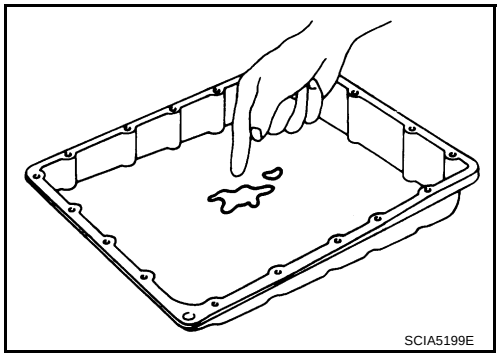
1. Disconnect the battery cable from the negative terminal.
2. Drain ATF through drain hole.
3. Remove exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .



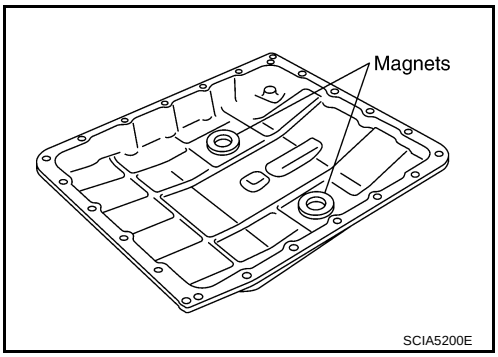
4. Disconnect heated oxygen sensor 2 harness connectors (A).
   - ⇦: Vehicle front
   - ⬅: Bolt
5. Remove heated oxygen sensor 2 harness (B) from clips (1).
6. Remove bracket (2) from transmission assembly.
7. Disconnect A/T assembly harness connector.



8. Remove snap ring from A/T assembly harness connector.

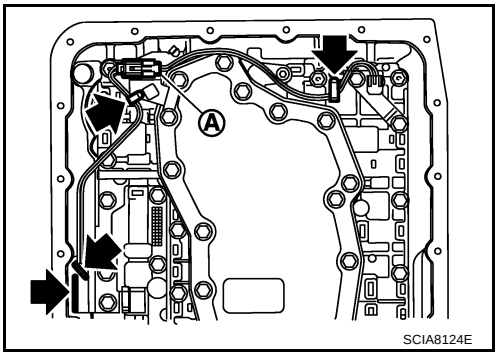


9. Push A/T assembly harness connector.
   CAUTION:
   Be careful not to damage connector.



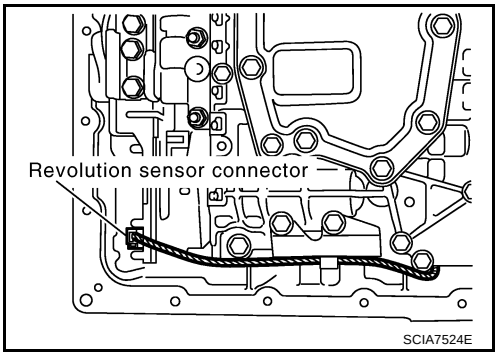
10. Remove clips (1), oil pan (2) and oil pan gasket.
    - ⇦: Vehicle front
    - ⬅: Oil pan mounting bolt
    - Drain bolt (3)

11. Check foreign materials in oil pan to help determine causes of malfunction. If the ATF is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
    - **If frictional material is detected, perform A/T fluid cooler cleaning. Refer to AT-14, "A/T Fluid Cooler Cleaning".**



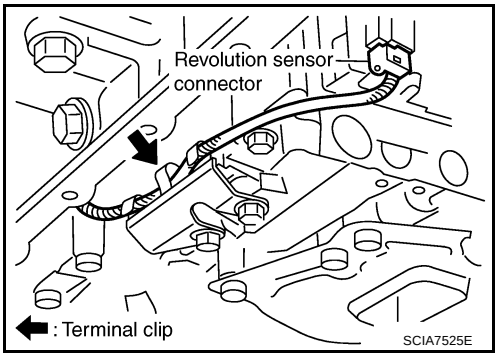
12. Remove magnets from oil pan.

13. Disconnect A/T fluid temperature sensor 2 connector (A).



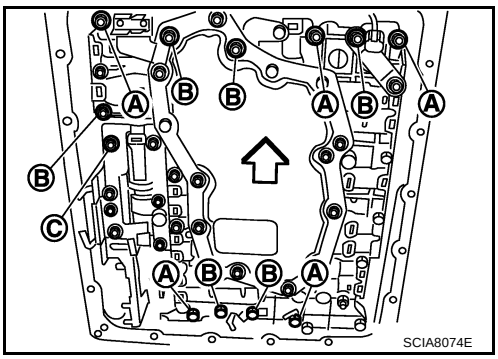
CAUTION:
Be careful not to damage connector.

14. Straighten terminal clips (⬅) to free terminal cord assembly and A/T fluid temperature sensor 2 harness.

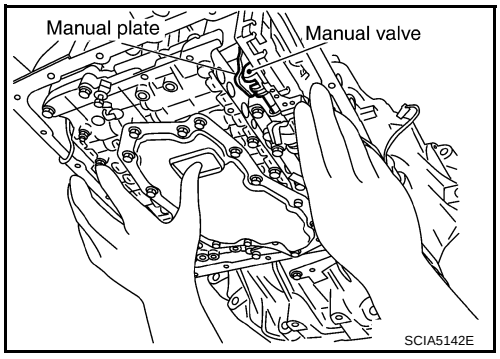


15. Disconnect revolution sensor connector.

CAUTION:
Be careful not to damage connector.

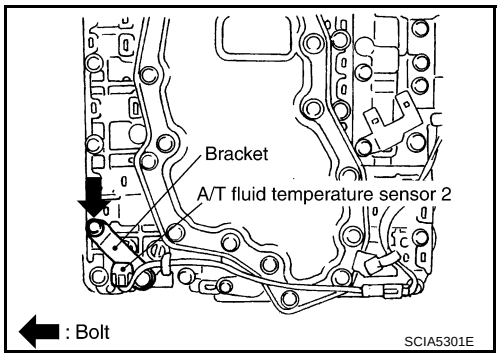


16. Straighten terminal clip to free revolution sensor harness.

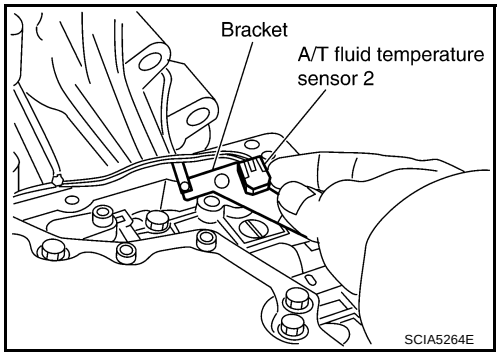


17. Remove bolts (A), (B) and (C) from control valve with TCM.
    - ⇦: Vehicle front

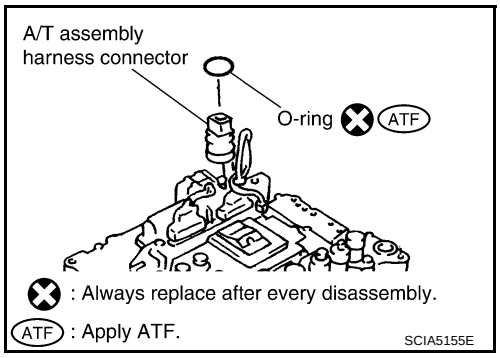
Bolt symbol	Length mm (in)	Number of bolts
A	42 (1.65)	5
B	55 (2.17)	6
C	40 (1.57)	1



18. Remove control valve with TCM from transmission case.

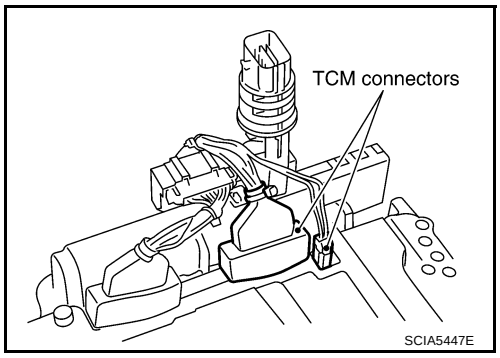


CAUTION:
When removing, be careful with the manual valve notch and manual plate height. Remove it vertically.

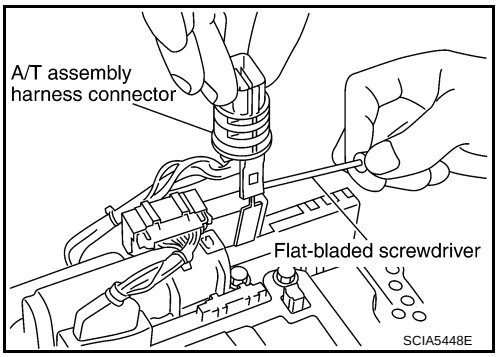


19. Remove A/T fluid temperature sensor 2 with bracket from control valve with TCM.

20. Remove bracket from A/T fluid temperature sensor 2.

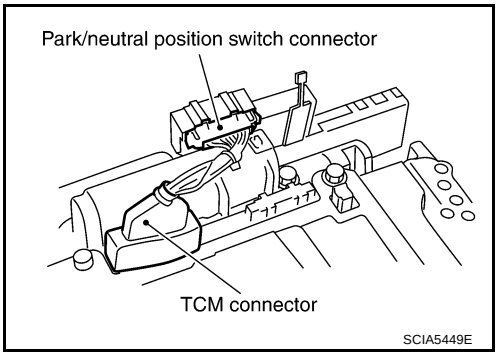


21. Remove O-ring from A/T assembly harness connector.



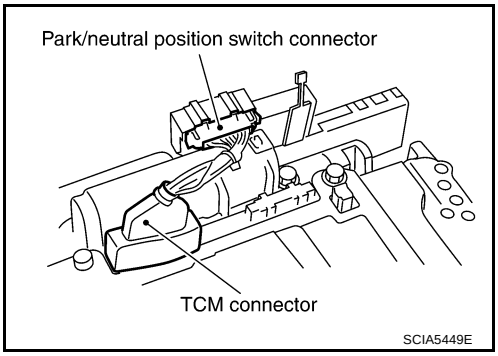
22. Disconnect TCM connectors.

CAUTION:
Be careful not to damage connectors.

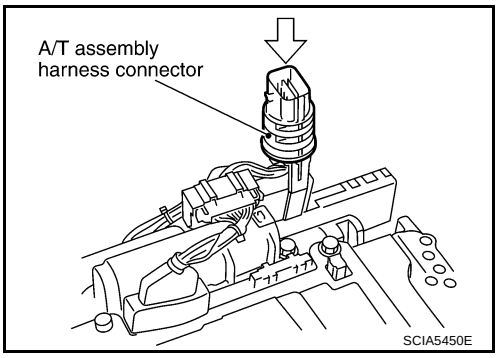


23. Remove A/T assembly harness connector from control valve with TCM using a flat-bladed screwdriver.

24. Disconnect TCM connector and park/neutral position switch connector.

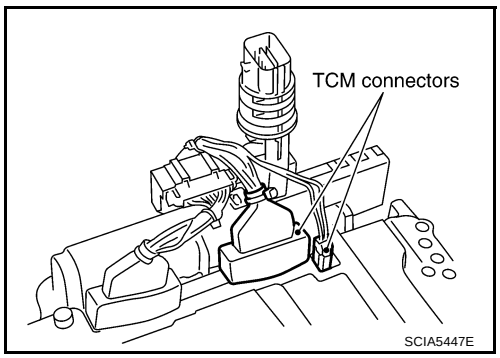


CAUTION:
Be careful not to damage connectors.



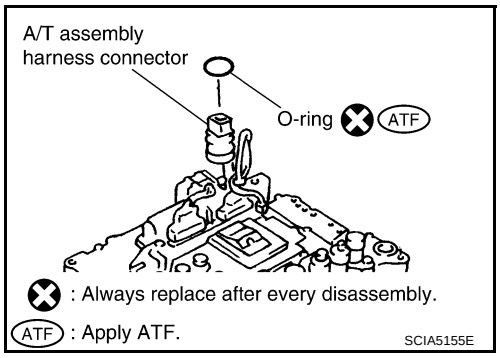
Installation

CAUTION:
After completing installation, check A/T fluid leakage and A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

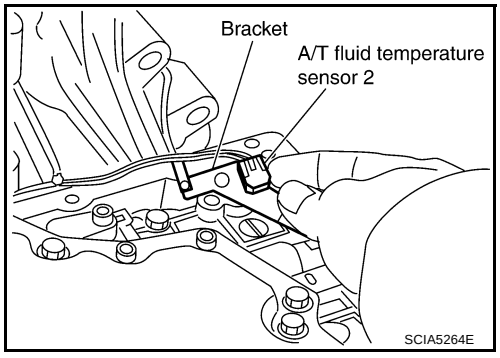


1. Connect TCM connector and park/neutral position switch connector.

2. Install A/T assembly harness connector from control valve with TCM.



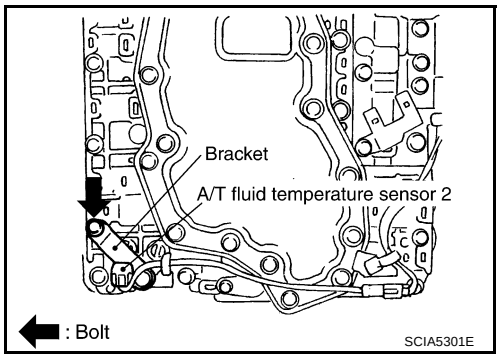
3. Connect TCM connectors.



4. Install O-ring in A/T assembly harness connector.

CAUTION:

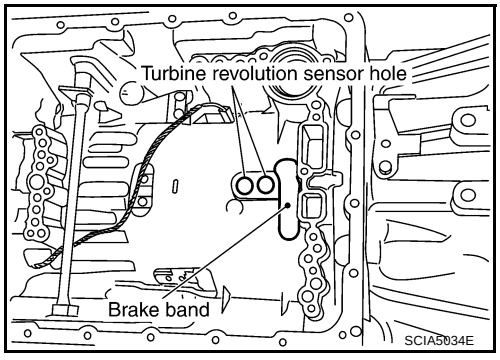
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**



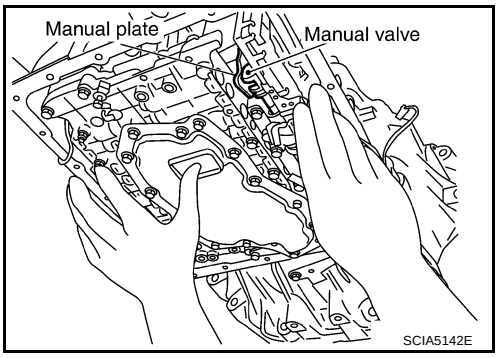
5. Install A/T fluid temperature sensor 2 to bracket.

6. Install A/T fluid temperature sensor 2 (with bracket) in control valve with TCM, and then tighten A/T fluid temperature sensor 2 bolt to the specified torque. Refer to AT-215, "COMPONENTS" .

CAUTION:



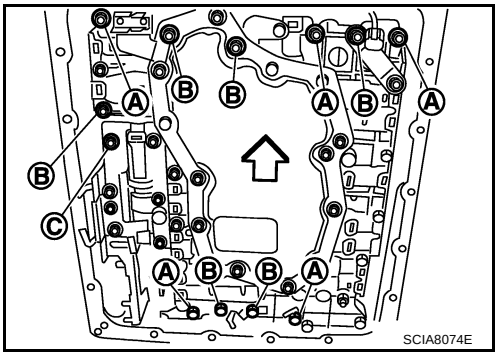
Adjust bolt hole of bracket to bolt hole of control valve with TCM.



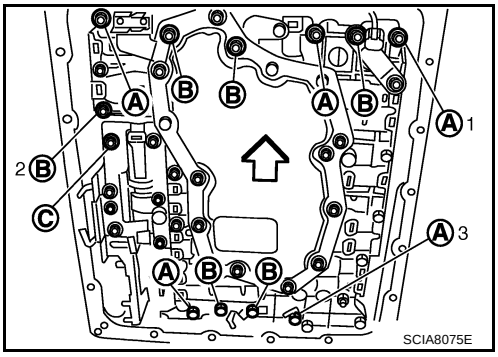
7. Install control valve with TCM in transmission case.

CAUTION:

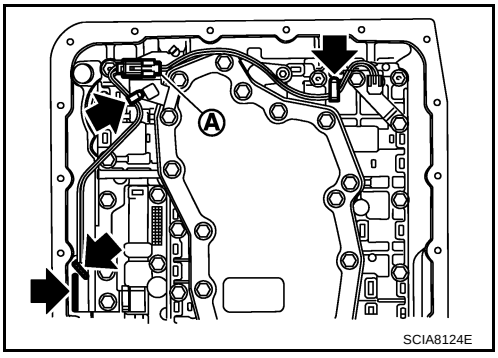
- **Make sure that turbine revolution sensor securely installs turbine revolution sensor hole.**
- **Hang down revolution sensor harness toward outside so as not to disturb installation of control valve with TCM.**
- **Adjust A/T assembly harness connector of control valve with TCM to terminal hole of transmission case.**



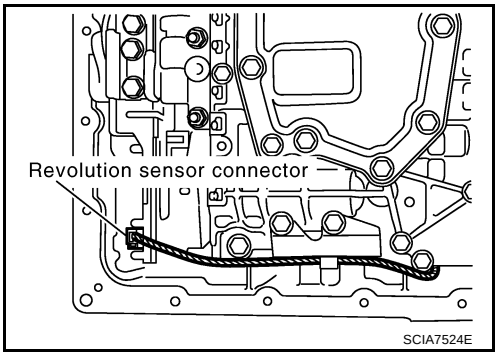
- **Assemble it so that manual valve cutout is engaged with manual plate projection.**



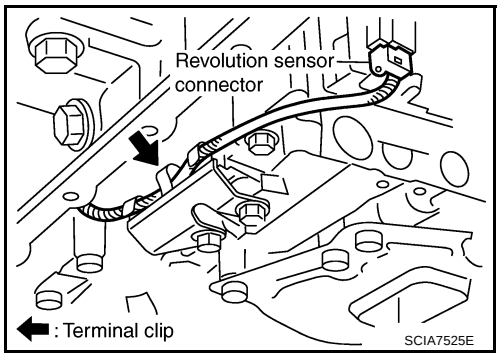
8. Install bolts (A), (B) and (C) in control valve with TCM.
   - ⇦: Vehicle front



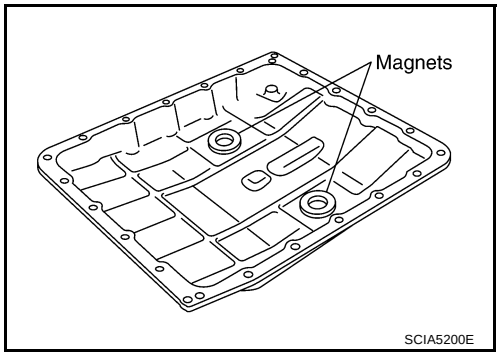
Bolt symbol	Length mm (in)	Number of bolts
A	42 (1.65)	5
B	55 (2.17)	6
C	40 (1.57)	1



9. Tighten bolt 1, 2 and 3 temporarily to prevent dislocation. After that tighten them in order (1 → 2 → 3), and then tighten other bolts, and then tighten control valve with TCM mounting bolts to the specified torque. Refer to AT-215, "COMPONENTS" .
   - ⇦: Vehicle front



10. Connect A/T fluid temperature sensor 2 connector (A).
11. Securely fasten terminal cord assembly and A/T fluid temperature sensor 2 harness with terminal clips (⬅).



12. Connect revolution sensor connector.

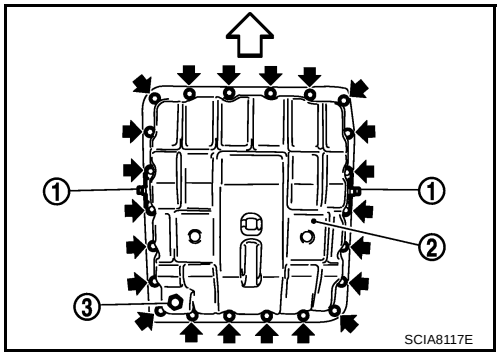
13. Securely fasten revolution sensor harness with terminal clip.

14. Install magnets in oil pan.

15. Install oil pan to transmission case.

a. Install oil pan gasket to oil pan.

CAUTION:



- **Do not reuse oil pan gasket.**
- **Install it in the direction to align hole positions.**
- **Complete remove all moisture, oil and old gasket, etc. from oil pan gasket mounting surface.**

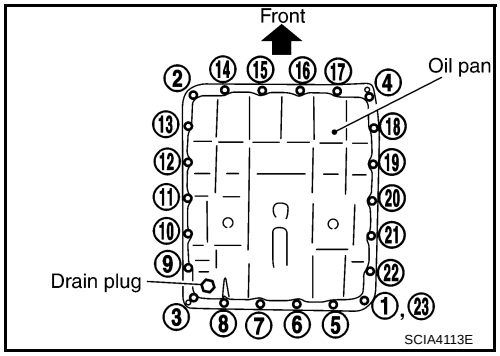
b. Install oil pan (2) (with oil pan gasket) and clips (1) to transmission case.

- ⇦: Vehicle front
- ⬅: Oil pan mounting bolt

CAUTION:

- **Install it so that drain plug (3) comes to the position as shown in the figure.**
- **Be careful not to pinch harness.**
- **Complete remove all moisture, oil and old gasket, etc. from oil pan mounting surface.**

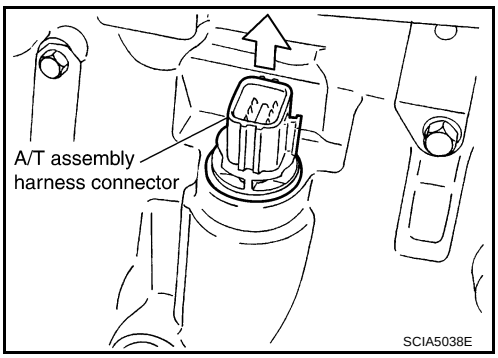
c. Tighten oil pan mounting bolts to the specified torque in numerical order shown in the figure after temporarily tightening them. Refer to AT-215, "COMPONENTS" .



CAUTION:

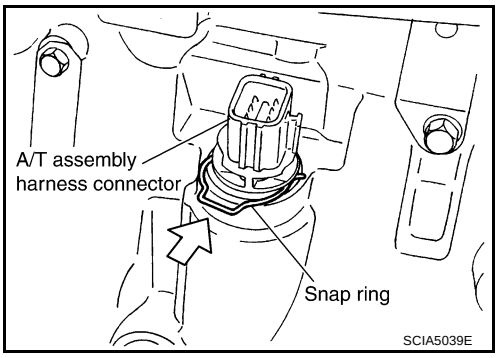
Do not reuse oil pan mounting bolts.

16. Install drain plug gasket and drain plug to oil pan, and then tighten drain plug to the specified torque. Refer to AT-215, "COMPONENTS" .

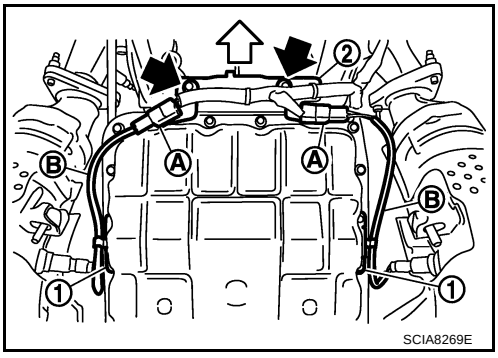


CAUTION:

Do not reuse drain plug gasket.

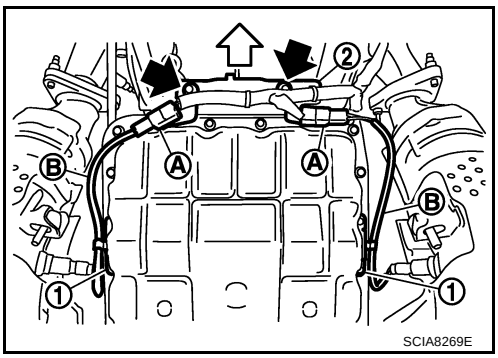


17. Pull up A/T assembly harness connector.

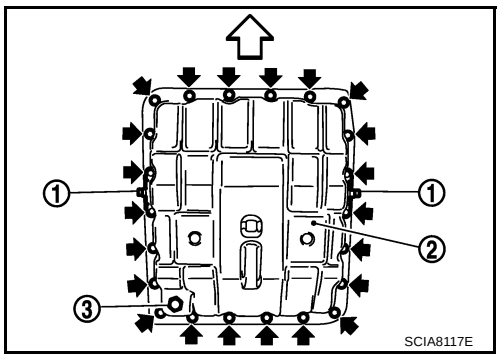


CAUTION:
Be careful not to damage connector.

18. Install snap ring to A/T assembly harness connector.
19. Connect A/T assembly harness connector.

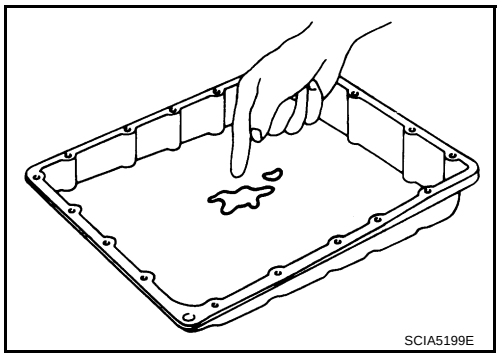


20. Install bracket (2) from transmission assembly. Refer to AT-215, "COMPONENTS" .
    - ⇦: Vehicle front
    - ⬅: Bolt
21. Install heated oxygen sensor 2 harness (B) from clips (1).
22. Connect heated oxygen sensor 2 harness connectors (A).
23. Install exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .
24. Pour ATF into A/T assembly. Refer to AT-12, "Changing A/T Fluid" .
25. Connect the battery cable to the negative terminal.



A/T FLUID TEMPERATURE SENSOR 2 REMOVAL AND INSTALLATION

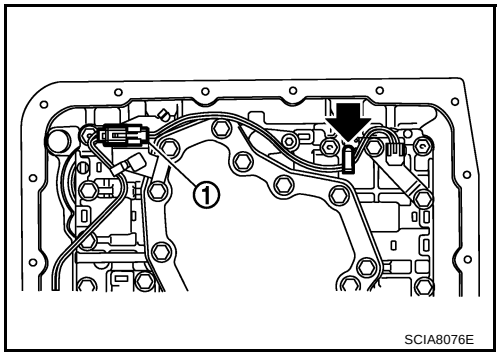
Removal



1. Disconnect the battery cable from the negative terminal.
2. Drain ATF through drain hole.
3. Remove exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .
4. Disconnect heated oxygen sensor 2 harness connectors (A).
    - ⇦: Vehicle front
    - ⬅: Bolt
5. Remove heated oxygen sensor 2 harness (B) from clips (1).
6. Remove bracket (2) from transmission assembly.

7. Remove clips (1), oil pan (2) and oil pan gasket.
   - ⇦: Vehicle front
   - ⬅: Oil pan mounting bolt
   - Drain plug (3)

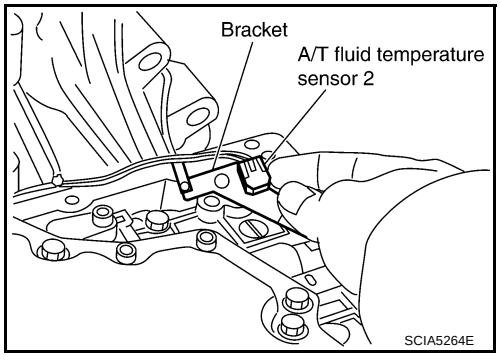
8. Check foreign materials in oil pan to help determine causes of malfunction. If the ATF is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
   - **If frictional material is detected, perform A/T fluid cooler cleaning. Refer to AT-14, "A/T Fluid Cooler Cleaning".**



9. Disconnect A/T fluid temperature sensor 2 connector (1).

   CAUTION:

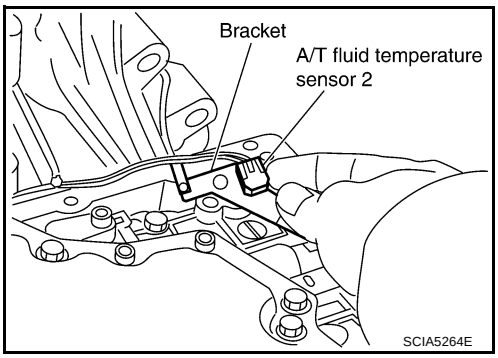
   Be careful not to damage connector.



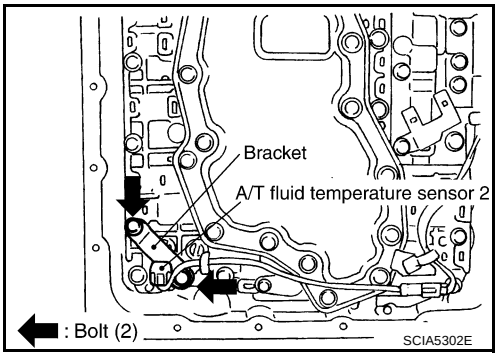
10. Straighten terminal clip (⬅) to free A/T fluid temperature sensor 2 harness.

11. Remove A/T fluid temperature sensor 2 with bracket from control valve with TCM.

12. Remove bracket from A/T fluid temperature sensor 2.

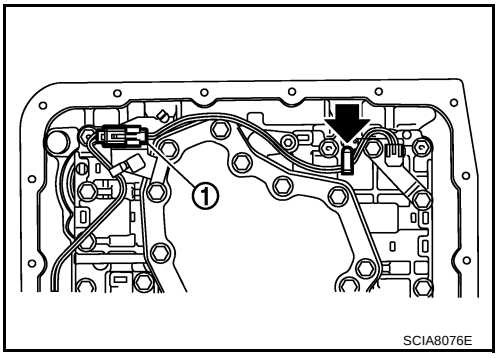


Installation



CAUTION:

After completing installation, check A/T fluid leakage and A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .



1. Install A/T fluid temperature sensor 2 to bracket.

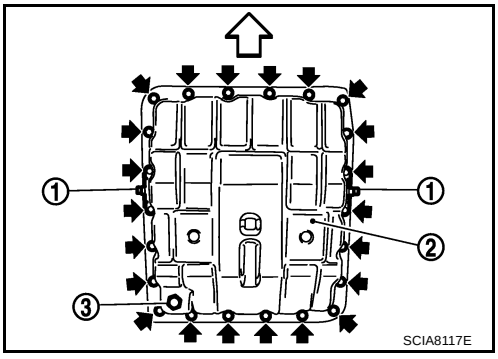
2. Install A/T fluid temperature sensor 2 (with bracket) in control valve with TCM, and then tighten A/T fluid temperature sensor 2 bolt to the specified torque. Refer to AT-215, "COMPONENTS" .

3. Connect A/T fluid temperature sensor 2 connector (1).
4. Securely fasten A/T fluid temperature sensor 2 harness with terminal clip (⬅).

5. Install oil pan to transmission case.

a. Install oil pan gasket to oil pan.

CAUTION:

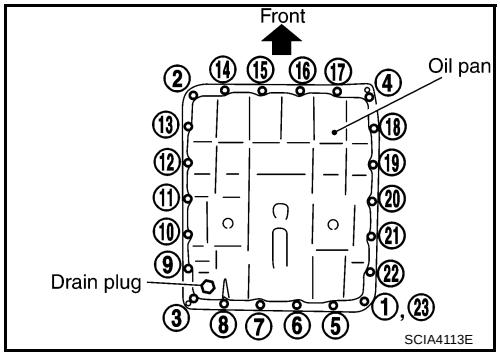


- **Do not reuse oil pan gasket.**
- **Install it in the direction to align hole positions.**
- **Complete remove all moisture, oil and old gasket, etc. from oil pan gasket mounting surface.**

b. Install oil pan (2) (with oil pan gasket) and clips (1) to transmission case.

- ⇦: Vehicle front
- ⬅: Oil pan mounting bolt

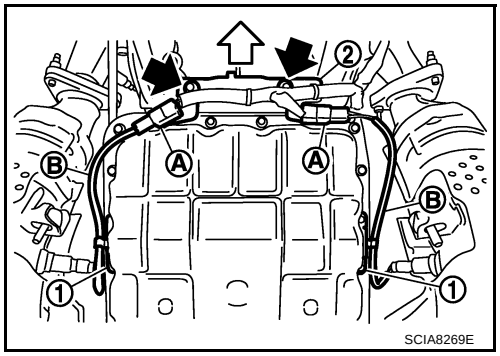
CAUTION:



- **Install it so that drain plug (3) comes to the position as shown in the figure.**
- **Be careful not to pinch harness.**

- **Complete remove all moisture, oil and old gasket, etc. from oil pan mounting surface.**

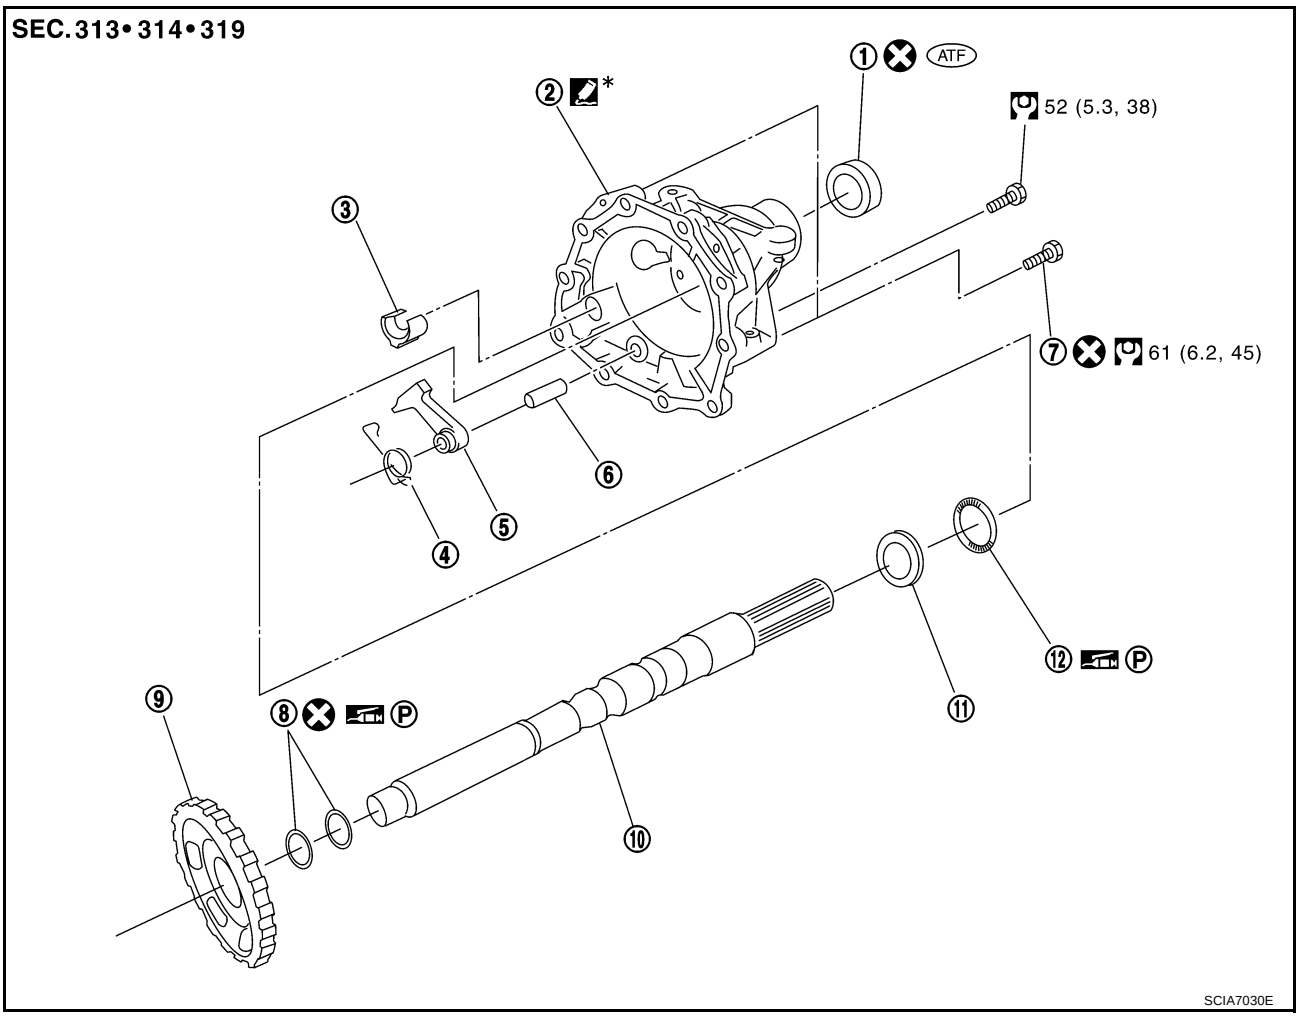
c. Tighten oil pan mounting bolts to the specified torque in numerical order shown in the figure after temporarily tightening them. Refer to AT-215, "COMPONENTS" .



CAUTION:
Do not reuse oil pan mounting bolts.

6. Install drain plug gasket and drain plug to oil pan, and then tighten drain plug to the specified torque. Refer to AT-215, "COMPONENTS" .

CAUTION:
Do not reuse drain plug gasket.



7. Install bracket (2) from transmission assembly. Refer to AT-215, "COMPONENTS" .
   - ⇦: Vehicle front
   - ⬅: Bolt
8. Install heated oxygen sensor 2 harness (B) from clips (1).
9. Connect heated oxygen sensor 2 harness connectors (A).
10. Install exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .
11. Pour ATF into A/T assembly. Refer to AT-12, "Changing A/T Fluid" .
12. Connect the battery cable to the negative terminal.

Parking Components

NCS00093

COMPONENTS

1.	Rear oil seal	2.	Rear extension	3.	Parking actuator support
4.	Return spring	5.	Parking pawl	6.	Pawl shaft
7.	Self-sealing bolt	8.	Seal ring	9.	Parking gear
10.	Output shaft	11.	Bearing race	12.	Needle bearing

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

However, refer to the following for others.

: Apply Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

REMOVAL

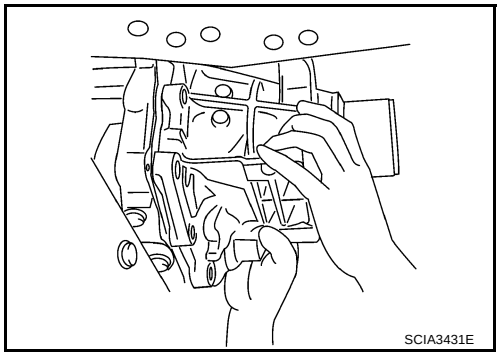
1. Drain ATF through drain hole.
2. Remove exhaust front tube and center muffler with power tool. Refer to EX-3, "Removal and Installation" .
3. Remove rear propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:

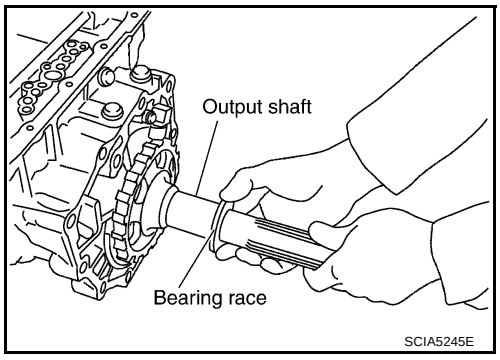
   Do not impact or damage propeller shaft tube.
4. Remove control rod. Refer to AT-205, "Control Rod Removal and Installation" .
5. Support A/T assembly with a transmission jack.

   CAUTION:

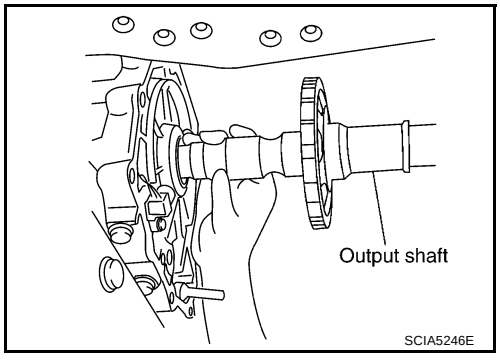
   When setting transmission jack, be careful not to allow it to collide against drain plug.
6. Remove rear engine mounting member with power tool. Refer to AT-242, "Removal and Installation" .



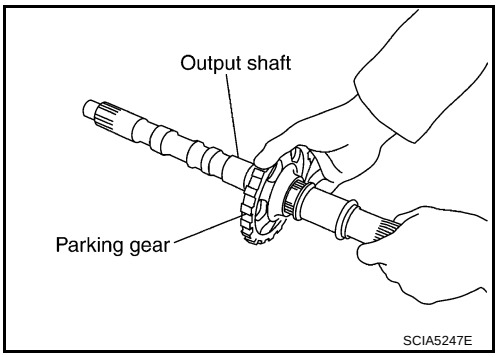
7. Remove tightening bolts for rear extension assembly and transmission case.



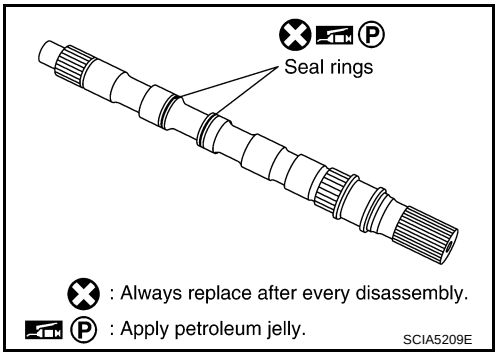
8. Tap rear extension assembly with soft hammer.



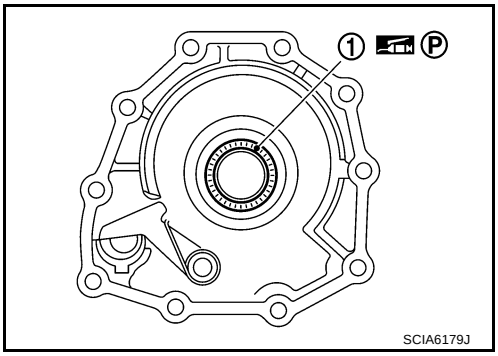
9. Remove rear extension assembly from transmission case. (With needle bearing.)



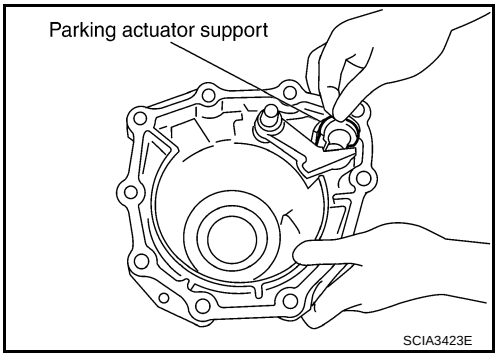
10. Remove bearing race from output shaft.



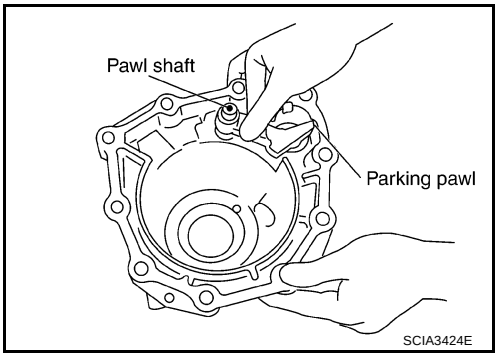
11. Remove output shaft from transmission case by rotating left/right.



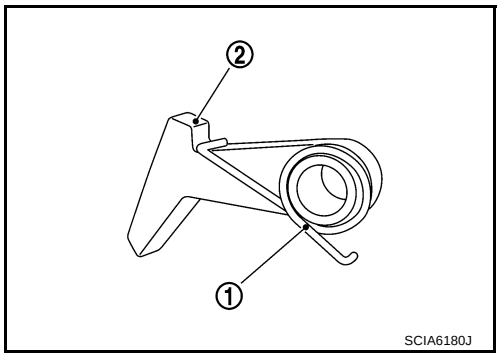
12. Remove parking gear from output shaft.



13. Remove seal rings from output shaft.

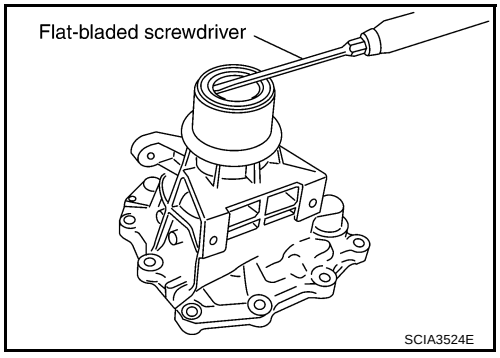


14. Remove needle bearing (1) from rear extension.



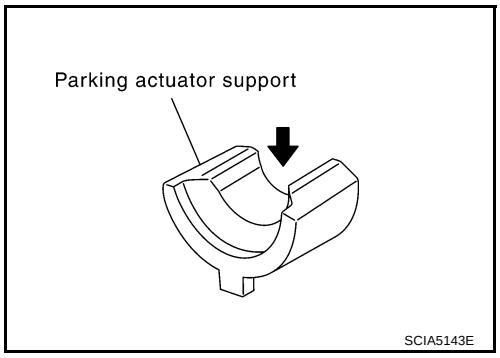
15. Remove parking actuator support from rear extension.

16. Remove parking pawl (with return spring) and pawl shaft from rear extension.

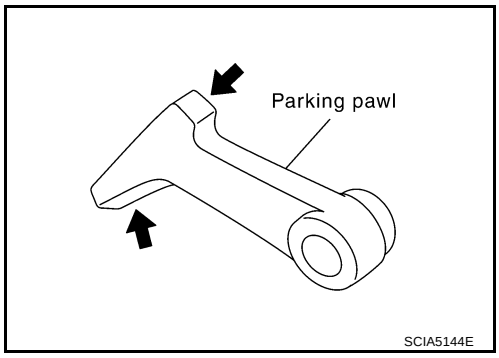


17. Remove return spring (1) from parking pawl (2).

18. Remove rear oil seal from rear extension.



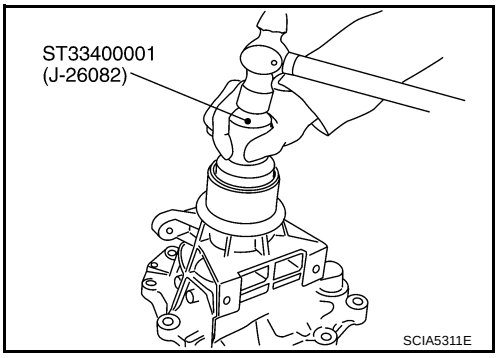
CAUTION:



Be careful not to scratch rear extension.

INSPECTION

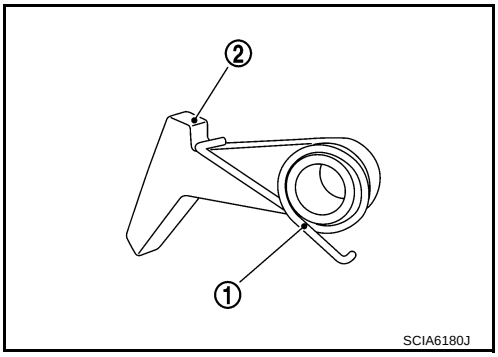
- If the contact surface on parking actuator support, parking pawl, etc. has excessive wear, abrasion, bend, or any other damage, replace the components.



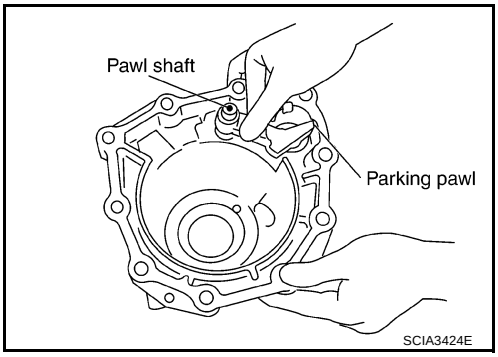
INSTALLATION

CAUTION:

After completing installation, check A/T position, A/T fluid leakage and A/T fluid level. Refer to AT-206, "Checking of A/T Position" , AT-12, "Checking A/T Fluid" .

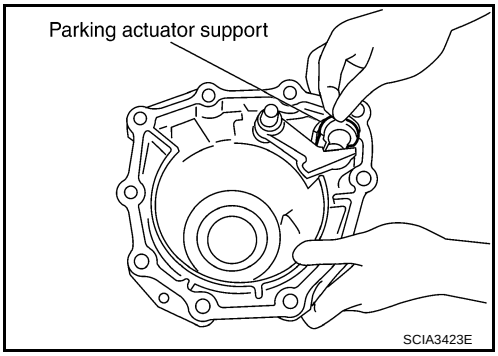


1. As shown in the figure, use a drift to drive rear oil seal into the rear extension until it is flush.



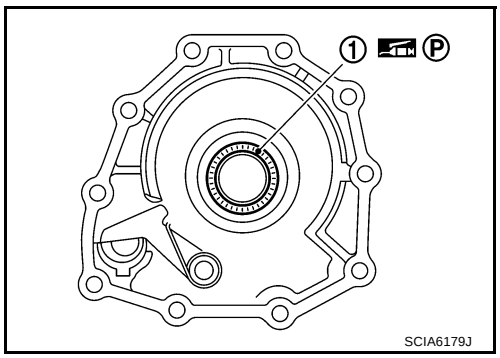
CAUTION:

- **Do not reuse rear oil seal.**
- **Apply ATF to rear oil seal.**



2. Install return spring (1) to parking pawl (2).

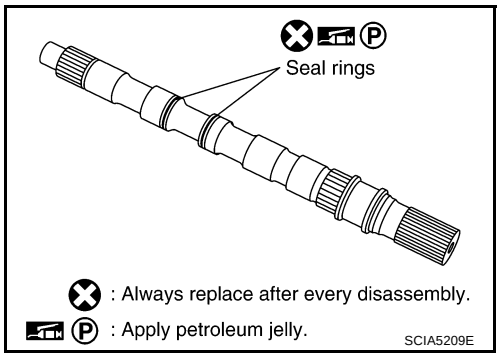
3. Install parking pawl (with return spring) and pawl shaft to rear extension.



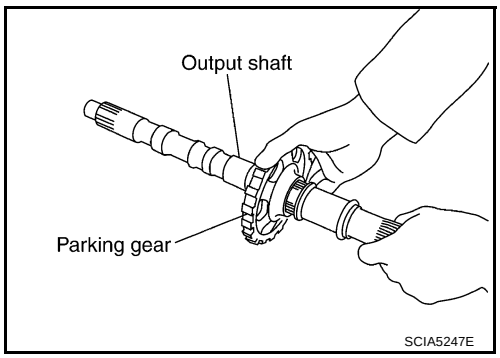
4. Install parking actuator support to rear extension.

5. Install needle bearing (1) to rear extension.

CAUTION:

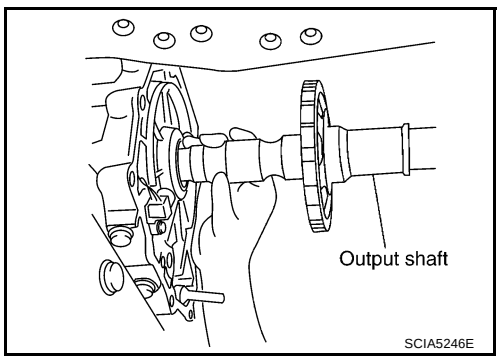


- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

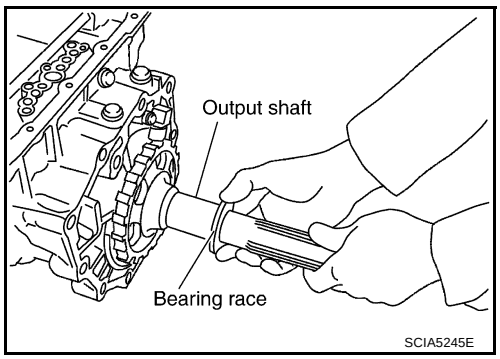


6. Install seal rings in output shaft.

CAUTION:

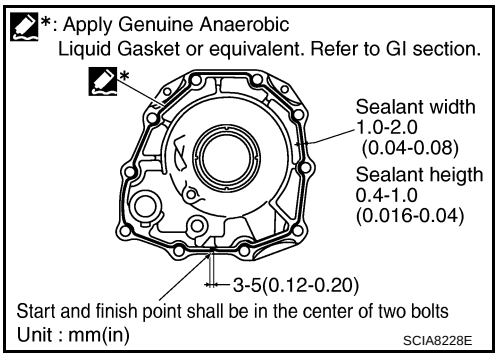


- **Do not reuse seal rings.**
- **Apply petroleum jelly to seal rings.**

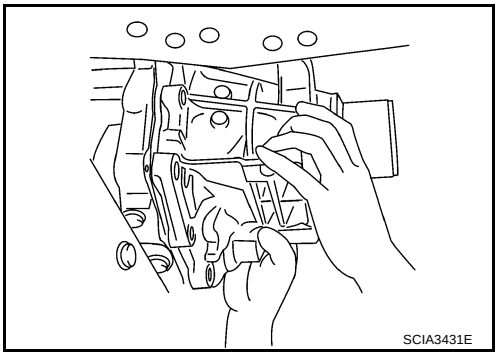


7. Install parking gear to output shaft.

8. Install output shaft to transmission case.

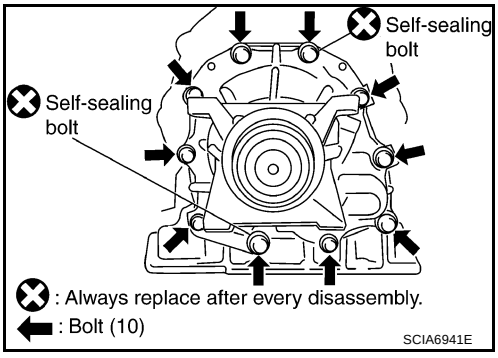


9. Install bearing race to output shaft.



10. Apply recommended sealant (Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .) to rear extension assembly as shown in the figure.

CAUTION:
Completely remove all moisture, oil and old sealant, etc. from transmission case and rear extension assembly mounting surfaces.



11. Install rear extension assembly to transmission case. (With needle bearing.)

CAUTION:
Insert the tip of parking rod between parking pawl and parking actuator support when assembling rear extension assembly.

12. Tighten rear extension assembly mounting bolts to the specified torque. Refer to AT-227, "COMPONENTS" .

CAUTION:
Do not reuse self-sealing bolts.

13. Install rear engine mounting member. Refer to AT-242, "Removal and Installation" .
14. Install control rod. Refer to AT-205, "Control Rod Removal and Installation" .
15. Install rear propeller shaft. Refer to PR-6, "Removal and Installation" .

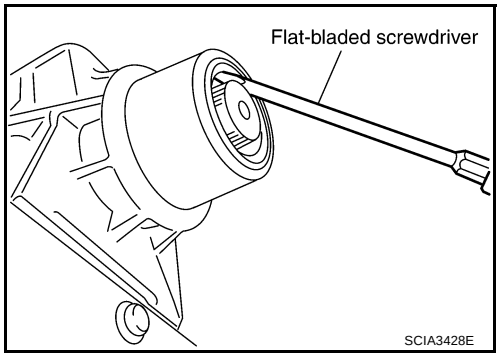
CAUTION:
Do not impact or damage propeller shaft tube.

16. Install exhaust front tube and center muffler. Refer to EX-3, "Removal and Installation" .
17. Install drain plug gasket and drain plug to oil pan, and then tighten drain plug to the specified torque. Refer to AT-215, "COMPONENTS" .

CAUTION:
Do not reuse drain plug gasket.

18. Pour ATF into A/T assembly. Refer to AT-12, "Changing A/T Fluid" .

Rear Oil Seal



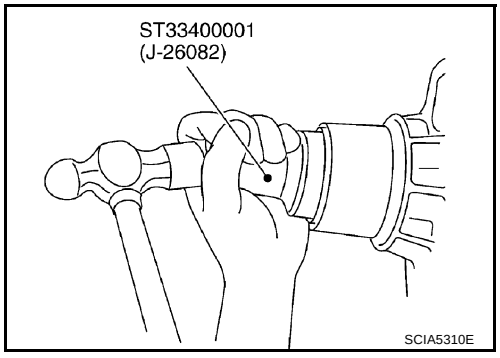
NCS00094

REMOVAL

1. Remove exhaust front tube and center muffler with power tool. Refer to EX-3, "Removal and Installation" .
2. Remove rear propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:
   Do not impact or damage propeller shaft tube.
3. Remove rear oil seal using a flat-bladed screwdriver.

   CAUTION:
   Be careful not to scratch rear extension assembly.



INSTALLATION

CAUTION:
After completing installation, check A/T fluid leakage and A/T fluid level. Refer to AT-12, "Checking A/T Fluid" .

1. As shown in the figure, use the drift to drive rear oil seal into rear extension assembly until it is flush.

   CAUTION:
   - **Do not reuse rear oil seal.**
   - **Apply ATF to rear oil seal.**
2. Install rear propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:
   Do not impact or damage propeller shaft tube.
3. Install exhaust front tube and center muffler. Refer to EX-3, "Removal and Installation" .

Revolution Sensor

NCS00095

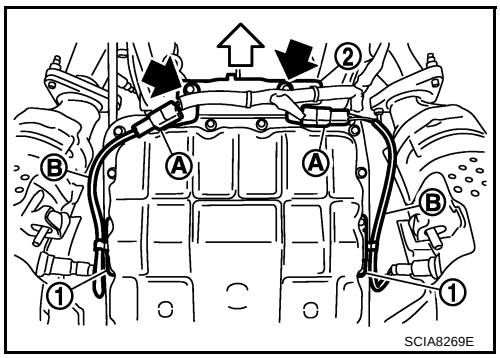
COMPONENTS

1. Rear extension	2. A/T	3. Bracket
4. Oil pan gasket	5. Clip	6. Oil pan mounting bolt
7. Oil pan	8. Drain plug	9. Drain plug gasket
10. Revolution sensor	11. Self-sealing bolt	

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

However, refer to the following for others.

: Apply Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .



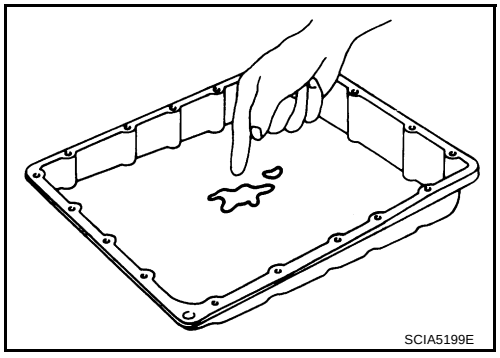
REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Drain ATF through drain hole.
3. Remove exhaust front tube and center muffler with power tool. Refer to EX-3, "Removal and Installation" .
4. Remove rear propeller shaft. Refer to PR-6, "Removal and Installation" .

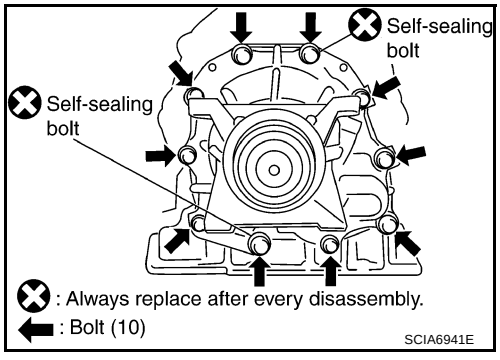
   CAUTION:

   Do not impact or damage propeller shaft tube.
5. Remove control rod. Refer to AT-205, "Control Rod Removal and Installation" .
6. Remove exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .

7. Disconnect heated oxygen sensor 2 harness connectors (A).
   - ⇦: Vehicle front
   - ⬅: Bolt
8. Remove heated oxygen sensor 2 harness (B) from clips (1).
9. Remove bracket (2) from transmission assembly.

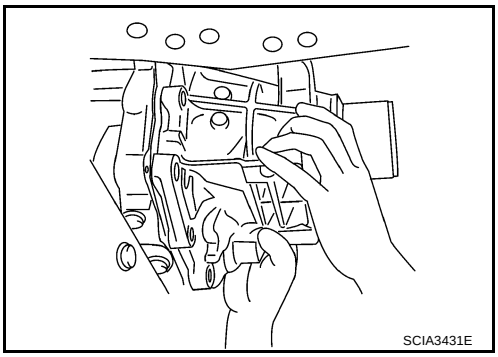


10. Remove clip (1), oil pan (2) and oil pan gasket.
    - ⇦: Vehicle front
    - ⬅: Oil pan mounting bolt
    - Drain plug (3)



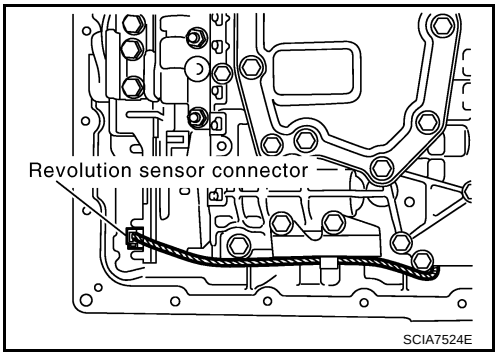
11. Check foreign materials in oil pan to help determine causes of malfunction. If the ATF is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
    - **If frictional material is detected, perform A/T fluid cooler cleaning. Refer to AT-14, "A/T Fluid Cooler Cleaning".**
12. Support transmission assembly with a transmission jack.

    CAUTION:
    When setting transmission jack, place wooden blocks to prevent from damaging control valve with TCM and transmission case.

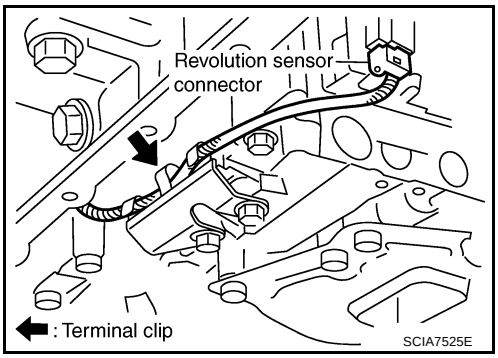


13. Remove rear engine mounting member with power tool. Refer to AT-242, "Removal and Installation" .
14. Remove tightening bolts for rear extension assembly and transmission case.

15. Tap rear extension assembly with soft hammer.



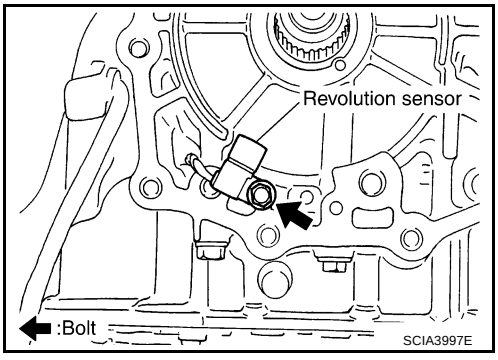
16. Remove rear extension assembly from transmission case. (With needle bearing.)



17. Disconnect revolution sensor connector.

CAUTION:

Be careful not to damage connector.

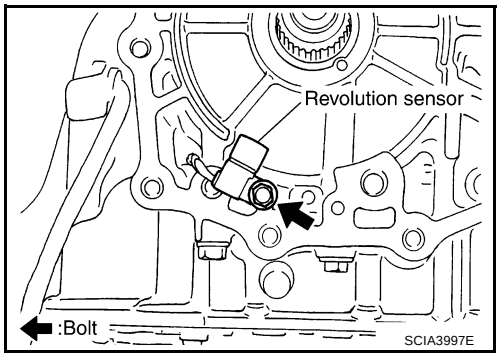


18. Straighten terminal clip to free revolution sensor harness.

19. Remove revolution sensor from transmission case.

CAUTION:

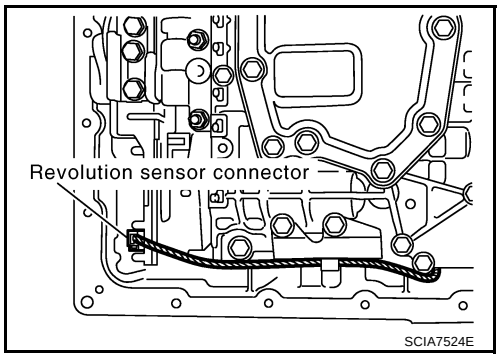
- **Do not subject it to impact by dropping or hitting it.**
- **Do not disassemble.**
- **Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.**
- **Do not place in an area affected by magnetism.**



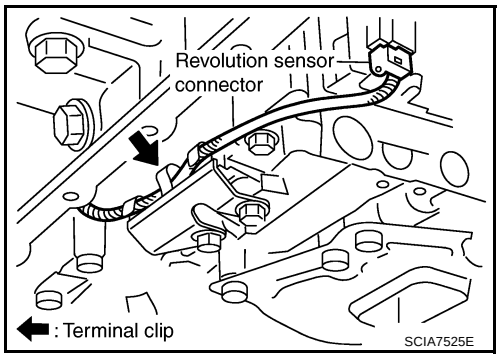
INSTALLATION

CAUTION:

After completing installation, check A/T position, A/T fluid leakage and A/T fluid level. Refer to AT-206, "Checking of A/T Position" , AT-12, "Checking A/T Fluid" .



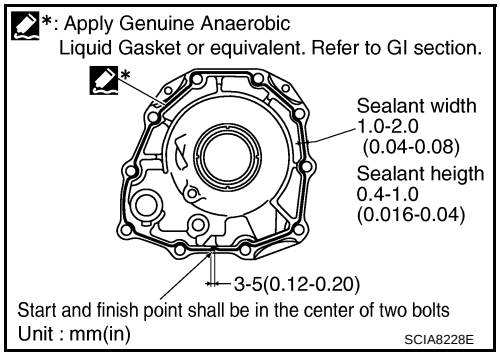
1. Install revolution sensor in transmission case, and then tighten a revolution sensor mounting blot to the specified torque. Refer to AT-235, "COMPONENTS" .



CAUTION:

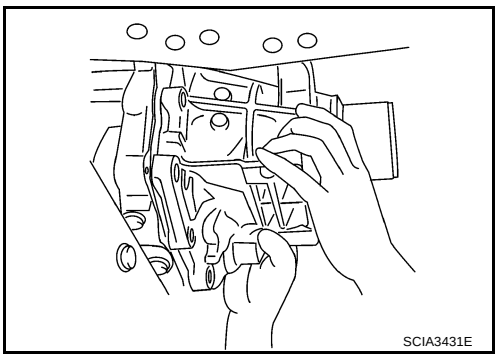
- **Do not subject it to impact by dropping or hitting it.**
- **Do not disassemble.**
- **Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.**
- **Do not place in an area affected by magnetism.**

2. Connect revolution sensor connector.



3. Securely fasten revolution sensor harness with clip.

4. Apply recommended sealant (Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .) to rear extension assembly as shown in illustration.

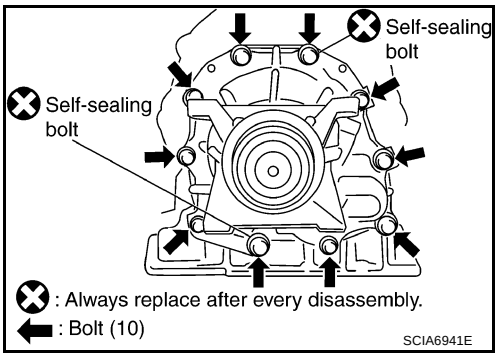


CAUTION:

Completely remove all moisture, oil and old sealant, etc. from transmission case and rear extension assembly mounting surfaces.

5. Install rear extension assembly to transmission case. (With needle bearing.)

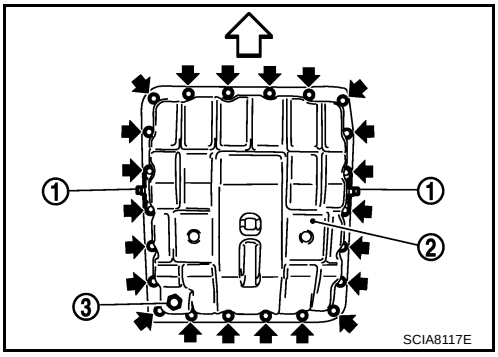
CAUTION:
Insert the tip of parking rod between parking pawl and parking actuator support when assembling rear extension assembly.



6. Tighten rear extension assembly mounting bolts to the specified torque. Refer to AT-235, "COMPONENTS" .

CAUTION:
Do not reuse self-sealing bolts.

7. Install rear engine mounting member. Refer to AT-242, "Removal and Installation" .
8. Install oil pan to transmission case.

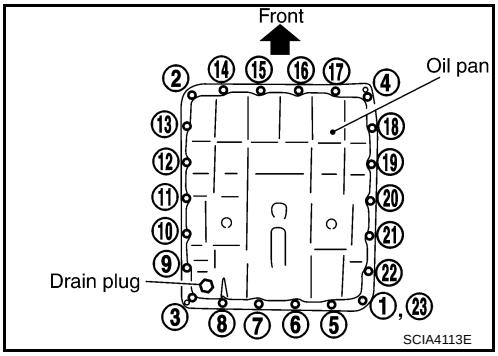


a. Install oil pan gasket to oil pan.

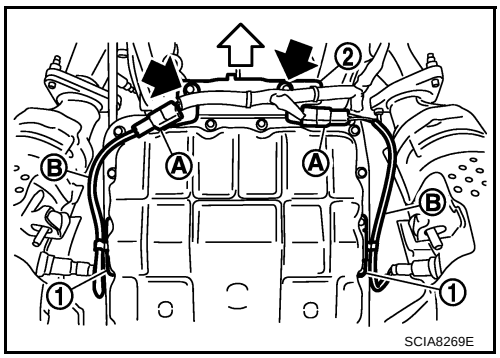
CAUTION:
- **Do not reuse oil pan gasket.**
- **Install it in the direction to align hole positions.**
- **Completely remove all moisture, oil and old gasket, etc. from oil pan gasket mounting surface.**

b. Install oil pan (2) (with oil pan gasket) and clips (1) to transmission case.
- ⇦: Vehicle front
- ⬅: Oil pan mounting bolt

CAUTION:
- **Install it so that drain plug (3) comes to the position as shown in the figure.**
- **Be careful not to pinch harness.**
- **Completely remove all moisture, oil and old gasket, etc. from oil pan mounting surface.**



c. Tighten oil pan mounting bolts to the specified torque in numerical order shown in the figure after temporarily tightening them. Refer to AT-235, "COMPONENTS" .



CAUTION:
Do not reuse oil pan mounting bolts.

9. Install drain plug gasket and drain plug to oil pan, and then tighten drain plug to the specified torque. Refer to AT-235, "COMPONENTS" .

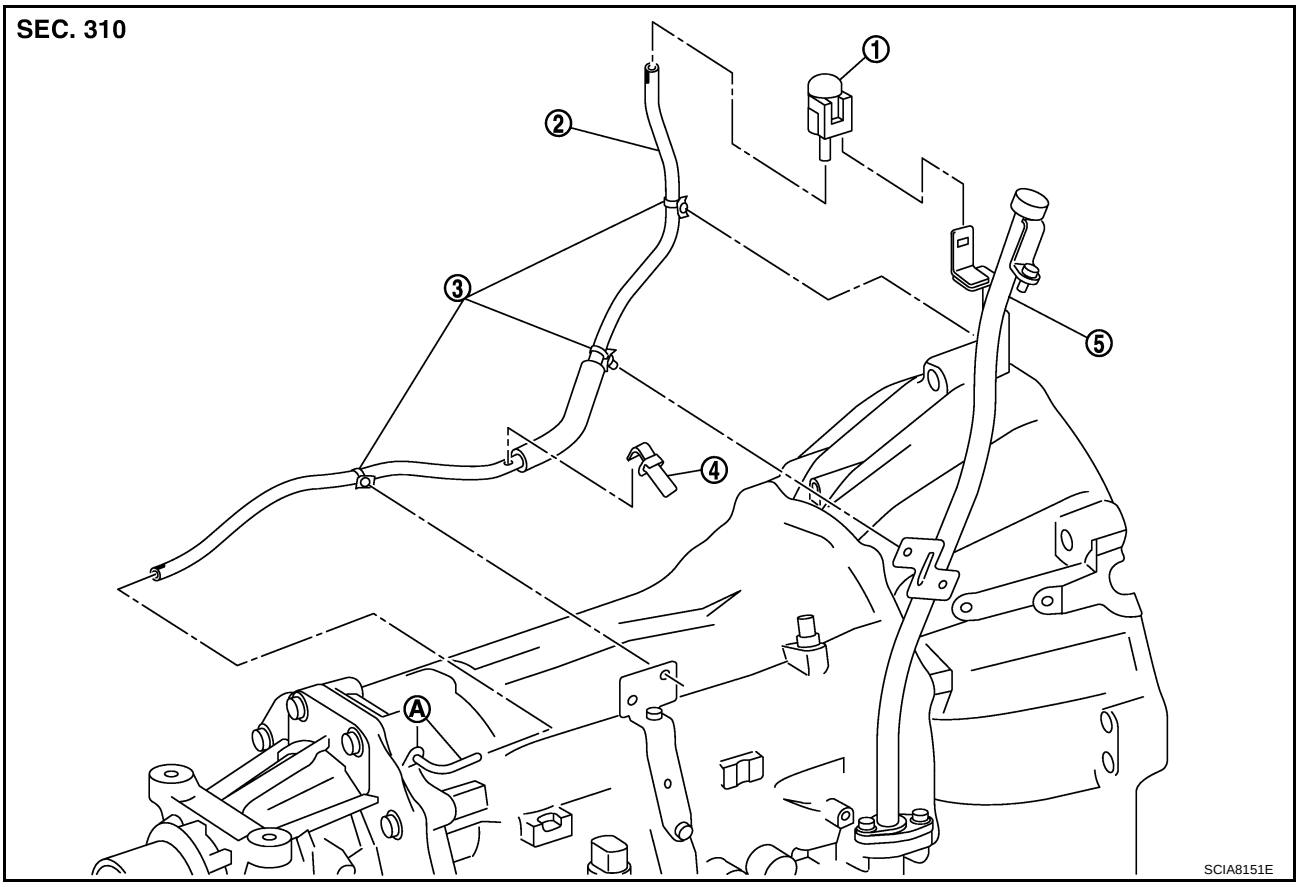
CAUTION:
Do not reuse drain plug gasket.

10. Install bracket (2) from transmission assembly. Refer to AT-215, "COMPONENTS" .
    - ⇦: Vehicle front
    - ⬅: Bolt
11. Install heated oxygen sensor 2 harness (B) from clips (1).
12. Connect heated oxygen sensor 2 harness connectors (A).
13. Install exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .
14. Install control rod. Refer to AT-205, "Control Rod Removal and Installation" .

SCIA8269E

15. Install rear propeller shaft. Refer to PR-6, "Removal and Installation" .

    CAUTION:
    Do not impact or damage propeller shaft tube.
16. Install exhaust front tube and center muffler. Refer to EX-3, "Removal and Installation" .
17. Pour ATF into A/T assembly. Refer to AT-12, "Changing A/T Fluid" .
18. Connect the battery cable to the negative terminal.

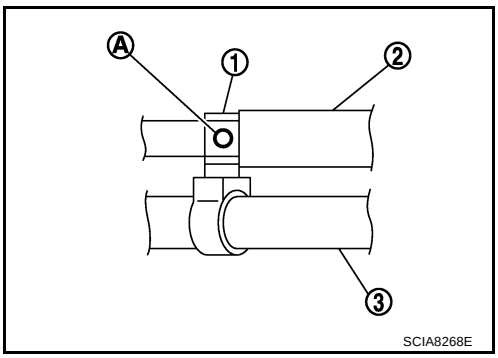


AIR BREATHER HOSE

PFP:31098

Removal and Installation

NCS00096

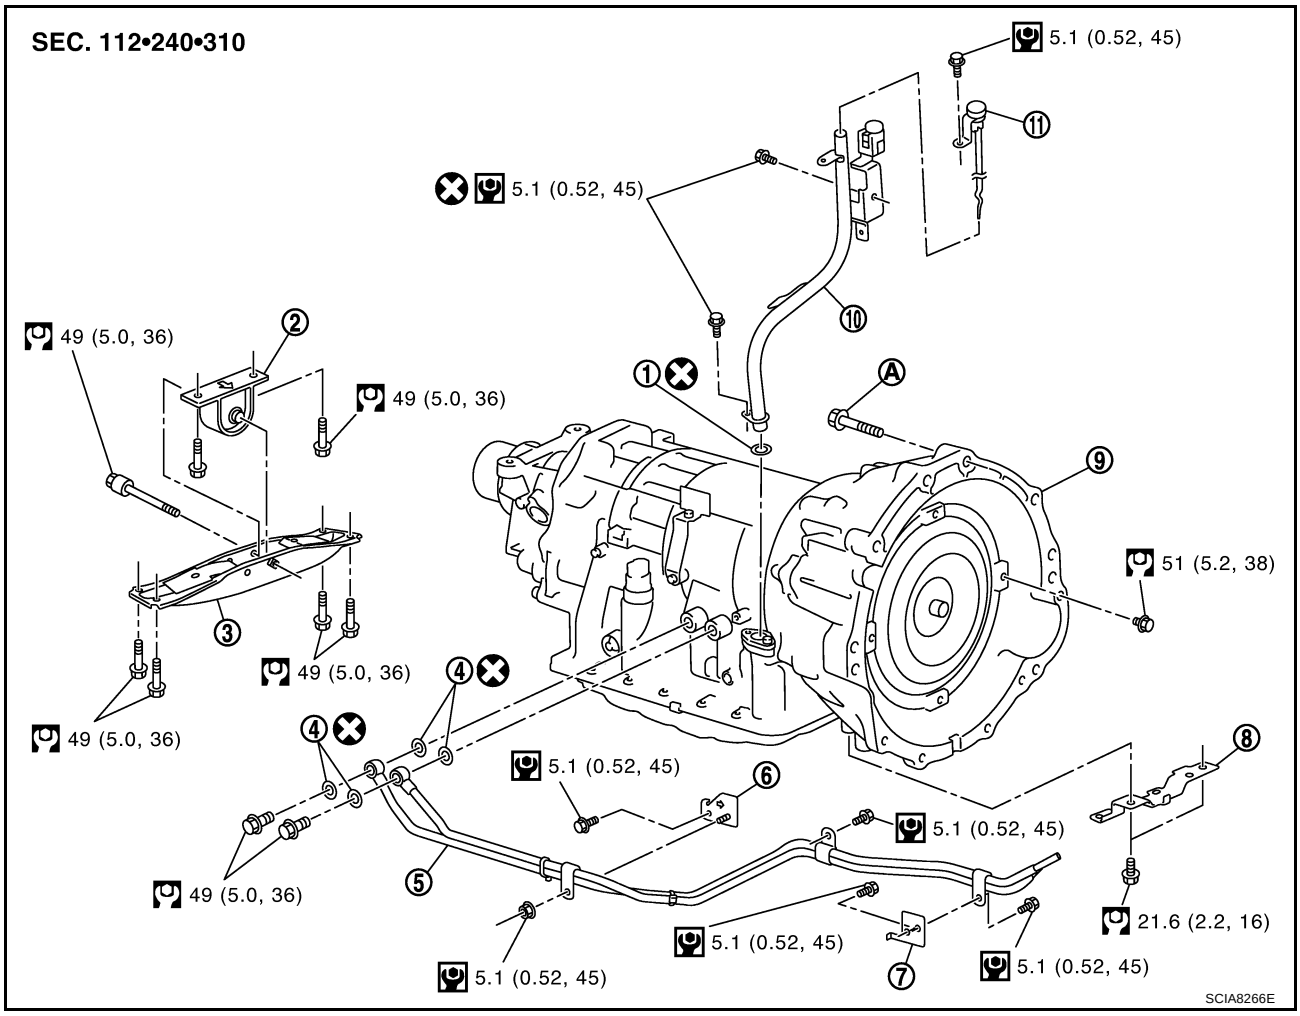


Refer to the figure below for air breather hose removal and installation procedure.

1. Air breather box
2. Air breather hose
3. Clip
4. Clip
5. A/T fluid charging pipe
A. Air breather tube

CAUTION:

- **When installing an air breather hose, do not to crush or block by folding or bending the hose.**
- **When inserting air breather hose to air breather tube, be sure to insert it fully until its end reaches the tube bend R portion.**
- **Install A/T air breather hose to air breather tube so that the paint mark is facing upward.**
- **Ensure clips are securely installed to brackets when installing A/T breather hose to brackets.**
- **When inserting air breather hose to air breather box, be sure to insert it fully until its end reaches the stop.**
- **Install A/T air breather hose to air breather box so that the paint mark is facing backward.**
- **Install clip (1) at the paint mark (A).**
  - **Air breather hose (2)**
  - **Harness (3)**



TRANSMISSION ASSEMBLY

PFP:31020

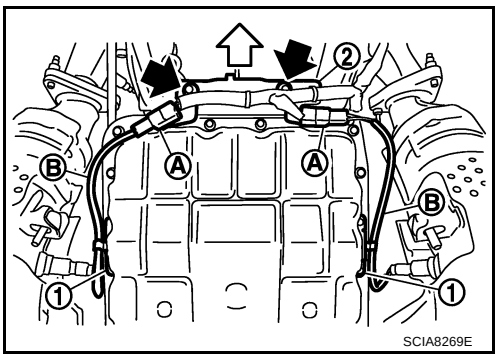
Removal and Installation

NCS00097

1. O-ring	2. Engine mounting insulator (rear)	3. Rear engine mounting member
4. Copper washer	5. Fluid cooler tube	6. Bracket
7. Bracket	8. Bracket	9. A/T assembly
10. A/T fluid charging pipe	11. A/T fluid level gauge	

A. For tightening torque, refer to AT-244, "INSTALLATION" .

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

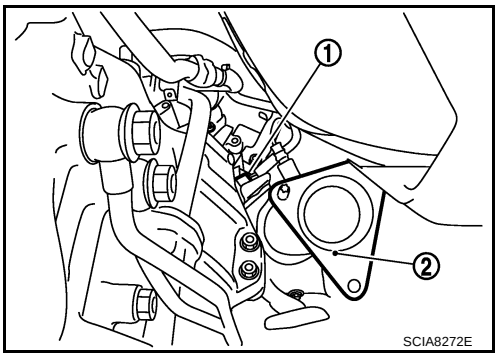


REMOVAL

CAUTION:

- **When removing A/T assembly from engine assembly, first remove crankshaft position sensor (POS) from A/T assembly.**
- **Be careful not to damage sensor edge.**

1. Disconnect the battery cable from the negative terminal.
2. Remove tower bar with power tool. Refer to FSU-20, "Removal and Installation" .
3. Remove engine under covers with power tool.
4. Remove exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .



5. Disconnect heated oxygen sensor 2 harness connectors (A).
   - ⇦: Vehicle front
   - ⬅: Bolt
6. Remove heated oxygen sensor 2 harness (B) from clips (1).
7. Remove bracket (2) from transmission assembly.
8. Remove front cross bar with power tool. Refer to FSU-8, "Components" .
9. Remove exhaust front tube and center muffler with power tool. Refer to EX-3, "Removal and Installation" .
10. Remove three way catalyst (right bank) and three way catalyst (left bank). Refer to EM-22, "Removal and Installation" .

SCIA8269E

11. Remove crankshaft position sensor (POS) (1). Refer to EM-26, "Removal and Installation" .
    - Three way catalyst (right bank) (2)

    CAUTION:
    - **Do not subject it to impact by dropping or hitting it.**
    - **Do not disassemble.**
    - **Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.**
    - **Do not place in an area affected by magnetism.**

SCIA8272E

12. Remove rear propeller shaft. Refer to PR-6, "Removal and Installation" .

    CAUTION:
    Do not impact, or damage propeller shaft tube.
13. Remove control rod. Refer to AT-205, "Control Rod Removal and Installation" .
14. Disconnect the following:
    - A/T assembly harness connector
    - S terminal connector (A)
    - EPS solenoid valve harness connector (B)
15. Remove starter motor with power tool. Refer to SC-17, "Removal and Installation" .
16. Remove A/T fluid level gauge.
17. Remove A/T fluid charging pipe
18. Remove O-ring from A/T fluid charging pipe.
19. Remove fluid cooler tube according to the following procedure.

SCIA8273E

a. Remove mounting nuts of the engine mounting insulator (LH) and engine mounting insulator (RH) on the undersurface of the vehicle. Refer to EM-101, "Removal and Installation" .
b. Push engine assembly upward from the vehicle with transmission jack to create clearance for removing fluid cooler tube.

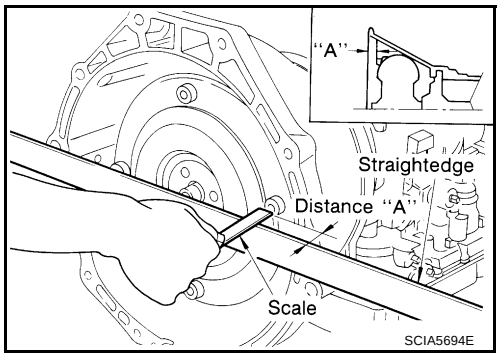
   CAUTION:
   Be careful with hoses and harness when pushing up the engine assembly.
c. Remove fluid cooler tube.

20. Plug up openings such as A/T fluid charging pipe hole, etc.
21. Remove rear plate cover from converter housing. Refer to EM-26, "Removal and Installation" .
22. Turn crankshaft, and remove the four tightening bolts for drive plate and torque converter.

    CAUTION:
    When turning crankshaft, turn it clockwise as viewed from the front of the engine.
23. Support A/T assembly with a transmission jack.

    CAUTION:
    When setting the transmission jack, be careful not to allow it to collide against the drain plug.
24. Remove rear engine mounting member with power tool. Refer to AT-242, "Removal and Installation" .

25. Remove engine mounting insulator (rear) with power tool. Refer to AT-242, "Removal and Installation" .
26. Remove bolts fixing A/T assembly to engine assembly with power tool.
27. Remove A/T assembly from vehicle with a transmission jack.
    - **Secure torque converter to prevent it from dropping.**
    - **Secure A/T assembly to a transmission jack.**
28. Remove air breather hose. Refer to AT-241, "Removal and Installation" .

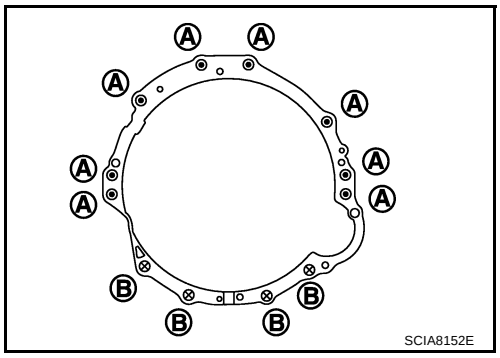


INSPECTION

Installation and Inspection of Torque Converter

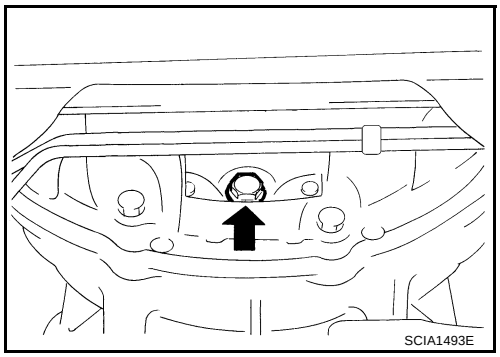
- After inserting a torque converter to a A/T, be sure to check distance “A” to ensure it is within the reference value limit.

Distance “A”: 25.0 mm (0.98 in) or more



INSTALLATION

Install the removed parts in the reverse order of the removal, while paying attention to the following work.



- When installing A/T assembly to the engine assembly, attach the fixing bolts in accordance with the following standard.
  - ⊗: Engine to transmission
  - ⦿: Transmission to engine

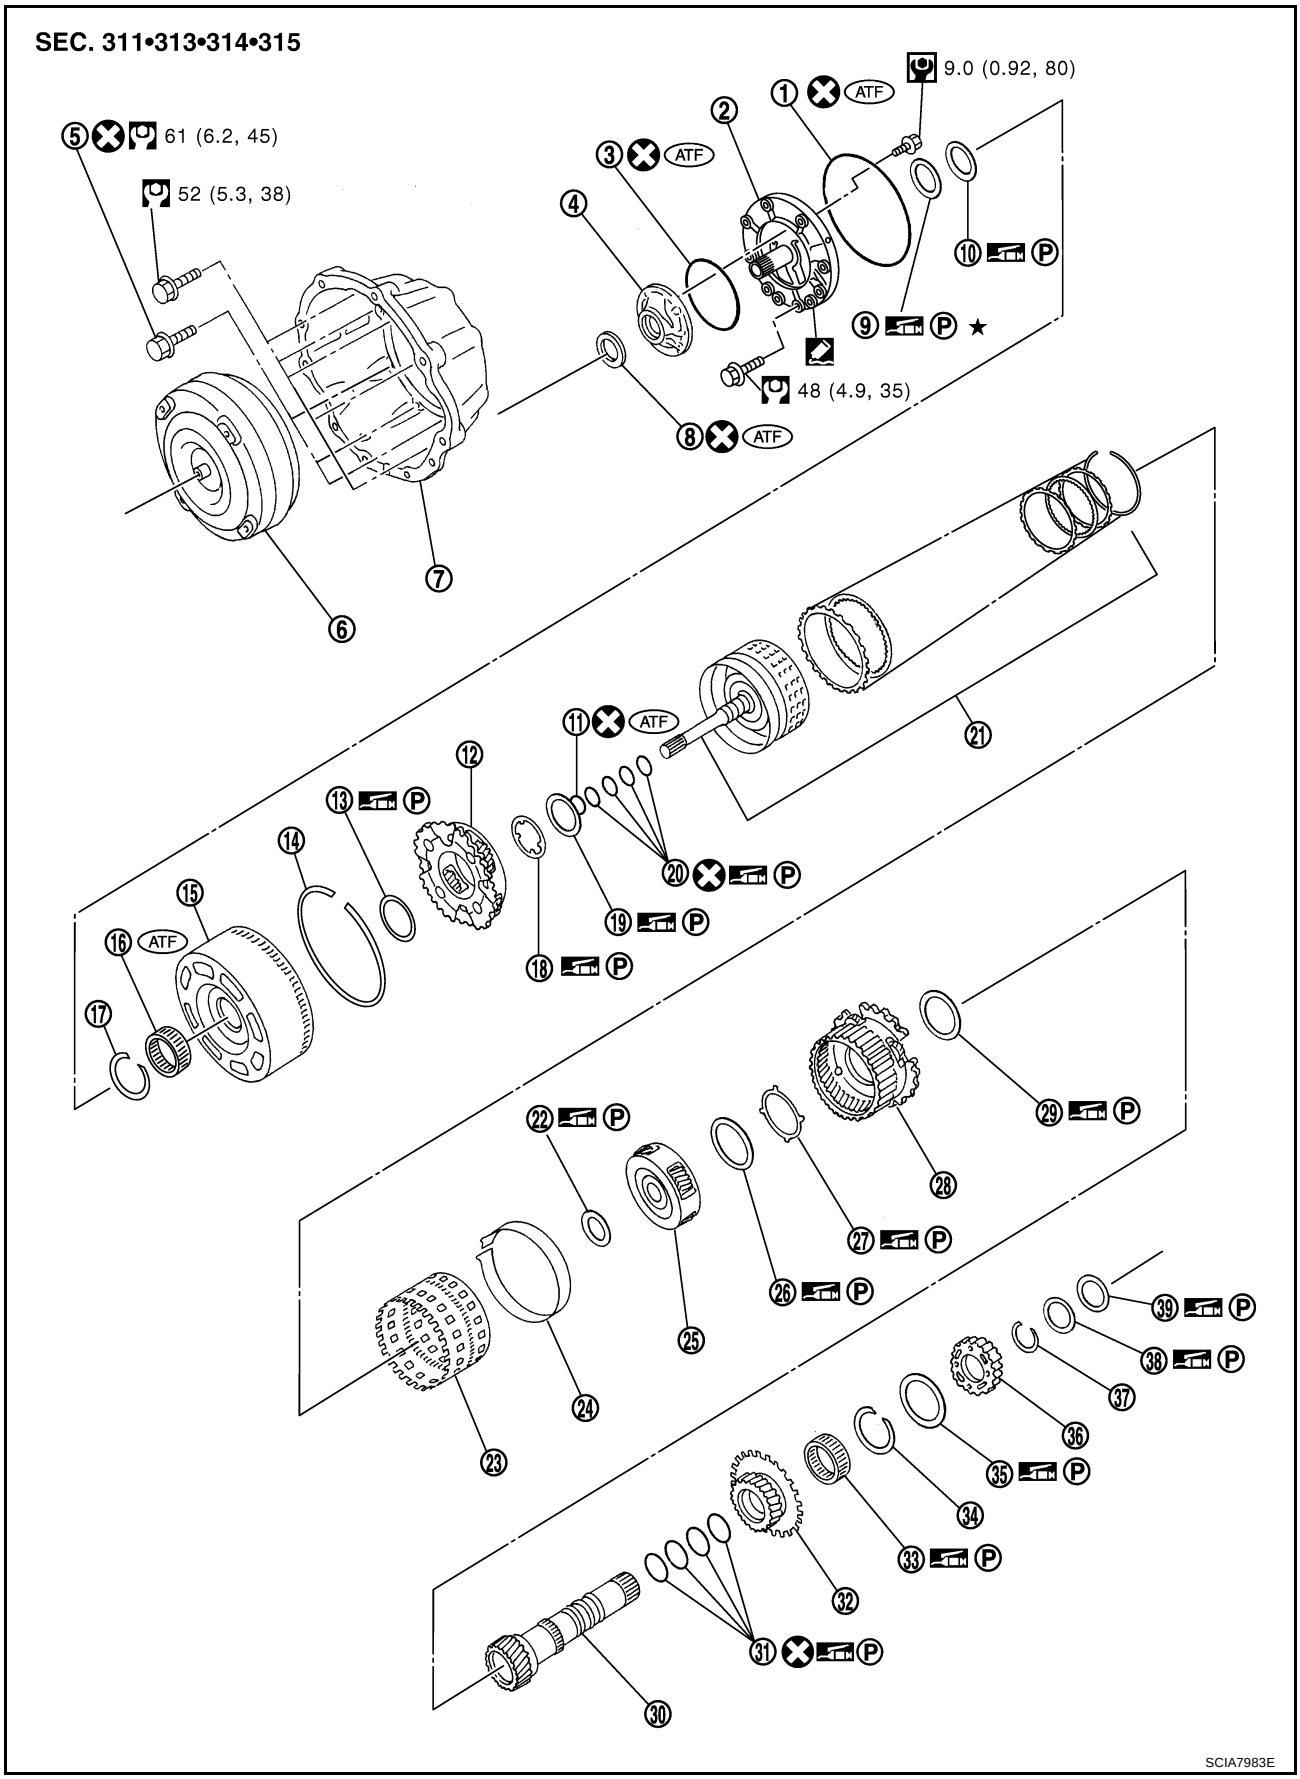
Bolt symbol	A	B
Number of bolts	8	4
Bolt length mm (in)	65 (2.56)	35 (1.38)
Tightening torque N·m (kg-m, ft-lb)	75 (7.7, 55)	46.6 (4.8, 34)

- Align the positions of tightening bolts for drive plate with those of the torque converter, and temporarily tighten the bolts. Then tighten the bolts with the specified torque.

: 51 N·m (5.2 kg-m, 38 ft-lb)

CAUTION:

- **When turning crankshaft, turn it clockwise as viewed from the front of the engine.**
- **When tightening the tightening bolts for torque converter after fixing crankshaft pulley bolts, be sure to confirm the tightening torque of crankshaft pulley mounting bolts. Refer to EM-53, "TIMING CHAIN" .**
- **After converter is installed to drive plate, rotate crankshaft several turns and check to be sure that transmission rotates freely without binding.**
- Install crankshaft position sensor (POS). Refer to EM-26, "Removal and Installation" .



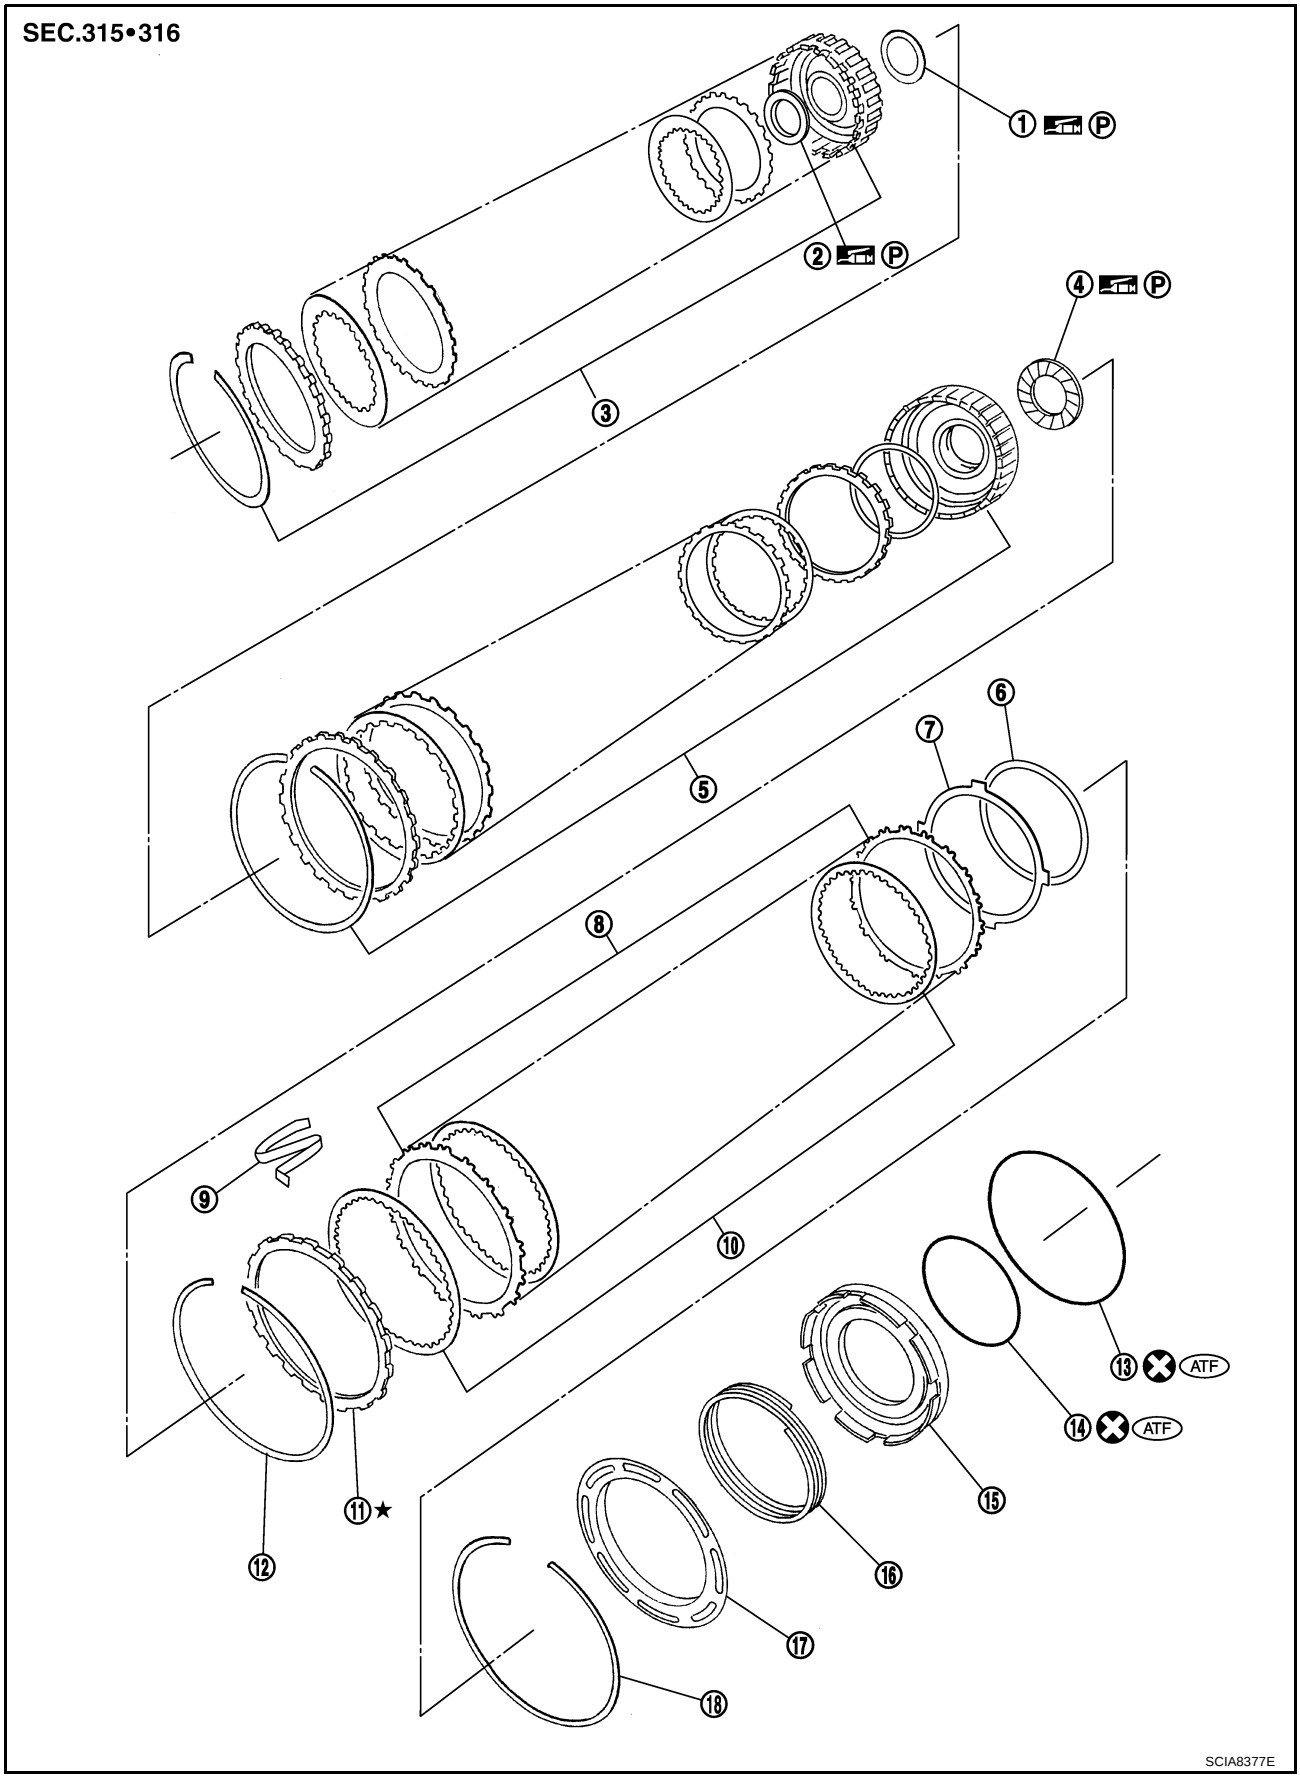
- After completing installation, check A/T fluid leakage, A/T fluid level and A/T position. Refer to AT-12, "Checking A/T Fluid" , AT-206, "Checking of A/T Position" .

OVERHAUL

PFP:00000

Components

NCS00098



1. O-ring	2. Oil pump cover	3. O-ring

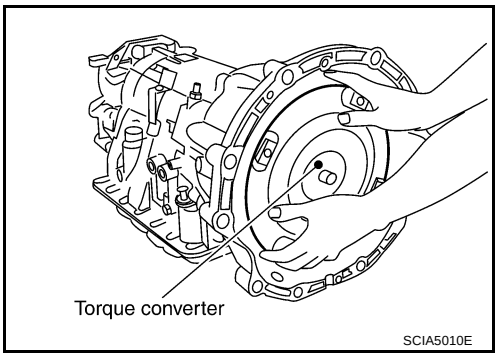
DISASSEMBLY



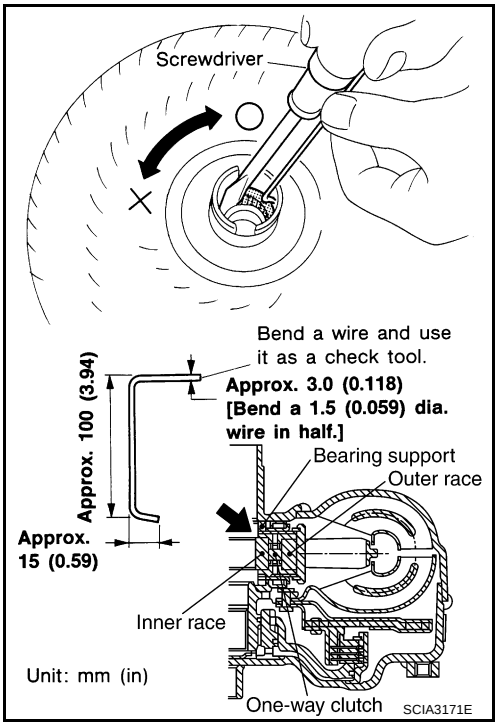
PFP:31020

Disassembly

NCS0009B

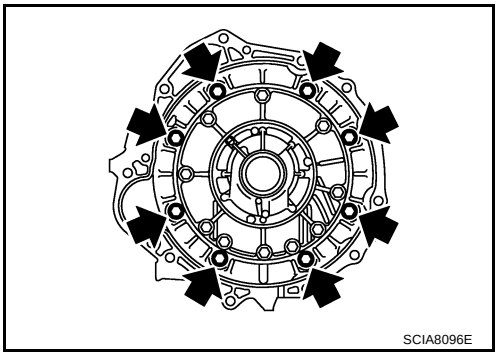
CAUTION:
Do not disassemble parts behind Drum Support. Refer to AT-17, "Cross-sectional View" .

1. Drain ATF through drain hole.
2. Remove torque converter by holding it firmly and turing while pulling straight out.



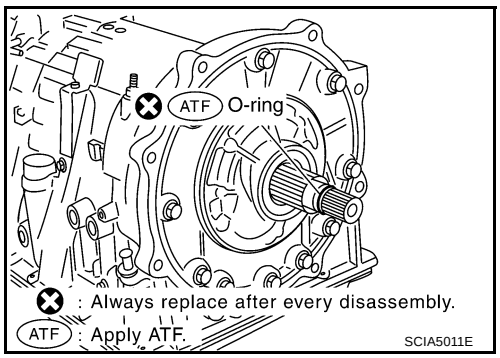
3. Check torque converter one-way clutch using check tool as shown at figure.

a. Insert check tool into the groove of bearing support built into one-way clutch outer race.

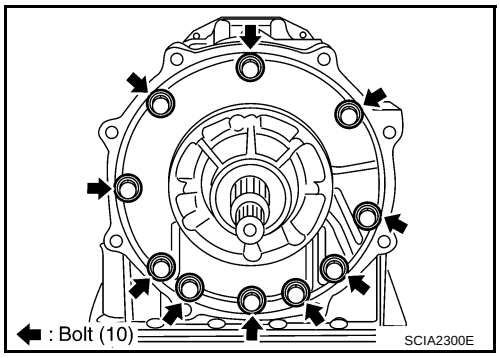


b. When fixing bearing support with check tool, rotate one- way clutch spline using screwdriver.

c. Check that inner race rotates clockwise only. If not, replace torque converter assembly.

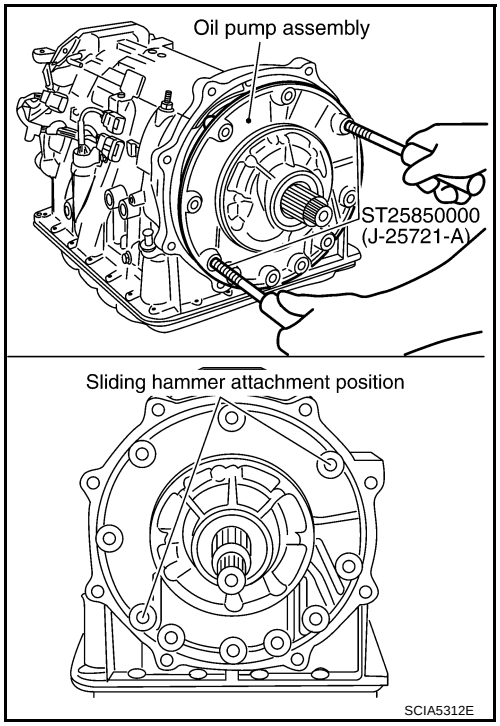


4. Remove tightening bolts (⬅) for converter housing and transmission case.
5. Remove converter housing from transmission case.

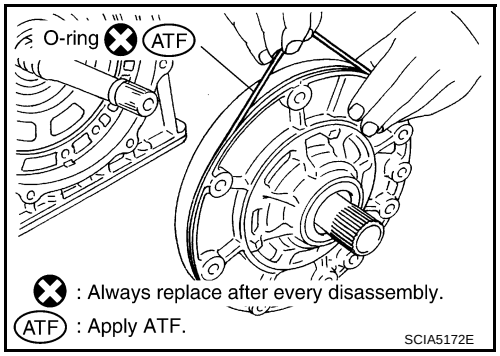


CAUTION:
Be careful not to scratch converter housing.

6. Remove O-ring from input clutch assembly.

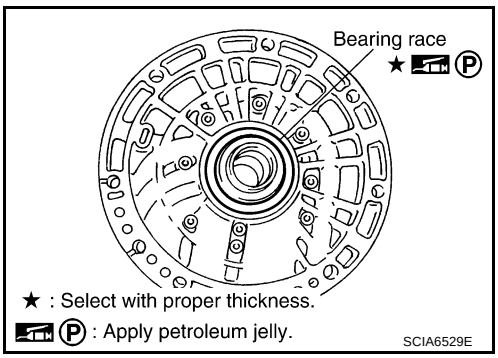


7. Remove tightening bolts for oil pump assembly and transmission case.

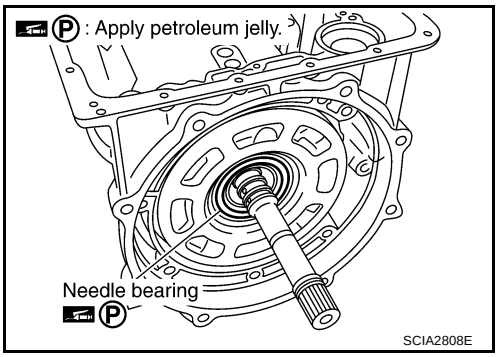


8. Attach the sliding hammers to oil pump assembly and extract it evenly from transmission case.

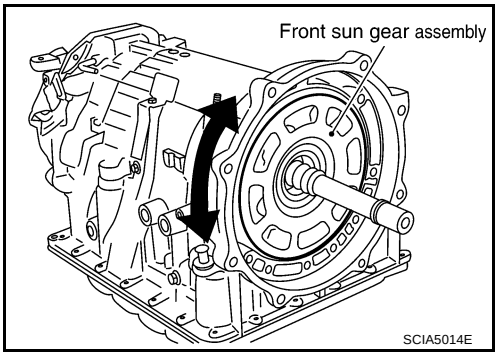
CAUTION:



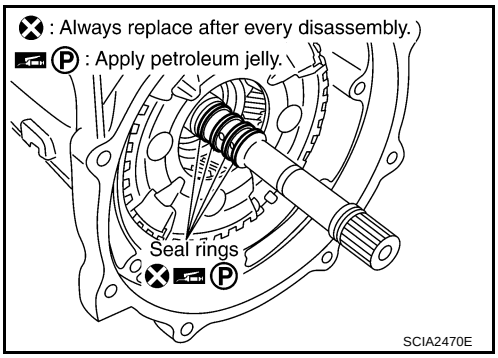
- **Fully tighten sliding hammer screw.**
- **Make sure that bearing race is installed to the oil pump assembly edge surface.**



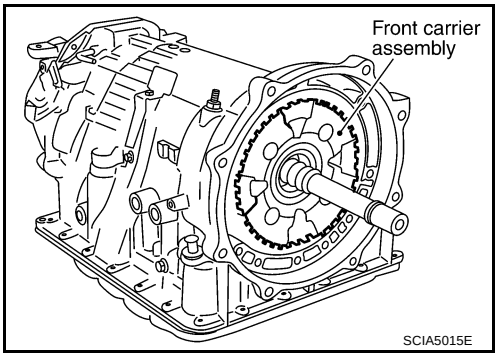
9. Remove O-ring from oil pump assembly.



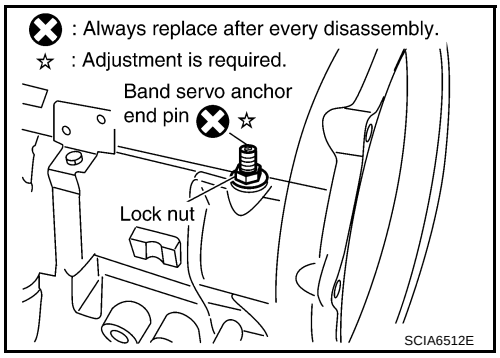
10. Remove bearing race from oil pump assembly.



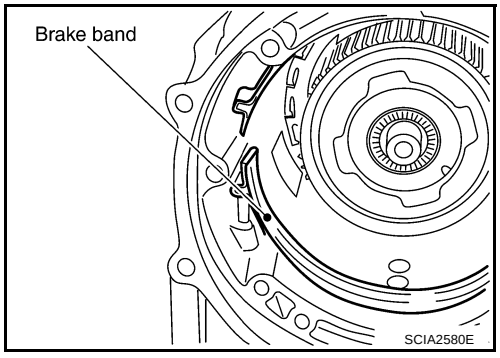
11. Remove needle bearing from front sun gear.



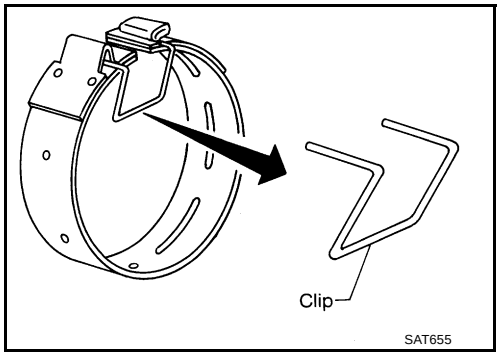
12. Remove front sun gear assembly from front carrier assembly.
NOTE:
Remove front sun gear by rotating left/right.



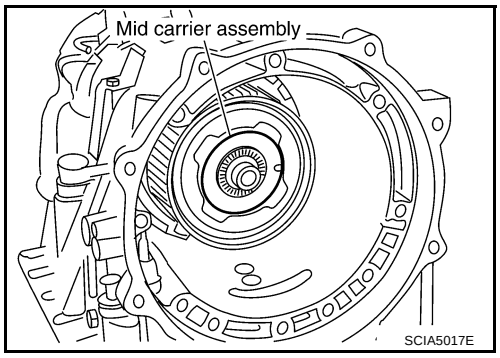
13. Remove seal rings from input clutch assembly.



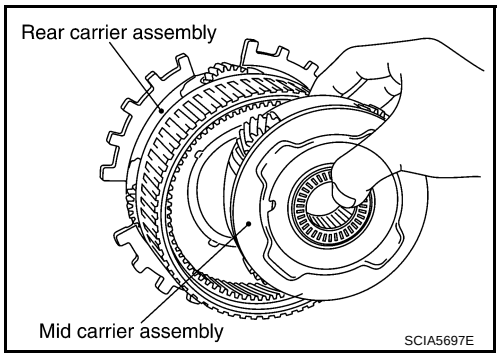
14. Remove front carrier assembly from rear carrier assembly. (With input clutch assembly and rear internal gear.)
CAUTION:
Be careful to remove it with needle bearing.



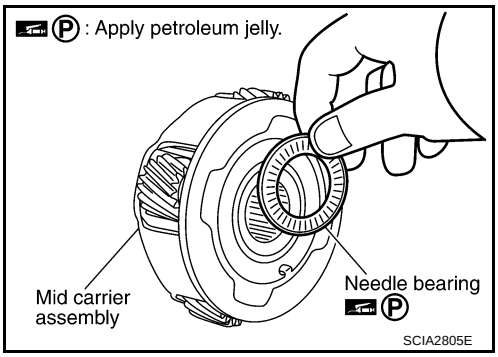
15. Loosen lock nut and remove band servo anchor end pin from transmission case.



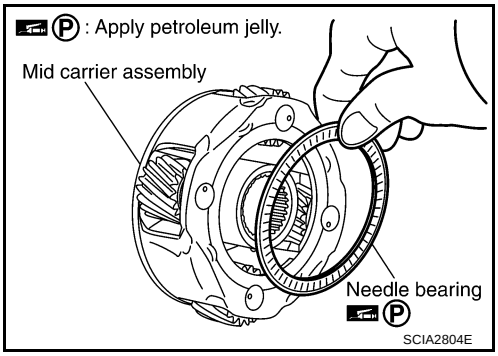
16. Remove brake band from transmission case.



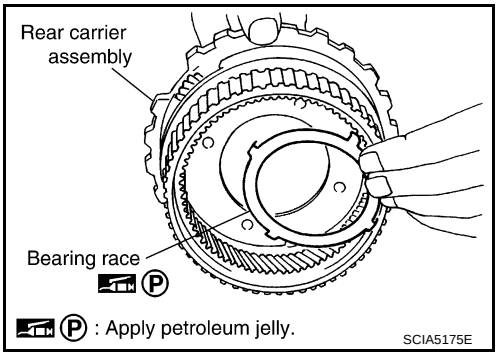
- **To prevent brake linings from cracking or peeling, do not stretch the flexible band unnecessarily. When removing the brake band, always secure it with a clip as shown in the figure at right.**
  Leave the clip in position after removing the brake band.
- **Check brake band facing for damage, cracks, wear or burns.**



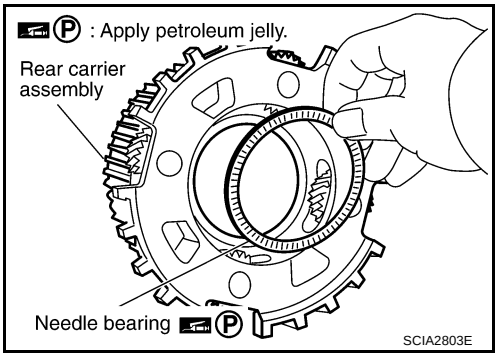
17. Remove mid carrier assembly and rear carrier assembly as a unit.



18. Remove mid carrier assembly from rear carrier assembly.

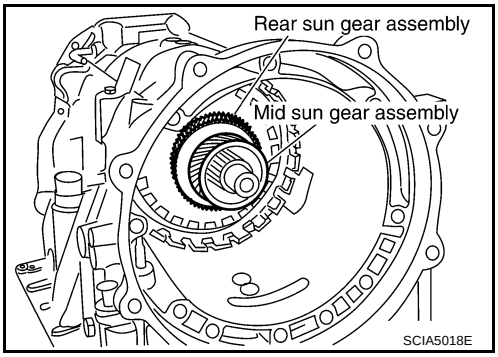


19. Remove needle bearing (front side) from mid carrier assembly.



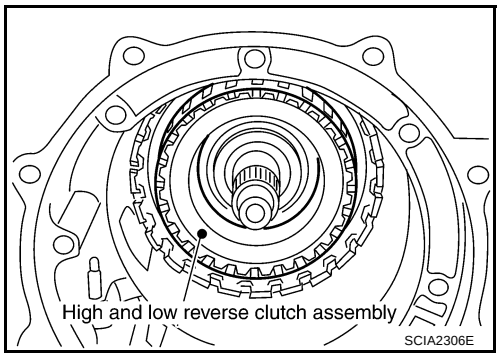
20. Remove needle bearing (rear side) from mid carrier assembly.

21. Remove bearing race from rear carrier assembly.



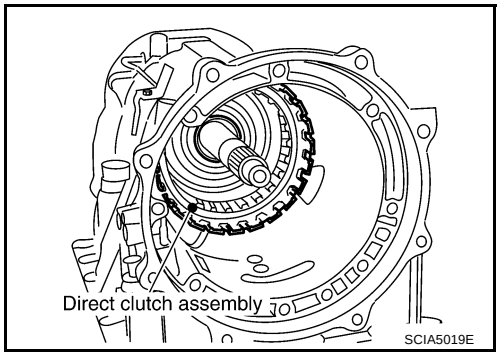
22. Remove needle bearing from rear carrier assembly.

23. Remove mid sun gear assembly, rear sun gear assembly and high and low reverse clutch hub as a unit.

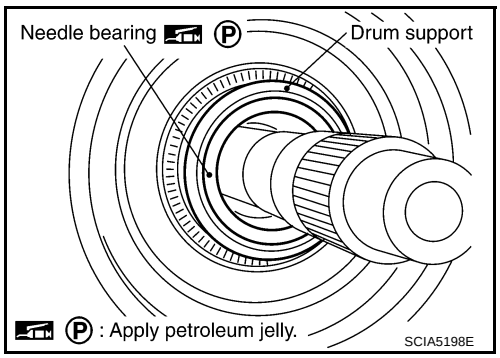


CAUTION:

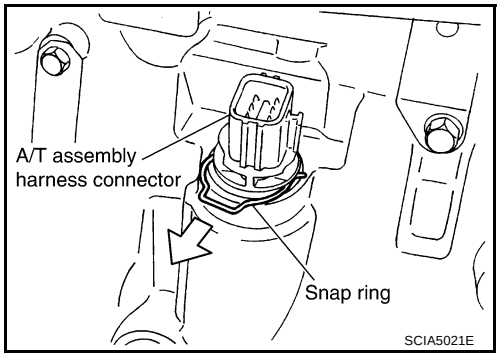
Be careful to remove then with bearing race and needle bearing.



24. Remove high and low reverse clutch assembly from direct clutch assembly.

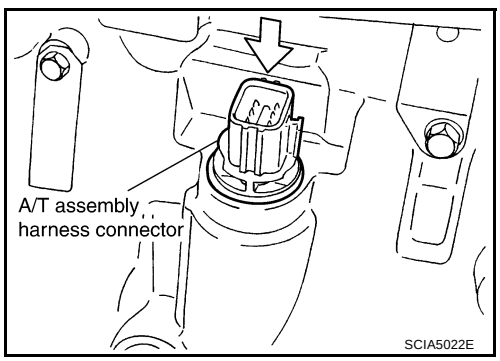


CAUTION:
Make sure that needle bearing is installed to high and low reverse clutch assembly edge surface.

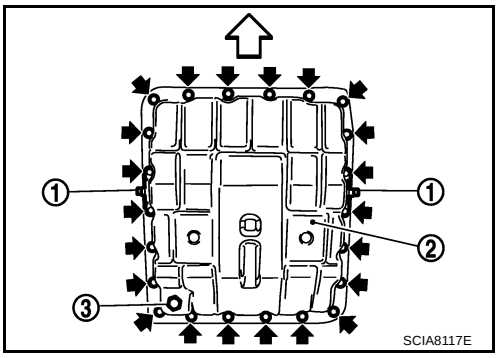


25. Remove direct clutch assembly from reverse brake.

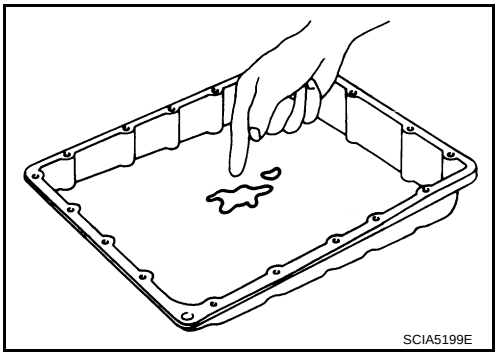
26. Remove needle bearing from drum support.



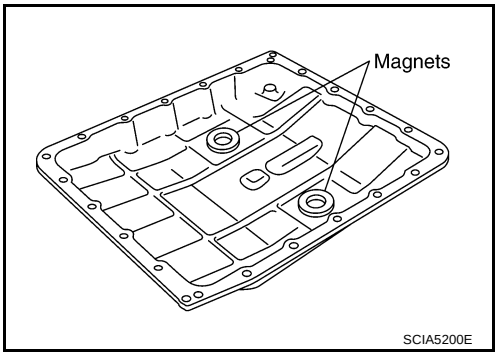
27. Remove snap ring from A/T assembly harness connector.



28. Push A/T assembly harness connector.

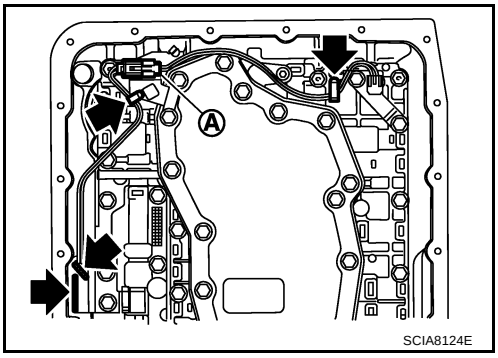


CAUTION:
Be careful not to damage connector.



29. Remove clips (1), oil pan (2) and oil pan gasket.
    - ⇦: Front
    - ⬅: Oil pan mounting bolt
    - Drain bolt (3)

30. Check foreign materials in oil pan to help determine causes of malfunction. If the ATF is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
    - **If frictional material is detected, perform A/T fluid cooler cleaning. Refer to AT-14, "A/T Fluid Cooler Cleaning".**

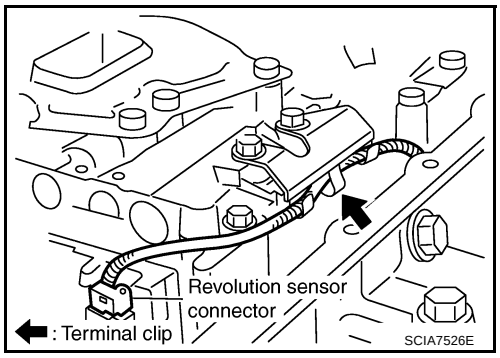


31. Remove magnets from oil pan.

32. Disconnect A/T fluid temperature sensor 2 connector (A).

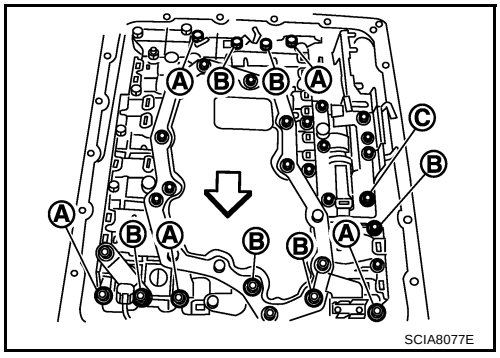
    CAUTION:
    Be careful not to damage connector.

33. Straighten terminal clips (⬅) to free terminal cord assembly and A/T fluid temperature sensor 2 harness.



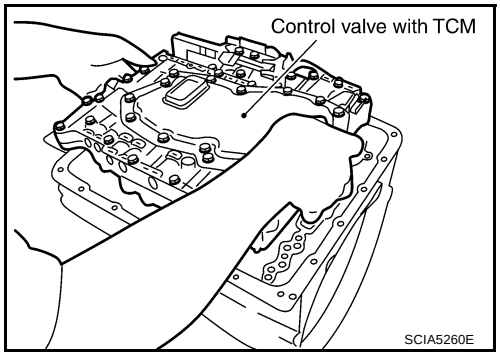
34. Disconnect revolution sensor connector.

    CAUTION:
    Be careful not to damage connector.

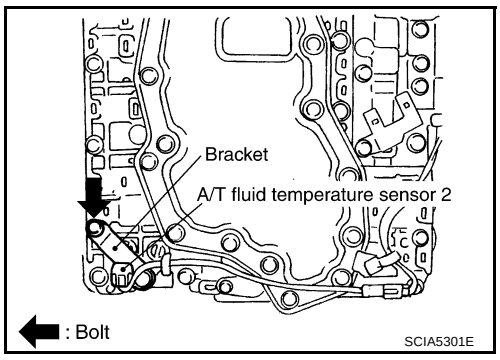


35. Straighten terminal clip to free revolution sensor harness.

36. Remove bolts (A), (B) and (C) from control valve with TCM.
    - ⇦: Front



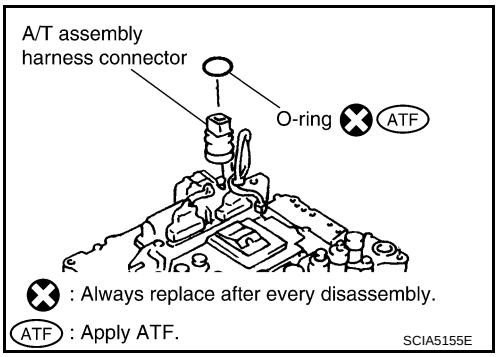
Bolt symbol	Length mm (in)	Number of bolts
A	42 (1.65)	5
B	55 (2.17)	6
C	40 (1.57)	1



37. Remove control valve with TCM from transmission case.

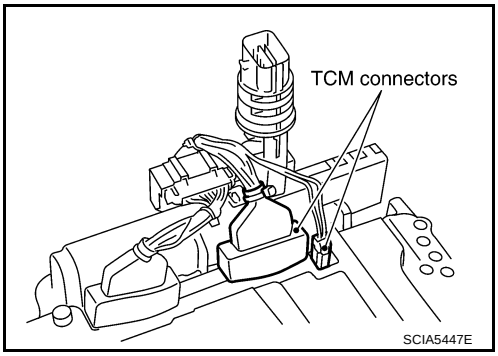
    CAUTION:

    When removing, be careful with the manual valve notch and manual plate height. Remove it vertically.

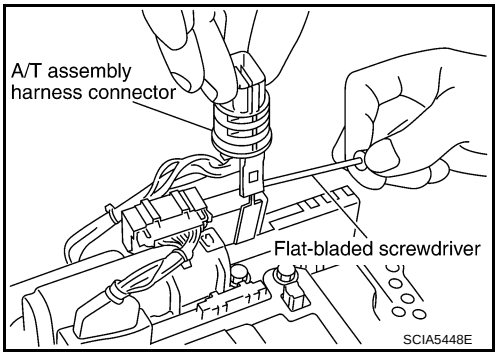


38. Remove A/T fluid temperature sensor 2 with bracket from control valve with TCM.

39. Remove bracket from A/T fluid temperature sensor 2.

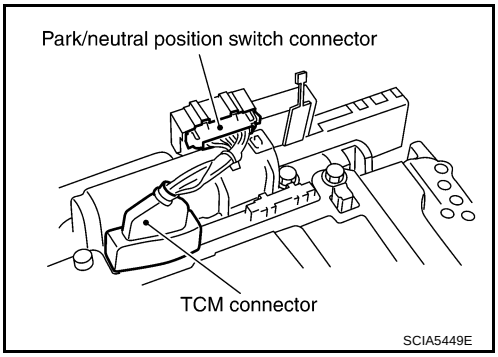


40. Remove O-ring from A/T assembly harness connector.

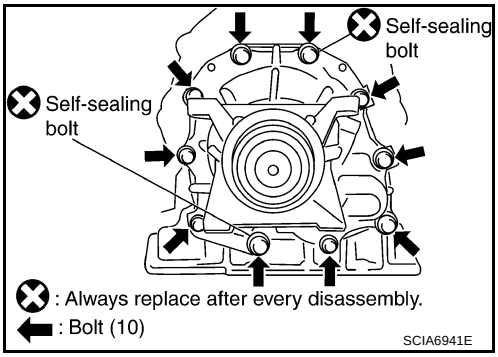


41. Disconnect TCM connectors.

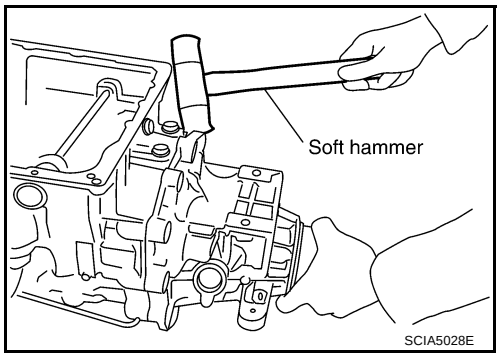
CAUTION:
Be careful not to damage connectors.



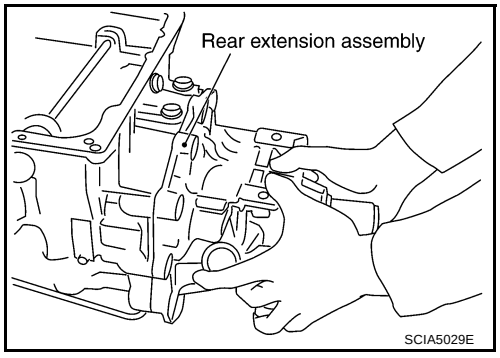
42. Remove A/T assembly harness connector from control valve with TCM using a flat-bladed screwdriver.



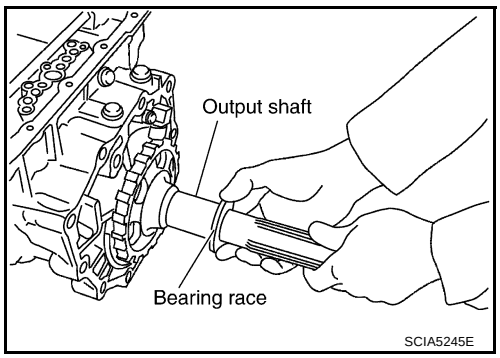
43. Disconnect TCM connector and park/neutral position switch connector.



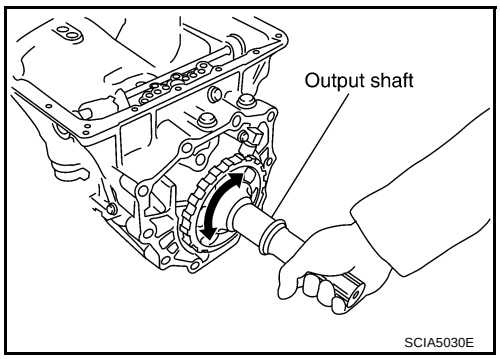
CAUTION:
Be careful not to damage connectors.



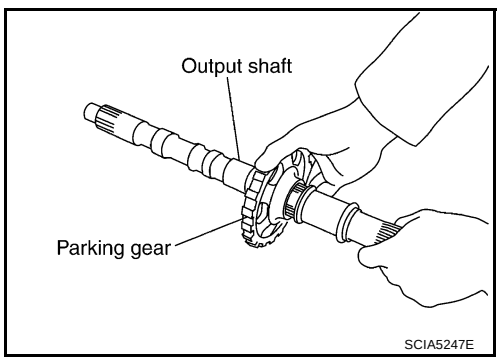
44. Remove tightening bolts for rear extension assembly and transmission case.



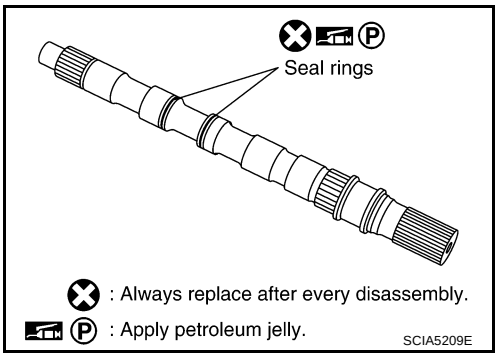
45. Tap rear extension assembly with soft hammer.



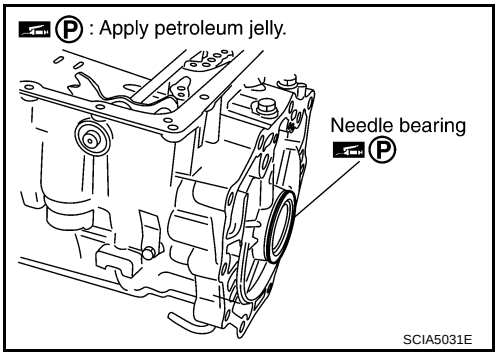
46. Remove rear extension assembly from transmission case. (With needle bearing)



47. Remove bearing race from output shaft.

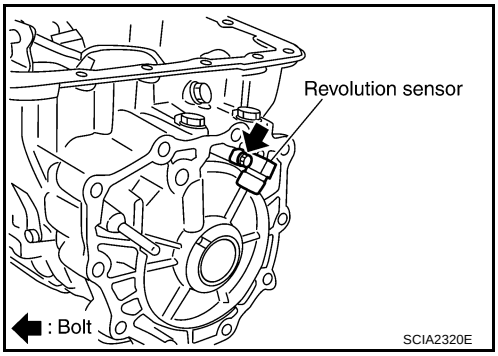


48. Remove output shaft from transmission case by rotating left/right.



49. Remove parking gear from output shaft.

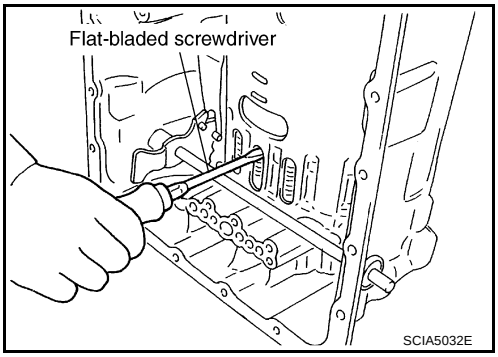
50. Remove seal rings from output shaft.



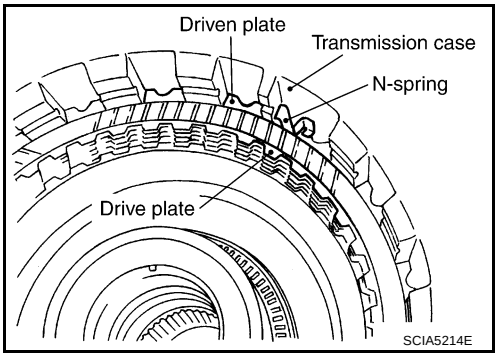
51. Remove needle bearing from transmission case.

52. Remove revolution sensor from transmission case.

CAUTION:



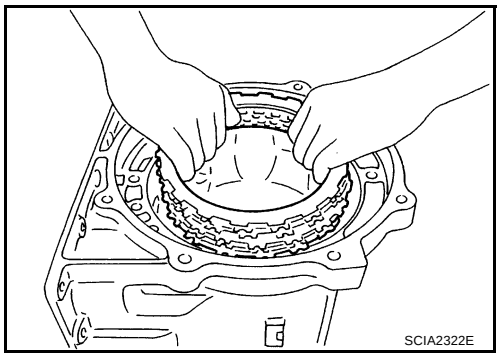
- **Do not subject it to impact by dropping or hitting it.**
- **Do not disassemble.**
- **Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.**
- **Do not place in an area affected by magnetism.**



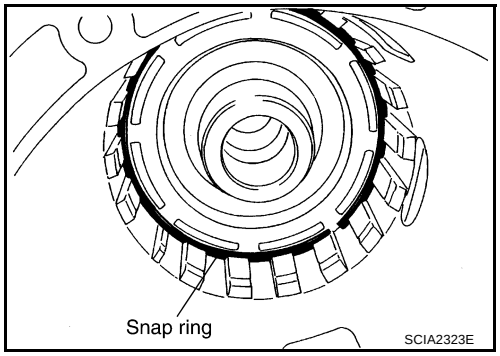
53. Remove reverse brake snap ring (fixing plate) using 2 flat-bladed screwdrivers.

NOTE:
Press out snap ring from transmission case oil pan side gap using a flat-bladed screwdriver, and remove it using another screwdriver.

54. Remove reverse brake retaining plate from transmission case.
    - Check facing for burns, cracks or damage. If necessary, replace the plate.

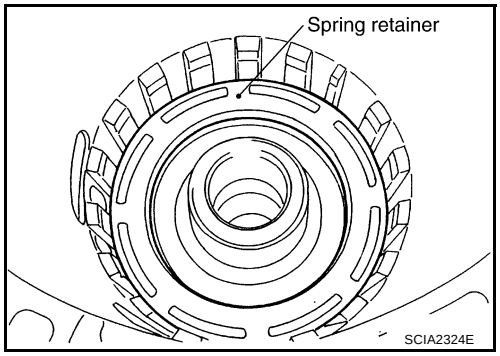


55. Remove N-spring from transmission case.

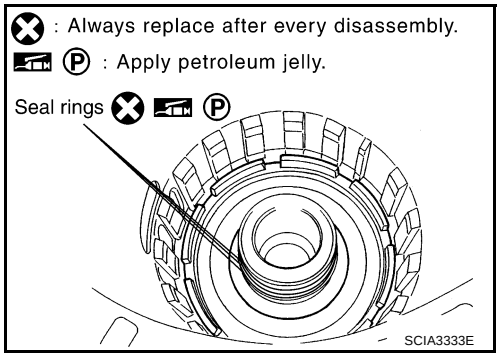


56. Remove reverse brake drive plates, driven plates and dish plates from transmission case.

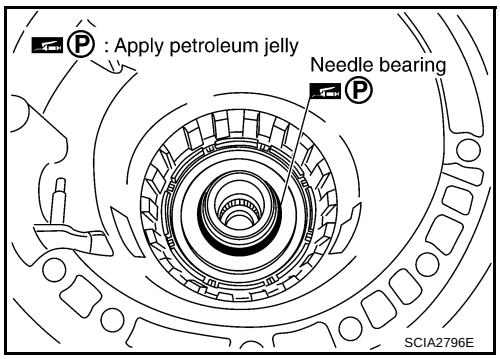
CAUTION:



Be careful to remove it with N-spring.

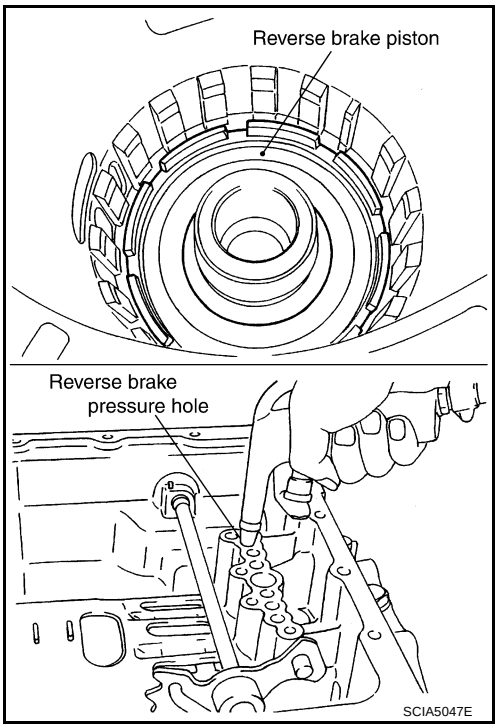


57. Remove snap ring (fixing spring retainer) using a flat-bladed screwdriver.

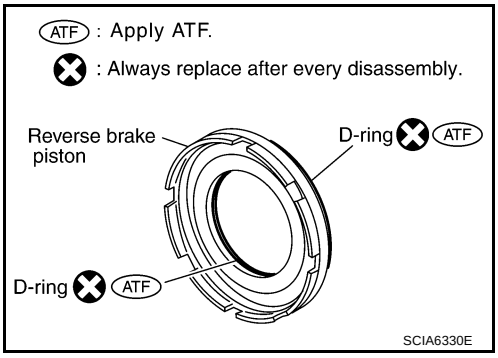


58. Remove spring retainer and return spring from transmission case.

59. Remove seal rings from drum support.

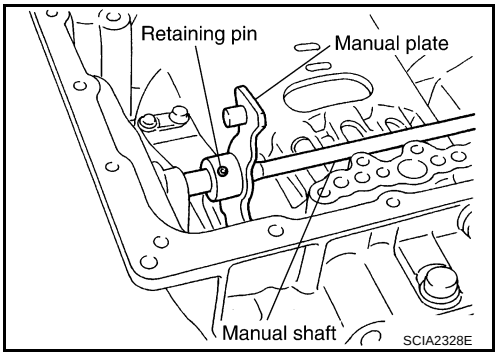


60. Remove needle bearing from drum support edge surface.

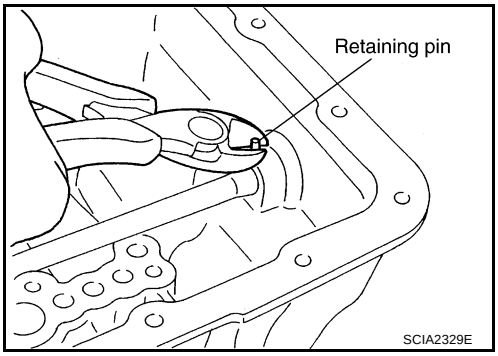


61. Remove reverse brake piston from transmission case with compressed air. Refer to AT-252, "Oil Channel" .

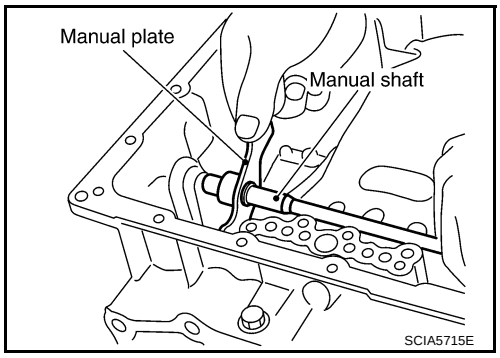
CAUTION:



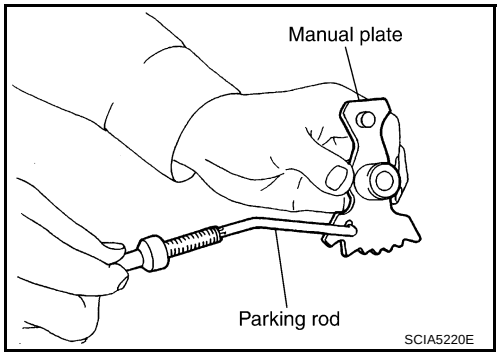
Care should be taken not to abruptly blow air. It makes pistons incline, as the result, it becomes hard to disassemble the pistons.



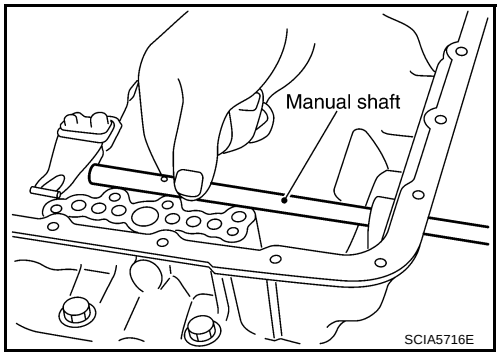
62. Remove D-rings from reverse brake piston.



63. Use a pin punch [4 mm (0.16 in) dia. commercial service tool] to knock out retaining pin.

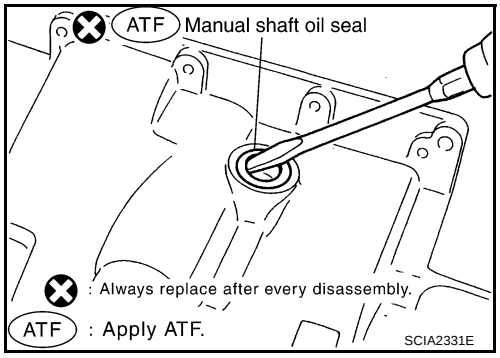


64. Remove manual shaft retaining pin using pair of nippers.

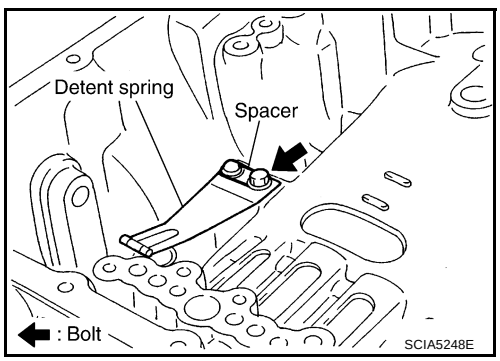


65. Remove manual plate (with parking rod) from manual shaft.

66. Remove parking rod from manual plate.

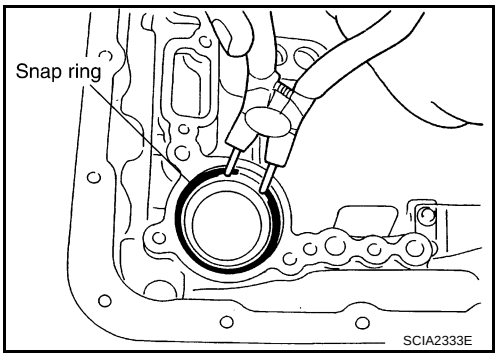


67. Remove manual shaft from transmission case.

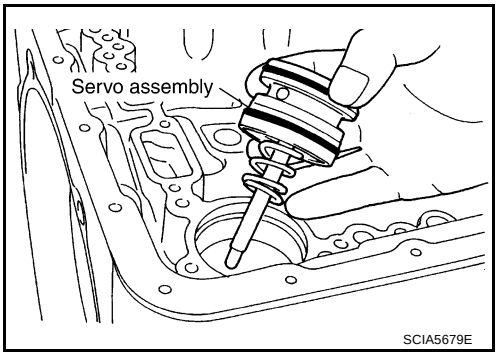


68. Remove manual shaft oil seals using a flat-bladed screwdriver.

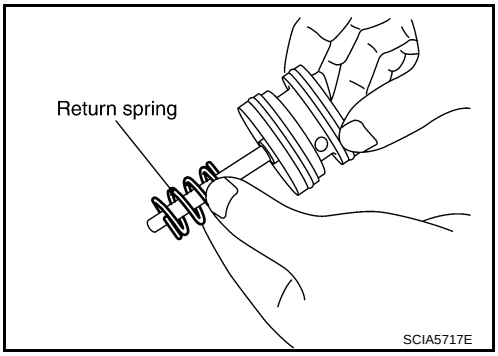
CAUTION:



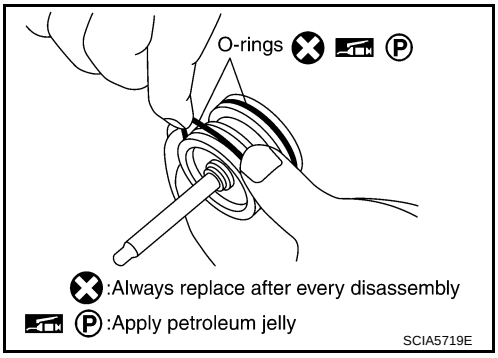
Be careful not to scratch transmission case.



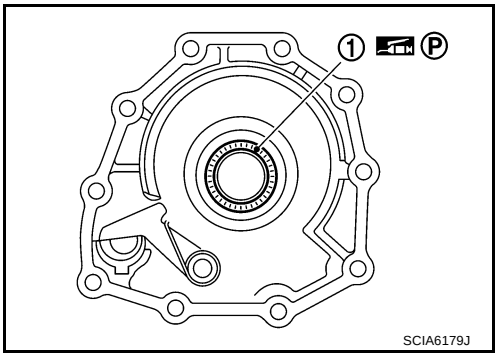
69. Remove detent spring and spacer from transmission case.



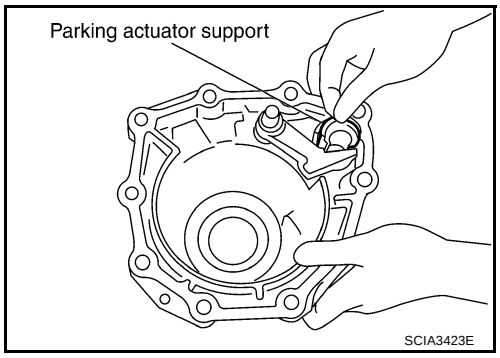
70. Remove snap ring from transmission case using pair of snap ring pliers.



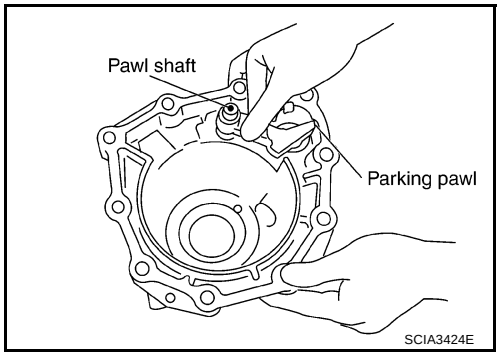
71. Remove servo assembly (with return spring) from transmission case.



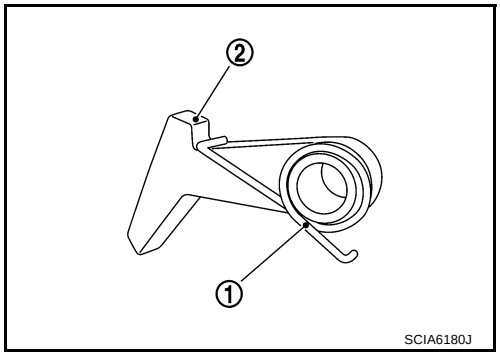
72. Remove return spring from servo assembly.



73. Remove O-rings from servo assembly.

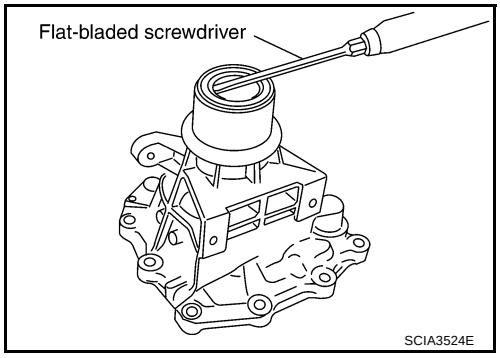


74. Remove needle bearing (1) from rear extension.



75. Remove parking actuator support from rear extension.

76. Remove parking pawl (with return spring) and pawl shaft from rear extension.

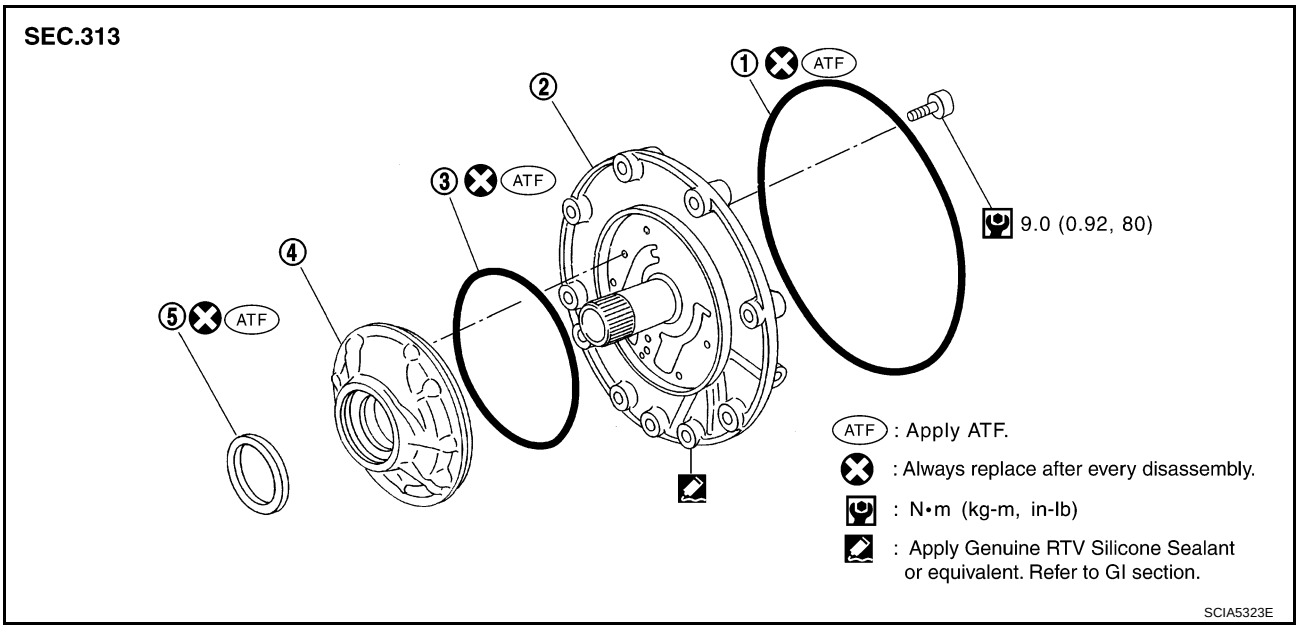


77. Remove return spring (1) from parking pawl (2).

78. Remove rear oil seal from rear extension.

CAUTION:

Be careful not to scratch rear extension.

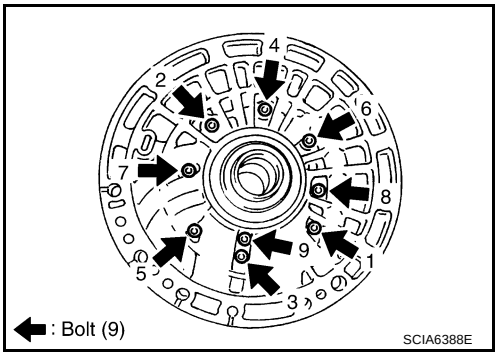


REPAIR FOR COMPONENT PARTS

PFP:00000

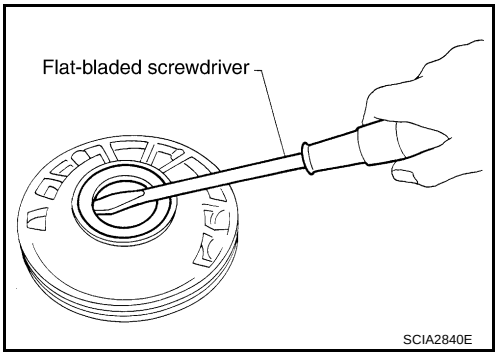
Oil Pump

NCS0009C



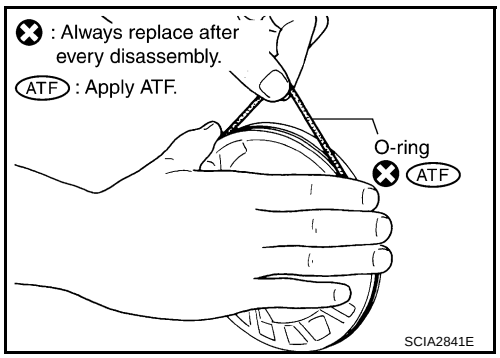
COMPONENTS

1. O-ring
2. Oil pump cover
3. O-ring
4. Oil pump housing
5. Oil pump housing oil seal

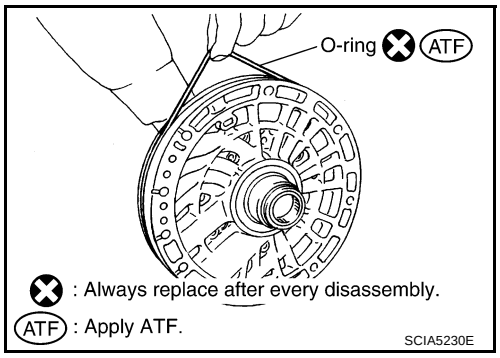


DISASSEMBLY

1. Remove oil pump housing from oil pump cover.



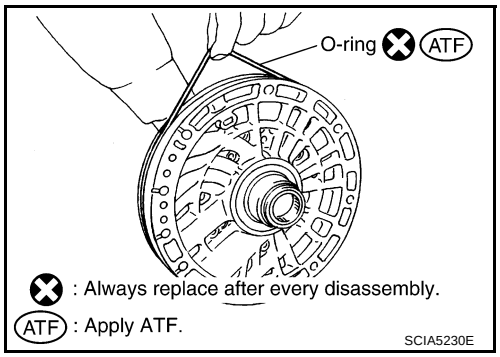
2. Remove oil pump housing oil seal using a flat-bladed screwdriver.



CAUTION:
Be careful not to scratch oil pump housing.

3. Remove O-ring from oil pump housing.

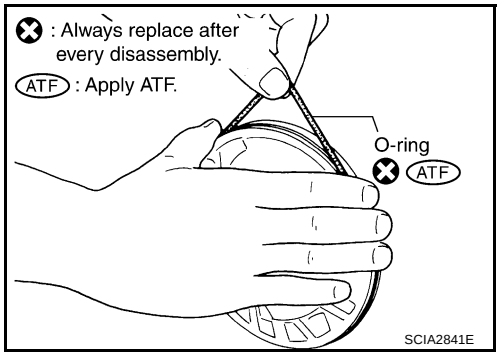
4. Remove O-ring from oil pump cover.



ASSEMBLY

1. Install O-ring to oil pump cover.

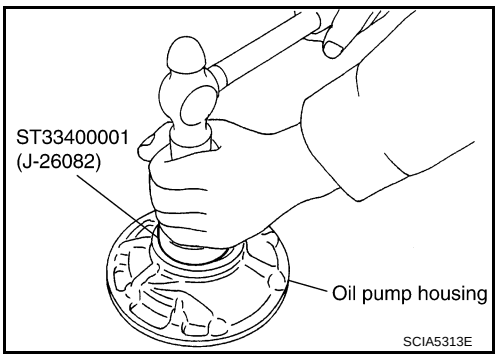
CAUTION:



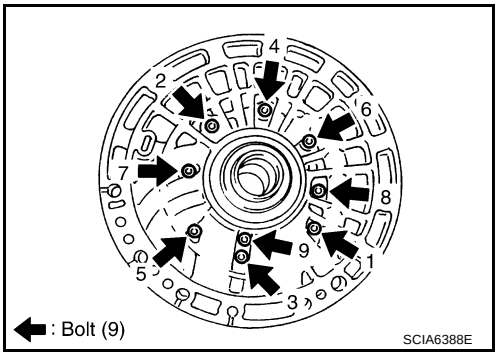
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**

2. Install O-ring to oil pump housing.

CAUTION:



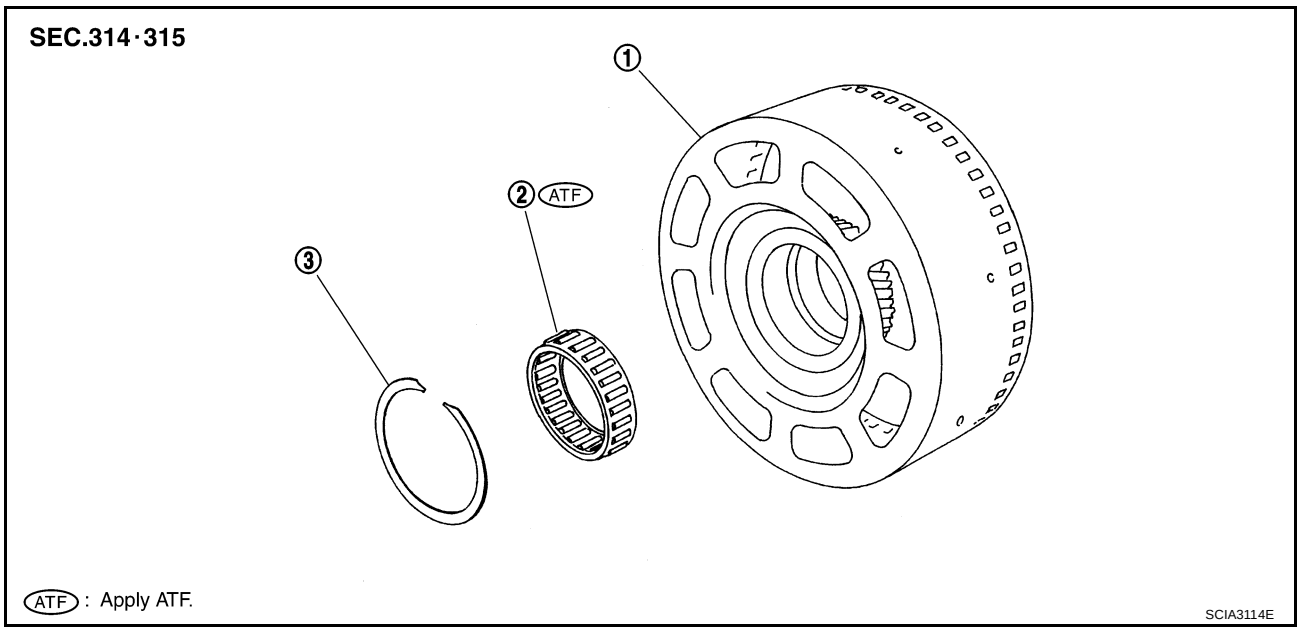
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**



3. Install oil pump housing oil seal to the oil pump housing until it is flush using the drift.

CAUTION:

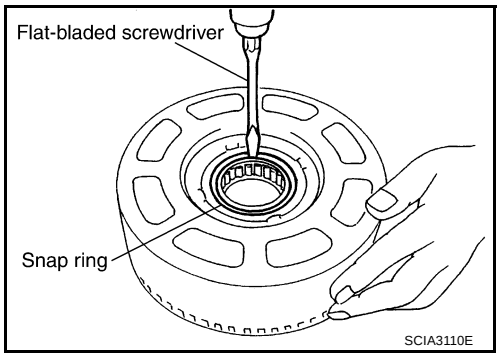
- **Do not reuse oil seal.**
- **Apply ATF to oil seal.**



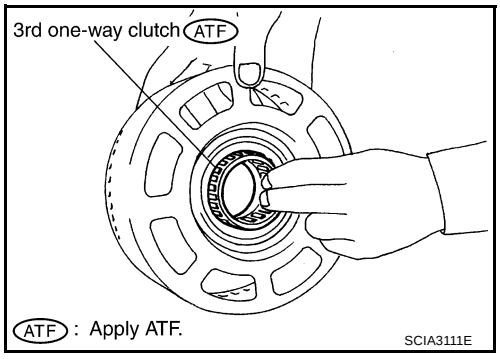
4. Install oil pump housing to oil pump cover.
5. Tighten bolts to the specified torque in numerical order shown in the figure after temporarily tightening them. Refer to AT-271, "COMPONENTS" .

Front Sun Gear, 3rd One-way Clutch

NCS0009D



COMPONENTS



1. Front sun gear
2. 3rd one-way clutch
3. Snap ring

DISASSEMBLY

1. Remove snap ring from front sun gear using a flat-bladed screwdriver.

2. Remove 3rd one-way clutch from front sun gear.

INSPECTION

3rd One-way Clutch

- Check frictional surface for wear or damage.

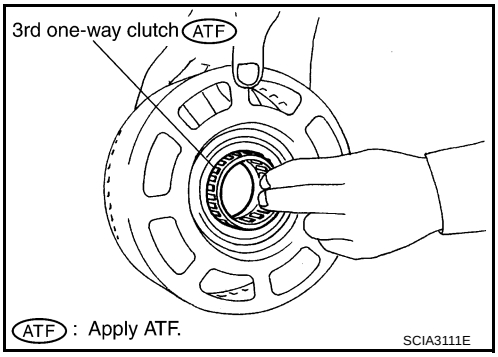
CAUTION:
If necessary, replace 3rd one-way clutch.

Front Sun Gear Snap Ring

- Check for deformation, fatigue or damage.

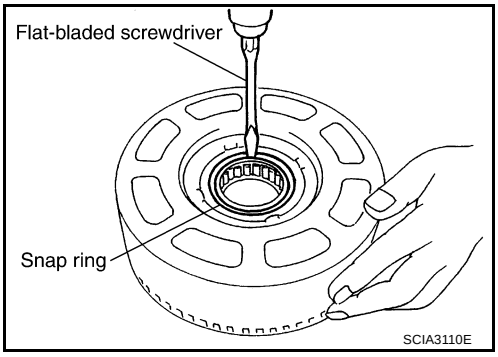
CAUTION:
If necessary, replace snap ring.

Front Sun Gear



- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace front sun gear.

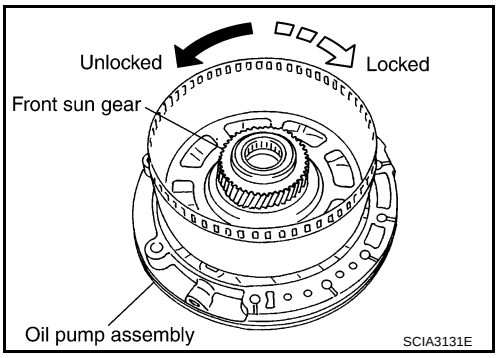


ASSEMBLY

1. Install 3rd one-way clutch in front sun gear.

CAUTION:
Apply ATF to 3rd one-way clutch.

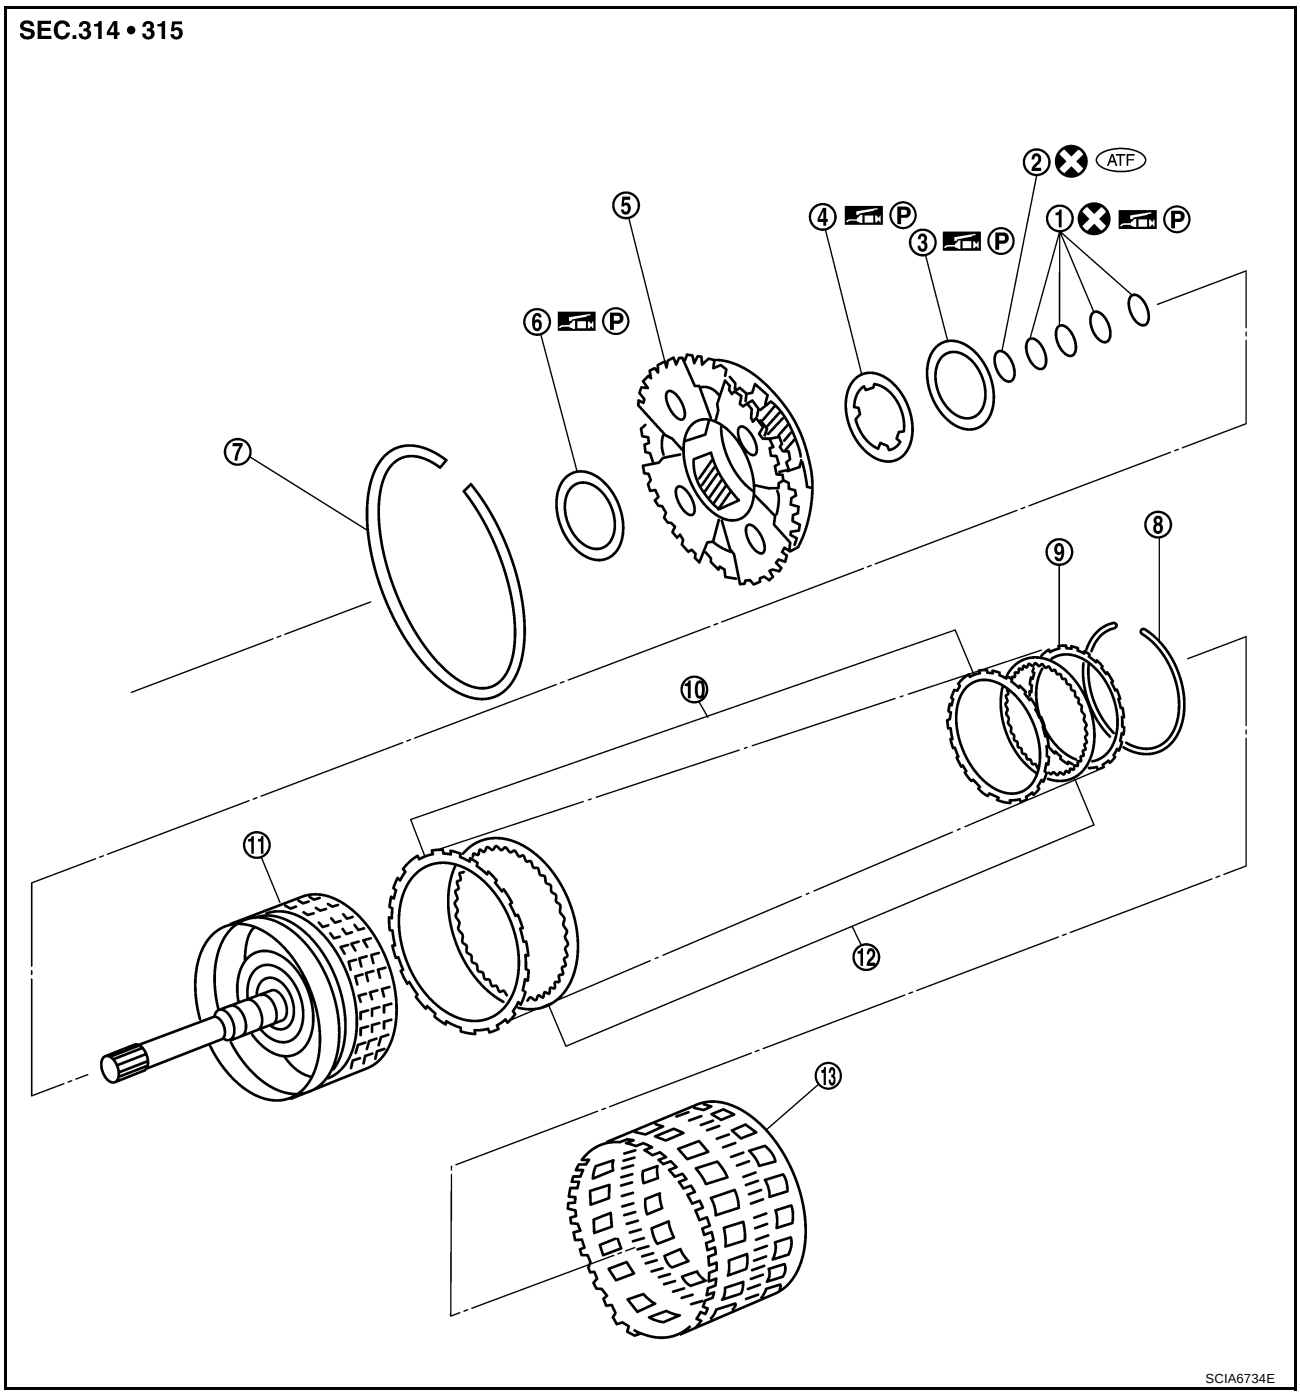
2. Install snap ring in front sun gear using a flat-bladed screwdriver.



3. Check operation of 3rd one-way clutch.

a. Hold oil pump assembly and turn front sun gear.

b. Check 3rd one-way clutch for correct locking and unlocking directions.

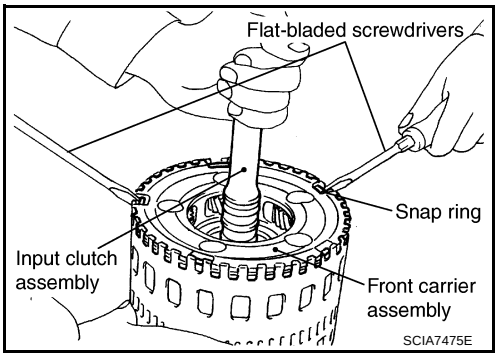


CAUTION:
If not as shown in the figure, check installation direction of 3rd one-way clutch.

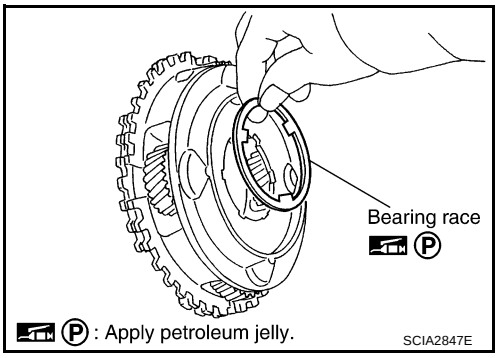
Front Carrier, Input Clutch, Rear Internal Gear

NCS0009E

COMPONENTS

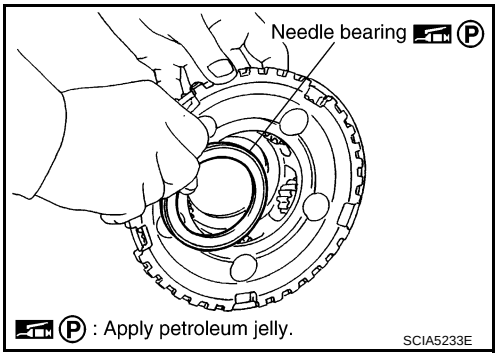


1. Seal ring
2. O-ring
3. Needle bearing
4. Bearing race
5. Front carrier assembly
6. Needle bearing
7. Snap ring
8. Snap ring
9. Retaining plate
10. Driven plate
11. Input clutch drum
12. Drive plate
13. Rear internal gear



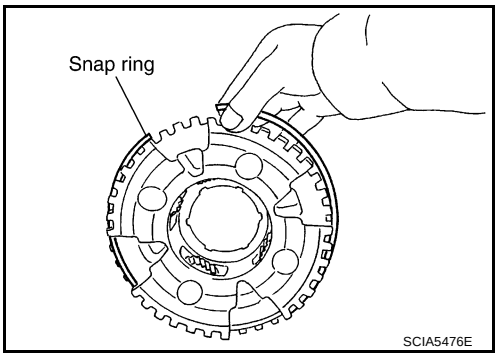
Refer to GI section to make sure icons (symbol marks) in the figure. Refer to GI-11, "Components" .

DISASSEMBLY

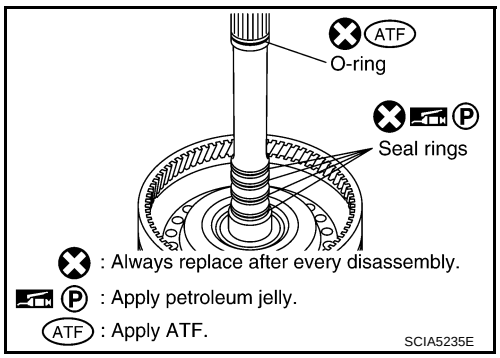


1. Compress snap ring using 2 flat-bladed screwdrivers.
2. Remove front carrier assembly and input clutch assembly from rear internal gear.
3. Remove front carrier assembly from input clutch assembly.

a. Remove bearing race from front carrier assembly.

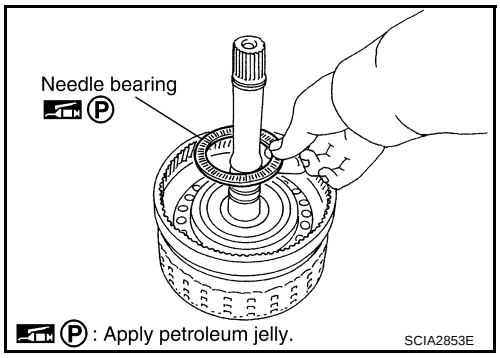


b. Remove needle bearing from front carrier assembly.



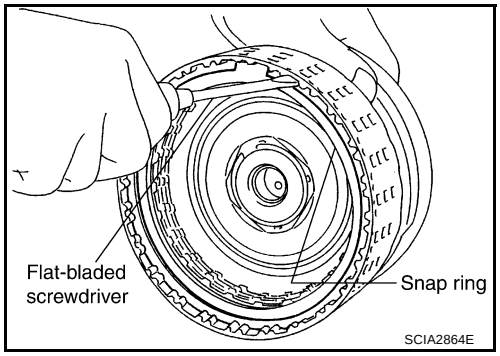
c. Remove snap ring from front carrier assembly.

CAUTION:
Do not expand snap ring excessively.



4. Disassemble input clutch assembly.

a. Remove O-ring and seal rings from input clutch assembly.



b. Remove needle bearing from input clutch assembly.

c. Remove snap ring from input clutch drum using a flat-bladed screwdriver.

d. Remove retaining plate, drive plates and driven plates from input clutch drum.

INSPECTION

Front Carrier Snap Ring

- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace snap ring.

Input Clutch Snap Ring

- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace input clutch assembly.

Input Clutch Drum

- Check for deformation, fatigue or damage or burns.

CAUTION:
If necessary, replace input clutch assembly.

Input Clutch Drive Plates

- Check facing for burns, cracks or damage.

CAUTION:
If necessary, replace input clutch assembly.

Input Clutch Retaining Plate and Driven Plates

- Check facing for burns, cracks or damage.

CAUTION:
If necessary, replace input clutch assembly.

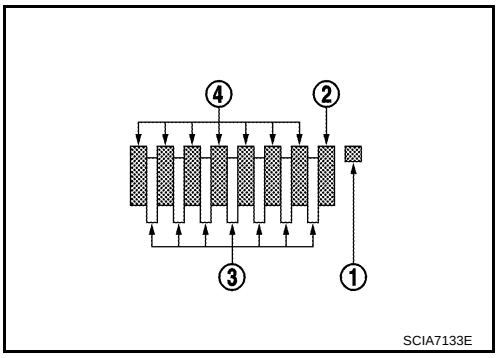
Front Carrier

- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace front carrier assembly.

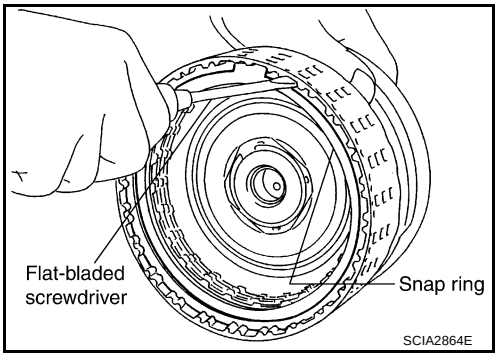
Rear Internal Gear

- Check for deformation, fatigue or damage.



CAUTION:
If necessary, replace rear internal gear.

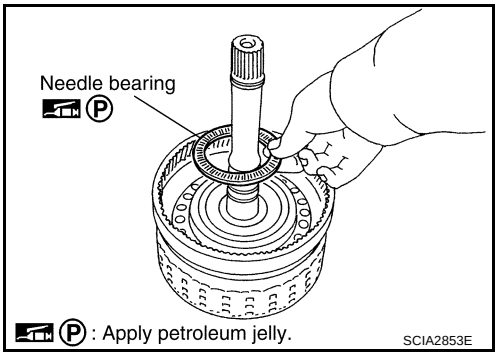
ASSEMBLY



1. Install input clutch.

a. Install driven plates, drive plates and retaining plate in input clutch drum.
   - Snap ring (1)
   - Retaining plate (2)
   - Drive plate (3)
   - Driven plate (4)
   - Drive plate/Driven plate: 7/7

   CAUTION:
   Take care with order of plates.



b. Install snap ring in input clutch drum using a flat-bladed screwdriver.

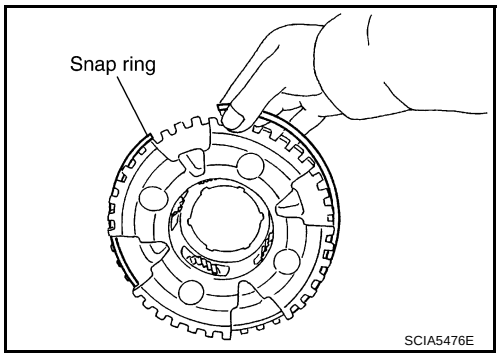
c. Install needle bearing in input clutch assembly.

   CAUTION:
   - **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
   - **Apply petroleum jelly to needle bearing.**

d. Install O-ring and seal rings in input clutch assembly.

CAUTION:

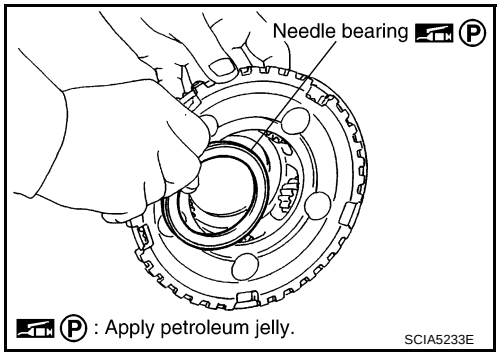
- **Do not reuse O-ring and seal rings.**
- **Apply ATF to O-ring.**
- **Apply petroleum jelly to seal rings.**



2. Install front carrier assembly.

a. Install snap ring to front carrier assembly.

CAUTION:

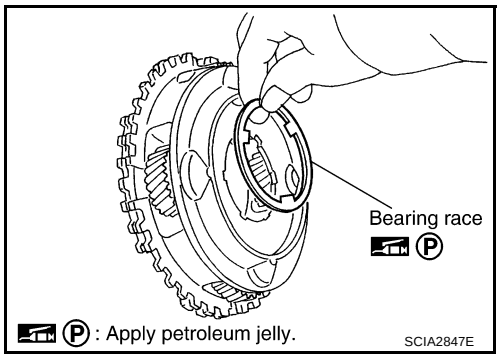


Do not expand snap ring excessively.

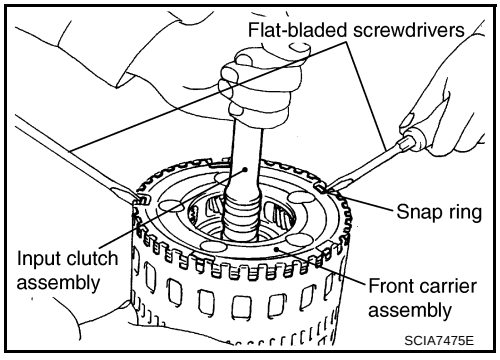
b. Install needle bearing in front carrier assembly.

CAUTION:

- **Take care with the direction of needle bearing. Refer to** **AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"** .
- **Apply petroleum jelly to needle bearing.**



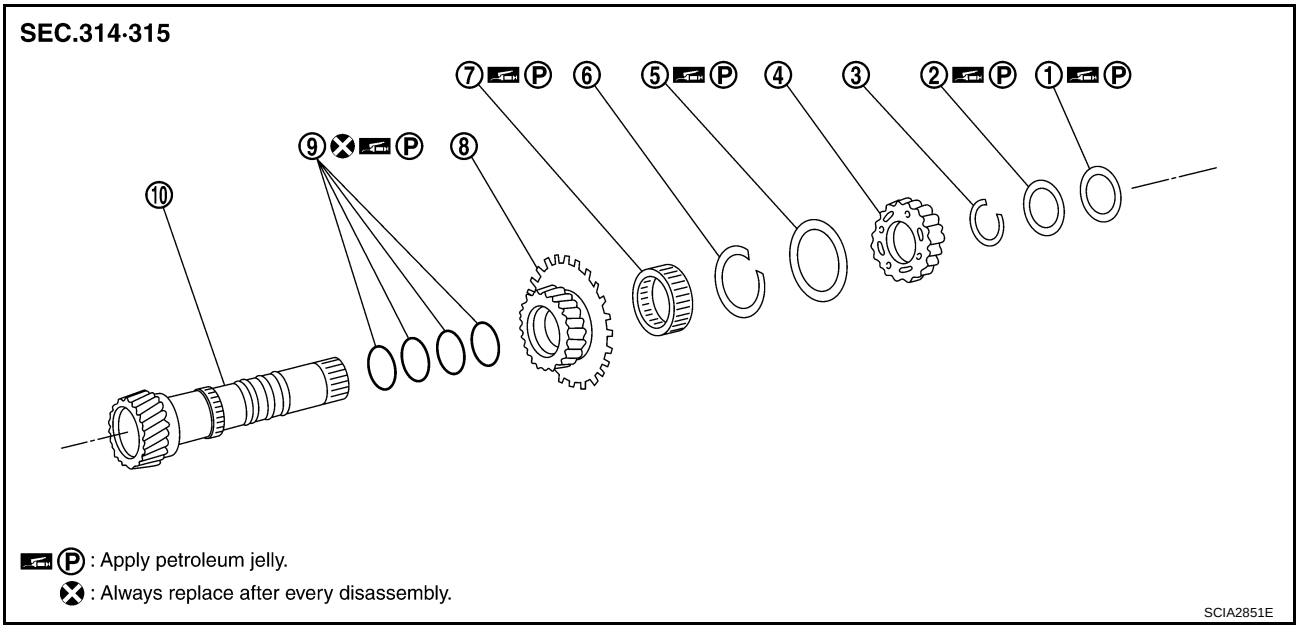
c. Install bearing race in front carrier assembly.



CAUTION:

Apply petroleum jelly to bearing race.

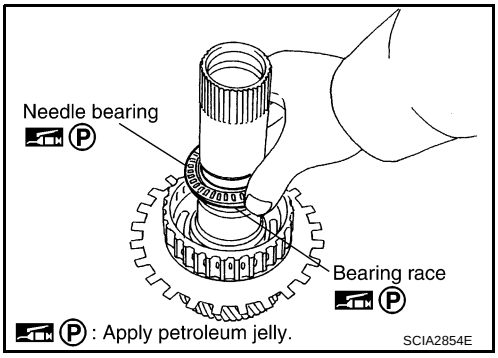
d. Install front carrier assembly to input clutch assembly.



3. Compress snap ring using 2 flat-bladed screwdrivers.
4. Install front carrier assembly and input clutch assembly to rear internal gear.

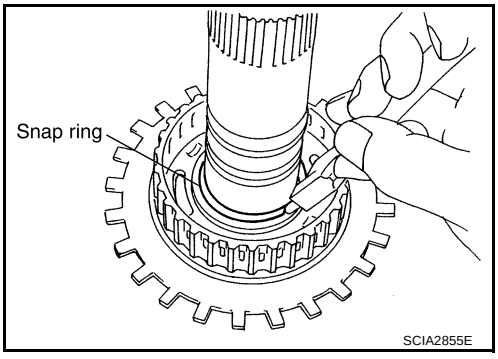
Mid Sun Gear, Rear Sun Gear, High and Low Reverse Clutch Hub

NCS0009F



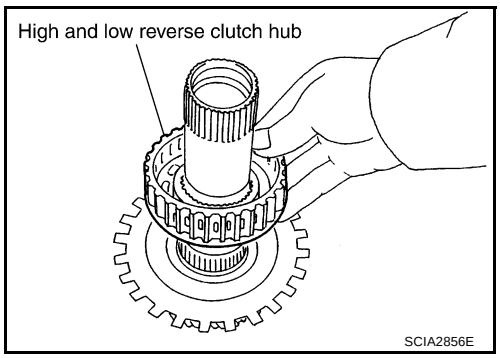
COMPONENTS

1. Needle bearing
2. Bearing race
3. Snap ring
4. High and low reverse clutch hub
5. Needle bearing
6. Snap ring
7. 1st one-way clutch
8. Rear sun gear
9. Seal ring
10. Mid sun gear

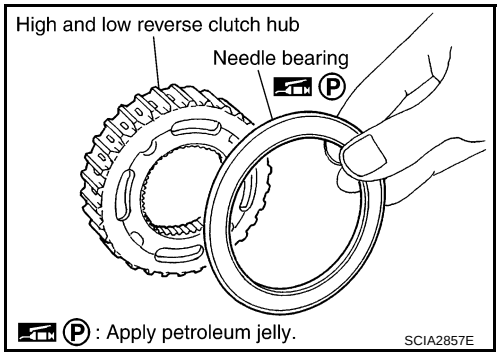


DISASSEMBLY

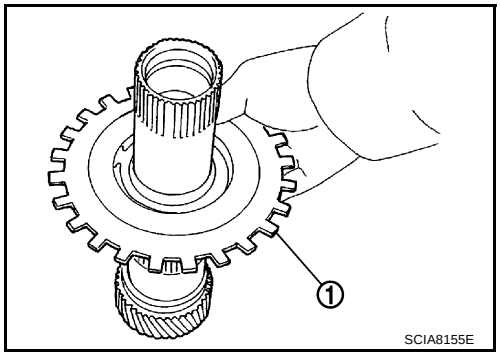
1. Remove needle bearing and bearing race from high and low reverse clutch hub.



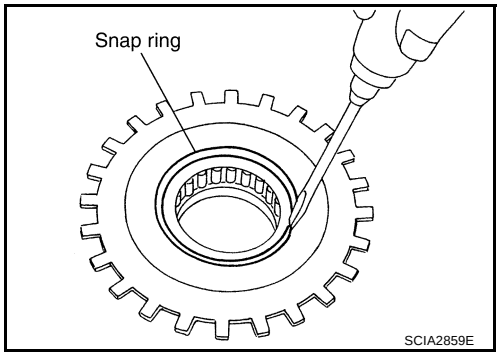
2. Remove snap ring from mid sun gear assembly using pair of snap ring pliers.



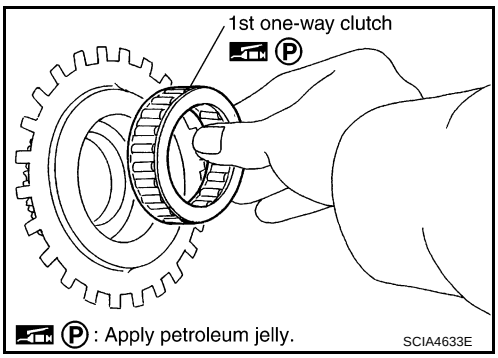
CAUTION:
Do not expand snap ring excessively.



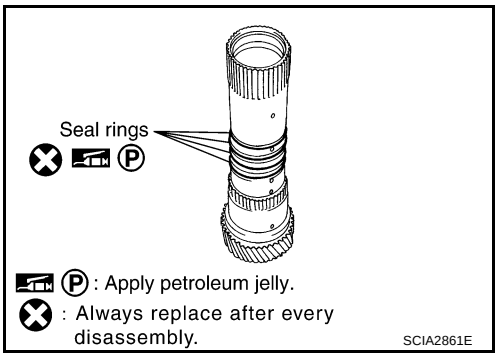
3. Remove high and low reverse clutch hub from mid sun gear assembly.



a. Remove needle bearing from high and low reverse clutch hub.



4. Remove rear sun gear assembly (1) from mid sun gear assembly.



a. Remove snap ring from rear sun gear using a flat-bladed screwdriver.

b. Remove 1st one-way clutch from rear sun gear.

5. Remove seal rings from mid sun gear.

INSPECTION

High and Low Reverse Clutch Hub Snap Ring, Rear Sun Gear Snap Ring

- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace snap ring.

1st One-way Clutch

- Check frictional surface for wear or damage.

CAUTION:
If necessary, replace 1st one-way clutch.

Mid Sun Gear

- Check for deformation, fatigue or damage.

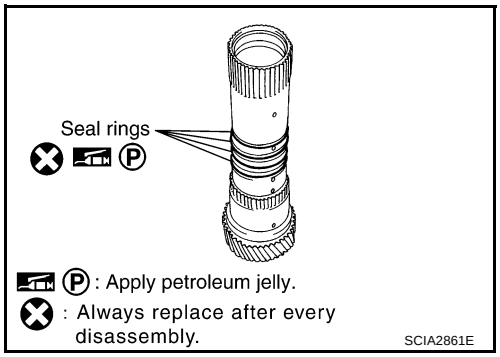
CAUTION:
If necessary, replace mid sun gear.

Rear Sun Gear

- Check for deformation, fatigue or damage.

CAUTION:
If necessary, replace rear sun gear.

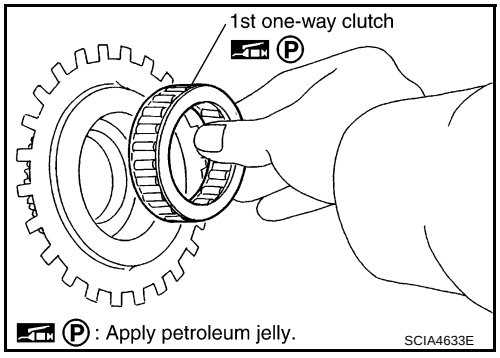
High and Low Reverse Clutch Hub



- Check for deformation, fatigue or damage.

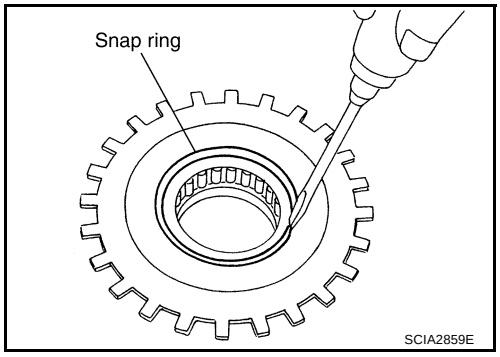
CAUTION:
If necessary, replace high and low reverse clutch hub.

ASSEMBLY

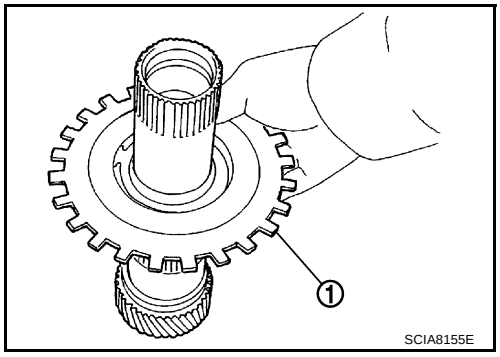


1. Install seal rings to mid sun gear.

CAUTION:
- **Do not reuse seal rings.**
- **Apply petroleum jelly to seal rings.**

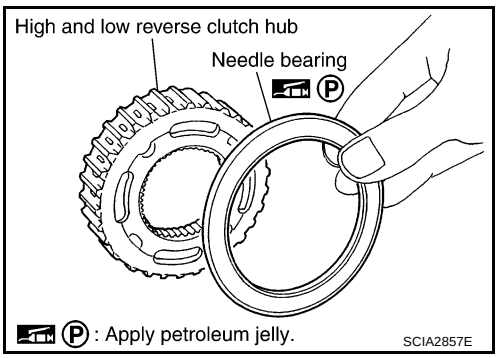


2. Install 1st one-way clutch to rear sun gear.

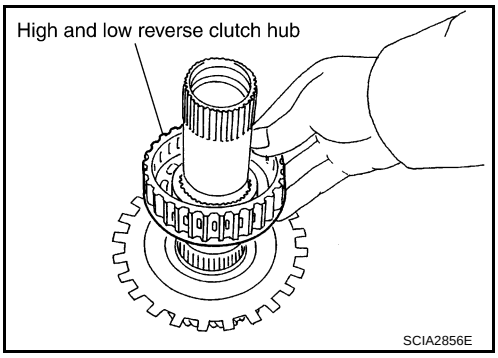


CAUTION:
Apply petroleum jelly to 1st one-way clutch.

3. Install snap ring to rear sun gear using a flat-bladed screwdriver.



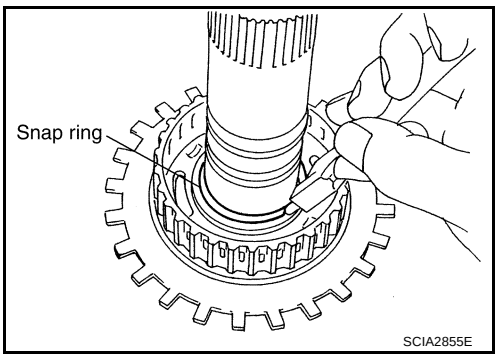
4. Install rear sun gear assembly (1) to mid sun gear assembly.



5. Install needle bearing to high and low reverse clutch hub.

CAUTION:

- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

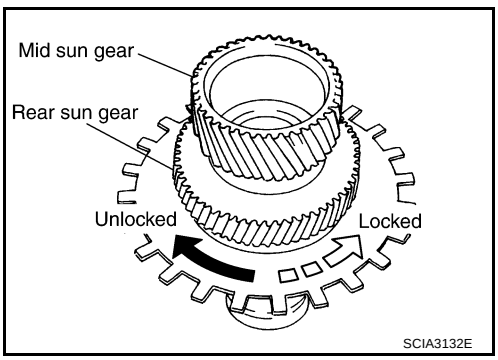


6. Install high and low reverse clutch hub to mid sun gear assembly.

7. Install snap ring to mid sun gear assembly using pair of snap ring pliers.

CAUTION:

Do not expand snap ring excessively.

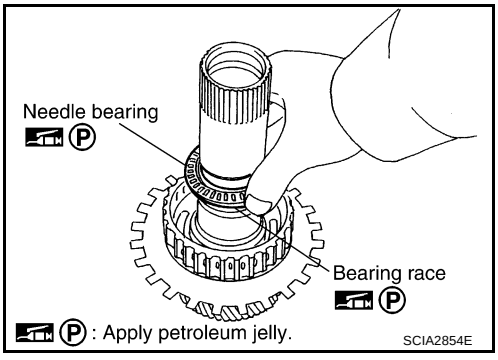


8. Check operation of 1st one-way clutch.

a. Hold mid sun gear and turn rear sun gear.

b. Check 1st one-way clutch for correct locking and unlocking directions.

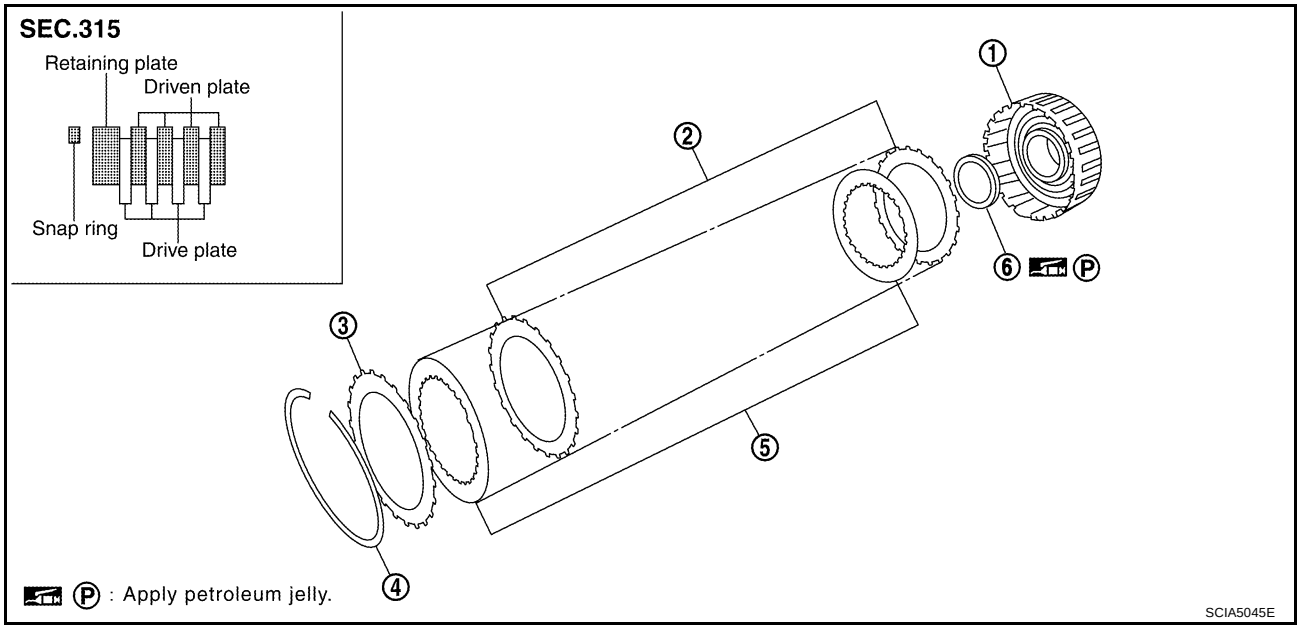
CAUTION:



If not as shown in illustration, check installation direction of 1st one-way clutch.

9. Install bearing race and needle bearing to high and low reverse clutch hub.

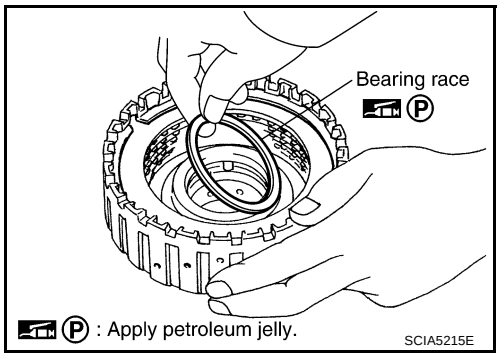
CAUTION:



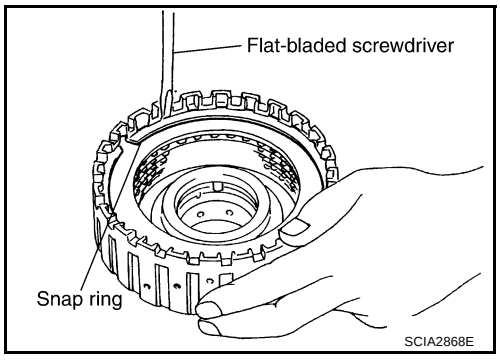
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

High and Low Reverse Clutch

NCS0009G



COMPONENTS



1. High and low reverse clutch drum
2. Driven plate
3. Retaining plate
4. Snap ring
5. Drive plate
6. Bearing race

DISASSEMBLY

1. Remove bearing race from high and low reverse clutch drum.

2. Remove snap ring from high and low reverse clutch drum using a flat-bladed screwdriver.
3. Remove retaining plate, drive plates and driven plates from high and low reverse clutch drum.

INSPECTION

Check the following, and replace high and low reverse clutch assembly if necessary.

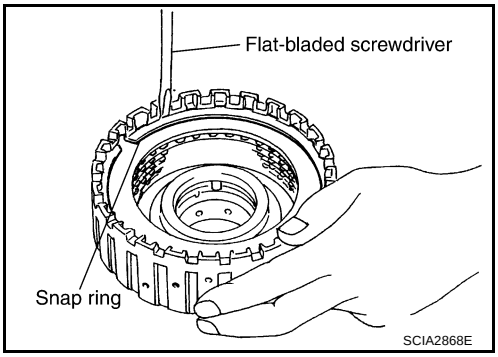
High and Low Reverse Clutch Snap Ring

- Check for deformation, fatigue or damage.

High and Low Reverse Clutch Drive Plates

- Check facing for burns, cracks or damage.

High and Low Reverse Clutch Retaining Plate and Driven Plates



- Check facing for burns, cracks or damage.

ASSEMBLY

1. Install driven plates, drive plates and retaining plate in high and low reverse clutch drum.

   CAUTION:
   Take care with order of plates.

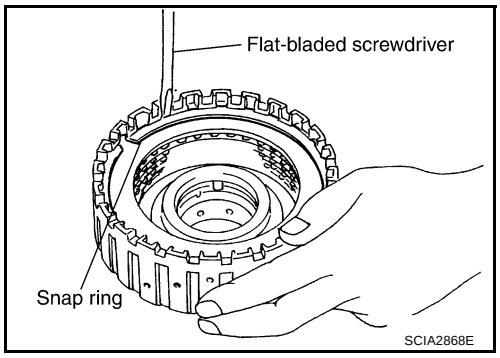
2. Install snap ring in high and low reverse clutch drum using a flat-bladed screwdriver.

3. Install bearing race to high and low reverse clutch drum.

   CAUTION:
   Apply petroleum jelly to bearing race.

Direct Clutch

NCS0009H



COMPONENTS

1. Direct clutch drum
2. Dish plate
3. Retaining plate
4. Driven plate
5. Retaining plate
6. Snap ring
7. Drive plate

DISASSEMBLY

1. Remove snap ring from direct clutch drum using a flat-bladed screwdriver.
2. Remove retaining plates, drive plates, driven plates and dish plate from direct clutch drum.

INSPECTION

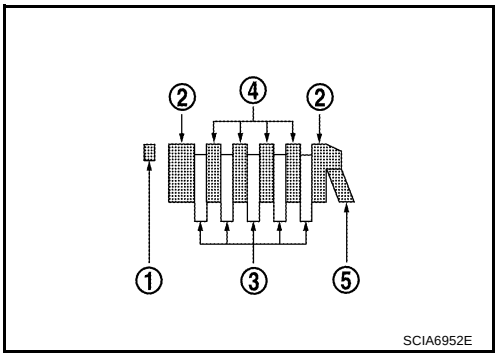
Check the following, and replace direct clutch assembly if necessary.

Direct Clutch Snap Ring

- Check for deformation, fatigue or damage.

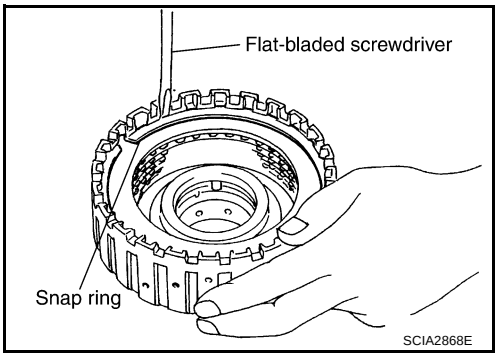
Direct Clutch Drive Plates

- Check facing for burns, cracks or damage.



Direct Clutch Retaining Plate, Driven Plates and Dish Plate

- Check facing for burns, cracks or damage.



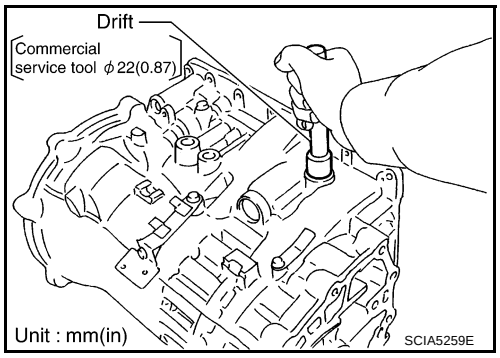
ASSEMBLY

1. Install dish plate, retaining paltes, driven plates and drive plates in direct clutch drum.
   - Snap ring (1)
   - Retaining plate (2)
   - Drive plate (3)
   - Driven plate (4)
   - Dish plate (5)
   - Drive plate/Driven plate: 5/4

   CAUTION:
   Take care with order of plates.

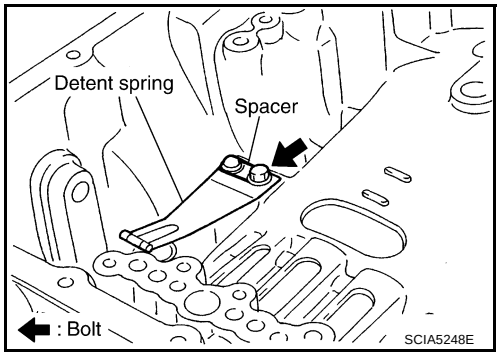
2. Install snap ring in direct clutch drum using a flat-bladed screwdriver.

ASSEMBLY



PFP:00000

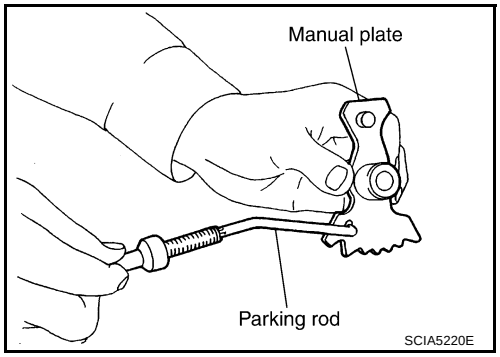
Assembly (1)



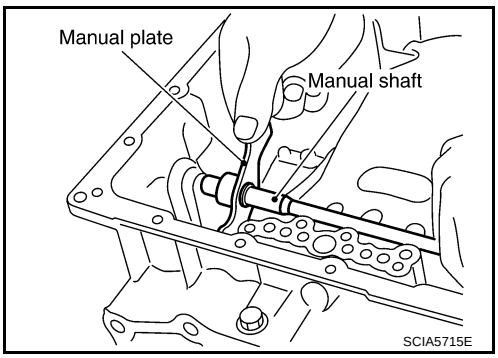
NCS0009I

1. As shown in the right figure, use a drift [commercial service tool: 22 mm (0.87 in) dia.] to drive manual shaft oil seals into transmission case until it is flush.

   CAUTION:
   - **Do not reuse manual shaft oil seals.**
   - **Apply ATF to manual shaft oil seals.**



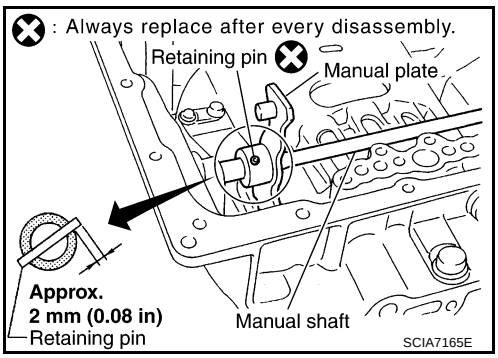
2. Install detent spring and spacer to transmission case, and then tighten mounting bolt to the specified torque. Refer to AT-246, "Components" .



3. Install manual shaft to transmission case.

4. Install parking rod to manual plate.

5. Install manual plate (with parking rod) to manual shaft.



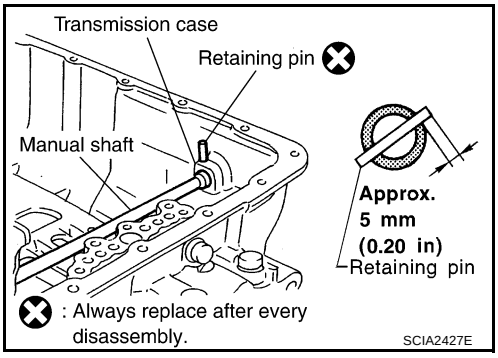
6. Install retaining pin into manual plate and manual shaft.

a. Fit pinhole of manual plate to pinhole of manual shaft with a pin punch.

b. Tap retaining pin into manual plate using a hammer.

CAUTION:

- **Do not reuse retaining pin.**
- **Drive retaining pin to 2±0.5 mm (0.08±0.020 in) over manual plate.**

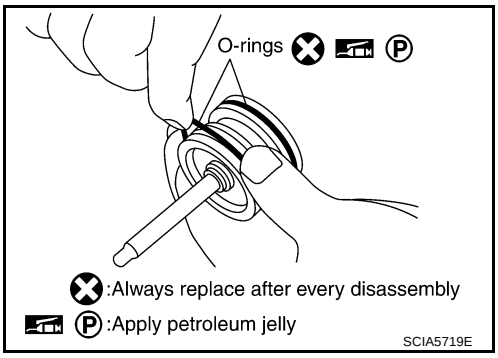


7. Install retaining pin into transmission case and manual shaft.

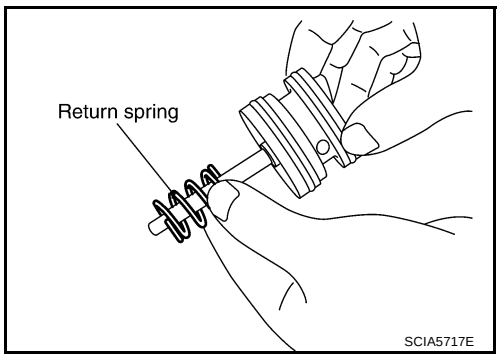
a. Fit pinhole of transmission case to pinhole of manual shaft with a pin punch.

b. Tap the retaining pin into transmission case using a hammer.

CAUTION:

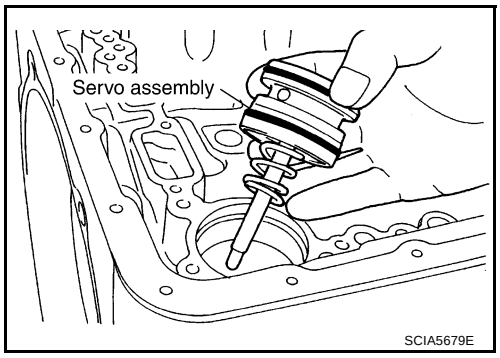


- **Do not reuse retaining pin.**
- **Drive retaining pin to 5±1 mm (0.20±0.04 in) over transmission case.**

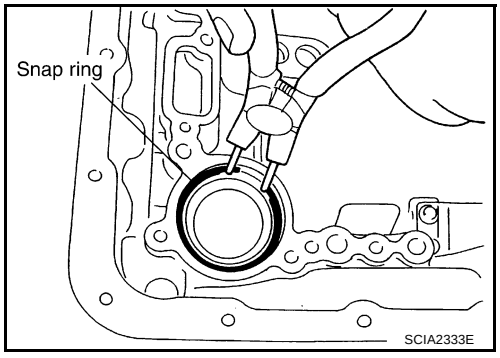


8. Install O-rings to servo assembly.

CAUTION:

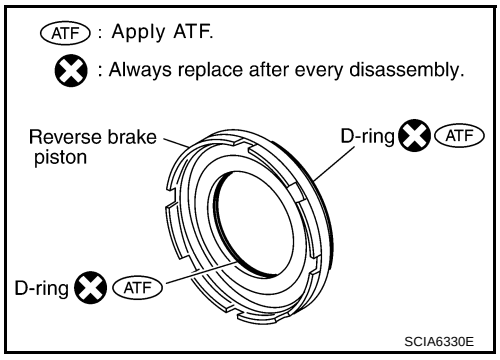


- **Do not reuse O-rings.**
- **Apply petroleum jelly to O-rings.**

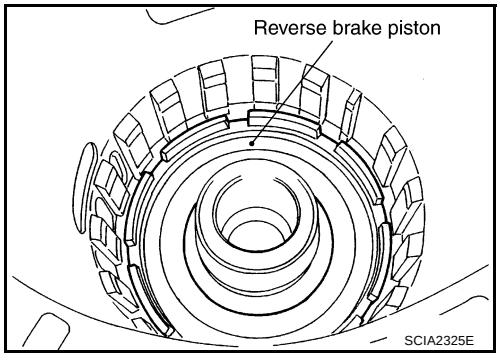


9. Install return spring to servo assembly.

10. Install servo assembly in transmission case.



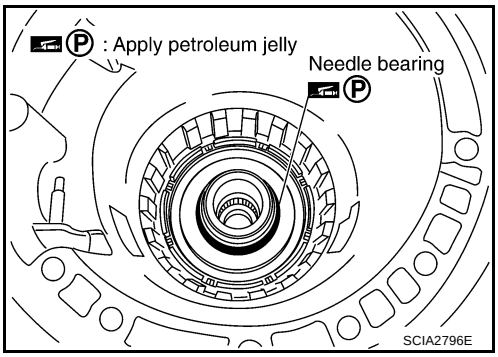
11. Install snap ring to transmission case using pair of snap ring pliers.



12. Install D-rings in reverse brake piston.

CAUTION:

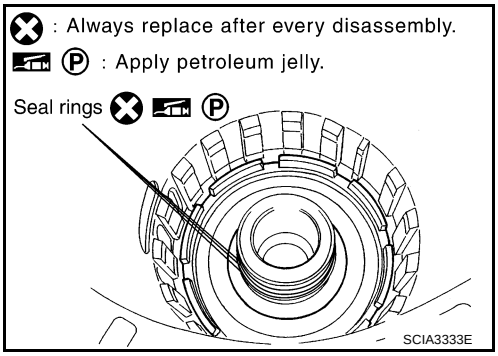
- **Do not reuse D-rings.**
- **Apply ATF to D-rings.**



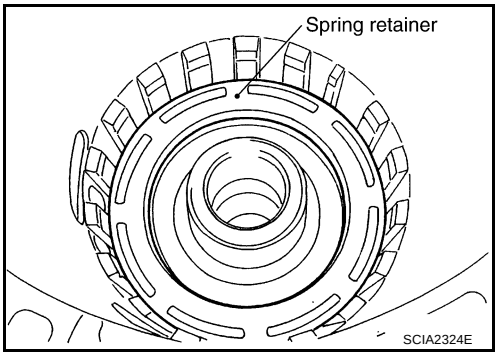
13. Install reverse brake piston in transmission case.

14. Install needle bearing to drum support edge surface.

CAUTION:



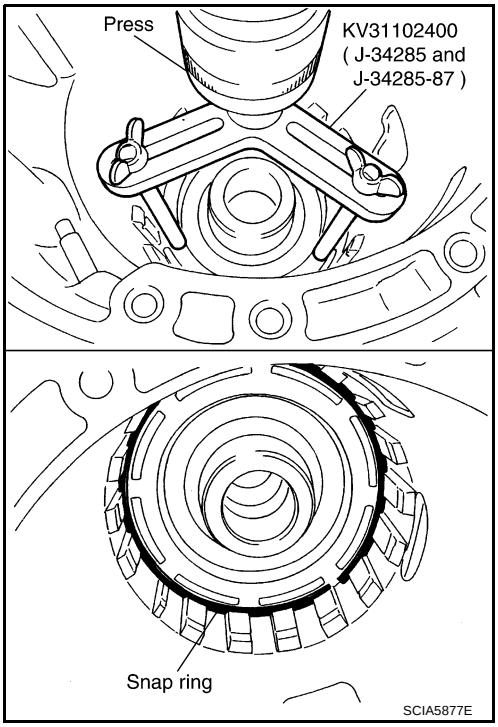
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**



15. Install seal rings to drum support.

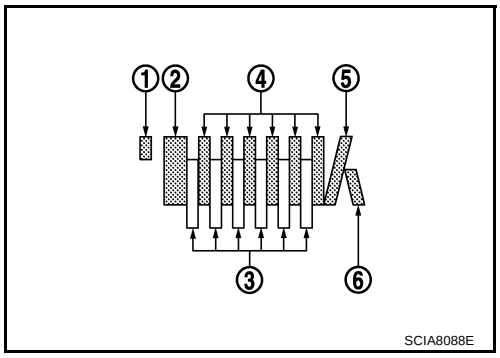
CAUTION:

- **Do not reuse seal rings.**
- **Apply petroleum jelly to seal rings.**



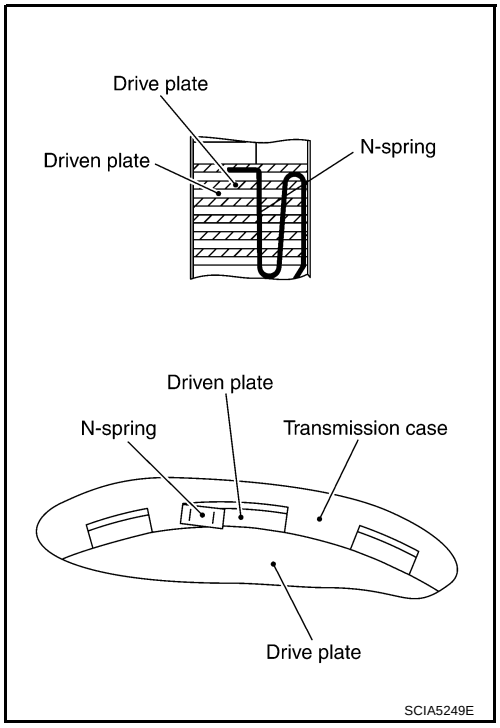
16. Install return spring and spring retainer in transmission case.

17. Set the SST on spring retainer and install snap ring (fixing spring retainer) in transmission case while compressing return spring.



CAUTION:

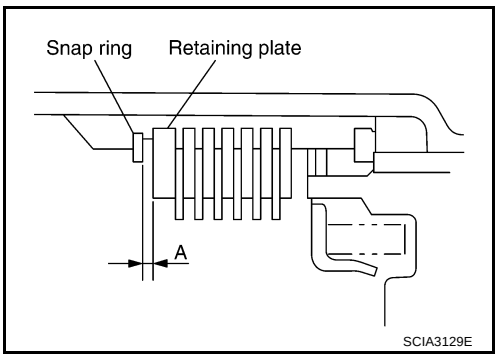
Securely assemble them using a flat-bladed screwdriver so that snap ring tension is slightly weak.



18. Install reverse brake retaining plate, drive plates, driven plates and dish plates in transmission case.
    - Snap ring (1)
    - Retaining plate (2)
    - Drive plate (3)
    - Driven plate (4)
    - Dish plate (5)
    - Dish plate (6)
    - Driveplate/Driven plate: 6/6

    CAUTION:
    Take care with order of plates.

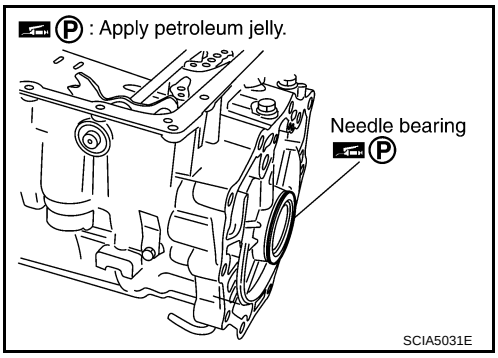
19. Assemble N-spring.
20. Install reverse brake retaining plate in transmission case.



21. Install snap ring in transmission case.

22. Measure clearance between retaining plate and snap ring. If not within specified clearance, select proper retaining plate. Refer to “Parts Information” for retaining plate selection.

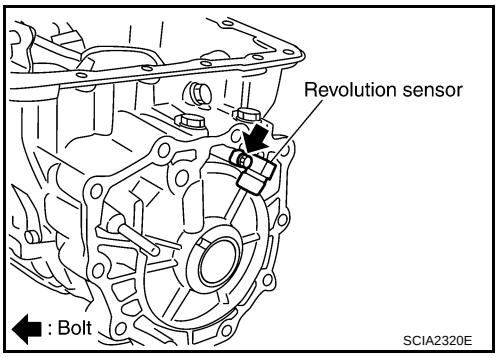
Specified clearance “A”:



Refer to AT-312, "Reverse Brake" .

23. Install needle bearing to transmission case.

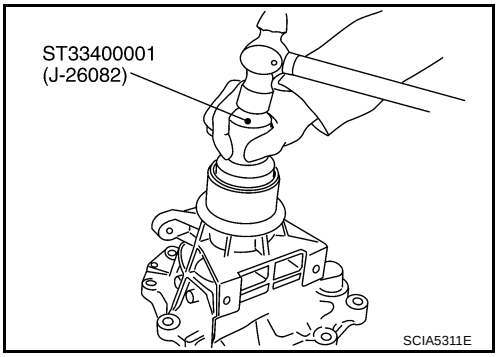
CAUTION:



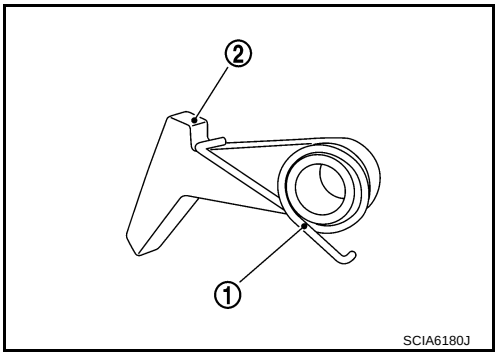
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

24. Install revolution sensor to transmission case, and then tighten mounting bolt to the specified torque. Refer to AT-246, "Components" .

CAUTION:

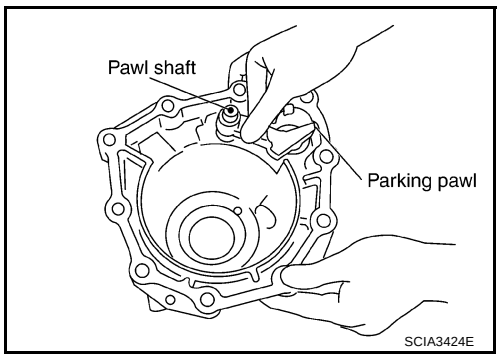


- **Do not subject it to impact by dropping or hitting it.**
- **Do not disassemble.**
- **Do not allow metal filings, etc. to get on the sensor's front edge magnetic area.**
- **Do not place in an area affected by magnetism.**

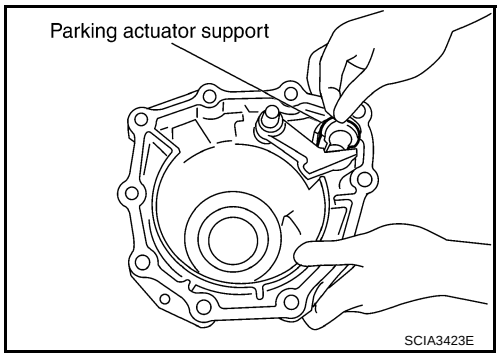


25. As shown in the figure, drive rear oil seal into rear extension until it is flush using a drift.

CAUTION:

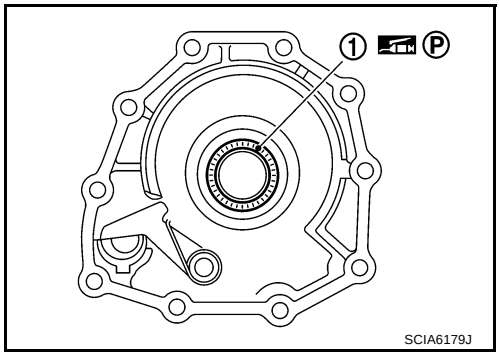


- **Do not reuse rear oil seal.**
- **Apply ATF to rear oil seal.**



26. Install return spring (1) to parking pawl (2).

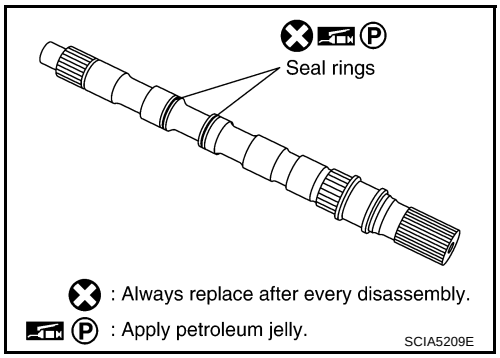
27. Install parking pawl (with return spring) and pawl shaft to rear extension.



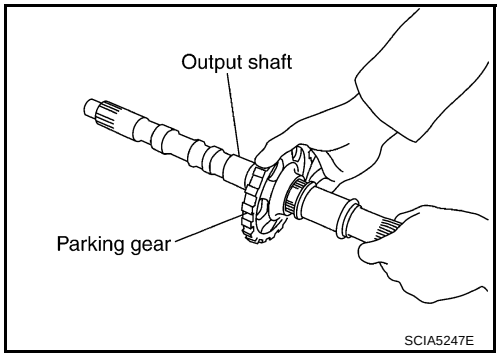
28. Install parking actuator support to rear extension.

29. Install needle bearing (1) to rear extension.

CAUTION:



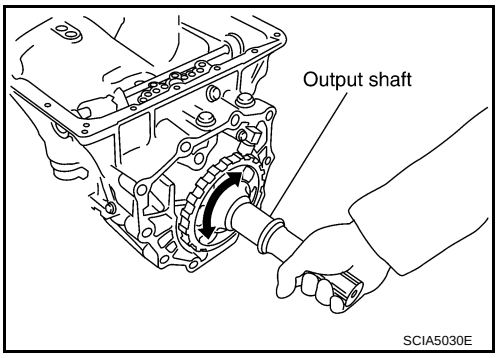
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**



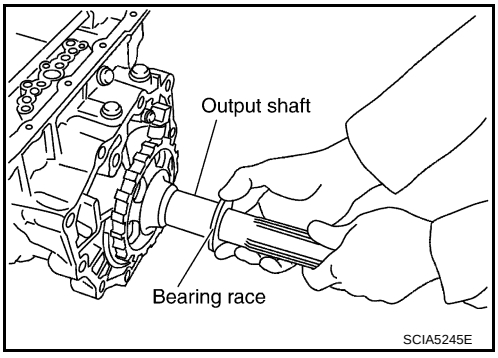
30. Install seal rings to output shaft.

CAUTION:

- **Do not reuse seal rings.**
- **Apply petroleum jelly to seal rings.**

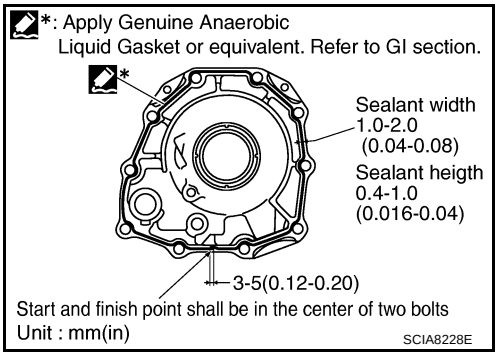


31. Install parking gear to output shaft.

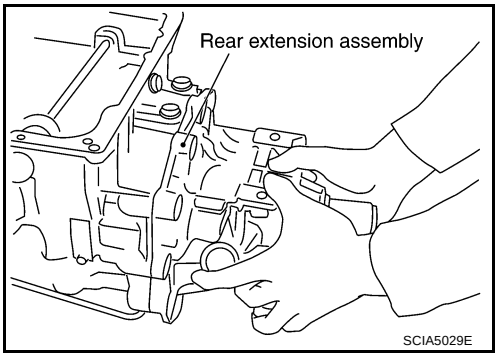


32. Install output shaft in transmission case.

CAUTION:
Be careful not to mistake front for rear because both sides looks similar. (Thinner end is front side.)

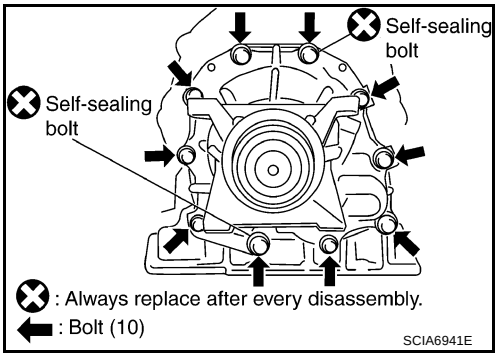


33. Install bearing race to output shaft.



34. Apply recommended sealant (Genuine Anaerobic Liquid Gasket or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .) to rear extension assembly as shown in the figure.

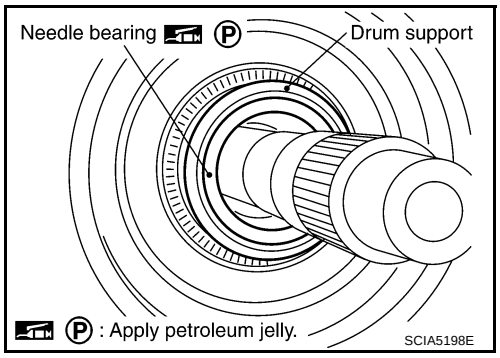
CAUTION:
Completely remove all moisture, oil and old sealant, etc. from transmission case and rear extension assembly mounting surfaces.



35. Install rear extension assembly to transmission case.

CAUTION:
Insert the tip of parking rod between parking pawl and the parking actuator support when assembling rear extension assembly.

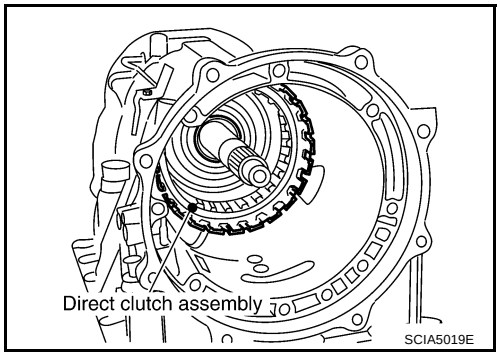
36. Tighten rear extension assembly mounting bolts to the specified torque. Refer to AT-246, "Components" .



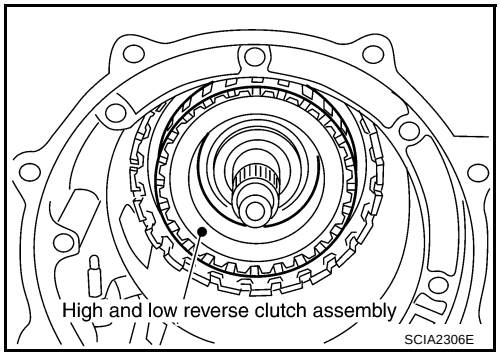
CAUTION:
Do not reuse self-sealing bolts.

37. Install needle bearing in drum support.

CAUTION:

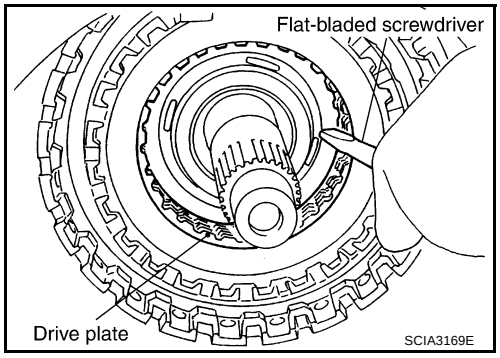


- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

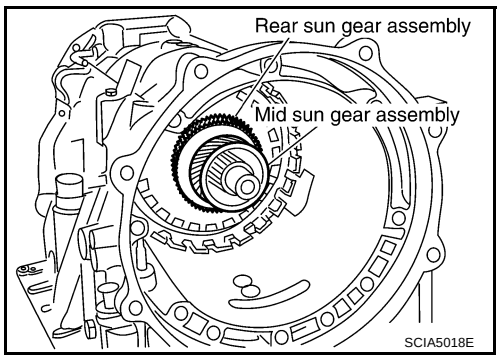


38. Install direct clutch assembly in reverse brake.

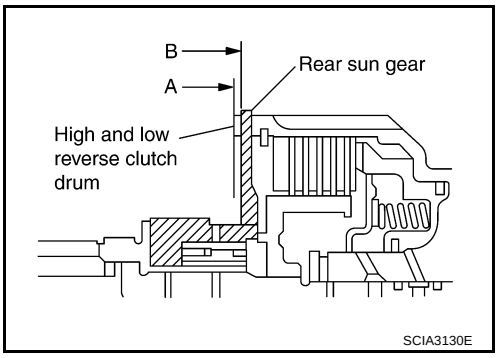
CAUTION:



Make sure that drum support edge surface and direct clutch inner boss edge surface come to almost same place.

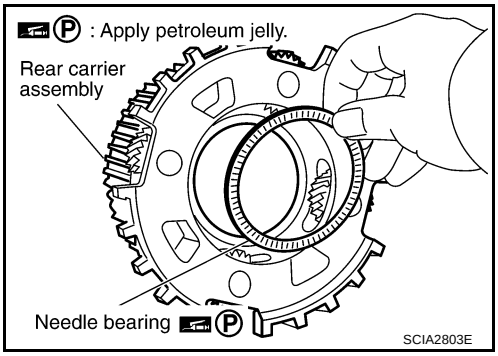


39. Install high and low reverse clutch assembly in direct clutch.

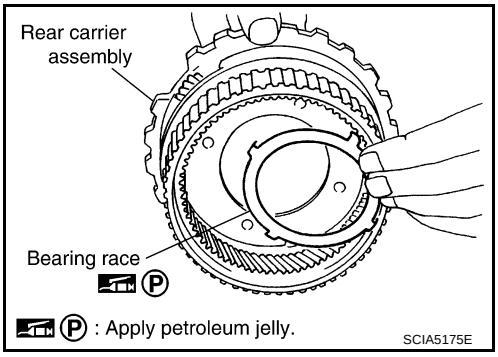


40. Align drive plate using a flat-bladed screwdriver.

41. Install high and low reverse clutch hub, mid sun gear assembly and rear sun gear assembly as a unit.

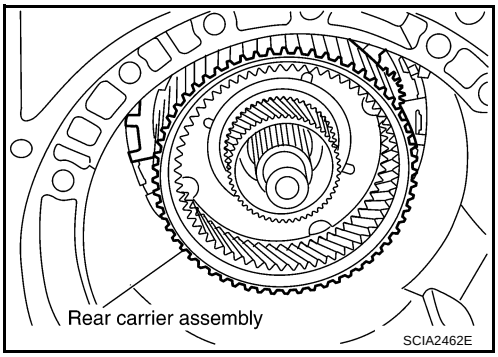


CAUTION:
Make sure that portion “A” of high and low reverse clutch drum protrudes approximately 2 mm (0.08 in) beyond portion “B” of rear sun gear.



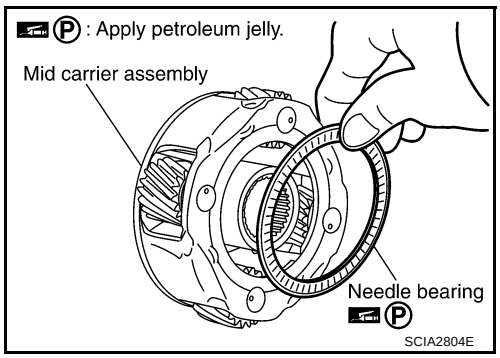
42. Install needle bearing in rear carrier assembly.

CAUTION:
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**



43. Install bearing race in rear carrier assembly.

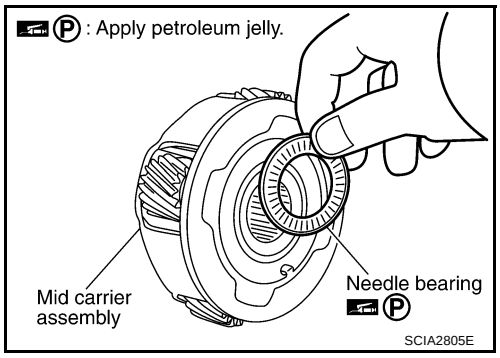
CAUTION:
Apply petroleum jelly to bearing race.



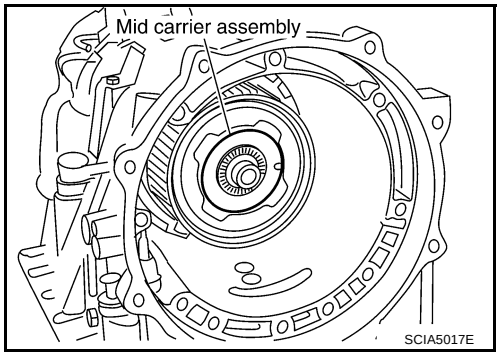
44. Install rear carrier assembly in direct clutch drum.

45. Install needle bearing (rear side) to mid carrier assembly.

CAUTION:

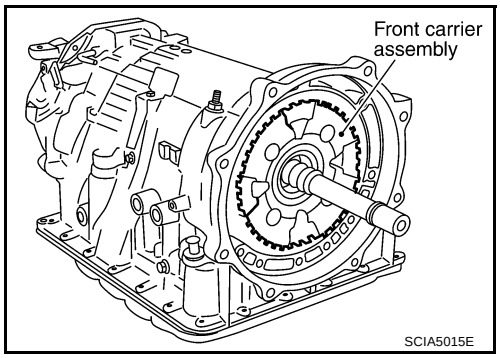


- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**



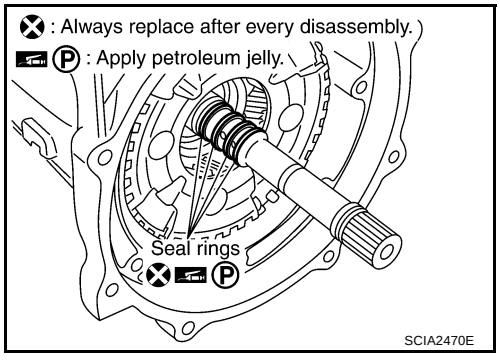
46. Install needle bearing (front side) to mid carrier assembly.

CAUTION:



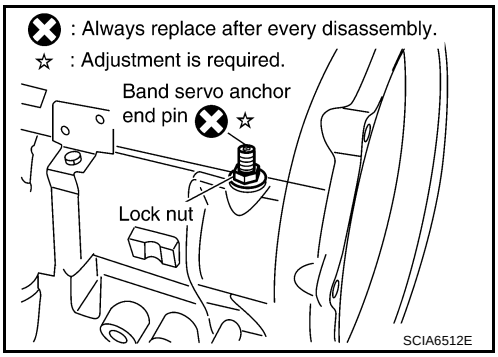
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

47. Install mid carrier assembly in rear carrier assembly.



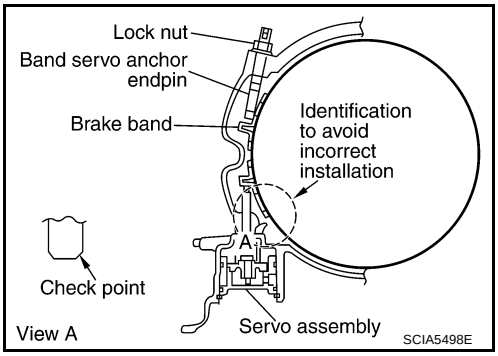
48. Install front carrier assembly, input clutch assembly and rear internal gear as a unit.

49. Install seal rings in input clutch assembly.



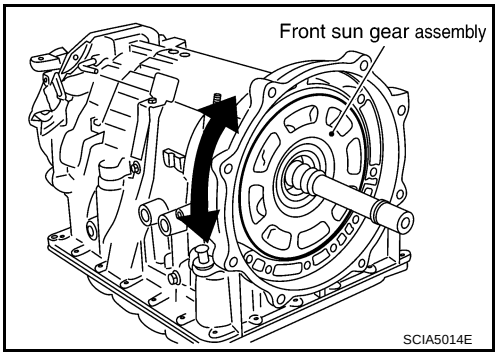
CAUTION:

- **Do not reuse seal rings.**
- **Apply petroleum jelly to seal rings.**



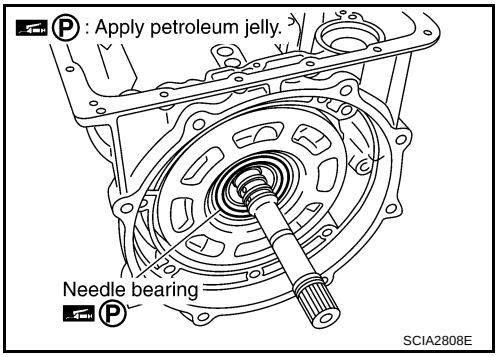
50. Install band servo anchor end pin and lock nut in transmission case.

CAUTION:
Do not reuse band servo anchor end pin.



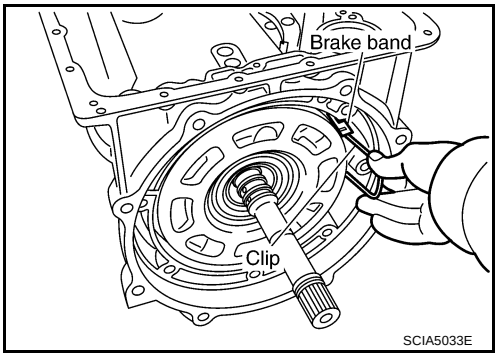
51. Install brake band in transmission case.

CAUTION:
Assemble it so that identification to avoid incorrect installation faces servo side.



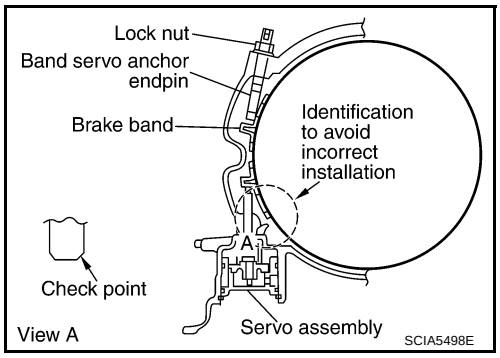
52. Install front sun gear to front carrier assembly.

CAUTION:
Apply ATF to front sun gear bearing and 3rd one-way clutch end bearing.



53. Install needle bearing to front sun gear.

CAUTION:
- **Take care with the direction of needle bearing. Refer to AT-253, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings" .**
- **Apply petroleum jelly to needle bearing.**

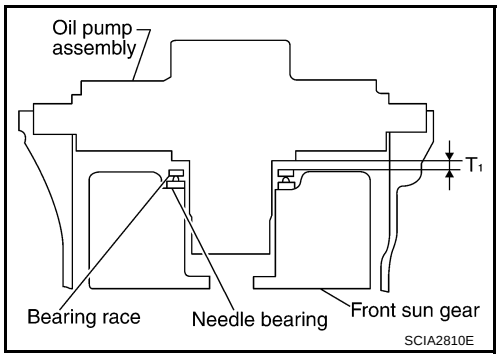


54. Adjust brake band tilting using a clip so that brake band contacts front sun gear drum evenly.

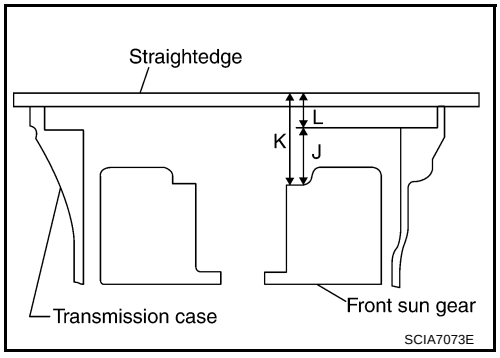
55. Adjust brake band.
a. Loosen lock nut.
b. Tighten band servo anchor end pin to the specified torque.

: 5.0 N·m (0.51 kg-m, 44 in-lb)

c. Back of band servo anchor end pin three turns.
d. Holding band servo anchor end pin, tighten lock nut to the specified torque. Refer to AT-246, "Components" .

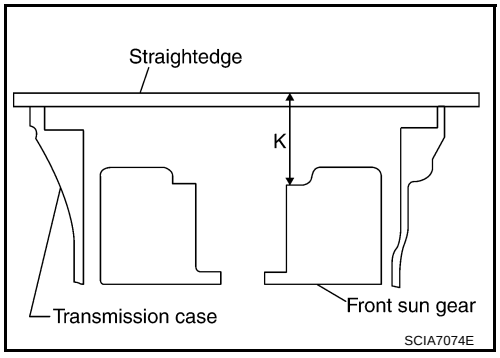


NCS0009J



Adjustment

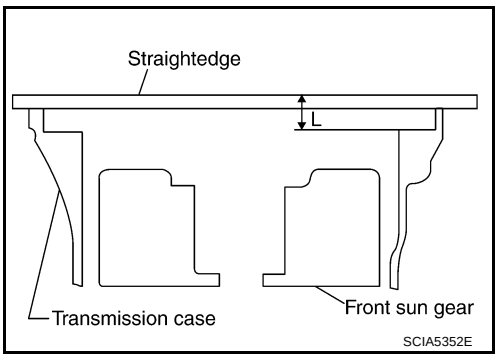
TOTAL END PLAY



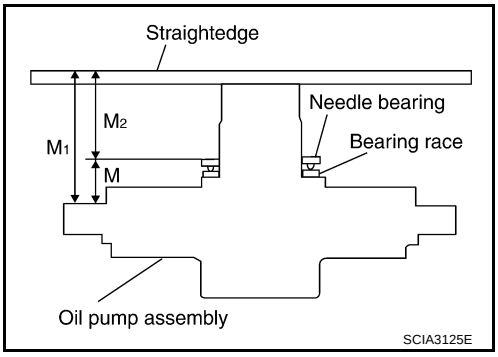
- Measure clearance between front sun gear and bearing race for oil pump cover.
- Select proper thickness of bearing race so that end play is within specifications.

1. Measure dimensions “K” and “L” and then calculate dimension “J”.

a. Measure dimension “K”.

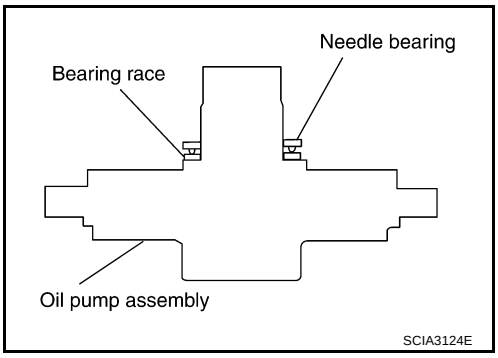


b. Measure dimension “L”.

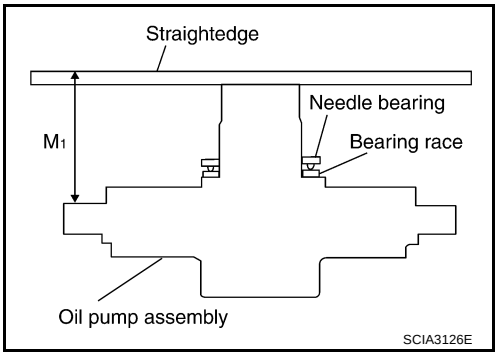


c. Calculate dimension “J”.

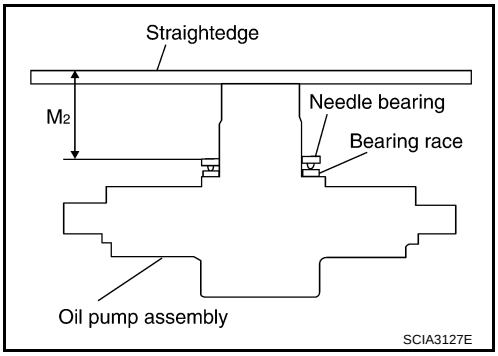
“J”: Distance between oil pump fitting surface of transmission case and needle bearing mating surface of front sun gear.



J = K – L

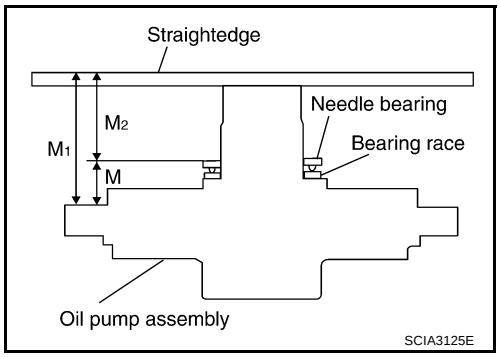


2. Measure dimensions “M_1 ” and “M_2 ” and then calculate dimension “M”.



a. Place bearing race and needle bearing on oil pump assembly.

b. Measure dimension “M_1 ”.

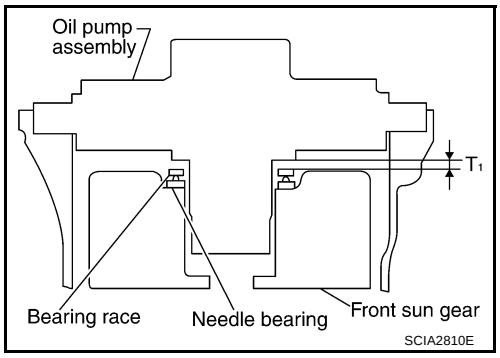


c. Measure dimension “M_2 ”.

d. Calculate dimension “M”.

“M”: Distance between transmission case fitting surface of oil pump and needle bearing on oil pump.

$M = M_1 - M_2$



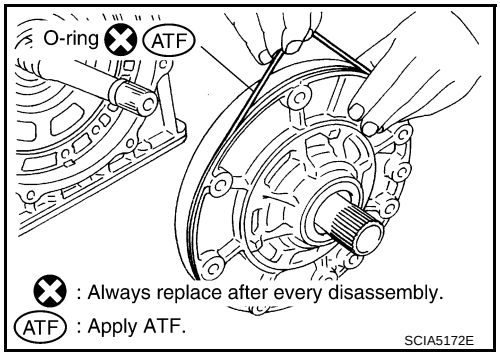
3. Adjust total end play “T_1”.

$T_1 = J - M$

Total end play “T_1”:

Refer to AT-312, "Total End Play" .

- Select proper thickness of bearing race so that total end play is within specifications. Refer to “Parts Information” for bearing race selection.

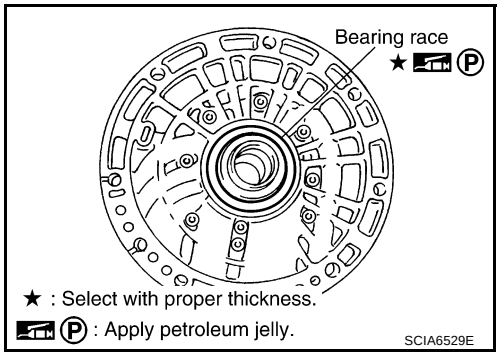


Assembly (2)

NCS0009K

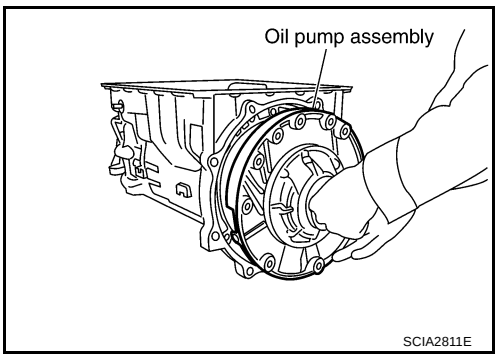
1. Install O-ring to oil pump assembly.

CAUTION:



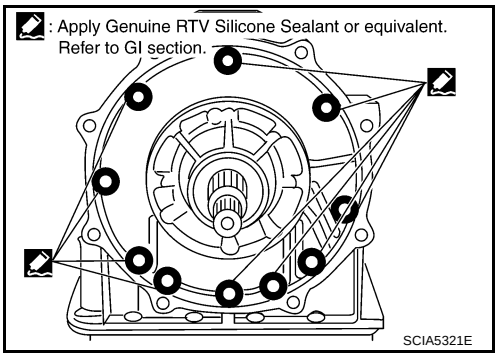
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**

2. Install bearing race to oil pump assembly.



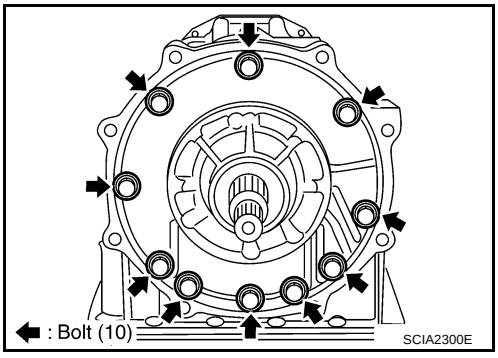
CAUTION:

Apply petroleum jelly to bearing race.



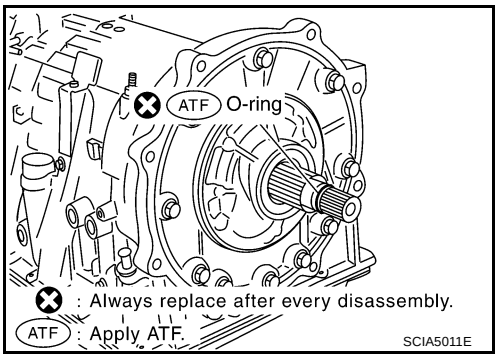
3. Install oil pump assembly in transmission case.

CAUTION:
Apply ATF to oil pump bearing.



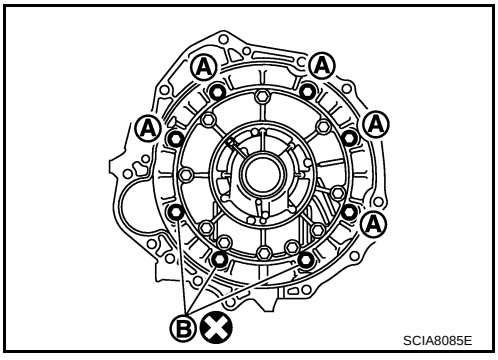
4. Apply recommended sealant (Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .) to oil pump assembly as shown in the figure.

CAUTION:
Completely remove all moisture, oil and old sealant, etc. from the oil pump mounting bolts and oil pump mounting bolt mounting surfaces.



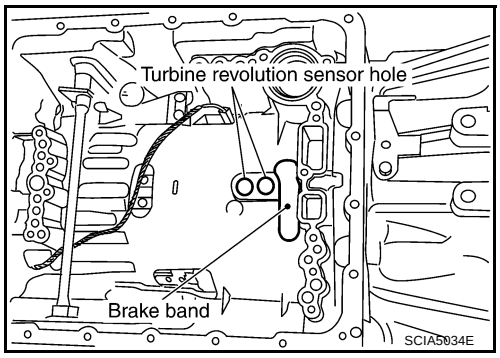
5. Tighten oil pump mounting bolts to the specified torque. Refer to AT-246, "Components" .

CAUTION:
Apply ATF to oil pump bushing.



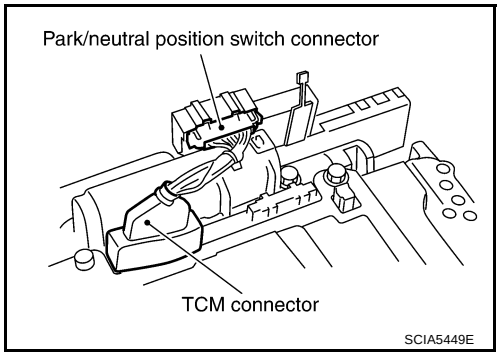
6. Install O-ring to input clutch assembly.

CAUTION:
- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**

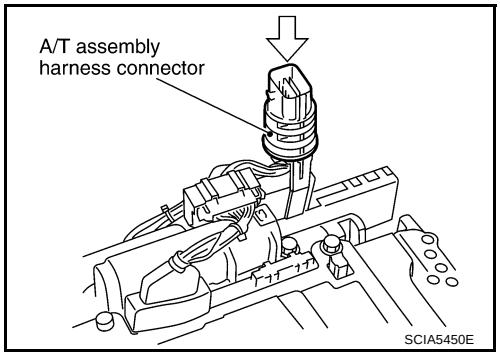


7. Install converter housing to transmission case, and then tighten converter housing bolts (A) and self-sealing bolts (B) to the specified torque. Refer to AT-246, "Components" .

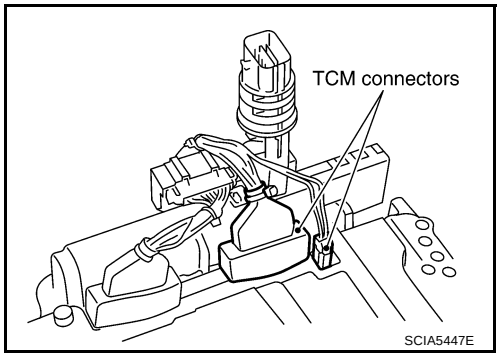
CAUTION:
Do not reuse self-sealing bolts (B).



8. Make sure that brake band does not close turbine revolution sensor hole.

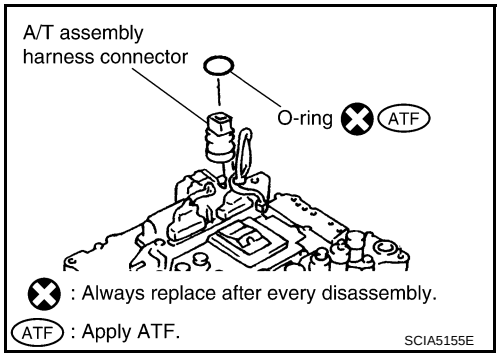


9. Install control valve with TCM.

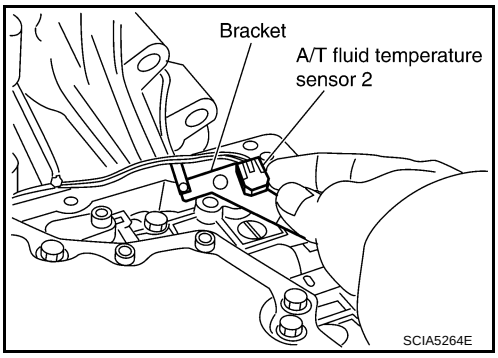


a. Connect TCM connector and park/neutral position switch connector.

b. Install A/T assembly harness connector from control valve with TCM.



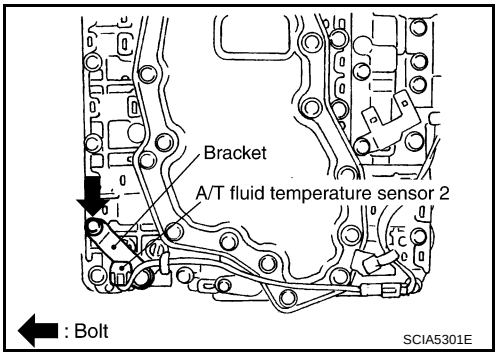
c. Connect TCM connectors.



d. Install O-ring to A/T assembly harness connector.

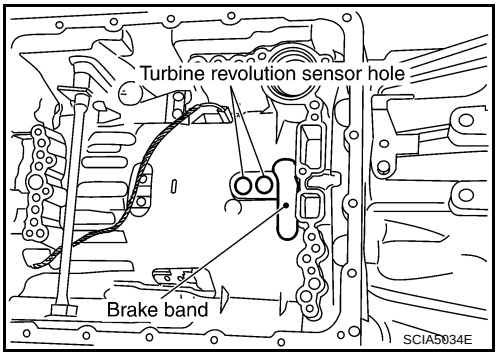
CAUTION:

- **Do not reuse O-ring.**
- **Apply ATF to O-ring.**

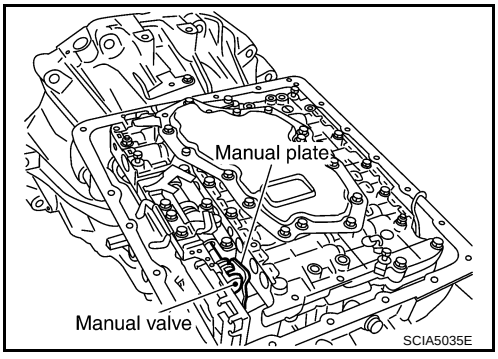


e. Install A/T fluid temperature sensor 2 to bracket.

f. Install A/T fluid temperature sensor 2 (with bracket) in control valve with TCM, and then tighten mounting bolt to the specified torque. Refer to AT-246, "Components" .



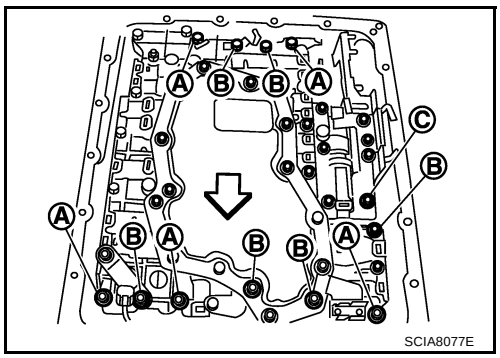
CAUTION:
Adjust bolt hole of bracket to bolt hole of control valve with TCM.



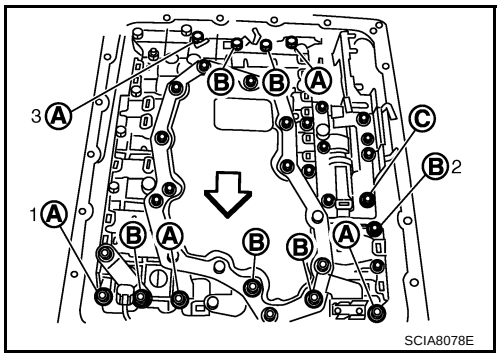
g. Install control valve with TCM in transmission case.

CAUTION:

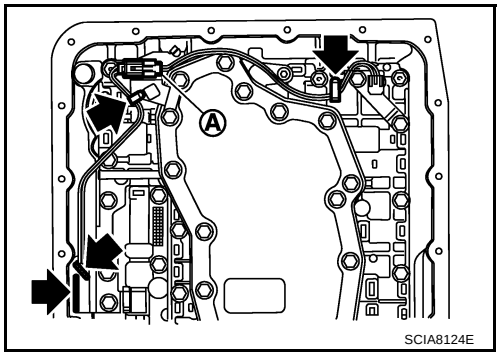
- **Make sure that turbine revolution sensor securely installs turbine revolution sensor hole.**
- **Hang down revolution sensor harness toward outside so as not to disturb installation of control valve with TCM.**
- **Adjust A/T assembly harness connector of control valve with TCM to terminal hole of transmission case.**



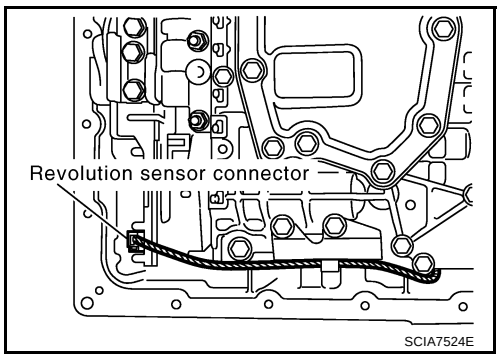
- **Assemble it so that manual valve cutout is engaged with manual plate projection.**



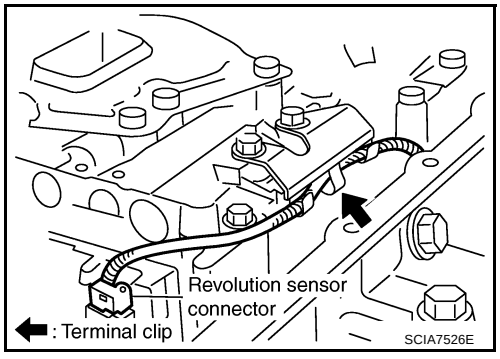
h. Install bolts (A), (B) and (C) to control valve with TCM.
- ⇦: Front



Bolt symbol	Length mm (in)	Number of bolts
A	42 (1.65)	5
B	55 (2.17)	6
C	40 (1.57)	1

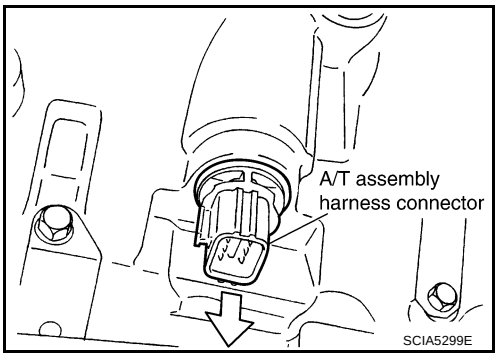


i. Tighten bolt 1, 2 and 3 temporarily to prevent dislocation. After that tighten them in order (1 → 2 → 3), and then tighten other bolts to the specified torque. Refer to AT-246, "Components" .
- ⇦: Front

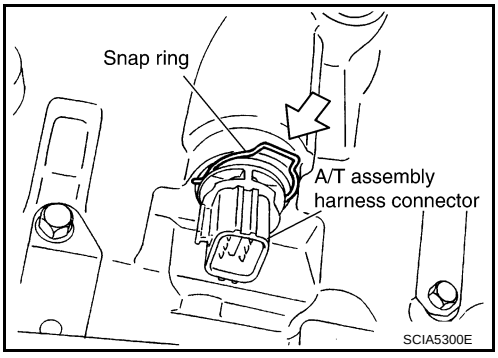


10. Connect A/T fluid temperature sensor 2 connector (A).
11. Securely fasten terminal cord assembly and A/T fluid temperature sensor 2 harness with terminal clips (⬅).

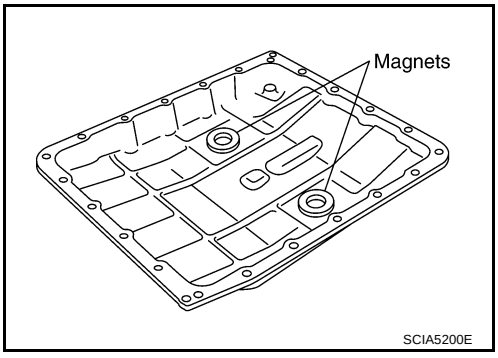
12. Connect revolution sensor connector.



13. Securely fasten revolution sensor harness with terminal clip.



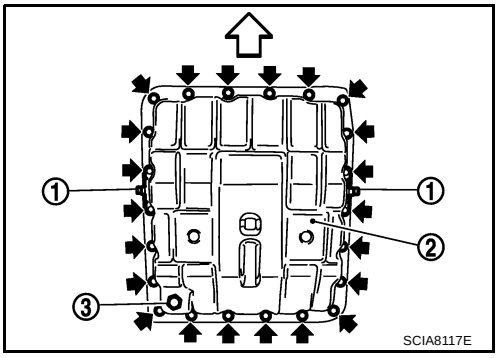
14. Pull down A/T assembly harness connector.



CAUTION:
Be careful not to damage connector.

15. Install snap ring to A/T assembly harness connector.

16. Install magnets in oil pan.



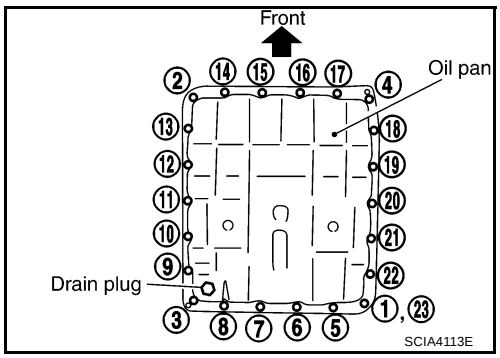
17. Install oil pan to transmission case.

a. Install oil pan gasket to oil pan.

CAUTION:
- **Do not reuse oil pan gasket.**
- **Install it in the direction to align hole positions.**
- **Completely remove all moisture, oil and old gasket, etc. from oil pan gasket mounting surface.**

b. Install oil pan (2) (with oil pan gasket) and clips (1) to transmission case.
- ⇦: Front
- ⬅: Oil pan mounting bolt

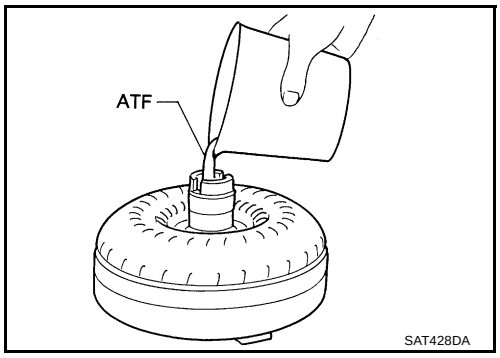
CAUTION:
- **Install it so that drain plug (3) comes to the position as shown in the figure.**
- **Be careful not to pinch harnesses.**
- **Completely remove all moisture, oil and old gasket, etc. from oil pan mounting surface.**



c. Tighten oil pan mounting bolts to the specified torque in numerical order shown in the figure after temporarily tightening them. Refer to AT-246, "Components" .

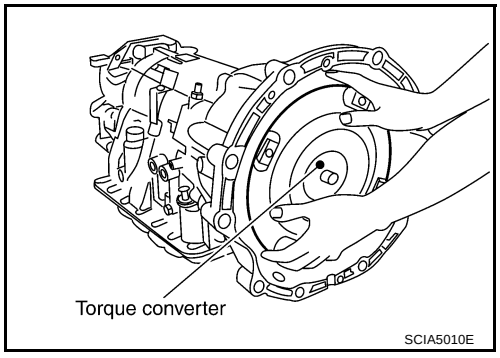
CAUTION:
Do not reuse oil pan mounting bolts.

18. Install drain plug to oil pan, and then tighten drain plug to the specified torque. Refer to AT-246, "Components" .



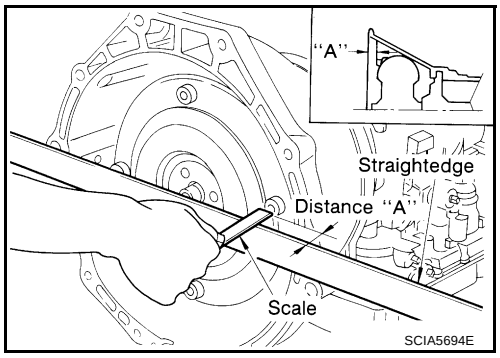
CAUTION:
Do not reuse drain plug gasket.

19. Install torque converter.



a. Pour ATF into torque converter.

- **Approximately 2 liter (2-1/8 US qt, 1-3/4 Imp qt) of ATF is required for a new torque converter.**
- **When reusing old torque converter, add the same amount of ATF as was drained.**



b. Install torque converter while aligning notches of torque converter with notches of oil pump.

CAUTION:
Install torque converter while rotating it.

c. Measure distance “A” to check that torque converter is in proper position.

Distance “A”: 25.0 mm (0.98 in) or more

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

General Specifications

NCS0009L

Applied model		VQ35HR engine
Automatic transmission model		RE5R05A
Transmission model code number		98X5B
Stall torque ratio		1.74 : 1
Transmission gear ratio	1st	3.842
	2nd	2.353
	3rd	1.529
	4th	1.000
	5th	0.839
	Reverse	2.765
Recommended fluid		Genuine NISSAN Matic J ATF*1
Fluid capacity		10.3 liter (10-7/8 US qt, 9-1/8 Imp qt)*2

CAUTION:

- **Use only Genuine NISSAN Matic J ATF. Do not mix with other fluid.**
- **Using A/T fluid other than Genuine NISSAN Matic J ATF will cause deterioration driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.**

- *1: Refer to MA-11, "Fluids and Lubricants" .
- *2: The fluid capacity is the reference value. Check the fluid level with A/T fluid level gauge.

Vehicle Speed at Which Gear Shifting Occurs

NCS0009M

Throttle position	Vehicle speed km/h (MPH)							
	D1 →D2	D2 →D3	D3 →D4	D4 →D5	D5 →D4	D4 →D3	D3 →D2	D2 →D1
Full throttle	50 – 54 (31 – 34)	97 – 105 (60 – 65)	154 – 164 (96 – 102)	224 – 234 (139 – 145)	220 – 230 (137 – 143)	145 – 155 (90 – 96)	86 – 94 (53 – 58)	39 – 43 (24 – 27)
Half throttle	29 – 33 (18 – 21)	63 – 69 (39 – 43)	100 – 108 (62 – 67)	136 – 144 (85 – 89)	88 – 96 (55 – 60)	64 – 72 (40 – 45)	28 – 34 (17 – 21)	9 – 13 (6 – 8)

- At half throttle, the accelerator opening is 4/8 of the full opening.

Vehicle Speed at Which Lock-up Occurs/Releases

NCS0009N

Throttle position	Vehicle speed km/h (MPH)	
	Lock-up ON	Lock-up OFF
Closed throttle	62 – 70 (39 – 44)	59 – 67 (37 – 42)
Half throttle	136 – 144 (85 – 89)	88 – 96 (55 – 60)

- At closed throttle, the accelerator opening is less than 1/8 condition. (Closed throttle position signal: OFF)
- At half throttle, the accelerator opening is 4/8 of the full opening.

Stall Speed

NCS0009O

Stall speed	2,700 – 3,000 rpm

Line Pressure

NCS0009P

Engine speed	Line pressure kPa (kg/cm^2 , psi)	
	“R” position	“D” and “M” positions
At idle speed	425 – 465 (4.3 – 4.7, 62 – 67)	379 – 428 (3.9 – 4.4, 55 – 62)
At stall speed	1,605 – 1,950 (16.4 – 19.9, 233 – 283)	1,310 – 1,500 (13.4 – 15.3, 190 – 218)

A/T Fluid Temperature Sensor

NCS0009Q

Name	Condition	CONSULT-III "DATA MONITOR" (Approx.)	Resistance (Approx.)
A/T fluid temperature sensor 1	0°C (32°F)	3.3 V	15 kΩ
	20°C (68°F)	2.7 V	6.5 kΩ
	80°C (176°F)	0.9 V	0.9 kΩ
A/T fluid temperature sensor 2	0°C (32°F)	3.3 V	10 kΩ
	20°C (68°F)	2.5 V	4 kΩ
	80°C (176°F)	0.7 V	0.5 kΩ

Turbine Revolution Sensor

NCS0009R

Name	Condition	Data (Approx.)
Turbine revolution sensor 1	When running at 50 km/h (31 MPH) in 4th speed with the closed throttle position signal OFF.	1.3 kHz
Turbine revolution sensor 2	When moving at 20 km/h (12 MPH) in 1st speed with the closed throttle position signal OFF.	

Vehicle Speed Sensor A/T (Revolution Sensor)

NCS0009S

Name	Condition	Data (Approx.)
Revolution sensor	When moving at 20 km/h (12 MPH).	185 Hz

Reverse Brake

NCS0009T

Model code number		98X5B
Number of drive plates		6
Number of driven plates		6
Clearance mm (in)	Standard	0.7 – 1.1 (0.028 – 0.043)

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

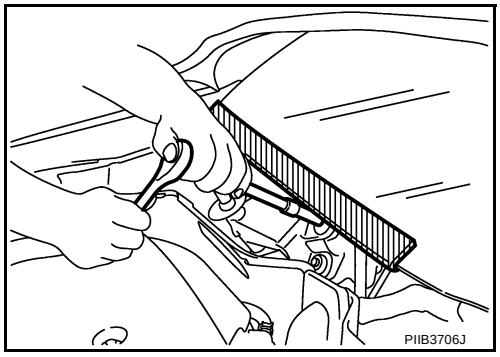
NJS000D2

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NJS000D3

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

NJS000CP

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Precautions for Working with HFC-134a (R-134a)

NJS00003

CAUTION:

- **CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. If the refrigerants are mixed and compressor malfunction is likely to occur, refer to "CONTAMINATED REFRIGERANT" below. To determine the purity of HFC-134a (R-134a) in the vehicle and recovery tank, use Refrigerant Recovery/Recycling Recharging equipment and Refrigerant Identifier.**
- **Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor malfunction is likely to occur.**
- **The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:**
  - **When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.**
  - **When installing refrigerant components to a vehicle, never remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.**
  - **Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.**
  - **Never allow lubricant (Nissan A/C System Oil Type S) to come in contact with styrene foam parts. Damage may result.**

CONTAMINATED REFRIGERANT

If a refrigerant other than pure HFC-134a (R-134a) is identified in a vehicle, take appropriate steps shown below:

- Explain to the customer that environmental regulations prohibit the release of contaminated refrigerant into the atmosphere.
- Explain that recovery of the contaminated refrigerant could damage service equipment and refrigerant supply.
- Suggest the customer return the vehicle to the location of previous service where the contamination may have occurred.
- In case of repairing, recover the refrigerant using only **dedicated equipment and containers. Never recover contaminated refrigerant into the existing service equipment.** If the facility does not have dedicated recovery equipment, contact a local refrigerant product retailer for available service. This refrigerant must be disposed of in accordance with all federal and local regulations. In addition, replacement of all refrigerant system components on the vehicle is recommended.
- If the vehicle is within the warranty period, the air conditioner warranty is void. Please contact Nissan Customer Affairs for further assistance.

General Refrigerant Precautions

NJS00004

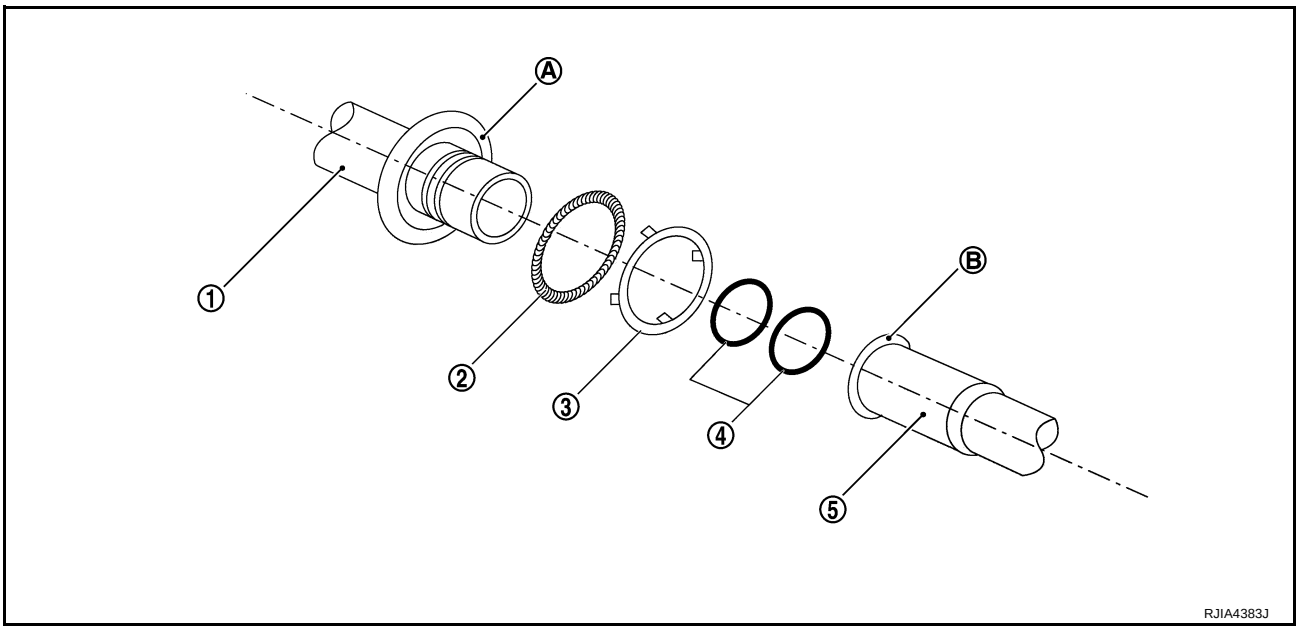
WARNING:

- **Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system, using certified service equipment meeting requirements of SAE J-2210 [HFC-134a (R-134a) recycling equipment], or J-2209 [HFC-134a (R-134a) recovery equipment]. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.**
- **Never release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.**
- **Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.**
- **Never store or heat refrigerant containers above 52°C (126°F).**
- **Never heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.**
- **Never intentionally drop, puncture, or incinerate refrigerant containers.**
- **Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.**
- **Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.**
- **Never pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and HFC-134a (R-134a) have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**

Precautions for Refrigerant Connection

NJS00006

A new type refrigerant connection has been introduced to all refrigerant lines except the following location.



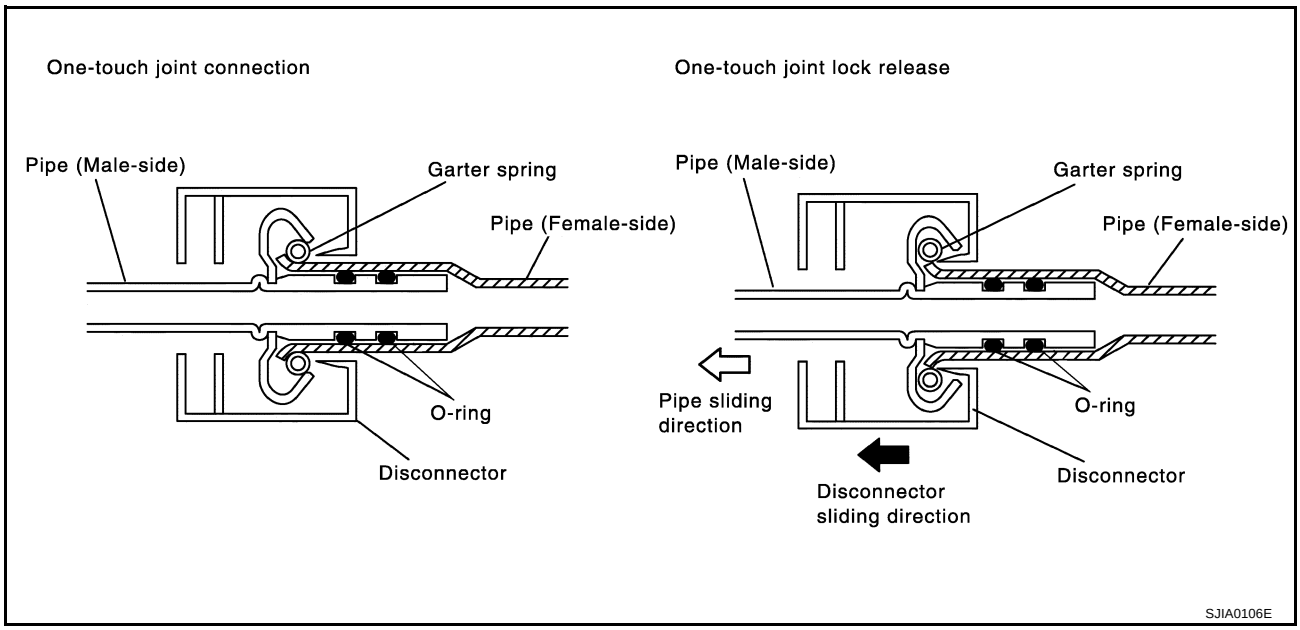
- Expansion valve to evaporator
- Refrigerant pressure sensor to liquid tank

ABOUT ONE-TOUCH JOINT

Description

- One-touch joints are pipe joints which do not require tools during piping connection.
- Unlike conventional connection methods using union nuts and flanges, controlling tightening torque at connection point is not necessary.
- When removing a pipe joint, use a disconnector.

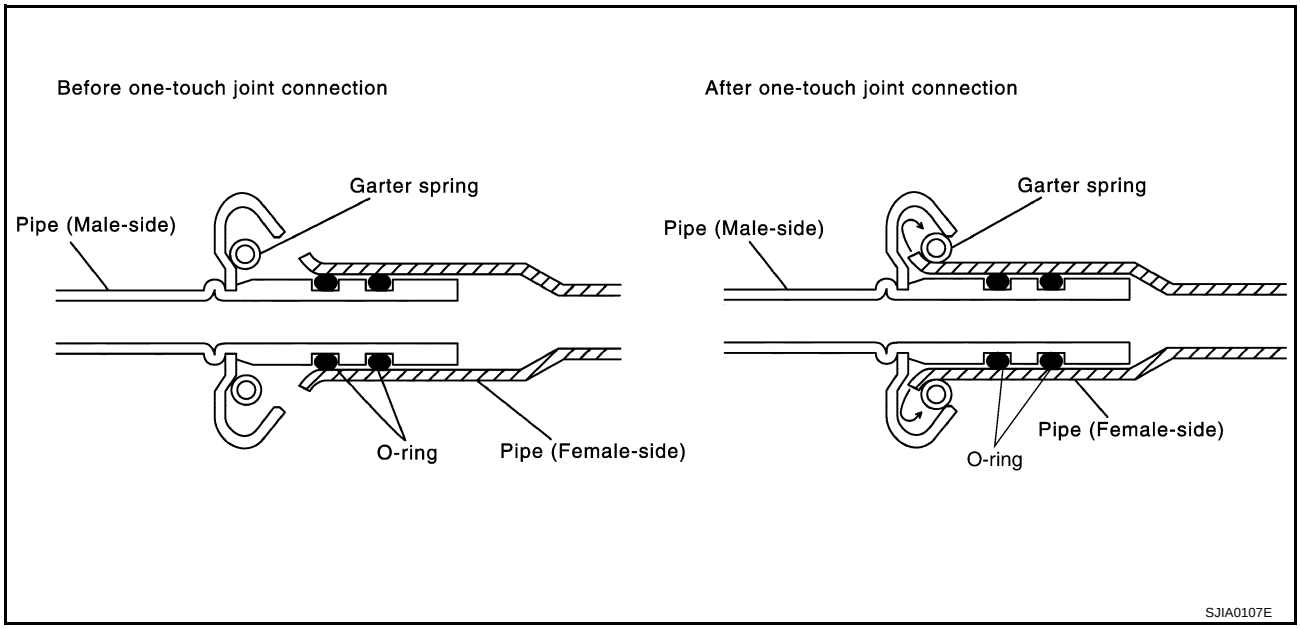
COMPONENT PARTS



FUNCTIONS OF COMPONENT PARTS

1	Pipe (Male-side)	● Retains O-rings (4). ● Retains garter spring (2) in cage (A).
2	Garter spring	Anchors female-side piping (5).
3	Indicator ring	When connection is made properly, this is ejected from male-side piping (1). (This part is no longer necessary after connection.)
4	O-ring	Seals connection point. (Not reusable)
5	Pipe (Female-side)	● Seals connection by compressing O-rings (4). ● Anchors piping connection using flare (B) and garter spring (2).

NOTE:



- Garter spring (2) cannot be removed from cage (A) of male-side piping.
- Indicator ring (3) remains near piping connection point, however, this is not a malfunction. (This is to check piping connection during factory assembly.)

REMOVAL

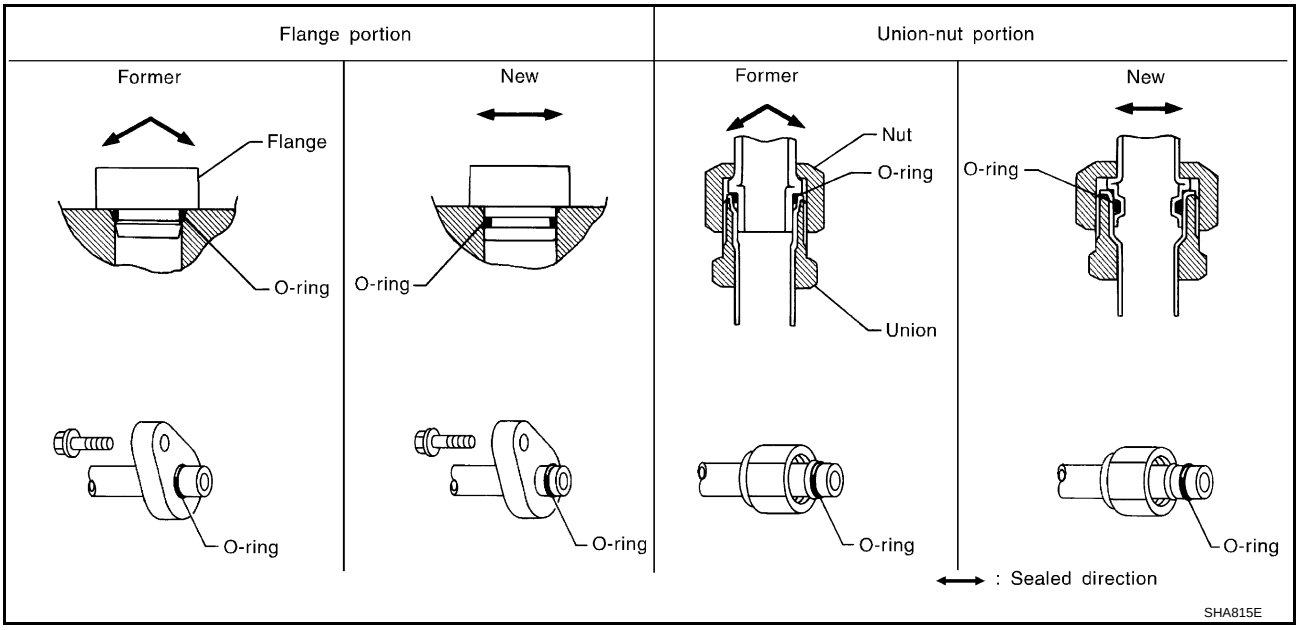
1. Clean piping connection point, and set a disconnector.
2. Slide disconnector in axial direction of piping, and stretch garter spring with tapered point of disconnector.
3. Slide disconnector farther so that inside diameter of garter spring becomes larger than outside diameter of female-side piping flare. Then male-side piping can be disconnected.

INSTALLATION

1. Clean piping connection points, and insert male-side piping into female-side piping.
2. Push inserted male-side piping harder so that female-side piping flare stretches garter spring.
3. If inside diameter of garter spring becomes larger than outside diameter of female-side piping flare, garter spring seats on flare. Then, it fits in between male-side piping cage and female-side piping flare to anchor piping connection point.

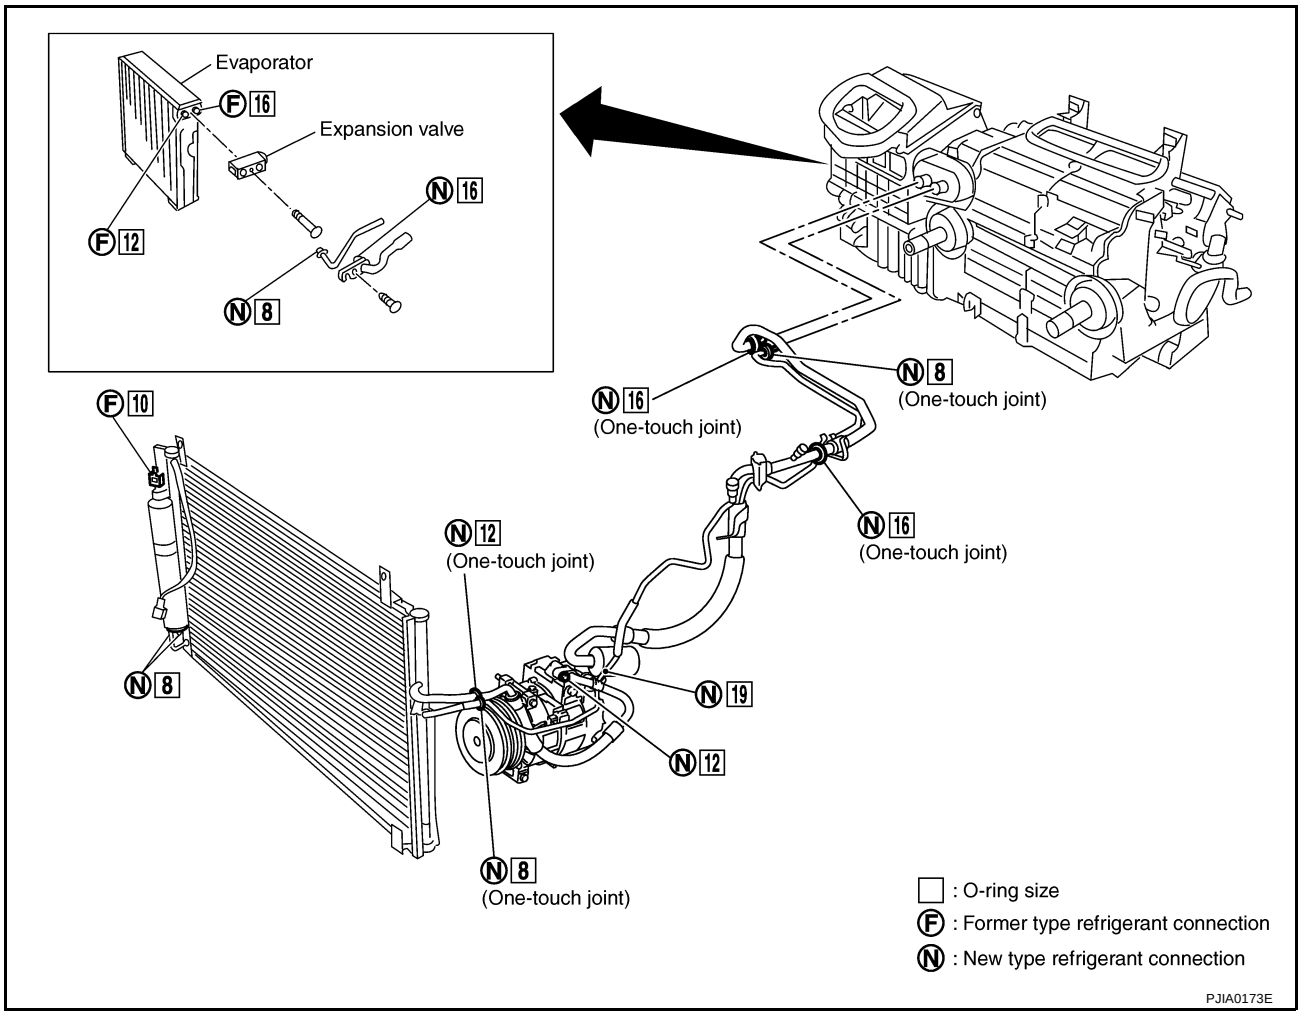
   NOTE:
   When garter spring seats on flare, and fits in between male-side piping cage and female-side piping flare, it clicks.

   CAUTION:
   - **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
   - **Insert piping securely until a click is heard.**



- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**

NOTE:
One-touch joint connection is used in points below.



- Low-pressure pipe 2 to low-pressure pipe 1 (O-ring size: 16)
- Low-pressure pipe 2 to low-pressure flexible hose (O-ring size: 16)
- High-pressure flexible hose to condenser (O-ring size: 12)
- High-pressure pipe 1 to high-pressure pipe 2 (O-ring size: 8)
- High-pressure pipe 1 to condenser (O-ring size: 8)

FEATURES OF NEW TYPE REFRIGERANT CONNECTION

- The O-ring has been relocated. It has also been provided with a groove for proper installation. This eliminates the possibility of the O-ring being caught in, or damaged by, the mating part. The sealing direction of the O-ring is now set vertically in relation to the contacting surface of the mating part to improve sealing characteristics.
- The reaction force of the O-ring will not occur in the direction that causes the joint to pull out, thereby facilitating piping connections.

O-RING AND REFRIGERANT CONNECTION

CAUTION:

The new and former refrigerant connections use different O-ring configurations. Never confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant may leak at the connection.

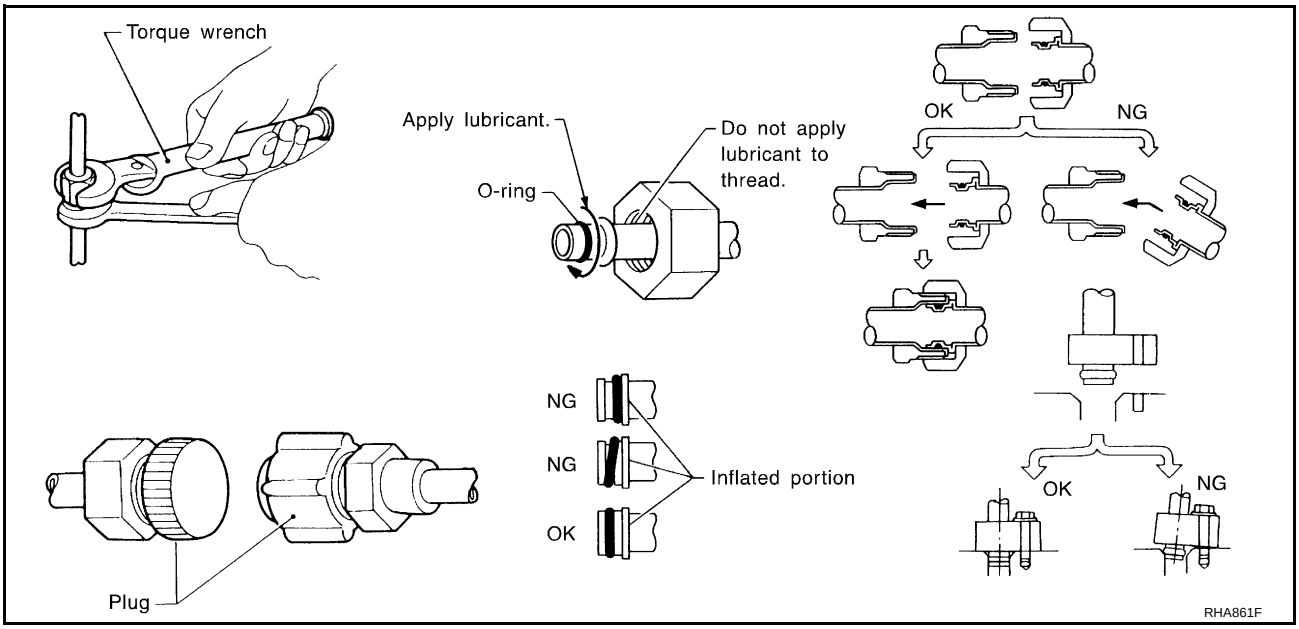
O-Ring Part Numbers and Specifications

Connection type	Piping connection point		Part number	QTY	O-ring size
New	Low-pressure pipe 2 to low-pressure pipe 1 (One-touch joint)		92473 N8221	2	16
	Low-pressure pipe 2 to low-pressure flexible hose (One-touch joint)		92473 N8221	2	16
	High-pressure pipe 1 to high-pressure pipe 2 (One-touch joint)		92471 N8221	2	8
	Condenser to high-pressure flexible hose (One-touch joint)		92472 N8221	2	12
	Condenser to high-pressure pipe 1 (One-touch joint)		92471 N8221	2	8
	Low-pressure pipe 1 to expansion valve		92473 N8210	1	16
	High-pressure pipe 2 to expansion valve		92471 N8210	1	8
	Compressor to low-pressure flexible hose		92474 N8210	1	19
	Compressor to high-pressure flexible hose		92472 N8210	1	12
	Liquid tank to condenser pipe	Inlet	92471 N8210	1	8
		Outlet		1	

Connection type	Piping connection point		Part number	QTY	O-ring size
Former	Refrigerant pressure sensor to liquid tank		J2476 89956	1	10
	Expansion valve to evaporator	Inlet	92475 71L00	1	12
		Outlet	92475 72L00	1	16

WARNING:

Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.



CAUTION:

When replacing or cleaning refrigerant cycle components, observe the following.

- **When the compressor is removed, store it in the same way at it is when mounted on the car. Failure to do so will cause lubricant to enter the low-pressure chamber.**
- **When connecting tubes, always use a torque wrench and a back-up wrench.**
- **After disconnecting tubes, immediately plug all openings to prevent entry of dust and moisture.**
- **When installing an air conditioner in the vehicle, connect the pipes at the final stage of the operation. Never remove the seal caps of pipes and other components until just before required for connection.**
- **Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.**
- **Thoroughly remove moisture from the refrigeration system before charging the refrigerant.**
- **Always replace used O-rings.**
- **When connecting tubes, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.**

Name : Nissan A/C system Oil Type S

- **O-ring must be closely attached to the groove of tube.**
- **When replacing the O-ring, be careful not to damage O-ring and tube.**
- **Connect tube until a click can be heard, then tighten the nut or bolt by hand. Make sure that the O-ring is installed to tube correctly.**
- **After connecting line, perform leak test and make sure that there is no leakage from connections. When the refrigerant leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.**

Precautions for Servicing Compressor

NJS00007

- **Plug all openings to prevent moisture and foreign matter from entering.**
- **When the compressor is removed, store it in the same way at it is when mounted on the car.**
- **When replacing or repairing compressor, follow “Maintenance of Lubricant Quantity in Compressor” exactly. Refer to ATC-21, "Maintenance of Lubricant Quantity in Compressor" .**
- **Keep friction surfaces between clutch and pulley clean. If the surface is contaminated with lubricant, wipe it off by using a clean waste cloth moistened with thinner.**
- **After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.**
- **After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation.**

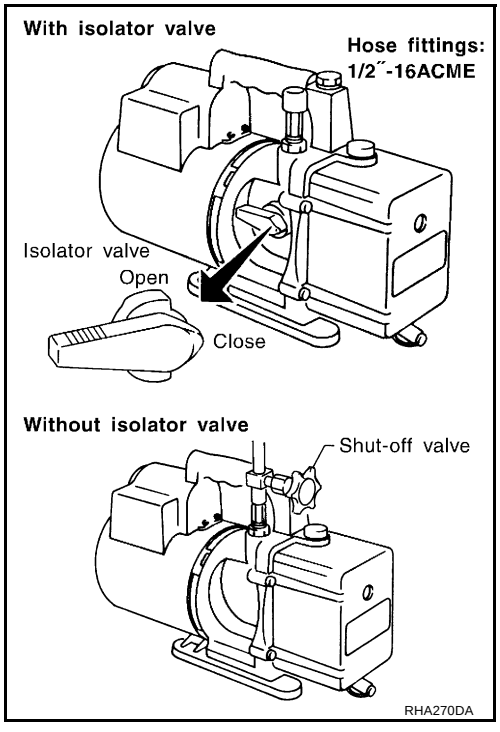
Precautions for Service Equipment

NJS00008

RECOVERY/RECYCLING EQUIPMENT

Be certain to follow the manufacturer’s instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

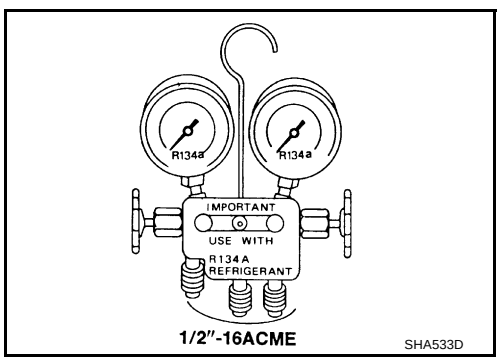
ELECTRICAL LEAK DETECTOR



Be certain to follow the manufacturer’s instructions for tester operation and tester maintenance.

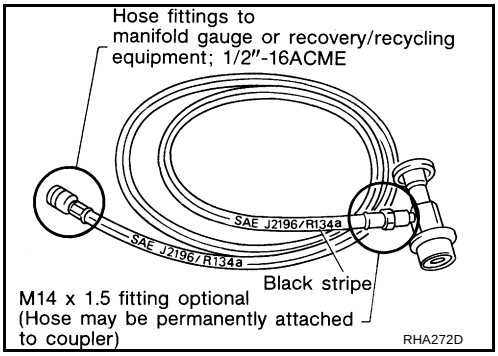
VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure. So the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.
To prevent this migration, use a manual valve placed near the hose-to-pump connection, as follows.



- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut-off valve, disconnect the hose from the pump. As long as the hose is connected, the valve is open and lubricating oil may migrate.

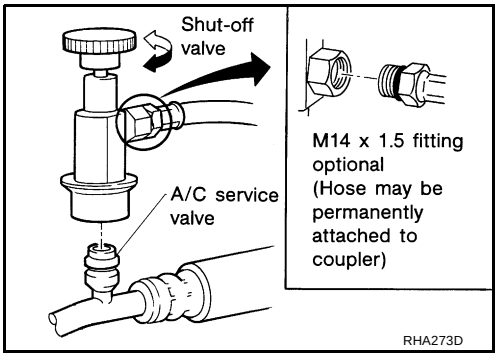
Some one-way valves open when vacuum is applied and close under no vacuum condition. Such valves may restrict the pump’s ability to pull a deep vacuum and are not recommended.



MANIFOLD GAUGE SET

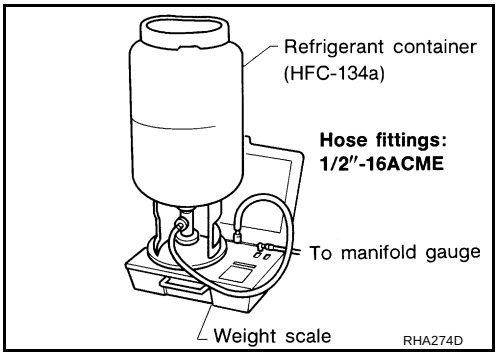
Be certain that the gauge face indicates HFC-134a or R-134a. Be sure the gauge set has 1/2″-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) and specified lubricants.

SERVICE HOSES



Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut -off devices (either manual or automatic) near the end of the hoses opposite to the manifold gauge.

SERVICE COUPLERS



Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close

REFRIGERANT WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified lubricants have been used with the scale. If the scale controls refrigerant flow electronically, the hose fitting must be 1/2″-16 ACME.

CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electrical scale or of quality recycle/recharge equipment.

Precautions for Leak Detection Dye

NJS00009

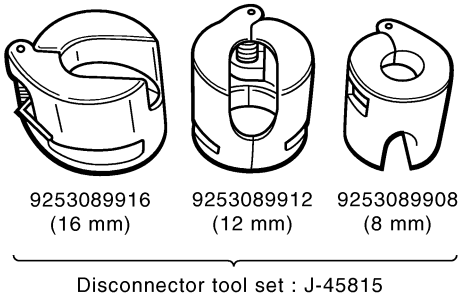
- The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.
- Always wear fluorescence enhancing UV safety goggles to protect your eyes and enhance the visibility of the fluorescent dye.
- The fluorescent dye leak detector is not a replacement for an electrical leak detector (SST: J-41995). The fluorescent dye leak detector should be used in conjunction with an electrical leak detector (SST: J-41995) to pin-point refrigerant leaks.
- For the purpose of safety and customer's satisfaction, read and follow all manufacture's operating instructions and precautions prior to performing the work.
- A compressor shaft seal should not necessarily be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electrical leak detector (SST: J-41995).
- Always remove any remaining dye from the leak area after repairs are completed to avoid a misdiagnosis during a future service.
- Never allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time cannot be removed.
- Never spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).
- Never use more than one refrigerant dye bottle (1/4 ounce /7.4 cc) per A/C system.
- Leak detection dyes for HFC-134a (R-134a) and CFC-12 (R-12) A/C systems are different. Never use HFC-134a (R-134a) leak detection dye in CFC-12 (R-12) A/C system or CFC-12 (R-12) leak detection dye in HFC-134a (R-134a) A/C system, or A/C system damage may result.
- The fluorescent properties of the dye will remain for three years or a little over unless a compressor malfunction occurs.

IDENTIFICATION

NOTE:
Vehicles with factory installed fluorescent dye have a green label.
Vehicles without factory installed fluorescent dye have a blue label.

IDENTIFICATION LABEL FOR VEHICLE

Vehicles with factory installed fluorescent dye have the identification label on the front side of hood.

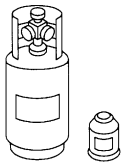


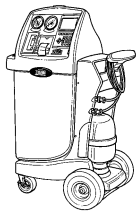
PREPARATION

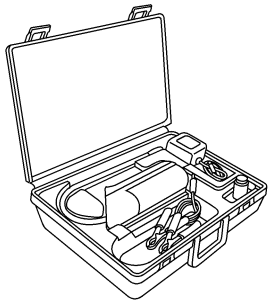
PFP:00002

Special Service Tools

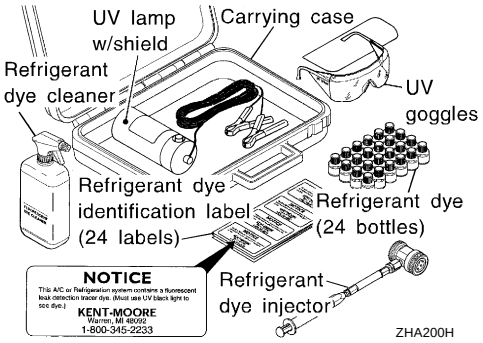
NJS0000B

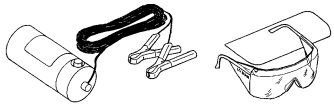


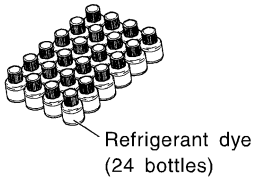


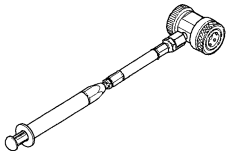


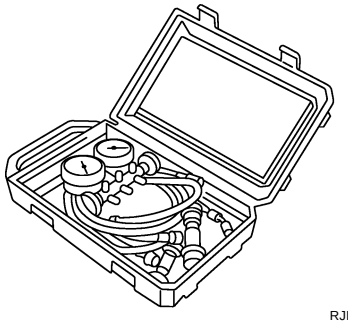
The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.



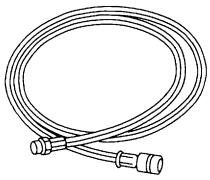


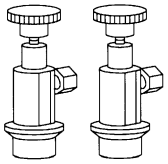


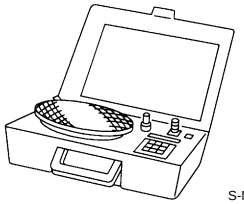


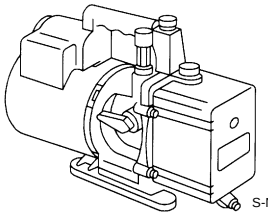


Tool number (Kent-Moore No.) Tool name		Description
9253089908 (for high-pressure pipe 1) (-) 9253089912 (for high-pressure flexible hose) (-) 9253089916 (for low-pressure pipe 1 and low-pressure flexible hose) (-) Disconnector tool set (J-45815)		Disconnect one-touch joint connection





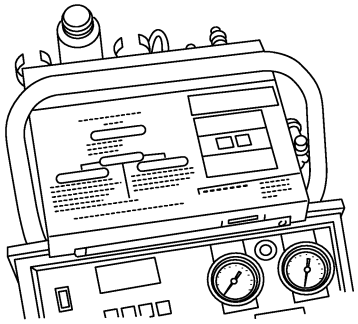


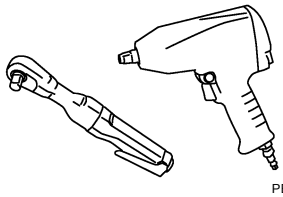


HFC-134a (R-134a) Service Tools and Equipment

NJS0000C

Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.
Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.
Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.
Never use adapters that convert one size fitting to another: refrigerant/lubricant contamination occurs and compressor malfunction may result.





Tool number (Kent-Moore No.) Tool name		Description
HFC-134a (R-134a) refrigerant	 S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size ● Large container 1/2″-16 ACME

REFRIGERATION SYSTEM

PFP:KA990

Refrigerant Cycle

NJS0000E

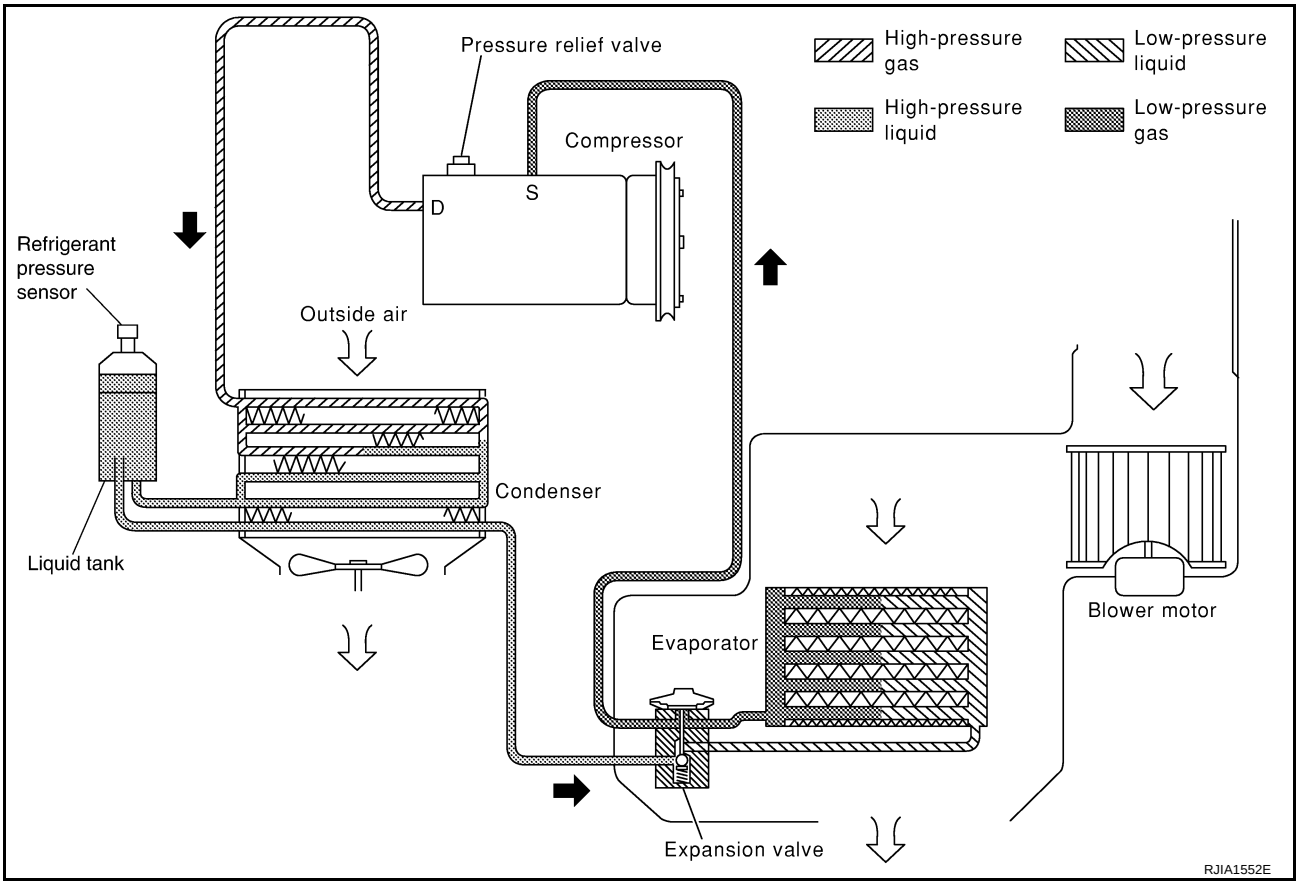
REFRIGERANT FLOW

The refrigerant flows from the compressor, through the condenser with liquid tank, through the evaporator, and back to the compressor. The refrigerant evaporation in the evaporator is controlled by an externally equalized expansion valve, located inside the evaporator case.

FREEZE PROTECTION

To prevent evaporator frozen up, the evaporator air temperature is monitored, and the voltage signal to the unified meter and A/C amp. will make the A/C relay go OFF and stop the compressor.

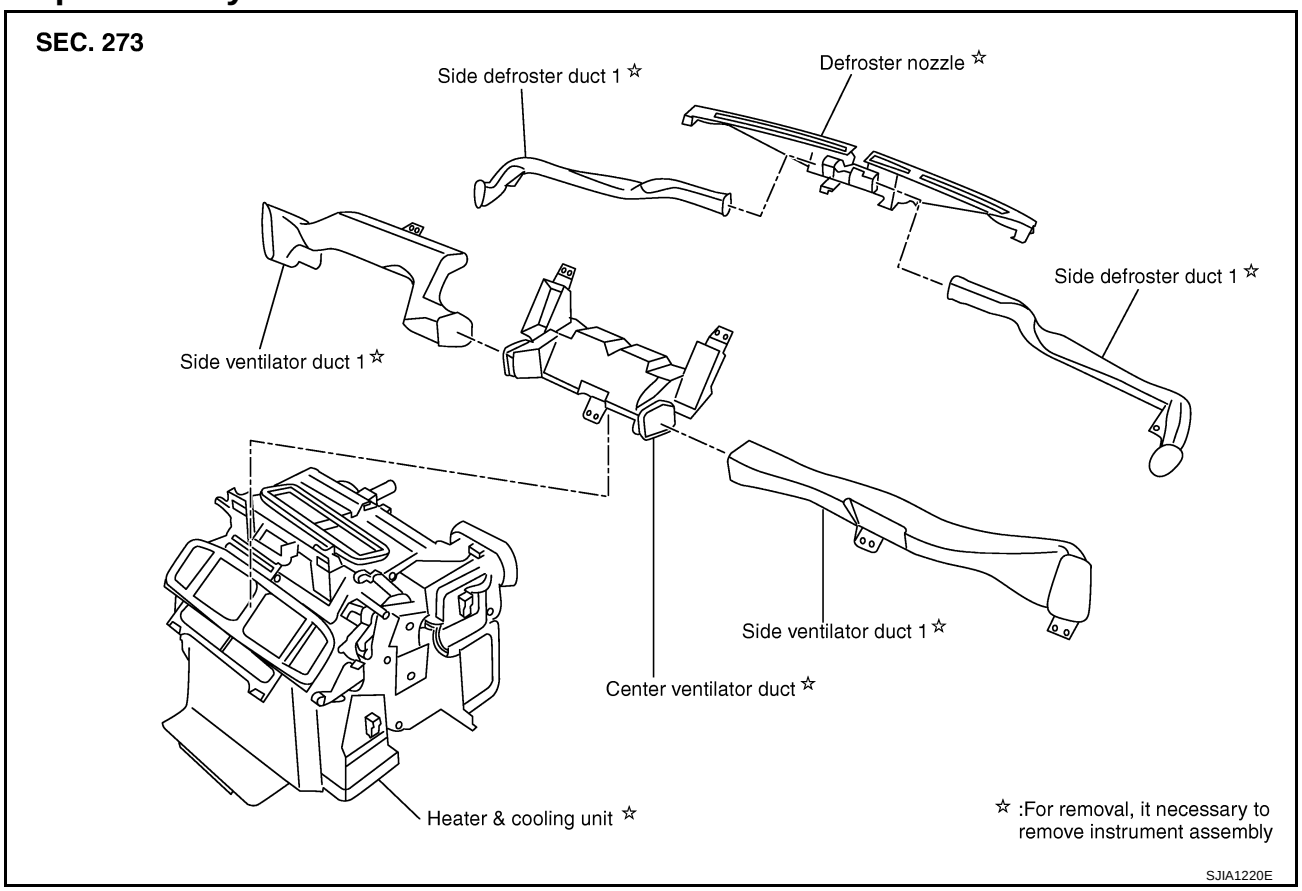
Refrigerant System Protection



NJS0000F

REFRIGERANT PRESSURE SENSOR

The refrigerant system is protected against excessively high- or low-pressures by the refrigerant pressure sensor, located on the liquid tank. If the system pressure rises above, or falls below the specifications, the refrigerant pressure sensor detects the pressure inside the refrigerant line and sends the voltage signal to the ECM. ECM makes the A/C relay go OFF and stops the compressor when pressure on the high-pressure side detected by refrigerant pressure sensor is over about 2,746 kPa (28 kg/cm^2 , 398 psi), or below about 134 kPa (1.4 kg/cm^2 , 19 psi).



PRESSURE RELIEF VALVE

The refrigerant system is also protected by a pressure relief valve, located in the rear head of the compressor. When the pressure of refrigerant in the system increases to an unusual level [more than 3,600 kPa (36.7 kg/cm^2 , 522 psi)], the release port on the pressure relief valve automatically opens and releases refrigerant into the atmosphere.

Component Layout

NJS0000H

LUBRICANT

PFP:KLG00

Maintenance of Lubricant Quantity in Compressor

NJS0000I

The lubricant in the compressor circulates through the system with the refrigerant. Add lubricant to compressor when replacing any component or after a large refrigerant leakage occurred. It is important to maintain the specified amount.
If lubricant quantity is not maintained properly, the following malfunctions may result:

- Lack of lubricant: May lead to a seized compressor.
- Excessive lubricant: Inadequate cooling (thermal exchange interference)

LUBRICANT

Name : Nissan A/C System Oil Type S

LUBRICANT RETURN OPERATION

Adjust the lubricant quantity according to the test group shown below.

1. CHECK LUBRICANT RETURN OPERATION

Can lubricant return operation be performed?

- A/C system works properly.
- There is no evidence of a large amount of lubricant leakage.

CAUTION:
If excessive lubricant leakage is noted, never perform the lubricant return operation.

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. PERFORM LUBRICANT RETURN OPERATION, PROCEEDING AS FOLLOWS

1. Start the engine, and set to the following conditions:
   - Engine speed: Idling to 1,200 rpm
   - A/C switch: ON
   - Blower speed: Max. position
   - Temp. control: Optional [Set so that intake air temperature is 25 to 30°C (77 to 86°F).]
   - Intake position: Recirculation (REC)
2. Perform lubricant return operation for about 10 minutes.
3. Stop the engine.

>> GO TO 3.

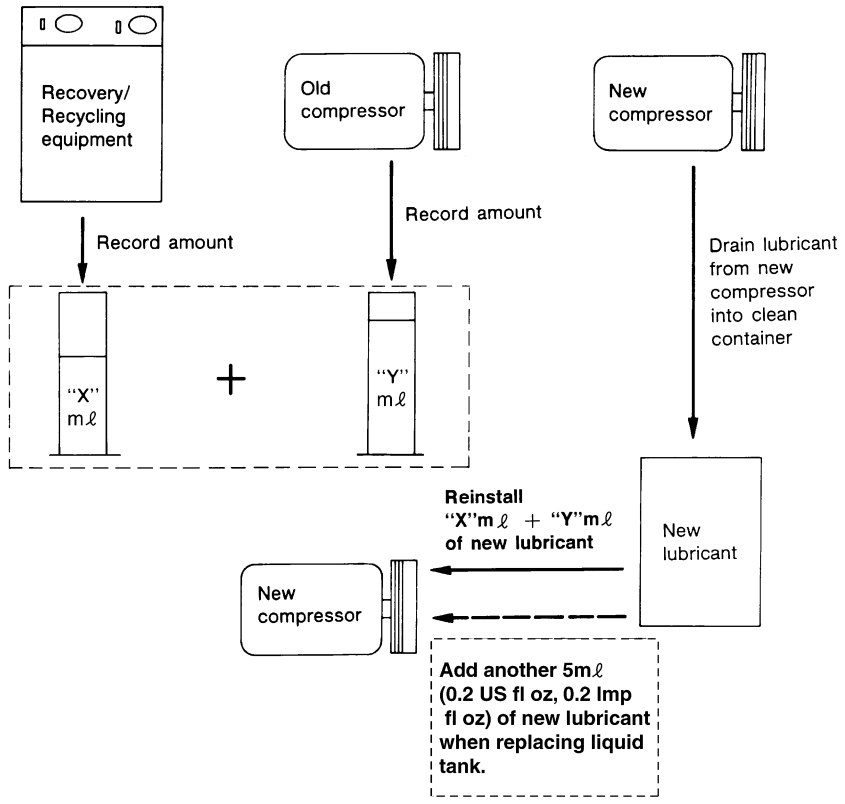
3. CHECK REPLACEMENT PART

Should the compressor be replaced?

YES >> GO TO ATC-23, "LUBRICANT ADJUSTING PROCEDURE FOR COMPRESSOR REPLACEMENT" .
NO >> GO TO ATC-22, "LUBRICANT ADJUSTING PROCEDURE FOR COMPONENTS REPLACEMENT EXCEPT COMPRESSOR" .

LUBRICANT ADJUSTING PROCEDURE FOR COMPONENTS REPLACEMENT EXCEPT COMPRESSOR

After replacing any of the following major components, add the correct amount of lubricant to the system.
Amount of lubricant to be added:



Part replaced	Lubricant to be added to system	Remarks
	Amount of lubricant m ℓ (US fl oz, Imp fl oz)	
Evaporator	75 (2.5, 2.6)	—
Condenser	35 (1.2, 1.2)	—
Liquid tank	10 (0.3, 0.4)	—
In case of refrigerant leak	30 (1.0, 1.1)	Large leak
	—	Small leak *1

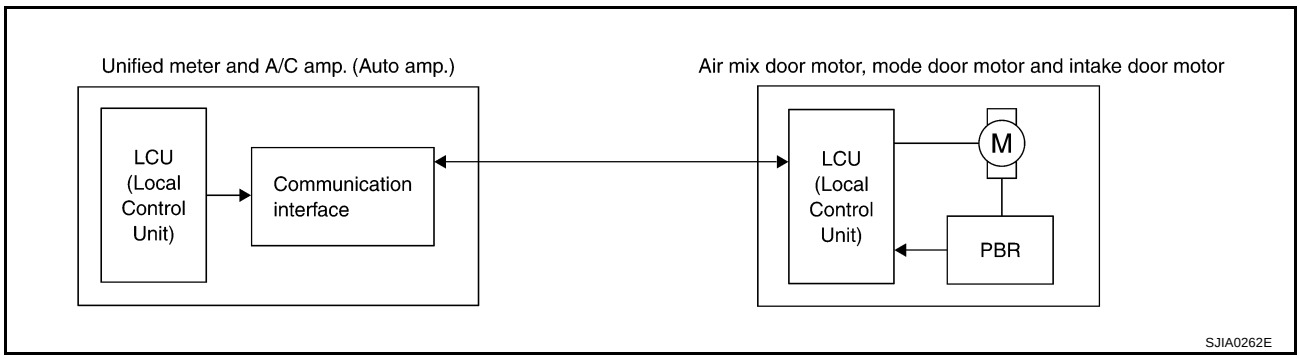
*1: If the refrigerant leak is small, no addition of lubricant is needed.

LUBRICANT ADJUSTING PROCEDURE FOR COMPRESSOR REPLACEMENT

1. Before connecting recovery/recycling recharging equipment to vehicle, check recovery/recycling recharging equipment gauges. No refrigerant pressure should be displayed. If NG, recover refrigerant from equipment lines.
2. Connect recovery/recycling recharging equipment to vehicle. Confirm refrigerant purity in supply tank using recovery/recycling recharging equipment and refrigerant identifier. If NG, refer to ATC-5, "CONTAMINATED REFRIGERANT" .
3. Confirm refrigerant purity in vehicle A/C system using recovery/recycling recharging equipment and refrigerant identifier. If NG, refer to ATC-5, "CONTAMINATED REFRIGERANT" .
4. Discharge refrigerant into the refrigerant recovery/recycling equipment. Measure lubricant discharged into the recovery/recycling equipment.
5. Drain the lubricant from the old (removed) compressor into a graduated container and recover the amount of lubricant drained.
6. Drain the lubricant from the new compressor into a separate, clean container.
7. Measure an amount of new lubricant installed equal to amount drained from old compressor. Add this lubricant to new compressor through the suction port opening.
8. Measure an amount of new lubricant equal to the amount recovered during discharging. Add this lubricant to new compressor through the suction port opening.
9. If the liquid tank also needs to be replaced, add another 5 mℓ (0.2 US fl oz, 0.2 Imp fl oz) of lubricant at this time.
   Do not add this 5 mℓ (0.2 US fl oz, 0.2 Imp fl oz) of lubricant when replaces the compressor only.

Lubricant adjusting procedure for compressor replacement

RJIA3578E



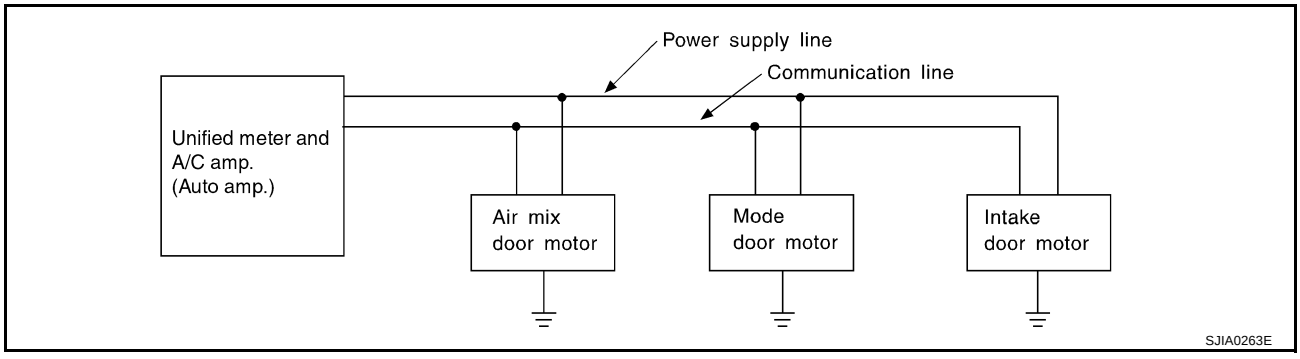
AIR CONDITIONER CONTROL

PFP:27500

Description of Air Conditioner LAN Control System

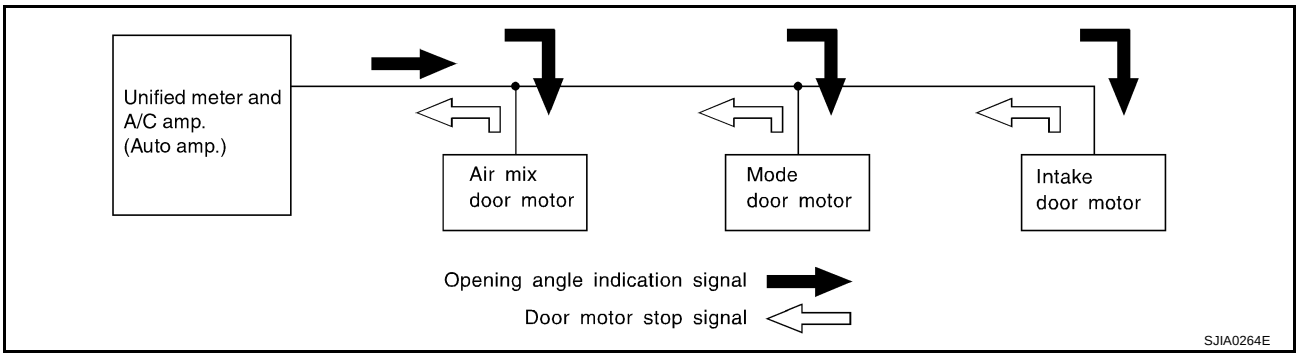
NJS0000J

The LAN (Local Area Network) system consists of unified meter and A/C amp., mode door motor, air mix door motor and intake door motor.
A configuration of these components is shown in the figure below.



System Construction

NJS0000K



A small network is constructed between unified meter and A/C amp., air mix door motor, mode door motor and intake door motor. The unified meter and A/C amp. and motors are connected by data transmission lines and motor power supply lines. The LAN network is built through the ground circuits of each door motor.
Addresses, motor opening angle signals, motor stop signals and error checking messages are all transmitted through the data transmission lines connecting the unified meter and A/C amp. and each door motor.
The following functions are contained in LCUs built into the air mix door motor, the mode door motor and the intake door motor.

- Address
- Motor opening angle signal
- Data transmission
- Motor stop and drive decision
- Opening angle sensor (PBR function)
- Comparison
- Decision (Unified meter and A/C amp. indicated value and motor opening angle comparison)

OPERATION

The unified meter and A/C amp. receives data from each of the sensors. The unified meter and A/C amp. sends mode door, air mix door and intake door opening angle data to the mode door motor LCU, air mix door motor LCU and intake door motor LCU.
The mode door motor, air mix door motor and intake door motor read their respective signals according to the address signal. Opening angle indication signals received from the unified meter and A/C amp. and each of the motor position sensors is compared by the LCUs in each motor with the existing decision and opening angles. Subsequently, HOT/COLD, DEF/VENT and FRE/REC operation is selected. The new selection data are returned to the unified meter and A/C amp.

TRANSMISSION DATA AND TRANSMISSION ORDER

Unified meter and A/C amp. data is transmitted consecutively to each of the door motors following the form shown in figure below.

Start:

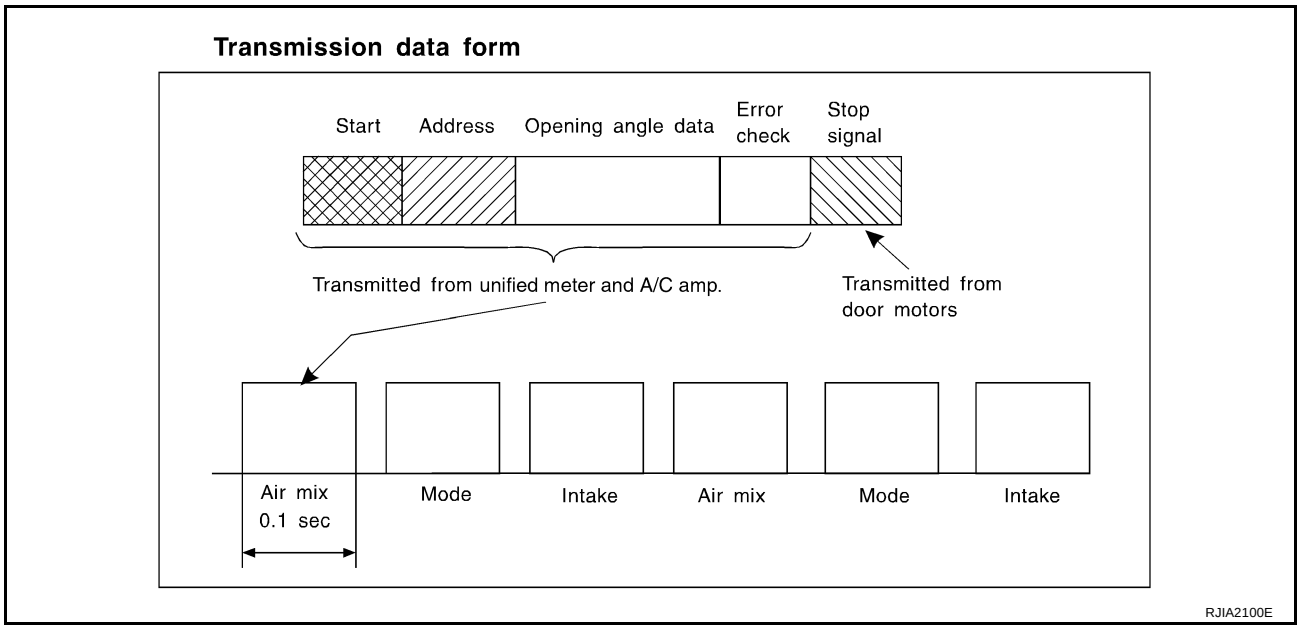
Initial compulsory signal sent to each of the door motors.

Address:

Data sent from the unified meter and A/C amp. are selected according to data-based decisions made by the air mix door motor, mode door motor and intake door motor.
If the addresses are identical, the opening angle data and error check signals are received by the door motor LCUs. The LCUs then make the appropriate error decision. If the opening angle data have no error, door control begins.
If an error exists, the received data are rejected and corrected data received. Finally, door control is based upon the corrected opening angle data.

Opening Angle:

Data that shows the indicated door opening angle of each door motor.



Error Check:

In this procedure, transmitted and received data are checked for errors. Error data are then compiled. The error check prevents corrupted data from being used by the air mix door motor, the mode door motor and the intake door motor. Error data can be related to the following symptoms.

- Malfunction of electrical frequency
- Poor electrical connections
- Signal leakage from transmission lines
- Signal level fluctuation

Stop Signal:

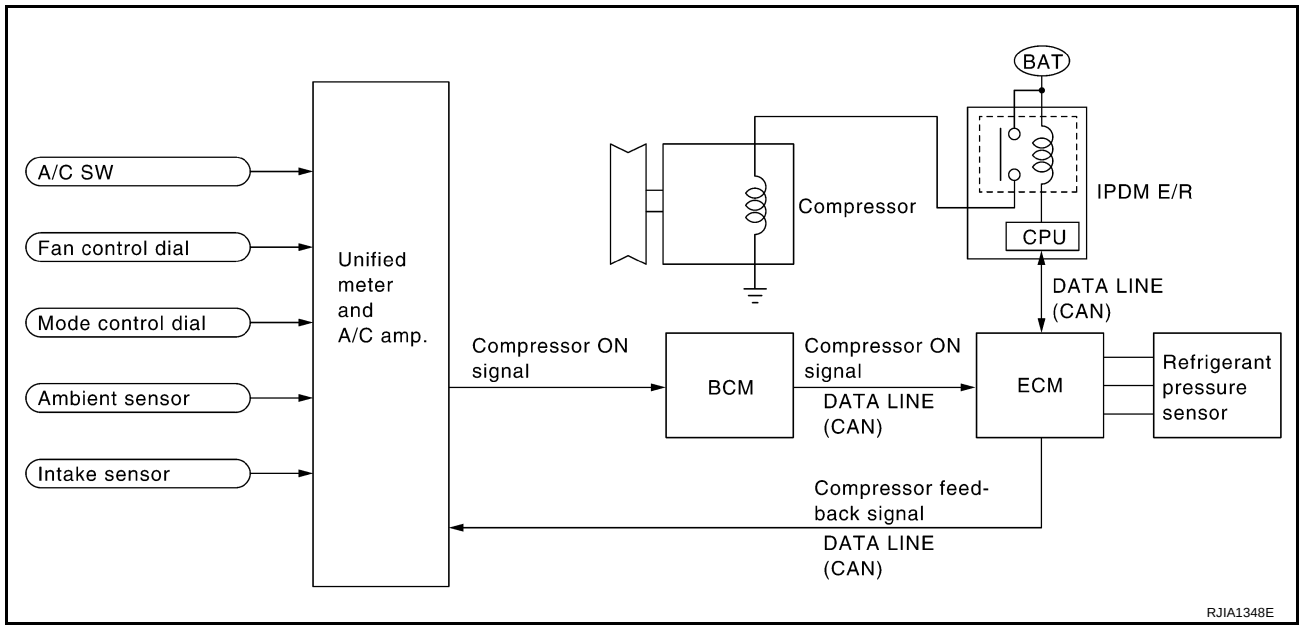
At the end of each transmission, a stop operation, in-operation, or internal malfunction message is delivered to the unified meter and A/C amp. This completes one data transmission and control cycle.

AIR MIX DOOR CONTROL (AUTOMATIC TEMPERATURE CONTROL)

The air mix door is automatically controlled so that in-vehicle temperature is maintained at a predetermined value by the temperature setting, ambient temperature, in-vehicle temperature and amount of sunload.

FAN SPEED CONTROL

Blower speed is automatically controlled by the temperature setting, ambient temperature, in-vehicle temperature, intake temperature, amount of sunload and air mix door position.
With FAN control dial set to AUTO, the blower motor starts to gradually increase air flow volume.
When engine coolant temperature is low, the blower motor operation is delayed to prevent cool air from flowing.



INTAKE DOOR CONTROL

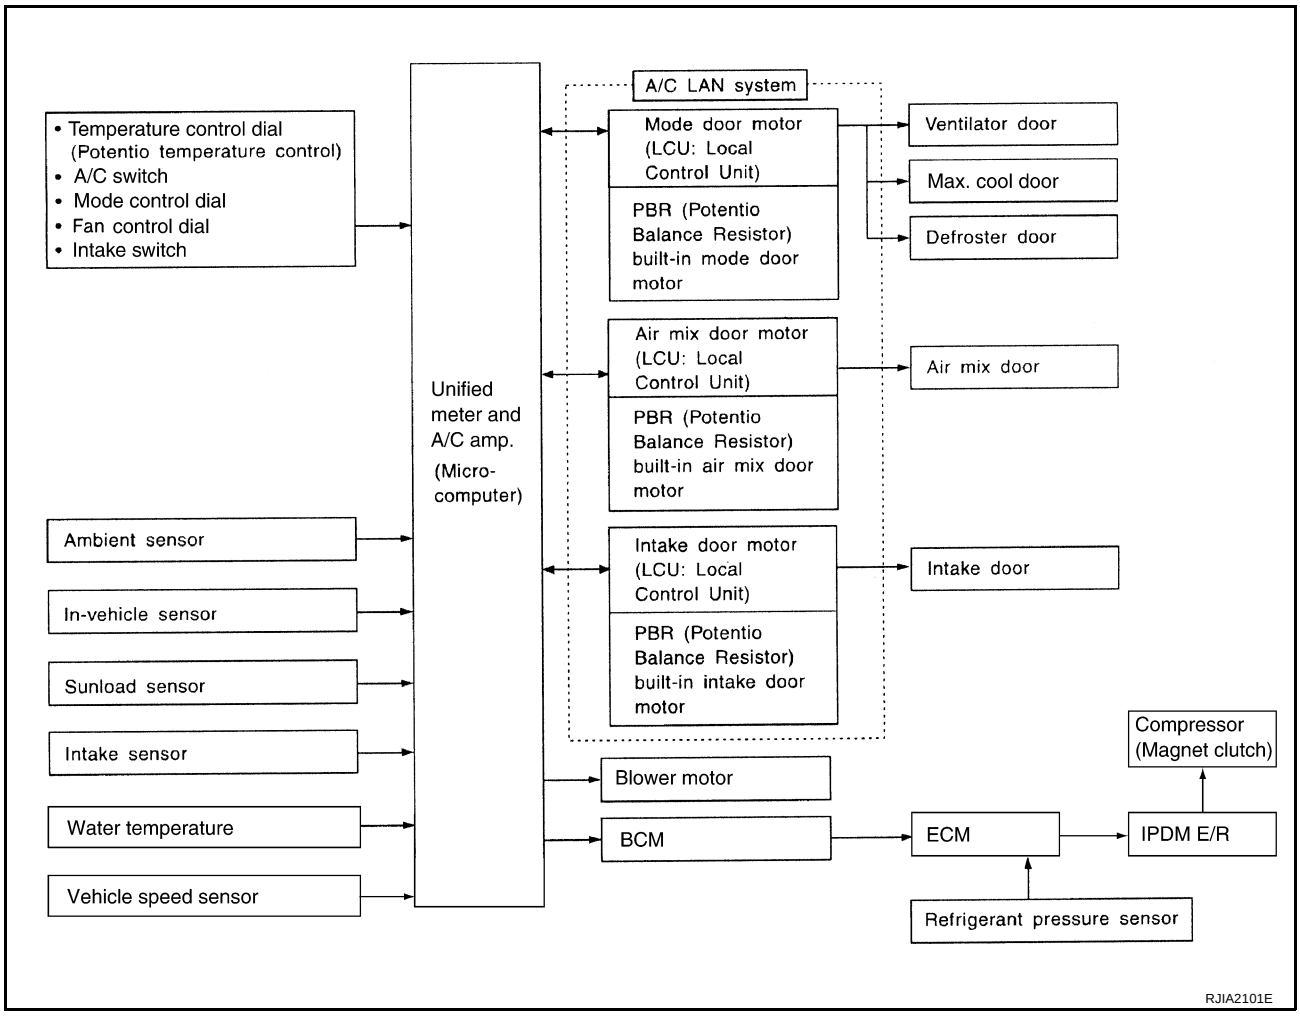
The intake doors are automatically controlled by the temperature setting, ambient temperature, in-vehicle temperature, intake temperature, amount of sunload and ON/OFF operation of the compressor.

MODE DOOR CONTROL

The mode door is automatically controlled by the temperature setting, ambient temperature, in-vehicle temperature, intake temperature and amount of sunload.

MAGNET CLUTCH CONTROL

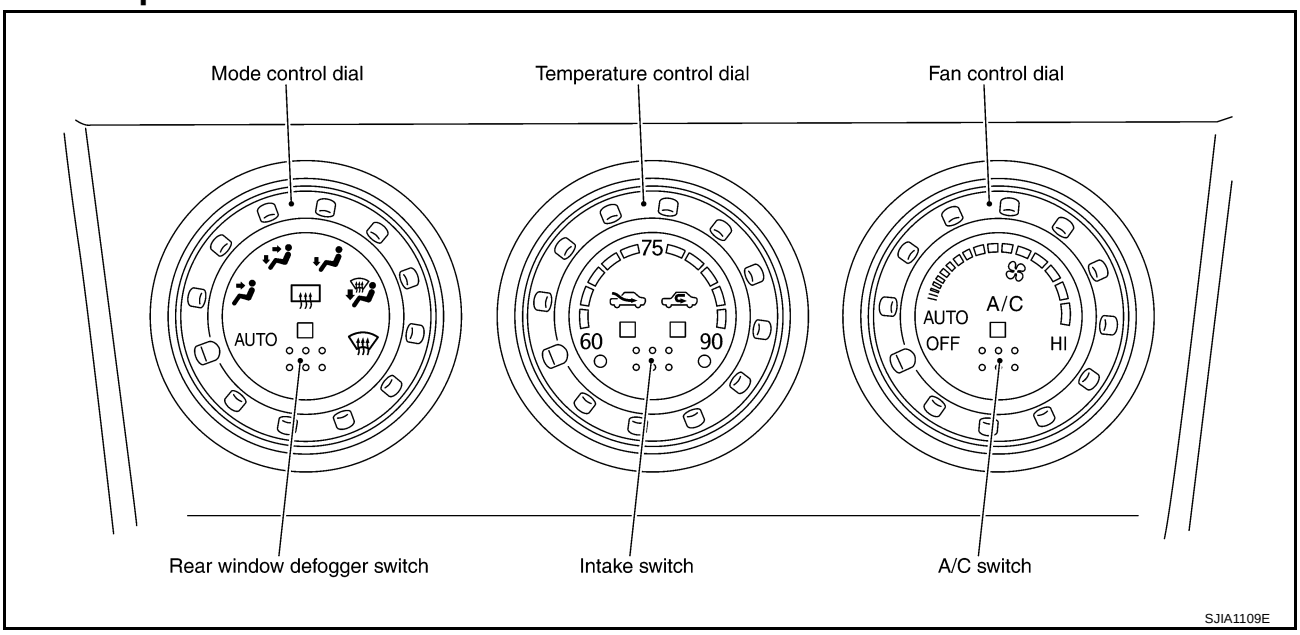
When A/C switch is pressed, turn fan control dial to ON or set mode control dial to D/F, D/F2 or DEF position, unified meter and A/C amp. transmits compressor ON signal to BCM.
BCM sends compressor ON signal to ECM, via CAN communication.
ECM judges whether compressor can be turned ON, based on each sensor status (refrigerant-pressure sensor signal, throttle angle, etc.). If it judges compressor can be turned ON, it sends compressor ON signal to IPDM E/R, via CAN communication.
Upon receipt of compressor ON signal from ECM, IPDM E/R turns air conditioner relay ON to operate compressor.
When sending compressor ON signal to IPDM E/R via CAN communication line, ECM simultaneously sends compressor feedback signal to unified meter and A/C amp. via CAN communication line.
Unified meter and A/C amp., then, uses input compressor feedback signal to control air inlet.



SELF-DIAGNOSIS SYSTEM

The self-diagnosis system is built into the unified meter and A/C amp. to quickly locate the cause of malfunctions.

Description of Control System



NJS0000L

The control system consists of input sensors, switches, unified meter and A/C amp. (microcomputer) and outputs. The relationship of these components is shown in the figure below:

Control Operation

NJS0000M

MODE CONTROL DIAL

The air discharge outlets are controlled with this dial.
Mode doors are set to the defrost position with this dial. Also, intake doors are set to the outside air position.
When shifting mode control dial to D/F, D/F2 or DEF position under the following conditions, compressor is turned ON. (A/C LED ON)

- FAN: ON
- A/C: OFF

TEMPERATURE CONTROL DIAL (POTENTIO TEMPERATURE CONTROL)

The set temperature is increased or decreased with this dial.

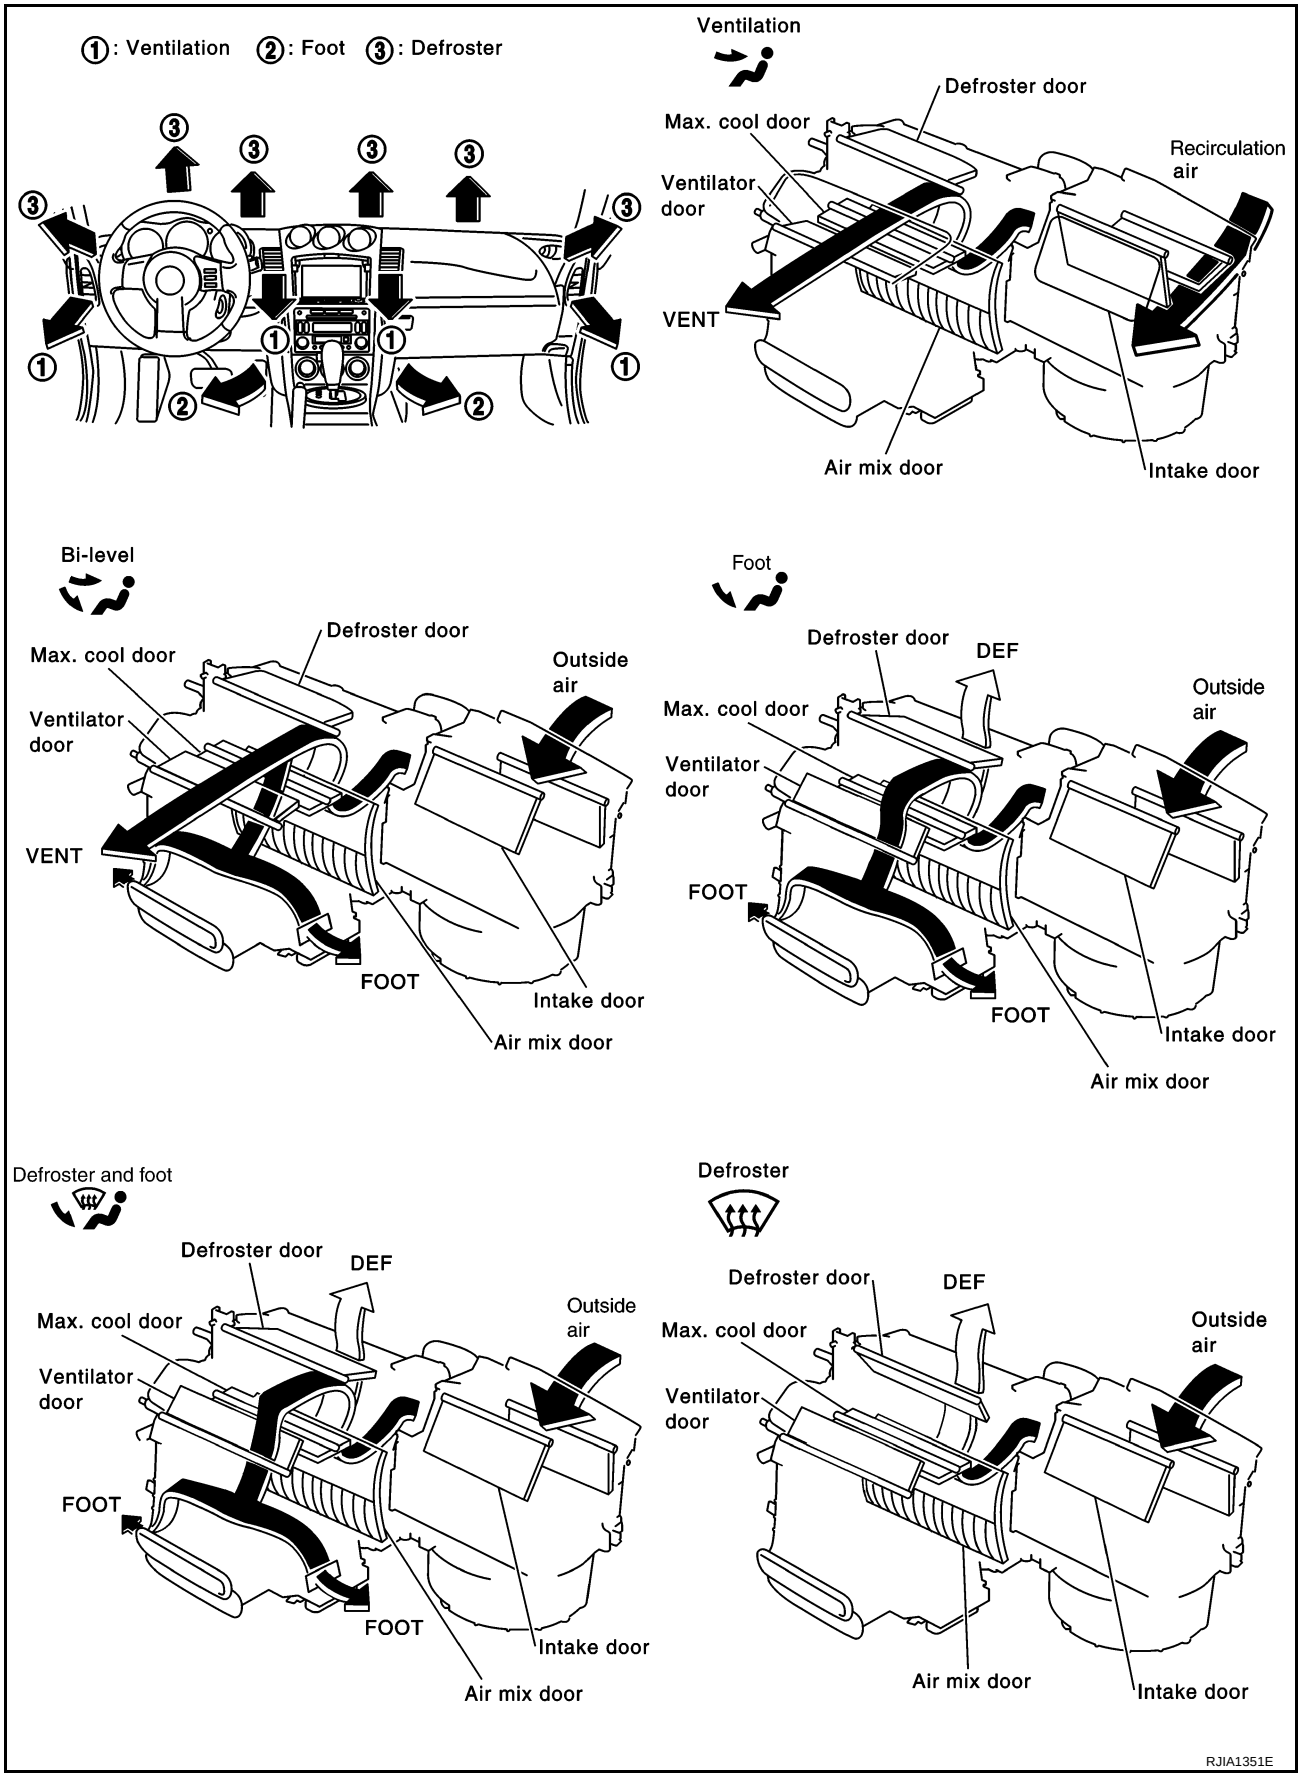
FAN CONTROL DIAL

The blower speed is automatically or manually controlled with this dial. Twenty-five speeds are available for manual control.
Shifting fan control dial to AUTO, compressor is turned ON automatically.

REAR WINDOW DEFOGGER SWITCH

When illumination is ON, rear window is defogged.

INTAKE SWITCH



- When intake switch is ON, REC LED turns ON, and air inlet is fixed to REC.
- When press intake switch again, FRE LED turns ON, and air inlet is fixed to FRE.
- When intake switch is pressed for approximately 1.5 seconds or longer, REC and FRE LEDs blink twice. Then, automatic control mode is entered. Inlet status is displayed even during automatic control.
- When FRE LED is turned ON, shifting mode control dial to D/F, D/F2 or DEF, or when compressor is turned from ON to OFF, intake switch is automatically turned OFF (fixed to FRE mode). REC mode can be re-entered by pressing intake switch again, and then compressor is turned ON. (Except D/F, D/F2 or DEF position)

A/C SWITCH

Compressor is ON or OFF with this switch.
(Pressing the A/C switch when the fan control dial is ON, will turn OFF the A/C switch and compressor.)

SJIA1884E

CAN Communication System Description

NJS0000P

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. For details, refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

Self-diagnosis Function

NJS0000W

DESCRIPTION

The self-diagnosis system diagnoses sensors, door motors, blower motor, etc. by system line.
Self-diagnosis is STEP-1 to 7. There are two ways of changing method during self-diagnosis.

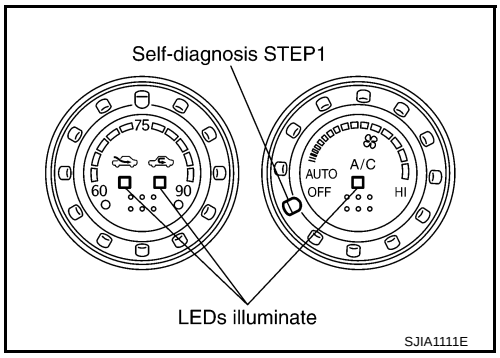
- Switching to self-diagnosis STEP-1 to 4.
  Shifting from normal control to the self-diagnosis system is accomplished by starting the engine (turning the ignition switch from OFF to ON) and pressing A/C switch for at least 5 seconds. The A/C switch must be pressed within 10 seconds after starting the engine (ignition switch is turned ON). This system will be canceled by either pressing intake switch or turning the ignition switch OFF. Shifting to the next step is accomplished by means of turning fan control dial, as required.
- Switching to self-diagnosis STEP-5 to 7 (Auxiliary mechanism).
  Shifting from normal control to the self-diagnosis system is accomplished by starting the engine (turning the ignition switch from OFF to ON) and pressing intake switch for at least 5 seconds. The intake switch must be pressed within 10 seconds after starting the engine (ignition switch is turned ON). This system will be canceled by either pressing A/C switch or turning the ignition switch OFF. Shifting to the next step is accomplished by means of turning fan control dial, as required.

SJIA1139E

FUNCTION CONFIRMATION PROCEDURE

1. SET IN SELF-DIAGNOSIS MODE (STEP-1 TO 4)

1. Set the fan control dial to OFF position.
2. Turn ignition switch ON.
3. Set in self-diagnosis mode as follows. Within 10 seconds after starting engine (ignition switch is turned ON.), press A/C switch for at least 5 seconds.



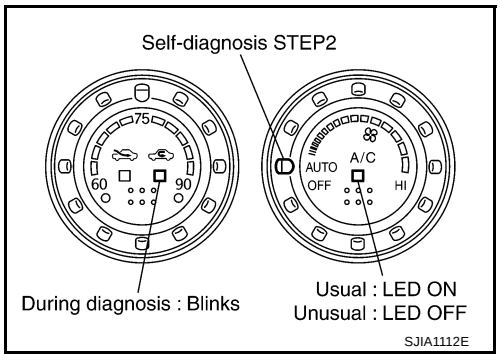
NOTE:
If battery voltage drops below 12 V during diagnosis STEP-3, door motor speed becomes slower and as a result, the system may generate an error even when operation is normal. To avoid this, start engine before performing this diagnosis.

>> GO TO 2.

2. STEP-1: LEDS ARE CHECKED

Check intake and A/C switch LEDs illumination.

OK >> GO TO 3.
NG >> Refer to ATC-91, "Self-diagnosis" .



3. CHECK TO ADVANCE SELF-DIAGNOSIS STEP-2

1. Turn fan control dial to AUTO position.
   NOTE:
   When switched to STEP-2, LED of REC position blinks for approximately 25 seconds.
2. Check A/C switch LED illumination.

Advance to self-diagnosis STEP-2?

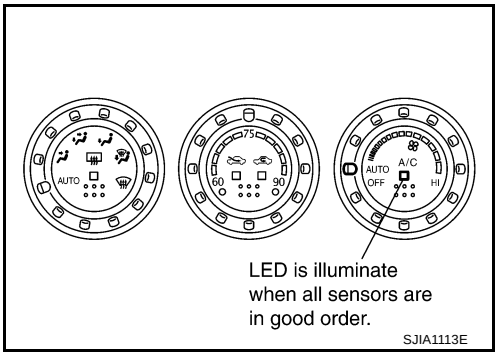
YES >> GO TO 4.
NO >> Replace A/C controller. (Fan control dial is malfunctioning.)

4. CHECK TO RETURN SELF-DIAGNOSIS STEP-1

Turn fan control dial to OFF position.

Return to self-diagnosis STEP-1?

YES >> GO TO 5.
NO >> Replace A/C controller. (Fan control dial is malfunctioning.)



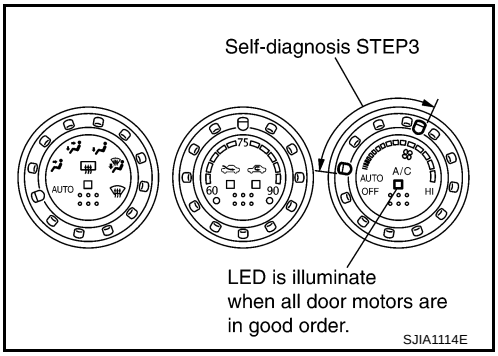
5. STEP-2: SENSOR CIRCUITS ARE CHECKED FOR OPEN OR SHORT CIRCUIT

1. Turn fan control dial to AUTO position.
2. Turn mode control dial to AUTO position.

   NOTE:
   When switched to STEP-2, LED of REC position blinks for approximately 25 seconds.
3. Check A/C switch LED is illuminate.

OK or NG

OK >> GO TO 6.
NG >> GO TO 9.

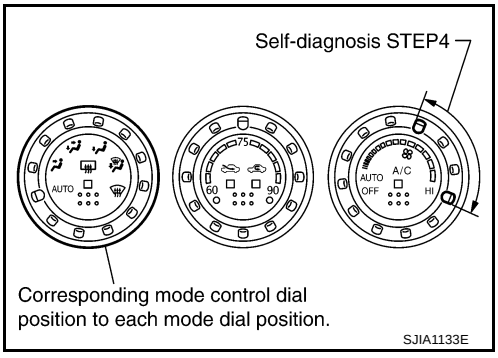


6. STEP-3: MODE DOOR AND INTAKE DOOR POSITIONS ARE CHECKED

1. Turn fan control dial to 1st - 12th speed.

   NOTE:
   When switched to STEP-3, LED of REC position blinks for approximately 50 seconds.
2. Check A/C switch LED is illuminate.

OK or NG



OK >> GO TO 7.
NG >> GO TO 10.

7. STEP-4: OPERATION OF EACH ACTUATOR IS CHECKED

1. Turn fan control dial to 13th - 25th speed.
2. Change operation status of air conditioner by changing mode control dial position.

>> GO TO 8.

8. CHECK ACTUATORS

Refer to the following chart and confirm discharge air flow, air temperature, blower motor duty ratio and compressor operation.

Discharge air flow

Mode door position	Air outlet/distribution		
	Vent	Foot	Defroster
	100%	–	–
	54%	46%	–
	–	76% (100%)	24% (–)
	–	57%	43%
	–	–	100%

( ): Manually control

RJIA2110E

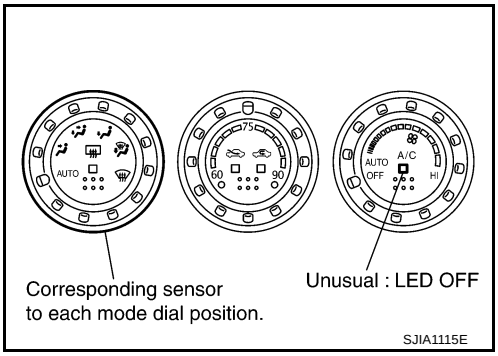
STEP-No. *1	STEP-41	STEP-42	STEP-43	STEP-44	STEP-45	STEP-46
Mode control dial position	AUTO	VENT	B/L	FOOT or FOOT2	D/F or D/F2	DEF
Mode door position	VENT	VENT2	B/L	FOOT *2	D/F	DEF
Intake door position	REC	REC	REC	FRE	FRE	FRE
Air mix door position	FULL COLD	FULL COLD	FULL COLD	FULL HOT	FULL HOT	FULL HOT
Blower motor duty ratio	25%	25%	41%	57%	75%	91%
Compressor	ON	ON	OFF	OFF	ON	ON

Checks must be made visually, by listening the sound, or by touching air outlets with hand, etc. for improper operation.

*1: STEP-No. 41 to 46 are for differentiation and will not be displayed.

*2: FOOT position during automatic control. Refer to ATC-51, "AUXILIARY MECHANISM: FOOT POSITION SETTING TRIMMER" .

OK or NG



OK >> 1. Turn ignition switch OFF or intake switch ON.
2. INSPECTION END

NG >>
- Air outlet does not change.
  Go to Mode Door Motor Circuit. Refer to ATC-60, "Mode Door Motor Circuit" .
- Intake door does not change.
  Go to Intake Door Motor Circuit. Refer to ATC-66, "Intake Door Motor Circuit" .
- Discharge air temperature does not change.
  Go to Air Mix Door Motor Circuit. Refer to ATC-63, "Air Mix Door Motor Circuit" .
- Blower motor operation is malfunctioning.
  Go to Blower Motor Circuit. Refer to ATC-69, "Blower Motor Circuit" .
- Magnet clutch does not engage.
  Go to Magnet Clutch Circuit. Refer to ATC-74, "Magnet Clutch Circuit" .

9. CHECK MALFUNCTIONING SENSOR AND DOOR MOTOR

Refer to the following chart.
*1: Perform self-diagnosis STEP-2 under sunshine.
When performing indoors, aim a light (more than 60 W) at sunload sensor, otherwise LED of A/C switch will not indicate despite that sunload sensor is functioning properly.

NOTE:
When switched to STEP-2, LED of REC position blinks for approximately 25 seconds.

Mode control dial position	Unusual	Malfunctioning sensor and door motor (Including circuits)	Reference page
VENT	A/C LED: OFF	Ambient sensor	*2
B/L		In-vehicle sensor	*3
FOOT or FOOT2		Sunload sensor *1	*4
D/F or D/F2		Intake sensor	*5
DEF		Air mix door motor (LCU) PBR	*6

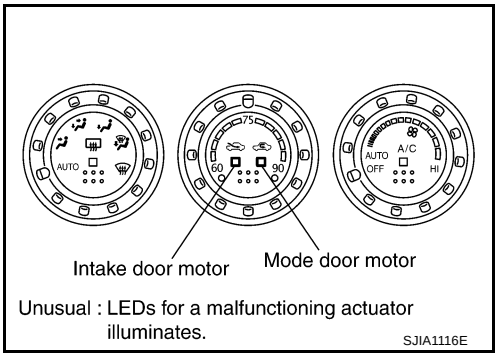
*5: ATC-100, "DIAGNOSIS PROCEDURE FOR INTAKE SENSOR" .
*6: ATC-65, "DIAGNOSIS PROCEDURE FOR AIR MIX DOOR MOTOR PBR" .

>> INSPECTION END



10. CHECK MALFUNCTIONING DOOR MOTOR POSITION SWITCH

Mode and/or intake door motor PBR(s) is/are malfunctioning.

NOTE:
When switched to STEP-3, LED of REC position blinks for approximately 50 seconds.

Unusual	Mode or intake door position	Reference page
REC LED: ON	Mode door motor	*1
FRE LED: ON	Intake door motor	*2

*1: ATC-62, "DIAGNOSIS PROCEDURE FOR MODE DOOR MOTOR" .
*2: ATC-68, "DIAGNOSIS PROCEDURE FOR INTAKE DOOR MOTOR" .

>> INSPECTION END

AUXILIARY MECHANISM: TEMPERATURE SETTING TRIMMER

The trimmer compensates for differences in range of ±3°C (±6°F) between temperature setting (temperature control dial position) and temperature felt by customer.

Operating procedures for this trimmer are as follows:

1. Set fan control dial to OFF.
2. Turn ignition switch ON.
3. Set in self-diagnosis mode as follows. Within 10 seconds after starting engine (ignition switch is turned ON.), press intake switch for at least 5 seconds.
4. When intake switch is pressed, temperature shifts in following order: 0°C (0°F)→ 1°C (2°F)→ 2°C (4°F)→ 3°C (6°F)→ –3°C (–6°F)→ –2°C (–4°F)→ –1°C (–2°F)→ return to 0°C (0°F).

Setting temperature	LED status of each switch		
	FRE	REC	A/C
–3°C (–6°F)	ON	ON	ON
–2°C (–4°F)	ON	ON	OFF
–1°C (–2°F)	ON	OFF	ON
0°C (0°F) (Initial setting)	OFF	OFF	OFF
1°C (2°F)	OFF	OFF	ON
2°C (4°F)	OFF	ON	OFF
3°C (6°F)	OFF	ON	ON

When battery cable is disconnected or battery voltage is below 9 V, trimmer operation is canceled. Temperature set becomes that of initial condition, i.e. 0°C (0°F).

AUXILIARY MECHANISM: FOOT POSITION SETTING TRIMMER

Wind distribution ratio in FOOT mode can be set.

Operating procedures for this trimmer are as follows:

1. Set fan control dial to AUTO.
2. Turn ignition switch ON.
3. Set in self-diagnosis mode as follows. Within 10 seconds after starting engine (ignition switch is turned ON.), press intake switch for at least 5 seconds.
4. Press intake switch as desired.

Type	Discharge air flow			
	Automatically controls the mode door		Manually controls the mode door	
	FOOT	DEF	FOOT	DEF
Type-A (initial setting)	76%	24%	100%	—
Type-B	76%	24%	100%	—
Type-C	100%	—	100%	—
Type-D	100%	—	100%	—

RJIA1365E

Type	LED status of each switch		
	FRE	REC	A/C
Type-A (Initial setting)	OFF	OFF	ON
Type-B	OFF	ON	OFF
Type-C	OFF	ON	ON
Type-D	ON	OFF	OFF

When battery cable is disconnected or battery voltage is below 9 V, trimmer operation is canceled. Wind distribution ratio set becomes that of initial condition.

AUXILIARY MECHANISM: INLET PORT MEMORY FUNCTION

When ignition switch is turned from OFF to ON, inlet port memory function at manual mode can be set.

Operating procedures for this trimmer are as follows:

1. Set fan control dial to 1st - 12th speed.
2. Turn ignition switch ON.
3. Set in self-diagnosis mode as follows. Within 10 seconds after starting engine (ignition switch is turned ON.), press intake switch for at least 5 seconds.
4. Press intake switch as desired.

LED status of FRE position	LED status of REC position	Setting status		Setting changeover method
		FRE	REC	
OFF	OFF	AUTO control	AUTO control	Intake SW: ON
OFF	ON	AUTO control (Initial setting)	Manual REC status is memorized. (Initial setting)	
ON	ON	Manual FRE status is memorized.	AUTO control	
ON	OFF	Manual FRE status is memorized.	Manual REC status is memorized.	

When battery cable is disconnected or battery voltage is below 9 V, memory function is canceled. Memory function set becomes that of initial condition.

Operational Check

NJS0000X

The purpose of the operational check is to check if the individual system operates properly.

Conditions : Engine running at normal operating temperature

CHECKING BLOWER

1. Turn fan control dial to 1st speed. Blower should operate on low speed.
2. Turn fan control dial to 2nd speed, and continue checking blower speed until all speeds are checked.
3. Leave blower on max. speed.

If NG, go to trouble diagnosis procedure for ATC-69, "Blower Motor Circuit" .
If OK, continue the check.

CHECKING DISCHARGE AIR

1. Turn mode control dial to each position.
2. Confirm that discharge air comes out according to the air distribution table. Refer to ATC-30, "Discharge Air Flow" .

Discharge air flow

Mode door position	Air outlet/distribution		
	Vent	Foot	Defroster
	100%	–	–
	54%	46%	–
	–	76% (100%)	24% (–)
	–	57%	43%
	–	–	100%

( ): Manually control

RJIA2110E

Intake door position is checked in the next step.
If NG, go to trouble diagnosis procedure for ATC-60, "Mode Door Motor Circuit" .
If OK, continue the check.

NOTE:
Confirm that the compressor clutch is engaged (sound or visual inspection) and intake door position is at FRESH when the D/F, D/F2 or DEF position are selected.

CHECKING INTAKE DOOR

1. Press intake switch. Recirculation LED should illuminate.
2. Press intake switch again. Fresh LED should illuminate.
3. Listen for intake door position change. (Slight change of blower sound can be heard.)

If NG, go to trouble diagnosis procedure for ATC-66, "Intake Door Motor Circuit" .
If OK, continue the check.

CHECKING TEMPERATURE DECREASE

1. Turn temperature control dial until 18°C (60°F).
2. Check for cold air at discharge air outlets.

If NG, go to trouble diagnosis procedure for ATC-81, "Insufficient Cooling" .
If OK, continue the check.

CHECKING TEMPERATURE INCREASE

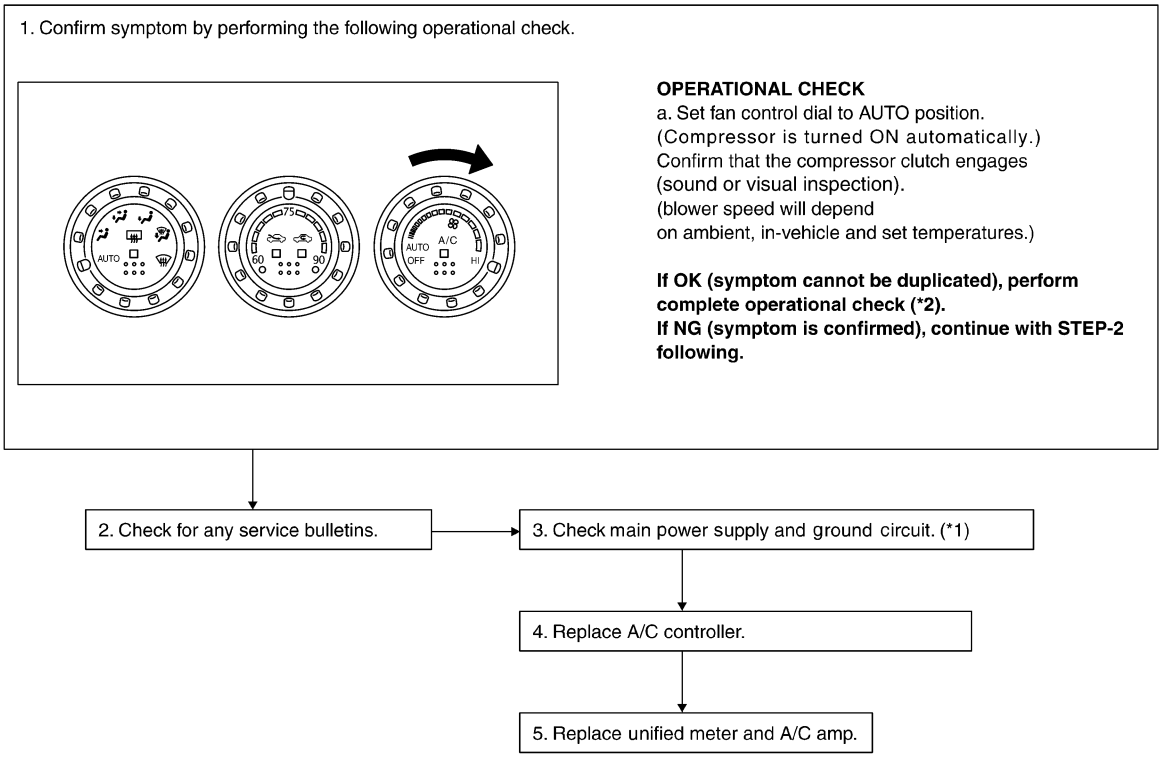
1. Turn temperature control dial until 32°C (90°F).
2. Check for hot air at discharge air outlets.

If NG, go to trouble diagnosis procedure for ATC-89, "Insufficient Heating" .
If OK, continue the check.

CHECKING A/C SWITCH

Turn fan control dial to AUTO position. (Compressor is turned ON automatically.)

- Confirm that the compressor clutch engages (sound or visual inspection). (Discharge air and blower speed will depend on ambient, in-vehicle, and set temperatures.)



If NG, go to trouble diagnosis procedure for ATC-54, "Power Supply and Ground Circuit for Auto Amp." , then if necessary, trouble diagnosis procedure for ATC-74, "Magnet Clutch Circuit" .
If all operational checks are OK (symptom cannot be duplicated), go to Incident Simulation Tests in GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident" and perform tests as outlined to simulate driving conditions environment. If symptom appears, refer to ATC-34, "SYMPTOM TABLE" and perform applicable trouble diagnosis procedures.

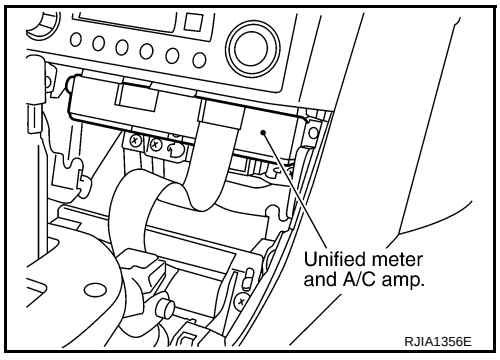
Power Supply and Ground Circuit for Auto Amp.

NJS0000Y

SYMPTOM: A/C system does not come on.

INSPECTION FLOW

SJIA1123E

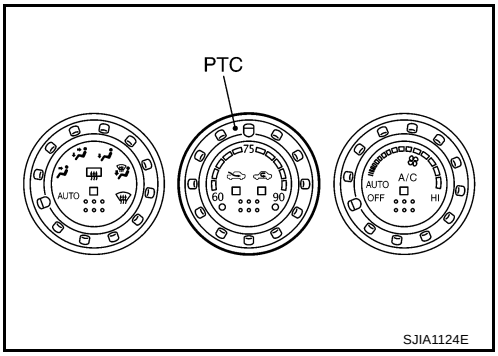


*1 ATC-55, "DIAGNOSIS PROCEDURE FOR A/C SYSTEM"

*2 ATC-53, "Operational Check"

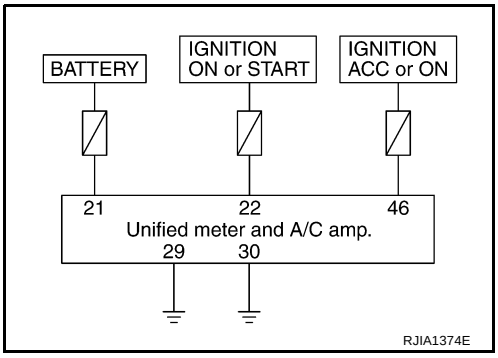
COMPONENT DESCRIPTION

Unified Meter and A/C amp. (Automatic Amplifier)



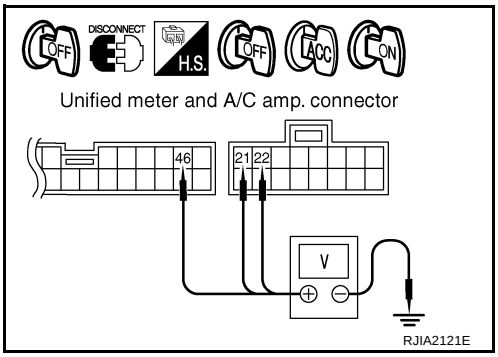
The unified meter and A/C amp. has a built-in microcomputer which processes information sent from various sensors needed for air conditioner operation. The air mix door motor, mode door motor, intake door motor, blower motor and compressor are then controlled.
When the various switches and temperature control dial are operated, data is input to the unified meter and A/C amp. from the A/C controller using multiplex communication.
Self-diagnosis functions are also built into unified meter and A/C amp. to provide quick check of malfunctions in the auto air conditioner system.

RJIA1356E



Potentio Temperature Control (PTC)

The PTC is built into the A/C controller. It can be set at an interval of 1°C (2.0°F) in the 18°C (60°F) to 32°C (90°F) temperature range by turning the temperature control dial.



DIAGNOSIS PROCEDURE FOR A/C SYSTEM

SYMPTOM: A/C system does not come on.

1. CHECK POWER SUPPLY CIRCUIT FOR UNIFIED METER AND A/C AMP.

1. Disconnect unified meter connector and A/C amp. connector.
2. Check voltage between unified meter and A/C amp. harness connector M49 terminal 21 and 22, unified meter and A/C amp. harness connector M50 terminal 46 and ground.

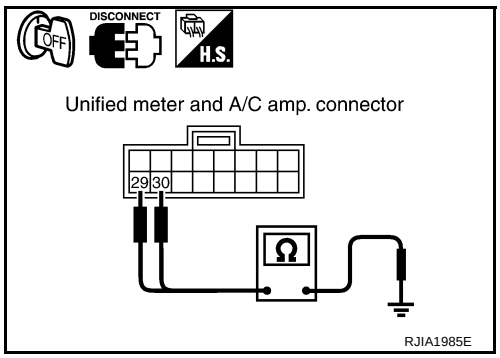
Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Unified meter and A/C amp. connector	Terminal No.				
M49	21	Ground	Battery voltage	Battery voltage	Battery voltage
M49	22		Approx. 0 V	Approx. 0 V	Battery voltage
M50	46		Approx. 0 V	Battery voltage	Battery voltage

OK or NG

OK >> GO TO 2.

NG >> Check 10A and 15A fuses [Nos. 10, 11, 12 and 19, located in the fuse block (J/B)]. Refer to PG-85, "FUSE BLOCK - JUNCTION BOX (J/B)" .

- If fuses are OK, check harness for open circuit. Repair or replace if necessary.
- If fuses are NG, check harness for short circuit and replace fuse.

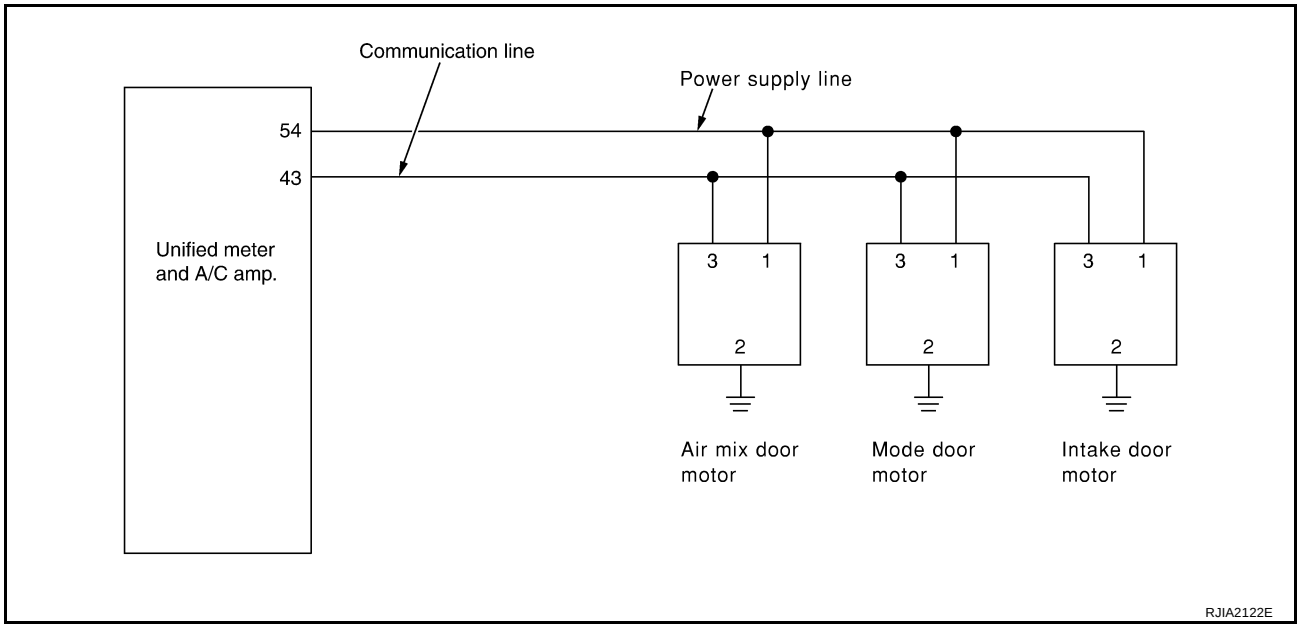


2. CHECK GROUND CIRCUIT FOR UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Check continuity between unified meter and A/C amp. harness connector M49 terminal 29, 30 and ground.

29, 30 – Ground : Continuity should exist.

OK or NG



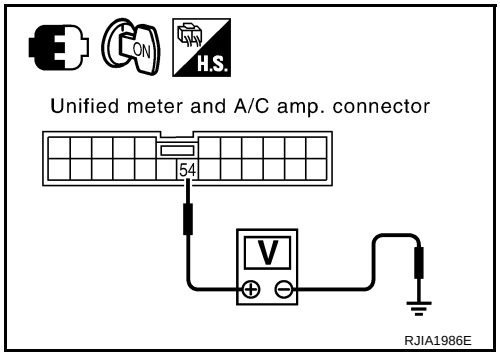
OK >> Replace unified meter and A/C amp.
NG >> Repair harness or connector.

LAN System Circuit

NJS0000Z

SYMPTOM: Mode door motor, intake door motor and/or air mix door motor does not operate normally.

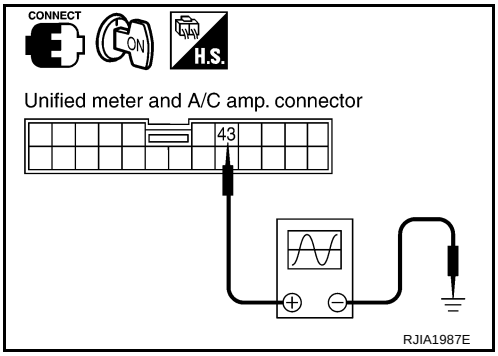
DIAGNOSIS PROCEDURE FOR LAN CIRCUIT



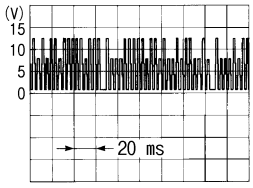
1. CHECK POWER SUPPLY FOR UNIFIED METER AND A/C AMP.

1. Turn ignition switch ON.
2. Check voltage between unified meter and A/C amp. harness connector M50 terminal 54 and ground.

54 – Ground : Battery voltage



OK or NG



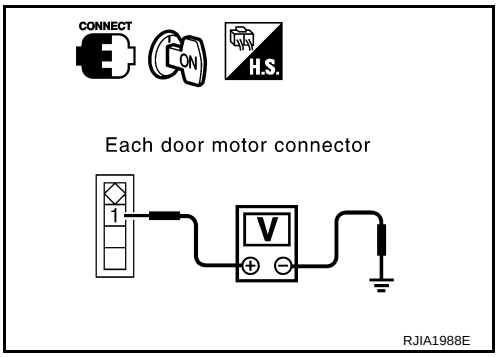
OK >> GO TO 2.
NG >> Replace unified meter and A/C amp.

2. CHECK SIGNAL FOR UNIFIED METER AND A/C AMP.

Confirm A/C LAN signal between unified meter and A/C amp. harness connector M50 terminal 43 and ground using an oscilloscope.

Terminals			Voltage
(+)		(–)	
Unified meter and A/C amp. connector	Terminal No.		
M50	43	Ground	

SJIA1453J



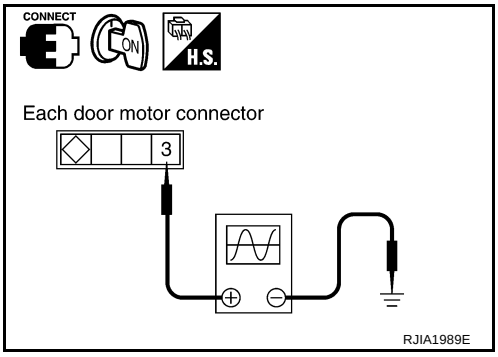
OK or NG

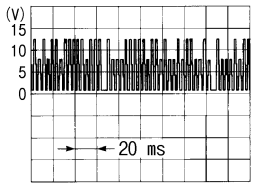
OK >> GO TO 3.
NG >> Replace unified meter and A/C amp.

3. CHECK POWER SUPPLY FOR EACH DOOR MOTOR

Check voltage between each door motor harness connector terminal 1 and ground.

1 – Ground : Battery voltage





OK or NG

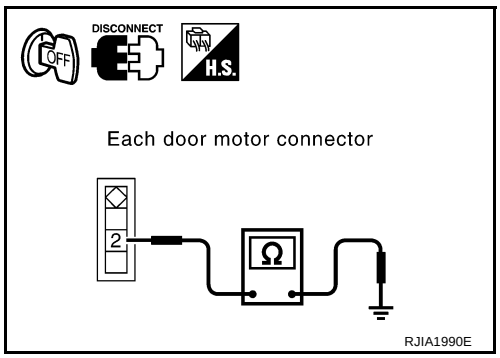
OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK SIGNAL FOR EACH DOOR MOTOR

Confirm A/C LAN signal between each door motor harness connector terminal 3 and ground using an oscilloscope.

Door motor	Terminals			Voltage
	(+)		(–)	
	Connector	Terminal No.		
Mode	M252	3	Ground	
Air mix	M253	3		
Intake	M256	3		

SJIA1453J



OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK MOTOR GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect each door motor connector.
3. Check continuity between each door motor harness connector terminal 2 and ground.

2 – Ground : Continuity should exist.

OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

6. CHECK MOTOR OPERATION

1. Reconnect each door motor connector.
2. Turn ignition switch ON.
3. Confirm operation of each door motor.

OK or NG

OK >> Return to operate normally.
- Poor contact in motor connector

NG >> Does not operate normally.
- GO TO 7.

7. CHECK AIR MIX DOOR MOTOR AND INTAKE DOOR MOTOR OPERATION

1. Turn ignition switch OFF.
2. Disconnect mode door motor, air mix door motor and intake door motor connector.
3. Reconnect air mix door motor and intake door motor connector.
4. Turn ignition switch ON.
5. Confirm operation of air mix door motor and intake door motor.

OK or NG

OK >> Air mix door motor and intake door motor operate normally.
- Replace mode door motor.

NG >> Air mix door motor and intake door motor does not operate normally.
- GO TO 8.

8. CHECK MODE DOOR MOTOR AND INTAKE DOOR MOTOR OPERATION

1. Turn ignition switch OFF.
2. Disconnect air mix door motor connector.
3. Reconnect mode door motor connector.
4. Turn ignition switch ON.
5. Confirm operation of mode door motor and intake door motor.

OK or NG

OK >> Mode door motor and intake door motor operate normally.
- Replace air mix door motor.

NG >> Mode door motor and intake door motor does not operate normally.
- GO TO 9.

9. CHECK MODE DOOR MOTOR AND AIR MIX DOOR MOTOR OPERATION

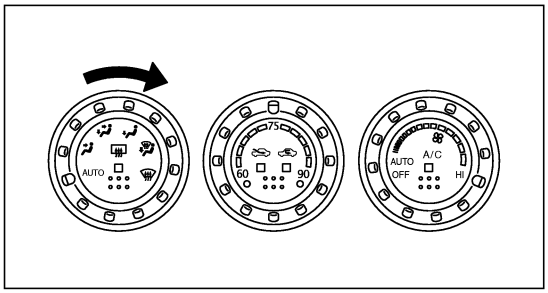
1. Turn ignition switch OFF.
2. Disconnect intake door motor connector.
3. Reconnect air mix door motor connector.
4. Turn ignition switch ON.
5. Confirm operation of mode door motor and air mix door motor.

OK or NG

OK >> Mode door motor and air mix door motor operate normally.
- Replace intake door motor.

NG >> Mode door motor and air mix door motor does not operate normally.
- Replace unified meter and A/C amp.

Mode Door Motor Circuit



NJS00010

SYMPTOM

- Air outlet does not change.
- Mode door motor does not operate normally.

INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

OPERATIONAL CHECK – Discharge air

a.Turn mode control dial to each position.

Discharge air flow

Mode door position	Air outlet/distribution		
	Vent	Foot	Defroster
	100%	–	–
	54%	46%	–
	–	76% (100%)	24% (–)
	–	57%	43%
	–	–	100%

( ): Manually control

b. Confirm that discharge air comes out according to the air distribution table at left.
Refer to “Discharge Air Flow” (*1).

- **If OK (symptom cannot be duplicated), perform complete operational check (*2).**
  If NG (symptom is confirmed), continue with STEP-2 following.
- **Confirm that the compressor clutch is engaged (sound or visual inspection) and intake door position is at FRESH when D/F, D/F2 or DEF is selected.**

2. Check for any service bulletins.

4. Perform self-diagnosis STEP-2. (*4)
- OK → 3. Perform self-diagnosis STEP-1. (*3)
- NG → Go to appropriate malfunctioning sensor circuit. (*9)

OK

5. Perform self-diagnosis STEP-3. (*4)
- NG → Go to DIAGNOSIS PROCEDURE FOR LAN SYSTEM CIRCUIT. (*10)

OK

6. Perform self-diagnosis STEP-4. (*4)
- NG → Check mode door control linkage. (*11)
  - NG → Repair or adjust control linkage.

OK **[Cause cannot be confirmed by self-diagnosis.]**

7. Check ambient sensor circuit. (*5)

OK

8. Check in-vehicle sensor circuit. (*6)

OK

9. Check sunload sensor circuit. (*7)

OK

10. Check intake sensor circuit. (*13)

OK

11. Check air mix door motor PBR circuit. (*8)

OK → If the symptom still exists, perform a complete operational check (*2) and check for other symptoms.
[Refer to symptom table, (*12).]
Dose another symptom exist?
- YES → Go to Trouble Diagnosis for related symptoms. **[Another symptom exists.]**
- NO → Replace unified meter and A/C amp.

INSPECTION END

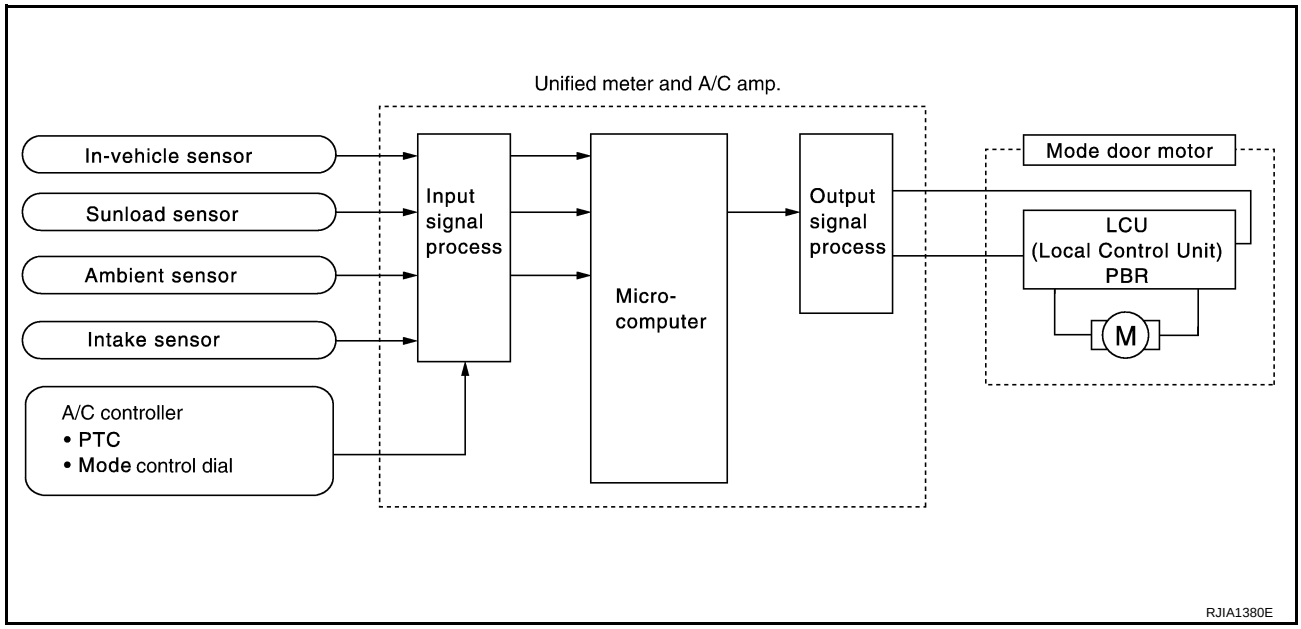
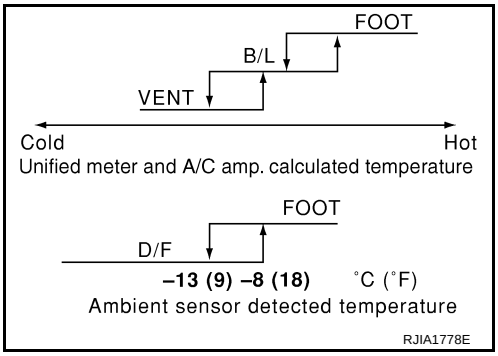
SYSTEM DESCRIPTION



Component Parts

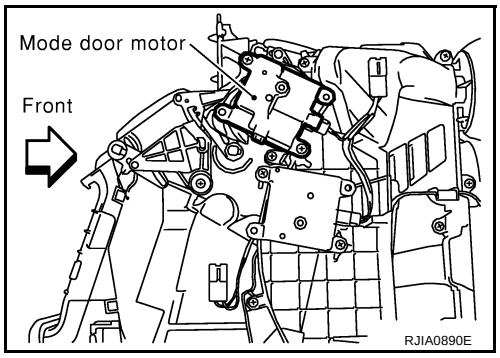
Mode door control system components are:



- Unified meter and A/C amp.
- Mode door motor (LCU)
- A/C LAN system (PBR built-in mode door motor, air mix door motor and intake door motor)
- In-vehicle sensor
- Ambient sensor
- Sunload sensor
- Intake sensor

System Operation

The unified meter and A/C amp. receives data from each of the sensors. The unified meter and A/C amp. sends air mix door, mode door and intake door opening angle data to the air mix door motor LCU, mode door motor LCU and intake door motor LCU.
The air mix door motor, mode door motor and intake door motor read their respective signals according to the address signal. Opening angle indication signals received from the unified meter and A/C amp. and each of the motor position sensors are compared by the LCUs in each door motor with the existing decision and opening angles. Subsequently, HOT/COLD, DEF/VENT and FRE/REC operation is selected. The new selection data are returned to the unified meter and A/C amp.



Mode Door Control Specification

COMPONENT DESCRIPTION

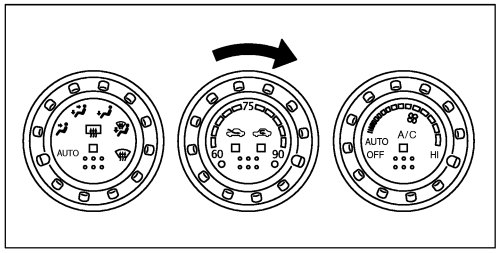
Mode Door Motor

The mode door motor is attached to the heater & cooling unit assembly. It rotates so that air is discharged from the outlet set by the unified meter and A/C amp. Motor rotation is conveyed to a link which activates the mode door.

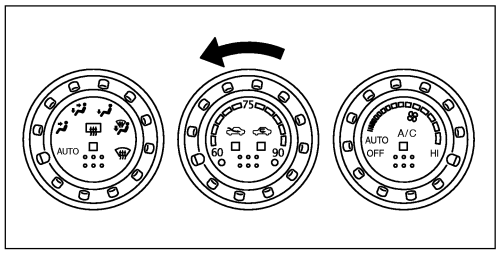
DIAGNOSIS PROCEDURE FOR MODE DOOR MOTOR

SYMPTOM: Mode door motor does not operate normally.
Perform diagnosis procedure. Refer to ATC-56, "DIAGNOSIS PROCEDURE FOR LAN CIRCUIT" .

Air Mix Door Motor Circuit



NJS00011



SYMPTOM

- Discharge air temperature does not change.
- Air mix door motor does not operate normally.

INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

OPERATIONAL CHECK

Temperature increase

a. Turn temperature control dial clockwise until 32°C (90°F).
b. Check for hot air at discharge air outlets.

Temperature decrease

a. Turn temperature control dial counterclockwise until 18°C (60°F).
b. Check for cold air at discharge air outlets.

If OK (symptom cannot be duplicated), perform complete operational check (*9).
If NG (symptom is confirmed), continue with STEP-2 following.

2. Check for any service bulletins.
3. Perform self-diagnosis STEP-1. (*1)
OK
4. Perform self-diagnosis STEP-2. (*12)
NG → Go to appropriate malfunctioning sensor circuit. (*6)
OK
5. Perform self-diagnosis STEP-4. (*12)
OK **[Cause cannot be confirmed by self-diagnosis.]**
6. Check ambient sensor circuit. (*2)
OK
7. Check in-vehicle sensor circuit. (*3)
OK
8. Check sunload sensor circuit. (*4)
OK
9. Check intake sensor circuit. (*11)
OK
10. Check air mix door motor PBR circuit. (*5)
OK
If the symptom still exists, perform a complete operational check (*9) and check for other symptoms. [Refer to symptom table, (*10).] Does another symptom exist?
YES → Go to Trouble Diagnosis for related symptom.
Another symptom exists.
NO
Replace unified meter and A/C amp. → INSPECTION END

NG → Go to LAN system circuit. (*7)
OK
Check air mix door motor. (*8)
NG
Replace air mix door motor.

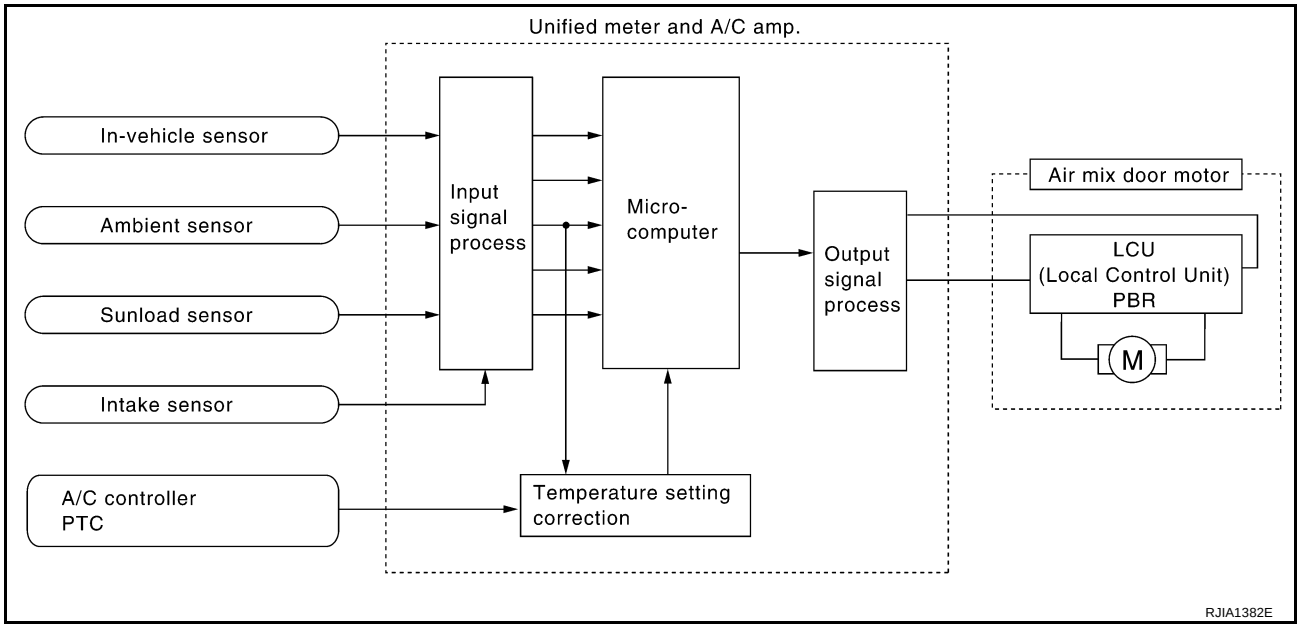
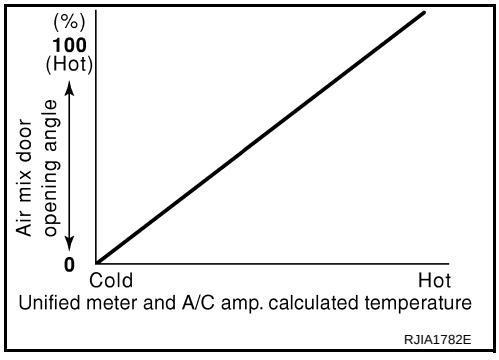
SYSTEM DESCRIPTION

Component Parts



Air mix door control system components are:

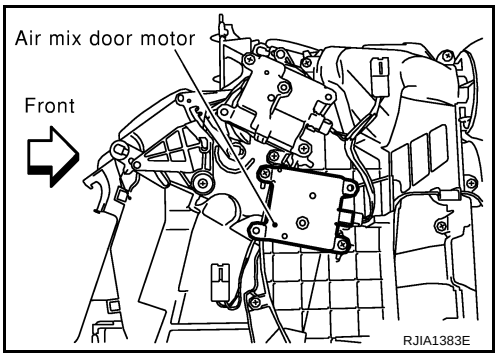
- Unified meter and A/C amp.
- Air mix door motor (LCU)
- A/C LAN system (PBR built-in mode door motor, air mix door motor and intake door motor)
- In-vehicle sensor
- Ambient sensor
- Sunload sensor
- Intake sensor



System Operation

The unified meter and A/C amp. receives data from each of the sensors. The unified meter and A/C amp. sends air mix door, mode door and intake door opening angle data to the air mix door motor LCU, mode door motor LCU and intake door motor LCU.

The air mix door motor, mode door motor and intake door motor read their respective signals according to the address signal. Opening angle indication signals received from the unified meter and A/C amp. and each of the motor position sensors are compared by the LCUs in each door motor with the existing decision and opening angles. Subsequently, HOT/COLD, DEF/VENT and FRE/REC operation is selected. The new selection data are returned to the unified meter and A/C amp.



Air Mix Door Control Specification

COMPONENT DESCRIPTION

Air Mix Door Motor

The air mix door motor is attached to the heater & cooling unit assembly. It rotates so that the air mix door is opened or closed to a position set by the unified meter and A/C amp. Motor rotation is then sent conveyed through a shaft and the air mix door position feedback is then sent to the unified meter and A/C amp. by PBR built-in air mix door motor.

DIAGNOSIS PROCEDURE FOR AIR MIX DOOR

SYMPTOM: Discharge air temperature does not change.
Perform diagnosis procedure. Refer to ATC-56, "DIAGNOSIS PROCEDURE FOR LAN CIRCUIT" .

Air Mix Door Motor PBR Circuit

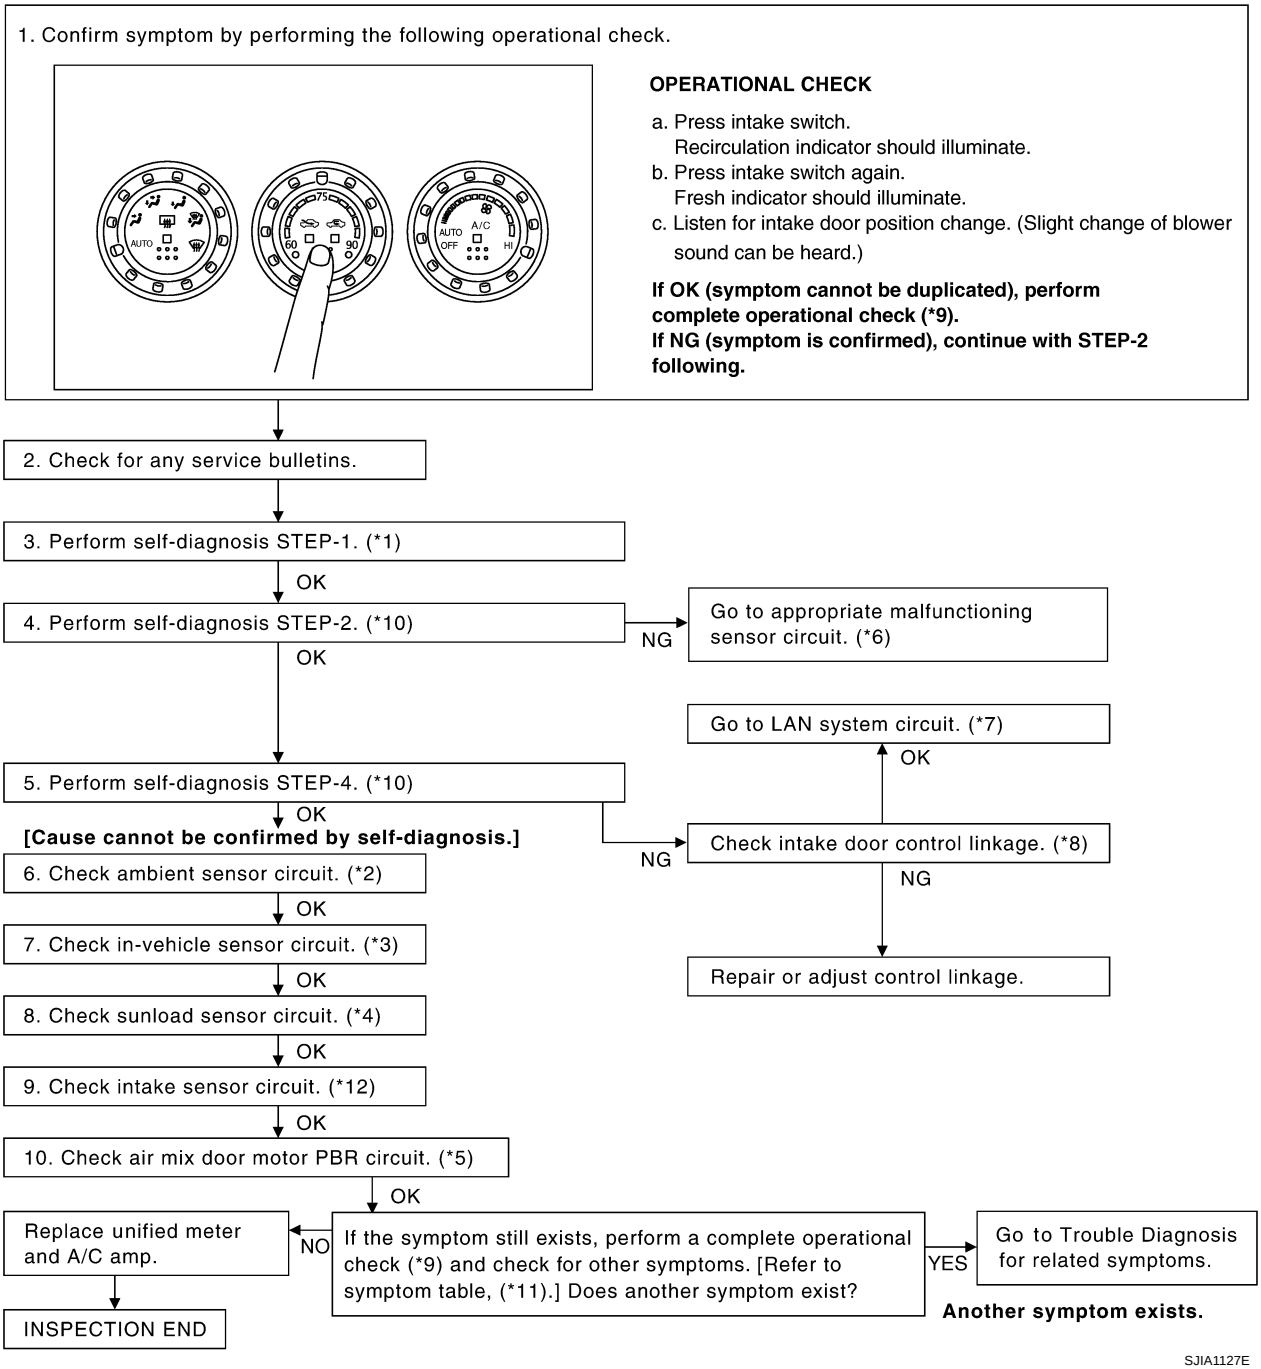
NJS00012

SYMPTOM

- Discharge air temperature does not change.
- PBR circuit is open or shorted.

DIAGNOSIS PROCEDURE FOR AIR MIX DOOR MOTOR PBR

Perform diagnosis procedure. Refer to ATC-56, "DIAGNOSIS PROCEDURE FOR LAN CIRCUIT" .



Intake Door Motor Circuit

NJS00013

SYMPTOM

- Intake door does not change.
- Intake door motor does not operate normally.

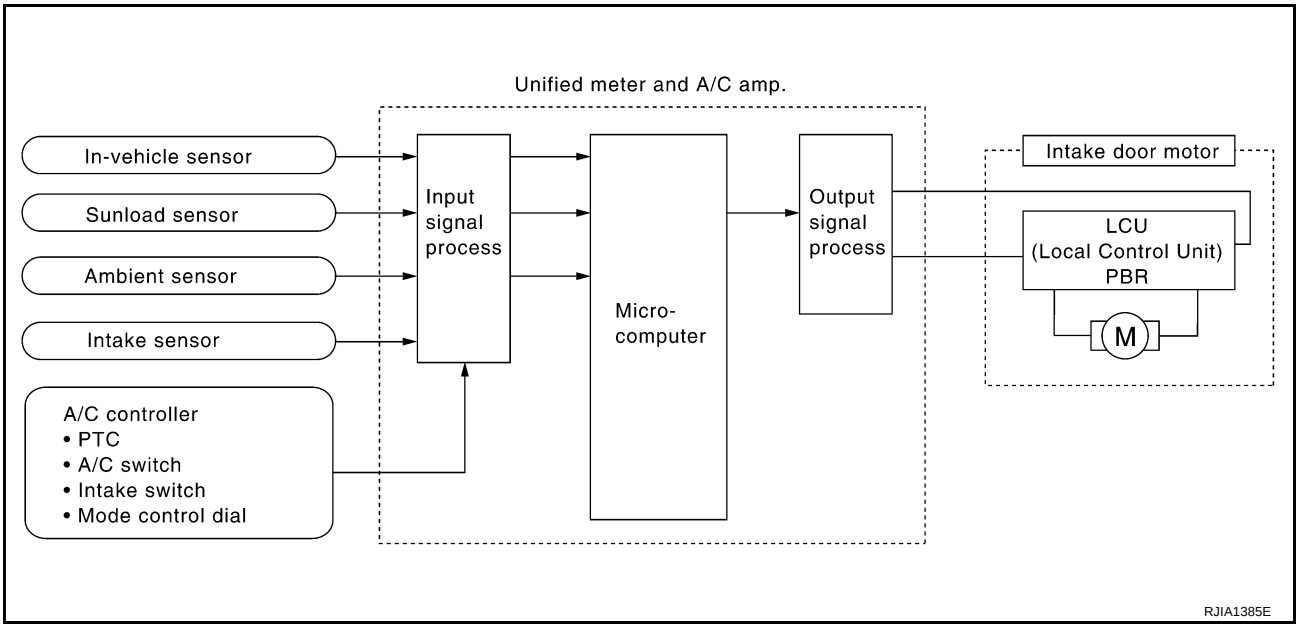
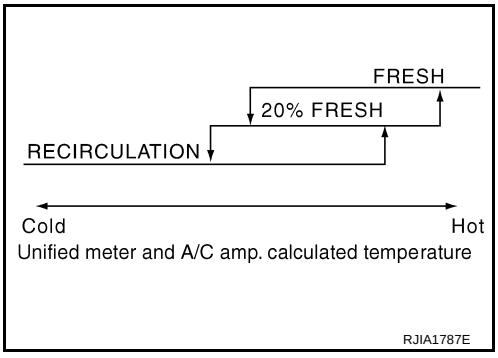
SYSTEM DESCRIPTION



Component Parts

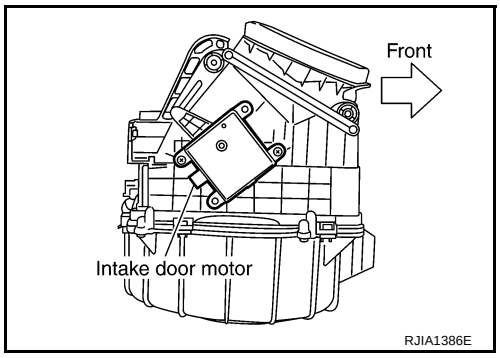
Intake door control system components are:



- Unified meter and A/C amp.
- Intake door motor (LCU)
- A/C LAN system (PBR built-in mode door motor, air mix door motor and intake door motor)
- In-vehicle sensor
- Ambient sensor
- Sunload sensor
- Intake sensor

System Operation

The intake door control determines intake door position based on the ambient temperature, the intake air temperature and the in-vehicle temperature. When setting mode control dial to D/F, D/F2 or DEF position, fan control dial OFF position, the unified meter and A/C amp. sets the intake door at the FRE position.



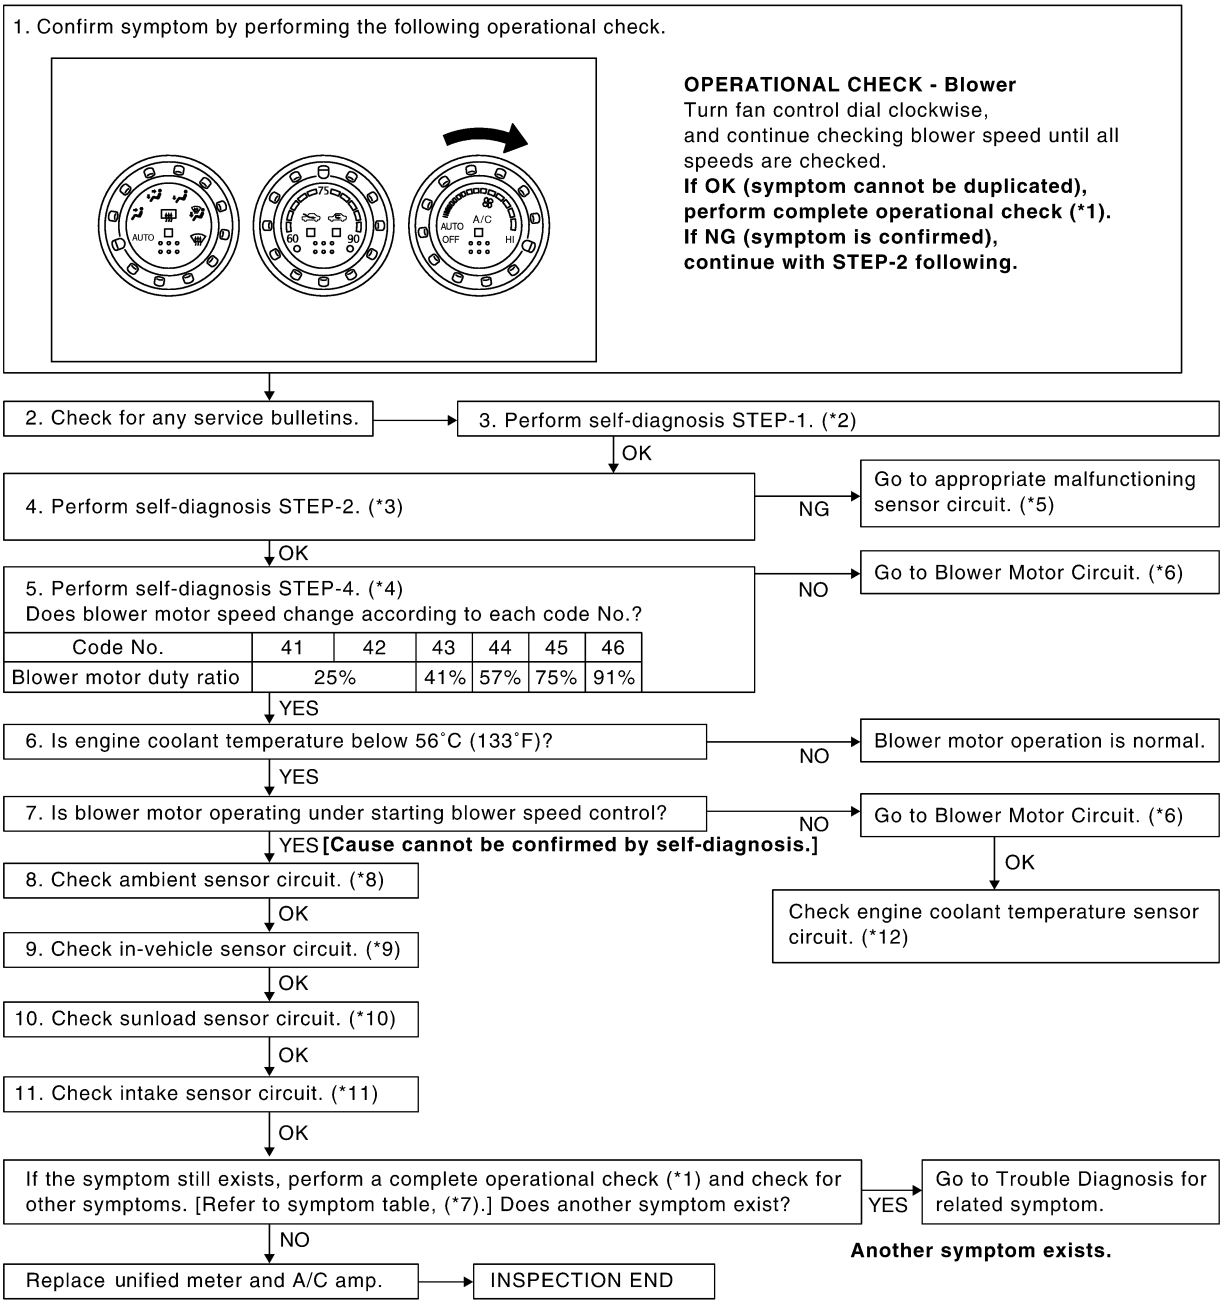
Intake Door Control Specification

COMPONENT DESCRIPTION

Intake Door Motor

The intake door motor is attached to the blower unit. It rotates so that air is drawn from inlets set by the unified meter and A/C amp. Motor rotation is conveyed to a lever which activates the intake door.

DIAGNOSIS PROCEDURE FOR INTAKE DOOR MOTOR



SYMPTOM: Intake door motor does not operate normally.
Perform diagnosis procedure. Refer to ATC-56, "DIAGNOSIS PROCEDURE FOR LAN CIRCUIT" .

Blower Motor Circuit

NJS00014

SYMPTOM: Blower motor operation is malfunctioning.

INSPECTION FLOW

SJIA1128E

SYSTEM DESCRIPTION

Component Parts

Fan speed control system components are:

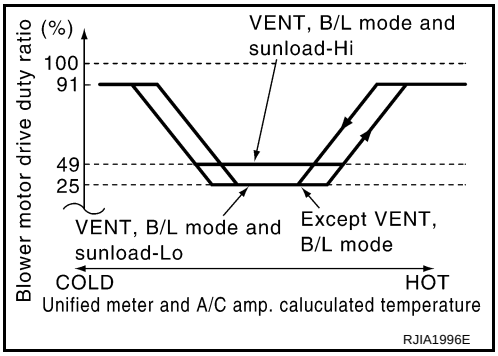
- Unified meter and A/C amp.
- A/C LAN system (PBR built-in mode door motor, air mix door motor and intake door motor)
- In-vehicle sensor
- Ambient sensor
- Sunload sensor
- Intake sensor

System Operation

Automatic Mode

In the automatic mode, the blower motor speed is calculated by the unified meter and A/C amp. based on the input from the PBR, in-vehicle sensor, sunload sensor, intake sensor and ambient sensor.
When the air flow is increased, the duty ratio of the blower motor's drive signal is changed at 8%/sec. to prevent a sudden increase in air flow.
In addition to manual air flow control and the usual automatic air flow control, starting air flow control, low water temperature starting control and high passenger compartment temperature starting control are available.

Starting Fan Speed Control

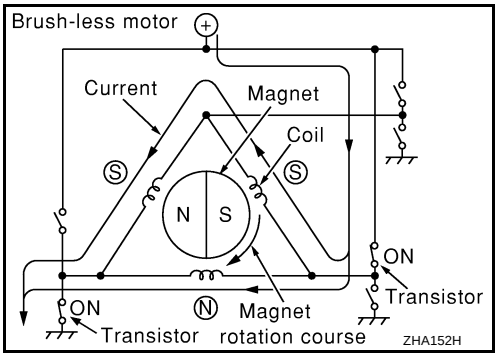


Start up from COLD SOAK Condition (Automatic mode)
In a cold start up condition where the engine coolant temperature is below 56°C (133°F), the blower will not operate for a short period of time (up to 150 seconds). The exact start delay time varies depending on the ambient and engine coolant temperature.
In the most extreme case (very low ambient) the blower starting delay will be 150 seconds as described above. After this delay, the blower will operate at low speed until the engine coolant temperature rises above 56°C (133°F), and then the blower speed will increase to the objective speed.
Start up from usual or HOT SOAK Condition (Automatic mode)
The blower will begin operation momentarily after the fan control dial to AUTO position. The blower speed will gradually rise to the objective speed over a time period of 3 seconds or less (actual time depends on the objective blower speed).

Blower Speed Compensation

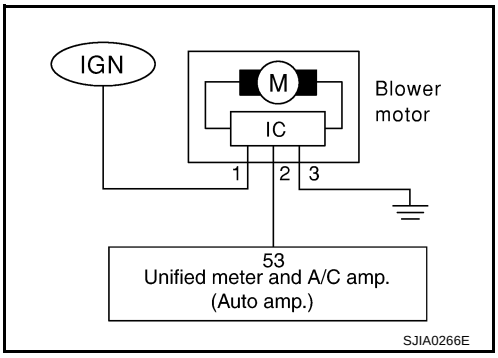
Sunload

When the in-vehicle temperature and the set temperature are very close, the blower will be operating at low speed. The low speed will vary depending on the sunload. During conditions of low or no sunload, the blower speed is at duty ratio 25%. During high sunload conditions, the unified meter and A/C amp. raise the blower speed.(duty ratio 49%).



Fan Speed Control Specification

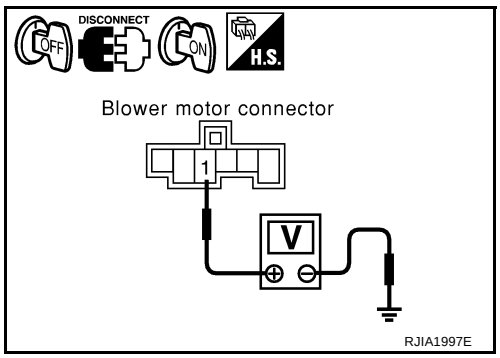
COMPONENT DESCRIPTION



Brush-less Motor

The blower motor utilizes a brush-less motor with a rotating magnet. Quietness is improved over previous motors where the brush was the point of contact and the coil rotated.

DIAGNOSIS PROCEDURE FOR BLOWER MOTOR



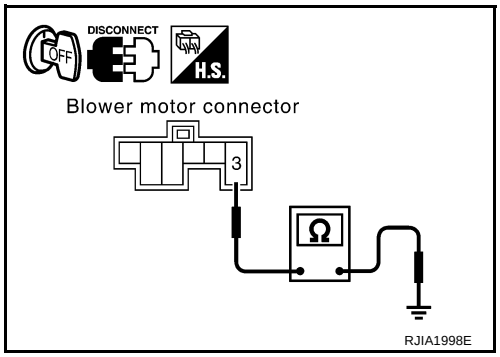
SYMPTOM: Blower motor operation is malfunctioning.

1. CHECK POWER SUPPLY FOR BLOWER MOTOR

1. Disconnect blower motor connector.
2. Turn ignition switch ON.
3. Check voltage between blower motor harness connector M62 terminal 1 and ground.

1 – Ground : Battery voltage

OK or NG



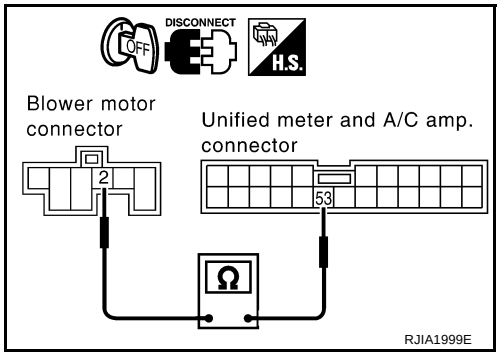
OK >> GO TO 2.
NG >> Check power supply circuit and 15A fuses [Nos. 10 and 11, located in the fuse block (J/B)]. Refer to PG-85, "FUSE BLOCK - JUNCTION BOX (J/B)" .

- If fuse are OK, check harness for open circuit. Repair or replace if necessary.
- If fuse are NG, check harness for short circuit and replace fuse.

2. CHECK GROUND CIRCUIT FOR BLOWER MOTOR

1. Turn ignition switch OFF.
2. Check continuity between blower motor harness connector M62 terminal 3 and ground.

3 – Ground : Continuity should exist.



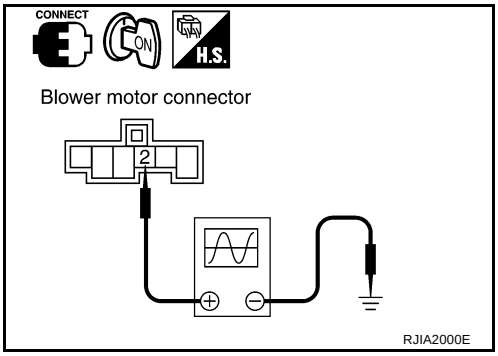
OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK CIRCUIT CONTINUITY BETWEEN BLOWER MOTOR AND UNIFIED METER AND A/C AMP.

1. Disconnect unified meter connector and A/C amp. connector.
2. Check continuity between blower motor harness connector M62 terminal 2 and unified meter and A/C amp. harness connector M50 terminal 53.

2 – 53 : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL

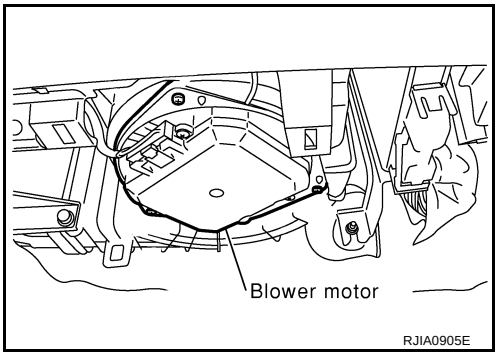
1. Reconnect blower motor connector and unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Change the fan speed from Lo to Hi, and check the duty ratios between blower motor harness connector M62 terminal 2 and ground by using an oscilloscope. Normal terminal 2 drive signal duty ratios are shown in the table below.

Blower fan speed	1st	5th	10th	15th	20th	25th
Blower motor connector M62 Terminal No. 2 (Oscilloscope)	T1 Approx. 1.6 ms	T2 Approx. 1.6 ms	T3 Approx. 1.6 ms	T4 Approx. 1.6 ms	T5 Approx. 1.6 ms	T6 Approx. 1.6 ms
Duty ratio	Approx. 25%	Approx. 37%	Approx. 47%	Approx. 57%	Approx. 71%	Approx. 91%

NOTE: Duty ratio = $\frac{Tx}{\text{Approx. 1.6 ms}}$ x 100 (%)

RJIA1390E

OK or NG



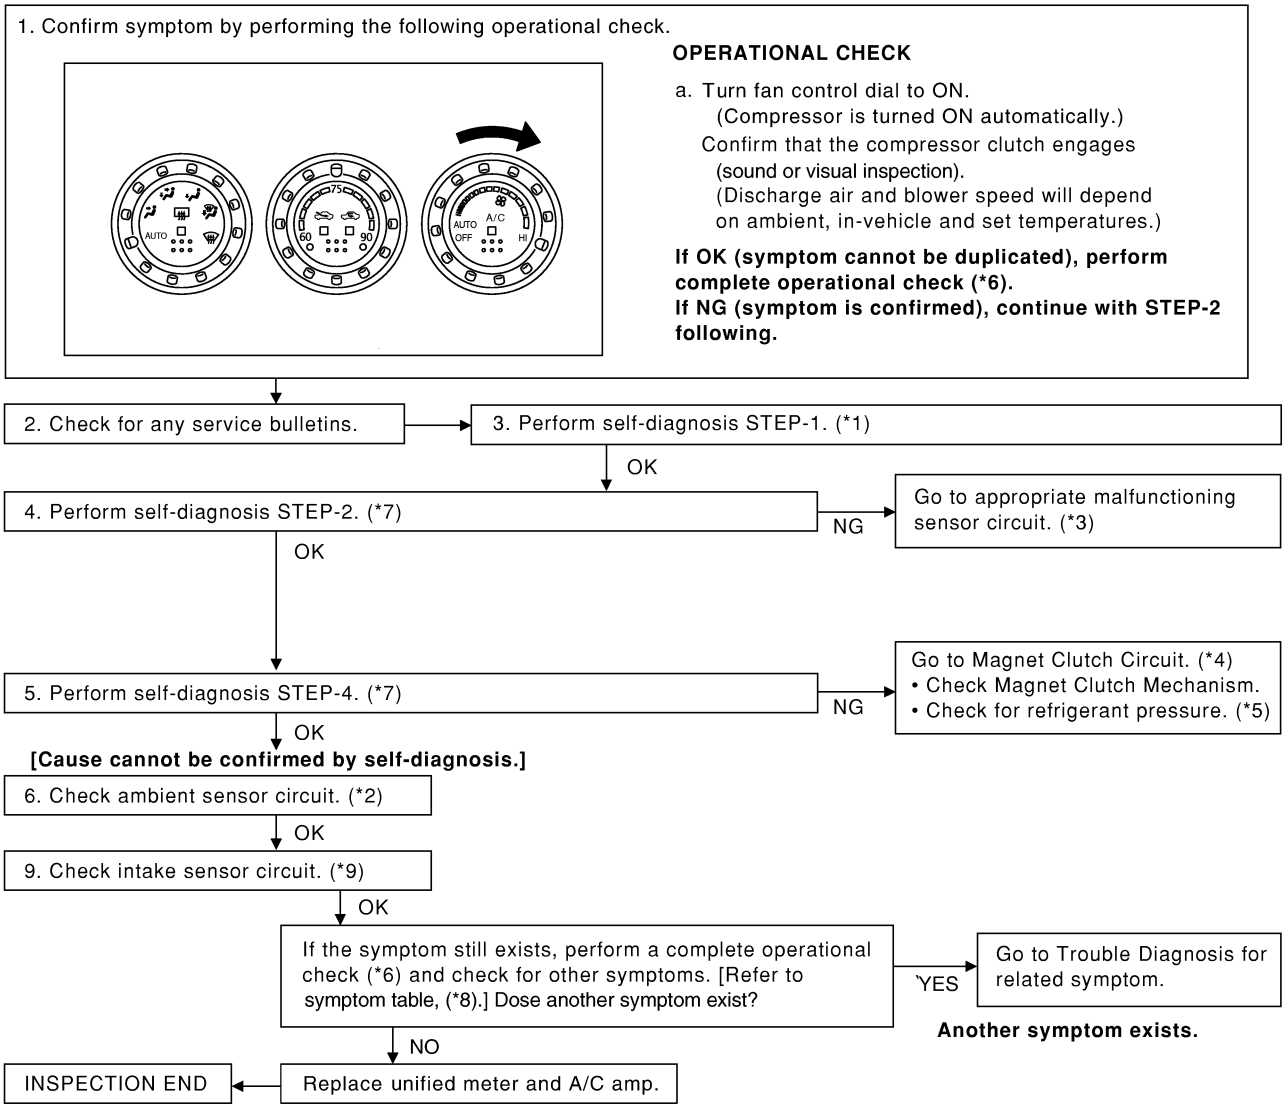
OK >> Replace blower motor after confirming the fan air flow does not change.
NG >> Replace unified meter and A/C amp.

COMPONENT INSPECTION

Blower Motor

Confirm smooth rotation of the blower motor.

- Ensure that there are no foreign particles inside the blower unit.



Magnet Clutch Circuit

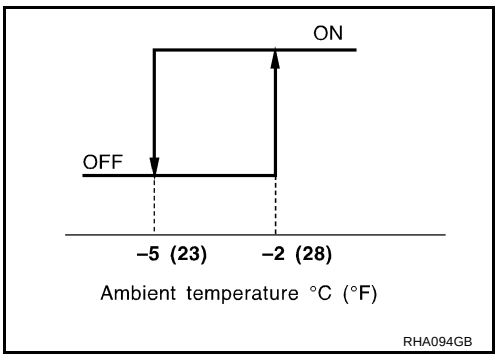
NJS00015

SYMPTOM: Magnet clutch does not engage.

INSPECTION FLOW

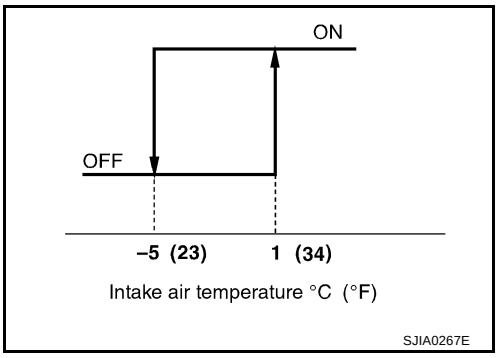
SJIA1129E

*1 ATC-46, "FUNCTION CONFIRMATION PROCEDURE", see No. 1.	*2 ATC-92, "Ambient Sensor Circuit"	*3 ATC-46, "FUNCTION CONFIRMATION PROCEDURE", see No. 9.
*4 ATC-75, "DIAGNOSIS PROCEDURE FOR MAGNET CLUTCH"	*5 ATC-86, "TROUBLE DIAGNOSIS FOR UNUSUAL PRESSURE"	*6 ATC-53, "Operational Check"
*7 ATC-46, "FUNCTION CONFIRMATION PROCEDURE", see No. 5 to 7.	*8 ATC-34, "SYMPTOM TABLE"	*9 ATC-100, "Intake Sensor Circuit"



SYSTEM DESCRIPTION

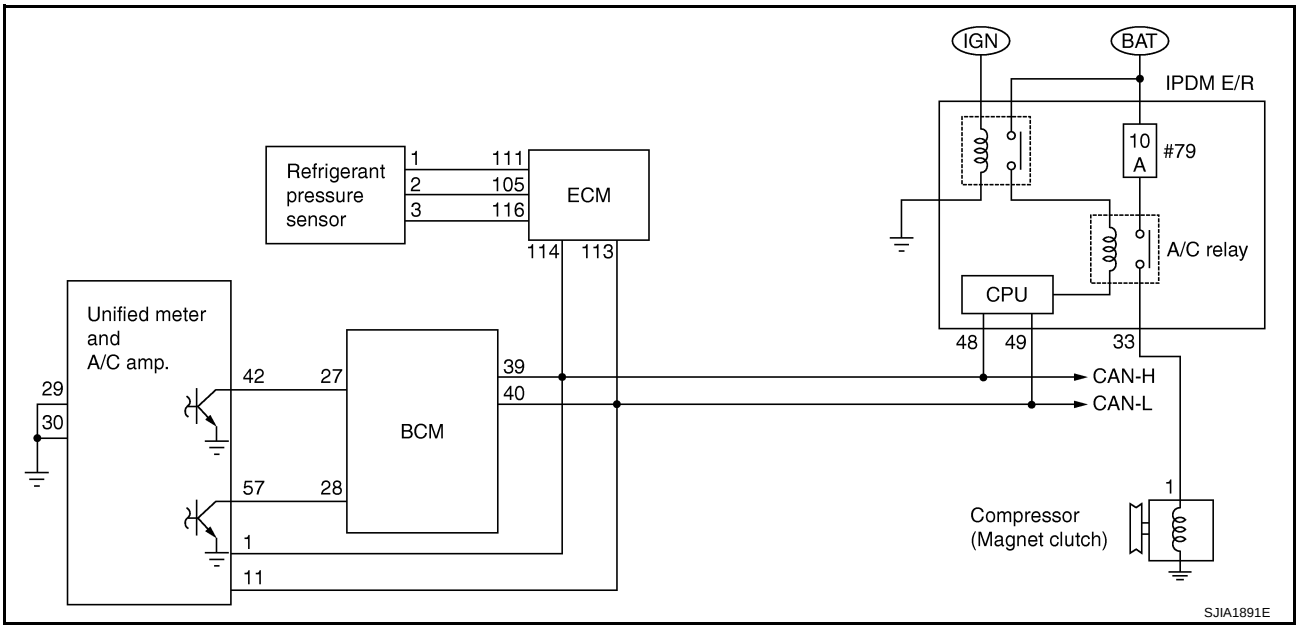
Unified meter and A/C amp. controls compressor operation by ambient temperature, intake air temperature and signal from ECM.



Low Temperature Protection Control

Unified meter and A/C amp. will turn compressor ON or OFF as determined by a signal detected by ambient sensor and intake sensor.

When ambient temperature is higher than –2°C (28°F), the compressor turns ON. The compressor turns OFF when ambient temperature is lower than –5°C (23°F).



When intake air temperature is higher than 1°C (34°F), the compressor turns ON. The compressor turns OFF when intake air temperature is lower than –5°C (23°F).

DIAGNOSIS PROCEDURE FOR MAGNET CLUTCH

SYMPTOM: Magnet clutch does not engage when A/C switch is ON.

1. CHECK AMBIENT SENSOR CIRCUIT AND INTAKE SENSOR CIRCUIT

Check ambient sensor and intake sensor. Refer to ATC-46, "FUNCTION CONFIRMATION PROCEDURE" , see No. 9.

OK or NG

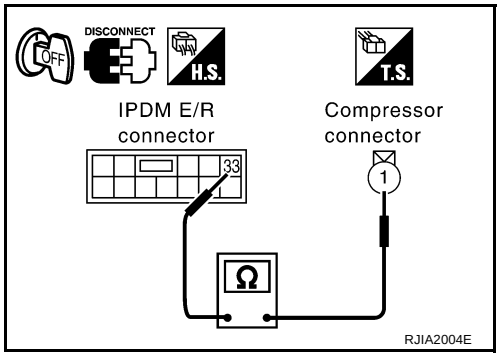
OK >> GO TO 2.

NG >>
- Malfunctioning ambient sensor: Refer to ATC-92, "Ambient Sensor Circuit" .
- Malfunctioning intake sensor: Refer to ATC-100, "Intake Sensor Circuit" .

2. PERFORM AUTO ACTIVE TEST

Refer to PG-20, "Auto Active Test" .

Dose the magnet clutch operate?



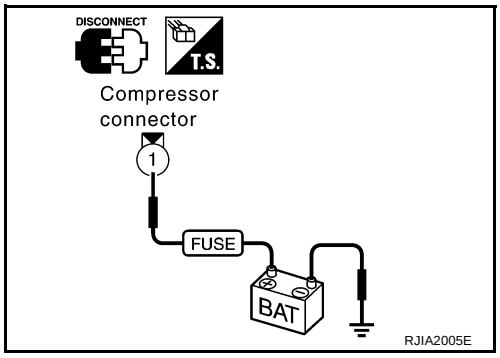
YES >>
- WITH CONSULT-III: GO TO 5.
- WITHOUT CONSULT-III: GO TO 6.

NO >> Check 10A fuse (No. 79, located in IPDM E/R), and GO TO 3. Refer to PG-23, "IPDM E/R Terminal Arrangement" .

3. CHECK CIRCUIT CONTINUITY BETWEEN IPDM E/R AND COMPRESSOR

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and compressor connector.
3. Check continuity between IPDM E/R harness connector E8 terminal 33 and compressor harness connector F24 terminal 1.

33 – 1 : Continuity should exist.



OK or NG

OK >> GO TO 4.

NG >> Repair harness or connector.

4. CHECK MAGNET CLUTCH CIRCUIT

Check for operation sound when applying battery voltage direct current to terminal.

OK or NG

OK >> 1. Replace IPDM E/R.
2. Go to self-diagnosis procedure ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and preform self-diagnosis STEP-4. Confirm that magnet clutch operation normal.

NG >> 1. Replace magnet clutch.
2. Go to self-diagnosis procedure ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and preform self-diagnosis STEP-4. Confirm that magnet clutch operation normal.

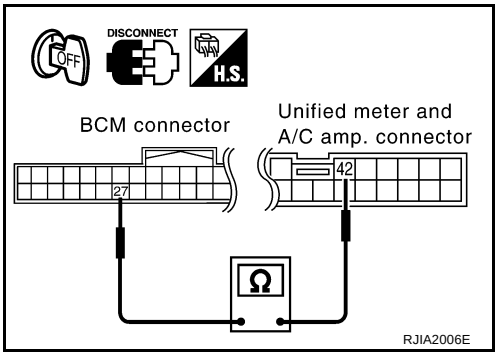
5. CHECK BCM INPUT (COMPRESSOR ON) SIGNAL

Check compressor ON/OFF signal. Refer to ATC-33, "CONSULT-III Function (BCM)" .

A/C SW ON : AIR COND SIG ON

A/C SW OFF : AIR COND SIG OFF

OK or NG



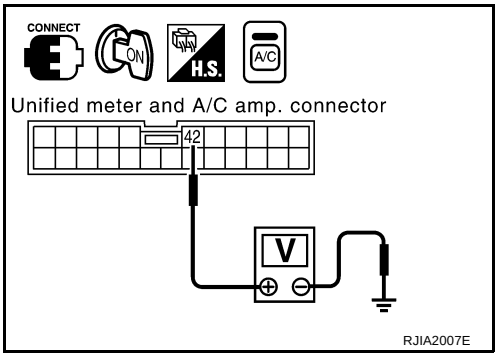
OK >> GO TO 8.

NG >> GO TO 6.

6. CHECK CIRCUIT CONTINUITY BETWEEN BCM AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect BCM connector and unified meter and A/C amp. connector.
3. Check continuity between BCM harness connector M90 terminal 27 and unified meter and A/C amp. harness connector M50 terminal 42.

27 – 42 : Continuity should exist.



OK or NG

OK >> GO TO 7.
NG >> Repair harness or connector.

7. CHECK VOLTAGE FOR UNIFIED METER AND A/C AMP. (COMPRESSOR ON SIGNAL)

1. Reconnect BCM connector and unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M50 terminal 42 and ground.

Terminals			Condition	Voltage
(+)		(–)		
Unified meter and A/C amp. connector	Terminal No.			
M50	42	Ground	A/C switch: ON (Blower motor operates.)	Approx. 0 V
			A/C switch: OFF	Approx. 5 V

OK or NG

OK >> GO TO 8.
NG-1 >> If the voltage is approx. 5 V when A/C switch is ON: Replace unified meter and A/C amp.
NG-2 >> If the voltage is approx. 0 V when A/C switch is OFF: Replace BCM.

8. CHECK REFRIGERANT PRESSURE SENSOR

WITH CONSULT-III

1. Start the engine.
2. Check voltage of refrigerant pressure sensor. Refer to EC-127, "CONSULT-III Reference Value in Data Monitor" .

WITHOUT CONSULT-III

1. Start the engine.
2. Check voltage between ECM harness connector M71 terminal 105 and ground.

Terminals			Condition	Voltage
(+)		(–)		
ECM connector	Terminal No.			
M71	105	Ground	A/C switch: ON (Blower motor operates.)	Approx. 1.0 - 4.0 V

OK or NG

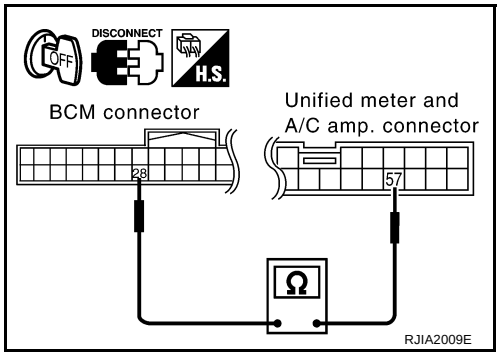
OK >> ● WITH CONSULT-III: GO TO 9.
● WITHOUT CONSULT-III: GO TO 10.

NG >> Refer to EC-710, "REFRIGERANT PRESSURE SENSOR" .

9. CHECK BCM INPUT (FAN ON) SIGNAL

Check FAN ON/OFF signal. Refer to ATC-33, "CONSULT-III Function (BCM)" .

FAN SW ON : HEATER FAN SW ON
FAN SW OFF : HEATER FAN SW OFF



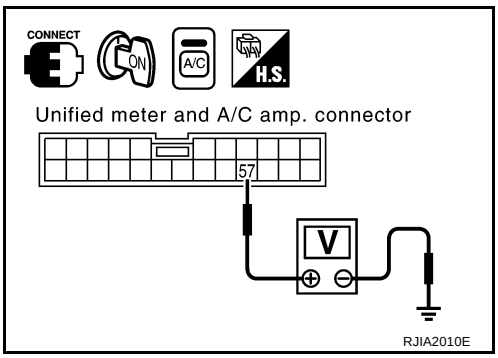
OK or NG

OK >> GO TO 12.
NG >> GO TO 10.

10. CHECK CIRCUIT CONTINUITY BETWEEN BCM AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect BCM connector and unified meter and A/C amp. connector.
3. Check continuity between BCM harness connector M90 terminal 28 and unified meter and A/C amp. harness connector M50 terminal 57.

28 – 57 : Continuity should exist.



OK or NG

OK >> GO TO 11.
NG >> Repair harness or connector.

11. CHECK VOLTAGE FOR UNIFIED METER AND A/C AMP. (FAN ON SIGNAL)

1. Reconnect BCM connector and unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M50 terminal 57 and ground.

Terminals			Condition	Voltage
(+)		(–)		
Unified meter and A/C amp. connector	Terminal No.			
M50	57	Ground	Fan control dial: ON (Blower motor operates.)	Approx. 0 V
			Fan control dial: OFF	Approx. 5 V

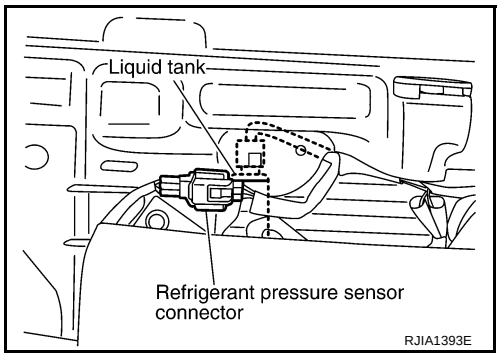
OK or NG

OK >> GO TO 12.
NG-1 >> If the voltage is approx. 5 V when blower motor is ON: Replace unified meter and A/C amp.
NG-2 >> If the voltage is approx. 0 V when blower motor is OFF: Replace BCM.

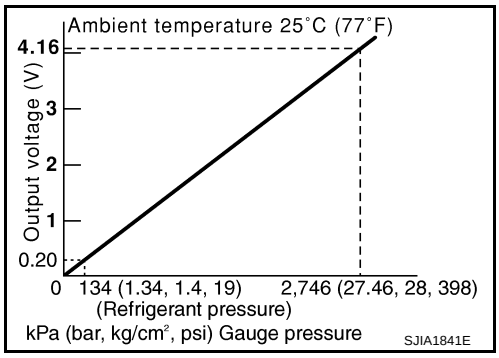
12. CHECK CAN COMMUNICATION

Check CAN communication. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

- BCM – ECM
- ECM – IPDM E/R
- ECM – Unified meter and A/C amp.



OK or NG

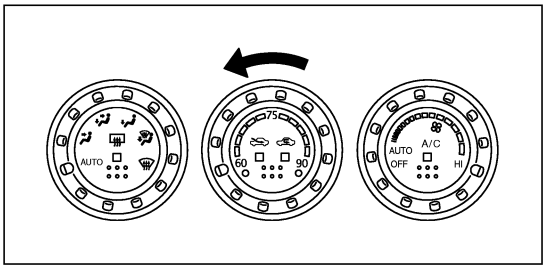


OK >> Replace ECM.
NG >> Repair or replace malfunctioning part(s).

COMPONENT INSPECTION

Refrigerant Pressure Sensor

The refrigerant pressure sensor is attached to the liquid tank.
Make sure that the A/C refrigerant pressure and the sensor output voltage are within the specified range as shown in the A/C operating condition figure. Refer to EC-710, "REFRIGERANT PRESSURE SENSOR" .



Insufficient Cooling

NJS00016

SYMPTOM: Insufficient cooling

INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

OPERATIONAL CHECK – Temperature decrease

a. Turn temperature control dial counterclockwise until 18°C (60°F).

b. Check for cold air at discharge air outlets.

If OK (symptom cannot be duplicated), perform complete operational check (*10).
If NG (symptom is confirmed), continue with STEP-2 following.

2. Check for any service bulletins.

3. Perform self-diagnosis STEP-1. (*1)

OK

4. Perform self-diagnosis STEP-2. (*11)

NG → Go to appropriate malfunctioning sensor circuit. (*5)

OK

5. Perform self-diagnosis STEP-4. (*11)

NG → **Go to appropriate malfunctioning items.**
- Check LAN system circuit. (*6)
- Check blower motor circuit. (*7)
- Check magnet clutch circuit. (*8)

OK

6. Check compressor belt tension. Refer to (*13), “Checking Drive Belts”.

NG → Adjust or replace compressor belt.

OK

7. Check air mix door operation. (*2)

NG → Replace air mix door motor.

OK

8. Check cooling fan motor operation.

NG → Refer to (*14), “System Description”.

OK

9. Before connectiong Recovery / Recycling Recharging equipment to vehicle, check Recovery / Recycling Recharging equipment gauges.
No refrigerant pressure should be displayed.
If NG, recover refrigerant from equipment lines.

OK

10. Confirm refrigerant purity in supply tank using Recovery / Recycling Recharging equipment with refrigerant identifire.

NG → Refer to Contaminated refrigerant. (*12)

OK

11. Connect Recovery / Recycling Recharging equipment to vehicle. Confirm refrigerant purity in vehicle A/C system using Recovery / Recycling Recharging equipment with refrigerant identifire.

NG

OK

12. Check for evaporator core freeze up.

NG (Freeze up.) → Perform performance test diagnosis. Refer to (*9)

(Does not freeze up.)

OK

13. Check refrigeration cycle pressure with manifold gauge connected. Refer to (*3).

NG

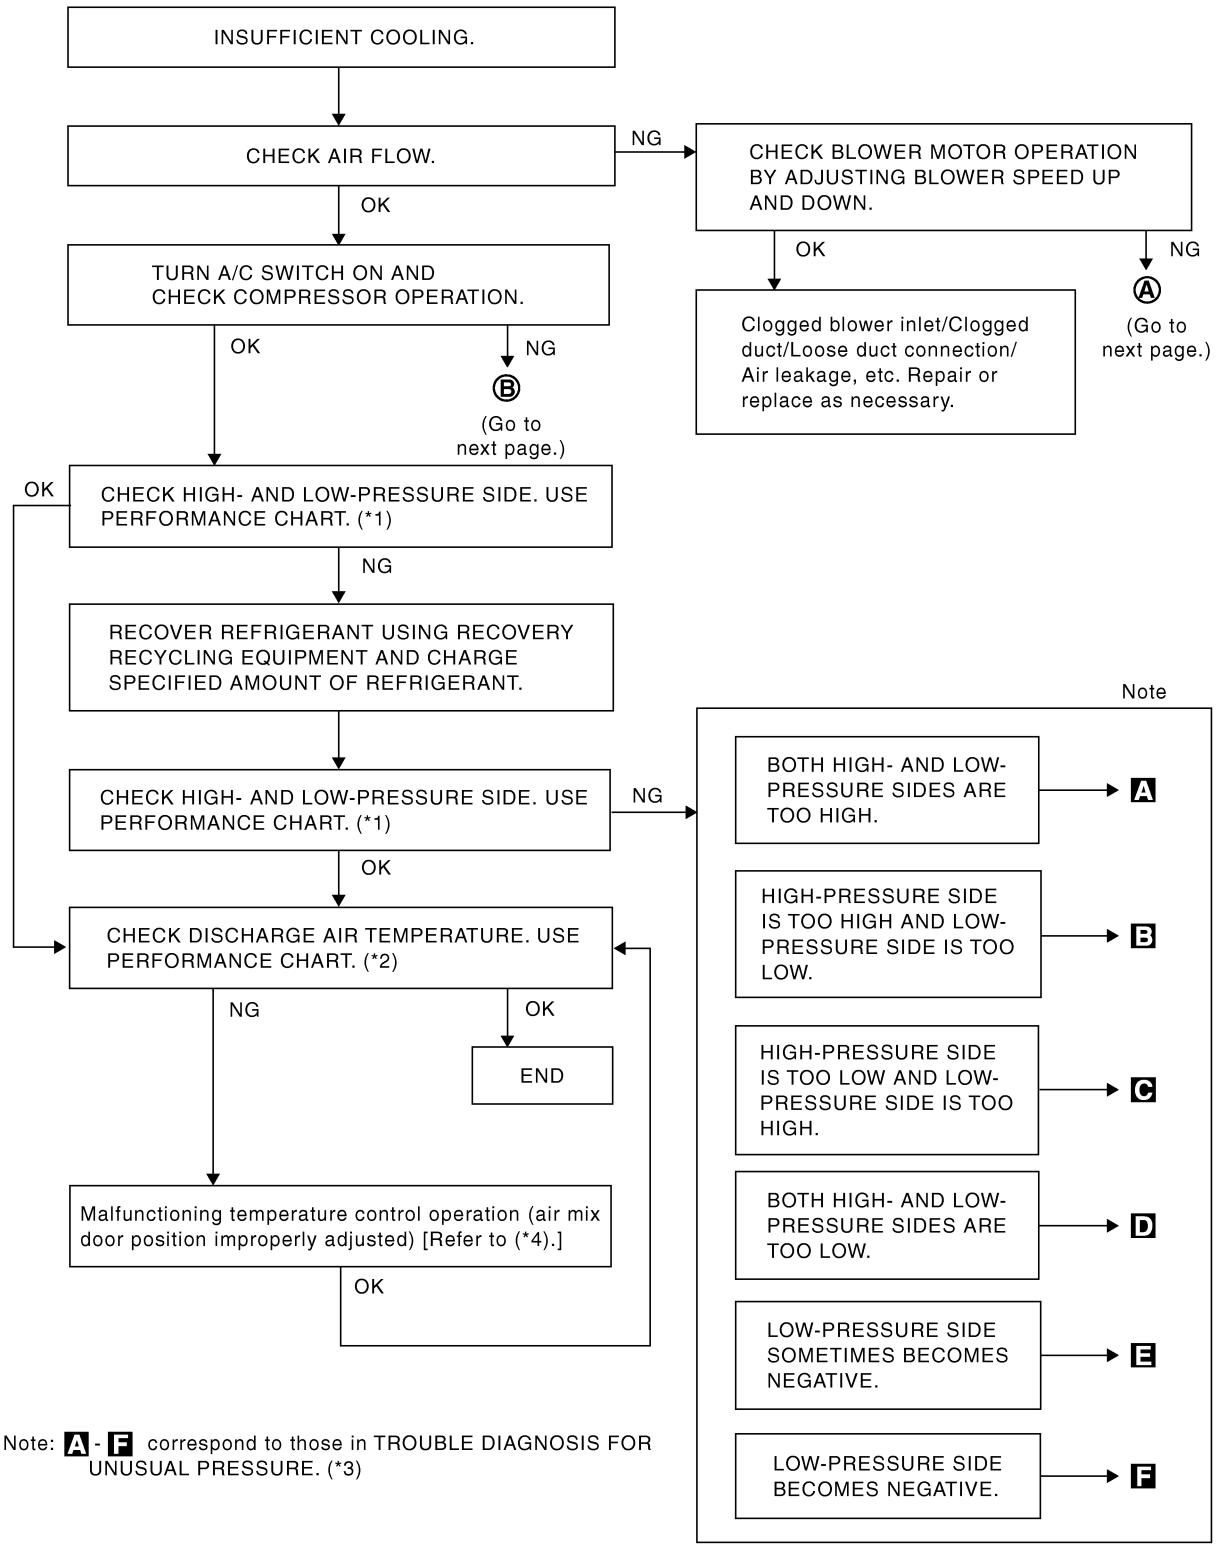
OK

14. Check ducts for air leaks.

NG → Replair air leaks.

OK

15. Perform temperature setting trimmer. (*4)
(1) Set up AUXILIARY MECHANISM mode in self-diagnosis.
(2) Turn temperature dial counterclockwise as desired.



OK

INSPECTION END

PERFORMANCE CHART

Test Condition

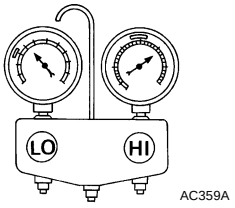
Testing must be performed as follows:

Vehicle condition	Indoors or in the shade (in a well-ventilated place)
Doors	Closed
Door windows	Open
Hood	Open
TEMP.	Max. COLD
Mode control dial	(Ventilation) set
Intake switch	(Recirculation) set
Fan (blower) speed	Max. speed set
Engine speed	Idle speed
Operate the air conditioning system for 10 minutes before taking measurements.	

Test Reading

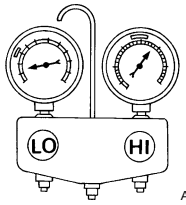
Recirculating-to-discharge Air Temperature Table

Inside air (Recirculating air) at blower assembly inlet		Discharge air temperature at center ventilator °C (°F)
Relative humidity %	Air temperature °C (°F)	
50 - 60	20 (68)	6.1 - 8.7 (43 - 48)
	25 (77)	8.5 - 11.5 (47 - 53)
60 - 70	20 (68)	8.7 - 11.1 (48 - 52)
	25 (77)	11.5 - 14.5 (53 - 58)



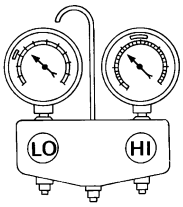
Ambient Air Temperature-to-operating Pressure Table

Ambient air		High-pressure (Discharge side) kPa (kg/cm^2 , psi)	Low-pressure (Suction side) kPa (kg/cm^2 , psi)
Relative humidity %	Air temperature °C (°F)		
50 - 70	20 (68)	850 - 1,050 (8.67 - 10.71, 123.3 - 152.3)	180 - 230 (1.84 - 2.35, 26.1 - 33.4)
	25 (77)	1,020 - 1,260 (10.40 - 12.85, 147.9 - 182.7)	190 - 240 (1.94 - 2.45, 27.6 - 34.8)
	30 (86)	1,150 - 1,410 (11.73 - 14.38, 166.8 - 204.5)	210 - 250 (2.14 - 2.55, 30.5 - 36.3)
	35 (95)	1,240 - 1,510 (12.65 - 15.40, 179.8 - 219.0)	220 - 270 (2.24 - 2.75, 31.9 - 39.2)



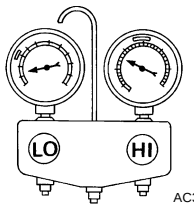
TROUBLE DIAGNOSIS FOR UNUSUAL PRESSURE

Whenever system's high and/or low side pressure(s) is/are unusual, diagnose using a manifold gauge. The marker above the gauge scale in the following tables indicates the standard (usual) pressure range. Since the standard (usual) pressure, however, differs from vehicle to vehicle, refer to above table (Ambient air temperature-to-operating pressure table).



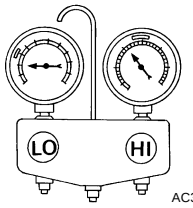
Both High- and Low-pressure Sides are Too High

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Both high- and low-pressure sides are too high.  AC359A	The pressure returns to normal soon after water is splashed on condenser.	Excessive refrigerant charge in refrigeration cycle.	Reduce refrigerant until specified pressure is obtained.
	Air suction by cooling fan is insufficient.	Insufficient condenser cooling performance. ↓ 1. Condenser fins are clogged. 2. Improper fan rotation of cooling fan.	● Clean condenser. ● Check and repair cooling fan as necessary.
	● Low-pressure pipe is not cold. ● When compressor is stopped high-pressure value quickly drops by approximately 196 kPa (2 kg/cm^2 , 28 psi). It then decreases gradually thereafter.	Poor heat exchange in condenser (After compressor operation stops, high-pressure decreases too slowly.). ↓ Air in refrigeration cycle.	Evacuate repeatedly and recharge system.
	Engine tends to overheat.	Engine cooling systems malfunction.	Check and repair each engine cooling system.
	● An area of the low-pressure pipe is colder than areas near the evaporator outlet. ● Low-pressure pipe is sometimes covered with frost.	● Excessive liquid refrigerant on low-pressure side. ● Excessive refrigerant discharge flow. ● Expansion valve is open a little compared with the specification. ↓ Improper expansion valve adjustment.	Replace expansion valve.



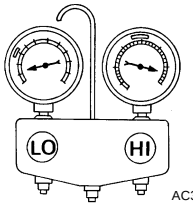
High-pressure Side is Too High and Low-pressure Side is Too Low

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
High-pressure side is too high and low-pressure side is too low.  AC360A	Upper side of condenser and high-pressure side are hot, however, liquid tank is not so hot.	High-pressure tube or parts located between compressor and condenser are clogged or crushed.	● Check and repair or replace malfunctioning parts. ● Check lubricant for contamination.



High-pressure Side is Too Low and Low-pressure Side is Too High

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
High-pressure side is too low and low-pressure side is too high.  AC356A	High- and low-pressure sides become equal soon after compressor operation stops.	Compressor pressure operation is improper. ↓ Damaged inside compressor packings.	Replace compressor.
	No temperature difference between high- and low-pressure sides.	Compressor pressure operation is improper. ↓ Damaged inside compressor packings.	Replace compressor.



Both High- and Low-pressure Sides are Too Low

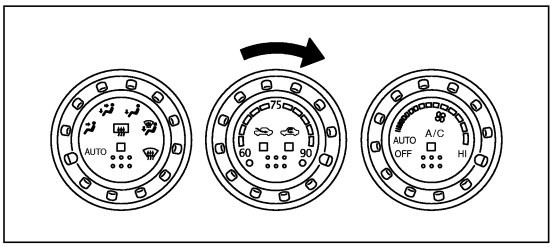
Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Both high- and low-pressure sides are too low.  AC353A	● There is a big temperature difference between liquid tank outlet and inlet. Outlet temperature is extremely low. ● Liquid tank inlet and expansion valve are frosted.	Liquid tank inside is slightly clogged.	● Replace liquid tank. ● Check lubricant for contamination.
	● Temperature of expansion valve inlet is extremely low as compared with areas near liquid tank. ● Expansion valve inlet is frosted. ● Temperature difference occurs somewhere in high-pressure side.	High-pressure pipe located between liquid tank and expansion valve is clogged.	● Check and repair malfunctioning parts. ● Check lubricant for contamination.
	Expansion valve and liquid tank are warm or slightly cool when touched.	Low refrigerant charge. ↓ Leaking fittings or components.	Check refrigerant for leaks. Refer to ATC-138, "Checking for Refrigerant Leaks" .
	There is a big temperature difference between expansion valve inlet and outlet while the valve itself is frosted.	Expansion valve closes a little compared with the specification. ↓ 1. Improper expansion valve adjustment. 2. Malfunctioning expansion valve. 3. Outlet and inlet may be clogged.	● Remove foreign particles by using compressed air. ● Replace expansion valve. ● Check lubricant for contamination.
	An area of the low-pressure pipe is colder than areas near the evaporator outlet.	Low-pressure pipe is clogged or crushed.	● Check and repair malfunctioning parts. ● Check lubricant for contamination.
	Air flow volume is not enough or is too low.	Evaporator is frozen.	● Check intake sensor circuit. Refer to ATC-100, "Intake Sensor Circuit" . ● Replace compressor. ● Repair evaporator fins. ● Replace evaporator. ● Refer to ATC-69, "Blower Motor Circuit" .

Low-pressure Side Sometimes Becomes Negative

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Low-pressure side sometimes becomes negative.  AC354A	● Air conditioning system does not function and does not cyclically cool the compartment air. ● The system constantly functions for a certain period of time after compressor is stopped and restarted.	Refrigerant does not discharge cyclically. ↓ Moisture is frozen at expansion valve outlet and inlet. ↓ Water is mixed with refrigerant.	● Drain water from refrigerant or replace refrigerant. ● Replace liquid tank.

Low-pressure Side Becomes Negative

Gauge indication	Refrigerant cycle	Probable cause	Corrective action
Low-pressure side becomes negative.  AC362A	Liquid tank or front/rear side of expansion valve's pipe is frosted or wet with dew.	High-pressure side is closed and refrigerant does not flow. ↓ Expansion valve or liquid tank is frosted.	Leave the system at rest until no frost is present. Start it again to check whether or not the malfunction is caused by water or foreign particles. ● If water is the cause, initially cooling is okay. Then the water freezes causing a blockage. Drain water from refrigerant or replace refrigerant. ● If due to foreign particles, remove expansion valve and remove the particles with dry and compressed air (not shop air). ● If either of the above methods cannot correct the malfunction, replace expansion valve. ● Replace liquid tank. ● Check lubricant for contamination.



Insufficient Heating

NJS00017

SYMPTOM: Insufficient heating

INSPECTION FLOW

1. Confirm symptom by performing the following operational check.

OPERATIONAL CHECK – Temperature increase

a. Turn temperature control dial clockwise until 32˚C (90˚F) .

b. Check for hot air at discharge air outlets.

If OK (symptom cannot be duplicated), perform complete operational check (*1).
If NG (symptom is confirmed), continue with STEP-2 following.

2. Check for any service bulletins.

3. Perform self-diagnosis STEP-1. (*2)

OK

4. Perform self-diagnosis STEP-2. (*3)

NG: Go to appropriate malfunctioning sensor circuit. (*5)

OK

5. Perform self-diagnosis STEP-4. (*3)

NG: **Go to appropriate malfunctioning items.**
- Check LAN system circuit. (*6)
- Check blower motor circuit. (*7)

OK

6. Check the following:
- Engine coolant level [Refer to (*10), “Changing Engine Coolant”.]
- Hoses for leaks or kinks.
- Radiator cap. [Refer to (*11), “Checking Radiator cap”.]
- Air in cooling system.

NG: Repair/replace as necessary.

OK

7. Check air mix door operation. Refer to (*4).

NG: Go to Air Mix Door Motor Circuit. (*8)

OK

8. Check ducts for air leaks.

NG: Repair leaks.

OK

9. Check the heater inlet and outlet hose temperatures by touching.

Hot inlet
Warm outlet

Check engine coolant temperature sensor (*9).

NG

Check heater hoses for proper installation.

NG: Repair or replace as necessary. Retest.

OK

Both hoses warm

OK

Back flush heater core, drain and refill coolant.
[Refer to (*10), “Changing Engine Coolant”.] Retest.

Hot inlet
Warm outlet

System OK

Both hoses warm

Replace heater core. Refill engine coolant.
[Refer to (*10), “Changing Engine Coolant”.] Retest.

Hot inlet
Warm outlet

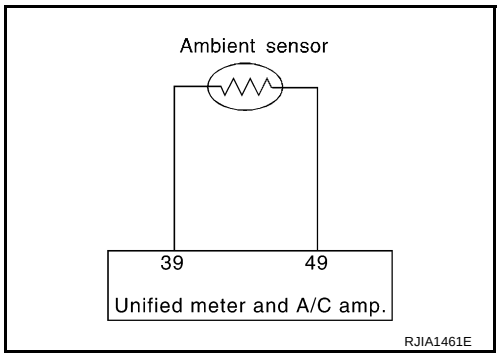
Ambient Sensor Circuit

NJS0001A

COMPONENT DESCRIPTION

Ambient Sensor

The ambient sensor is attached on the hood lock stay. It detects ambient temperature and converts it into a resistance value which is then input into the unified meter and A/C amp.

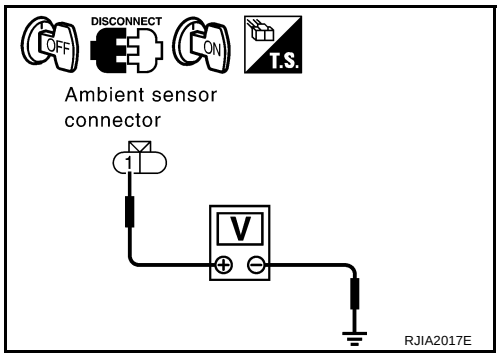


AMBIENT TEMPERATURE INPUT PROCESS

The unified meter and A/C amp. includes a processing circuit for the ambient sensor input. However, when the temperature detected by the ambient sensor increases quickly, the processing circuit retards the unified meter and A/C amp. function. It only allows the unified meter and A/C amp. to recognize an ambient temperature increase of 0.33°C (0.6°F) per 100 seconds.

As an example, consider stopping for a few minutes after high speed driving. Although the actual ambient temperature has not changed, the temperature detected by the ambient sensor will increase. This is because the heat from the engine compartment can radiate to the front bumper area, location of the ambient sensor.

DIAGNOSIS PROCEDURE FOR AMBIENT SENSOR

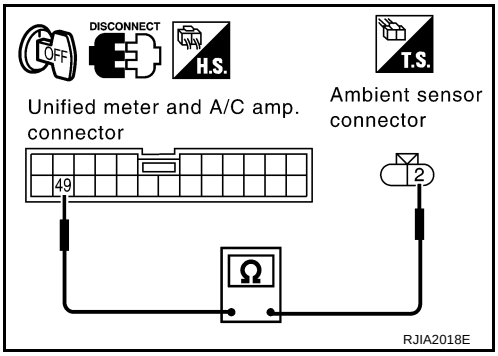


SYMPTOM: Ambient sensor circuit is open or shorted. (LED of A/C switch does not illuminate as a result of performing self-diagnosis STEP-2.)

1. CHECK VOLTAGE BETWEEN AMBIENT SENSOR AND GROUND

1. Disconnect ambient sensor connector.
2. Turn ignition switch ON.
3. Check voltage between ambient sensor harness connector E34 terminal 1 and ground.

1 – Ground : Approx. 5 V



OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY BETWEEN AMBIENT SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between ambient sensor harness connector E34 terminal 2 and unified meter and A/C amp. harness connector M50 terminal 49.

2 – 49 : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

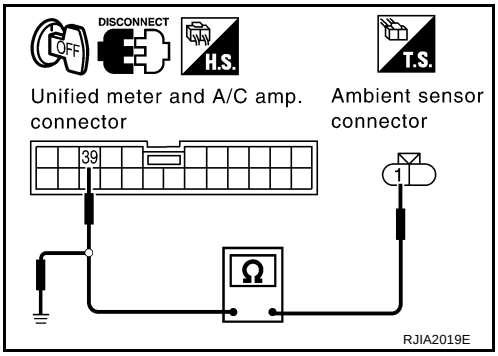
3. CHECK AMBIENT SENSOR

Refer to ATC-94, "Ambient Sensor" .

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> 1. Replace ambient sensor.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



4. CHECK CIRCUIT CONTINUITY BETWEEN AMBIENT SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between ambient sensor harness connector E34 terminal 1 and unified meter and A/C amp. harness connector M50 terminal 39.

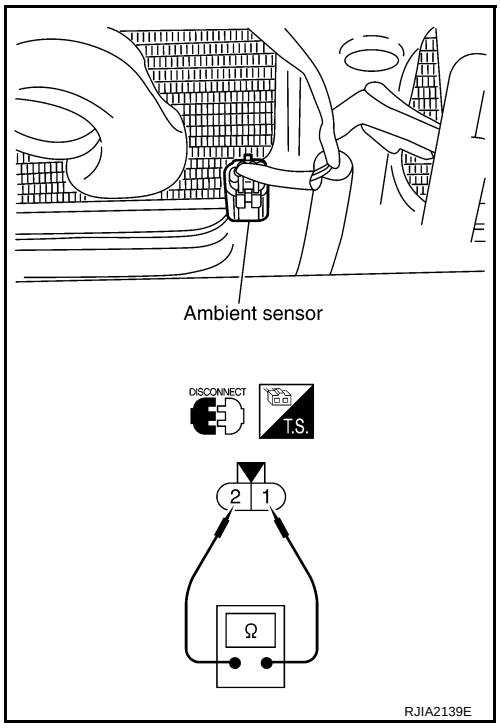
1 – 39 : Continuity should exist.

4. Check continuity between ambient sensor harness connector E34 terminal 1 and ground.

1 – Ground : Continuity should not exist.

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



NG >> Repair harness or connector.

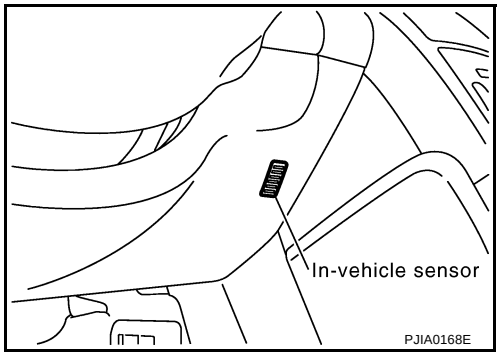
COMPONENT INSPECTION

Ambient Sensor

After disconnecting ambient sensor connector E34, measure resistance between terminals 1 and 2 at sensor side. Refer to the table below.

Temperature °C (°F)	Resistance kΩ
–15 (5)	12.73
–10 (14)	9.92
–5 (23)	7.80
0 (32)	6.19
5 (41)	4.95
10 (50)	3.99
15 (59)	3.24
20 (68)	2.65
25 (77)	2.19
30 (86)	1.81
35 (95)	1.51
40 (104)	1.27
45 (113)	1.07

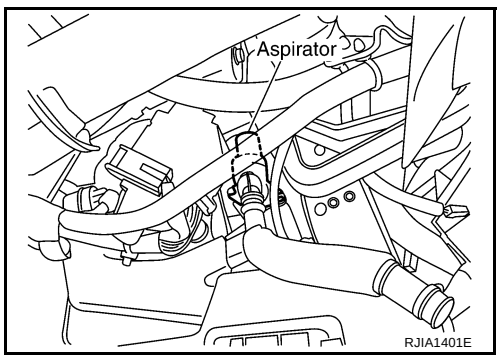
If NG, replace ambient sensor.



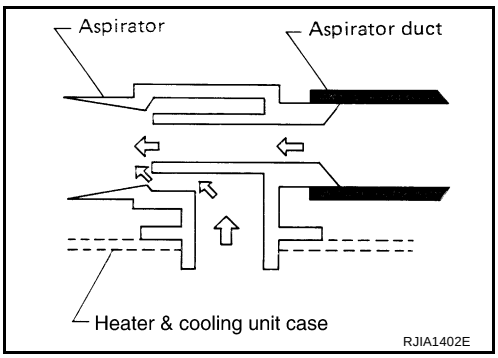
In-vehicle Sensor Circuit

NJS0001B

COMPONENT DESCRIPTION

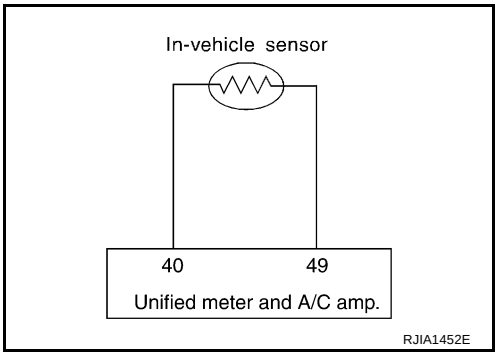


In-vehicle Sensor



The in-vehicle sensor is located on instrument driver panel lower. It converts variations in temperature of compartment air drawn from the aspirator into a resistance value. It is then input into the unified meter and A/C amp.

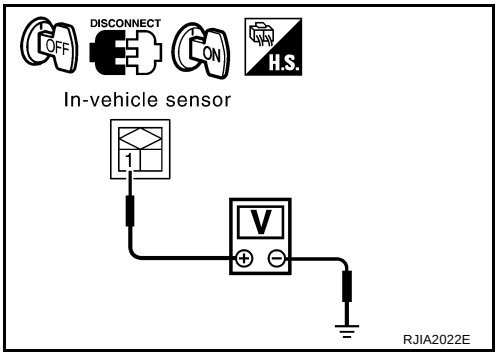
Aspirator



The aspirator is located on driver's side of heater & cooling unit assembly. It produces vacuum pressure due to air discharged from the heater & cooling unit assembly, continuously taking compartment air in the aspirator.

DIAGNOSIS PROCEDURE FOR IN-VEHICLE SENSOR

SYMPTOM: In-vehicle sensor circuit is open or shorted. (LED of A/C switch does not illuminate as a result of performing self-diagnosis STEP-2.)



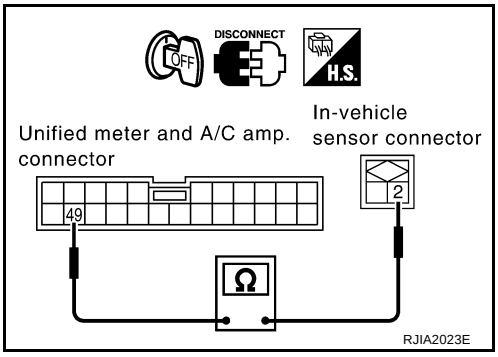
1. CHECK VOLTAGE BETWEEN IN-VEHICLE SENSOR AND GROUND

1. Disconnect in-vehicle sensor connector.
2. Turn ignition switch ON.
3. Check voltage between in-vehicle sensor harness connector M42 terminal 1 and ground.

1 – Ground : Approx. 5 V

OK or NG

OK >> GO TO 2.
NG >> GO TO 4.



2. CHECK CIRCUIT CONTINUITY BETWEEN IN-VEHICLE SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between in-vehicle sensor harness connector M42 terminal 2 and unified meter and A/C amp. harness connector M50 terminal 49.

2 – 49 : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

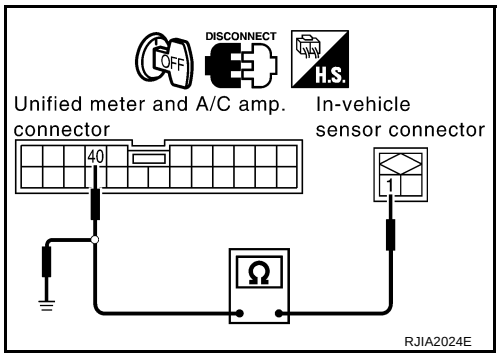
3. CHECK IN-VEHICLE SENSOR

Refer to ATC-96, "In-vehicle Sensor" .

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> 1. Replace in-vehicle sensor.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



4. CHECK CIRCUIT CONTINUITY BETWEEN IN-VEHICLE SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between in-vehicle sensor harness connector M42 terminal 1 and unified meter and A/C amp. harness connector M50 terminal 40.

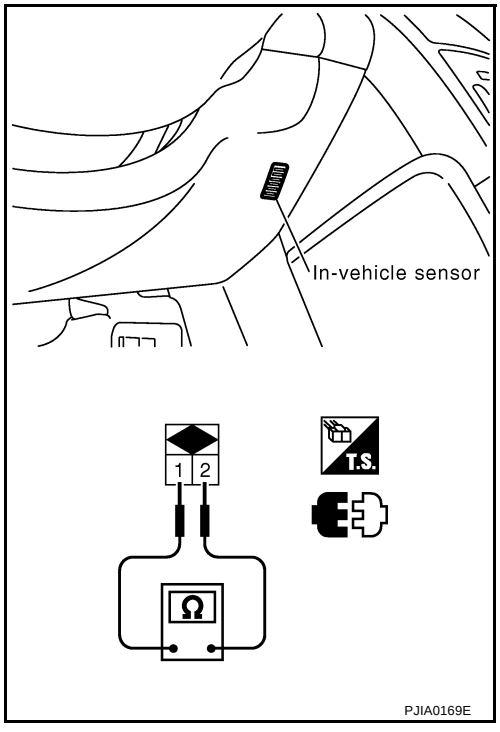
1 – 40 : Continuity should exist.

4. Check continuity between in-vehicle sensor harness connector M42 terminal 1 and ground.

1 – Ground : Continuity should not exist.

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



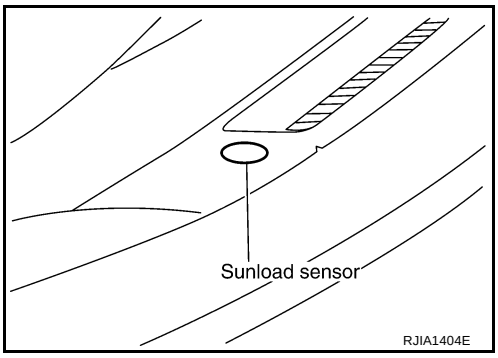
NG >> Repair harness or connector.

COMPONENT INSPECTION

In-vehicle Sensor

After disconnecting in-vehicle sensor connector M42, measure resistance between terminals 1 and 2 at sensor side. Refer to the table below.

Temperature °C (°F)	Resistance kΩ
–15 (5)	12.73
–10 (14)	9.92
–5 (23)	7.80
0 (32)	6.19
5 (41)	4.95
10 (50)	3.99
15 (59)	3.24
20 (68)	2.65
25 (77)	2.19
30 (86)	1.81
35 (95)	1.51
40 (104)	1.27
45 (113)	1.07



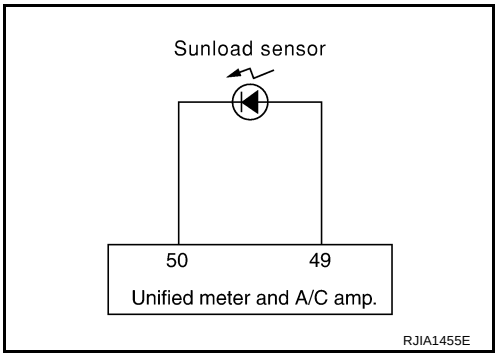
If NG, replace in-vehicle sensor.

Sunload Sensor Circuit

NJS0001C

COMPONENT DESCRIPTION

The sunload sensor is located on the passenger's side defroster grille. It detects sunload entering through windshield by means of a photo diode. The sensor converts the sunload into a current value which is then input into the unified meter and A/C amp.

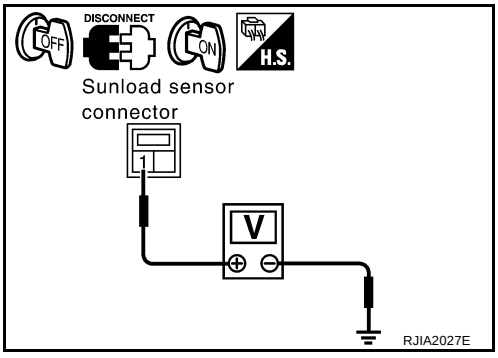


SUNLOAD INPUT PROCESS

The unified meter and A/C amp. also includes a processing circuit which averages the variations in detected sunload over a period of time. This prevents drastic swings in the ATC system operation due to small or quick variations in detected sunload.

For example, consider driving along a road bordered by an occasional group of large trees. The sunload detected by the sunload sensor will vary whenever the trees obstruct the sunlight. The processing circuit averages the detected sunload over a period of time, so that the (insignificant) effect of the trees momentarily obstructing the sunlight does not cause any change in the ATC system operation. On the other hand, shortly after entering a long tunnel, the system will recognize the change in sunload, and the system will react accordingly.

DIAGNOSIS PROCEDURE FOR SUNLOAD SENSOR

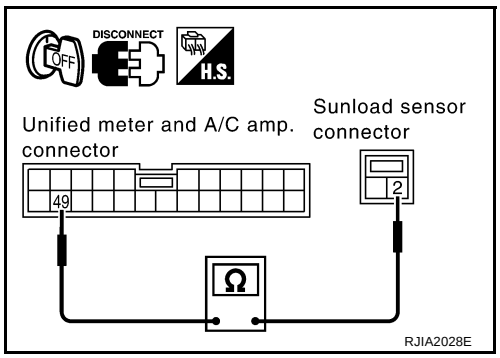


SYMPTOM: Sunload sensor circuit is open or shorted. (LED of A/C switch does not illuminate as a result of performing self-diagnosis STEP-2.)

1. CHECK VOLTAGE BETWEEN SUNLOAD SENSOR AND GROUND

1. Disconnect sunload sensor connector.
2. Turn ignition switch ON.
3. Check voltage between sunload sensor harness connector M18 terminal 1 and ground.

1 – Ground : Approx. 5 V



OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY BETWEEN SUNLOAD SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between sunload sensor harness connector M18 terminal 2 and unified meter and A/C amp. harness connector M50 terminal 49.

2 – 49 : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

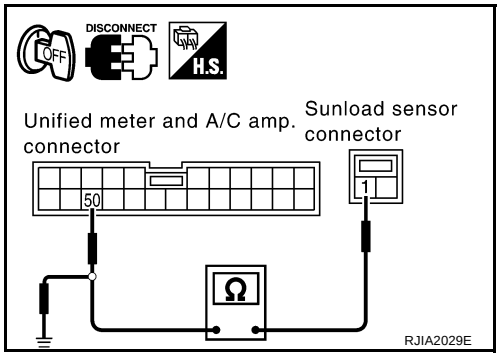
3. CHECK SUNLOAD SENSOR

1. Reconnect sunload sensor connector and unified meter and A/C amp. connector.
2. Refer to ATC-99, "Sunload Sensor" .

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> 1. Replace sunload sensor.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



4. CHECK CIRCUIT CONTINUITY BETWEEN SUNLOAD SENSOR AND UNIFIED METER AND A/C AMP.

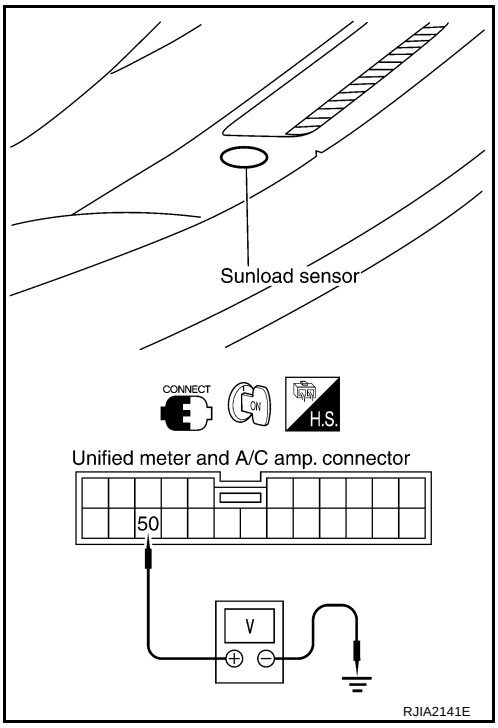
1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between sunload sensor harness connector M18 terminal 1 and unified meter and A/C amp. harness connector M50 terminal 50.

1 – 50 : Continuity should exist.

4. Check continuity between sunload sensor harness connector M18 terminal 1 and ground.

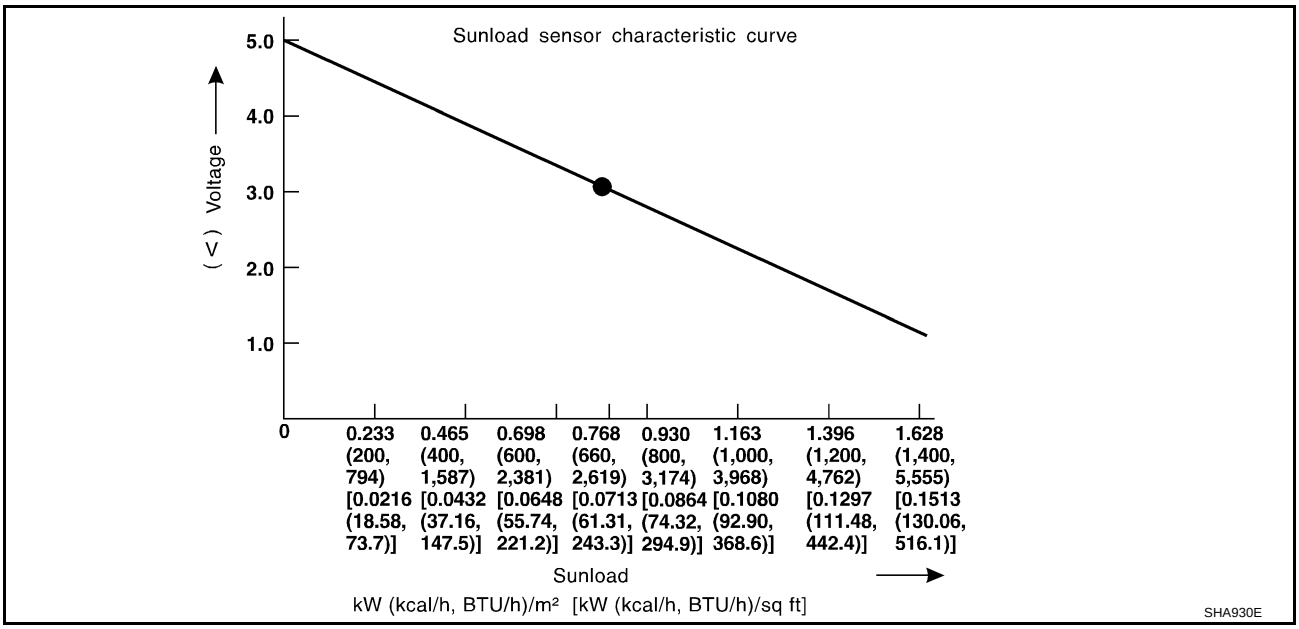
1 – Ground : Continuity should not exist.

OK or NG



OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> Repair harness or connector.



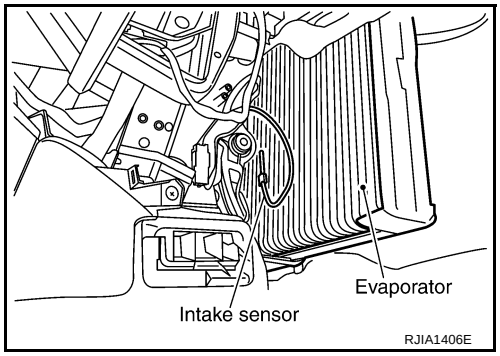
COMPONENT INSPECTION

Sunload Sensor

Measure voltage between unified meter and A/C amp. harness connector M50 terminal 50 and ground.

- When checking sunload sensor, select a place where sunshine directly on it.

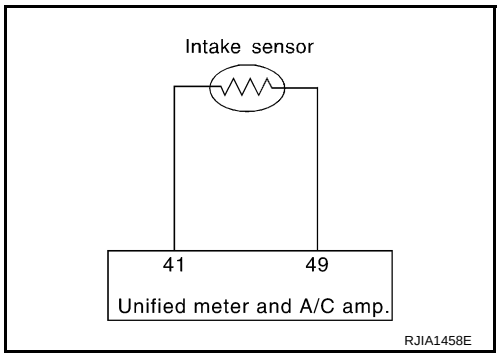
If NG, replace sunload sensor.



Intake Sensor Circuit

NJS0001D

COMPONENT DESCRIPTION

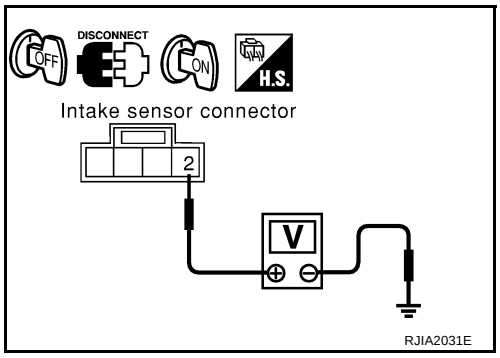


Intake Sensor

The intake sensor is located on the heater & cooling unit assembly. It converts temperature of air after it passes through the evaporator into a resistance value which is then input to the unified meter and A/C amp.

DIAGNOSIS PROCEDURE FOR INTAKE SENSOR

SYMPTOM: Intake sensor circuit is open or shorted. (LED of A/C switch does not illuminate as a result of performing self-diagnosis STEP-2.)



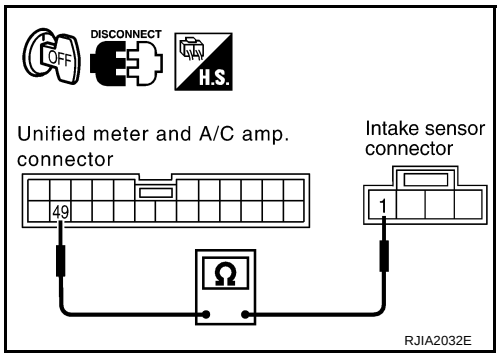
1. CHECK VOLTAGE BETWEEN INTAKE SENSOR AND GROUND

1. Disconnect intake sensor connector.
2. Turn ignition switch ON.
3. Check voltage between intake sensor harness connector M255 terminal 2 and ground.

2 – Ground : Approx. 5 V

OK or NG

OK >> GO TO 2.
NG >> GO TO 4.



2. CHECK CIRCUIT CONTINUITY BETWEEN INTAKE SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between intake sensor harness connector M255 terminal 1 and unified meter and A/C amp. harness connector M50 terminal 49.

1 – 49 : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

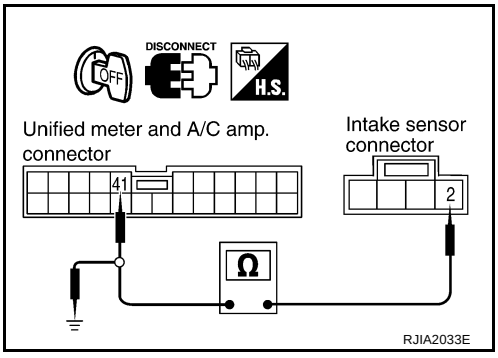
3. CHECK INTAKE SENSOR

Refer to ATC-101, "Intake Sensor" .

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> 1. Replace intake sensor.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.



4. CHECK CIRCUIT CONTINUITY BETWEEN INTAKE SENSOR AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between intake sensor harness connector M255 terminal 2 and unified meter and A/C amp. harness connector M50 terminal 41.

2 – 41 : Continuity should exist.

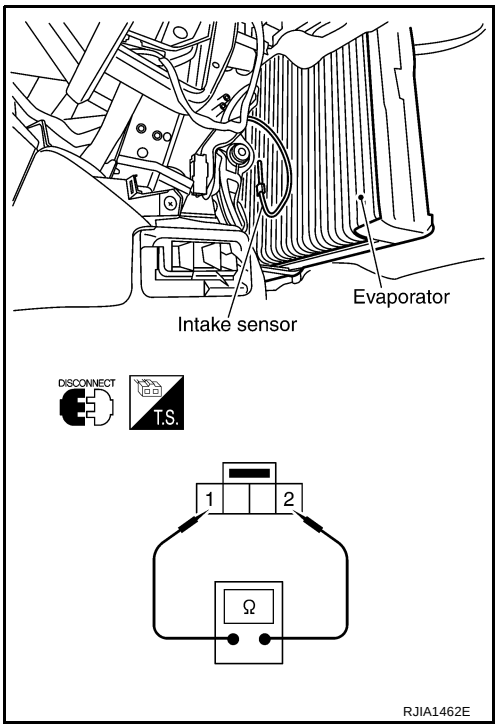
4. Check continuity between intake sensor harness connector M255 terminal 2 and ground.

2 – Ground : Continuity should not exist.

OK or NG

OK >> 1. Replace unified meter and A/C amp.
2. Go to self-diagnosis ATC-46, "FUNCTION CONFIRMATION PROCEDURE" and perform self-diagnosis STEP-2.

NG >> Repair harness or connector.



COMPONENT INSPECTION

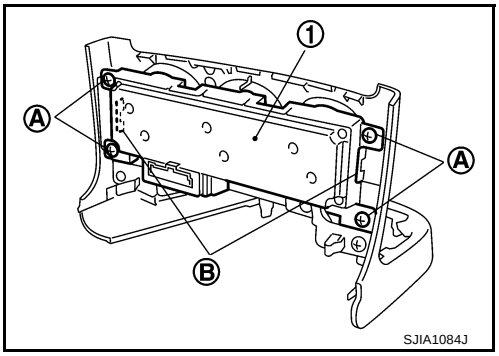
Intake Sensor

After disconnecting intake sensor connector M255, measure resistance between terminals 1 and 2 at sensor side. Refer to the table below.

Temperature °C (°F)	Resistance kΩ
–15 (5)	12.34
–10 (14)	9.62
–5 (23)	7.56
0 (32)	6.00
5 (41)	4.80
10 (50)	3.87
15 (59)	3.15
20 (68)	2.57
25 (77)	2.12
30 (86)	1.76
35 (95)	1.47
40 (104)	1.23
45 (113)	1.04

If NG, replace intake sensor.

A/C CONTROLLER



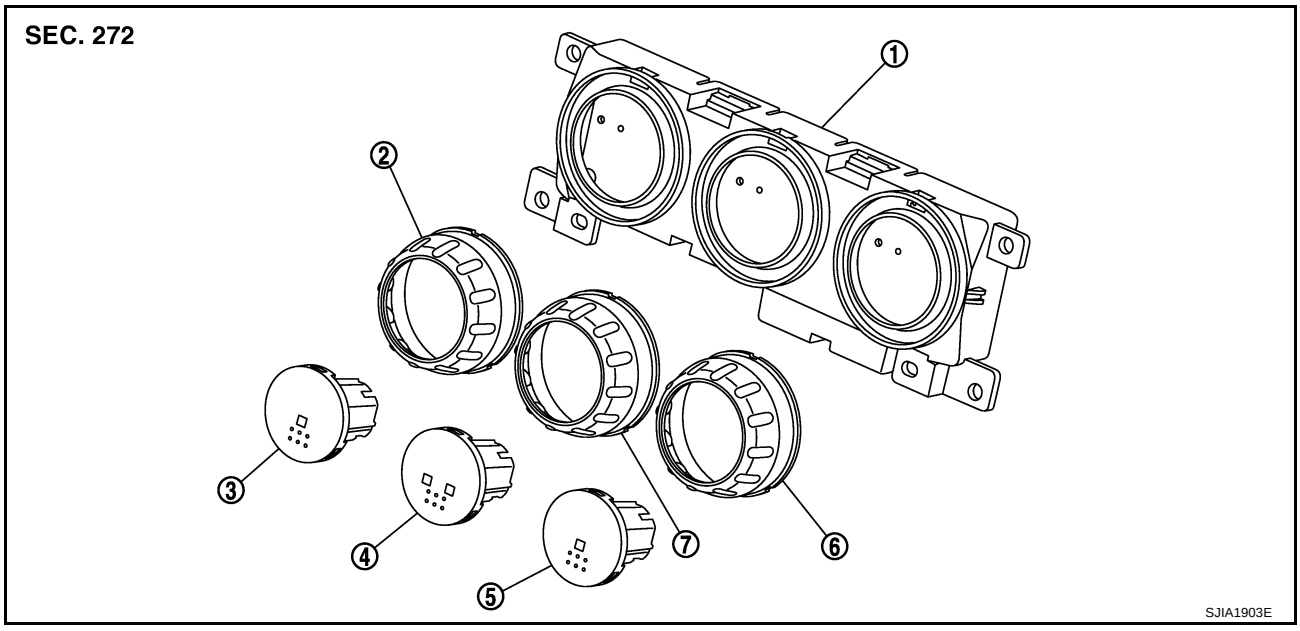
PFP:27500

Removal and Installation

NJS0001E

REMOVAL

1. Remove console finisher (A/T) or console boot (M/T). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove mounting screws (A) and clips (B), and then remove A/C controller (1) from console finisher (A/T) or console boot (M/T).



INSTALLATION

Installation is basically the reverse order of removal.

Disassembly and Assembly

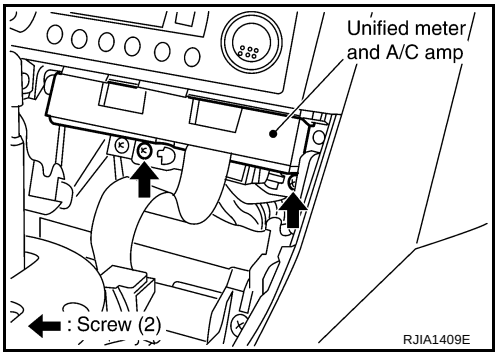
NJS000CT

1. A/C controller assembly
2. Mode control dial
3. Rear window defogger switch
4. Intake switch
5. A/C switch
6. Fan control dial
7. Temperature control dial

NOTE:

When disassembling controller, wind gummed tape around each dial assembly and pull out the dial assembly together with switch from the A/C controller assembly.

AUTO AMP



PFP:27760

Removal and Installation of Unified Meter and A/C Amp.

NJS0001F

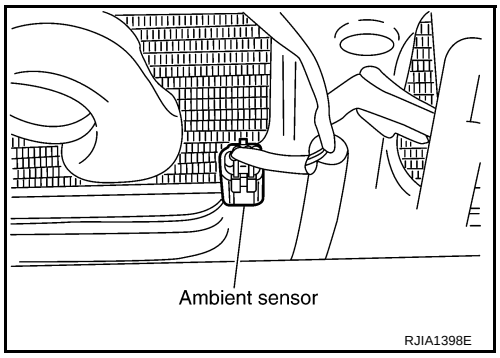
REMOVAL

1. Remove console finisher (A/T) or console boot (M/T). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove mounting screws, and then remove unified meter and A/C amp.

INSTALLATION

Installation is basically the reverse order of removal.

AMBIENT SENSOR



PFP:27722

Removal and Installation

NJS0001G

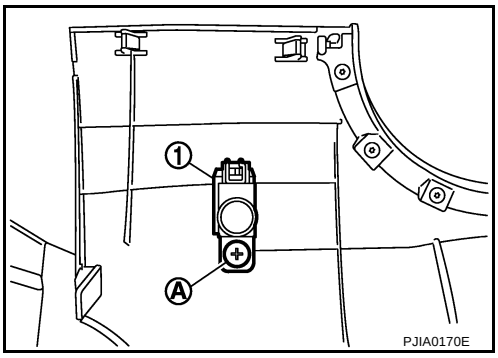
REMOVAL

1. Disconnect ambient sensor connector.
2. Remove ambient sensor.

INSTALLATION

Installation is basically the reverse order of removal.

IN-VEHICLE SENSOR



PFP:27720

Removal and Installation

NJS0001H

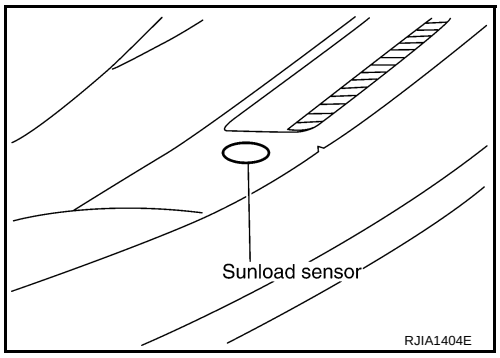
REMOVAL

1. Remove instrument driver panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove mounting screw (A), and then remove in-vehicle sensor (1).

INSTALLATION

Installation is basically the reverse order of removal.

SUNLOAD SENSOR



PFP:27721

Removal and Installation

NJS0001I

REMOVAL

1. Pull out sunload sensor from instrument panel.
2. Disconnect sunload sensor connector, and then remove sunload sensor.

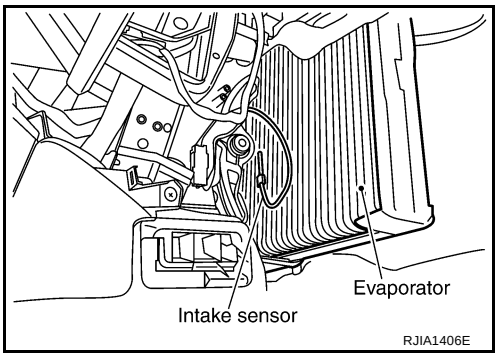
INSTALLATION

Installation is basically the reverse order of removal.

INTAKE SENSOR

PFP:27723

Removal and Installation



NJS0001J

REMOVAL

1. Remove low-pressure pipe 1 and high-pressure pipe 2. Refer to ATC-131, "Removal and Installation of Low-pressure Pipe 1 and High-pressure Pipe 2" .

   CAUTION:
   Cap or wrap the joint of evaporator, low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with suitable material such as vinyl tape to avoid the entry of air.

2. Slide evaporator to passenger side, and then remove intake sensor.

INSTALLATION

Installation is basically the reverse order of removal.

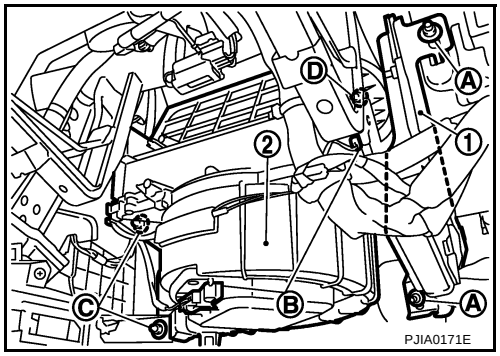
CAUTION:

- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Mark the mounting position of intake sensor bracket prior to removal so that the reinstalled sensor can be located in the same position.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

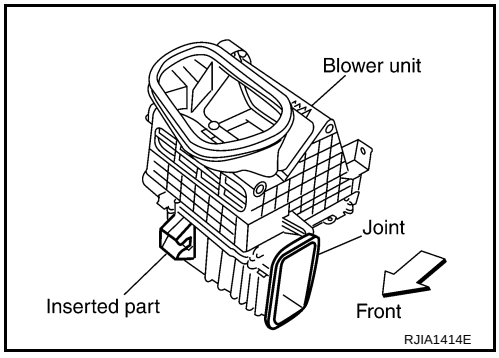
BLOWER UNIT

PFP:27200

Removal and Installation



NJS0001K



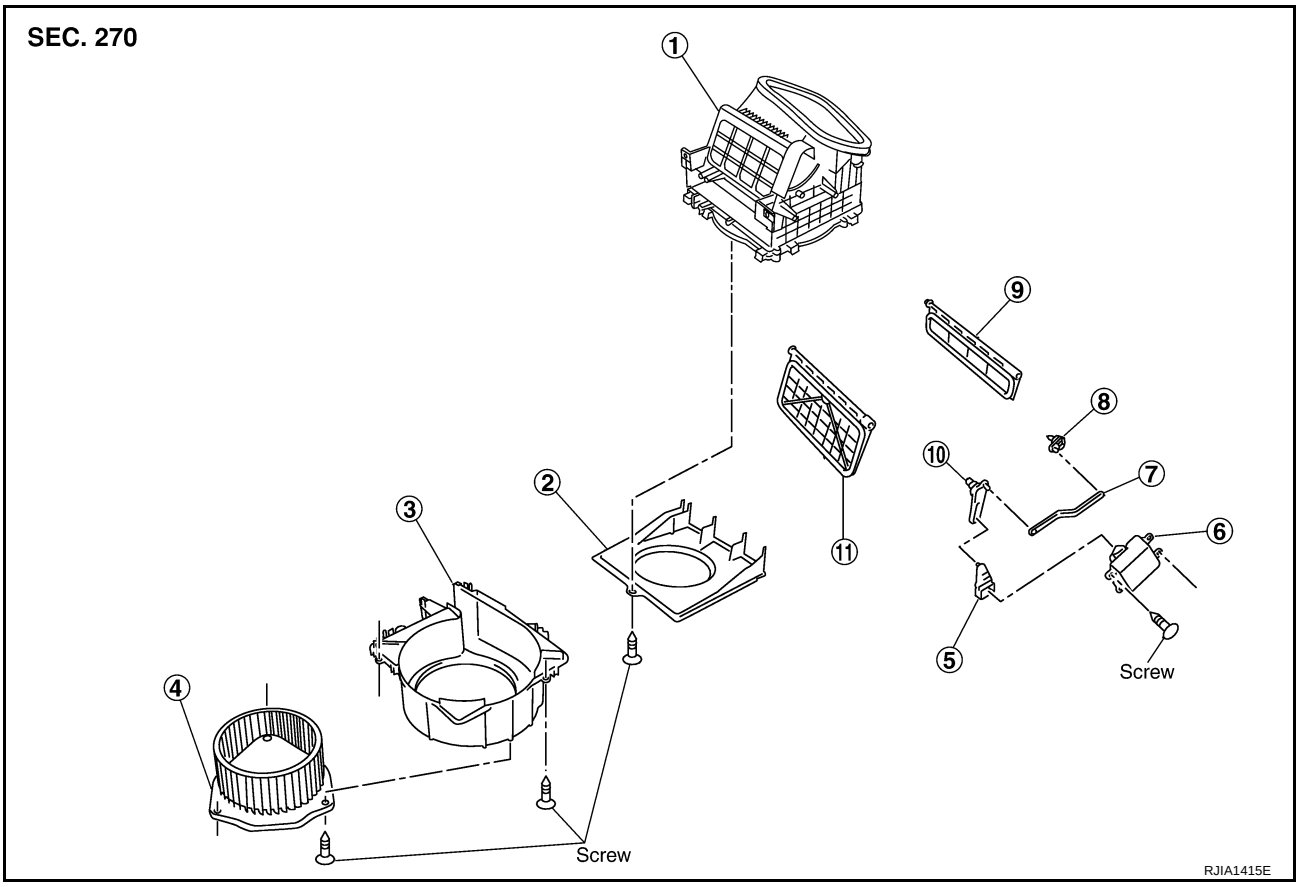
REMOVAL

1. Remove remote keyless entry receiver. Refer to BL-92, "Removal and Installation of Remote Keyless Entry Receiver" .
2. Remove mounting nuts (A), and then remove ECM (1) with bracket attached.
3. Disconnect intake door motor and blower motor connector (B).
4. Remove mounting screws (C) and bolt (D), and then remove blower unit (2).

CAUTION:

Move blower unit rightward, and remove location pin (1 part) and joint. Then remove blower unit downward.

INSTALLATION



Installation is basically the reverse order of removal.

CAUTION:

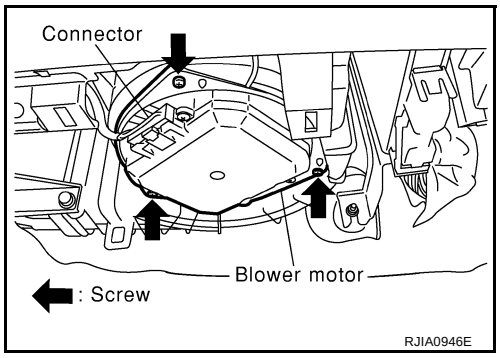
Make sure location pin (1 part) and joint are securely inserted.

Disassembly and Assembly

NJS0001L

1. Intake upper case
2. Intake bell mouth
3. Intake lower case
4. Blower motor assembly
5. Intake door lever 2
6. Intake door motor
7. Intake door link
8. Intake door lever 3
9. Intake door 2
10. Intake door lever 1
11. Intake door 1

BLOWER MOTOR



PFP:27226

Removal and Installation

NJS0001M

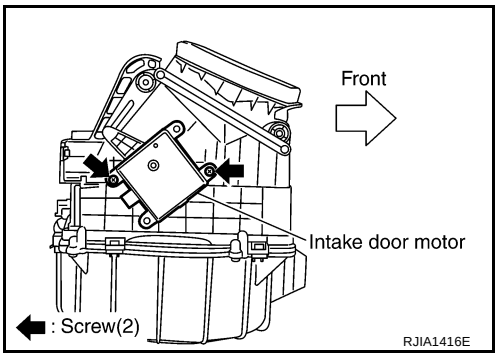
REMOVAL

1. Remove instrument passenger panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect blower motor connector.
3. Remove mounting screws, and then remove blower motor.

INSTALLATION

Installation is basically the reverse order of removal.

INTAKE DOOR MOTOR



PFP:27730

Removal and Installation

NJS0001N

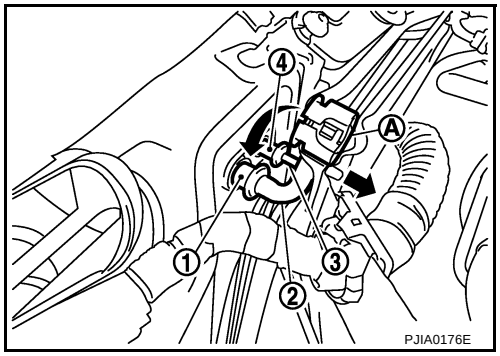
REMOVAL

1. Remove blower unit. Refer to ATC-108, "BLOWER UNIT" .
2. Remove mounting screws, and then remove intake door motor from blower unit.

INSTALLATION

Installation is basically the reverse order of removal.

HEATER & COOLING UNIT ASSEMBLY



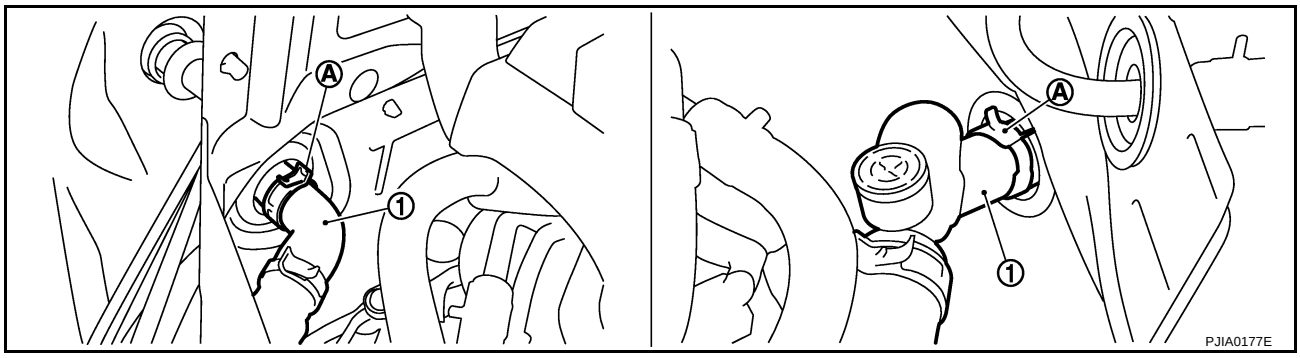
PFP:27110

Removal and Installation

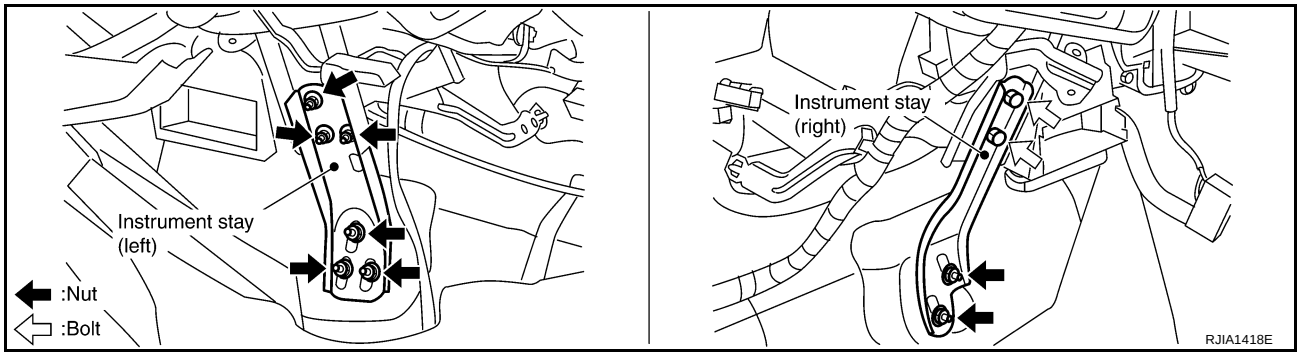
NJS0001O

REMOVAL

1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Drain coolant from cooling system. Refer to CO-10, "Changing Engine Coolant" .
3. Remove cowl top cover. Refer to EI-20, "COWL TOP" .
4. Disconnect one-touch joint between low-pressure pipe 1 (1) and low-pressure pipe 2 (2) with disconnector (SST: 9253089916) (A).



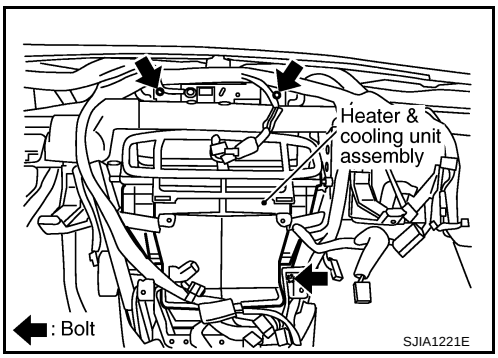
CAUTION:
Cap or wrap the joint of low-pressure pipe 1 and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.



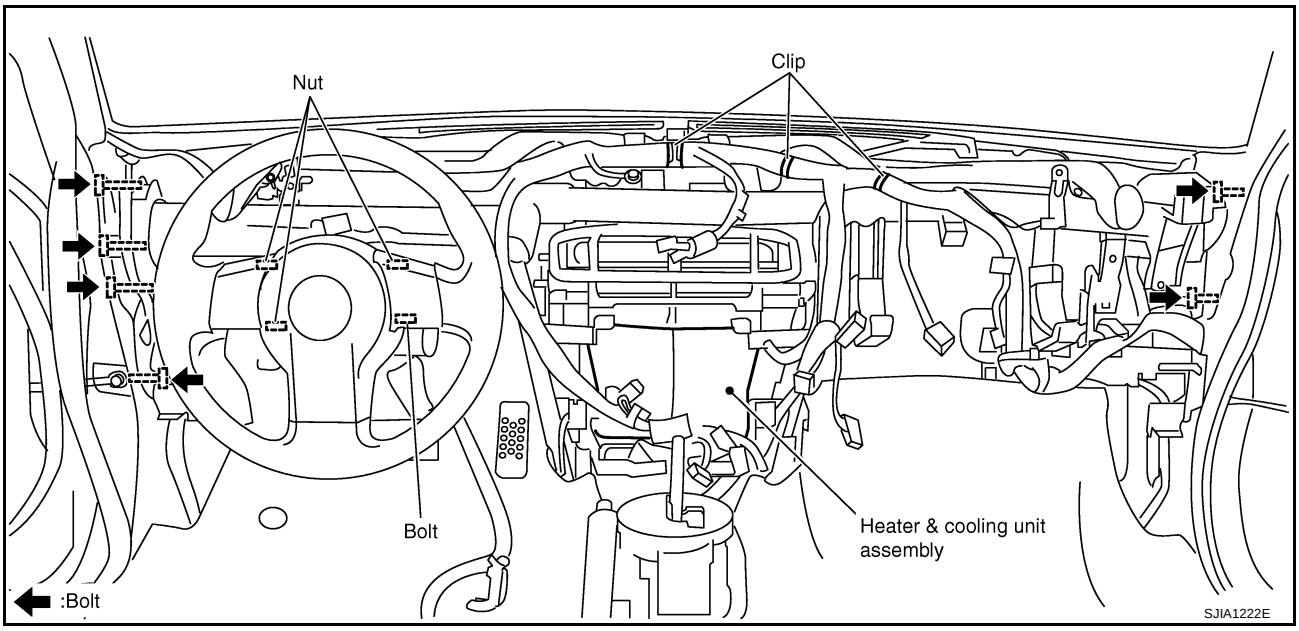
5. Disconnect one-touch-joint between high-pressure pipe 1 (3) and high-pressure pipe 2 (4) with disconnector (SST: 9253089908) (A).

CAUTION:
Cap or wrap the joint of high-pressure pipe 1 and high-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.

6. Remove clamps (A), and then disconnect two heater hoses (1) from heater core.



7. Remove instrument panel. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
8. Remove blower unit. Refer to ATC-108, "BLOWER UNIT" .
9. Remove clips of vehicle harness from steering member.
10. Remove mounting nuts and bolts, and then remove instrument stays (left and right).



11. Remove defroster nozzle and ventilator ducts. Refer to ATC-121, "Removal of Defroster Nozzle, Ducts and Ventilator Ducts" .

12. Remove mounting bolts from heater & cooling unit assembly.

13. Remove steering column assembly mounting nuts and bolt.
14. Remove steering member mounting bolts, and then remove steering member.

15. Remove heater & cooling unit assembly.

INSTALLATION

Installation is basically the reverse order of removal.

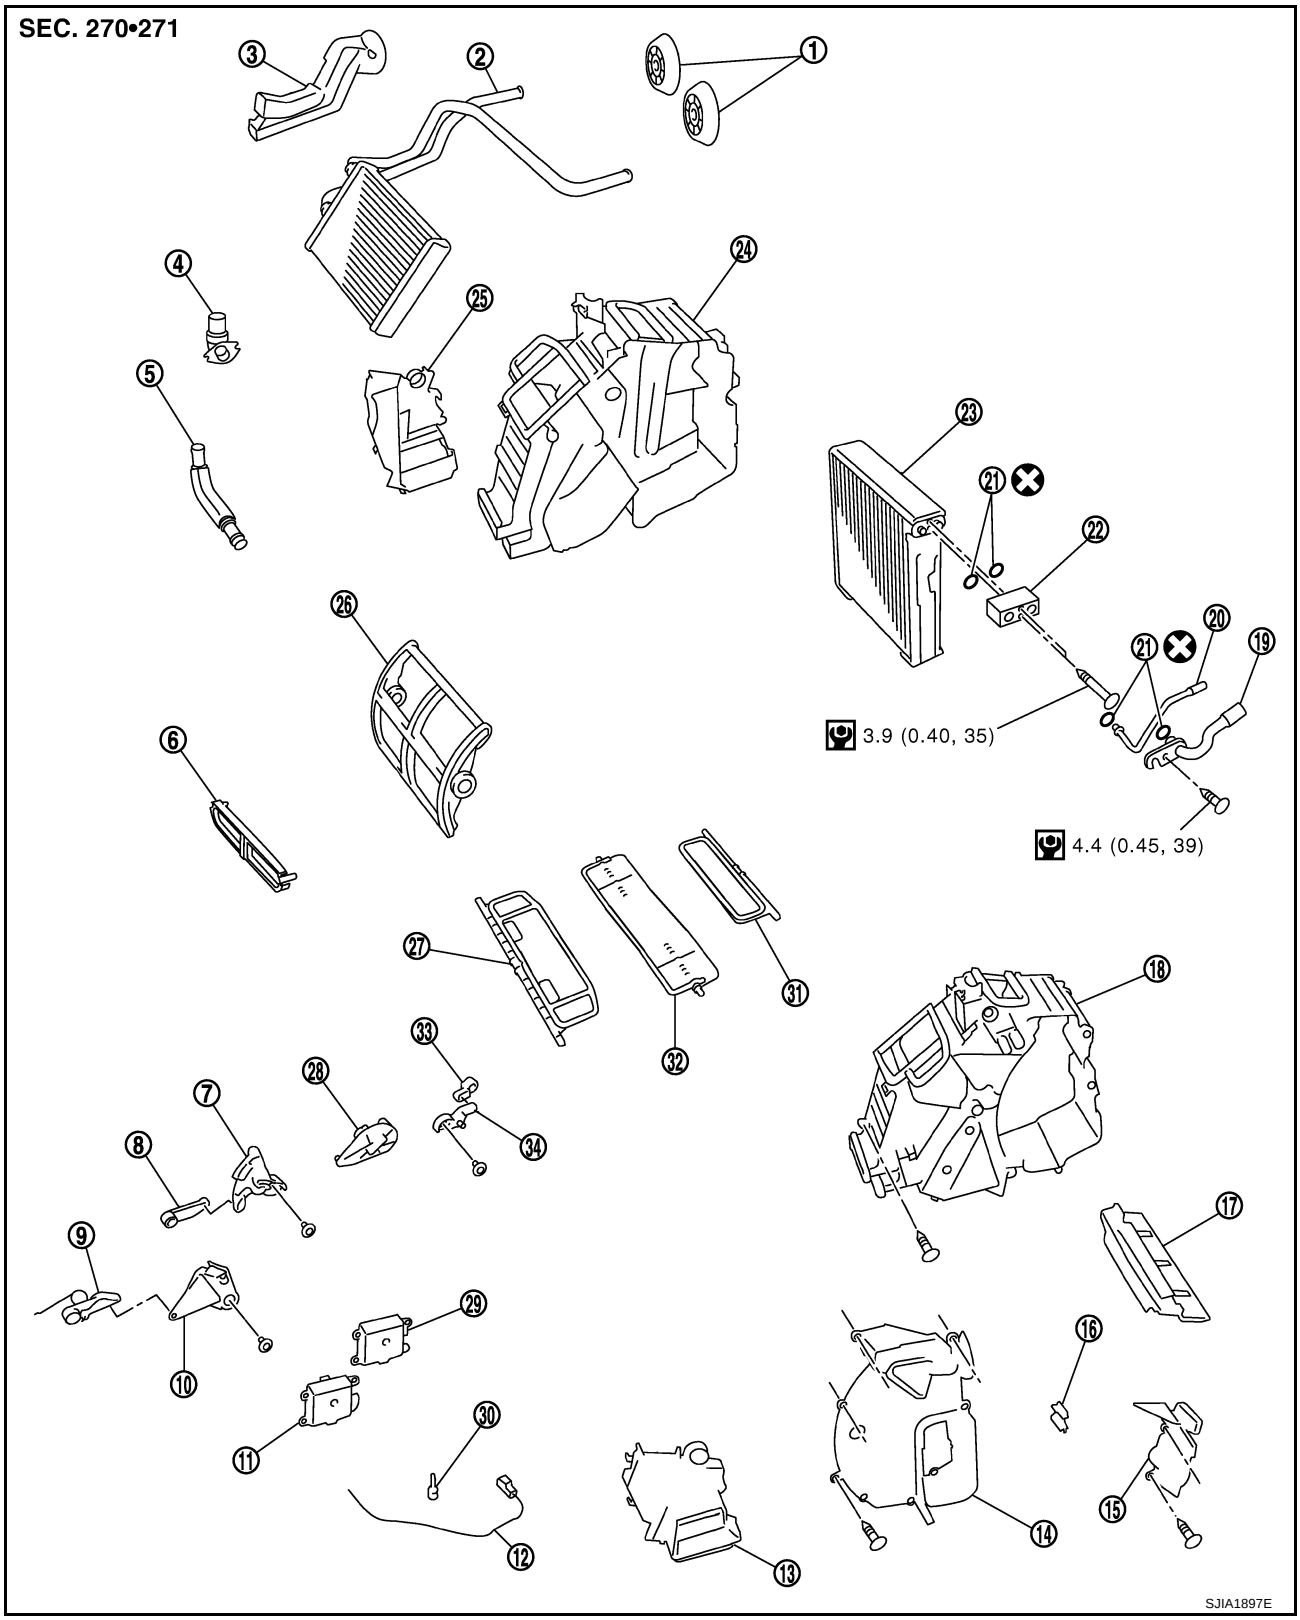
CAUTION:

- **Replace O-rings of low-pressure pipe 2 and high-pressure pipe 1 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

NOTE:

- When filling radiator with coolant, refer to CO-10, "Changing Engine Coolant" .
- Recharge the refrigerant.

Heater & cooling unit assembly mounting bolts



: 6.9 N·m (0.7 kg-m, 61 in-lb)

Steering member and steering column assembly mounting nuts and bolt

: 12 N·m (1.2 kg-m, 9 ft-lb)

Disassembly and Assembly

NJS0001P

1. Heater pipe grommet
2. Heater core
3. Heater pipe cover
4. Aspirator
5. Aspirator duct
6. Rear foot cover

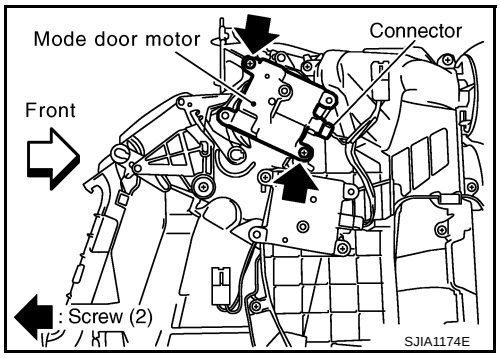
31. Defroster door
32. Max. cool door
33. Defroster door lever
34. Defroster door link

: N·m (kg-m, in-lb)

: Always replace after every disassembly.

MODE DOOR MOTOR



PFP:27731

Removal and Installation

NJS0001Q

REMOVAL

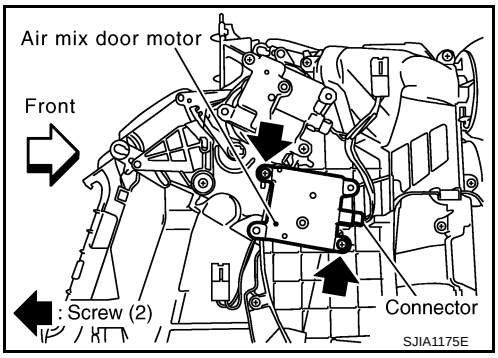
1. Remove blower unit. Refer to ATC-108, "BLOWER UNIT" .
2. Remove mounting screws from mode door motor.
3. Disconnect connector, and then remove mode door motor.

INSTALLATION

Installation is basically the reverse order of removal.

AIR MIX DOOR MOTOR

PFP:27732



Removal and Installation

NJS0001R

REMOVAL

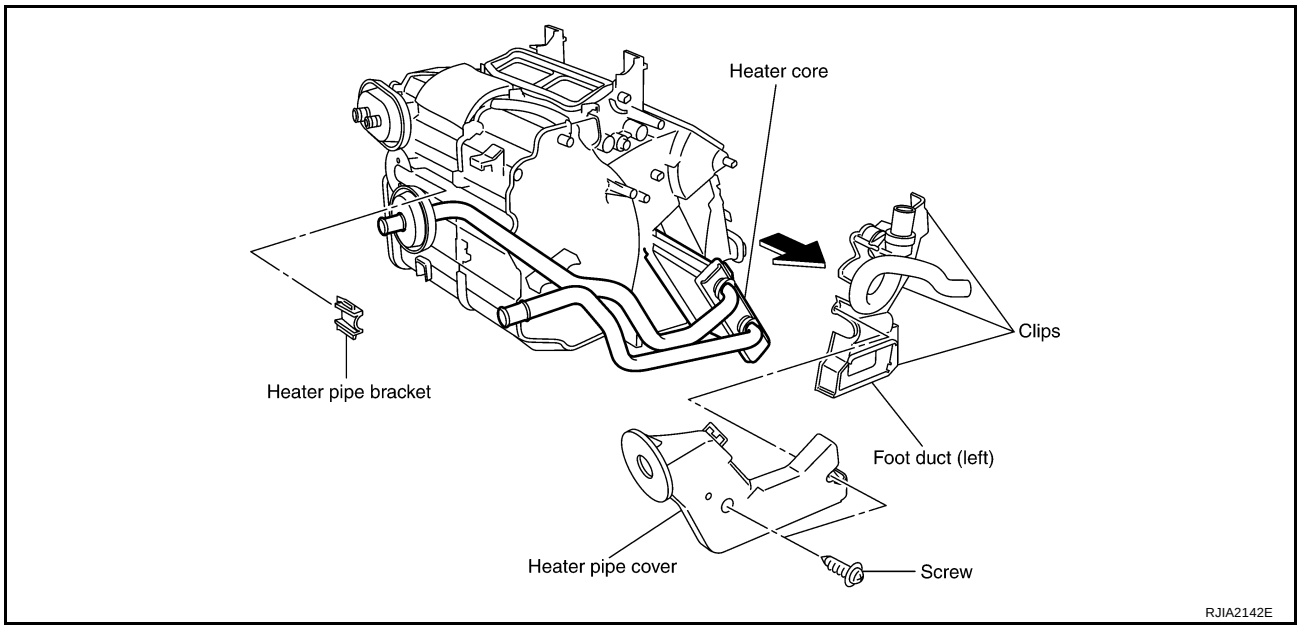
1. Set the temperature control dial at 18°C (60°F).
2. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal.

   CAUTION:
   After the battery cables are disconnected, do not open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
3. Remove blower unit. Refer to ATC-108, "BLOWER UNIT" .
4. Disconnect air mix door motor connector.
5. Remove mounting screws, and then remove air mix door motor.

INSTALLATION

Installation is basically the reverse order of removal.

HEATER CORE



PFP:27140

Removal and Installation

NJS0001S

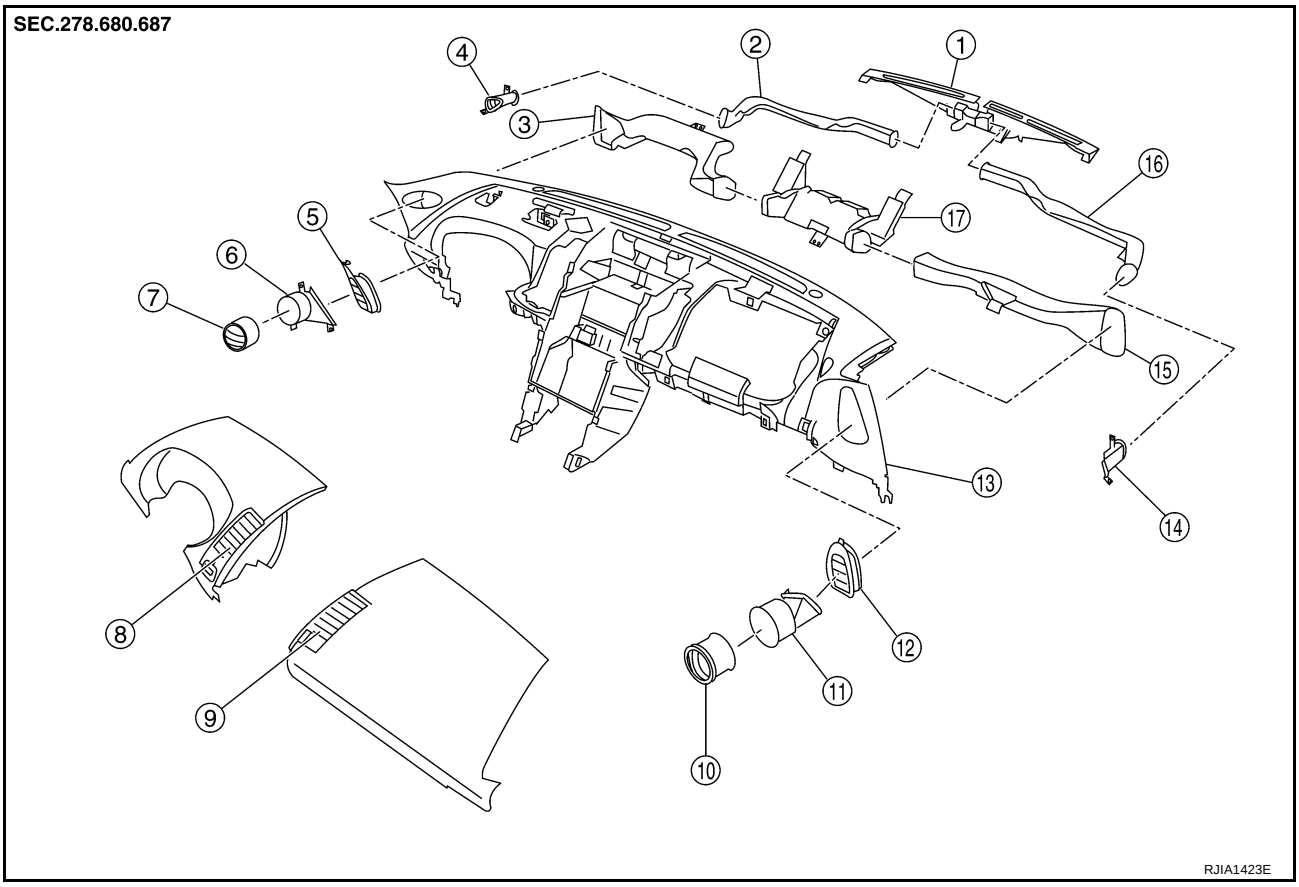
REMOVAL

1. Remove heater & cooling unit assembly. Refer to ATC-112, "HEATER & COOLING UNIT ASSEMBLY" .
2. Remove foot duct (left). Refer to ATC-122, "Removal of Foot Ducts" .

3. Remove mounting screws, and then remove heater pipe cover.
4. Remove heater pipe bracket and heater pipe grommet.
5. Slide heater core to leftward.

INSTALLATION

Installation is basically the reverse order of removal.



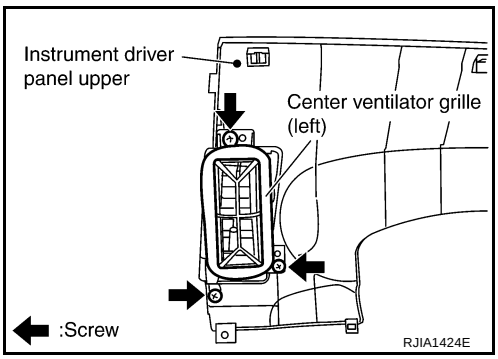
DUCTS AND GRILLES

PFP:27860

Removal and Installation

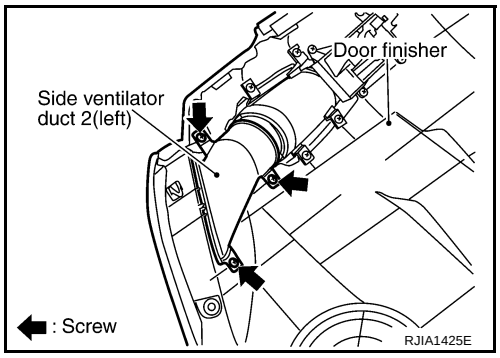
NJS0001T

COMPONENT LAYOUT



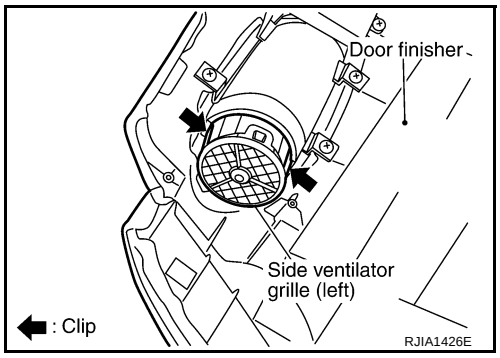
1. Defroster nozzle
2. Side defroster duct 1 (left)
3. Side ventilator duct 1 (left)
4. Side defroster duct 2 (left)
5. Instrument side finisher (left)
6. Side ventilator duct 2 (left)
7. Side ventilator grille (left)
8. Center ventilator grille (left)
9. Center ventilator grille (right)
10. Side ventilator grille (right)
11. Side ventilator duct 2 (right)
12. Instrument side finisher (right)
13. Instrument panel
14. Side defroster duct 2 (right)
15. Side ventilator duct 1 (right)
16. Side defroster duct 1 (right)
17. Center ventilator duct

REMOVAL



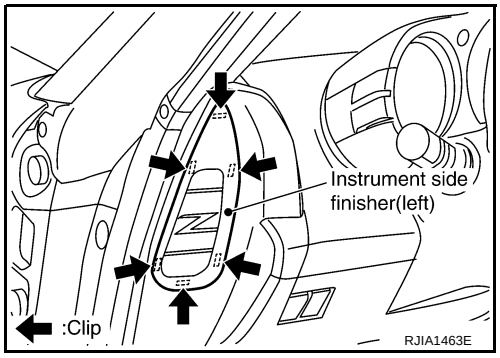
Removal of Center Ventilator Grilles

1. Remove instrument driver and passenger panel upper. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove mounting screws, and then remove center ventilator grilles.

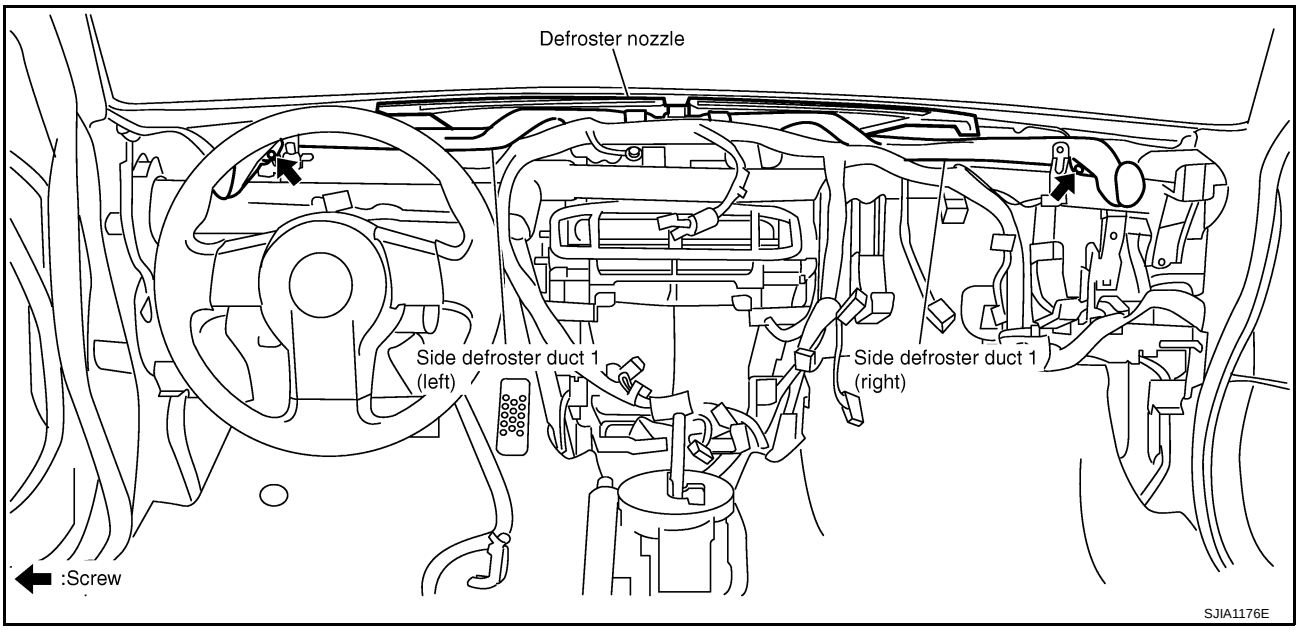


Removal of Side Ventilator Duct 2 and Grilles

1. Remove door finisher. Refer to EI-33, "DOOR FINISHER" .
2. Remove mounting screws, and then remove side ventilator duct 2 (left and right).

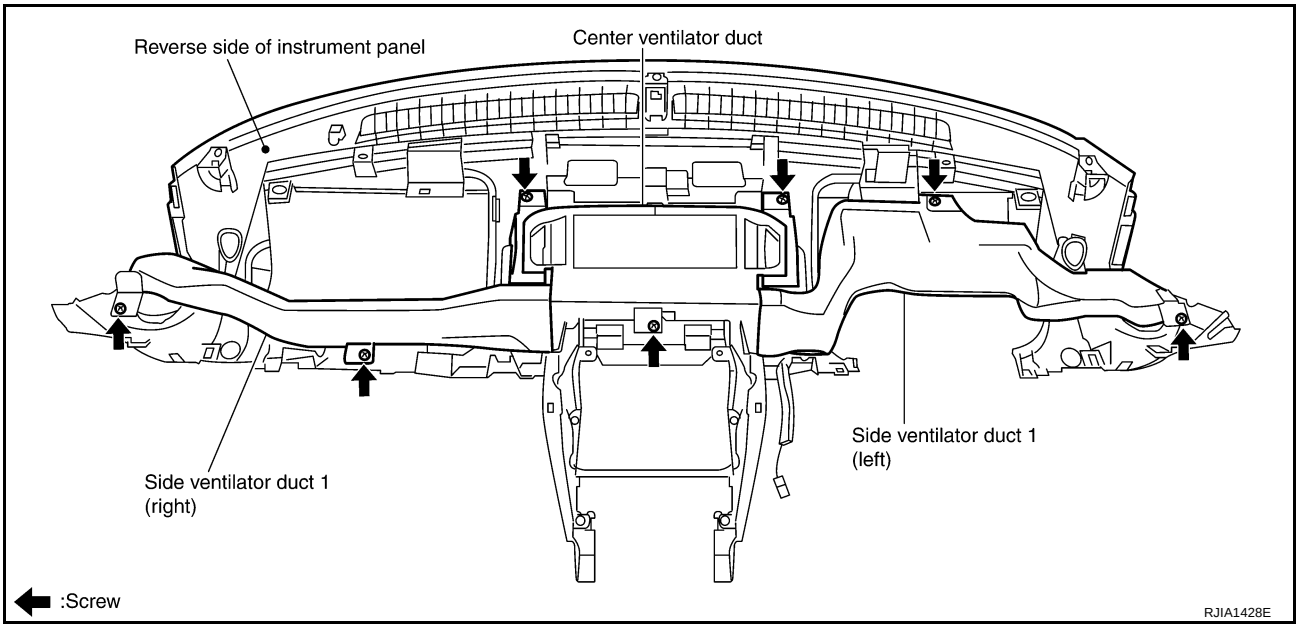


3. Remove mounting clips, and then remove side ventilator grilles (left and right).

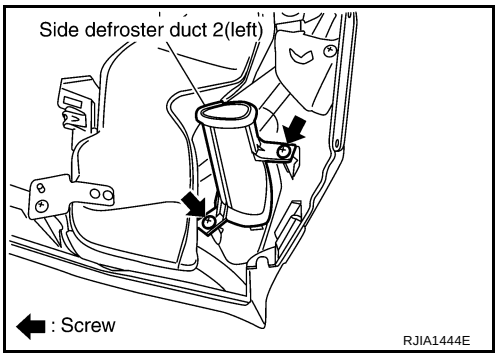


Removal of Instrument Side Finishers

Remove mounting clips, and then remove instrument side finishers (left and right).

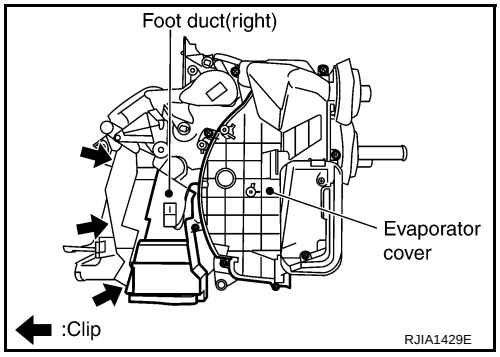


Removal of Defroster Nozzle, Ducts and Ventilator Ducts



1. Remove instrument panel. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove mounting screws, and then remove side defroster duct 1 (left and right).
3. Remove steering member, and then remove defroster nozzle.

4. Remove mounting screws, and then remove side ventilator duct 1 (left and right) and center ventilator duct from instrument panel.



5. Remove mounting screws, and then remove side defroster duct 2 (left and right).

Removal of Foot Ducts

1. Remove heater & cooling unit assembly. Refer to ATC-112, "HEATER & COOLING UNIT ASSEMBLY" .
2. Remove evaporator cover, and then remove foot duct (right).
3. Remove aspirator and heater pipe cover.
4. Remove mounting clips, and then remove foot duct (left).

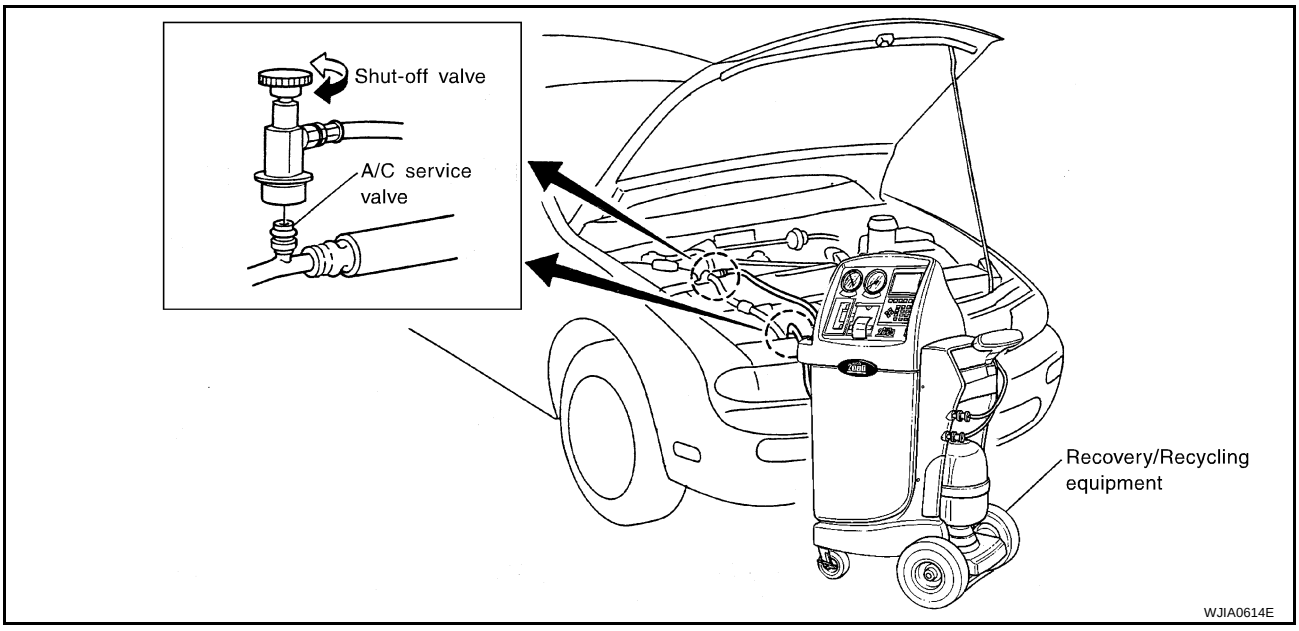
INSTALLATION

Installation is basically the reverse order of removal.

REFRIGERANT LINES

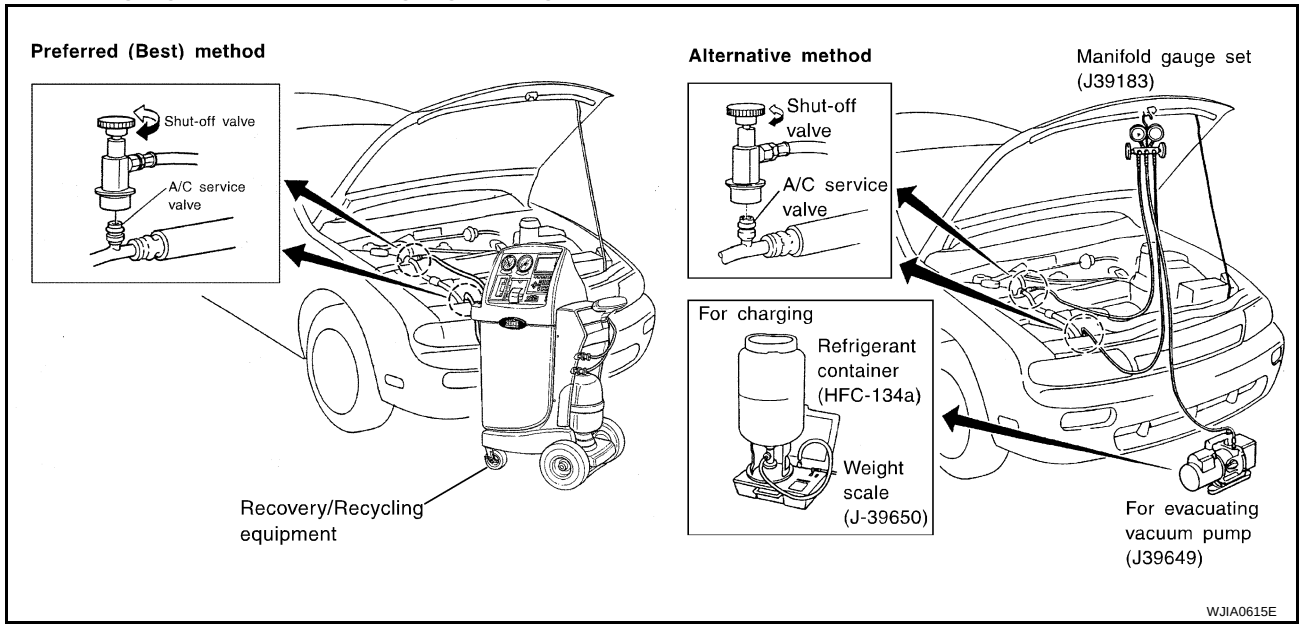
PFP:92600

HFC-134a (R-134a) Service Procedure

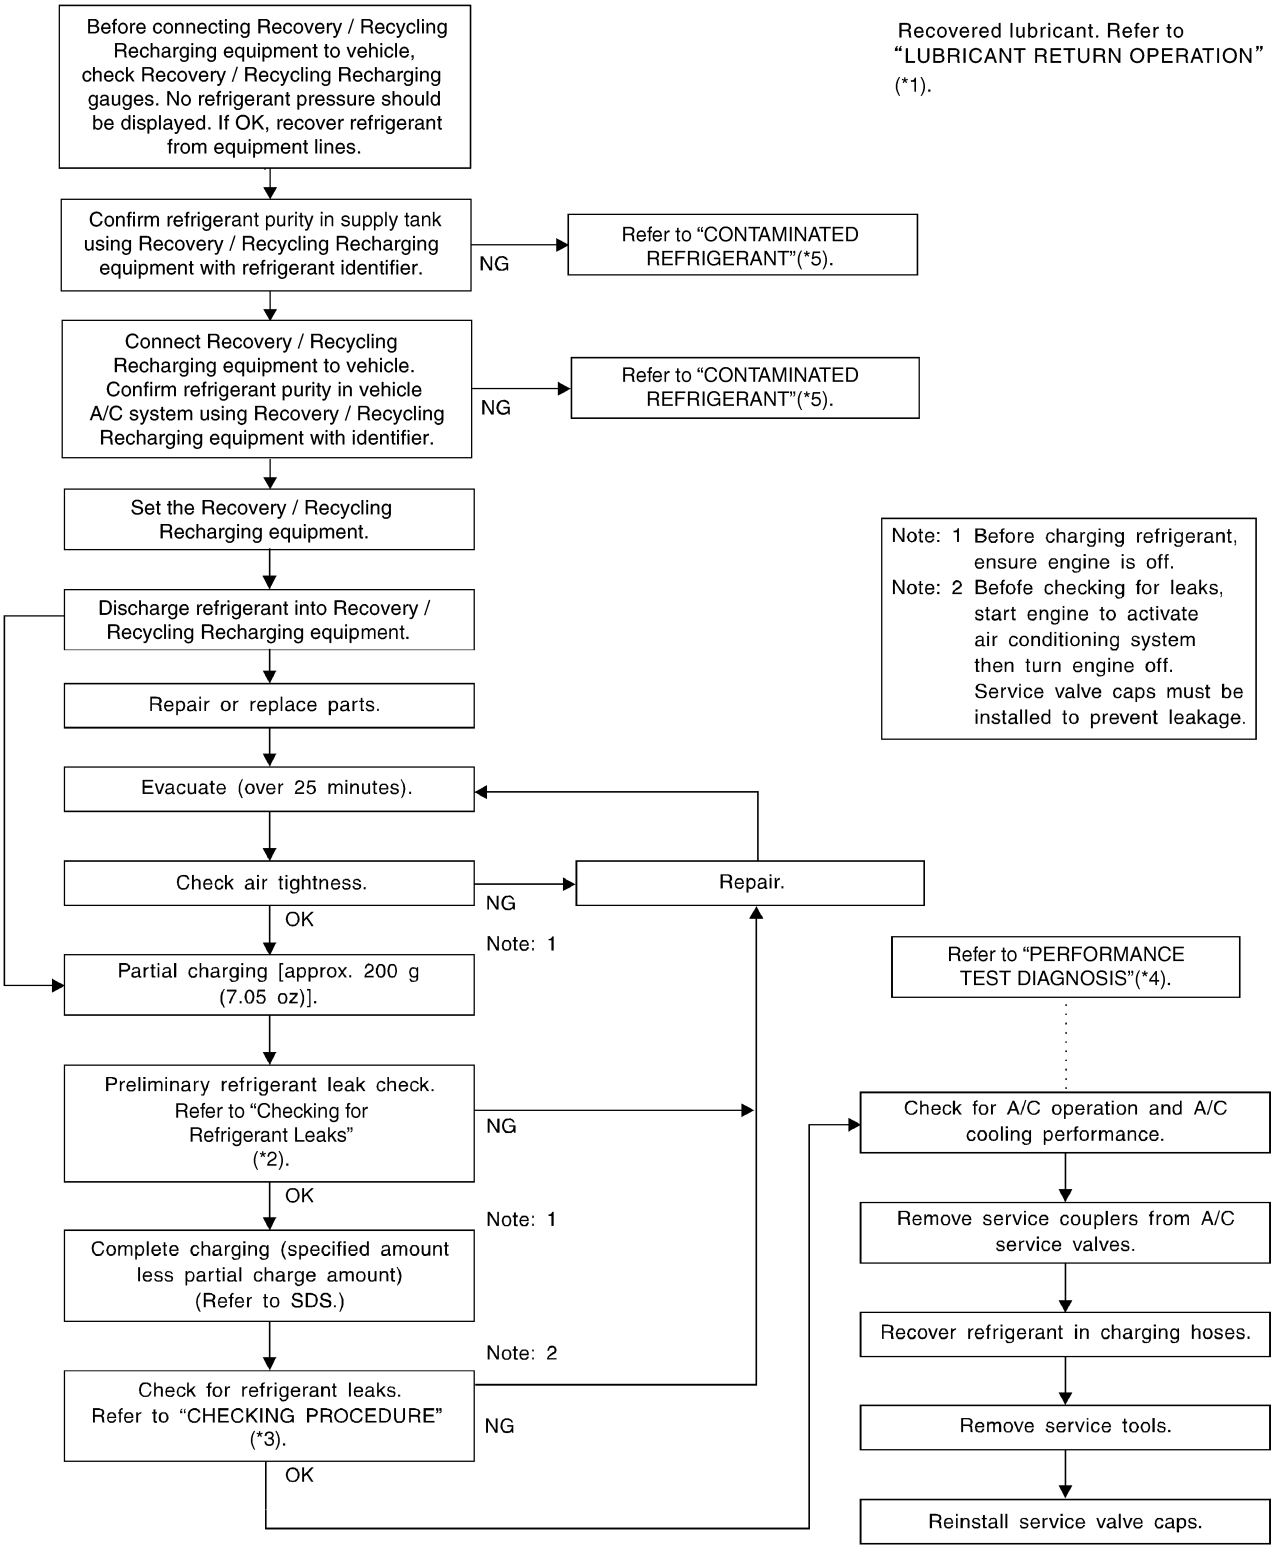


NJS0001U

SETTING OF SERVICE TOOLS AND EQUIPMENT



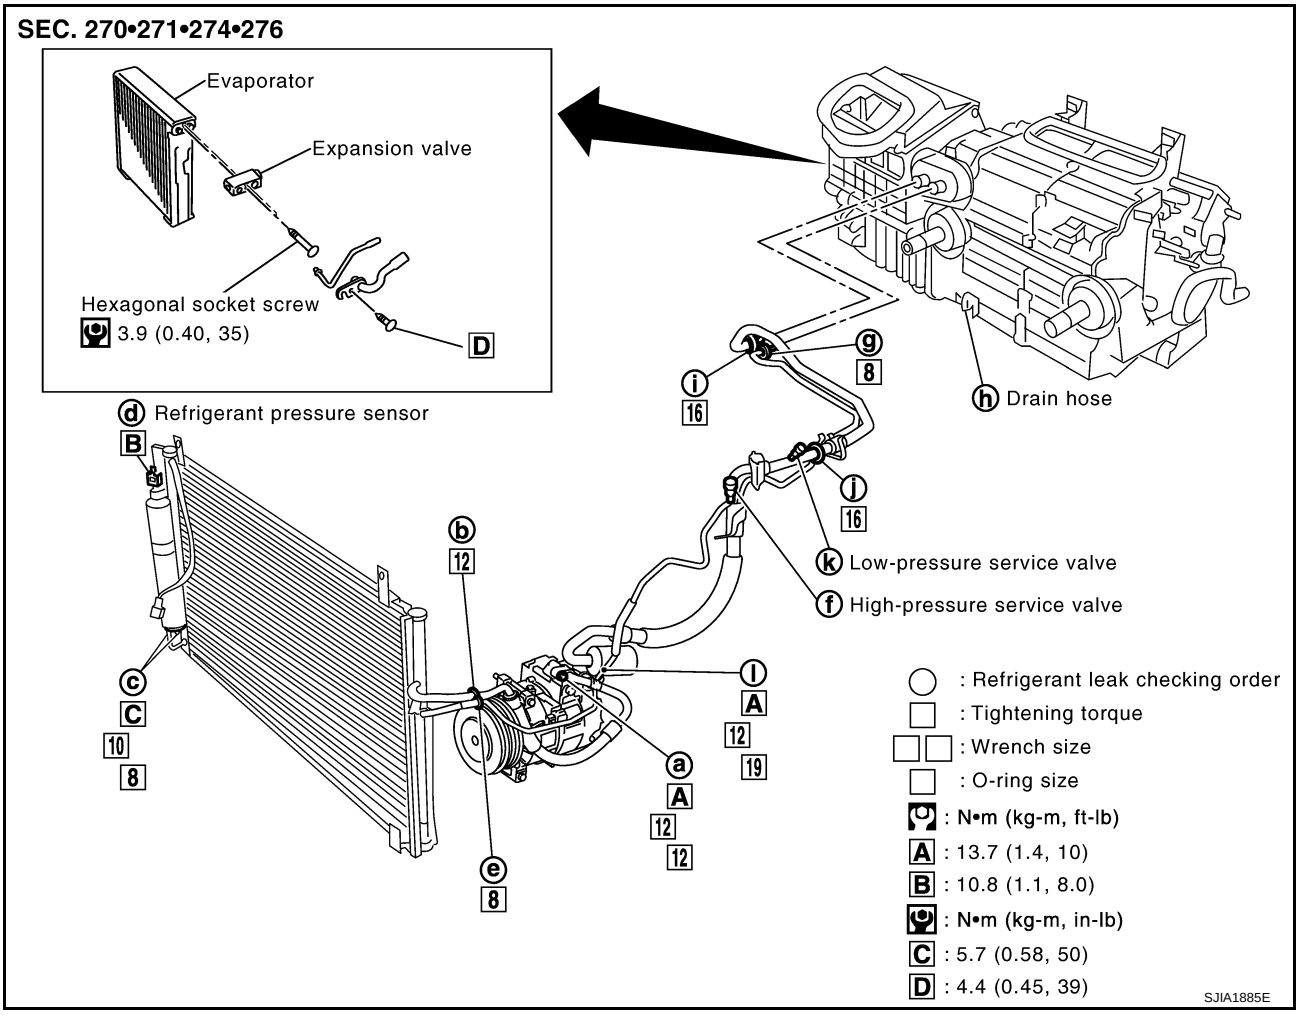
Discharging Refrigerant



WARNING:

Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from A/C system using certified service equipment meeting requirements of SAE J-2210 [HFC-134a (R-134a) recycling equipment] or J-2209 [HFC-134a (R-134a) recovery equipment]. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.

Evacuating System and Charging Refrigerant

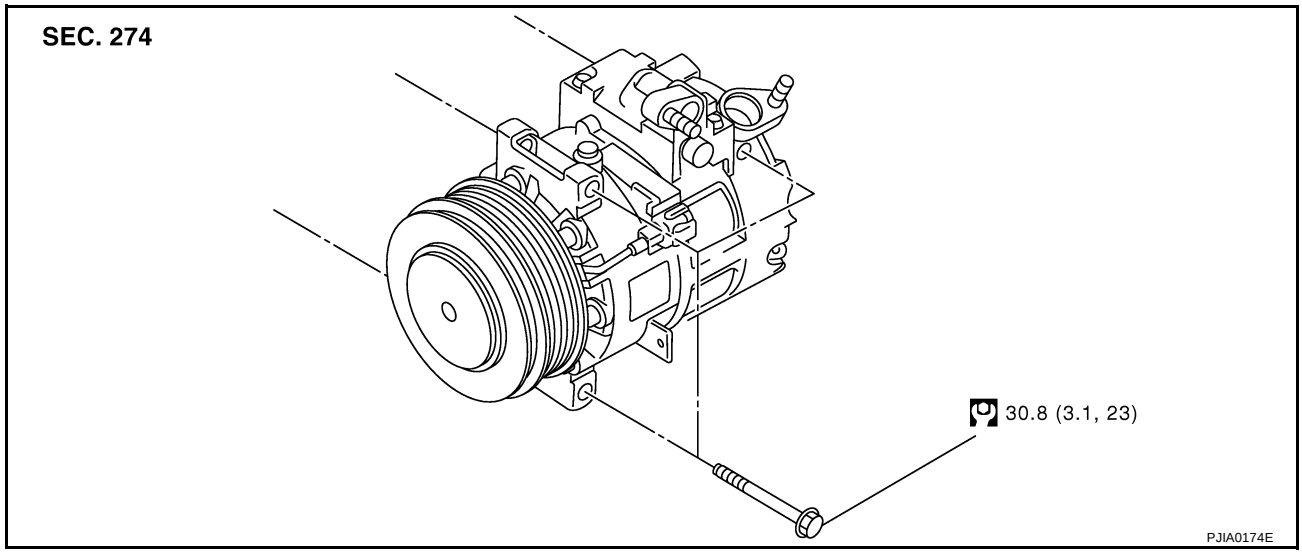


SJIA1275E

*1 ATC-21, "LUBRICANT RETURN OPERATION"
*2 ATC-138, "Checking for Refrigerant Leaks"
*3 ATC-140, "CHECKING PROCEDURE"
*4 ATC-83, "PERFORMANCE TEST DIAGNOSIS"
*5 ATC-5, "CONTAMINATED REFRIGERANT"

Components

NJS0001V

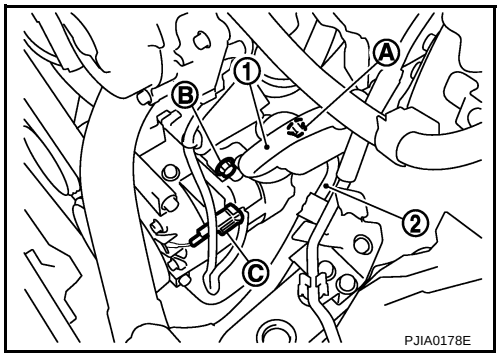


Refer to ATC-7, "Precautions for Refrigerant Connection" .

Removal and Installation of Compressor

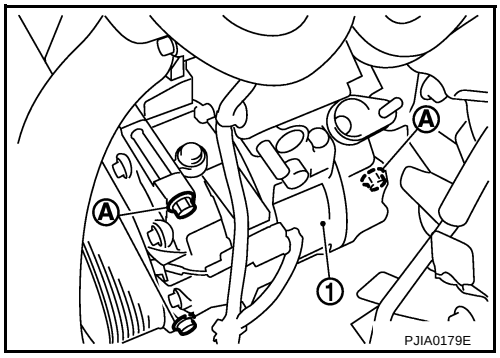
NJS0001W

REMOVAL



: N·m (kg-m, ft-lb)

1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Remove tower bar. Refer to FSU-20, "TOWER BAR" .



3. Remove engine cover (1), (2). Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
4. Remove air cleaner case (LH) and air duct (LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
5. Remove mounting nuts (A) from low-pressure flexible hose (1).
6. Remove mounting nuts (B) from high-pressure flexible hose (2).

CAUTION:
Cap or wrap the joint of compressor, low-pressure flexible hose and high-pressure flexible hose with suitable material such as vinyl tape to avoid the entry of air.

7. Disconnect compressor connector (C).
8. Remove drive belt. Refer to EM-12, "DRIVE BELTS" .

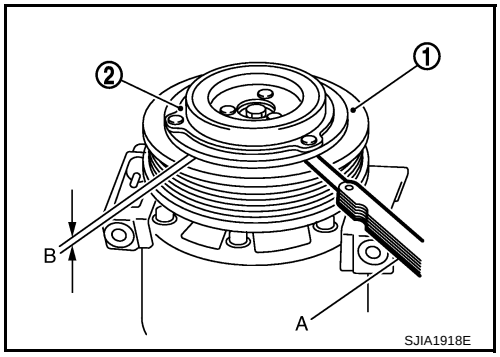
9. Remove mounting bolts (A) from compressor, using power tools.
10. Remove compressor (1) upward of vehicle.

INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of low-pressure flexible hose and high-pressure flexible hose with new ones, and then apply compressor oil to it when installing it.**
- **When recharging refrigerant, check for leaks.**



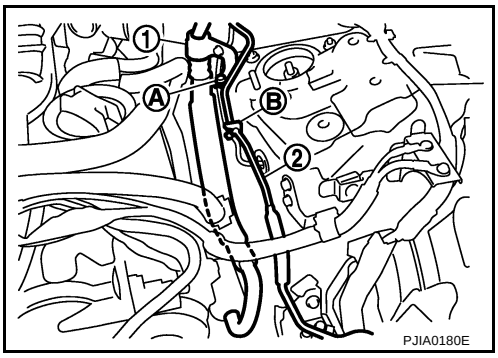
Check Disc to Pulley Clearance

NJS000IE

Check the clearance (B) between pulley assembly (1) and clutch disc (2) around the entire periphery with feeler gauge (A).

Disc to pulley clearance : 0.30 - 0.60 mm (0.012 - 0.024 in)

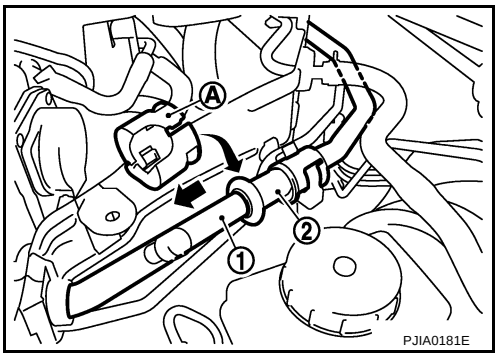
If specified clearance is not obtained, replace compressor.



Removal and Installation of Low-pressure Flexible Hose and Pipe 2

NJS0001Y

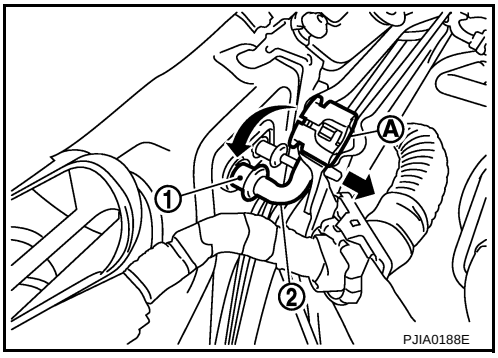
REMOVAL



1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Remove cowl top cover. Refer to EI-20, "COWL TOP" .
3. Remove tower bar. Refer to FSU-20, "TOWER BAR" .
4. Remove engine cover (1), (2). Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
5. Remove air cleaner case (LH) and air duct (LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
6. Remove mounting bolt (A) from low-pressure flexible hose bracket (1).
7. Remove high-pressure pipe 1 (2) from vehicle clip (B).

8. Disconnect one-touch joint between low-pressure flexible hose (1) and low-pressure pipe 2 (2) with disconnector (SST: 9253089916) (A).

CAUTION:

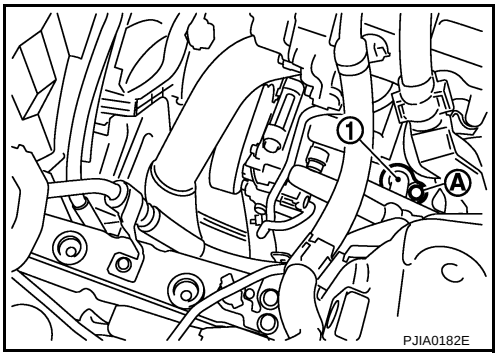


Cap or wrap the joint of low-pressure flexible hose and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.

9. Disconnect one-touch joint between low-pressure pipe 1 (1) and low-pressure pipe 2 (2) with disconnector (SST: 9253089916) (A).

CAUTION:

Cap or wrap the joint of low-pressure pipe 1 and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.



10. Remove mounting nut (A) from low-pressure flexible hose (1). (Compressor side)

CAUTION:

Cap or wrap the joint of compressor and low-pressure flexible hose with suitable material such as vinyl tape to avoid the entry of air.

11. Remove low-pressure flexible hose.

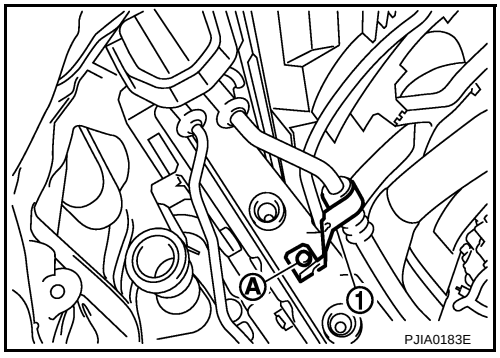
INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of low-pressure flexible hose and low-pressure pipe 2 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

Low-pressure flexible hose bracket mounting bolt

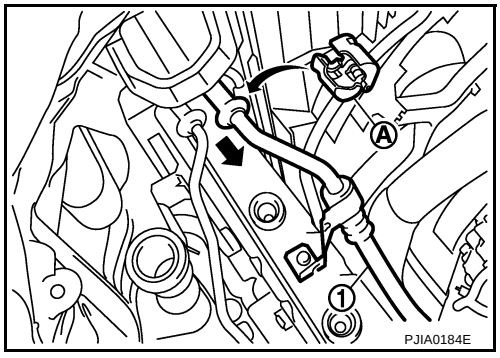


: 4.2 N·m (0.43 kg-m, 37 in-lb)

Removal and Installation of High-pressure Flexible Hose

NJS0001Z

REMOVAL



1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Remove tower bar. Refer to FSU-20, "TOWER BAR" .
3. Remove engine cover (1), (2). Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
4. Remove air cleaner case (LH) and air duct (LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
5. Remove mounting bolt (A) from high-pressure flexible hose bracket (1).

6. Disconnect one-touch joint between high-pressure flexible hose (1) and condenser with disconnector (SST: 9253089912) (A).

   CAUTION:

   Cap or wrap the joint of high-pressure flexible hose and condenser with suitable material such as vinyl tape to avoid the entry of air.

7. Remove mounting nut (A) from high-pressure flexible hose (1), and then remove high-pressure flexible hose.

   CAUTION:

   Cap or wrap the joint of high-pressure flexible hose and compressor with suitable material such as vinyl tape to avoid the entry of air.

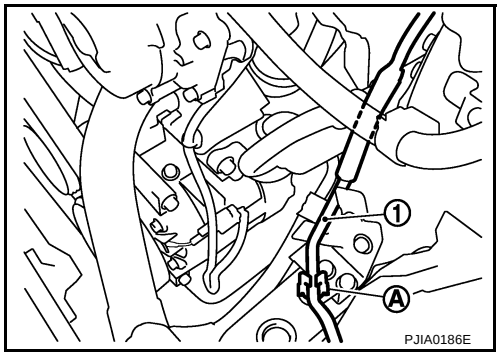
INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of high-pressure flexible hose with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

High-pressure flexible hose bracket mounting bolt

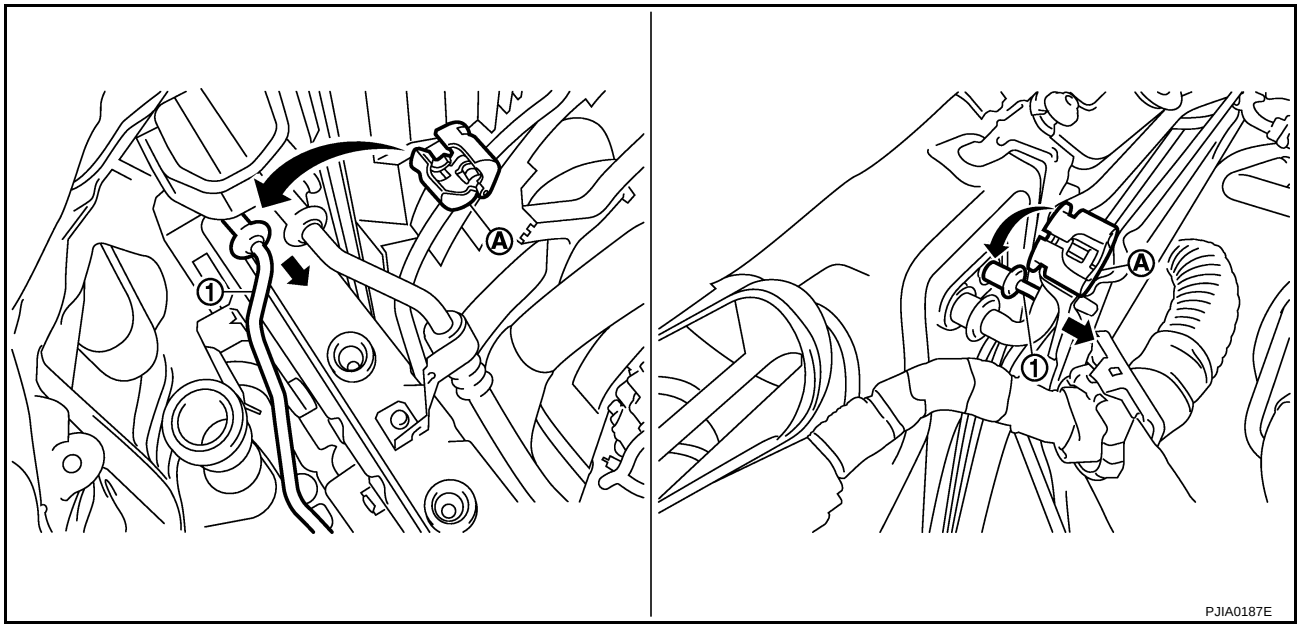


: 4.2 N·m (0.43 kg-m, 37 in-lb)

Removal and Installation of High-pressure Pipe 1 (Engine Compartment)

NJS00020

REMOVAL



1. Remove low-pressure flexible hose and pipe 2. Refer to ATC-127, "Removal and Installation of Low-pressure Flexible Hose and Pipe 2" .
2. Remove high-pressure pipe 1 (1) from vehicle clip (A).

3. Disconnect one-touch joint between high-pressure pipe 1 (1) and condenser with disconnector (SST: 9253089908) (A).

CAUTION:

Cap or wrap the joint of condenser and high-pressure pipe 1 with suitable material such as vinyl tape to avoid the entry of air.

4. Disconnect one-touch joint between high-pressure pipe 1 (1) and high-pressure pipe 2 with disconnector (SST: 9253089908) (A).

CAUTION:

Cap or wrap the joint of high-pressure pipe 1 and 2 with suitable material such as vinyl tape to avoid the entry of air.

5. Remove high-pressure pipe 1.

INSTALLATION

Installation is basically the reverse order of removal.

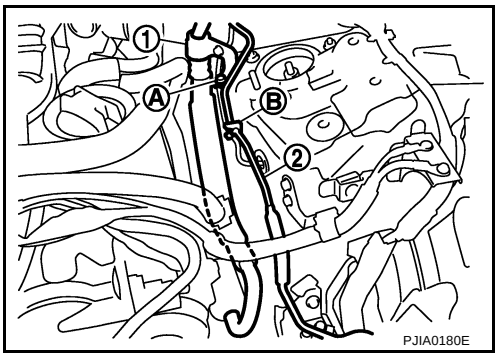
CAUTION:

- **Replace O-rings of high-pressure pipe 1 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**

- **When recharging refrigerant, check for leaks.**

High-pressure flexible hose bracket mounting bolt

: 4.2 N·m (0.43 kg-m, 37 in-lb)



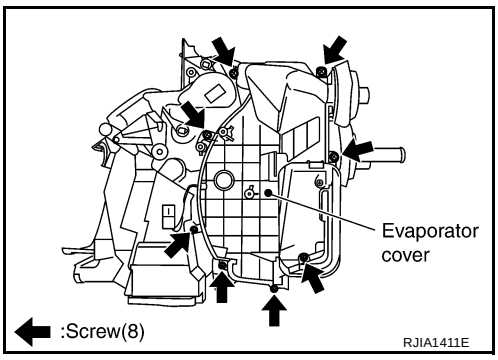
Removal and Installation of Low-pressure Pipe 1 and High-pressure Pipe 2

NJS00021

REMOVAL

1. Set the temperature control dial at 18°C (60°F).
2. Open the driver and passenger window, and then disconnect the battery cable from the negative terminal.

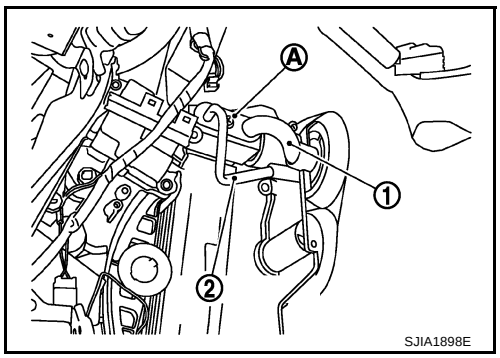
   CAUTION:
   After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
3. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
4. Remove cowl top cover. Refer to EI-20, "COWL TOP" .
5. Remove mounting bolt (A) from low-pressure flexible hose bracket (1).
6. Remove high-pressure pipe 1 (2) from vehicle clip (B).



7. Disconnect one-touch joint between low-pressure pipe 1 (1) and low-pressure pipe 2 (2) with disconnector (SST: 9253089916) (A).

   CAUTION:
   Cap or wrap the joint of low-pressure pipe 1 and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.
8. Disconnect one-touch joint between high-pressure pipe 1 (3) and high-pressure pipe 2 (4) with disconnector (SST: 9253089908) (A).

   CAUTION:
   Cap or wrap the joint of high-pressure pipe 1 and high-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.



9. Remove instrument passenger panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
10. Remove blower unit. Refer to ATC-108, "BLOWER UNIT" .
11. Remove air mix door motor and mode door motor. Refer to ATC-117, "AIR MIX DOOR MOTOR" and ATC-116, "MODE DOOR MOTOR" .
12. Remove mounting screws, and then remove evaporator cover.

13. Remove mounting bolt (A), and then remove low-pressure pipe 1 (1) and high-pressure pipe 2 (2).

CAUTION:
Cap or wrap the joint of evaporator, low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with suitable material such as vinyl tape to avoid the entry of air.

INSTALLATION

Installation is basically the reverse order of removal.

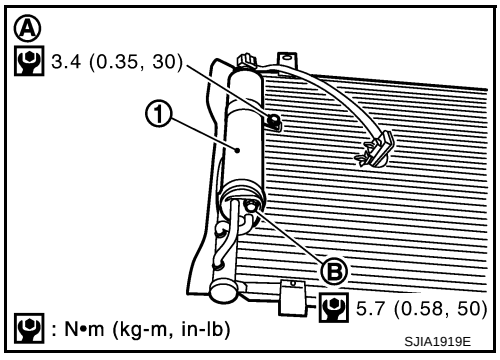
CAUTION:

- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

Low-pressure flexible hose bracket mounting bolt

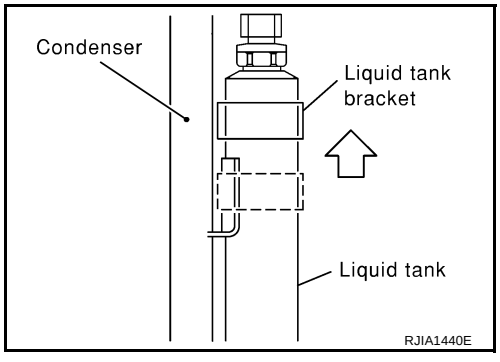
: 4.2 N·m (0.43 kg-m, 37 in-lb)

Removal and Installation of Liquid Tank



NJS00022

REMOVAL

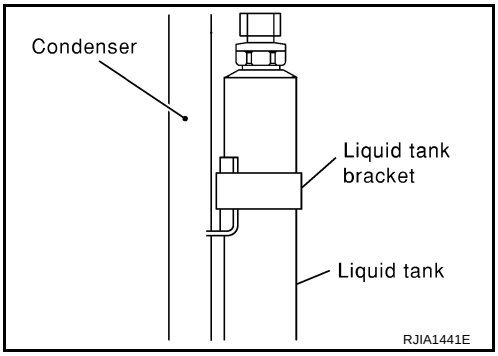


1. Remove condenser. Refer to ATC-133, "Removal and Installation of Condenser" .
2. Clean liquid tank and its surrounding area, and remove dust and rust from liquid tank.

CAUTION:
Be sure to clean carefully.

3. Remove mounting bolts (A), (B) from liquid tank (1).

4. Lift liquid tank bracket upward. Remove liquid tank bracket from protruding part of condenser.
5. Slide liquid tank upward, and then remove liquid tank.

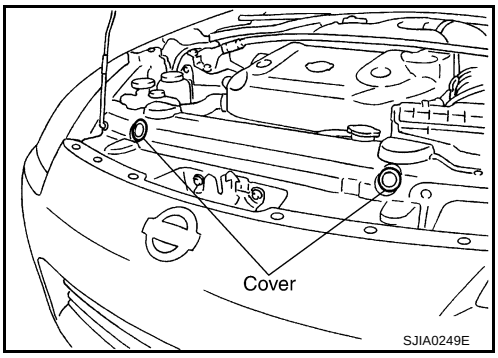


INSTALLATION

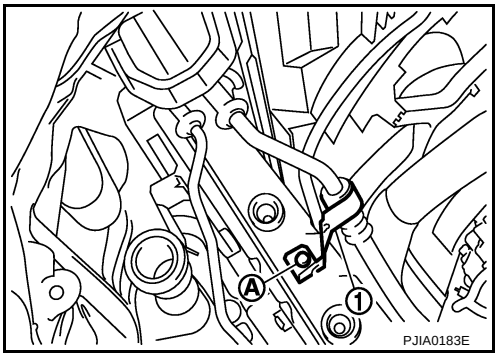
Installation is basically the reverse order of removal.

CAUTION:

- **Make sure liquid tank bracket is securely installed at protrusion of condenser.**
- **Make sure liquid tank bracket does not move to a position below center of liquid tank.**
- **Replace O-rings of condenser pipe with new ones, and then apply compressor oil to it when installing it.**
- **When recharging refrigerant, check for leaks.**



Removal and Installation of Condenser



NJS00023

REMOVAL

1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Drain engine coolant. Refer to CO-10, "Changing Engine Coolant" .
3. Remove cover for condenser mounting bolt.

4. Remove tower bar. Refer to FSU-20, "TOWER BAR" .
5. Remove engine cover (1), (2). Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
6. Remove air cleaner case (LH) and air duct (LH). Refer to and EM-15, "AIR CLEANER AND AIR DUCT" .
7. Remove radiator fan shroud after removing radiator upper hose.
8. Remove mounting bolt for condenser.
9. Remove mounting bolt (A) from high-pressure flexible hose bracket (1).

10. Disconnect one-touch joint between high-pressure flexible hose (1) and condenser with disconnector (SST: 9253089912).

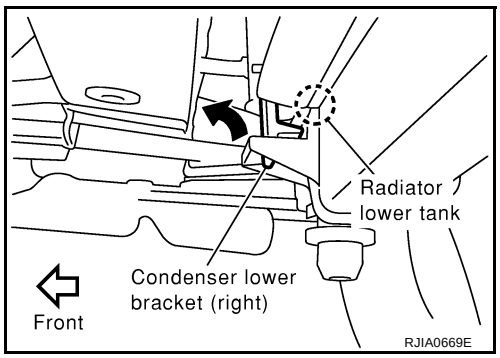
    CAUTION:

    Cap or wrap the high-pressure flexible hose and condenser with suitable material such as vinyl tape to avoid the entry of air.

    Disconnect one-touch joint between high-pressure pipe 1 (2) and condenser with disconnector (SST: 9253089908).

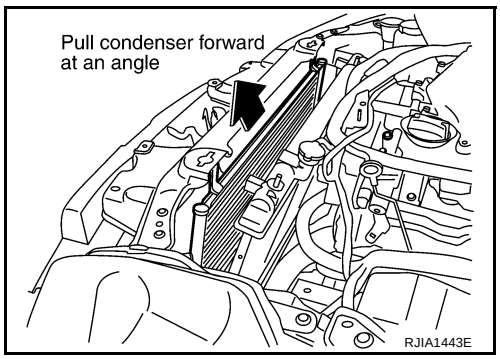
    CAUTION:

    Cap or wrap the joint of high-pressure pipe 1 and condenser with suitable material such as vinyl tape to avoid the entry of air.



11. Remove radiator upper mount, move radiator and condenser to the engine side.

12. Disconnect refrigerant pressure sensor connector.



13. Lift condenser up slightly and tilt it toward front of vehicle. (This is because condenser lower bracket is on bottom of radiator tank.)

14. Pull condenser forward at an angle. Remove condenser from radiator.

CAUTION:

Be careful not to damage core surface of the condenser and the radiator.

INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

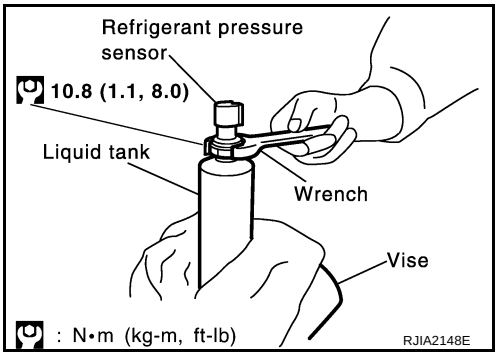
- **Replace O-rings of high-pressure flexible hose and high-pressure pipe 1 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

Condenser mounting bolt

: 4.2 N·m (0.43 kg-m, 37 in-lb)

High-pressure flexible hose bracket mounting bolt

: 4.2 N·m (0.43 kg-m, 37 in-lb)



Removal and Installation of Refrigerant Pressure Sensor

NJS00024

REMOVAL

1. Remove liquid tank. Refer to ATC-132, "Removal and Installation of Liquid Tank" .
2. Using a vise, secure liquid tank, and then remove refrigerant pressure sensor.

CAUTION:
When working, be careful not to damage condenser.

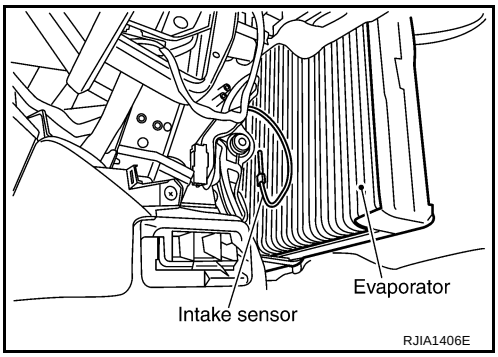
INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Apply compressor oil to the O-ring of the refrigerant pressure sensor when installing it.**
- **When recharging refrigerant, check for leaks.**

Removal and Installation of Evaporator



NJS00025

REMOVAL

1. Remove low-pressure pipe 1 and high-pressure pipe 2. Refer to ATC-131, "Removal and Installation of Low-pressure Pipe 1 and High-pressure Pipe 2" .

CAUTION:
Cap or wrap the joint of evaporator, low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with suitable material such as vinyl tape to avoid the entry of air.

2. Slide evaporator, and then remove it from heater & cooling unit assembly.
3. Remove intake sensor from evaporator, and then remove evaporator.

INSTALLATION

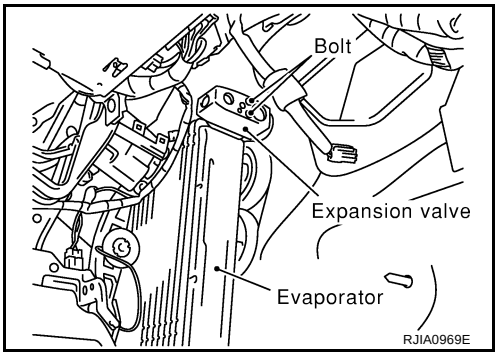
Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **O-rings are different from low-pressure pipe 1 (high-pressure pipe 1) and low-pressure pipe 2 (high-pressure pipe 2).**
- **Mark the mounting position of intake sensor bracket prior to removal so that the reinstalled sensor can be located in the same position.**
- **When recharging refrigerant, check for leaks.**

Low-pressure flexible hose bracket mounting bolt

: 4.2 N·m (0.43 kg-m, 37 in-lb)



Removal and Installation of Expansion Valve

NJS00026

REMOVAL

1. Remove low-pressure pipe 1 and high-pressure pipe 2. Refer to ATC-131, "Removal and Installation of Low-pressure Pipe 1 and High-pressure Pipe 2" .
2. Remove mounting bolts, and then remove expansion valve.

CAUTION:
Cap or wrap the joint of evaporator with suitable material such as vinyl tape to avoid the entry of air.

INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of evaporator, expansion valve, low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to them when installing them.**
- **O-rings are different from low-pressure pipe 1 (high-pressure pipe 1) and low-pressure pipe 2 (high-pressure pipe 2).**
- **When recharging refrigerant, check for leaks.**

Checking for Refrigerant Leaks

NJS00027

Perform a visual inspection of all refrigeration parts, fittings, hoses and components for signs of A/C lubricant leakage, damage and corrosion. A/C lubricant leakage may indicate an area of refrigerant leakage. Allow extra inspection time in these areas when using either an electrical leak detector or fluorescent dye leak detector (SST: J-42220).
If dye is observed, confirm the leak with an electrical leak detector. It is possible a prior leak was repaired and not properly cleaned.
When searching for leaks, do not stop when one leak is found but continue to check for additional leaks at all system components and connections.
When searching for refrigerant leaks using an electrical leak detector, move the probe along the suspected leak area at 1 to 2 inches per second and no further than 1/4 inch from the component.

CAUTION:
Moving the electrical leak detector probe slower and closer to the suspected leak area will improve the chances of finding a leak.

Checking System for Leaks Using the Fluorescent Leak Detector

NJS00028

1. Check A/C system for leaks using the UV lamp and safety goggles (SST: J-42220) in a low sunlight area (area without windows preferable). Illuminate all components, fittings and lines. The dye will appear as a bright green/yellow area at the point of leakage. Fluorescent dye observed at the evaporator drain opening indicates an evaporator core assembly (tubes, core or expansion valve) leak.
2. If the suspected area is difficult to see, use an adjustable mirror or wipe the area with a clean shop rag or cloth, with the UV lamp for dye residue.
3. After the leak is repaired, remove any residual dye using dye cleaner (SST: J-43872) to prevent future misdiagnosis.
4. Perform a system performance check and verify the leak repair with an approved electrical leak detector.

NOTE:
Other gases in the work area or substances on the A/C components, for example, anti-freeze, windshield washer fluid, solvents and lubricants, may falsely trigger the leak detector. Make sure the surfaces to be checked are clean.
Clean with a dry cloth or blow off with shop air.
Do not allow the sensor tip of the detector to contact with any substance. This can also cause false readings and may damage the detector.

Dye Injection

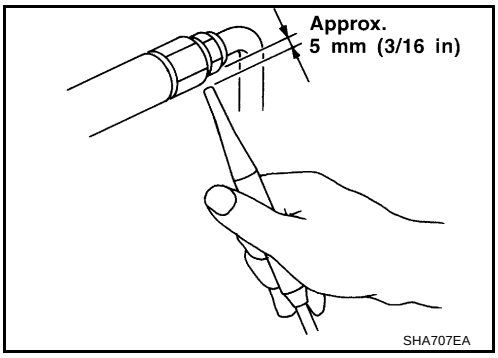
NJS00029

(This procedure is only necessary when recharging the system or when the compressor has seized and was replaced.)

1. Check A/C system static (at rest) pressure. Pressure must be at least 345 kPa (3.52 kg/cm^2 , 50 psi).
2. Pour one bottle (1/4 ounce / 7.4 cc) of the A/C refrigerant dye into the injector tool (SST: J-41459).
3. Connect the injector tool to the A/C low-pressure side service valve.
4. Start the engine and switch A/C ON.
5. When the A/C operating (compressor running), inject one bottle (1/4 ounce / 7.4 cc) of fluorescent dye through the low-pressure service valve using dye injector tool (SST: J-41459) (refer to the manufacture's operating instructions).
6. With the engine still running, disconnect the injector tool from the service valve.

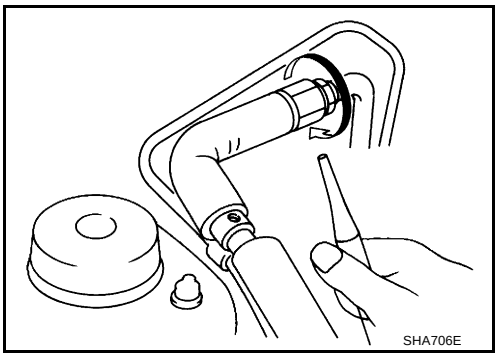
   CAUTION:
   Be careful the A/C system or replacing a component, pour the dye directly into the open system connection and proceed with the service procedures.
7. Operate the A/C system for a minimum of 20 minutes to mix the dye with the system oil. Depending on the leak size, operating conditions and location of the leak, it may take from minutes to days for the dye to penetrate a leak and become visible.
8. Attach a blue label as necessary.

Electrical Leak Detector

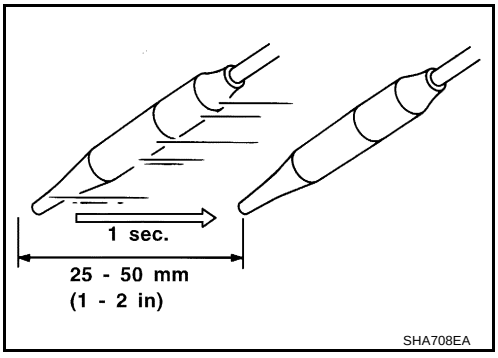


NJS0002A

PRECAUTIONS FOR HANDLING LEAK DETECTOR



When performing a refrigerant leak check, use an A/C electrical leak detector (SST) or equivalent. Ensure that the instrument is calibrated and set properly per the operating instructions.
The leak detector is a delicate device. In order to use the leak detector properly, read the operating instructions and perform any specified maintenance.



1. Position probe approximately 5 mm (3/16 in) away from point to be checked.

2. When testing, circle each fitting completely with probe.

3. Move probe along component approximately 25 to 50 mm (1 to 2 in)/sec.

CHECKING PROCEDURE

To prevent inaccurate or false readings, make sure there is no refrigerant vapor, shop chemicals, or cigarette smoke in the vicinity of the vehicle. Perform the leak test in calm area (low air/wind movement) so that the leaking refrigerant is not dispersed.

1. Stop the engine.
2. Connect a suitable A/C manifold gauge set (SST:J-39183) to the A/C service valves.
3. Check if the A/C refrigerant pressure is at least 345 kPa (3.52 kg/cm^2 , 50 psi) above 16°C (61°F). If less than specification, recover/evacuate and recharge the system with the specified amount of refrigerant.

   NOTE:
   At temperatures below 16°C (61°F), leaks may not be detected since the system may not reach 345 kPa (3.52 kg/cm^2 , 50 psi).
4. Perform the leak test from the high-pressure side (compressor discharge a to evaporator inlet g) to the low-pressure side (evaporator drain hose h to shaft seal l). Refer to ATC-125, "Components" . Perform a leak check for the following areas carefully. Clean the component to be checked and move the leak detected probe completely around the connection/component.

   Compressor
   Check the fitting of high- and low-pressure flexible hoses, relief valve and shaft seal.
   Condenser
   Check the fitting of high-pressure flexible hose and pipe.
   Liquid tank
   Check the fitting of refrigerant connection.
   Service valves
   Check all around the service valves. Ensure service valve caps are secured on the service valves (to prevent leaks).

   NOTE:
   After removing A/C manifold gauge set from service valves, wipe any residue from valves to prevent any false readings by leak detector.
   Cooling unit (Evaporator)
   With engine OFF, turn blower fan on “High” for at least 15 seconds to dissipate any refrigerant trace in the cooling unit. Wait a minimum of 10 minutes accumulation time (refer to the manufacturer’s recommended procedure for actual wait time) before inserting the leak detector probe into the drain hose.
   Keep the probe inserted for at least 10 seconds. Use caution not to contaminate the probe tip with water or dirt that may be in the drain hose.
5. If a leak detector detects a leak, verify at least once by blowing compressed air into area of suspected leak, then repeat check as outlined above.
6. Do not stop when one leak is found. Continue to check for additional leaks at all system components.
   If no leaks are found, perform steps 7 - 10.
7. Start the engine.
8. Set the A/C control as follows;

a. A/C switch: ON
b. MODE door position: VENT (Ventilation)
c. Intake door position: Recirculation
d. Temperature setting: Max. cold
e. Fan speed: High

9. Run engine at 1,500 rpm for at least 2 minutes.
10. Stop the engine and perform leak check again following steps 4 through 6 above.
    Refrigerant leaks should be checked immediately after stopping the engine. Begin with the leak detector at the compressor. The pressure on the high-pressure side will gradually drop after refrigerant circulation stops and pressure on the low-pressure side will gradually rise, as shown in the graph. Some leaks are more easily detected when pressure is high.

11. Before connecting recovery/recycling recharging equipment to vehicle, check recovery/recycling recharging equipment gauges. No refrigerant pressure should be displayed. If pressure is displayed, recover refrigerant from equipment lines and then check refrigerant purity.
12. Confirm refrigerant purity in supply tank using recovery/recycling recharging equipment and refrigerant identifier.
13. Confirm refrigerant purity in vehicle A/C system using recovery/recycling recharging equipment and refrigerant identifier.
14. Discharge A/C system using approved refrigerant recovery/recycling recharging equipment. Repair the leaking fitting or component if necessary.
15. Evacuate and recharge A/C system and perform the leak test to confirm no refrigerant leaks.
16. Perform A/C performance test to ensure system works properly.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS000C3

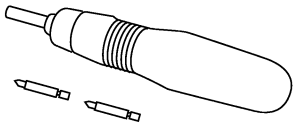
The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS000C4



Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

For Audio System operation information, refer to Owner's Manual.
Power is supplied at all times

- through 15 A fuse [No. 37, located in the fuse and fusible link box]
- to audio unit terminal 6.

With the ignition switch in the ACC or ON position, power is supplied

- through 10 A fuse [No. 6, located in the fuse block (J/B)]
- to audio unit terminal 10.

Ground is supplied through the case of the audio unit.
When audio switch is pressed, audio signals are supplied

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to terminals 1 and 2 of driver door speaker and passenger door speaker
- to terminals 1 and 2 of rear speaker LH and RH
- to terminals 1 and 2 of tweeter (driver side) and tweeter (passenger side).

When one of steering switch is pressed to volume up, seek up, or mode ON, resistance in steering switch circuit changes depending on which button is pressed.
When one of steering switch is pressed to volume down, seek down, or power ON, resistance in steering switch circuit changes depending on which button is pressed.

BOSE SYSTEM (COUPE MODELS)

CD auto changer (built into audio unit) operation is controlled by audio unit.
Refer to owner's manual for the system operation.
Power is supplied at all times

- through 15 A fuse [No. 37, located in the fuse and fusible link box]
- to audio unit terminal 6
- to BOSE speaker amp. terminal 11
- to satellite radio tuner terminal 32,
- through 15 A fuse [No. 17, located in the fuse block (J/B)]
- to woofer amp. terminal 8.

With the ignition switch in the ACC or ON position, power is supplied

- through 10 A fuse [No. 6, located in the fuse block (J/B)]
- to audio unit terminal 10
- to satellite radio tuner terminal 36,
- through audio unit terminal 12
- to BOSE speaker amp. terminal 41,
- through BOSE speaker amp. terminal 32
- to woofer amp. terminal 6.

Ground is supplied through the case of the audio unit.
Ground is also supplied

- to BOSE speaker amp. terminal 27
- to woofer amp. terminal 7
- through body grounds B5, B6, D105 and T14.

When audio switch is pressed, audio signals are supplied

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to BOSE speaker amp. terminals 33, 34, 35, 36, 37, 38, 39 and 40.

Audio signals are amplified by the BOSE speaker amp.
The amplified audio signals are supplied

- through BOSE speaker amp. terminals 12, 19, 20, 21, 22, 23, 24, 25, 26 and 28
- to terminals 1 and 2 of driver door speaker and passenger door speaker

- to terminals 1 and 2 of rear speaker LH and RH
- to terminals 1 and 2 of tweeter (driver side) and tweeter (passenger side)
- to terminals 1 and 2 of woofer amp.

Audio signals are amplified by the woofer amp.
The amplified audio signals are supplied

- through woofer amp. terminals 3 and 4
- to terminals 1 and 2 of woofer.

When one of steering switch is pressed to volume up, seek up, or mode ON, resistance in steering switch circuit changes depending on which button is pressed.
When one of steering switch is pressed to volume down, seek down, or power ON, resistance in steering switch circuit changes depending on which button is pressed.

BOSE SYSTEM (ROADSTER MODELS)

CD auto changer (built into audio unit) operation is controlled by audio unit.
Refer to owner's manual for the system operation.
Power is supplied at all times

- through 15 A fuse [No. 37, located in the fuse and fusible link box]
- to audio unit terminal 6
- to BOSE speaker amp. terminal 11,
- through 15 A fuse [No. 17, located in the fuse block (J/B)]
- to woofer amp. terminal 8.

With the ignition switch in the ACC or ON position, power is supplied

- through 10 A fuse [No. 6, located in the fuse block (J/B)]
- to audio unit terminal 10,
- through audio unit terminal 12
- to BOSE speaker amp. terminal 41,
- through BOSE speaker amp. terminal 32
- to woofer amp. terminal 6.

Ground is supplied through the case of the audio unit.
Ground is also supplied

- to BOSE speaker amp. terminal 27
- to woofer amp. terminal 7
- through body grounds B5, B6 and T14.

When audio switch is pressed, audio signals are supplied

- through audio unit terminals 1, 2, 3, 4, 13, 14, 15 and 16
- to BOSE speaker amp. terminals 33, 34, 35, 36, 37, 38, 39 and 40.

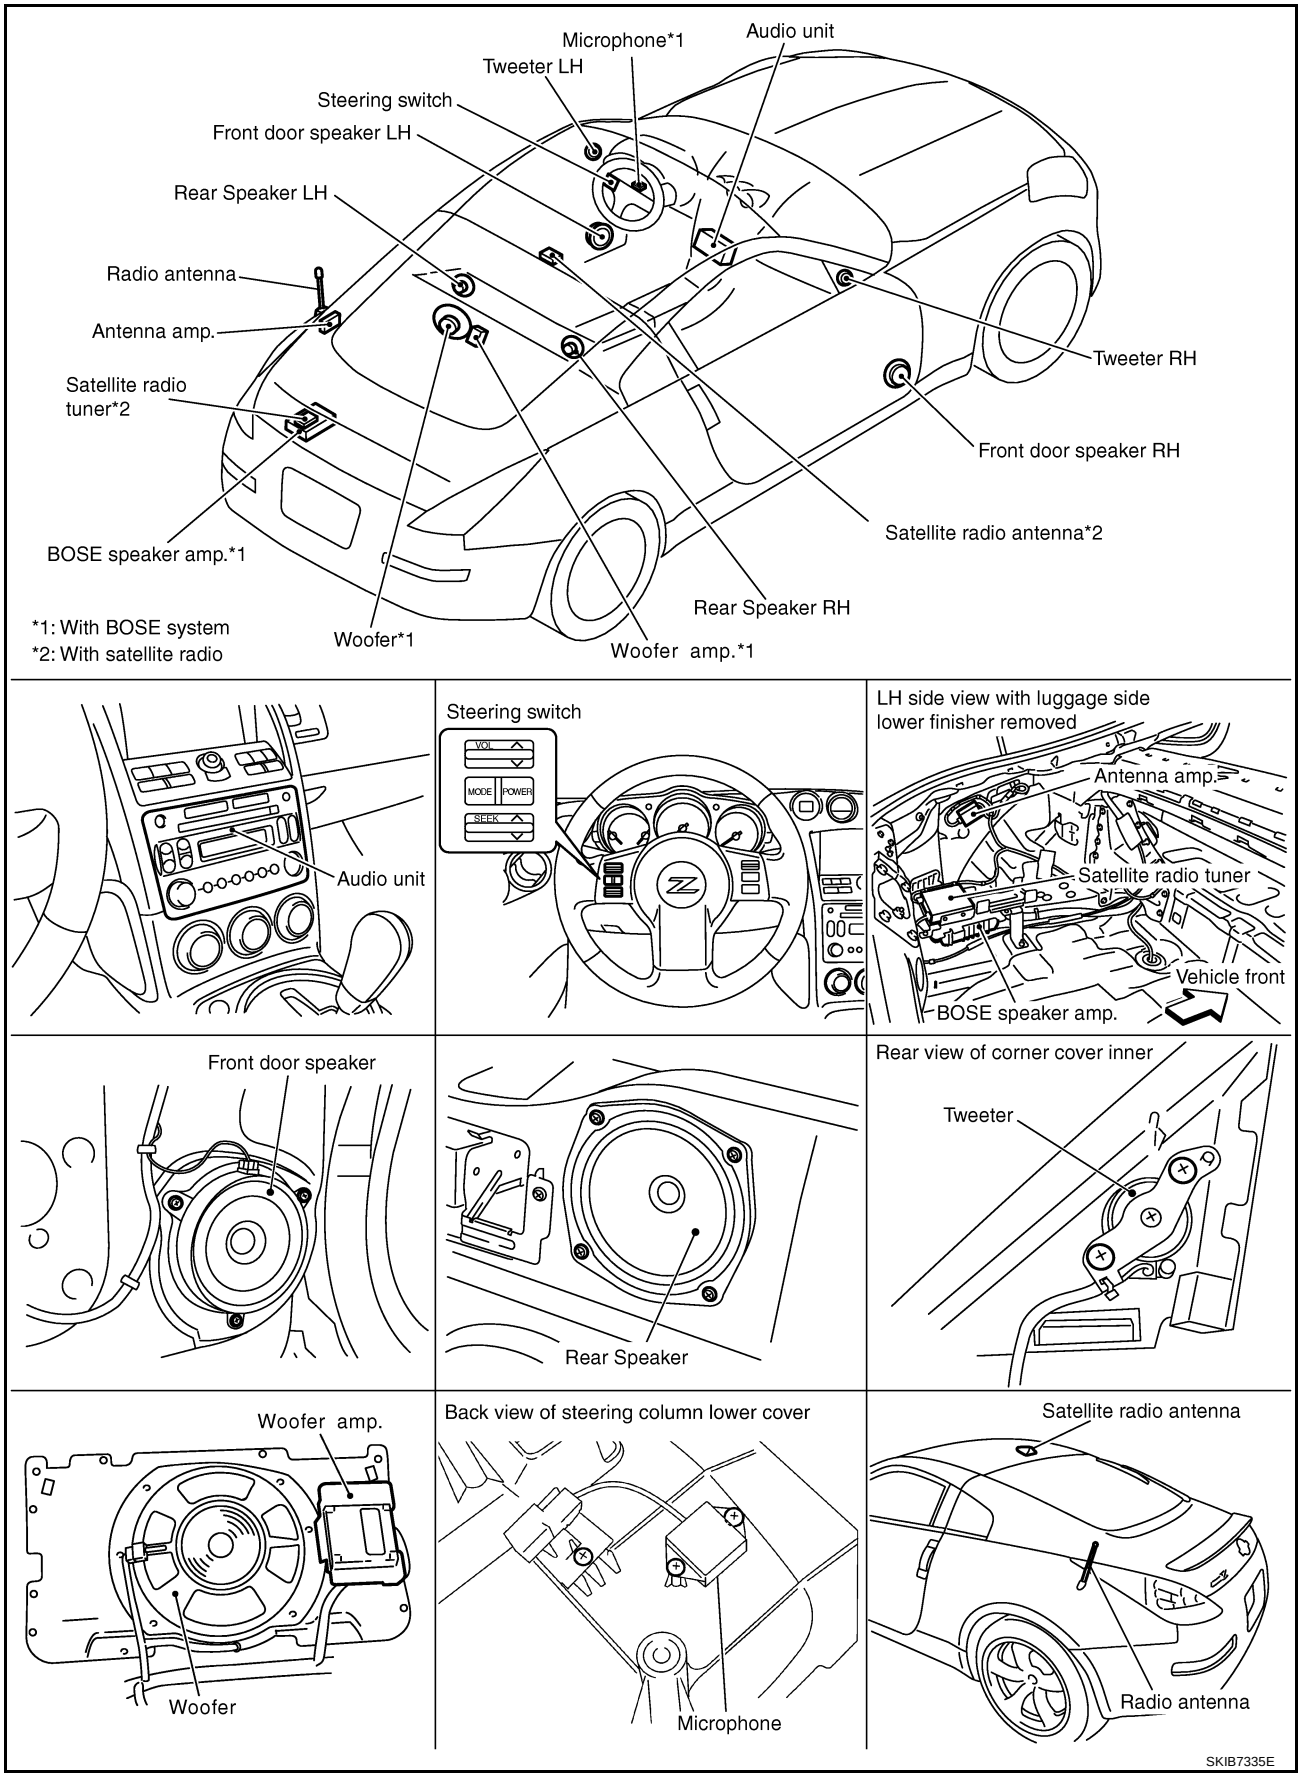
Audio signals are amplified by the BOSE speaker amp.
The amplified audio signals are supplied

- through BOSE speaker amp. terminals 12, 19, 20, 21, 22, 23, 24, 25, 26 and 28
- to terminals 1 and 2 of driver door speaker and passenger door speaker
- to terminals 1 and 2 of rear speaker LH and RH
- to terminals 1 and 2 of tweeter (driver side) and tweeter (passenger side)
- to terminals 1 and 2 of woofer amp.

Audio signals are amplified by the woofer amp.
The amplified audio signals are supplied

- through woofer amp. terminals 3 and 4
- to terminals 1 and 2 of woofer.

When one of steering switch is pressed to volume up, seek up, or mode ON, resistance in steering switch circuit changes depending on which button is pressed.
When one of steering switch is pressed to volume down, seek down, or power ON, resistance in steering switch circuit changes depending on which button is pressed.



AudioPilot® System

AudioPilot® is the sound improving system that picks up by a microphone under the steering any noises or the sound of music coming into the vehicle, and that uses the BOSE speaker amp. to revise the frequency feature of music in real time in response to the frequency feature of the noise while driving and listening to music.

- If low frequency area noise from vehicle is loud, it adjusts low frequency element of music to be bigger than vehicle noise.
- If high frequency area noise from vehicle is loud, it adjusts high frequency element of music to be bigger than vehicle noise.
- If vehicle noise is smaller than the setting volume, correction is not performed.

36 (P/B)	Ground	ACC power supply	Input	ACC	—	Battery voltage
40	—	Satellite radio antenna	—	—	—	—

Trouble Diagnosis

NKS002ED

- The majority of the audio malfunctions are the result of outside causes (bad CD, electromagnetic interference, etc.). Check the symptoms below to diagnose the malfunction.
- The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunctioning. Check if noise is caused and/or changed by engine speed, ignition switch turned to each position, and operation of each piece of electrical equipment, and then determine the cause.
- Refer to "SERVICE BULLETIN NTB04-119" for the diagnosis of satellite radio.

Symptom	Possible malfunction location
Audio system does not work properly.	● Audio unit power supply circuit ● Audio unit
No sound can be heard from all speakers.	**Base system** ● Audio unit
	BOSE system ● BOSE speaker amp. power supply and ground circuit ● BOSE speaker amp. ON signal circuit ● Audio unit ● BOSE speaker amp.
No sound can be heard from one or several speakers.	**Base system** ● Audio signal circuit between audio unit and speaker ● Speaker ● Tweeter ● Audio unit
	BOSE system ● Audio signal circuit between audio unit and BOSE speaker amp. ● Audio signal circuit between BOSE speaker amp. and speaker ● Speaker ● Tweeter ● Audio unit ● BOSE speaker amp.
No sound can be heard from woofer.	● Woofer amp. power supply and ground circuit ● Woofer amp. ON signal circuit ● Audio signal circuit between BOSE speaker amp. and woofer ● Audio signal circuit between woofer amp. and woofer ● Woofer ● Woofer amp. ● BOSE speaker amp.
No sound can be heard from radio or noise is caught.	● Antenna amp. ON signal circuit ● Antenna feeder ● Antenna ● Antenna amp. ● Audio unit
None of the steering switch operations work	● TEL adapter unit control signal 1 circuit ● Steering switch signal ground circuit

NOTE:
Noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources. It is not a malfunction.

- Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.

- Multi-path noise: This noise results from a time difference between the broadcast waves directly from the station arriving at the antenna and the waves reflected by mountains or buildings.

Power Supply Circuit Inspection

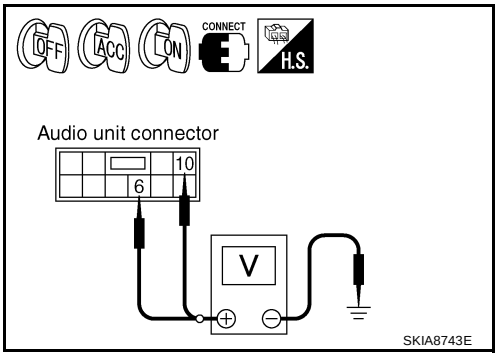
NKS002BF

1. CHECK FUSE

Make sure that the following fuses of the audio unit, BOSE speaker amp. and woofer amp. are not blown.

Unit	Signal	Fuse No.
Audio unit	Battery power supply	37
	Ignition switch ACC or ON	6
BOSE speaker amp.	Battery power supply	37
Woofer amp.	Battery power supply	17

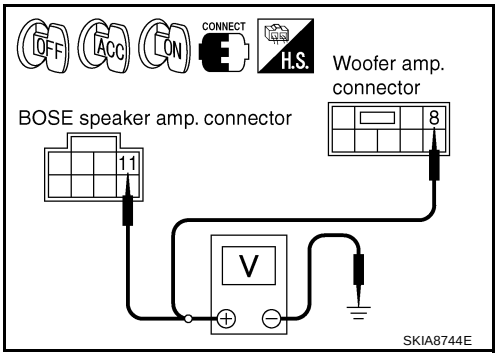
OK or NG



OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT



1. Check voltage between audio unit harness connector terminals and ground.

Unit	Terminals (+) Connector	Terminals (+) Terminal	Terminals (–)	OFF	ACC	ON
Audio unit	M40	6	Ground	Battery voltage	Battery voltage	Battery voltage
		10	Ground	0 V	Battery voltage	Battery voltage

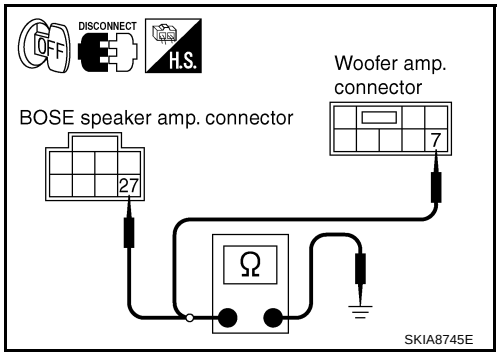
2. Check voltage between BOSE speaker amp., woofer amp. harness connector terminals and ground (BOSE system).

Unit	Terminals (+) Connector	Terminals (+) Terminal	Terminals (–)	OFF	ACC	ON
BOSE speaker amp.	T6	11	Ground	Battery voltage	Battery voltage	Battery voltage
Woofer amp.	B32	8				

OK or NG

OK >> ● INSPECTION END (Base system)
● GO TO 3 (BOSE system).

NG >> Repair harness or connector.



3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BOSE speaker amp. and woofer amp. connectors.
3. Check continuity between BOSE speaker amp. harness connector T6 terminal 27 and ground.

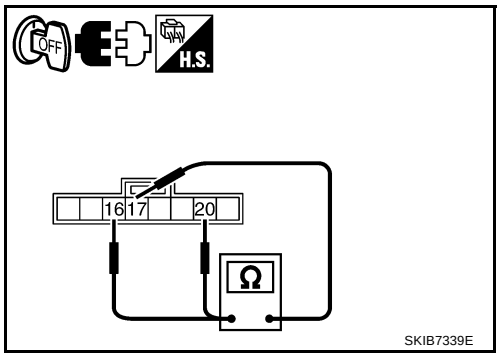
27 – Ground : Continuity should exist.

4. Check continuity between woofer amp. harness connector B32 terminal 7 and ground.

7 – Ground : Continuity should exist.

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.



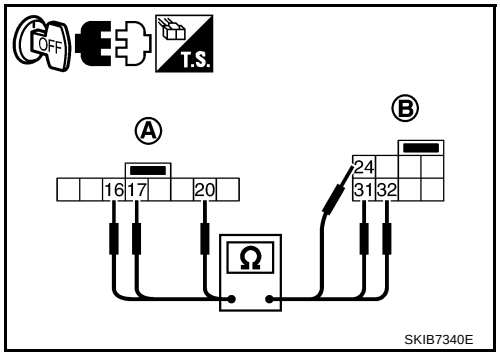
Steering Switch Does Not Operate

NKS002EE

1. CHECK STEERING SWITCH RESISTANCE

1. Turn ignition switch OFF.
2. Disconnect combination switch (spiral cable) connector.
3. Check resistance between steering switch harness connector M203 terminals.

Terminal		Signal name	Condition	Resistance (Ω)
16	17	Power	Press and hold POWER switch.	Approx. 0
		Seek down	Press and hold SEEK DOWN switch.	Approx. 165
		Volume down	Press and hold VOLUME DOWN switch.	Approx. 652
20		Mode	Press and hold MODE switch.	Approx. 0
		Seek up	Press and hold SEEK UP switch.	Approx. 165
		Volume up	Press and hold VOLUME UP switch.	Approx. 652



OK or NG

OK >> GO TO 2.
NG >> Replace steering switch.

2. CHECK SPIRAL CABLE

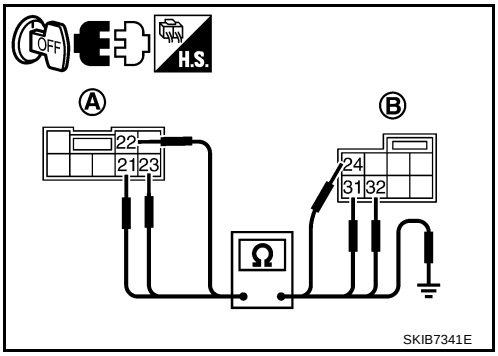
1. Disconnect combination switch (spiral cable) connector.
2. Check continuity between combination switch (spiral cable) connector (A) terminals 16, 17, 20 and connector (B) terminals 32, 31, 24.

16 – 32 : Continuity should exist.
17 – 31 : Continuity should exist.
20 – 24 : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Replace spiral cable.

3. CHECK HARNESS



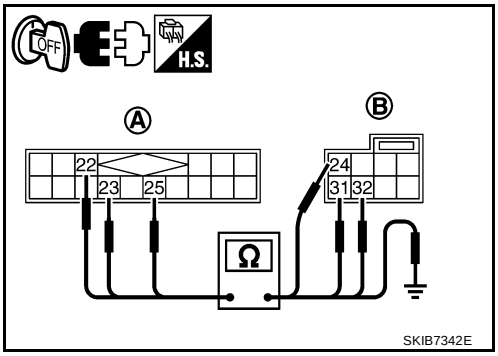
Base system

1. Disconnect audio unit connector.
2. Check continuity between audio unit harness connector (A) M46 terminals 21, 22, 23 and combination switch (spiral cable) harness connector (B) M23 terminals 24, 32, 31.

   21 – 24 : Continuity should exist.
   22 – 32 : Continuity should exist.
   23 – 31 : Continuity should exist.

3. Check continuity between audio unit harness connector (A) M46 terminals 21, 22 and ground.

   21, 22 – Ground : Continuity should not exist.



BOSE system

1. Disconnect audio unit connector.
2. Check continuity between audio unit harness connector (A) M39 terminals 22, 23, 25 and combination switch (spiral cable) harness connector (B) M23 terminals 24, 32, 31.

   22 – 24 : Continuity should exist.
   23 – 32 : Continuity should exist.
   25 – 31 : Continuity should exist.

3. Check continuity between audio unit harness connector (A) M39 terminals 22, 23 and ground.

   22, 23 – Ground : Continuity should not exist.

OK or NG

OK >> Replace audio unit.
NG >> Repair harness or connector.

AudioPilot® Does Not Work

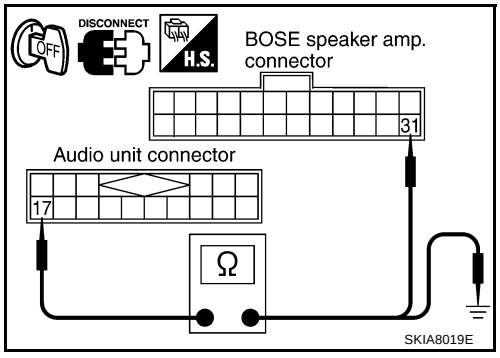
NKS002BG

1. CHECK AUDIO UNIT

Check AudioPilot® turns ON.

OK or NG

OK >> GO TO 2.
NG >> Turn AudioPilot® ON.



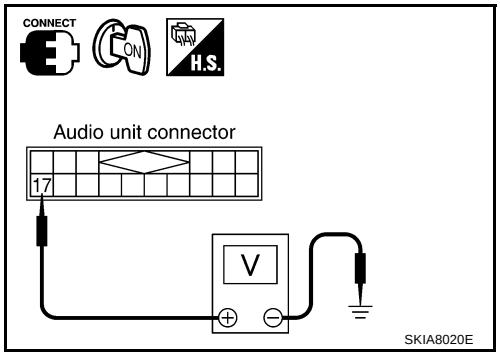
2. CHECK HARNESS

1. Turn ignition switch OFF.
2. Disconnect audio unit and BOSE speaker amp. connectors.
3. Check continuity between audio unit harness connector M39 terminal 17 and BOSE speaker amp. harness connector T7 terminal 31.

17 – 31 : Continuity should exist.

4. Check continuity between audio unit harness connector M39 terminal 17 and ground.

17 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

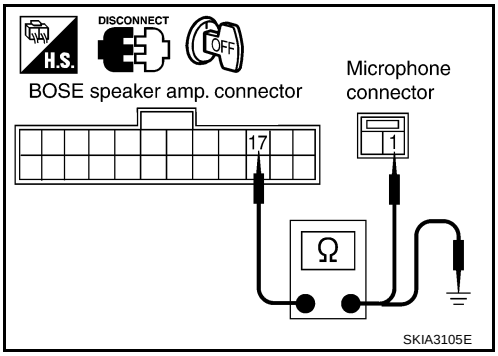
3. CHECK AUDIOPILOT® SIGNAL

1. Connect audio unit and BOSE speaker amp. connectors.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminals and ground.

Terminals			Condition	Voltage
(+)		(–)		
Connector	Terminal			
M39	17	Ground	AudioPilot® OFF	Approx. 7.5 V
			AudioPilot® ON	Approx. 0 V

OK or NG

OK >> GO TO 4.
NG >> Replace audio unit.



4. CHECK HARNESS

1. Turn ignition switch OFF
2. Disconnect BOSE speaker amp. and microphone connectors.
3. Check continuity between BOSE speaker amp. harness connector T7 terminal 17 and microphone harness connector E123 terminal 1.

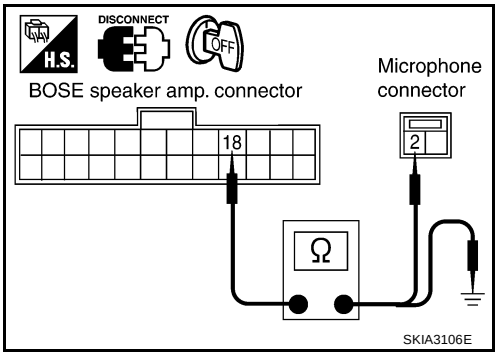
17 – 1 : Continuity should exist.

4. Check continuity between BOSE speaker amp. harness connector T7 terminal 17 and ground.

17 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



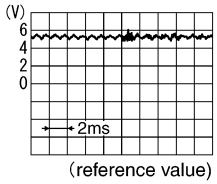
5. CHECK HARNESS

1. Check continuity between BOSE speaker amp. harness connector T7 terminal 18 and microphone harness connector E123 terminal 2.

18 – 2 : Continuity should exist.

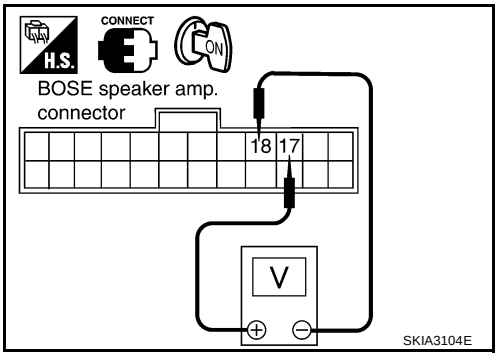
2. Check continuity between BOSE speaker amp. harness connector T7 terminal 18 and ground.

18 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.



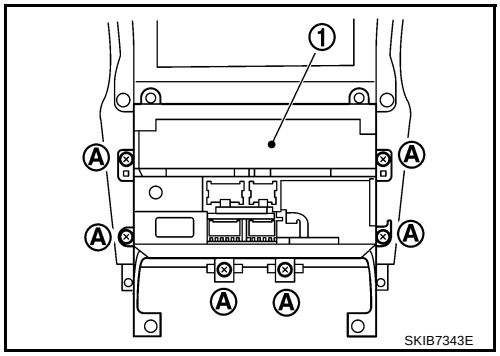
6. CHECK MICROPHONE SIGNAL

1. Connect BOSE speaker amp. and microphone connectors.
2. Turn ignition switch ON.
3. Check voltage waveform between BOSE speaker amp. harness connector T7 terminal 17 and 18 using oscilloscope, when inputting some sounds (voice, etc.) toward the microphone.

17 – 18:

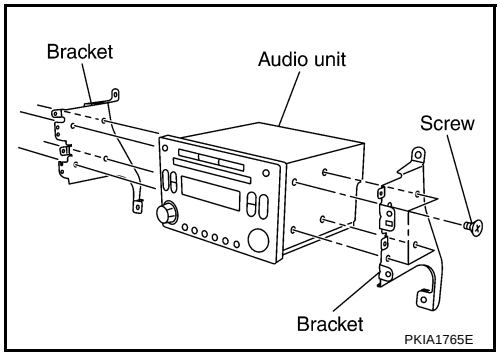
PKIA2104E

Does the voltage waveform change with sounds?



YES >> Replace BOSE speaker amp.
NO >> Replace microphone.

Removal and Installation of Audio Unit (Base system)



NKS002BH

REMOVAL

1. Remove cluster lid C. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws (A), and remove audio unit (1).

3. Remove screws (8), and remove bracket.

INSTALLATION

Installation is the reverse order of removal.

Locking CD Auto Changer Mechanism (Audio unit of BOSE system)

NKS002BI

CAUTION:

- **Prior to removing a malfunctioning CD auto changer unit (Audio unit of BOSE system) that will be shipped for repair, the changer mechanism MUST BE LOCKED to prevent the mechanism from being damaged during shipping.**
- **If a CD is jammed or unable to be removed from the unit, do NOT lock the changer mechanism. If the unit is to be shipped for repair, carefully package the unit to prevent vibration and shock.**

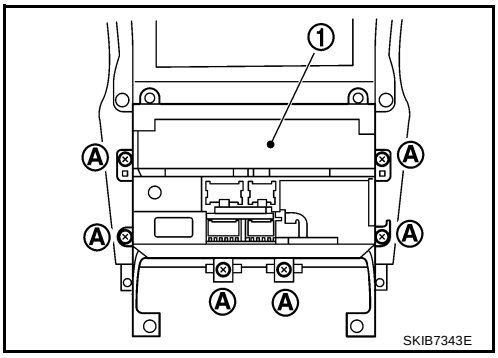
DAMPER LOCK PROCEDURE

1. Eject and remove any CDs from the audio unit (BOSE system).
2. Turn ignition switch OFF. Wait until audio unit (BOSE system) display is off and mechanism stops moving (mechanism sound stops).
3. Press any one of the disc selection buttons once. When a display shows on the audio unit (BOSE system), press the same disc selection button again within 5 seconds.
   - The changer mechanism will lock itself within 10 seconds.
4. After mechanism stops moving (mechanism sound stops), open the driver and passenger window, and then disconnect negative battery cable.

CAUTION:

After the battery cables are disconnected, do not open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.

NOTE:

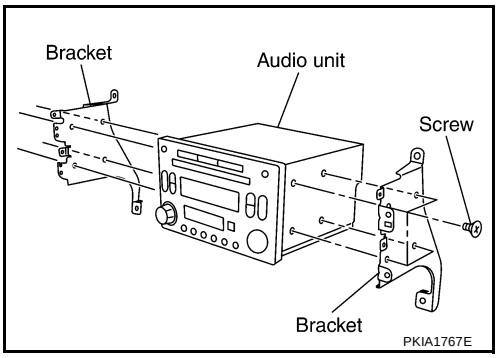


After installing a new or remanufactured audio unit (BOSE system), switching the audio unit (BOSE system) ON will automatically unlock the mechanism. A special unlocking procedure is not required.

Removal and Installation of Audio Unit (BOSE system)

NKS002BJ

REMOVAL



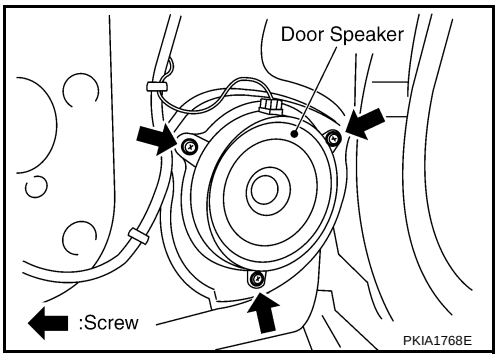
1. Perform damper lock operation. Refer to AV-46, "Locking CD Auto Changer Mechanism (Audio unit of BOSE system)" .
2. Remove cluster lid C. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
3. Remove screws (A), and remove audio unit (1).

4. Remove screws (8), and remove bracket.

CAUTION:

- **When carrying audio unit body, do not touch internal mechanism access from cassette tape slot.**
- **Be careful not to allow foreign matter from cassette tape slot.**

INSTALLATION



Installation is the reverse order of removal.

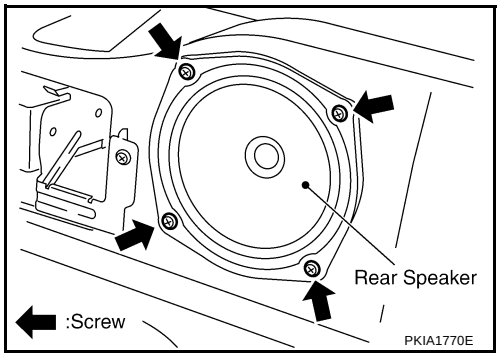
Removal and Installation of Door Speaker

NKS002BK

REMOVAL

1. Remove door finisher. Refer to EI-33, "Removal and Installation" .
2. Remove screws (3), and remove door speaker.

INSTALLATION



Installation is the reverse order of removal.

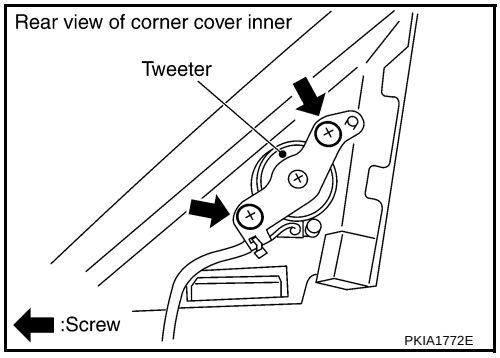
Removal and Installation of Rear Speaker

NKS002BL

REMOVAL

1. Remove luggage floor finisher upper (front) (Coupe models), or luggage floor finisher upper (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-41, "Removal and Installation (for Roadster Models)" .
2. Remove screws (4), and remove rear speaker.

INSTALLATION



Installation is the reverse order of removal.

Removal and Installation of Tweeter

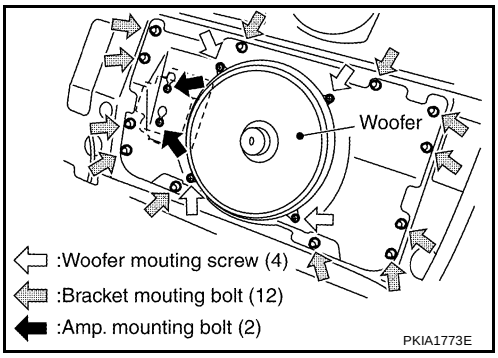
NKS002BM

REMOVAL

1. Remove corner cover inner. Refer to GW-81, "Removal and Installation" .
2. Remove screws (2), and remove tweeter from corner cover inner.

INSTALLATION

Installation is the reverse order of removal.



Removal and Installation of Woofer and Woofer Amp. (BOSE System)

NKS002BN

REMOVAL

Woofer Assembly

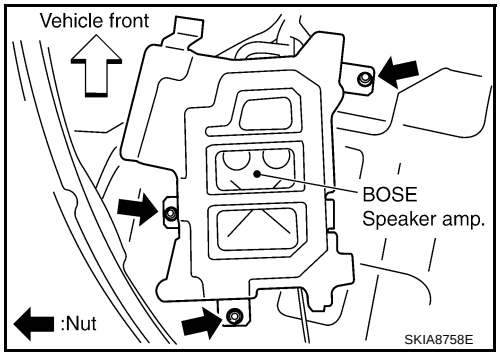
1. Remove luggage floor finisher lower. Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-41, "Removal and Installation (for Roadster Models)" .
2. Remove woofer mounting screws (4), and remove woofer.
3. Remove bracket mounting bolts (12), and remove bracket.
4. Remove woofer amp. mounting bolts (2), and remove woofer amp. from bracket.

Woofer or Woofer Amp. Only

1. Remove luggage floor finisher mask. Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-41, "Removal and Installation (for Roadster Models)" .
2. Remove woofer mounting screws (4), and remove woofer.
3. Remove woofer amp. mounting bolts (2), and remove woofer amp. from bracket.

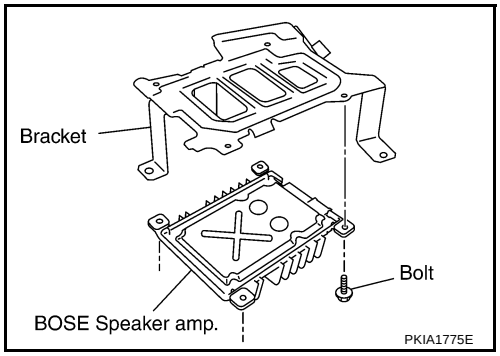
INSTALLATION

Installation is the reverse order of removal, taking care of the following point.



Bracket mounting bolt : **9 N·m (0.92 kg-m, 80 in-lb)**

Removal and Installation of BOSE Speaker Amp.



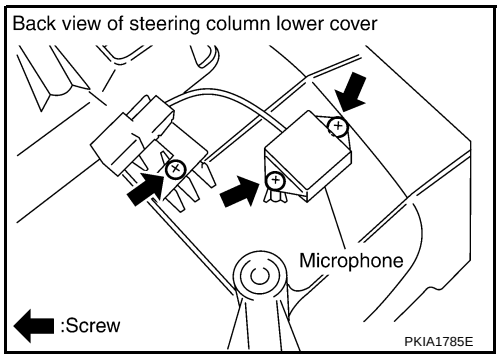
NKS002BO

REMOVAL

1. Remove trunk side box. Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-49, "Removal and Installation (for Roadstar Models)" .
2. Remove luggage floor carpet and spare tire cover (Coupe models), or trunk floor carpet and spare tire cover (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-49, "Removal and Installation (for Roadstar Models)" .
3. Remove nuts (3), and remove BOSE speaker amp. from trunk room floor.

4. Remove bolts (4), and remove bracket.

INSTALLATION



Installation is the reverse order of removal.

Removal and Installation of Microphone

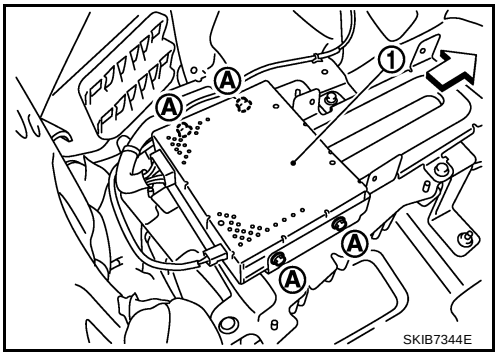
NKS002BP

REMOVAL

1. Remove steering column lower cover. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws (3), and remove microphone.

INSTALLATION

Installation is the reverse order of removal.



Removal and Installation of Satellite Radio Tuner

NKS002EF

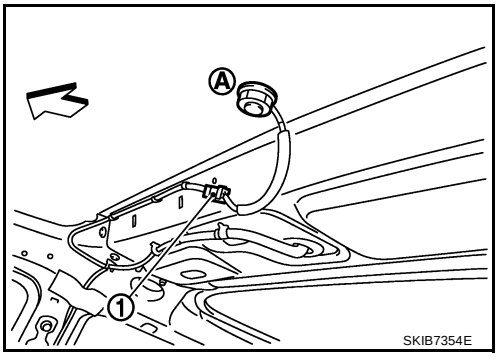
REMOVAL

⇦: Vehicle front

1. Remove trunk side box. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
2. Remove luggage floor carpet and spare tire cover. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
3. Remove screws (A), and remove satellite radio tuner (1).

INSTALLATION

Installation is the reverse order of removal.



Removal and Installation of Satellite Radio Antenna

NKS002EL

REMOVAL

⇦: Vehicle front

1. Remove headlining. Refer to EI-44, "Removal and Installation (for Coupe Models)" .
2. Remove nut (A), and then disconnect connector (1).
3. Remove satellite radio antenna.

INSTALLATION

Installation is the reverse order of removal.

Roof antenna mounting nut : 6.0 N·m (0.61 kg-m, 53 in-lb)

ANTENNA

PFP:28200

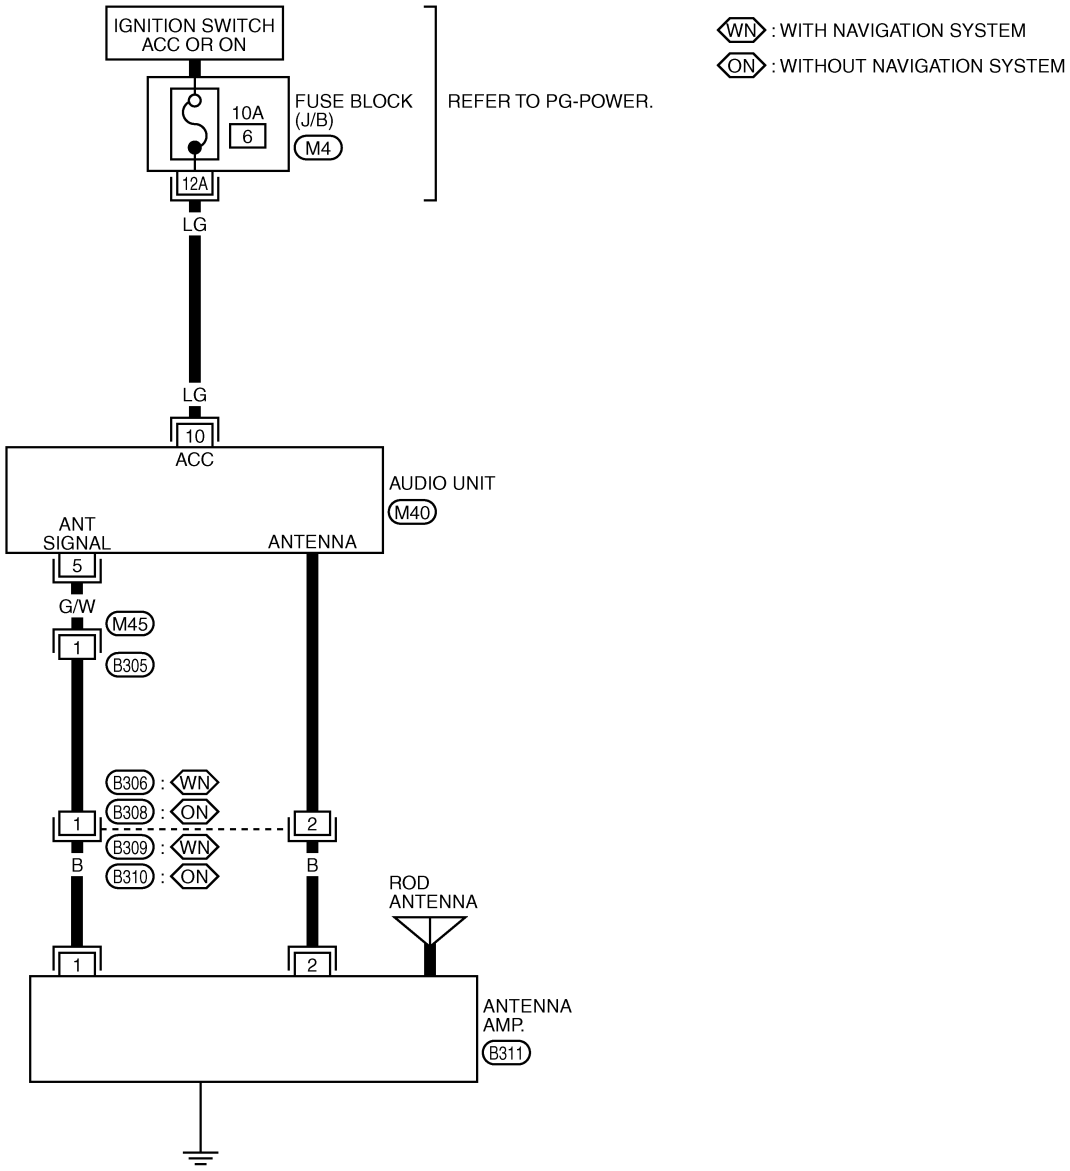
System Description

NKS002EG

With the ignition switch in ACC or ON, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to audio unit terminal 10.

Ground is supplied through the case of the antenna amp.
When the radio switch is turned ON, antenna signal is supplied



- through audio unit terminal 5
- to antenna amp. terminal 1.

Then the antenna amp. is activated.
Antenna signals amplified by the antenna amp. are supplied to the audio unit.

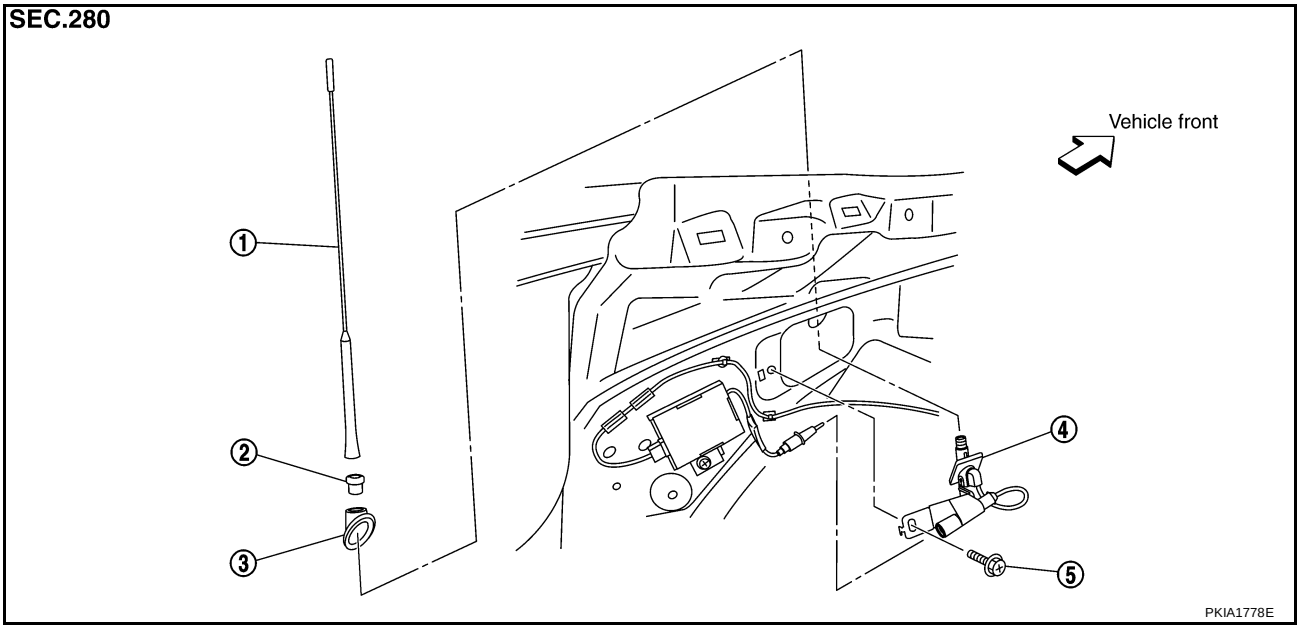
Removal and Installation of Antenna Amp.

NKS002EJ

REMOVAL

1. Remove luggage side finisher lower (LH) (Coupe models), or trunk front finisher (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-49, "Removal and Installation (for Roadstar Models)" .
2. Remove luggage floor carpet and spare tire cover (Coupe models), or trunk floor carpet and spare tire cover (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-49, "Removal and Installation (for Roadstar Models)" .
3. Remove screw (1), and remove antenna amp.



INSTALLATION

Installation is the reverse order of removal.

Removal and Installation of Antenna

NKS002EK

1. Antenna rod
2. Antenna nut
3. Antenna base
4. Antenna assembly
5. Screw

REMOVAL

1. Remove luggage side finisher lower (LH) (Coupe models), or trunk front finisher (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-49, "Removal and Installation (for Roadstar Models)" .
2. Remove antenna rod and remove antenna nut.
3. Disconnect antenna amp. plug.
4. Remove screw and remove antenna assembly.
5. Remove antenna base.

INSTALLATION

Installation is the reverse order of removal.

Removal and Installation of Satellite Radio Antenna

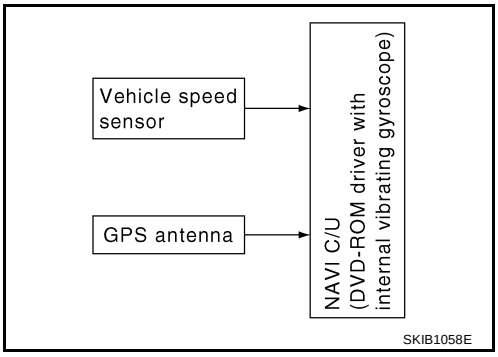
NKS002KG

Refer to AV-51, "Removal and Installation of Satellite Radio Antenna" .

NAVIGATION SYSTEM

PFP:25915

System Description

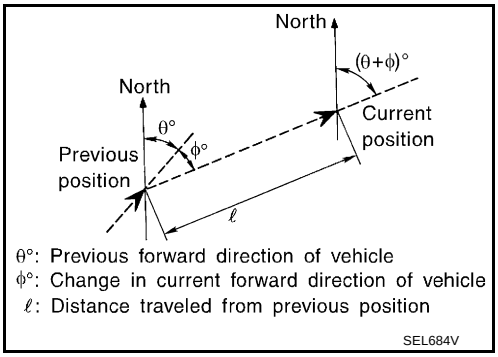


NKS000CX

For Navigation System operation information, refer to Navigation System Owner's Manual.

LOCATION DETECTION PRINCIPLE

The navigation system periodically calculates the vehicle's current position according to the following three signals:

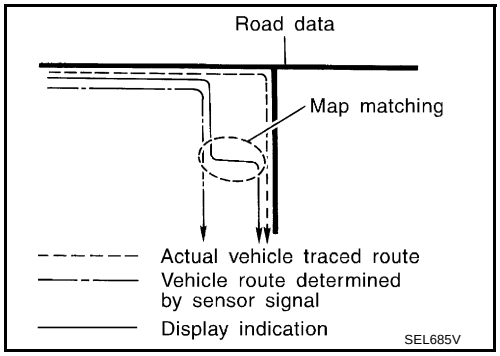


- Travel distance of the vehicle as determined by the vehicle speed sensor
- Turning angle of the vehicle as determined by the gyroscope (angular velocity sensor)
- Direction of vehicle travel as determined by the GPS antenna (GPS information)

The current position of the vehicle is then identified by comparing the calculated vehicle position with map data read from the DVD-ROM, which is stored in the DVD-ROM drive (map-matching), and indicated on the screen as a current-location mark. More accurate data is judged and used by comparing vehicle position detection results found by the GPS with the result by map-matching.

The current vehicle position will be calculated by detecting the distance the vehicle moved from the previous calculation point and its direction.

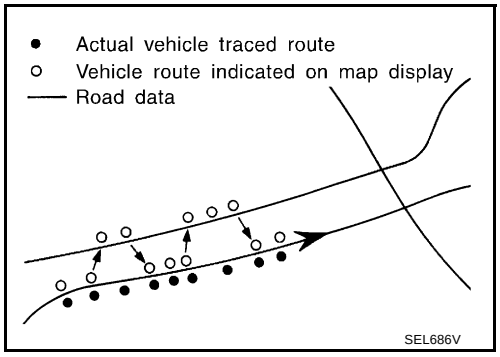
- Travel distance
  Travel distance calculations are based on the vehicle speed sensor input signal. Therefore, the calculation may become incorrect as the tires wear down. To prevent this, an automatic distance correction function has been adopted.
- Travel direction
  Change in the travel direction of the vehicle is calculated by a gyroscope (angular velocity sensor) and a GPS antenna (GPS information). They have both advantages and disadvantages.



Type	Advantage	Disadvantage
Gyroscope (angular velocity sensor)	Can detect the vehicle's turning angle quite accurately.	Direction errors may accumulate when vehicle is driven for long distances without stopping.
GPS antenna (GPS information)	Can detect the vehicle's travel direction (North/South/East/West).	Correct direction cannot be detected when vehicle speed is low.

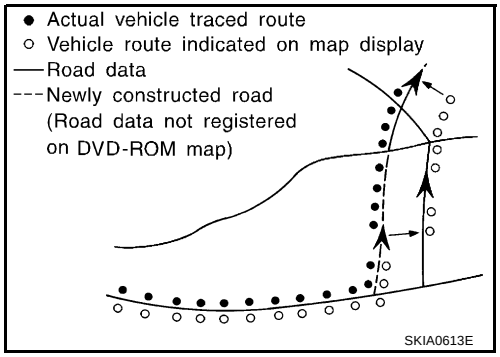
More accurate traveling direction is detected because priorities are set for the signals from these two devices according to the situation.

MAP-MATCHING

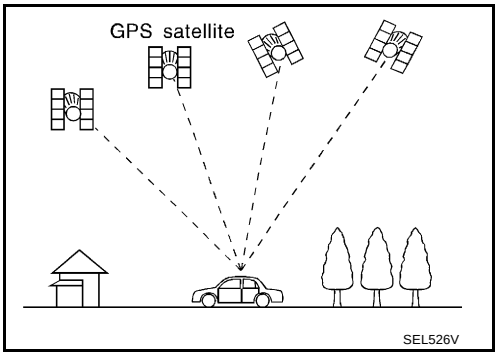


Map-matching compares a current location detected by the method in the “Location Detection Principle” with a road map data from DVD-ROM stored in DVD-ROM drive.

NOTE:
The road map data is based on data stored in the DVD-ROM.



The vehicle position may not be corrected under the following circumstances and after driving for a certain time when GPS information is difficult to receive. In this case, the current-location mark on the display must be corrected manually.



- In map-matching, alternative routes to reach the destination will be shown and prioritized, after the road on which the vehicle is currently driven has been judged and the current-location mark has been repositioned.
  If there is an error in distance and/or direction, alternative routes will be shown in different order of priority, and the incorrect road can be avoided.
  If two roads are running in parallel, they are of the same priority. Therefore, the current-location mark may appear on either of them alternately, depending on maneuvering of the steering wheel and configuration of the road.

- Map-matching does not function correctly when a road on which the vehicle is driving is new and not recorded in the DVD-ROM, or when road pattern stored in the map data and the actual road pattern are different due to repair.
  When driving on a road not present in the map, the map-matching function may find another road and position the current-location mark on it. Then, when the correct road is detected, the current-location mark may change to it.
- Effective range for comparing the vehicle position and travel direction calculated by the distance and direction with the road data read from the DVD-ROM is limited. Therefore, when there is an excessive gap between current vehicle position and the position on the map, correction by map-matching is not possible.

GPS (GLOBAL POSITIONING SYSTEM)

GPS (Global Positioning System) was developed for and is controlled by the US Department of Defense. The system utilizes GPS satellites (NAVSTAR), sending out radio waves while flying on an orbit around the earth at an altitude of approximately 21,000 km (13,100 miles).

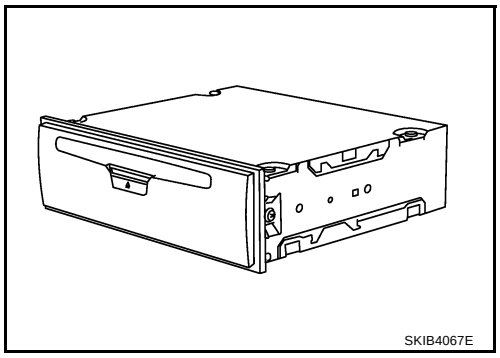
The GPS receiver calculates the vehicle's position in three dimensions (latitude/longitude/altitude) according to the time lag of the radio waves received from four or more GPS satellites (three-dimensional positioning). If radio waves were received only from three GPS satellites, the GPS receiver calculates the vehicle's position in two dimensions (latitude/longitude), and utilize the altitude data calculated previously with radio waves from four or more GPS satellites (two-dimensional positioning).

Position correction by GPS is not available while the vehicle is stopped.

Accuracy of GPS will deteriorate under the following conditions:

- In two-dimensional positioning, GPS accuracy will deteriorate when altitude of the vehicle position changes.
- The accuracy can be even lower depending on the arrangement of the GPS satellites utilized for the positioning.
- Position detection is not possible when vehicle is in an area where radio waves from the GPS satellite do not reach, such as in a tunnel, parking lot in a building, and under an elevated highway. Radio waves from the GPS satellites may not be received when some object is located over the GPS antenna.

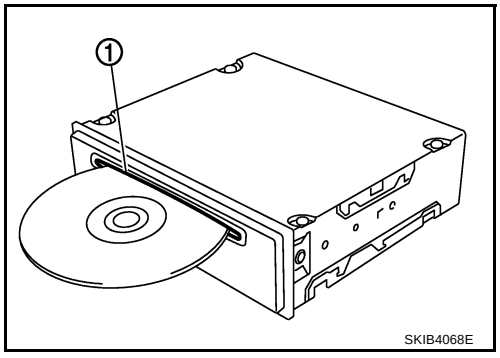
NOTE:



- Even a high-precision three dimensional positioning, the detection result has an error about 10 m (30ft).
- Because the signals of GPS satellite is controlled by the Tracking and Control Center in the United States, the accuracy may be degraded lower intentionally or the radio waves may stop.

Component Description

NKS002QA



NAVI CONTROL UNIT

- NAVI control unit connects to the display unit and NAVI switch with communication lines.
- The gyro (angular speed sensor) and the DVD-ROM drive are built-in units that control the navigation functions.
- Signals are received from the gyro, the vehicle speed sensor, and the GPS antenna. Vehicle location is determined by combining these data with the data contained in the DVD-ROM map. Locations information is shown on display unit.
- NAVI control unit outputs ON signal and voice guidance signal to audio unit.

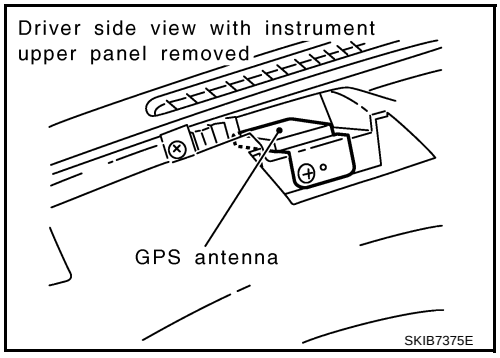
SKIB4067E

DVD-ROM Drive

Maps, traffic control regulations, and other pertinent information can be easily read from the DVD-ROM (1).

SKIB4068E

DVD-ROM

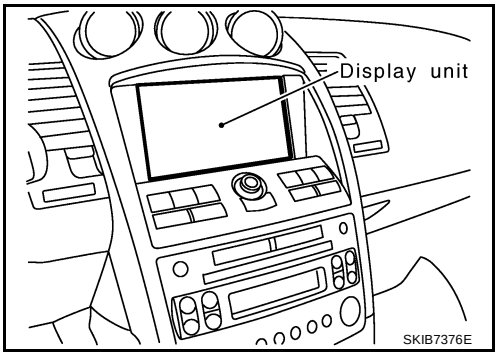


- The DVD-ROM has maps, traffic control regulations, and other pertinent information.
- To improve DVD-ROM map matching and route determination functions, the DVD-ROM uses an exclusive Nissan format. Therefore, the use of a DVD-ROM provided by other manufacturers cannot be used.

Gyro (Angular Speed Sensor)

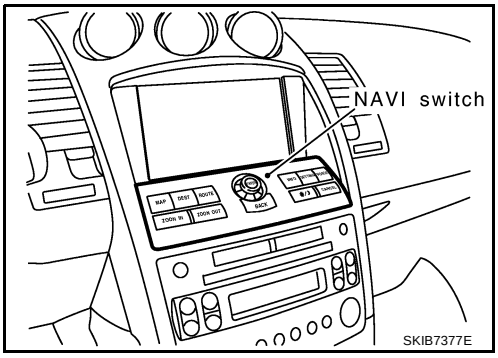
- The oscillator gyro sensor is used to detect changes in vehicle steering angle.
- The gyro is built into the NAVI control unit.

GPS ANTENNA



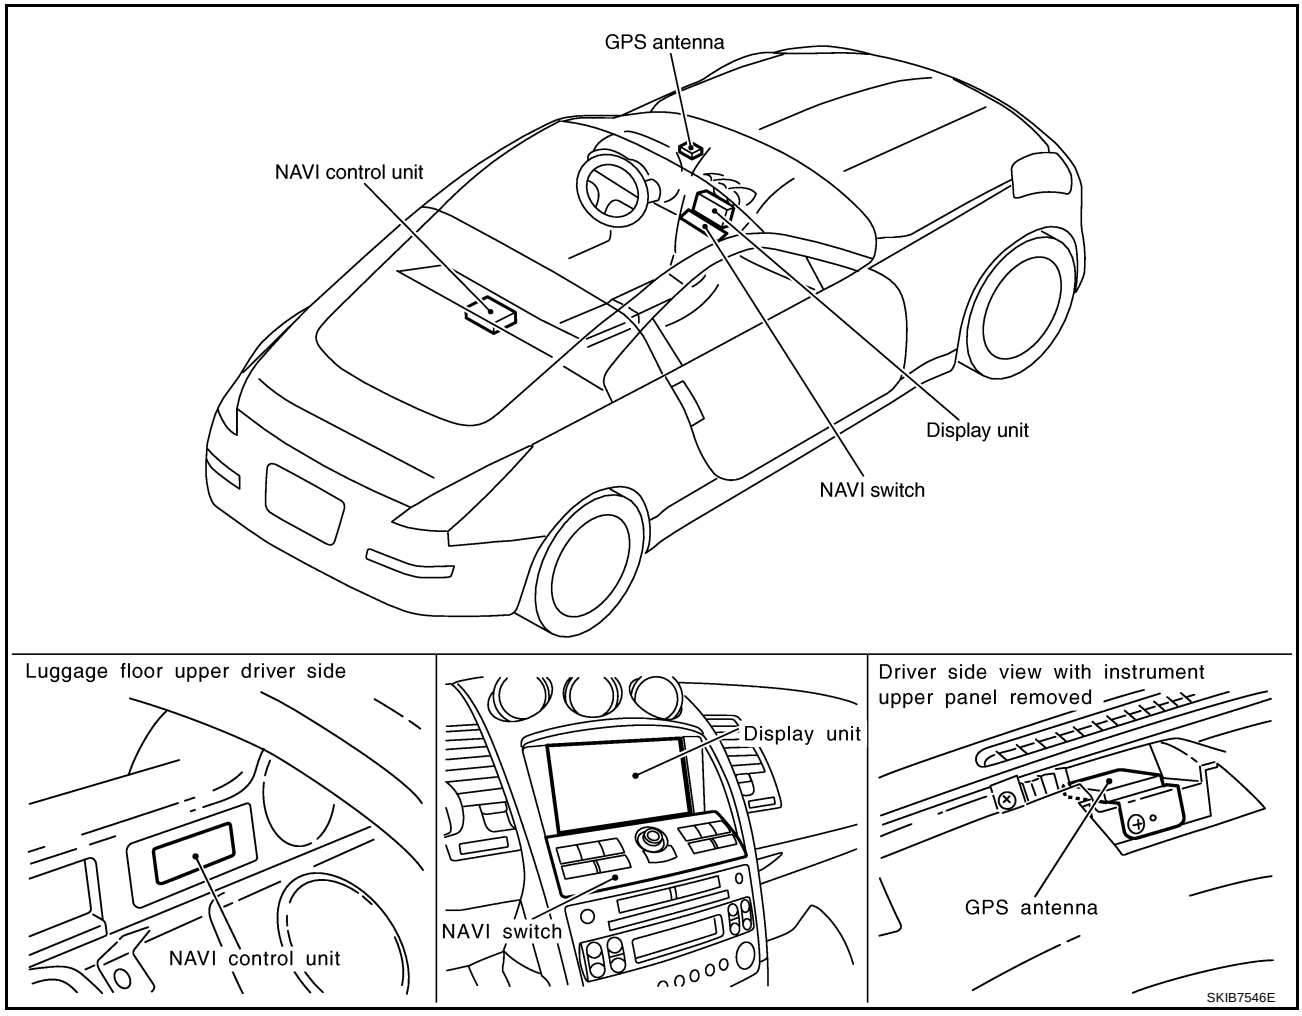
The GPS antenna receives and amplifies the radio waves from the GPS satellites, and then transmits the GPS signal to NAVI control unit.

SKIB7375E



DISPLAY UNIT

- Display unit connects to the NAVI control unit and NAVI switch with communication lines.
- Display unit receives RGB image signal from NAVI control unit, and RGB image is displayed.



NAVI SWITCH

- NAVI switch connects to the display unit and NAVI control unit with communication lines.
- Operation signal from NAVI switch is transmitted to NAVI control unit through display unit.

Special Note for Trouble Diagnosis

NKS002JP

Prior to perform trouble diagnosis, make sure there are no corresponding description in the “Example of Symptoms Possible No Malfunction”. Refer to AV-95, "Example of Symptoms Possible No Malfunction" .

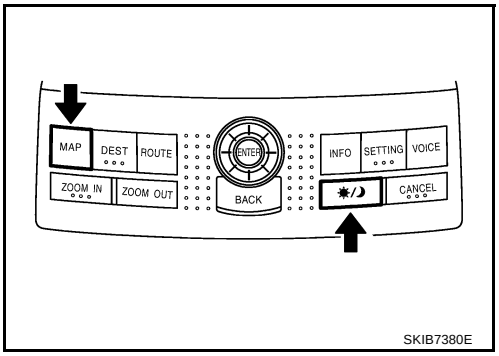
On Board Self-Diagnosis Function

NKS000D6

DESCRIPTION

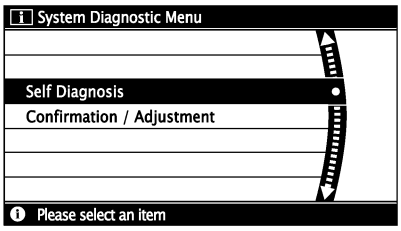
- Trouble diagnosis function of navigation system has a Self Diagnosis mode by automatic operation and a Confirmation/Adjustment mode by manual operation.
- Self Diagnosis mode checks for connections between the units constituting this system, analyzes each individual unit at the same time, and displays the results on the display unit.
- Confirmation/Adjustment mode displays trouble diagnosis that require an operation and a judgment by a human (auto-decision can not be performed by the system), confirmation of preset value, and an error history.

DIAGNOSIS ITEM



Mode			Description
Self Diagnosis			● NAVI control unit diagnosis (DVD-ROM drive will not be diagnosed when no DVD-ROM is in it.). ● Analyzes connection between the NAVI control unit and the GPS antenna, connection between the NAVI control unit and each unit, and operation of each unit.
Confirmation/ Adjustment	Display Diagnosis		Color tone and shading of the screen can be checked by the display of a color bar and a gray scale.
	Vehicle Signals		Diagnosis of signals that are input to NAVI control unit can be performed for Vehicle speed, Lights, Ignition and Reverse.
	Navigation	Steering Angle Adjustment	This mode is used to correct difference between actual turning angle of a vehicle and turning angle of the vehicle mark on the display.
		Speed Calibration	Under ordinary conditions, the navigation system distance measuring function will automatically compensate for minute decreases in wheel and tire diameter caused by tire wear or low-pressure. Speed Calibration can immediately restore system accuracy in cases such as when distance calibration is needed because of the use of tire chains.
	Error History		Malfunctions that occurred in the past are displayed, along with the number of times each has occurred. Time and location when/where the errors occurred are also displayed.
	Delete Unit Connection Log		Erase the connection history of unit and error history.

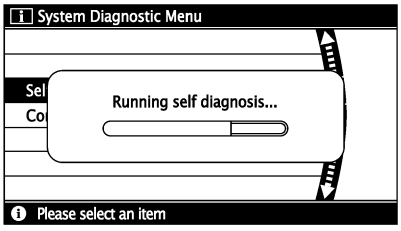
Self Diagnosis Mode



NKS000D7

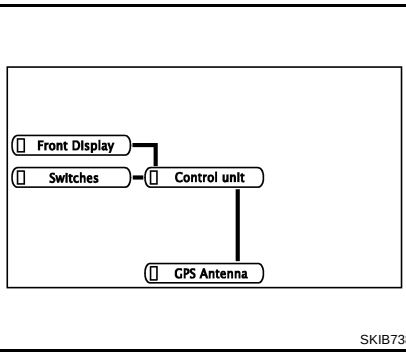
OPERATION PROCEDURE

1. Start the engine.
2. Press and hold “MAP” and “☀/☽” buttons simultaneously for 5 seconds or more.
   - Shifting from current screen to previous screen is performed by pressing “BACK” button.



3. The initial trouble diagnosis screen will be shown, and items “Self Diagnosis” and “Confirmation/Adjustment” will become selective.

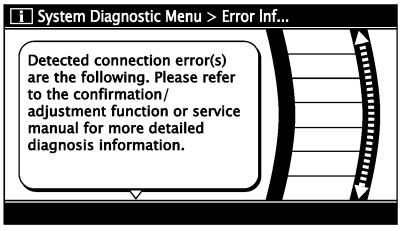
SKIB6971E



4. Perform self-diagnosis by selecting the “Self Diagnosis”.
   - Self-diagnosis screen is displayed, and then self-diagnosis starts.
   - The bar graph visible below self-diagnosis screen displays progress of the diagnosis.

SKIB6972E

5. On the diagnosis results screen, each unit name and connection line will be colored according to the diagnosis result, as follows.

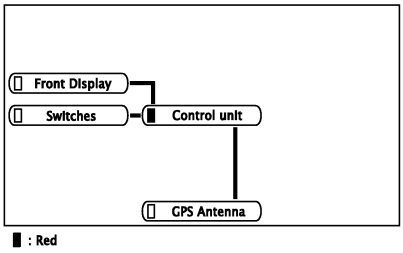


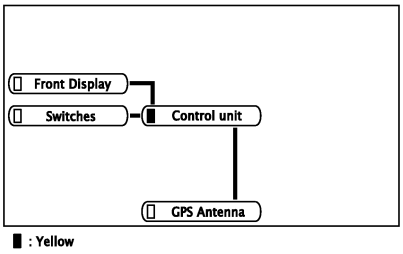
Diagnosis results	Unit	Connection line
Normal	Green	Green
Connection malfunction	Gray	Yellow
DVD-ROM drive undiagnosed	Gray	Green
DVD-ROM and DVD-ROM drive malfunction	Yellow	Green
Unit returned an error	Red	Green

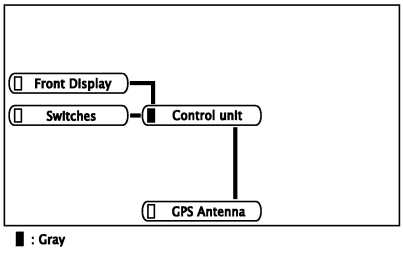
SKIB7381E

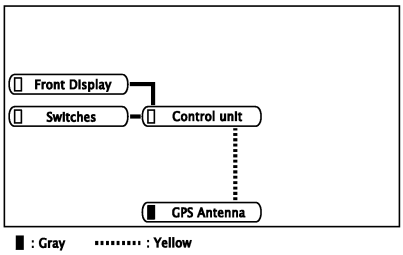
NOTE:
- Control unit = NAVI control unit
- Switches = NAVI switch
- Only Control unit (NAVI control unit) is displayed in red.
- If multiple malfunctions occur at the same time for a single unit, the screen switch colors are determined according to the following order of priority: red > yellow > gray.

6. Select a switch on the diagnosis results screen, and comments for the diagnosis results will be shown.







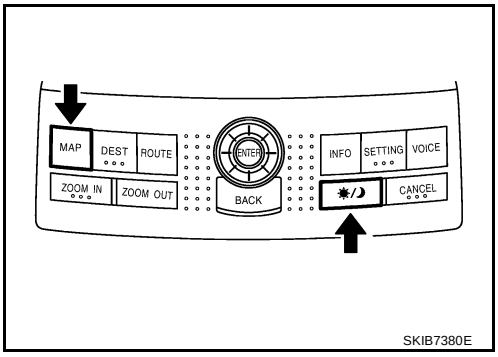


SKIB3659E

SELF-DIAGNOSIS RESULT

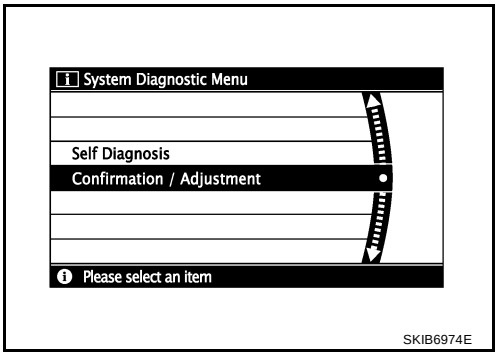
Check the applicable display in the following table, and then repair the malfunctioning parts.

Quick Reference Table



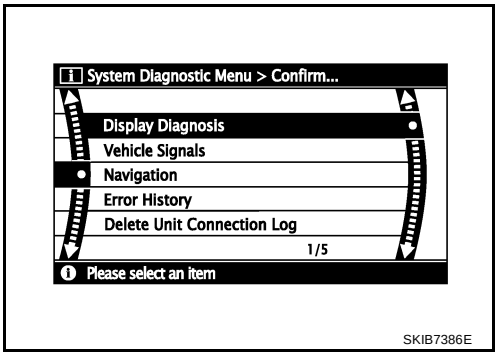
Self-diagnosis result screen	Possible cause	Action to take
 SKIB7382E	NAVI control unit malfunction is detected	Replace NAVI control unit Refer to AV-98, "Removal and Installation of NAVI Control Unit"
 SKIB7383E	● Malfunction is detected on DVD-ROM drive pickup lens in NAVI control unit ● There is dirt and damage on the DVD-ROM	1. Check if the inserted DVD-ROM is specified for this navigation system, and the DVD-ROM is dirty, scratched or warped. 2. If the results from the above checkup show no malfunction, insert the same DVD-ROM, and then restart self-diagnosis. 3. If self-diagnosis results still show any malfunction, replace NAVI control unit.
 SKIB7384E	DVD-ROM not inserted is detected	Insert DVD-ROM
 SKIB7385E	GPS antenna connection malfunction is detected	1. Check if GPS antenna feeder line is snapped or pinched. 2. If the results from the above checkup show no malfunction, replace GPS antenna, and then restart self-diagnosis. 3. If self-diagnosis results still show any malfunction, replace NAVI control unit.

Confirmation/Adjustment Mode

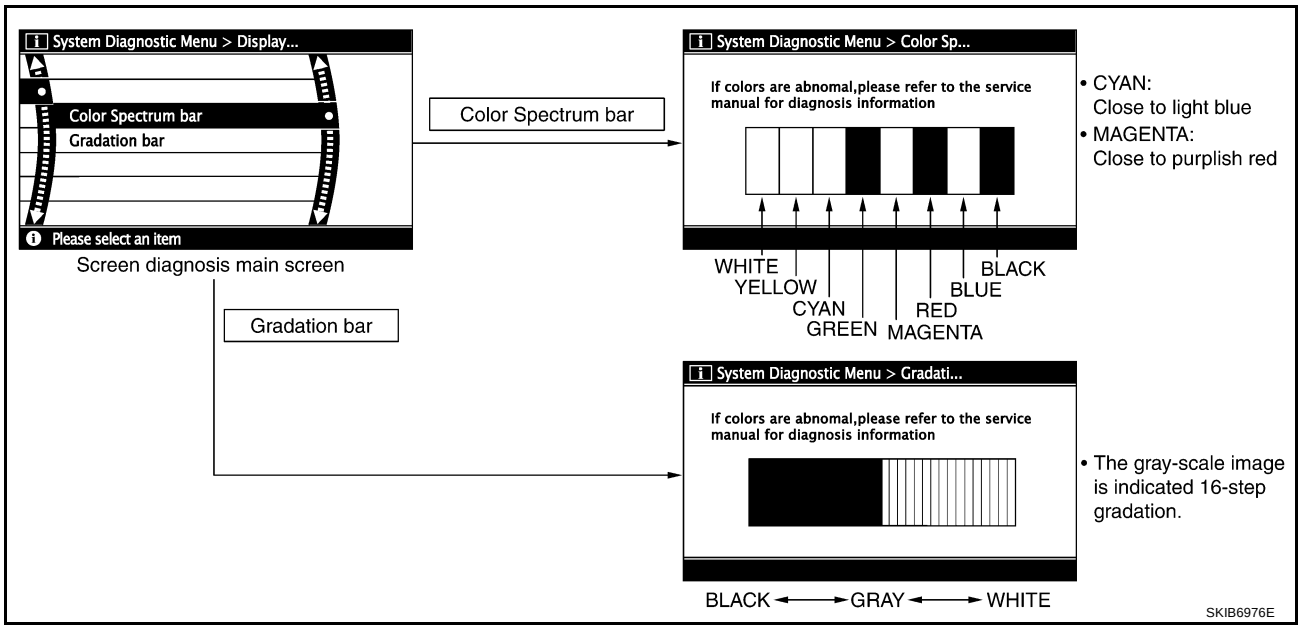


NKS000D8

OPERATION PROCEDURE



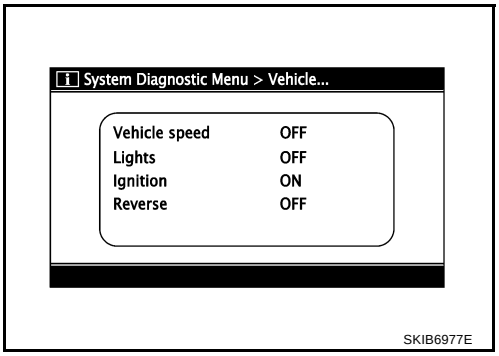
1. Start the engine.
2. Press and hold “MAP” and “☀/☽” buttons simultaneously for 5 seconds or more.
   - Shifting from current screen to previous screen is performed by pressing “BACK” button.



3. The initial trouble diagnosis screen will be shown, and items “Self Diagnosis” and “Confirmation/Adjustment” will become selective.
4. Select “Confirmation/Adjustment”.

5. Each diagnosis is shown by selecting each screen switch on Confirmation/Adjustment screen.

DISPLAY DIAGNOSIS

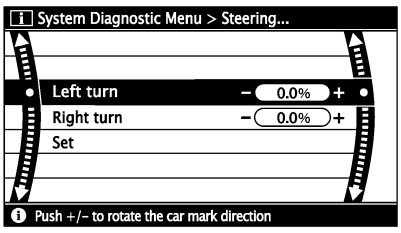


- If RGB signal is malfunctioning, the tint of the color bar display is as follows.

R (red) signal error : Light blue (Cyan) tint
G (green) signal error : Purple (Magenta) tint
B (blue) signal error : Yellow tint

VEHICLE SIGNALS

A comparison check can be made of each actual vehicle signal and the signals recognized by the NAVI control unit.

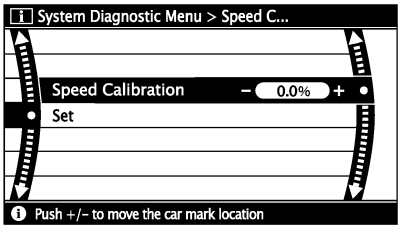


Diagnosis item	Display	Condition	Remarks
Vehicle speed	ON	When vehicle speed is more than 0 km/h (0 MPH)	Changes in indication may be delayed. This is normal.
	OFF	When vehicle speed is 0 km/h (0 MPH)	
	—	Ignition switch in ACC position	
Lights	ON	Lighting switch ON	—
	OFF	Lighting switch OFF	
Ignition	ON	Ignition switch ON	—
	OFF	Ignition switch ACC position	
Reverse	ON	Selector lever in R position	Changes in indication may be delayed. This is normal.
	OFF	Selector lever in any position other than R position	
	—	Ignition switch in ACC position	

NOTE:
If ignition signal is NG, each vehicle signal of vehicle speed and reverse is not displayed.

NAVIGATION

Steering Angle Adjustment

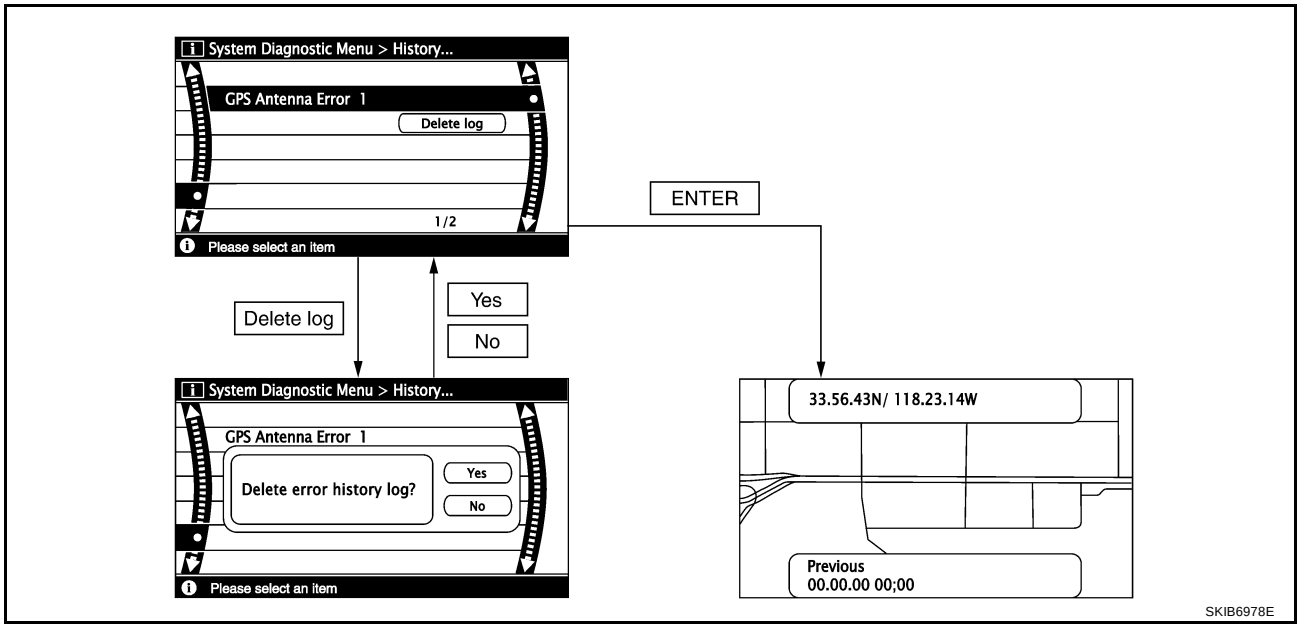


The steering angle output value detected by the gyroscope can be adjusted.

SKIB3684E

Speed Calibration

Usually the automatic distance correction function adjusts the malfunction in distance caused by the tires wearing down or the tire pressure change. If prompt adjustment is necessary when the tire chains are installed etc., perform this procedure.



SKIB3685E

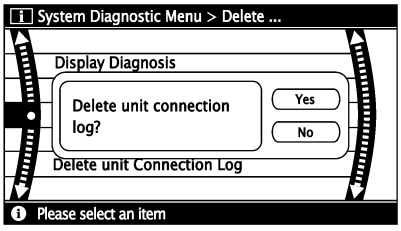
ERROR HISTORY

Diagnosis results of self-diagnosis depend on if any error occurred during the time after selecting “Self Diagnosis” until self-diagnosis results is displayed.
Meanwhile, when an error occurs before selecting “Self Diagnosis”, and if an error does not occur until self-diagnosis results is displayed, a diagnosis result is judged as normal.
Consequently, a diagnosis needs to be performed with “Error History” for the past error that is not available with self-diagnosis.
“Error History” displays the time and place of the most recent occurrence of that error. However, take note of the following points.

- Correct time of the error occurrence may not be displayed when the GPS antenna substrate within the NAVI control unit has malfunctioned.
- Place of the error occurrence is represented by the position of the vehicle mark at the time when the error occurred. If the vehicle mark has deviated from the correct position, then the place of the error occurrence may not be located correctly.
- When the ignition switch is turned ON if the error is detected, the counter increases 1. Even if it is normal when the ignition switch is turned ON the next time, the counter does not decrease.
- The upper limit of the counter is 50. 51 or more is displayed as 50. It can be reset to 0 by “Delete log” switch.

Diagnosis by Error History

- When having a difficulty on the investigation of cause due to multiple errors with a reproducible malfunction, turn ON the ignition switch from OFF mode after making a memo of the item and number of time (or delete “Error History”). Check “Error History” again after the malfunction was reproduced, and then perform diagnosis focusing on the item of which number of time increased.
- DVD-ROM error history may be restored because DVD-ROM cannot be temporarily read. (Driving on rough road etc.) Then, erase the error history. (This is not a malfunction.) Perform service in “Action to take” if error history are repeatedly indicated again.



Error item	Possible cause	Action to take
GPS Antenna Error	GPS antenna connection malfunction is detected	1. Start self-diagnosis, and make sure of the result. 2. If any error is found, GO TO 3. If any error is not found, delete the error history and end the diagnosis. (This is not a malfunction.) 3. Check if GPS antenna feeder line is snapped or pinched. 4. If the results from the above checkup show no malfunction, replace GPS antenna, and then restart self-diagnosis. 5. If self-diagnosis results still show any malfunction, replace NAVI control unit.
FLASH-ROM Error Of Control Unit	NAVI control unit malfunction is detected	1. Start self-diagnosis, and make sure of the result. 2. If any error is found, replace NAVI control unit. Refer to AV-98, "Removal and Installation of NAVI Control Unit" . If any error is not found, delete the error history and end the diagnosis. (This is not a malfunction.)
Connection Of Gyro		
GPS Communication Error	GPS malfunction is detected	If the symptoms such as the GPS receipt malfunction occur, intermittent malfunction caused by strong radio interference may be detected. If the malfunction always occurs, replace NAVI control unit.
GPS ROM Error		
GPS RAM Error		
GPS RTC Error		
DVD-ROM Mechanism not Detected	● Malfunction is detected on DVD-ROM drive pickup lens in NAVI control unit ● There is dirt and damage on the DVD-ROM	1. Check if the inserted DVD-ROM is specified for this navigation system, and the DVD-ROM is dirty, scratched or warped. 2. If the results from the above checkup show no malfunction, insert the same DVD-ROM, and then restart self-diagnosis. 3. If self-diagnosis results still show any malfunction, replace NAVI control unit.
DVD-ROM Communication Error		
DVD-ROM Mechanism Error		
DVD-ROM Focus Error		
DVD-ROM TOC Error		
DVD-ROM Disc Error		
DVD-ROM Seek Error		
DVD-ROM Error Correction Error		
DVD-ROM Read Error		
DVD-ROM Data Transfer Error		
DVD-ROM Data Error		
DVD-ROM Loading / Eject Error		
DVD-ROM Time-out		

Error item	Possible cause	Action to take
Front Display Connection Error	Display unit power supply and ground circuit malfunction is detected	1. Delete the error history, and turn OFF ignition switch. 2. Turn ON ignition switch, and make sure of the error history. 3. If the error item listed left is displayed again, GO TO 4. If the error item is not displayed, end the diagnosis. (This is not a malfunction.) 4. Check display unit power supply and ground circuit. 5. If the results from the above checkup show no malfunction, replace display unit.

Error item	Possible cause	Action to take
Switches Connection Error	● NAVI switch power supply and ground circuit malfunction is detected ● Malfunction is detected on communication signal between display unit and NAVI switch ● Malfunction is detected on communication signal between NAVI control unit and display unit	1. Delete the error history, and turn OFF ignition switch. 2. Turn ON ignition switch, and make sure of the error history. 3. If the error item listed left is displayed again, GO TO 4. If the error item is not displayed, end the diagnosis. (This is not a malfunction.) 4. Check NAVI switch power supply and ground circuit. 5. Check communication circuit between display unit and NAVI switch. 6. Check communication circuit between NAVI control unit and display unit. 7. If the results from the above checkup show no malfunction, replace NAVI switch, display unit, or NAVI control unit, and then start self-diagnosis. 8. If self-diagnosis results still show any malfunction, replace one of the two units that is not replaced yet. 9. If self-diagnosis results still show any malfunction, replace the other unit.
● Front Display Connection Error ● Switches Connection Error	● Malfunction is detected on communication signal between NAVI control unit and display unit ● Malfunction is detected on communication signal between display unit and NAVI switch	1. Delete the error history, and turn OFF ignition switch. 2. Turn ON ignition switch, and make sure of the error history. 3. If the error item listed left is displayed again, GO TO 4. If the error item is not displayed, end the diagnosis. (This is not a malfunction.) 4. Check communication circuit between NAVI control unit and display unit. 5. Check communication circuit between display unit and NAVI switch. 6. If the results from the above checkup show no malfunction, replace NAVI switch, display unit, or NAVI control unit, and then start self-diagnosis. 7. If self-diagnosis results still show any malfunction, replace one of the two units that is not replaced yet. 8. If self-diagnosis results still show any malfunction, replace the other unit.

DELETE UNIT CONNECTION LOG

Erase the connection history of unit and error history that is recorded in NAVI control unit (clear the connection history of the removed unit).

SKIB6979E

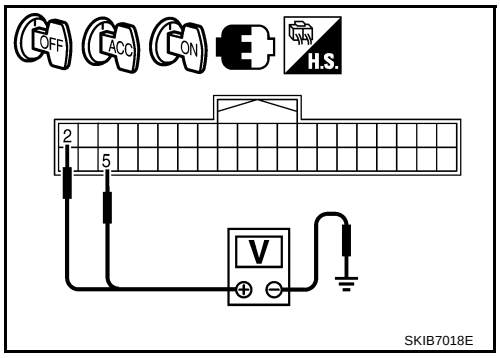
All Images Are Not Displayed

NKS000DI

Symptom: RGB image such as a map screen is not displayed.

1. CHECK CONDITION

Check if brightness of screen changes when ☀/☽ button on NAVI switch is turned on after turning on ignition switch.

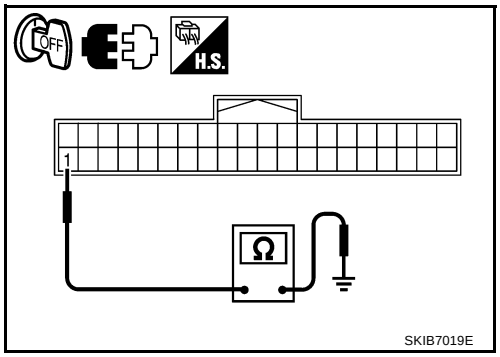


Does brightness of screen change?

YES >> GO TO 5.
NO >> GO TO 2.

2. CHECK NAVI CONTROL UNIT POWER SUPPLY AND GROUND CIRCUIT

1. Check voltage between NAVI control unit harness connector terminals and ground.



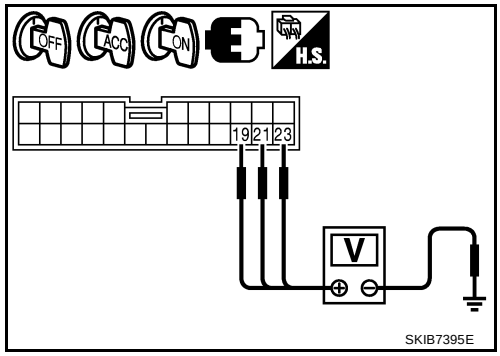
Terminals			OFF	ACC	ON
(+)		(–)			
Connector	Terminal				
B104	2	Ground	Battery voltage	Battery voltage	Battery voltage
	5		0 V	Battery voltage	Battery voltage

SKIB7018E

2. Turn ignition switch OFF.
3. Disconnect NAVI control unit connector.
4. Check continuity between NAVI control unit harness connector B104 terminal 1 and ground.

1 – Ground : Continuity should exist.

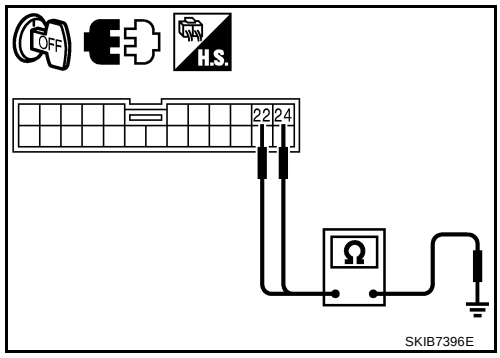
SKIB7019E



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK DISPLAY UNIT POWER SUPPLY AND GROUND CIRCUIT



1. Check voltage between display unit harness connector terminals and ground.

Terminals			OFF	ACC	ON
(+)		(–)			
Connector	Terminal				
M35	21, 23	Ground	Battery voltage	Battery voltage	Battery voltage
	19		0 V	Battery voltage	Battery voltage

2. Turn ignition switch OFF.
3. Disconnect display unit connector.
4. Check continuity between display unit harness connector M35 terminals 22, 24 and ground.

22, 24 – Ground : Continuity should exist.

OK or NG

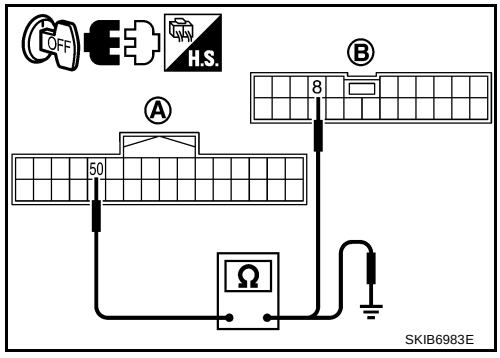
OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK NAVI CONTROL UNIT AND DISPLAY UNIT

1. Replace NAVI control unit or display unit.
2. Turn ignition switch ON.
3. Check if an image is displayed on the screen.

Is an image displayed on the screen?

YES >> INSPECTION END
NO >> Replace the other unit.



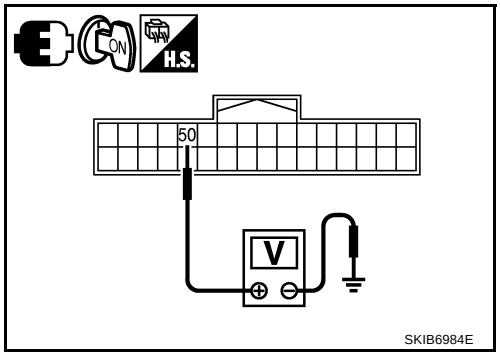
5. CHECK HARNESS

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and display unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B105 terminal 50 and display unit harness connector (B) M35 terminal 8.

50 – 8 : Continuity should exist.

4. Check continuity between NAVI control unit harness connector (A) B105 terminal 50 and ground.

50 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

6. CHECK RGB AREA (YS) SIGNAL

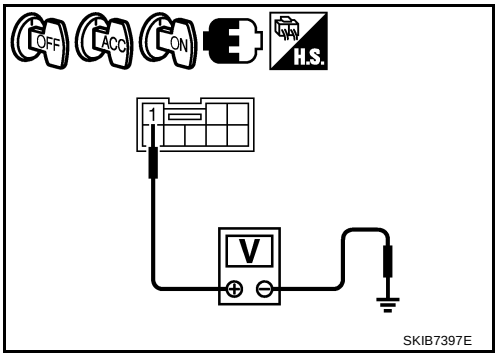
1. Connect NAVI control unit and display unit connectors.
2. Turn ignition switch ON.
3. Check voltage between NAVI control unit harness connector B105 terminal 50 and ground.

50 – Ground : Approx. 5 V

OK or NG

OK >> Replace display unit.
NG >> Replace NAVI control unit.

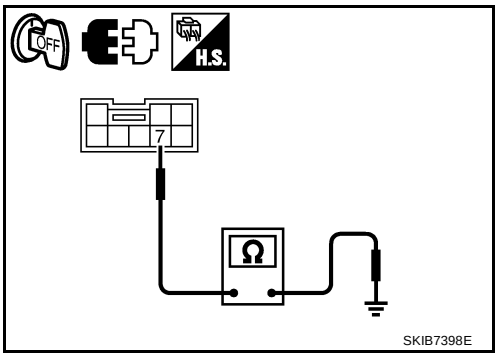
Navigation System Is Not Operated by NAVI Switch



NKS000DJ

Symptom: Initial screen (NISSAN screen) or warning screen is displayed after ignition switch turns ON. But NAVI switch does not work.

1. CHECK NAVI SWITCH POWER SUPPLY AND GROUND CIRCUIT



1. Check voltage between NAVI switch harness connector terminal and ground.

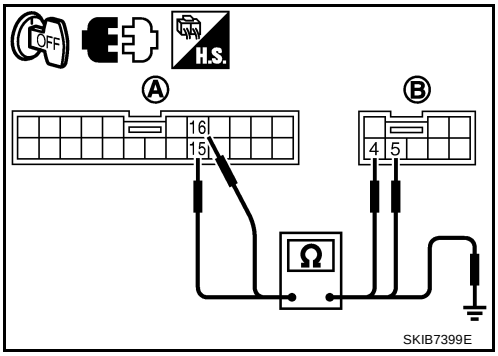
Terminals			OFF	ACC	ON
(+)		(–)			
Connector	Terminal				
M37	1	Ground	0 V	Battery voltage	Battery voltage

2. Turn ignition switch OFF.
3. Disconnect NAVI switch connector.
4. Check continuity between NAVI switch harness connector M37 terminal 7 and ground.

7 – Ground : Continuity should exist.

OK or NG

OK >> GO TO 2.
NG >> Repair harness or connector.



2. CHECK HARNESS

1. Disconnect display unit connector.
2. Check continuity between display unit harness connector (A) M35 terminals 15, 16 and NAVI switch harness connector (B) M37 terminals 5, 4.

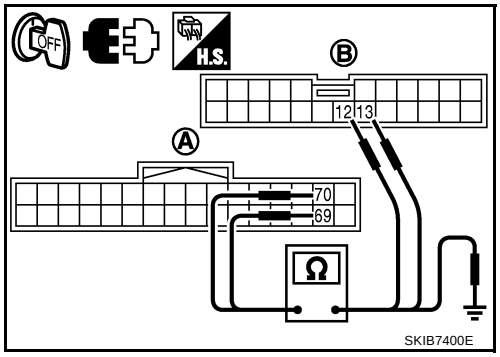
15 – 5 : Continuity should exist.
16 – 4 : Continuity should exist.

3. Check continuity between display unit harness connector (A) M35 terminals 15, 16 and ground.

15, 16 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.



3. CHECK HARNESS

1. Disconnect NAVI control unit connector.
2. Check continuity between NAVI control unit harness connector (A) B105 terminals 69, 70 and display unit harness connector (B) M35 terminals 13, 12.

69 – 13 : Continuity should exist.
70 – 12 : Continuity should exist.

3. Check continuity between NAVI control unit harness connector (A) B105 terminals 69, 70 and ground.

69, 70 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK NAVI SWITCH, DISPLAY UNIT AND NAVI CONTROL UNIT

1. Replace NAVI switch, display unit, or NAVI control unit.
2. Make sure that navigation system can be operated by NAVI switch.

OK or NG

OK >> INSPECTION END
NG >> GO TO 5.

5. CHECK NAVI SWITCH, DISPLAY UNIT AND NAVI CONTROL UNIT

1. Replace one of the two units that is not replaced yet.
2. Make sure that navigation system can be operated by NAVI switch.

OK or NG

OK >> INSPECTION END
NG >> Replace the other unit.

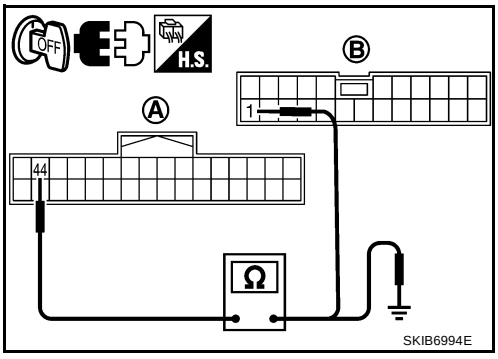
Tint Is Strange for The RGB Image

NKS000DL

Symptom: Tint of RGB image is strange.

1. CHECK HARNESS

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and display unit connectors.
3. Check the malfunctioning circuit according to the symptoms.



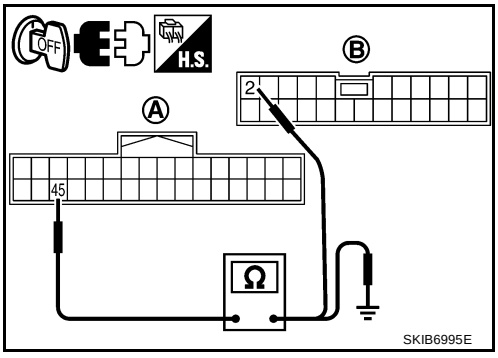
- **Light blue (Cyan) tinged screen**

Check continuity between NAVI control unit harness connector (A) B105 terminal 44 and display unit harness connector (B) M35 terminal 1.

44 – 1 : Continuity should exist.

Check continuity between NAVI control unit harness connector (A) B105 terminal 44 and ground.

44 – Ground : Continuity should not exist.



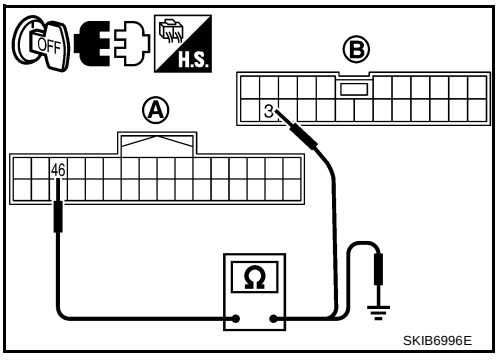
- **Purple (Magenta) tinged screen**

Check continuity between NAVI control unit harness connector (A) B105 terminal 45 and display unit harness connector (B) M35 terminal 2.

45 – 2 : Continuity should exist.

Check continuity between NAVI control unit harness connector (A) B105 terminal 45 and ground.

45 – Ground : Continuity should not exist.



- **Yellow tinged screen**

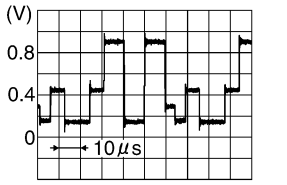
Check continuity between NAVI control unit harness connector (A) B105 terminal 46 and display unit harness connector (B) M35 terminal 3.

46 – 3 : Continuity should exist.

Check continuity between NAVI control unit harness connector (A) B105 terminal 46 and ground.

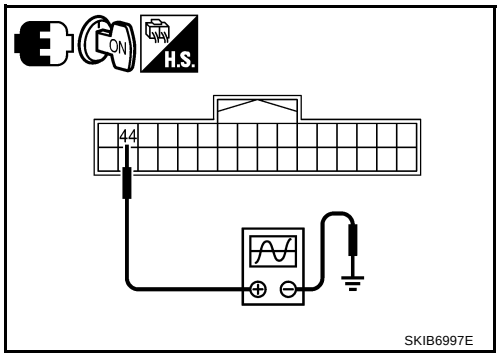
46 – Ground : Continuity should not exist.

OK or NG



OK >> GO TO 2.
NG >> Repair harness or connector.

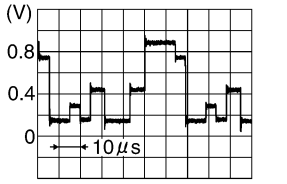
2. CHECK RGB SIGNAL



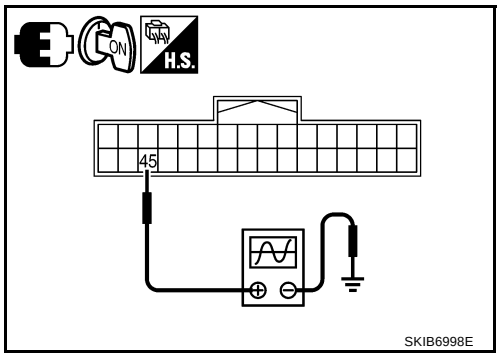
1. Connect NAVI control unit and display unit connectors.
2. Turn ignition switch ON.
3. Start Confirmation/Adjustment mode. Refer to AV-77, "Confirmation/Adjustment Mode" .
4. Display color bar by selecting “Color Spectrum bar” on Display Diagnosis screen. Refer to AV-78, "DISPLAY DIAGNOSIS" .
5. Check the malfunctioning circuit according to the symptoms.

- **Light blue (Cyan) tinged screen**
  Check voltage waveform between NAVI control unit harness connector B105 terminal 44 and ground using oscilloscope.

44 – Ground:



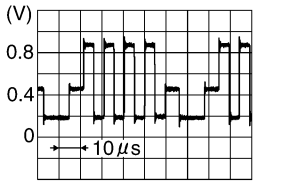
SKIB7360E



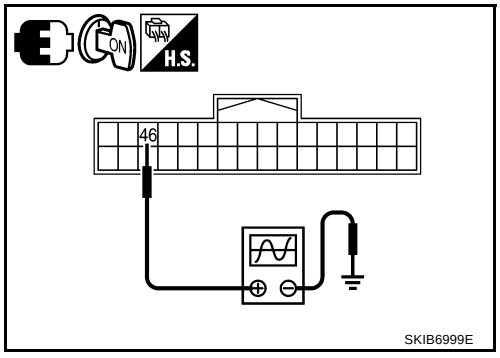
SKIB6997E

- **Purple (Magenta) tinged screen**
  Check voltage waveform between NAVI control unit harness connector B105 terminal 45 and ground using or oscilloscope.

45 – Ground:



SKIB7361E



SKIB6998E

- **Yellow tinged screen**
  Check voltage waveform between NAVI control unit harness connector B105 terminal 46 and ground using oscilloscope.

46 – Ground:

SKIB7362E

SKIB6999E

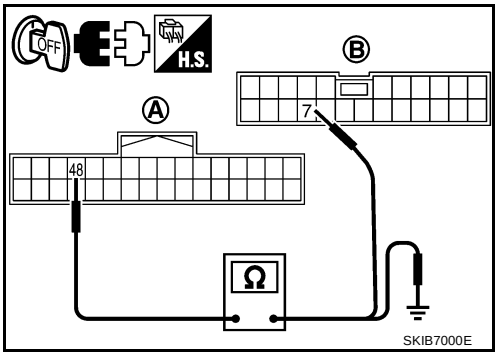
OK or NG

OK >> Replace display unit.
NG >> Replace NAVI control unit.

RGB Image Is Rolling

NKS000DM

Symptom: RGB image such as a map screen is rolling.



1. CHECK HARNESS

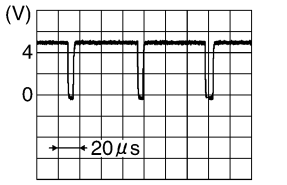
1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and display unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B105 terminal 48 and display unit harness connector (B) M35 terminal 7.

48 – 7 : Continuity should exist.

4. Check continuity between NAVI control unit harness connector (A) B105 terminal 48 and ground.

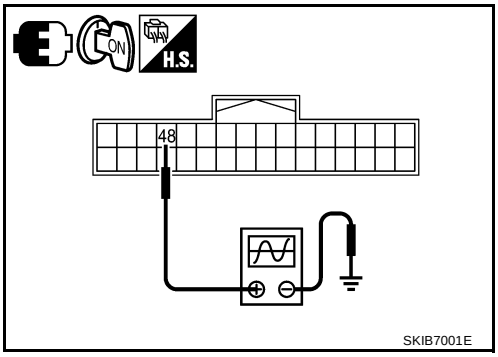
48 – Ground : Continuity should not exist.

SKIB7000E



OK or NG

OK >> GO TO 2.
NG >> Repair harness or connector.



2. CHECK RGB SYNCHRONIZING SIGNAL

1. Connect NAVI control unit and display unit connectors.
2. Turn ignition switch ON.
3. Check voltage waveform between NAVI control unit harness connector B105 terminal 48 and ground using oscilloscope.

48 – Ground:

SKIB3603E

SKIB7001E

OK or NG

OK >> Replace display unit.
NG >> Replace NAVI control unit.

Voice Guidance Is Not Heard

NKS000DN

Symptom: Voice guidance does not sound at route guidance.

1. CHECK CONDITION

Turn audio system ON, and check if any sound can be heard from front door speaker.

OK or NG

OK >> GO TO 2.
NG >> Refer to AV-39, "Trouble Diagnosis" and repair malfunctioning part.

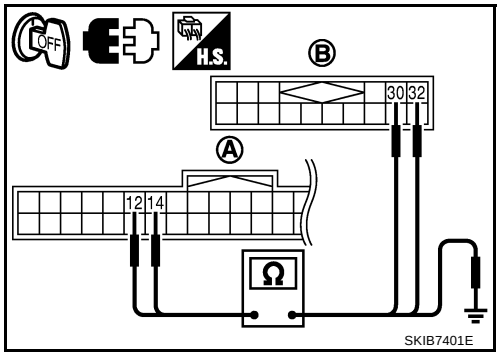
2. CHECK CONDITION

Turn audio system ON, and check if front door speaker is muted when pressing “VOICE” button during sounding from front door speaker.

Is front door speaker muted?

YES >> GO TO 3.
NO >> GO TO 5.

3. CHECK HARNESS



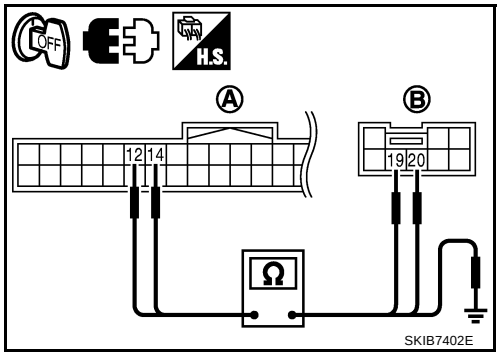
With BOSE system

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and audio unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B104 terminals 12, 14 and audio unit harness connector (B) M39 terminals 32, 30.

   12 – 32 : Continuity should exist.
   14 – 30 : Continuity should exist.

4. Check continuity between NAVI control unit harness connector (A) B104 terminals 12, 14 and ground.

   12, 14 – Ground : Continuity should not exist.



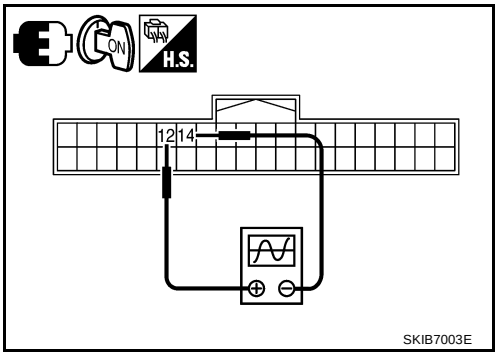
With base system

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and audio unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B104 terminals 12, 14 and audio unit harness connector (B) M46 terminals 20, 19.

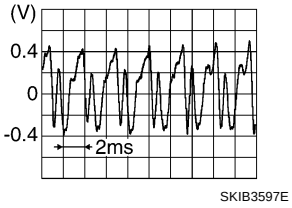
   12 – 20 : Continuity should exist.
   14 – 19 : Continuity should exist.

4. Check continuity between NAVI control unit harness connector (A) B104 terminals 12, 14 and ground.

   12, 14 – Ground : Continuity should not exist.



OK or NG



OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK VOICE GUIDANCE SIGNAL

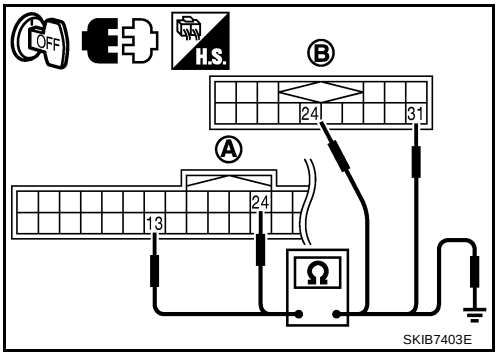
1. Connect NAVI control unit and audio unit connectors.
2. Turn ignition switch ON.
3. When pressing “VOICE” button, check voltage waveform between NAVI control unit harness connector B104 terminals 12 and 14 using or oscilloscope.

12 – 14:

OK or NG

OK >> Replace audio unit.
NG >> Replace NAVI control unit.

5. CHECK HARNESS



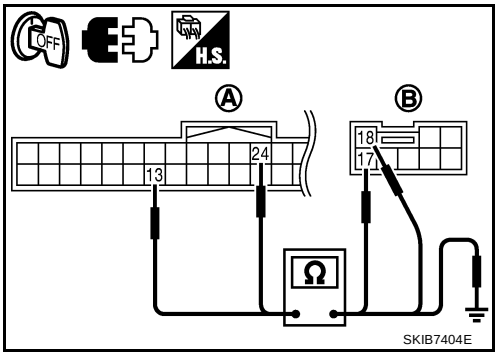
With BOSE system

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and audio unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B104 terminals 13, 24 and audio unit harness connector (B) M39 terminals 31, 24.

13 – 31 : Continuity should exist.
24 – 24 : Continuity should exist.

4. Check continuity between NAVI control unit harness connector (A) B104 terminal 24 and ground.

24 – Ground : Continuity should not exist.



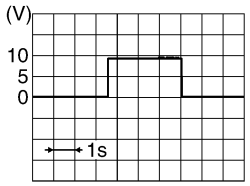
With base system

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit and audio unit connectors.
3. Check continuity between NAVI control unit harness connector (A) B104 terminals 13, 24 and audio unit harness connector (B) M46 terminals 18, 17.

13 – 18 : Continuity should exist.
24 – 17 : Continuity should exist.

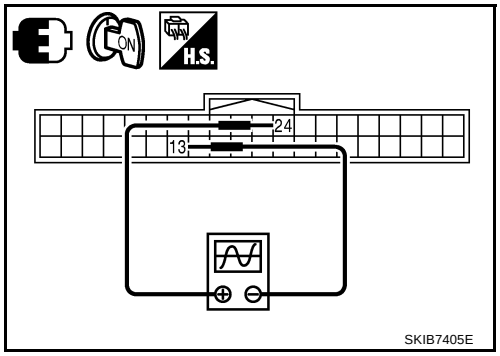
4. Check continuity between NAVI control unit harness connector (A) B104 terminal 24 and ground.

24 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.



6. CHECK VOICE GUIDANCE ON SIGNAL

1. Connect NAVI control unit and audio unit connectors.
2. Turn ignition switch ON.
3. When pressing “VOICE” button, check voltage waveform between NAVI control unit harness connector B104 terminals 24 and 13 using oscilloscope.

24 – 13:

SKIB0232E

SKIB7405E

OK or NG

OK >> Replace audio unit.
NG >> Replace NAVI control unit.

Vehicle Mark Is Not Displayed Properly

NKS000DO

Symptom: Vehicle mark is not displayed at the vehicle driving position properly.

1. NAVIGATION SYSTEM ADJUSTMENT

1. Select “Navigation” in Confirmation/Adjustment mode, and adjust items, “Steering Angle Adjustment” and “Speed Calibration”. Refer to AV-79, "NAVIGATION" .
2. Check symptom with driving.

Is any malfunction observed?

YES >> GO TO 2.
NO >> INSPECTION END

2. SELF-DIAGNOSIS

Start self-diagnosis, and check any malfunction related to GPS. Refer to AV-74, "Self Diagnosis Mode" .

Is any malfunction related to GPS observed?

YES >> Repair malfunctioning part by diagnosis results.
NO >> GO TO 3.

3. CHECK VEHICLE SIGNAL

Select “Vehicle Signals” in Confirmation/Adjustment mode, and check the vehicle speed signal and reverse signal inputting to NAVI control unit. Refer to AV-78, "VEHICLE SIGNALS" .

OK or NG

OK >> Limit of position detection capacity.
NG >>
- Check NAVI control unit vehicle speed signal circuit, and repair malfunctioning part.
- Check NAVI control unit reverse signal circuit, and repair malfunctioning part.

Example of Symptoms Possible No Malfunction

NKS002JQ

For Navigation System operation information, refer to Navigation System Owner's Manual.

BASIC OPERATIONS

Symptom	Possible cause	Possible solution
No image is displayed.	The brightness is at the lowest setting.	Adjust the brightness of the display.
	The display is turned off.	Press and hold the ☀/☽ button to turn on the display.
No voice guidance is available. or The volume is too high or too low.	The volume is not set correctly, or it is turned off.	Adjust the volume of voice guidance.
No map is displayed on the screen.	The DVD-ROM is not inserted, or it is inserted upside down.	Insert the DVD-ROM correctly.
	A screen other than map screen is displayed.	Press the “MAP” button.
	The pickup lens of the DVD unit is dirty.	The pickup lens can become dirty depending on how you use the vehicle. Contact a NISSAN dealer or qualified workshop for pickup lens cleaning.
The screen is too dim. The movement is slow.	The temperature in the interior of the vehicle is low.	Wait until the interior of the vehicle has warmed up.
Some pixels in the display are darker or brighter than others.	This condition is an inherent characteristic of liquid crystal displays.	This is not a malfunction.
Some menu items cannot be selected.	Some menu items become unavailable while the vehicle is driven.	Park the vehicle in a safe location, then operate the navigation system.

NOTE:

Locations stored in the Address Book and other memory functions may be lost if the vehicle's battery is disconnected or is discharged. If this occurs, service the vehicle's battery as necessary and re-enter the information in the Address Book.

VEHICLE MARKS

Symptom	Possible cause	Possible solution
Names of roads and locations differ between plan view and BIRD-VIEW™ .	This is because the quantity of the displayed information is reduced so that the screen does not become difficult to read. There is also a chance that names of the roads or locations may be displayed several times, and the names appearing on the screen may be different because of a processing procedure.	This is not a malfunction.
The vehicle mark is not displayed in the correct position.	The vehicle was transported after the ignition switch was turned off, for example, by a ferry or car transporter.	Drive the vehicle for a while on a road where GPS signals can be received.
	The position and direction of the vehicle mark may be incorrect depending on the driving environments and the levels of positioning accuracy of the navigation system.	This is not a malfunction. Drive the vehicle for a while to automatically correct the position and direction of the vehicle mark.
When the vehicle is travelling on a new road, the vehicle mark is located on another road nearby.	The system automatically places the vehicle mark on the nearest available road, because the new road is not stored in the map data.	Updated road information will be included in the next version of the DVD-ROM.
The screen does not switch to the night screen even after turning on the headlights.	The daytime screen was set the last time the headlights were turned on.	Set the screen to the night screen mode using ☀/☽ button when you turn on the headlights.
The map does not scroll even when the vehicle is moving.	The current location map screen is not displayed.	Press the “MAP” button.
The vehicle mark is not displayed.	The current location map screen is not displayed.	Press the “MAP” button.

Symptom	Possible cause	Possible solution
The GPS indicator on the screen remains gray.	GPS signals cannot be received depending on the vehicle location, such as in a parking garage, on a road that has numerous tall buildings, etc.	Drive on an open, straight road for a while.
	A sufficient amount of GPS satellites is not available.	Please wait for the satellites to move to locations available for your navigation system.
The location of the vehicle mark is misaligned from the actual position.	When using tire chains or replacing the tires, speed calculations based on the speed sensor may be incorrect.	Drive the vehicle for a while [at approximately 30 km/h (19 MPH) for about 30 minutes] to automatically correct the vehicle's mark position. If this does not correct the vehicle mark position, contact a NISSAN dealer or qualified workshop.
	The map data has a mistake or is incomplete (the vehicle mark position is always misaligned in the same area).	Updated road information will be included in the next version of the DVD-ROM.

DVD-ROM

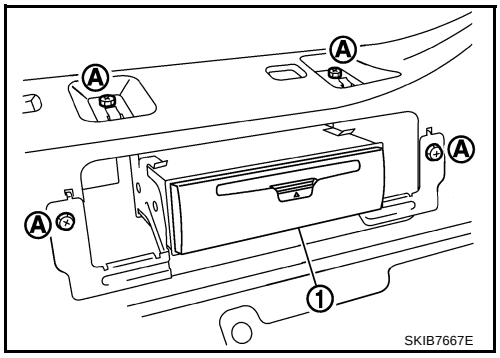
Symptom	Possible cause	Possible solution
The message “Error” appears.	The DVD-ROM is dirty or partially damaged.	Check the DVD-ROM and wipe it clean with a soft cloth.
		In you see any damage, replace the DVD-ROM.

ROUTE CALCULATION AND VISUAL GUIDANCE

Symptom	Possible cause	Possible solution
In the auto re-route calculation, waypoints are not included.	Waypoints that you have already passed are not included in the auto re-route calculation.	If you want to go to that waypoint again, you need to edit the route.
Route information is not displayed.	Route calculation has not yet been performed.	Set the destination and perform route calculation.
	You are not driving on the suggested route.	Drive on the suggested route.
	Route guidance is set to off.	Turn on the route guidance.
The auto re-route calculation (or detour calculation) suggests the same route as the one previously suggested.	Route calculations took priority conditions into consideration, but the same route was calculated.	This is not a malfunction.
A waypoint cannot be added.	Five waypoints are already set on the route, including the ones that you have already passed.	A maximum of 5 waypoints can be set on the route. If you want to go to 6 or more waypoints, perform route calculations several times, as necessary.
The suggested route is not displayed.	Roads near the destination cannot be calculated.	Reset the destination to a main or ordinary road, and recalculate the route.
	The starting point and destination are too close.	Set a more distant destination.
	The starting point and destination are too far away.	Divide your trip by selecting one or two intermediate destinations, and perform a global route calculation based on multiple route calculations.
	There are time restricted roads (day of week, time) near the current vehicle location or destination.	Set [Use Time Restricted Roads] to off.
The part of the route that you have already passed is deleted.	A route is managed by sections between waypoints. If you passed the first waypoint, the section between the starting point and the waypoint is deleted. (It may not be deleted depending on the area.)	This is not a malfunction.

Symptom	Possible cause	Possible solution
An indirect route is suggested.	If there are restrictions (such as one-way streets) on roads close to the starting point or destination, the system may suggest an indirect route.	Adjust the location of the starting point or destination.
	The system may suggest an indirect route because route calculation does not take into consideration some areas such as narrow streets (grey roads).	Reset the destination to a main or ordinary road, and recalculate the route.
The landmark information does not correspond to the actual information.	This may be caused by insufficient or incorrect data on the DVD-ROM.	Updated information will be included in the next version of the DVD-ROM.
The suggested route does not exactly connect with the starting point, waypoints, or destination.	There is no data for route calculation closer to these locations.	Set the starting point, waypoints and destination on a main road, and perform route calculation.

VOICE GUIDANCE



Symptom	Possible cause	Possible solution
Voice guidance is not available.	Voice guidance is only available at certain intersections marked with . In some cases, voice guidance is not available even when the vehicle should make a turn.	This is not malfunction.
	The vehicle has deviated from the suggested route.	Go back to the suggested route or request route calculation again.
	Voice guidance is set to off.	Turn on the voice guidance.
	Route guidance is set to off.	Turn on the route guidance.
The guidance content does not correspond to the actual condition.	The content of voice guidance may vary, depending on the types of intersections where turns are made.	Follow all traffic rules and regulations.

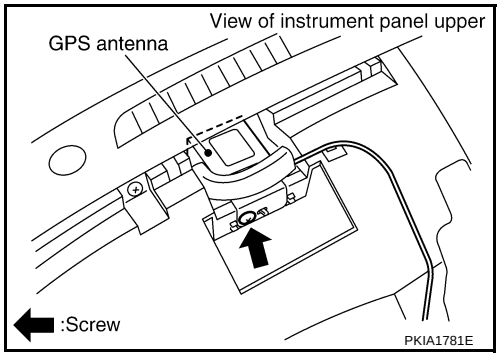
Removal and Installation of NAVI Control Unit

NKS000DT

REMOVAL

1. Remove luggage floor finisher upper (front) (Coupe models), or luggage floor finisher upper (Roadster models). Refer to EI-39, "Removal and Installation (for Coupe Models)" , or EI-41, "Removal and Installation (for Roadster Models)" .
2. Remove screws (A), and remove NAVI control unit (1).
3. Remove NAVI control unit from bracket.

INSTALLATION



Installation is the reverse order of removal.

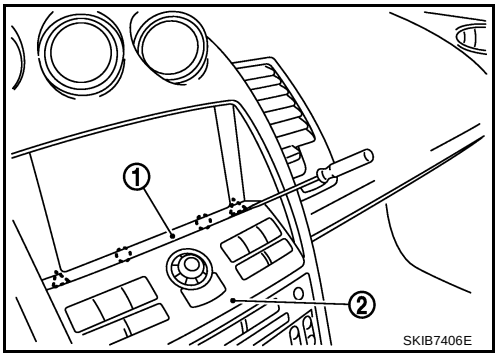
Removal and Installation of GPS Antenna

NKS000DU

REMOVAL

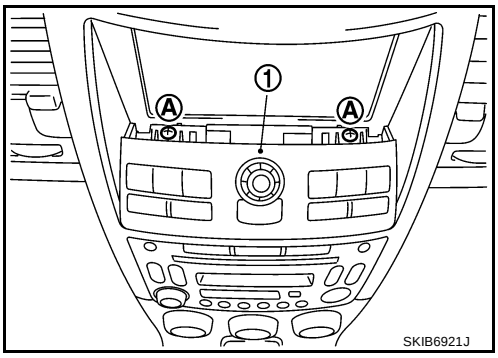
1. Remove instrument driver panel upper. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screw (1), and remove GPS antenna.

INSTALLATION



Installation is the reverse order of removal.

Removal and Installation of NAVI Switch



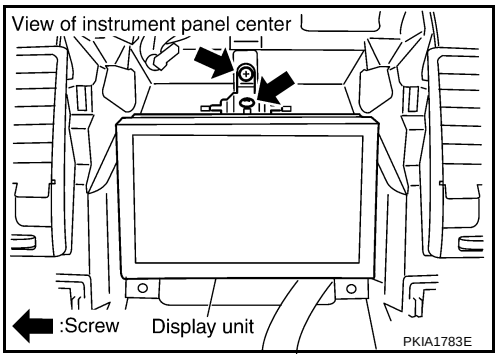
NKS000DV

REMOVAL

1. Insert cloth-covered driver into gaps between mask (1) and NAVI switch (2), and remove mask (1).

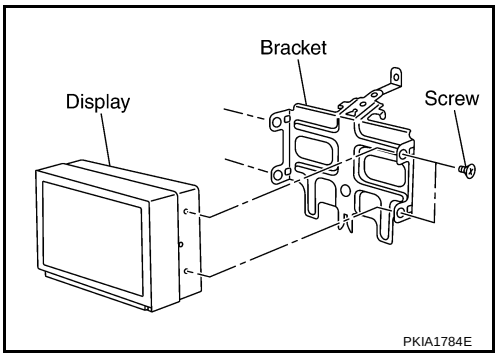
2. Remove screws (A), and remove NAVI switch (1).

INSTALLATION



Installation is the reverse order of removal.

Removal and Installation of Display Unit



NKS000DW

REMOVAL

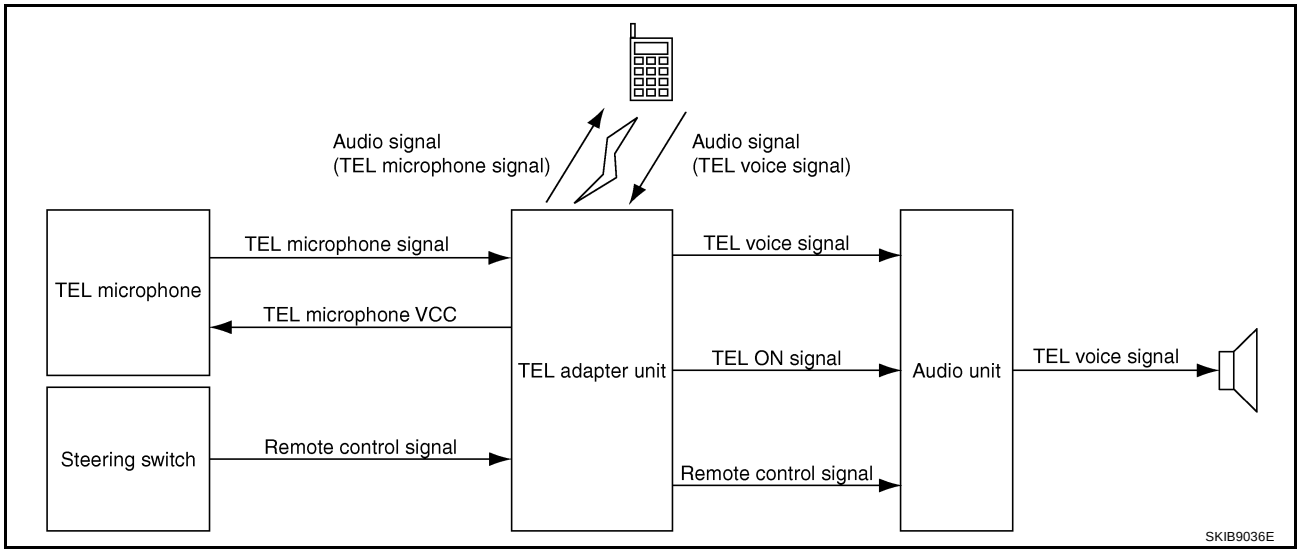
1. Remove cluster lid C. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws (2), and remove display unit.

3. Remove screws (4), and remove bracket.

INSTALLATION

Installation is the reverse order of removal.

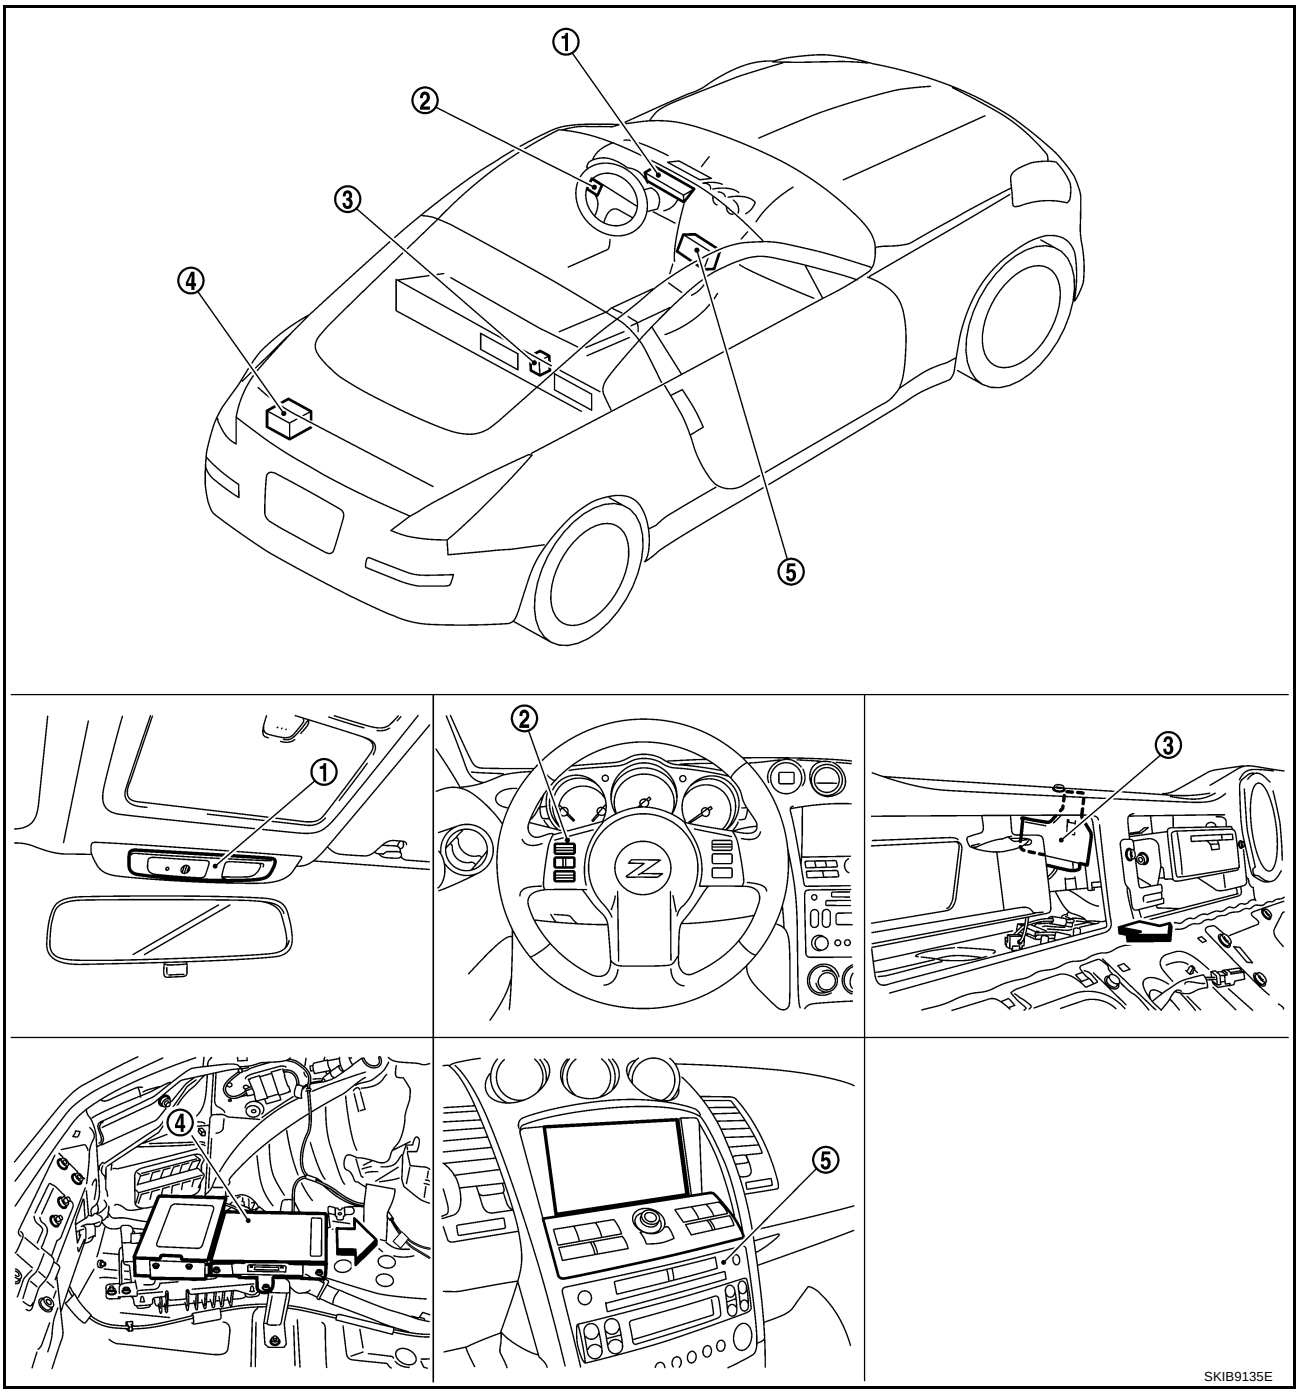
TELEPHONE



PFP:28342

System Description

NKS0056C



HANDS-FREE PHONE SYSTEM

- For Hands-free phone system operation information, refer to Owner's Manual.
- TEL adapter unit has Bluetooth® module. It can perform wireless hands-free telephone calls using a cellular phone in vehicle compartment.
- 5 or less cellular phones can be registered into the TEL adapter unit.
- Hands-free phone mode starts by transmitting steering switch signal to TEL adapter unit when pressing button.
- Hands-free phone mode ends by transmitting steering switch signal to TEL adapter unit when pressing MODE button.
- When uttering to the TEL microphone, TEL microphone signal (audio signal) is transmitted from the TEL microphone to the TEL adapter unit and transmitted to the cellular phone with the Bluetooth® communication.
- Audio signals from a party at the other end are transmitted from the cellular phone to the TEL adapter unit with the Bluetooth® communication, and transmitted from the TEL adapter unit to the audio unit, then the party's voice is output from the front door speaker.
- Audio unit switches the voice from front speaker RH to TEL voice when receiving TEL ON signal from TEL adapter unit.

Component Parts Location

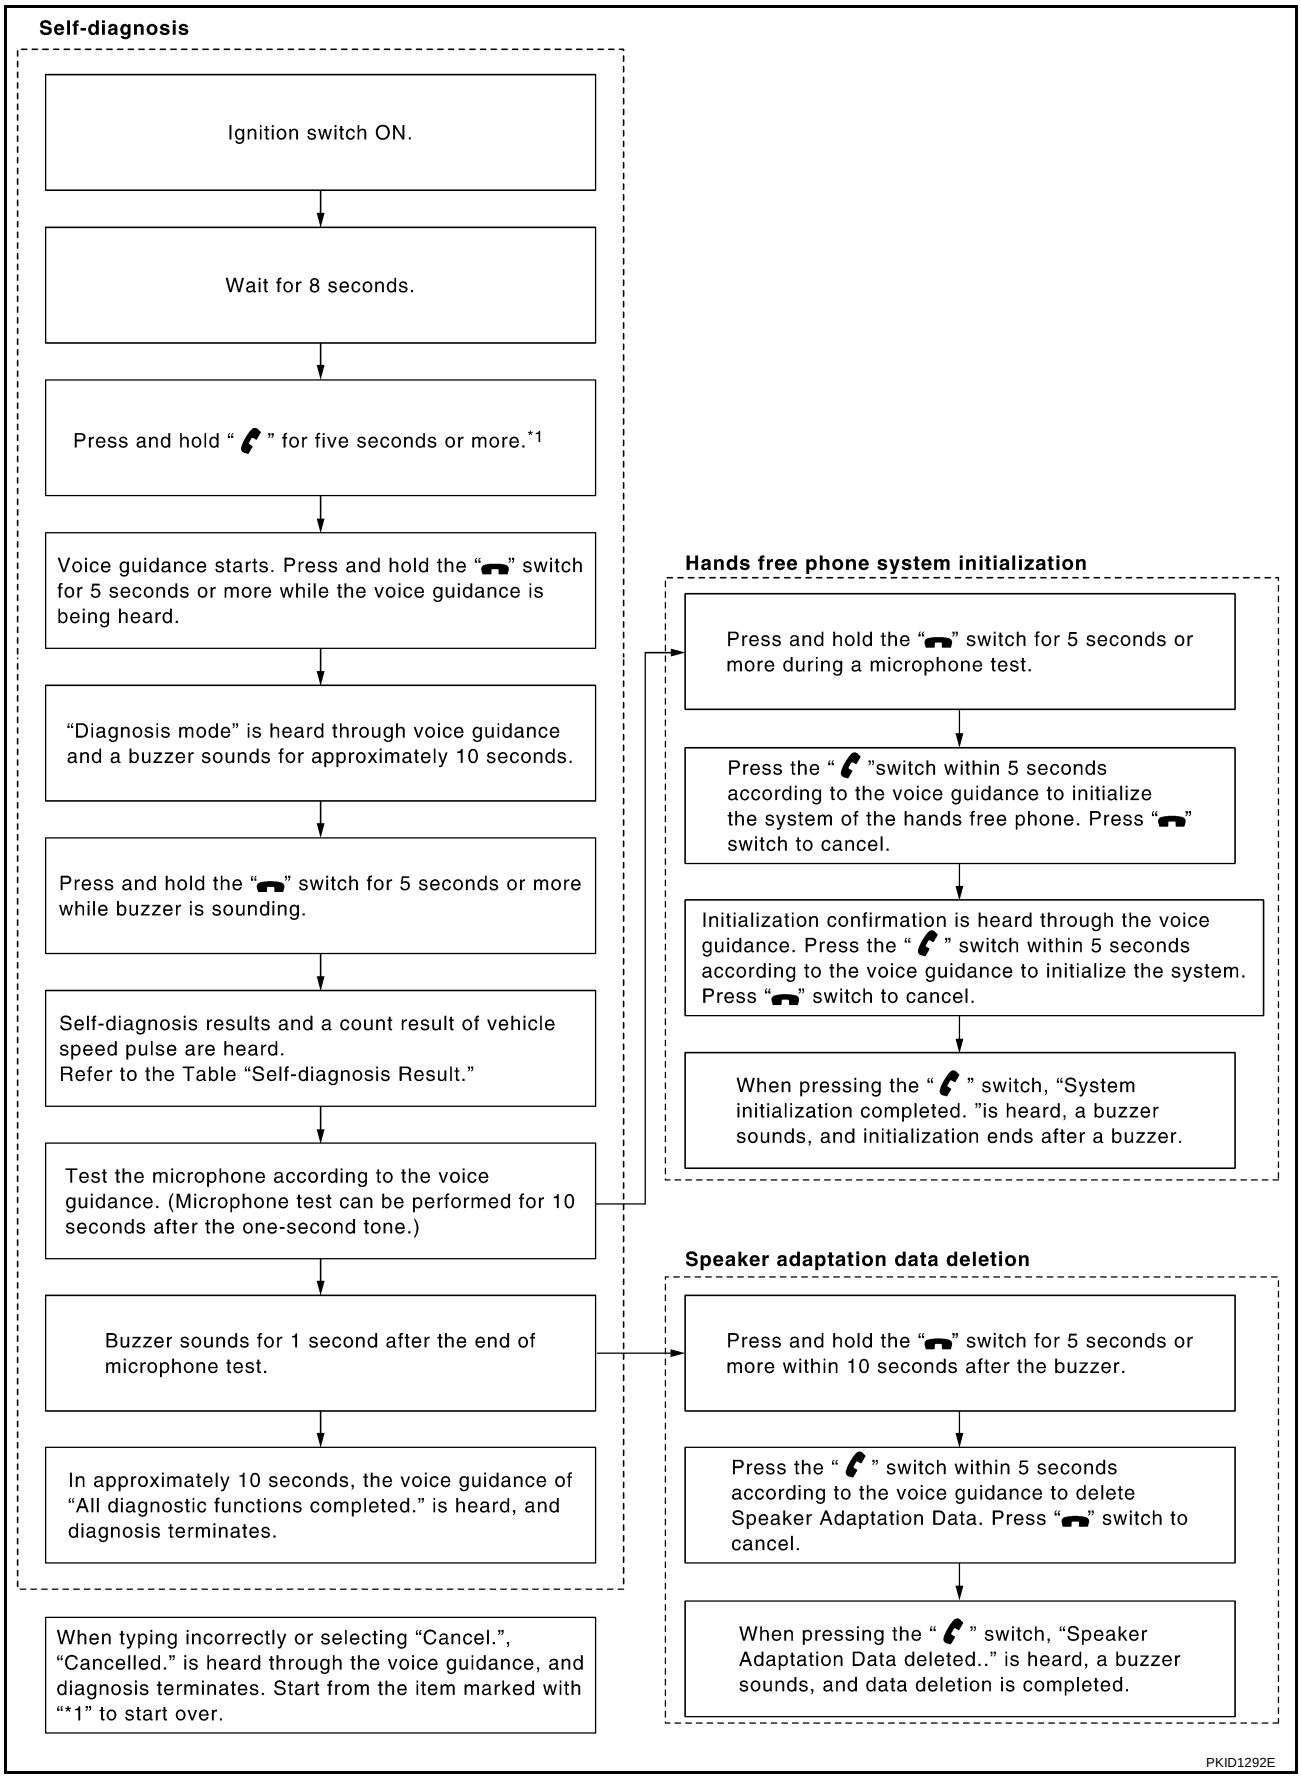
33	—	TEL antenna signal	Input	ON	Not connected to Bluetooth® antenna connector	Approx. 3 V

Self-Diagnosis Function

NKS0056J



- During on board diagnosis the diagnosis function of TEL adapter unit starts with the operation of the steering switch and performs the diagnosis when ignition switch ACC.
- The on board diagnosis has 3 modes: the self-diagnosis mode that performs the trouble diagnosis, the speaker adaptation data deleting mode and the hands free phone system initialization mode.

NOTE:

- Perform the diagnosis with the vehicle stopped.
- Perform STEP 2 if necessary.

STEP	Mode	Contents
STEP 1	Self-diagnosis	The self-diagnosis mode perform the following. ● Diagnosis of TEL adapter unit, Bluetooth antenna and steering switch. ● Vehicle speed pulse count. ● Microphone test. Then reads out the results with the sound.
STEP 2	Speaker adaptation data deleting	The speaker adaptation data deleting mode can delete the speaker adaptation data.
	Hands free phone system initialization	Hands free phone system initialization mode can perform the initialization of hands free phone system.

DIAGNOSIS FUNCTION OPERATION PROCEDURE

ERROR ITEM (ERROR NAME)

Error name	Detection condition	Trouble-shooting method
There are no failure records to report	System is normal	—
Internal error	Error inside TEL adapter unit	Replace TEL adapter unit.
Bluetooth® antenna open	Open in the Bluetooth® antenna is detected	Check the Bluetooth® antenna feeder for open.
Bluetooth® antenna short	Short in the Bluetooth® antenna is detected	Check the Bluetooth® antenna feeder for short.
Bluetooth® antenna unplugged	Disconnected Bluetooth® antenna	Check the connection Bluetooth® antenna.
Phone button stuck	Stuck switch	Check the steering switch. Refer to AV-115, "Component Inspection" .
Phone end button stuck	Stuck MODE switch	

Error Count

- Error count is read out simultaneously when reading out the error name.
- The errors are read out continuously when some errors occur at the same time.
- The error count guides “0” when the error occurs. The next time it counts up “1” if it is normal with the ignition switch ON.
- It continues the count up unless the initialization of hands free phone system is performed.

VEHICLE SPEED SIGNAL

- Check the input status of the vehicle speed pulse count after ignition switch turns ON.
- The guidance announces the type of error name and then the vehicle speed pulse count.

MICROPHONE TEST

Input the voice spoken into the microphone to the speaker, and checks the microphone function.

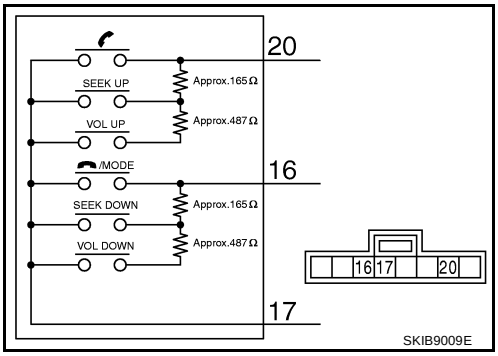
Symptom Chart

NKS0056K

Indicator status	Symptom	Check item	Diagnosis procedure
ON (Normal)	Voice is not heard on the other end.	—	● Check the TEL microphone signal circuit between TEL adapter unit to the TEL microphone. ● Check the TEL microphone power supply circuit between TEL adapter unit to the microphone.
	Voice guidance does not activate, or the volume of voice guidance is too low when pressing switch. (“PHONE” is indicated on LCD screen of the audio unit)	—	Check TEL voice signal circuit between TEL adapter unit to the audio unit.
	Voice guidance does not activate, when pressing switch. (“PHONE” is not indicated on LCD screen of the audio unit)	Dial the cellular phone. The front speaker RH outputs a dial tone.	1. Check “VOLUME UP” and “SEEK UP” switches function. 2. Replace steering switch, if “VOLUME UP” and “SEEK UP” switches function is normal. If not, go to 3. 3. Check if remote control signal A circuit between steering switch and TEL adapter unit is not open or short. 4. Check voltage of remote control signal A between steering switch and TEL adapter unit when operating steering switch.
		Dial the cellular phone. The front speaker RH does not outputs a dial tone.	1. Check TEL ON signal circuit. Go to the next step if normal. 2. Disconnect TEL adapter unit connector. Measure audio unit #28 terminal voltage. Replace TEL adapter unit if the voltage approx. 5 V. Replace audio unit if the voltage approx. 0 V.
	None of the steering switch operations work.	—	● Check control signal 1circuit. ● Check steering switch signal ground circuit.
OFF	Bluetooth® communication does not perform.	The indicator blinks for approx. 5 sec. when pressing switch.	Perform the error history mode with self-diagnosis. Refer to AV-111, "Self-Diagnosis Function" .
		The indicator continue turning OFF when pressing switch.	Check TEL adapter unit power supply, and ground circuit.

Component Inspection

NKS0056L



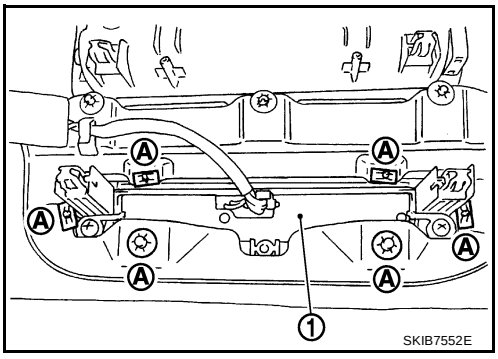
STEERING SWITCH

20 – 17

switch ON	: Approx. 0 Ω
“SEEK UP” switch ON	: Approx. 165 Ω
“VOLUME UP” switch ON	: Approx. 652 Ω

16 – 17

MODE switch ON	: Approx. 0 Ω
“SEEK DOWN” switch ON	: Approx. 165 Ω
“VOLUME DOWN” switch ON	: Approx. 652 Ω



Removal and Installation of Telephone Microphone

NKS0056M

REMOVAL

1. Remove headlining. Refer toEI-44, "Removal and Installation (for Coupe Models)" .
2. Remove mount pin (A), and remove telephone microphone(1).

INSTALLATION

Installation is the reverse order of removal.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS0009L

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS0009M

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

BCM (BODY CONTROL MODULE)

PFP:284B2

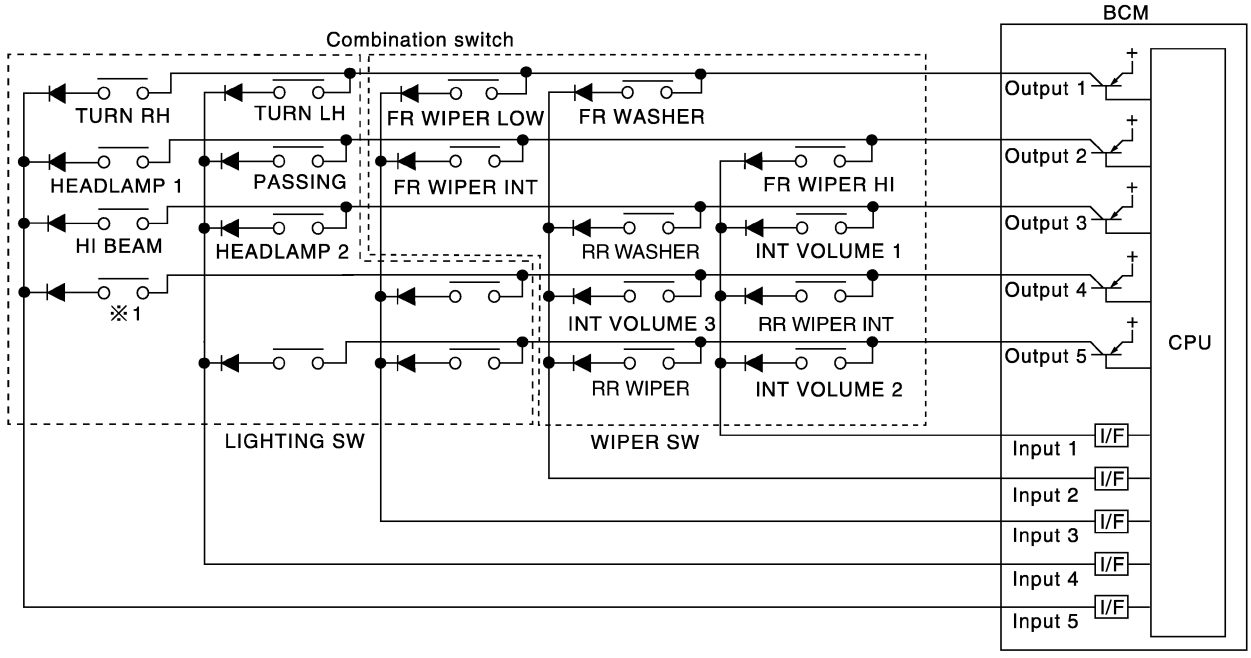
System Description

NKS0009N

BCM (Body Control Module) controls the operation of various electrical units installed in the vehicle.

BCM FUNCTION

BCM has combination switch reading function for reading the operation of combination switches (light, wiper, washer and turn signal) in addition to a function for controlling the operation of various electrical components. Also it has an interface function allowing it to receive signals from the unified meter and A/C amp., and send signals to ECM using CAN communication.



COMBINATION SWITCH READING FUNCTION

Description

- BCM reads combination switch (lighting switch, wiper switch) status, and controls various electrical component, according to the results.
- BCM reads information of a maximum of 20 switches by combining five output terminals (OUTPUT 1 - 5) and five input terminals (INPUT 1 - 5).

Operation Description

- BCM activates transistors of output terminals (OUTPUT 1 - 5) periodically and, allows current to flow in turn.
- If any (1 or more) switches are turned ON, circuit of output terminals (OUTPUT 1 - 5) and input terminals (INPUT 1 - 5) becomes active.
- At this time, transistors of output terminals (OUTPUT 1 - 5) are activated to allow current to flow. When voltage of input terminals (INPUT 1 - 5) corresponding to that switch changes, interface in BCM detects voltage change, and BCM determines that switch is ON.

※1 : LIGHTING SWITCH 1ST POSITION

PKIC4861E

Operation Table of BCM and Combination Switches

BCM reads operation status of combination switch using combinations shown in table below.

	COMB SW OUTPUT 1		COMB SW OUTPUT 2		COMB SW OUTPUT 3		COMB SW OUTPUT 4		COMB SW OUTPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
COMB SW INPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	INT VOLUME 1 ON	INT VOLUME 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	INT VOLUME 2 ON	INT VOLUME 2 OFF
COMB SW INPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	INT VOLUME 3 ON	INT VOLUME 3 OFF	RR WIPER ON	RR WIPER OFF
COMB SW INPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	—	—
COMB SW INPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEAD-LAMP 2 ON	HEAD-LAMP 2 OFF	—	—	—	—
COMB SW INPUT 5	TURN RH ON	TURN RH OFF	HEAD-LAMP 1 ON	HEAD-LAMP 1 OFF	HI BEAM ON	HI BEAM OFF	LIGHTING SW (1st) ON	LIGHTING SW (1st) OFF	—	—

PKIC4963E

NOTE:
Headlamp system has a dual circuit.

Sample Operation (When lighting switch 1ST position is turned ON)

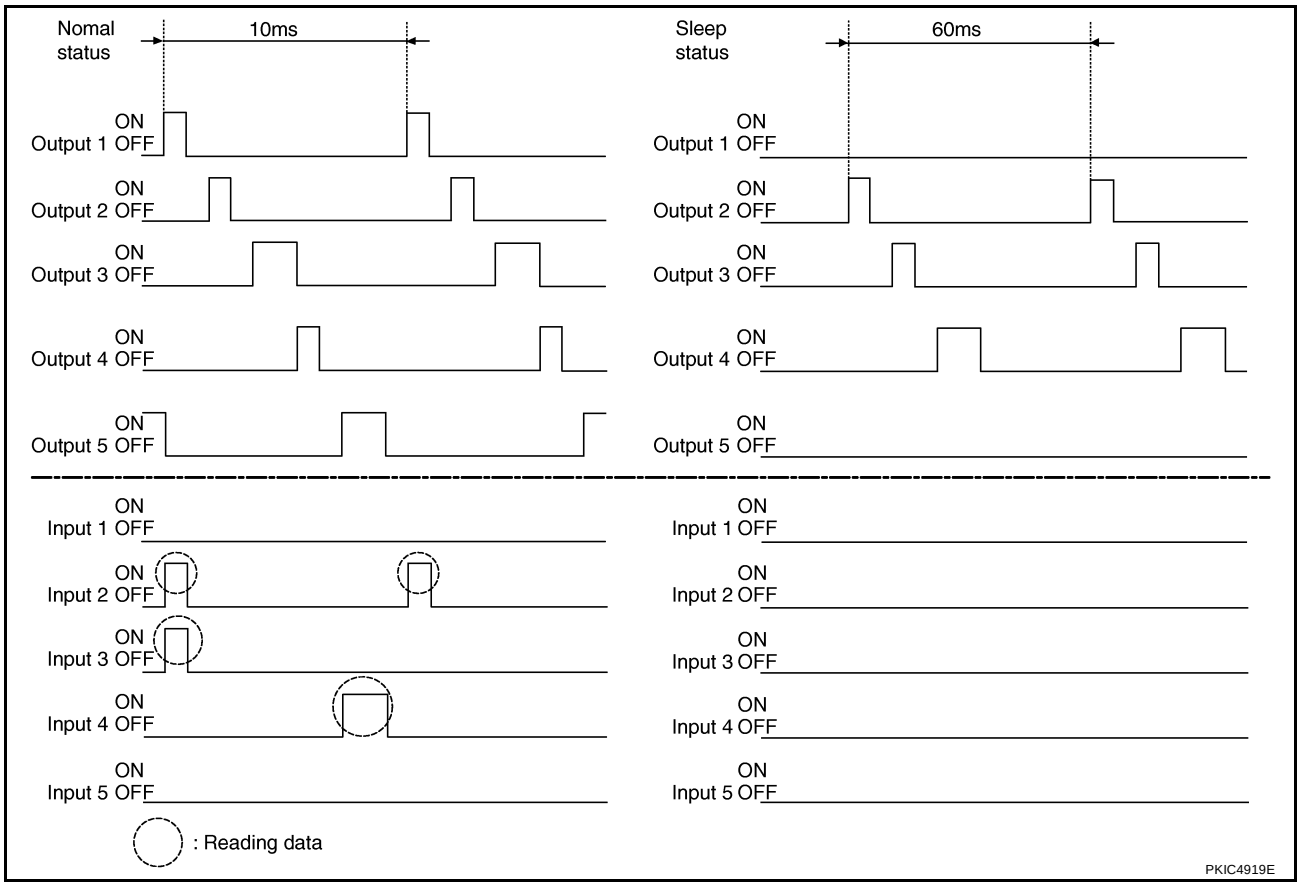
- When lighting switch 1ST position is turned ON, contact in combination switch turns ON. At this time if OUTPUT 4 transistor is activated, BCM detects that voltage changes in INPUT 5.
- When OUTPUT 4 transistor is ON, BCM detects that voltage changes in INPUT 5, and judges that lighting switch 1ST position is ON. Then BCM sends lighting switch (1ST position) ON signal to IPDM E/R using CAN communication.
- When OUTPUT 4 transistor is activated again, BCM detects that voltage changes in INPUT 5, and recognizes that lighting switch 1ST position is continuously ON.

※1 : LIGHTING SWITCH 1ST POSITION

SKIB7456E

NOTE:
Each OUTPUT terminal transistor is activated at 10 ms intervals. Therefore after switch is turned ON, electrical loads are activated with time delay. But this time delay is so short that it cannot be detected by human senses.

Operation Mode



The combination switch reading function has the operation modes shown below.

1. Normal mode

– When BCM is not in sleep mode, OUTPUT terminals (1 - 5) each turn ON-OFF every 10 ms.

2. Sleep mode

– When BCM is in sleep mode BCM enters low power mode. OUTPUT (1 - 5) turn ON-OFF every 60 ms, and only input from light switch system is accepted.

CAN COMMUNICATION CONTROL

CAN communication allows a high rate of information transmission through the two communication lines (CAN L line, CAN H line) connecting the various control units in the system. Each control unit transmits/receives data but selectively reads required data only. For details of signals that are transmitted/received by BCM via CAN communication, refer to LAN-48, "CAN System Specification Chart" .

BCM STATUS CONTROL

BCM changes its status depending on the operation status in order to save power consumption.

1. CAN communication status
   - With ignition switch ON, CAN communicates with other control units normally.
   - Control by BCM is being operated properly.
   - When ignition switch is OFF, switching to sleep mode is possible.
   - Even when ignition switch is OFF, if CAN communication with IPDM E/R and combination meter is active, CAN communication status is active.
2. Sleep transient status
   - This status shuts down CAN communication when ignition switch is turned OFF.
   - It transmits sleep request signal to IPDM E/R and combination meter.
   - Two seconds after CAN communication of all control units stops, sleep transient status switches to CAN communication inactive status.
3. CAN communication inactive status
   - With ignition switch OFF, CAN communication is not active.
   - With ignition switch OFF, control performed only by BCM is active.
   - Three seconds after CAN communication of all control units stops, CAN communication inactive status switches to sleep status.
4. Sleep status
   - BCM is activated with low power mode.
   - CAN communication is not active.
   - When CAN communication operation is detected, it switches to CAN communication status.
   - When a state of the following switches changes, it switches to CAN communication state.
   - Key switch (ACC, ON)
   - Hazard switch
   - Door lock/unlock switch
   - Front door switch (driver side, passenger side)
   - Back door opener switch (coupe models)
   - Trunk lid opener switch (roadster models)
   - Combination switch (passing, lighting switch 1ST position)
   - Key fob (lock/unlock signal)
   - Key cylinder switch
   - When control performed only by BCM is required by switch, it shifts to CAN communication inactive mode.
   - Status of combination switch reading function is changed.

CAN Communication System Description

NKS0009O

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NIS00001

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

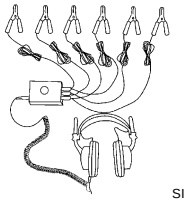
NIS00002

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Work

NIS00003

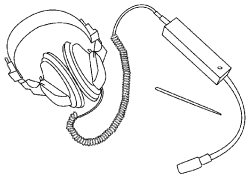
- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operation.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.



PREPARATION

PFP:00002

Special Service Tools



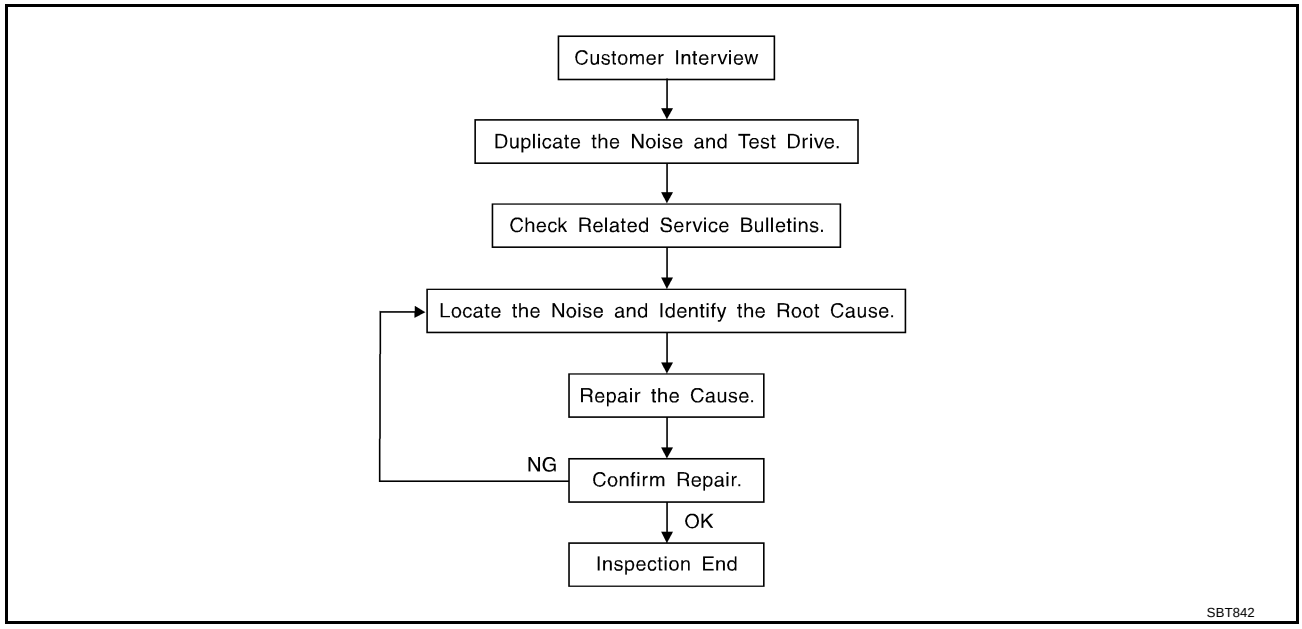
NIS00005

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
(J-39570) Chassis ear  SIIA0993E	Locating the noise
(J-43980) NISSAN Squeak and Rattle Kit  SIIA0994E	Repairing the cause of noise

Commercial Service Tools

NIS00006



Tool name	Description
Engine ear  SIIA0995E	Locating the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS00007

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to BL-11, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to BL-9, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS00008

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:
Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

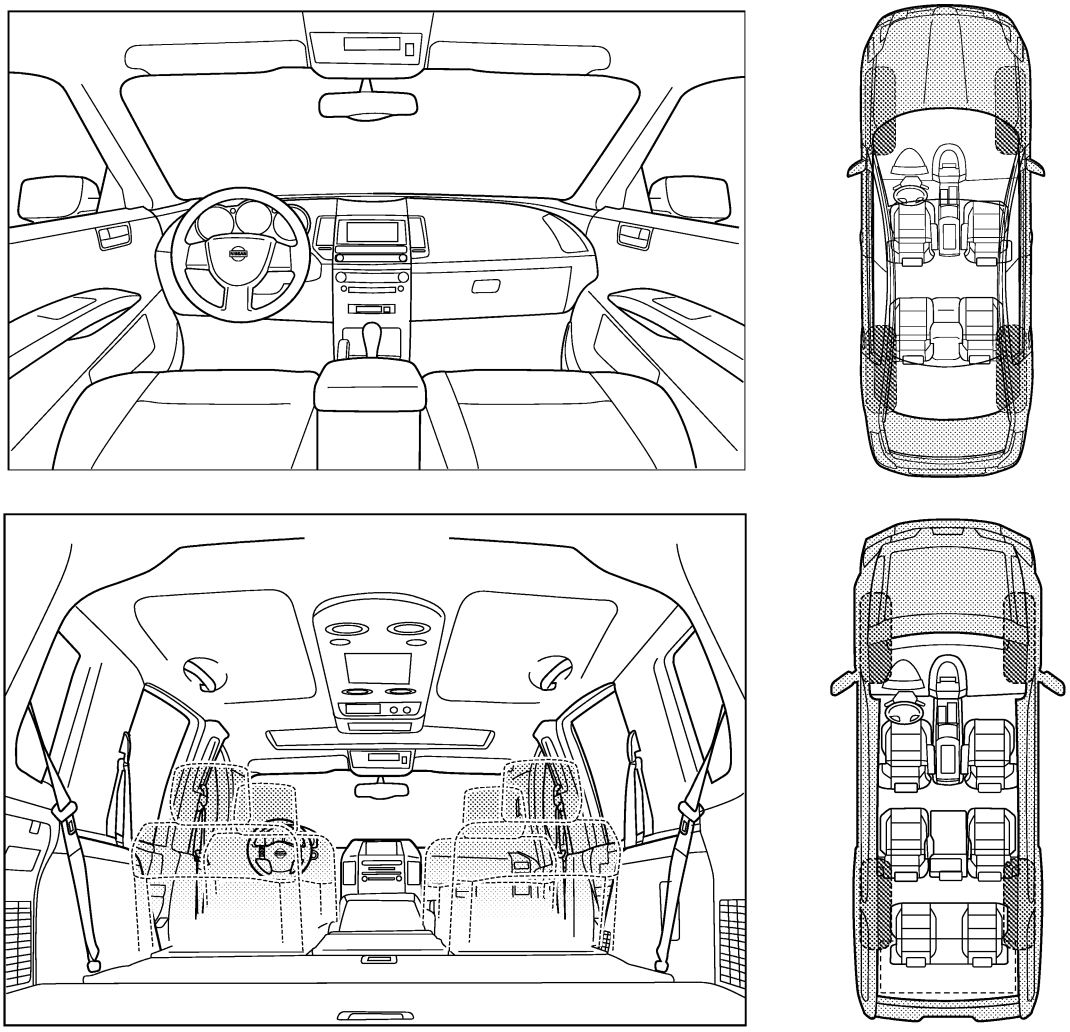
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



Diagnostic Worksheet

NIS00009

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

HOOD

PFP:F5100

Fitting Adjustment

NIS0000A

1. Hood assembly
2. Front bumper
3. Head lamp
4. Front fender
5. Bumper rubber
6. Hood hinge
7. Hood lock assembly

LONGITUDINAL AND LATERAL CLEARANCE ADJUSTMENT

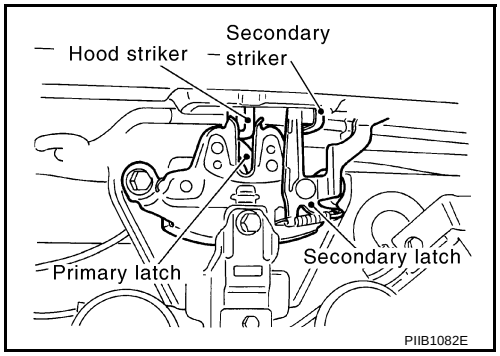
1. Remove hood lock assembly, loosen the hood hinge nuts and close the hood.
2. Adjust the lateral and longitudinal clearance, and open the hood to tighten the hood hinge mounting bolts to the specified torque.
3. Install the hood lock temporarily, and align the hood striker and hood lock so that the centers of hood striker and hood lock become vertical viewed from the front, by moving the hood lock laterally.
4. Tighten hood lock assembly mounting bolts to the specified torque.

CAUTION:

Adjust right/left clearance between hood and each part to the following specification.

Hood and head lamp (B–B) : Less than 2.0 mm (0.08 in)

Hood and fender (C–C) : Less than 1.0 mm (0.04 in)



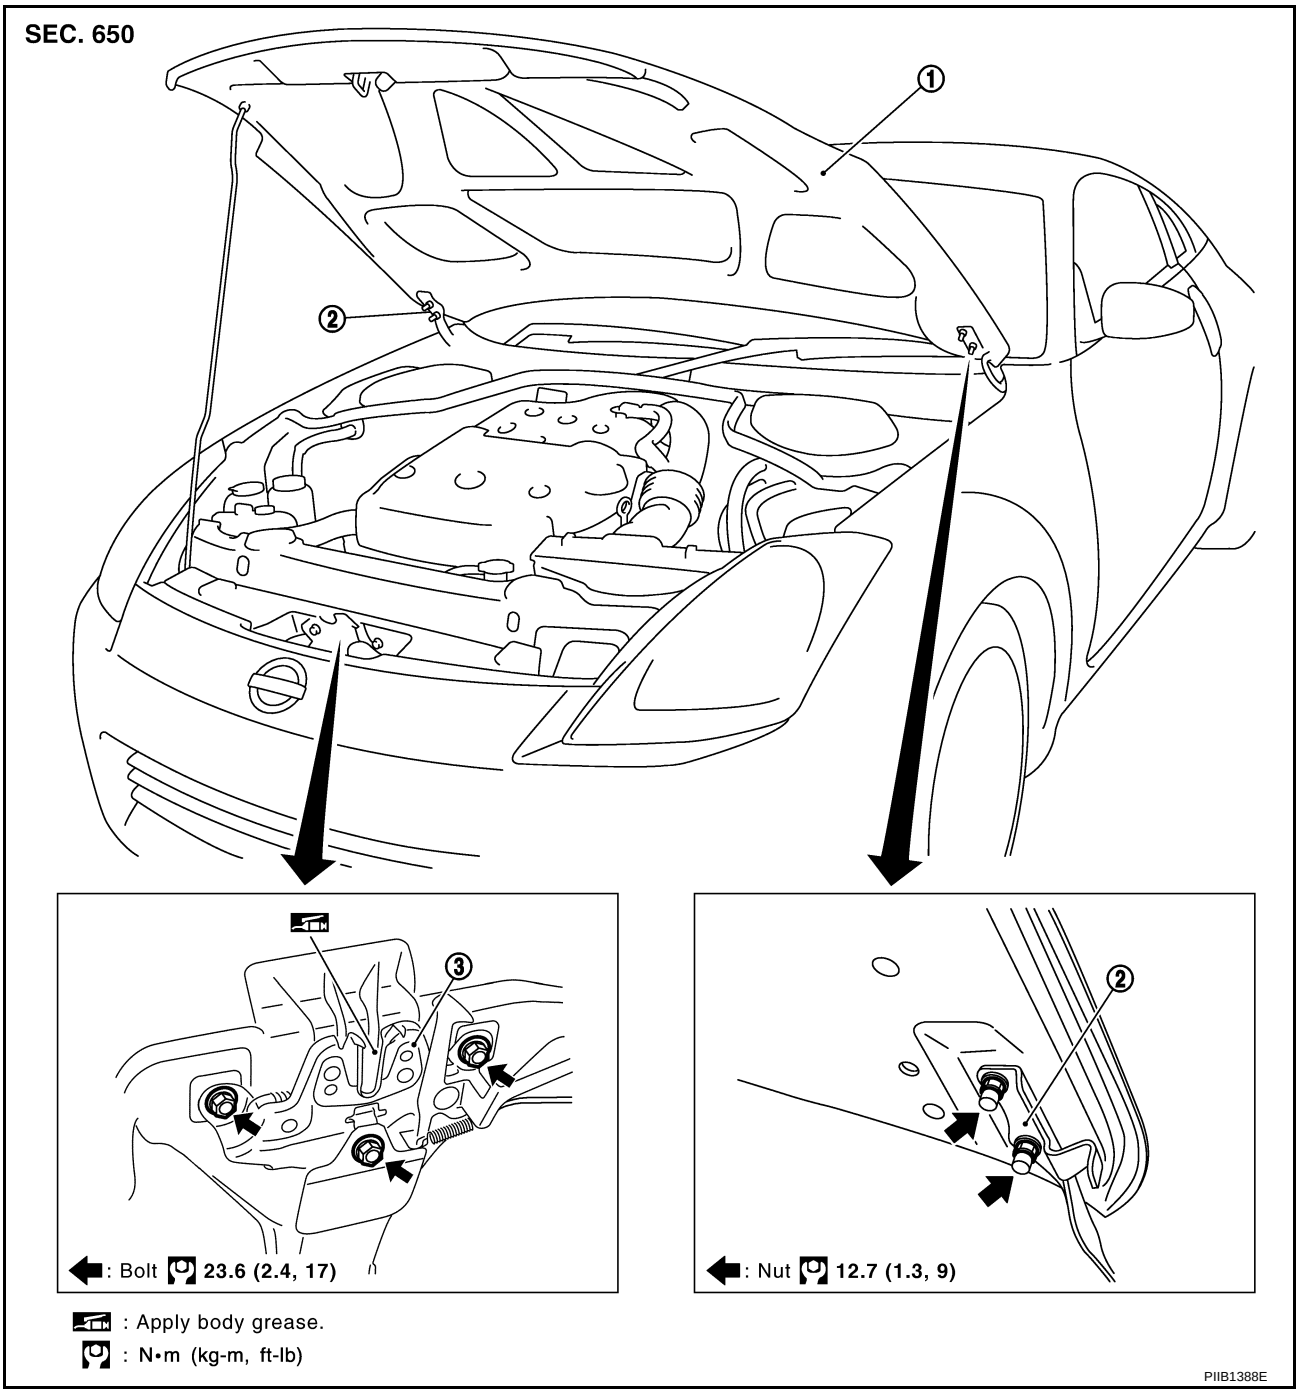
FRONT END HEIGHT ADJUSTMENT

1. Remove the hood lock and adjust the height by rotating the bumper rubber until the hood becomes 1 to1.5 mm (0.04 to 0.059 in) lower than the fender.
2. Temporarily tighten the hood lock assembly, and position it by engaging it with the hood striker. Check the hood lock and hood striker for looseness, and tighten the hood lock assembly mounting bolts to the specified torque.

SURFACE HEIGHT ADJUSTMENT

1. Remove hood lock assembly, and adjust the surface height difference of hood and fender according to the fitting standard dimension, by rotating RH and LH bumper rubbers.
2. Install hood lock temporarily, and move hood lock laterally until the centers of striker and lock become vertical when viewed from the front.
3. Make sure that the hood lock secondary latch is properly engaged with the secondary striker with hood's own weight.
4. Make sure that the hood lock primary latch is securely engaged with the hood striker with hood's own weight by dropping hood from approx. 200 mm (7.87 in) height.

   CAUTION:
   Do not drop hood from a height of 300 mm (11.81 in) or more.
5. Move hood lockup and down until striker smoothly engages the lock when the hood is closed.
6. When pulling the hood opener lever gently, make sure that front end of the hood rises by approximately 20 mm (0.79 in) and that hood striker and hood lock primary latch is disengaged. Also make sure that hood opener returns to the original position.
7. After adjustment, tighten lock bolts to the specified torque.



CAUTION:
Adjust evenness between hood and fender to the following specification.

Hood and fender (C–C) : 0 ± 1.0 mm (0 ± 0.04 in)

Removal and Installation of Hood Assembly

NIS0000B

1. Hood assembly
2. Hood hinge
3. Hood lock assembly

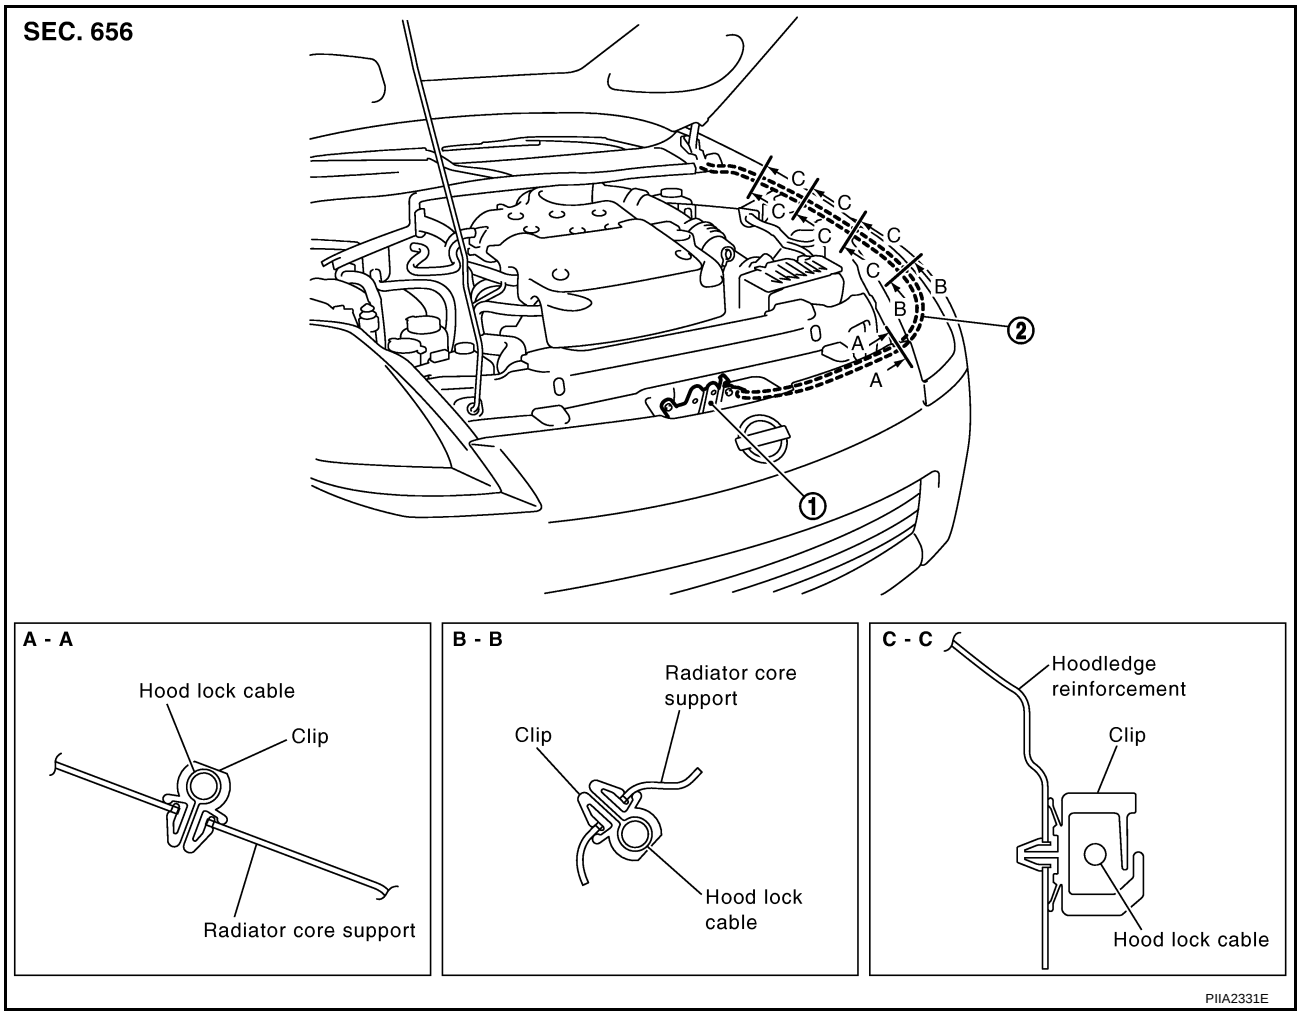
REMOVAL

Remove the hinge mounting nuts on the hood to remove the hood assembly.

CAUTION:

Operate with two workers, because of its heavy weight.

INSTALLATION

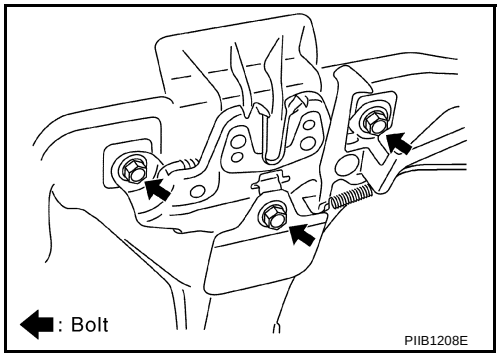


Install in the reverse order of removal.

CAUTION:

- **Before installing hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installing, perform hood fitting adjustment. Refer to BL-13, "Fitting Adjustment" .**

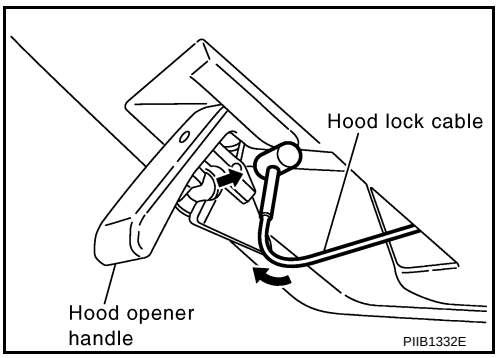
Removal and Installation of Hood Lock Control



NIS0000C

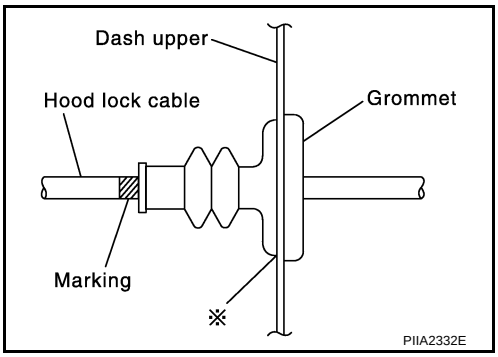
1. Hood lock assembly
2. Hood lock cable

REMOVAL



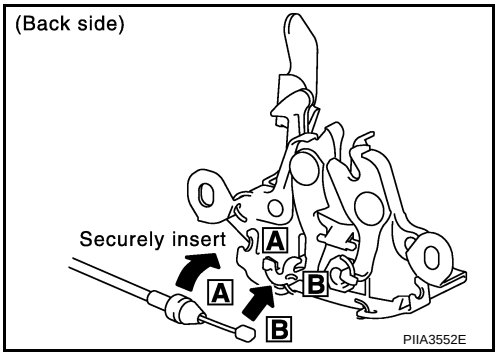
1. Remove the fender protector (LH). Refer to EI-21, "FENDER PROTECTOR" .
2. Remove the hood lock assembly.

3. Remove the dash side finisher. Refer to IP-10, "Component Parts Drawing" .
4. Remove hood lock cable and unclip it from portion of radiator core support.



5. While pulling the hood lock cable, remove hood lock cable connected to hood opener handle.
6. Remove grommet on dash board, and pull hood lock cable toward passenger compartment.

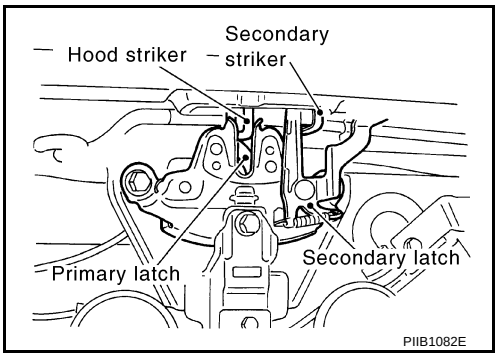
CAUTION:
While pulling, be careful not to damage (peeling) the outside of the hood lock cable.



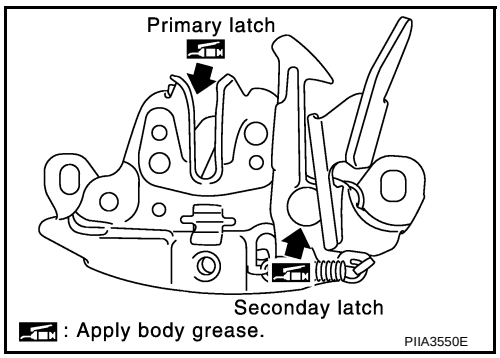
INSTALLATION

1. Pull the hood lock cable through the panel hole to the engine compartment. Be careful not to bend the cable too much, keeping the radius 100 mm (3.94 in) or more.
2. Check that the cable is not offset from the positioning grommet, and push the grommet into the panel hole securely.
3. Apply the sealant to the grommet (at * mark) properly.
4. Install while pulling hood lock cable.

5. Install the hood lock cable securely to the hood lock.
6. Install hood lock assembly.
7. After installing, check the hood lock adjustment and hood opener operation.



Hood Lock Control Inspection

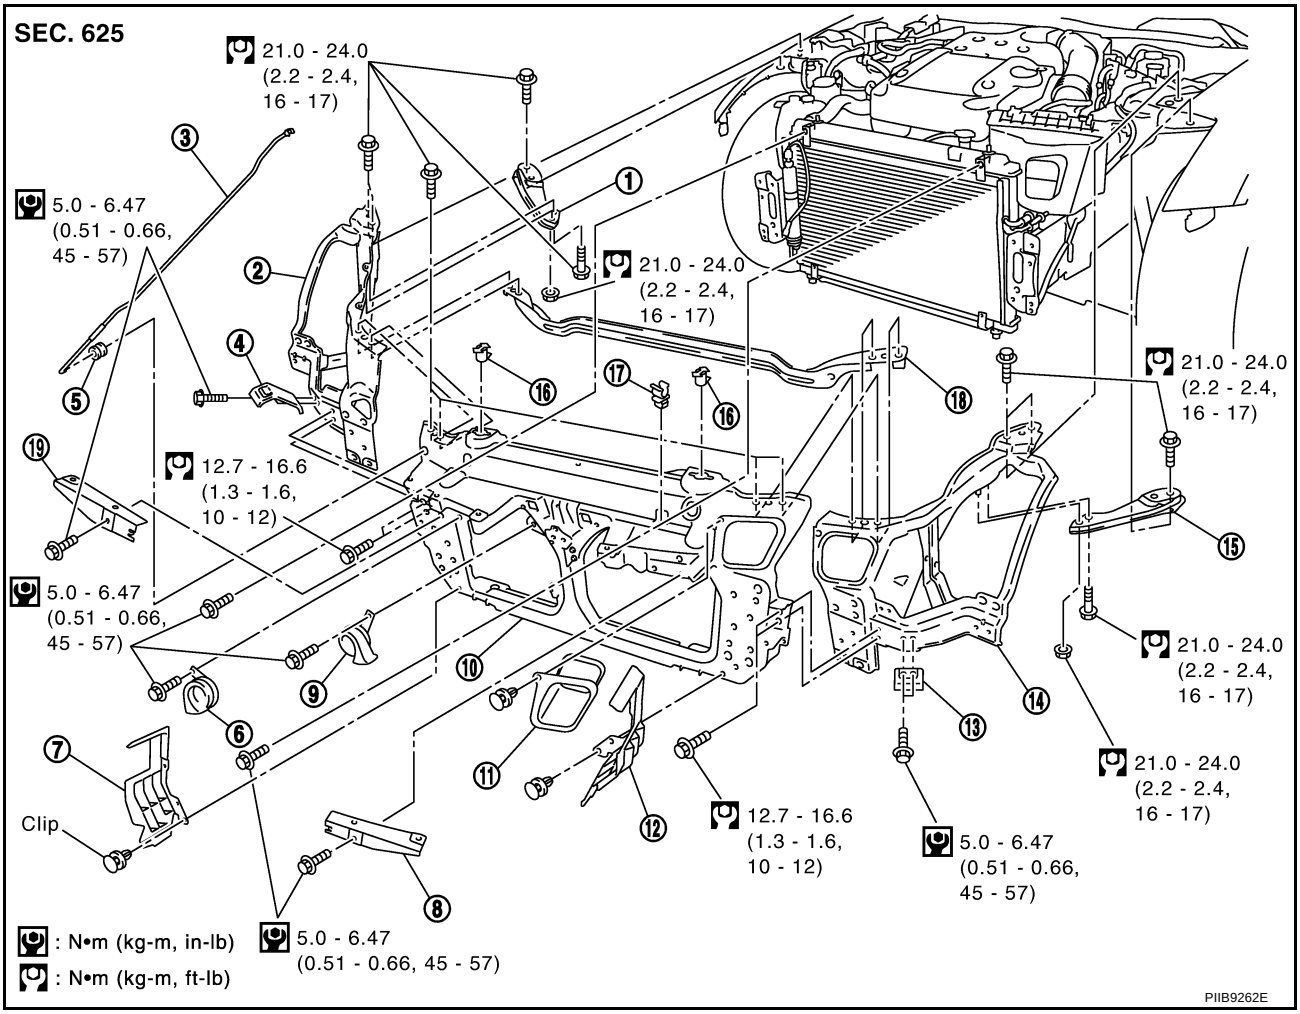


NIS0000D

CAUTION:
If the hood lock cable is bent or deformed, replace it.

1. Check that the secondary latch is properly engaged with the secondary striker with hood's own weight by dropping it from approx. 200 mm (7.87 in) height.
2. While operating the hood opener, carefully check that the front end of the hood is raised by approx. 20 mm (0.79 in). Also check that the hood opener returns to the original position.

3. Check the hood lock lubrication condition. If necessary, apply “body grease” to the points shown in the figure.

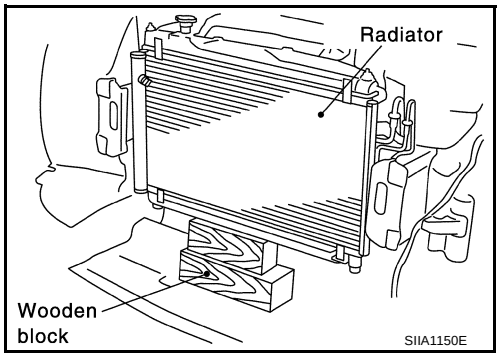


RADIATOR CORE SUPPORT

PFP:62500

Removal and Installation

NIS0000E



1.	Radiator core support side stay (RH)	2.	Radiator core support side (RH)	3.	Hood stay
4.	Bumper retainer (RH)	5.	Grommet	6.	Horn (High)
7.	Air guide (RH)	8.	Bumper fascia stay radiator core support center (LH)	9.	Horn (Low)
10.	Radiator core support center	11.	Air duct	12.	Air guide (LH)
13.	Bumper retainer (LH)	14.	Radiator core support side (LH)	15.	Radiator core support side stay (LH)
16.	Radiator upper bracket	17.	Hood rod clamp	18.	Radiator core support bar
19.	Bumper fascia stay radiator core support center (RH)				

REMOVAL

1. Remove hood assembly. Refer to BL-15, "Removal and Installation of Hood Assembly" .
2. Remove front bumper. Refer to EI-14, "Removal and Installation" .
3. Remove head lamp (LH/RH). Refer to LT-29, "Removal and Installation" .
4. Remove hood lock assembly, and then hood lock cable. Refer to BL-16, "Removal and Installation of Hood Lock Control" .
5. Remove washer tank. Refer to WW-34, "Removal and Installation of Washer Tank" .
6. Remove crash zone sensor. Refer to SRS-48, "Removal and Installation" .
7. Remove washer tank inlet clip. Refer to WW-34, "Removal and Installation of Washer Tank" .
8. Remove the oil cooler. Refer to PS-33, "HYDRAULIC LINE" .
9. Remove ambient sensor. Refer to ATC-104, "Removal and Installation" .

10. Remove horn connectors.
11. Remove mounting harness clip on radiator core support center and side to separate the harness.
12. Remove radiator upper bracket, and radiator core support side and radiator core support hood ledge stay bolts. Remove radiator core support center and side together. Remove bolts with power tool.

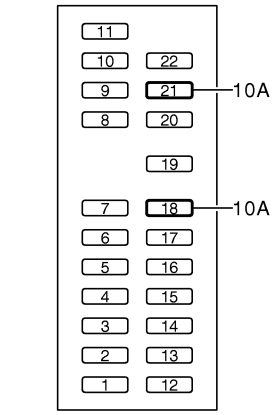
CAUTION:
Put a wooden block under the radiator assembly to prevent the radiator assembly from falling.

13. Remove radiator core support center and side together.
14. After removing radiator core support center and side together, the following parts are separated.
    - Remove the hood stay, grommet and hood rod clamp
    - Horn (High/Low)
    - Air duct
    - Air guide (LH/RH)
    - Bumper fascia stay radiator core support center (LH/RH)
    - Bumper retainer (LH/RH)
    - Radiator core support side and radiator core support side bar
    - Radiator core support side hood ledge stay (LH/RH)

INSTALLATION

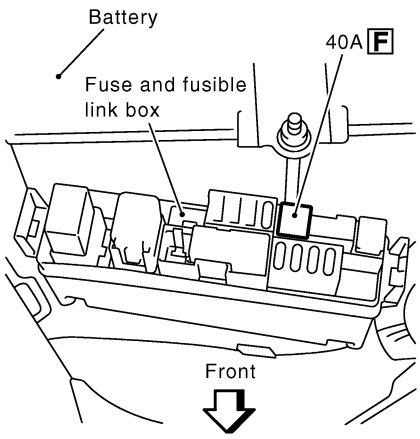
Install in the reverse order of removal.

CAUTION:
After installing, check the hood lock adjustment and hood opener operation. Refer to BL-13, "Fitting Adjustment" .

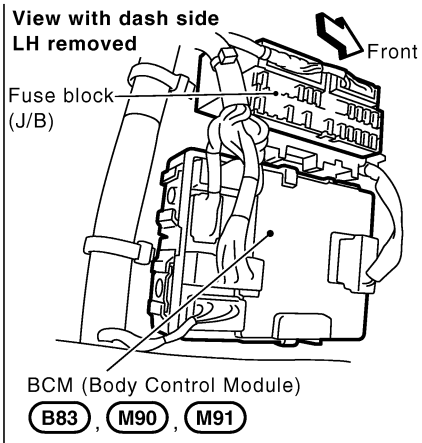


POWER DOOR LOCK SYSTEM

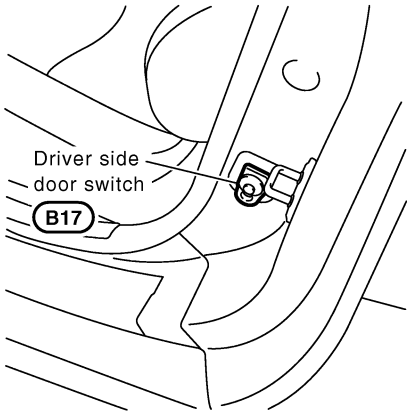
PFP:24814



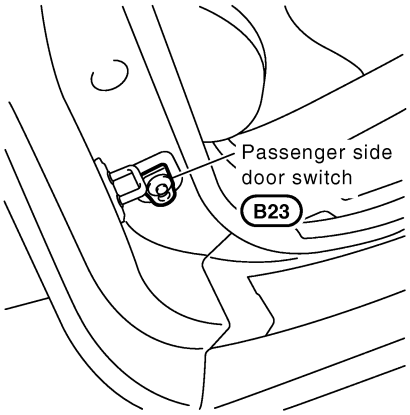
Component Parts and Harness Connector Location

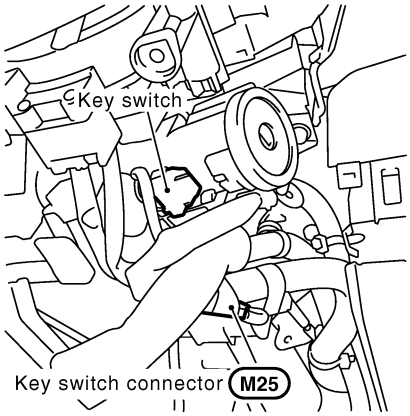


NIS0000F

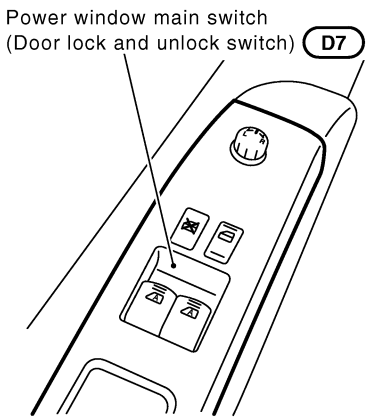


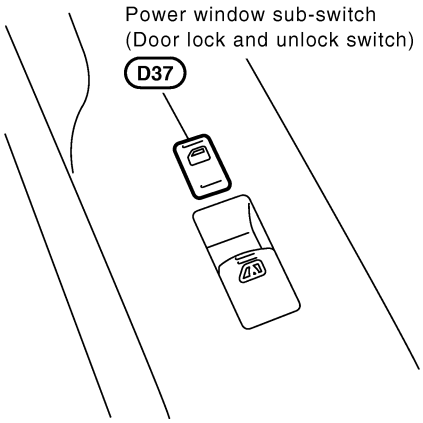
FOR COUPE

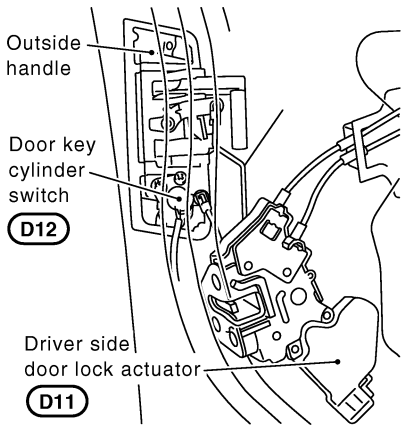


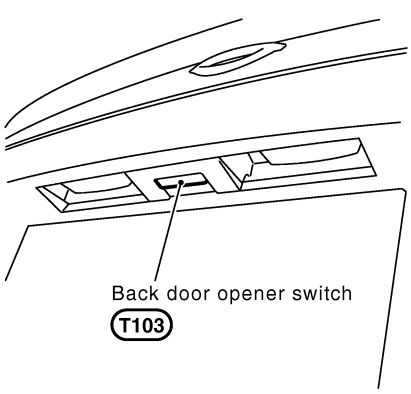


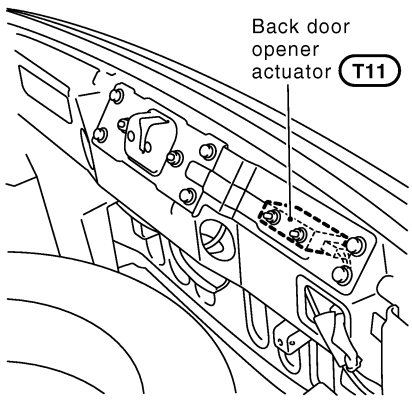
Fuse block (J/B) fuse layout

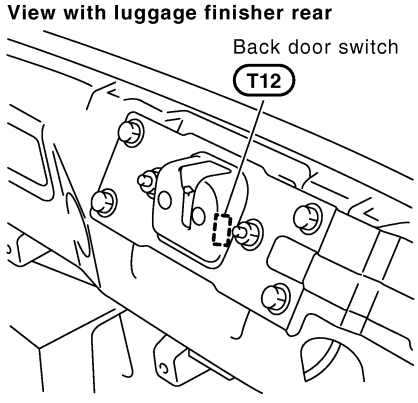


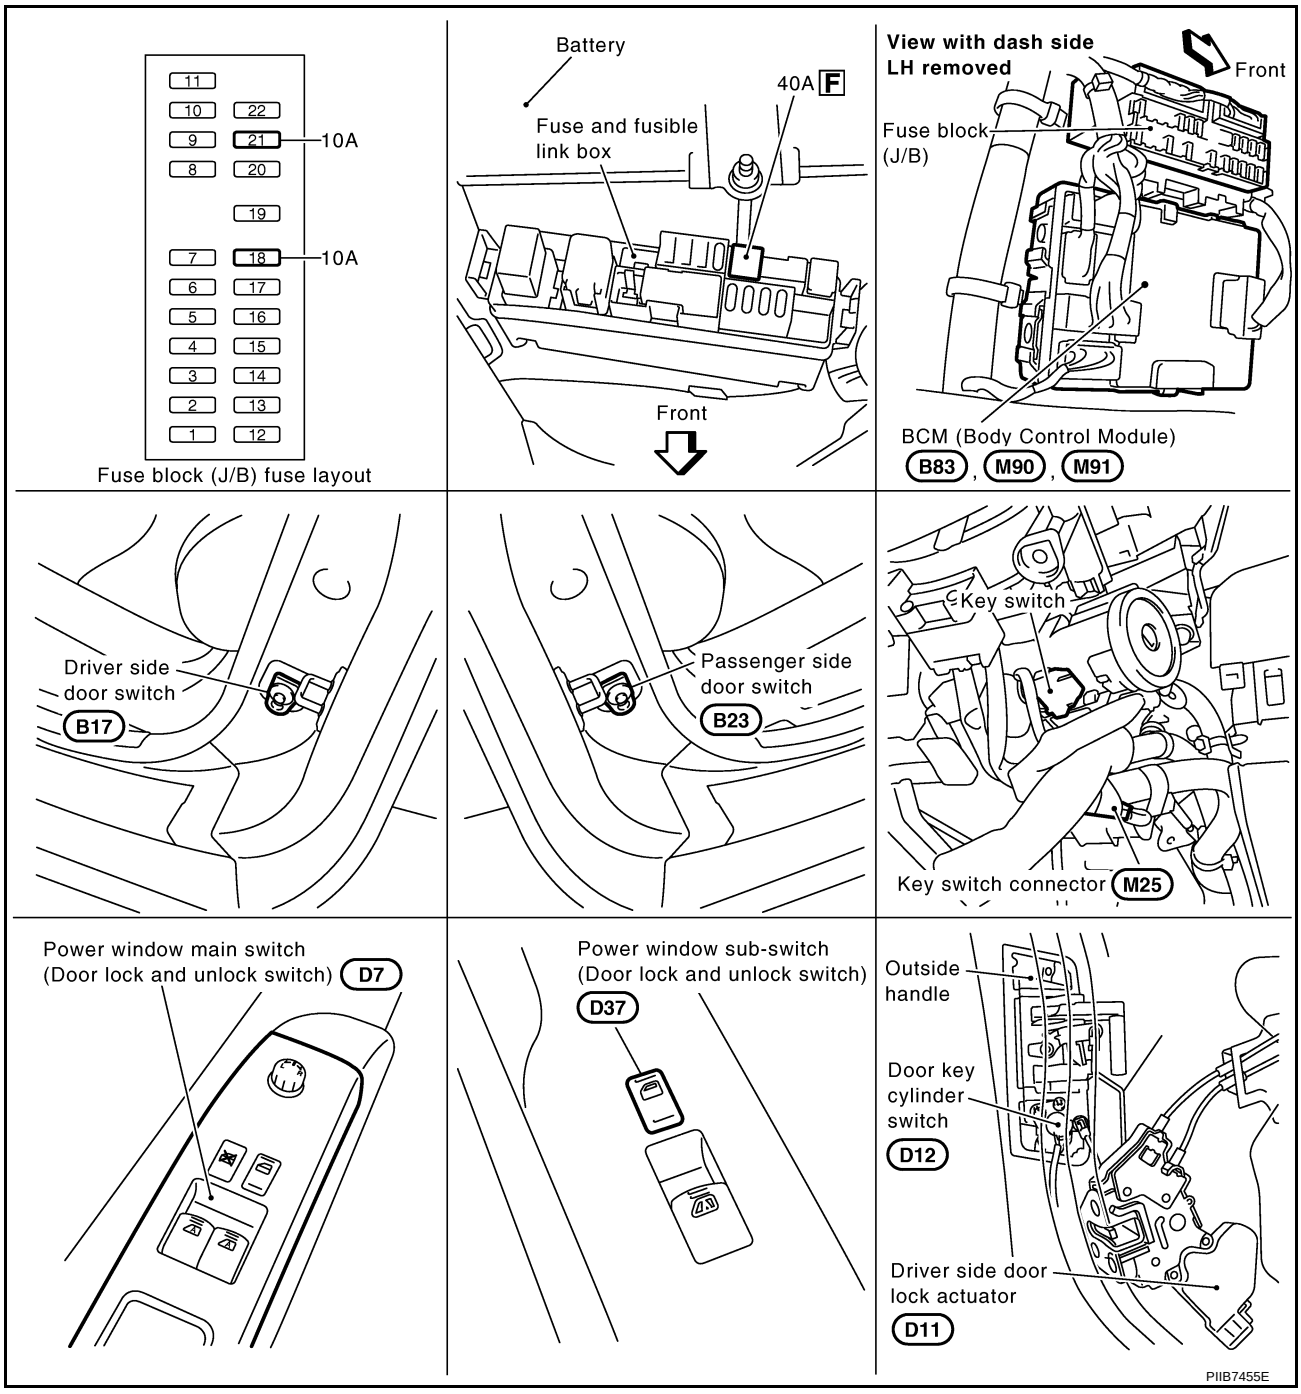












PIIB7454E

FOR ROADSTER

System Description

NIS0000G

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No.21, located in the fuse block (J/B)]
- to key switch terminal 2.

When ignition key inserted, power is supplied

- through key switch terminal 1
- to BCM terminal 37.

Ground is supplied

- to terminal 52 of BCM
- through body grounds M30 and M66.

When the door is locked or unlocked with power window main switch (door lock and unlock switch), ground is supplied

- to power window main switch (door lock and unlock switch) terminal 15
- through body grounds M30 and M66.

Power window main switch (door lock and unlock switch) operation signal is supplied

- through power window main switch (door lock and unlock switch) terminal 12.
- to BCM terminal 22

When the door is locked or unlocked with power window sub-switch (door lock and unlock switch), ground is supplied

- to power window sub-switch (door lock and unlock switch) terminal 11
- through body grounds M30 and M66.

Power window sub-switch (door lock and unlock switch) operation signal is supplied

- through power window sub-switch (door lock and unlock switch) terminal 16.
- to BCM terminal 22

When the door is locked with door key cylinder switch, ground is supplied

- to power window main switch (door lock and unlock switch) terminal 6
- through door key cylinder switch terminals 3 and 2 and
- through body grounds M30 and M66.

Door key cylinder switch operation signal is supplied

- through power window main switch (door lock and unlock switch) terminal 12
- to BCM terminal 22.

When the door is unlocked with door key cylinder switch, ground is supplied

- to power window main switch (door lock and unlock switch) terminal 7
- through door key cylinder switch terminals 1 and 2 and
- through body grounds M30 and M66.

Door key cylinder switch operation signal is supplied

- through power window main switch (door lock and unlock switch) terminal 12
- to BCM terminal 22.

BCM is connected to power window main switch (door lock and unlock switch) and power window sub-switch (door lock and unlock switch) as serial link.

POWER WINDOW SERIAL LINK

Power window main switch, power window sub-switch and BCM transmit and receive the signal by power window serial link.
The under mentioned signal is transmitted from power window main switch to BCM.

- Door lock and unlock switch signal.

The under mentioned signal is transmitted from power window sub-switch to BCM.

- Door lock and unlock switch signal.

OUTLINE

Functions available by operating the door lock and unlock switches on driver's door and passenger's door

- With the locking operation of door lock and unlock switch, door lock actuators of driver's and passenger's doors are locked.
- With the unlocking operation of door lock and unlock switch, door lock actuators of driver's and passenger's doors are unlocked.

Functions available by operating the key cylinder switch

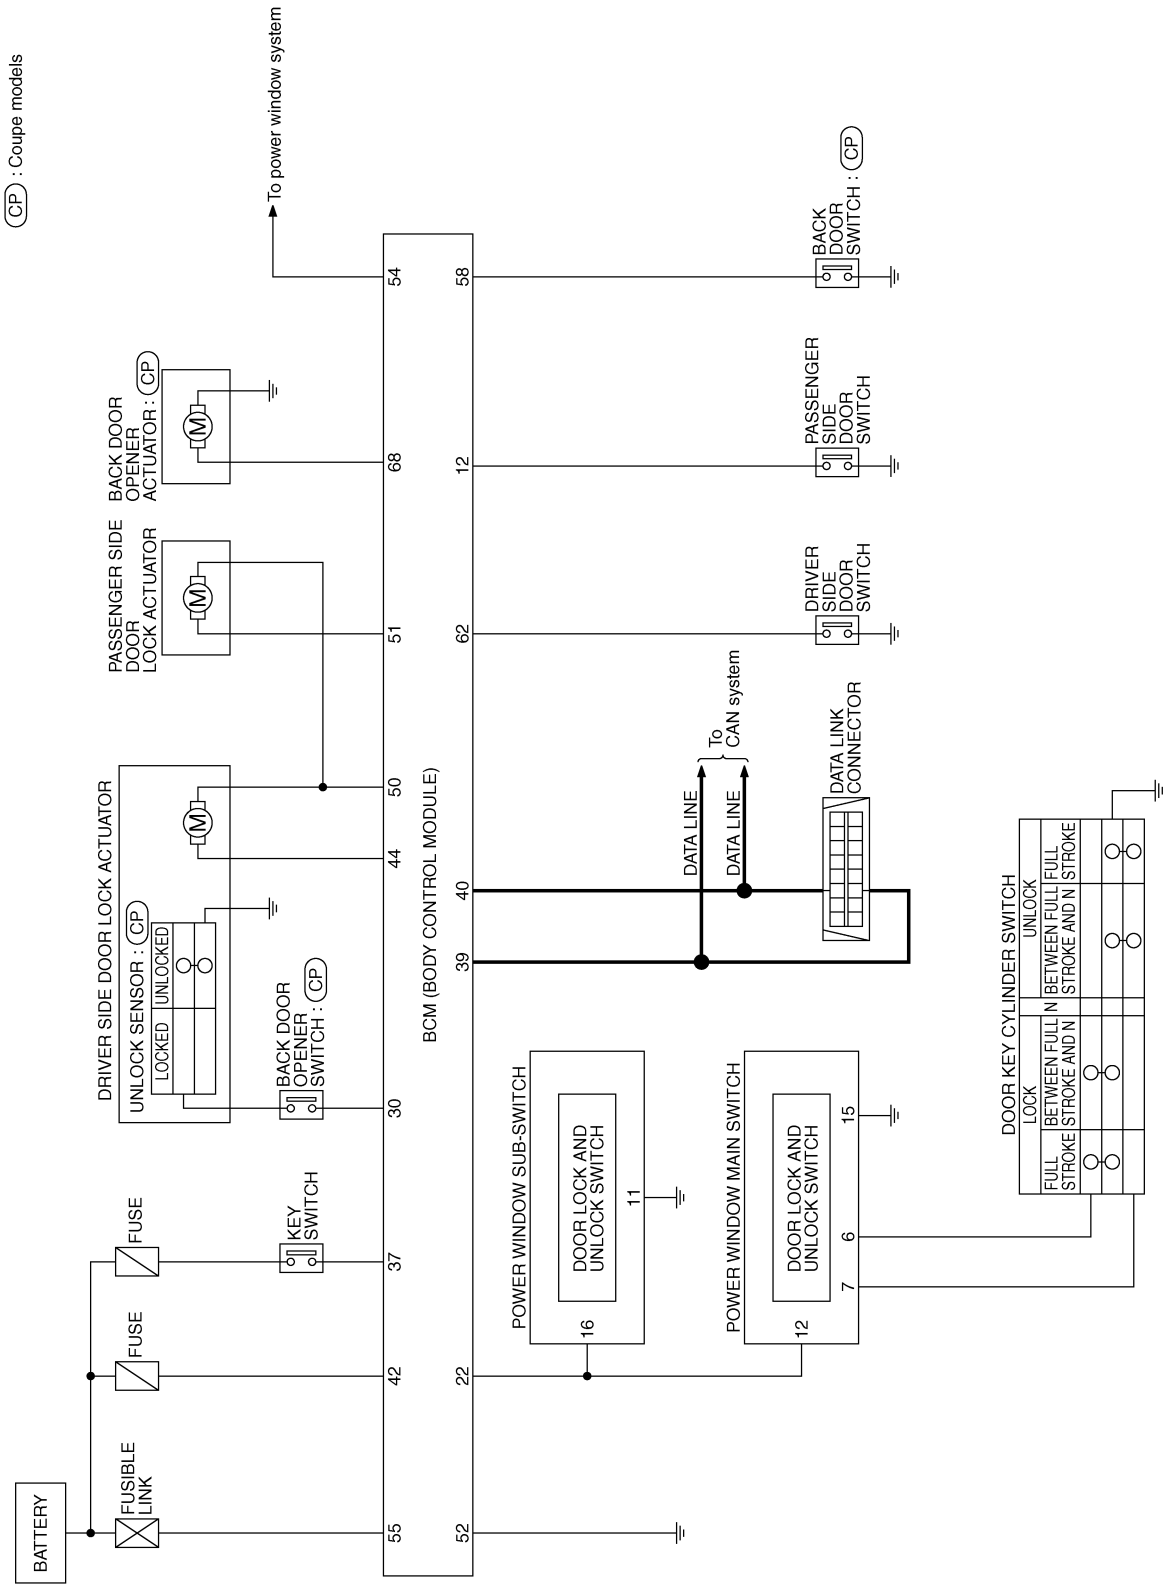
- With the locking operation of door key cylinder, door lock actuators of all doors are locked.
- When door key cylinder is unlocked, door lock actuator (driver side) is unlocked.
- When door key cylinder is unlocked for the second time within 5 seconds after the first unlock operation, door lock actuators on driver's and passenger's doors are unlocked.

Unlock mode can be changed by using CONSULT-III “WORK SUPPORT” mode in “DOOR LOCK-UNLOCK SET”.
Refer to BL-35, "WORK SUPPORT" .

Key reminder door system

When door lock and unlock switch is operated to lock doors with ignition key put in key cylinder and driver's and passenger's door open, driver and passenger door lock actuators are locked and then unlocked.

Back door opener operation/For coupe



When back door opener switch is ON with driver's door unlocked,
ground is supplied

- to BCM terminal 68
- through back door opener actuator terminals 1 and 2 and
- through body grounds B5, B6, D105 and T14

Then back door opener actuator opens back door.

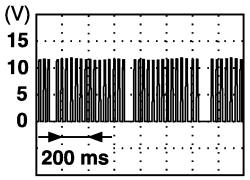
Terminals and Reference Value for BCM



NIS0000K

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage (V) (Approx.)
12	P	Passenger side door switch	Input	ON (Open) → OFF (Closed)	0 → 5
22	Y	Power window switch serial link	Input/ Output	—	 PIIA2344J
30	P	Back door opener switch	Input	Press the back door opener switch when driver side door is unlocked	5 → 0
37	B/R	Ignition key switch (insert)	Input	ON (Key inserted) → OFF (Key removed from IGN key cylinder)	Battery voltage → 0
39	L	CAN-H	Input/ Output	—	—
40	P	CAN-L	Input/ Output	—	—
42	GY	Power source (Fuse)	Input	—	Battery voltage
44	Y	Driver side door lock actuator (unlock)	Output	Door lock / unlock switch (Free → Unlock)	0 → Battery voltage → 0
50	PU	All door lock actuator (lock)	Output	Door lock / unlock switch (Free → Lock)	0 → Battery voltage → 0
51	W/R	Passenger side door lock actuator (unlock)	Output	Door lock / unlock switch (Free → Unlock)	0 → Battery voltage → 0
52	B	Ground	—	—	0
55	R	Power source (Fusible link)	Input	—	Battery voltage
58	R/W	Back door switch	Input	ON (Open) → OFF (Closed)	0 → Battery voltage *
62	L	Driver side door switch	Input	ON (Open) → OFF (Closed)	0 → 5
68	L/R	Back door opener output	Output	Press the back door opener switch when driver side door is unlocked	0 → Battery voltage

*When interior lamp battery saver control is in OFF: Approx. 5V

Terminal and Reference Value for Power Window Main Switch

NIS0000L

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
6	B/R	Key cylinder switch lock signal	Key position (Neutral → Locked)	5 → 0
7	SB	Key cylinder switch unlock signal	Key position (Neutral → Unlocked)	5 → 0
12	PU/W	Power window switch serial link	—	 PIIA2344J
15	B	Ground	—	0

Work Flow

NIS0000M

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to BL-23, "System Description" .
3. Does power door lock system operate normally? If Yes, GO TO 6, If No, GO TO 4.
4. INSPECTION END.

CONSULT-III Function (BCM)

NIS0000N

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Inspection item, self-diagnosis mode	Content
Door lock	Work support	Changes the setting for each function.
	Data monitor	Displays BCM input data on real-time basis.
	Active test	Sends drive signals to door lock actuator to perform operation check.

WORK SUPPORT

Work item	Description
DOOR LOCK-UNLOCK SET	Select unlock mode can be changed in this mode. Selects ON-OFF of select unlock mode.
ANTI-LOCK OUT SET	Key reminder door mode can be changed in this mode. Selects ON-OFF of key reminder door mode.

DATA MONITOR

Monitor item “operation”		Content
KEY ON SW	“ON/OFF”	Indicates [ON/OFF] condition of key switch.
LOCK SW DR/AS	“ON/OFF”	Indicates [ON/OFF] condition of lock signal from lock/unlock switch of driver and passenger side.
UNLK SW DR/AS	“ON/OFF”	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch of driver and passenger side.
KEY CYL LK-SW	“ON/OFF”	Indicates [ON/OFF] condition of lock signal from key cylinder.
KEY CYL UN-SW	“ON/OFF”	Indicates [ON/OFF] condition of unlock signal from key cylinder.
LK BUTTON/SIG	“ON/OFF”	Indicates [ON/OFF] condition of lock signal from key fob.
UN BUTTON/SIG	“ON/OFF”	Indicates [ON/OFF] condition of unlock signal from key fob.
IGN ON SW	“ON/OFF”	Indicates [ON/OFF] condition of ignition switch.
DOOR SW-DR	“ON/OFF”	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW-AS	“ON/OFF”	Indicates [ON/OFF] condition of passenger side door switch.
BACK DOOR SW*1	“ON/OFF”	Indicates [ON/OFF] condition of back door switch.
TRNK OPN MNTR*2	“ON/OFF”	Indicates [ON/OFF] condition of trunk lid opener switch.

*1: For Coupe
*2: For Roadster

ACTIVE TEST

Test item	Content
ALL D/LK MTR	This test is able to check all door lock actuators lock operation. These actuators lock when “ON” on CONSULT-III screen is touched.
DR D/UN MTR	This test is able to check driver side door lock actuator unlock operation. This actuator unlock when “ON” on CONSULT-III screen is touched.
NON DR D/UN	This test is able to check door lock actuators (except driver side door lock actuator) unlock operation. These actuator unlock when “ON” on CONSULT-III screen is touched.

Trouble Diagnoses Symptom Chart

NIS0000O

Symptom	Diagnoses service procedure	Reference to page
Key reminder door system does not operate properly.	1. Check power supply and ground circuit of BCM.	BL-37
	2. Check key switch (Insert) .	BL-40
	3. Check door switch .	BL-38
	4. Replace BCM.	BCS-17
Power door lock does not operate by door lock and unlock switch on power window main switch or power window sub-switch.	1. Check power supply and ground circuit of BCM.	BL-37
	2. Check door lock and unlock switch .	BL-42
	3. Check driver side door lock actuator .	BL-45
	4. Check passenger side door lock actuator .	BL-46
	5. Replace BCM	BCS-17
Driver side door lock actuator does not operate.	1. Check power supply and ground circuit of BCM.	BL-37
	2. Check driver side door lock actuator .	BL-45
Passenger side door lock actuator does not operate.	1. Check power supply and ground circuit of BCM.	BL-37
	2. Check passenger side door lock actuator .	BL-46
Power door lock does not operate by door key cylinder operation, but operates by door lock and unlock switch.	1. Check power supply and ground circuit of BCM.	BL-37
	2. Check door key cylinder switch .	BL-47
	3. Replace power window main switch.	—
Back door opener does not operate.	1. Check power supply and ground of BCM.	BL-37
	2. Check back door opener switch .	BL-48
	3. Check back door opener actuator .	BL-50

Check Power Supply and Ground Circuit of BCM

NIS0000P

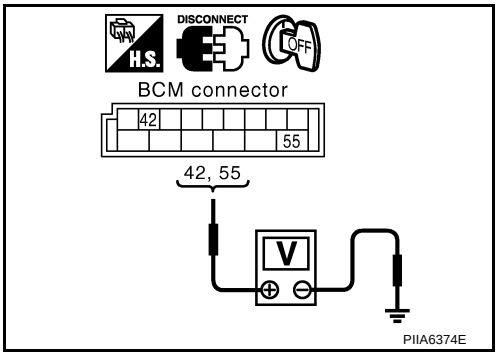
CHECK FUSE

1. FUSE INSPECTION

1. Turn ignition switch OFF.
2. Check the following.

- 40A fusible link (letter **F** , located in the fuse and fusible link box)
- 10A fuse [No.18, located in the fuse block (J/B)]

NOTE:
Refer to BL-21, "Component Parts and Harness Connector Location" .



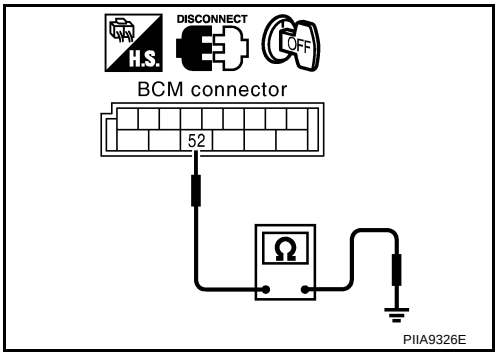
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Disconnect BCM connector.
2. Check voltage between BCM harness connector M91 terminal 42, 55 and ground.

42 (GY) - Ground : Battery voltage
55 (R) – Ground : Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Check BCM power supply circuit for open or short.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector M91 terminal 52 and ground.

52 (B) – Ground Continuity should exist.

OK or NG

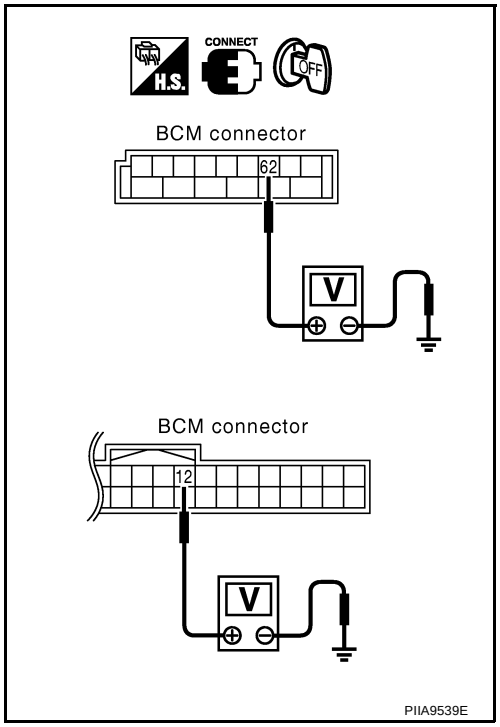
OK >> Power supply and ground circuit is OK.
NG >> Check BCM ground circuit for open or short.

Check Door Switch

NIS0000Q

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-AS” and “DOOR SW-DR”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Item	Terminals			Condition of door switch	Voltage (V) (Approx.)
	Connector	(+) Terminal (Wire color)	(–)		
Driver side door switch	B83	62 (L)	Ground	Open	0
				Close	5
Passenger side door switch	M90	12 (P)		Open	0
				Close	5

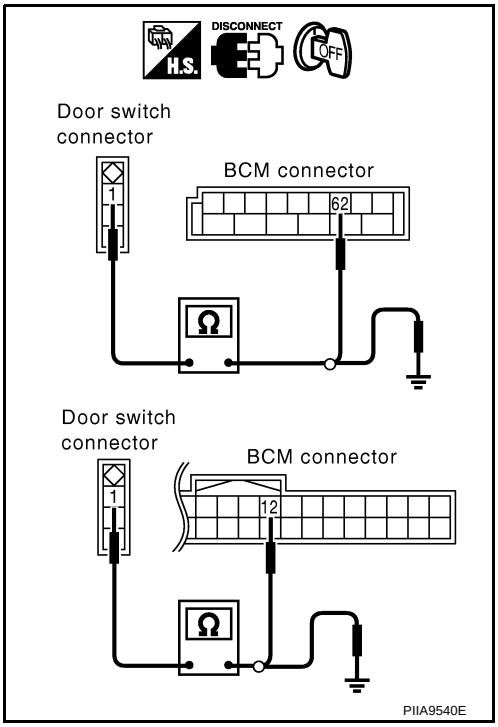
OK or NG

OK >> Door switch is OK.
NG >> GO TO 2.

2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between door switch harness connector B17, B23, terminals 1 and BCM harness connector B83 terminals 62 (driver side) or M90 terminal 12 (passenger side).

Driver side door



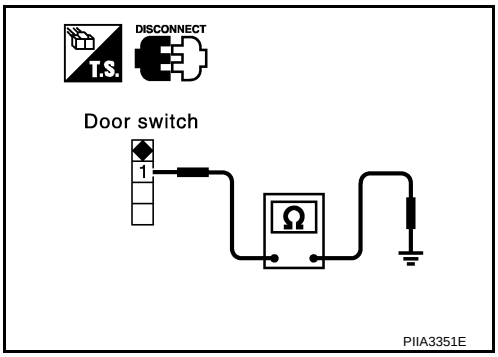
1 (L) – 62 (L) : Continuity should exist.

Passenger door

1 (P) – 12 (P) : Continuity should exist.

4. Check continuity between door switch harness connector B17, B23, terminals 1 and ground.

1 (L or P) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between door switch harness connector B17 (driver side) or B23 (passenger side) terminal 1 and ground.

Terminal (Wire color)		Door switch	Continuity
1 (L or P)	Ground	Pushed	No
		Released	Yes

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace malfunction door switch.

Check Key Switch (insert)

NIS0000R

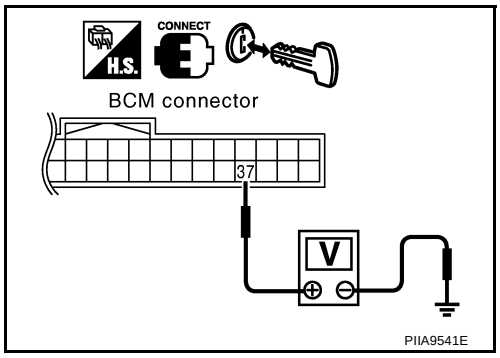
1. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-III

Check ignition key cylinder switch “KEY ON SW” in “DATE MONITOR” mode with CONSULT-II

- When key is inserted in ignition key cylinder

  KEY ON SW :ON



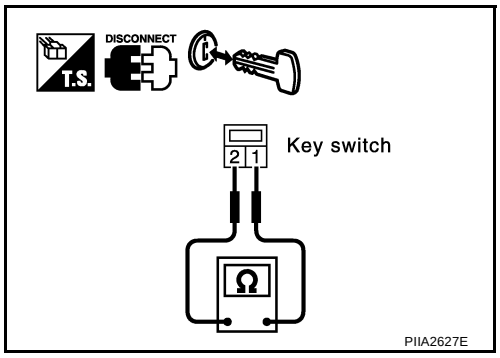
- When key is removed in ignition key cylinder

  KEY ON SW :OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M90	37 (B/R)	Ground	Key is inserted	Battery voltage
			Key is removed	0



OK or NG

OK >> Key switch is OK.
NG >> GO TO 2.

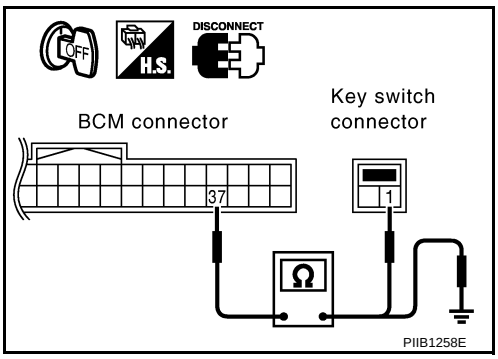
2. CHECK KEY SWITCH (INSERT)

1. Turn ignition switch OFF.
2. Disconnect key switch connector.
3. Check continuity between key switch terminals 1 and 2.

Connector	Terminals		Condition	Continuity
M25	1	2	Key is inserted in ignition key cylinder	Yes
			Key is removed from ignition key cylinder	No

OK or NG

OK >> GO TO 3.
NG >> Replace key switch.



3. CHECK KEY SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 37 and key switch harness connector M25 terminal 1.

37 (B/R) - 1 (B/R) : Continuity should exist.

3. Check continuity between BCM harness connector M90 terminal 37 and ground.

37 (B/R) - Ground : Continuity should not exist.

OK or NG

OK >> Check the following.
- 10A fuse [No.21, located in the fuse block (J/B)]
- Harness for open or short between key switch and fuse

NG >> Repair harness or connector.

Check Door Lock and Unlock Switch

NIS0000S

1. CHECK POWER WINDOW OPERATION

Does power window system operate normally?

YES or NO?

YES >> GO TO 2
NO >> Refer to GW-30, "Trouble Diagnoses Symptom Chart" .

2. CHECK DOOR LOCK AND UNLOCK SWITCH OUTPUT SIGNAL

With CONSULT-III

Check door lock and unlock switch (“LOCK SW DR/AS”, “UNLK SW DR/AS”) in DATA MONITOR mode with CONSULT-II. Refer to BL-35, "DATA MONITOR" .

- When door lock and unlock switch is turned to LOCK

  CDL LOCK SW :ON

- When door lock and unlock switch is turned to UNLOCK

  CDL UNLOCK SW :ON

Without CONSULT-III

1. Remove key from ignition switch, and close the doors of driver side and passenger side.
2. Check the signal between BCM connector and ground with oscilloscope when door lock and unlock switch (driver side and passenger side) is turned “LOCK” or “UNLOCK”.
3. Make sure signals which are shown in the figure below can be detected during 10 second just after door lock and unlock switch (driver side or passenger side) is turned “LOCK” or “UNLOCK”.

Connector	Terminal (Wire color)		Signal (Reference value)
	(+)	(–)	
M90	22 (Y)	Ground	

PIIA1297E

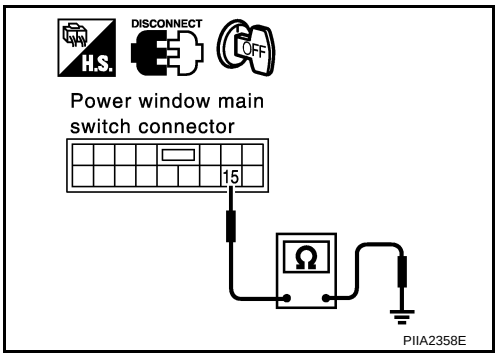
PIIA6379E

OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK BCM OUTPUT SIGNAL

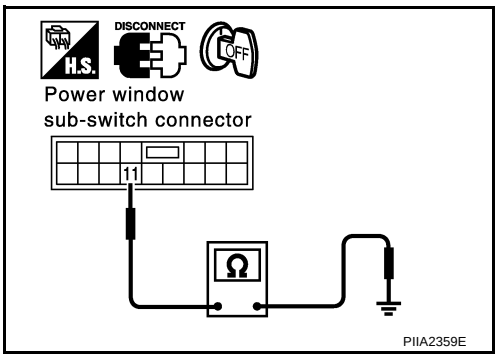
Check power window serial link (“POWER WINDOW DOWN”) in “ACTIVE TEST” mode with CONSULT-III. Refer to BL-74, "Active Test" .
When “ACTIVE TEST” is executed, the window of driver side and passenger side are go down.



OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace BCM.

4. CHECK DOOR LOCK AND UNLOCK SWITCH GROUND CIRCUIT

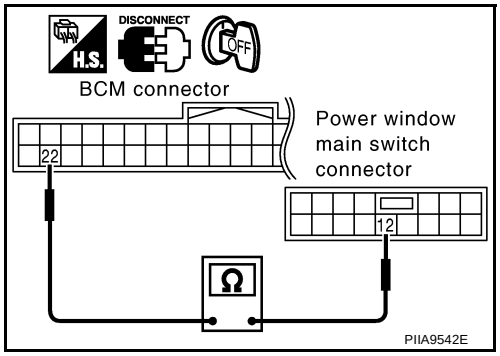


1. Turn ignition switch OFF.
2. Disconnect power window main switch (door lock and unlock switch) and power window sub-switch (door lock and unlock switch) connector.
3. Check continuity between power window main switch (door lock and unlock switch) harness connector D7 terminal 15 and ground.

15 (B) – Ground : Continuity should exist.

4. Check continuity between power window sub-switch (door lock and unlock switch) harness connector D37 terminal 11 and ground.

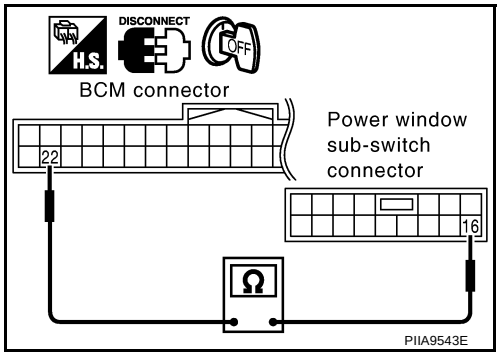
11 (B) – Ground : Continuity should exist.



OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness.

5. CHECK POWER WINDOW SERIAL LINK CIRCUIT



1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 22 and power window main switch (door lock and unlock switch) harness connector D7 terminal 12.

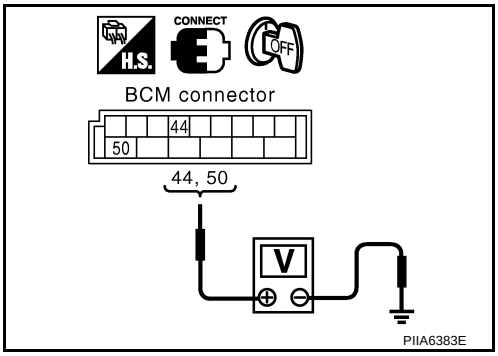
22 (Y) – 12 (PU/W) **: Continuity should exist.**

3. Check continuity between BCM harness connector M90 terminal 22 and power window sub-switch (door lock and unlock switch) harness connector D37 terminal 16.

22 (Y) – 16 (SB) **: Continuity should exist.**

OK or NG

OK >> Replace power window main switch.
NG >> Repair or replace harness.



Check Driver Side Door Lock Actuator

NIS0000T

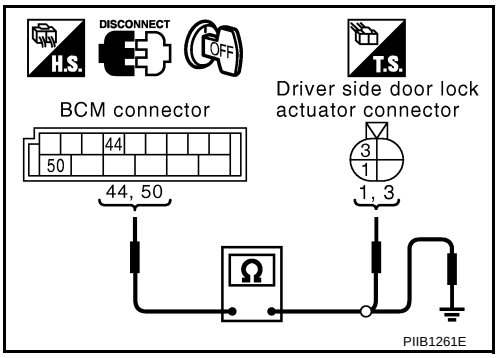
1. CHECK DOOR LOCK ACTUATOR SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M91	44 (Y)	Ground	Driver door lock/unlock switch is turned to UNLOCK.	0 → Battery voltage → 0
	50 (PU)		Driver door lock/unlock switch is turned to LOCK.	0 → Battery voltage → 0

OK or NG

OK >> GO TO 2.
NG >> Replace BCM.



2. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M91 terminals 44, 50 and driver side door lock actuator harness connector D11 terminals 1, 3.

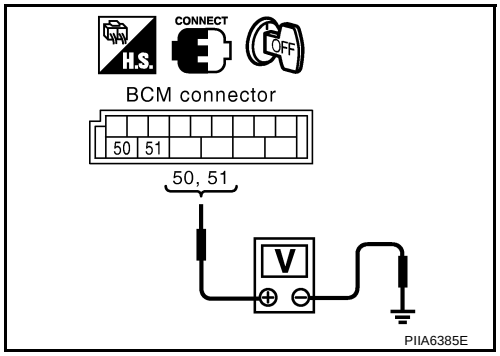
44 (Y) – 3 (Y) : Continuity should exist.
50 (PU) – 1 (PU) : Continuity should exist.

3. Check continuity between BCM harness connector M91 terminals 44, 50 and ground.

44 (Y) – Ground : Continuity should not exist.
50 (PU) – Ground : Continuity should not exist.

OK or NG

OK >> Replace driver side door lock actuator.
NG >> Repair or replace harness between BCM and driver side door lock actuator.



Check Passenger Side Door Lock Actuator

NIS0000U

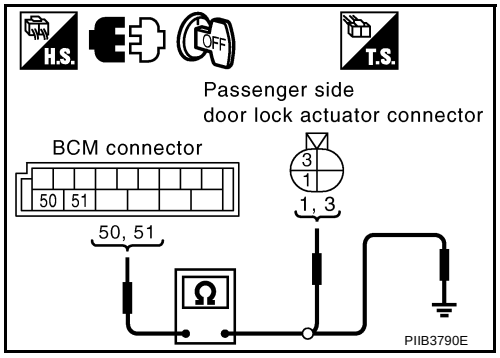
1. CHECK DOOR LOCK ACTUATOR SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between passenger side door lock actuator connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M91	50 (PU)	Ground	Door lock/unlock switch is turned to LOCK.	0 → Battery voltage → 0
	51 (W/R)		Door lock/unlock switch is turned to UNLOCK.	0 → Battery voltage → 0

OK or NG

OK >> GO TO 2.
NG >> Replace BCM.



2. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M91 terminals 50, 51 and passenger side door lock actuator harness connector D40 terminals 1, 3.

50 (PU) – 1 (PU) : Continuity should exist.
51 (W/R) – 3 (GY) : Continuity should exist.

3. Check continuity between BCM harness connector M91 terminals 50, 51 and ground.

50 (PU) – Ground : Continuity should not exist.
51 (W/R) – Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger side door lock actuator.
NG >> Repair or replace harness between BCM and passenger side door lock actuator.

Check Door Key Cylinder Switch

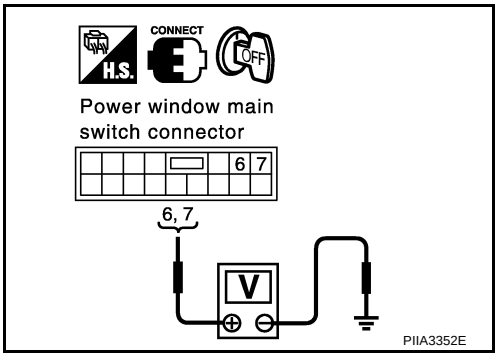
NIS0000V

1. CHECK DOOR KEY CYLINDER SWITCH INPUT SIGNAL

With CONSULT-III

- Check door key cylinder switch (“KEY CYL LK SW”) in “DATA MONITOR” mode with CONSULT-III.

  “KEY CYL LK-SW” should be “ON” when key inserted in door key cylinder is turned to lock.



- Check door key cylinder switch (“KEY CYL UN-SW”) in “DATA MONITOR” mode with CONSULT-III.

  “KEY CYL UN-SW” should be “ON” when key inserted in door key cylinder is turned to unlock.

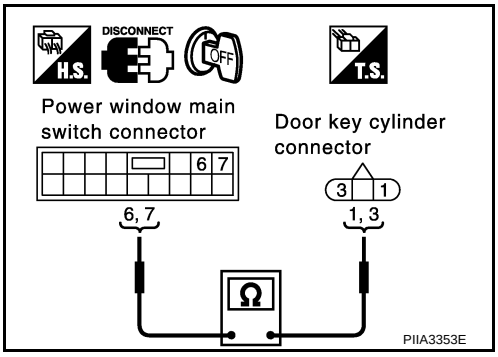
Without CONSULT-III

Check voltage between power window main switch (door lock and unlock switch) connector and ground.

Connector	Terminals (+)	Terminals (–)	Key position	Voltage (V) (Approx.)
D7	6 (B/R)	Ground	Neutral/Unlock	5
			Lock	0
	7 (SB)		Neutral/Lock	5
			Unlock	0

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.



NG >> GO TO 2.

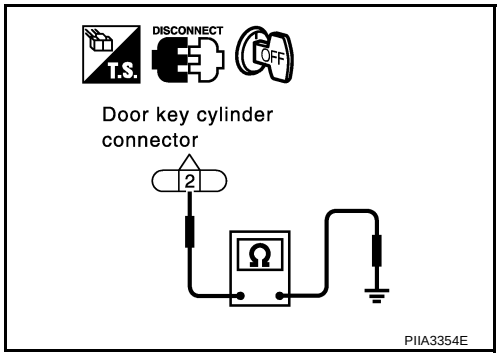
2. CHECK DOOR KEY CYLINDER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch (door lock and unlock switch) and door key cylinder switch connector.
3. Check continuity between power window main switch (door lock and unlock switch) harness connector D7 terminals 6, 7 and door key cylinder switch harness connector D12 terminals 1, 3.

6 (B/R) – 3 (B/R) : Continuity should exist.

7 (SB) – 1 (SB) : Continuity should exist.

OK or NG



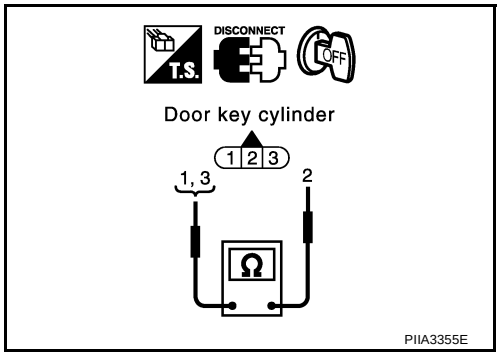
OK >> GO TO 3.

NG >> Repair or replace harness between power window main switch and door key cylinder switch.

3. CHECK DOOR KEY CYLINDER SWITCH GROUND CIRCUIT

Check continuity between door key cylinder switch harness connector D12 terminal 2 and ground.

2 (B) – Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK DOOR KEY CYLINDER SWITCH

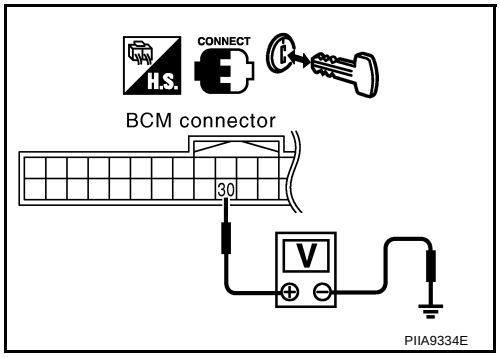
Check continuity between door key cylinder switch terminals 1, 3 and 2.

Connector	Terminals		Key position	Continuity
D12	1	2	Neutral/Lock	No
			Unlock	Yes
	3		Neutral/Unlock	No
			Lock	Yes

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace door key cylinder switch.

Check Back Door Opener Switch



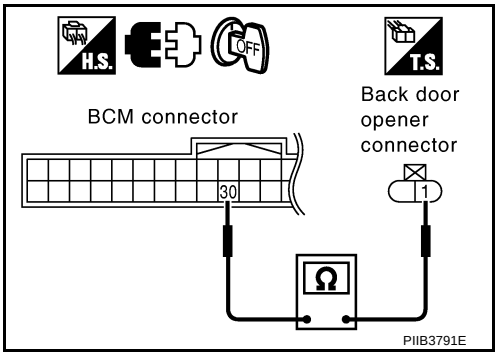
NIS0000W

1. CHECK BACK DOOR OPENER SIGNAL

Check voltage between BCM connector and ground.
Press back door opener switch when driver side door is unlocked.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Back door opener switch ON	0
			Back door opener switch OFF	Battery voltage*

*: When interior lamp battery saver control is in OFF position. →Approx.5V



OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

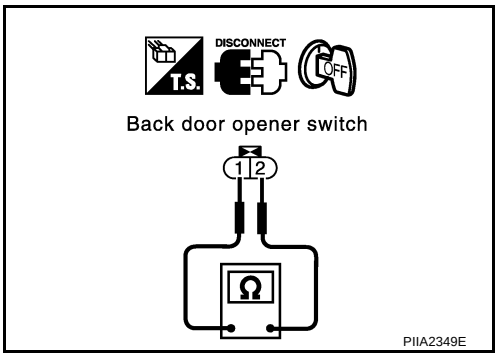
2. CHECK BACK DOOR OPENER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door opener switch connector.
3. Check continuity between BCM harness connector M90 terminal 30 and back door opener switch harness connector T103 terminal 1.

30 (P) – 1 (P) **: Continuity should exist.**

OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between BCM and back door opener switch.

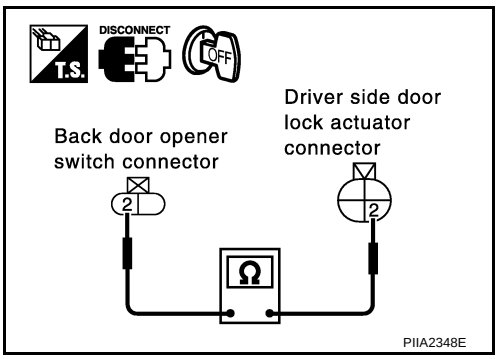


3. CHECK BACK DOOR OPENER SWITCH

Check continuity between back door opener switch terminals 1 and 2.

Connector	Terminals		Condition	Continuity
T103	1	2	Back door opener switch: ON	Yes
			Back door opener switch: OFF	No

OK or NG

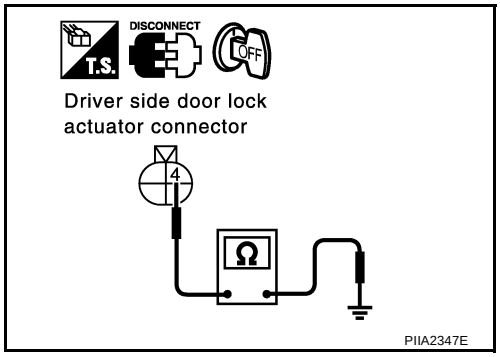


OK >> GO TO 4.
NG >> Replace back door opener switch.

4. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between back door opener switch harness connector T103 terminal 2 and driver side door lock actuator harness connector D11 terminal 2.

2 (G) – 2 (OR) **: Continuity should exist.**



OK or NG

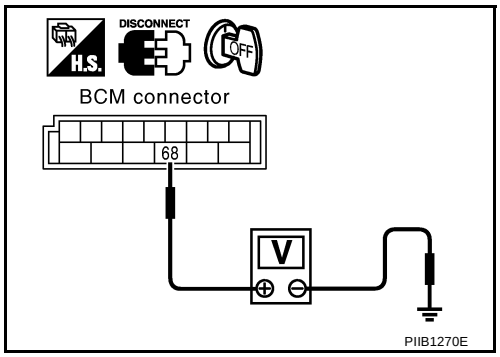
OK >> GO TO 5.
NG >> Repair or replace harness between back door opener switch and driver side door lock actuator.

5. CHECK DOOR LOCK ACTUATOR GROUND CIRCUIT

Check continuity between driver side door lock actuator harness connector D11 terminal 4 and ground.

4 (B) – Ground : Continuity should exist.

OK or NG



OK >> Replace driver side door lock actuator.
NG >> Repair or replace harness.

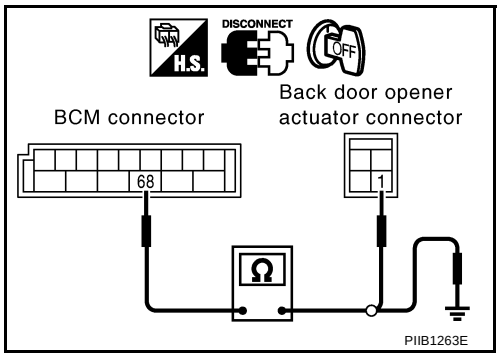
Check Back Door Opener Actuator

NIS0000X

1. CHECK BACK DOOR OPENER ACTUATOR SIGNAL

Check voltage between BCM connector and ground.
Press the back door opener switch when driver side door is unlocked.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
B83	68 (L/R)	Ground	Back door opener switch ON	Battery voltage
			Back door opener switch OFF	0



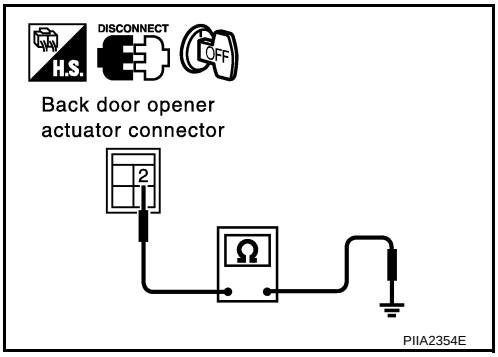
OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

2. CHECK BACK DOOR OPENER ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door opener actuator connector.
3. Check continuity between BCM harness connector B83 terminal 68 and back door opener actuator harness connector T11 terminal 1.

68 (L/R) – 1 (L/R) : Continuity should exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between BCM and back door opener actuator.

3. CHECK BACK DOOR OPENER ACTUATOR GROUND CIRCUIT

Check continuity between back door opener actuator harness connector T11 terminal 2 and ground.

2 (B) – Ground : Continuity should exist.

OK or NG

OK >> Replace back door opener actuator.
NG >> Repair or replace.

FUEL FILLER LID OPENER

PFP:78820

System Description/For RoadSter

NIS0000Y

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

When ignition switch ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

FUEL LID OPEN OPERATION

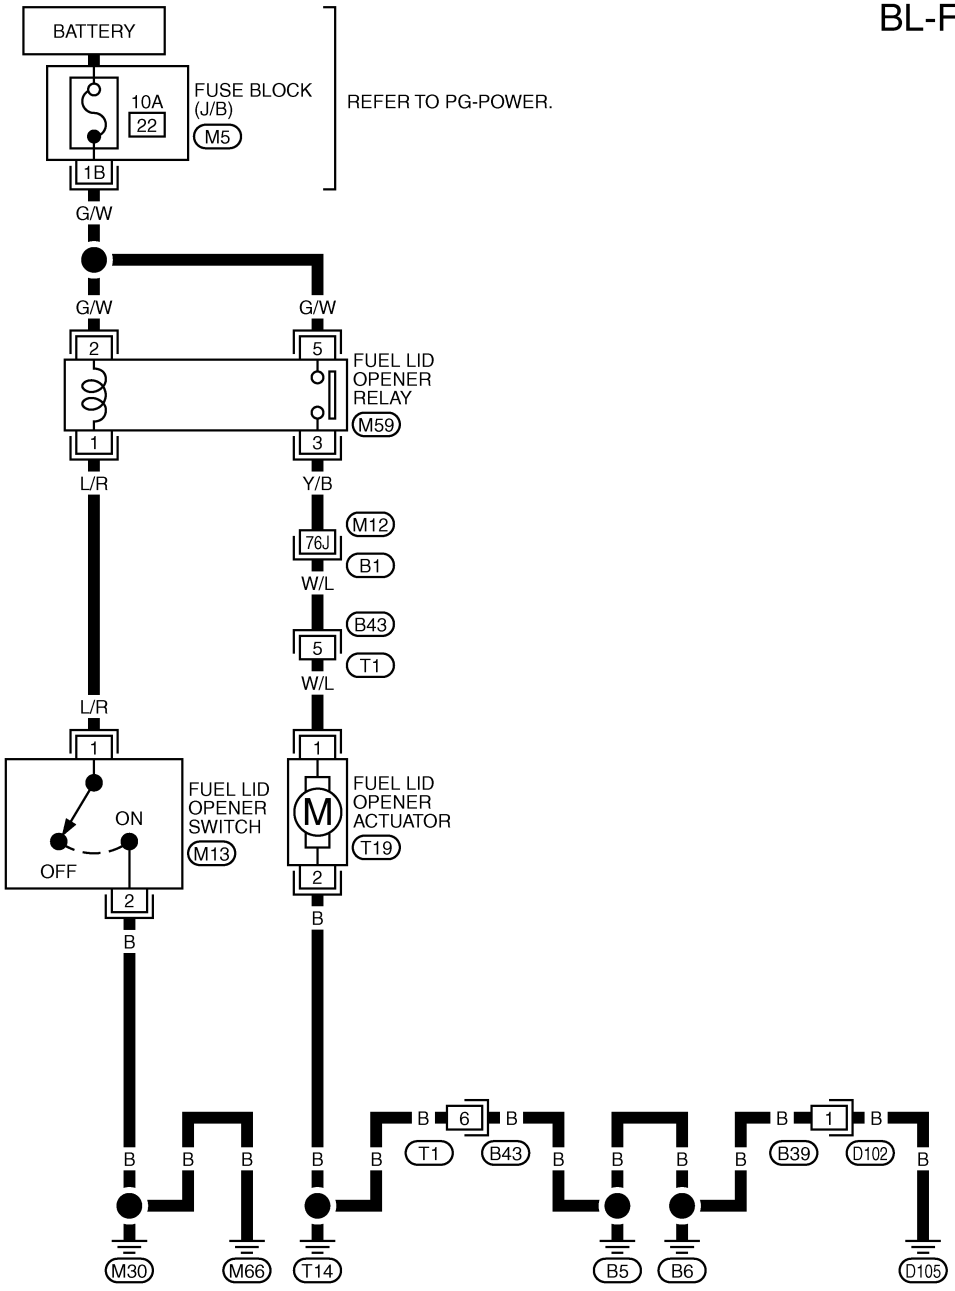
When fuel lid opener switch is ON (pushed), ground is supplied

- to BCM terminal 58
- through fuel lid opener switch terminals 1 and 2, and
- through body grounds M30 and M66.

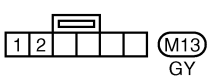
And power is supplied

- to BCM terminal 70
- through fuel lid opener actuator terminals 1 and 2, and
- through body grounds B5, B6, and T14.

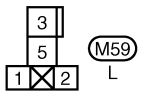
Then fuel lid opener actuator opens fuel lid.



FUEL LID OPENER CANCEL OPERATION



Fuel lid cannot open when vehicle condition is in arm or alarm phase.



Wiring Diagram — F/LID — /For Coupe

CONSULT-III Function (BCM)/For Roadster

NIS00011

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Inspection item, self-diagnosis mode	Content
Fuel lid	Data monitor	Displays BCM input data on real-time basis.
	Active test	Sends drive signals to fuel lid opener actuator to perform operation check.

DATA MONITOR

Monitor item “operation”	Content
F/LID OPN SW	Indicates [ON/OFF] condition of fuel lid opener switch.

ACTIVE TEST

Test item	Content
FUEL LID OPEN	This test is able to check fuel lid opener actuator unlock operation. This actuator unlocks when “ON” on CONSULT-III screen is touched.

Terminals and Reference Value for BCM/For Roadster

NIS00012

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage [V] (Approx.)
11	LG	Ignition switch (ACC)	Input	Ignition switch (ACC or ON)	Battery voltage
39	L	CAN-H	Input	—	—
40	P	CAN-L	Input	—	—
42	GY	Power source (Fuse)	Input	—	Battery voltage
52	B	Ground	—	—	0
55	R	Power source (Fusible link)	Input	—	Battery voltage
58	Y/B	Fuel lid opener switch	Input	Fuel lid opener switch is ON	0
				Fuel lid opener switch is OFF	Battery voltage
70	W/L	Fuel lid opener release output signal	Output	Fuel lid opener switch is ON	0
				Fuel lid opener switch is OFF	Battery voltage (For 0.5s)

Trouble Diagnosis/For Roadster

NIS00013

FUEL LID DOSE NOT OPEN WITH FUEL LID OPENER SWITCH

1. VEHICLE CONDITION

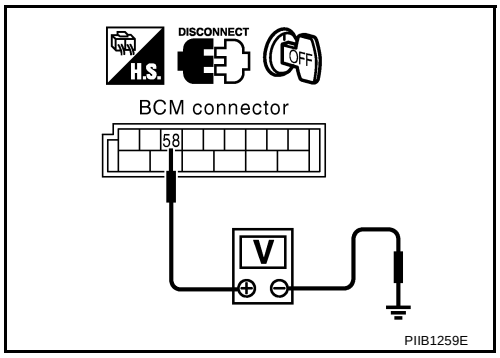
Check vehicle security system.

Arm phase or alarm phase?

Yes or No

Yes >> Cancel arm phase or alarm phase condition.
No >> GO TO 2.

2. CHECK FUEL LID OPEN INPUT SIGNAL



With CONSULT-III

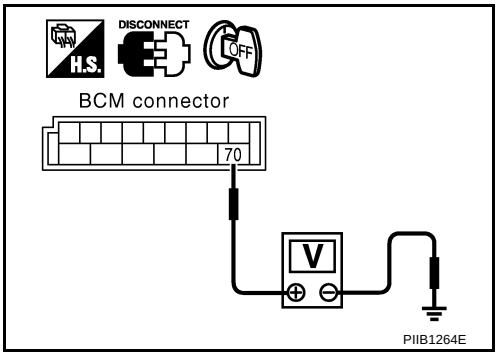
Check door switches (“F/LID OPN SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
F/LID OPN SW	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

1. Turn ignition switch OFF.
2. Check voltage between BCM and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V] (Approx.)
	(+)	(–)		
B83	58 (Y/B)	Ground	Fuel lid opener switch ON	0
			Fuel lid opener switch OFF	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 6.

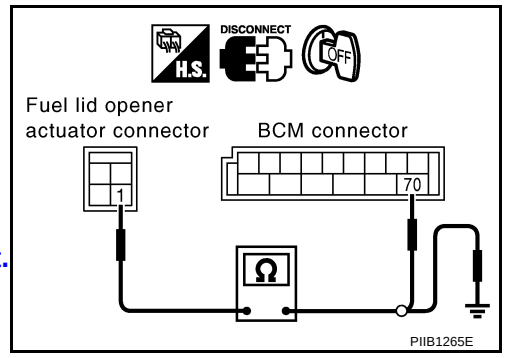
3. CHECK FUEL LID OPEN OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V] (Approx.)
	(+)	(–)		
B83	70 (W/L)	Ground	Fuel lid opener switch ON	Battery voltage (for 0.5s)
			Fuel lid opener switch OFF	0

OK or NG

OK >> GO TO 4.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .



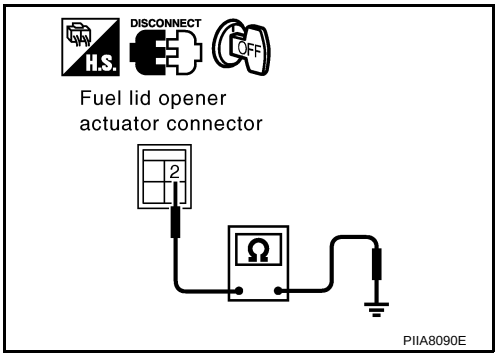
4. CHECK FUEL LID OPENER ACTUATOR CIRCUIT

1. Disconnect BCM connector and fuel lid opener actuator connector.
2. Check continuity between BCM harness connector B83 terminal 70 and fuel lid opener actuator harness connector T19 terminal 1.

70 (W/L) - 1 (W/L) : Continuity should exist.

3. Check continuity between fuel lid opener actuator harness connector T19 terminal 1 and ground.

1 (W/L) - ground : Continuity should not exist.



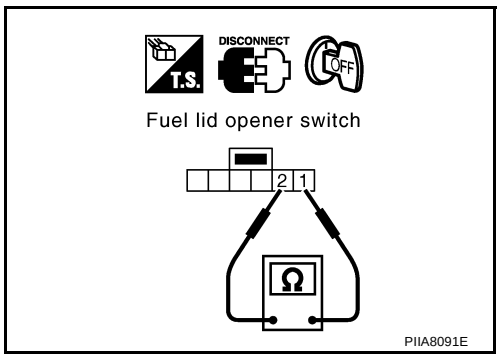
OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK FUEL LID OPENER ACTUATOR GROUND CIRCUIT

Check continuity between fuel lid opener actuator harness connector T19 terminal 2 and ground.

2 (B) - ground : Continuity should exist.



OK or NG

OK >> Replace fuel lid opener actuator.
NG >> Repair harness or connector.

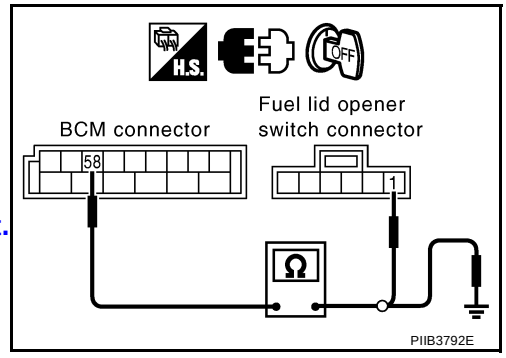
6. CHECK FUEL LID OPENER SWITCH

1. Disconnect fuel lid opener switch
2. Check continuity between fuel lid opener switch harness connector M13 terminals 1 and 2.

Connector	Terminals		Fuel lid opener switch condition	Continuity
M13	1	2	ON (Pushed)	Yes
			OFF (Released)	No

OK or NG

OK >> GO TO 7.
NG >> Replace fuel lid opener switch.



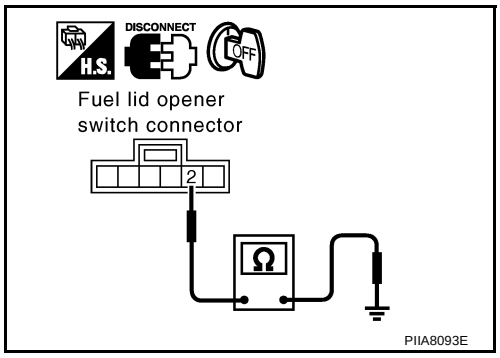
7. CHECK FUEL LID OPENER SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector B83 terminal 58 and fuel lid opener switch harness connector M13 terminal 1.

58 (Y/B) - 1 (L/R) : Continuity should exist.

3. Check continuity between BCM harness connector B83 terminal 58 (Y/B) and ground.

58 (Y/B) - ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Repair harness or connector.

8. CHECK FUEL LID OPENERE SWITCH GROUND CIRCUIT

Check continuity between fuel lid opener switch harness connector M13 terminal 2 and ground.

2 (B) - ground : Continuity should exist.

OK or NG

OK >> Replace fuel lid opener switch.
NG >> Repair harness or connector.

System Description

NIS00015

INPUTS

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No. 21, located in the fuse block (J/B)]
- to key switch terminal 2.

When the ignition switch is ON or START position, power is supplied

- through 10A fuse [No.1, located in the fuse block (J/B)]
- to BCM terminal 38.

When the ignition switch is ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

When the driver side door switch is ON (door is OPEN), ground is supplied

- to BCM terminal 62
- through driver side door switch terminal 1 and
- through driver door switch case ground.

When the passenger side door switch is ON (door is OPEN), ground is supplied

- to BCM terminal 12
- through passenger side door switch terminal 1 and
- through passenger side door switch case ground.

When the back door switch (For coupe models) is ON (door is OPEN), ground is supplied

- to BCM terminal 58
- through the back door switch terminals 1 and 3 and
- through body grounds B5, B6, D105 and T14.

When the trunk lid lock assembly (trunk room lamp switch) (For roadster models) is ON (trunk is OPEN), ground is supplied

- to BCM terminal 57
- through the trunk room lamp switch terminals 3 and 1 and
- through body grounds B5,B6 and T14.

When the key switch is ON (key is inserted in ignition key cylinder), power is supplied

- through key switch terminals 2 and 1
- to BCM terminal 37.

Key fob signal is inputted to remote keyless entry receiver (the antenna of the system is built in remote keyless entry receiver).
Remote keyless entry receiver sends keyfob signal

- to BCM terminal 20
- from remote keyless entry receiver terminal 2.

The remote keyless entry system controls operation of the

- power door lock
- hazard and horn reminder
- auto door lock
- interior lamp and step lamp
- panic alarm

- back door opener (For coupe)
- trunk lid opener (For roadster)
- keyless power window down (open)

OPERATION PROCEDURE

Power Door Lock Operation

BCM receives a LOCK signal from key fob. BCM locks all doors receiving of LOCK signal from key fob.
When an UNLOCK signal is sent from key fob once, driver's door will be unlocked.
Then, if an UNLOCK signal is sent from key fob again within 5 seconds, all other doors will be unlocked.

Hazard Reminder

When the doors are locked or unlocked by key fob, power is supplied to hazard warning lamp and it flashes as follows

- LOCK operation: C mode (flash twice) or S mode (flash twice)
- UNLOCK operation: C mode (flash once) or S mode (does not flash)

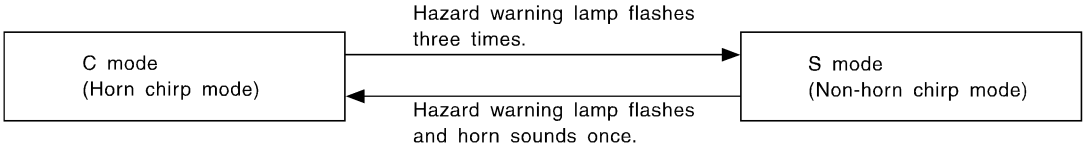
Horn Reminder

BCM output to IPDM E/R for horn reminder signal as DATA LINE (CAN H line and CAN L line).
The horn reminder has C mode (horn chirp mode) and S mode (non-horn chirp mode).

Operating function of hazard and horn reminder

	C mode		S mode	
Remote controller operation	Lock	Unlock	Lock	Unlock
Hazard warning lamp flash	Twice	Once	Twice	—
Horn sound	Once	—	—	—

Hazard and horn reminder does not operate if any door switch is ON (any door is OPEN).



How to change hazard and horn reminder mode

With CONSULT-III

Hazard and horn reminder can be changed using “WORK SUPPORT” mode in “MULTI ANSWER BACK SET”.
Refer to BL-73, "Work Support" .

Without CONSULT-III

When LOCK and UNLOCK signals are sent from the key fob for more than 2 seconds at the same time, the hazard and horn reminder mode is changed and hazard warning lamp flashes and horn sounds as follows:

SEL153WA

Auto Door Lock Operation

Auto lock function signal is sent for operation when any of the following signals are not sent within 1 minute after the unlock signal is sent from the key fob:

- when door switch is turned ON for open.
- when the key switch is turned ON.
- when the lock signal is sent from the key fob.

Auto door lock mode can be changed using “WORK SUPPORT” mode in “AUTO LOCK SET”.
Refer to BL-73, "Work Support" .

Interior Lamp and Step Lamp Operation

When the following conditions come:

- condition of interior lamp switch is DOOR position;
- door switch OFF (when all the doors are closed);

Remote keyless entry system turns on interior lamp (for 30 seconds) with input of UNLOCK signal from key fob.
For detailed description, refer to LT-130, "MAP LAMP TIMER OPERATION" .

Panic Alarm Operation

When key switch is OFF (when ignition key is not inserted in key cylinder), BCM turns on and off horn and headlamp intermittently with input of PANIC ALARM signal from key fob.
The alarm automatically turns off after 25 seconds or when BCM receives any signal from key fob.
For detailed description, refer to BL-128, "PANIC ALARM OPERATION" .

Back Door Operation/For Coupe

When a BACK DOOR OPEN signal is sent with key OFF (ignition key removed from key cylinder) from key fob, power is supplied through BCM terminal 19.
When power and ground are supplied, back door opener actuator opens back door.

Trunk Opener Operation/For Roadster

When a TRUNK OPEN signal is sent with key OFF (ignition key removed from key cylinder) from key fob, power is supplied through BCM terminal 19.
When power and ground are supplied, trunk lid opener actuator opens trunk.

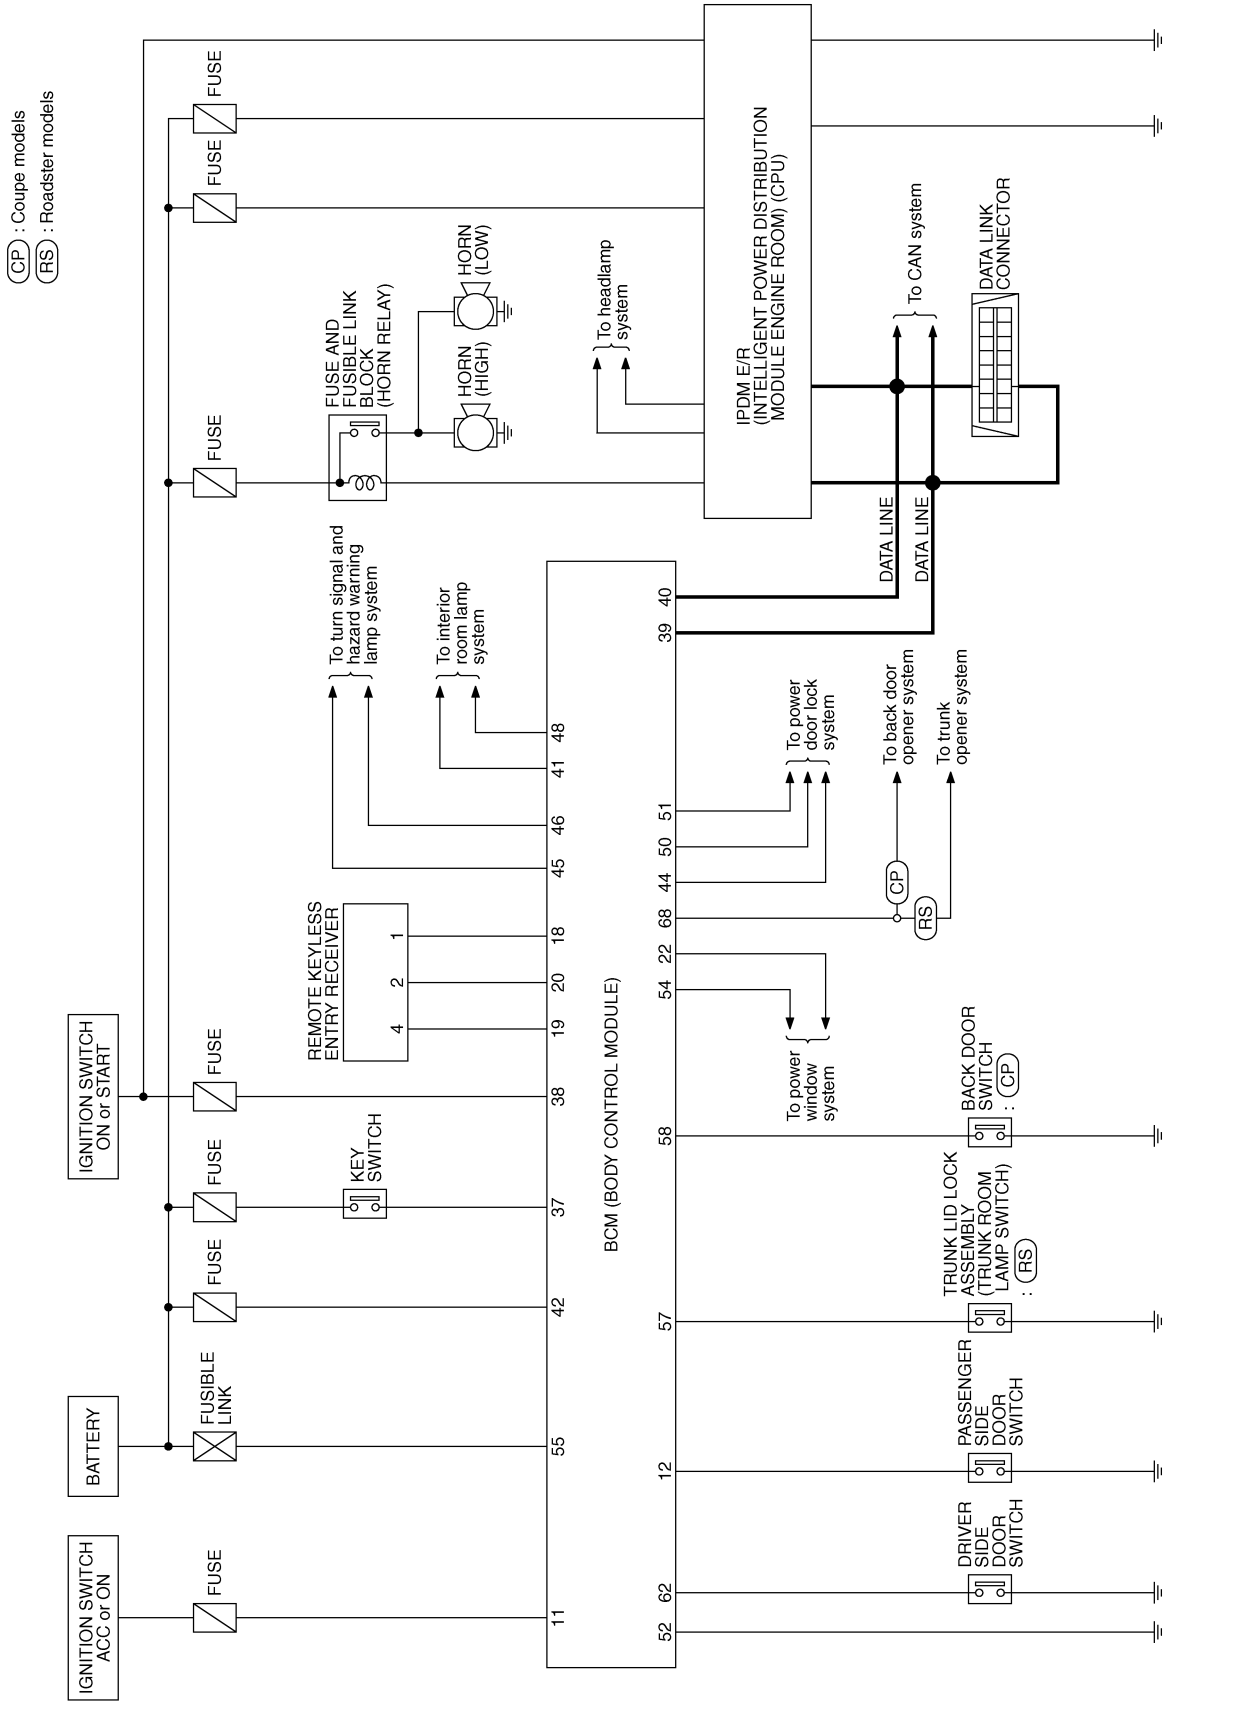
Keyless Power Window Down (open) Operation

When key fob unlock switch is turned ON with ignition switch OFF, and key fob unlock switch is detected to be on continuously for 3 seconds, the driver's door and passenger's door power windows are simultaneously opened.
Power window is operated to open and the operation continues as long as the key fob unlock switch is pressed.

CAN Communication System Description

NIS00016

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NIS00017

Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.

Monitored Item	Description
KEY ON SW	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW-AS	Indicates [ON/OFF] condition of passenger side door switch.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch (For Coupe).
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from lock/unlock switch.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from lock/unlock switch.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from door key cylinder switch.
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from key fob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from key fob.
PANIC BTN	Indicates [ON/OFF] condition of panic signal from key fob.
TRUNK OPNR SW	Indicates [ON/OFF] condition of trunk room lamp switch (For Roadster).
TRUNK BTN/SIG	Indicates [ON/OFF] condition of back door open signal from key fob.
	Indicates [ON/OFF] condition of trunk open signal from key fob. (For Roadster)
TRUNK OPN MNTR	Indicates [ON/OFF] condition of trunk lid opener switch. (For Roadster)
UN BUTTON ON	Indicates [ON/OFF] condition of unlock signal from key fob.
LK/UN BTN ON	Indicates [ON/OFF] condition of lock/unlock signal at the same time from key fob.
DOOR SW-RR	This is displayed even when it is not equipped.

Active Test

Test Item	Description
INT LAMP	This test is able to check interior lamp operation. The interior lamp is turned on when “ON” on CONSULT-III screen is touched.
IGN ILLUM	This is displayed even when it is not equipped.
TRUNK/BACK DOOR	This test is able to check back door (For Coupe) or trunk lid (For Roadster) opener actuator operation. The back door (For Coupe) or trunk (For Roadster) is unlocked when “ON” on CONSULT-III screen is touched.
HORN	This test is able to check panic alarm and horn reminder operations. The horn activate for 0.02 seconds after “ON” on CONSULT-III screen is touched.
HEAD LAMP(HI)	This test is able to check headlamps panic alarm operation. The headlamp illuminates for 0.5 seconds after “ON” on CONSULT-III screen is touched.
POWER WINDOW DOWN	This test is able to check power window open operation. The front power windows activate for 10 seconds after “ON” or CONSULT-III screen is touched.
FLASHER RIGHT	This test is able to check hazard reminder operation. The right hazard lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER LEFT	This test is able to check hazard reminder operation. The left hazard lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER RIGHT (CAN)	This test is able to check hazard reminder operation. The right hazard indicator lamp turns on when “ON” on CONSULT-III screen is touched.
FLASHER LEFT (CAN)	This test is able to check hazard reminder operation. The left hazard indicator lamp turns on when “ON” on CONSULT-III screen is touched.

CONSULT-III Application Items for IPDM E/R

NIS0001H

DATA MONITOR

Monitored Item	Description
HORN CHIRP	Indicates [ON/OFF] condition of horn function by IPDM E/R.

ACTIVE TEST

Test Item	Description
HORN	This test is able to check horn operation. Horn activates when “ON” on CONSULT-III screen is touched.

Work Flow

NIS0001I

1. Check the trouble symptom and customer's requests.
2. Understand outline of system. Refer to BL-61, "System Description" .
3. Confirm that power door lock system operates normally. Refer to BL-21, "POWER DOOR LOCK SYSTEM" .
4. Refer to trouble diagnosis chart by symptom, repair or replace any malfunctioning parts. Refer to BL-75, "Trouble Diagnosis Chart by Symptom" .
5. Inspection end.

Trouble Diagnosis Chart by Symptom

NIS0001J

NOTE:

- Always check the “Work Flow” before troubleshooting. Refer to BL-75, "Work Flow" .
- Always check key fob battery before replacing key fob.
- The panic alarm operation, back door or trunk lid (Roadster models) opener operation and keyless power window down operation of remote keyless entry system do not activate with the ignition key inserted in the ignition key cylinder.

Symptom	Diagnoses/service procedure	Reference page
All functions of remote keyless entry system do not operate.	1. Check key fob battery and function	BL-77
	2. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	3. Check remote keyless entry receiver	BL-85
	4. Replace BCM	BCS-17
The new ID of key fob cannot be entered without CONSULT-III.	1. Check key fob battery and function	BL-77
	2. Check key switch	BL-84
	3. Check door switch	BL-79
	4. Check ACC switch	BL-78
	5. Check door lock and unlock switch	BL-42
	6. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	7. Replace BCM	BCS-17
Door lock or unlock does not work.	1. Check door lock operation	BL-23
	2. Check key fob battery and function	BL-77
	3. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	4. Replace BCM	BCS-17
Back door does not open when back door opener button is continuously pressed.	1. Check back door opener operation	BL-23
	2. Check back door open operation mode	BL-73
	3. Check key fob battery and function	BL-77
	4. Check key switch	BL-84
	5. Replace BCM	BCS-17

Symptom	Diagnoses/service procedure	Reference page
Trunk does not open when trunk opener button is continuously pressed. (Roadster models)	1. Check trunk opener operation	BL-114
	2. Check trunk open operation mode	BL-73
	3. Check key fob battery and function	BL-77
	4. Check key switch	BL-84
	5. Replace BCM	BCS-17
Hazard reminder does not activate properly when pressing lock or unlock button of key fob.	1. Check hazard reminder mode * *: Hazard reminder can be activated or deactivated. First check the hazard reminder setting.	BL-73
	2. Check hazard warning lamp function with hazard switch.	LT-66
	3. Check door switch	BL-79
	4. Replace BCM	BCS-17
Horn reminder does not activate properly when pressing lock button of key fob.	1. Check horn reminder mode * *: Horn reminder can be activated or deactivated. First check the horn chirp setting.	BL-73

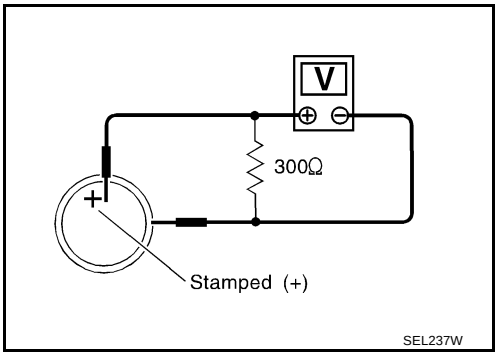
Interior lamp and step lamp operation do not activate properly.	1. Check interior lamp and step lamp operation	BL-88
	2. Check door switch	BL-79
	3. Replace BCM	BCS-17
Panic alarm (horn and headlamp) does not activate when panic alarm button is continuously pressed.	1. Check panic alarm mode * *: Panic alarm can be activated or deactivated. First check the Panic alarm setting.	BL-73
	2. Check key fob battery and function	BL-77
	3. Check headlamp alarm	BL-88
	4. Check horn chirp function with horn switch.	BL-88
	5. Check IPDM E/R operation	BL-85
	6. Check key switch	BL-84
	7. Replace key fob. Refer to ID Code Entry Procedure. **NOTE:** If the result of key fob function check with CONSULT-III is OK, key fob is not malfunctioning.	BL-89
	8. Replace BCM	BCS-17
Auto door lock operation does not activate properly. (All other remote keyless entry system function is OK.)	1. Check auto door lock operation mode * *: Auto door lock operation can be activated or deactivated. First check the auto door lock operation setting.	BL-73
	2. Replace BCM	BCS-17
Keyless power window down (open) operation does not activate properly. (All other remote keyless entry system function is OK.)	1. Check power window down operation mode * *: Power window down operation can be activated or deactivated. First check the power window down setting.	BL-73
	2. Check power window function	GW-19
	3. Replace BCM	BCS-17



Check Key Fob Battery and Function

NIS0001K

1. CHECK KEY FOB BATTERY

1. Remove key fob battery. Refer to BL-91, "Key Fob Battery Replacement" .
2. Measure voltage between battery positive and negative terminals.

Voltage : 2.5 - 3.0V

NOTE:
Key fob does not function if battery is not set correctly.

OK or NG

OK >> GO TO 2
NG >> Replace battery.

2. CHECK KEY FOB FUNCTION

With CONSULT-III

Check key fob function in “DATA MONITOR” mode with CONSULT-III.
When pushing each button of key fob, the corresponding monitor item should be turned as follows.

Condition	Monitor item	
Pushing LOCK	KEYLESS LOCK	: ON
Pushing UNLOCK	KEYLESS UNLOCK	: ON
Keep pushing UNLOCK	RKE KEEP UNLK	: ON*
	*: “RKE KEEP UNLK” turns to ON 3 seconds after UNLOCK button keeps pushing.	
Pushing TRUNK	KEYLESS TRUNK	: ON
Pushing PANIC	KEYLESS PANIC	: ON
Pushing LOCK and UNLOCK at the same time	RKE LCK - UNLCK	: ON

OK or NG

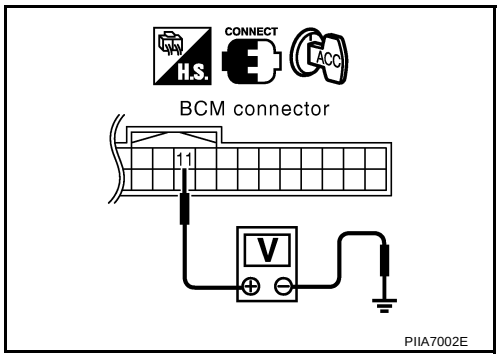
OK >> Key fob is OK.
NG >> Replace key fob.

Check ACC Switch

NIS0001L

1. CHECK ACC SWITCH

With CONSULT-III



Check ACC switch (“ACC ON SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
ACC ON SW	Ignition switch position is ACC or ON	: ON
	Ignition switch position is OFF	: OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Item	Con-nector	Terminals (Wire color)		Condition	Voltage [V] (Approx.)
		(+)	(–)		
Ignition switch	M90	11 (LG)	Ground	ACC or ON	Battery voltage
				OFF	0

OK or NG

OK >> ACC switch is OK.

NG >> Check the following.

- 10A fuse [No. 6, located in fuse block (J/B)]
- Harness for open or short between BCM and fuse

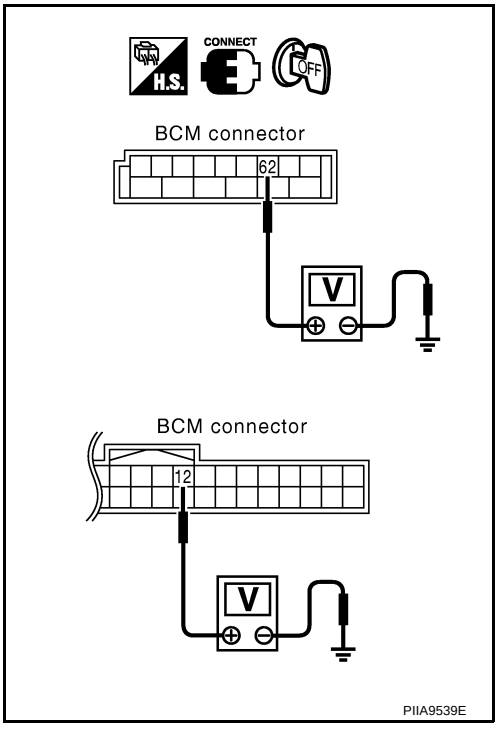
Check Door Switch

NIS0001M

DRIVER SIDE DOOR SWITCH AND PASSENGER SIDE DOOR SWITCH CHECK

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-DR” and “DOOR SW-AS”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

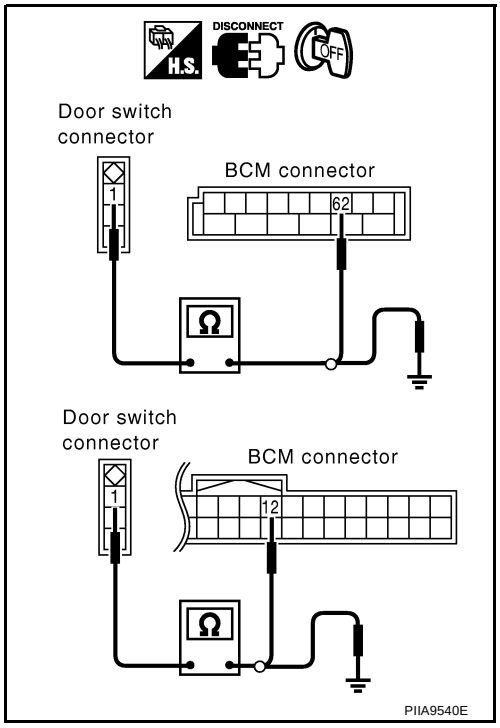
Check voltage between BCM connector and ground.

Item	Con-nector	Terminals (Wire color)		Condition	Voltage [V] (Approx.)
		(+)	(–)		
Driver side door switch	B83	62 (L)	Ground	Open	0
				Close	5
Passenger side door switch	M90	12 (P)		Open	0
				Close	5

OK or NG

OK >> Door switch is OK.

NG >> GO TO 2.



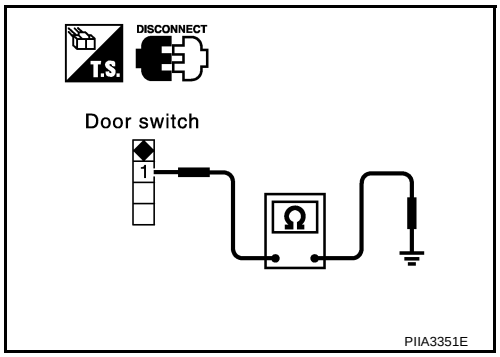
2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between door switch harness connector B17, B23 terminal 1 and BCM harness connector B83 terminal 62 (driver side) or M90 terminal 12 (passenger side).

Driver side door
1 (L) - 62 (L) : Continuity should exist.
Passenger side door
1 (P) - 12 (P) : Continuity should exist.

4. Check continuity between door switch harness connector B17, B23 terminal 1and ground.

Driver side door switch
1 (L) - Ground : Continuity should not exist.
Passenger side door switch
1(P) - Ground : Continuity should not exist.

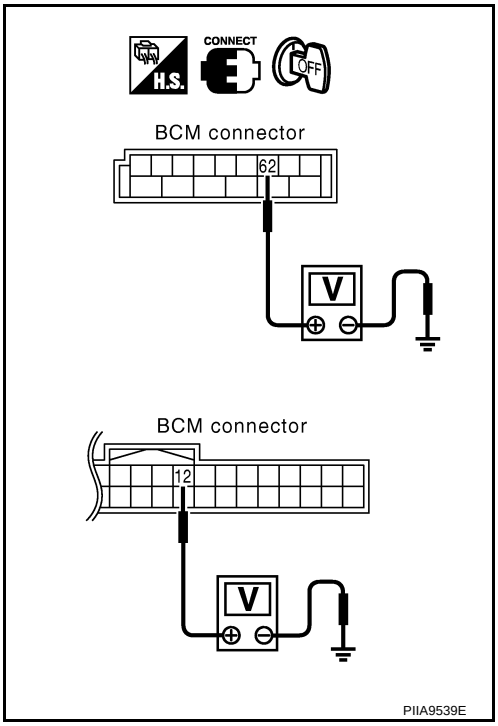


OK or NG
OK >> GO TO 3.
NG >> Repair or replace door switch harness.

3. CHECK DOOR SWITCH

Check continuity between door switch B17 (driver side) or B23 (passenger side) terminal 1 and ground part of door switch.

Terminal		Condition of door switch	Continuity
1	Ground part of door switch	Pushed (close)	No
		Released (open)	Yes



OK or NG
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK DOOR SWITCH INPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM harness connectors B83 (driver side), M90 (passenger side) terminals 62, 12 and ground.

62 (L) – Ground : Approx. 5V
12 (P) – Ground : Approx. 5V

OK or NG

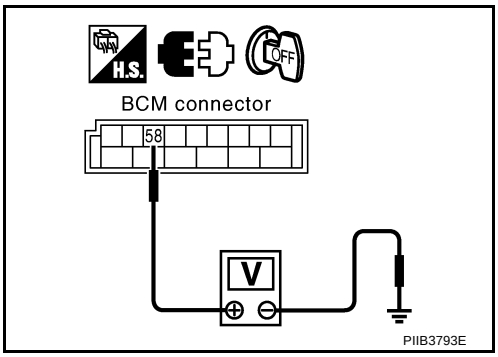
OK >> Check harness connection.
NG >> Replace BCM.

CHECK BACK DOOR SWITCH /FOR COUPE

1. CHECK BACK DOOR SWITCH INPUT SIGNAL

With CONSULT-III

Check back door switch (“BACK DOOR SW”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

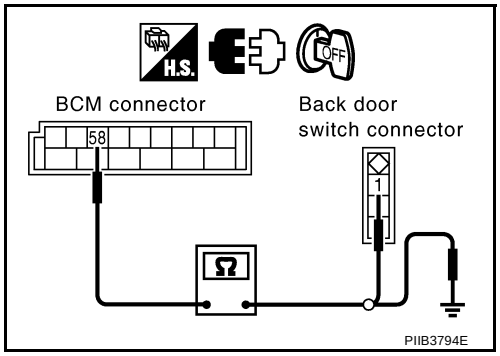
1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition of back door switch	Voltage [V] (Approx.)
	(+)	(–)		
B83	58 (R/W)	Ground	Open	0
			Close	Battery voltage*

* : When interior lamp battery saver control is in OFF. → Approx. 5V

OK or NG

OK >> Back door switch circuit is OK.
NG >> GO TO 2.



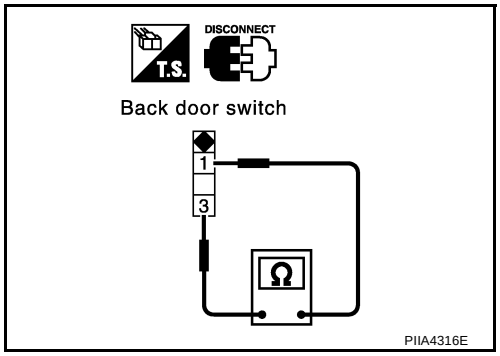
2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect back door switch and BCM connector.
3. Check continuity between BCM harness connector B83 terminal 58 and back door switch harness connector T12 terminal 1.

58 (R/W) - 1 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 58 and ground.

58 (R/W) - Ground : Continuity should not exist.



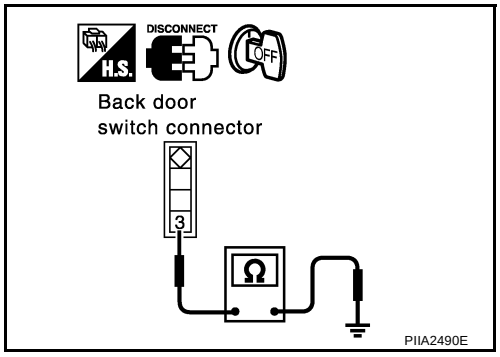
OK or NG

OK >> GO TO 3.
NG >> Repair or replace back door switch harness.

3. CHECK BACK DOOR SWITCH

Check continuity between back door switch terminals 1 and 3.

Connector	Terminal		Condition of back door switch	Continuity
T12	1	3	Open position	Yes
			Closed position	No



OK or NG

OK >> GO TO 4.
NG >> Replace back door switch.

4. CHECK BACK DOOR SWITCH GROUND CIRCUIT

Check continuity between door switch harness connector T12 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check harness connection.
NG >> Repair or replace back door switch harness.

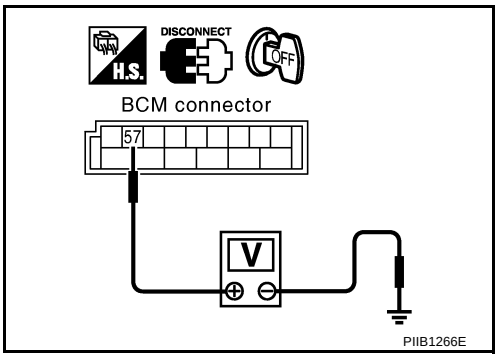
Check Trunk Lid Lock Assembly (Trunk Room Lamp Switch) / For Roadster

NIS0001N

1. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) INPUT SIGNAL

With CONSULT-III

Check trunk lid opener switch (“TRUNK OPN MNTR”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
TRNK OPN MNTR	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

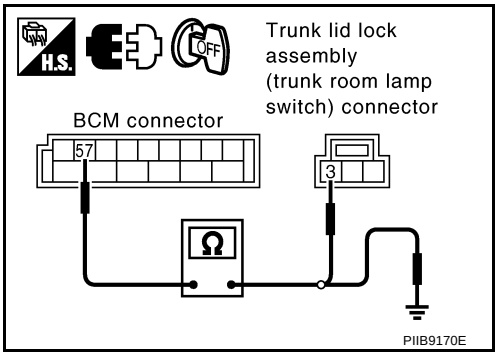
Check voltage between BCM connector and ground.

Con-nector	Terminals (Wire color)		Condition of trunk lid lock assembly (trunk room lamp switch)	Voltage [V] (Approx.)
	(+)	(–)		
B83	57 (R/W)	Ground	Open	0
			Close	Battery voltage*

*: When interior lamp battery saver control is in OFF. → Approx. 5V.

OK or NG

OK >> Trunk room lamp switch is OK.
NG >> GO TO 2.



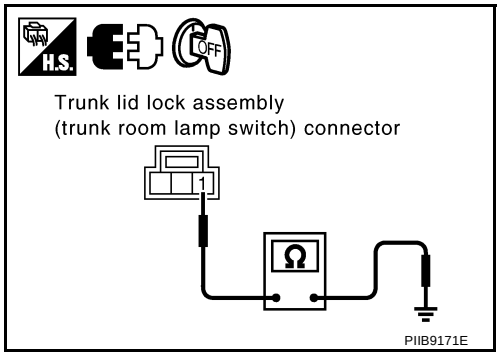
2. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) and BCM connector.
3. Check continuity between BCM harness connector B83 terminal 57 and trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 3.

   57 (R/W) - 3 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 57 and ground.

   57 (R/W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.

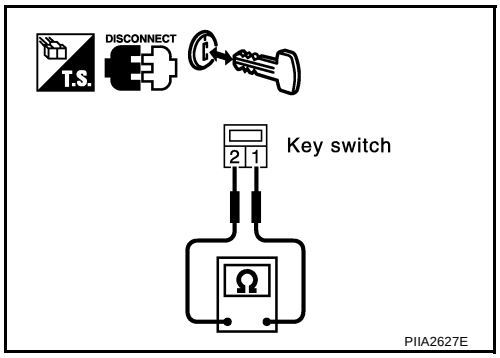
3. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) connector.
3. Check continuity between trunk lid lock assembly (trunk room lamp switch) connector T47 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check trunk lid lock assembly (trunk room lamp switch).
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.



Check Key Switch

NIS0001O

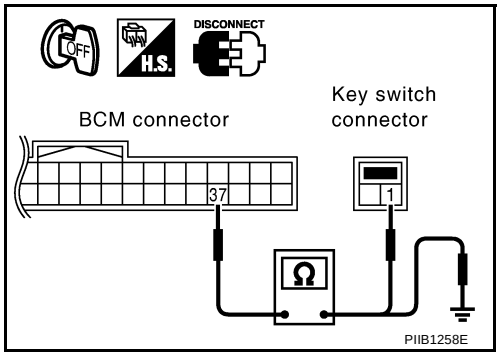
1. CHECK KEY SWITCH

Check continuity key switch terminals 1 and 2.

Connector	Terminals		Condition of key switch	Continuity
M25	1	2	Inserted	Yes
			Removed	No

OK or NG

OK >> GO TO 3.
NG >> Replace key switch.



2. CHECK KEY SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 37 and key switch harness connector M25 terminal 1.

37 (B/R) - 1 (B/R) : Continuity should exist.

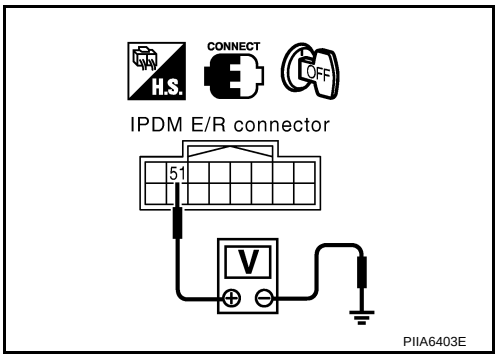
3. Check continuity between BCM harness connector M90 terminal 37 and ground.

37 (B/R) - Ground : Continuity should not exist.

OK or NG

OK >> Check the following.
- 10A fuse [No.21, located in the fuse block (J/B)]
- Harness for open or short between key switch and fuse

NG >> Repair or replace harness.



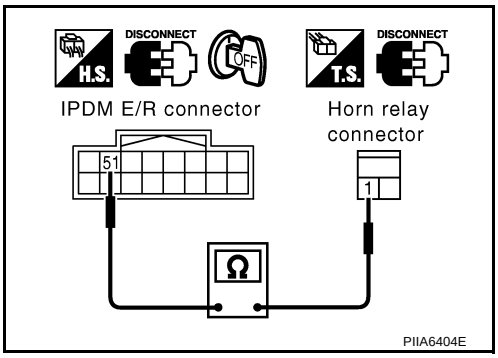
Check IPDM E/R Operation

NIS0001P

1. CHECK IPDM E/R INPUT SIGNAL

Check voltage between IPDM E/R connector E9 terminal 51 and ground.

51 (G/B) – Ground : Battery voltage



OK or NG

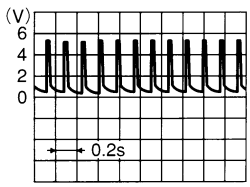
OK >> Replace IPDM E/R.
NG >> GO TO 2.

2. CHECK IPDM E/R CIRCUIT

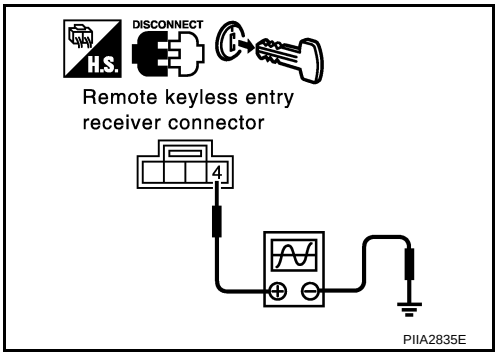
1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay connector.
3. Check continuity between IPDM E/R harness connector E9 terminal 51 and horn relay harness connector E21 terminal 1.

1 (G/B) - 51(G/B) : Continuity should exist.

OK or NG



OK >> Check harness connection.
NG >> Repair or replace harness.



Check Remote Keyless Entry Receiver

NIS0001Q

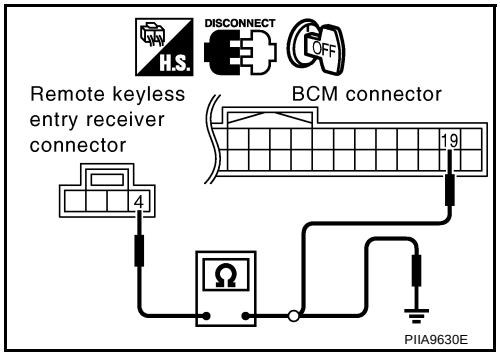
1. CHECK MULTI-REMOTE CONTROL RECEIVER INPUT VOLTAGE

1. Remove key from ignition key cylinder.
2. Check signal between remote keyless entry receiver connector and ground with oscilloscope.

Con-nector	Terminal (Wire color) (+)	Terminal (Wire color) (–)	Condition	Signal (Reference value)
M78	4 (Y)	Ground	Key is inserted in IGN key cylinder	0
			All door closed	

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



2. CHECK REMOTE KEYLESS ENTRY RECEIVER HARNESS

1. Turn ignition switch OFF.
2. Disconnect remote keyless entry receiver and BCM connector.
3. Check continuity between remote keyless entry receiver connector M78 terminal 4 and BCM connector M90 terminal 19.

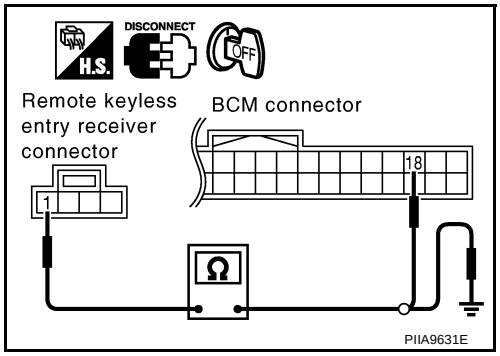
4 (Y) - 19 (Y) : Continuity should exist.

4. Check continuity between remote keyless entry receiver connector M78 terminal 4 and ground.

4 (Y) - Ground : Continuity should not exist.

OK or NG

OK >> Check harness connection.
NG >> Repair or replace the harness.



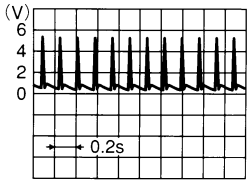
3. CHECK REMOTE KEYLESS ENTRY RECEIVER

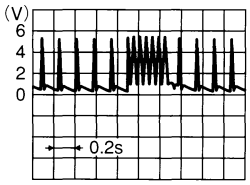
1. Turn ignition switch OFF.
2. Check continuity between remote keyless entry receiver connector M78 terminal 1 and BCM connector M90 terminal 18.

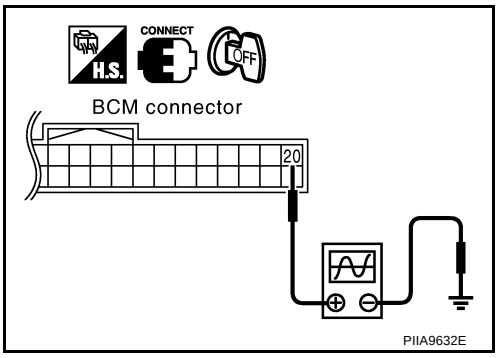
1 (B) - 18 (B) : Continuity should exist.

3. Check continuity between remote keyless entry receiver connector M78 terminal 1 and ground.

1 (B) - Ground : Continuity should not exist.







OK or NG

OK >> GO TO 4.
NG >> Repair or replace the harness.

4. CHECK REMOTE KEYLESS ENTRY RECEIVER OUTPUT SIGNAL

1. Connect remote keyless entry receiver connector.
2. Check signal BCM connector and ground with oscilloscope.

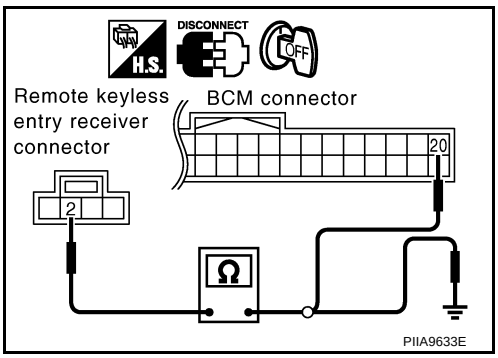
Connector	Terminal (Wire color) (+)	Terminal (Wire color) (–)	Condition	Signal (Reference value)
M90	20 (L)	Ground	Key is inserted in IGN key cylinder	0
			Waiting (All door closed)	 OCC3879D
			When signal is received (All door closed)	 OCC3880D

OK or NG

OK >> Replace BCM.
NG >> GO TO 5.

5. CHECK REMOTE KEYLESS ENTRY RECEIVER HARNESS

1. Disconnect remote keyless receiver and BCM connector.
2. Check continuity between remote keyless entry receiver connector M78 terminal 2 and BCM connector M90 terminal 20.



2 (L) - 20 (L) : Continuity should exist.

3. Check continuity between remote keyless entry receiver connector M78 terminal 2 and ground.

2 (L) - Ground : Continuity should not exist.

OK or NG

OK >> Replace remote keyless entry receiver.
NG >> Repair or replace the harness.

Check Horn Function

NIS0001R

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HORN OPERATION

Check if horn sounds with horn switch.

Does horn operate?

Yes >> Horn circuit is OK.
No >> Check horn circuit. Refer to WW-53, "Wiring Diagram — HORN —" .

Check Headlamp Alarm

NIS0001S

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HEADLAMP OPERATION

Does headlamp come on when turning lighting switch “ON”.

YES or NO

Yes >> Headlamp alarm circuit is OK.
No >> Check headlamp system. Refer to LT-5, "HEADLAMP (FOR USA)" , LT-32, "HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -" ,.

Check Interior Lamp Operation

NIS0001T

1. CHECK ILLUMINATION OPERATION

When interior lamp switch is in “DOOR” position, open the door (driver side or passenger side).

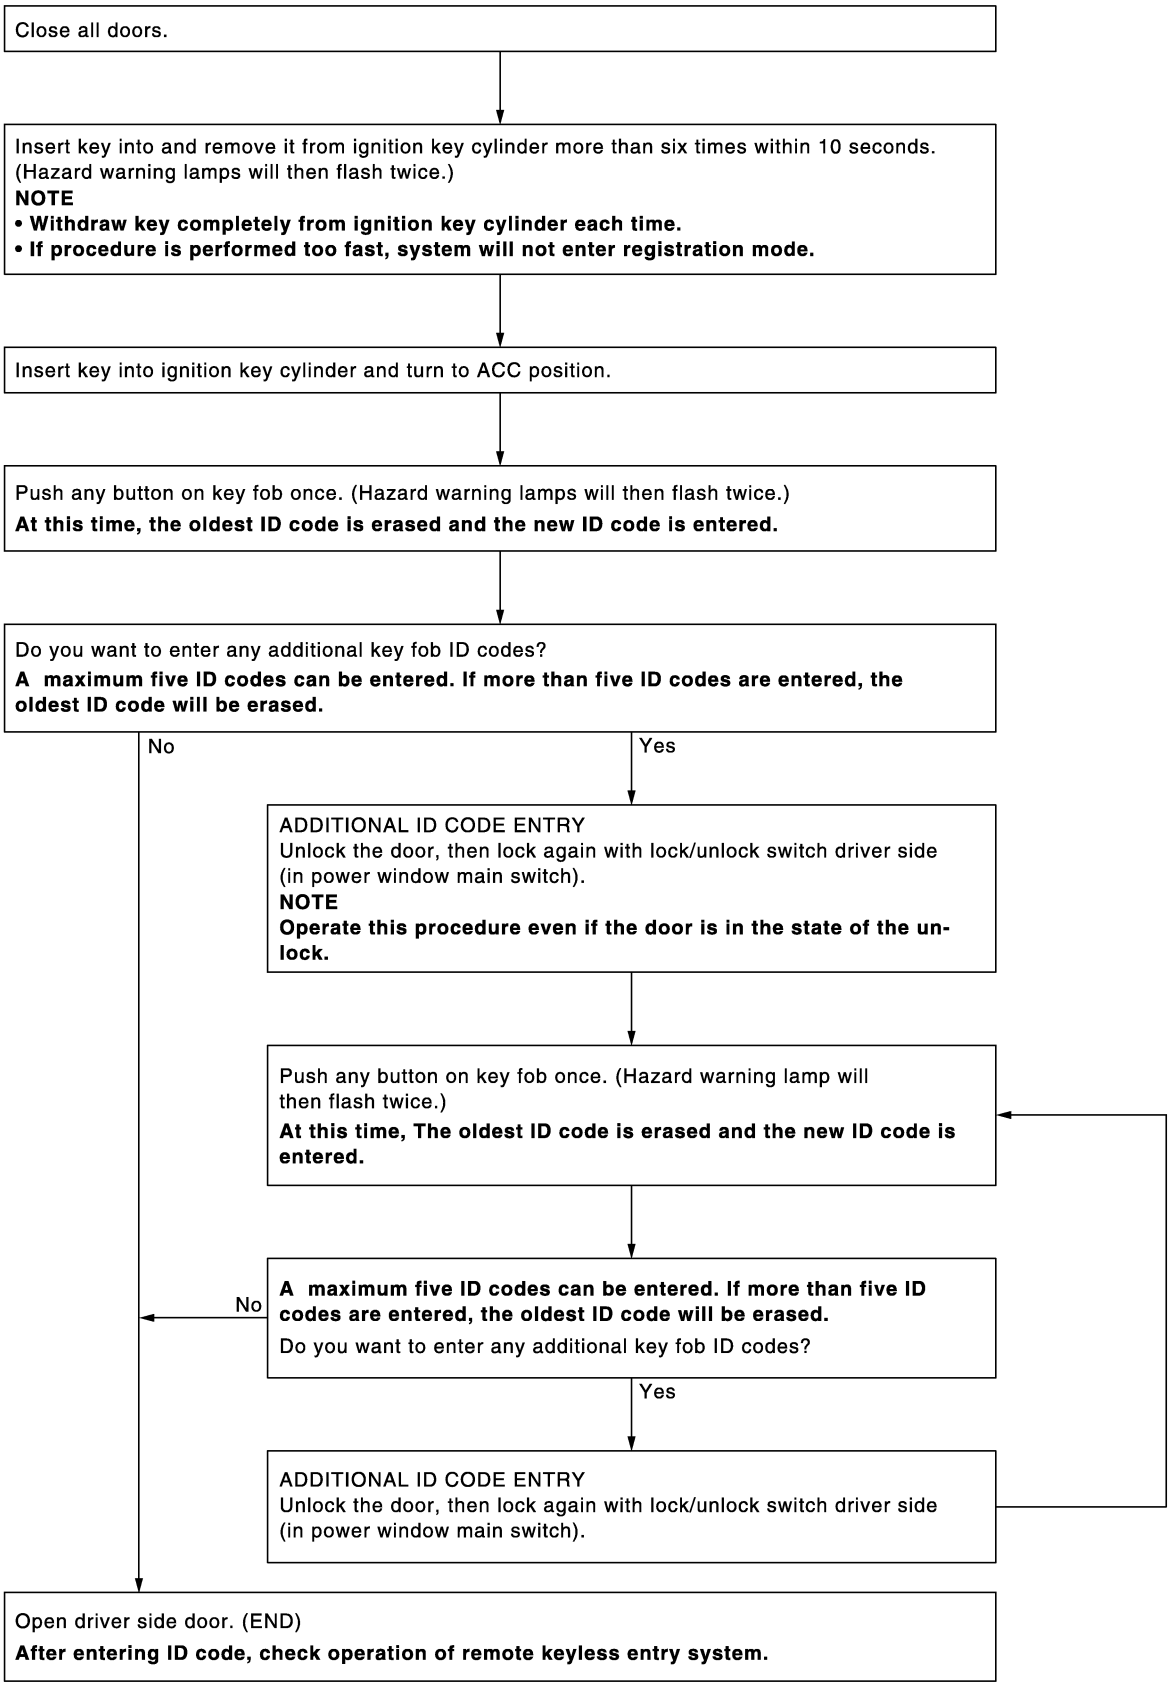
Interior lamp should illuminate.

OK or NG

OK >> Interior lamp circuit is OK.
NG >> Check interior lamp circuit. Refer to LT-128, "INTERIOR ROOM LAMP" .

ID Code Entry Procedure

NIS0001U



KEY FOB ID SETUP WITH CONSULT-III

NOTE:
If a key fob is lost, the ID code of the lost key fob must be erased to prevent unauthorized use. When the ID code of a lost key fob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.

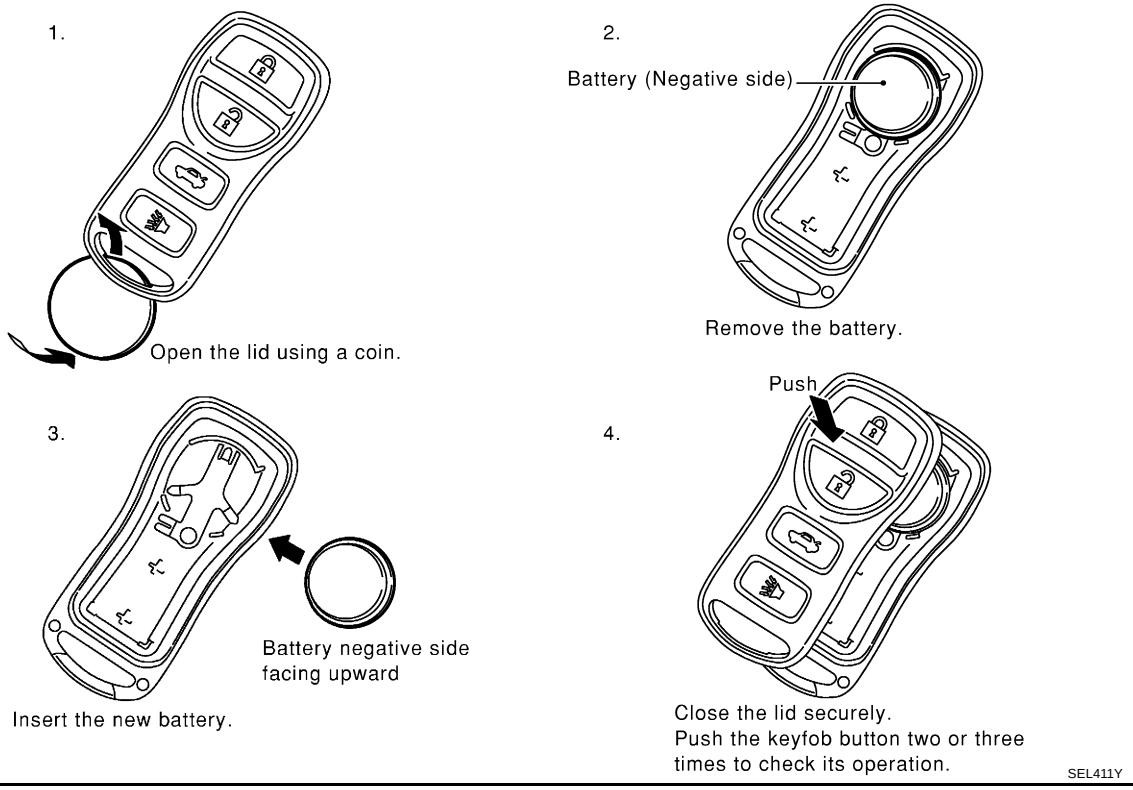
1. Touch “WORK SUPPORT”.

2. The items shown on the figure can be set up.
   - “REMO CONT ID REGIST”
     Use this mode to register a key fob ID code.
     NOTE:
     Register the ID code when key fob or BCM is replaced, or when additional key fob is required.
   - “REMO CONT ID ERASUR”
     Use this mode to erase a key fob ID code.
   - “REMO CONT ID CONFIR”
     Use this mode to confirm if a key fob ID code is registered or not.

KEY FOB ID SETUP WITHOUT CONSULT-III

PIIA2839E

NOTE:



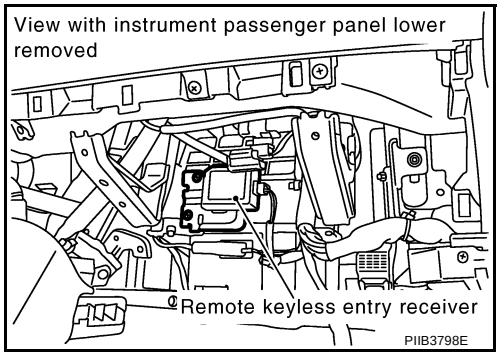
- If a key fob is lost, the ID code of the lost key fob must be erased to prevent unauthorized use. A specific ID code can be erased with CONSULT-III. However, when the ID code of a lost key fob is not known, all controller ID codes should be erased. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.
  To erase all ID codes in memory, register one ID code (key fob) five times. After all ID codes are erased, the ID codes of all remaining and/or new key fobs must be re-registered.
- When registering an additional key fob, the existing ID codes in memory may or may not be erased. If five ID codes are stored in memory, when an additional code is registered, only the oldest code is erased. If less than five ID codes are stored in memory, when an additional ID code is registered, the new ID code is added and no ID codes are erased.
- If you need to activate more than two additional new key fobs, repeat the procedure “Additional ID code entry” for each new key fob.
- Entry of maximum five ID codes is allowed. When more than five ID codes are entered, the oldest ID code will be erased.
- Even if same ID code that is already in the memory is input, the same ID code can be entered. The code is counted as an additional code.

Key Fob Battery Replacement

NIS0001V

NOTE:

- Be careful not to touch the circuit board or battery terminal.
- The keyfob is water-resistant. However, if it does get wet, immediately wipe it dry.



Removal and Installation of Remote Keyless Entry Receiver

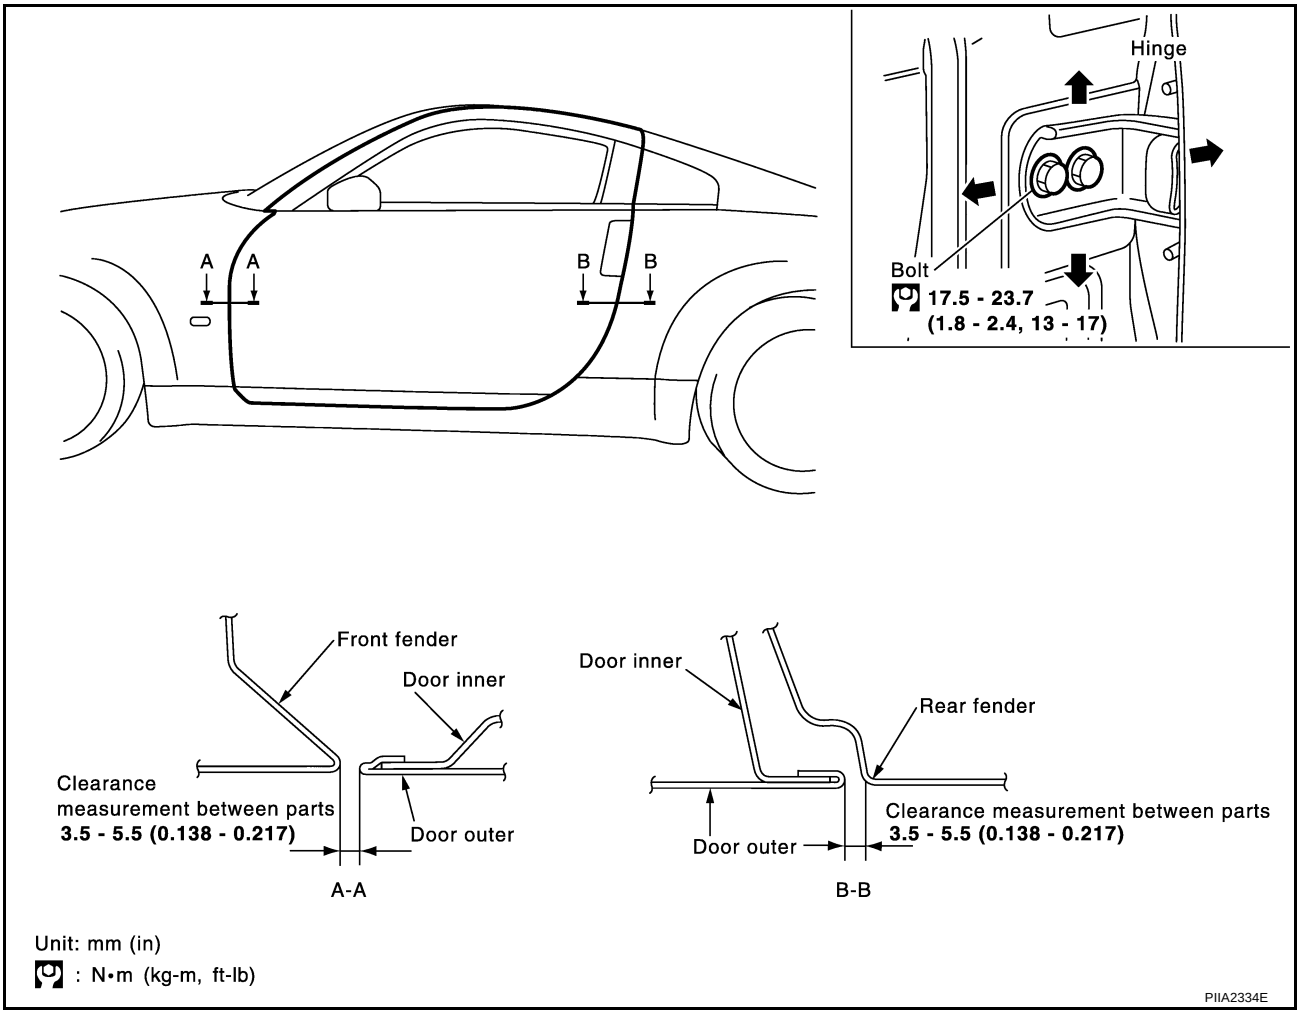
NIS0001W

REMOVAL

1. Remove the instrument passenger panel lower. Refer to IP-13, "(L) Instrument Passenger Panel Lower" .
2. Remove the screw and remote keyless entry receiver connector.
3. Remove the remote keyless entry receiver.

INSTALLATION

Install in the reverse order of removal.



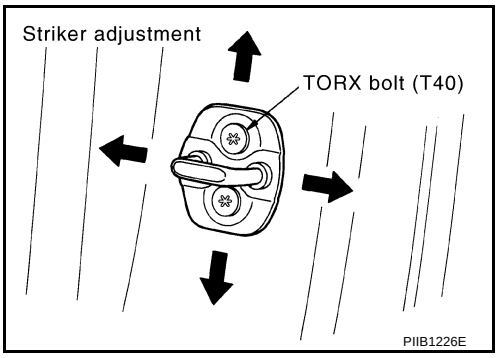
DOOR

PFP:80100

Fitting Adjustment

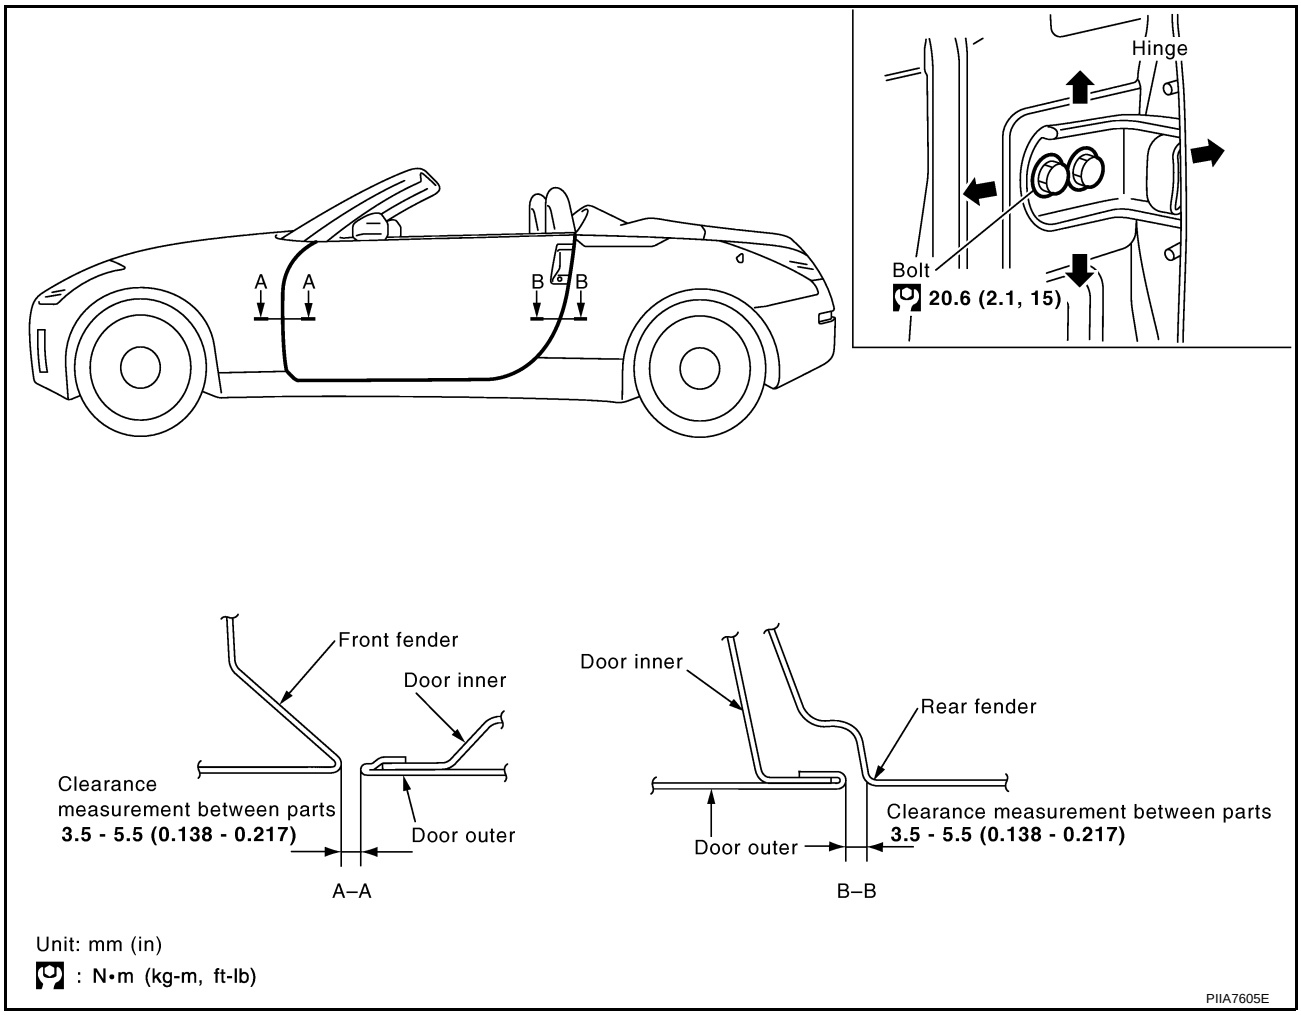
NIS0001X

COUPE



DOOR

Longitudinal clearance and surface height adjustment at front end

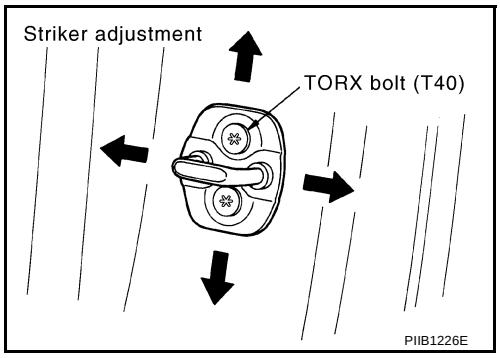


1. Remove the fender protector. Refer to EI-21, "FENDER PROTECTOR" .
2. Loosen the hinge mounting bolts. Raise the door at rear end to adjust.

STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock insertion direction.

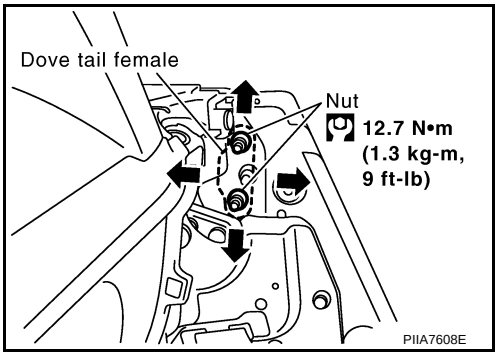
ROADSTER



DOOR

Longitudinal clearance and surface height adjustment at front end

1. Remove the fender protector. Refer to EI-21, "FENDER PROTECTOR" .
2. Loosen the hinge mounting bolts. Raise the door at rear end to adjust.



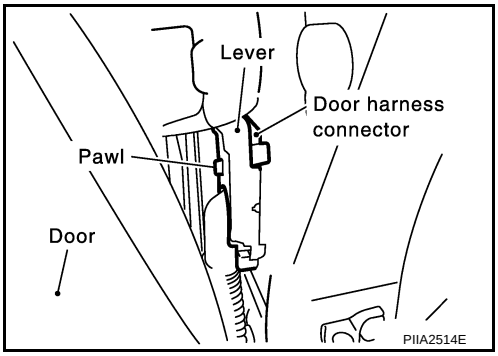
STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock insertion direction.

DOVE TAIL FEMALE ADJUSTMENT (ROADSTER)

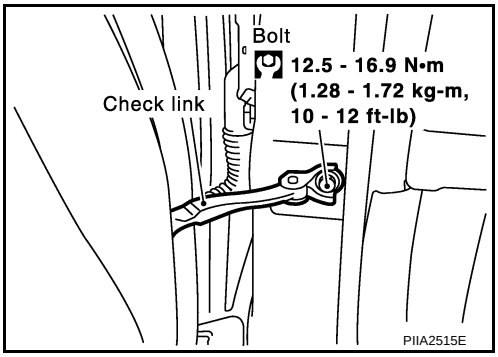
Adjust the dove tail female so that it becomes parallel with the lock insertion direction.

Removal and Installation



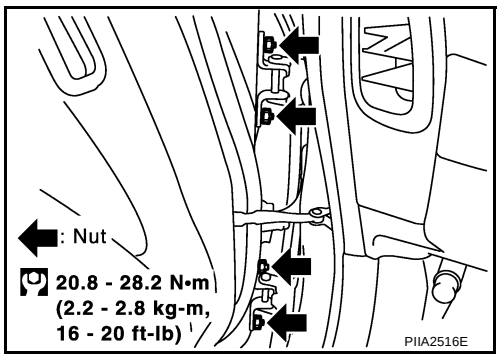
NIS0001Y

CAUTION:



- **When removing and installing the door assembly, support the door with a jack and cloth to protect the door and body.**
- **When removing and installing door assembly, be sure to perform the fitting adjustment Refer to BL-93, "Fitting Adjustment" .**
- **Operate with two workers, because of its heavy weight.**
- **Check the hinge rotating part for poor lubrication. If necessary, apply “body grease”.**
- **After installing, check operation.**
- **Apply sealant and coat with the same body color paint to door hinge installation part and mounting nuts.**

REMOVAL

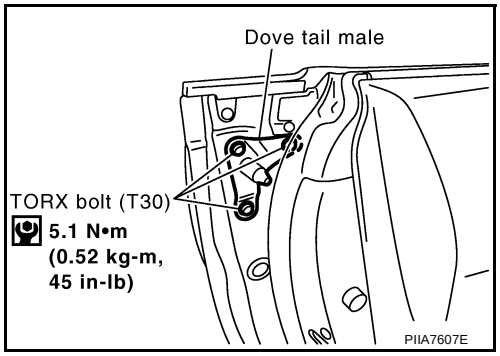


1. Pull the lever and remove the door harness connector while removing tabs of door harness connector.

2. Remove the mounting bolts of the check link on the vehicle.

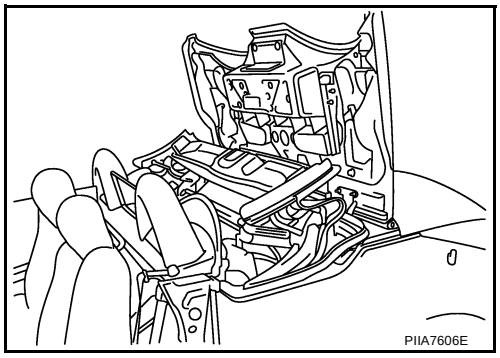
3. Remove the door-side hinge mounting nuts, and remove the door assembly.

INSTALLATION



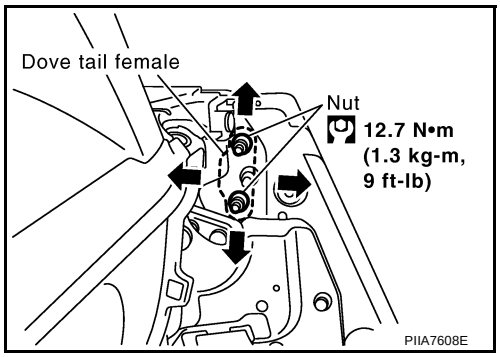
Install in the reverse order of removal.

Removal and Installation of Dove Tail Male & Female (Roadster)



NIS0001Z

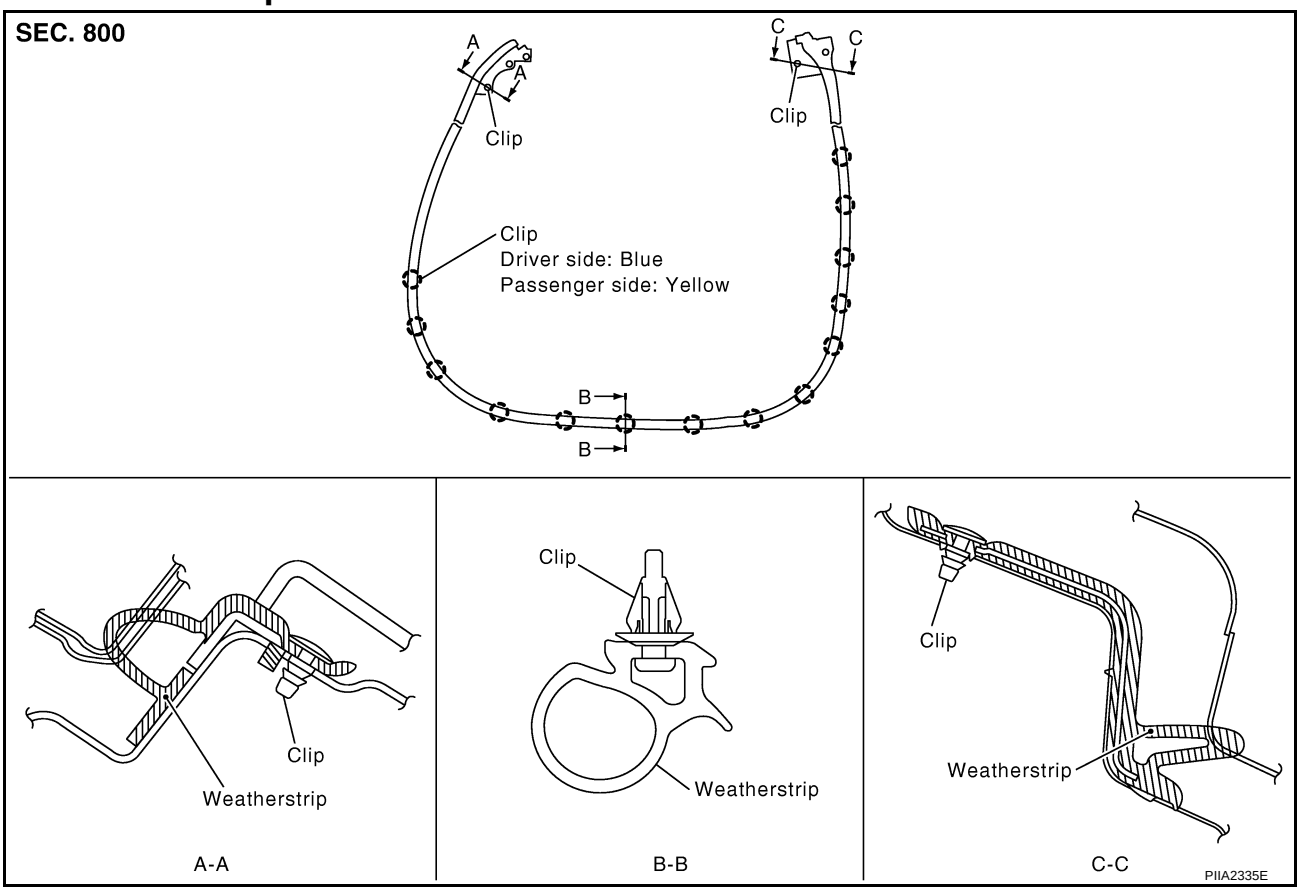
REMOVAL



1. Remove the TORX bolts (T30) of dove tail male.

2. Soft top assembly locate like a figure.
3. Remove the body side welt. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
4. Remove the body side weatherstrip. Refer to EI-32, "Removal and Installation (for Roadster Models)" .
5. Remove the rear side finisher and kicking plate inner. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
6. Remove the shoulder anchor. Refer to SB-6, "Removal and Installation of Seat Belt (Roadster)" .
7. Remove the rear side trim. Refer to EI-37, "Removal and Installation (for Roadster Models)" .

8. Remove the dove tail female mounting nuts. Remove the dove tail female.



INSTALLATION

Install in the reverse order of removal.

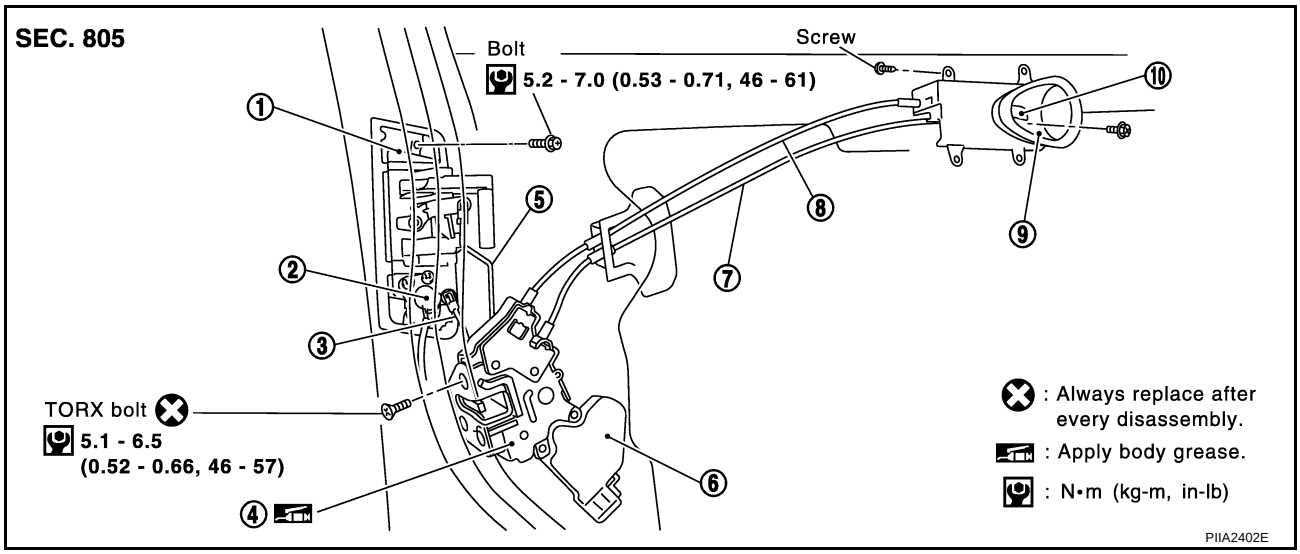
Door Weatherstrip

NIS00020

REMOVAL

Remove the weatherstrip clips and remove weatherstrip.

INSTALLATION



Install in the reverse order of removal.

DOOR LOCK

PFP:80502

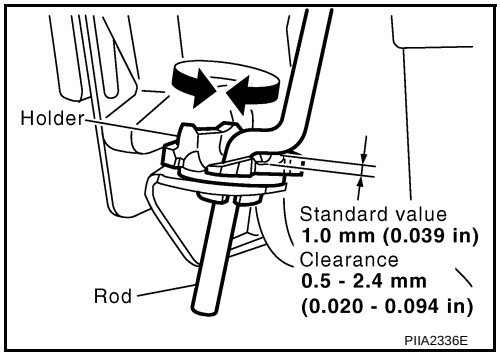
Component Structure

NIS00021

1. Outside handle
2. Key cylinder (driver side only)
3. Key lock rod (driver side only)
4. Door lock assembly
5. Outside handle rod
6. Door lock actuator
7. Lock knob cable
8. Inside handle cable
9. Inside handle
10. Lock knob

Inspection and Adjustment

NIS00022



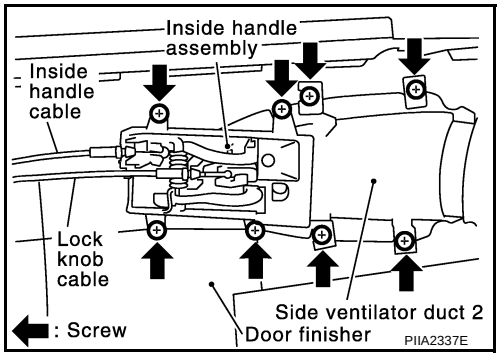
1. Remove the door finisher. Refer to EI-33, "Removal and Installation" .
2. Remove the door window and door module assembly. Refer to GW-51, "Removal and Installation" .

EXTERIOR HANDLE ROD ADJUSTMENT

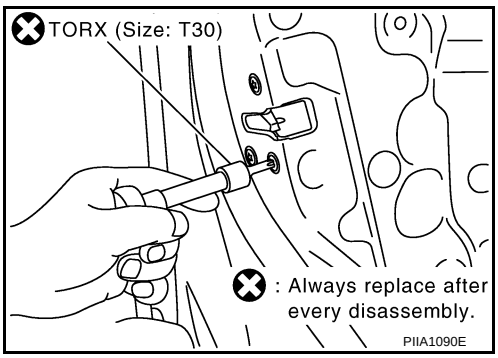
Rotate the bushing to adjust so that the clearance between the bushing and rod becomes as shown in the figure.

CAUTION:

Be careful not to make the clearance 0 mm (0 in) or the rod will be pressed continuously.

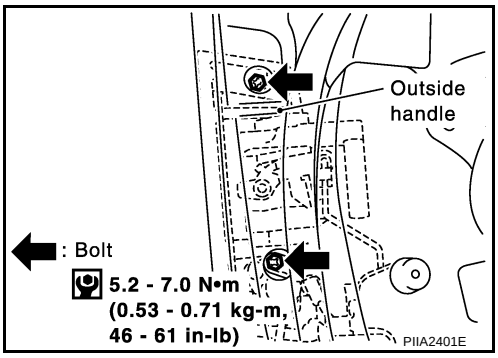


Removal and Installation



NIS00023

REMOVAL



1. Remove the door finisher. Refer to EI-33, "Removal and Installation" .
2. Remove the door window and door module assembly. Refer to GW-51, "Removal and Installation" .
3. Disconnect the inside handle cable and locking knob cable from the back side of the door finisher.

4. Reach to separate the key cylinder (driver side only) rod and outside handle rod connection (on the handle).
5. Disconnect the door lock actuator connector.
6. Remove the mounting screws (TORX T30), remove the door lock assembly.

7. Remove the outside handle mounting bolts, remove the outside handle.

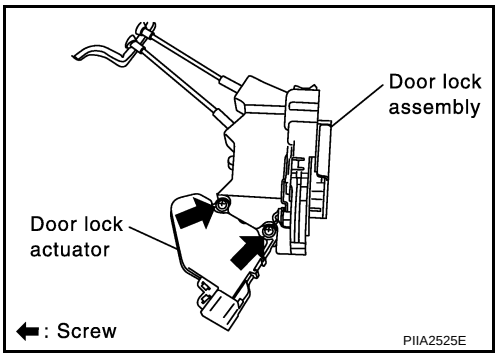
INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **To install each rod, be sure to rotate the rod holder until a click is felt.**
- **After installing, check operation.**
- **After installing, perform fitting adjustment. Refer to BL-93, "Fitting Adjustment" .**

Disassembly and Assembly



NIS00024

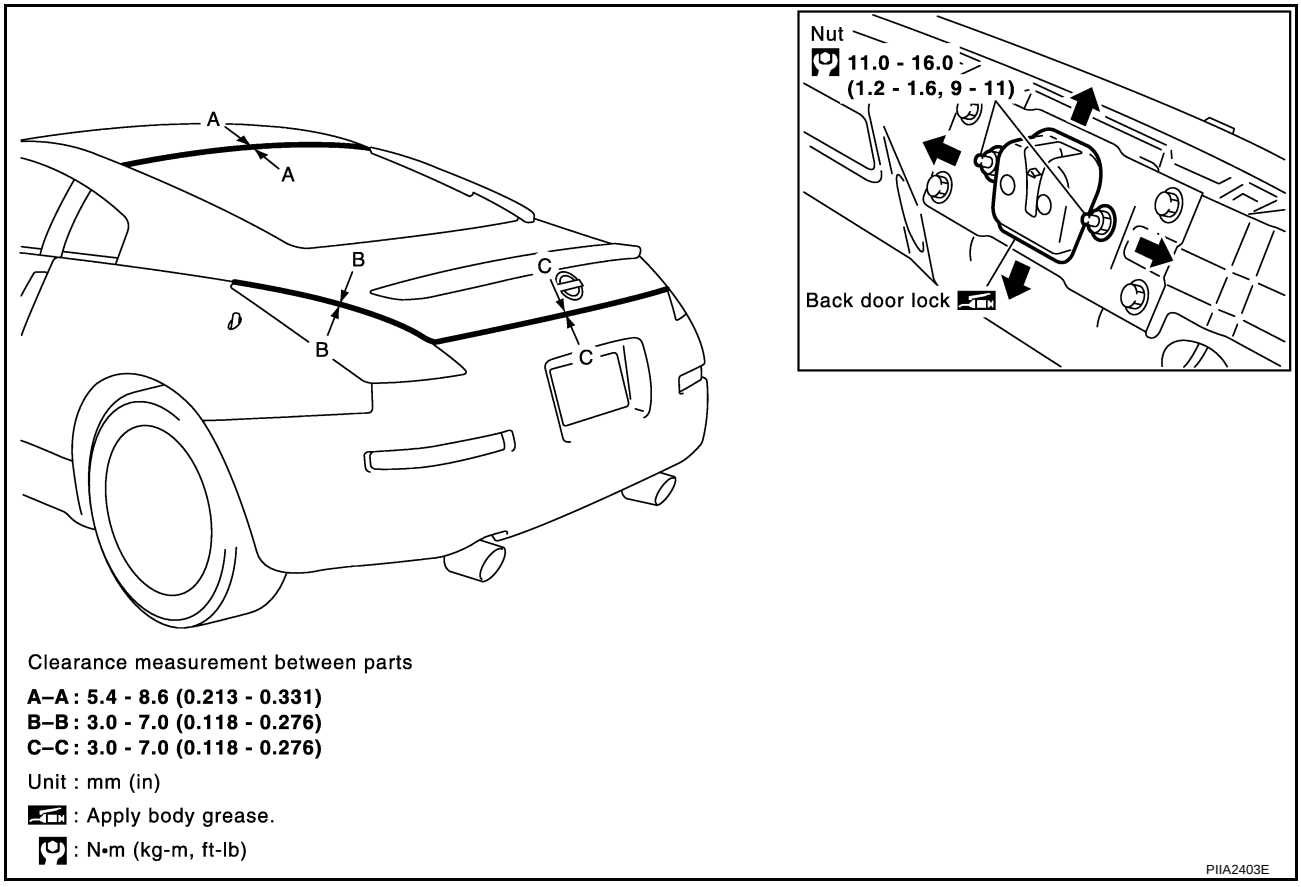
DISASSEMBLY

CAUTION:

Be sure to remove or install the actuator with the door lock assembly removed.

1. Remove the mounting screws, and remove the actuator from the door lock assembly.
2. Pull the actuator straight downward to separate it from the door lock assembly.

ASSEMBLY



1. Align the actuator pivot with the cutout on the knob lever of the door lock assembly, then assemble the actuator.
2. Move the knob lever and the actuator pivot toward the lock-on direction, and check that it engages securely.

BACK DOOR

PFP:90100

Fitting Adjustment

NIS00025

Clearance measurement between parts

A–A : 5.4 - 8.6 (0.213 - 0.331)
B–B : 3.0 - 7.0 (0.118 - 0.276)
C–C : 3.0 - 7.0 (0.118 - 0.276)

Unit : mm (in)

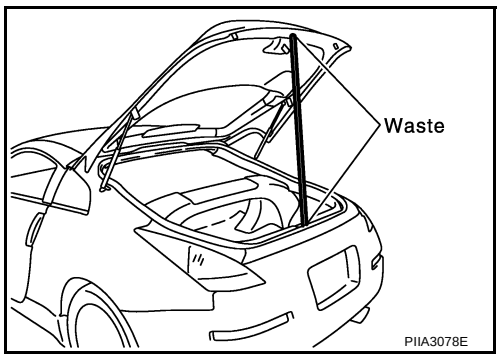
: Apply body grease.

: N•m (kg-m, ft-lb)

PIIA2403E

VERTICAL/LATERAL CLEARANCE ADJUSTMENT

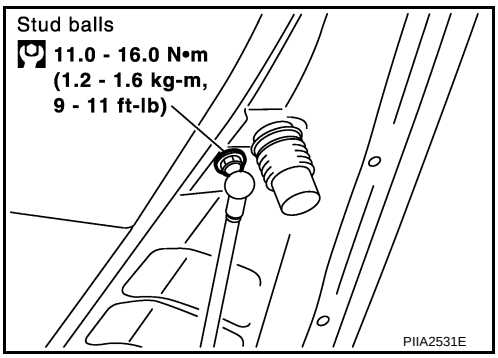
1. Remove back door weatherstrip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove the luggage finisher lower (center). Refer to EI-40, "LUGGAGE FLOOR TRIM" .
3. Loosen the back door lock mounting bolts. Raise the back door lock to the top position, and temporarily tighten the back door lock mounting bolt at the position.
4. Close the back door lightly and adjust the surface height, then open the back door to finally tighten the back door lock mounting bolts to the specified torque.



Back Door Assembly

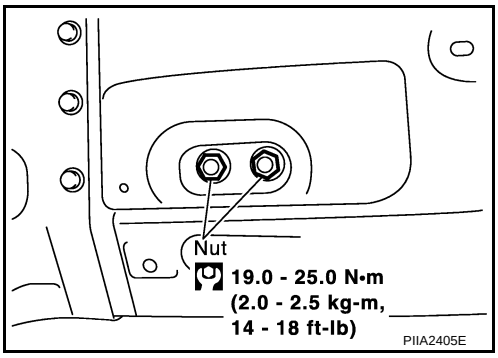
NIS00026

REMOVAL



1. Remove the headlining. Refer to EI-44, "Removal and Installation (for Coupe Models)" .
2. Disconnect each harness connector, which is out to body from back door.
3. Support the back door striker with a proper material to prevent it from falling.

   WARNING:
   Body injury may occur if no supporting rod is holding the back door open when removing the damper stay.

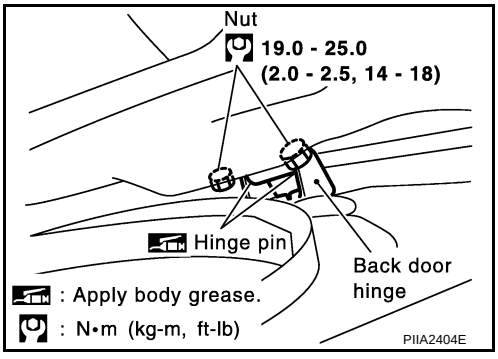


PIIA3078E

4. Remove stud balls on back door.

5. Remove hinge mount nuts of the body and remove back door assembly.

INSTALLATION



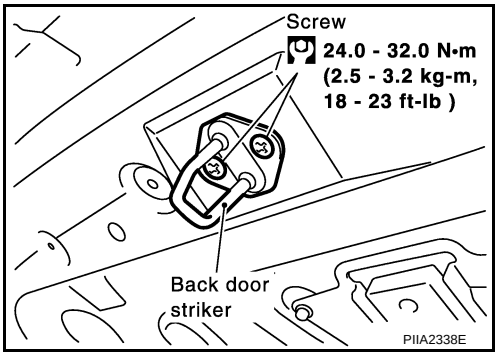
Install in the reverse order of removal.

CAUTION:

- **After installing, check operation.**
- **After installing, perform fitting adjustment.**

INSPECTION

1. Check hinges for the following items.
   - Malfunction noise or door closing and opening effort
   - Component wear or damage
2. Apply body grease to the rotating part of the hinge.



Removal and Installation of Back Door Striker

NIS00027

REMOVAL

1. Remove back door finisher lower. Refer to EI-48, "BACK DOOR FINISHER" .
2. Remove mounting screws, and remove striker from the vehicle.

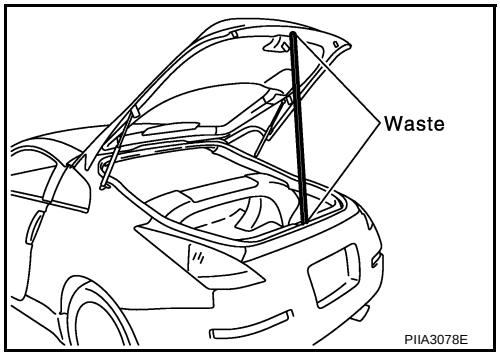
INSTALLATION

Install in the reverse order of removal.

CAUTION:

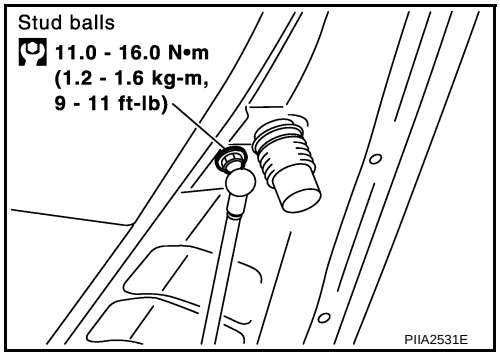
After installing, perform fitting adjustment.

Removal and Installation of Back Door Stay



NIS00028

REMOVAL



1. Support the back door striker with a proper material to prevent it from falling.

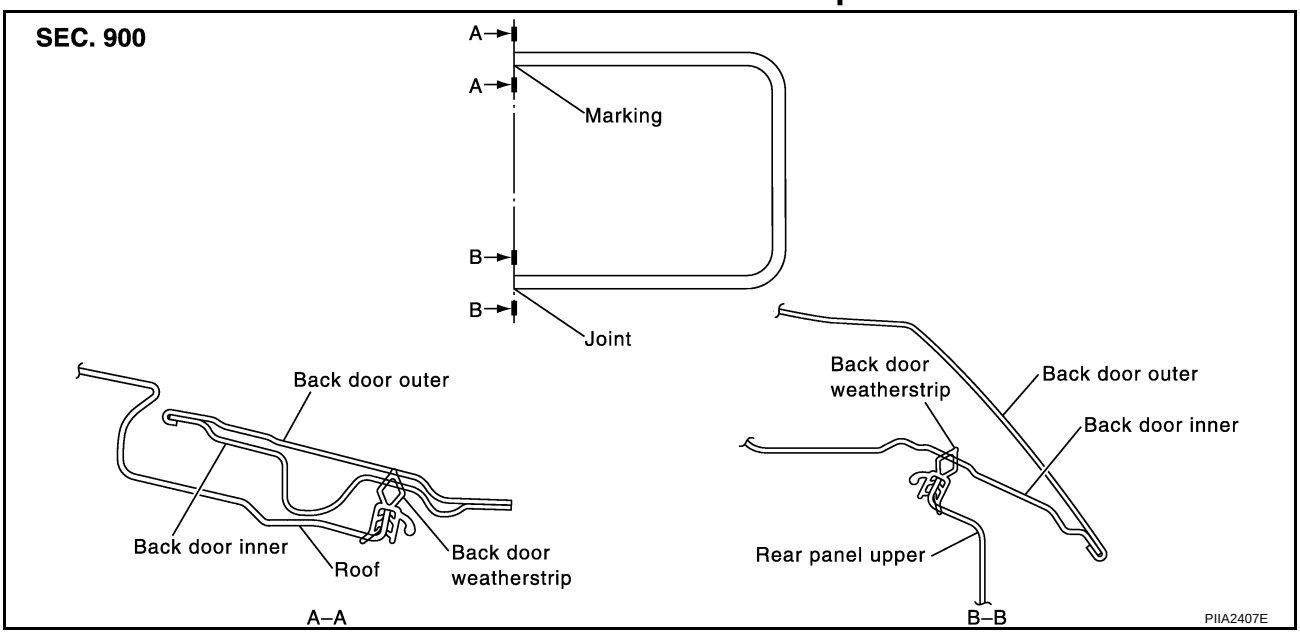
   WARNING:

   Body injury may occur if no supporting rod is holding the back door open when removing the damper stay.

2. Remove stud balls on back door.

3. Remove back door stay assembly (gas stay) bracket adjusting nuts and remove back door stay assembly.

INSTALLATION



Install in the reverse order of removal.

CAUTION:

After installing, check operation.

Removal and Installation of Back Door Weatherstrip

NIS00029

REMOVAL

Pull up and remove engagement with body from weatherstrip joint.

CAUTION:

After removal, do not pull strongly on the weatherstrip.

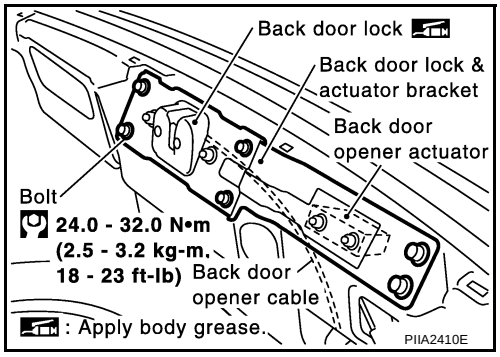
INSTALLATION

Install in the reverse order of removal.

1. Working from the upper section, align weatherstrip mark with vehicle center position mark and install weatherstrip onto the vehicle.
2. For the lower section, align the weatherstrip seam with center of the striker.
3. After installation, pull the weatherstrip gently to ensure that there is no loose section.

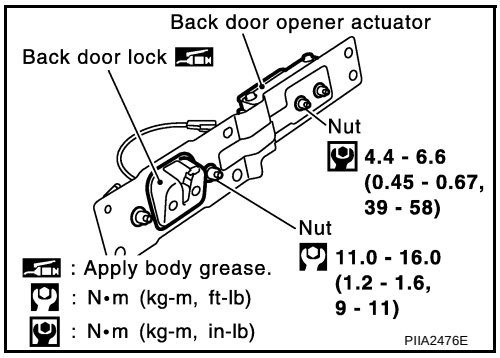
   NOTE:
   Make sure the weatherstrip is fit tightly at each corner and back door rear plate.

BACK DOOR LOCK



PFP:90504

Removal and Installation of Back Door Lock & Back Door Opener Actuator



NIS0002A

REMOVAL

1. Remove back door weatherstrip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove luggage finisher lower (center). Refer to EI-40, "LUGGAGE FLOOR TRIM" .
3. Disconnect the connector and the clip of the back door opener.
4. Remove the mounting bolts.

5. Disconnect the connector of the back door opener actuator and back door opener cable, remove the bracket.
6. Remove the mounting nuts, remove back door lock and back door opener actuator.

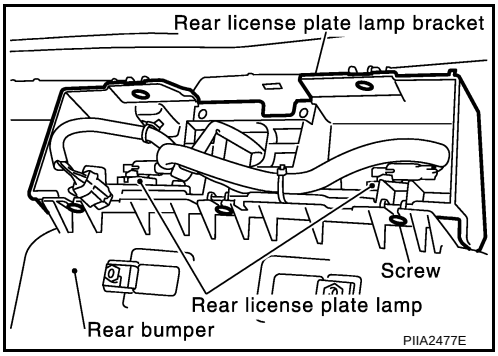
INSTALLATION

Install in the reverse order of removal.

CAUTION:

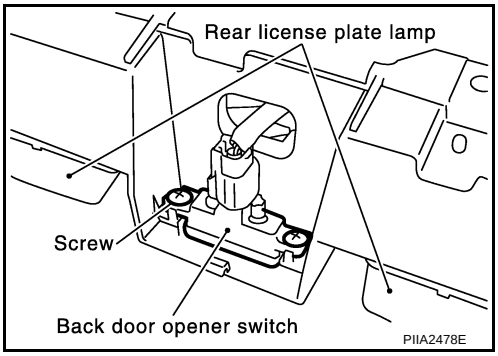
- **After installing, check operation.**
- **After installing, perform fitting adjustment. Refer to BL-100, "Fitting Adjustment" .**

INSPECTION



1. Check back door lock for the following items.
   - Malfunction noise or door closing and opening effort
   - Component wear or damage
2. Apply body grease to the rotating part of the back door lock.

Removal and Installation of Back Door Opener Switch (External)

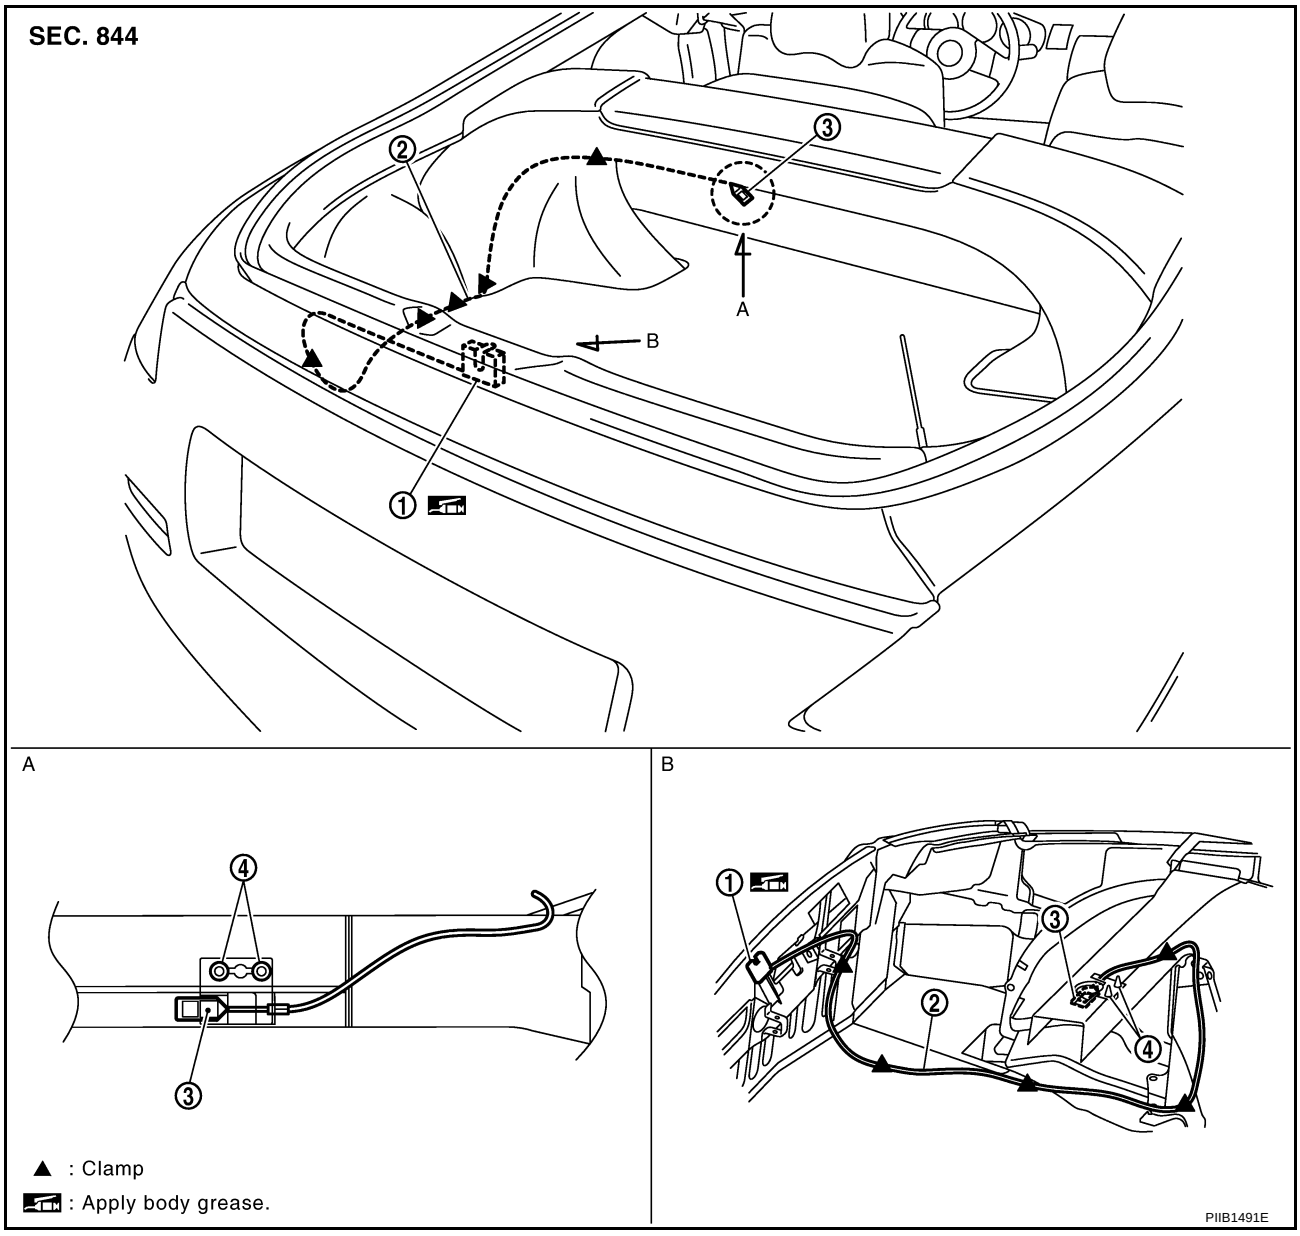


NIS0002B

REMOVAL

1. Remove rear bumper fascia assembly. Refer to EI-17, "Removal and Installation" .
2. Remove the mounting screws of the license plate bracket.

3. Remove the mounting screws and connector of the back door opener switch.



INSTALLATION

1. Install in the reverse order of removal.
2. After installing, check the operation.

Removal and Installation of Back Door Emergency Opener Cable

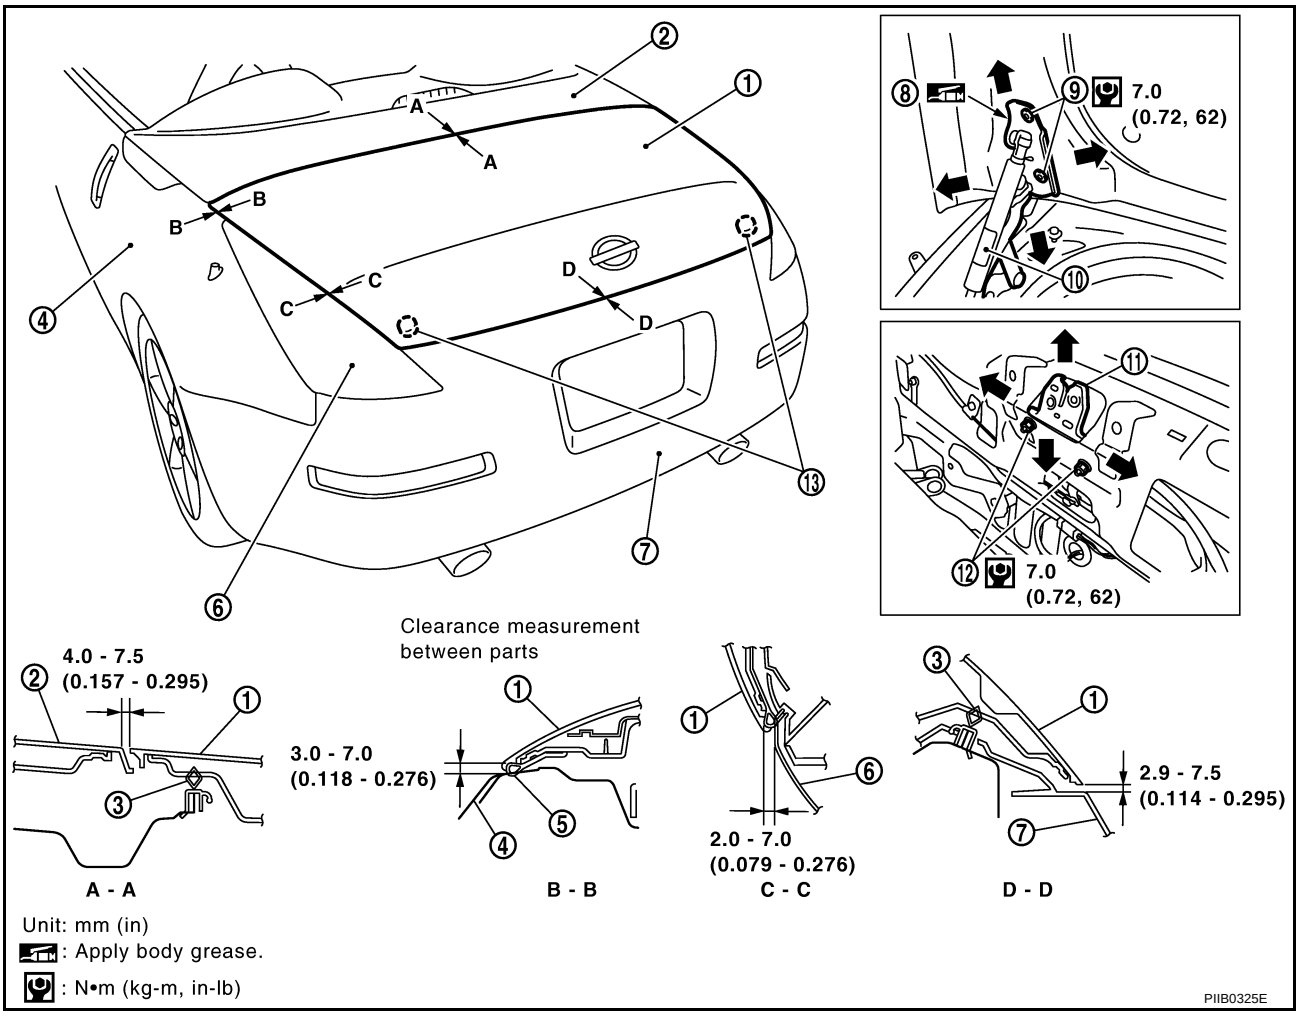
NIS0002C

1. Back door lock assembly
2. Back door emergency opener cable
3. hook
4. Clip

REMOVAL

1. Remove back door weather strip. Refer to BL-103, "Removal and Installation of Back Door Weatherstrip" .
2. Remove luggage finisher lower (center), luggage side finisher lower (LH), luggage side finisher upper (LH), trunk side box, luggage floor carpet, strut cover rear, strut cover lower (center), and strut cover lower (LH). Refer to EI-39, "Removal and Installation (for Coupe Models)" .
3. Disconnect back door emergency opener cable from back door lock.
4. Disconnect back door emergency opener cable from back door emergency opener cable clamp, and then remove back door emergency opener cable.

INSTALLATION



1. Install in the reverse order of removal.
2. After installing, check the operation.

TRUNK LID

PFP:H4300

Fitting Adjustment

NIS0002D

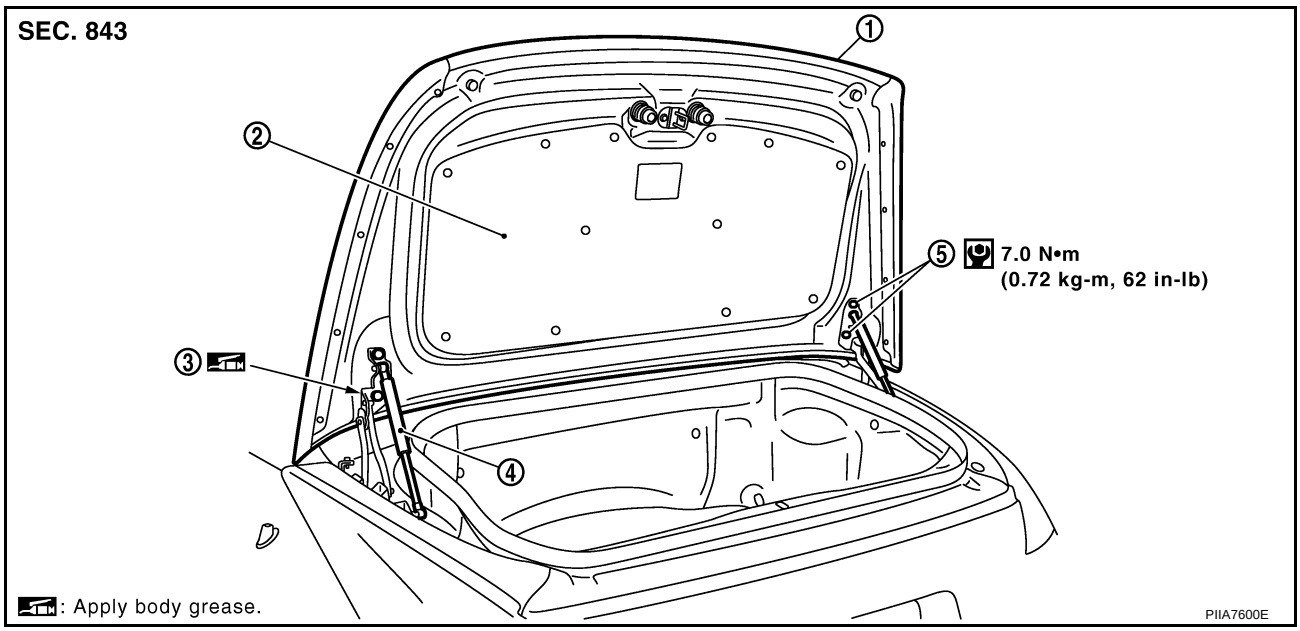
1. Trunk lid assembly
2. Storage lid
3. Trunk lid weatherstrip
4. Rear fender
5. Trunk lid moulding
6. Rear combination lamp
7. Rear bumper fascia
8. Trunk lid hinge
9. TORX bolt (T30)
10. Trunk lid stay
11. Trunk lid lock assembly
12. Nut
13. Bumper rubber

LONGITUDINAL AND LATERAL CLEARANCE ADJUSTMENT

1. Remove trunk rear finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
2. Loosen trunk lid hinge mounting bolts, and remove trunk lid lock. And then, close trunk lid.
3. Tighten trunk lid hinge mounting bolts to the specified torque after adjusting lateral clearance and clearance to storage lid and rear bumper fascia.
4. Position trunk lid lock and engage trunk lid striker. Check trunk lid striker and trunk lid lock for looseness.
5. Tighten trunk lid mounting bolts to the specified torque.

SURFACE HEIGHT ADJUSTMENT

1. Remove trunk rear finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER"
2. Remove trunk lid lock. Rotate bumper rubber to adjust height between trunk lid and bumper fascia.
3. Position trunk lid lock and engage trunk lid striker. Check trunk lid striker and trunk lid lock for looseness. Tighten trunk lid mounting bolts to the specified torque.
4. Adjust lateral clearance and surface height between trunk lid and other parts so that they are within the following dimensional difference.



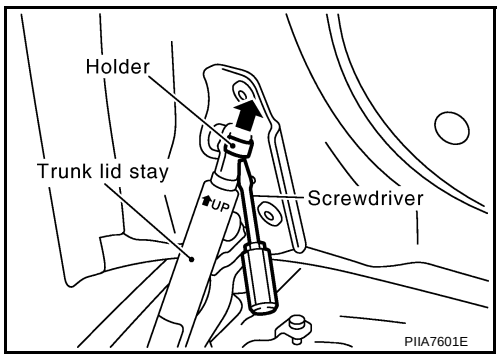
CAUTION:

Adjust evenness between trunk lid and each part to the following specification.

Trunk lid and storage lid (A–A) : 0 ± 1.0 mm (0 ± 0.04 in)
Trunk lid and rear bumper fascia (D–D) : 0.85 ± 2.1 mm (0.0335 ± 0.083 in)

Removal and Installation of Trunk Lid Assembly

NIS0002E



1. Trunk lid assembly
2. Trunk lid insulator
3. Trunk lid hinge
4. Trunk lid stay
5. TORX bolt (T30)

CAUTION:
Operate with two workers, because of its heavy weight.

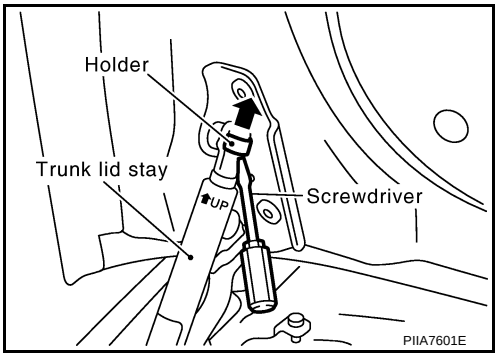
REMOVAL

1. Screwdriver into the gap and remove holder.
2. Remove trunk lid stay (gas stay).
3. Remove the trunk lid hinge bolts, trunk lid assembly side and remove the trunk lid assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.
Install holder to trunk lid stay, and then push it into trunk lid hinge (stud ball) when installing trunk lid stay.

CAUTION:



- **Check trunk lid open/close operation after installation**
- **Apply sealant and coat with the same body color paint to trunk lid hinge installation part and mounting bolts.**

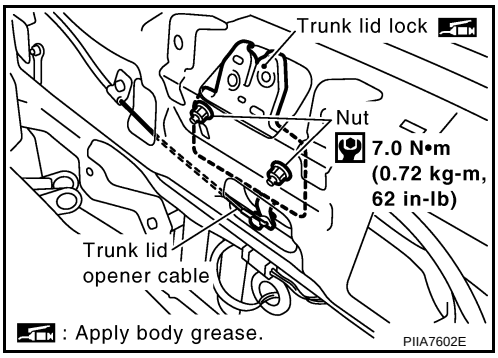
Removal and Installation of Trunk Lid Stay

NIS0002F

REMOVAL

1. Screwdriver into the gap and remove holder.
2. Remove trunk lid stay.

INSTALLATION



1. Note the following, and install in the reverse order of removal.
   Install holder to trunk lid stay, and then push it into trunk lid hinge (stud ball) when installing trunk lid stay.
2. After installation, check the operation.

Removal and Installation of Trunk Lid Lock Assembly

NIS0002G

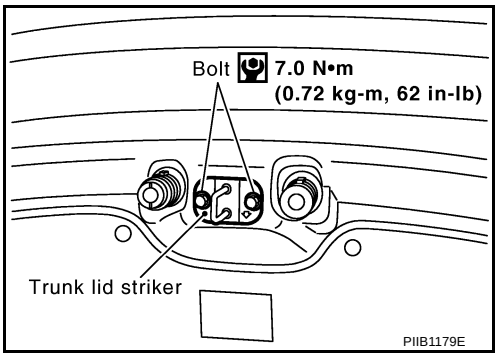
REMOVAL

1. Remove the trunk lid weatherstrip. Refer to BL-113, "Removal and Installation of Trunk Lid Weatherstrip" .
2. Remove trunk lid release lever. Refer to EI-49, "Removal and Installation (for Roadstar Models)" .
3. Remove the trunk lid finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
4. Disconnect the release lever cable and trunk lid opener cable from the clip.
5. After removing the harness connector, remove the mounting bolts, and remove the trunk lid lock.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



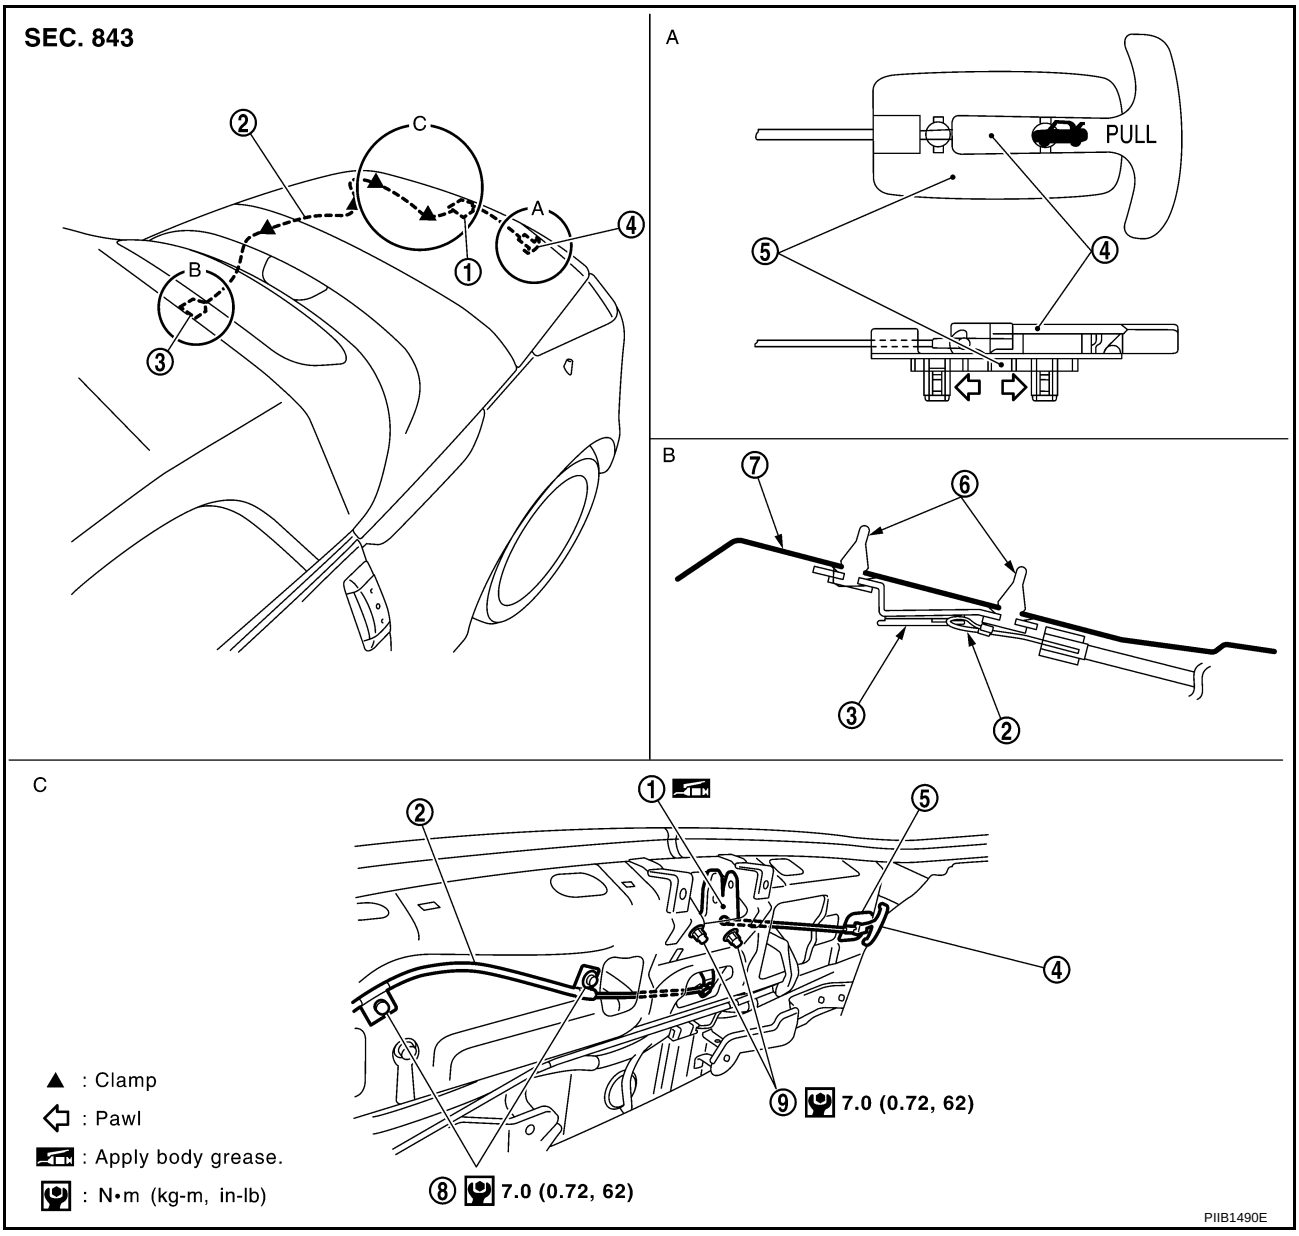
- **After installing, close the trunk lid height. Perform the lock and surface height adjustment. Refer to BL-107, "Fitting Adjustment" .**
- **After installing, check the operation.**

Removal and Installation of Trunk Lid Striker

NIS0002H

REMOVAL

Remove the mounting bolts, then remove the striker from the trunk lock support.



INSTALLATION

1. Install in the reverse order of removal.
2. After installing, close the trunk lid height. Perform the lock and surface height adjustment. Refer to BL-107, "Fitting Adjustment" .
3. After installation, check the operation.

Removal and Installation of Trunk Lid Emergency Opener Cable

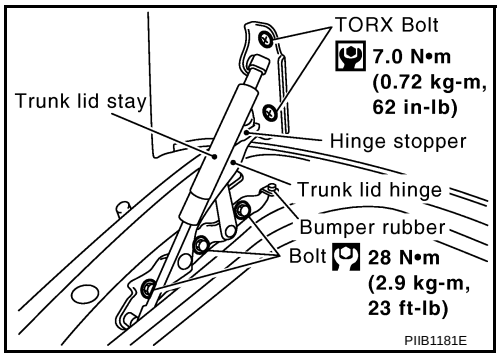
NIS0002I

1. Trunk lid lock assembly	2. Trunk lid emergency opener cable	3. Trunk lid emergency opener cable hook
4. Trunk lid emergency opener lever (secondary)	5. Trunk lid emergency opener lever holder	6. Clip
7. Panel	8. Bolt	9. Nut

REMOVAL

1. Remove trunk lid weatherstrip. Refer to BL-113, "Removal and Installation of Trunk Lid Weatherstrip" .
2. Remove trunk floor carpet, spare tire cover, trunk rear finisher, trunk front finisher, and trunk side box. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
3. Remove floor box lid. Refer to EI-41, "Removal and Installation (for Roadster Models)" .
4. Disconnect trunk lid emergency opener cable from trunk lid lock.
5. Disconnect each clamp of trunk lid emergency opener cable.

INSTALLATION



Install in the reverse order of removal.

Removal and Installation of Trunk Lid Hinge

NIS0002J

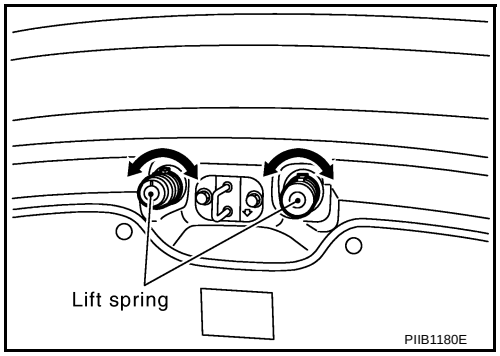
REMOVAL

1. Remove trunk lid stay. Refer to BL-109, "Removal and Installation of Trunk Lid Stay" .
2. Remove trunk lid assembly. Refer to BL-108, "Removal and Installation of Trunk Lid Assembly" .
3. Remove trunk lid hinge mounting bolts, and then remove trunk lid hinge.

INSTALLATION

1. Position trunk lid hinge to body side. Temporarily tighten front side bolt and rear side bolt in this order, and then tighten them to the specified torque.
2. Install trunk lid to trunk lid hinge.
3. Install trunk lid stay.

CAUTION:



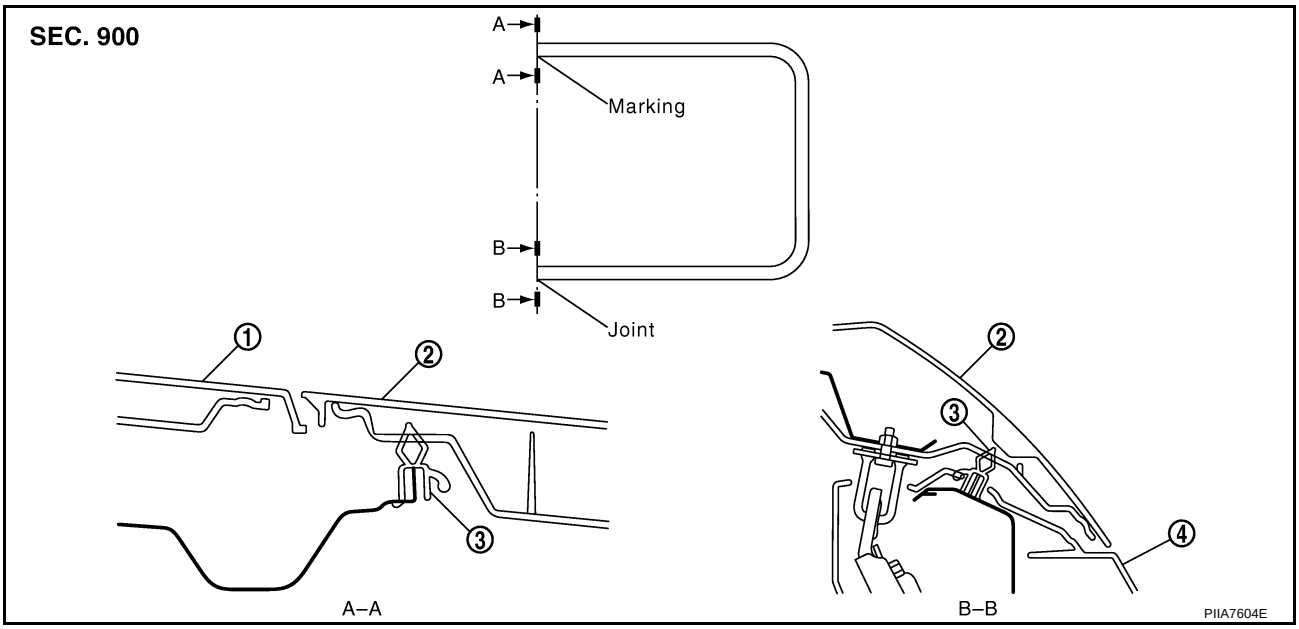
- **Before installing trunk lid hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installation, perform trunk lid fitting adjustment. Refer to BL-107, "Fitting Adjustment" .**
- **Check trunk lid open/close operation after installation.**
- **Apply sealant and the same body color paint to trunk lid hinge and mounting bolts to cover broken seal area.**

Removal and Installation of Lift Spring

NIS0002K

REMOVAL

Rotate lift spring bottom clockwise/counterclockwise by approximately 90 deg, and then remove lift spring.



INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Trunk Lid Weatherstrip

NIS0002L

1. Storage lid
2. Trunk lid assembly
3. Trunk lid weatherstrip
4. Rear bumper fascia

REMOVAL

Pull up and remove engagement with body from weatherstrip joint.

CAUTION:

After removal, do not pull strongly on the weatherstrip.

INSTALLATION

Install in the reverse order of removal.

1. Install the weatherstrip from the front with the vehicle center mark aligned to the weatherstrip mark.
2. At rear side, align the weatherstrip seam to the center of the striker.
3. After installing, pull the weatherstrip lightly to check for looseness.

   CAUTION:

   The weatherstrip should fit tightly onto the corners and trunk lid rear plate.

TRUNK LID OPENER

PFP:84640

Component Parts and Harness Connector Location

NIS0002M

System Description

NIS0002N

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

Ground is supplied

- to BCM terminal 52
- through body grounds M30 and M66.

When trunk lid opener switch is ON (pushed) with trunk lid opener cancel switch is ON and driver's door unlocked, ground is supplied

- to BCM terminal 30
- through trunk lid opener cancel switch terminals 1 and 2,
- through trunk lid opener switch terminals 1 and 2,

- through driver side door lock actuator (unlock sensor) terminals 2 and 4,
- through grounds M30 and M66.

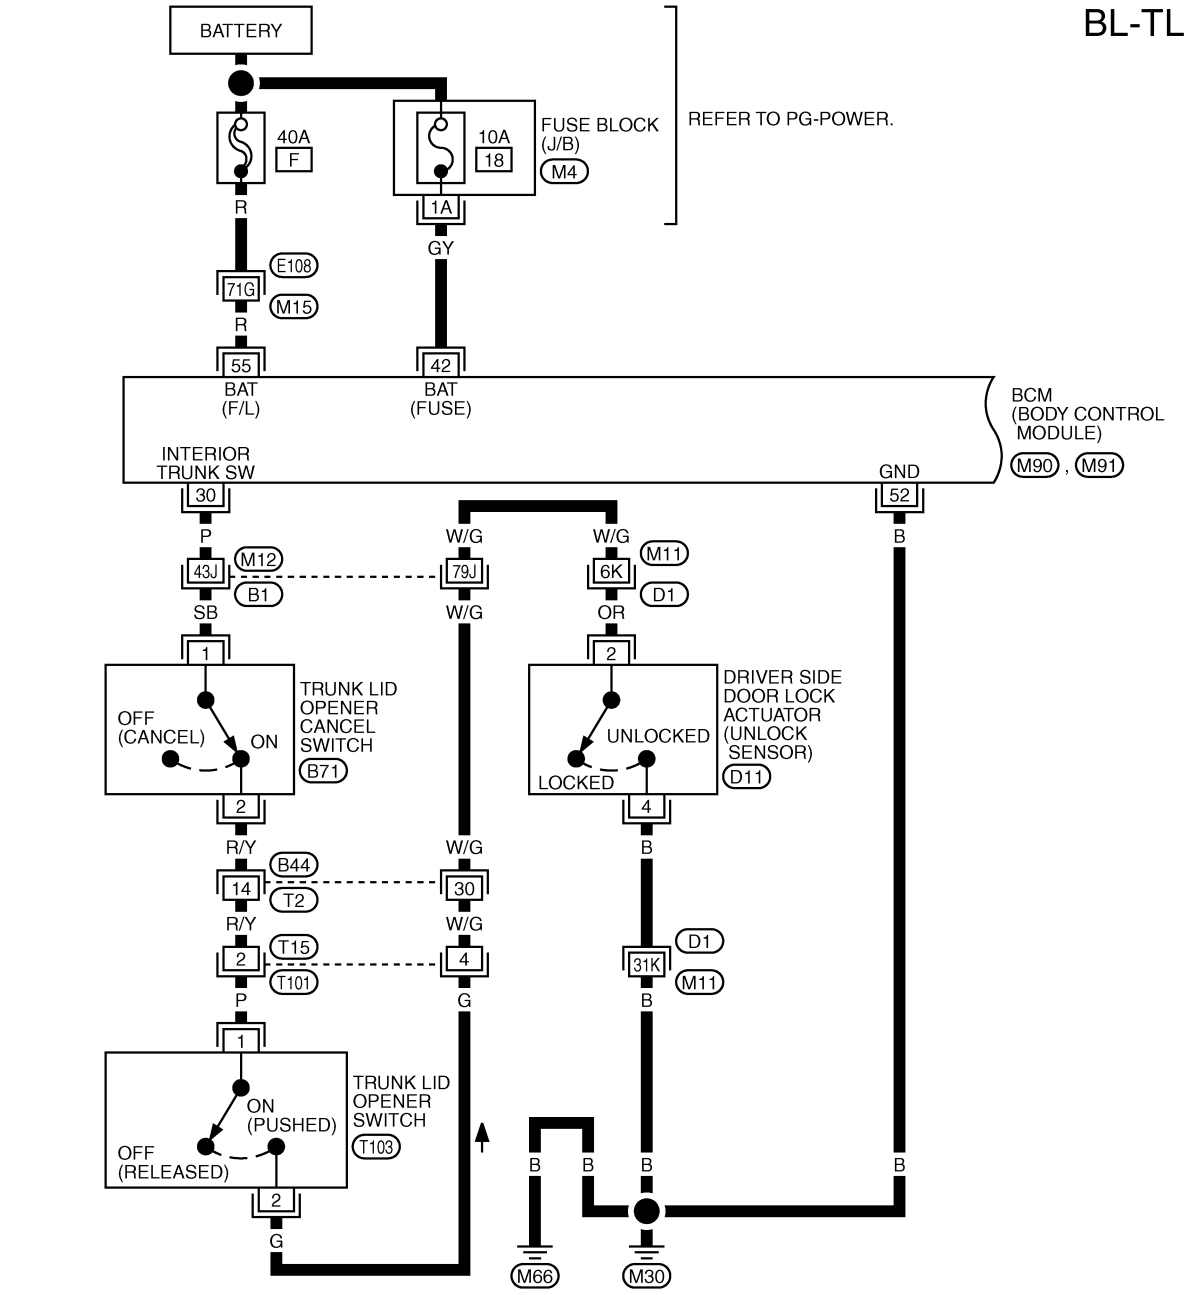
And power is supplied

- to BCM terminal 68
- through trunk lid lock assembly (trunk lid opener actuator) terminals 2 and 1
- through grounds B5, B6 and T14.

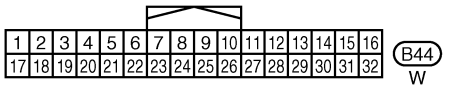
Then trunk lid lock assembly (trunk lid opener actuator) opens trunk.

TRUNK LID OPENER CANCEL OPERATION

When trunk lid opener cancel switch is OFF (CANCEL), it cannot open trunk with trunk lid opener switch.



TRUNK OPENER OPERATION WITH KEY FOB



Open the trunk with key fob. Refer to BL-63, "Trunk Opener Operation/For Roadster" .

CONSULT-III Function (BCM)

NIS0002Q

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Inspection item, self-diagnosis mode	Content
Trunk	DATA MONITOR	Displays the input data of BCM in real time basis.
	ACTIVE TEST	Give a drive signals to load to check the operation check.

ACTIVE TEST

Test item	Content
TRUNK/BACK DOOR	This test is able to check trunk lid opener actuator unlock operation. This actuator unlocks when “ON” on CONSULT-III screen is touched.

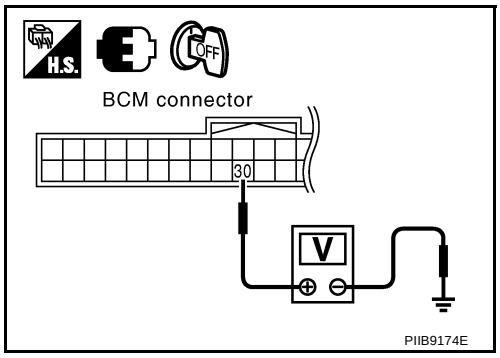
Trouble Diagnosis

NIS0002R

TRUNK DOSE NOT OPEN WITH TRUNK LID OPENER SWITCH

1. CHECK TRUNK LID OPENER CANCEL SWITCH

Check trunk lid opener cancel switch position.



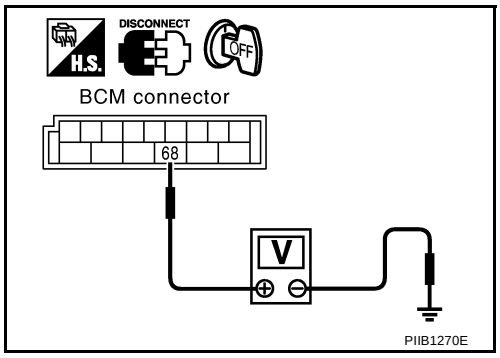
Is trunk lid opener cancel switch in ON position?

Yes or No

Yes >> GO TO 2.
No >> Turn on trunk lid opener cancel switch.

2. CHECK TRUNK LID OPEN INPUT SIGNAL

1. Remove Key from ignition key cylinder.
2. Unlock driver side door.
3. Check voltage between BCM and ground.



Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Trunk lid opener switch ON	0
			Trunk lid opener switch OFF	5

OK or NG

OK >> GO TO 3.
NG >> GO TO 6.

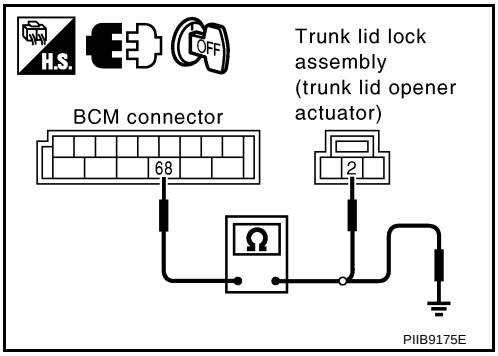
3. CHECK TRUNK LID OPEN OUTPUT SIGNAL

Check voltage between BCM and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
B83	68 (L/R)	Ground	Trunk lid opener switch ON	Battery voltage
			Trunk lid opener switch OFF	0

OK or NG

OK >> GO TO 4.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .



4. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK LID OPENER ACTUATOR) CIRCUIT

1. Disconnect BCM connector and trunk lid lock assembly (trunk lid opener actuator) connector.
2. Check continuity between BCM harness connector B83 terminal 68 and trunk lid lock assembly (trunk lid opener actuator) harness connector T47 terminal 2.

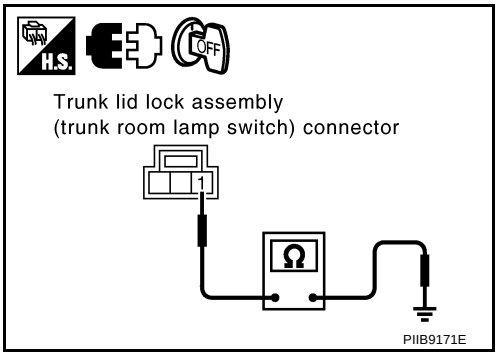
68 (L/R) - 2 (L/R) : Continuity should exist.

3. Check continuity between BCM harness connector B83 terminal 68 and ground.

68 (L/R) - ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



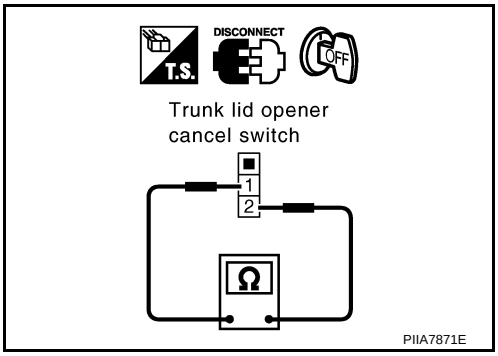
5. CHECKTRUNK LID LOCK ASSEMBLY (TRUNK LID OPENER ACTUATOR) GROUND CIRCUIT

Check continuity between trunk lid lock assembly (trunk lid opener actuator) harness connector T47 terminal 1 and ground.

1 (B) - ground : Continuity should exist.

OK or NG

OK >> Replace trunk lid lock assembly (trunk lid opener actuator).
NG >> Repair harness or connector.

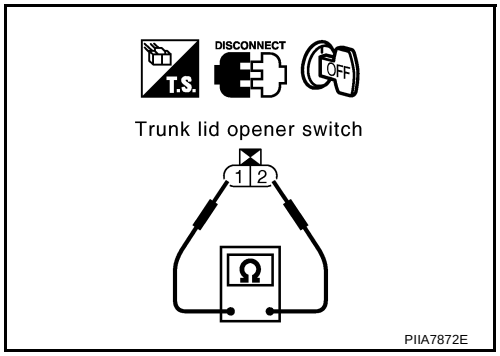


6. CHECK TRUNK LID OPENER CANCEL SWITCH

1. Disconnect trunk lid opener cancel switch.
2. Check continuity between trunk lid opener cancel switch harness connector B71 terminals 1 and 2.

Terminals		Trunk lid opener cancel switch condition	Continuity
1	2	ON	Yes
		OFF	No

OK or NG

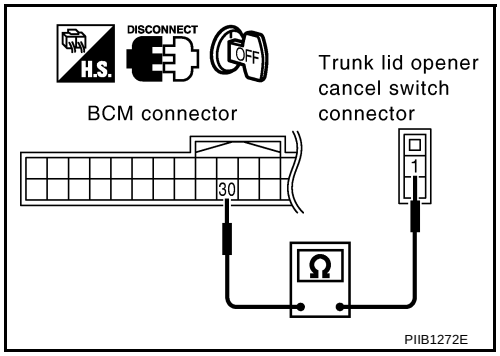


OK >> GO TO 7.
NG >> Replace trunk lid opener cancel switch.

7. CHECK TRUNK LID OPENER SWITCH

1. Disconnect trunk lid opener switch
2. Check continuity between trunk lid opener switch harness connector T103 terminals 1 and 2.

Terminals		Trunk lid opener switch condition	Continuity
1	2	ON (Pushed)	Yes
		OFF (Released)	No



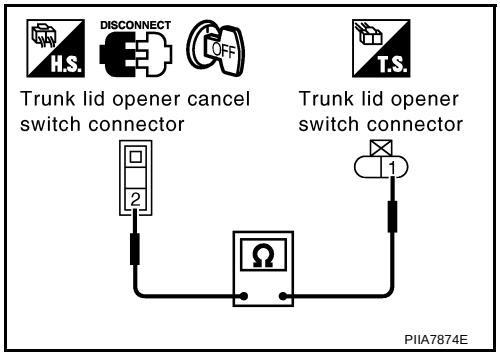
OK or NG

OK >> GO TO 8.
NG >> Replace trunk lid opener switch.

8. CHECK TRUNK LID OPENER CANCEL SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 30 and trunk lid opener cancel switch harness connector B71 terminal 1.

30 (P) - 1 (SB) : Continuity should exist.



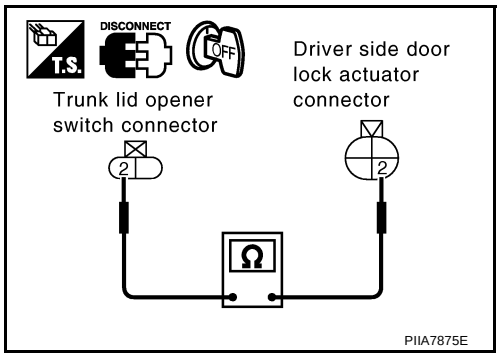
OK or NG

OK >> GO TO 9.
NG >> Repair harness or connector.

9. CHECK TRUNK LID OPENER SWITCH CIRCUIT

Check continuity between trunk lid opener cancel switch harness connector B71 terminal 2 and trunk lid opener switch harness connector T103 terminal 1.

2 (R/Y) - 1 (P) : Continuity should exist.



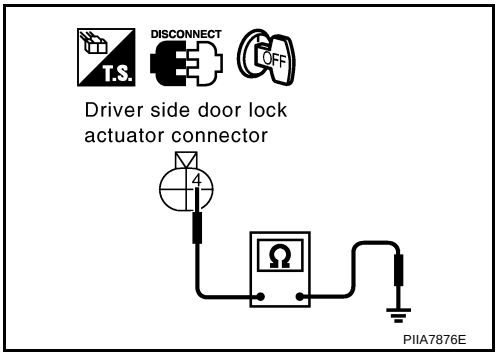
OK or NG

OK >> GO TO 10.
NG >> Repair harness or connector.

10. CHECK DRIVER SIDE DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between trunk lid opener switch harness connector T103 terminal 2 and driver side door lock actuator switch harness connector D11 terminal 2.

2 (G) - 2 (OR) : Continuity should exist.



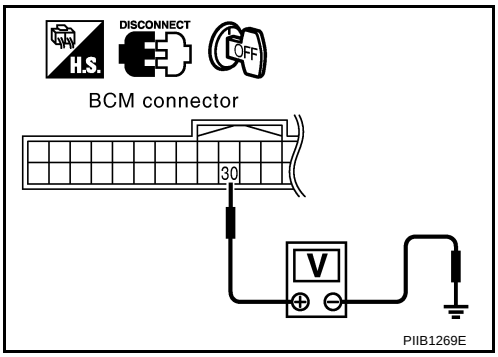
OK or NG

OK >> GO TO 11.
NG >> Repair harness or connector.

11. CHECK DRIVER SIDE DOOR LOCK ACTUATOR GROUND CIRCUIT

Check continuity between driver side door lock actuator switch harness connector D11 terminal 4 and ground.

4 (B) - ground : Continuity should exist.



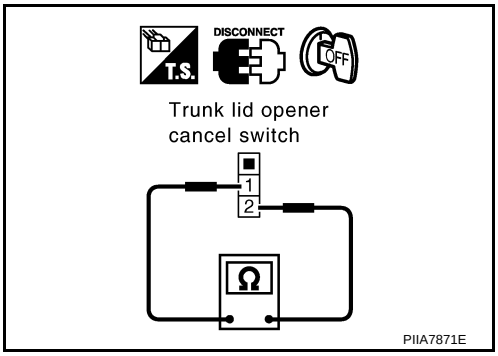
OK or NG

OK >> Replace driver side door lock actuator.
NG >> Repair harness or connector.

TRUNK DOSE NOT CLOSE

1. CHECK TRUNK LID OPEN INPUT SIGNAL

1. Remove Key from ignition key cylinder.
2. Turn on trunk lid opener cancel switch.
3. Unlock driver side door.
4. Check voltage between BCM and ground.



Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M90	30 (P)	Ground	Trunk lid opener switch ON	0
			Trunk lid opener switch OFF	5

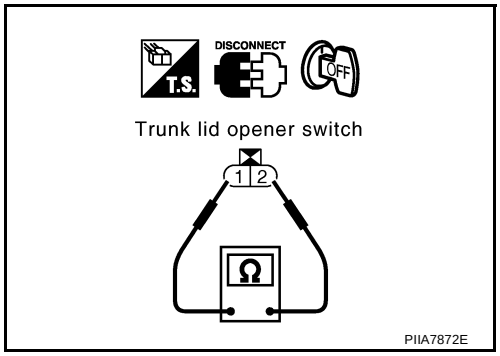
OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

2. CHECK TRUNK LID OPENER CANCEL SWITCH

1. Disconnect trunk lid opener cancel switch.
2. Check continuity between trunk lid opener cancel switch harness connector B71 terminals 1 and 2.

Terminals		Trunk lid opener cancel switch condition	Continuity
1	2	ON	Yes
		OFF	No



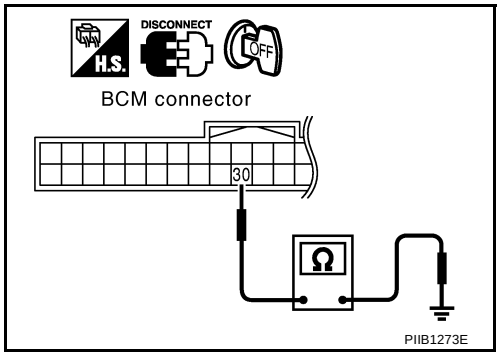
OK or NG

OK >> GO TO 3.
NG >> Replace trunk lid opener cancel switch.

3. CHECK TRUNK LID OPENER SWITCH

1. Disconnect trunk lid opener switch
2. Check continuity between trunk lid opener switch harness connector T103 terminals 1 and 2.

Terminals		Trunk lid opener switch condition	Continuity
1	2	ON (Pushed)	Yes
		OFF (Released)	No



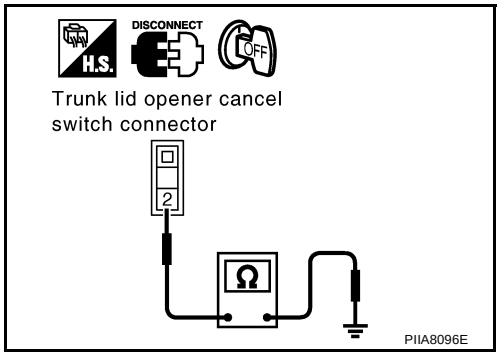
OK or NG

OK >> GO TO 4.
NG >> Replace trunk lid opener switch.

4. CHECK TRUNK LID OPENER CANCEL SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 30 and ground.

30 (P) - ground : Continuity should not exist.



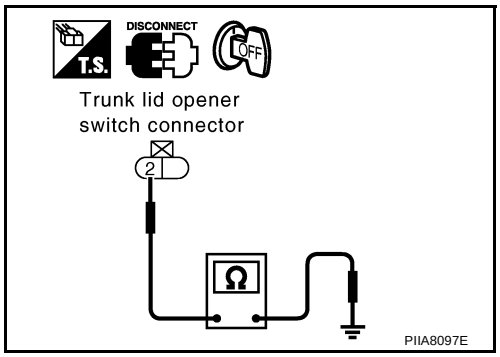
OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK TRUNK LID OPENER SWITCH CIRCUIT

Check continuity between trunk lid opener cancel switch harness connector B71 terminal 2 and ground.

2 (R/Y) - ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

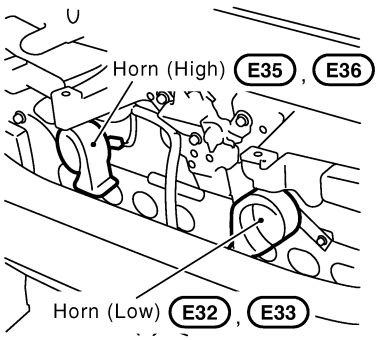
6. CHECK DRIVER SIDE DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect driver side door lock actuator connector.
2. Check continuity between trunk lid opener switch harness connector T103 terminal 2 and ground.

2 (G) - ground : Continuity should not exist.

OK or NG

OK >> Replace BCM.
NG >> Repair harness or connector.



VEHICLE SECURITY (THEFT WARNING) SYSTEM

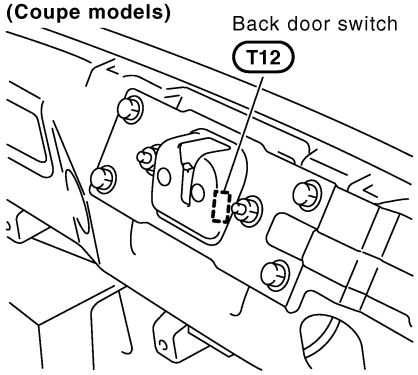
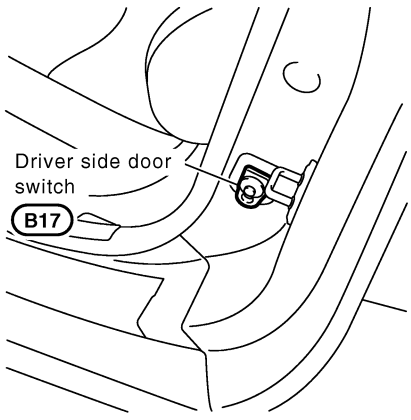
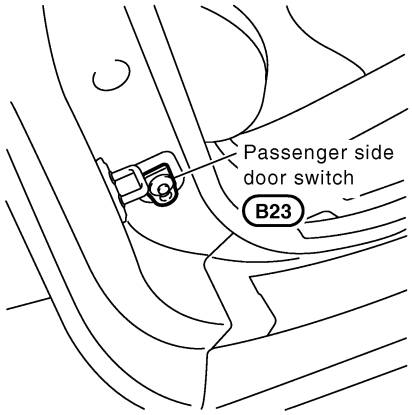
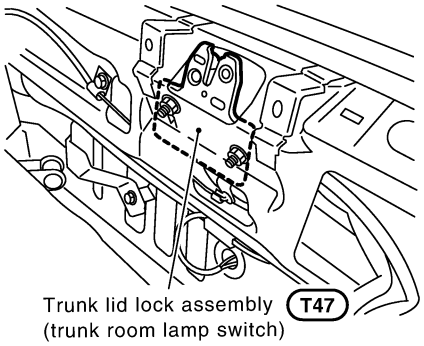
View with dash side LH removed



View with cowl top removed

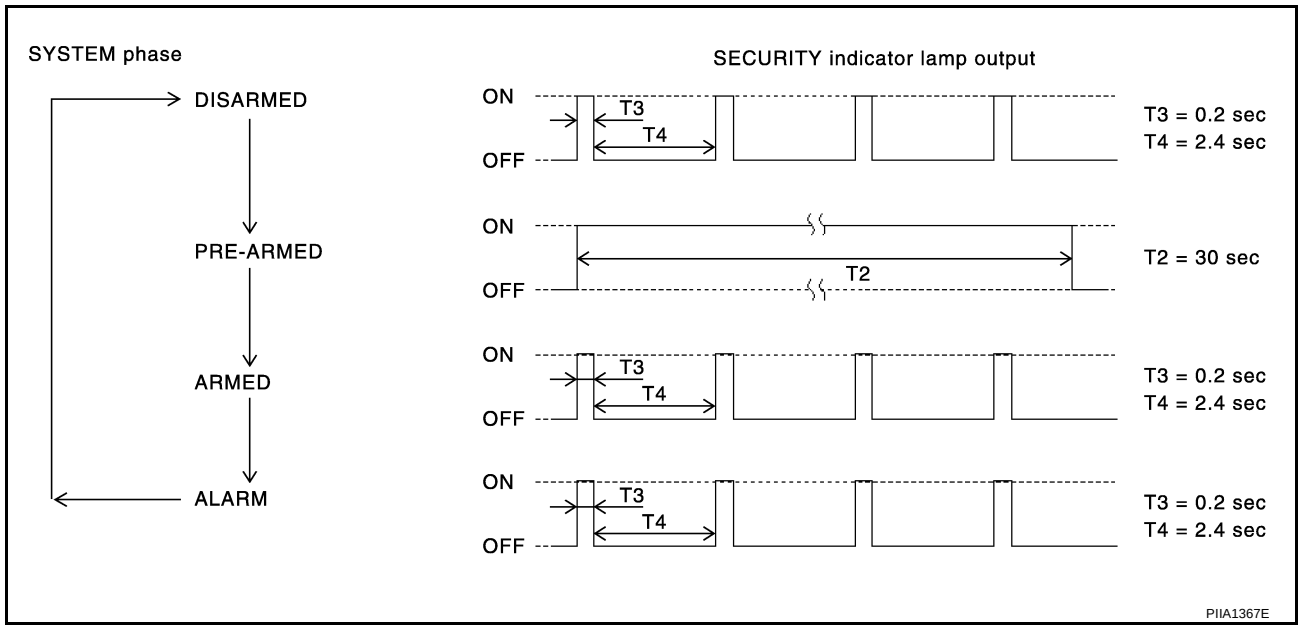






View with luggage finisher rear (Coupe models)

View with luggage finisher lower (center) removed



PIIB9256E

System Description

NIS0002T

DESCRIPTION

Operation Flow

Setting the vehicle security system

Initial condition

- Ignition switch is in OFF position.

Disarmed phase

- When hood, doors, back door (for Coupe) or trunk (for Roadster) is open, the vehicle security system is set in the disarmed phase on the assumption that the owner is inside or near the vehicle.
- When the vehicle security system is in the disarmed phase, the security indicator lamp blinks every 2.4 seconds.

Pre-armed phase and armed phase

When the following operation 1 or 2 is performed, the vehicle security system turns into the “pre-armed” phase. (The security indicator lamp illuminates.)

1. BCM receives LOCK signal from door key cylinder switch or key fob after all doors and back door (for Coupe) or trunk (for Roadster) are closed.
2. All doors and back door (for Coupe) or trunk (for Roadster) are closed after doors are locked by key or door lock and unlock switch.
   The security indicator lamp illuminates for 30 seconds. Then, the system automatically shifts into the “armed” phase.

Canceling the set vehicle security system

When one of the following operations is performed, the armed phase is canceled.

1. Unlock the doors with the key or the key fob.
2. Open the back door (for Coupe) or trunk (for Roadster) with the key fob.
3. Turn ignition switch to “ON” or “ACC” position.

Canceling the alarm operation of the vehicle security system

When one of the following operations is performed, the alarm operation is canceled.

- Unlock the door with the key or key fob.
- Open the trunk (for Roadster) with the key fob.

Activating the alarm operation of the vehicle security system

Make sure the system is in the armed phase. (The security indicator lamp blinks every 2.4 seconds.)
When the following operation 1 or 2 is performed, the system sounds the horns and flashes the headlamps for about 50 seconds.

1. Any door or trunk (for Roadster) is opened during armed phase.

2. Disconnecting and connecting the battery connector before canceling armed phase.

POWER SUPPLY AND GROUND

Power is supplied at all times

- through 10A fuse [No.19, located in the fuse block (J/B)]
- to security indicator lamp terminal 1.

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42.

With the ignition switch in the ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied.

- to BCM terminal 52
- through body grounds M30 and M66.

INITIAL CONDITION TO ACTIVATE THE SYSTEM

The operation of the vehicle security system is controlled by the doors and trunk (for Roadster).
To activate the vehicle security system, BCM must receive signals indicating the doors and trunk (for Roadster) are closed and the doors are locked by key or key fob.
When a door is open, BCM terminals 12, 65 receives a ground signal from each door switch.
When driver side door is unlocked by power window main switch (door lock and unlock switch), BCM terminal 22 receives a signal from terminal 12 of power window main switch.
When passenger side door is unlocked by power window sub-switch (door lock and unlock switch), BCM terminal 22 receives a signal from terminal 16 of power window sub-switch.
The IPDM E/R then sends a signal to the BCM via CAN communication line.
When the back door (for Coupe) or trunk (for Roadster) is open, BCM terminal 57 (for Roadster) or 58 (for Coupe) receives a ground signal

- from terminal 1 of the back door switch (for Coupe) or terminal 3 of trunk lid lock assembly (trunk room lamp switch) (for Roadster)
- through body grounds B5, B6,T14, D105 (for Coupe) or B5, B6, T14 (for Roadster).

VEHICLE SECURITY SYSTEM ALARM OPERATION

The vehicle security system is triggered by

- opening a driver or passenger side door
- opening the back door (for Coupe)
- opening the trunk (for Roadster)
- detection of battery disconnect and connect.

The vehicle security system will be triggered once the system is in armed phase,
When BCM receives a ground signal at terminals 12, 62 (door switch), 57 (trunk room lamp switch) or 58 (back door switch).
Power is supplied at all times

- to horn relay terminal 2
- through 15A fuse (No. 35, located in the fuse and fusible link box).

When the vehicle security system is triggered, ground is supplied intermittently to both headlamp relay and horn relay.
When both headlamp relay (with built-in IPDM E/R) and horn relay are energized and then power is supplied to headlamps (high beam and low beam) and horns (HIGH and LOW).
The headlamps flash and the horn sounds intermittently.
The alarm automatically turns off after 50 seconds, but will reactivate if the vehicle is tampered with again.

VEHICLE SECURITY SYSTEM DEACTIVATION

To deactivate the vehicle security system, a door must be unlocked or back door (for Coupe) or trunk (for Roadster) must be opened with the key or key fob.

When the key is used to unlock a door, BCM terminal 22 receives signal

- from terminal 12 of the power window main switch (door lock and unlock switch).

When the BCM receives either above signal or unlock signal from key fob, the vehicle security system is deactivated. (Disarmed phase)

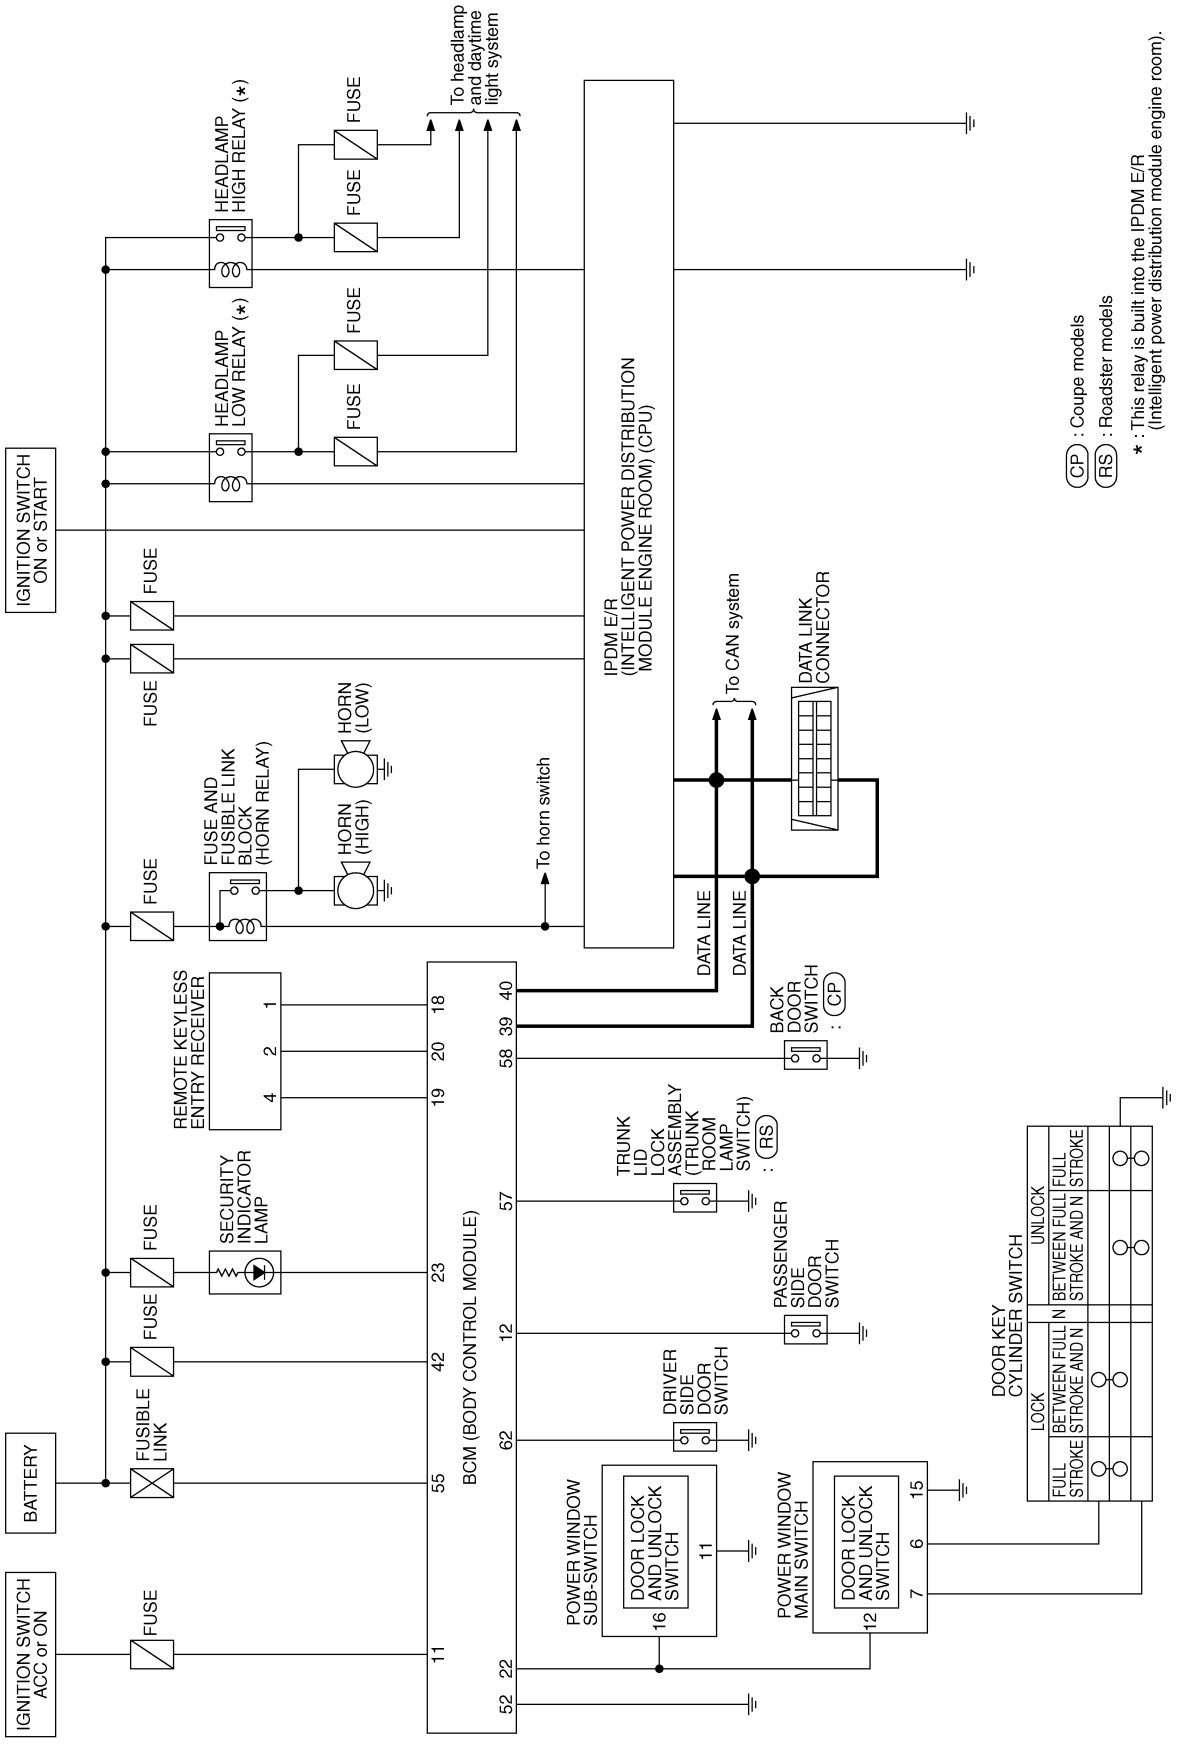
PANIC ALARM OPERATION

Remote keyless entry system may or may not operate vehicle security system (horn and headlamps) as required.
When the panic alarm button on the keyfob is triggered, ground is supplied intermittently to both headlamp relay and horn relay.
When both headlamp relay (with built-in IPDM E/R) and horn relay are energized and then power is supplied to headlamps (high beam and low beam) and horns (HIGH and LOW).
The headlamp flashes and the horn sounds intermittently.
The alarm automatically turns off after 25 seconds or when BCM receives any signal from key fob.

CAN Communication System Description

NIS0002U

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NIS0002V

Refer to LAN-4, "CAN Communication System" .

CONSULT-III Function (BCM)

NIS00030

CONSULT-III APPLICATION ITEM

Work Support

Test Item	Description
SECURITY ALARM SET	This mode is able to confirm and change security alarm ON-OFF setting.
THEFT ALM TRG	The switch which triggered vehicle security alarm is recorded. This mode is able to confirm and erase the record of vehicle security alarm. The trigger data can be erased by touching “CLEAR” on CONSULT-III screen.

Data Monitor

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY CYL LK SW	Indicates [ON/OFF] condition of lock signal from key cylinder switch.
KEY CYL UN SW	Indicates [ON/OFF] condition of unlock signal from key cylinder switch.
DOOR SW-DR	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW-AS	Indicates [ON/OFF] condition of passenger side door switch.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
TRUNK OPNR SW	Indicates [ON/OFF] condition of trunk room lamp switch. (Roadster models)
TRUNK OPN MNTR	This is displayed even when it is not equipped. Indicates [ON/OFF] condition of trunk lid opener switch. (Roadster models)
TRUNK KEY SW	This is displayed even when it is not equipped.
DOOR SW-RR	This is displayed even when it is not equipped.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
LOCK SW DR/AS	Indicates [ON/OFF] condition of lock signal from driver and passenger side door lock/unlock switch.
UNLK SW DR/AS	Indicates [ON/OFF] condition of unlock signal from driver and passenger side door lock/unlock switch.
LK BUTTON/SIG	Indicates [ON/OFF] condition of lock signal from key fob.
UN BUTTON/SIG	Indicates [ON/OFF] condition of unlock signal from key fob.
TRUNK BTN/SIG	Indicate [ON/OFF] condition of back door open signal from key fob (for Coupe). Indicates [ON/OFF] condition of trunk open signal from key fob (for Roadster).

Active Test

Test Item	Description
THEFT IND	This test is able to check security indicator lamp operation. The lamp will be turned on when “ON” on CONSULT-III screen is touched.

Test Item	Description
HORN	This test is able to check vehicle security horn (horn alarm) operation. The horns will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.
HEAD LAMP	This test is able to check vehicle security lamp (headlamp alarm) operation. The headlamps will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.

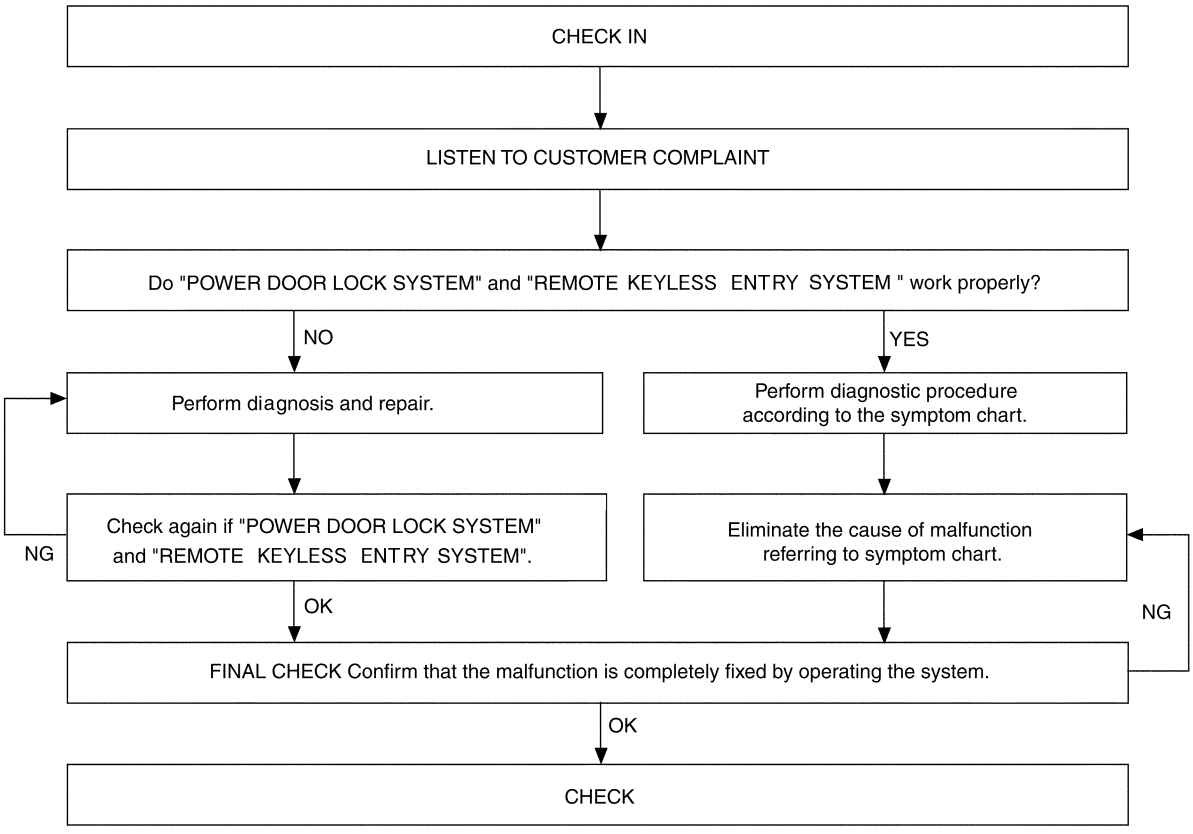
CONSULT-III Function (IPDM E/R)

NIS00031

CONSULT-III APPLICATION ITEM

Data Monitor

Monitored Item	Description
HL LO REQ	Indicates [ON/OFF] condition of headlamp low beam.
HL HI REQ	Indicates [ON/OFF] condition of headlamp high beam.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
THFT HRN REQ	Indicates [ON/OFF] condition of horn relay.



Active Test

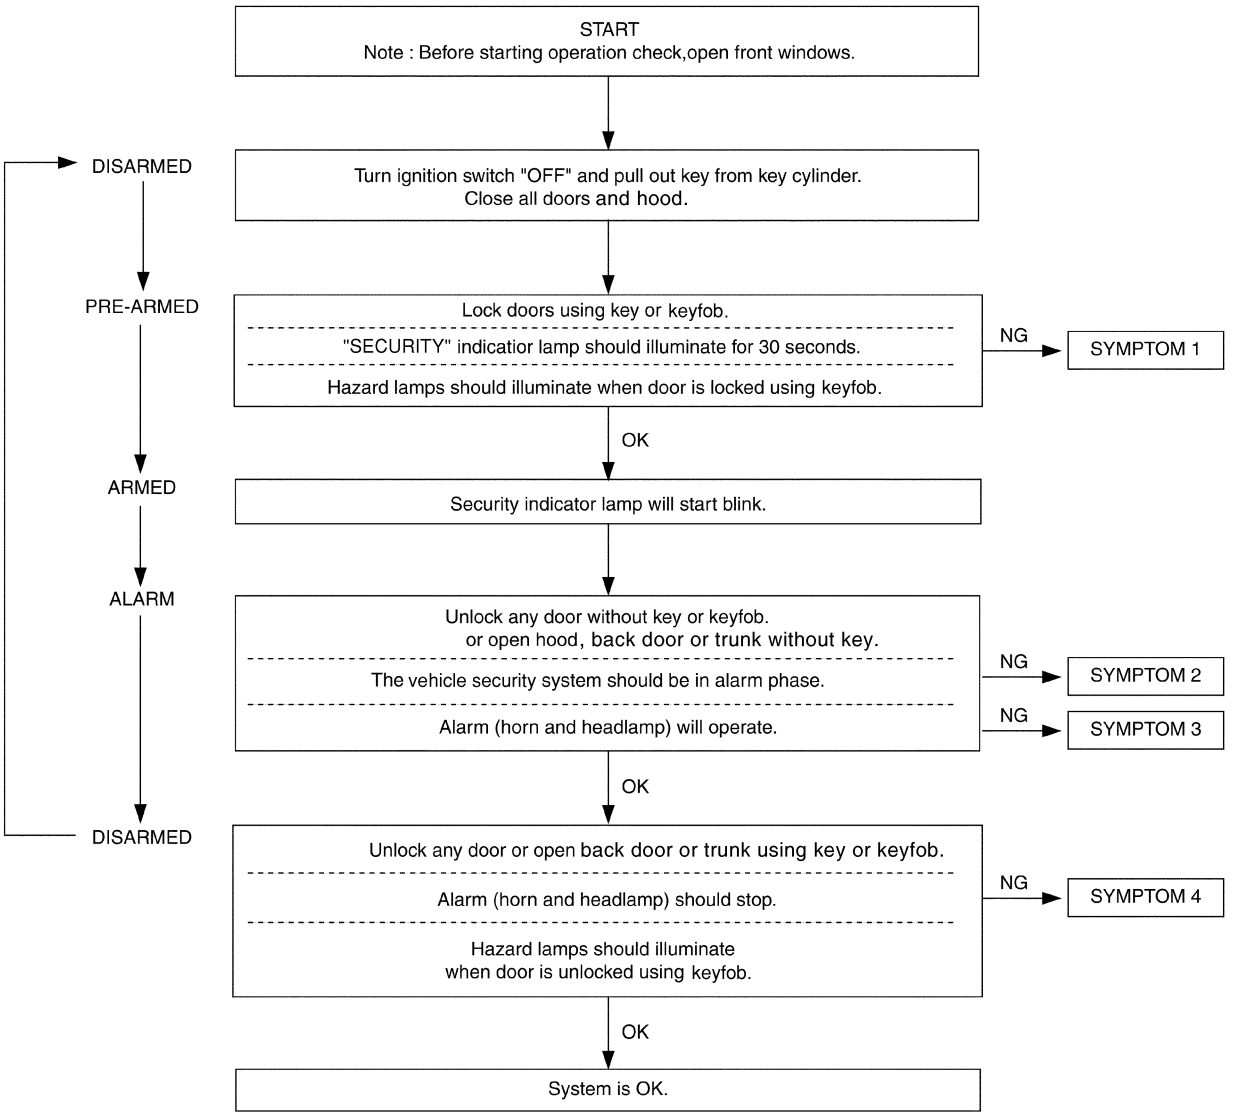
Test Item	Description
LAMPS	This test is able to check theft warning lamp (headlamp alarm) operation. The headlamps will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.
HORN	This test is able to check theft warning horn (horn alarm) operation. The horns will be activated for 0.5 seconds after “ON” on CONSULT-III screen is touched.

Trouble Diagnosis

NIS00032

WORK FLOW

LIIA0123E



- “POWER DOOR LOCK SYSTEM” Diagnosis; refer to BL-35, "Work Flow" .

- “REMOTE KEYLESS ENTRY” Diagnosis; refer to BL-75, "Work Flow" .

Preliminary Check

NIS00033

The system operation is canceled by turning ignition switch to “ACC” at any step between START and ARMED in the following flow chart.

PIIA8954E

After performing preliminary check, go to symptom chart. Refer to BL-140, "Symptom Chart" .

Symptom Chart

NIS00034

PROCEDURE / SYMPTOM			Diagnostic procedure	Reference page
1	Vehicle security system cannot be set by ….	Door switch	Diagnostic Procedure 1 (Check door, hood, back door switch or trunk room lamp switch)	BL-141

	Security indicator does not turn “ON”.		Diagnostic Procedure 2 (Check security indicator lamp)	BL-146
			If the above systems are “OK”, replace BCM.	BCS-17
2	*1 Vehicle security system does not alarm when ….	Any door is opened.	Diagnostic Procedure 1 (Check door, hood and trunk room lamp switch)	BL-141
			If the above systems are “OK”, replace BCM.	BCS-17
3	Vehicle security alarm does not activate.	Horn alarm	Diagnostic Procedure 4 (Check vehicle security horn alarm)	BL-148
			If the above systems are “OK”, replace BCM.	BCS-17
		Headlamp alarm	Diagnostic Procedure 5 (Check vehicle security headlamp alarm)	BL-148
			If the above systems are “OK”, replace BCM.	BCS-17
4	Vehicle security system cannot be canceled by ….	Door outside key	Diagnostic Procedure 3 (Check door key cylinder switch)	BL-147
		Key fob	Check remote keyless entry system function.	BL-61
			If the above systems are “OK”, replace BCM.	BCS-17

*1: Make sure the system is in the armed phase.

Diagnostic Procedure 1

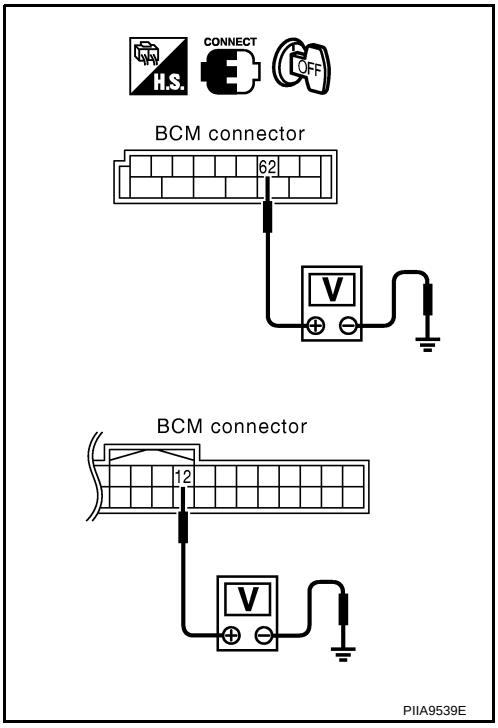
NIS00035

1 – 1 CHECK DOOR SWITCH

Check driver side door switch and passenger side door switch

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-DR” and “DOOR SW-AS”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

Check voltage between BCM connector and ground.

Item	Con-nector	Terminal (Wire color)		Condi-tion of door switch	Voltage [V] (Approx.)
		(+)	(–)		
Driver side door switch	B83	62 (L)	Ground	Open	0
				Close	5
Passenger side door switch	M90	12 (P)		Open	0
				Close	5

OK or NG

OK >> Door switch is OK, and go to the following

- BL-143, "1 – 2 CHECK BACK DOOR SWITCH (COUPE)"
- BL-145, "1 – 3 CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) (ROADSTER)"

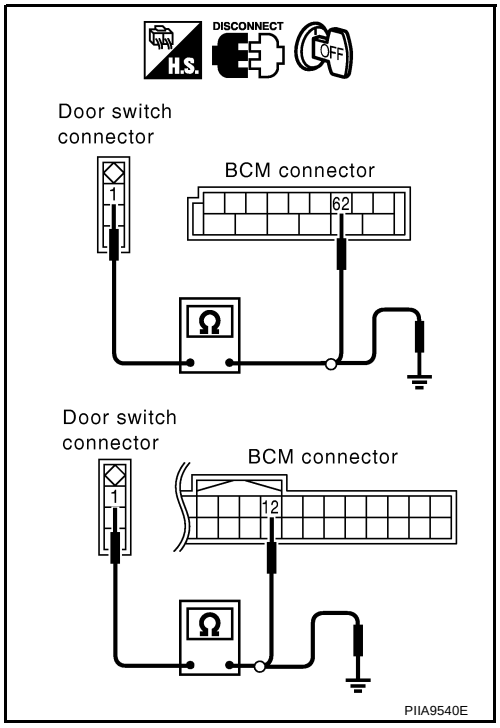
NG >> GO TO 2.

2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between door switch harness connector B17, B23 terminal 1 and BCM harness connector B83 terminal 62 (driver side) or M90 terminal 12 (passenger side).

Driver side door

1 (L) - 62 (L) : Continuity should exist.



Passenger side door

1 (P) - 12 (P) : Continuity should exist.

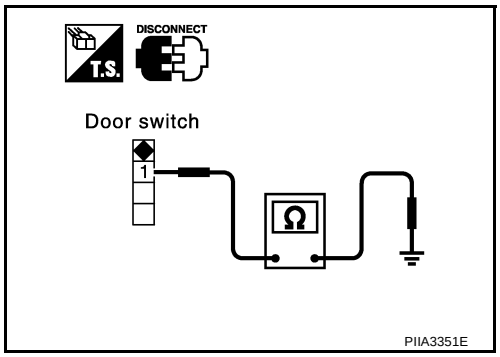
4. Check continuity between door switch harness connector B17, B23 terminal 1 and ground.

Each door switch

1 (W or P) - Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace door switch harness.

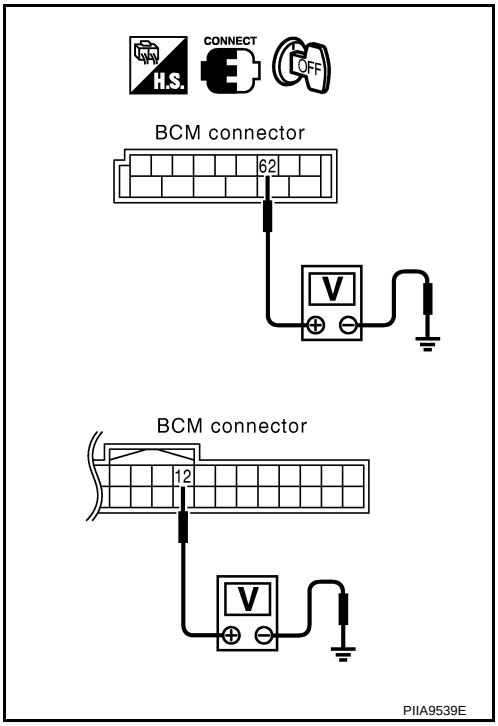


3. CHECK DOOR SWITCH

Check continuity between door switch B17 (driver side) or B23 (passenger side) terminal 1 and ground part of door switch.

Terminal		Condition of door switch	Continuity
1	Ground part of door switch	Pushed	No
		Released	Yes

OK or NG



OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK DOOR SWITCH INPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM harness connectors B83 (driver side), M90 (passenger side) terminals 62, 12 and ground.

62 (L) – Ground : Approx. 5V
12 (P) – Ground : Approx. 5V

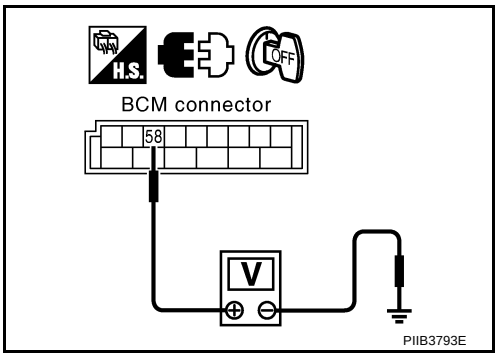
OK or NG

OK >> Check harness connection.
NG >> Replace BCM.

1 – 2 CHECK BACK DOOR SWITCH (COUPE)

1. CHECK BACK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check back door switch (“BACK DOOR SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

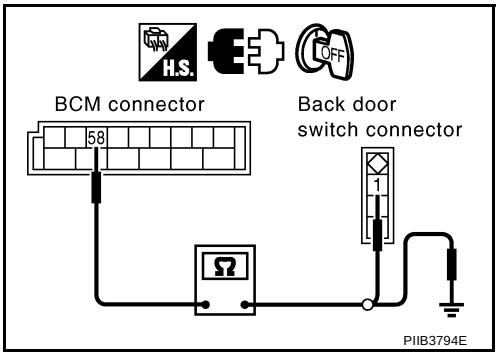
Without CONSULT-III

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition of back door switch	Voltage [V] (Approx.)
	(+)	(–)		
M83	58 (R/W)	Ground	Open	0
			Close	Buttery voltage

OK or NG

OK >> Back door switch is OK.
NG >> GO TO 2.



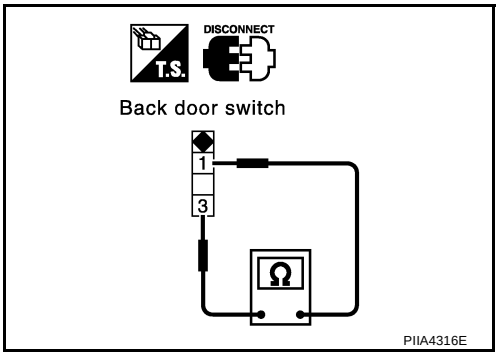
2. CHECK BACK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door switch connectors.
3. Check continuity between BCM harness connector B83 terminal 58 and back door switch harness connector T12 terminal 1.

58 (R/W) - 1 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 58 and ground.

58 (R/W) - Ground : Continuity should not exist.



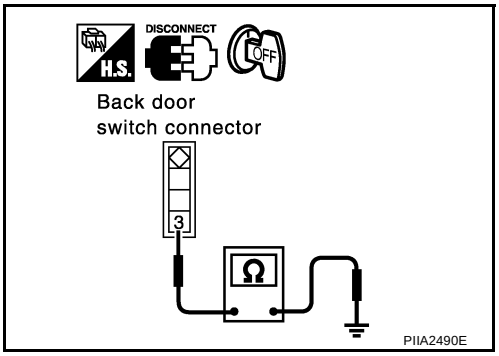
OK or NG

OK >> GO TO 3.
NG >> Repair or replace back door switch harness.

3. CHECK BACK DOOR SWITCH

Check continuity between door switch terminals 1 and 3.

Terminal		Condition of back door switch	Continuity
1	3	Open position	Yes
		Closed position	No



OK or NG

OK >> GO TO 4.
NG >> Replace back door switch.

4. CHECK BACK DOOR SWITCH GROUND CIRCUIT

Check continuity between back door switch harness connector T12 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.

OK or NG

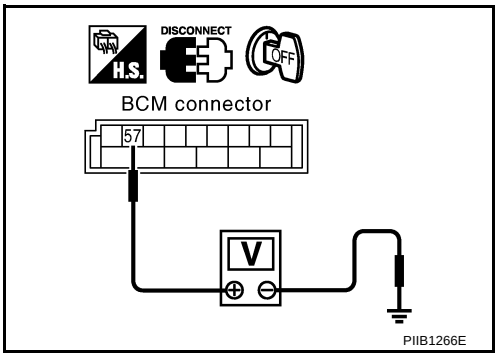
OK >> Back door switch circuit is OK.
NG >> Repair or replace harness.

1 – 3 CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) (ROADSTER)

1. CHECK TRUNK ROOM LAMP SWITCH INPUT SIGNAL

With CONSULT-III

Check trunk lid opener switch (“TRUNK OPN MNTR”) in “DATA MONITOR” mode with CONSULT-III.



Monitor item	Condition	
TRNK OPN MNTR	OPEN	: ON
	CLOSE	: OFF

Without CONSULT-III

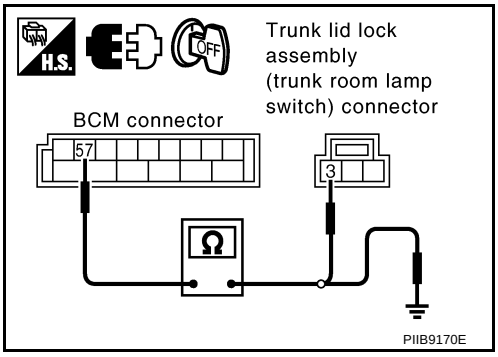
Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition of trunk room lamp switch	Voltage [V] (Approx.)
	(+)	(–)		
B83	57 (R/W)	Ground	Open	0
			Close	Battery voltage*

*: When interior lamp battery saver control is in OFF. → Approx 5V.

OK or NG

OK >> Trunk room lamp switch is OK .
NG >> GO TO 2.



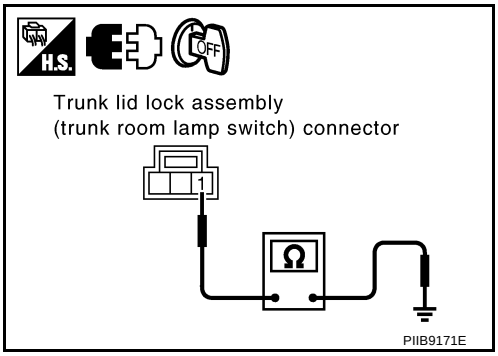
2. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect trunk lid lock assembly (trunk room lamp switch) and BCM connector.
3. Check continuity between trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 3 and BCM harness connector B83 terminal 57.

   57 (R/W) - 3 (R/W) : Continuity should exist.

4. Check continuity between BCM harness connector B83 terminal 57 and ground.

   57 (R/W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Replace trunk lid lock assembly (trunk room lamp switch) harness.

3. CHECK TRUNK LID LOCK ASSEMBLY (TRUNK ROOM LAMP SWITCH) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between trunk lid lock assembly (trunk room lamp switch) harness connector T47 terminal 1 and ground.

   1 (B) - Ground : Continuity should exist.

OK or NG

OK >> Trunk lid lock assembly (trunk room lamp switch) is OK.
NG >> Repair or replace trunk lid lock assembly (trunk room lamp switch) harness.

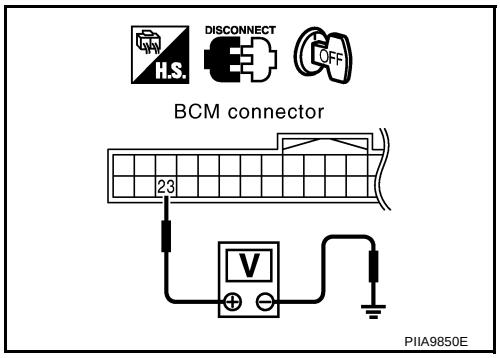
Diagnostic Procedure 2

NIS00036

CHECK SECURITY INDICATOR LAMP

1. SECURITY INDICATOR LAMP ACTIVE TEST

With CONSULT-III



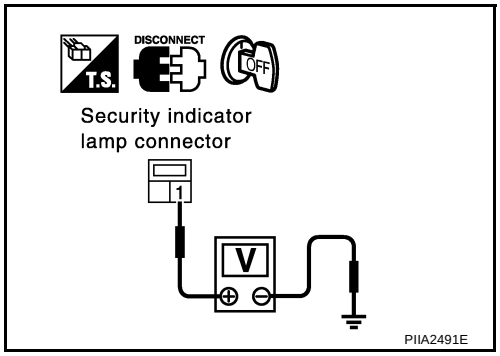
Check “THEFT IND” in “ACTIVE TEST” mode with CONSULT-III.

Perform operation shown on display.
Indicator lamp should illuminate.

Without CONSULT-III

1. Disconnect BCM connector.
2. Check voltage between BCM connector M90 terminal 23 and ground.

23 (G/OR) - Ground : Battery voltage



OK or NG

OK >> Security indicator lamp is OK.
NG >> GO TO 2.

2. CHECK POWER SUPPLY CIRCUIT FOR SECURITY INDICATOR LAMP

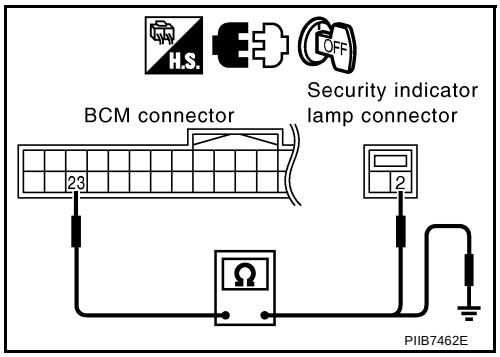
1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp connector M34 terminal 1 and ground.

1 (R/W) - Ground : Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Check the following.

- 10A fuse [No. 19, located in fuse block (J/B)]
- Harness for open or short between security indicator lamp and fuse



3. CHECK SECURITY INDICATOR LAMP CIRCUIT

1. Check continuity between BCM harness connector M90 terminal 23 and security indicator lamp harness connector M34 terminal 2.

23 (G/OR) - 2 (G/OR) : Continuity should exist.

2. Check continuity between BCM harness connector M90 terminal 23 and ground.

23 (G/OR) - Ground : Continuity should not exist.

OK or NG

OK >> Check indicator lamp condition.
NG >> Repair harness or connector.

Diagnostic Procedure 3

NIS00037

CHECK DOOR KEY CYLINDER SWITCH

1. CHECK DOOR KEY CYLINDER SWITCH DRIVER SIDE OPERATION

Do doors lock/unlock when using the key?

YES or NO

YES >> Door key cylinder switch operation is OK.
NO >> Check door key cylinder switch circuit. Refer to BL-47, "Check Door Key Cylinder Switch" .

Diagnostic Procedure 4

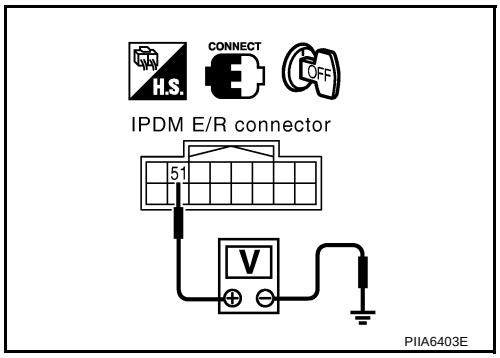
NIS00038

CHECK VEHICLE SECURITY HORN ALARM

First perform the “SELF-DIAG RESULTS” of “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated in “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CHECK HORN OPERATION

Check if horn sounds with horn switch.



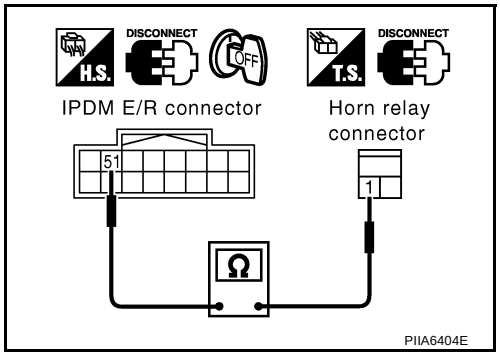
Does horn operate?

YES >> GO TO 2.
NO >> Check horn circuit. Refer to WW-53, "HORN" .

2. CHECK IPDM E/R INPUT SIGNAL

Check voltage between IPDM E/R connector E9 terminal 51 and ground.

51 (G/B) – Ground : Battery voltage.



OK or NG

OK >> Replace IPDM E/R.
NG >> GO TO 3.

3. CHECK HORN RERAY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay connector.
3. Check continuity between IPDM E/R harness connector E9 terminal 51 and horn relay harness connector E21 terminal 1.

1 (G/B) - 51(G/B) : Continuity should exist.

OK or NG

OK >> Horn circuit is OK.
NG >> Repair or replace harness.

Diagnostic Procedure 5

NIS00039

CHECK VEHICLE SECURITY HEADLAMP ALARM

1. CHECK HEAD LAMP OPERATION

Does headlamp come on when turning lighting switch “ON”?

YES or NO

YES >> Headlamp alarm circuit is OK.
NO >> Check headlamp system. Refer to,,, LT-32, "HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -"LT-5, "HEADLAMP (FOR USA)" .

Diagnostic Procedure 6

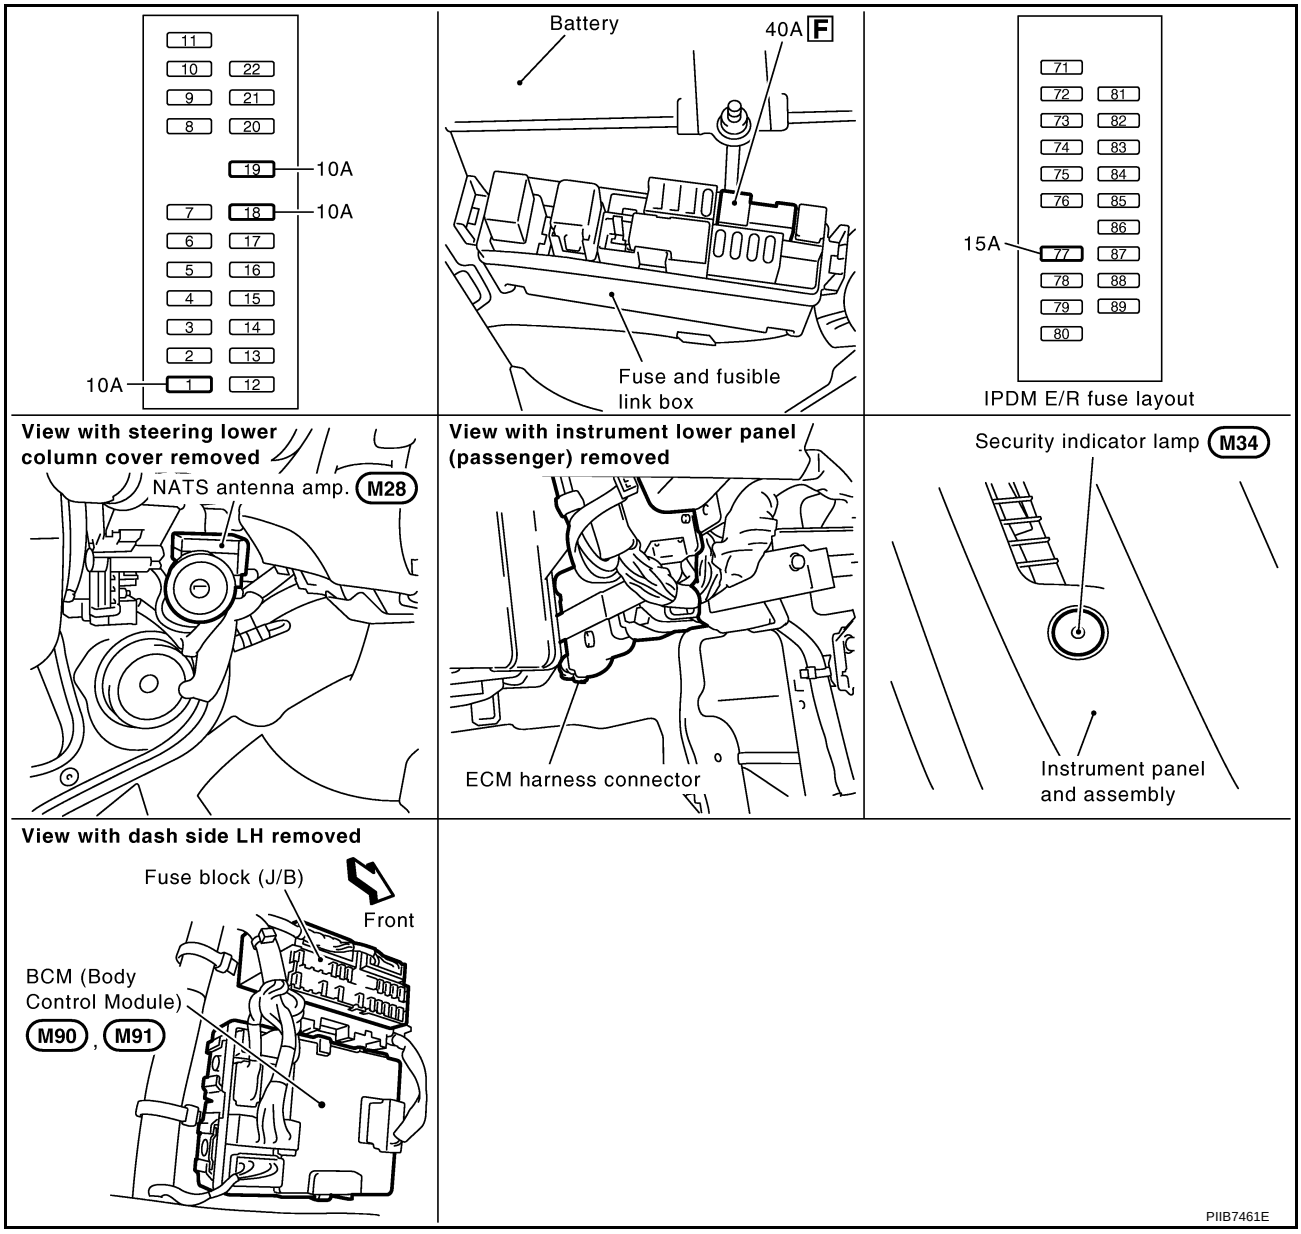
NIS0003A

CHECK DOOR LOCK AND UNLOCK SWITCH

1. CHECK DOOR LOCK AND UNLOCK SWITCH INPUT SIGNAL

Does doors lock/unlock when using power window main switch (door lock and unlock switch) or power window sub-switch (door lock and unlock switch)?

YES or NO?



YES >> Door lock and unlock switch is OK.
NO >> Refer to BL-42, "Check Door Lock and Unlock Switch" .

NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

PFP:25386

Component Parts and Harness Connector Location

NIS0003B

NOTE:

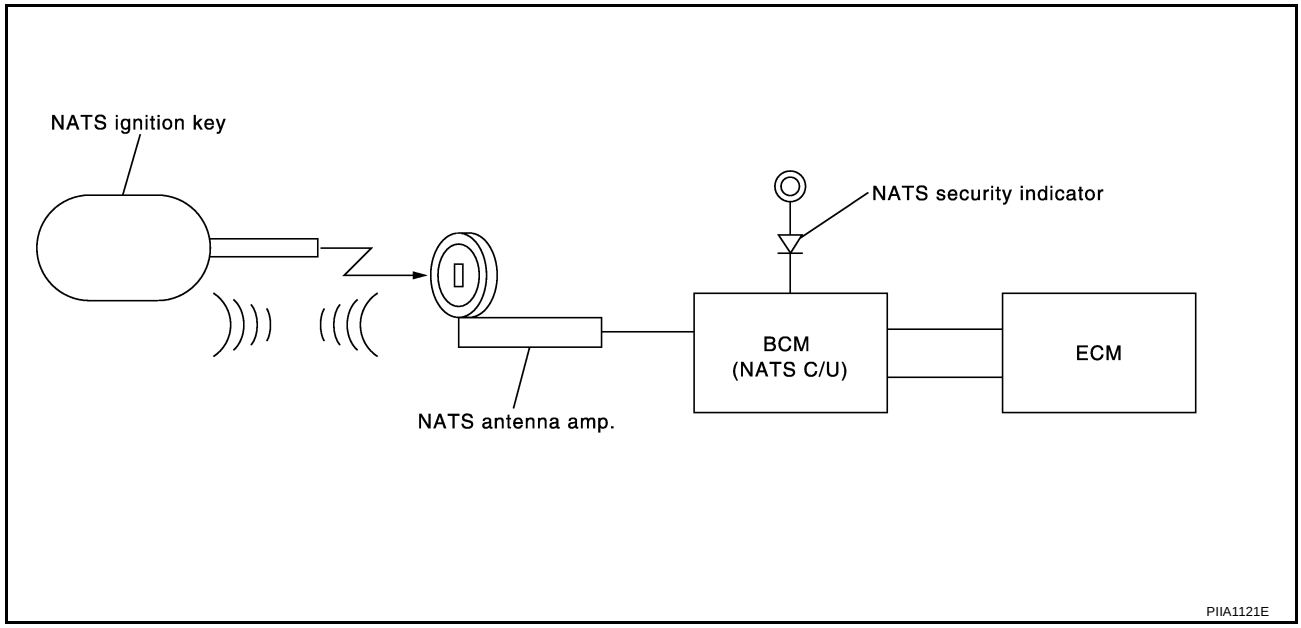
If customer reports a “No start” condition, request ALL KEYS to be brought to an NISSAN dealer in case of a NVIS (NATS) malfunction.

System Description

NIS0003C

NVIS (Nissan Vehicle Immobilizer System-NATS) has the following immobilizer functions:

- Since only NVIS (NATS) ignition keys, whose ID Nos. have been registered into the ECM and BCM, allow the engine to run, a vehicle operation without a key registered in NVIS (NATS) is prevented by NVIS (NATS).
  That is to say, NVIS (NATS) will immobilize the engine if someone tries to start it without the registered key of NVIS (NATS).
- All of the originally supplied ignition key IDs (except for card plate key) have been registered in NVIS (NATS).
  If requested by the vehicle owner, a maximum of five key IDs can be registered into the NVIS (NATS) components.
- The security indicator blinks when the ignition switch is in “OFF” or “ACC” position. Therefore, NVIS (NATS) warns outsiders that the vehicle is equipped with the anti-theft system.
- When NVIS (NATS) detects trouble, the security indicator lamp lights up while ignition key is in the “ON” position.
- NVIS (NATS) trouble diagnoses, system initialization and additional registration of other NVIS (NATS) ignition key IDs must be carried out using CONSULT-III hardware and CONSULT-III NVIS (NATS) software.
  When NVIS (NATS) initialization has been completed, the ID of the inserted ignition key is automatically registered in NVIS (NATS). Then, if necessary, additional registration of other NVIS (NATS) ignition key IDs can be carried out.
  Regarding the procedures of NVIS (NATS) initialization and NVIS (NATS) ignition key ID registration, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS.
- **When servicing a malfunction of the NVIS (NATS) (indicated by lighting up of Security Indicator Lamp) or registering another NVIS (NATS) ignition key ID No., it may be necessary to re-register original key identification. Therefore, be sure to receive ALL KEYS from vehicle owner.**



System Composition

NIS0003D

The immobilizer function of the NVIS (NATS) consists of the following:

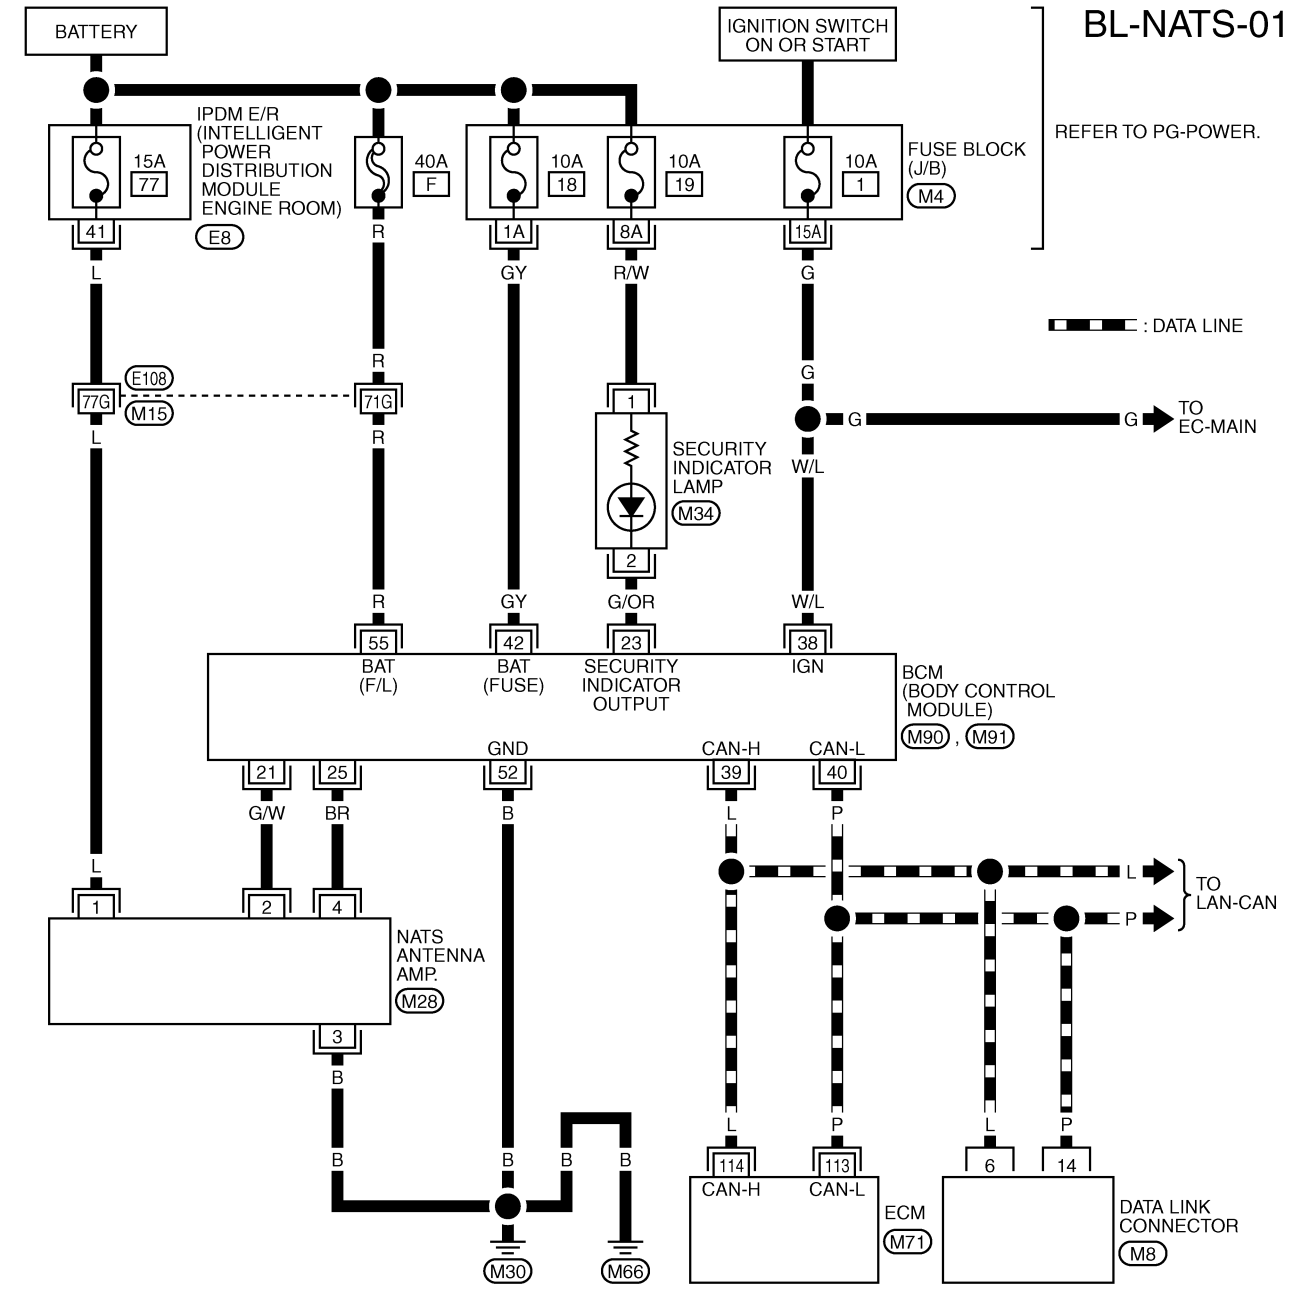
- NATS ignition key
- NATS antenna amp. located in the ignition key cylinder
- BCM
- Engine control module (ECM)
- Security indicator

NOTE:
The communication between ECM and BCM uses the CAN communication system.

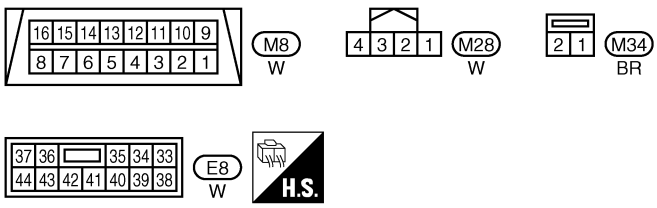
ECM Re-communicating Function

NIS0003E

Performing following procedure can automatically perform re-communication of ECM and BCM, but only when the ECM has been replaced with a new one (*1).
*1: New one means a virgin ECM which has never been energized on-board.
(In this step, initialization procedure by CONSULT-III is not necessary)



NOTE:



- **When registering new Key IDs or replacing the ECM other than brand new, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS.**
- **If multiple keys are attached to the key holder, separate them before work.**
- **Distinguish keys with unregistered key ID from those with registered ID.**

1. Install ECM.
2. Using a registered key (*2), turn ignition switch to “ON”.
   *2: To perform this step, use the key (except for card plate key) that has been used before performing ECM replacement.
3. Maintain ignition switch in “ON” position for at least 5 seconds.
4. Turn ignition switch to “OFF”.
5. Start engine.
   If engine can be started, procedure is completed.
   If engine cannot be started, refer to CONSULT-III Operation Manual NATS-IVIS/NVIS and initialize control unit.

Wiring Diagram — NATS —

NIS0003F

M4 -FUSE BLOCK-JUNCTION BOX (J/B)
M71 , M90 , M91 -ELECTRICAL UNITS

TIWT2271E

Terminals and Reference Value for BCM

NIS0003G

Terminal	Wire color	Item	Signal Input/ Output	Condition	Voltage (V) (Approx.)
21	G/W	NATS antenna amp.	Input/ Output	Ignition switch (OFF → ON)	Just after turning ignition switch “ON”: Pointer of tester should move.
23	G/OR	Security indicator lamp	Output	Goes OFF → illuminates (Every 2.4 seconds)	Battery voltage → 0
25	BR	NATS antenna amp.	Input/ Output	Ignition switch (OFF → ON)	Just after turning ignition switch “ON”: Pointer of tester should move.
38	W/L	Ignition switch (ON)	Input	Ignition switch (ON or START)	Battery voltage
39	L	CAN-H	Input/ Output	—	—
40	P	CAN-L	Input/ Output	—	—
42	GY	Power source (Fuse)	Input	—	Battery voltage
52	B	Ground	—	—	0
55	R	Power source (Fusible link)	Input	—	Battery voltage

CONSULT-III

NIS0003H

CONSULT-III INSPECTION PROCEDURE

Refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

CONSULT-III DIAGNOSTIC TEST MODE FUNCTION

CONSULT-III DIAGNOSTIC TEST MODE	Description
C/U INITIALIZATION	When replacing any of the following components, C/U initialization and re-registration of all NATS ignition keys are necessary. [(NATS ignition key BCM/ ECM)

NOTE:

- When any initialization is performed, all ID previously registered will be erased and all NATS ignition keys must be registered again.

NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART

Detected items [NVIS (NATS) program card screen terms]	P No. Code (Self-diagnostic result of “ENGINE”)	Malfunction is detected when.....	Reference page
CHAIN OF ECM-IMMU [P1612]	NATS MALFUNCTION P1612	Communication impossible between ECM and BCM In rare case, “CHAIN OF ECM-IMMU” might be stored during key registration procedure, even if the system is not malfunctioning.	Refer to BL-158, "Diagnostic Procedure 1" .
DIFFERENCE OF KEY [P1615]	NATS MALFUNCTION P1615	BCM can receive the key ID signal but the result of ID verification between key ID and BCM is NG.	Refer to BL-159, "Diagnostic Procedure 2" .
CHAIN OF IMMU-KEY [P1614]	NATS MALFUNCTION P1614	BCM cannot receive the key ID signal.	Refer to BL-160, "Diagnostic Procedure 3" .

Detected items [NVIS (NATS) program card screen terms]	P No. Code (Self-diagnostic result of “ENGINE”)	Malfunction is detected when.....	Reference page
ID DISCORD, IMM-ECM [P1611]	NATS MALFUNCTION P1611	The result of ID verification between BCM and ECM is NG. System initialization is required.	Refer to BL-161, "Diagnostic Procedure 4" .
LOCK MODE [P1610]	NATS MALFUNCTION P1610	When the starting operation is carried out five or more times consecutively under the following conditions, NVIS (NATS) will shift the mode to one which prevents the engine from being started. ● Unregistered ignition key is used. ● BCM or ECM’s malfunctioning.	Refer to BL-165, "Diagnostic Procedure 6" .
DON'T ERASE BEFORE CHECKING ENG DIAG	—	All engine trouble codes except NVIS (NATS) trouble code has been detected in ECM.	Refer to BL-155, "Work Flow" .

Work Flow

NIS002B3

1. LISTEN TO CUSTOMER COMPLAINT OR REQUEST

Get symptoms or listen to customer complaints or request.

NOTE:
In case of request for NVIS (NATS) system repair, the key ID re-registration might be necessary. Keep all the ignition keys before work for the re-registration.

Key ID registration request>>Register ignition key by referring to CONSULT-III Operation Manual NATS-IVIS/NVIS.
Request for malfunction repair.>>GO TO 2.

2. CONFIRM SELF DIAGNOSIS 1

Start CONSULT-III with ignition switch in ON position and confirm “SELF DIAG RESULT” with “ENGINE”.

Is DTC detected?

No malfunction>>GO TO 3.
If the codes detected are between the interval P1610 to P1615.>> Refer to BL-154, "NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART" .
If the codes detected are between the interval P1610 to P1615 and others.>> GO TO 4.

3. CHECK SECURITY INDICATOR FUNCTION

Check that security indicator for lighting up fulfill the two conditions below.

- Security indicator lights off when ignition switch is ON position.
- Security indicator blinks when ignition switch is in any position except ON.

Lighting up condition is normal.>>Inspection END.
Lighting up condition is malfunctioning.>>Perform security indicator Inspection. Refer to BL-163, "Diagnostic Procedure 5" .

4. TROUBLE DIAGNOSIS

Perform by priority the trouble diagnosis for the codes which are not included in the interval P1610 to P1615.

Is DTC detected?

No malfunction>>Inspection END.
If the codes detected are between the interval P1610 to P1615.>>BL-154, "NVIS (NATS) SELF-DIAGNOSTIC RESULTS ITEM CHART".

Trouble Diagnoses

DIAGNOSTIC SYSTEM DIAGRAM

Diagnostic Procedure 1

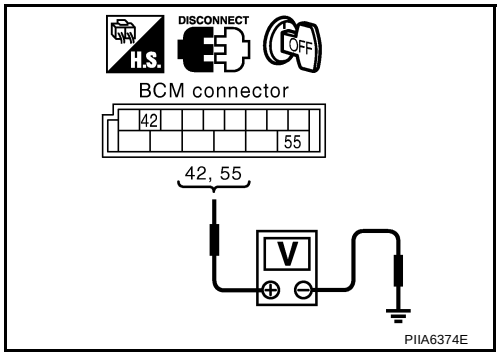
NIS0003K

Self-diagnostic results:
“CHAIN OF ECM-IMMU” displayed on CONSULT-III screen
First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-III, then perform the trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF ECM-IMMU” displayed on CONSULT-III screen.

NOTE:
In rare case, “CHAIN OF ECM-IMMU” might be stored during key registration procedure, even if the system is not malfunctioning.



Is CONSULT-III screen displayed as above?

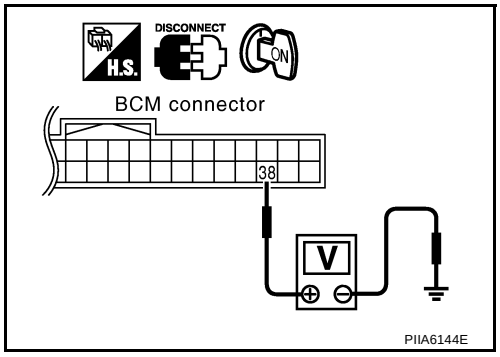
Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. CHECK POWER SUPPLY CIRCUIT FOR BCM

1. Disconnect BCM connector.
2. Check voltage between BCM harness connector M91 terminal 42, 55 and ground with CONSULT-III or tester.

42 (GY) - Ground : Battery voltage
55 (R) - Ground : Battery voltage

OK or NG



OK >> GO TO 3.
NG >> Check the following.

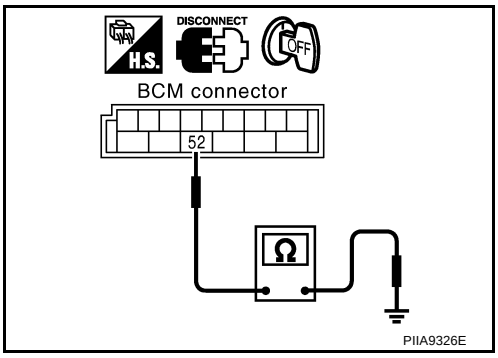
- 40A fusible link (letter **F** , located in fuse and fusible link box)
- 10A fuse [No.18, located in the fuse block (J/B)]
- Harness for open or short between fusible link and BCM. **Ref. Part No. C1**
- Harness for open or short between fuse and BCM. **Ref. Part No. C1**

3. CHECK IGN SW. ON SIGNAL

1. Turn ignition switch ON.
2. Check voltage between BCM harness connector M90 terminal 38 and ground with CONSULT-III or tester.

38 (W/L) - Ground : Battery voltage

OK or NG



OK >> GO TO 4.
NG >> Check the following.

- 10A fuse [No. 1, located in the fuse block (J/B)]
- Harness for open or short between fuse and BCM. **Ref. part No. C2**

4. CHECK GROUND CIRCUIT FOR BCM

1. Turn ignition OFF.
2. Check continuity between BCM harness connector M91 terminal 52 and ground.

52 (B) - Ground : Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness. **Ref. part No. C3**

5. REPLACE BCM

1. Replace BCM **Ref. part No. A**
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Does the engine start?

Yes >> BCM is malfunctioning.
- Replace BCM. **Ref. part No. A**
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

No >> ECM is malfunctioning.
- Replace ECM. **Ref. part No. B**
- Perform initialization or re-communicating function.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.
- For re-communicating function, refer to BL-152, "ECM Re-communicating Function" .

Diagnostic Procedure 2

NIS0003L

Self-diagnostic results:
“DIFFERENCE OF KEY” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “DIFFERENCE OF KEY” displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III. Re-register all NATS ignition key IDs.
For initialization and registration of NATS ignition key IDs, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows message on the screen.

Can the system be initialized and can the engine be started with re-registered NATS ignition key?

Yes >> Ignition key ID was unregistered. **Ref. part No. D**
No >> BCM is malfunctioning.
- Replace BCM. **Ref. part No. A**
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Diagnostic Procedure 3

NIS0003M

Self-diagnostic results:
“CHAIN OF IMMU-KEY” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “CHAIN OF IMMU-KEY” displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as shown in figure?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to BL-166, "How to Replace NATS Antenna Amp." .

OK or NG

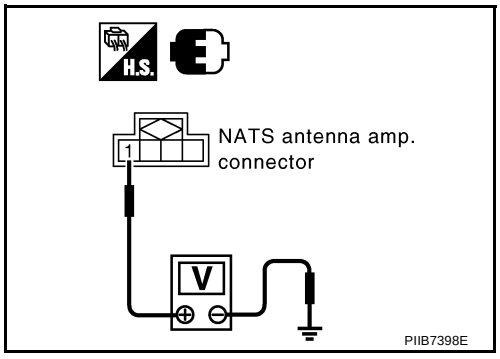
OK >> GO TO 3.
NG >> Reinstall NATS antenna amp. correctly.

3. CHECK NVIS (NATS) IGNITION KEY ID CHIP

Start engine with another registered NATS ignition key.

Does the engine start?

Yes >> Ignition key ID chip is malfunctioning.
- Replace the ignition key. **Ref. part No, E5**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.



No >> GO TO 4.

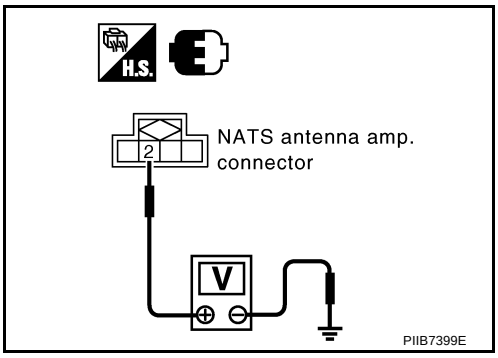
4. CHECK POWER SUPPLY FOR NATS ANTENNA AMP.

1. Turn ignition switch “ON”.
2. Check voltage between NATS antenna amp. harness connector M28 terminal 1 and ground with CONSULT-III or tester.

Just after turning ignition switch “ON”

Voltage: Approx. 5V (For 3 seconds)

OK or NG



OK >> GO TO 5.
NG >>
- Check harness for open or short between NATS antenna amp. and BCM.

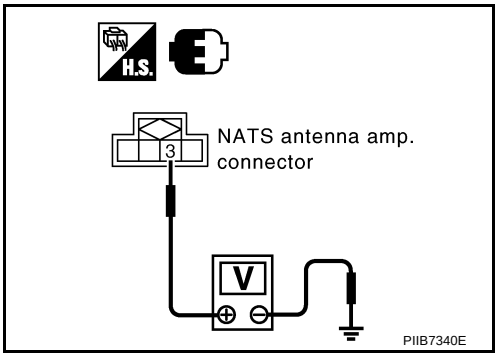
NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

5. CHECK NATS ANTENNA AMP. SIGNAL LINE- 1

Check voltage between NATS antenna amp. harness connector M28 terminal 2 and ground with analogue tester.

Before turning ignition switch "ON"
Voltage: 0V
Just after turning ignition switch "ON"
: Pointer of tester should move.

OK or NG



OK >> GO TO 6.
NG >> ● Check harness for open or short between NATS antenna amp. and BCM.

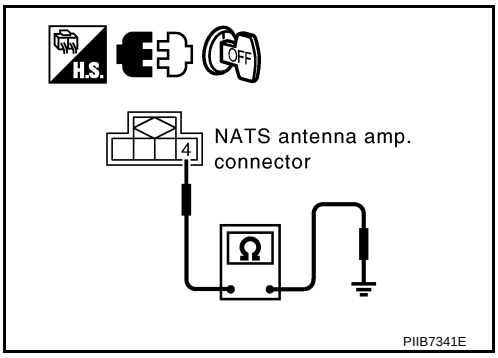
NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

6. CHECK NATS ANTENNA AMP. SIGNAL LINE- 2

Check voltage between NATS antenna amp. harness connector M28 terminal 3 and ground with analogue tester.

Before turning ignition switch "ON"
Voltage: 0V
Just after turning ignition switch "ON"
: Pointer of tester should move.

OK or NG



OK >> GO TO 7.
NG >> ● Check harness for open or short between NATS antenna amp. and BCM.

NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

7. CHECK NATS ANTENNA AMP. GROUND LINE CIRCUIT

1. Turn ignition switch "OFF".
2. Check continuity between NATS antenna amp. connector harness M28 terminal 4 and ground.

4 (BR) – Ground : Continuity should exist.

OK or NG

OK >> NATS antenna amp. is malfunctioning. **Ref. part No. E6**
NG >> Replace NATS antenna amp.

● Check harness for open or short between NATS antenna amp. and BCM.

NOTE:
If harness is OK, replace BCM, perform initialization with CONSULT-III. For initialization, refer to "CONSULT-III Operation Manual NATS-IVIS/NVIS".

Diagnostic Procedure 4

NIS0003N

Self-diagnostic results:
"ID DISCORD, IMM-ECM" displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “ID DISCORD, IMM-ECM” displayed on CONSULT-III screen.

NOTE:
“ID DISCORD IMM-ECM”:
Registered ID of BCM is in discord with that of ECM.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III. Re-register all NATS ignition key IDs.
For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows message on the screen.

Can the system be initialized?

Yes >> Start engine. (END)
- (System initialization had not been completed. **Ref. part No. F**)

No >> ECM is malfunctioning.
- Replace ECM. **Ref. part No. B**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

Diagnostic Procedure 5

NIS0003O

“SECURITY INDICATOR LAMP DOES NOT LIGHT UP”

1. CHECK FUSE

- Check 10A fuse [No.19, located in the fuse block (J/B)]

  NOTE:
  Refer to BL-150, "Component Parts and Harness Connector Location" .

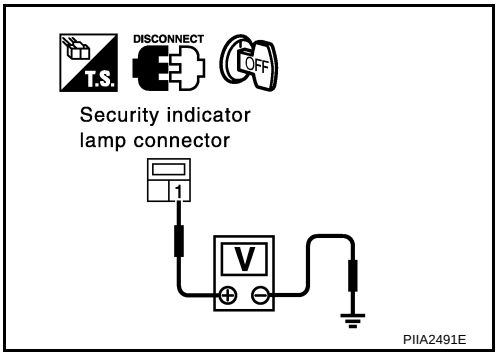
OK or NG

OK >> GO TO 2.
NG >> Replace fuse.

2. CHECK SECURITY INDICATOR LAMP

1. Install 10A fuse.
2. Start engine and turn ignition switch OFF.
3. Check the security indicator lamp lights up.

Security indicator lamp should light up.



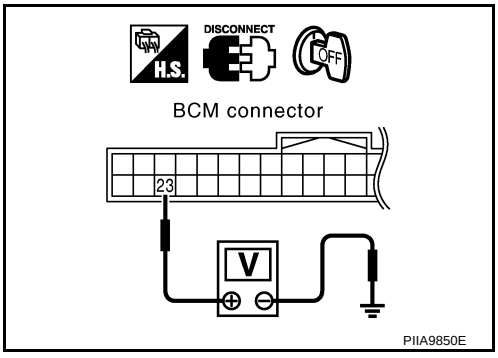
OK or NG

OK >> Inspection END.
NG >> GO TO 3.

3. CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Disconnect security indicator lamp connector.
2. Check voltage between security indicator lamp harness connector M34 terminal 1 and ground.

1 (R/W) – Ground : Battery voltage should exist.



OK or NG

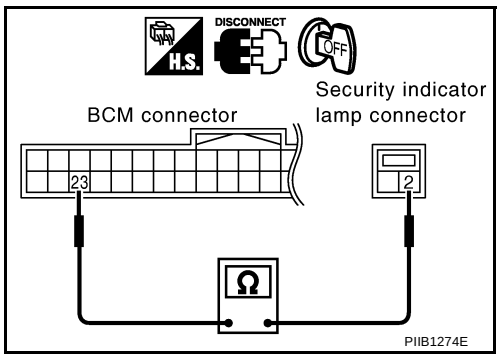
OK >> GO TO 4.
NG >> Check harness for open or short between fuse and security indicator lamp.

4. CHECK BCM FUNCTION

1. Connect security indicator lamp connector.
2. Disconnect BCM (NATS connector.
3. Check voltage between BCM harness connector M90 terminal 23 and ground.

23 (G/OR) – Ground : Battery voltage

OK or NG



OK >> BCM is malfunctioning.
- Replace BCM.
  Ref. part No. A
- Perform initialization with CONSULT-III.
- For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NG >> GO TO 5.

5. CHECK SECURITY INDICATOR LAMP CIRCUIT

1. Check continuity between BCM harness connector M90 terminal 23 and security indicator lamp harness connector M34 terminal 2.

23 (G/OR) - 2 (G/OR) : Continuity should exist.

OK or NG

OK >> Check indicator lamp condition.
NG >> Repair harness or connector.

Diagnostic Procedure 6

NIS0003P

Self-diagnostic results:
“LOCK MODE” displayed on CONSULT-III screen

1. CONFIRM SELF-DIAGNOSTIC RESULTS

Confirm SELF-DIAGNOSTIC RESULTS “LOCK MODE” is displayed on CONSULT-III screen.

Is CONSULT-III screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-156, "SYMPTOM MATRIX CHART 1" .

2. ESCAPE FROM LOCK MODE

1. Turn ignition switch OFF.
2. Turn ignition switch ON with registered key. (Do not start engine.) Wait 5 seconds.
3. Return the key to OFF position. Wait 5 seconds.
4. Repeat steps 2 and 3 twice (total of three cycles).
5. Start the engine.

Does engine start?

Yes >> System is OK (Now system is escaped from “LOCK MODE”).
No >> GO TO 3.

3. PERFORM INITIALIZATION WITH CONSULT-III

Perform initialization with CONSULT-III.
For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows the message on the screen.

Can the system be initialized?

Yes >> System is OK.
No >> GO TO 4.

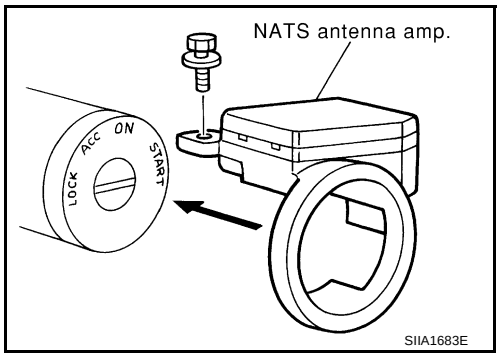
4. PERFORM INITIALIZATION WITH CONSULT-III AGAIN

1. Replace BCM.
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-III shows the message on the screen.

Can the system be initialized?

Yes >> System is OK. (BCM is malfunctioning. **Ref. part No. A**)
No >> ECM is malfunctioning.



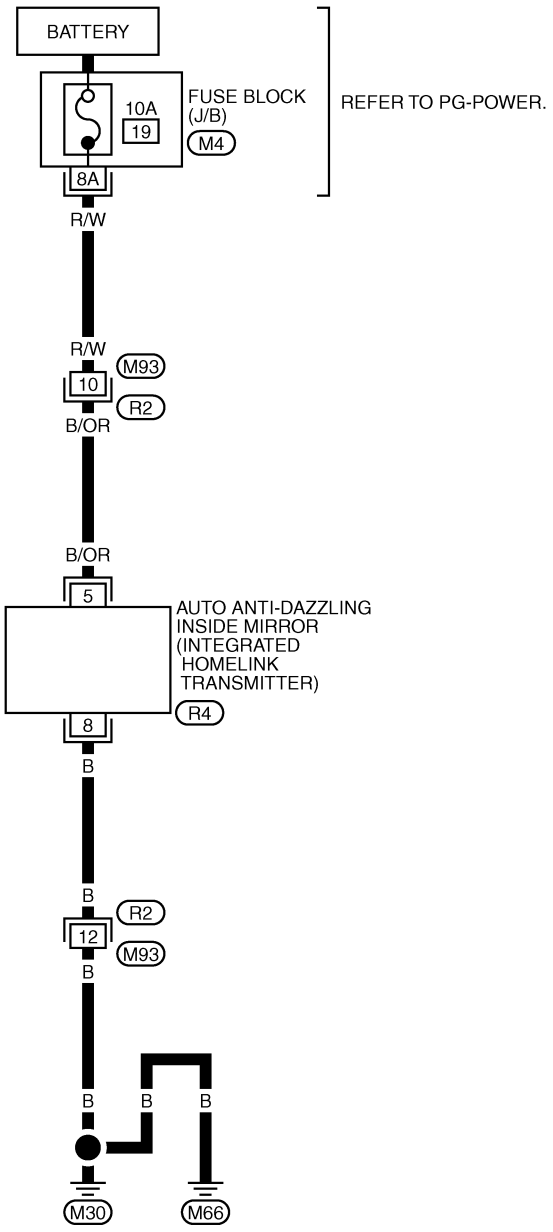
- Replace ECM. **Ref. part No. B**
- Perform initialization with CONSULT-III.
  For initialization, refer to “CONSULT-III Operation Manual NATS-IVIS/NVIS”.

How to Replace NATS Antenna Amp.

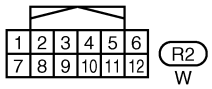
NIS0003Q

NOTE:

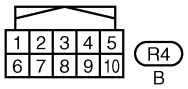
- **If NATS antenna amp. is not installed correctly, NVIS (NATS) system will not operate properly and SELF-DIAG RESULTS on CONSULT-III screen will show “LOCK MODE” or “CHAIN OF IMMU-KEY”.**
- **Initialization is not necessary only when NATS antenna amp. is replaced with a new one.**



INTEGRATED HOMELINK TRANSMITTER



PFP:96401



Wiring Diagram — TRNSCV —

NIS0003R

REFER TO THE FOLLOWING.
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

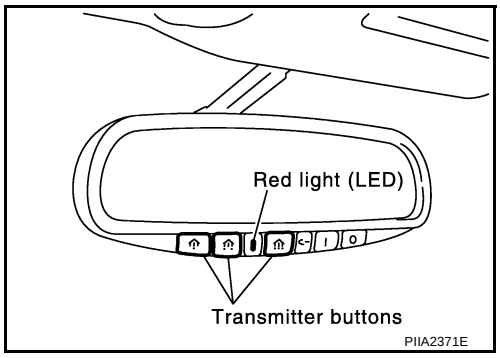
TIWT2272E

Trouble Diagnoses

NIS0003S

DIAGNOSTIC PROCEDURE

SYMPTOM: Transmitter does not activate receiver.



Before conducting the procedure given below, make sure that system receiver (garage door opener, etc.) operates with original, hand-held transmitter. If NG, receiver or hand-held transmitter is malfunctioning, not vehicle related.

1. CHECK ILLUMINATION

1. Turn ignition switch “OFF”.
2. Does red light (LED) of transmitter illuminate when any transmitter button is pressed?

YES or NO

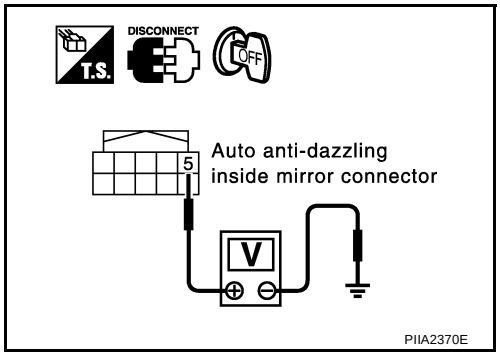
YES >> GO TO 2.
NO >> GO TO 3.

2. CHECK TRANSMITTER

Check transmitter with Tool*.
*:For details, refer to Technical Service Bulletin.

OK or NG

OK >> Receiver or hand-held transmitter malfunction, not vehicle related.
NG >> Replace inside mirror assembly.

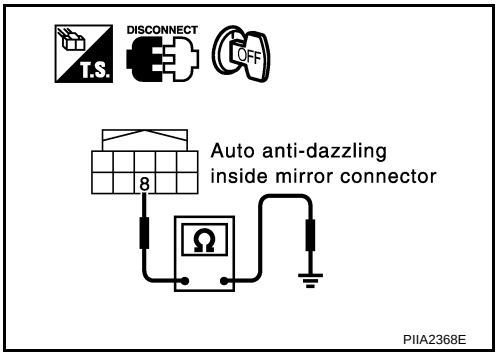


3. CHECK POWER SUPPLY

1. Disconnect transmitter connector.
2. Turn ignition switch “OFF”.
3. Check voltage between auto anti-dazzling inside mirror (integrated homelink transmitter) connector R4 terminal 5 and ground.

5 (B/OR) – Ground : Battery voltage

OK or NG



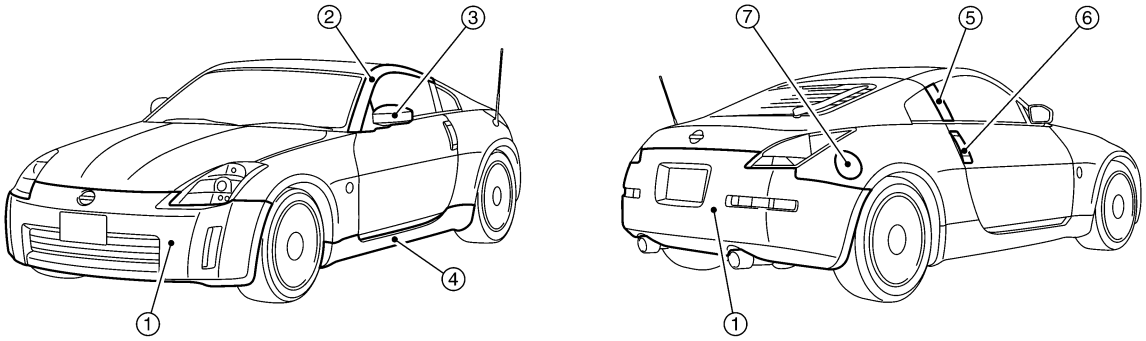
OK >> GO TO 4.
NG >>
- Check 10A fuse. [No. 19 located in the fuse block (J/B)]
- Harness for open or short between fuse and anti-dazzling inside mirror (integrated homelink transmitter).

4. CHECK GROUND CIRCUIT

Check continuity between anti-dazzling inside mirror (integrated homelink transmitter) connector R4 terminal 8 and ground.

8 (B) – Ground : Continuity should exist.

OK or NG



OK >> Replace inside mirror assembly.
NG >> Harness for open or short between anti-dazzling inside mirror (integrated homelink transmitter) body ground.

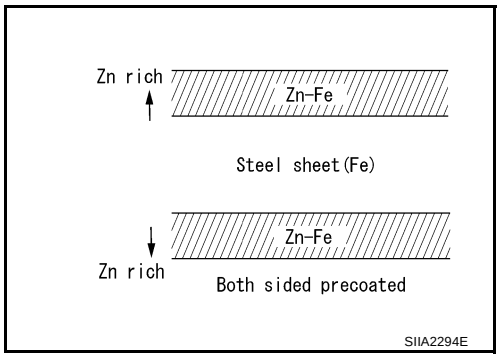
42. Rear bumper stay (RH&LH)

Corrosion Protection



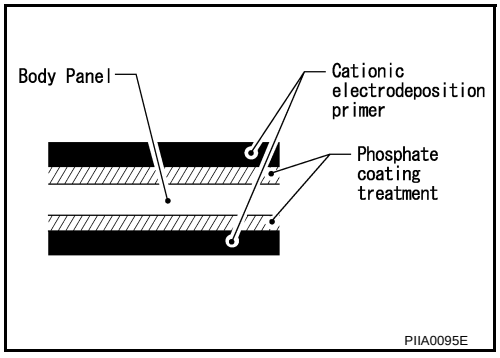
NIS0003X

DESCRIPTION

To provide improved corrosion prevention, the following anti-corrosive measures have been implemented in NISSAN production plants. When repairing or replacing body panels, it is necessary to use the same anti-corrosive measures.

Anti-corrosive precoated steel (Galvannealed steel)

To improve repairability and corrosion resistance, a new type of anti-corrosive precoated steel sheet has been adopted replacing conventional zinc-coated steel sheet.
Galvannealed steel is electroplated and heated to form Zinc-iron alloy, which provides excellent and long term corrosion resistance with cationic electrodeposition primer.

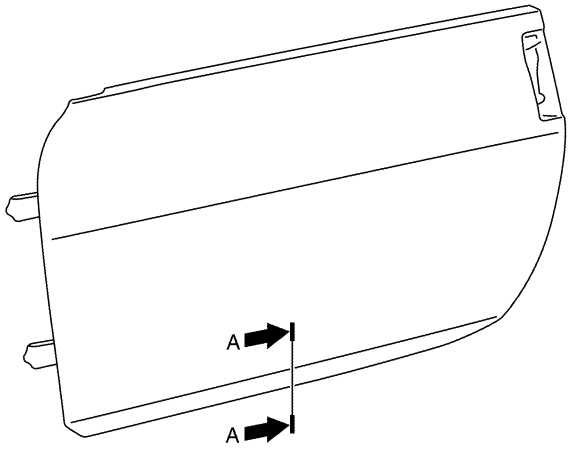


Nissan Genuine Service Parts are fabricated from galvannealed steel. Therefore, it is recommended that GENUINE NISSAN PARTS or equivalent be used for panel replacement to maintain the anti-corrosive performance built into the vehicle at the factory.

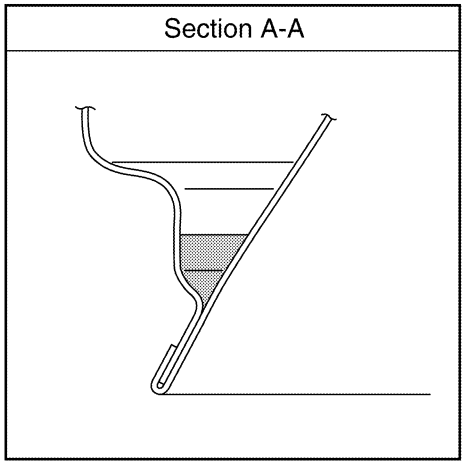
Phosphate coating treatment and cationic electrodeposition primer

A phosphate coating treatment and a cationic electrodeposition primer, which provide excellent corrosion protection, are employed on all body components.

CAUTION:



Confine paint removal during welding operations to an absolute minimum.



Nissan Genuine Service Parts are also treated in the same manner. Therefore, it is recommended that GENUINE NISSAN PARTS or equivalent be used for panel replacement to maintain anti-corrosive performance built into the vehicle at the factory.

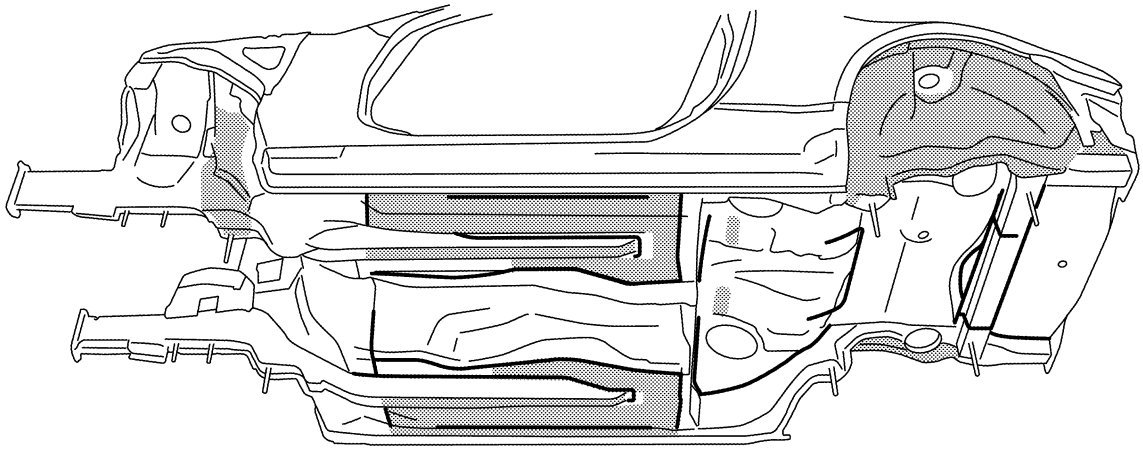
ANTI-CORROSIVE WAX

To improve corrosion resistance, anti-corrosive wax is applied inside the body sill and inside other closed sections. Accordingly, when replacing these parts, be sure to apply anti-corrosive wax to the appropriate areas of the new parts. Select an excellent anti-corrosive wax which will penetrate after application and has a long shelf life.

: Indicates anti-corrosive wax coated portions.

SIIA1979E

UNDERCOATING

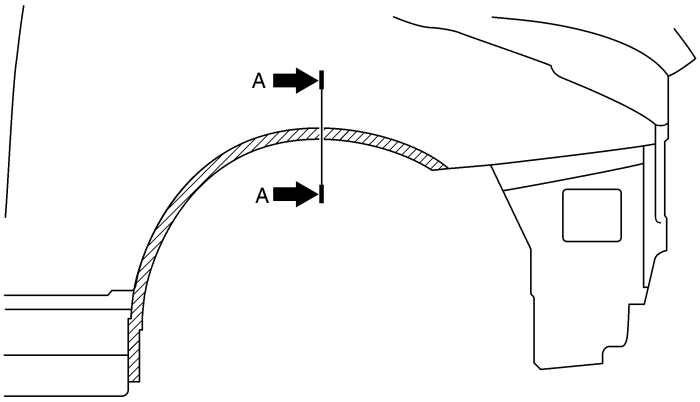


The underside of the floor and wheelhouse are undercoated to prevent rust, vibration, noise and stone chipping. Therefore, when such a panel is replaced or repaired, apply undercoating to that part. Use an undercoating which is rust preventive, soundproof, vibration-proof, shock-resistant, adhesive, and durable.

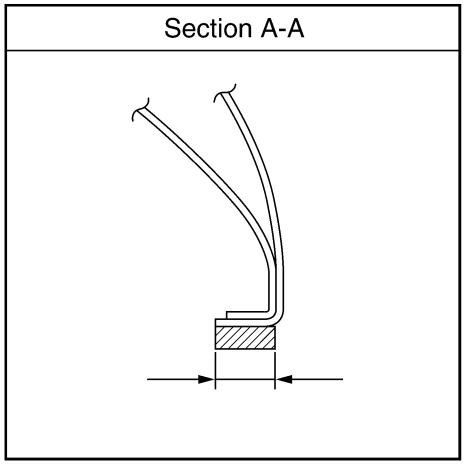
Precautions in undercoating

1. Do not apply undercoating to any place unless specified (such as the areas above the muffler and three way catalyst which are subjected to heat).
2. Do not undercoat the exhaust pipe or other parts which become hot.
3. Do not undercoat rotating parts.
4. Apply bitumen wax after applying undercoating.
5. After putting seal on the vehicle, put undercoating on it.

: Indicates undercoated portions.



: Indicates sealed portions.

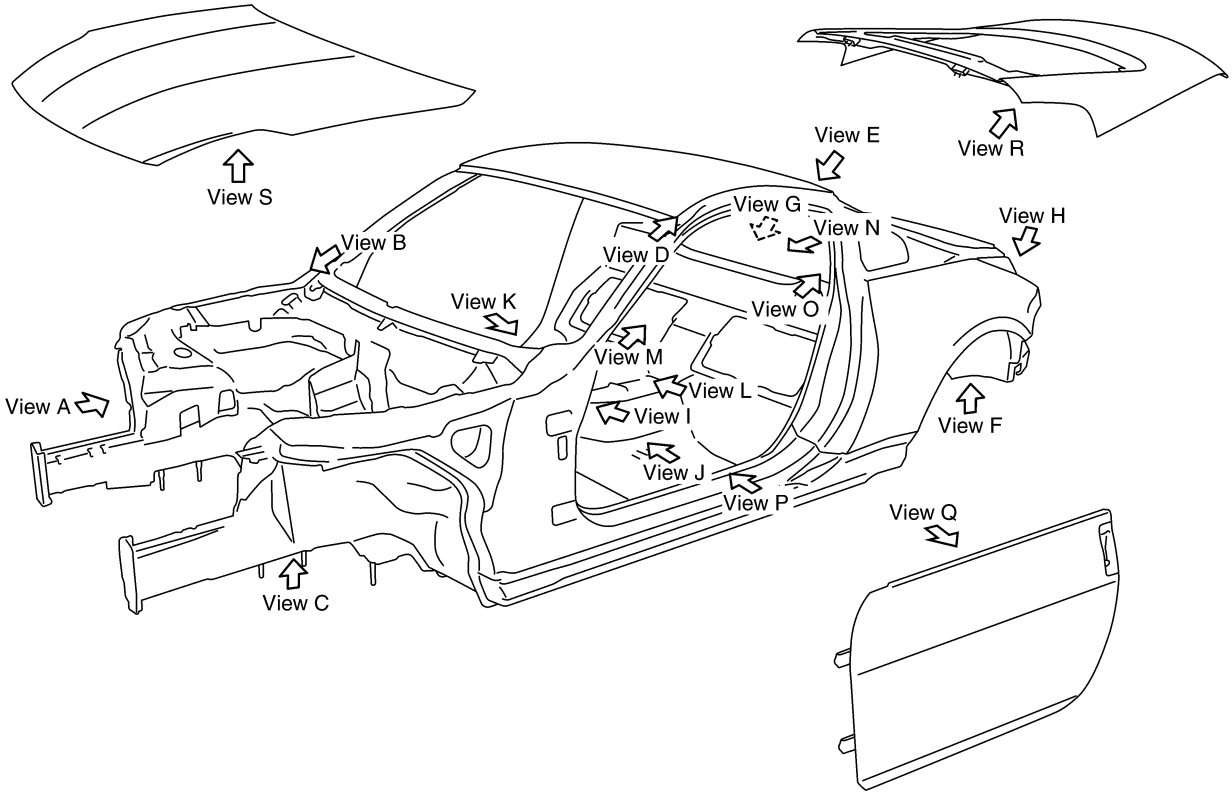


SIIA2298E

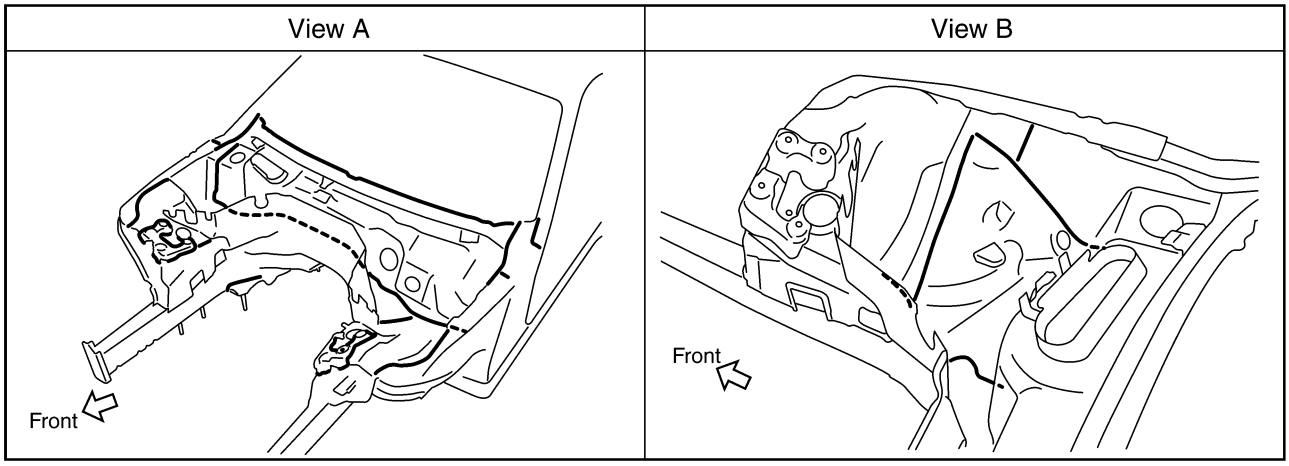
STONE GUARD COAT

To prevent damage caused by stones, the lower outer body panel (fender, door, etc.) have an additional layer of Stone Guard Coating over the ED primer coating. When replacing or repairing these panels, apply Stone Guard coating to the same portions as before. Use a coating which is rust preventive, durable, shock-resistant and has a long shelf life.

: Indicates stone guard coated portions.

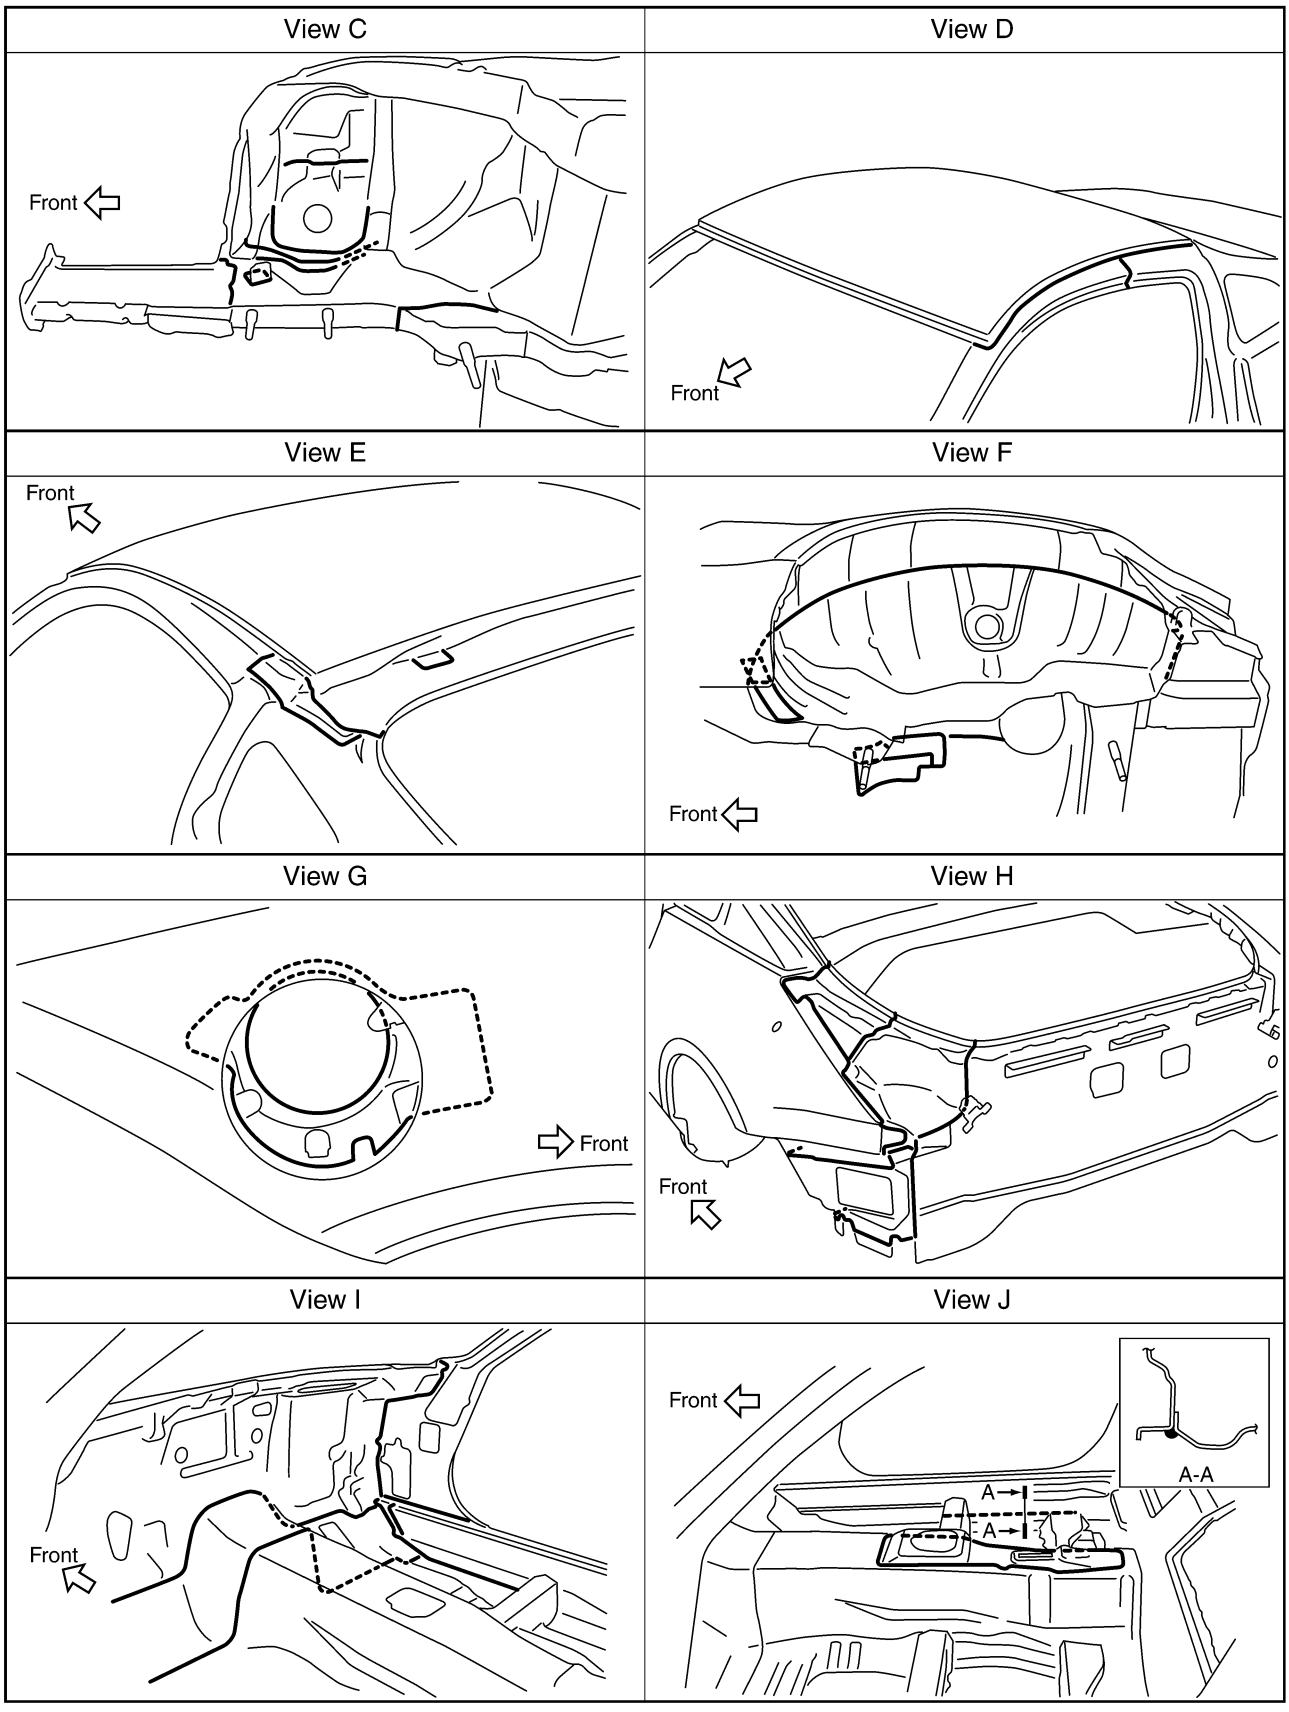


SIIA2299E



Body Sealing (Coupe)

NIS0003Y



DESCRIPTION

The following figure shows the areas which are sealed at the factory. Sealant which has been applied to these areas should be smooth and free from cuts or gaps. Care should be taken not to apply an excess amount of sealant and not to allow other unaffected parts to come into contact with the sealant.

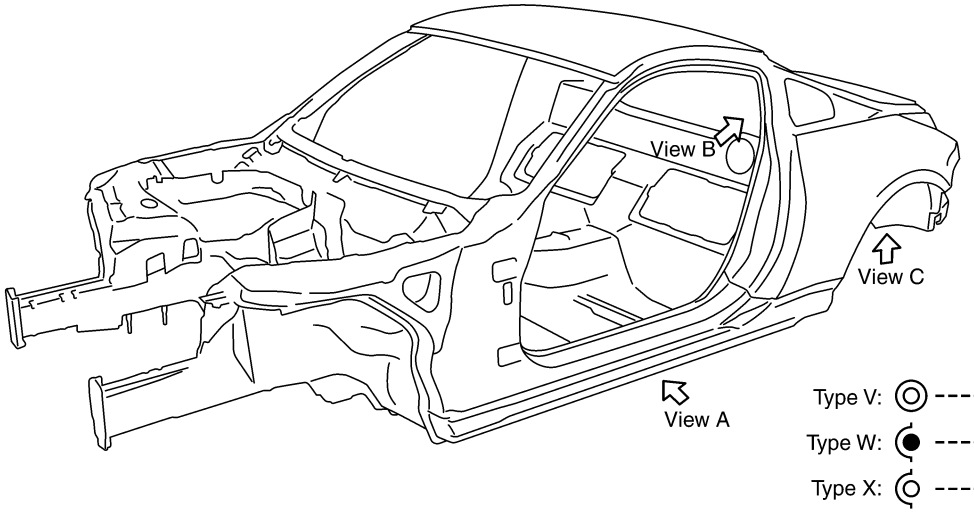
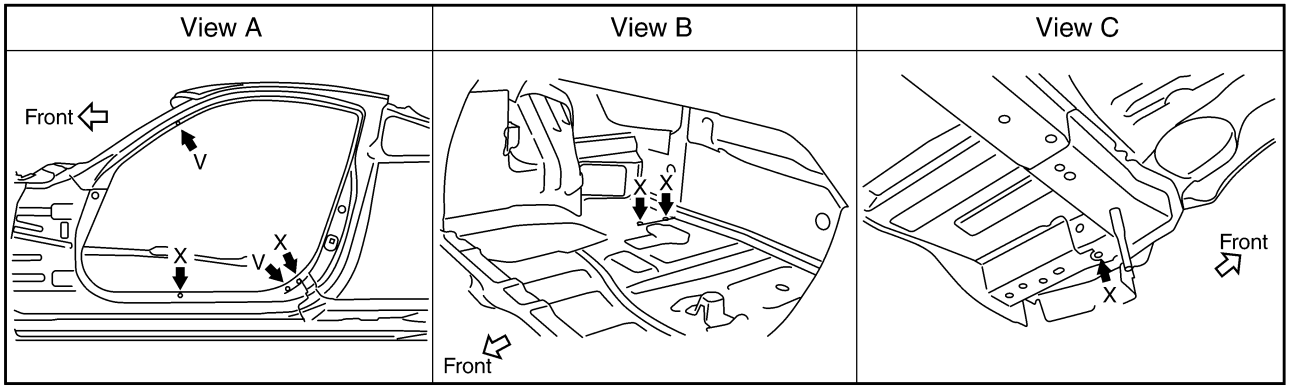
BODY CENTER MARKS (COUPE)

A mark has been placed on each part of the body to indicate the vehicle center. When repairing parts damaged by an accident which might affect the vehicle frame (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.

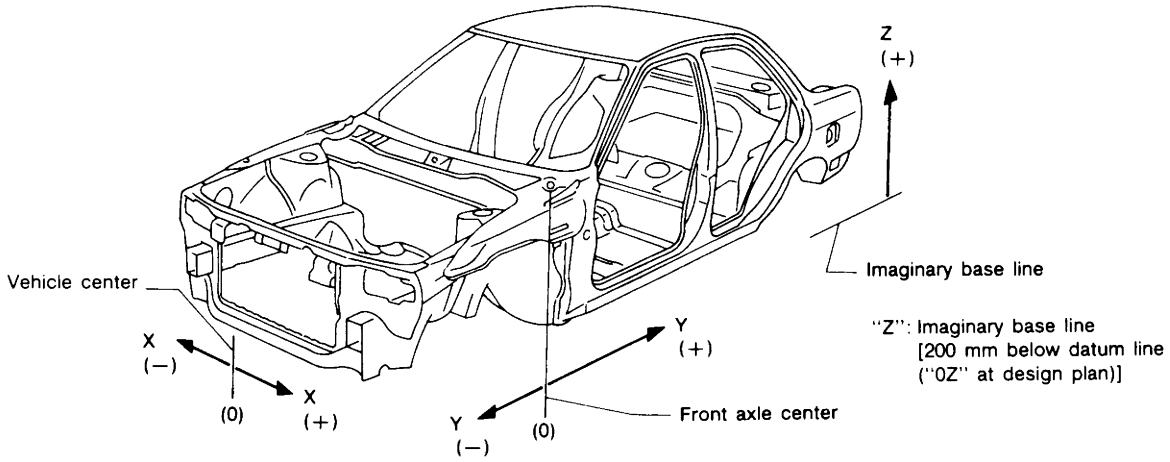




SIIA1974E

PANEL PARTS MATCHING MARKS (COUPE)

A mark has been placed on each body panel to indicate the parts matching positions. When repairing parts damaged by an accident which might affect the vehicle structure (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.



SIIA1981E

DESCRIPTION

- All dimensions indicated in the figures are actual.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (*) following the value at the measuring point indicates that the measuring point on the other side is symmetrically the same value.
- The coordinates of the measurement points are the distances measured from the standard line of ″X″, ″Y″ and ″Z″.

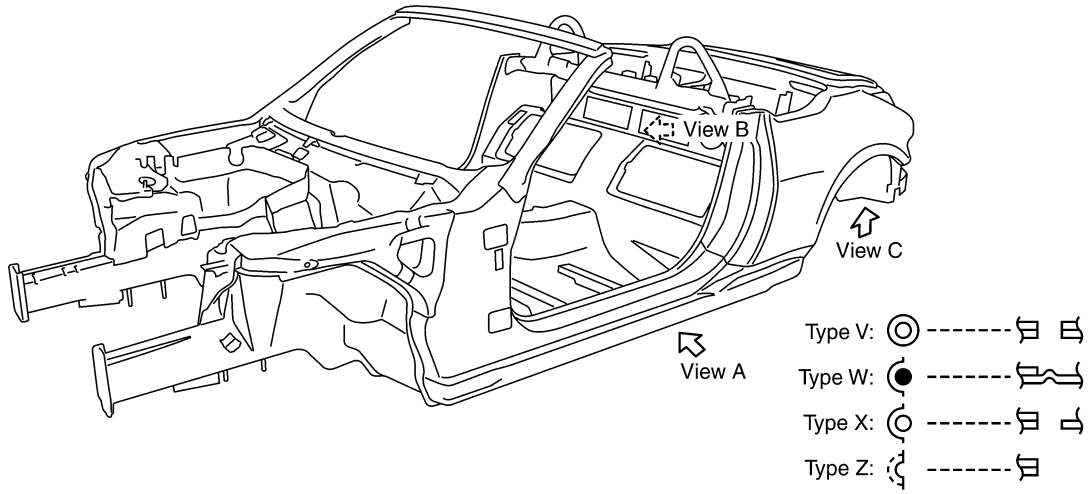
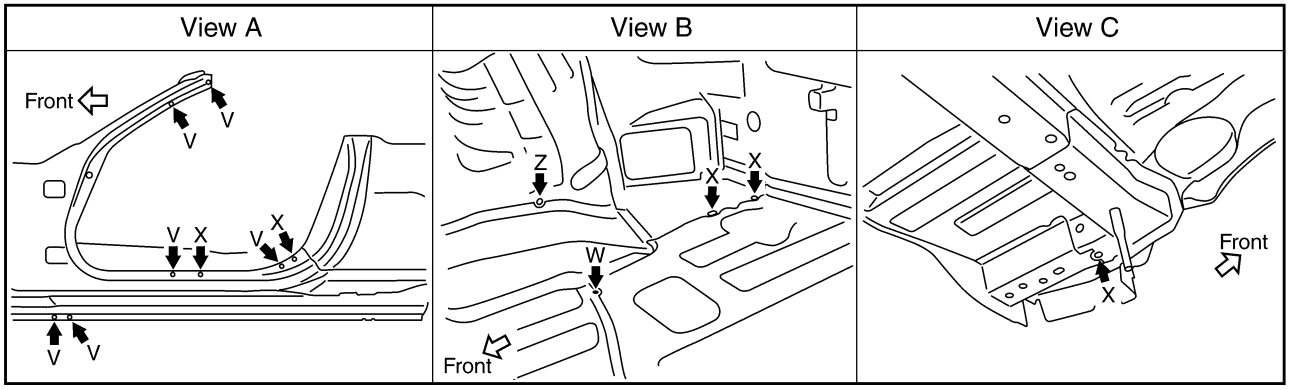
BODY CENTER MARKS (ROADSTER)

A mark has been placed on each part of the body to indicate the vehicle center. When repairing parts damaged by an accident which might affect the vehicle frame (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.

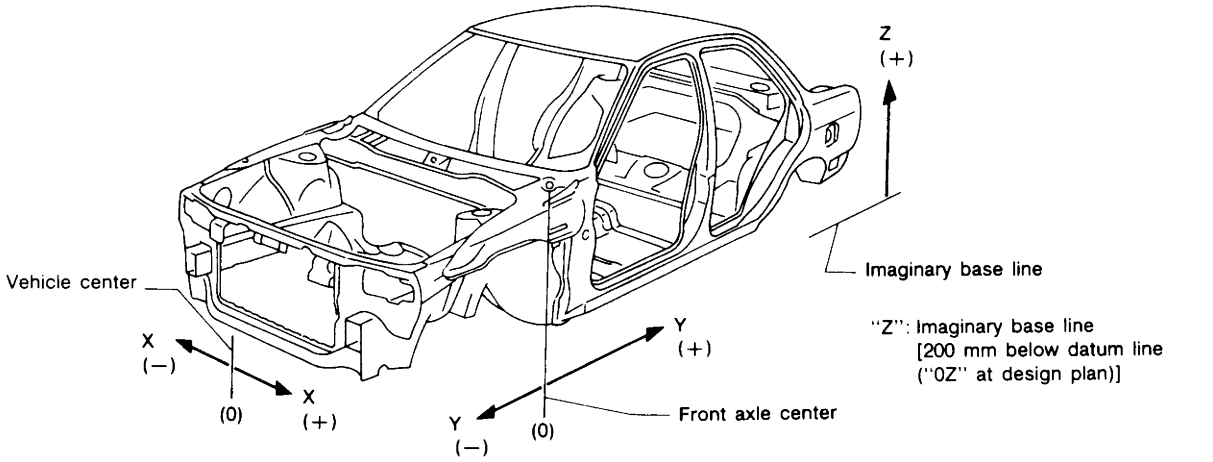




SIIA2304E

PANEL PARTS MATCHING MARKS (ROADSTER)

A mark has been placed on each body panel to indicate the parts matching positions. When repairing parts damaged by an accident which might affect the vehicle structure (members, pillars, etc.), more accurate and effective repair will be possible by using these marks together with body alignment specifications.



SIIA2305E

DESCRIPTION

- All dimensions indicated in the figures are actual.
- When using a tracking gauge, adjust both pointers to equal length. Then check the pointers and gauge itself to make sure there is no free play.
- When a measuring tape is used, check to be sure there is no elongation, twisting or bending.
- Measurements should be taken at the center of the mounting holes.
- An asterisk (*) following the value at the measuring point indicates that the measuring point on the other side is symmetrically the same value.
- The coordinates of the measurement points are the distances measured from the standard line of ″X″, ″Y″ and ″Z″.

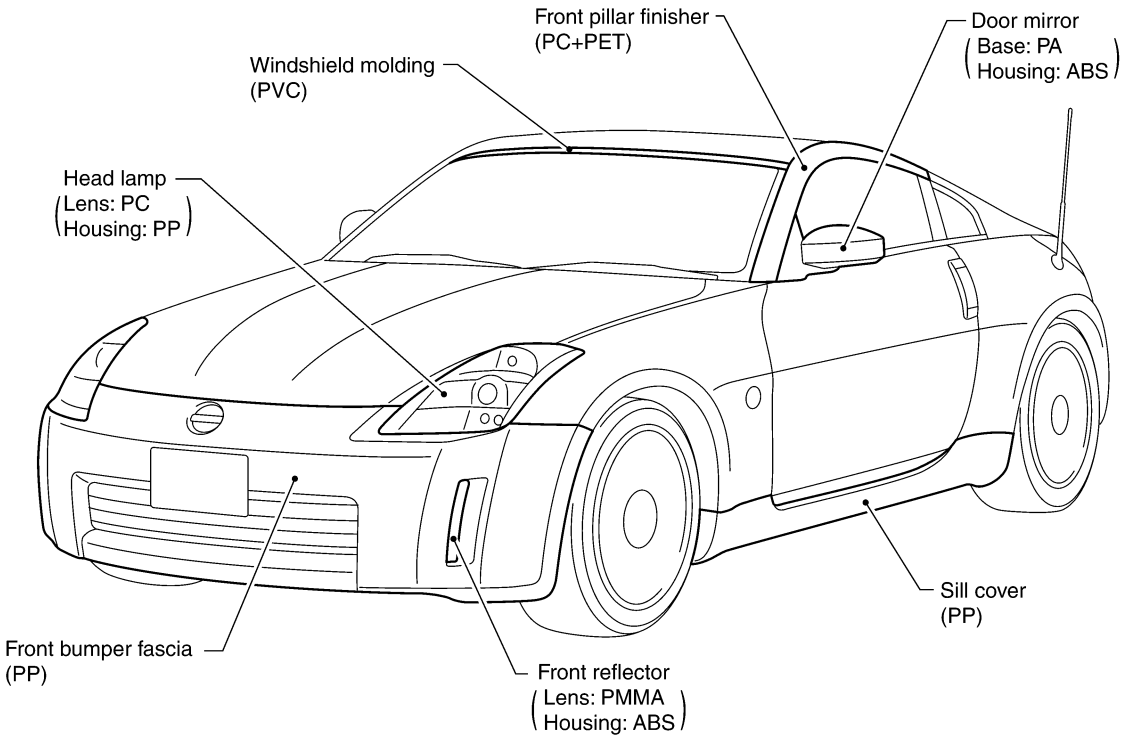
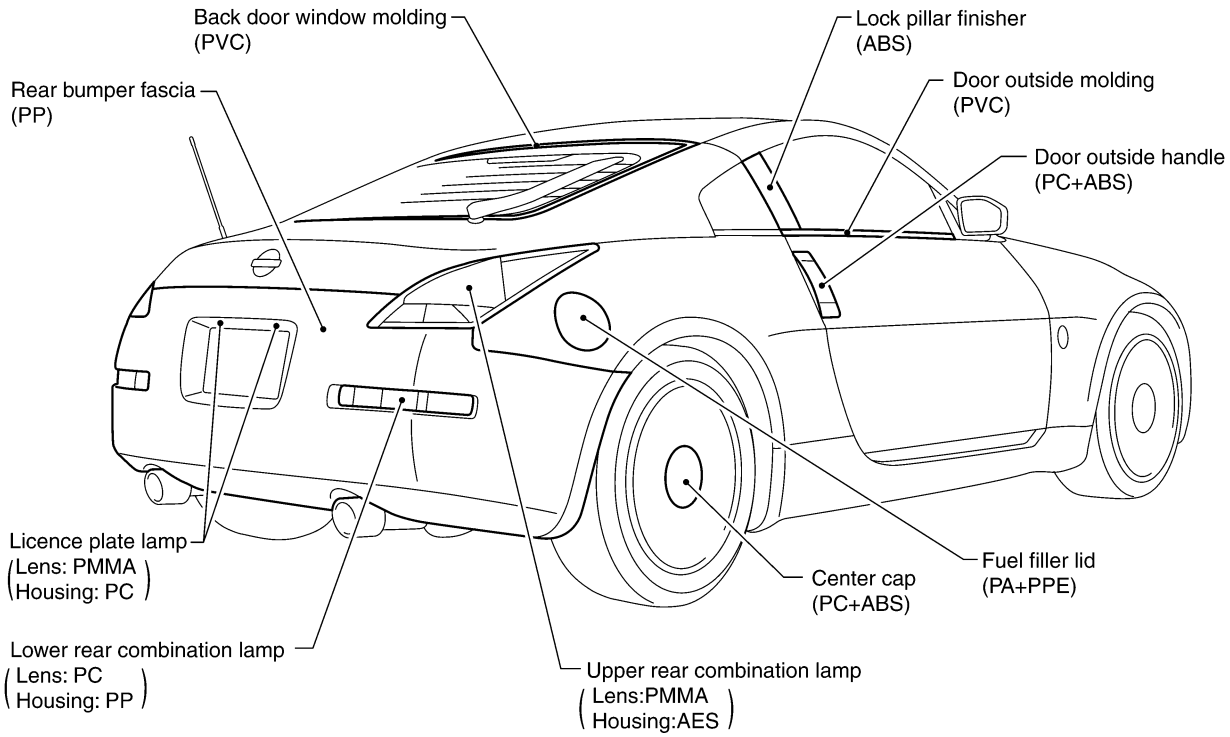
Handling Precautions For Plastics (Coupe)

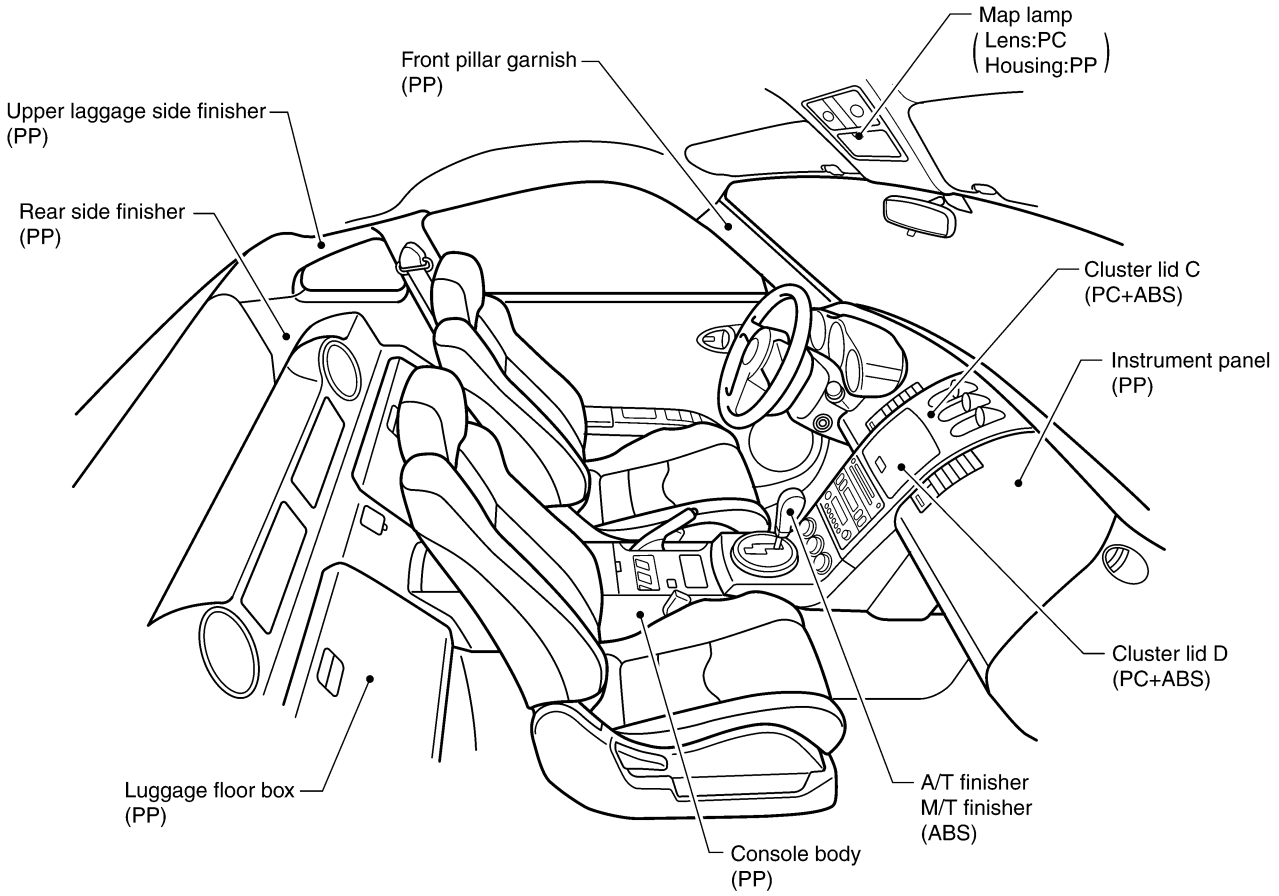


NIS00044



HANDLING PRECAUTIONS FOR PLASTICS

Abbre-viation	Material name	Heat resisting temperature °C(°F)	Resistance to gasoline and solvents	Other cautions
PE	Polyethylene	60(140)	Gasoline and most solvents are harmless if applied for a very short time (wipe up quickly).	Flammable
PVC	Poly Vinyl Chloride	80(176)	Same as above.	Poison gas is emitted when burned.
EPM/ EPDM	Ethylene Propylene (Diene) copolymer	80(176)	Same as above.	Flammable
PP	Polypropylene	90(194)	Same as above.	Flammable, avoid battery acid.
UP	Unsaturated Polyester	90(194)	Same as above.	Flammable
PS	Polystyrene	80(176)	Avoid solvents.	Flammable
ABS	Acrylonitrile Butadiene Styrene	80(176)	Avoid gasoline and solvents.	
AES	Acrylonitrile Ethylene Styrene	80(176)	Same as above.	
PMMA	Poly Methyl Methacrylate	85(185)	Same as above.	
EVAC	Ethylene Vinyl Acetate	90(194)	Same as above.	
ASA	Acrylonitrile Styrene Acrylate	100(222)	Same as above.	Flammable
PPE	Poly Phenylene Ether	110(230)	Same as above.	
PC	Polycarbonate	120(248)	Same as above.	
PAR	Polyarylate	180(356)	Same as above.	
PUR	Polyurethane	90(194)	Same as above.	
POM	Poly Oxymethylene	120(248)	Same as above.	Avoid battery acid.
PBT+ PC	Poly Butylene Terephthalate + Polycarbonate	120(248)	Same as above.	Flammable
PA	Polyamide	140(284)	Same as above.	Avoid immersing in water.
PBT	Poly Butylene Terephthalate	140(284)	Same as above.	
PET	Polyester	180(356)	Same as above.	
PEI	Polyetherimide	200(392)	Same as above.	



1. When repairing and painting a portion of the body adjacent to plastic parts, consider their characteristics (influence of heat and solvent) and remove them if necessary or take suitable measures to protect them.
2. Plastic parts should be repaired and painted using methods suiting the materials' characteristics.

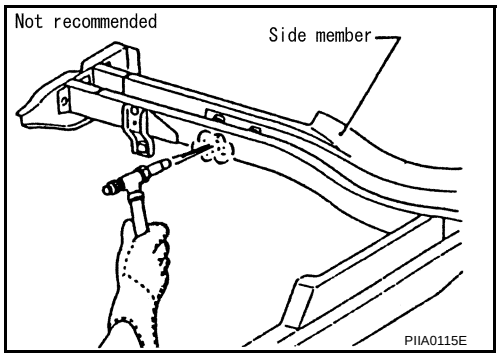
Precautions In Repairing High Strength Steel

NIS00046

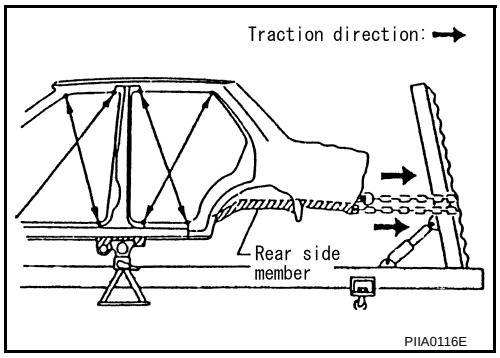
High strength steel is used for body panels in order to reduce vehicle weight.
Accordingly, precautions in repairing automotive bodies made of high strength steel are described below:

HIGH STRENGTH STEEL (HSS) USED IN NISSAN VEHICLES



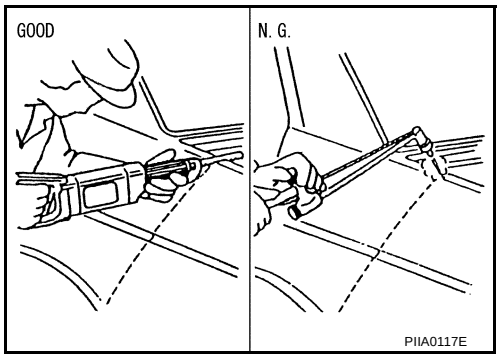
Tensile strength	Nissan/Infiniti designation	Major applicable parts
373 N/mm^2 (38kg/mm^2 ,54klb/sq in)	SP130	● Front & rear side member assembly ● Hoodledge assembly ● Upper dash ● Body side ● Other reinforcements
785-981 N/mm^2 (80-100kg/mm^2 ,114-142klb/sq in)	SP150	● Front door guard beam

SP130 is the most commonly used HSS.

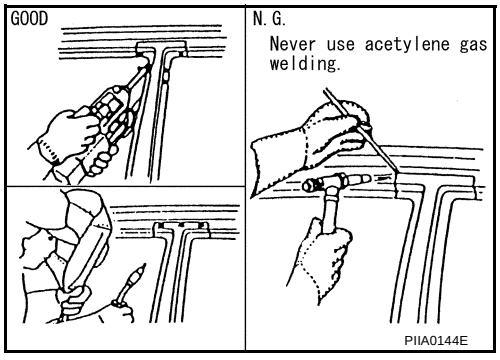


Read the following precautions when repairing HSS:

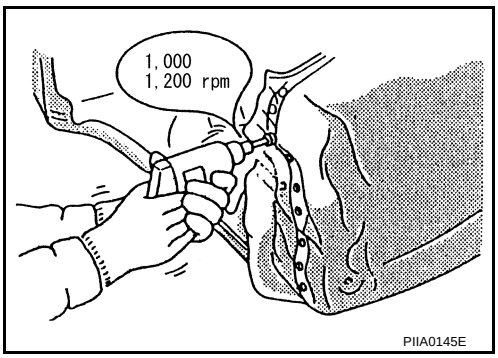
1. Additional points to consider



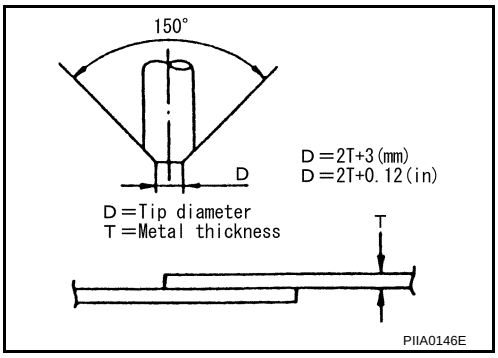
- The repair of reinforcements (such as side members) by heating is not recommended since it may weaken the component. When heating is unavoidable, do not heat HSS parts above 550°C (1,022°F).
  Verify heating temperature with a thermometer.
  (Crayon-type and other similar type thermometer are appropriate.)



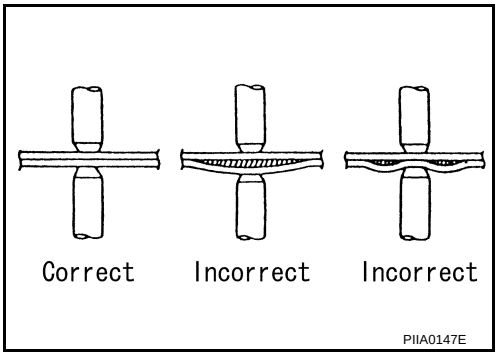
- When straightening body panels, use caution in pulling any HSS panel. Because HSS is very strong, pulling may cause deformation in adjacent portions of the body. In this case, increase the number of measuring points, and carefully pull the HSS panel.



- When cutting HSS panels, avoid gas (torch) cutting if possible. Instead, use a saw to avoid weakening surrounding areas due to heat. If gas (torch) cutting is unavoidable, allow a minimum margin of 50 mm (1.97in).



- When welding HSS panels, use spot welding whenever possible in order to minimize weakening surrounding areas due to heat.
  If spot welding is impossible, use M.I.G. welding. Do not use gas (torch) welding because it is inferior in welding strength.



- The spot weld on HSS panels is harder than that of an ordinary steel panel.
  Therefore, when cutting spot welds on a HSS panel, use a low speed high torque drill (1,000 to 1,200 rpm) to increase drill bit durability and facilitate the operation.

2. Precautions in spot welding HSS
   This work should be performed under standard working conditions. Always note the following when spot welding HSS:
   - The electrode tip diameter must be sized properly according to the metal thickness.

   - The panel surfaces must fit flush to each other, leaving no gaps.

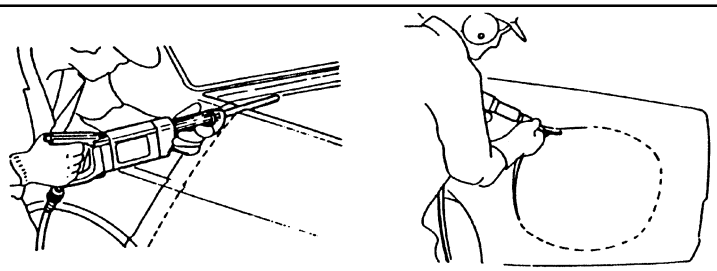
   - Follow the specifications for the proper welding pitch.

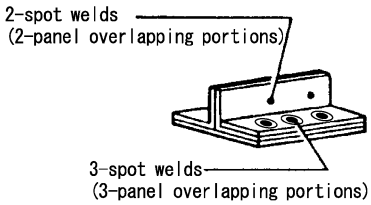
Unit:mm

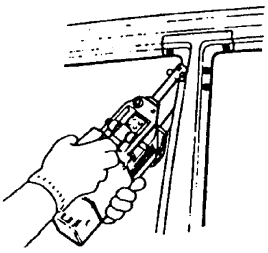
Thickness (t)	Minimum pitch (l)
0.6 (0.024)	10 (0.39) or over
0.8 (0.031)	12 (0.47) or over
1.0 (0.039)	18 (0.71) or over
1.2 (0.047)	20 (0.79) or over
1.6 (0.063)	27 (1.06) or over
1.8 (0.071)	31 (1.22) or over

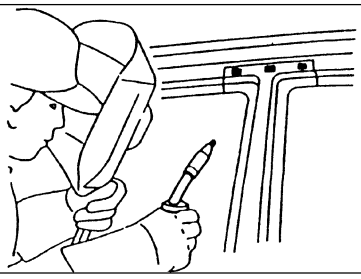
Replacement Operations (Coupe)

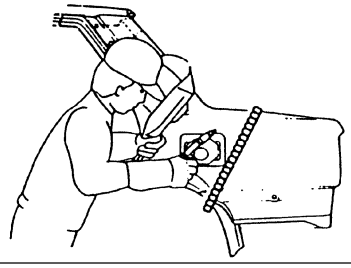
NIS00047

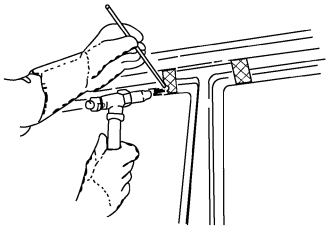


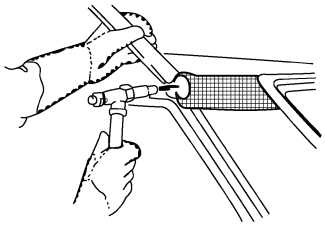


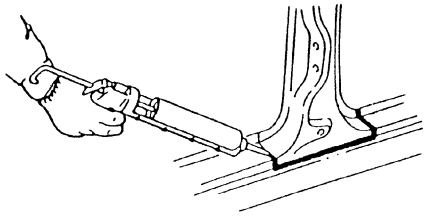








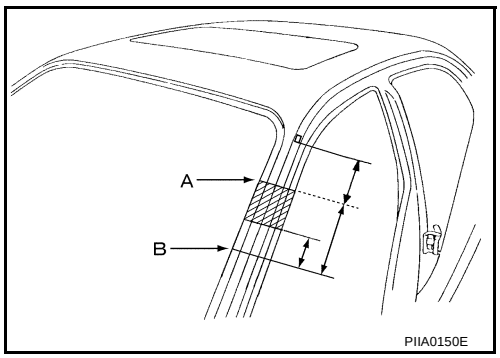




DESCRIPTION

This section is prepared for technicians who have attained a high level of skill and experience in repairing collision-damaged vehicles and also use modern service tools and equipment. Persons unfamiliar with body repair techniques should not attempt to repair collision-damaged vehicles by using this section.

Technicians are also encouraged to read Body Repair Manual (Fundamentals) in order to ensure that the original functions and quality of the vehicle can be maintained. The Body Repair Manual (Fundamentals) contains additional information, including cautions and warning, that are not including in this manual. Technicians should refer to both manuals to ensure proper repairs.



Please note that these information are prepared for worldwide usage, and as such, certain procedures might not apply in some regions or countries.

The symbols used in this section for cutting and welding / brazing operations are shown below.

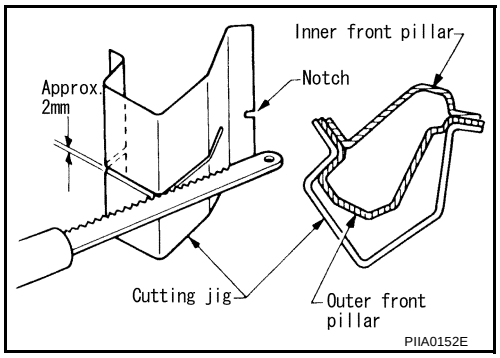
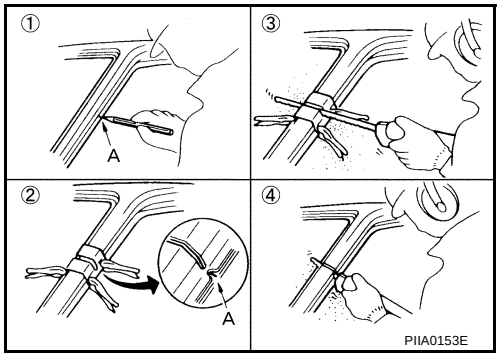
PIIA0149E



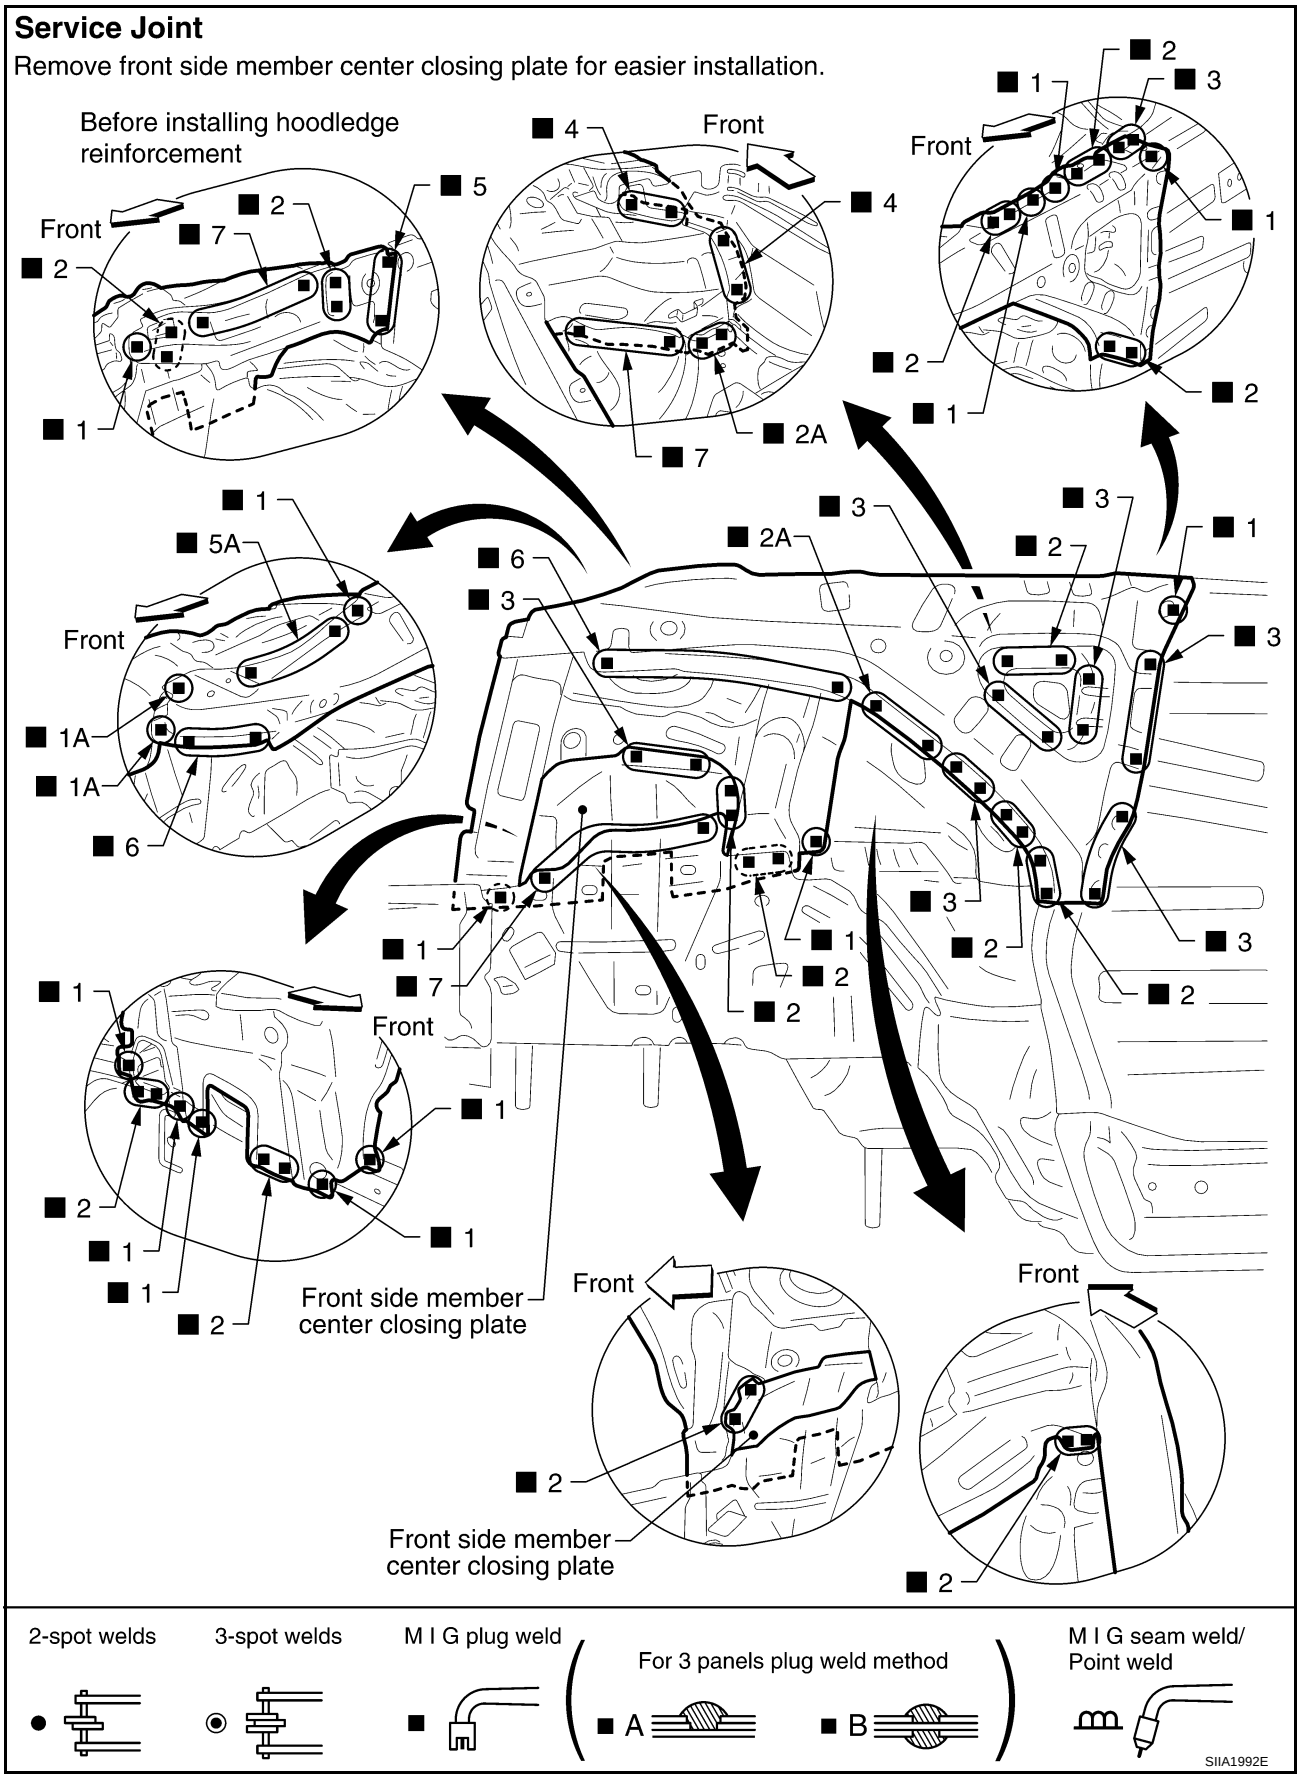
- Front pillar butt joint can be determined anywhere within shaded area as shown in the figure. The best location for the butt joint is at position A due to the construction of the vehicle. Refer to the front pillar section.

- Determine cutting position and record distance from the locating indent. Use this distance when cutting the service part. Cut outer front pillar over 60 mm above inner front pillar cut position.



- Prepare a cutting jig to make outer pillar easier to cut. Also, this will permit service part to be accurately cut at joint position.

- An example of cutting operation using a cutting jig is as follows.



1. Mark cutting lines.
   A: Cut position of outer pillar
   B: Cut position of inner pillar
2. Align cutting line with notch on jig. Clamp jig to pillar.
3. Cut outer pillar along groove of jig. (At position A)
4. Remove jig and cut remaining portions.
5. Cut inner pillar at position B in same manner.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

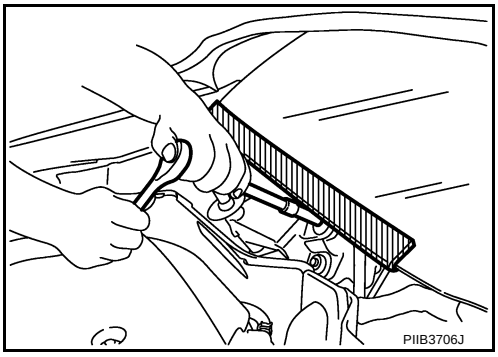
NFS00001

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



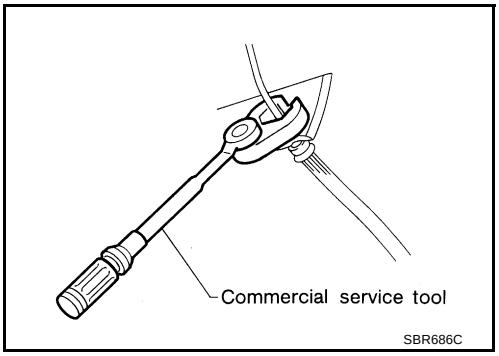
NFS00002

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

NFS000HT

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



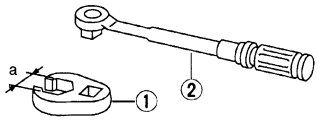
Precautions for Brake System

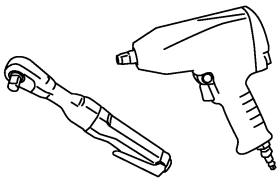
NFS00003

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "Fluids and Lubricants" .
- Do not reuse drained brake fluid.
- Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.
- To clean or wash all parts of master cylinder and disc brake caliper, use clean brake fluid.
- Do not use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.

- Use flare nut crowfoot and torque wrench when removing and installing brake tube.
- When installing brake piping, be sure to check torque.
- Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or the battery negative terminal.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.
  Refer to BR-38, "Brake Burnishing Procedure" .

WARNING:





Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

PREPARATION

PFP:00002

Commercial Service Tools

NFS00004

Tool name		Description
1. Flare nut crowfoot a:10 mm (0.39 in)/12mm(0.47 in) 2. Torque wrench	 S-NT360	Installing each brake piping
Power tool	 PBIC0190E	Loosening bolts and nuts
Pin punch Tip diameter: 4 mm (0.16 in) dia	 ZZA0515D	Removing and installing reservoir tank pin

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

NFS00005

Use the chart below to help you find the cause of the symptom. If necessary, repair or replace these parts.

BRAKE PEDAL

PFP:46501

Inspection and Adjustment

NFS00006

PLAY AND CLEARANCE BETWEEN THE BRAKE PEDAL AND FLOOR PANEL WITH PEDAL DEPRESSED

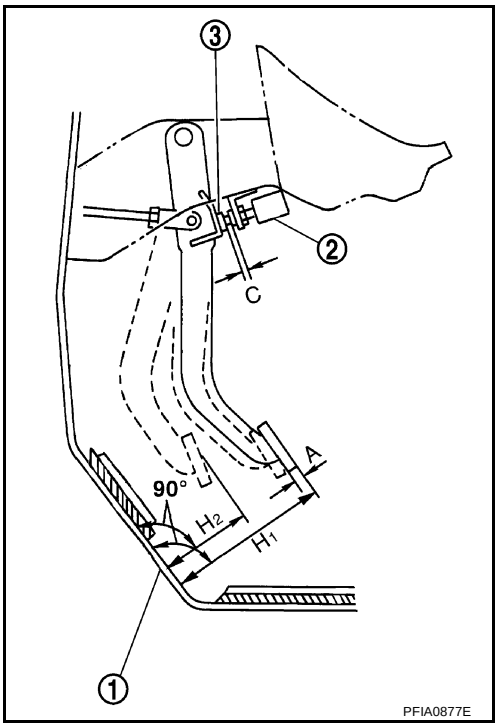
1. Check the brake pedal free height from the dash lower panel (1).
2. Adjust the height referring to the following specifications.

Brake pedal height "H_1 " (from dash lower panel top surface)

M/T models : 153.2 – 163.2 mm (6.03 – 6.43 in)

A/T models : 161.5 – 171.5 mm (6.36 – 6.75 in)

Depressed pedal height "H_2 " [under a force of 490 N (50 kg, 110 lb) with the engine running]



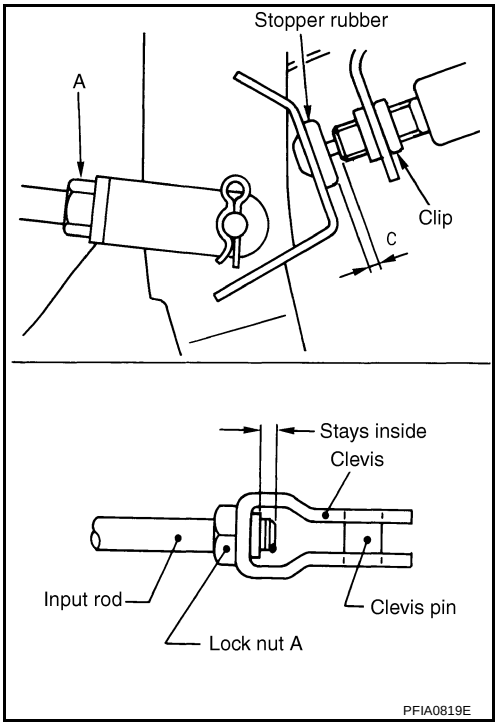
M/T models : More than 90 mm (3.54 in)

A/T models : More than 95 mm (3.74 in)

Clearance "C " between threaded end of the stop lamp switch/ASCD cancel switch (2) and stopper rubber (3).

: 0.74 – 1.96 mm (0.0291 – 0.0772 in)

Pedal play "A" : 3 – 11 mm (0.12 – 0.43 in)



ADJUSTMENT

1. Loosen the stop lamp switch and ASCD cancel switch by rotating it counterclockwise by 45°.
2. Loosen the lock nut (A) on the input rod, then rotate the input rod to set the pedal to the specified height, and tighten the lock nut (A) to the specified torque. Refer to BR-23, "Components" .

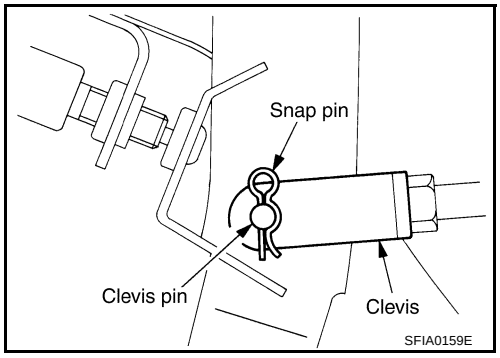
   CAUTION:
   Check that the threaded end of the input rod stays inside the clevis.
3. With the pedal pulled and held by hand, press the stop lamp switch and ASCD cancel switch until its threaded end contacts the stopper rubber.
4. With the threaded end of the stop lamp switch contacting the stopper rubber and ASCD cancel switch, rotate the switch clockwise by 45° to secure.

   CAUTION:
   Make sure that the clearance "C" between the stopper rubber and threaded end of the stop lamp switch and ASCD cancel switch is within the standard.
5. Check the pedal play.

   CAUTION:
   Make sure that the stop lamps go off when the pedal is released.
6. Start the engine to check the brake pedal's depressed height.

Components

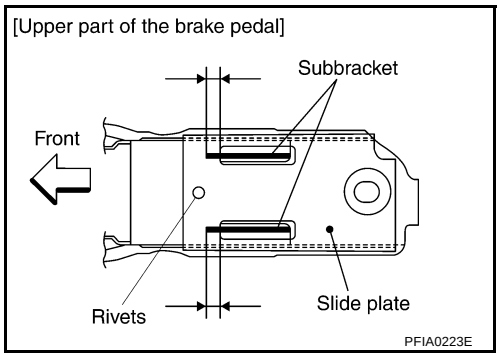
NFS000IF



1. Clevis pin
2. Snap pin
3. Stop lamp switch
4. Clip
5. Stopper rubber
6. Pedal pad
7. Brake pedal assembly
8. ASCD cancel switch

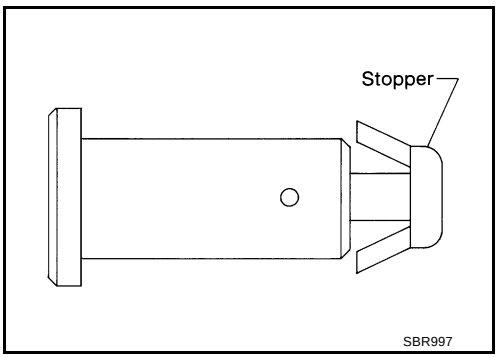
Removal and Installation

NFS00007



REMOVAL

1. Remove instrument driver lower panel. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the steering column. Refer to PS-10, "STEERING COLUMN" .
3. Remove the stop lamp switch and ASCD cancel switch from the pedal assembly.
4. Remove the snap pin and clevis pin from the brake booster clevis.
5. Remove the mounting nuts and bolt from the bracket, and remove the pedal assembly from the vehicle.



INSPECTION AFTER REMOVAL

- Check that the rivets in the upper part of the brake pedal are not deformed.
- Make sure the sub bracket and the slide plate are at least 5.0 – 6.0 mm (0.197 – 0.236 in) apart.

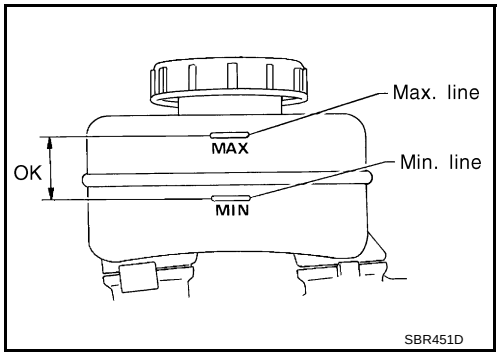
- Check the brake pedal for bend, damage, and cracks on the welded parts. Replace the applicable part if a failure is detected.
- Check the clevis pin and resin stopper for damage and deformation. If a failure is detected, replace the clevis pin.

INSTALLATION

Paying attention to the following items, install in the reverse order of removal.

- After installing the brake pedal assembly to the vehicle, adjust the brake pedal.

BRAKE FLUID



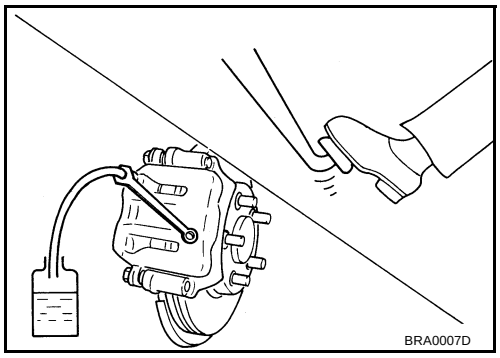
PFP:KN100

On-Vehicle Inspection

NFS00008

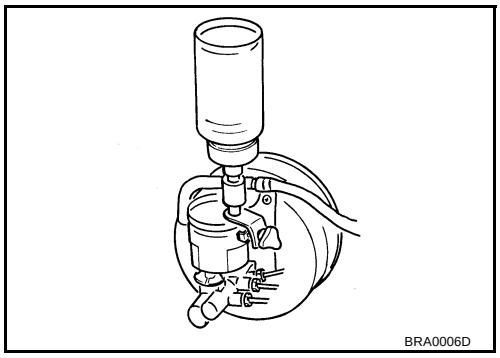
LEVEL CHECK

- Check that the fluid level in the reservoir tank is within the standard (between MAX and MIN lines).
- Visually check around the reservoir tank for fluid leaks.
- If fluid level is excessively low, check brake system for leaks.
- If warning lamp remains illuminated after parking lever is released, check brake system for fluid leakage.



Drain and Refill

NFS00009



CAUTION:

- **Refill with new brake fluid “DOT3”.**
- **Do not reuse drained brake fluid.**
- **Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.**

1. Connect a vinyl tube to bleed valve.
2. Depress the brake pedal, loosen the bleed valve, and gradually remove the brake fluid.
3. Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or battery negative terminal.

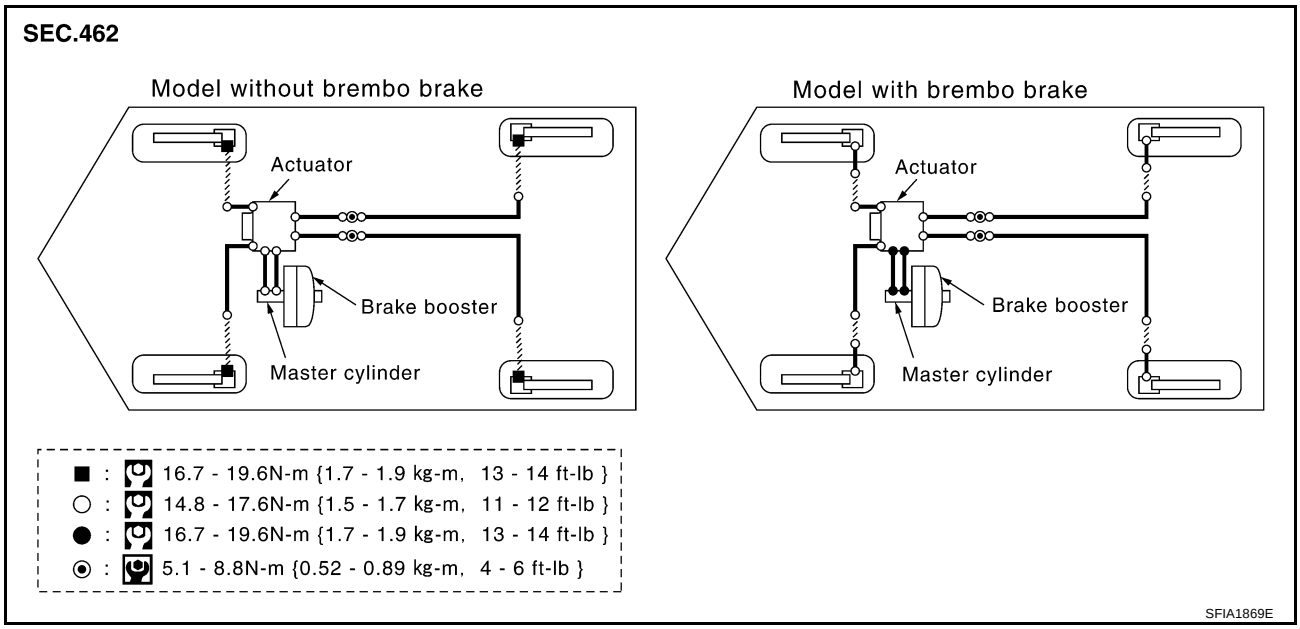
4. Make sure there is no foreign material in the reservoir tank, and refill with new brake fluid.
5. Rest foot on brake pedal. Loosen bleed valve. Slowly depress pedal until it stops. Tighten bleed valve. Release brake pedal. Repeat this process a few times, then pause to add new brake fluid to master cylinder. Continue until new brake fluid flows out. Bleed Air. Refer to BR-11, "Bleeding Brake System" .

Bleeding Brake System

NFS0000A

CAUTION:

While bleeding, pay attention to master cylinder fluid level.



1. Before working, turn the ignition switch OFF and disconnect the connectors of ABS actuator and control unit or battery negative terminal.
2. Connect a vinyl tube to the rear right bleed valve.
3. Fully depress brake pedal 4 to 5 times.
4. With the brake pedal depressed, loosen the bleed valve to let the air out, and then tighten it immediately.
5. Repeat steps 3, 4 until no more air comes out.
6. Tighten the bleed valve to the specified torque. Refer to BR-27, "Components" (Front) and BR-40, "Components" (Rear).
7. In steps 2 to 6 below, with the master cylinder reservoir tank filled at least half way, bleed air from the front left, rear left, and front right tires, in that order.

BRAKE TUBE AND HOSE

PFP:46300

Hydraulic Circuit

NFS0000B

CAUTION:

- **Make sure it does not twist or break when being attached.**
- **Make sure there is no interference with other parts when turning steering both clockwise and counterclockwise.**
- **The brake tube is an important safety part. If a brake fluid leak is detected, always disassemble the parts. Replace applicable part with a new one, if necessary.**
- **Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.**
- **Do not bend or twist brake hose sharply, or strongly pull it.**
- **When removing components, cover connections so that no dirt, dust, or other foreign matter gets in.**
- **Refill with new brake fluid " DOT 3 ".**
- **Do not reuse drained brake fluid.**

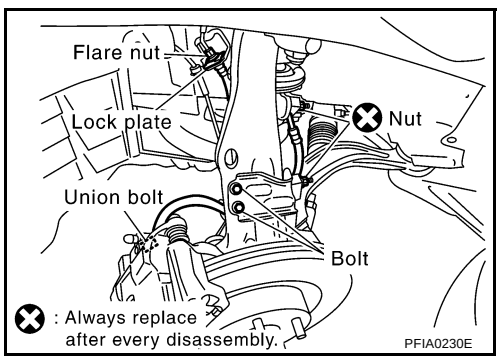
Removal and Installation of the Front Brake Tube and Brake Hose (Other than Brembo Calipers)

NFS0000C

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove brake tube from brake hose.
3. Remove union bolt and remove the brake hose from the caliper assembly.
4. Remove the lock plate and nut, and remove the brake hose from the vehicle.

INSTALLATION



1. Attach the brake hose to the vehicle and tighten the nut to the specified torque.

   : 19.6 – 23.5 N·m (2.0 – 2.3 kg-m, 15 – 17 ft-lb)

   NOTE:
   When removed bracket attaching the bolt is tightened with provisions torque.

   : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

2. Install brake hose by aligning with the protrusion on caliper assembly, and tighten union bolts to the specified torque.

: 16.7 – 19.6 N·m (1.7 – 1.9 kg-m, 13 – 14 ft-lb)

CAUTION:
Do not reuse the copper washer.

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure it to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque.

: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

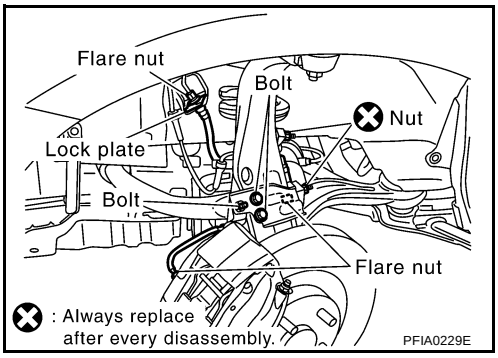
Removal and Installation of the Front Brake Tube and Brake Hose (With Brembo Calipers)

NFS0000D

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove the brake tube from the brake hose.
3. Using a flare nut wrench, remove the caliper-side brake tube from the brake hose.
4. Remove the lock plate and nut, and remove the brake hose from the vehicle.

INSTALLATION



1. Attach the brake hose to the vehicle and tighten the nut to the specified torque.

Nut : 19.6 – 23.5 N·m (2.0 – 2.3 kg-m, 15 – 17 ft-lb)

Bolt : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

2. Attach the caliper-side brake tube to the brake hose, partially tighten the flare nut as far as possible by hand, then tighten it to the specified torque with flare nut crowfoot and torque wrench.

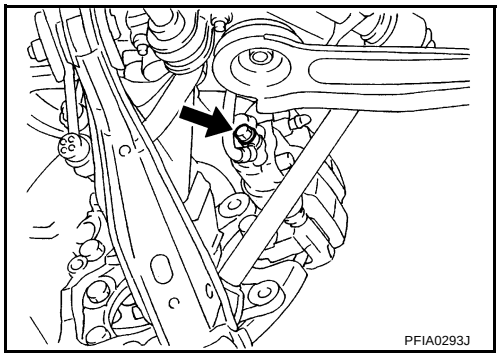
: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque with flare nut torque.

: 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Removal and Installation of the Rear Brake Tube and Brake Hose (Other than Brembo Calipers)



NFS0000E

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove brake tube from brake hose.
3. Remove union bolts, and then remove brake hose from the caliper assembly.
4. Remove the lock plate and then remove the brake hose from the vehicle.

INSTALLATION

1. Attach the brake hose L-pin to the caliper assembly positioning hole and tighten the union bolt to the specified torque.

: **16.7 – 19.6 N·m (1.7 – 1.9 kg-m, 13 – 14 ft-lb)**

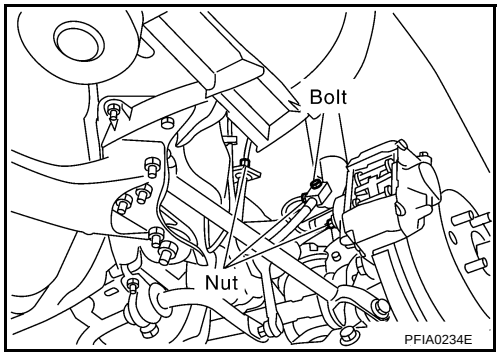
CAUTION:
Do not reuse the copper washer.

2. After securing the brake hose to the vehicle with the lock plate, partially tighten the brake tube flare nut as far as possible by hand and then tighten to the specified torque with flare nut crow-foot and torque wrench.

: **14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)**

3. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Removal and Installation of the Rear Brake Tube and Brake Hose (With Brembo Calipers)



NFS0000F

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Using a flare nut wrench, remove the brake tube from the brake hose.
3. Using a flare nut wrench, remove the caliper-side brake tube from the brake hose.
4. Remove the lock plate and bolt, and remove the brake hose from the vehicle.

INSTALLATION

1. Attach the brake hose to the vehicle and tighten the bolt to the specified torque.

: **19.6 – 22.5 N·m (2.0 – 2.2 kg-m, 15 – 16 ft-lb)**

2. Attach the caliper-side brake tube to brake hose, partially tighten the flare nut as far as possible by hand, then tighten it to the specified torque with flare nut crowfoot and torque wrench.

: **14.8 – 17.6 N·m (1.5 – 1.7kg-m, 11 – 12 ft-lb)**

3. Attach the brake hose to the brake tube, partially tighten the flare nut as far as possible by hand, then secure to the bracket with the lock plate.
4. Using a flare nut crowfoot and torque wrench, tighten the flare nut to the specified torque.

: **14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)**

5. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

Inspection after Installation

NFS0000G

CAUTION:
If a leak is detected at the connections, retighten it or, if necessary, replace the damaged part.

1. Check hose, tube, and connections for fluid leaks, damage, twist, deformation, contact with other parts, and loose connections.
2. While depressing pedal under a force of 785 N (80 kg, 177 lb) with engine running for approximately 5 seconds, check for fluid leakage from each part.

BRAKE MASTER CYLINDER

PFP:46010

On-Vehicle Inspection

NFS0000H

LEAK INSPECTION

- Check for leaking in the master cylinder installation surface, the reservoir tank installation surface, and the brake tube connections.

Removal and Installation

NFS0000I

CAUTION:

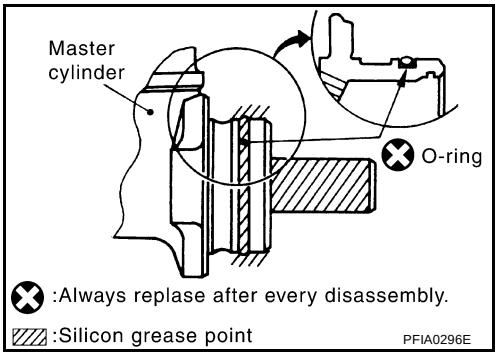
Do not let brake fluid come in contact with painted surfaces on the body. This might damage the paint, so if it does come in contact, immediately wipe area and wash off with water.

REMOVAL

1. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
2. Remove the fluid surface sensor harness connector.
3. Using a flare nut wrench, disconnect master cylinder assembly and brake tube.
4. Remove the master cylinder assembly nut and remove the master cylinder assembly from the vehicle. Refer to BR-24, "Removal and Installation" .

INSTALLATION

CAUTION:



- **Refill with new brake fluid “DOT3”.**
- **Do not reuse drained brake fluid.**

1. Attach the master cylinder assembly to the brake booster assembly and tighten the nut to the specified torque. BR-23, "Components" .

   CAUTION:

   Vehicles equipped with VDC require particular attention when conducting the following installation.

   - **Make sure the sliding surface of the primary piston rod is not damaged, and that no foreign matter become attached.**
   - **Do not reuse the O-ring on the rear end of the master cylinder as it is a non-reusable part.**
   - **Apply the silicon grease in the inner kit to and around the O-ring at the rear end of the master cylinder and to the inside of the booster.**

2. Install brake tube to master cylinder assembly and temporarily tighten flare nuts by hand.
3. Tighten the brake tube flare nut to the specified torque with flare nut crowfoot and torque wrench. Refer to BR-12, "Hydraulic Circuit" .
4. Refill brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

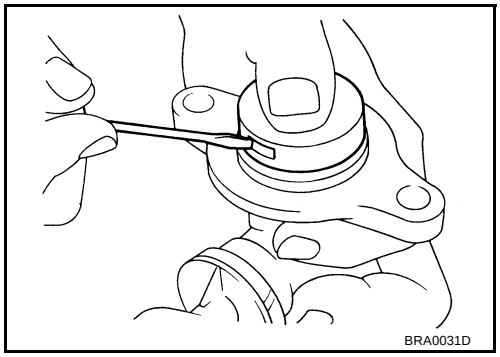
Components

NFS0000J

1. Reservoir tank
2. Reservoir cap
3. Oil strainer
4. Pin
5. Cylinder body
6. Piston stopper
7. Grommet
8. Secondary piston assembly
9. Primary piston assembly
10. O-ring
11. Snap ring
12. Guide assembly
13. Plate
14. Stopper cap
15. Primary piston assembly
16. Secondary piston assembly

Disassembly and Assembly

NFS0000K

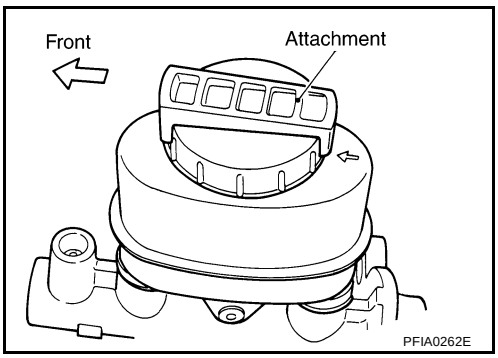


MODELS WITHOUT VDC

Disassembly

CAUTION:

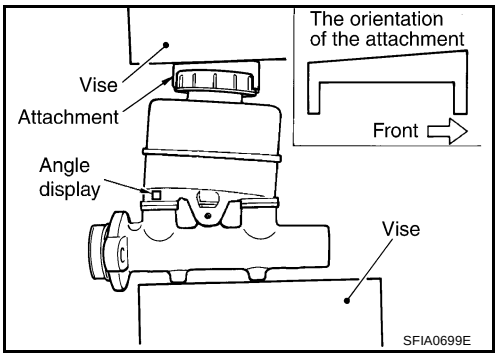
Only remove the reservoir tank when absolutely necessary.



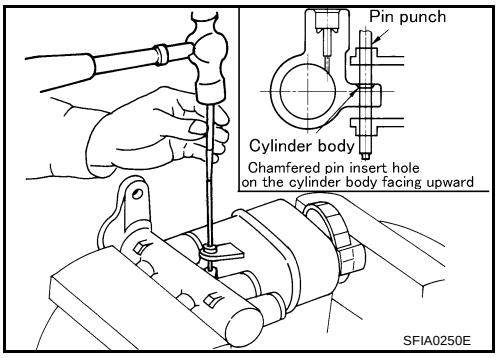
1. Using a flat-bladed screwdriver as shown in the figure, lift up the tabs on the stopper cap and remove it from the master cylinder. The piston inside the master cylinder might pop out when this is done, so hold the stopper cap down at the same time.

2. Attach the attachment in the inner kit to the reservoir cap as shown in the figure.

CAUTION:

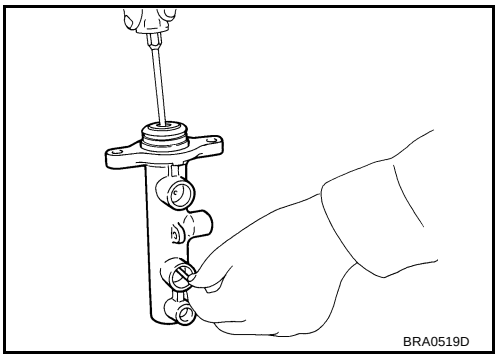


When attaching the attachment to the reservoir cap, make sure it is pointing in the right direction.

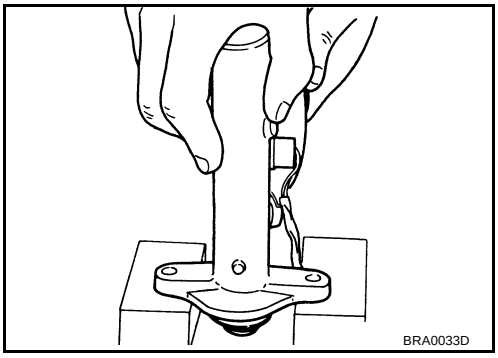


3. Place the side of the cylinder body with chamfering around the pin insertion hole facing up, and secure the master cylinder assembly with a vise.

CAUTION:



- **Tighten without letting the pin securing the reservoir tank and cylinder body come in contact with the pin insertion hole of the reservoir tank.**
- **When securing the master cylinder assembly with the vise, be sure not to over-tighten.**
- **When securing in a vise, use copper plates or cloth to protect the flange.**



4. Using a pin punch [commercial service tool: diameter approx. 4 mm (0.16 in)], remove mounting pin on the reservoir tank.
5. Remove master cylinder assembly from the vise.
6. Remove reservoir tank and grommet from cylinder body.

7. Using a Phillips flat-bladed screwdriver, push in the primary piston and remove the piston stopper from the cylinder body secondary-side tank boss hole.
8. Carefully pull the primary piston assembly straight out to prevent cylinder inner wall from being damaged.

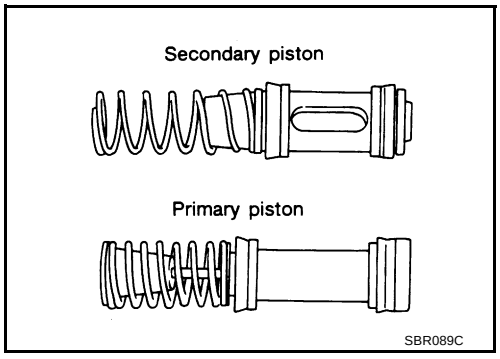
9. Tap flange using a soft block such as wood, and carefully pull the secondary piston assembly straight out to prevent cylinder inner wall from being damaged.

Inspection after Disassembly

Master cylinder

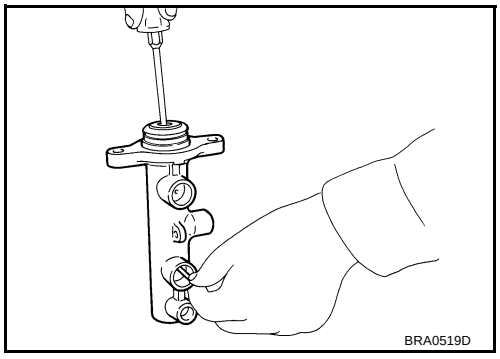
- Check that there is no damage, friction, rusting, or pinholes on the cylinder inner wall, and replace if there are any non-standard conditions.

Assembly



CAUTION:

- **Do not use mineral oils such as kerosene, gasoline during the cleaning and assembly process.**
- **Make sure there is no foreign matter such as dirt or dust attached to the inner cylinder walls, the piston, or the cap seal, and use care to avoid damaging parts with the assembly tools.**
- **Do not drop parts. If a part is dropped, do not use it.**



1. Apply brake fluid to cylinder inner wall body and contact surface of the piston assembly.
2. Insert the secondary piston assembly and primary piston assembly into cylinder body in this order.

   CAUTION:

   - **Do not reuse the primary and secondary piston assemblies.**
   - **Be sure to replace the assembly without disassembling the new inner kit.**
   - **Pay attention to the orientation of the piston cup, and insert straight to prevent the cup from being caught by cylinder inner wall.**

3. Perform a visual inspection of the secondary piston slit through the tank boss hole on the secondary-side of the cylinder body, and install the piston stopper.

4. Holding down the piston with the stopper cap, push the stopper cap tabs so they are firmly into the cylinder grooves, then attach the stopper cap.

   CAUTION:

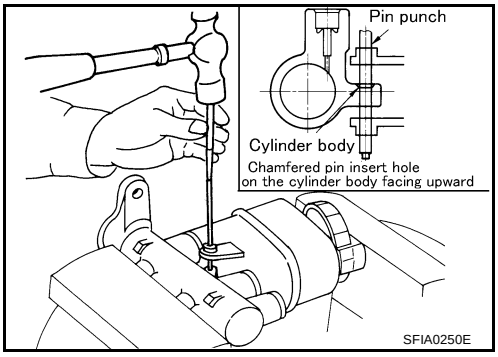
   Do not reuse the stopper cap.

5. Apply brake fluid the grommet and attach to the cylinder body.

   CAUTION:

   Do not reuse the grommet.

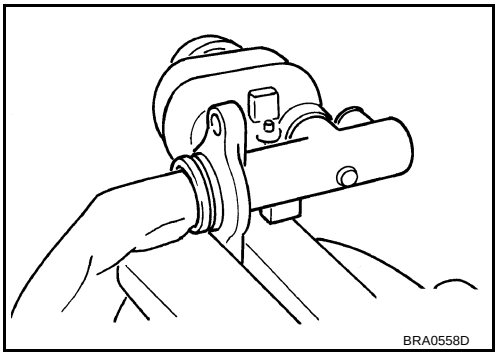
6. Attach the attachment in the inner kit to the reservoir cap as described in disassembly step 2.
7. Master cylinder assembly is fixed in the vise as described in disassembly step 3.



NOTE:
Attach the reservoir tank in the orientation shown in the figure.

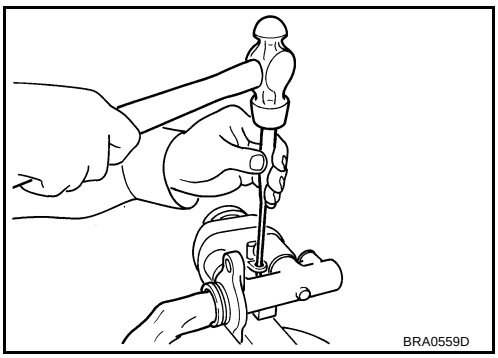
8. Using a pin punch [commercial service tool: diameter Approx. 4 mm (0.16 in)], attach the reservoir tank mounting pin so that the attachment side and the opposite side are identical.

CAUTION:
Do not reuse reservoir tank and mounting pin.



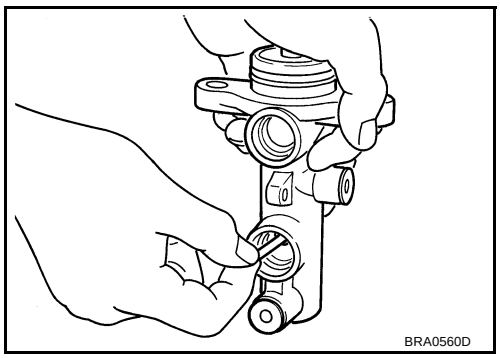
MODELS WITH VDC

Disassembly



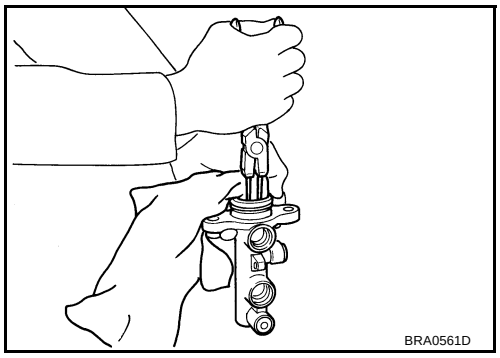
CAUTION:
- **While working, cover the primary piston rod with cloth to prevent it from being damaged.**
- **Only remove the reservoir tank when absolutely necessary.**

1. Place the side of the cylinder body with chamfering around the pin insertion hole up, and secure the cylinder body flange section with a vise as shown in the figure.

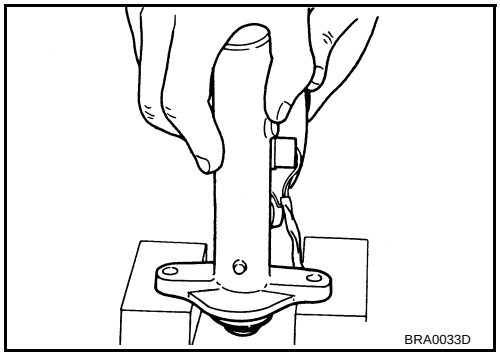


CAUTION:
When securing in a vise, use copper plates or cloth to protect the flange.

2. Using a pin punch [commercial service tool: diameter Approx 4 mm (0.16 in)], remove the reservoir tank mounting pin.
3. Remove master cylinder assembly from the vise.
4. Remove reservoir tank and grommet from cylinder body.



5. Push in the primary piston and remove the piston stopper from the cylinder body secondary-side tank boss hole.



6. Remove the snap ring while pushing the primary piston in to prevent the piston from popping out.
7. Holding the primary piston rod, pull the primary piston assembly, the plate, and the guide straight out.
8. Remove the plate and guide from the primary piston.

CAUTION:
When removing the plate from the primary piston rod, make sure the inside of the plate does not damage the rod.

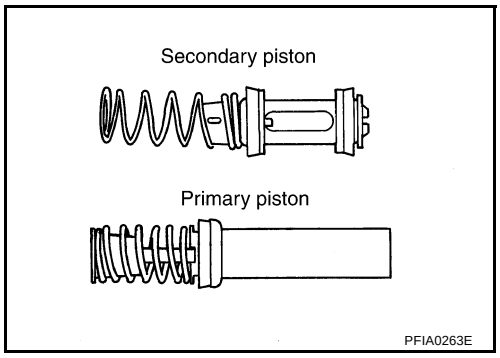
9. Tap flange using a soft block such as wood, and carefully pull the secondary piston assembly straight out to prevent cylinder inner wall from being damaged.

Inspection after Disassembly

Master cylinder

- Check that there is no damage, friction, rusting, or pinholes on the cylinder inner wall, and replace if there are any non-standard conditions.

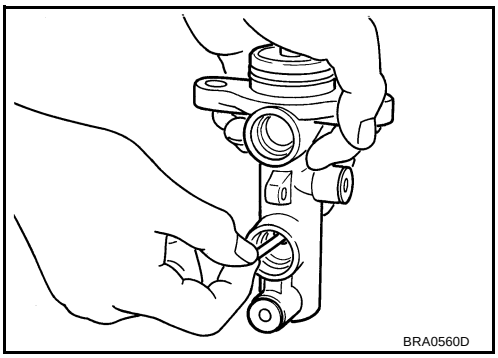
Assembly



CAUTION:

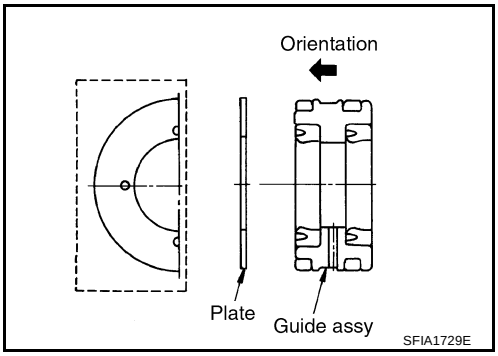
- **Do not use mineral oils such as kerosene, gasoline during the cleaning and assembly process.**
- **Make sure there is no foreign matter such as dirt or dust attached to the inner cylinder walls, the piston, or the cap seal, and use care to avoid damaging parts with the assembly tools.**
- **Do not drop parts. If a part is dropped, do not use it.**

1. Apply brake fluid to cylinder inner wall body and contact surface of the piston assembly, and apply the silicon grease in the inner kit to the primary piston rod.
2. Insert the secondary piston and primary piston into cylinder body in this order.



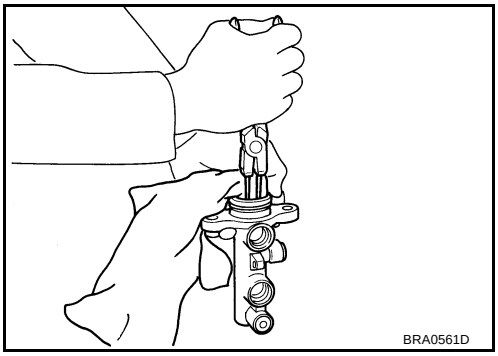
CAUTION:

- **Do not reuse the primary and secondary piston assemblies.**
- **Be sure to replace the assembly without disassembling the new inner kit.**



- **Pay attention to the orientation of the piston cup, and insert straight to prevent the cup from being caught by cylinder inner wall.**

3. Perform a visually inspection of the secondary piston slit through the tank boss hole on the secondary-side of the cylinder body, and install the piston stopper.

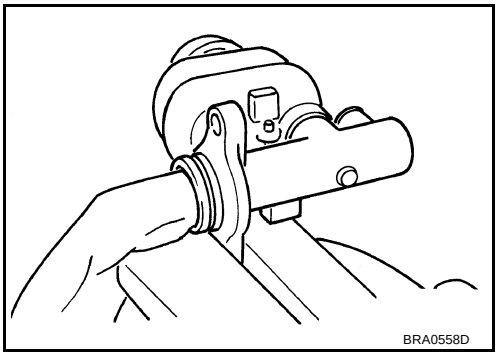


4. Insert the plate and guide into the cylinder body.

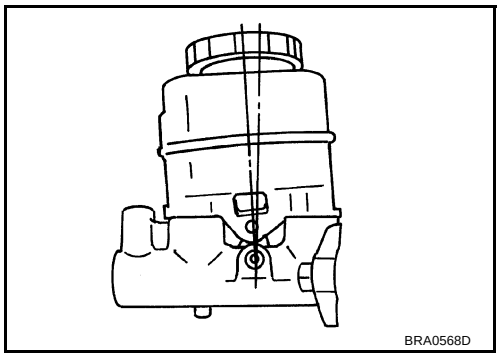
CAUTION:
- **Make sure not to damage the primary piston rod.**
- **Pay attention to the direction of the guide.**
- **Do not drop the O-ring.**
- **Make sure the guide and/or plate are not inserted at an angle.**

5. Cover the primary piston rod with cloth to prevent it getting damaged, and attach the snap ring with the primary piston pushed in.

CAUTION:
- **Make sure the area around the snap ring is snug in the cylinder body bore groove.**
- **Do not reuse the snap ring.**



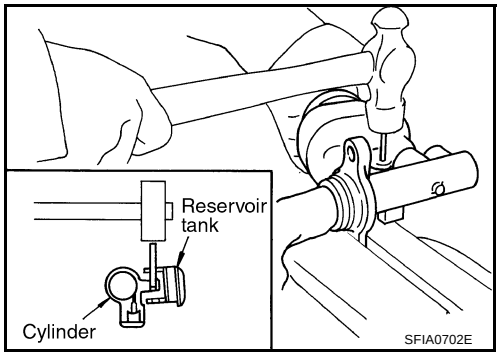
6. Place the side of the cylinder body with chamfering around the pin insertion hole up, and secure the cylinder body flange section with a vise.



CAUTION:
When securing in a vise, use copper plates or cloth to protect the flange.

7. Apply brake fluid to the grommet and attach the reservoir tank to the master cylinder.

CAUTION:
Do not reuse the grommet.



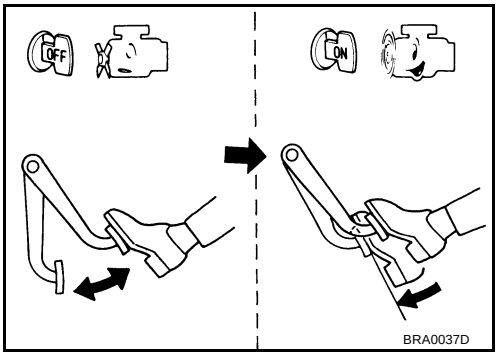
NOTE:
Attach the reservoir tank in the orientation shown in the figure.

8. Tilt the reservoir tank so that the mounting pin can be inserted as shown in the figure, and insert the mounting pin. When the mounting pin has passed the master cylinder pinhole, return the reservoir tank to a level position. Attach the mounting pin to the opposite mounting pin hole of the reservoir tank so that it is the same as the insertion side.

CAUTION:

- **Be sure to insert pin from the chamfered pinhole of cylinder body.**
- **Do not reuse reservoir tank and mounting pin.**

BRAKE BOOSTER



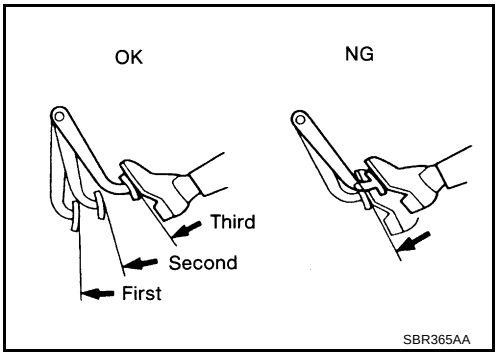
PFP:47200

On-Vehicle Inspection

NFS0000L

OPERATING CHECK

With the engine stopped, change the vacuum to the atmospheric pressure by depressing the brake pedal several times. Then with brake pedal fully depressed, start the engine and when the vacuum pressure reaches the standard, check that the clearance between the brake pedal and floor panel decreases.

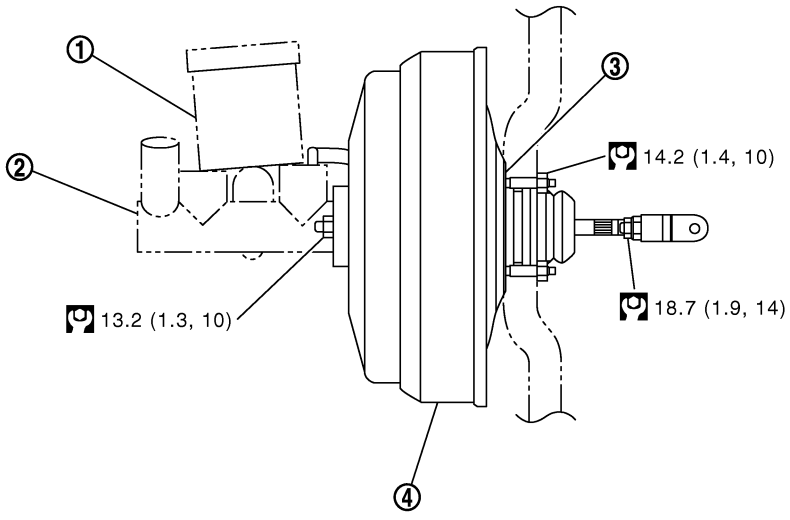


CAUTION:

Depressing pedal interval is approximately 5 seconds.

AIRTIGHT CHECK

- Run the engine at idle for approximately 1 minute, and stop it after applying vacuum to the booster. Depress the brake pedal normally to change the vacuum to the atmospheric pressure. Check that distance between the brake pedal and floor panel gradually increases.
- Depress brake pedal while engine is running, and stop engine with pedal depressed. The pedal stroke should not change after holding pedal down for 30 seconds.



CAUTION:

Depressing pedal interval is approximately 5 seconds.

Components

NFS000IG

SEC. 460•465•470

1. Reservoir tank
2. Master cylinder
3. Gasket
4. Brake booster

Refer to GI-11, "Components" , for the symbols in the figure.

Removal and Installation

NFS0000M

REMOVAL

CAUTION:

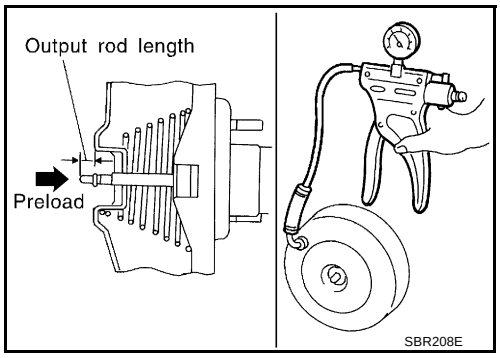
- **Be careful not to deform or bend brake piping while removing and installing the brake booster.**
- **Replace clevis pin if it is damaged.**
- **Be careful not to damage brake booster stud bolt threads. If brake booster is tilted or inclined during installation, the dash panel may damage the threads.**
- **Attach the check valve in the correct orientation.**

1. Remove vacuum hose from the brake booster. Refer to BR-25, "VACUUM LINES" .
2. Remove the brake master cylinder. Refer to BR-24, "Removal and Installation" .
3. Remove the brake piping between brake master cylinder and ABS actuator and electric unit (control unit). Refer to BR-12, "Hydraulic Circuit" .

   CAUTION:

   For M/T vehicles with remove the brake piping after removing the clutch reservoir tank bolt.
4. Remove the brake pedal attachment snap pin and clevis pin from inside the vehicle.
5. Remove the nuts on the brake booster and brake pedal assembly.
6. Remove brake booster assembly from the engine compartment side.

INSPECTION AFTER REMOVAL

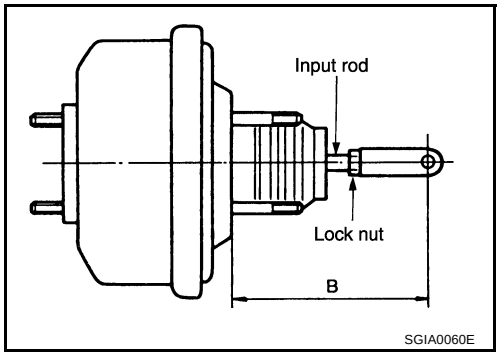


Output Rod Length Inspection

1. Using a handy vacuum pump, apply a vacuum of –66.7 kPa (–500 mmHg,–19.69 inHg) to the brake booster.
2. Check output rod length.

Standard dimension when vacuum –66.7 kPa (–500 mmHg, –19.69 inHg)

With TCS : 10.4 mm (0.409 in)

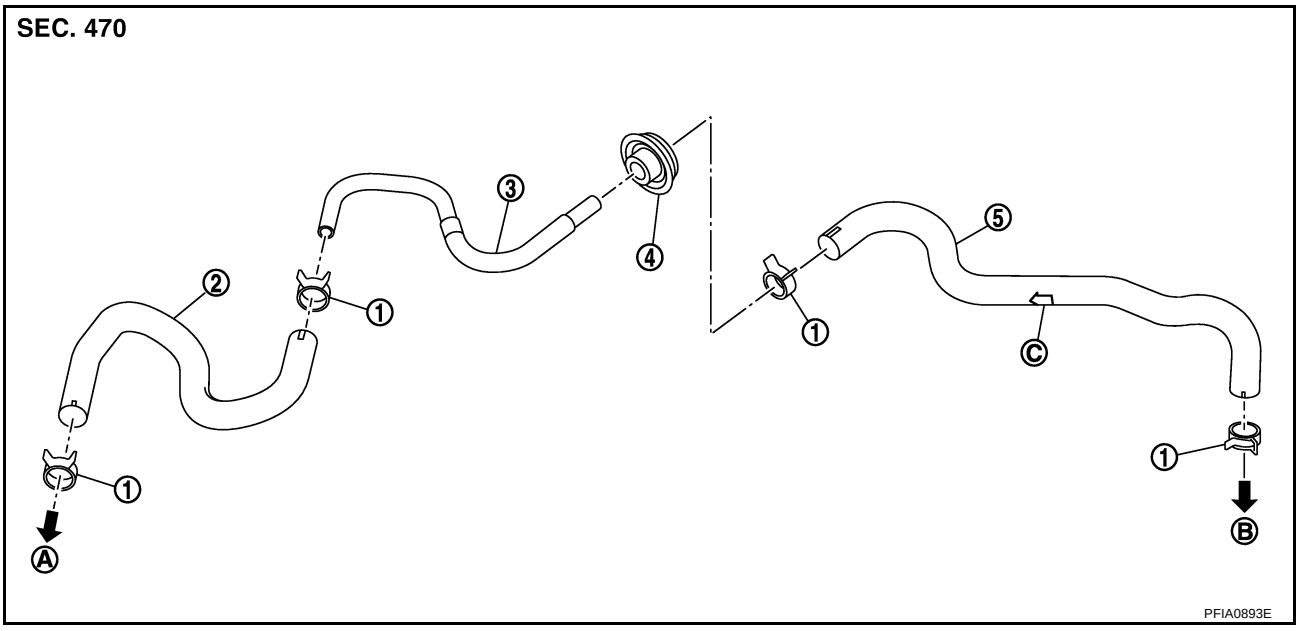


With VDC : –6.2 mm (–0.244 in)

INSTALLATION

1. Loosen the lock nut to adjust the input rod length so that the length “B” (in the figure on the right) satisfies the specified value.

   Length “B” : 125 mm (4.92 in)
2. After adjusting “B”, temporarily tighten the lock nut to install the booster assembly to the vehicle. At this time, make sure to install a gasket between the booster assembly and the vehicle.
3. Connect the brake pedal with the clevis of the input rod.
4. Install the pedal bracket mounting nuts and tighten them to the specified torque.
5. Install the brake piping between brake master cylinder and ABS actuator and electric unit (control unit). Refer to BR-12, "Hydraulic Circuit" .
6. Install the master cylinder to the booster assembly. Refer to BR-24, "Removal and Installation" .
7. Adjust the height and play of the brake pedal. Refer to BR-7, "ADJUSTMENT" .
8. Tighten the lock nut of the input rod to the specified torque. Refer to BR-23, "Components" .
9. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

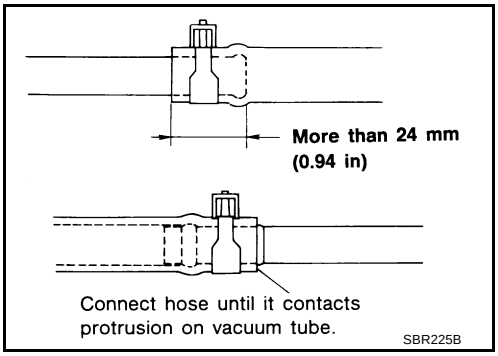


VACUUM LINES

PFP:41920

Components

NFS000IH



1. Clamp	2. Vacuum hose	3. Vacuum tube
4. Grommet	5. Vacuum hose (built in check valve)	
A. To intake manifold	B. To brake booster	C. Stamp indicating engine direction

Removal and Installation

NFS0000N

CAUTION:

- **Because vacuum hose contains a check valve, it must be installed in the correct orientation. Refer to the stamp or label to confirm correct installation. The brake booster will not operate normally if the hose is installed in the wrong direction.**
- **Insert the vacuum hose for at least 24 mm (0.94 in).**
- **Do not use lubricating oil during assembly.**

Inspection

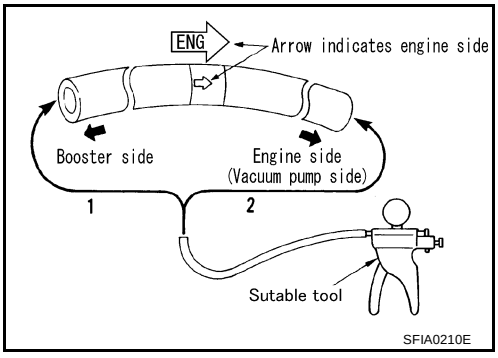
NFS0000O

VISUAL INSPECTION

Check for improper assembly, damage and deteriorate.

CHECK VALVE INSPECTION

Airtightness Inspection



Use a hand-held vacuum pump to check.

When connected to booster side (1):

Vacuum decrease should be within 1.3 kPa (10 mmHg, 0.39 inHg) for 15 seconds under a vacuum of −66.7 kPa (−500 mmHg, −19.69 inHg)

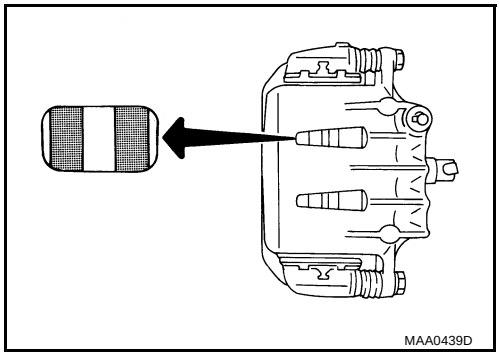
When connected to engine side (2):

No vacuum will be applied

FRONT DISC BRAKE

PFP:41000

On-Vehicle Inspection

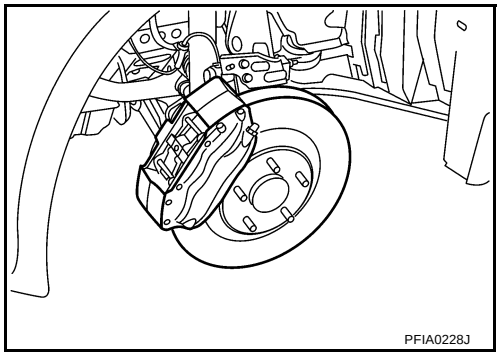


NFS000AS

PAD WEAR INSPECTION

Other than Brembo Calipers

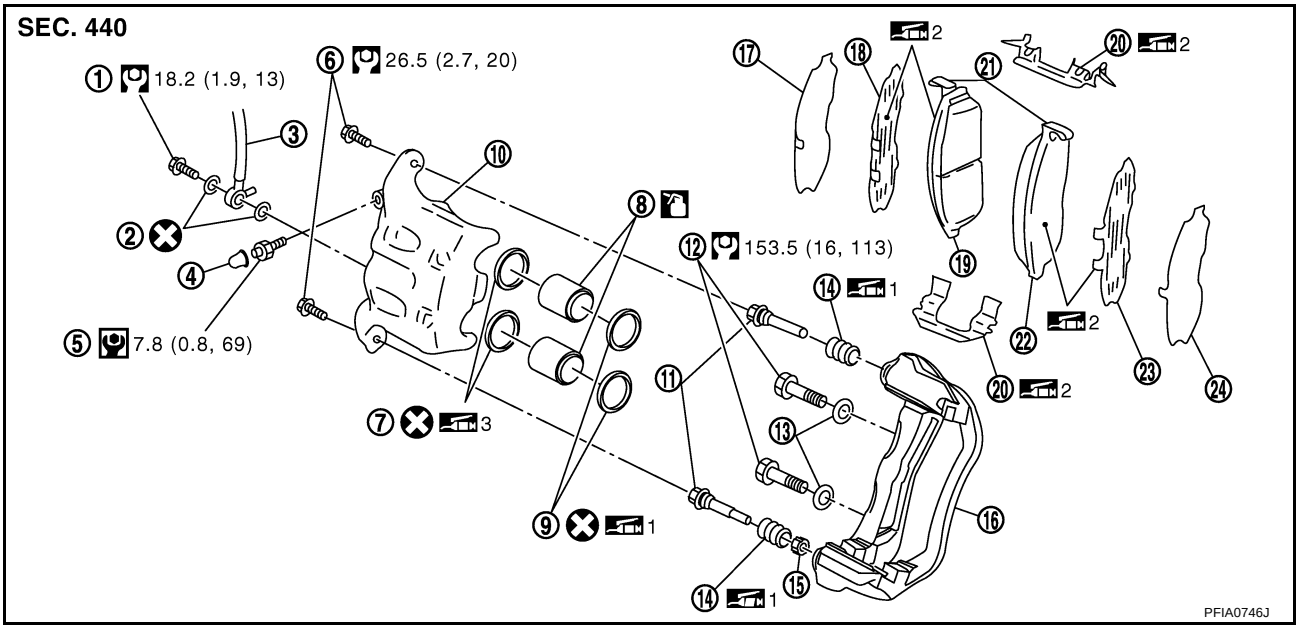
- Check pad thickness from check hole on cylinder body. Use a scale for inspection if necessary.



Standard thickness : 11.0 mm (0.433 in)
Repair limit thickness : 2.0 mm (0.079 in)

With Brembo Calipers

- Inspect the thickness of the pad through the caliper inspection hole. Use a scale for inspection if necessary.



Standard thickness : 9.3 mm (0.366 in)
Repair limit thickness : 2.0 mm (0.079 in)

Components

NFS000AT

OTHER THAN BREMBO CALIPERS

1. Union bolt	2. Copper washer	3. Brake hose
4. Cap	5. Bleed valve	6. Sliding pin bolt
7. Piston seal	8. Piston	9. Piston boot
10. Cylinder body	11. Sliding pin	12. Torque member mounting bolt
13. Washer	14. Sliding pin boot	15. Bushing
16. Torque member	17. inner shim cover	18. inner shim
19. Inner pad	20. Pad retainer	21. Pad wear sensor
22. Outer pad	23. Outer shim	24. Outer shim cover

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

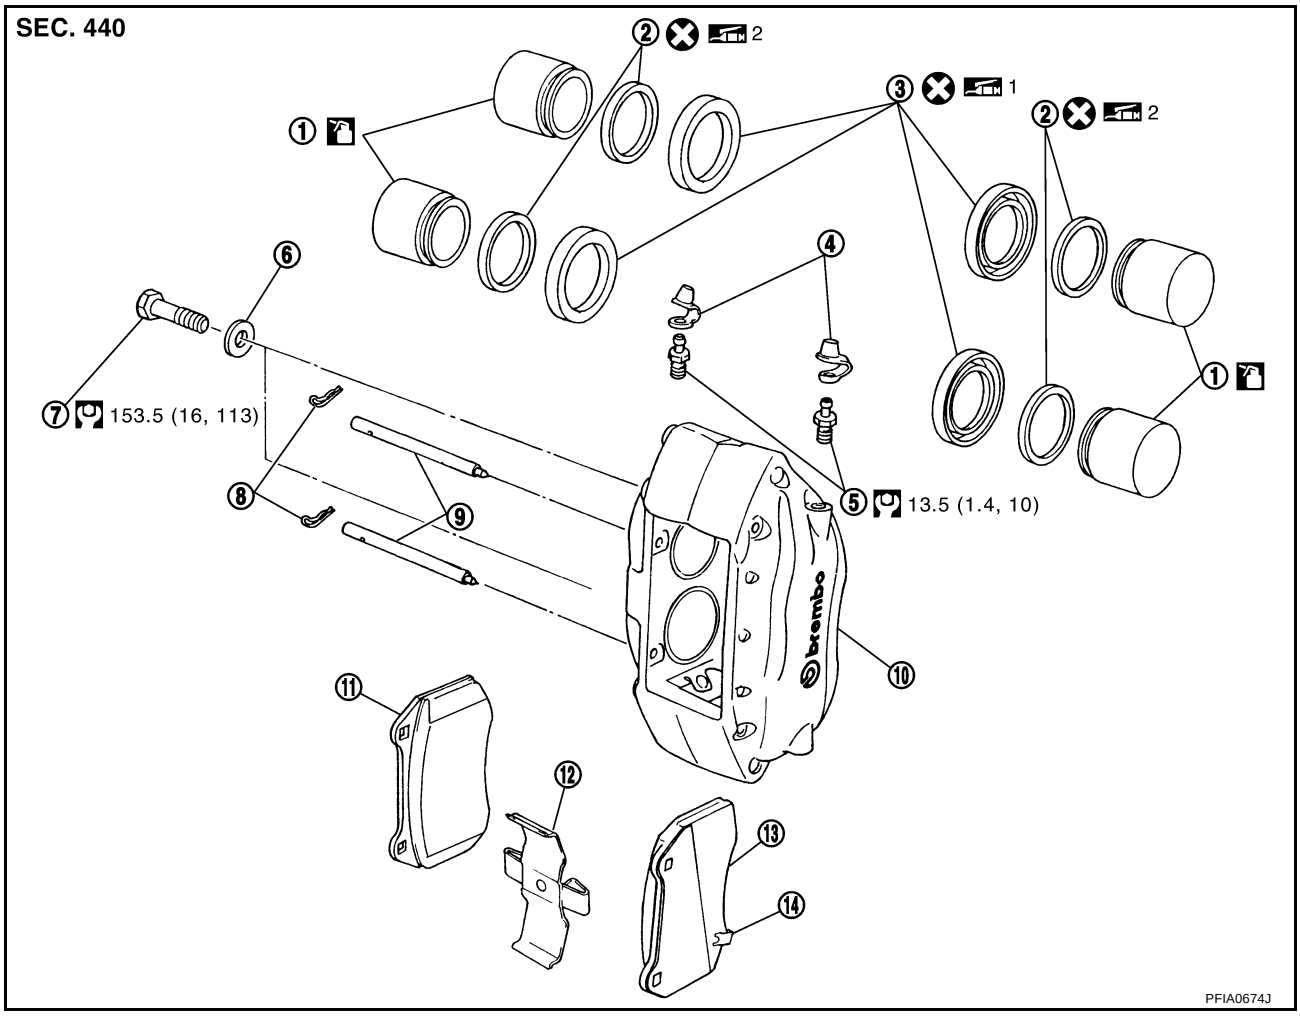
2: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

3: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.



CAUTION:

- **While removing cylinder body, do not depress brake pedal because piston will pop out.**
- **It is not necessary to remove torque member mounting bolts on torque member and brake hose except for disassembly or replacement of caliper assembly. In this case, hang cylinder body with a wire so that brake hose is not under tension.**
- **Do not damage piston boot.**
- **If any shim is subject to serious corrosion, replace it with a new one.**
- **Always replace shim and shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**
- **Burnish the brake pads and disc rotor mutually contacting surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-38, "Brake Burnishing Procedure" .**

WITH BREMBO CALIPERS

NOTE:

Refer to BR-30, "HOW TO APPLY GREASE TO THE BRAKE PAD" for how to apply grease to brake pads.

1.	Piston	2.	Piston seal	3.	Piston boot
4.	Cap	5.	Bleed valve	6.	Washer
7.	Bolt	8.	Clips	9.	Pad pins
10.	Caliper	11.	Inner pad	12.	Cross spring
13.	Outer pad	14.	Pad wear sensor		

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

2: Apply polyglycol ether based lubricant.

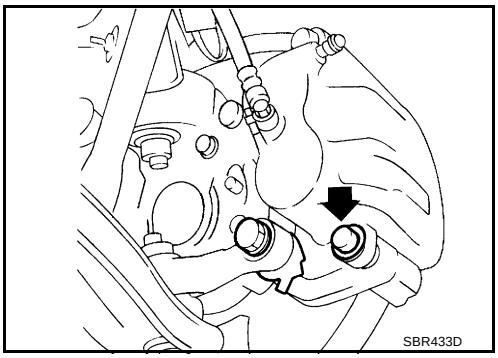
: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

CAUTION:

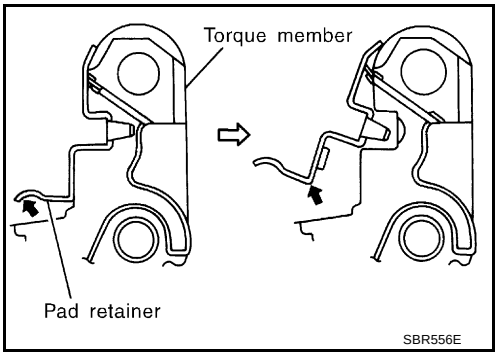
- **While the brake pad and cylinder body are separated, the piston may suddenly jump out, so do not depress the brake pedal.**
- **Apart from caliper assembly, disassembly or replacement, there is no need to remove caliper bolts or brake hose or tube.**
- **Do not damage piston boot.**
- **Keep disc rotor clean of brake fluid.**



- **Burnish the brake pads and disc rotor mutually contacting surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-38, "Brake Burnishing Procedure" .**

Removal and Installation of Brake Pad (Other than Brembo Calipers)

NFS000AU

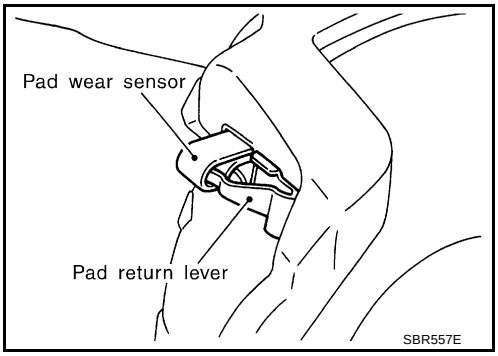


REMOVAL

1. Remove tires from vehicle with a power tool.
2. Remove lower sliding pin bolt.

3. Hang cylinder body with a wire, and remove pads, shims and pad retainers from torque member.

   CAUTION:
   - **When removing pad retainer from torque member, lift pad retainer in the direction shown by arrow (shown in the figure) so as not to deform it.**
   - **Do not damage piston boot.**
   - **Keep disc rotor clean of brake fluid.**

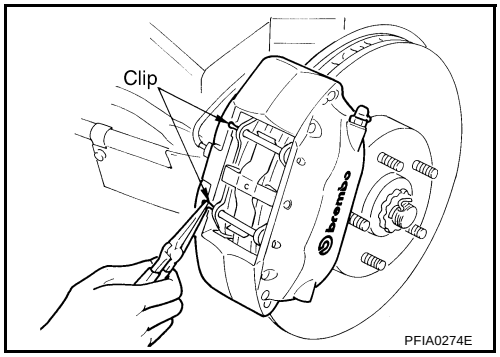


INSTALLATION

1. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease between pad retainer and pad.
2. Install pad retainers and pad assemblies to torque member.

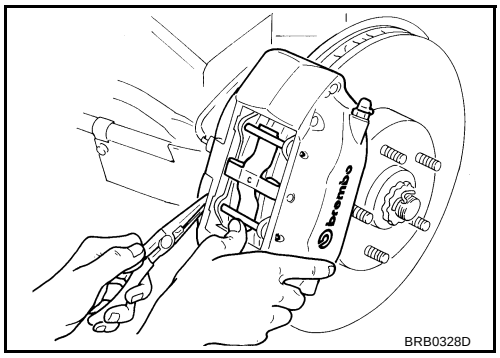
   CAUTION:
   Inner pad and outer pad have pad-return mechanism on upper side of pad retainer. When installing pad to torque member, be sure to install pad return lever to pad wear sensor securely.
3. Install cylinder body to torque member.

   CAUTION:
   When replacing pads with new ones, press in piston until pads can be installed. In this case, carefully monitor brake fluid level in reservoir tank because brake fluid will return to master cylinder reservoir tank.



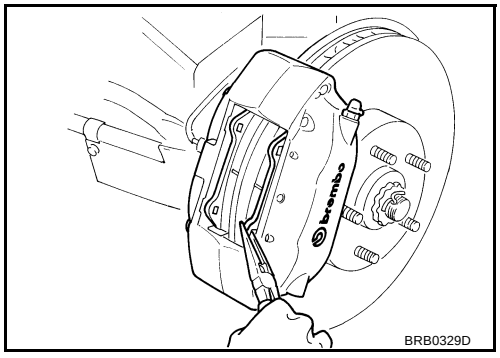
4. Install lower sliding pin bolt, and tighten it to the specified torque. Refer to BR-27, "Components" .
5. Secure disc rotor with wheel nuts. Depress brake pedal a few times until it gets a responsive touch.
6. Check front disc brake for drag.
7. Install tires to vehicle.

Removal and Installation of Brake Pad (With Brembo Calipers)



NFS0000W

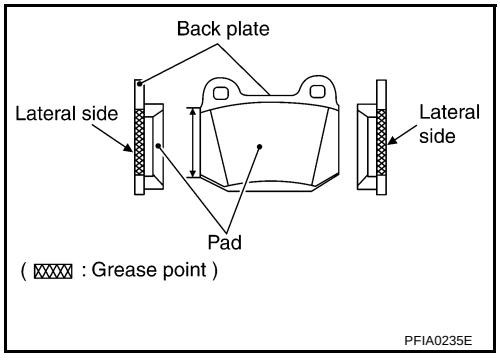
REMOVAL



1. Remove tires from vehicle with a power tool.
2. Remove the clip from the pad pin.

3. Remove the pad pin while holding down the cross spring, then remove the cross spring from the caliper.

4. Using pliers, remove the pad from the caliper.



HOW TO APPLY GREASE TO THE BRAKE PAD

Pad Side

Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease about 0.5 g (0.018 oz) per surface equally to back plate side of Inner Pad and Outer Pad. (Refer to the figure.)

CAUTION:

Make sure no foreign matter attaches itself to the grease.

INSTALLATION

1. Insert the piston to the position where the pad is attached.

   NOTE:

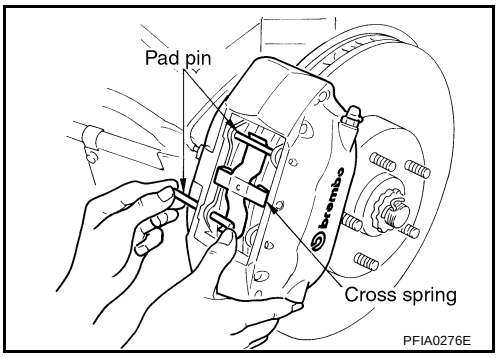
   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

   CAUTION:

   By pushing in the piston, the brake fluid returns to the master cylinder reservoir tank. Watch the level of the surface of the reservoir tank.

2. Attach pad.

CAUTION:



- **Attach the pad with wear sensor to the outer side.**
- **The side of the shim with the larger cutouts should be on the entry side of the disc rotor spin.**

3. Insert the upper pad pin from the inner cylinder side, then insert firmly to the outer cylinder side through the hole in the top of the pad.
4. As shown in the figure, place the top of the cross spring over the top pad pin, press in the cross spring, push the lower pad pin from the inner cylinder side to the outer cylinder side, and secure the cross spring.
5. Insert the clip in the small hole at the end of the pad pin.

CAUTION:

If the clip is not fully attached, the pad pin or the pad could fall out while the vehicle is in motion.

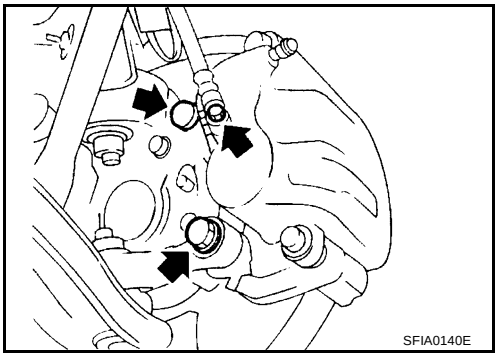
6. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)

NFS000AV

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Fasten disc rotor using wheel nut.
3. Drain brake fluid gradually (from bleed valve while depressing brake pedal). Refer to BR-10, "Drain and Refill" .
4. Remove union bolt, and then remove brake hose from caliper assembly.
5. Remove torque member mounting bolts (from torque member), and remove caliper assembly (from vehicle with a power tool).



CAUTION:

Do not drop brake pad.

6. Remove disc rotor.

CAUTION:

Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.

INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

CAUTION:

Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install caliper assembly to vehicle, and tighten torque member mounting bolts to the specified torque. Refer to BR-27, "Components" .

CAUTION:

Before installing torque member to vehicle, wipe oil and grease on washer seats on steering knuckle and mounting surface of torque member.

3. Install a projection of brake hose metal fitting by aligning with protrusions on cylinder body, and tighten union bolt to the specified torque. Refer to BR-27, "Components" .

   CAUTION:
   - **Do not reuse copper washers for union bolts.**
   - **Assemble brake hose securely on caliper assembly.**
4. After installing caliper assembly, refill with new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
5. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (With Brembo Calipers)

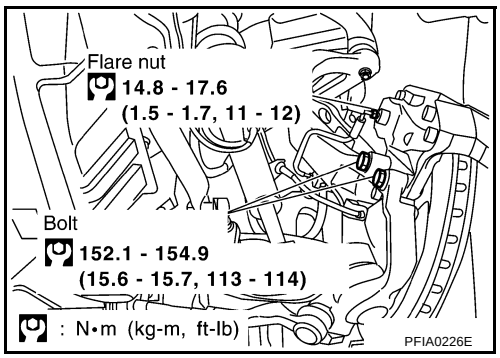
NFS0000X

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
3. Remove the brake pad. Refer to BR-30, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
4. Remove the brake tube flare nut using a flare wrench.
5. Remove the brake tube bracket from the knuckle spindle.

6. Remove the caliper bolt and remove the caliper assembly from the vehicle.
7. Remove disc rotor.

   CAUTION:
   Put matching marks of wheel hub assembly and disc rotor, if it is necessary to remove when removing disc rotor.



INSTALLATION

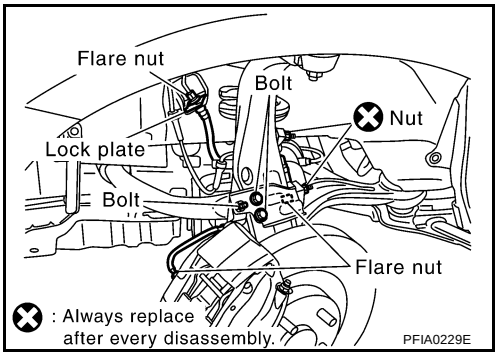
CAUTION:
- **Refill with new brake fluid “DOT 3”.**
- **Never reuse drained brake fluid.**

1. Install disc rotor.

   CAUTION:
   Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.
2. Install caliper assembly to the vehicle, and tighten bolts to the specified torque.

   CAUTION:
   When attaching the caliper assembly to the vehicle, wipe any oil off the knuckle spindle washers and caliper assembly attachment surfaces.

3. Attach the brake tube to the caliper assembly and partially tighten the flare nut.



4. Attach the brake tube bracket to the knuckle spindle and tighten to the specified torque.

   : 10.8 – 15.6 N·m (1.1 – 1.5 kg-m, 8 – 11 ft-lb)

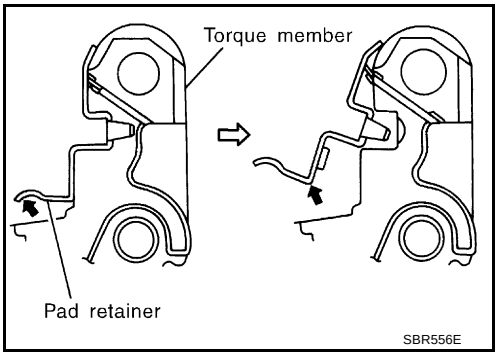
5. Using a flare nut crowfoot and torque wrench, tighten the caliper assembly and brake tube connection flare nut to the specified torque.

   : 14.8 – 17.6 N·m (1.5 – 1.7 kg-m, 11 – 12 ft-lb)

6. Attach brake pad. Refer to BR-30, "Removal and Installation of Brake Pad (With Brembo Calipers)" .

7. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
8. Install tires to vehicle.

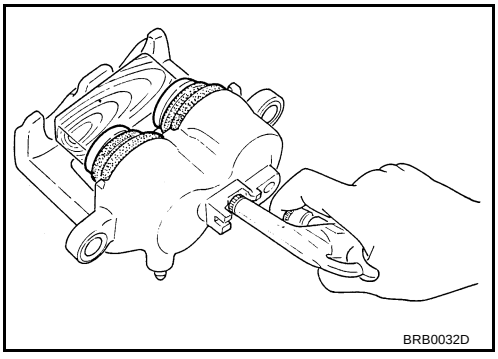
Disassembly and Assembly of Brake Caliper Assembly (Other than Brembo Calipers)



NFS000AW

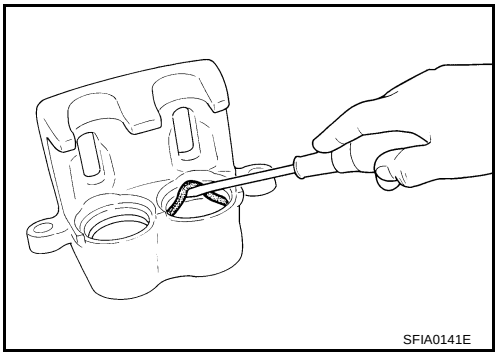
NOTE:
Do not remove torque member, brake pads, shims, shim covers and pad retainers, when disassembling or assembling cylinder body.

DISASSEMBLY



1. Remove caliper assembly from vehicle. Refer to BR-31, "Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)" .
2. Remove sliding pin bolts from cylinder body, and remove pads, shims, shim cover and pad retainers from torque member.

   CAUTION:
   When removing pad retainer from torque member, lift the pad retainer in the direction shown by arrow (shown in the figure) so as not to deform it.



3. Remove sliding pins and sliding pin boots from torque member.
4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove pistons and piston boots.

   CAUTION:
   Do not get fingers caught in the pistons.

5. Using a flat-bladed screwdriver, remove piston seals from cylinder body.

   CAUTION:
   Be careful not to damage the inner wall of cylinder.

INSPECTION AFTER DISASSEMBLY

Cylinder Body

CAUTION:

Use new brake fluid to clean. Do not use mineral oils such as gasoline or kerosene.

- Check the inner wall of cylinder for corrosion, wear, and damage. If a malfunction is detected, replace cylinder body.
- Minor flaws caused by corrosion or a foreign material can be removed by polishing a surface of the inner wall with a fine sandpaper. Replace cylinder body, if a malfunction is detected.

Torque Member

Check for wear, cracks, and damage. If a malfunction is detected, replace applicable part.

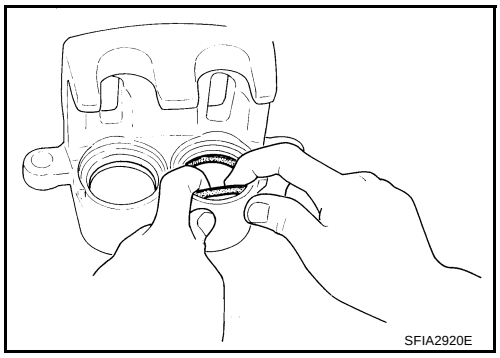
Piston

CAUTION:

The piston sliding surface is plated. Do not polish with sandpaper.

Check piston surface for corrosion, wear, and damage. If a malfunction is detected, replace applicable part.

Sliding Pin, Sliding Pin Bolt, and Sliding Pin Boot



Check sliding pins and sliding pin boots for wear, damage, and cracks. If a malfunction is detected, replace applicable part.

ASSEMBLY

1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

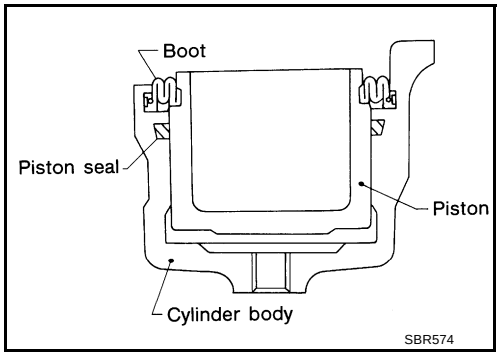
   CAUTION:

   Do not reuse piston seal.

2. Apply rubber grease to piston boots. Cover the piston end with piston boot, and install cylinder-side lip on piston boot properly into groove on cylinder body.

   CAUTION:

   Do not reuse piston boot.



3. Apply brake fluid to piston, and press piston into cylinder body by hand to assemble piston-side lip on piston boot properly into a groove on piston.

   CAUTION:

   Press piston evenly and change pressing point to prevent inner wall of cylinder from being rubbed.

4. Install sliding pins and sliding pin boots to the torque member.

5. Install the torque member to the steering knuckle and tighten the mounting bolts to the specified torque. Refer to BR-27, "Components" .

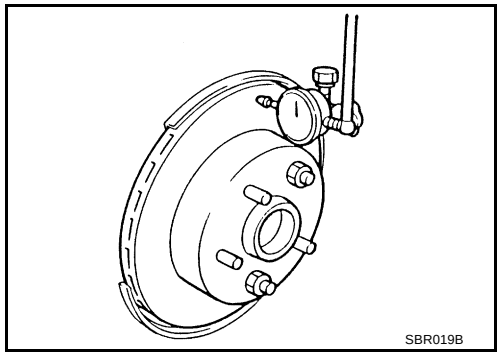
CAUTION:
Before installing torque member to vehicle, wipe off oil and grease on the washer seats on steering knuckle and the mounting surface of the torque member.

6. Install pad retainers to torque member.
7. Press in piston until pads can be installed, and then install cylinder body to torque member.
8. Install cylinder body, and tighten sliding pin bolt to the specified torque. Refer to BR-27, "Components" .
9. Position a projection of brake hose metal fitting by aligning with protrusions on cylinder body and tighten union bolt to specified torque. Refer to BR-12, "Hydraulic Circuit" .

CAUTION:
- **Assemble brake hose securely to cylinder body.**
- **Do not reuse copper washer for union bolts.**

10. After installing caliper assembly, refill with new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .

DISC ROTOR INSPECTION



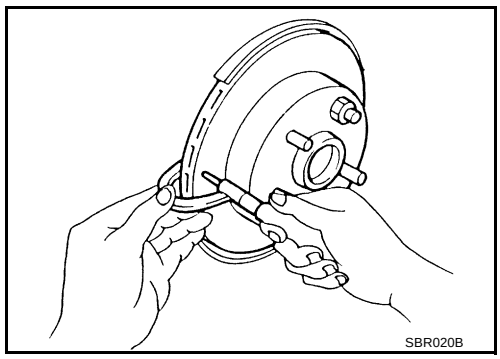
Visual Inspection

Check surfaces of disc rotor for uneven wear, cracks, and serious damage. If a malfunction is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, secure disc rotor to wheels hub. (2 or more positions)
2. Using a dial indicator, check runout.

Measurement point:
At a point 10.0 mm (0.394 in) from outer edge of disc
Runout limit (with it attached to the vehicle):
0.035 mm (0.0014 in) or less



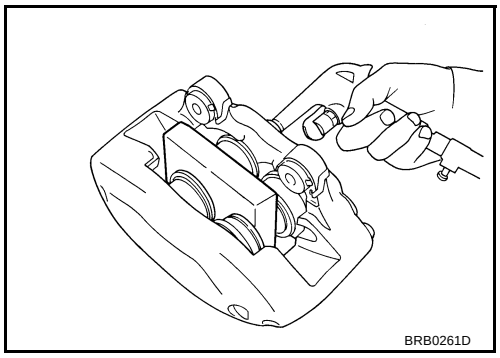
NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer to FAX-4, "On-Vehicle Inspection" .

3. If runout is outside limit, find the minimum runout point by shifting the mounting positions of disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of disc rotor. If thickness is outside standard, replace disc rotor.

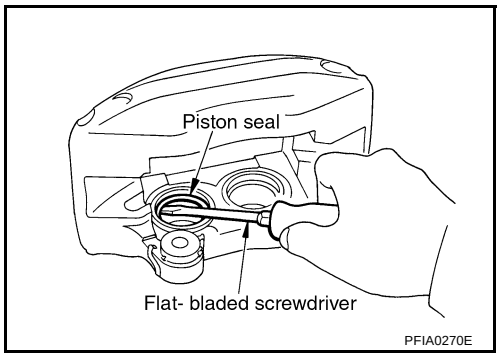
Standard thickness : 28.0 mm (1.10 in)
Repair limit thickness : 26.0 mm (1.02 in)
Maximum uneven wear (measured at 8 positions)
: 0.015 mm (0,0006 in) or less



Disassembly and Assembly of Brake Caliper Assembly (With Brembo Calipers)

NFS0000Y

DISASSEMBLY



1. Insert a piece of wood as shown in the figure, blow air in through the flare nut mounting hole, and remove the piston and piston boot. If the four pistons do not all come out at the same time, press the piston(s) that have come out a ways into the cylinder body and blow air in again.

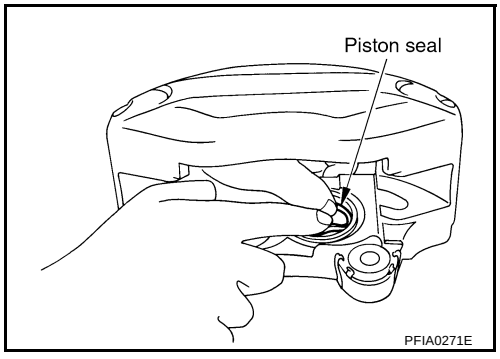
   CAUTION:
   Do not get fingers caught in the piston.
2. Remove the piston boot from the piston.

3. Using a flat-bladed screwdriver, remove the piston seal.

   CAUTION:
   - **Be careful not to damage cylinder inner wall.**
   - **Never remove the four bolts from the inner and outer sides of the caliper. Do not tighten them further, either.**

CALIPER INSPECTION

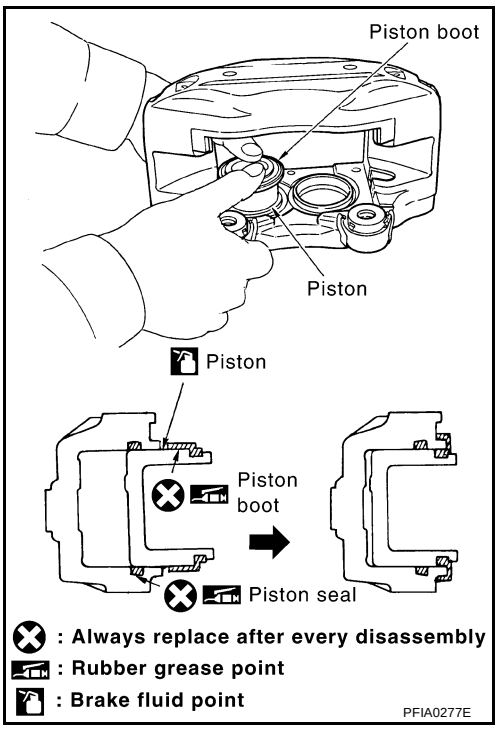
Caliper



CAUTION:
- **Use new brake fluid to clean. Do not use mineral oils such as gasoline or kerosene.**
- **Check for corrosion, wear, or damage to the cylinder inner wall, and replace the caliper if there are any non-standard conditions.**

Piston

CAUTION:
- **Since the piston surface is plated, do not repair using sandpaper.**
- **Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.**



ASSEMBLY

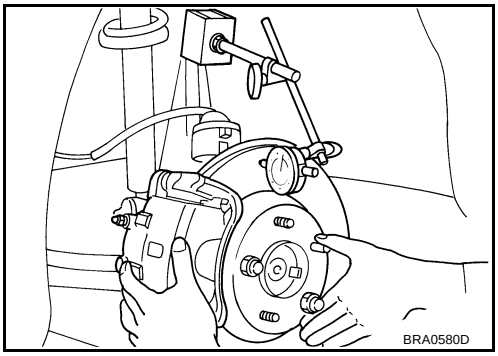
1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

2. Apply rubber grease to the piston boot, place it on the piston, and firmly insert the piston boot cylinder-side lip into the cylinder body groove.
3. Insert the piston into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

4. Attach the shim and shim cover to the pad and attach to the caliper.

DISC ROTOR INSPECTION



Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

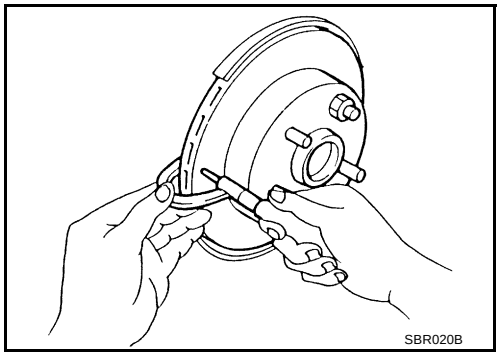
Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Runout limit (with it attached to the vehicle)
: 0.040 mm (0.0016 in) or less
Runout limit (just the disc rotor)
: 0.040 mm (0.0016 in) or less

NOTE:
Make sure that wheel bearing axial end play is with in the specifications before measuring runout. Refer to FAX-4, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.



Standard

Standard thickness : 30.0 mm (1.181 in)

Wear limit : 28.4 mm (1.118 in)

Maximum uneven wear (measured at 8 positions)

: 0.015 mm (0.0006 in) or less

Brake Burnishing Procedure

NFS000AX

Burnish the brake pad and disc rotor mutually contacting surfaces of disc rotor according to following procedure after refinishing or replacing disc rotors, after replacing pads, or if a soft pedal occurs at very low mileage.

CAUTION:

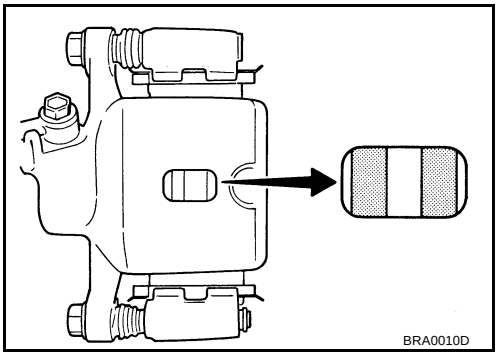
- **Be careful of vehicle speed because brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

REAR DISC BRAKE

PFP:44000

On-Vehicle Inspection

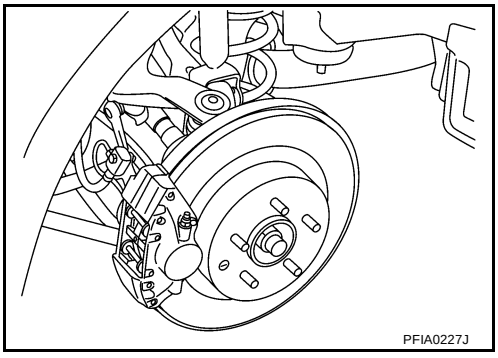


NFS0000Z

PAD WEAR INSPECTION

Other than Brembo Calipers

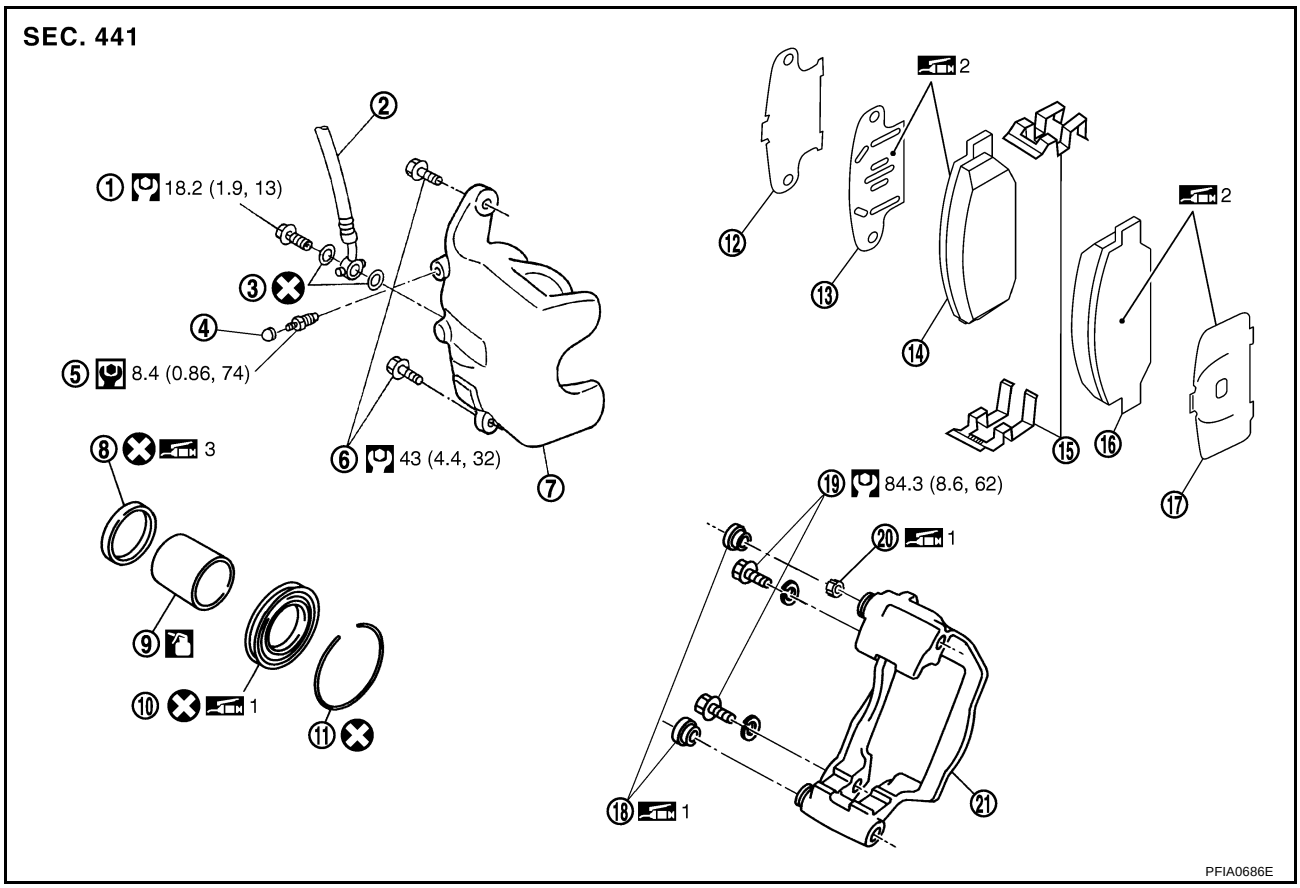
- Inspect the thickness of the pad through the cylinder body inspection hole. Use a scale for inspection if necessary.



Standard thickness : 8.5 mm (0.335 in)
Repair limit thickness : 2.0 mm (0.079 in)

With Brembo Calipers

- Inspect the thickness of the pad through the caliper inspection hole. Use a scale for inspection if necessary.



Standard thickness : 9.1 mm (0.358 in)
Repair limit thickness : 2.0 mm (0.079 in)

Components

NFS00010

OTHER THAN BREMBO CALIPERS

1.	Union bolt	2.	Brake hose	3.	Copper washer
4.	Cap	5.	Bleed valve	6.	Sliding pin bolt
7.	Cylinder body	8.	Piston seal	9.	Piston
10.	Piston boot	11.	Retaining ring	12.	Inner shim cover
13.	Inner shim	14.	Inner pad	15.	Pad retainer
16.	Outer pad	17.	Outer shim	18.	Slide pin boot
19.	Torque member bolt	20.	Bushing	21.	Torque member

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

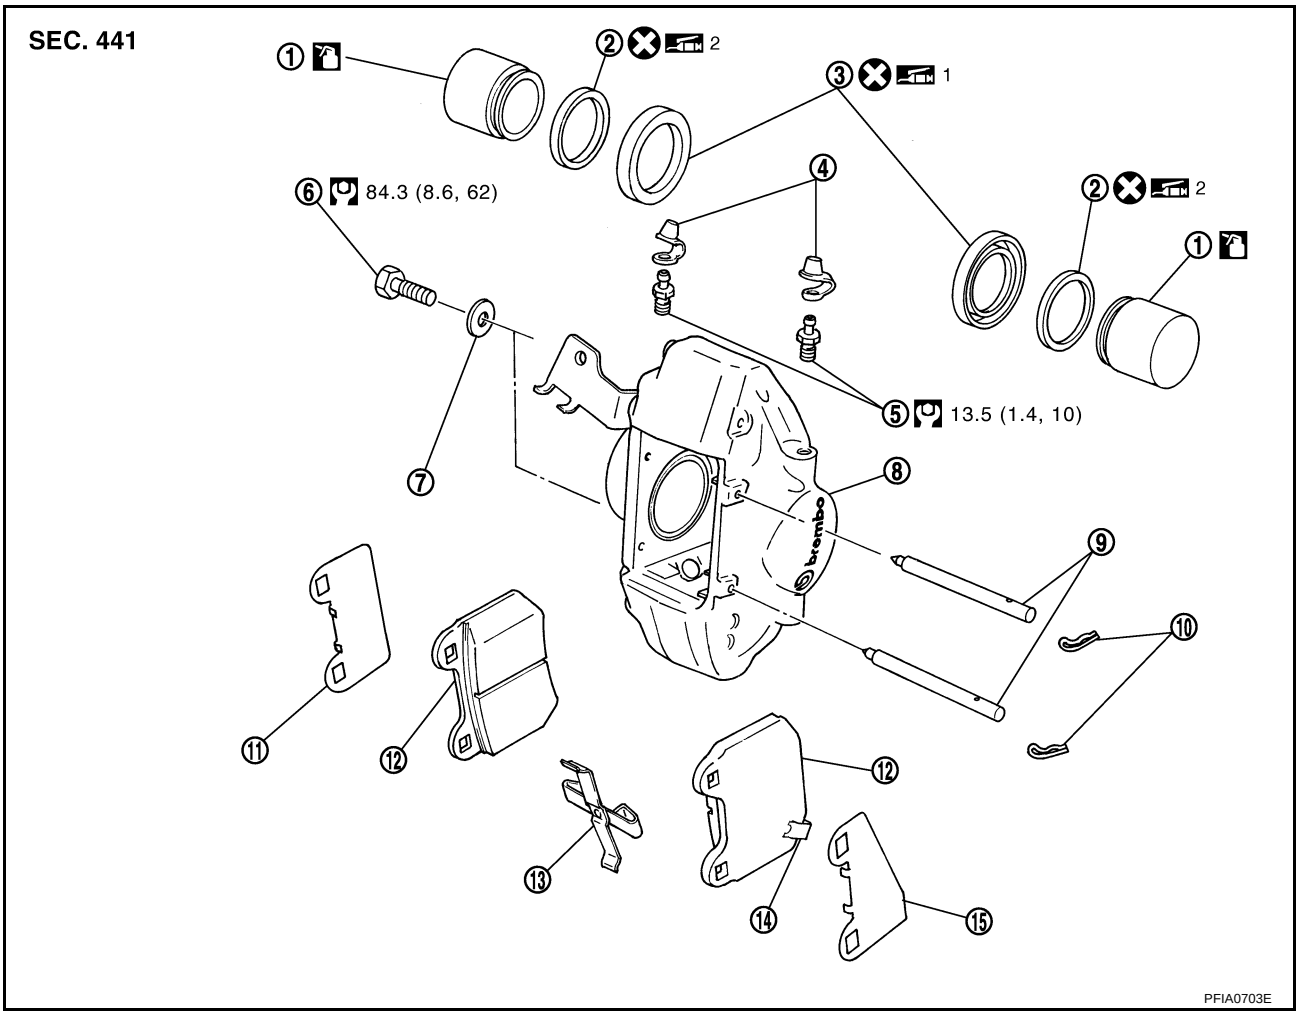
2: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

3: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.



CAUTION:

- **While removing cylinder body, never depress the brake pedal because the piston will pop out.**
- **It is not necessary to remove bolts on torque member and brake hose except for disassembly or replacement of the caliper assembly. In this case, hang cylinder body with a wire so as not to stretch brake hose.**
- **Do not damage piston boot.**
- **If any shim is subject to serious corrosion, replace it with a new one.**
- **Always replace shims and shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**

WITH BREMBO CALIPERS

NOTE:

Refer to BR-43, "HOW TO APPLY GREASE TO THE BRAKE PAD" for how to apply grease to brake pads.

1.	Piston	2.	Piston seal	3.	Piston boot
4.	Cap	5.	Bleed valve	6.	Bolt
7.	Washer	8.	Caliper	9.	Pad pins
10.	Clips	11.	Inner shim cover	12.	Brake pad
13.	Cross spring	14.	Pad wear sensor	15.	Outer shim cover

Refer to GI-11, "Components" and the followings for the symbols in the figure.

1: Apply rubber grease.

2: Apply polyglycol ether based lubricant.

: Apply brake fluid.

WARNING:

Clean dust on caliper and brake pad with a vacuum dust collector to minimize the hazard of airborne particles or other materials.

CAUTION:

- **While removing cylinder body, never depress the brake pedal because the piston will pop out.**
- **Apart from caliper assembly, disassembly or replacement, there is no need to remove caliper bolts or brake hose or tube.**
- **Do not damage piston boot.**
- **Always replace shim covers as a set when replacing brake pads.**
- **Keep disc rotor clean of brake fluid.**

Removal and Installation of Brake Pad (Other than Brembo Calipers)

NFS00011

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Remove sliding pin bold (one on top).
3. Hang cylinder body with a wire, and remove pads, pad retainers, shims and shim cover from torque member.

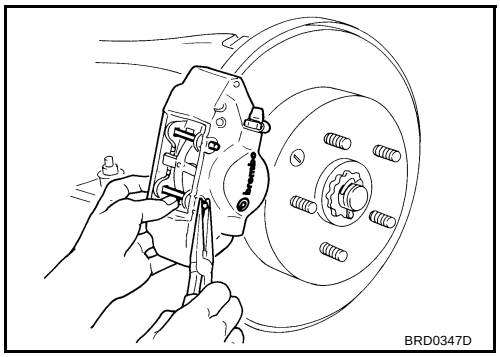
INSTALLATION

1. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease to the rear of the pad and to both sides of the shim, and attach the inner shim and shim cover to the inner pad, and the outer shim to the outer pad.
2. Attach the pad retainer and pad to the torque member.
3. Push the piston in so that the pad is firmly attached and attach the cylinder body to the torque member.

   NOTE:
   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

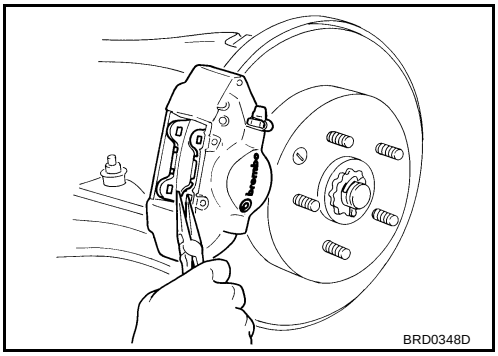
   CAUTION:
   By pushing in the piston, the brake fluid returns to the master cylinder reservoir tank. Watch the level of the surface of the reservoir tank.
4. Attach the sliding pin bolt (one on top) and tighten to the specified torque.
5. Check brake for drag.
6. Install tires to vehicle.

Removal and Installation of Brake Pad (With Brembo Calipers)



NFS00016

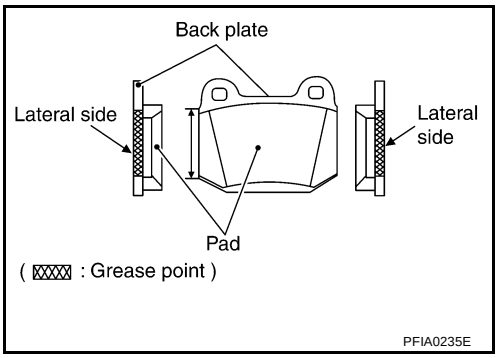
REMOVAL



1. Remove tires from vehicle with a power tool.
2. Remove the clip from the pad pin.

3. Remove the pad pin while holding down the cross spring, then remove the cross spring from the caliper.

4. Using pliers, remove the pad from the caliper.



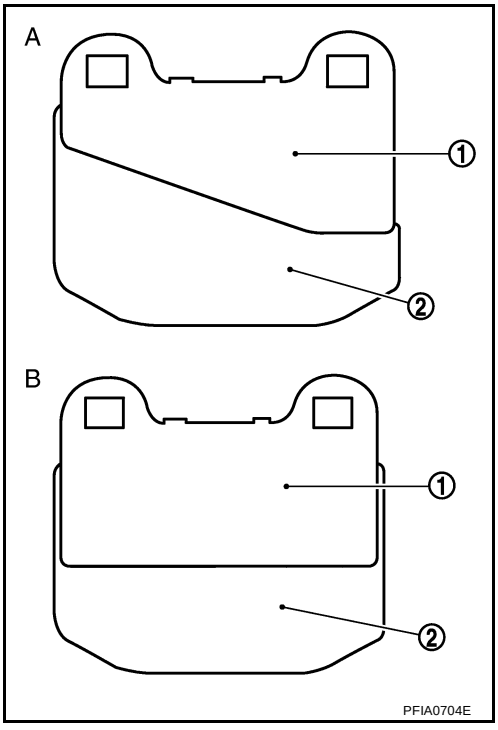
HOW TO APPLY GREASE TO THE BRAKE PAD

Pad Side

Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease about 0.5 g (0.018 oz) per surface equally to back plate side of Inner Pad and Outer Pad. (Refer to the figure)

CAUTION:

Make sure no foreign matter attaches itself to the grease.



Pad Rear

Apply approximately 1.5 g (0.053 oz) of PBC (Poly Butyl Cuprysil) grease or silicone -based grease between shim cover (1) and pad (2).

- A: Outer side
- B: Inner side

CAUTION:

Make sure no foreign matter attaches itself to the grease.

INSTALLATION

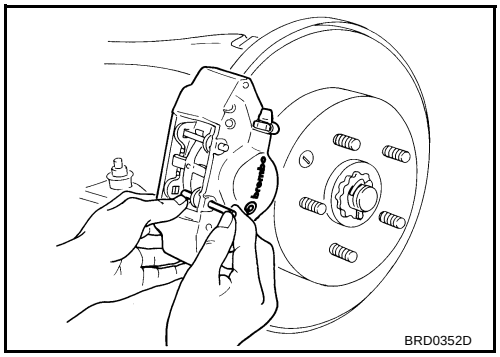
1. Insert the piston to the position where the pad is attached.

   NOTE:

   Using a disc brake piston tool (commercial service tool), etc., makes it easier to push in the piston.

   CAUTION:

   Pushing the piston in will make the brake fluid return to the master cylinder reservoir tank, so watch the level of the surface of the reservoir tank.



2. Attach pad and shim cover.

CAUTION:
Attach the pad with wear sensor to the outer side.

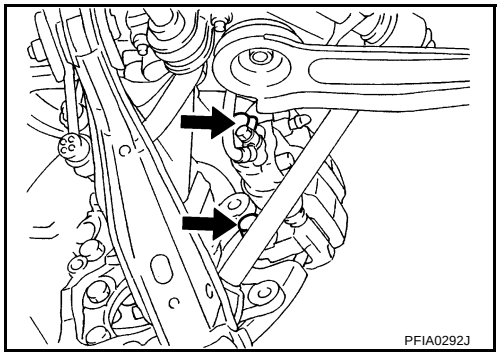
3. Insert the upper pad pin from the outer cylinder side, then insert firmly to the inner cylinder side through the hole in the top of the pad.
4. As shown in the figure, place the top of the cross spring over the top pad pin, press in the cross spring, push the lower pad pin from the outer cylinder side to the inner cylinder side, and secure the cross spring.
5. Insert the clip in the small hole at the end of the pad pin.

CAUTION:
If the clip is not fully attached, the pad pin or the pad could fall out while the vehicle is in motion.

6. Install tires to vehicle.

Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)

NFS00012



REMOVAL

1. Remove tires from vehicle with a power tool.
2. Fasten disc rotor using wheel nut.
3. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
4. Remove union bolts then disconnect brake hose from caliper assembly and torque member bolts, and remove caliper assembly.

CAUTION:
Do not drop brake pad.

5. Remove disc rotor.

CAUTION:
Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.

INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

CAUTION:
Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install caliper assembly to the vehicle, and tighten torque member mounting bolts to the specified torque.

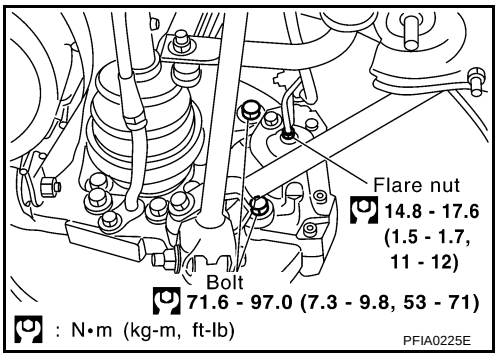
CAUTION:
Before installing caliper assembly to the vehicle, wipe off oil and grease on washer seats on axle assembly and mounting surface of caliper assembly.

3. Install L-shape pin of brake hose to caliper assembly and tighten union bolts to the specified torque.

CAUTION:

- **Do not reuse the copper washer for union bolts.**
- **Securely attach brake hose to protrusion on caliper assembly.**

4. Insert new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
5. Check rear disc brake for drag.
6. Install tires to vehicle.



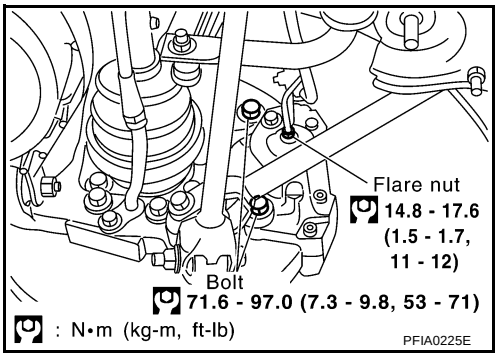
Removal and Installation of Brake Caliper Assembly (With Brembo Calipers)

NFS00017

REMOVAL

1. Remove tires from vehicle with a power tool.
2. Drain brake fluid. Refer to BR-10, "Drain and Refill" .
3. Remove the brake pad. Refer to BR-42, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
4. Remove the brake tube flare nut using a flare wrench.
5. Remove the brake hose bolt, move the brake hose, and remove the caliper assembly from the vehicle.
6. Remove disc rotor.

CAUTION:
Put matching marks on wheel hub assembly and disc rotor, if it is necessary to remove disc rotor.



INSTALLATION

CAUTION:
- **Refill with new brake fluid “DOT 3”.**
- **Do not reuse drained brake fluid.**

1. Install disc rotor.

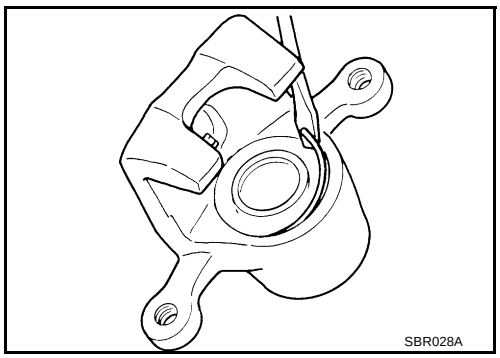
CAUTION:
Put alignment marks on disc rotor and wheel hub at the time of removal when reusing disc rotor.

2. Install the brake tube to the caliper assembly and partially tighten the flare nut.
3. Install the caliper assembly to the vehicle and tighten the bolt to the specified torque.
4. Tighten the flare nut to the specified torque.
5. Install brake pad and shim. Refer to BR-42, "Removal and Installation of Brake Pad (With Brembo Calipers)" .
6. Refill new brake fluid and bleed air. Refer to BR-11, "Bleeding Brake System" .
7. Install tires to vehicle.

Disassembly and Assembly of Brake Caliper Assembly (Other than Brembo Calipers)

NFS00013

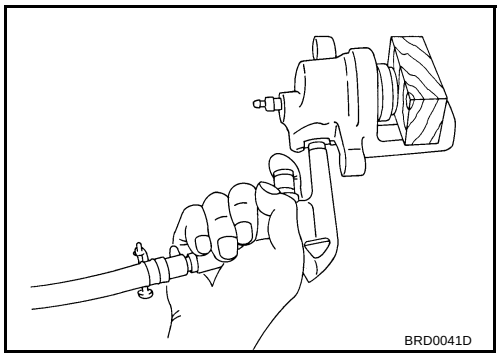
NOTE:
Do not remove torque member, pads, shims, shim cover and pad retainers when disassembling and assembling cylinder body assembly.



DISASSEMBLY

1. Remove the slide pin bolt, and then remove cylinder body from torque member.

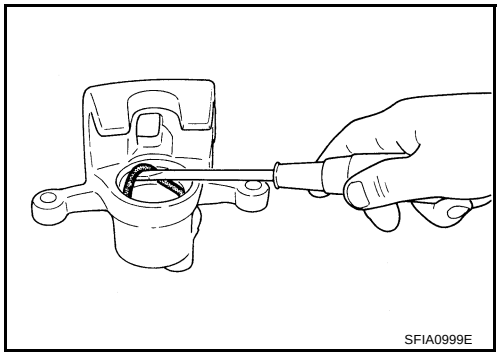
CAUTION:
Do not drop pads, shims, shim covers and pad retainers from torque member.



2. Remove sliding pin boot from torque member.

3. As shown in the figure, using a flat-bladed screwdriver, remove the retaining ring from the cylinder body.

SBR028A



4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove pistons and piston boots.

CAUTION:
Do not get fingers caught in the piston.

BRD0041D

5. Using a flat-bladed screwdriver, remove piston seals from cylinder body.

CAUTION:
Be careful not to damage cylinder inner wall.

SFIA0999E

CALIPER INSPECTION

Cylinder Body

CAUTION:

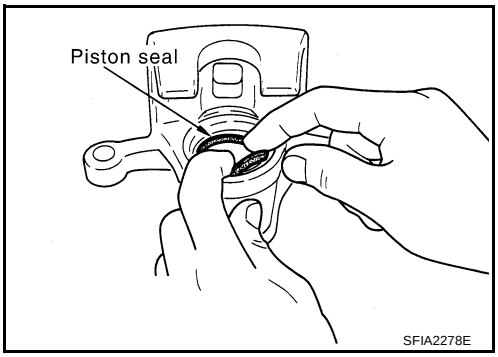
- **Use new brake fluid to clean. Never use mineral oils such as gasoline or kerosene.**
- **Check inner wall of cylinder for corrosion, wear, and damage. If any non-standard condition is detected, replace cylinder body.**
- **Minor flaws caused by corrosion or a foreign material can be removed by polishing the surface with a fine sandpaper. Replace the cylinder body, if necessary.**

Torque Member

Check for wear, cracks, and damage. If damage or deformation is present, replace the affected part.

Piston

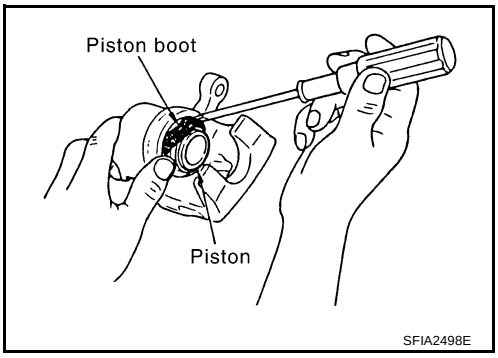
CAUTION:
Since the piston surface is plated, do not repair using sandpaper.
Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.



Sliding Pin Bolts and Sliding Pin Boots

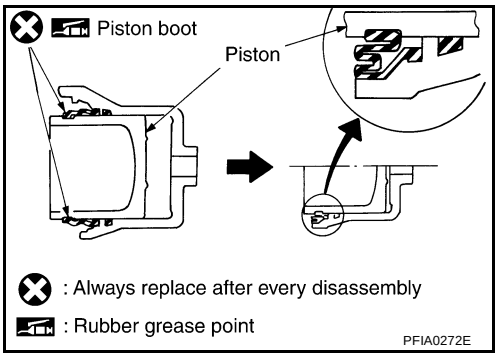
Check that there is no wear, damage, or cracks in the sliding pin bolts and sliding pin boots, and if there are, replace them.

ASSEMBLY



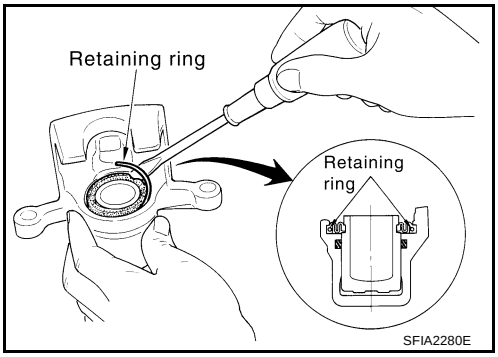
1. Apply polyglycol ether based lubricant to the piston seal, and install them to the cylinder body.

   CAUTION:
   Do not reuse piston seal.



2. Apply rubber grease to piston boot. Cover the piston end with the piston boot, and then install cylinder slide lip on the piston boot securely into the groove on cylinder body.

   CAUTION:
   Do not reuse the piston boot.



3. Apply a brake fluid to the piston, insert into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

   CAUTION:
   Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

4. Fix piston boot with retaining ring.

   CAUTION:
   - **Make sure the boot is firmly in the cylinder body groove.**
   - **Do not reuse the retaining ring.**

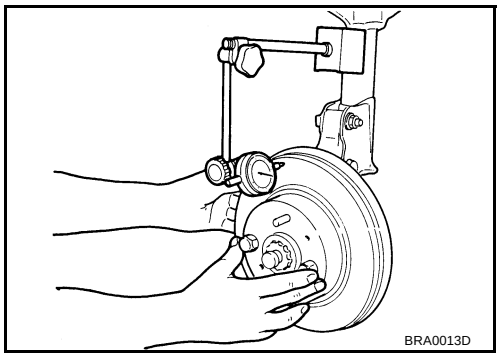
5. Install the sliding pin bolt and sliding pin boot to the torque member.
6. Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease to the rear of the pad and to both sides of the shim, and attach the inner shim and shim cover to the inner pad, and the outer shim to the outer pad.

7. Install the pad retainers and pads to the torque member.

CAUTION:
When attaching the pad retainer, attach it firmly so that it does not float up higher than the torque member, as shown in the figure.

8. After assembling shims and shim cover to pad, install it to the torque member.
9. Install cylinder body. Tighten sliding pin bolts to the specified torque. Refer to BR-40, "Components" .

DISC ROTOR INSPECTION



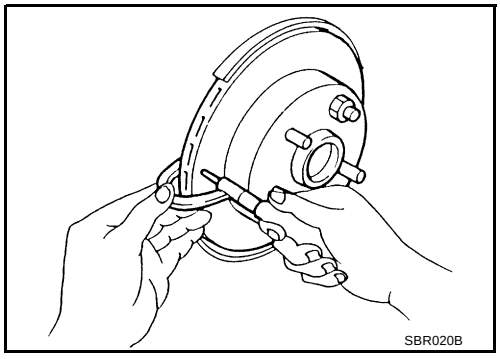
Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Measurement position:
At a point 10 mm (0.39 in) from outer edge of the disc
Runout limit (with it attached to the vehicle):
0.055 mm (0.0022 in) or less
Runout limit (just the disc rotor):
0.020 mm (0.008 in) or less



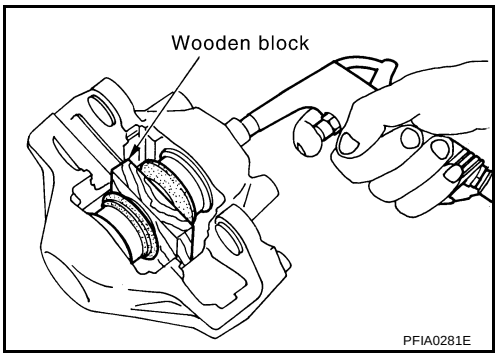
NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer to RAX-6, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.

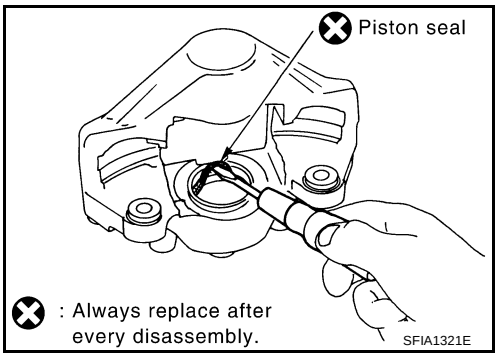
Standard
Standard thickness : 16.0 mm (0.630 in)
Wear limit : 14.0 mm (0.551 in)
Maximum uneven wear (measured at 8 positions)
: 0.015 mm (0.0006 in) or less



Disassembly and Assembly of Brake Caliper Assembly (With Brembo Calipers)

NFS00018

DISASSEMBLY



1. Insert a piece of wood as shown in the figure, blow air in through the flare nut mounting hole, and remove the piston and piston boot.

   CAUTION:
   Do not get fingers caught in the piston.
2. Remove the piston boot from the piston.

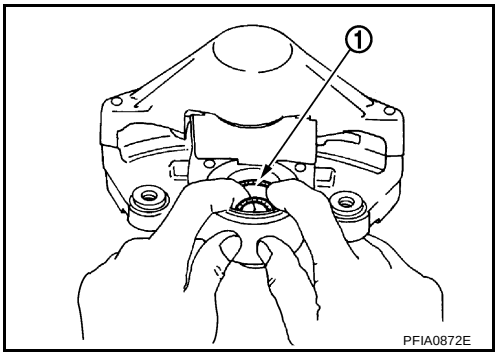
3. Using a flat-bladed screwdriver, remove the piston seal.

   CAUTION:
   - **Be careful not to damage cylinder inner wall.**
   - **Never remove the four bolts from the inner and outer sides of the caliper. Do not tighten them further, either.**

CALIPER INSPECTION

Caliper

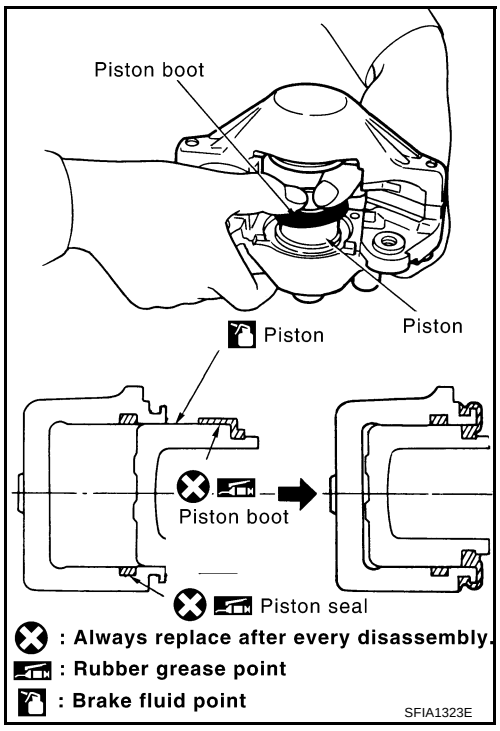
CAUTION:
- **Use new brake fluid to clean. Never use mineral oils such as gasoline or kerosene.**
- **Check for corrosion, wear, or damage to the cylinder inner wall, and replace the caliper if there are any non-standard conditions.**



Piston

CAUTION:
- **Since the piston surface is plated, do not repair using sandpaper.**
- **Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.**

ASSEMBLY



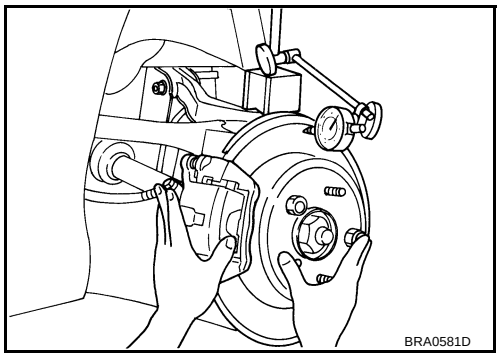
1. Apply polyglycol ether based lubricant to the piston seal (1), and install them to the cylinder body.

   CAUTION:
   Do not reuse piston seal.

2. Apply rubber grease to the piston boot, place it on the piston, and firmly insert the piston boot cylinder-side lip into the cylinder body groove.
3. Insert the piston into the cylinder body by hand and firmly attach the piston boot piston-side lip into the piston groove.

CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.

DISC ROTOR INSPECTION



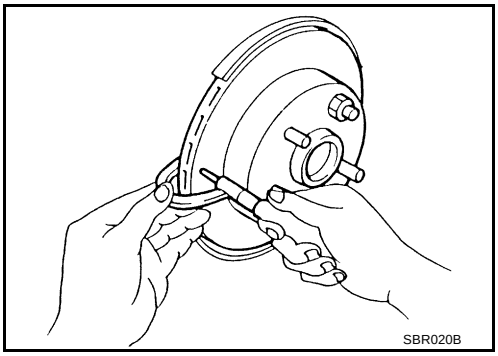
Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

Runout Inspection

1. Using wheel nuts, fix disc rotor to the wheel hub. (2 or more positions)
2. Inspect runout using a dial gauge.

Standard value
(measured at 10 mm (0.39 in) inside the disc edge)
Runout limit (with it attached to the vehicle)
: 0.070 mm (0.0028 in) or less
Runout limit (just for disc rotor)
: 0.040 mm (0.0016 in) or less



NOTE:
Make sure that wheel bearing axial end play is with in the specification before measuring runout. Refer toRAX-6, "On-Vehicle Inspection" .

3. If runout is outside the limit, find the minimum runout point by shifting mounting positions of the disc rotor and wheel hub by one hole.
4. If runout is still outside the limit after performing the above operation, replace or lathe the disc rotor. [When lathing, use the Pro–Cut PFM On–Car Brake Lathe (Tool No. 38–PFM90.5) or equivalent.]

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.

Standard

Standard thickness : 22.0 mm (0.866 in)

Wear limit : 20.2 mm (0.795 in)

Maximum uneven wear (measured at 8 positions)

: 0.015 mm (0.0020 in) or less

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

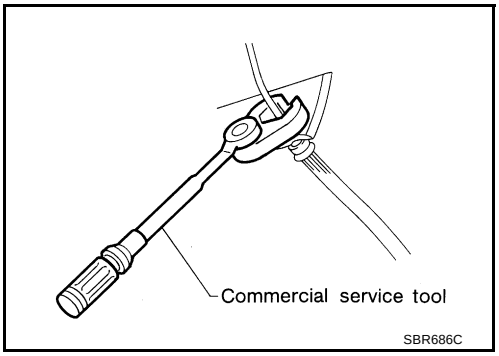
NFS0001M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0001N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0001O

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene to clean. They will ruin rubber parts and cause improper operation.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of ABS actuator and electric unit (control unit) or the battery negative terminal.

WARNING:

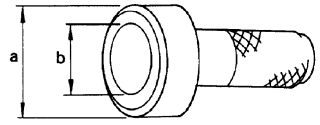
Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

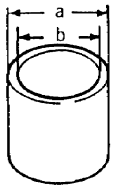
Precautions for Brake Control

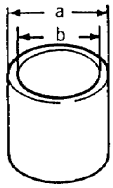
NFS0001P

- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.

- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.



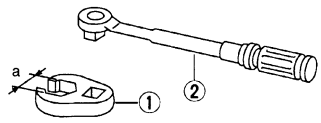




PREPARATION

PFP:00002

Special Service Tools



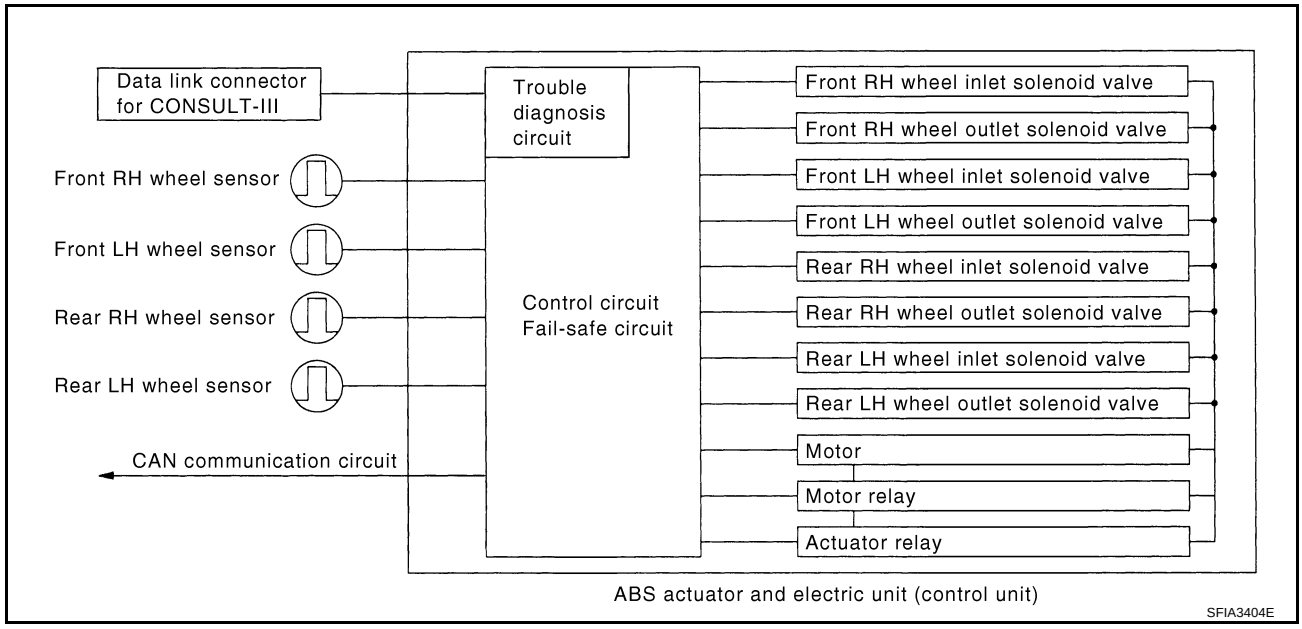
NFS0001Q

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	Installation rear sensor rotor
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	
KV40104710 (—) Drift a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0001R



Tool name		Description
1. Flare nut crowfoot a: 10 mm (0.39 in) / 12 mm (0.47 in) 2. Torque wrench	 S-NT360	Installing brake tube

SYSTEM DESCRIPTION

PFP:00000

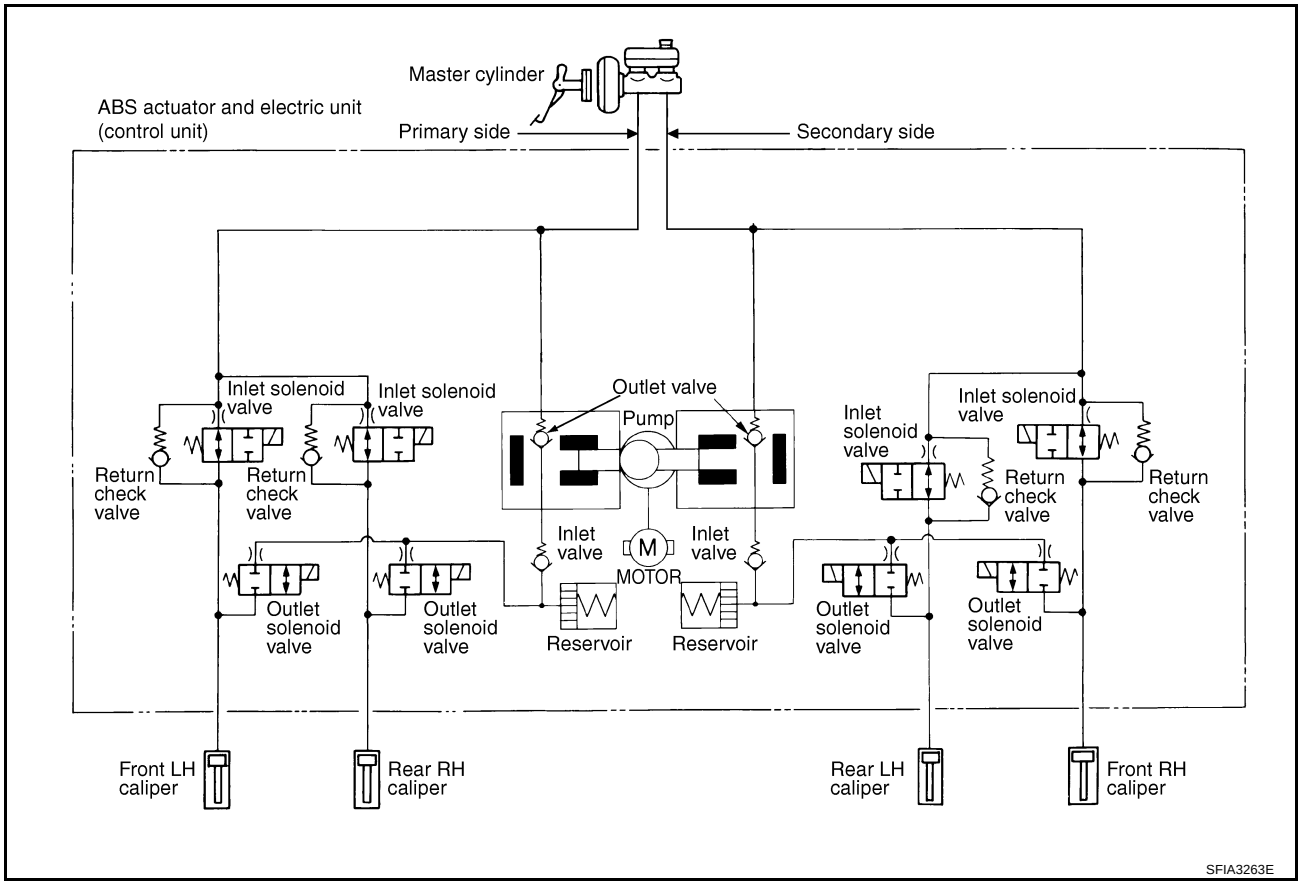
System Diagram

NFS0001S

ABS Function

NFS0001T

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical System Diagnosis by CONSULT-III is available.



EBD Function

NFS0001U

- Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical System Diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS0001W

CAN Communication

NFS0001X

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

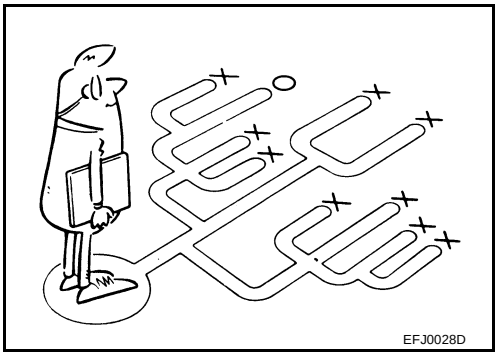
NFS000II

ABS, EBD SYSTEM

In case of electrical problems with the ABS, the ABS warning lamp will turn on. In case of electrical problems with the EBD, brake warning lamp, ABS warning lamp will turn on. Simultaneously, the ABS become one of the following conditions of the Fail-Safe function.

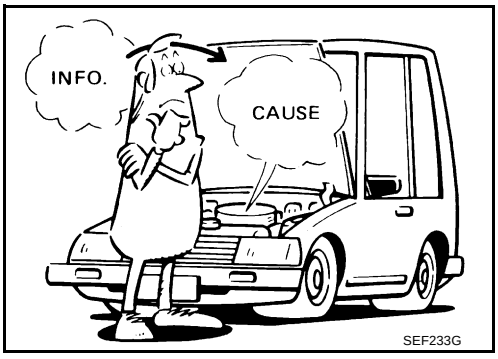
- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicle without ABS equipment.

  NOTE:
  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For EBD trouble, The EBD and ABS become inoperative, are the condition of the vehicle is the same as the condition of vehicles without ABS, EBD equipment.



How to Proceed with Diagnosis

NFS0001Y

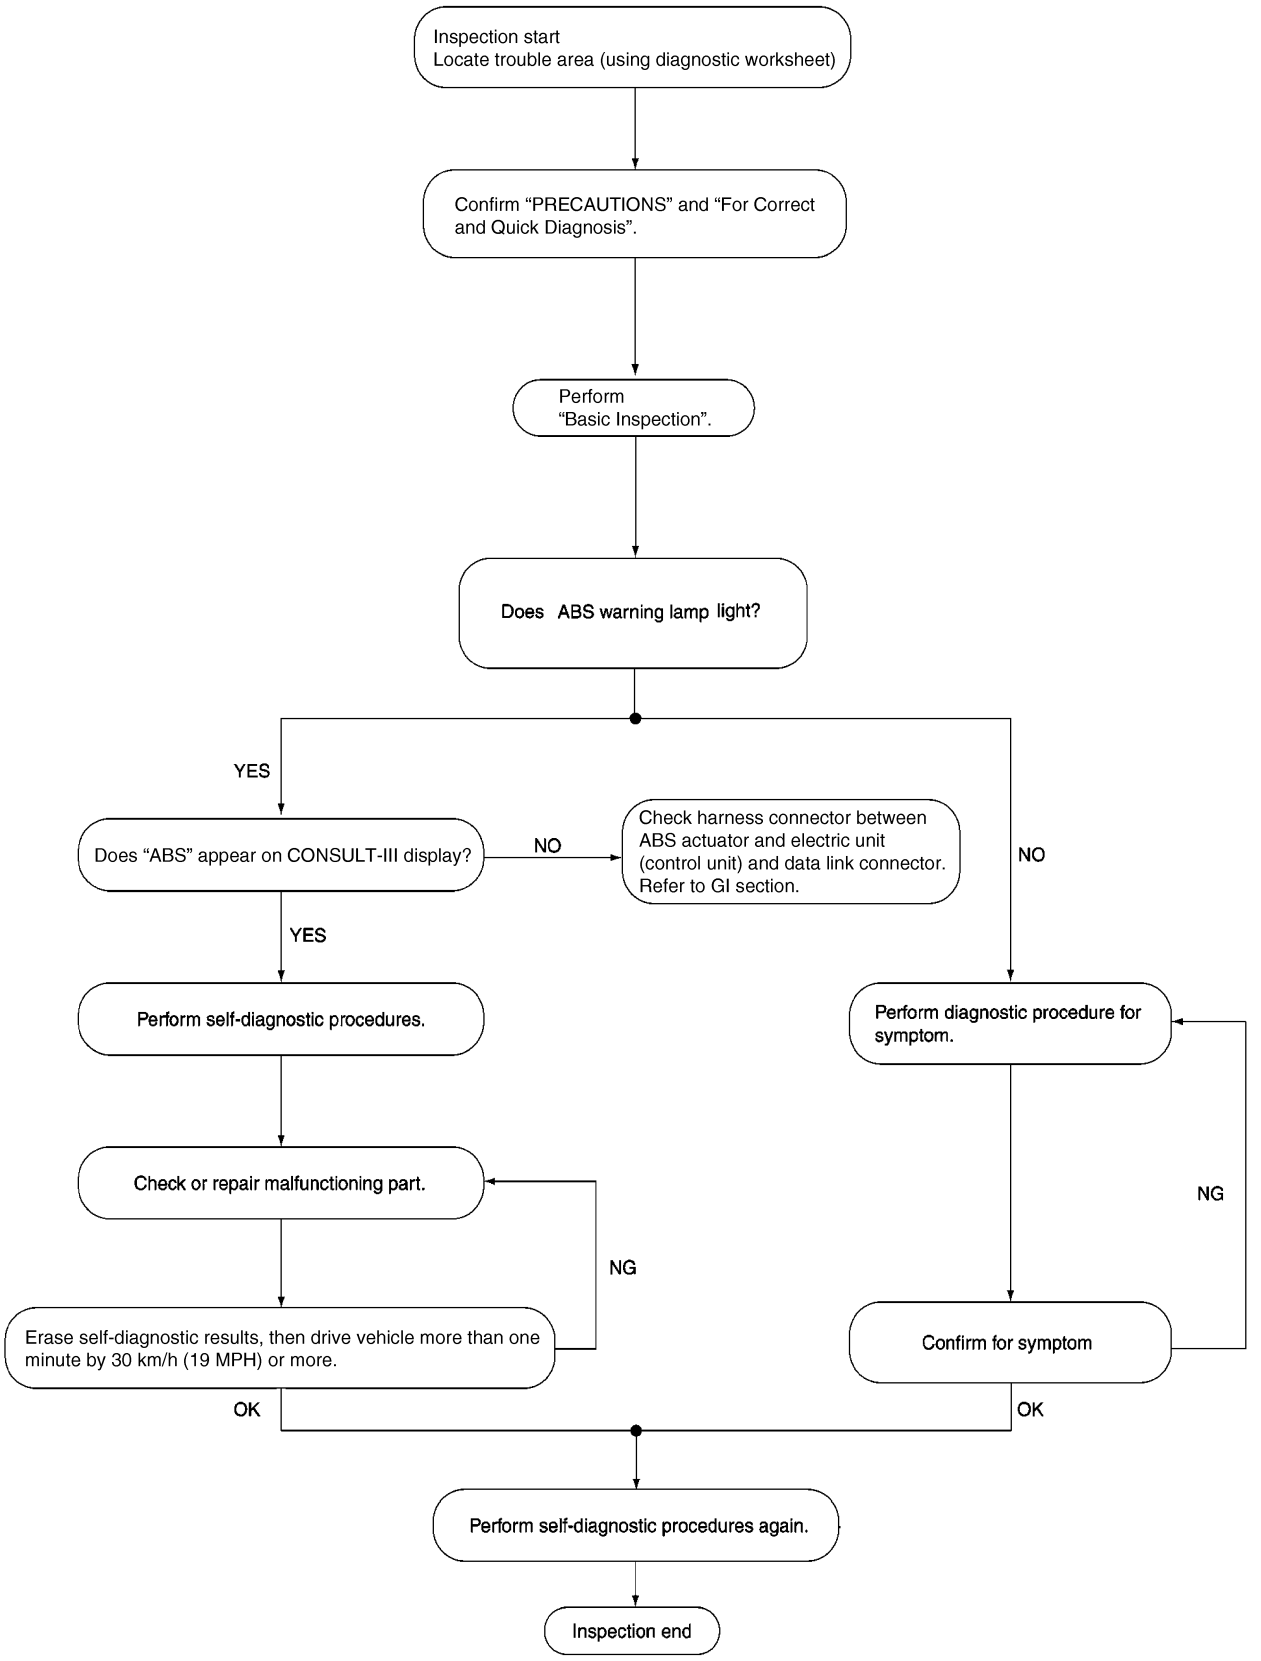


BASIC CONCEPT

- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.
- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:
  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

EFJ0028D



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions" .

DIAGNOSIS FLOWCHART

SFIA3405E

ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration	
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00022

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Wheel speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (± 10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
EBD WARN LAMP	Brake warning lamp on condition (Note 2)	Brake warning lamp ON	ON
		Brake warning lamp OFF	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
ABS WARN LAMP	ABS warning lamp on condition (Note 3)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
BATTERY VOLT	Battery voltage supplied to ABS control unit	Ignition switch ON	10 - 16V
GEAR	Determined gear shift position from the A/T PNP switch signal	Driving	M/T vehicles are always left in 1.
ENGINE RPM	Engine running	With engine stopped	0 rpm
		With engine running	Almost in accordance with tachometer display
FAIL SIGNAL	Fail signal status	During ABS fail-safe During EBD fail-safe	ON

Note 1: Confirm tire pressure is normal.
Note 2: Serves as EBD warning lamp.
Note 3: ON/OFF timing of ABS warning lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal).

CONSULT- II Functions (ABS)

NFS00023

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-19, "Self-Diagnosis"
DATA MONITOR	Input/Output data in the ABS actuator and electric unit (control unit) can be read.	BRC-21, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.	BRC-22, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	ABS actuator and electric unit (control unit) part number can be read.	—

Self-Diagnosis

NFS000HD

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp and brake warning lamp turn OFF.

   CAUTION:

   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR-1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-25, "Wheel Sensor System" (Note 1)
RR LH SENSOR-1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR-1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR-1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR-2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR-2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR-2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR-2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the ABS actuator and electric unit (control unit) power supply voltage is lower than normal.	BRC-27, "ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal malfunction in the ABS actuator and electric unit (control unit).	BRC-27, "ABS Actuator and Electric Unit (Control Unit)"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system.	BRC-29, "ABS Actuator Relay or ABS Motor Relay Power System"
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-30, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the control unit detects an error in the front left inlet solenoid system.	BRC-29, "ABS Actuator Relay or ABS Motor Relay Power System"
FR LH OUT ABS SOL [C1121]	When the control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the control unit detects an error in the rear right inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the control unit detects an error in the rear right outlet solenoid system.	

Display item	Malfunction detecting condition	Check item
EMERGENCY BRAKE [C1153]	When the ABS actuator and electric unit (control unit) malfunctions (pressure increase is too much or too little).	BRC-31, "ABS Actuator and Electric Unit (Control Unit) 2"
CAN COMM CIRCUIT [U1000]	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-31, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) or more for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.
Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Data Monitor

NFS000HE

DISPLAY ITEM LIST

×: Standard –: Not applicable ▼: Option

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECM INPUT SIGNALS	MAIN SIGNALS	SELECTION MENU	
FR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by front LH wheel sensor signal is displayed.
FR RH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by front RH wheel sensor signal is displayed.
RR LH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by rear LH wheel sensor signal is displayed.
RR RH SENSOR [km/h (MPH)]	×	×	▼	Wheel speed calculated by rear RH wheel sensor signal is displayed.
FR LH IN SOL (ON/OFF)	—	×	▼	Front left inlet ABS solenoid valve (ON/OFF) status is displayed.
FR LH OUT SOL (ON/OFF)	—	×	▼	Front left outlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH IN SOL (ON/OFF)	—	×	▼	Rear right inlet ABS solenoid valve (ON/OFF) status is displayed.
RR RH OUT SOL (ON/OFF)	—	×	▼	Rear right outlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH IN SOL (ON/OFF)	—	×	▼	Front right inlet ABS solenoid valve (ON/OFF) status is displayed.
FR RH OUT SOL (ON/OFF)	—	×	▼	Front right outlet ABS solenoid valve (ON/OFF) status is displayed.
RR LH IN SOL (ON/OFF)	—	×	▼	Rear left wheel inside ABS solenoid valve (ON/OFF) status is displayed.
RR LH OUT SOL (ON/OFF)	—	×	▼	Rear left outlet ABS solenoid valve (ON/OFF) status is displayed.
EBD WARN LAMP (ON/OFF)	—	×	▼	Brake warning lamp (ON/OFF) status is displayed.
STOP LAMP SW (ON/OFF)	×	×	▼	Stop lamp switch (ON/OFF) status is displayed.
MOTOR RELAY (ON/OFF)	—	×	▼	ABS motor relay (ON/OFF) condition is displayed.
ACTUATOR RLY (ON/OFF)	—	×	▼	ABS actuator relay (ON/OFF) status is displayed.
ABS WARN LAMP (ON/OFF)	—	×	▼	ABS warning lamp (ON/OFF) status is displayed.
BATTERY VOLT (V)	×	×	▼	The voltage supplied to the ABS control unit is displayed.

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECM INPUT SIGNALS	MAIN SIGNALS	SELECTION MENU	
EBD SIGNAL (ON/OFF)	—	—	▼	EBD operation (ON/OFF) status is displayed.
ABS SIGNAL (ON/OFF)	—	—	▼	ABS operation (ON/OFF) status is displayed.
EBD FAIL SIG (ON/OFF)	—	—	▼	EBD fail-safe signal (ON/OFF) status is displayed.
ABS FAIL SIG (ON/OFF)	—	—	▼	ABS fail-safe signal (ON/OFF) status is displayed.

Active Test

NFS000IN

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

For ABS solenoid valve, touch “UP”, “KEEP”, and “DOWN”.Then use screen monitor to check that solenoid valve operates as shown in the table below.

Operation	ABS solenoid valve		
	UP	KEEP	DOWN
FR RH IN SOL	OFF	ON	ON
FR RH OUT SOL	OFF	OFF	ON*

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS00024

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	This is the sound of the motor operating inside ABS actuator, and there may be some low sounds while the ABS is operating.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal

ABS WARNING LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	Remarks
Ignition switch OFF	—	—
For approximately “1” second after ignition switch ON	×	—
After approximately “1” second after ignition switch ON. (When system is normal)	—	Turns off 2 second after engine start
ABS error	×	When there is an ABS actuator and electric unit error (power or ground error)

Basic Inspection

NFS00025

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around ABS actuator for leaks. If there is leaking or oozing fluid, check following items.
   - If ABS actuator connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or ABS actuator screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than ABS actuator connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at ABS actuator, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace ABS actuator body.

     CAUTION:
     ABS actuator and electric unit (control unit) cannot be disassembled.
3. Check brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP INSPECTION

1. Make sure ABS warning lamp turned on approximately 1 second when the ignition switch is turned ON. Check CAN communications. Refer to BRC-31, "CAN Communication System" .
2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. Make sure ABS warning lamp turn off 2 seconds after the engine is started. If ABS warning lamp has not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the ABS actuator and electric unit.
4. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-19, "HOW TO ERASE SELF-DIAGNOSIS RESULTS"

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS00026

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR -1, -2
FR LH SENSOR -1, -2
RR RH SENSOR -1, -2
RR LH SENSOR -1, -2

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are the air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

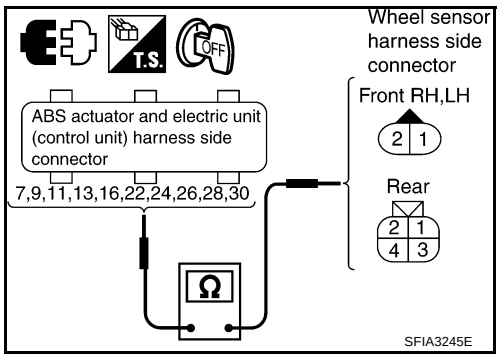
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect ABS control unit connector and the malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connector, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1 minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

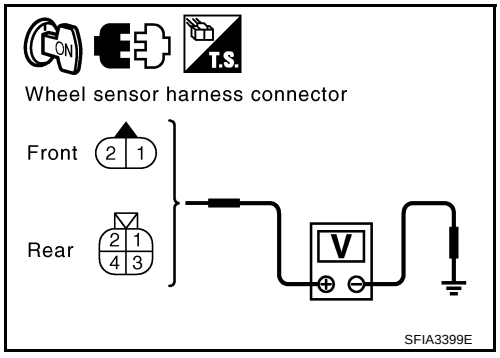
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect the wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH) and ABS control unit (control unit) connector E51.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit) (signal)	ABS actuator and electric unit (control unit) (ground)
Front RH	24	1	9	2	24, 9	16, 30
Front LH	22	1	7	2	22, 7	
Rear RH	28	1	13	2	28, 13	
Rear LH	26	3	11	4	26, 11	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

ABS Actuator and Electric Unit (Control Unit)

NFS00028

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit). Re-conduct ABS actuator and electric unit (control unit) self-diagnosis.
NO >> INSPECTION END

ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems

NFS00029

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

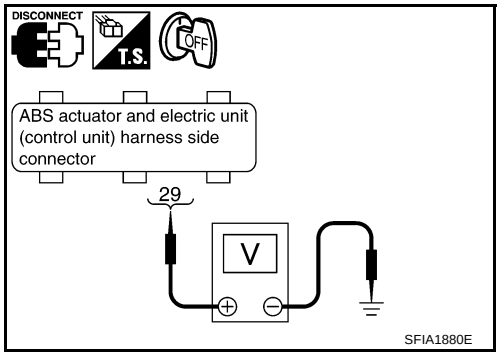
Check self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis display items?

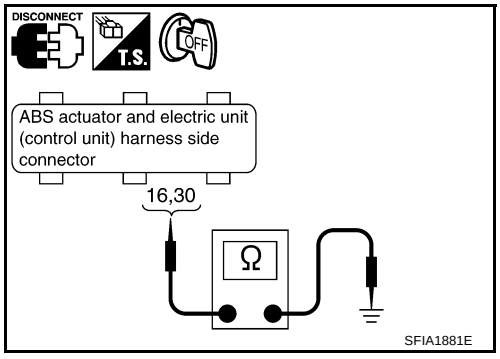
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector and check terminal for deformation, disconnection, looseness, and so on, If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.

Is the result of self-diagnosis normal?



YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER AND GROUND CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check continuity and voltage between connector terminals and ground.

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Voltage
Power supply	29	Ignition switch ON	Battery voltage (Approx. 12 V)
		Ignition switch OFF	Approx. 0 V

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Continuity
Ground	16, 30	Ignition switch OFF	Yes

OK or NG

OK >> Check battery (terminal looseness, power drop, etc.) error. If there is an error, make repairs.
NG >> Corresponding harness circuit error. Repair the circuit.

ABS Actuator Relay or ABS Motor Relay Power System

NFS0002A

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

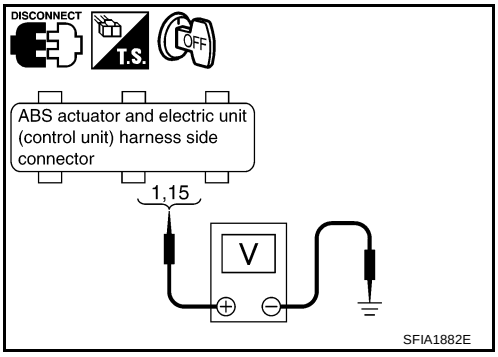
Self-diagnosis results
IN ABS SOL
OUT ABS SOL
MAIN RELAY

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E51, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

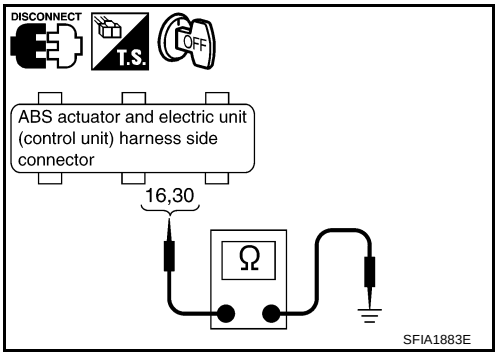
3. CHECK ABS ACTUATOR RELAY OR ABS MOTOR RELAY POWER CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. For ABS actuator relay, measure the voltage between the connector terminal 1 and ground. For ABS motor relay, measure the voltage between connector terminal 15 and ground.

ABS actuator and electric unit (control unit)	Ground	Voltage
1, 15	—	Battery voltage (Approx. 12 V)

OK or NG

OK >> GO TO 4
NG >> Error in the circuit between battery and ABS actuator and electric unit (control unit). Repair the circuit.



4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) connector and ground.

ABS actuator and electric unit (control unit)	Ground	Continuity
16, 30	—	Yes

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Open or short in harness. Repair or replace the harness.

Stop Lamp Switch System

NFS0002B

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

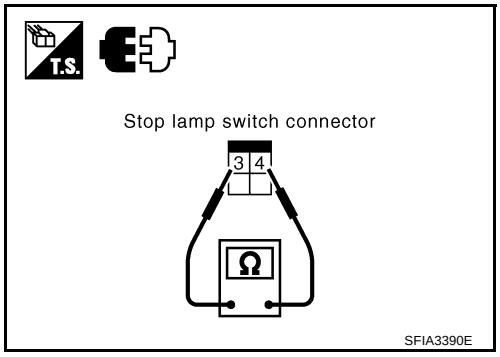
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E51 and stop lamp switch connector E112, check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and conduct self-diagnosis.
3. Start engine.
4. Repeat Pumping brake pedal carefully several times, then perform self-diagnosis again.



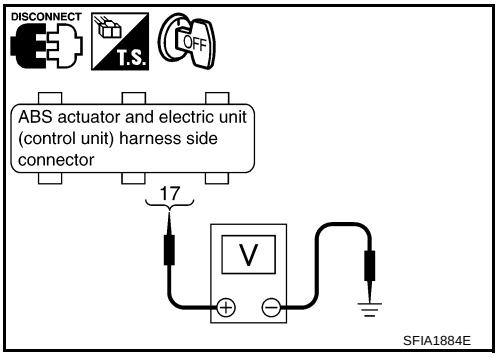
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check voltage between ABS actuator and electric unit (control unit) connector terminal and ground.

ABS actuator and electric unit (control unit)	Ground	Measurement condition	Voltage
17	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> INSPECTION END
NG >> Open or short in harness between ABS actuator and electric unit and stop lamp switch. Repair or replace the harness.

ABS Actuator and Electric Unit (Control Unit) 2

NFS0002C

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit).
NO >> INSPECTION END

CAN Communication System

NFS0002D

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the ABS actuator and electric unit (control unit) connector, and check terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connector is loose, damaged, open, or shorted.

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0002E

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system.

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0002F

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >>
- Bleed air from the brake piping.
- Check brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repairs.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector, and make sure the braking force is sufficient when the ABS is not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .
NG >> Check brake system.

The Braking Distance is Long

NFS0002G

CAUTION:
On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .

NG >>
- Bleed air from the brake piping.
- Check brake system.

The ABS Function Does Not Operate

NFS0002H

CAUTION:
The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0002I

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.

NO >> Perform self-diagnosis. Refer to BRC-19, "OPERATION PROCEDURE" .

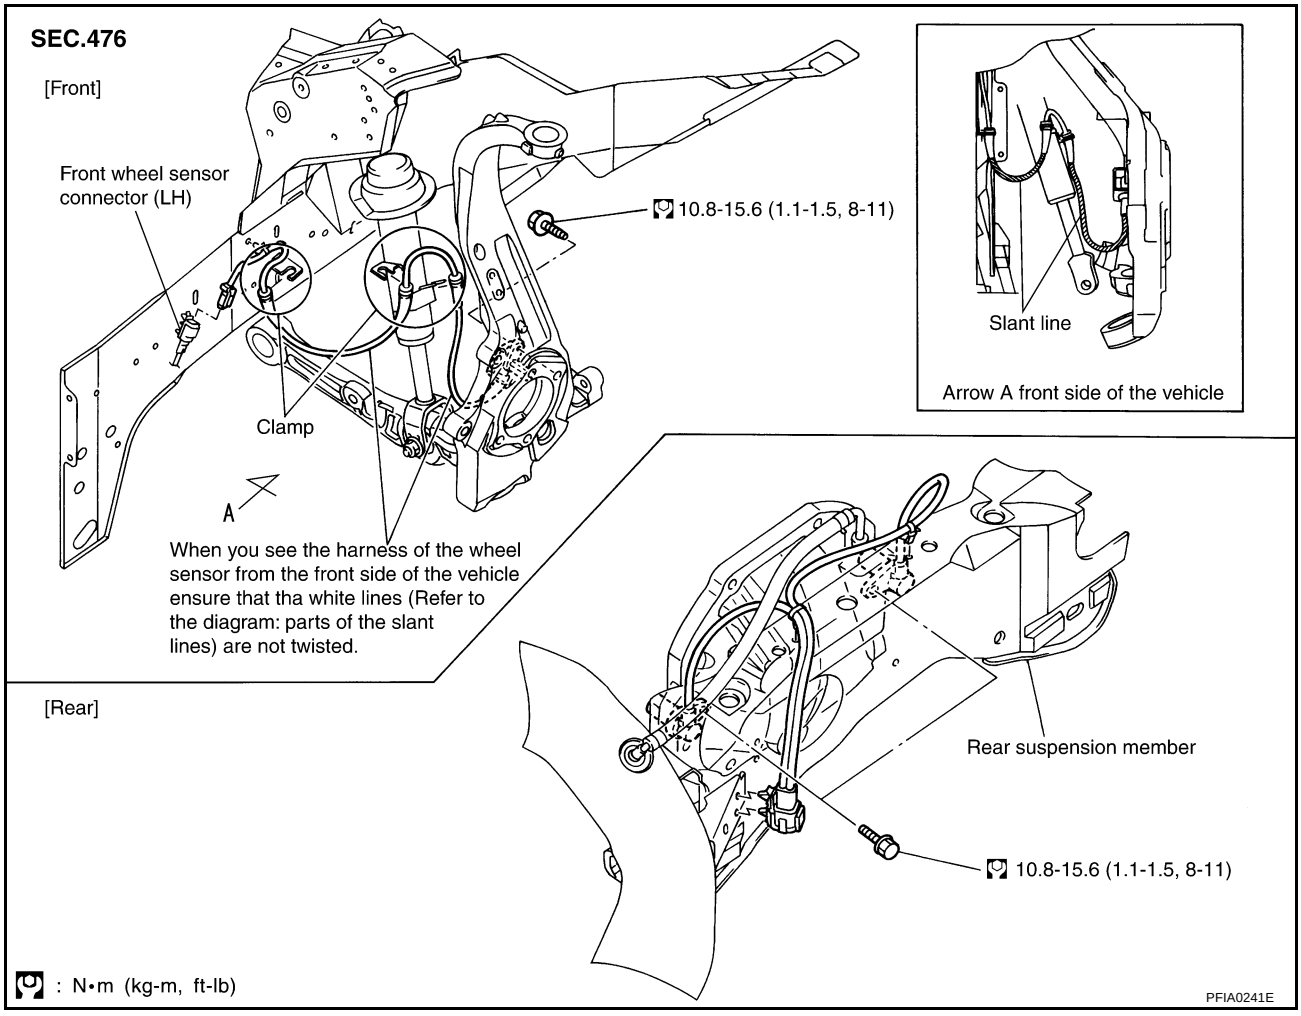
2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.

NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-32, "Excessive ABS Function Operation Frequency" .



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0002J

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS0002K

REMOVAL

Front

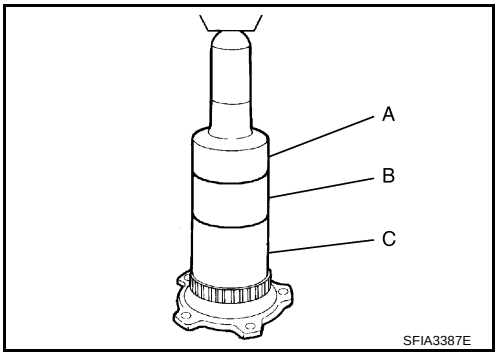
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
  - Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
  - Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the companion flange.

INSTALLATION

Front



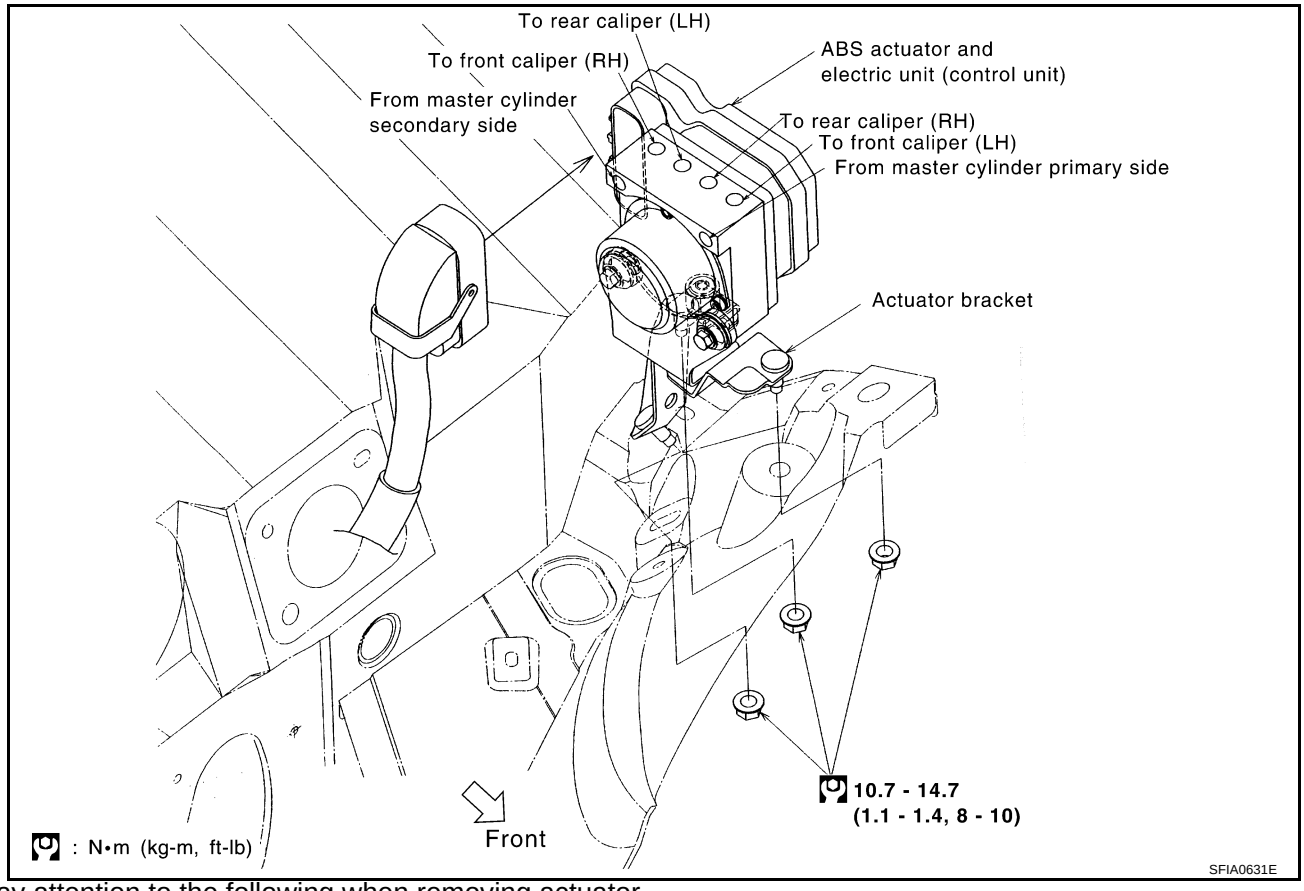
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
  - Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

  - Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



ABS ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

NFS0002L

COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer to BR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

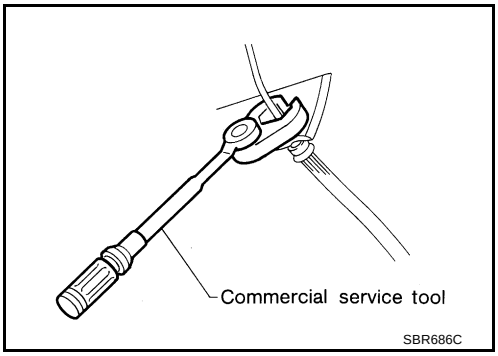
NFS0002M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0002N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0002O

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of ABS actuator and electric unit (control unit) or the battery negative terminal.

WARNING:

Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

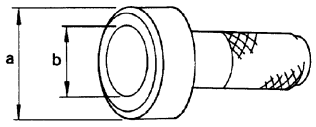
Precautions for Brake Control

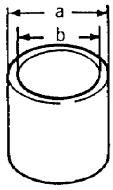
NFS0002P

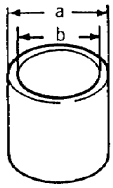
- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting

diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.

- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.



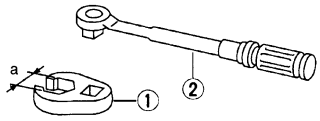




PREPARATION

PFP:00002

Special Service Tools



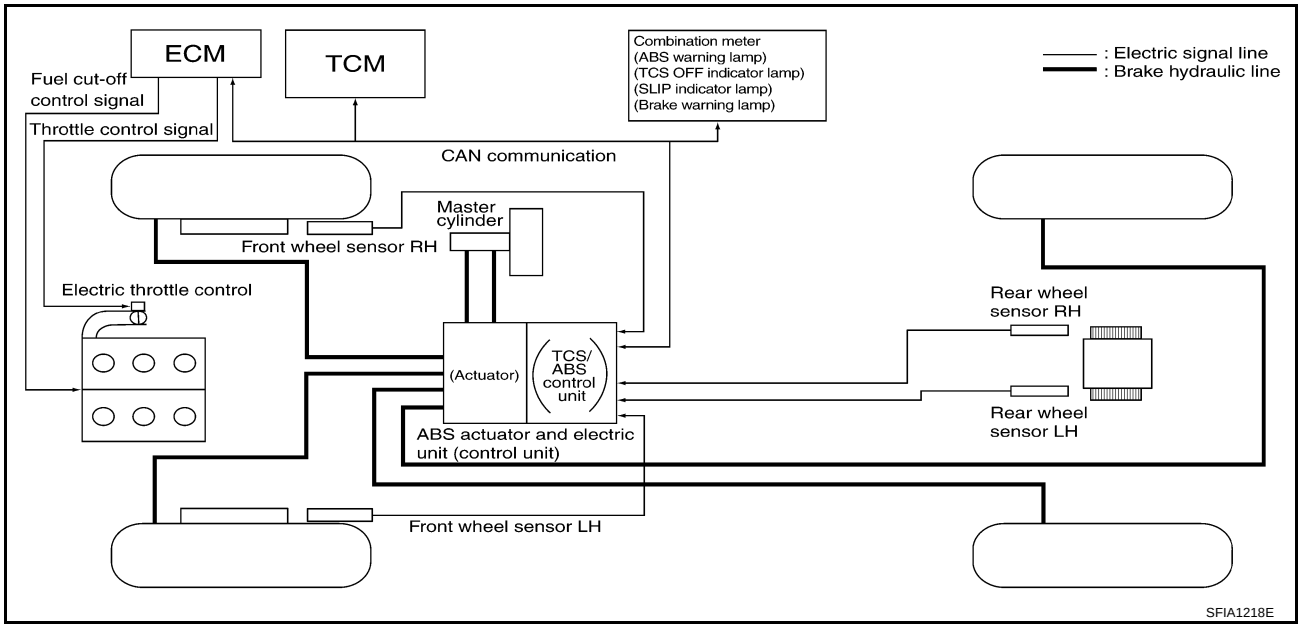
NFS0002Q

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	Installation rear sensor rotor
KV40104710 (—) a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0002R



Tool name		Description
1. Flare nut crowfoot a: 10 mm (0.39 in) / 12mm (0.47 in) 2. Torque wrench	 S-NT360	Installing brake tube

SYSTEM DESCRIPTION

PFP:00000

System Diagram

NFS0002S

TCS Function

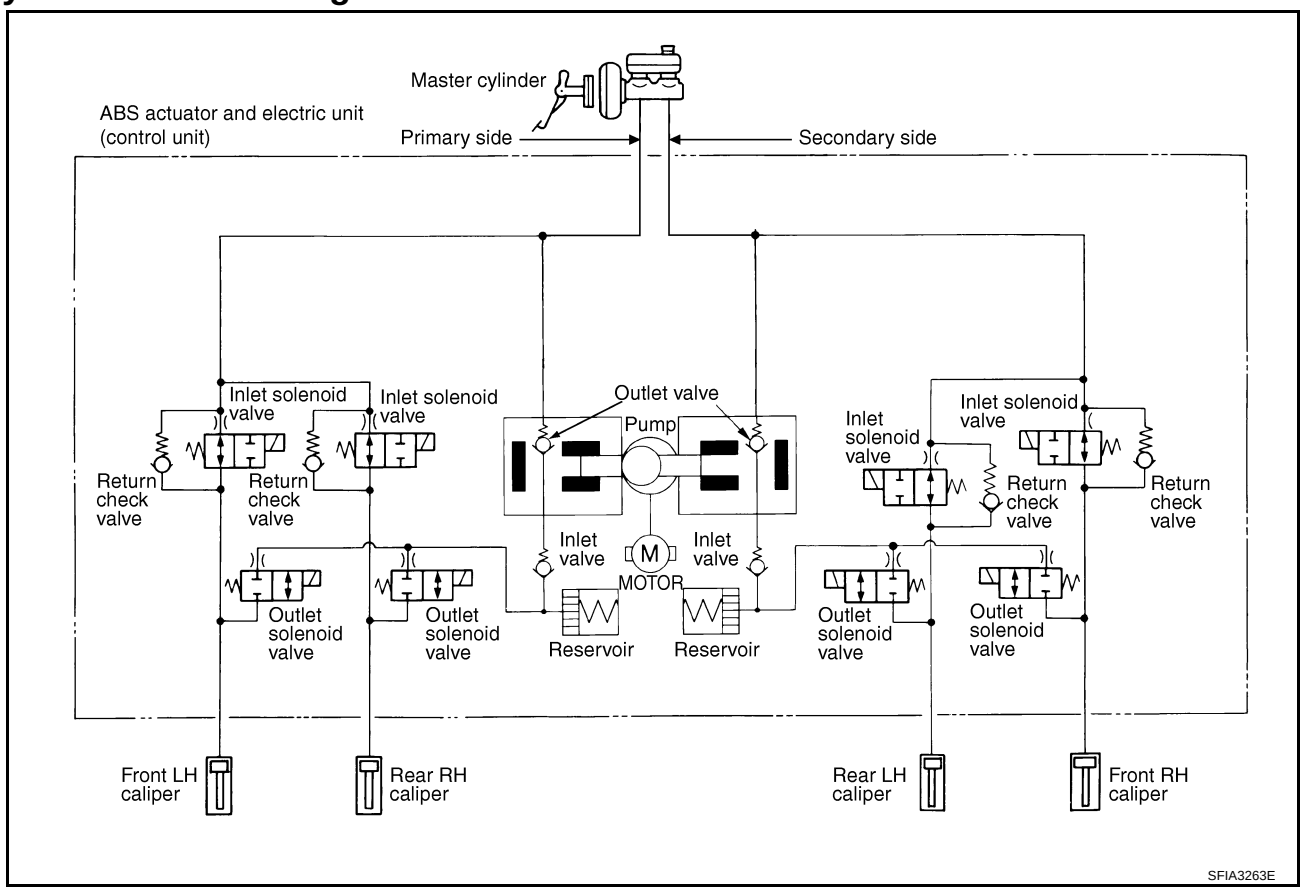
NFS0002T

- The wheel spin occurrence of the drive wheels is detected by the ABS actuator and electric unit (control unit) using the wheel speed signals from all four wheels, so when wheel spin occurs, the amount of wheel spin is reduced by cutting the fuel to the engine, and partially closing the throttle valve to reduce the engine torque. The throttle opening is also controlled to obtain the optimum engine torque.
- Depending on road circumstances, the driver may have a sluggish feel. This is normal, because the optimum traction has the highest priority under TCS operation.
- TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.
- During TCS operation, it informs a driver of system operation by flashing SLIP indicator lamp.

ABS Function

NFS0002U

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical system diagnosis by CONSULT-III is available.



EBD Function

NFS0002V

- The Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical system diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS0002X

CAN Communication

NFS0002Y

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

NFS000IJ

TCS SYSTEM

In case of Throttle Control System trouble, the TCS OFF indicator lamp and SLIP indicator lamp are turned on, and the condition of the vehicle is the same as the condition of vehicles without TCS equipment. In case of trouble to the Throttle Control System, the ABS control continues to operate normally without TCS control.

CAUTION:

If the Fail-Safe function is activated, then perform the self-diagnosis for TCS/ABS control system.

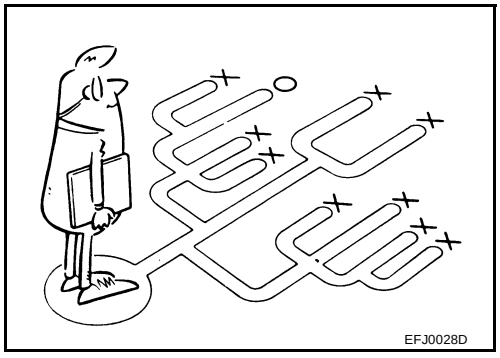
ABS, EBD SYSTEM

In case of electrical problems with the ABS, the ABS warning lamp, TCS OFF indicator lamp and SLIP indicator lamp will turn on. In case of electrical problem with the EBD, brake warning lamp, ABS warning lamp, TCS OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the TCS/ABS become one of the following conditions of the Fail-Safe function.

- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicles without TCS/ABS equipment.

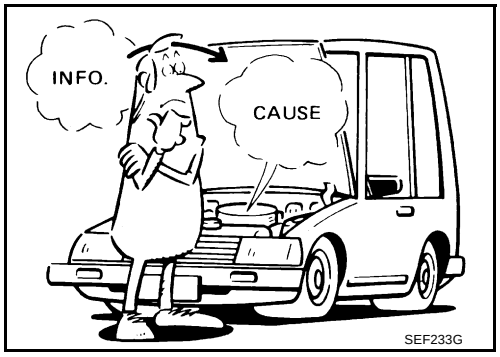
  NOTE:
  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.

How to Proceed with Diagnosis



NFS0002Z

BASIC CONCEPT

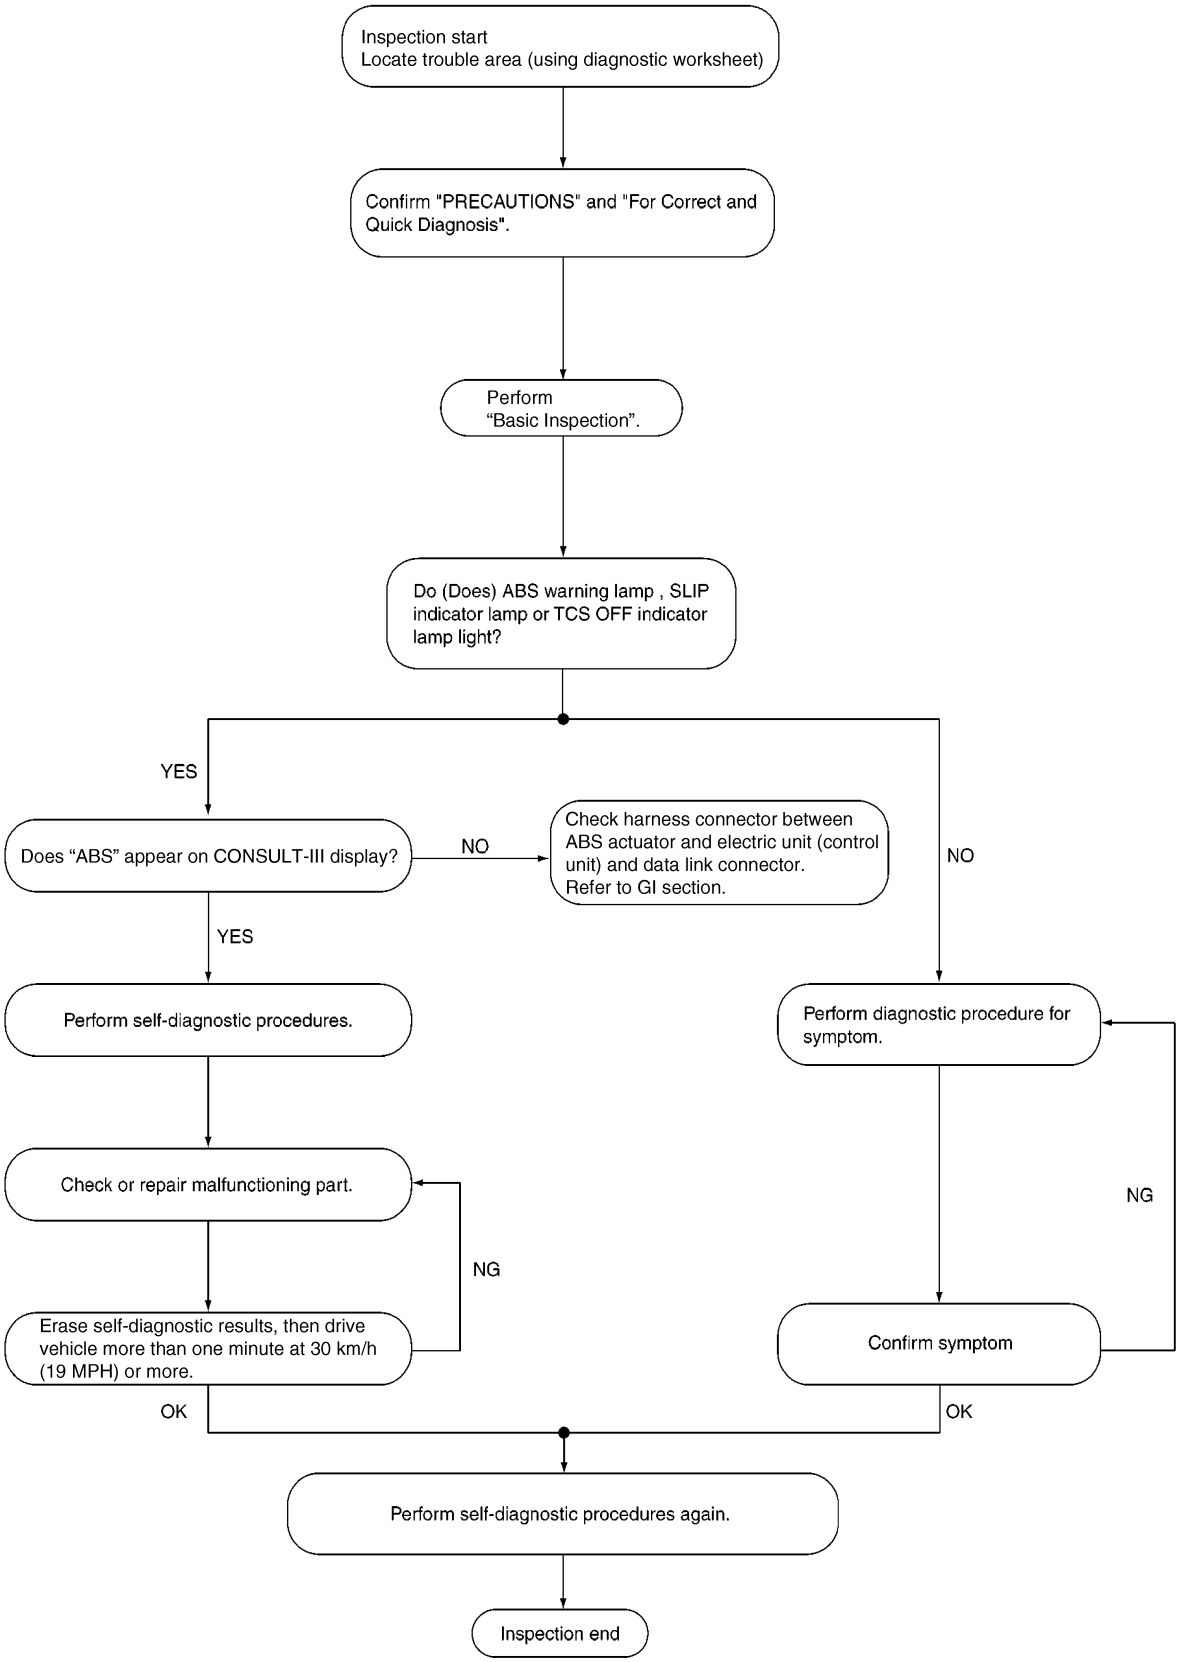


- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.

- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:
  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

EFJ0028D



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions"

DIAGNOSIS FLOWCHART

SFIA3406E

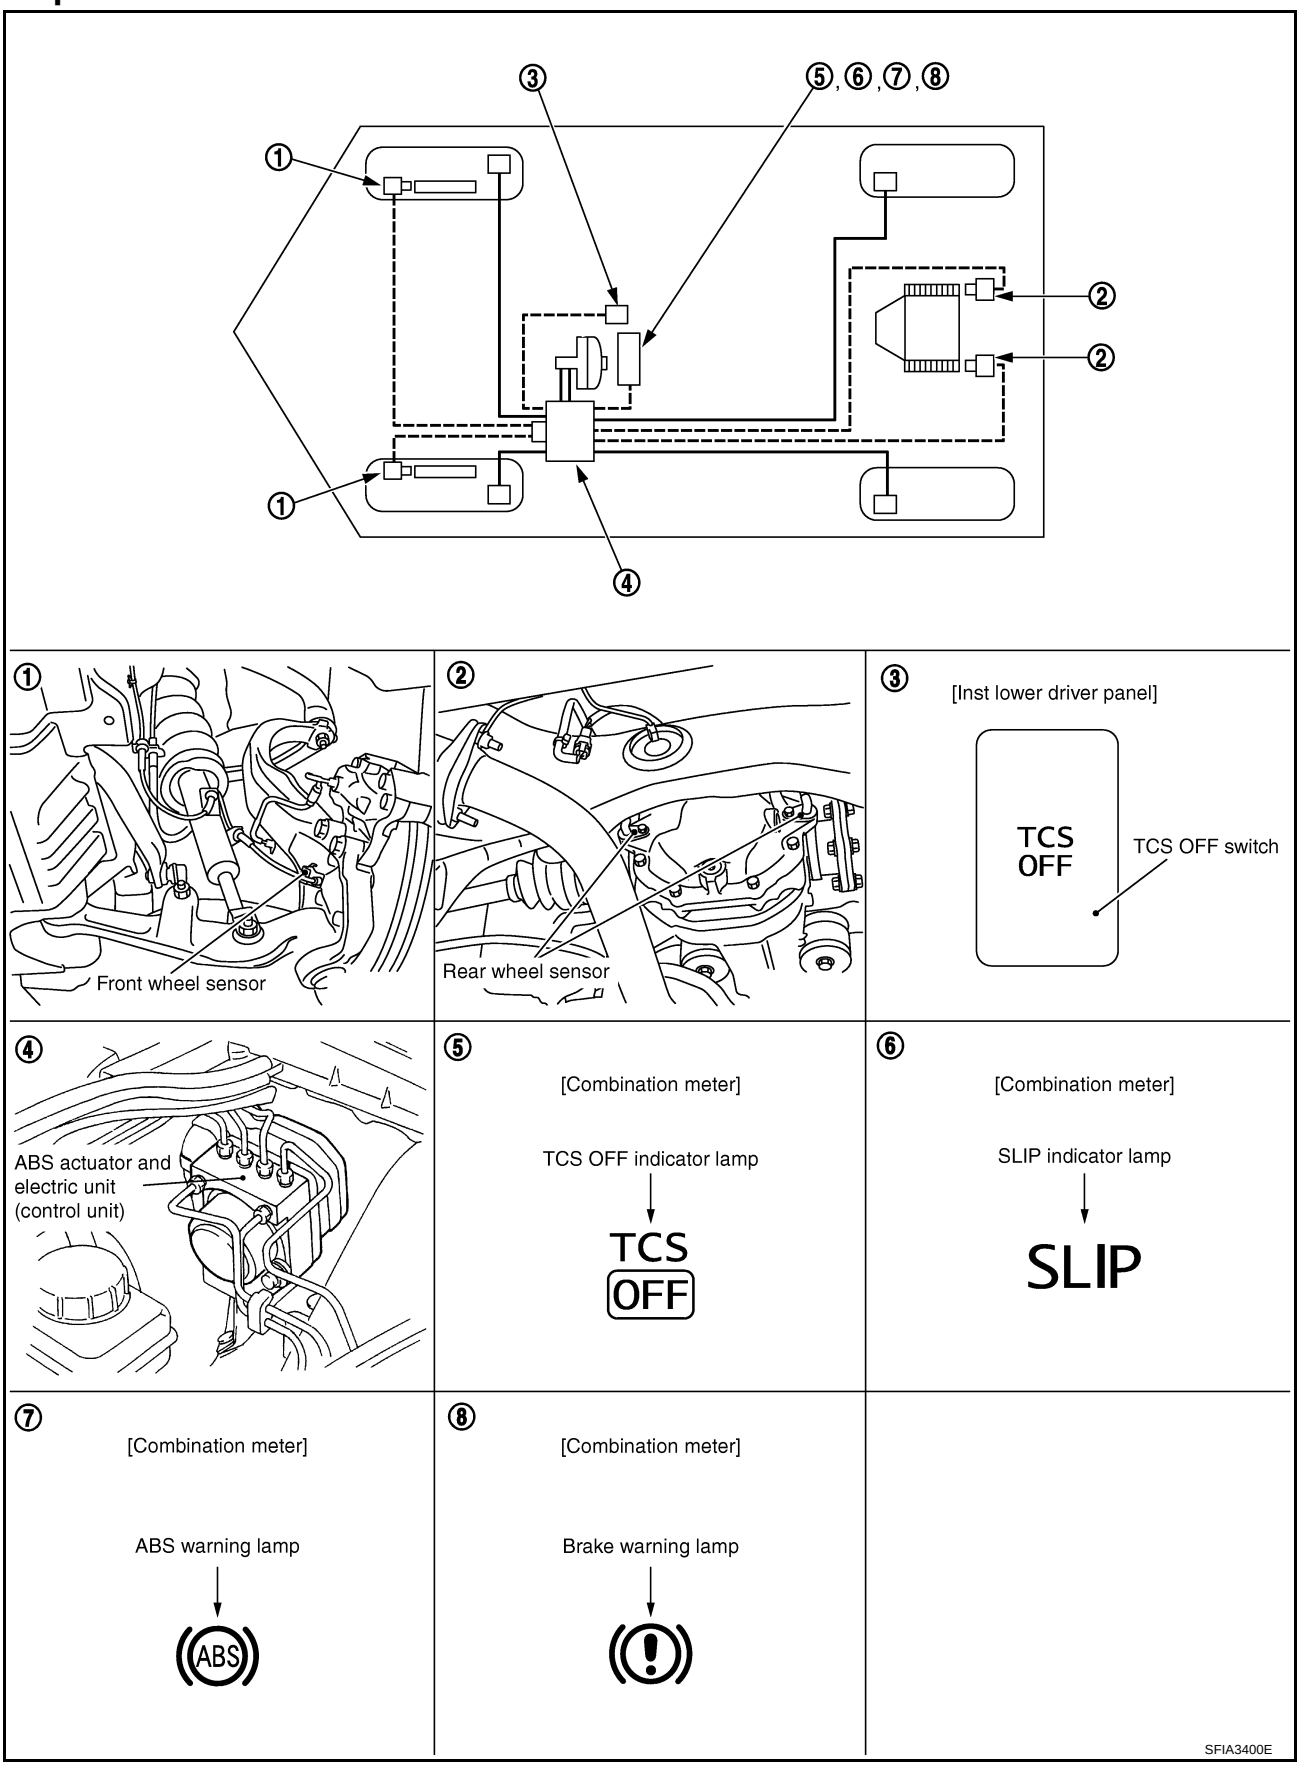
ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B



EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00034

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Wheel speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (±10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
EBD WARN LAMP	Brake warning lamp on condition (Note 2)	Brake warning lamp ON	ON
		Brake warning lamp OFF	OFF
ABS WARN LAMP	ABS warning lamp on condition (Note 3)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
OFF LAMP	TCS OFF indicator lamp on condition (Note 4)	TCS OFF indicator lamp ON	ON
		TCS OFF indicator lamp OFF	OFF
SLIP LAMP	SLIP indicator lamp on condition (Note 5)	SLIP indicator lamp ON	ON
		SLIP indicator lamp OFF	OFF
OFF SW	TCS switch ON-OFF status	TCS OFF switch ON (TCS OFF indicator lamp ON)	ON
		TCS OFF switch OFF (TCS OFF indicator lamp OFF)	OFF
BATTERY VOLT	Battery voltage supplied to TCS/ABS control unit	Ignition switch ON	10 - 16 V
GEAR	Determined gear shift position from the A/T PNP switch signal	Driving	1 - 5 ● Differs depending on the transmission status. (M/T vehicles are always left in 1.)
ENGINE RPM	Engine running	With engine stopped	0 rpm
		With engine running	Almost in accordance with tachometer display
N POSITION SIGNAL	Determined gear shift position from the A/T PNP switch signal (Note 5)	N position	ON
		Other than N position	OFF

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
P POSITION SIGNAL	Determined gear shift position from the A/T PNP switch signal (Note 6)	P position	ON
		Other than P position	OFF
FAIL SIGNAL	Fail signal status	During TCS fail-safe During ABS fail-safe During EBD fail-safe	ON
ACCEL POS SIG	Open/close condition of throttle valve (linked with accelerator pedal).	Accelerator pedal not depressed (ignition switch is ON)	0 %
		Depress accelerator pedal (ignition switch is ON)	0 to 100 %

Note 1: Confirm tire pressure is normal.
Note 2: Serves as EBD warning lamp.
Note 3: ON/OFF timing of ABS warning lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal).
Note 4: ON/OFF timing of TCS OFF indicator lamp
ON: For approximately 1 second after the ignition switch is turned on, when an error is detected, or when the TCS OFF switch is on.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal), when TCS OFF switch is off.
Note 5: ON/OFF timing of SLIP indicator lamp
ON: For approximately 1 second after the ignition switch is turned on or when an error is detected.
OFF: Approximately 1 second after the ignition switch is turned on (when system is normal), when TCS function is not operating
Flash: When the TCS function is operating during driving.
Note 6: A/T models.

CONSULT- II Functions (ABS)

NFS00035

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-53, "Self-diagnosis"
DATA MONITOR	Input/Output data in the ABS actuator and electric unit (control unit) can be read.	BRC-55, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.	BRC-57, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	ABS actuator and electric unit (control unit) part number can be read.	—

Self-diagnosis

NFS000HG

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp, TCS OFF indicator lamp, SLIP indicator lamp and brake warning lamp turn OFF.

   CAUTION:
   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp, TCS OFF indicator lamp, SLIP indicator lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR-1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-61, "Wheel Sensor System" (Note 1)
RR LH SENSOR-1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR-1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR-1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR-2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR-2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR-2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR-2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the ABS actuator and electric unit (control unit) power supply voltage is lower than normal.	BRC-64, "ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal error in the ABS actuator and electric unit (control unit).	BRC-63, "ABS Actuator and Electric Unit (Control Unit)"
PUMP MOTOR [C1111]	When the ABS actuator and electric unit (control unit) detects an error in the motor or motor relay.	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"

Display item	Malfunction detecting condition	Check item
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-66, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the control unit detects an error in the front left inlet solenoid system.	BRC-65, "ABS Actuator Relay or ABS Motor Relay Power System"
FR LH OUT ABS SOL [C1121]	When the control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the control unit detects an error in the rear right inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the control unit detects an error in the rear right outlet solenoid system.	
EMERGENCY BRAKE [C1153]	When the ABS actuator and electric unit (control unit) malfunctions (pressure increase is too much or too little).	BRC-67, "ABS Actuator and Electric Unit (Control Unit) 2"
ENGINE SIGNAL 1 [C1130]	Major engine components are malfunctioning.	BRC-63, "Engine System"
ENGINE SIGNAL 2 [C1131]		
ENGINE SIGNAL 3 [C1132]		
ENGINE SIGNAL 4 [C1133]		
ENGINE SIGNAL 5 [C1134]		
ENGINE SIGNAL 6 [C1136]		
CAN COMM CIRCUIT [U1000]	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-67, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) or more for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.

Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Active Test

NFS000IO

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

For ABS solenoid valve, touch “UP”, “KEEP”, and “DOWN”.Then use screen monitor to check that solenoid valve operates as shown in the table below.

Operation	ABS solenoid valve		
	UP	KEEP	DOWN
FR RH IN SOL	OFF	ON	ON
FR RH OUT SOL	OFF	OFF	ON*

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS00036

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- TCS/ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	This is the sound of the motor operating inside ABS actuator and electric unit (control unit), and there may be some low sounds while TCS or ABS is operating.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	

Symptom	Symptom description	Result
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
TCS operation (SLIP indicator lamp ON)	TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.	Normal When conducting the inspection on a chassis dynamometer, cancel the TCS function.
	When inspecting the speedometer, etc., press TCS OFF switch to turn off TCS function before conducting the work.	
	When accelerator pedal is depressed on a chassis dynamometer (front wheel fixing type), the vehicle speed will not increase. This is normal, because TCS is activated by the stationary front wheels. The warning lamp may also turn on to show “sensor system error” in this case. This is not a malfunction either, because the stationary front wheels are detected. Restart engine, and drive the vehicle at 30 km/h (19 MPH) or more or higher to check that the warning lamp no longer turns on.	
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal
Sluggish feel	Depending on road circumstances, the driver may have a sluggish feel. This is normal, because under TCS operation optimum traction has the highest priority (safety first). Sometimes the driver has a slight sluggish feel in response to substantial accelerator pedal operation.	Normal

ABS WARNING LAMP, TCS OFF INDICATOR LAMP AND SLIP INDICATOR LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	TCS OFF indicator lamp	SLIP indicator lamp	Remarks
Ignition switch OFF	—	—		—
For approximately “1” second after ignition switch ON	×	×	×	—
After approximately “1” second after ignition switch ON (When system is normal)	—	—	—	Turns off 2 second after engine start
When the TCS OFF switch is turned on (TCS function off)	—	×	—	—
TCS/ABS error	×	×	×	—
	×	×	—	When there is an ABS actuator and electric unit (control unit) error (power or ground error)
TCS error	—	×	×	—

Basic Inspection

NFS00037

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around ABS actuator and electric unit (control unit) for leaks. If there is leaking or oozing fluid, check the following items.
   - If ABS actuator and electric unit (control unit) connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or ABS actuator and electric unit (control unit) screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than ABS actuator and electric unit (control unit) connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at ABS actuator and electric unit (control unit), if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the ABS actuator and electric unit (control unit) body.

     CAUTION:
     ABS actuator and electric unit (control unit) cannot be disassembled.
3. Check brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP, TCS OFF INDICATOR LAMP, SLIP INDICATOR LAMP INSPECTION

1. Make sure ABS warning lamp, TCS OFF indicator lamp (when TCS OFF switch is OFF), and SLIP indicator lamp turns ON approximately 1 second when the ignition switch is turned ON. If they do not, check the TCS OFF indicator lamp and then TCS OFF switch. Refer to BRC-68, "TCS OFF SWITCH" . Check CAN communications. Refer to “CAN Communication Inspection”. If there are no errors with TCS OFF switch and CAN communication system, check combination meter. Refer to BRC-67, "CAN Communication System" .
2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. With the engine running, make sure TCS OFF indicator lamp turns on and off when TCS OFF switch is turned on and off. If the indicator lamp status does not correspond to switch operation, check the TCS OFF switch system. Refer to BRC-68, "TCS OFF SWITCH" .
4. Make sure ABS warning lamp, TCS OFF indicator lamp, and SLIP indicator lamp turn off 2 seconds after the engine is started. If ABS warning lamp, TCS OFF indicator lamp, and SLIP indicator lamp have not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the ABS actuator and electric unit (control unit).
5. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-53, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS00038

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR -1, -2
FR LH SENSOR -1, -2
RR RH SENSOR -1, -2
RR LH SENSOR -1, -2

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are the air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

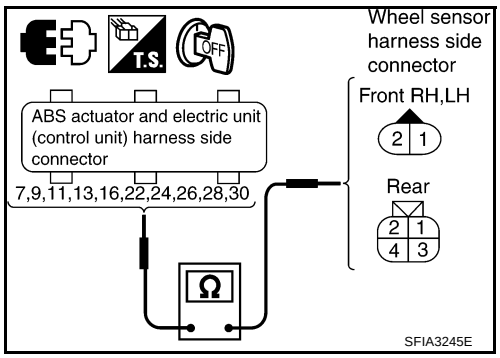
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector and malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connector, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1 minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

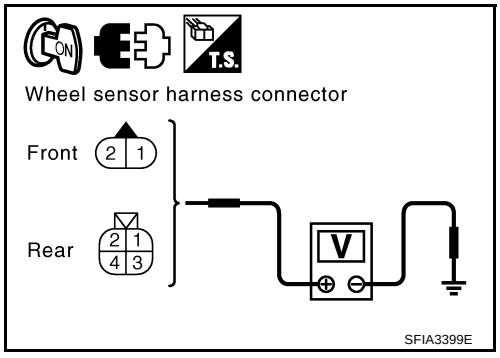
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH) and ABS actuator and electric unit (control unit) connector E51.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit)	Wheel sensor	ABS actuator and electric unit (control unit) (signal)	ABS actuator and electric unit (control unit) (ground)
Front RH	24	1	9	2	24, 9	16, 30
Front LH	22	1	7	2	22, 7	
Rear RH	28	1	13	2	28, 13	
Rear LH	26	3	11	4	26, 11	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Engine System

NFS00039

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
ENGINE SIGNAL 1
ENGINE SIGNAL 2
ENGINE SIGNAL 3
ENGINE SIGNAL 4
ENGINE SIGNAL 5
ENGINE SIGNAL 6

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK ENGINE SYSTEM

1. Conduct an ECM self-diagnosis and repair or replace any non-standard items. Re-conduct ECM self-diagnosis.
2. Re-conduct ABS actuator and electric unit (control unit) self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace any non-standard items. Re-conduct the self-diagnosis.

ABS Actuator and Electric Unit (Control Unit)

NFS0003A

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace ABS actuator and electric unit (control unit). Re-conduct the self-diagnosis.
NO >> INSPECTION END

ABS Actuator and Electric Unit (Control Unit) Power and Ground Systems

NFS0003B

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

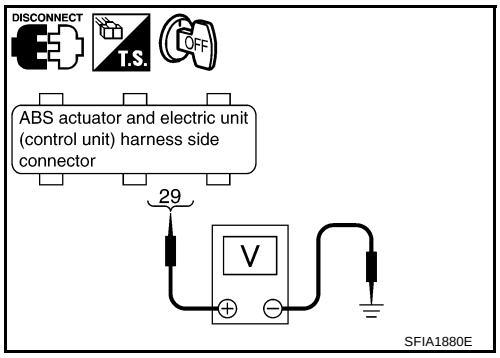
Check self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis display items?

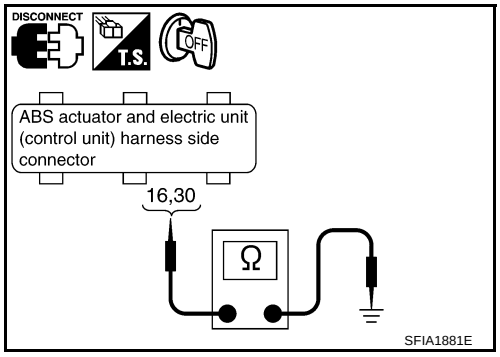
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect ABS actuator and electric unit (control unit) connector, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.

Is the result of self-diagnosis normal?



YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER AND GROUND CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check continuity and voltage between ABS actuator and electric unit (control unit) connector and ground.

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Voltage
Power supply	29	Ignition switch ON	Battery voltage (Approx. 12 V)
		Ignition switch OFF	Approx. 0 V

Signal name	ABS actuator and electric unit (control unit)	Measurement condition	Continuity
Ground	16, 30	Ignition switch OFF	Yes

OK or NG

OK >> Check battery (terminal looseness, power drop, etc.) Error. If there is an error, make repairs.
NG >> Corresponding harness circuit error. Repair the circuit.

ABS Actuator Relay or ABS Motor Relay Power System

NFS0003C

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

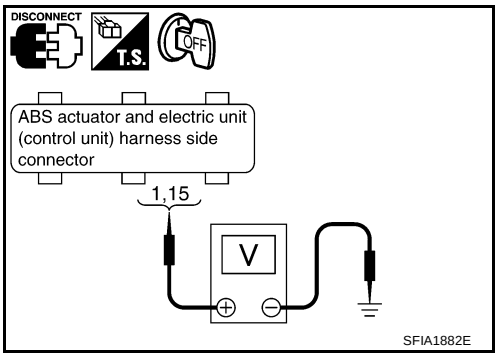
Self-diagnosis results
IN ABS SOL
OUT ABS SOL
PUMP MOTOR
MAIN RELAY

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector, check terminal to see if it is deformed, disconnected, loose, etc., and if there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

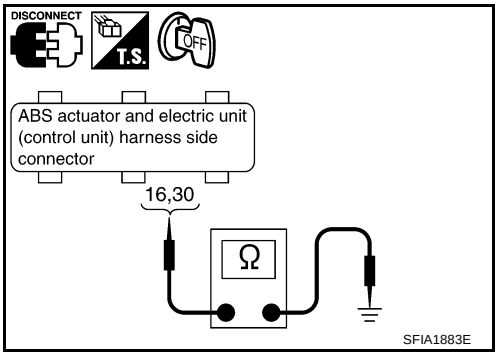
3. CHECK ABS ACTUATOR RELAY OR ABS MOTOR RELAY POWER CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector E51.
2. For ABS actuator relay, measure the voltage between the connector terminal 1 and ground. For ABS motor relay, measure the voltage between connector terminal 15 and ground.

ABS actuator and electric unit (control unit)	Ground	Voltage
1, 15	—	Battery voltage (Approx. 12 V)

OK or NG

OK >> GO TO 4
NG >> Error in the circuit between battery and ABS actuator and electric unit (control unit). Repair the circuit.



4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) connector and ground.

ABS actuator and electric unit (control unit)	Ground	Continuity
16, 30	—	Yes

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Open or short in harness. Repair or replace the harness.

Stop Lamp Switch System

NFS0003D

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

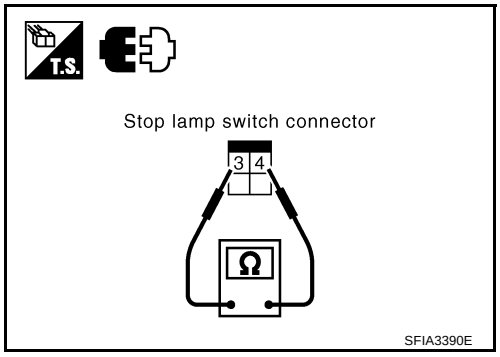
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector and stop lamp switch connector E111, check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and conduct self-diagnosis.
3. Start engine
4. Repeat pumping brake pedal carefully several time, then perform self-diagnosis again



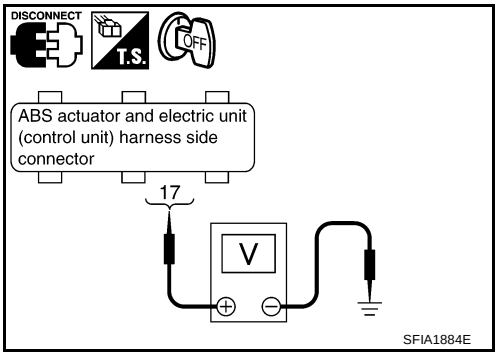
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E51.
2. Check voltage between ABS actuator and electric unit (control unit) connector terminal and the ground.

ABS actuator and electric unit (control unit)	Ground	Measurement condition	Voltage
17	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> INSPECTION END
NG >> Open or short in harness between ABS actuator and electric unit (control unit) and stop lamp switch. Repair or replace the harness.

ABS Actuator and Electric Unit (Control Unit) 2

NFS0003E

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace the ABS actuator and electric unit (control unit).
NO >> INSPECTION END

CAN Communication System

NFS0003F

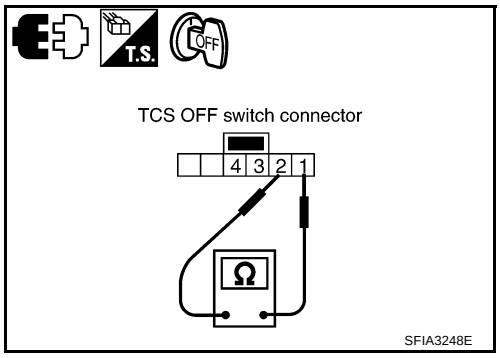
INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the ABS actuator and electric unit (control unit) connector, and check terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connection is loose, damaged, open, or shorted.



Component Inspection

NFS0003G

TCS OFF SWITCH

- Turn ignition switch OFF, disconnect the TCS OFF switch connector M9, and check continuity between terminals 1 and 2.

1 - 2 : Continuity should exist when pushing the switch.
: Continuity should not exist when releasing the switch.

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0003H

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system.

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0003I

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >> ● Bleed air from the brake piping.
● Check the brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repairs.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect the ABS actuator and electric unit (control unit) connector, and make sure the braking force is sufficient when the ABS is not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> Check brake system.

The Braking Distance Is Long

NFS0003J

CAUTION:

On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> ● Bleed air from the brake piping.
● Check brake system.

The ABS Function Does Not Operate

NFS0003K

CAUTION:

The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0003L

CAUTION:

Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.
NO >> Perform self-diagnosis. Refer to BRC-53, "OPERATION PROCEDURE" .

2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.
NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-69, "Excessive ABS Function Operation Frequency" .

The Vehicle Jerks Around During TCS/ABS Control

NFS0003M

1. CHECK ENGINE SPEED SIGNAL

Conduct CONSULT-III ABS actuator and electric unit (control unit) “Data Monitor”.

Is the speed during idling 400 rpm or higher?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK ECM SELF-DIAGNOSIS RESULT ITEM

Perform ECM self-diagnosis.

Are self-diagnosis items displayed?

YES >> Check the corresponding items. Refer to EC-81, "TROUBLE DIAGNOSIS" in “Engine Control (EC section)”.
NO >> GO TO 3.

3. SYMPTOM CHECK 1

Check if the vehicle jerks during TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. CHECK A/T SELF-DIAGNOSIS RESULT ITEM

Perform A/T self-diagnosis.

OK or NG

OK >> GO TO 5.
NG >> Check the corresponding items. Refer toAT-40, "TROUBLE DIAGNOSIS" in “A/T”.

5. SYMPTOM CHECK 2

Check if the vehicle jerks during TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 6.

6. CHECK SELF-DIAGNOSIS RESULT ITEM 1

Conduct self-diagnosis of the ABS actuator and electric unit (control unit).

Are self-diagnosis items displayed?

YES >> Check the corresponding items, make repairs, and re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.
NO >> GO TO 7.

7. CHECK CONNECTOR

1. Disconnect the ABS actuator and electric unit (control unit) connector and the ECM connectors, check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the connector.
2. Securely reconnect the connector and conduct self-diagnosis.

OK or NG

OK >> If the connector terminal contact is loose, damaged, open or shorted, repair or replace the connector terminal.
NG >> GO TO 8.

8. CHECK SELF-DIAGNOSIS RESULT ITEM 2

Re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.

Are self-diagnosis items displayed?

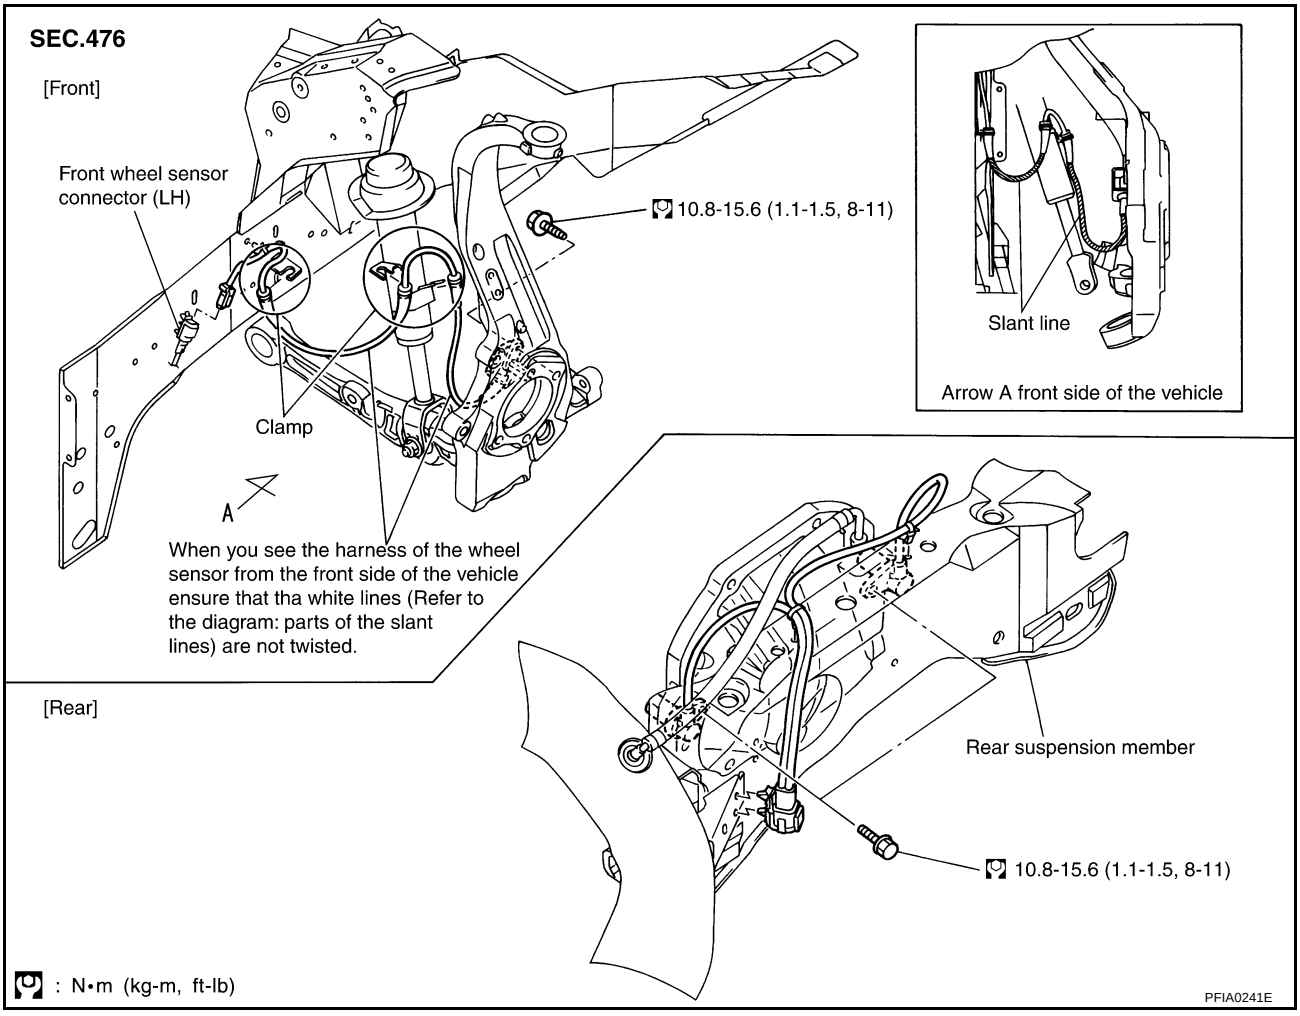
YES >> Repair or replace any non-standard items.
NO >> GO TO 9.

9. CHECK CIRCUIT BETWEEN ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) AND THE ECM

Check CAN communication system. Refer to BRC-67, "CAN Communication System" .

OK or NG

OK >> INSPECTION END
NG >> Connect the connector and re-conduct the ABS actuator and electric unit (control unit) self-diagnosis.



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0003N

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS0003O

REMOVAL

Front

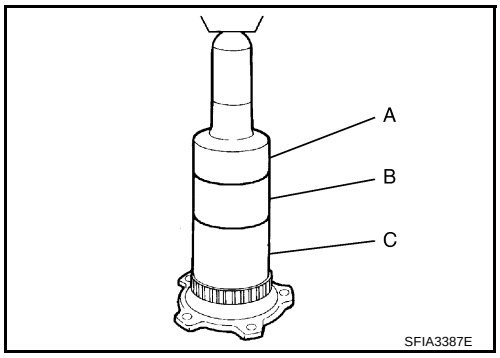
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
- Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
- Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the side flange.

INSTALLATION

Front



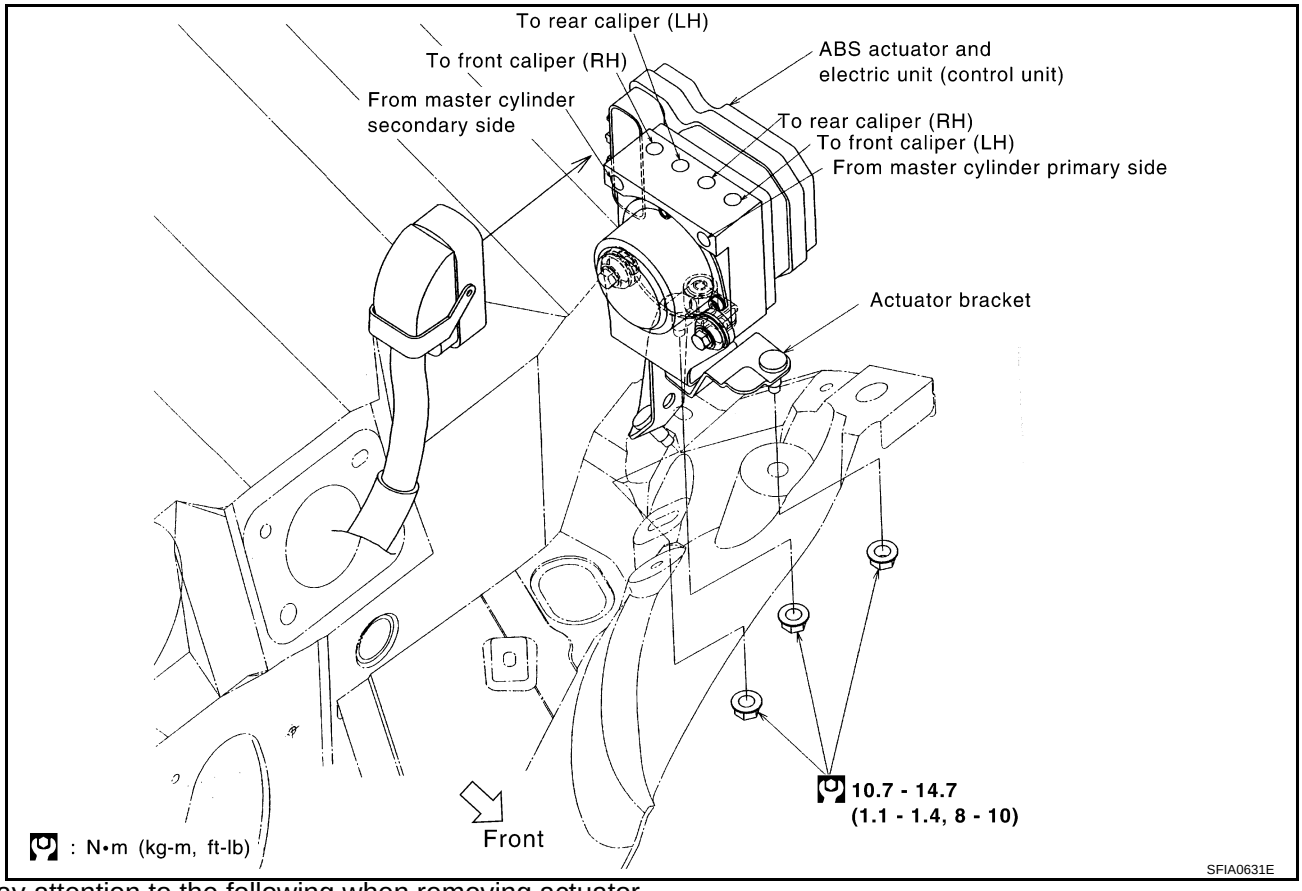
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
- Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

- Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



ABS ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

NFS0003P

COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer toBR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

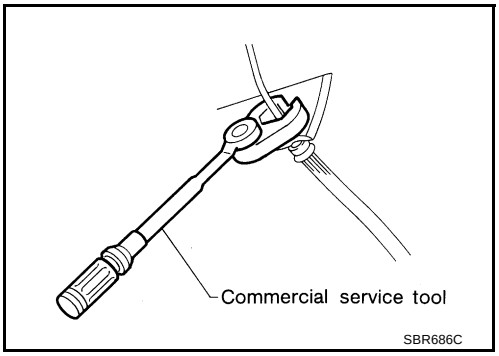
NFS000TP

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NFS0003R

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Brake System

NFS0003S

- Recommended fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use a flare nut wrench when removing flare nuts, and use a flare nut crowfoot and torque wrench when tighten brake tube flare nuts.
- When installing brake tubes, be sure to check torque.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connector of VDC/TCS/ABS control unit or the battery negative terminal.

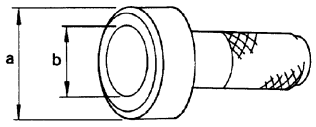
WARNING:

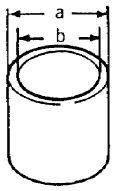
Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

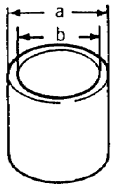
Precautions for Brake Control

NFS0003T

- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) Have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.
- If the following components are replaced with non-genuine components or converted, the VDC OFF indicator lamp and SLIP indicator lamp may turn on or the VDC system may not operate properly. Components related to suspension (Shock Absorber, Strut, Spring, Bush, etc.), Tires, wheels (exclude specified size), components related to brake (Pad, Rotor, Caliper, etc.), Components related to engine (Muffler, ECM, etc.), Components related to body reinforcement (Roll bar, Tower bar, etc.).
- Driving in the condition of breakage or excessive wear of the suspension, tires or components related to the brakes may cause the VDC OFF indicator lamp and the SLIP indicator lamp to turn on, and the VDC system may not operate properly.
- When the TCS or VDC is activated by sudden acceleration or sudden turn, some noise may occur if the brake pedal is used. The noise is a result of the normal operation of the TCS and VDC.
- When driving on roads which have extreme slopes (such as mountainous roads) or high banks (such as sharp carves on a freeway), the VDC may not operate normally, or the VDC warning lamp may turn on. However, this is not a problem if normal operation can be resumed after restarting the engine.
- Sudden turns (such as spin turns, acceleration turns), drifting, etc. When VDC function is OFF (VDC SW ON) may cause the yaw rate/side G -sensor system indicate a problem. However this is not a problem if normal operation can be resumed after restarting the engine.



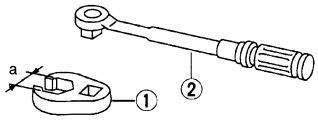




PREPARATION

PFP:00002

Special Service Tools



NFS0003U

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0701D	Installation rear sensor rotor
ST27863000 (—) Drift a: 74.5 mm (2.933 in) dia. b: 62.5 mm (2.461 in) dia.	 ZZA0832D	
KV40104710 (—) a: 76.3 mm (3.004 in) dia. b: 67.9 mm (2.673 in) dia.	 ZZA0832D	

Commercial Service Tools

NFS0003V

Tool name		Description
1. Flare nut crowfoot a: 10mm (0.39 in) / 12mm (0.47 in) 2. Torque wrench	 S-NT360	installing brake tube

ON-VEHICLE SERVICE

PFP:00000

Adjustment of Steering Angle Sensor Neutral Position

NFS0003W

In case of doing work that applies to the list below, make sure to adjust neutral position of steering angle sensor before running vehicle.

Situation	Adjustment of Steering Angle Sensor Neutral Position
Removing/Installing VDC/TCS/ABS control unit	–
Replacing VDC/TCS/ABS control unit	×
Removing/Installing steering angle sensor	×
Removing/Installing steering components	×
Removing/Installing suspension components	×
Change 4 tires to new ones	–
Tire rotation	–
Adjusting wheel alignment	×

×: Required
–: Not required

1. Stop vehicle with front wheels in straight-ahead position.
2. Turn ignition switch ON and in the following order touch “ABS” “WORK SUPPORT” “ANGLE SENSOR ADJUSTMENT” in CONSULT-III screen.
3. Touch “START”.

   CAUTION:
   Do not touch steering wheel while adjusting steering angle sensor.
4. After approximately 10 seconds, touch “END”. (After approximately 60 seconds, it ends automatically.)
5. Turn ignition switch OFF, then turn it ON again.

   CAUTION:
   Be sure to carry out above operation.
6. Run vehicle with front wheels in straight-ahead position, then stop.
7. Select “DATA MONITOR”, “ECU INPUT SIGNALS”, and “STEERING ANGLE SIGNAL” on CONSULT-III screen. Then check that “STEERING ANGLE SIGNAL” is within 0±2.5°. If value is more than specification, repeat steps 1 to 7.
8. Erase memory of VDC/TCS/ABS control unit and ECM.
9. Turn ignition switch to OFF.

SYSTEM DESCRIPTION

PFP:00000

System Diagram

NFS0003X

VDC Function

NFS0003Y

- In addition to the TCS/ABS function, the driver steering amount and brake operation amount are detected from the steering angle sensor and pressure sensor, and the vehicle's driving status (amount of under-steering / over-steering) is determined from information from the yaw rate/side G sensor, wheel sensor, etc., and this information is used to improve vehicle stability by controlling the braking and engine power to all four wheels.
- The SLIP indicator lamp flashes to inform the driver of VDC operation.
- During VDC operation, the body and brake pedal lightly vibrate and mechanical noises may be heard. This is normal.
- The ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp might turn on when the vehicle is subject to strong shaking or large vibration, such as when the vehicle is on a turn table or a ship while the engine is running. In this case, restart the engine on a normal road, and if the ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp turn off, there is no problem.

TCS Function

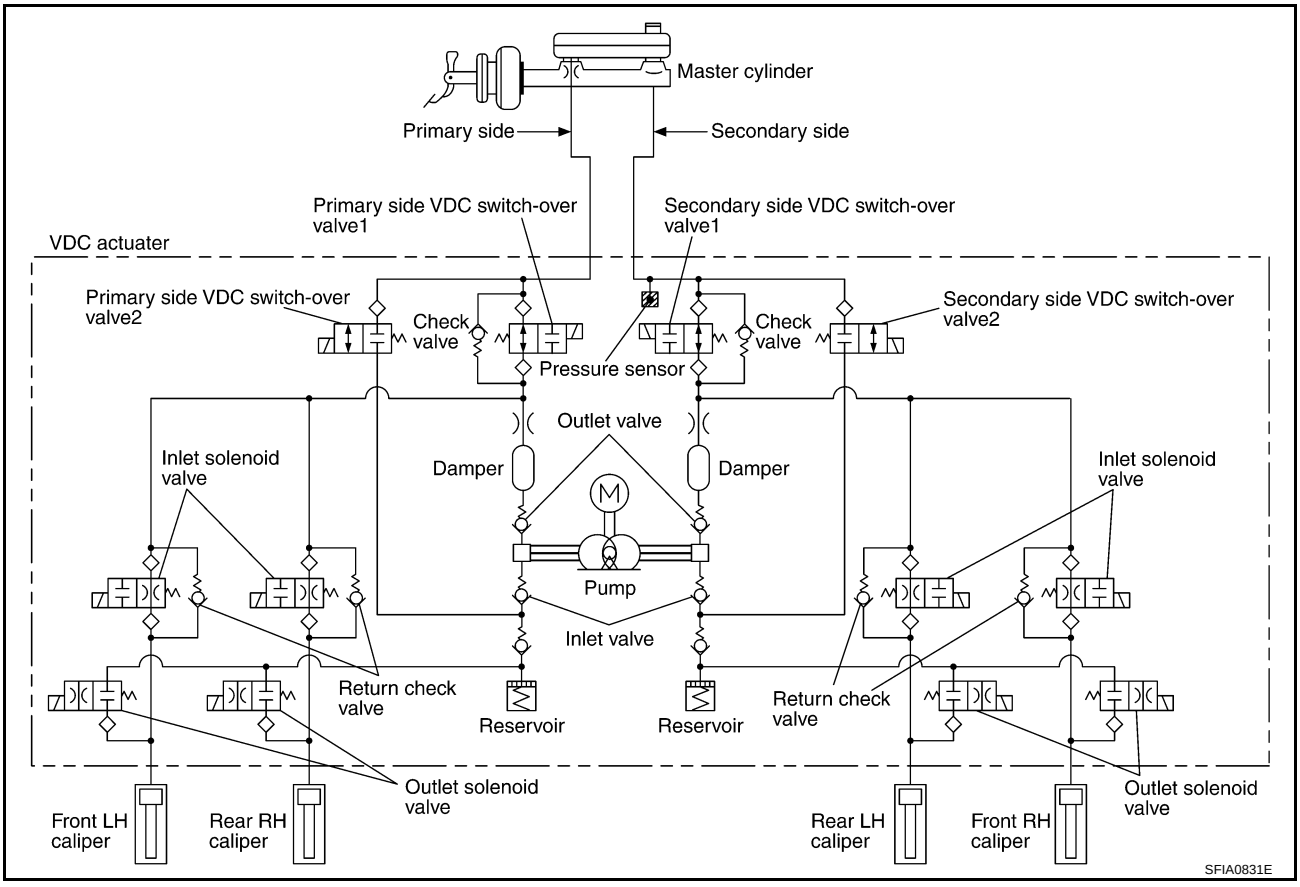
NFS0003Z

- The wheel spin of the drive wheels is detected by the VDC/TCS/ABS control unit from the wheel speed signals from the four wheels, so if wheel spin occurs, the rear wheel right and left brake fluid pressure control and engine fuel cut are conducted while the throttle value is restricted to reduce the engine torque and decrease the amount of wheel spin. In addition, the degree the throttle is opened is controlled to achieve the optimum engine torque.
- Depending on road circumstances, the driver may have a sluggish feel. This is normal, because the optimum traction has the highest priority under TCS operation.
- TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.
- During TCS operation, it informs a driver of system operation by flashing SLIP indicator lamp.

ABS Function

NFS00040

- The Anti-Lock Braking System is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the Fail-Safe function starts, the ABS becomes inoperative, and the ABS warning lamp turns on.
- Electrical System Diagnosis by CONSULT-III is available.



EBD Function

NFS00041

- Electronic Brake Distribution is a function that detects subtle slippages between the front and rear wheels during braking, and it improves handling stability by electronically controlling the Brake Fluid Pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the Fail-Safe function is activated, the EBD and ABS becomes inoperative, and the ABS warning lamp and brake warning lamp are turned on.
- Electrical System Diagnosis by CONSULT-III is available.

Hydraulic Circuit Diagram

NFS00043

CAN Communication

NFS00044

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-48, "CAN System Specification Chart" .

TROUBLE DIAGNOSIS

PFP:00004

Fail-Safe Function

NFS000IK

VDC/TCS SYSTEM

In case of Throttle Control System trouble, the VDC OFF indicator lamp and SLIP indicator lamp are turned on, and the condition of the vehicle is the same as the condition of vehicles without VDC/TCS equipment. In case of trouble to the Throttle Control System, the ABS control continues to operate normally without VDC/TCS control.

CAUTION:

If the Fail-Safe function is activated, then perform the self diagnosis for VDC/TCS/ABS control system.

ABS, EBD SYSTEM

In case of the electrical problems with the ABS, the ABS warning lamp, VDC OFF indicator lamp and SLIP indicator lamp will turn on. In case of the electrical problem with the EBD, brake warning lamp, ABS warning lamp, VDC OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the VDC/TCS/ABS become one of the following conditions of the Fail-Safe function.

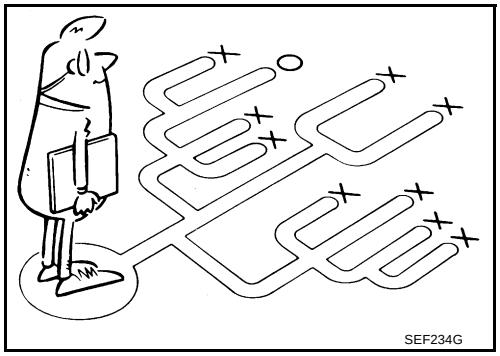
- For ABS trouble, only the EBD is activated and the condition of the vehicle is the same condition of vehicle without VDC/TCS/ABS equipment.

  NOTE:

  ABS self diagnosis sound may be heard. That is a normal condition because a self diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For EBD trouble, the EBD and ABS become inoperative, and the condition of the vehicle is the same as the condition of vehicles without VDC/TCS/ ABS, EBD equipment.

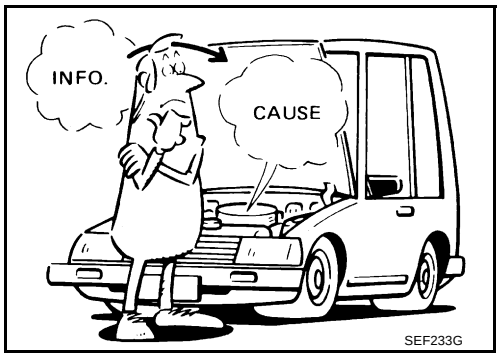
How to Proceed With Diagnosis

NFS00045



BASIC CONCEPT

- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.

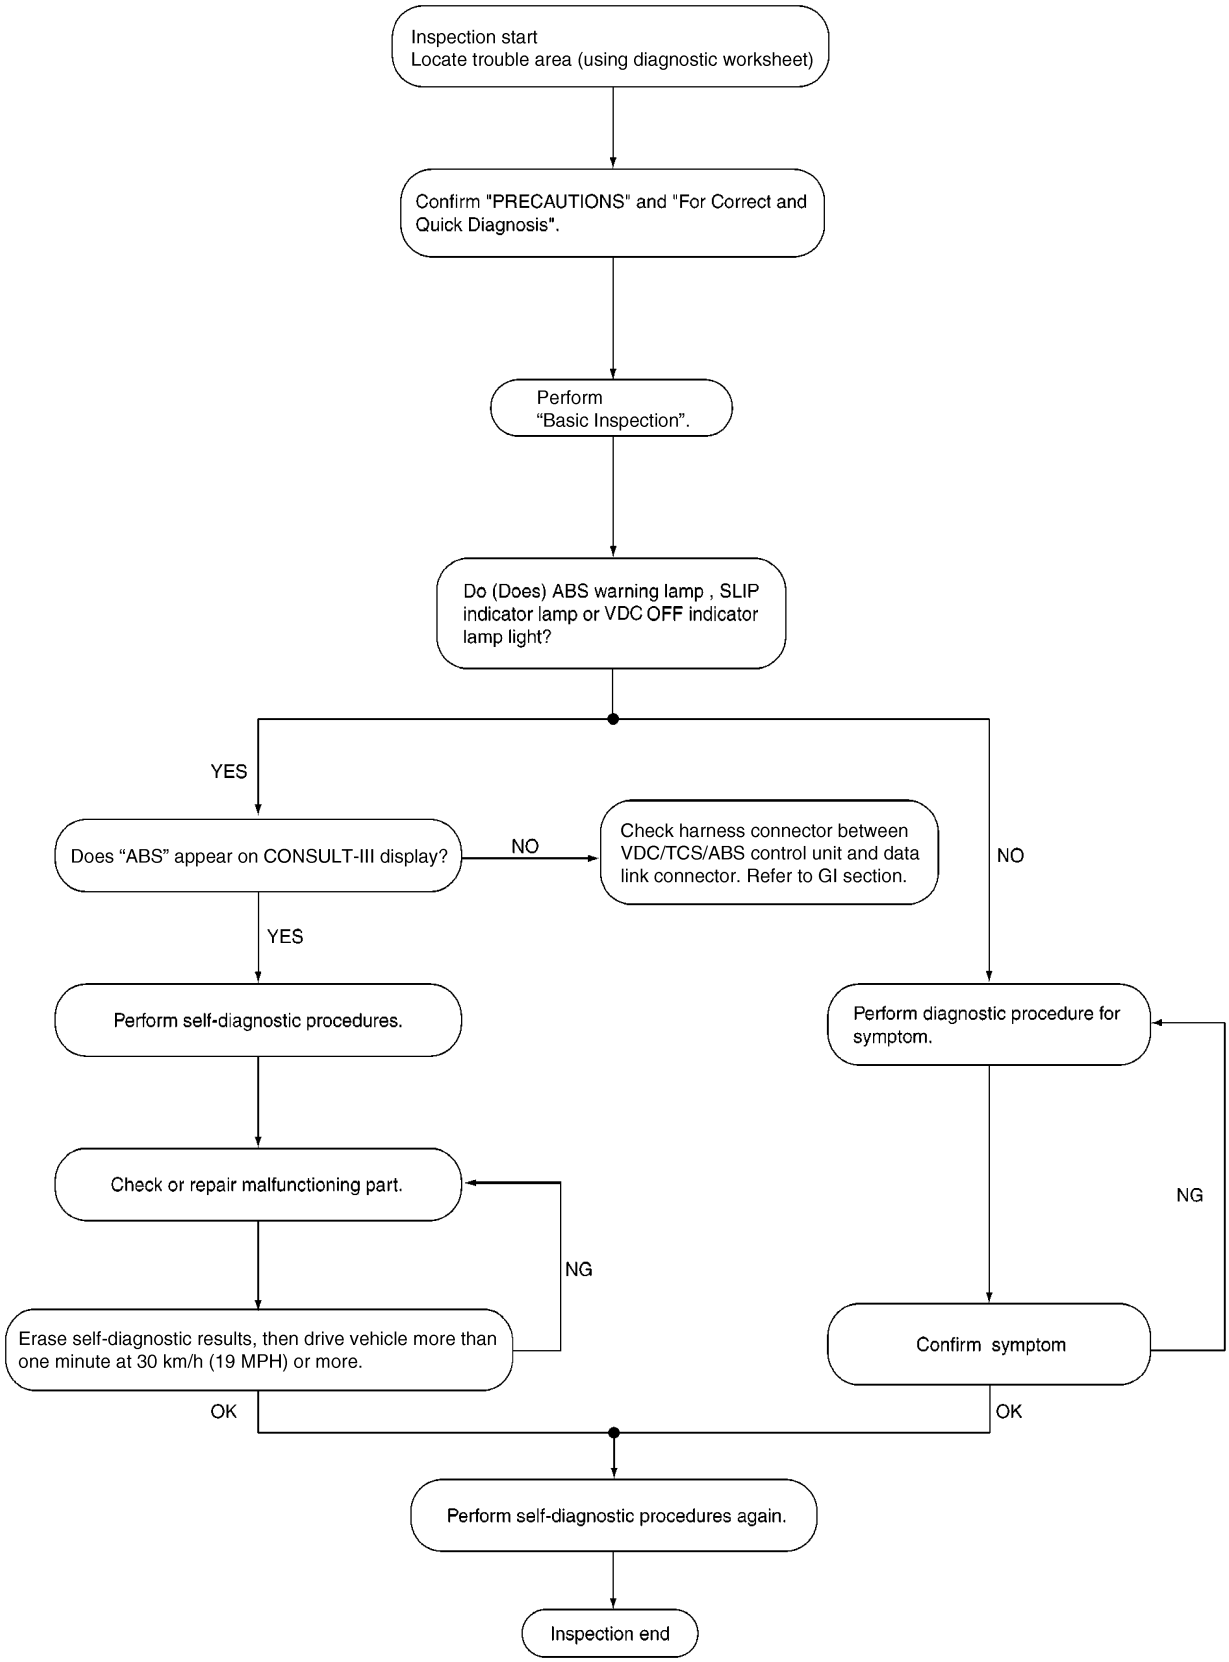


- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:

  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.

SEF234G



- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.

SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-3, "General Precautions"

DIAGNOSIS FLOWCHART

SFIA3407E

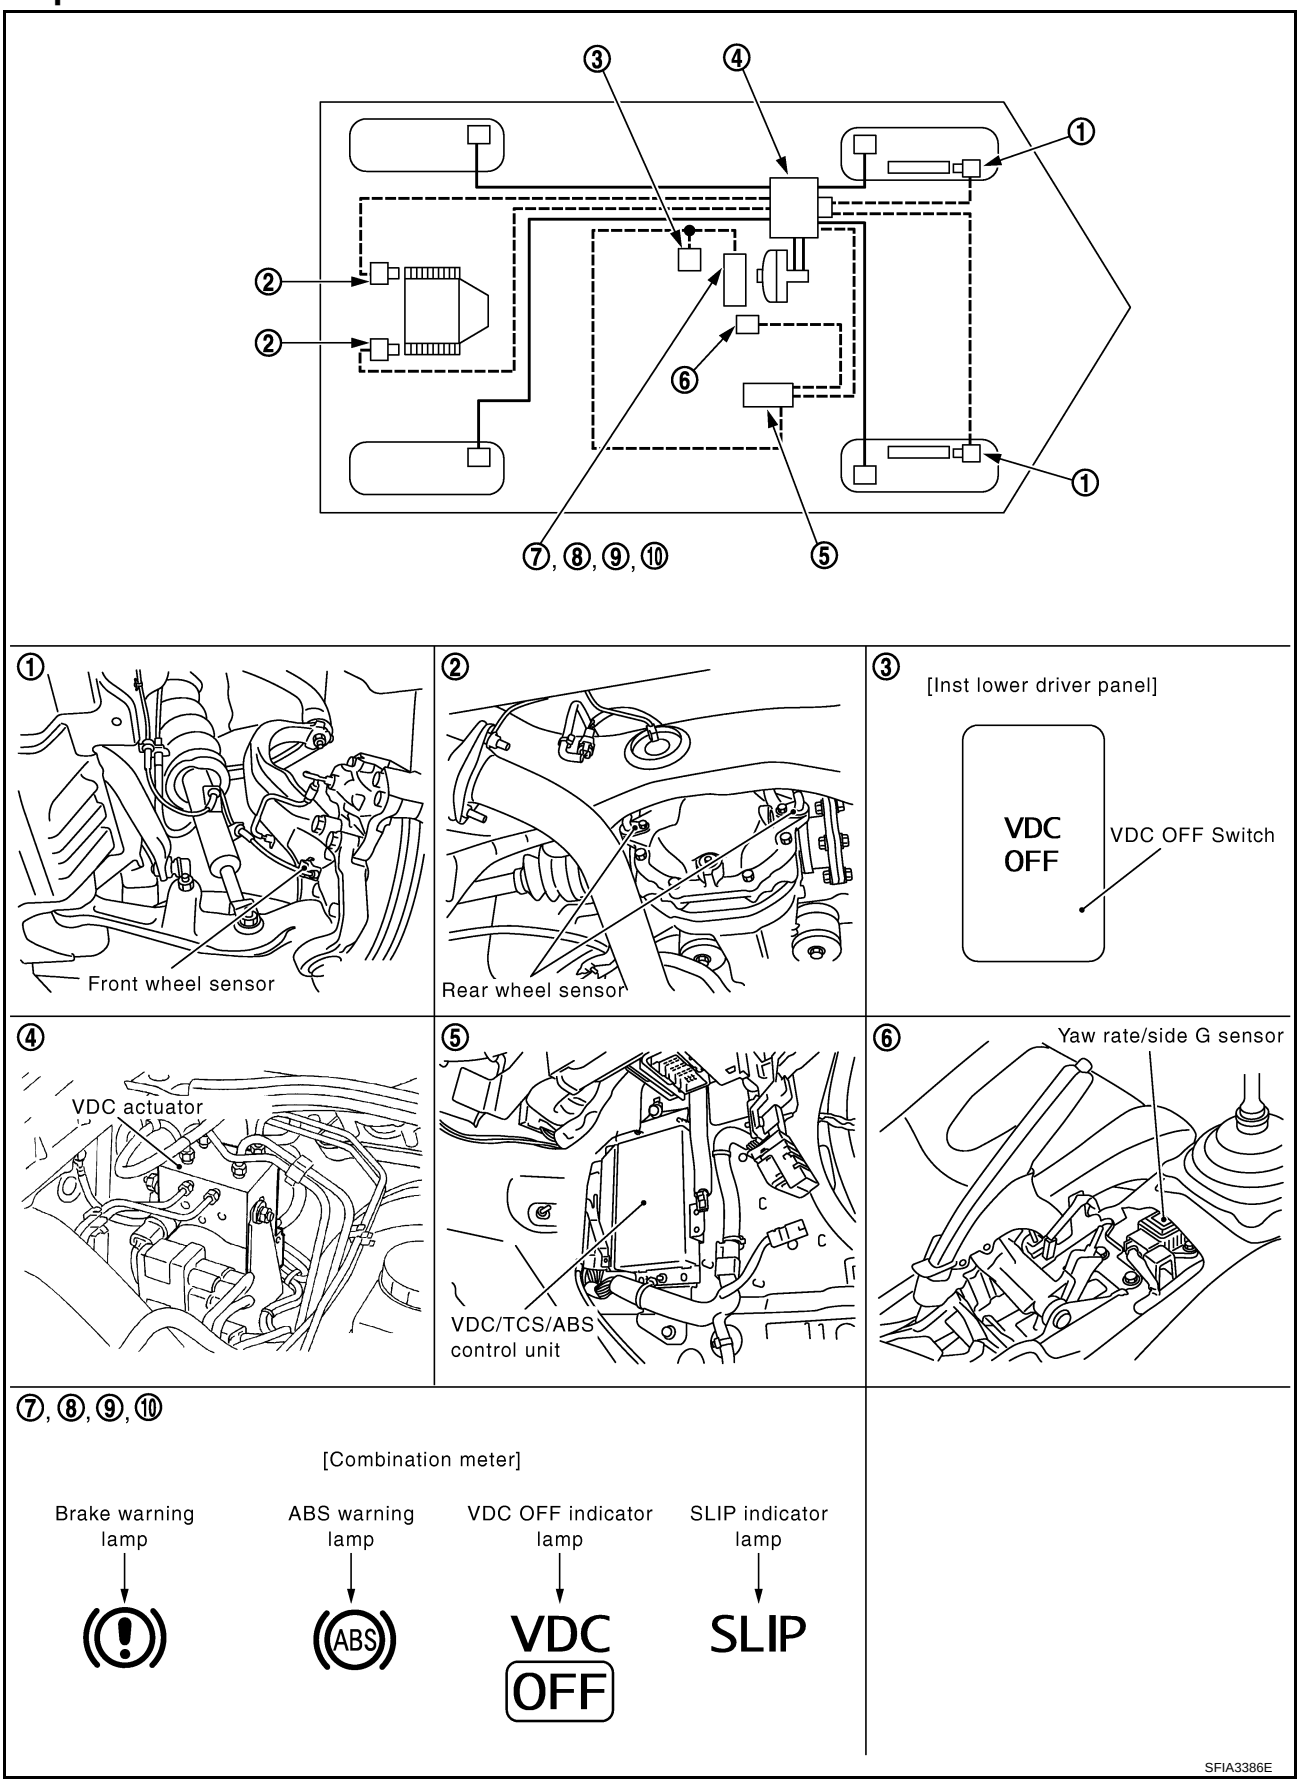
ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B



EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

Control Unit Input/Output Signal Standard

NFS00049

REFERENCE VALUE FROM CONSULT-III

CAUTION:

The display shows the control unit calculation data, so a normal value might be displayed even in the event the output circuit (harness) is open or short - circuited.

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
WHEEL SENSOR	Vehicle speed calculated using signals from all four wheel sensors	Vehicle stopped	0 km/h (0 MPH)
		While driving (Note 1)	Nearly matches the speedometer display (±10% or less)
IN ABS S/V OUT ABS S/V	Operation status of all solenoids	When the actuator solenoid operates or during a fail-safe	ON
		When the actuator relay operates and the actuator solenoid does not operate	OFF
STOP LAMP SW	Brake pedal operation	Brake pedal depressed	ON
		Brake pedal not depressed	OFF
MOTOR RELAY	Motor and motor relay operation status	When the motor relay and motor are operating	ON
		When the motor relay and motor are not operating	OFF
ACTUATOR RLY	Actuator relay operation status	When the actuator relay is operating	OFF
		When the actuator relay is not operating	ON
ABS WARN LAMP	ABS warning lamp on condition (Note 2)	ABS warning lamp ON	ON
		ABS warning lamp OFF	OFF
OFF LAMP	VDC OFF indicator lamp on condition (Note 3)	When the VDC OFF indicator lamp on	ON
		When the VDC OFF indicator lamp off	OFF
OFF SW	VDC OFF switch ON-OFF status	VDC OFF switch ON (When the VDC OFF indicator lamp on)	ON
		When VDC OFF switch OFF (When the VDC OFF indicator lamp off)	OFF
SLIP LAMP	SLIP indicator lamp on condition (Note 4)	When SLIP indicator lamp is ON	ON
		When SLIP indicator lamp is OFF	OFF
BATTERY VOLT	Battery voltage supplied to VDC/TCS/ABS control unit	Ignition switch ON	10 - 16V
GEAR	Determined gear shift position from the A/T PNP switch signal	Always	1 (M/T vehicles normally remain at 1)
POSITION	Shift position determined by the A/T PNP switch signal	Always	## (M/T vehicles normally remain at ##)
YAW RATE SEN	Yaw rate detected by yaw rate sensor	Vehicle stopped	Approx. 0 d/s
		While driving	-70 - 70d/s
ACCEL POS SIG	Throttle open/close status (linked to the accelerator pedal)	Do not step on the accelerator pedal (When ignition switch is on)	0%
		Step on the Brake pedal (When ignition switch is on)	0 to 100%
SIDE G-SENSOR	Side G detected by side G sensor	Vehicle stopped	Approx. 0 m/s^2
		While driving	-24.3 - 24.1 m/s^2
ST ANGLE SIG	Steering angle detected by steering angle sensor	Straight-ahead condition	Approx. 0°
		Steering wheel turned	-720 - 720°

Monitor item	Display Content	Data monitor	
		Condition	Reference values for normal operation
PRESS SENSOR	Brake fluid pressure detected by pressure sensor	Do not step on the Brake pedal (When ignition switch is on)	Approx. 0 bar
		Step on the accelerator pedal (When ignition switch is on)	-40 - 300 bar
ENGINE RPM	Engine running	With engine stopped	0rpm
		Engine running	Almost in accordance with tachometer display
SNOW MODE SW	Snow mode switch ON/OFF condition	Snow mode switch ON	ON
		Snow mode switch OFF	OFF
CONTROL BOOSTER	Boost control status	When control booster is operating	ON
		When control booster is not operating	OFF
M MODE	A/T manual mode status	Always	OFF (M/T vehicles normally remain OFF)
OD OFF SW	A/T OD switch status	Always	OFF (M/T vehicles normally remain OFF)
PARK BRAKE SW	Parking brake status	Parking brake depressed	ON
		Parking brake not depressed	OFF
USV HSV	VDC switch-over valve status	During actuator change-over valve operation or during a fail-safe	ON
		When the actuator relay operates and the actuator change-over valve does not operate	OFF
V/R POWER	Actuator relay activated (ON/OFF)	When actuator relay is active (engine is running).	ON
		When actuator relay is not active (before engine starts and in fail-safe mode).	OFF
M/R OUTPUT	Actuator motor and motor relay status (ON/OFF)	When actuator motor and motor relay are active (“ACTIVE TEST” with CONSULT-III).	ON
		When the actuator motor and motor relay are not operating	OFF
FLUID LEV SW	Brake fluid level sensor ON/OFF status	When brake fluid level sensor is on	ON
		When the brake fluid level sensor is off	OFF
FAIL SIGNAL	Fail signal status	During VDC fail-safe During TCS fail-safe During ABS fail-safe During EBD fail-safe	ON

Note 1: Confirm tire pressure is normal.
Note 2: ON/OFF timing of ABS warning lamp
ON: Approximately 1 sec. After turning on the ignition switch or when an error is detected.
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal).
Note 3: ON/OFF timing of VDC OFF indicator lamp
ON: Approximately 1 sec. After the ignition switch is turned on, an error is detected, or the VDC OFF switch is on
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal) and the VDC OFF switch is off
Note 4: ON/OFF timing of SLIP indicator lamp
ON: Approximately 1 sec. After turning on the ignition switch or when an error is detected.
OFF: Approximately 1 sec. After the ignition switch is turned on (when system is normal) and the VDC/TCS function is not operating
Flashing: VDC/TCS function is active during driving

CONSULT-III Functions (ABS)

NFS0004A

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function	Reference
WORK SUPPORT	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.	BRC-79, "Adjustment of Steering Angle Sensor Neutral Position"
SELF-DIAG RESULTS	Self-diagnostic results can be read and erased quickly.	BRC-96, "Self-Diagnosis"
DATA MONITOR	Input/Output data in the VDC/TCS/ABS control unit can be read.	BRC-99, "Data Monitor"
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of communication can be read.	LAN-44, "CAN Diagnostic Support Monitor"
ACTIVE TEST	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the VDC/TCS/ABS control unit and also shifts some parameters in a specified range.	BRC-101, "Active Test"
FUNCTION TEST	Conducted by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.	—
ECU PART NUMBER	VDC/TCS/ABS control unit part number can be read.	—

Self-Diagnosis

NFS000HK

OPERATION PROCEDURE

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

HOW TO ERASE SELF-DIAGNOSIS RESULTS

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp, VDC OFF indicator lamp, SLIP indicator lamp and brake warning lamp turn OFF.

   CAUTION:

   If memory cannot be erased, perform applicably diagnosis.

   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp, VDC OFF indicator lamp, SLIP indicator lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

DISPLAY ITEM LIST

Display item	Malfunction detecting condition	Check item
RR RH SENSOR -1 [C1101]	When the circuit in the rear RH wheel sensor is open.	BRC-105, "Wheel Sensor System" (Note 1)
RR LH SENSOR - 1 [C1102]	When the circuit in the rear LH wheel sensor is open.	
FR RH SENSOR - 1 [C1103]	When the circuit in the front RH wheel sensor is open.	
FR LH SENSOR - 1 [C1104]	When the circuit in the front LH wheel sensor is open.	
RR RH SENSOR -2 [C1105]	When the circuit in the rear RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
RR LH SENSOR - 2 [C1106]	When the circuit in the rear LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR RH SENSOR -2 [C1107]	When the circuit in the front RH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
FR LH SENSOR - 2 [C1108]	When the circuit in the front LH wheel sensor is short-circuited. Or when the sensor power voltage is outside the standard. When the distance between the wheel sensor and sensor rotor is too large and the sensor pulse cannot be recognized by the control unit.	
BATTERY VOLTAGE [ABNORMAL] [C1109]	When the VDC/TCS/ABS power voltage is lower than normal.	BRC-120, "VDC/TCS/ABS Control Unit Power and Ground Systems"
CONTROLLER FAILURE [C1110]	When there is an internal error in the VDC/TCS/ABS control unit.	BRC-107, "VDC/TCS/ABS Control Unit 1"
PUMP MOTOR [C1111]	When the control unit detects an error in the motor or motor relay.	BRC-116, "ABS Motor and Motor Relay System"
MAIN RELAY [C1114]	When the control unit detects an error in the actuator relay system.	BRC-118, "Actuator Relay System"
ABS SENSOR [ABNORMAL SIGNAL] [C1115]	When wheel sensor input is malfunction.	BRC-105, "Wheel Sensor System" (Note 1)
STOP LAMP SW [C1116]	When a stop lamp switch open-circuit is detected.	BRC-119, "Stop Lamp Switch System"
FR LH IN ABS SOL [C1120]	When the VDC/TCS/ABS control unit detects an error in the front left inlet solenoid system.	BRC-113, "Solenoid and VDC Change-Over Valve System"
FR LH OUT ABS SOL [C1121]	When the VDC/TCS/ABS control unit detects an error in the front left outlet solenoid system.	
FR RH IN ABS SOL [C1122]	When the VDC/TCS/ABS control unit detects an error in the front right inlet solenoid system.	
FR RH OUT ABS SOL [C1123]	When the VDC/TCS/ABS control unit detects an error in the front right outlet solenoid system.	
RR LH IN ABS SOL [C1124]	When the VDC/TCS/ABS control unit detects an error in the rear left inlet solenoid system.	
RR LH OUT ABS SOL [C1125]	When the VDC/TCS/ABS control unit detects an error in the rear left outlet solenoid system.	
RR RH IN ABS SOL [C1126]	When the VDC/TCS/ABS control unit detects an error in the rear left inlet solenoid system.	
RR RH OUT ABS SOL [C1127]	When the VDC/TCS/ABS control unit detects an error in the rear right outlet solenoid system.	

Display item	Malfunction detecting condition	Check item
USV LINE [FL-RR] [C1147]	When the primary side VDC change-over valve 1 circuit is open or short-circuit.	BRC-113, "Solenoid and VDC Change-Over Valve System"
USV LINE [FR-RL] [C1148]	When the secondary side VDC change-over valve 1 circuit is open or short-circuit.	
HSV LINE [FL-RR] [C1149]	When the primary side VDC change-over valve 2 circuit is open or short-circuit.	
HSV LINE [FR-RL] [C1150]	When the secondary side VDC change-over valve 2 circuit is open or short-circuit.	
PRESS SEN CIRCUIT [C1142]	Pressure sensor open-circuit. When a short-circuit is detected. Or, when a pressure sensor error is detected.	BRC-108, "Pressure Sensor System"
ST ANG SEN CIRCUIT [C1143]	When the steering angle sensor neutral point has deviated. Or, when a steering angle sensor error is detected.	BRC-110, "Steering Angle Sensor System"
ST ANG SEN SIGNAL [C1144]	Neutral position correction of steering angle sensor is not finished.	BRC-79, "Adjustment of Steering Angle Sensor Neutral Position"
YAW RATE SENSOR [C1145]	When a yaw rate sensor error is detected. Or, when the yaw rate sensor circuit is open. When a short-circuit is detected.	BRC-111, "Yaw Rate/Side G Sensor System"
SIDE G - SEN CIRCUIT [C1146]	When there is an error in the side G sensor. Or, when the side G sensor circuit is open or short-circuited.	BRC-111, "Yaw Rate/Side G Sensor System"
ENGINE SIGNAL 1 [C1130]	Major engine components malfunctioning.	BRC-107, "Engine System"
ENGINE SIGNAL 2 [C1131]		
ENGINE SIGNAL 3 [C1132]		
ENGINE SIGNAL 4 [C1133]		
ENGINE SIGNAL 5 [C1134]		
ENGINE SIGNAL 6 [C1135]		
EMERGENCY BRAKE [C1153]	When the VDC/TCS/ABS control unit is malfunctioning (excessive pressure increase or insufficient pressure increase).	BRC-121, "VDC/TCS/ABS Control Unit 2"
BR FLUID LEVEL LOW [C1155]	The brake fluid level has dropped. Or, when there is a short to ground in the circuit between the VDC/TCS/ABS control unit and the fluid level sensor.	BRC-121, "Brake Fluid Level Switch System"
ST ANG SEN COM CIR [C1156]	CAN communication line or steering angle sensor has generated an error.	BRC-122, "CAN Communication System"
CAN COMM CIRCUIT [U1000]	When VDC/TCS/ABS control unit is not transmitting or receiving CAN communication signal for 2 seconds or more.	BRC-122, "CAN Communication System" (Note 2)

Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, ABS warning lamp turns on. Check that ABS warning lamp turns off while driving the vehicle at approximately 30 km/h (19 MPH) for approximately 1 minute according to self-diagnosis procedure. In addition, if wheel sensor 2 is displayed for the wheels, check the wheel sensor circuit and also check the control unit power voltage.
Note 2: When errors are detected in several systems, including the CAN communication system [U1000], troubleshoot the CAN communication system.

Data Monitor

TCS SIGNAL (ON/OFF)	–	–	▼	TCS operation (ON/OFF) status is displayed.
VDC SIGNAL (ON/OFF)	–	–	▼	VDC operation (ON/OFF) status is displayed.
EBD FAIL SIG (ON/OFF)	–	–	▼	EBD fail-safe signal (ON/OFF) status is displayed.
ABS FAIL SIG (ON/OFF)	–	–	▼	ABS fail-safe signal (ON/OFF) status is displayed.
TCS FAIL SIG (ON/OFF)	–	–	▼	TCS fail-safe signal (ON/OFF) status is displayed.
VDC FAIL SIG (ON/OFF)	–	–	▼	The VDC fail-safe signal (ON/OFF) status is displayed.
CRANKING SIG (ON/OFF)	–	–	▼	Ignition switch START position signal input status is displayed.
ASCD SIGNAL (ON/OFF)	–	–	▼	ASCD (ON/OFF) status is displayed.
FLUID LEV (ON/OFF)	x	–	▼	Brake fluid level sensor (ON/OFF) status is displayed.
PARKING BRAKE SW (ON/OFF)	x	–	▼	Parking brake switch (ON/OFF) status is displayed.
USV FL-RR (ON/OFF)	–	–	▼	Primary side USV solenoid valve (ON/OFF) status is displayed.
USV FR-RL (ON/OFF)	–	–	▼	Secondary side USV solenoid valve (ON/OFF) status is displayed.
HSV FL-RR (ON/OFF)	–	–	▼	Primary side HSV solenoid valve (ON/OFF) status is displayed.
HSV FR-RL (ON/OFF)	–	–	▼	Secondary side HSV solenoid valve (ON/OFF) status is displayed.

Item (Unit)	SELECT MONITOR ITEM			Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
V/R OUTPUT (ON/OFF)	–	–	▼	Valve relay operation signal (ON/OFF) status is displayed.
M/R OUTPUT (ON/OFF)	–	–	▼	Monitor relay operation signal (ON/OFF) status is displayed.

Active Test

NFS000IP

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **The ABS and brake warning lamps turn on during the active test.**

NOTE:

- When the active test is conducted while depressing the pedal, the pedal depression amount will change, but this is normal.
- Approximately 10 seconds after the operation is begun, “TEST STOP” will be displayed.

TEST ITEM

Solenoid valve

CAUTION:

The example shown is for the front right wheel. The procedure for the other wheels is the same as given below.

- When conducting an active test of the ABS function, select the main item for each test item. In addition, when conducting an active test of the VDC/TCS function, select the item menu for each test item.
- For the ABS solenoid valve, touch “UP”, “KEEP”, “DOWN” on the display screen. For the ABS solenoid valve (ACT), touch “UP”, “ACT UP”, “ACT KEEP” and confirm that the solenoid valves (IN, OUT, USV, HSV) operate as shown in the table below.

Operation	ABS solenoid valve			ABS solenoid valve (ACT)		
	UP	KEEP	DOWN	UP	ACT UP	ACT KEEP
FR RH IN SOL	OFF	ON	ON	OFF	OFF	OFF
FR RH OUT SOL	OFF	OFF	ON*	OFF	OFF	OFF
USV [FR - RL]	OFF	OFF	OFF	OFF	ON	ON
HSV [FR - RR]	OFF	OFF	OFF	OFF	ON*	OFF

*: ON for 1 to 2 seconds after the touch, and then OFF

ABS Motor

Touch “ON”, “OFF” on the display screen and make sure the ABS motor relay is operating as shown in the table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY	ON	ON

Correct and Quick Diagnosis

NFS0004B

DIAGNOSIS PRECAUTIONS

- Before performing the trouble diagnosis, always read the general information (GI) to confirm the general precautions. Refer to GI-3, "General Precautions" .
- When replacing steering angle sensor, steering system components or suspension system components, and when adjusting the alignment, be sure to adjust the steering angle sensor neutral position before driving. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .
- After completing service, always erase the self-diagnosis results. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS" .

- When inspection of the continuity or voltage between units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal. Move harnesses, harness connectors, or terminals by hand to make sure all connections are solid and undamaged.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- VDC/TCS/ABS is a system that uses electronic control to perform brake control and engine power control. Therefore, phenomena like those shown in the following table may occur, but this is because the system is working normally.

Symptom	Symptom description	Result
Motor operation noise	The is a motor operation sound inside VDC/TCS/ABS actuator, and sometimes there is a slight sound when VDC, TCS, or ABS operates.	Normal
	Just after the engine starts, the motor operating noise may be heard. This is a normal status of the system operation check.	
System operation check noise	When the engine is started, you may barely be able to hear a slight thudding sound from the engine room, but this sound is made by the system operation check and is normal.	Normal
TCS operation (SLIP indicator lamp ON)	TCS may be activated any time the vehicle suddenly accelerates, suddenly downshifts, or is driven on a road with a varying surface friction coefficient.	Normal Cancel the VDC/TCS function for the inspection on a chassis dynamometer.
	When inspecting the speedometer, etc., press VDC OFF switch to turn off TCS function before conducting the work.	
	When accelerator pedal is depressed on a chassis dynamometer (front wheel fixing type), the vehicle speed will not increase. This is normal, because TCS is activated by the stationary front wheels. The warning lamp may also turn on to show “sensor system error” in this case. This is not a malfunction either, because the stationary front wheels are detected. Restart engine, and drive the vehicle at 30 km/h (19 MPH) or higher to check that the warning lamp no longer turns on.	
ABS operation (longer stopping distance)	Stopping distance may be longer for vehicles with ABS when the vehicle drives on rough or snow-covered roads. Use lower speeds when driving on these kinds of roads.	Normal
Sluggish feel	Depending on road circumstances, the driver may have a sluggish feel. This is normal, because under TCS operation optimum traction has the highest priority (safety first). Sometimes the driver has a slight sluggish feel in response to substantial accelerator pedal operation.	Normal

ABS WARNING LAMP, VDC OFF INDICATOR LAMP, SLIP INDICATOR LAMP AND BRAKE WARNING LAMP ON/OFF TIMING

×: ON –: OFF

Condition	ABS warning lamp	VDC OFF indicator lamp	SLIP indicator lamp	Brake warning lamp (Note 1)	Remarks
Ignition switch OFF.	—	—	—	—	—
Approx. Within 1 seconds after ignition switch is turned ON.	×	×	×	× (Note 1)	—
Approx. 1 seconds after ignition switch ON.	—	—	—	× (Note 1)	Turns OFF 2 seconds after engine starts.
VDC OFF switch is turned ON. (VDC function is OFF.)	—	×	—	—	—
VDC/TCS/ABS error.	×	×	—	—	There is a malfunction in VDC/TCS/ABS control unit, SLIP indicator lamp turns off (when the power supply or ground circuits return an error).
	×	×	×	—	—
When VDC/TCS is not functioning normally.	—	×	×	—	—
EBD error.	×	×	×	×	—

Note 1:Brake warning lamp will turn on in case of operating parking brake (switch turned on) or of actuating brake fluid level switch (brake fluid is insufficient).

Basic Inspection

NFS0004C

BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check brake tubes or hoses and around VDC actuator for leaks. If there is leaking or oozing fluid, check the following items.
   - If VDC actuator connection is loose, tighten the piping to the specified torque and re-conduct the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or VDC actuator screw, replace the damaged part and re-conduct the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than VDC actuator connection, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at VDC actuator, if the fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the VDC actuator body.

     CAUTION:
     VDC actuator cannot be disassembled.
3. Check the brake pad degree of wear. Refer to BR-26, "PAD WEAR INSPECTION" in “Front Disc Brake” and BR-39, "PAD WEAR INSPECTION" in “Rear Disc Brake”.

POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure the battery positive cable, negative cable and ground connection are not loose. In addition, check the battery voltage to make sure it has not dropped.

ABS WARNING LAMP, VDC OFF INDICATOR LAMP, SLIP INDICATOR LAMP INSPECTION

1. Make sure ABS warning lamp, VDC OFF indicator lamp (when VDC OFF switch is OFF), and SLIP indicator lamp turns ON approximately 1 second when the ignition switch is turned ON. If they do not, check the VDC OFF indicator lamp and then VDC OFF switch. Refer to BRC-122, "VDC OFF SWITCH" . Check CAN communications. Refer to “CAN Communication Inspection”. If there are no errors with VDC OFF switch and CAN communication system, check combination meter. Refer to BRC-122, "CAN Communication System" .

2. Make sure lamp turns off approximately 1 second after the ignition switch is turned on. If the lamp does not turn off, conduct self-diagnosis.
3. With the engine running, make sure VDC OFF indicator lamp turns on and off when VDC OFF switch is turned on and off. If the indicator lamp status does not correspond to switch operation, check the VDC OFF switch system. Refer to BRC-122, "VDC OFF SWITCH" .
4. Make sure ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp turn off 2 seconds after the engine is started. If ABS warning lamp, VDC OFF indicator lamp, and SLIP indicator lamp have not turned off 10 seconds after the engine has been started, conduct self-diagnosis of the VDC/TCS/ABS control unit.
5. After conducting the self-diagnosis, be sure to erase the error memory. Refer to BRC-96, "HOW TO ERASE SELF-DIAGNOSIS RESULTS"

TROUBLE DIAGNOSIS FOR SYSTEM

PFP:00000

Wheel Sensor System

NFS0004D

After using the CONSULT-III SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between the sensor terminal with tester etc., because the sensor is an active sensor.**
- **Do not expand the terminal of the connector with a/the tester terminal stick, when it does the inspection with the tester.**

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
FR RH SENSOR-1,-2
FR LH SENSOR- 1,-2
RR RH SENSOR-1,-2
RR LH SENSOR-1,- 2
ABS SENSOR [ABNORMAL SIGNAL]

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK TIRE

Check air pressure, wear, and size.

Are air pressure, wear, and size within the standard values?

YES >> GO TO 3.
NO >> Adjust air pressure, or replace tire.

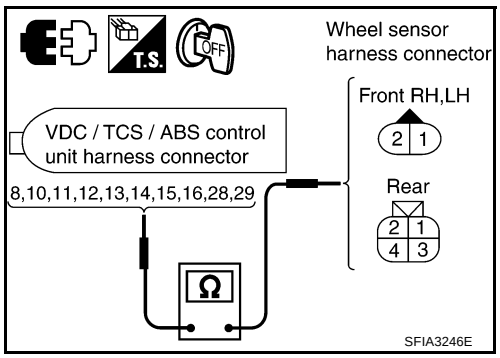
3. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of the front sensor rotor rubber for damage.
- Check the rear sensor rotor for damage.

OK or NG

OK >> GO TO 4.
NG >> Repair wheel sensor mount or replace the sensor rotor.

4. CHECK CONNECTOR



1. Disconnect VDC/TCS/ABS control unit connector and malfunctioning wheel sensor connector E42 (FR - LH) or E27 (FR - RH) or T5 (RR - RH, LH). Check the terminal to see if it is deformed, disconnected, loose, etc., and replace it if any non-standard condition is found.
2. Reconnect connectors, drive at a speed of approximately 30 km/h (19 MPH) or more for approximately 1minute, and then perform self-diagnosis.

Is the result of self-diagnosis normal?

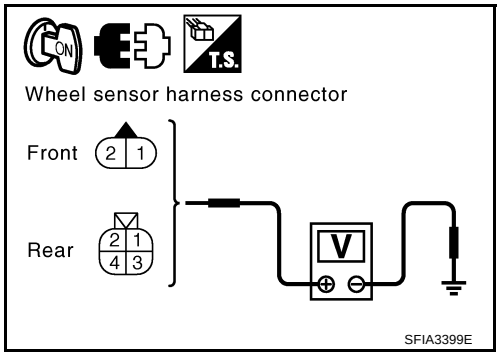
YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect wheel sensor connector E42 (FR - LH), E27 (FR - RH), T5 (RR - RH, LH) and VDC/TCS/ABS control unit connector B114.
2. Check continuity between terminals. (Also check the continuity when the steering wheel is turned right and left and when the sensor harness inside the wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	VDC/TCS/ABS control unit	Wheel sensor	VDC/TCS/ABS control unit	Wheel sensor	VDC/TCS/ABS control unit (signal)	VDC/TCS/ABS control unit (ground)
Front RH	16	1	15	2	16, 15	28, 29
Front LH	10	1	8	2	10, 8	
Rear RH	12	1	11	2	12, 11	
Rear LH	14	3	13	4	14, 13	

Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness and connector that have malfunction.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Disconnect malfunctioning wheel sensor connector.
2. Turn ignition switch ON and check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel	Wheel sensor	Ground	Voltage
Front RH	1	—	8 V or more
Front LH			
Rear RH			
Rear LH	3		

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Engine System

NFS0004E

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
ENGINE SIGNAL 1
ENGINE SIGNAL 2
ENGINE SIGNAL 3
ENGINE SIGNAL 4
ENGINE SIGNAL 5
ENGINE SIGNAL 6

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK ENGINE SYSTEM

1. Conduct an ECM self-diagnosis and repair or replace any non-standard items. Re-conduct the ECM self-diagnosis.
2. Re-conduct VDC/TCS/ABS control unit self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace any non-standard items. Re-conduct the self-diagnosis.

VDC/TCS/ABS Control Unit 1

NFS0004F

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace VDC/TCS/ABS control unit. Re-conduct the self-diagnosis.
NO >> INSPECTION END

Pressure Sensor System

NFS0004G

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

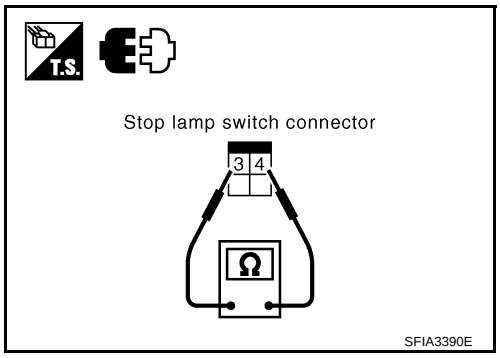
Check self-diagnosis results.

Self-diagnosis results
PRESS SEN CIRCUIT

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK STOP LAMP SWITCH CONNECTOR



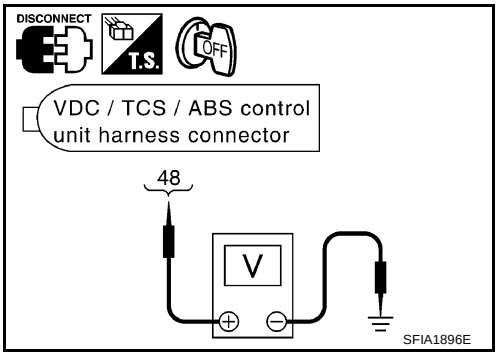
1. Disconnect stop lamp switch connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors.
3. Start engine.
4. Repeat pumping brake pedal carefully several times, then perform self-diagnosis again.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.



Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No

OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114.
2. Check voltage between VDC/TCS/ABS control unit connector B114 terminal 48 and ground.

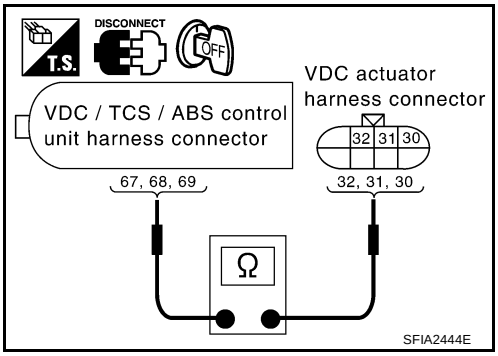
VDC/TCS/ABS control unit	Ground	Measurement condition	Voltage
48	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> GO TO 5.
NG >> Open or short in harness. Repair or replace the harness.

5. CHECK PRESSURE SENSOR CONNECTOR

1. Disconnect VDC actuator connector E50 and VDC/TCS/ABS control unit connector, check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 6.

6. CHECK PRESSURE SENSOR HARNESS

1. Turn ignition switch OFF and disconnect VDC actuator connector E50 and VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC actuator connector.

VDC/TCS/ABS control unit	VDC actuator	Continuity
69	30	Yes
68	31	
67	32	

OK or NG

OK >> GO TO 7.
NG >> If the open or short in harness, repair or replace the harness.

7. CHECK PRESSURE SENSOR

1. Connect VDC actuator and VDC/TCS/ABS control unit connectors.
2. Conduct “DATA MONITOR” of the “PRESS SENSOR” to check if the status is normal.

Condition	Data monitor display
When brake pedal is depressed.	– 40 – 300 bar
When brake pedal is released.	Approx. 0 bar

OK or NG

OK >> INSPECTION END
NG >> If the pressure sensor is damaged or malfunctioning, replace the VDC actuator (pressure sensor it built in).

Steering Angle Sensor System

NFS0004H

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

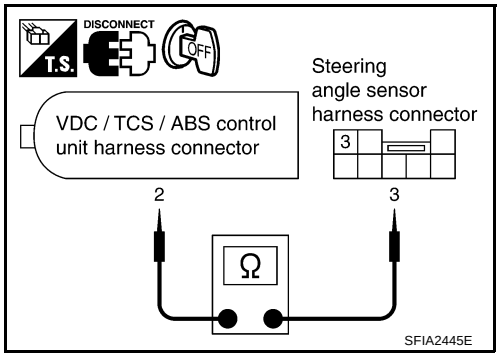
Self-diagnosis results
ST ANG SEN CIRCUIT

Is the above displayed in the self-diagnosis item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect steering angle sensor connector and VDC/TCS/ABS control unit connector and check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then preform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STEERING ANGLE SENSOR HARNESS

1. Check CAN communication system. Refer to BRC-122, "CAN Communication System" .
2. Turn ignition switch OFF and disconnect steering angle sensor connector M22 and VDC/TCS/ABS control unit connector B114.
3. Check continuity between VDC/TCS/ABS control unit connector terminal 2 and steering angle sensor connector terminal 3.

VDC/TCS/ABS control unit	Steering angle sensor	Continuity
2	3	Yes

OK or NG

OK >> GO TO 4.
NG >> If the open or short in harness, repair or replace the harness.

4. CHECK DATA MONITOR

1. Connect steering angle sensor and VDC/TCS/ABS control unit connectors.
2. Conduct “DATA MONITOR” of the “STR ANGLE SIG” to check if the status is normal.

Steering condition	Data monitor
Straight-ahead	Approx. 0°
Turn wheel to the right by 90 °	Approx. + 90°
Turn wheel to the left by 90 °	Approx. - 90°

OK or NG

OK >> Re-conduct VDC/TCS/ABS control unit self-diagnosis.
NG >> Replace spiral cable (steering angle sensor) and adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

Yaw Rate/Side G Sensor System

NFS0004I

CAUTION:
Sudden turns (such as spin turns, acceleration turns), drifting, etc. When VDC function is OFF (VDC OFF switch ON) may cause the yaw rate/side G sensor system indicate a problem. However this is not a problem if normal operation can be resumed after restarting the engine.

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

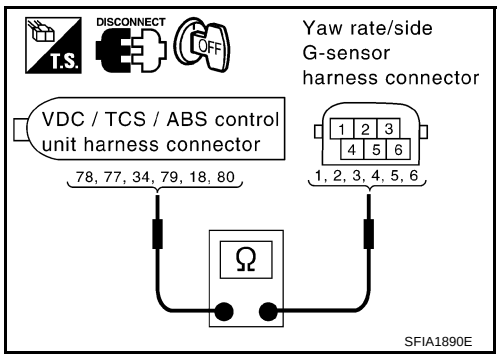
Self-diagnosis results
YAW RATE SENSOR
SIDE G-SENSOR

CAUTION:
When on a turntable, such as at a parking structure entrance, or when on a moving object with the engine running, the VDC OFF indicator lamp might turn on and the self-diagnosis using the CONSULT-III the yaw rate sensor system might be displayed, but in this case there is no problem with the yaw rate sensor system. As soon as the vehicle leaves the turntable or moving object, restart the engine to return the system to normal.

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect yaw rate/side G sensor connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Reconnect the connectors and then preform self-diagnosis.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK YAW RATE/SIDE G SENSOR HARNESS

1. Turn ignition switch OFF and disconnect yaw rate/side G sensor connector M51 and VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit vehicle side connector and yaw rate/side G sensor vehicle side connector.

VDC/TCS/ABS control unit	Yaw rate/side G sensor	Continuity
18	5	Yes
34	3	
77	2	
78	1	
79	4	
80	6	

OK or NG

OK >> GO TO 4.
NG >> If the open or short in harness, repair or replace the harness.

4. CHECK YAW RATE/SIDE G SENSOR

1. Connect yaw rate/side G sensor and VDC/TCS/ABS control unit connectors.
2. Use “DATA MONITOR” to check if the yaw rate/side G sensor are normal.

Vehicle status	Yaw rate sensor (Data monitor standard)	Side G sensor (Data monitor standard)
When stopped	- 4 to + 4 deg/s	- 1.1 to + 1.1 m/s^2
Right turn	Negative value	Negative value
Left turn	Positive value	Positive value

OK or NG

OK >> INSPECTION END
NG >> Replace the malfunctioning yaw rate/side G sensor, and then re-conduct the VDC/TCS/ABS control unit self-diagnosis.

Solenoid and VDC Change-Over Valve System

NFS0004J

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

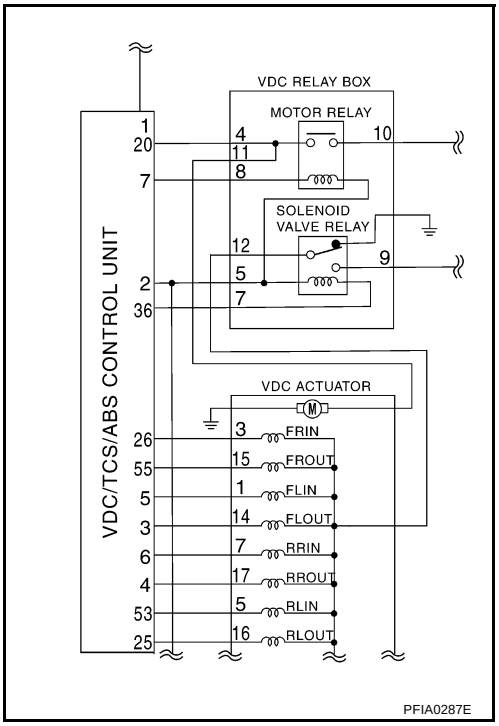
Check self-diagnosis results.

Self-diagnosis results
IN ABS SOL
OUT ABS SOL
USV LINE [FL-RR]
USV LINE [FR-RL]
HSV LINE [FL-RR]
HSV LINE [FR-RL]

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR



1. Disconnect VDC/TCS/ABS control unit connector and solenoid connector E49, E50 and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.

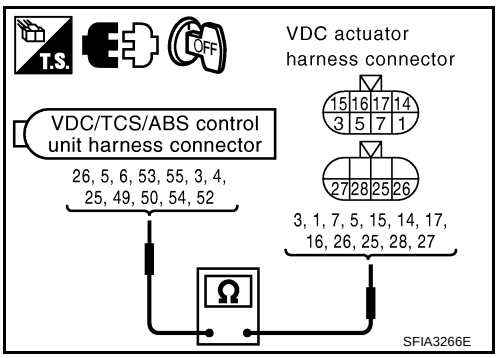
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK SOLENOID INPUT SIGNAL

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector.
2. Check resistance between VDC/TCS/ABS control unit connector and ground.

VDC/TCS/ABS control unit	Ground	Resistance value
26	—	6.0 – 11 Ω
5		
6		
53		
55		3.0 – 5.0 Ω
3		
4		
25		
49		6.0 – 11 Ω
50		
54		3.0 – 5.0 Ω
52		



OK or NG

OK >> Check the VDC/TCS/ABS control unit power system. Refer to BRC-120, "VDC/TCS/ABS Control Unit Power and Ground Systems" .

NG >> GO TO 4.

4. CHECK SOLENOID HARNESS

1. Disconnect VDC actuator connector.
2. Check continuity between VDC/TCS/ABS control unit connector B114 and VDC actuator connector E49.

VDC/TCS/ABS control unit	VDC actuator	Continuity
26	3	Yes
5	1	
6	7	
53	5	
55	15	
3	14	
4	17	
25	16	
49	26	
50	25	
54	28	
52	27	

OK or NG

OK >> Replace VDC/TCS/ABS actuator assembly.
NG >> Open or short in harness. Repair or replace the harness.

ABS Motor and Motor Relay System

NFS0004K

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
PUMP MOTOR

Is the above displayed in the self-diagnosis display items?

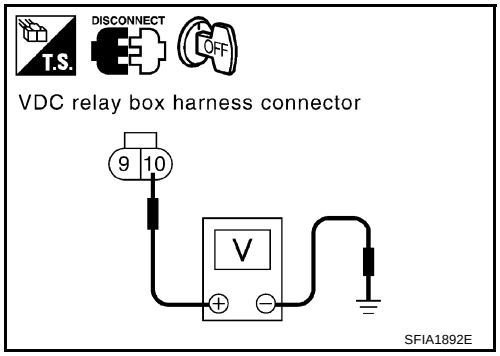
YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect VDC relay box connector E47, E48, E222 and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.

Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

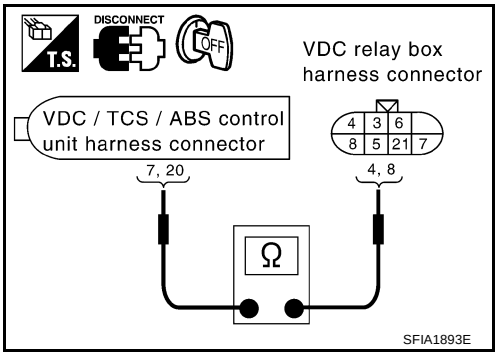


3. CHECK ABS MOTOR AND MOTOR RELAY POWER SYSTEM

1. Disconnect VDC relay box connectors E48.
2. Check voltage between VDC relay box connector and ground.

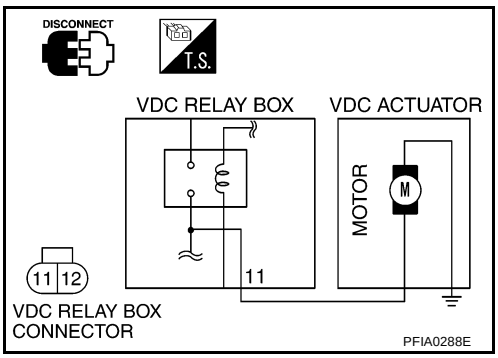
VDC relay box	Ground	Voltage
10	—	Battery voltage (Approx. 12 V)

OK or NG



OK >> GO TO 4.
NG >> The circuit between battery and VDC relay box terminal 10 is open or shorted. Repair the circuit.

4. CHECK ABS MOTOR AND MOTOR RELAY HARNESS



1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114 and VDC relay box connector E47.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC relay box vehicle side connector.

VDC/TCS/ABS control unit	VDC relay box	Continuity
20	4	Yes
7	8	

3. Check if the actuator motor operates when a 12 V voltage is applied to the VDC relay box connector E222 terminal 12.

CAUTION:
Operate the actuator motor for 4 seconds or less to prevent heat generation.

OK or NG

OK >> GO TO 5.
NG >> The actuator motor or actuator motor circuit open or short in harness. Repair or replace the actuator motor or actuator motor circuit harness.

5. CHECK ABS MOTOR RELAY

ABS motor relay independent inspection. Refer toBRC-123, "ABS MOTOR RELAY AND ACTUATOR RELAY".

OK or NG

OK >> Replace VDC actuator assembly.
NG >> Replace VDC relay box.

Actuator Relay System

NFS0004L

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

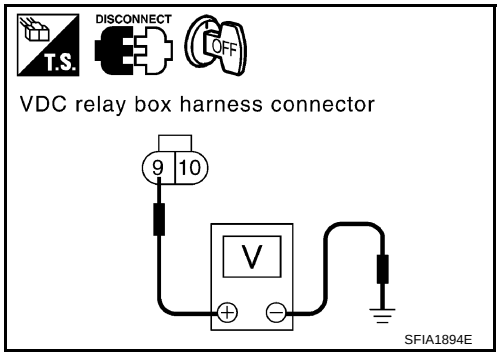
Self-diagnosis results
MAIN RELAY

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect VDC relay box connector E47, E48, E222 and VDC/TCS/ABS control unit connector B114 and check terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors and then preform self-diagnosis.



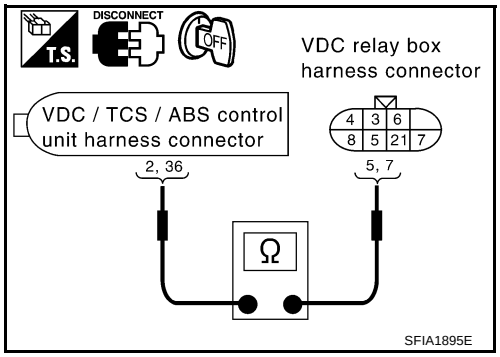
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK ACTUATOR RELAY POWER SYSTEM

1. Turn ignition switch OFF and disconnect VDC relay box connector E48.
2. Check voltage between VDC relay box connector and ground.

VDC relay box	Ground	Voltage
9	—	Battery voltage (Approx. 12 V)



OK or NG

OK >> GO TO 4.
NG >> The circuit between battery and VDC relay box harness connector E48 terminal 9 is open or shorted. Repair the circuit.

4. CHECK ACTUATOR RELAY HARNESS

1. Disconnect VDC/TCS/ABS control unit connector B114.
2. Check continuity between VDC/TCS/ABS control unit connector and VDC relay box connector E47.

VDC/TCS/ABS control unit	VDC relay box	Continuity
2	5	Yes
36	7	

OK or NG

OK >> GO TO 5.
NG >> Open or short in harness. Repair or replace the harness.

5. CHECK ACTUATOR RELAY

Independently check VDC actuator relay. Refer to BRC-123, "ABS MOTOR RELAY AND ACTUATOR RELAY".

OK or NG

OK >> Replace VDC actuator assembly.
NG >> Replace VDC relay box.

Stop Lamp Switch System

NFS0004M

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

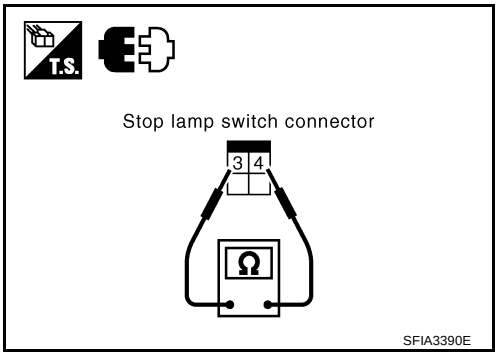
Self-diagnosis results
STOP LAMP SW

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect stop lamp switch connector and VDC/TCS/ABS control unit connector and check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connectors.
3. Start engine.
4. Repeat pumping brake pedal carefully several times, then perform self-diagnosis again.



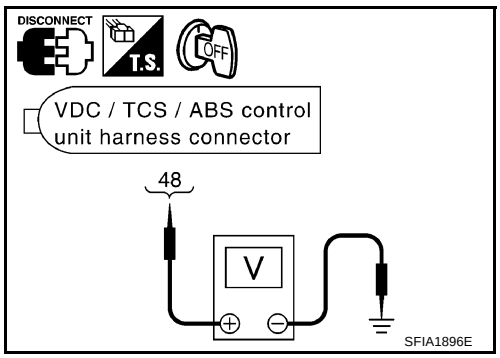
Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch connector E111.
2. Disconnect stop lamp switch connector
3. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch	Condition	Continuity
3 – 4	Release stop lamp switch (When brake pedal is depressed.)	Yes
	Push stop lamp switch (When brake pedal is released.)	No



OK or NG

OK >> GO TO 4.
NG >> Replace stop lamp switch. Refer to BR-8, "Components" .

4. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect VDC/TCS/ABS control unit connector B114.
2. Check voltage between VDC/TCS/ABS control unit connector B114 terminal 48 and ground.

VDC/TCS/ABS control unit	Ground	Measurement condition	Voltage
48	—	Brake pedal depressed.	Battery voltage (Approx. 12 V)
		Brake pedal not depressed.	Approx. 0 V

OK or NG

OK >> Connect the connectors and conduct a VDC/TCS/ABS control unit self-diagnosis.
NG >> Open or short in harness. Repair or replace the harness.

VDC/TCS/ABS Control Unit Power and Ground Systems

NFS0004N

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

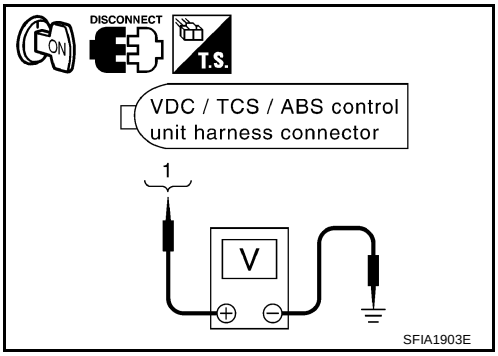
Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is the above displayed in the self-diagnosis item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

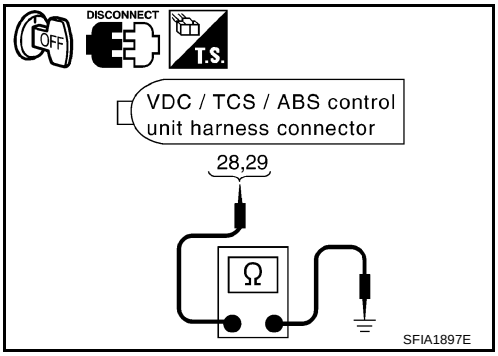
1. Disconnect VDC/TCS/ABS control unit connector and check the terminal for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the terminal.
2. Securely reconnect the connector and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK VDC/TCS/ABS CONTROL UNIT POWER AND GROUND CIRCUIT



1. Disconnect VDC/TCS/ABS control unit connector B114.
2. With the ignition switch turned on and off, check voltage between VDC/TCS/ABS control unit connector and ground.

Signal name	VDC/TCS/ABS control unit	Ground	Voltage
Power supply	1	—	Battery voltage (Approx. 12 V)

3. Check continuity between VDC/TCS/ABS control unit and ground.

Signal name	VDC/TCS/ABS control unit	Ground	Continuity
Ground	28, 29	—	Yes

OK or NG

OK >> Check battery (terminal looseness, low voltage, etc.) For any non-standard condition. If any non-standard condition exists, recharge or replace battery as necessary.

NG >> The corresponding harness circuit is open or shorted. Repair the circuit.

VDC/TCS/ABS Control Unit 2

NFS0004O

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

Check self-diagnosis results.

Self-diagnosis results
EMERGENCY BRAKE

When any item other than “EMERGENCY BRAKE” is indicated in self-diagnosis display, follow the instructions below.

CAUTION:

“EMERGENCY BRAKE” is indicated when control unit itself is detected as an error. If this display item is indicated, replace control unit.

Is the above displayed in the self-diagnosis display items?

YES >> Replace VDC/TCS/ABS control unit and re-conduct the self-diagnosis.

NO >> INSPECTION END

Brake Fluid Level Switch System

NFS0004P

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSIS RESULTS

1. Check brake reservoir tank fluid level. If the level is low, add brake fluid.
2. Erase the self-diagnosis results and check self-diagnosis results.

Self-diagnosis results
BR FLUID LEVEL LOW

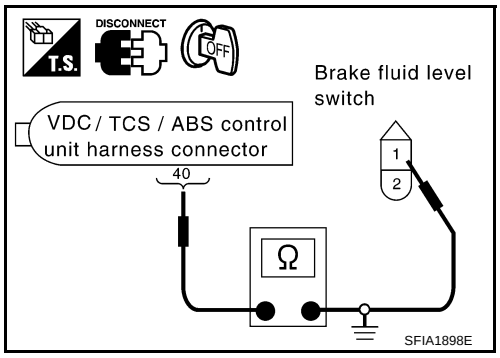
Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.

NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect brake fluid level switch connector and VDC/TCS/ABS control unit connector and check terminal for deformation, disconnection, looseness, and so on. If there is any non-standard condition, repair or replace the terminal.
2. Securely reconnect the connectors and then perform self-diagnosis.



Is the result of self-diagnosis normal?

YES >> The connector terminal contact is loose, damaged, open or shorted.
NO >> GO TO 3.

3. CHECK HARNESS BETWEEN THE BRAKE FLUID LEVEL SWITCH AND THE VDC/TCS/ABS CONTROL UNIT

1. Turn ignition switch OFF and disconnect brake fluid level switch connector, VDC/TCS/ABS control unit, connectors.
2. Check continuity between brake fluid level switch connector E44 and VDC/TCS/ABS control unit connector B114.

VDC/TCS/ABS control unit	Brake fluid level switch	Continuity
40	1	Yes
	Ground	No
Ground	2	Yes

OK or NG

OK >> Connect connectors and conduct a VDC/TCS/ABS control unit self-diagnosis.
NG >> If the open or short in harness, repair or replace the harness.

CAN Communication System

NFS0004Q

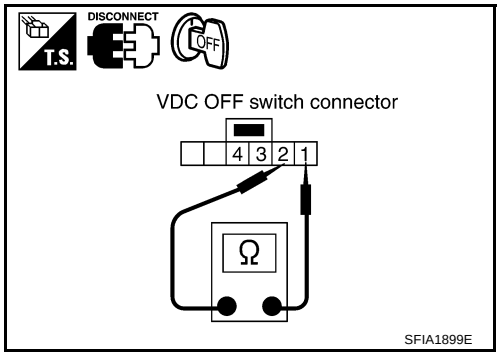
INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF, disconnect the VDC/TCS/ABS control unit connector, and check the terminal for deformation, disconnection, looseness, and so on. If there is a malfunction, repair or replace the terminal.
2. Reconnect connector to perform self-diagnosis.

Is “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Print out the self-diagnostic results, and refer to LAN-48, "CAN System Specification Chart" .
NO >> Connector terminal connection is loose, damaged, open, or shorted.

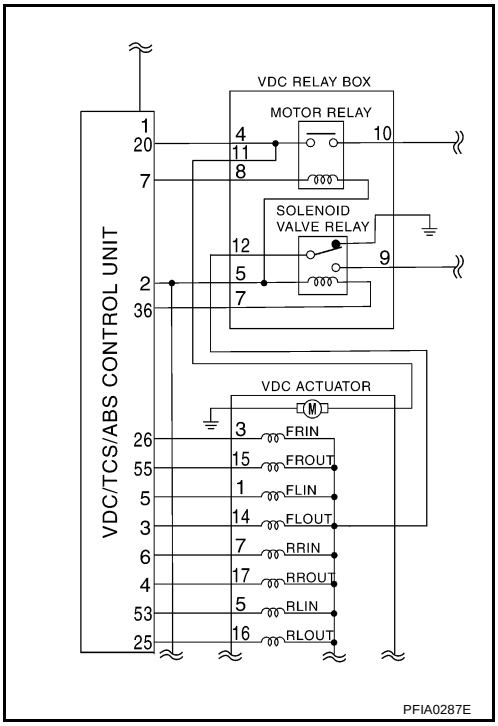


Component Inspection

NFS0004R

VDC OFF SWITCH

- Turn ignition switch OFF, and disconnect the VDC OFF switch connector M9, and check the continuity between terminals 1 and 2.



1 - 2 :Continuity should exist when pushing the switch.
continuity should not exist when releasing the switch.

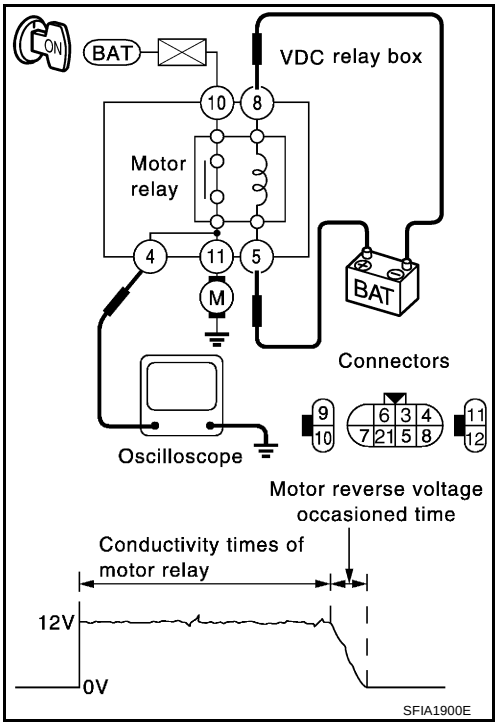
ABS MOTOR RELAY AND ACTUATOR RELAY

- Turn ignition switch OFF and disconnect the VDC relay box connector E47, E48, E222.
- Apply a voltage of 12 V between the ABS motor relay terminal 8 and the actuator relay terminal 7 and then check the continuity between the following terminals.

ABS motor relay	Between terminal 4 to 10	Continuity should exist.
Actuator relay	Between terminal 9 to 12	Continuity should exist.

VDC/TCS/ABS ACTUATOR

Actuator Operation Inspection



1. Turn ignition switch ON, apply a voltage of 12 V between the relay box terminal 5 and 8, use an oscilloscope to measure the motor voltage at this time (between terminal 11 and the ground), and check the motor reverse voltage occurrence time when operation is stopped.

Motor counter-electromotive force duration:

0.1 second or more

CAUTION:

- **The above check should be performed after motor relay unit inspection to make sure relay operates normally.**
- **To prevent overheating, do not drive actuator motor more than 4 seconds.**
- **The motor reverse voltage occurrence time is standard when the battery voltage is 12 V and the air temperature is 20°C (68°F), and this time is a little shorter when the battery voltage is low or the air temperature is low.**

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Excessive ABS Function Operation Frequency

NFS0004S

1. CHECK START

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system

2. CHECK FRONT AND REAR AXLE

Make sure there is no excessive play in the front and rear axles.

OK or NG

OK >> GO TO 3.
NG >> Repair.

3. CHECK WHEEL SENSOR AND SENSOR ROTOR

Wheel Sensor Inspection

- Wheel sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Wheel sensor connector connection inspection
- Wheel sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 sec. After the ignition switch is turned on or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

Unexpected Pedal Reaction

NFS0004T

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too big?

YES >>
- Bleed air from the brake piping.
- Check the brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repair.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect the VDC/TCS/ABS control unit connector and make sure the braking force is sufficient when the ABS in not operating. After the inspection, reconnect the connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .
NG >> Check brake system.

The Braking Distance Is Long

NFS0004U

CAUTION:
On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect VDC/TCS/ABS control unit connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

NG >>
- Bleed air from the brake piping.
- Check brake system.

The ABS Function Does Not Operate

NFS0004V

CAUTION:
The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure the warning lamp turns off approximately 1 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

NG >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

Pedal Vibration or ABS Operation Sound Occurs

NFS0004W

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine (at approximately 10 km/h (6MPH) or higher)**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when the engine is started.

Does the symptom occur?

YES >> GO TO 2.

NO >> Perform self-diagnosis. Refer to BRC-96, "OPERATION PROCEDURE" .

2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (head lamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit (or its wiring), and if there is, move it farther away.

NO >> GO TO 3. CHECK WHEEL SENSOR AND SENSOR ROTOR in BRC-124, "Excessive ABS Function Operation Frequency" .

Vehicle Jerks During VDC/TCS/ABS Control

NFS0004X

1. CHECK ENGINE SPEED SIGNAL

Conduct CONSULT-III VDC/TCS/ABS control unit “Data Monitor”.

Is engine speed at idle 400 rpm or higher?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK ECM SELF-DIAGNOSIS RESULT ITEM

Perform ECM self-diagnosis.

Are self-diagnosis items displayed?

YES >> Check the corresponding items. Refer to EC-81, "TROUBLE DIAGNOSIS" in “Engine Control (EC section)”.
NO >> GO TO 3.

3. SYMPTOM CHECK 1

Check if the vehicle jerks during VDC/TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. CHECK A/T SELF-DIAGNOSIS RESULTS ITEM

Perform A/T self-diagnosis.

OK or NG

OK >> GO TO 5.
NG >> Check the corresponding items. Refer to AT-40, "TROUBLE DIAGNOSIS" in “A/T”.

5. SYMPTOM CHECK 2

Check if the vehicle jerks during VDC/TCS/ABS control.

OK or NG

OK >> INSPECTION END
NG >> GO TO 6.

6. CHECK SELF-DIAGNOSIS RESULT ITEM 1

Conduct self-diagnosis of the VDC/TCS/ABS control unit.

Are self-diagnosis items displayed?

YES >> Check the corresponding items, make repairs, and re-conduct the VDC/TCS/ABS control unit self-diagnosis.
NO >> GO TO 7.

7. CHECK CONNECTOR

1. Disconnect the VDC/TCS/ABS control unit and the ECM connectors, check the terminals for deformation, disconnection, looseness, and so on. If there is an error, repair or replace the connector.
2. Securely reconnect the connector and conduct self-diagnosis.

OK or NG

OK >> If the connector terminal contact is loose, damaged, open or shorted, repair or replace the connector terminal.
NG >> GO TO 8.

8. CHECK SELF-DIAGNOSIS RESULT ITEM 2

Re-conduct the VDC/TCS/ABS control unit self-diagnosis.

Are self-diagnosis items displayed?

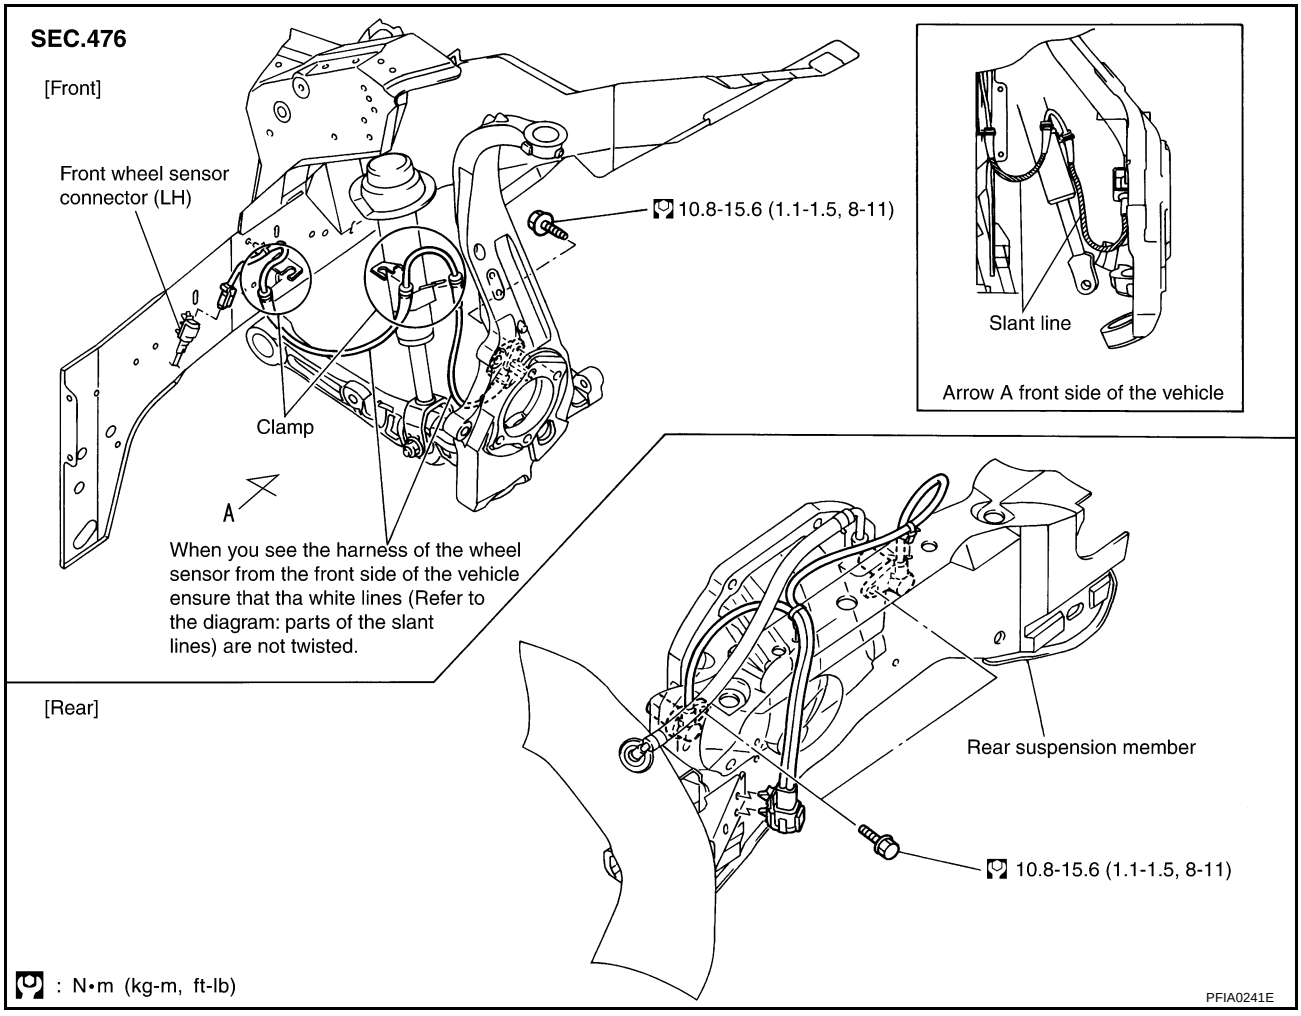
YES >> Repair or replace any non-standard items.
NO >> GO TO 9.

9. CHECK CIRCUIT BETWEEN VDC/TCS/ABS CONTROL UNIT AND THE ECM

Check CAN communication system. Refer to BRC-122, "CAN Communication System" .

OK or NG

OK >> INSPECTION END
NG >> Connect the connectors, and re-conduct the VDC/TCS/ABS control unit self-diagnosis.



WHEEL SENSORS

PFP:47910

Removal and Installation

NFS0004Y

COMPONENTS

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

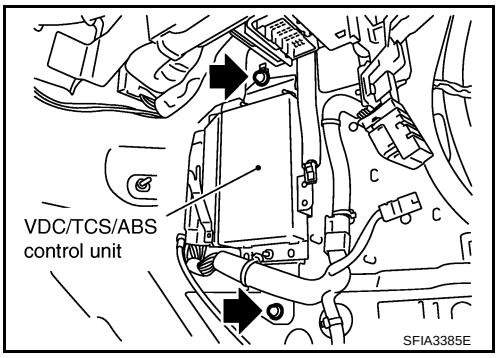
- **As much as possible, avoid rotating sensor when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing sensor. Tighten installation bolts and nuts to specified torques.

- When installing, check that there is no foreign material such as iron chips on pick-up and mounting hole of the sensor. Check that no foreign material has been caught in the sensor rotor motor. Remove any foreign material and clean the mount.
- When installing front sensor, be sure to press rubber grommets in until they lock at the three locations shown in diagram (2 at shock absorbers and 1 at body panel). When installed, harness must not be twisted. White line on harness (shaded part) must be visible from front.

VDC/TCS/ABS CONTROL UNIT



PFP:47660

Removal and Installation

NFS0004Z

REMOVAL

1. Remove dash side finisher (RH). Refer to IP-12, "(C) Dash Side Finisher (RH/LH)" .
2. Remove VDC/TCS/ABS control unit bolts.
3. Remove VDC/TCS/ABS control unit.

INSTALLATION

Installation in the reverse order of removal.

- When installing the VDC/TCS/ABS control unit, tighten bolts to the specified torque.

VDC/TCS/ABS control unit bolts : 8.3 N·m (0.85 kg–m, 73 in–lb)

CAUTION:

When replacing VDC/TCS/ABS control unit, make sure to adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

SENSOR ROTOR

PFP:47970

Removal and Installation

NFS00050

REMOVAL

Front

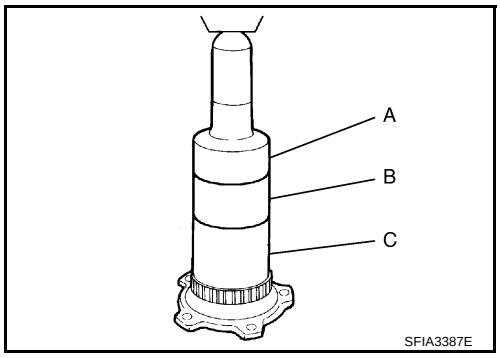
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to remove rear sensor rotor.
- Remove side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.
- Using a bearing replacer (special service tool) and puller (commercial service tool), remove sensor rotor from the companion flange.

INSTALLATION

Front



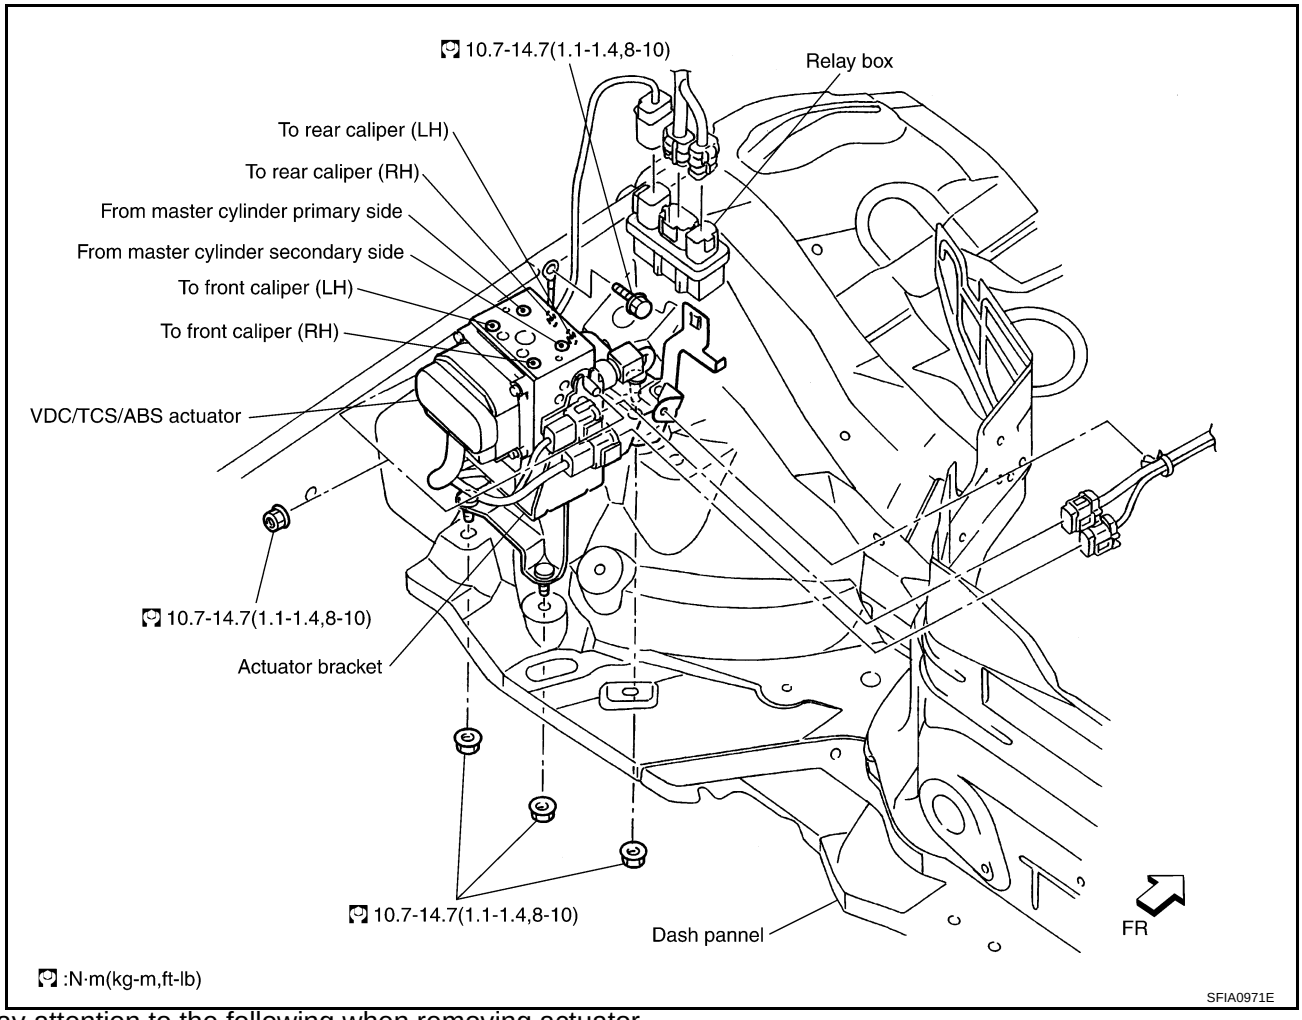
Sensor rotor cannot be disassembled. To replace sensor rotor, replace hub bearing assembly. Refer to FAX-4, "Removal and Installation" in “Front Axle/Drive Shaft” in “FAX” section.

Rear

- Follow procedure below to install rear sensor rotor.
- Using a drift (special service tool), press rear sensor rotor onto the side flange.

Tool number	A: ST30720000 (J-25405)
	B: ST27863000 (—)
	C: KV40104710 (—)

- Install side flange. Refer to RFD-15, "SIDE OIL SEAL" in “Rear Final Drive” in “RFD” section.



VDC/TCS/ABS ACTUATOR

PFP:47660

Removal and Installation

NFS00051

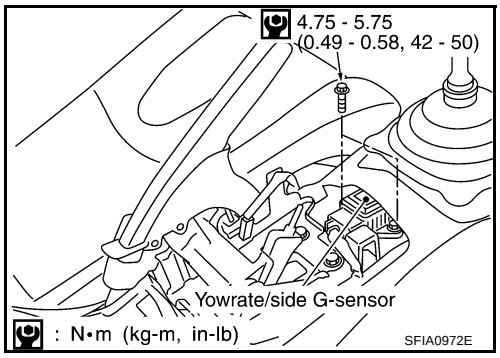
COMPONENTS

Pay attention to the following when removing actuator.

CAUTION:

- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut wrench (commercial service tool).**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake piping. Refer to BR-11, "Bleeding Brake System" .**
- **Be sure to securely connect the ground cable.**

G SENSOR



PFP:47930

Removal and Installation

NFS00052

REMOVAL

1. Remove center console. Refer to IP-16, "CENTER CONSOLE" .
2. Remove harness connector.
3. Remove installation bolts. Remove yaw rate/side G sensor.

CAUTION:

- **Do not drop or strike the yaw rate/side G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because yaw rate/side G sensor is weak for the impact.**

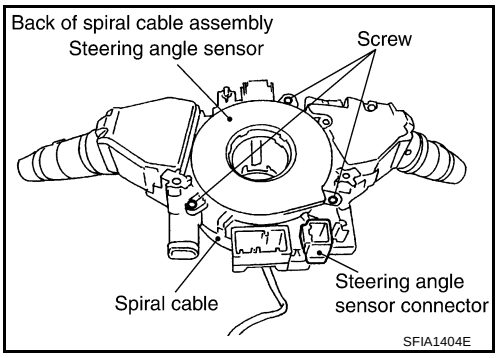
INSTALLATION

To install, follow procedure for removal in reverse order.

CAUTION:

- **Do not drop or strike the yaw rate/side G sensor, because it has little endurance to impact.**

STEERING ANGLE SENSOR



PFP:25554

Removal and Installation

NFS00053

REMOVAL

1. Remove spiral cable assembly. Refer to SRS-42, "SPIRAL CABLE" .
2. Remove steering angle sensor.

INSTALLATION

Install in the reverse order of removal.

NOTE:

After work, make sure to adjust neutral position of steering angle sensor. Refer to BRC-79, "Adjustment of Steering Angle Sensor Neutral Position" .

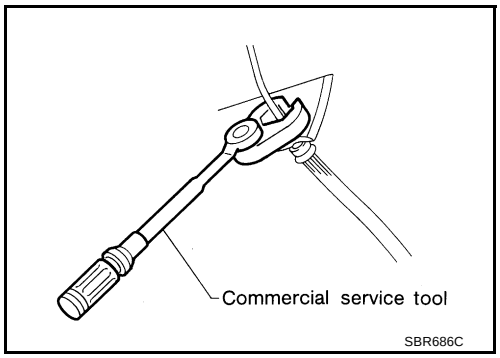
PRECAUTIONS

PFP:00001

Precautions for Battery Service



NCS00001

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

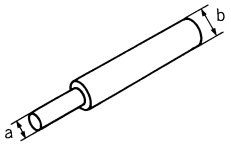
Service Notice or Precautions

NCS00002

- Recommended clutch fluid is brake fluid “DOT 3”. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Never reuse drained clutch fluid.
- Be careful not to splash clutch fluid on painted areas.
- When removing clutch tube, use a flare nut wrench.
- When installing clutch tube, use a flare nut torque wrench.
- Use new clutch fluid to clean or wash all parts of master cylinder.
- Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.
- If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.
- Do not disassemble CSC body.

WARNING:

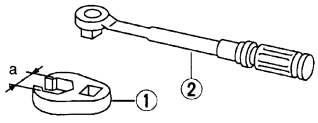
After cleaning clutch disc, wipe it with a dust collector. Do not use compressed air.

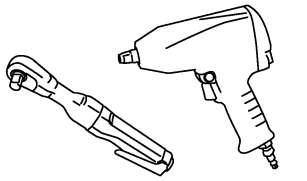


PREPARATION

PFP:00002

Special Service Tools





NCS00003

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
ST20050240 (—) Diaphragm adjusting wrench  ZZA0508D	Adjusting unevenness of diaphragm spring of clutch cover
ST20670000 (—) Clutch aligning bar a: 15 mm (0.59 in) dia. b: 23 mm (0.91 in) dia.  ZZA1178D	Installing clutch disc

Commercial Service Tools

NCS00004

Tool name	Description
Pin punch Tip diameter: 4.5 mm (0.177 in) dia.  ZZA0515D	Removing and installing master cylinder spring pin
1. Flare nut crowfoot a: 10 mm (0.39 in) 2. Torque wrench  S-NT360	Removing and installing clutch piping
Power tool  PBIC0190E	Loosening bolts and nuts

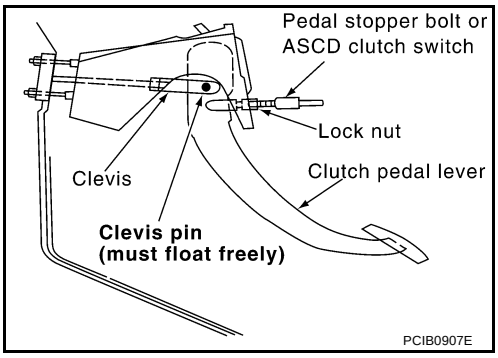
NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

NCS00005

Use the chart below to help you find the cause of the symptom. The numbers indicate the order of the inspection. If necessary, repair or replace these parts.



Reference page		CL-5	CL-7	CL-9	CL-11	EM-101	CL-16										EM-134
SUSPECTED PARTS (Possible cause)		CLUTCH PEDAL (Free play out of adjustment)	CLUTCH LINE (Air in line)	MASTER CYLINDER PISTON CUP (Damaged)	CSC (Concentric Slave Cylinder) (Worn, dirty or damaged)	ENGINE MOUNTING (Loose)	CLUTCH DISC (Out of true)	CLUTCH DISC (Runout is excessive)	CLUTCH DISC (Lining broken)	CLUTCH DISC (Dirty or burned)	CLUTCH DISC (Oily)	CLUTCH DISC (Worn out)	CLUTCH DISC (Hardened)	CLUTCH DISC (Lack of spline grease)	DIAPHRAGM SPRING (Damaged)	DIAPHRAGM SPRING (Out of tip alignment)	PRESSURE PLATE (Distortion)	FLYWHEEL (Distortion)
Symptom	Clutch grabs/chatters					1		2			2	2	2			2		
	Clutch pedal spongy		1	2	2													
	Clutch noisy				1													
	Clutch slips	1									2	2			3		4	5

CLUTCH PEDAL

PFP:46540

On-Vehicle Inspection and Adjustment

NCS00006

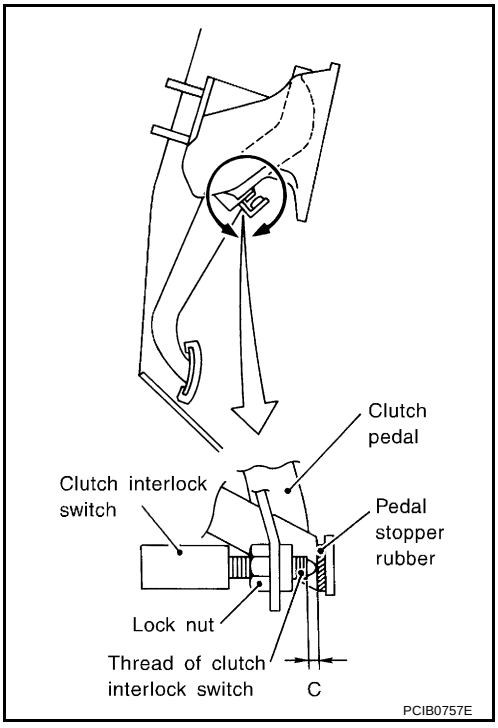
1. Check to see if the clevis pin floats freely in the bore of the clutch pedal. It should not be bound by the clevis or clutch pedal.

a. If the clevis pin is not free, check that the pedal stopper bolt or ASCD clutch switch is not applying pressure to the clutch pedal causing the clevis pin to bind. To adjust, loosen lock nut and turn pedal stopper bolt or ASCD clutch switch.

b. Tighten the lock nut. Refer to CL-6, "Removal and Installation" .

c. Verify that the clevis pin floats in the bore of the clutch pedal. It should not be bound by the clutch pedal.

d. If the clevis pin is still not free, remove the clevis pin and check for deformation or damage. Replace clevis pin if necessary. Leave pin removed for step 2.



2. Check clutch pedal stroke for free range of movement.

a. With the clevis pin removed, manually move the clutch pedal up and down to determine if it moves freely.

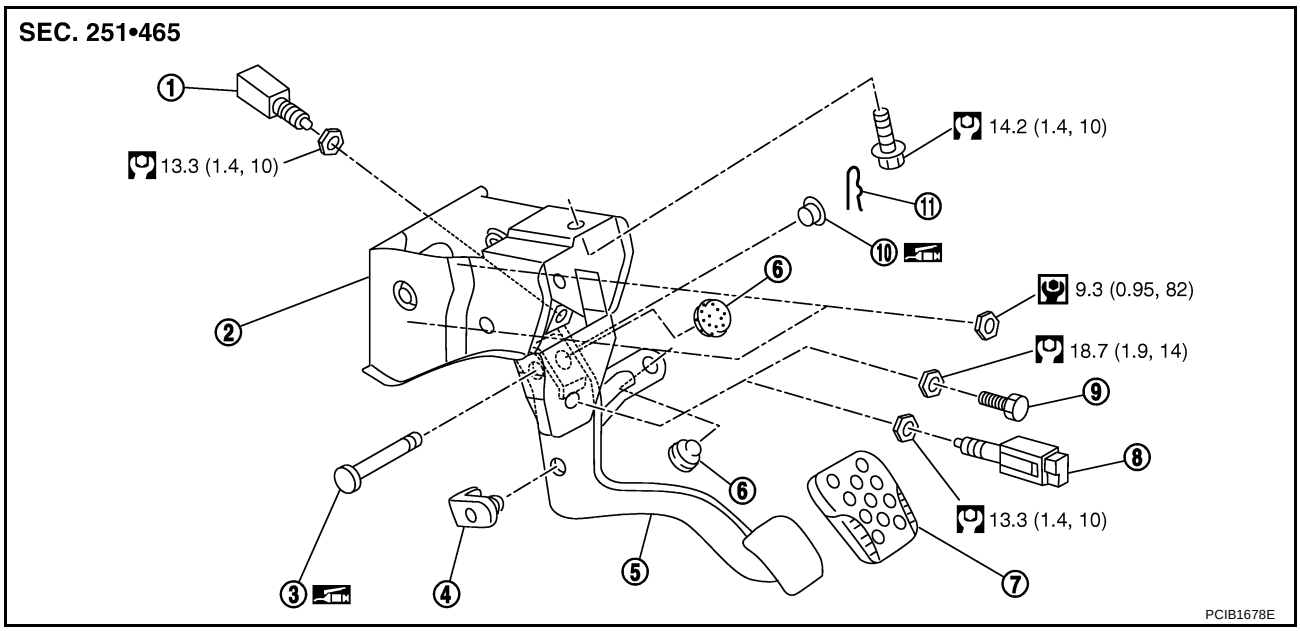
b. If any sticking is noted, replace the related parts (clutch pedal assembly, bushing etc.). Re-assemble the clutch pedal and re-verify that the clevis pin floats freely in the bore of the clutch pedal.

3. Adjust clearance “C” while depressing clutch pedal fully. (With clutch interlock switch)

Clearance C : 0.1 - 1.0 mm (0.004 - 0.039 in)

4. Check clutch hydraulic and system components (clutch master cylinder, CSC, etc.) for sticking or binding.

a. If any sticking or binding noted, repair or replace related parts as necessary.



b. If hydraulic system repair was necessary, bleed the clutch hydraulic system. Refer to CL-7, "Bleeding" .

NOTE:
Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.

Removal and Installation

NCS00007

COMPONENTS

1. Clutch interlock switch
2. Bracket
3. Clevis pin
4. Pedal stopper rubber
5. Clutch pedal
6. Stopper rubber
7. Pedal pad
8. ASCD clutch switch (With ASCD)
9. Pedal stopper bolt (Without ASCD)
10. Bushing
11. Snap pin

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

: Apply lithium-based grease including molybdenum disulphide.

REMOVAL

1. Remove kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove footrest. Refer to EI-43, "Removal and Installation" .
3. Remove dash side finisher (LH). Refer to IP-11, "Removal and Installation" .
4. Remove instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
5. Remove the clutch interlock switch and ASCD clutch switch (with ASCD) connectors and harness.
6. Remove the snap pin and clevis pin.
7. Remove the pedal bracket mounting bolt and nuts and then remove the clutch pedal assembly.

INSPECTION AFTER REMOVAL

Check clutch pedal for bend, damage, or a cracked weld. If bend, damage, or a cracked weld is found, replace the clutch pedal assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

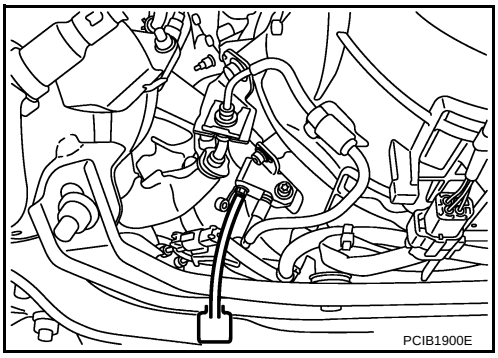
- Tighten pedal stopper bolt lock nut or ASCD clutch switch lock nut to the specified torque after installing the clutch pedal assembly in the vehicle and adjusting the pedal free play. Refer to CL-5, "On-Vehicle Inspection and Adjustment" .
- After installing the clutch interlock switch, adjust the switch position. Refer to CL-5, "On-Vehicle Inspection and Adjustment" .

CLUTCH FLUID

PFP:00017

Bleeding

NCS00008



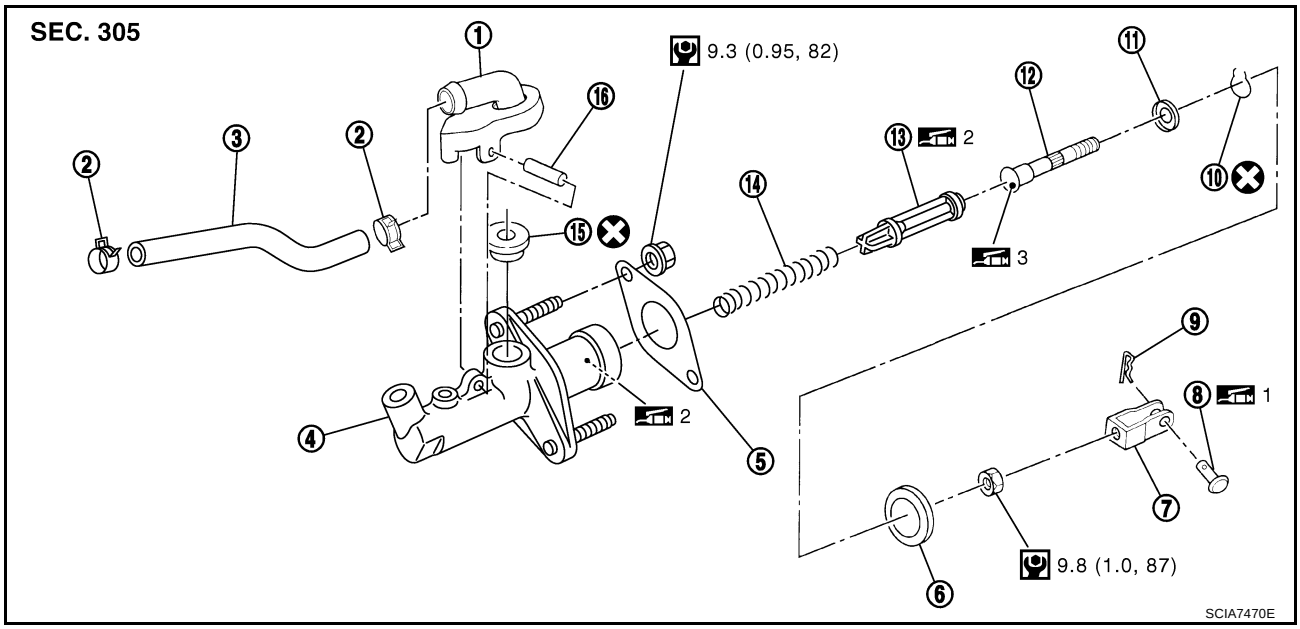
CAUTION:

- **Monitor fluid level in the reservoir tank to make sure it does not empty.**
- **Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.**

NOTE:

Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.

1. Fill the master cylinder reservoir tank with new clutch fluid.
2. Connect a transparent vinyl hose to the air bleeder valve.
3. Depress clutch pedal slowly and fully several times at an interval of 2 to 3 seconds and hold it.
4. With clutch pedal depressed, open air bleeder valve to release air.
5. Close air bleeder valve.
6. Release clutch pedal and wait for 5 seconds.
7. Repeat steps 3 to 6 until no bubbles can be observed in the clutch fluid.
8. Tighten air bleeder valve to the specified torque. Refer to CL-11, "COMPONENTS" .



PCIB1900E

CLUTCH MASTER CYLINDER

PFP:30610

Components

NCS001A1

1. Nipple	2. Clamp	3. Reservoir hose
4. Cylinder body	5. Packing	6. Seat
7. Clevis	8. Clevis pin	9. Snap pin
10. Stopper ring	11. Stopper	12. Push rod
13. Piston assembly	14. Return spring	15. Reservoir seal
16. Spring pin		

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

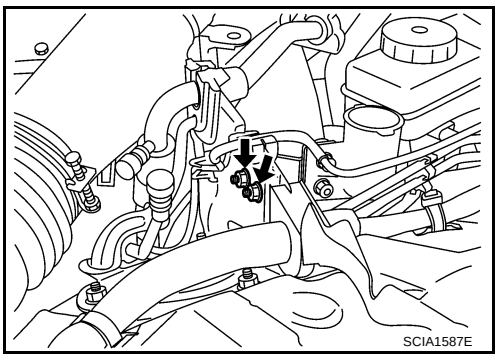
1: Apply lithium-based grease including molybdenum disulphide.

2: Apply rubber lubricant.

3: Apply silicone grease

Removal and Installation

NCS00009

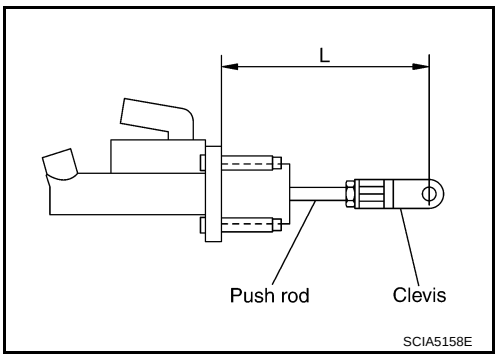


REMOVAL

1. Remove kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .
2. Remove footrest. Refer to EI-43, "Removal and Installation" .
3. Remove dash side finisher. Refer to IP-11, "Removal and Installation" .
4. Remove instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
5. Remove snap pin and clevis pin from the clevis, and separate it from clutch pedal.
6. Remove hoodledge cover. Refer to EI-20, "Removal and Installation" .
7. Drain clutch fluid in reservoir tank and then remove reservoir hose.

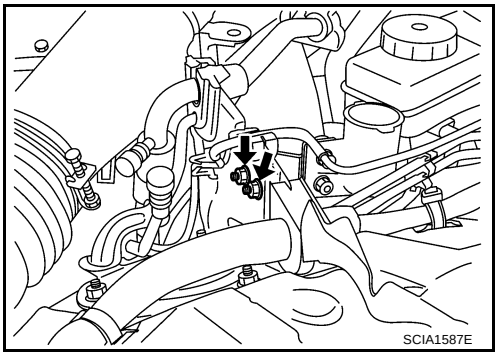
CAUTION:

Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.



8. Remove reservoir tank mounting nut and then remove reservoir tank.
9. Remove clutch tube using a flare nut wrench.
10. Remove mounting nuts and then remove packing and master cylinder assembly.

INSTALLATION



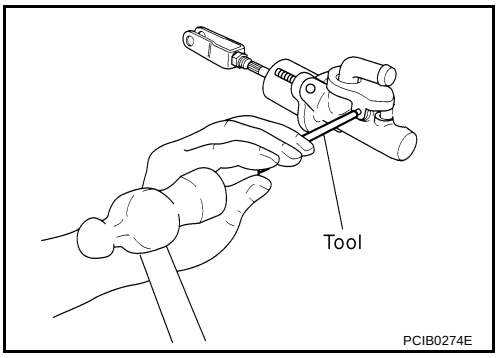
1. Check position of clevis and push rod. If measurement is outside the standard length, adjust position of clevis and push rod.

   Length "L" : 111.0 ± 0.5 mm (4.37 ± 0.02 in)

2. Install packing and master cylinder assembly and tighten mounting nuts to the specified torque. Refer to CL-8, "Components" .
3. Connect clutch tube to master cylinder assembly and temporarily tighten flare nut.
4. Tighten clutch tube flare nut to the specified torque using a flare nut torque wrench. Refer to CL-15, "Removal and Installation" .
5. Install clevis to the clutch pedal, and fix clevis with clevis pin.
6. Install snap pin to the clevis pin.
7. Install reservoir hose to the nipple. Install the reservoir tank to the vehicle, and then tighten mounting nuts to the specified torque.

   : 5.8 N·m (0.59 Kg-m, 51 in-lb)

8. After completing this procedure, inspect and adjust for clutch pedal and then bleed the clutch hydraulic system. Refer to CL-5, "On-Vehicle Inspection and Adjustment" and CL-7, "Bleeding" .
9. Install hoodledge cover.
10. Install instrument driver panel lower. Refer to IP-11, "Removal and Installation" .
11. Install dash side finisher. Refer to IP-11, "Removal and Installation" .
12. Install footrest. Refer to EI-43, "FLOOR TRIM" .
13. Install kicking plate. Refer to EI-35, "Removal and Installation (for Coupe Models)" or EI-37, "Removal and Installation (for Roadster Models)" .



Disassembly and Assembly

NCS0000A

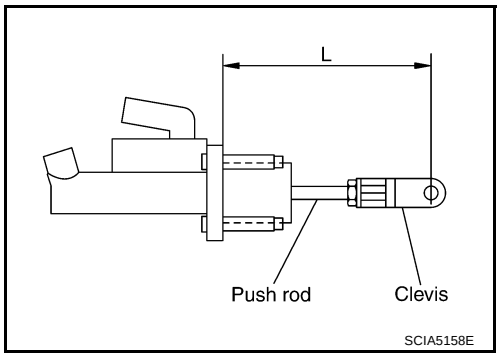
DISASSEMBLY

1. Remove spring pin, nipple and reservoir seal from cylinder body using a pin punch.
2. Loosen push rod lock nut. Remove clevis and lock nut.
3. Remove the seat from the cylinder body.
4. Remove the stopper ring and stopper, and then remove the push rod, piston assembly and return spring from the cylinder body.

   CAUTION:
   Restrain the push rod while doing this because there is a danger the piston assembly will fly out of the cylinder body.

INSPECTION AFTER DISASSEMBLY

Check for any of the conditions shown below. If any malfunction is found, replace the part concerned.



- Damaged cylinder internal wall, foreign matter, wear, corrosion, or pin hole
- Damaged or deformed nipple or reservoir tank
- Settling of the spring
- Cracked and deformed seat

ASSEMBLY

1. Apply rubber lubricant to internal surface of the cylinder body, sliding surface of piston assembly, and the piston cup. Insert return spring and piston assembly to the cylinder body.
2. Apply silicone grease to the push rod and install the stopper before installing the stopper ring.

   CAUTION:
   - **Do not reuse stopper ring.**
   - **Restrain the push rod while doing this because there is a danger the piston assembly will fly out of the master cylinder.**
3. Install seat to the cylinder body.
4. Install clevis to push rod.
5. Check and adjust the position of clevis and push rod. After adjusting “L”, tighten lock nut to the specified torque. Refer to CL-8, "Components" .

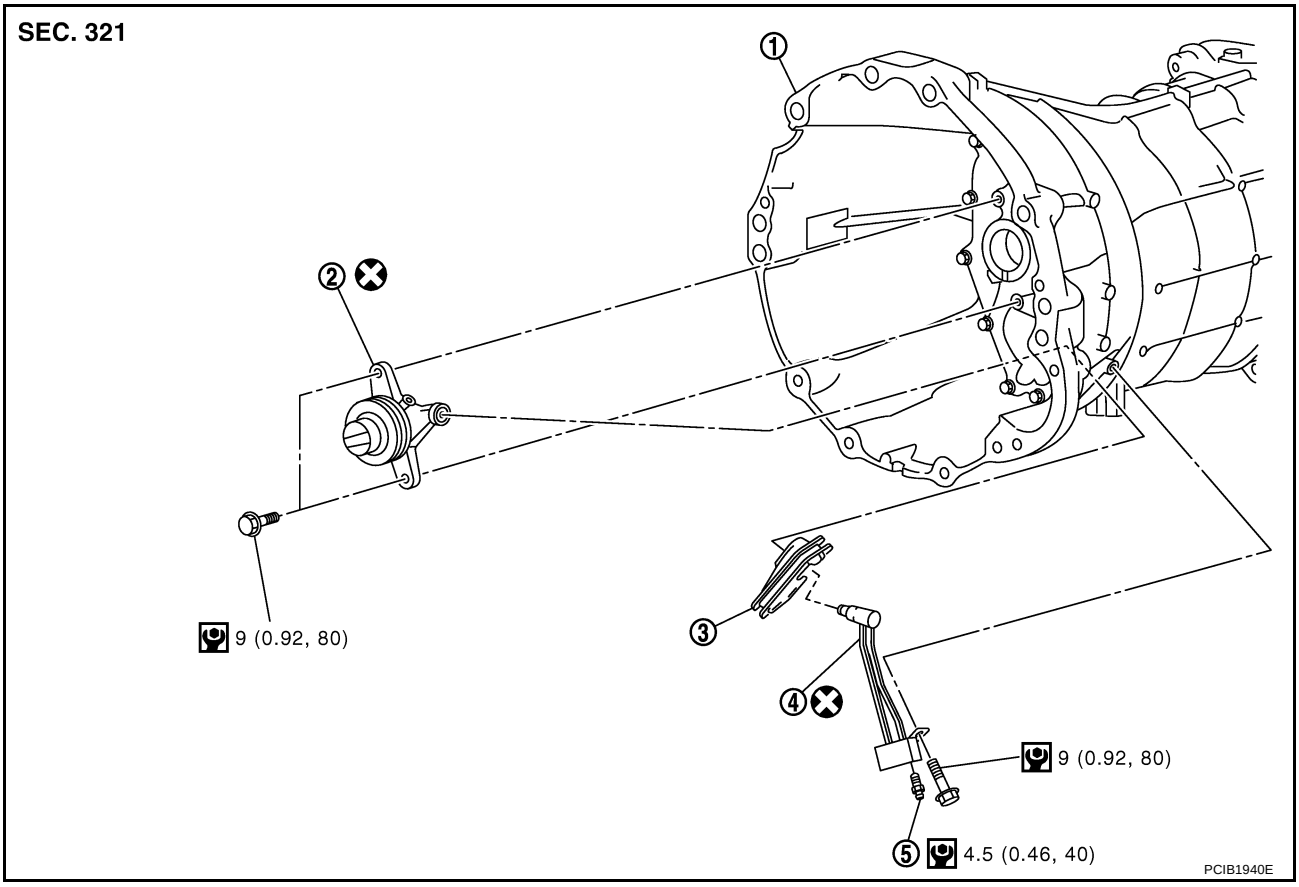
   Length “L” : 111.0 ± 0.5 mm (4.37 ± 0.02 in)

6. Install reservoir seal and nipple to cylinder body. Install spring pin using a pin punch.

   CAUTION:
   Do not reuse reservoir seal.

CSC (CONCENTRIC SLAVE CYLINDER)

PFP:30500



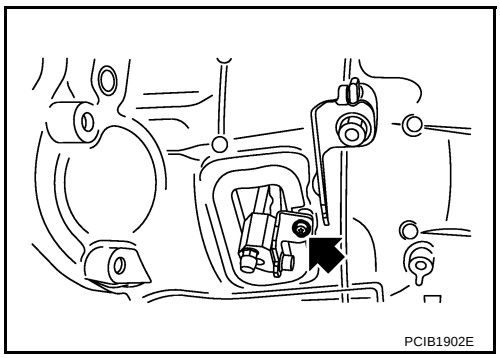
Removal and Installation

NCS0029M

CAUTION:

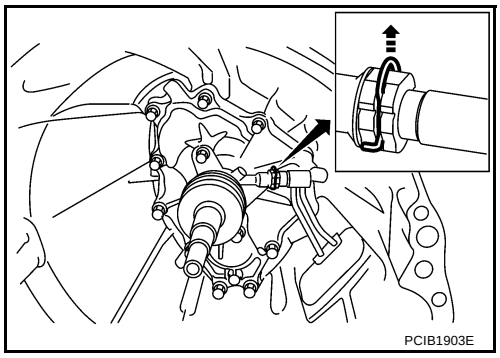
- **If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.**
- **Do not disassemble CSC body.**
- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**

COMPONENTS



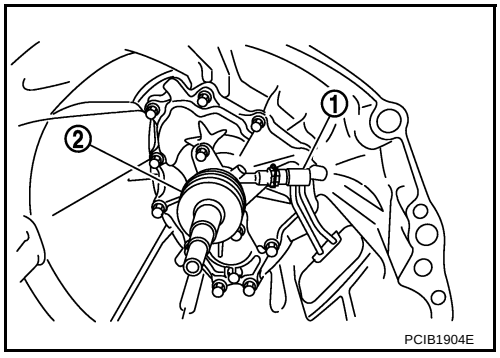
1.	Transmission assembly	2.	CSC (Concentric Slave Cylinder) body	3.	Dust cover
4.	CSC (Concentric Slave Cylinder) tube	5.	Air bleeder valve		

Refer to GI-11, "Components" for the symbols in the figure.



REMOVAL

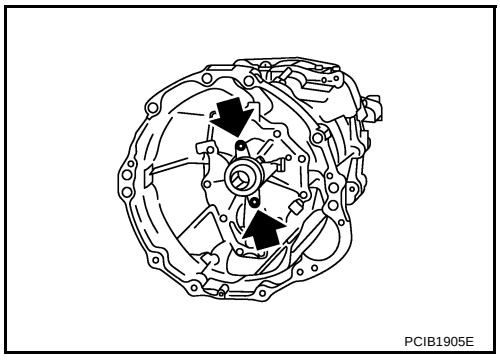
1. Remove transmission assembly from the vehicle. Refer to MT-18, "Removal and Installation" .



2. Remove CSC tube mounting bolt.

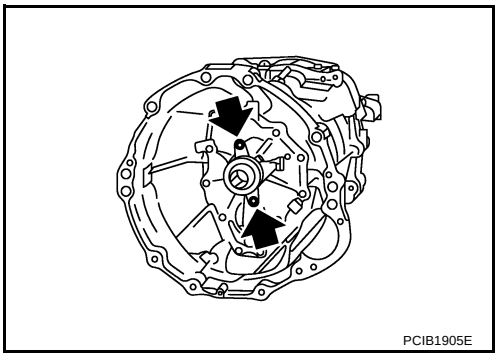
PCIB1902E

3. Pull up the lock pin of CSC body.



PCIB1903E

4. Pull out the CSC tube (1) from the CSC body (2).
5. Remove CSC tube and dust cover from transmission case.
6. Remove air bleeder valve from CSC tube.

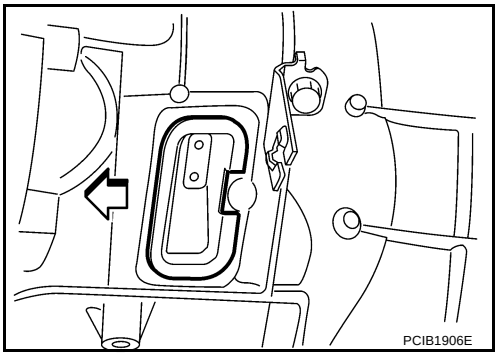


PCIB1904E

7. Remove CSC body from transmission case.

PCIB1905E

INSTALLATION

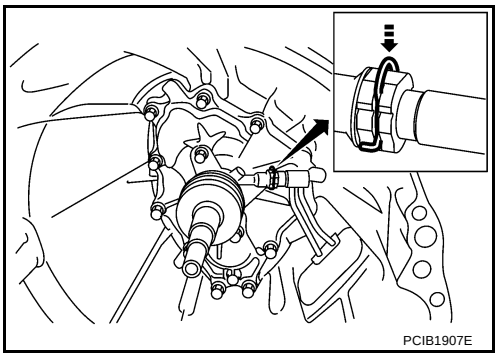


1. Install CSC body to transmission case and then tighten mounting bolts to the specified torque. Refer to CL-11, "COMPONENTS" .

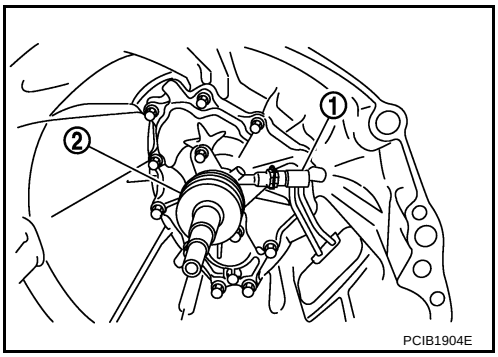
CAUTION:
- **Do not reuse CSC body.**
- **Do not insert and operate CSC body because piston and stopper of CSC body components may fall off.**

2. Install dust cover to transmission case.

⇦ : Vehicle front

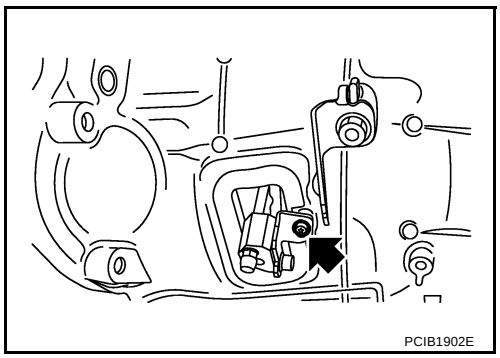


CAUTION:
Be careful with the orientation of dust cover.

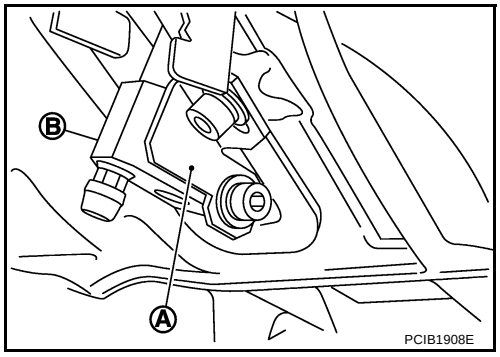


3. Insert CSC tube to dust cover.

CAUTION:
- **Do not reuse CSC tube.**
- **Be sure not to damage O-ring of CSC tube.**



4. Press down the lock pin of the CSC body.



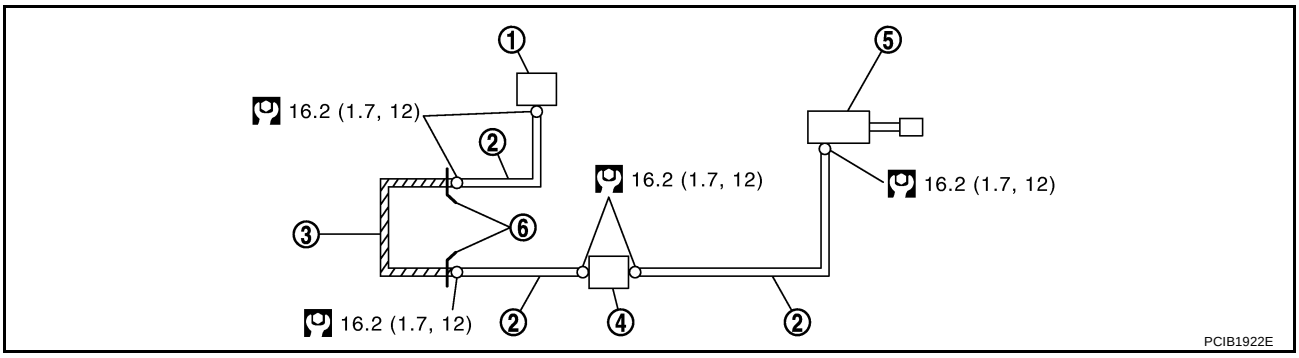
5. Insert the CSC tube (1) into the connector of the CSC body (2) until it clicks.

6. Install CSC tube mounting bolt and then tighten mounting bolt to the specified torque. Refer to CL-11, "COMPONENTS" .

PCIB1902E

CAUTION:
Assemble the components checking that the bracket (A) on the CSC body and the nozzle (B) closely contact each other before tightening the bolt. When assembled correctly, the components should not move beyond the allowable looseness of the connector on the CSC body.

PCIB1908E



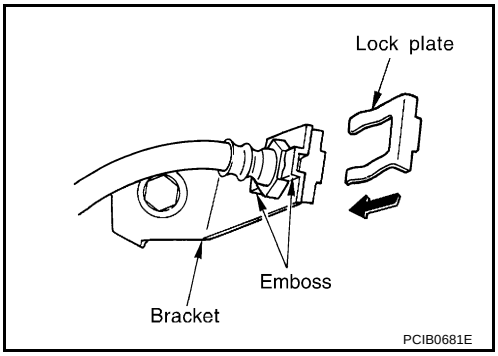
7. Install transmission assembly to the vehicle. Refer to MT-20, "INSTALLATION" .
8. Bleed the air from the clutch hydraulic system, Refer to CL-7, "Bleeding" .

CLUTCH PIPING

PFP:30650

Removal and Installation

NCS0000D



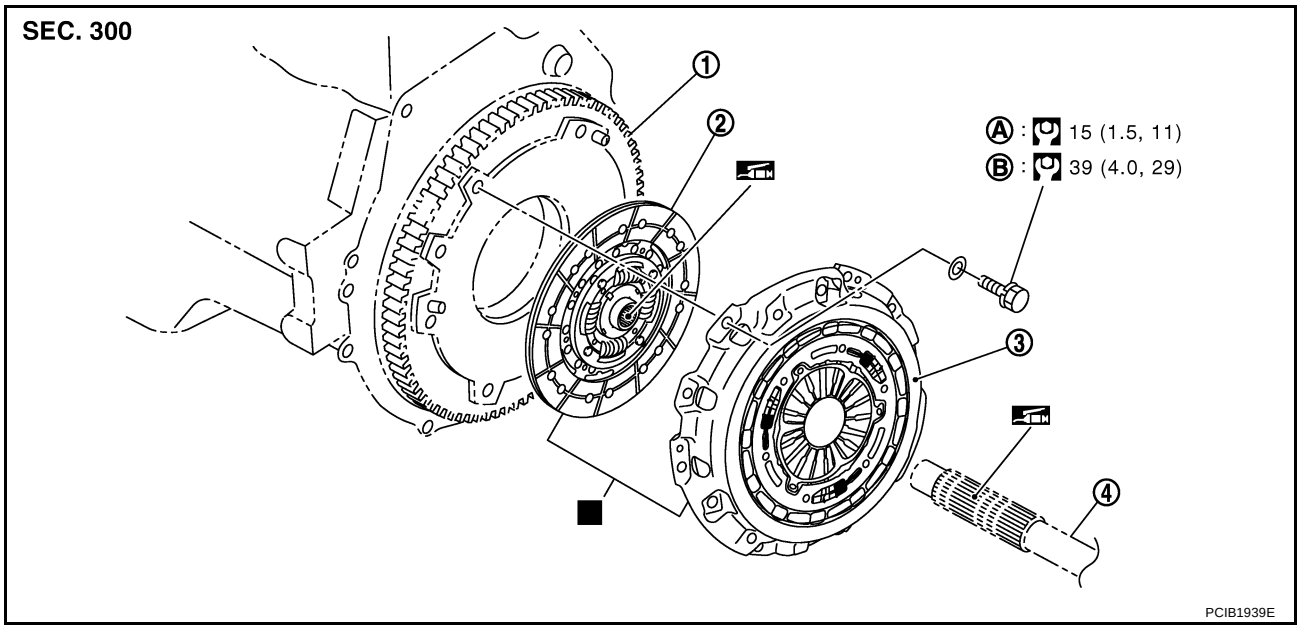
1.	CSC (Concentric Slave Cylinder) assembly	2.	Clutch tube	3.	Clutch hose
4.	Connector	5.	Master cylinder assembly	6.	Lock plate

Refer to GI-11, "Components" , for the symbol in the figure.

Carefully observe the following steps during clutch tube removal and installation.

- Do not spill clutch fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.
- When fixing clutch hose to bracket, align clutch hose metal fittings with bracket positioning emboss and lock plate to secure. At this time, prevent twisting or damage of clutch hose. In addition, be careful not to damage clutch hose.
- Tighten clutch tube flare nut to the specified torque.

  CAUTION:
  Be careful not to damage flare nut and clutch tube.
- After installation, bleed the clutch hydraulic system. Refer to CL-7, "Bleeding" .



CLUTCH DISC, CLUTCH COVER

PFP:30100

Removal and Installation

NCS0000G

COMPONENTS

1. Flywheel
2. Clutch disc
3. Clutch cover
4. Main drive gear

A. First step

B. Final step

Refer to GI-11, "Components" , and the followings for the symbols in the figure.

■ : Replace the parts as a set.

: Apply lithium-based grease including molybdenum disulphide

CAUTION:

- **If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.**
- **Be careful not to bring any grease into contact with the clutch disc facing, pressure plate surface and flywheel surface.**
- **If flywheel is removed, align dowel pin with the smallest hole of flywheel. Refer to EM-111, "ASSEMBLY" .**
- **When installing, be careful that grease applied to main drive gear does not adhere to clutch disc.**
- **Do not clean in solvent on clutch disk.**

REMOVAL

1. Remove transmission assembly from the vehicle. Refer to MT-18, "Removal and Installation" .
2. Loosen clutch cover mounting bolts with power tool. Remove clutch cover and clutch disc.

   CAUTION:

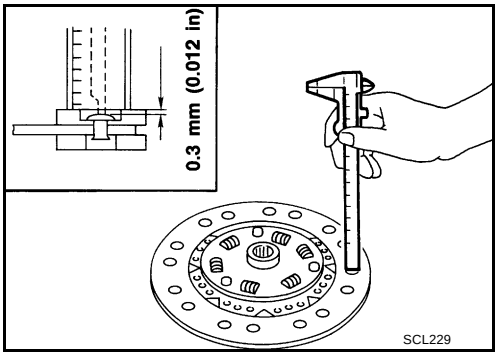
   Do not drop clutch disc.

INSPECTION AND ADJUSTMENT AFTER REMOVAL

Clutch Disc

- Measure circumference runout relative to the clutch disc center spline. If it is outside the specification, replace clutch disc and clutch cover as a set.

  Runout limit/diameter of the area to be measured
  : 1.0 mm (0.039 in)/230 mm (9.06 in) dia.

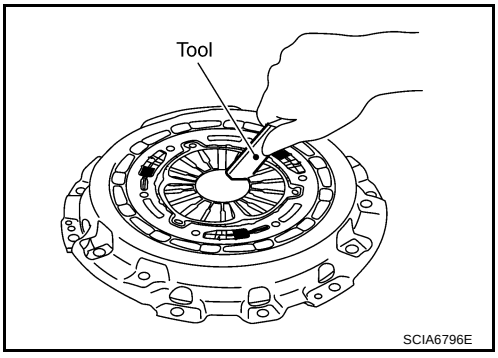


- Measure backlash for clutch disc spline and main drive shaft spline at the circumference of the clutch disc. If it is outside the specified range, replace clutch disc and clutch cover as a set.

  Maximum backlash of spline
  : 1.0 mm (0.039 in)

- Using calipers, measure the depth to the clutch disc facing rivet heads. If it exceeds the allowable wear limit, replace clutch disc and clutch cover as a set.

  Facing wear limit (depth to the rivet head)
  : 0.3 mm (0.012 in)



Clutch Cover

Check diaphragm spring lever claws for unevenness with the lever still on the vehicle. If they exceed the tolerance, adjust lever height using the diaphragm adjusting wrench.

Tolerance for diaphragm spring lever unevenness
: 0.8 mm (0.031 in)

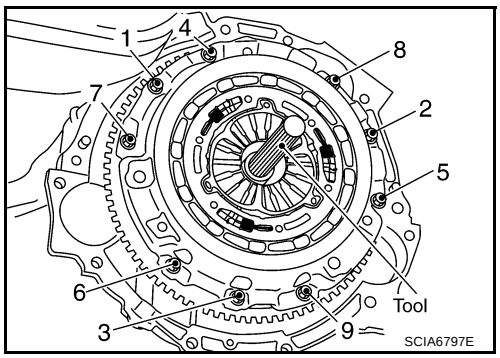
Tool number : ST20050240 (—)

- Check clutch cover thrust ring for wear or breakage. If wear or breakage is found, replace clutch disc and clutch cover as a set.

  NOTE:
  - Worn thrust ring will generate a beating noise when tapped at the rivet with a hammer.
  - Broken thrust ring will make a clinking sound when cover is shaken up and down.

- If a trace of burn or discoloration is found on the clutch cover pressure plate to clutch disc contact surface, repair the surface with sandpaper. If surface is damaged or distorted, replace clutch disc and clutch cover as a set.

INSTALLATION



1. Apply recommended grease to clutch disc and main drive gear spline.

   CAUTION:
   Be sure to apply grease to the points specified. Otherwise, noise, poor disengagement, or damage to the clutch may result. Excessive grease may cause slip or judder. And if it adheres to seal of CSC body, it cause clutch fluid leakage. Wipe off excess grease. Wipe off any grease oozing from the parts.

2. Install clutch disc and clutch cover. Pre-tighten mounting bolts and install clutch aligning bar.

   Tool number : ST20670000 (—)

   CAUTION:
   If either clutch disk or clutch cover is needed to be replaced, replace them as a set.
3. Tighten clutch cover mounting bolts evenly in two steps in the order shown in the figure. Refer to CL-16, "Removal and Installation" .
4. Install transmission assembly. Refer to MT-18, "Removal and Installation" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NBS0001M

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

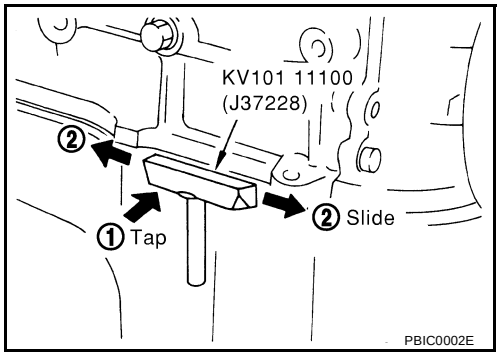
NBS0001N

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Liquid Gasket

NBS0001O

REMOVAL OF LIQUID GASKET SEALING



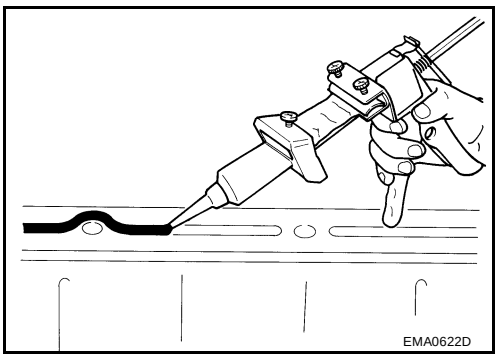
- After removing mounting bolts and nuts, separate the mating surface using seal cutter (SST) and remove old liquid gasket sealing.

  CAUTION:

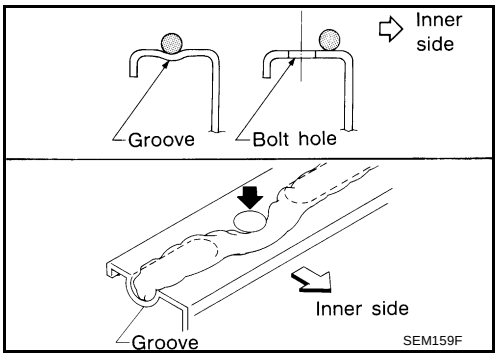
  Be careful not to damage the mating surfaces.
- Tap seal cutter to insert it, and then slide it by tapping on the side as shown in the figure.
- In areas where seal cutter (SST) is difficult to use, use plastic hammer to lightly tap the parts, to remove it.

  CAUTION:

  If for some unavoidable reason tool such as screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE

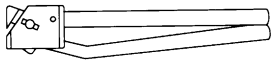


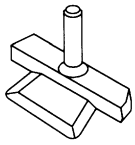
1. Using scraper, remove old liquid gasket adhering to the liquid gasket application surface and the mating surface.
   - Remove liquid gasket completely from the groove of the liquid gasket application surface, mounting bolts, and bolt holes.
2. Wipe the liquid gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.

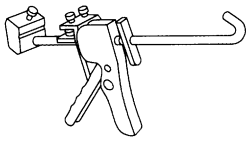
3. Attach liquid gasket tube to tube presser [SST: WS39930000 (—)].
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
4. Apply liquid gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for the liquid gasket application, apply liquid gasket to the groove.

   - As for the bolt holes, normally apply liquid gasket inside the holes. Occasionally, it should be applied outside the holes. Make sure to read the text of service manual.
   - Within five minutes of liquid gasket application, install the mating component.
   - If liquid gasket protrudes, wipe it off immediately.
   - Do not retighten mounting bolts or nuts after the installation.
   - After 30 minutes or more have passed from the installation, fill engine oil and engine coolant.

CAUTION:
If there are specific instructions in this manual, observe them.



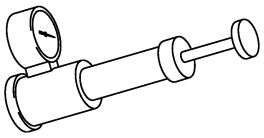


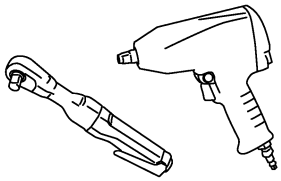


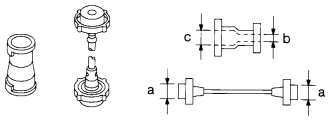
PREPARATION

PFP:00002

Special Service Tools







NBS0001P

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
KV99103510 (—) Radiator plate pliers A  S-NT224	Installing radiator upper and lower tanks
KV99103520 (—) Radiator plate pliers B  S-NT225	Removing radiator upper and lower tanks
KV10111100 (J37228) Seal cutter  NT046	Removing chain tensioner cover and water pump cover
WS39930000 (—) Tube presser  S-NT052	Pressing the tube of liquid gasket

Commercial Service Tools

NBS0001Q

Tool name	Description
Radiator cap tester  PBIC1982E	Checking radiator and radiator cap
Power tool  PBIC0190E	Loosening nuts and bolts
Radiator cap tester adapter  S-NT564	Adapting radiator cap tester to radiator cap and radiator filler neck a: 28 (1.10) dia. b: 31.4 (1.236) dia. c: 41.3 (1.626) dia. Unit: mm (in)

OVERHEATING CAUSE ANALYSIS

PFP:00012

Troubleshooting Chart

NBS0001R

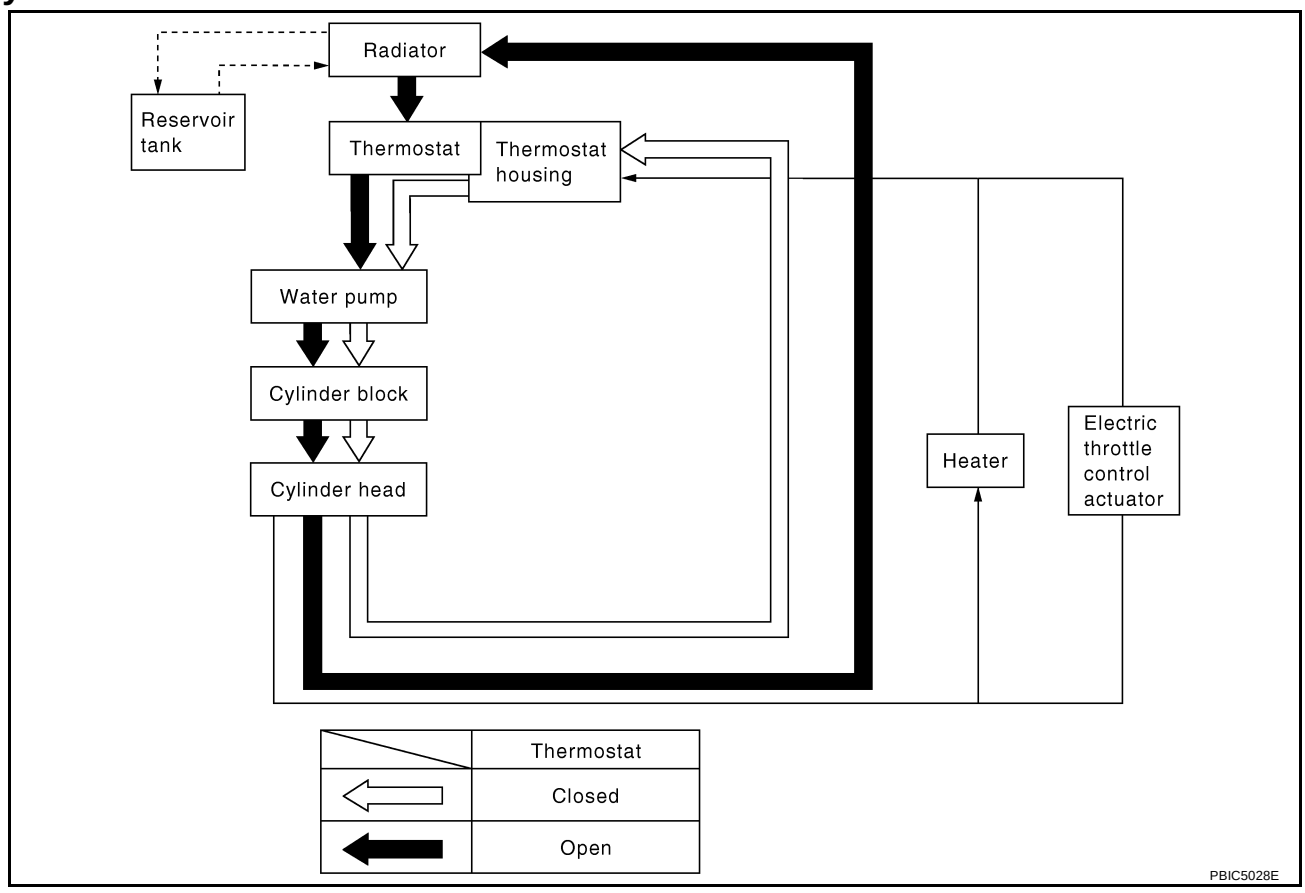
	Symptom		Check items	
Cooling system parts malfunction	Poor heat transfer	Water pump malfunction	Worn or loose drive belt	—
		Thermostat stuck closed	—	
		Damaged fins	Dust contamination or paper clogging	
			Physical damage	
		Clogged radiator cooling tube	Excess foreign material (rust, dirt, sand, etc.)	
	Reduced air flow	Cooling fan does not operate	Fan assembly	—
		High resistance to fan rotation		
		Damaged fan blades		
	Damaged radiator shroud	—	—	—
	Improper engine coolant mixture ratio	—	—	—
	Poor engine coolant quality	—	Engine coolant viscosity	—
	Insufficient engine coolant	Engine coolant leaks	Cooling hose	Loose clamp
				Cracked hose
			Water pump	Poor sealing
			Radiator cap	Loose
				Poor sealing
			Radiator	O-ring for damage, deterioration or improper fitting
				Cracked radiator tank
				Cracked radiator core
			Reservoir tank	Cracked reservoir tank
		Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration
				Cylinder head gasket deterioration

OVERHEATING CAUSE ANALYSIS

	Symptom		Check items	
Except cooling system parts malfunction	—	Overload on engine	Abusive driving	High engine rpm under no load
				Driving in low gear for extended time
				Driving at extremely high speed
			Powertrain system malfunction	—
			Installed improper size wheels and tires	
			Dragging brakes	
			Improper ignition timing	
	Blocked or restricted air flow	Blocked bumper	—	—
		Blocked radiator grille	Installed car brassiere	
			Mud contamination or paper clogging	
		Blocked radiator	—	
		Blocked condenser	Blocked air flow	
		Installed large fog lamp		

COOLING SYSTEM

PFP:21020



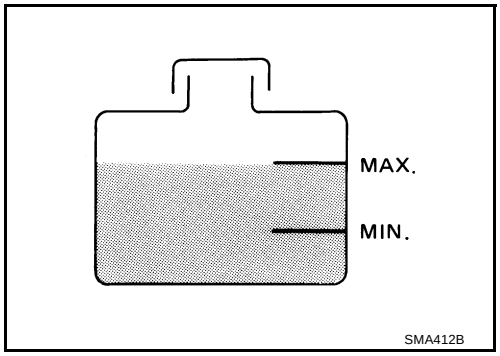
Cooling Circuit

NBS0001S

System Chart

NBS0001T

ENGINE COOLANT



PFP:KQ100

Inspection

NBS0001U

LEVEL CHECK

- Check if the reservoir tank engine coolant level is within the “MIN” to “MAX” range when engine is cool.
- Adjust the engine coolant level as necessary.

LEAK CHECK

- To check for leaks, apply pressure to the cooling system with radiator cap tester (commercial service tool) and radiator cap tester adapter (commercial service tool) (A).

  Testing pressure

  : 157 kPa (1.6 kg/cm^2 , 23 psi)

  WARNING:

  Do not remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from radiator.

  CAUTION:

  Higher test pressure than specified may cause radiator damage.

  NOTE:

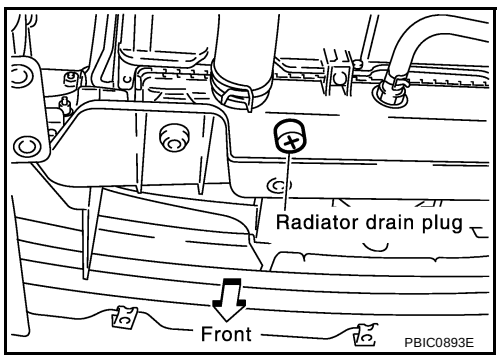
  In a case that engine coolant decreases, replenish radiator with engine coolant.

- If anything is found, repair or replace damaged parts.

Changing Engine Coolant

NBS0001V

WARNING:



- **To avoid being scalded, do not change engine coolant when engine is hot.**
- **Wrap a thick cloth around cap and carefully remove cap. First, turn cap a quarter of a turn to release built-up pressure. Then turn cap all the way.**

CAUTION:

Be careful not to allow engine coolant to contact drive belts.

DRAINING ENGINE COOLANT

1. Remove undercover with power tool.
2. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

When drain all of engine coolant in the system, open water drain plugs on engine cylinder block. Refer to EM-108, "DISASSEMBLY" .

3. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing.
4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush the engine cooling system. Refer to CO-12, "FLUSHING COOLING SYSTEM" .

REFILLING ENGINE COOLANT

1. Install reservoir tank if removed, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .
2. Make sure that each hose clamp has been firmly tightened.
3. Remove air relief plug (1) on heater hose.

   2 : Heater hose
   ⇦ : Vehicle front

4. Fill radiator and reservoir tank to specified level.
   - **Pour engine coolant through engine coolant filler neck slowly of less than 2 ℓ (2-1/8 US qt, 1-3/4 lmp qt) a minute to allow air in system to escape.**
   - **Use Genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS".**

     Engine coolant capacity
     (with reservoir tank at “MAX” level)

     : Approx. 9.0 ℓ (9 - 1/2 US qt, 7- 7/8 lmp qt)

     Reservoir tank capacity (at “MAX” level)

     : 0.8 ℓ (7/8 US qt, 3/4 lmp qt)

   - When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring.

     Air relief plug:

     : 1.2 N·m (0.12 kg-m, 11 in-lb)

5. Install radiator cap.
6. Warm up until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.
   - Make sure thermostat opening condition by touching radiator hose (lower) to see a flow of warm water.

   CAUTION:
   Watch water temperature gauge so as not to overheat engine.

7. Stop engine and cool down to less than approximately 50°C (122°F).
   - Cool down using fan to reduce the time.
   - If necessary, refill radiator up to filler neck with engine coolant.
8. Refill reservoir tank to “MAX” level line with engine coolant.
9. Repeat steps 4 through 7 two or more times with radiator cap installed until engine coolant level no longer drops.
10. Check cooling system for leaks with engine running.
11. Warm up engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between “COOL” and “WARM”.
    - Sound may be noticeable at heater unit.
12. Repeat step 11 three times.
13. If sound is heard, bleed air from cooling system by repeating step 4 through 7 until engine coolant level no longer drops.

FLUSHING COOLING SYSTEM

1. Install reservoir tank if removed, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .

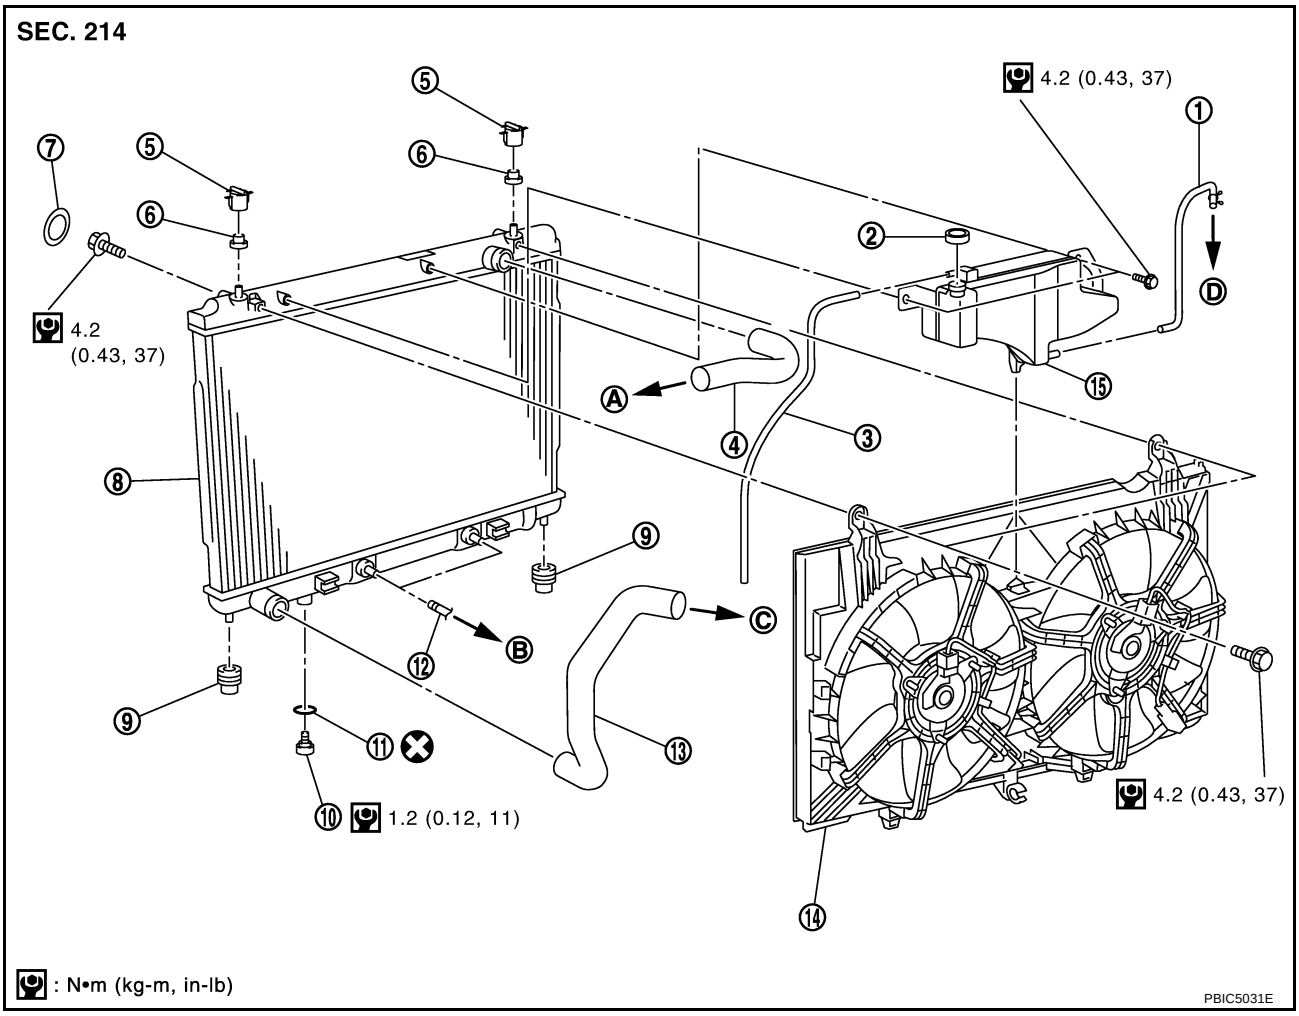
2. Remove air relief plug (1) on heater hose.

   2 : Heater hose
   ⇦ : Vehicle front

3. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.

   Air relief plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)



4. Run engine and warm it up to normal operating temperature.
5. Rev engine two or three times under no-load.
6. Stop engine and wait until it cools down.
7. Drain water from the system. Refer to CO-10, "DRAINING ENGINE COOLANT" .
8. Repeat steps 1 through 7 until clear water begins to drain from radiator.

RADIATOR

PFP:21400

Removal and Installation

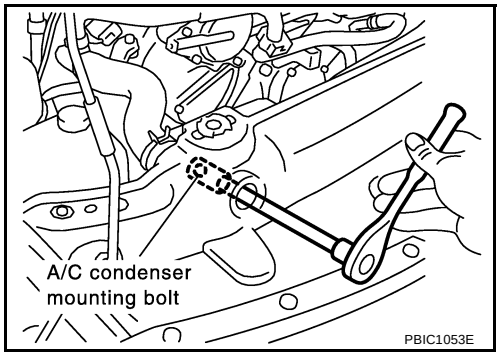
NBS0001W

1. Reservoir tank hose	2. Reservoir tank cap	3. Reservoir tank hose
4. Radiator hose (upper)	5. Upper mount bracket	6. Mounting rubber (upper)
7. Cover	8. Radiator	9. Mounting rubber (lower)
10. Radiator drain plug	11. O-ring	12. A/T fluid cooler hose (A/T models)
13. Radiator hose (lower)	14. Radiator cooling fan assembly	15. Reservoir tank
A. To water outlet	B. To A/T fluid cooler tube (A/T models)	C. To water inlet
D. To water outlet		

- Refer to GI-11, "Components" for symbol marks in the figure.

WARNING:

Do not remove radiator cap when engine is hot. Serious burns could occur from high-pressure engine coolant escaping from radiator. Wrap a thick cloth around the cap. Slowly turn it a quarter of a turn to release built-up pressure. Carefully remove radiator cap by turning it all the way.



REMOVAL

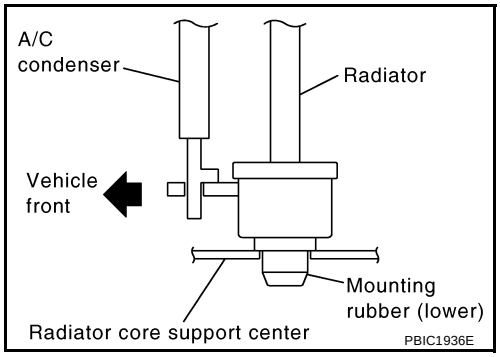
1. Remove undercover with power tool.
2. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air duct and air cleaner case assembly. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove bracket mounting bolt for anchoring A/C piping from vehicle left side, so that A/C piping can be moved.

5. Remove reservoir tank.
6. Removal radiator hoses (upper and lower) and reservoir tank hose.

   CAUTION:
   Be careful not to allow engine coolant to contact drive belts.
7. Remove radiator cooling fan assembly. Refer to CO-21, "COOLING FAN" .
8. Disconnect A/T fluid cooler hoses. (A/T models)
   - Install blind plug to avoid leakage of A/T fluid.
9. Remove cover, and then two A/C condenser mounting bolts located in upper part of radiator.

10. Rotate two radiator upper mount brackets 90 degrees in the direction as shown in the figure, and remove them.



11. Remove radiator as follows:

    CAUTION:
    Do not damage or scratch A/C condenser and radiator core when removing.

a. With lifting and pulling radiator in a rear direction, disassemble lower mount from radiator core support center.

   CAUTION:
   Because A/C condenser is onto the front-lower portion of radiator, moving to rear direction should be at minimum.

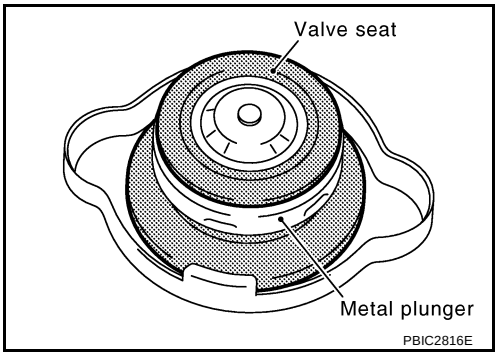
b. Lift A/C condenser up and remove radiator after disengaging the fitting as front-bottom surface.

   CAUTION:
   Lifting A/C condenser should be minimum to prevent a load to A/C piping.

c. After removing radiator, put A/C condenser on radiator core support center to prevent a load to A/C piping, and temporarily fix it with rope or similar means.

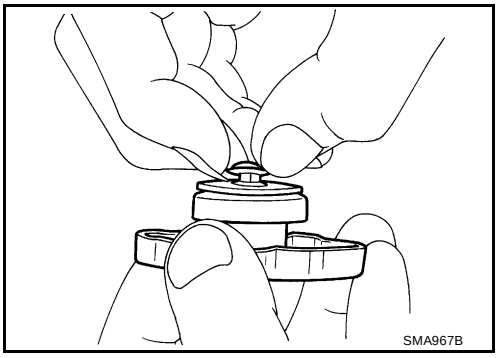
INSTALLATION

Installation is the reverse order of removal.



INSPECTION AFTER INSTALLATION

- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant and A/T fluid.



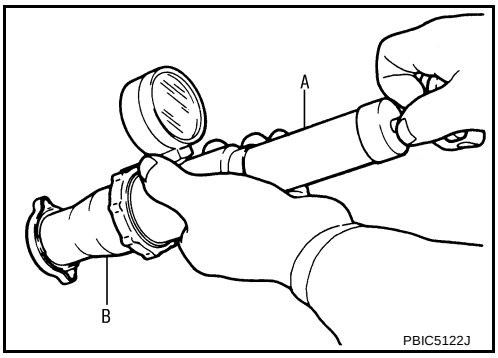
Checking Radiator Cap

NBS0001X

- Check valve seat of radiator cap.
  - Check if valve seat is swollen to the extent that the edge of the plunger cannot be seen when watching it vertically from the top.
  - Check if valve seat has no soil and damage.

- Pull negative-pressure valve to open it, and make sure that it is completely closed when released.
  - Make sure that there is no dirt or damage on the valve seat of radiator cap negative-pressure valve.
  - Make sure that there are no unusualness in the opening and closing conditions of negative-pressure valve.

- Check radiator cap relief pressure.



Standard:

108 - 127 kPa (1.1 - 1.3 kg/cm^2 , 16 - 18 psi)

Limit:

88 kPa (0.9 kg/cm^2 , 13 psi)

  - When connecting radiator cap to the radiator cap tester (commercial service tool) (A) and the radiator cap tester adapter (commercial service tool) (B), apply engine coolant to the cap seal surface.

- Replace radiator cap if there is an unusualness related to the above three.

CAUTION:

When installing radiator cap, thoroughly wipe out the filler neck to remove any waxy residue or foreign material.

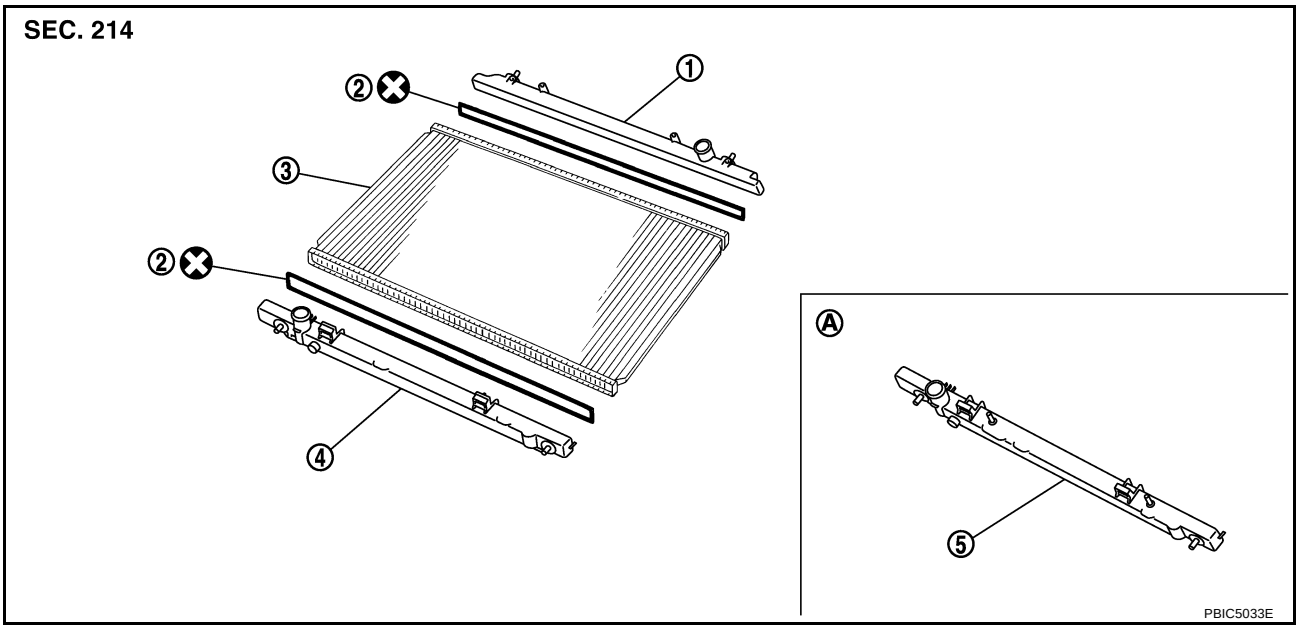
Checking Radiator

NBS0001Y

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape harness and electrical connectors to prevent water from entering.

1. Apply water by hose to the back side of radiator core vertically downward.



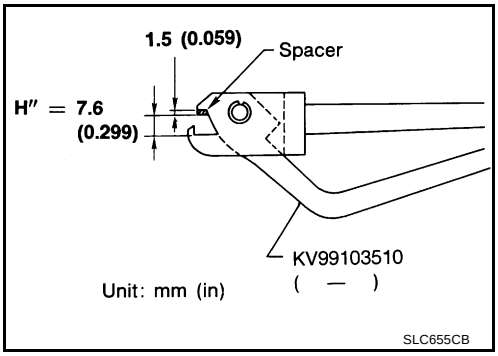
2. Apply water again to all radiator core surface once per minute.
3. Stop washing if any stains no longer flow out from radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (5 kg/cm^2 , 71 psi) and keep distance more than 30 cm (11.8 in).
5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

RADIATOR (ALUMINUM TYPE)

PFP:21460

Disassembly and Assembly

NBS0001Z



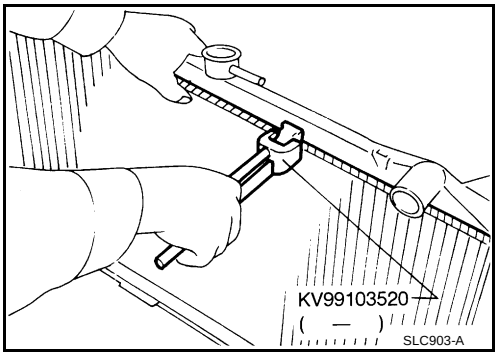
1. Upper tank
2. Sealing rubber
3. Core
4. Lower tank
5. Lower tank (with A/T fluid cooler)

A. A/T models

- Refer to GI-11, "Components" for symbol marks in the figure.

PREPARATION

1. Attach spacer to tip of radiator plate pliers A (SST).
   Spacer specification: 18 mm (0.71 in) wide × 8.5 mm (0.335 in) long × 1.5 mm (0.059 in) thick.



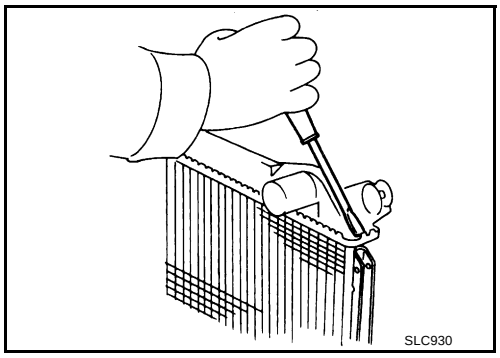
2. Make sure that when radiator plate pliers A [SST: KV99103510 (—)] are closed dimension H″ is approx. 7.6 mm (0.299 in).
3. Adjust dimension H″ with spacer, if necessary.

DISASSEMBLY

1. Remove upper and lower tanks with radiator plate pliers B (SST).

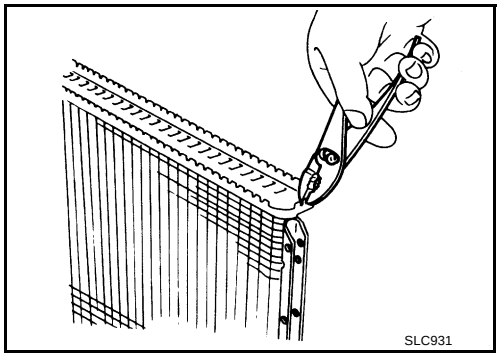
   CAUTION:
   Do not disassemble lower tank and A/T fluid cooler. (A/T models)

   NOTE:
   Regard lower tank and A/T fluid cooler as an assembly. (A/T models)



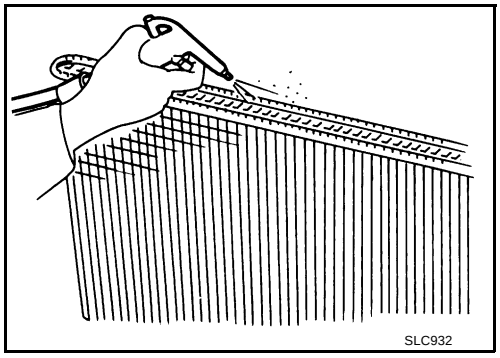
- Grip the crimped edge and bend it upwards so that radiator plate pliers B [SST: KV99103520(—)] slips off.

  CAUTION:
  Do not bend excessively.

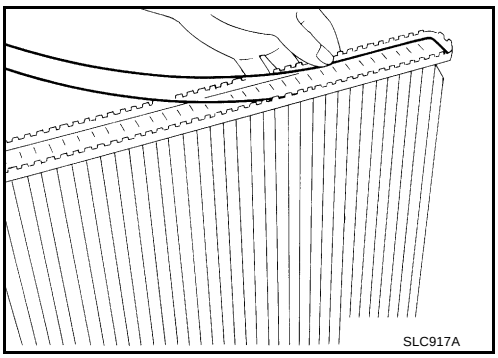


- In areas where radiator plate pliers B [SST: KV99103520(—)] cannot be used, use screwdriver to bend the edge up.

  CAUTION:
  Be careful not to damage tank.

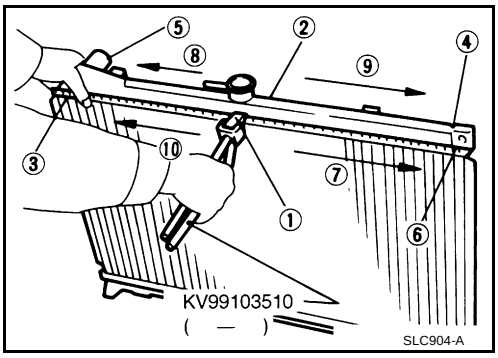


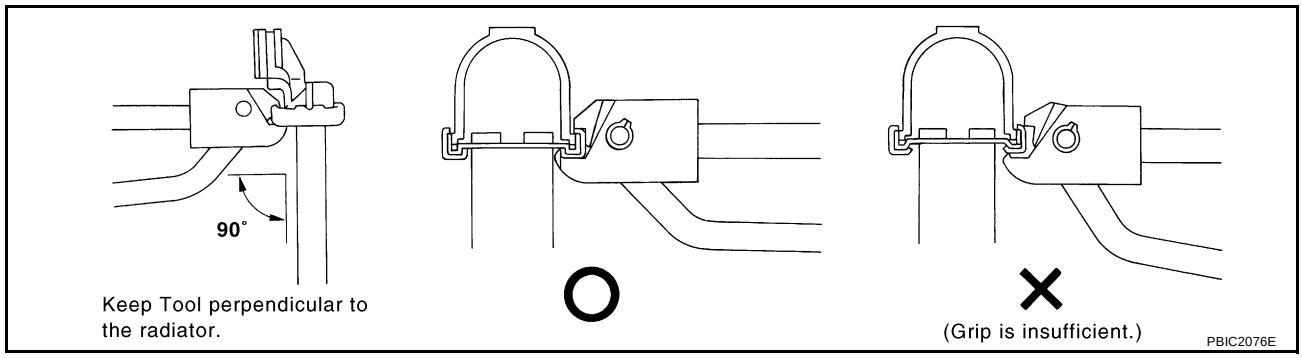
2. Remove sealing rubber.
3. Make sure the edge stands straight up.



ASSEMBLY

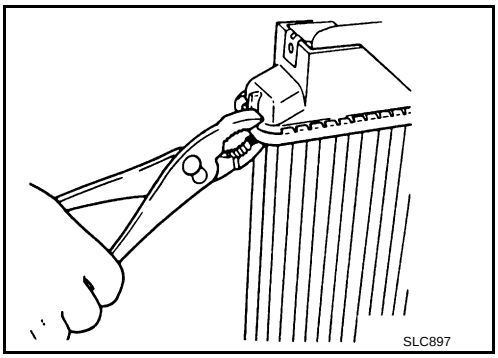
1. Clean contact portion of tank.



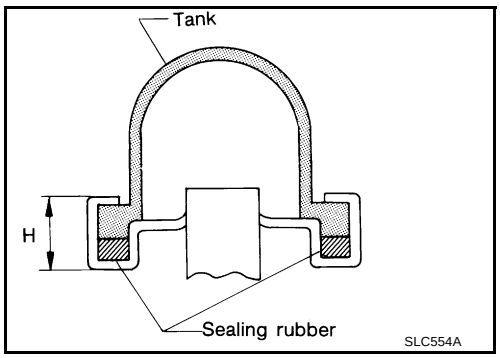


2. Install sealing rubber while pushing it with fingers.

CAUTION:
Be careful not to twist sealing rubber.



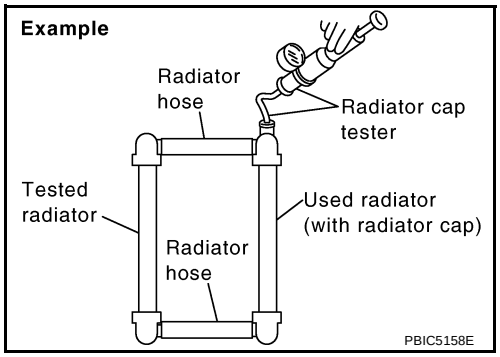
3. Caulk tank in numerical order as shown in the figure with radiator plate pliers A (SST).



- Use pliers in the locations where radiator plate pliers A [SST: KV99103510 (—)] cannot be used.

4. Make sure that the rim is completely crimped down.

Standard height "H" : 8.0 - 8.4 mm (0.315 - 0.331 in)

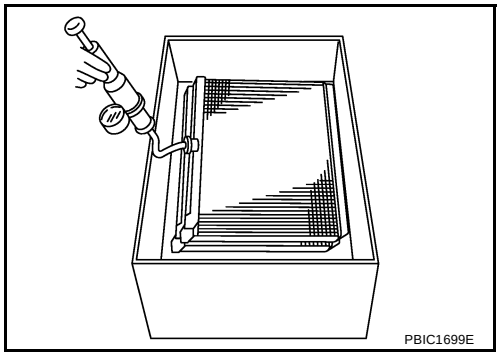


5. Make sure that there is no leakage.
Refer to CO-20, "INSPECTION" .

INSPECTION

1. Apply pressure with radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool).
   - Provide used radiator and connect it to tested radiator using radiator hoses as shown in the figure.

   NOTE:
   The used radiator should be tested beforehand to confirm it has no leakage. If used one is not available, it is possible to use new service part as a radiator testing tool.



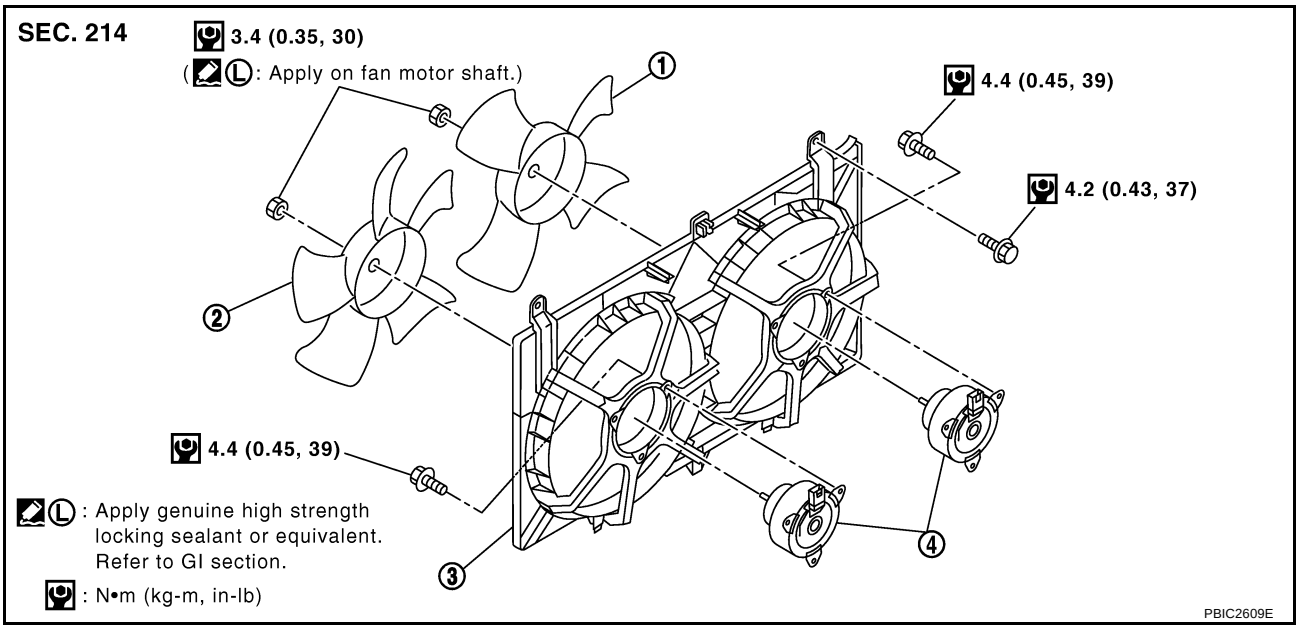
Testing pressure

: 157 kPa (1.6 kg/cm^2 , 23 psi)

WARNING:
To prevent the risk of hose coming undone while under pressure, securely fasten it down with hose clamp.

CAUTION:
Attach hose to A/T fluid cooler to seal its inlet and outlet.
(A/T models)

2. Check for leakage by soaking radiator in water container with the testing pressure applied.

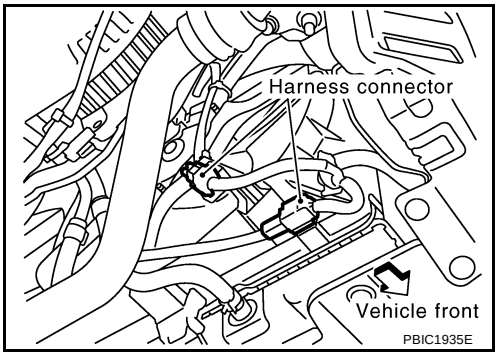


COOLING FAN

PFP:21140

Removal and Installation

NBS00020



1. Cooling fan (RH)
2. Cooling fan (LH)
3. Fan shroud
4. Fan motor

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air cleaner case assembly (RH, LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove reservoir tank. Refer to CO-13, "RADIATOR" .
5. Disconnect radiator hose (upper) at radiator side. Refer to CO-13, "RADIATOR" .
6. Disconnect fan motor harness connectors at the right-lower portion of fan shroud.

7. Remove mounting bolts to lift up and radiator cooling fan assembly.

   CAUTION:
   Be careful not to damage or scratch on radiator core.

INSTALLATION

Installation is the reverse order of removal.

NOTE:
Cooling fans are controlled by ECM. For details, refer to EC-543, "DTC P1217 ENGINE OVER TEMPERATURE" .

Disassembly and Assembly

NBS00021

DISASSEMBLY

1. Remove cooling fans (RH and LH) from fan motors.
2. Remove fan motors from fan shroud.

INSPECTION AFTER DISASSEMBLY

Cooling Fan

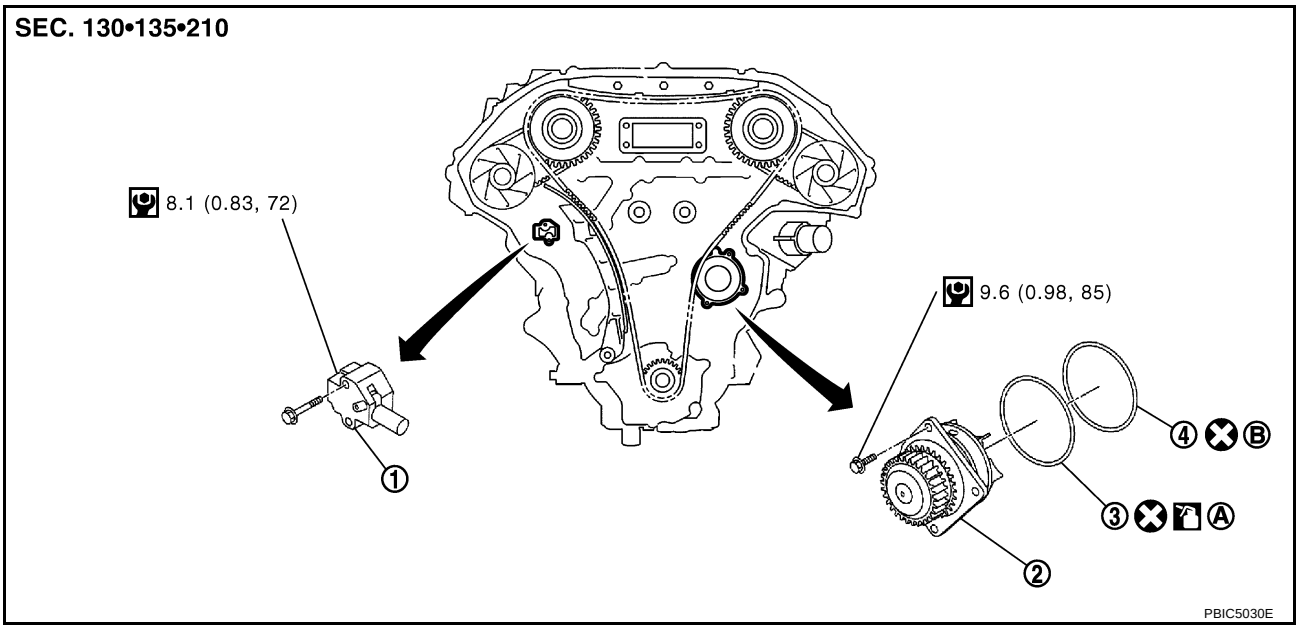
Inspect cooling fan for crack or unusual bend.

- If anything is found, replace cooling fan.

ASSEMBLY

Assembly is the reverse order of disassembly.

CAUTION:



RH and LH cooling fans are different. Be careful not to misassemble them.

WATER PUMP

PFP:21020

Removal and Installation

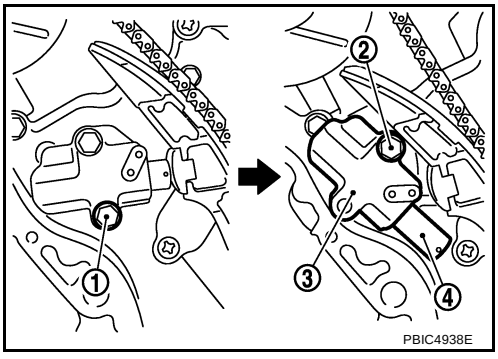
NBS00022

1. Timing chain tensioner (primary)	2. Water pump	3. O-ring
4. O- ring		
A. Identify with yellow paint mark	B. Identify with light blue paint mark Apply engine coolant	

- Refer to GI-11, "Components" for symbol marks in the figure.

CAUTION:

- **When removing water pump assembly, be careful not to get engine coolant on drive belt.**
- **Water pump cannot be disassembled and should be replaced as a unit.**
- **After installing water pump, connect hose and clamp securely, then check for leaks using radiator cap tester (commercial service tool) and radiator cap tester adapter (commercial service tool).**



REMOVAL

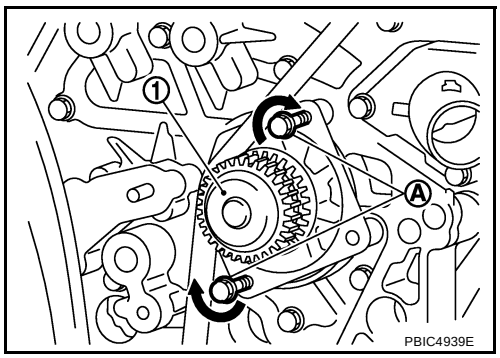
1. Remove front timing chain case. Refer to EM-44, "FRONT TIMING CHAIN CASE" .
2. Remove timing chain tensioner (primary) as follows:

a. Remove lower mounting bolt (1).

b. Loosen upper mounting bolt (2) slowly, and then turn chain tensioner (primary) (3) on the upper mounting bolt so that plunger (4) is fully expanded.

NOTE:
Even if plunger is fully expanded, it is not dropped from the body of timing chain tensioner (primary).

c. Remove upper mounting bolt, and then remove timing chain tensioner (primary).



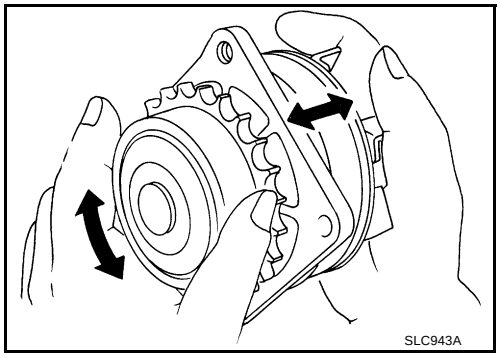
3. Remove water pump as follows:

a. Remove three water pump mounting bolts. Secure a gap between water pump gear and timing chain, by turning crankshaft counterclockwise until timing chain looseness on water pump sprocket becomes maximum.

b. Screw M8 bolts (A) [pitch: 1.25 mm (0.049 in) length: approx. 50 mm (1.97 in)] into water pumps upper and lower mounting bolt holes until they reach timing chain case. Then, alternately tighten each bolt for a half turn, and pull out water pump (1).

CAUTION:

- **Pull straight out while preventing vane from contacting socket in installation area.**
- **Remove water pump without causing sprocket to contact timing chain.**

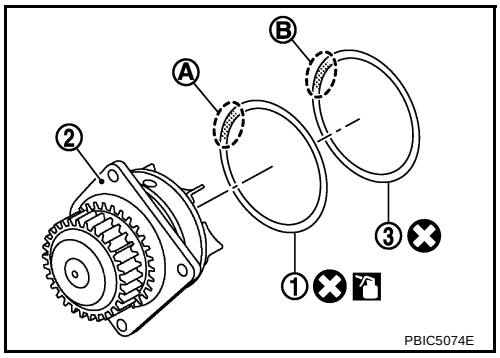


c. Remove M8 bolts and O-rings from water pump (1).

CAUTION:

Do not disassemble water pump.

INSPECTION AFTER REMOVAL



- Check for badly rusted or corroded water pump body assembly.
- Check for rough operation due to excessive end play.
- Replace water pump, if necessary.

INSTALLATION

1. Install new O-rings to water pump.
   - Apply engine oil to O-rings (1) and engine coolant to O-ring (3) as shown in the figure.
   - Locate O-ring (1) with yellow paint mark (A) to engine front side.
   - Locate O-ring (3) with light blue paint mark (B) to rear side.

   2 : Water pump

2. Install water pump.

CAUTION:

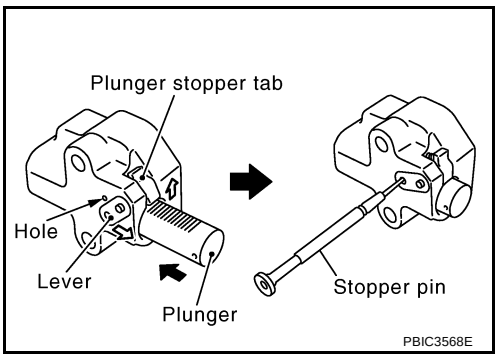
Do not allow cylinder block to nip O-rings when installing water pump.

- Make sure that timing chain and water pump sprocket are engaged.
- Insert water pump by tightening mounting bolts alternately and evenly.

3. Install timing chain tensioner (primary) as follows:

a. Turn crankshaft clockwise so that timing chain on the timing chain tensioner (primary) side is loose.

b. Pull plunger stopper tab up (or turn lever downward) so as to remove plunger stopper tab from the ratchet of plunger.



NOTE:
Plunger stopper tab and lever are synchronized.

c. Push plunger into the inside of tensioner body.

d. Hold plunger in the fully compressed position by engaging plunger stopper tab with the tip of ratchet.

e. To secure lever, insert stopper pin through hole of lever into tensioner body hole.

- The lever parts and the tab are synchronized. Therefore, the plunger will be secured under this condition.

NOTE:
Figure shows the example of 1.2 mm (0.047 in) diameter thin screwdriver being used as the stopper pin.

f. Install timing chain tensioner (primary).

- Remove dust and foreign material completely from backside of timing chain tensioner (primary) and from installation area of rear timing chain case.

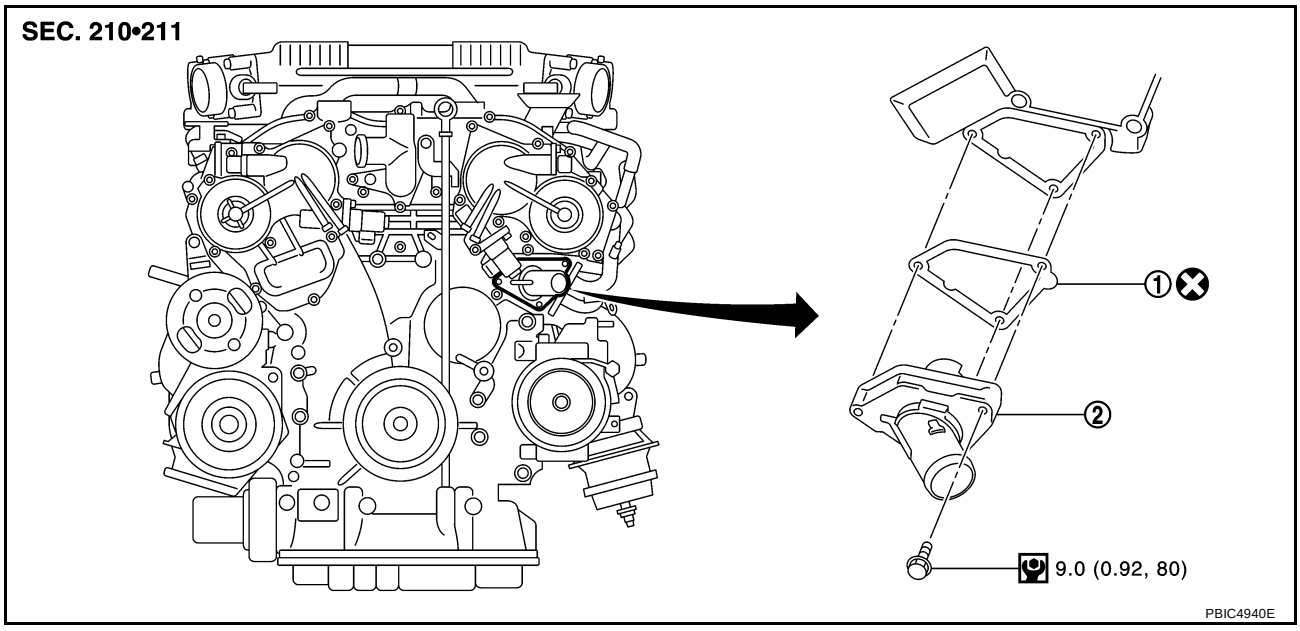
g. Remove stopper pin.

h. Make sure again that timing chain and water pump sprocket are engaged.

4. Install in the reverse order of removal after this step.

- **After starting engine, let idle for three minutes, then rev engine up to 3,000 rpm under no load to purge air from the high-pressure chamber of chain tensioner. Engine may produce a rattling noise. This indicates that air still remains in the chamber and is not a matter of concern.**

INSPECTION AFTER INSTALLATION



- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

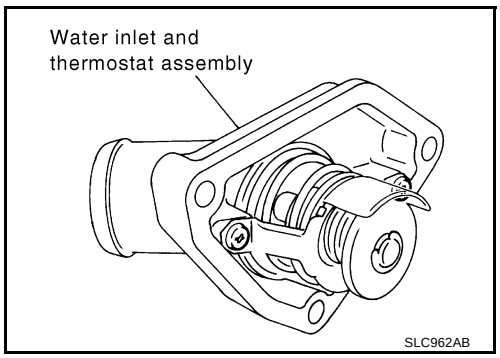
WATER INLET AND THERMOSTAT ASSEMBLY

PFP:21200

Removal and Installation

NBS00023

1. Gasket
2. Water inlet and thermostat assembly



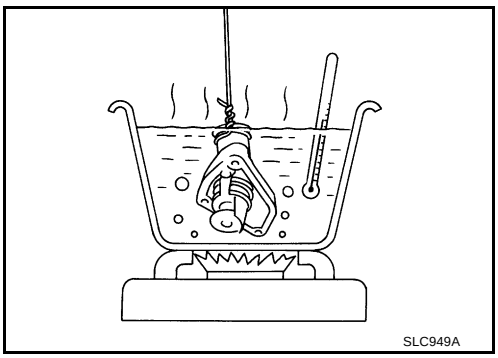
- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove undercover with power tool.
2. Drain engine coolant from radiator drain plug at the bottom of radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove air duct and air cleaner case (LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Disconnect radiator hose (lower) from water inlet and thermostat assembly.
5. Remove intake valve timing control solenoid.
6. Remove water inlet and thermostat assembly.

   CAUTION:
   Do not disassemble water inlet and thermostat assembly. Replace them as a unit, if necessary.



INSPECTION AFTER REMOVAL

1. Check valve seating condition at ordinary room temperatures. It should seat tightly.

2. Check valve operation.

Thermostat	Standard
Valve opening temperature	82°C (180°F)
Maximum valve lift	9.0 mm / 95°C (0.354 in / 203°F)
Valve closing temperature	77°C (171°F)

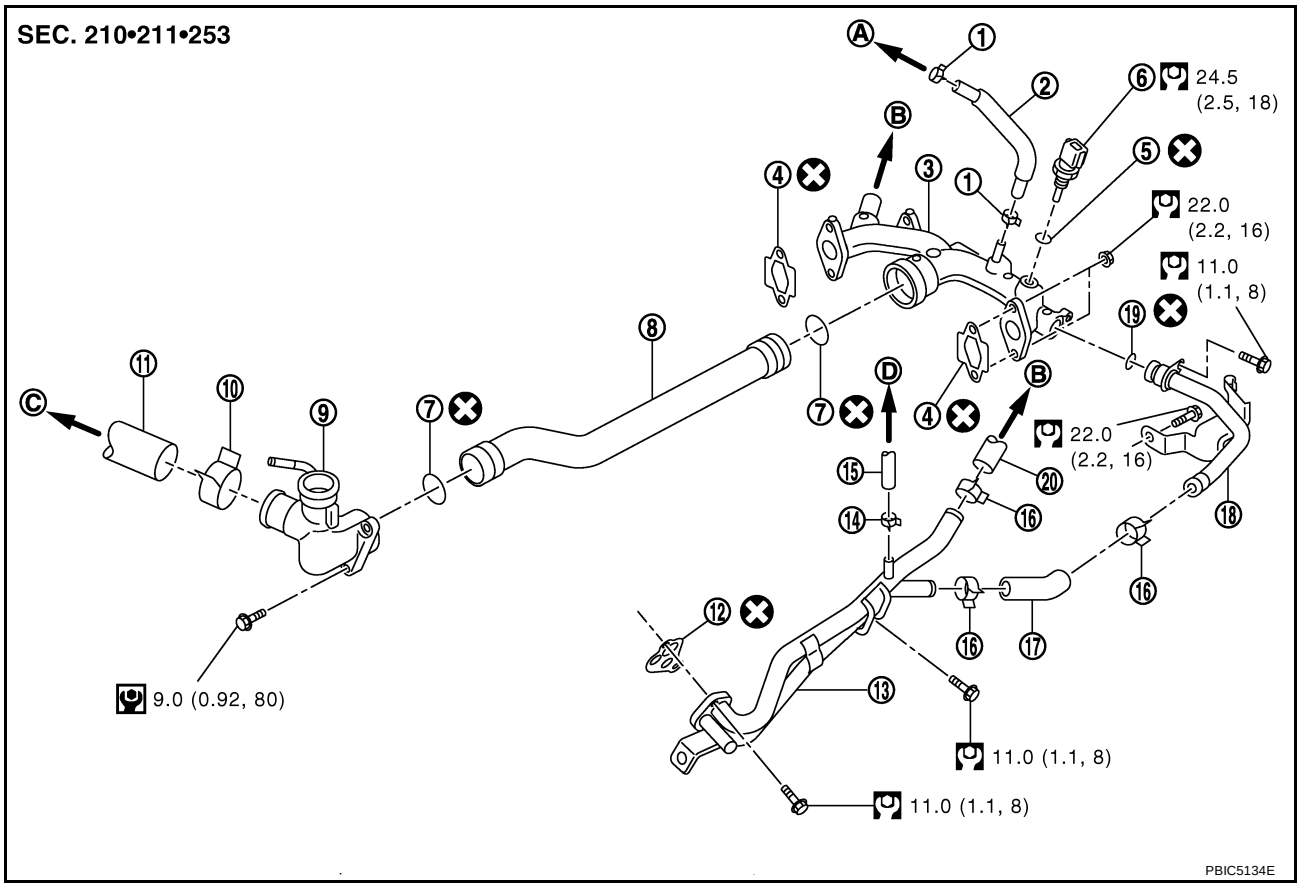
- If the malfunctioning condition, when valve seating at ordinary room temperature, or measured values are out of the standard, replace water inlet and thermostat assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

- **Be careful not to spill engine coolant over engine room. Use rag to absorb engine coolant.**

INSPECTION AFTER INSTALLATION



- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

WATER OUTLET AND WATER PIPING

PFP:11060

Removal and Installation

NBS00024

1.	Clamp	2.	Water hose	3.	Water outlet (rear)
4.	Gasket	5.	Washer	6.	Engine coolant temperature sensor
7.	O-ring	8.	Water outlet pipe	9.	Water outlet (front)
10.	Clamp	11.	Radiator hose (upper)	12.	Gasket
13.	Heater pipe	14.	Clamp	15.	Water hose
16.	Clamp	17.	Heater hose	18.	Water bypass pipe
19.	O-ring	20.	Heater hose		
A.	To EVAP piping	B.	To heater core	C.	To radiator
D.	To electric throttle control actuator				

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove undercover with power tool.
2. Drain engine coolant from radiator drain plug at the bottom of radiator, and from water drain plug at the front of cylinder block. Refer to CO-10, "Changing Engine Coolant" and CO-23, "WATER PUMP" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
4. Remove air duct and air cleaner case (RH, LH). Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
5. Remove radiator hose (upper), heater hoses and water hoses.
6. Remove the following parts, when remove water outlet.
   - A/T fluid charging pipe (A/T models): Refer to AT-242, "TRANSMISSION ASSEMBLY" .
   - Intake manifold collector: Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
7. Remove engine coolant temperature sensor as necessary.

CAUTION:
Be careful not to damage engine coolant temperature sensor.

8. Remove oil level gauge and guide. Refer to EM-44, "FRONT TIMING CHAIN CASE" .
9. Remove water outlet, heater pipe, water bypass hoses and water pipe.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Securely insert each hose, and install clamp at a position where it does not interfere with the pipe bulge.
- When inserting water pipe into water outlet, apply neutral detergent to O-ring.

INSPECTION AFTER INSTALLATION

- Check for leaks of engine coolant using radiator cap tester adapter (commercial service tool) and radiator cap tester (commercial service tool). Refer to CO-10, "LEAK CHECK" .
- Start and warm up engine. Visually make sure that there is no leaks of engine coolant.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00100

Standard and Limit

NBS00025

ENGINE COOLANT CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Engine coolant capacity (With reservoir tank at “MAX” level)	9.0 (9-1/2, 7- 7/8)
Reservoir tank engine coolant capacity (At “MAX” level)	0.8 (7/8, 3/4)

RADIATOR

Unit: kPa (kg/cm^2 , psi)

Cap relief pressure	Standard	108 - 127 (1.1 - 1.3, 16 - 18)
	Limit	88 (0.9, 13)
Leakage test pressure		157 (1.6, 23)

THERMOSTAT

Valve opening temperature	82°C (180°F)
Maximum valve lift	9.0 mm / 95°C (0.354 in / 203°F)
Water closing temperature	77°C (171°F)

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS0005P

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS0005Q

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

COMBINATION METERS

PFP:24814

System Description

NKS0005S

UNIFIED METER CONTROL UNIT

- Speedometer, odo/trip meter, tachometer, fuel gauge and water temperature gauge are controlled by the unified meter control unit, which is built into the combination meter. Unified meter control unit receives a signals from unified meter and A/C amp.
- Warning lamp and indicator lamp of combination meter are controlled by signals drawn from the unified meter and A/C amp.
- Odo/trip meter and A/T indicator segments can be checked in self-diagnosis mode.
- Meters/gauges can be checked in self-diagnosis mode.

UNIFIED METER AND A/C AMP.

Refer to DI-44, "COMBINATION METER CONTROL FUNCTION" in “UNIFIED METER AND A/C AMP”.

POWER SUPPLY AND GROUND CIRCUIT

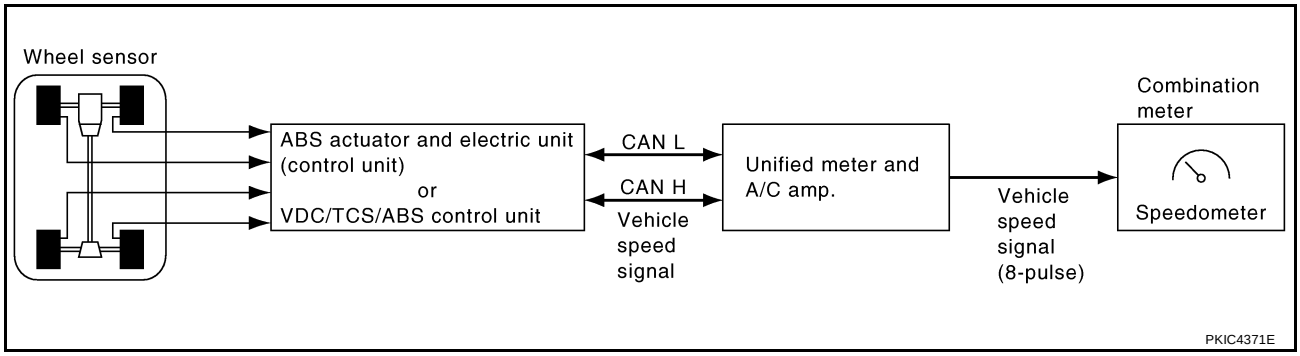
Power is supplied at all times

- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to combination meter terminal 24.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to combination meter terminal 23.

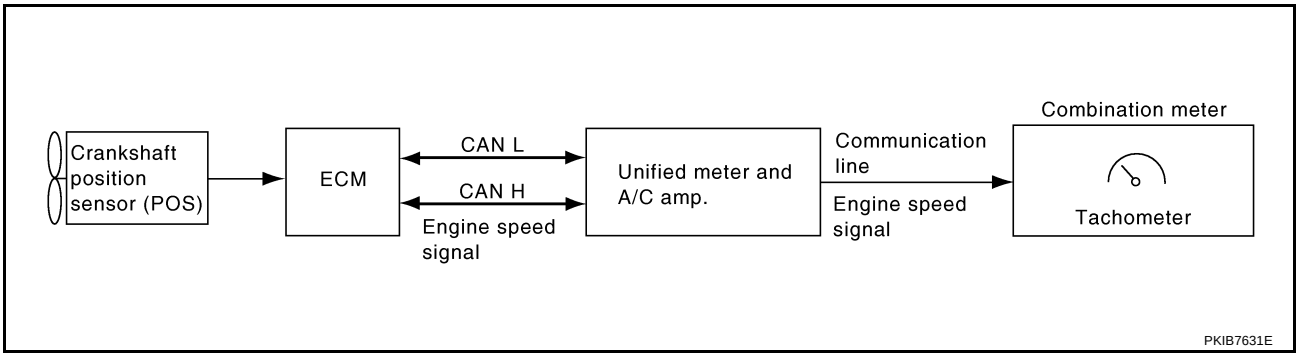
With the ignition switch in the ACC or ON position, power is supplied



- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to combination meter terminal 14.

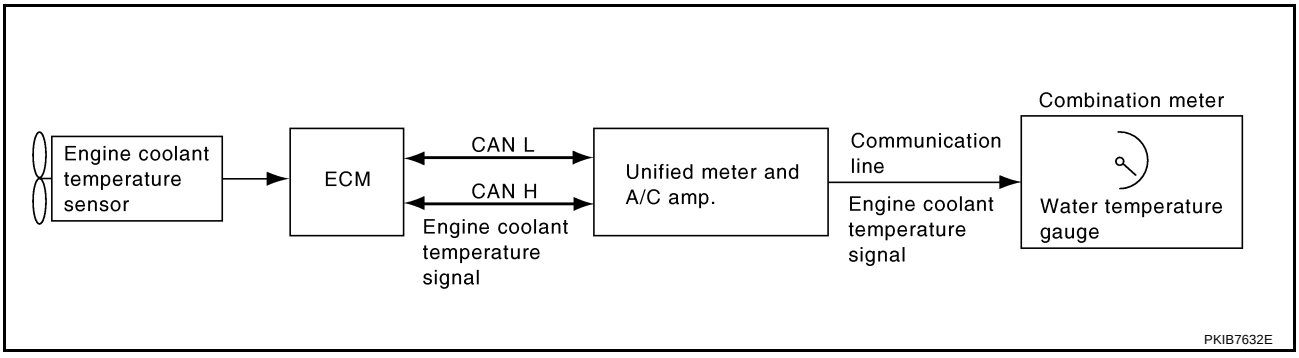
Ground is supplied

- to combination meter terminals 10, 11 and 12
- through body grounds M30 and M66.



SPEEDOMETER

- VDC/TCS/ABS control unit [with VDC] or ABS actuator and electric unit (control unit) [without VDC] provides a vehicle speed signal to the unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. converts the vehicle speed signal to the 8-pulse signal, and outputs the vehicle speed signal (8-pulse) to combination meter.
- Combination meter indicates the vehicle speed according to vehicle speed signal (8-pulse).



TACHOMETER

- ECM provides engine speed signal to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits engine speed signal to combination meter with communication line.
- Combination meter indicates the engine speed according to engine speed signal.

WATER TEMPERATURE GAUGE

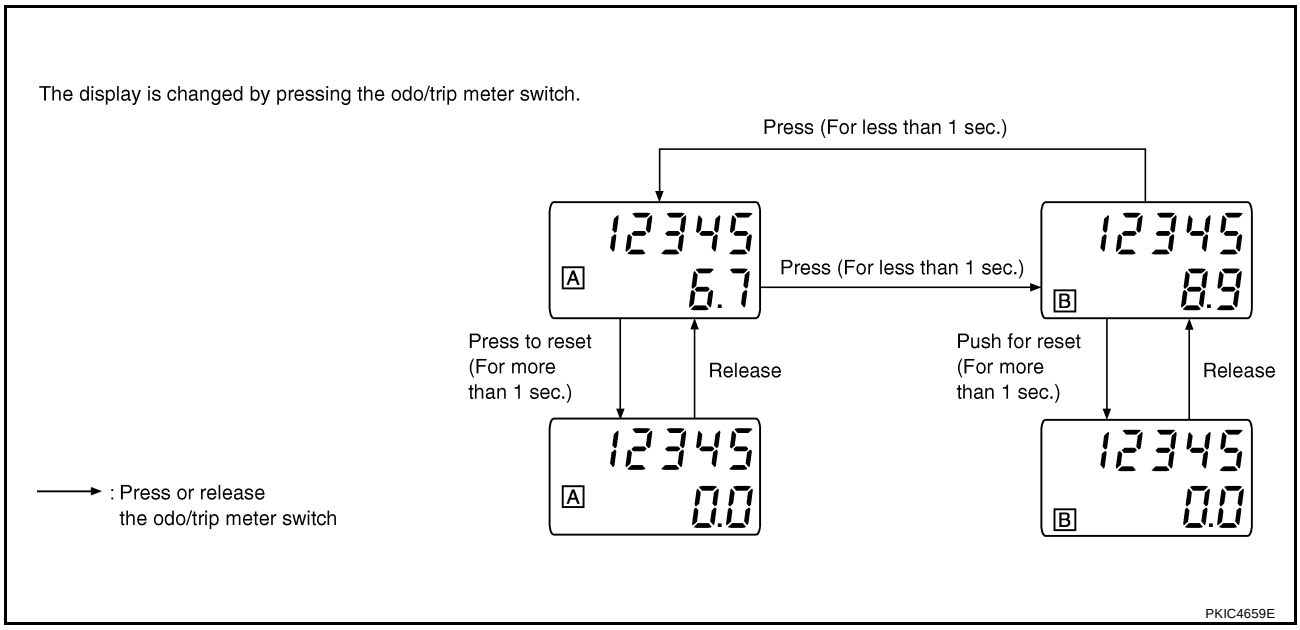
- ECM provides engine coolant temperature signal to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits engine coolant temperature signal to combination meter with communication line.
- Combination meter indicates the engine coolant temperature according to engine coolant temperature signal.

FUEL GAUGE

- Unified meter and A/C amp. reads a resistor signal from fuel level sensor.

Signal is supplied

- from unified meter and A/C amp. terminal 36
- through fuel level sensor unit and fuel pump (main) terminals 5 and 2, and
- through fuel level sensor unit (sub) terminals 2 and 1
- to unified meter and A/C amp. terminal 28.



- Unified meter and A/C amp. provides a fuel level signal to combination meter with communication line.
- Combination meter indicates the approximate fuel level according to fuel level signal.

ODO/TRIP METER

- VDC/TCS/ABS control unit [with VDC] or ABS actuator and electric unit (control unit) [without VDC] provides a vehicle speed signal to the unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. converts the vehicle speed signal to the 8-pulse signal, and outputs the vehicle speed signal (8-pulse) to combination meter.
- Combination meter uses the vehicle speed signal (8-pulse) to calculate the mileage, and displays it.

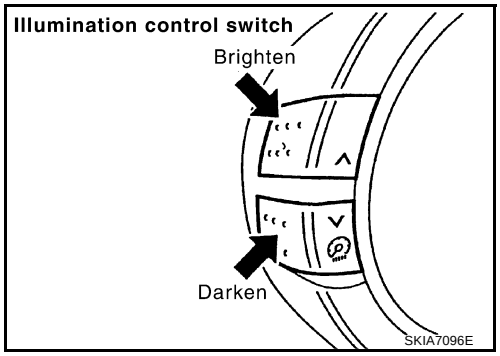
How to Change The Display

Pressing the odo/trip meter switch toggles the display mode in the following order.

- The odo/trip meter display mode toggling and trip display resetting can be identified by the time elapsed from pressing the odo/trip meter switch to releasing it.
- When resetting with “trip A” displayed, only “trip A” is reset. (The “trip B” functions in the same way.)

NOTE:
The record of the odo meter is kept even if the battery cable is disconnected. The record of the trip meter is erased when the battery cable is disconnected.

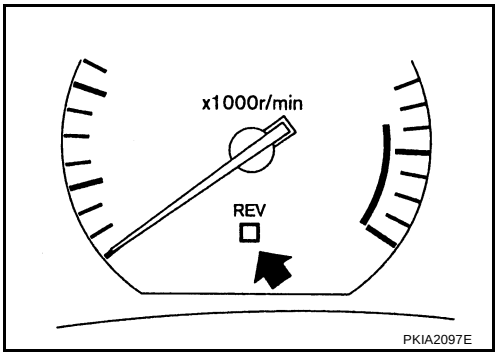
ILLUMINATION CONTROL



Daytime Mode

When ignition switch is turned ON, combination meter and triple meter illumination is turned ON by unified meter control unit.

Nighttime Mode



- Unified meter control unit is transferred to nighttime mode, with ignition switch turned ON and position light request signal from BCM with CAN communication.
- When in nighttime mode, trip computer switch, and illumination control switch illumination turns ON by unified meter control unit. Each illumination is controlled by unified meter control unit.
- Each illumination can be adjusted to 16 step by illumination control switch in nighttime mode.

NOTE:
For further details of illumination circuit, refer to LT-156, "ILLUMINATION" .

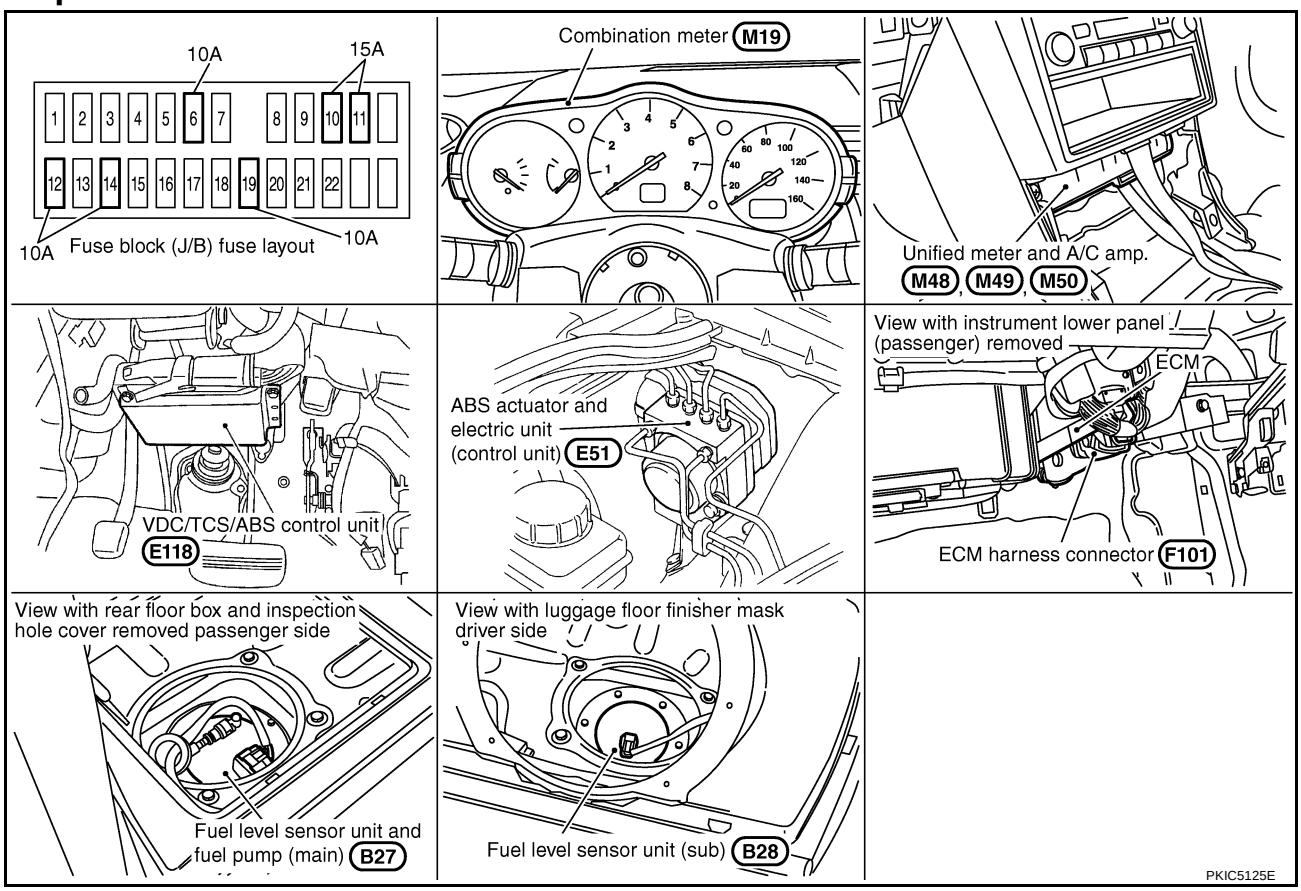
SHIFT-UP INDICATOR

- Shift-up indicator can be used when shifting up at a constant engine speed from any gear while driving. It becomes a guide for shift-up timing.
- Shift-up indicator flashes approximately 500 rpm before reaching the engine speed set. It illuminates when reaching the engine speed set.

Shift-up engine speed can be set by the shift-up indicator setting mode on trip computer. Refer to DI-29, "Shift-up Indicator Setting Mode" .

NOTE:

- There may be a time lag between the shift-up indicator illumination and the tachometer indication.
- If the battery cable is disconnected, the set engine speed becomes 7,000 rpm.



FAIL-SAFE

Combination meter performs fail-safe operation when unified meter and A/C amp. communication is malunction.

Function		Fail-safe operation
Speedometer		Return to zero
Tachometer		Reset to zero
Fuel gauge		
Water temperature gauge		
Illumination control	Combination meter illumination	Change to nighttime mode
Odo/trip meter		Integrate in response to 8-pulse input
A/T indicator		The display turns OFF
Meter buzzer		The meter buzzer turns OFF
Warning lamp/indicator lamp	ABS warning lamp	The lamp turns ON
	VDC OFF indicator lamp	
	TCS OFF indicator lamp	
	SLIP indicator lamp	
	Brake warning lamp	
	Tire pressure warning lamp	
	A/T CHECK lamp	The lamp turns OFF
	Oil pressure warning lamp	
	Door warning lamp	
	High beam indicator lamp	
	Turn signal indicator lamp	
	Malfunction indicator lamp	
	CRUISE indicator lamp	
	SET indicator lamp

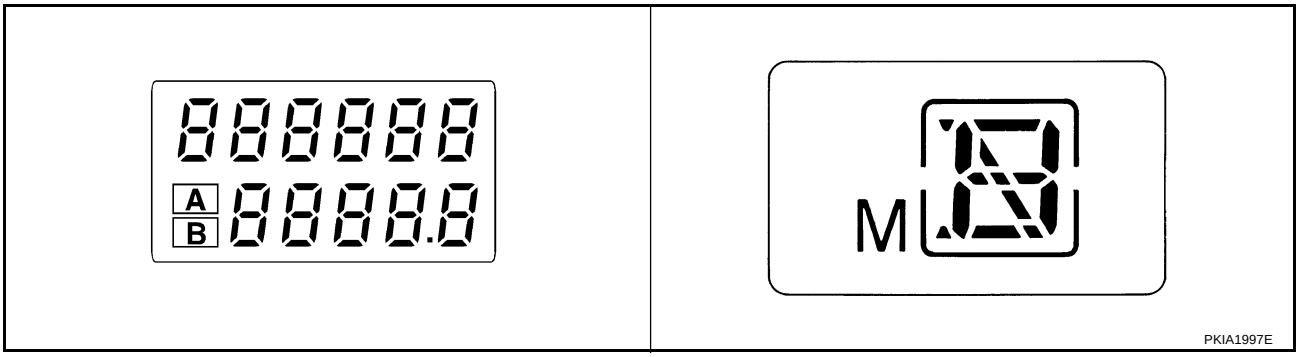
46	L/W	ACC power supply	ACC	—	Battery voltage

Self-Diagnosis Mode of Combination Meter

NKS0005Z



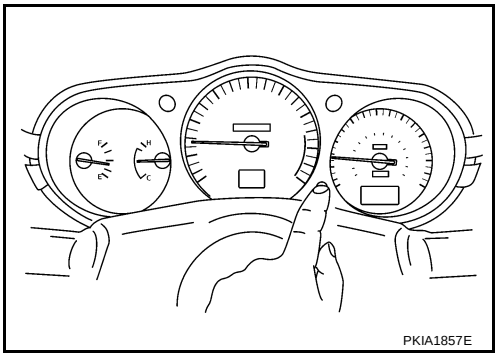
SELF-DIAGNOSIS FUNCTION

- Odo/trip meter segment and A/T indicator segment operation can be checked in self-diagnosis mode.
- Meters/gauges can be checked in self-diagnosis mode.

OPERATION PROCEDURE

1. Turn ignition switch ON, and switch the odo/trip meter to “trip A” or “trip B”.

   NOTE:
   If the diagnosis function is activated with “trip A” displayed, the mileage on “trip A” will indicate “0000.0”, but the actual trip mileage will be retained. (The “trip B” functions in the same way.)
2. Turn ignition switch OFF.
3. While pressing the odo/trip meter switch, turn ignition switch ON again.
4. Make sure that the trip meter displays “0000.0”.
5. Press the odo/trip meter switch at least 3 times (within 7 seconds after the ignition switch is turned ON).
6. All the segments on the odo/trip meter and A/T indicator illuminate, and simultaneously the low-fuel warning lamp indicator illuminates. At this time, the unified meter control unit is turned to diagnosis mode.



NOTE:

- Check combination meter power supply and ground circuit when self-diagnosis mode of combination meter does not start. Replace combination meter if normal.
- If any of the segments is not displayed, replace combination meter.

7. Press the odo/trip meter switch. Each meter/gauge should indicate as shown in the figure while pressing odo/trip meter switch. (At this time, the low-fuel warning lamp goes off).

   NOTE:
   If any of the meter/gauge is not activated, replace combination meter.

CONSULT-III Function (METER A/C AMP)

NKS00060

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Trouble Diagnosis

NKS00061

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom or customer complaint.
2. Perform preliminary check. Refer to DI-16, "PRELIMINARY CHECK" .
3. According to the symptom chart, make sure of the symptom cause and repair or replace applicable parts.
4. Does the meter operate normally? If so, GO TO 5. If not, GO TO 2.
5. INSPECTION END

PRELIMINARY CHECK

1. CHECK OPERATION OF SELF-DIAGNOSIS MODE (COMBINATION METER)

Perform self-diagnosis mode of combination meter. Refer to DI-15, "SELF-DIAGNOSIS FUNCTION" .

Does self-diagnosis mode operation normally?

YES >> GO TO 2.
NO >> GO TO 3.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected >> INSPECTION END
Malfunction detected >> Check applicable parts, and repair or replace corresponding parts.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT OF COMBINATION METER

Check power supply and ground circuit of combination meter. Refer to DI-17, "Power Supply and Ground Circuit Inspection" .

OK or NG

OK >> Replace combination meter.
NG >> Repair power supply and ground circuit of combination meter.

Symptom Chart

NKS00062

Symptom	Possible cause
Speedometer and odo/trip meter indication is malfunction.	Refer to DI-18, "Vehicle Speed Signal Inspection" .
Tachometer indication is malfunction.	Refer to DI-19, "Engine Speed Signal Inspection" .
Water temperature gauge indication is malfunction.	Refer to DI-19, "Engine Coolant Temperature Signal Inspection" .
Fuel gauge indication is malfunction.	Refer to DI-19, "Fuel Level Sensor Signal Inspection" .
Low-fuel warning lamp indication is irregular.	
A/T position indicator is malfunction.	Refer to DI-70, "A/T Indicator Is Malfunction" .
Illumination control does not operate.	Refer to DI-21, "Illumination Control Switch Inspection" .

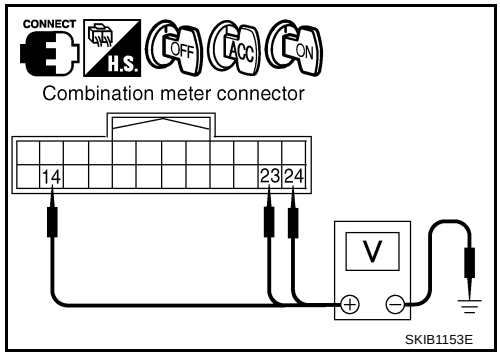
Power Supply and Ground Circuit Inspection

NKS00064

1. CHECK FUSE

Check for blown combination meter fuses.

Power source	Fuse No.
Battery	19
Ignition switch ACC or ON	6
Ignition switch ON or START	14



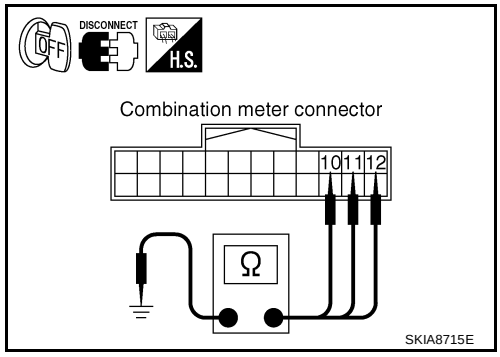
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between combination meter harness connector M19 terminals 24, 23, 14 and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M19	24	Ground	Battery voltage	Battery voltage	Battery voltage
	23		0 V	0 V	Battery voltage
	14		0 V	Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness between combination meter and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check continuity between combination meter harness connector M19 terminals 10, 11, 12 and ground.

10 – Ground
11 – Ground **: Continuity should exist.**
12 – Ground

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

Vehicle Speed Signal Inspection

NKS00065

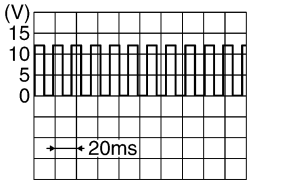
Symptom: Indication is irregular for the Speedometer and odo/trip meter.

1. CHECK VDC/TCS/ABS CONTROL UNIT OR ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform the following units self-diagnosis.

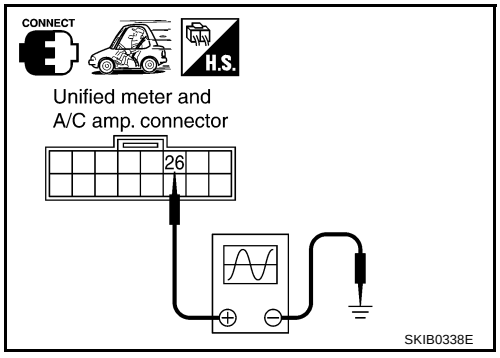
- VDC/TCS/ABS control unit [with VDC]. Refer to BRC-96, "CONSULT-III Functions (ABS)" .
- ABS actuator and electric unit (control unit) [without VDC (with TCS)]. Refer to BRC-52, "CONSULT-III MAIN FUNCTION" .
- ABS actuator and electric unit (control unit) [without VDC (without TCS)]. Refer to BRC-19, "CONSULT-III MAIN FUNCTION" .

Self-diagnostic results



No malfunction detected >> GO TO 2.
Malfunction detected >> Check applicable parts, and repair or replace corresponding parts.

2. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL



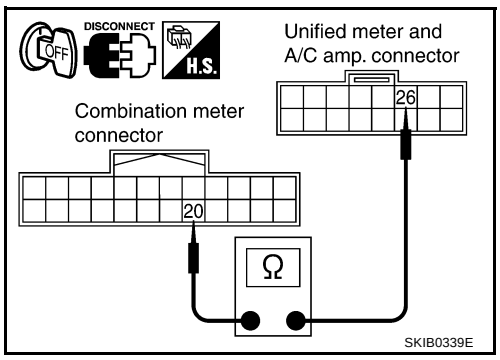
1. Start engine and drive vehicle at approximately 40 km/h (25 MPH).
2. Check voltage signal between unified meter and A/C amp. harness connector M49 terminal 26 and ground.

NOTE:
Maximum voltage may be 5 V due to specifications (connected units).

26 – Ground:

PKIA1935E

SKIB0338E



OK or NG

OK >> GO TO 3.
NG >>
- If monitor indicates “0 V” constantly, repair or replace malfunctioning parts after checking each unit inputting vehicle speed signal (8 pulse), harness and connector between each unit and unified meter and A/C amp.
- If monitor indicates “5 V” or “12 V” constantly, replace unified meter and A/C amp.

3. CHECK CONTINUITY BETWEEN COMBINATION METER AND UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 20 and unified meter and A/C amp. harness connector M49 terminal 26.

20 – 26 : Continuity should exist.

SKIB0339E

OK or NG

OK >> Replace combination meter.
NG >> Repair harness or connector.

Engine Speed Signal Inspection

NKS00066

Symptom: Tachometer indication is malfunction.

1. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “TACHO METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” with tachometer pointer of combination meter.

OK or NG

OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “ENGINE” on CONSULT-III.
2. Using “ENG SPEED” on “DATA MONITOR”, check the CONSULT-III screen when the engine is idling.
3. Select “METER A/C AMP” on CONSULT-III.
4. Using “TACHO METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” of the idling speed with that of the “ENG SPEED”.

OK or NG

OK >> Perform ECM self-diagnosis. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
NG >> Replace unified meter and A/C amp.

Engine Coolant Temperature Signal Inspection

NKS00067

Symptom: Water temperature gauge indication is malfunction.

1. CHECK UNIFIED METER AND A/C AMP. OUTPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “W TEMP METER” on the “DATA MONITOR”, compare the value of “DATA MONITOR” with water temperature gauge pointer of combination meter.

Water temperature gauge pointer	Reference value of data monitor [°C (°F)]
Hot	Approx. 130 (266)
Middle	Approx. 70 - 105 (158 - 221)
Cold	Approx. 50 (122)

OK or NG

OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “ENGINE” on CONSULT-III.
2. Using “COOLAN TEMP/S” on “DATA MONITOR”, check the CONSULT-III screen.
3. Select “METER A/C AMP” on CONSULT-III.
4. Using “W TEMP METER” on, compare the value of “DATA MONITOR” with that of the “COOLAN TEMP/S”.

OK or NG

OK >> Perform ECM self-diagnosis. Refer to EC-116, "CONSULT-III Function (ENGINE)" .
NG >> Replace unified meter and A/C amp.

Fuel Level Sensor Signal Inspection

NKS00068

Symptom:

- Fuel gauge indication is malfunction.
- Low-fuel warning lamp indication is irregular.

NOTE:
The following symptoms are not malfunction.

Fuel level sensor unit

- Depending on vehicle position or driving circumstance, the fuel level in the tank varies, and the pointer may fluctuate.
- If the vehicle is fueled with the ignition switch ON, the pointer will move slowly.

Low-fuel warning lamp

- Depending on vehicle position or driving circumstance, the fuel in the tank flows and the warning lamp ON timing may change.

1. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “METER A/C AMP” on CONSULT-III.
2. Using “FUEL METER” on “DATA MONITOR”, compare the value of “DATA MONITOR” with fuel gauge pointer of combination meter.

Fuel gauge indication	Value on monitor [lit.]
Full	Approx. 74
Three quarters	Approx. 61
Half	Approx. 42
A quarter	Approx. 22
Empty	Approx. 8

OK or NG

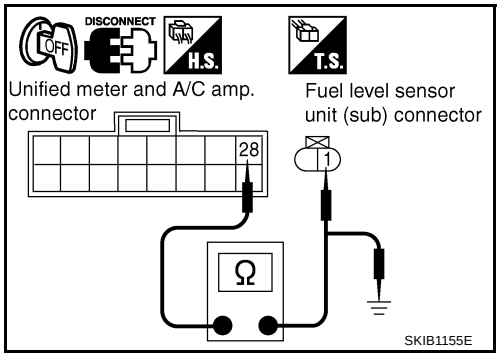
OK >> GO TO 2.
NG >> Replace combination meter.

2. CHECK FUEL LEVEL SENSOR

1. Turn ignition switch OFF.
2. Check components. Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .

OK or NG

OK >> GO TO 3.
NG >> Replace fuel level sensor unit.



3. CHECK FUEL LEVEL SENSOR (SUB) CIRCUIT

1. Disconnect unified meter and A/C amp. connector and fuel level sensor unit (sub) connector.
2. Check continuity between unified meter and A/C amp. harness connector M49 terminal 28 and fuel level sensor unit (sub) harness connector B28 terminal 1.

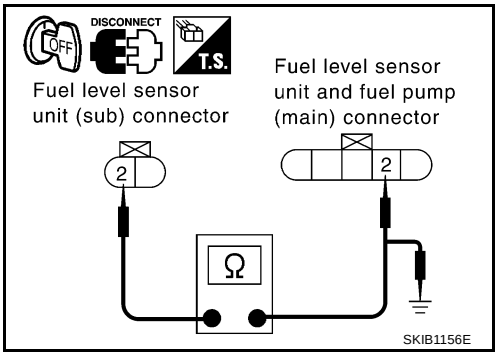
28 – 1 : Continuity should exist.

3. Check continuity between unified meter and A/C amp. harness connector M49 terminal 28 and ground.

28 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.



4. CHECK FUEL LEVEL SENSOR (MAIN·SUB) CIRCUIT

1. Disconnect fuel level sensor unit and fuel pump (main) connector.
2. Check continuity between fuel level sensor unit (sub) harness connector B28 terminal 2 and fuel level sensor unit and fuel pump (main) harness connector B27 terminal 2.

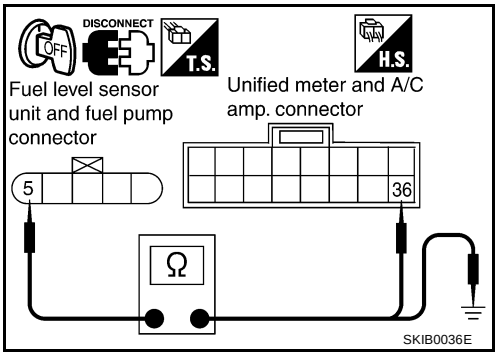
2 – 2 : Continuity should exist.

3. Check continuity between fuel level sensor unit (sub) harness connector B28 terminal 2 and ground.

2 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



5. CHECK FUEL LEVEL SENSOR (MAIN) CIRCUIT

1. Check continuity between fuel level sensor unit and fuel pump (main) harness connector B27 terminal 5 and unified meter and A/C amp. harness connector M49 terminal 36.

5 – 36 : Continuity should exist.

2. Check continuity between fuel level sensor unit and fuel pump (main) harness connector B27 terminal 5 and ground.

5 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 6.
NG >> Repair harness or connector.

6. CHECK INSTALLATION CONDITION

Check fuel level sensor unit installation, and check whether the float arm interferes or binds with any of the internal components in the fuel tank.

OK or NG

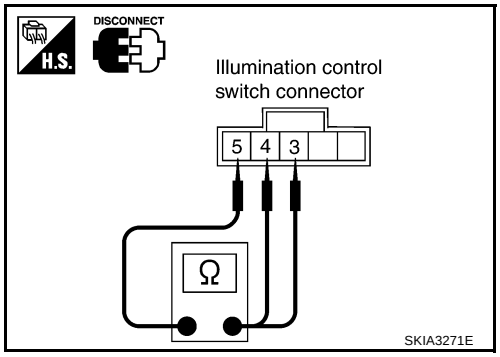
OK >> Replace unified meter and A/C amp.
NG >> Install the fuel level sensor unit properly.

Illumination Control Switch Inspection

NKS00069

Symptom: Illumination control does not operate.

1. CHECK CONNECTOR



1. Turn ignition switch OFF.
2. Remove combination meter.
3. Remove rear finisher of combination meter.
4. Check illumination control switch connector for looseness.

OK or NG

OK >> GO TO 2.
NG >> Repair illumination control switch connector.

2. CHECK ILLUMINATION CONTROL SWITCH

1. Disconnect illumination control switch connector.
2. Check continuity between illumination control switch harness connector M207 terminals 3 or 4 and 5.

Terminal		Condition	Continuity
3	5	Illumination control switch upper side (BRIGHTEN) is pressed.	Yes
		Illumination control switch upper side (BRIGHTEN) is released.	No
4		Illumination control switch lower side (DARKEN) is pressed.	Yes
		Illumination control switch lower side (DARKEN) is released.	No

OK or NG

OK >> Replace combination meter.
NG >> Replace illumination control switch.

Fuel Gauge Pointer Fluctuates, Indicator Wrong Value or Varies

NKS0006A

1. CHECK FUEL GAUGE FLUCTUATION

Test drive vehicle to see if gauge fluctuates only during driving or at the instant of stopping.

Does the indication value vary only during driving or at the instant of stopping?

YES >> The pointer fluctuation may be caused by fuel level change in the fuel tank. Condition is normal.
NO >> Ask the customer about the situation when the symptom occurs in detail, and perform the trouble diagnosis.

Fuel Gauge Does Not Move to FULL Position

NKS0006B

1. QUESTION 1

Does it take a long time for the pointer to move to FULL position?

YES >> GO TO 2.
NO >> GO TO 3.

2. QUESTION 2

Was the vehicle fueled with the ignition switch ON?

YES >> Be sure to fuel the vehicle with the ignition switch OFF. Otherwise, it will take a long time to move to FULL position because of the characteristic of the fuel gauge.
NO >> GO TO 3.

3. QUESTION 3

Is the vehicle parked on an incline?

YES >> Check the fuel level indication with vehicle on a level surface.
NO >> GO TO 4.

4. QUESTION 4

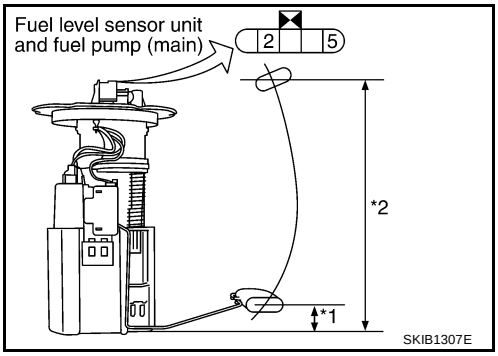
During driving, does the fuel gauge pointer move gradually toward EMPTY position?

YES >> Check the fuel level sensor unit. Refer to DI-23, "FUEL LEVEL SENSOR UNIT" .
NO >> The float arm may interfere or bind with any of the components in the fuel tank.

Electrical Components Inspection

NKS0006C

FUEL LEVEL SENSOR UNIT



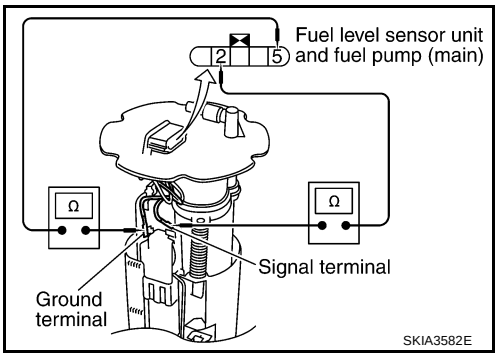
For removal, refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

Fuel Level Sensor Unit and Fuel Pump (Main)

Check the resistance between terminals 2 and 5.

Terminal		Float position [mm (in)]			Resistance value [Ω]
2	5	*1	Empty	30 (1.18)	Approx. 80
		*2	Full	210 (8.27)	Approx. 3

*1 and *2: When float rod is in contact with stopper.

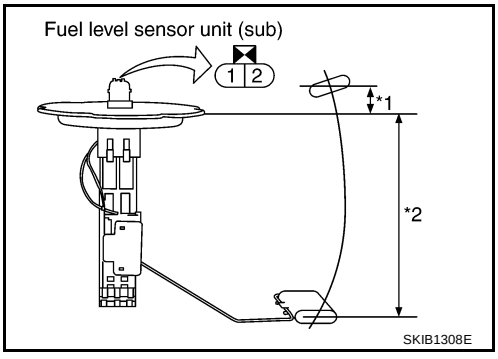


- If the results of check are NG, check the fuel level sensor unit and fuel pump (main) harness. Refer to DI-23, "Fuel Level Sensor Unit and Pump (Main) Harness" .

Fuel Level Sensor Unit and Pump (Main) Harness

Check the continuity between the following terminals.

Terminal	Continuity
2 - Signal terminal	Yes
5 - Ground terminal	



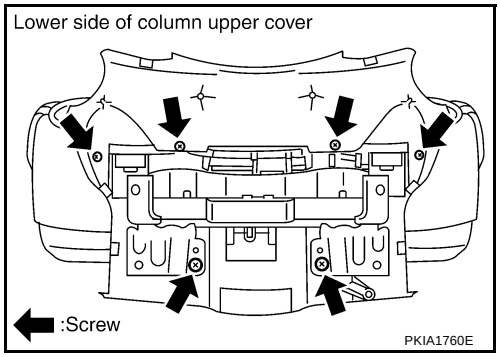
- If the results of check are NG, replace fuel pump assembly. If the results of check are OK, replace fuel level sensor unit.

Fuel Level Sensor Unit (Sub)

Check the resistance between terminals 1 and 2.

Terminal		Float position [mm (in)]			Resistance value [Ω]
1	2	*1	Full	8 (0.31)	Approx. 3
		*2	Empty	175 (6.89)	Approx. 43

*1 and *2: When float rod is in contact with stopper.

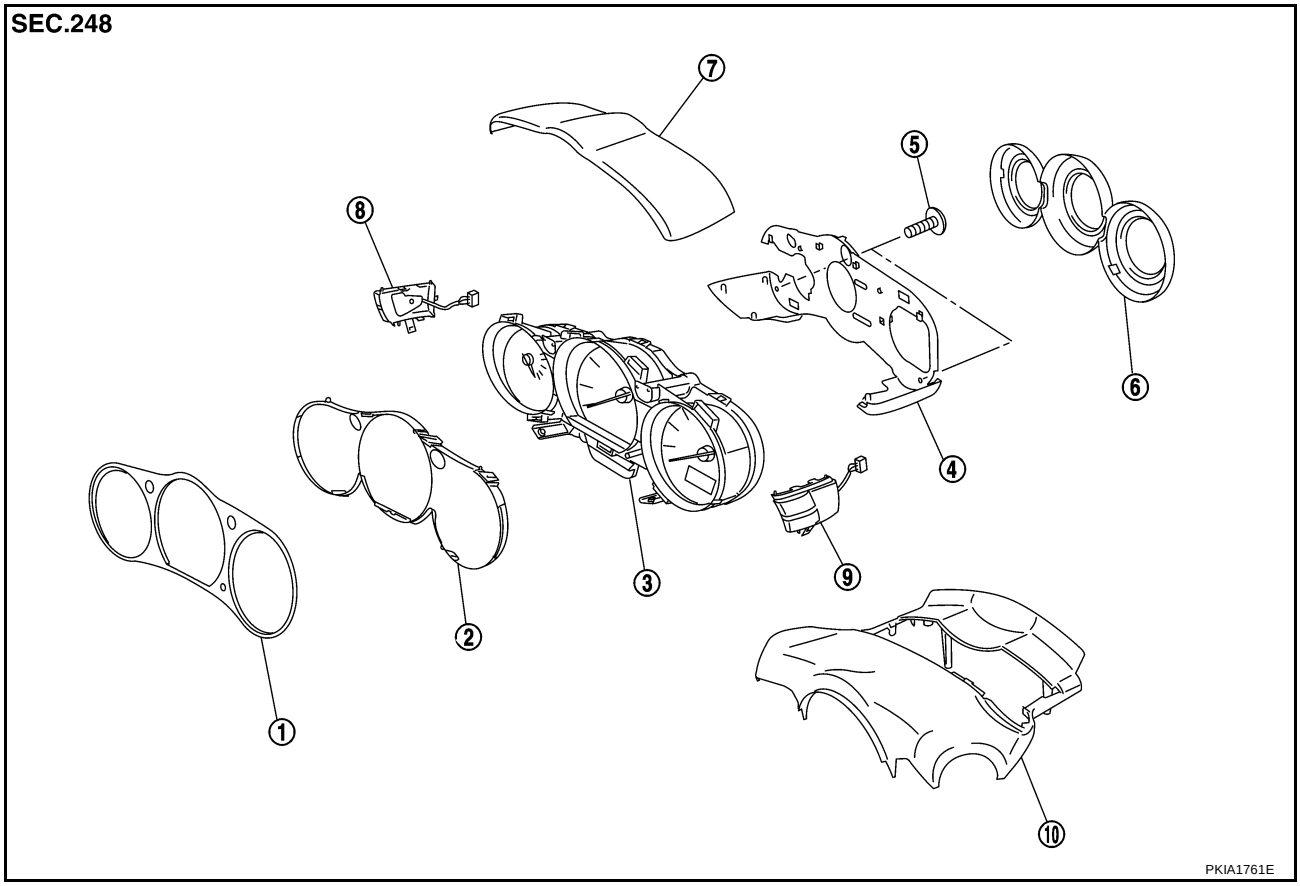


Removal and Installation for Combination Meter

NKS0006D

REMOVAL

1. Remove instrument driver panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove steering column lower cover. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY"
3. Remove bolts (4) and remove column upper cover and combination meter assembly. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove screws (6) and remove combination meter.

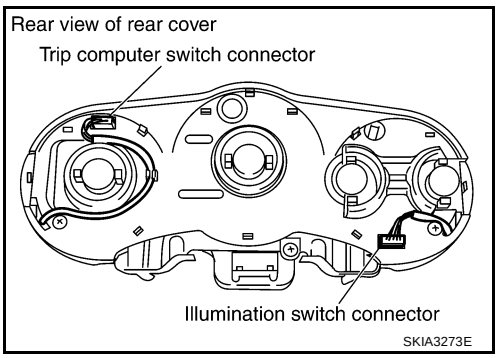


INSTALLATION

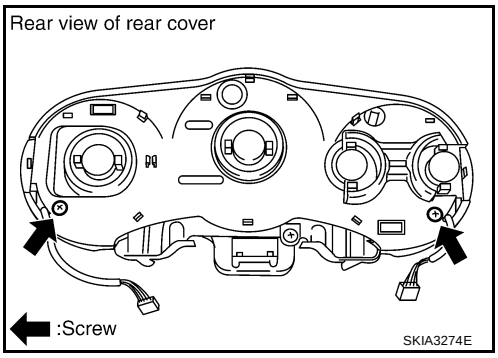
Installation is the reverse order of removal.

Disassembly and Assembly for Combination Meter

NKS0006E



1. Front finisher
2. Front cover
3. Unified meter control unit
4. Rear cover
5. Screws
6. Rear finisher
7. Upper cover
8. Illumination control switch
9. Trip computer switch
10. Steering column upper cover



DISASSEMBLY

1. Remove screws (6) to separate steering column upper cover.
2. Disengage tabs (2) to separate front finisher.
3. Disengage tabs (8) to separate rear finisher.

4. Disconnect illumination control switch connector and trip computer switch connector.

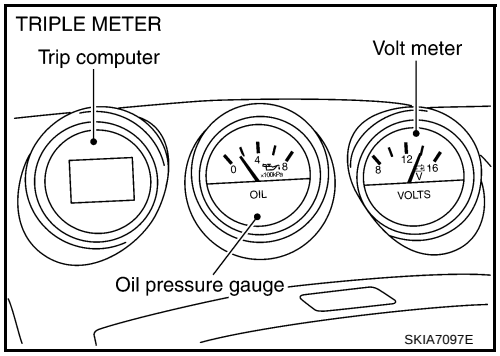
5. Remove screws (2) and remove rear cover.

6. Disengage tabs (4) to separate upper cover from rear cover.
7. Remove illumination control switch.
8. Remove trip computer switch.
9. Disengage tabs (7) to separate front cover.

ASSEMBLY

Assembly is the reverse order of disassembly.

TRIPLE METERS



PFP:24845

System Description

NKS0006F

TRIPLE METER

- Oil pressure gauge and voltmeter are controlled by the triple meter.
- Trip computer is controlled by the signals from the unified meter and A/C amp.
- Triple meter operation can be checked with self-diagnosis mode of combination meter.

UNIFIED METER AND A/C AMP.

Refer to DI-45, "TRIPLE METER CONTROL FUNCTION" in “UNIFIED METER AND A/C AMP”.

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to triple meter terminal 2.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to triple meter terminal 3.

Ground is supplied

- to triple meter terminal 1
- through grounds M30 and M66.

VOLTMETER

When ignition switch is turned to the ON position, the voltmeter indicates the battery voltage.

OIL PRESSURE GAUGE

With the ignition switch in the ON or START position, power is supplied

- through triple meter terminal 9
- to oil pressure sensor terminal 1.

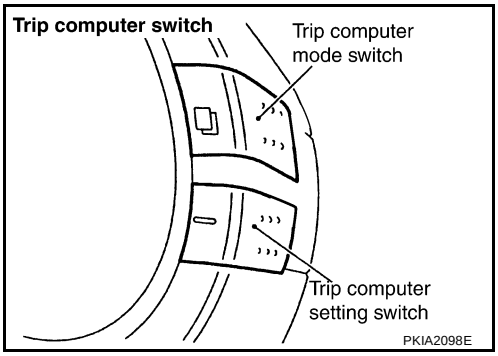
Ground is supplied

- to triple meter terminal 7
- through oil pressure sensor terminal 3.

And triple meter reads oil pressure signal from oil pressure sensor

- from oil pressure sensor terminal 2
- to triple meter terminal 8.

NOTE:



- Triple meter judges an oil pressure condition by oil pressure signal, and transmits oil pressure warning lamp signal to combination meter through unified meter and A/C amp. with communication line.
- Oil pressure gauge is not designed to indicate the low oil level. Use the oil level gauge to check the oil level.

TRIP COMPUTER

Function

When the ignition switch is turned ON, the display scrolls all the modes. And then shows the mode chosen before the ignition switch is turned OFF.

- Trip computer is operated by the trip computer switch.
- Trip computer receives a switch signal from combination meter through the unified meter and A/C amp. with communication line.

The mode of the trip computer is the following.

- Vehicle speed
- Ambient air temperature
- DTE (distance to empty)
- Average fuel consumption
- Average vehicle speed
- Trip time
- Trip distance
- Stopwatch
- Shift-up indicator setting mode

How to Change/ Reset the Displayed Mode

- The displayed mode can be selected in the following order by momentarily pressing the trip computer mode switch.
  - Vehicle speed → Ambient air temperature → DTE → Average fuel consumption and average vehicle speed → Trip time and trip distance → Stopwatch → Shift-up indicator setting
- Holding the trip computer setting switch for more than 1 second resets the displayed mode (Average fuel consumption, average vehicle speed, trip time, trip distance or stopwatch).

NOTE:
When the ambient air temperature warning, the tire pressure warning, and the DTE warning, match warning conditions at the same time, the display automatically displays the ambient air temperature warning.

Vehicle Speed

- Trip computer receives vehicle speed signal from combination meter through the unified meter and A/C amp. with communication line.
- Trip computer displays the vehicle speed according to vehicle speed signal.

Ambient Air Temperature

- Unified meter and A/C amp. reads ambient air temperature signal from ambient air temperature sensor.

Signal is supplied

- from unified meter and A/C amp. terminal 39
- through ambient sensor terminal 1 and 2
- to unified meter and A/C amp. terminal 49.

- Trip computer receives ambient air temperature signal from the unified meter and A/C amp. with communication line.
- Trip computer displays ambient air temperature according to ambient air temperature signal.

NOTE:
- Indication range is between –30 and 55 °C (–22 and 131 °F).
- When ambient air temperature is less than –30 °C (–22 °F) or more than 55 °C (131 °F), the display shows “--”.
- When ambient air temperature is less than 3 °C (37 °F) continuously, the display shows “ICY” as warning. At more than 4 °C (39 °F) the display stops showing “ICY”.

DTE (Distance to Empty)

- Unified meter and A/C amp. uses following signals to calculate the DTE signal.
  - Fuel remaining signal (from the fuel level sensor unit)
  - Fuel consumption signal (from ECM)
  - Vehicle speed signal [from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)]
- Trip computer receives DTE signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the DTE according to DTE signal.
- The indication is refreshed every 30 seconds.

NOTE:

- When fuel remaining is less than approx. 10 ℓ (10-5/8 US qt, 8-3/4 Imp qt), the display shows “dte” blink as a warning. And the fuel remaining is less than approx. 8 ℓ (8-1/2 US qt, 7 Imp qt), the display shows “----”.
- When the battery cable is disconnected and reconnected, the display shows “----” for 30 seconds.

Average Fuel Consumption

- Unified meter and A/C amp. uses following signals to calculate the average fuel consumption signal.
  - Fuel consumption signal (from ECM)
  - Vehicle speed signal [from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)]
- Trip computer receives the average fuel consumption signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the average fuel consumption according to the average fuel consumption signal.
- The indication is refreshed every 30 seconds.

NOTE:

If the average fuel consumption is reset, the average vehicle speed is reset at the same time. While driving about 1/3 miles (500 m) or for 80 seconds after resetting, the display shows “----”.

Average Vehicle Speed

- Unified meter and A/C amp. uses following signals to calculate the average vehicle speed signal.
  - Trip distance signal
  - Trip time signal
- Trip computer receives the average vehicle speed signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the average vehicle speed according the average vehicle speed signal.
- The indication shows refreshed every 30 seconds.

NOTE:

If the average vehicle speed is reset, the average fuel consumption will be reset at the same time. After resetting, the display will show “----” for 30 seconds.

Trip Time

- Unified meter and A/C amp. calculates the time during ignition switch ON.
- Trip computer receives the trip time signal from the unified meter and A/C amp. with communication line.
- Trip computer displays trip time according to the trip time signal.

NOTE:

If trip time is reset, trip distance is reset at the same time.

Trip Distance

- Unified meter and A/C amp. uses following signals to calculate the average fuel consumption signal.
  - Trip time signal
  - Vehicle speed signal from VDC/TCS/ABS control unit or ABS actuator and electric unit (control unit)
- Trip computer receives the trip distance signal from the unified meter and A/C amp. with communication line.
- Trip computer displays the trip distance according to the trip distance signal.

NOTE:

If trip distance is reset, trip time will be reset at the same time.

Stopwatch

Trip computer displays stopwatch.

NOTE:

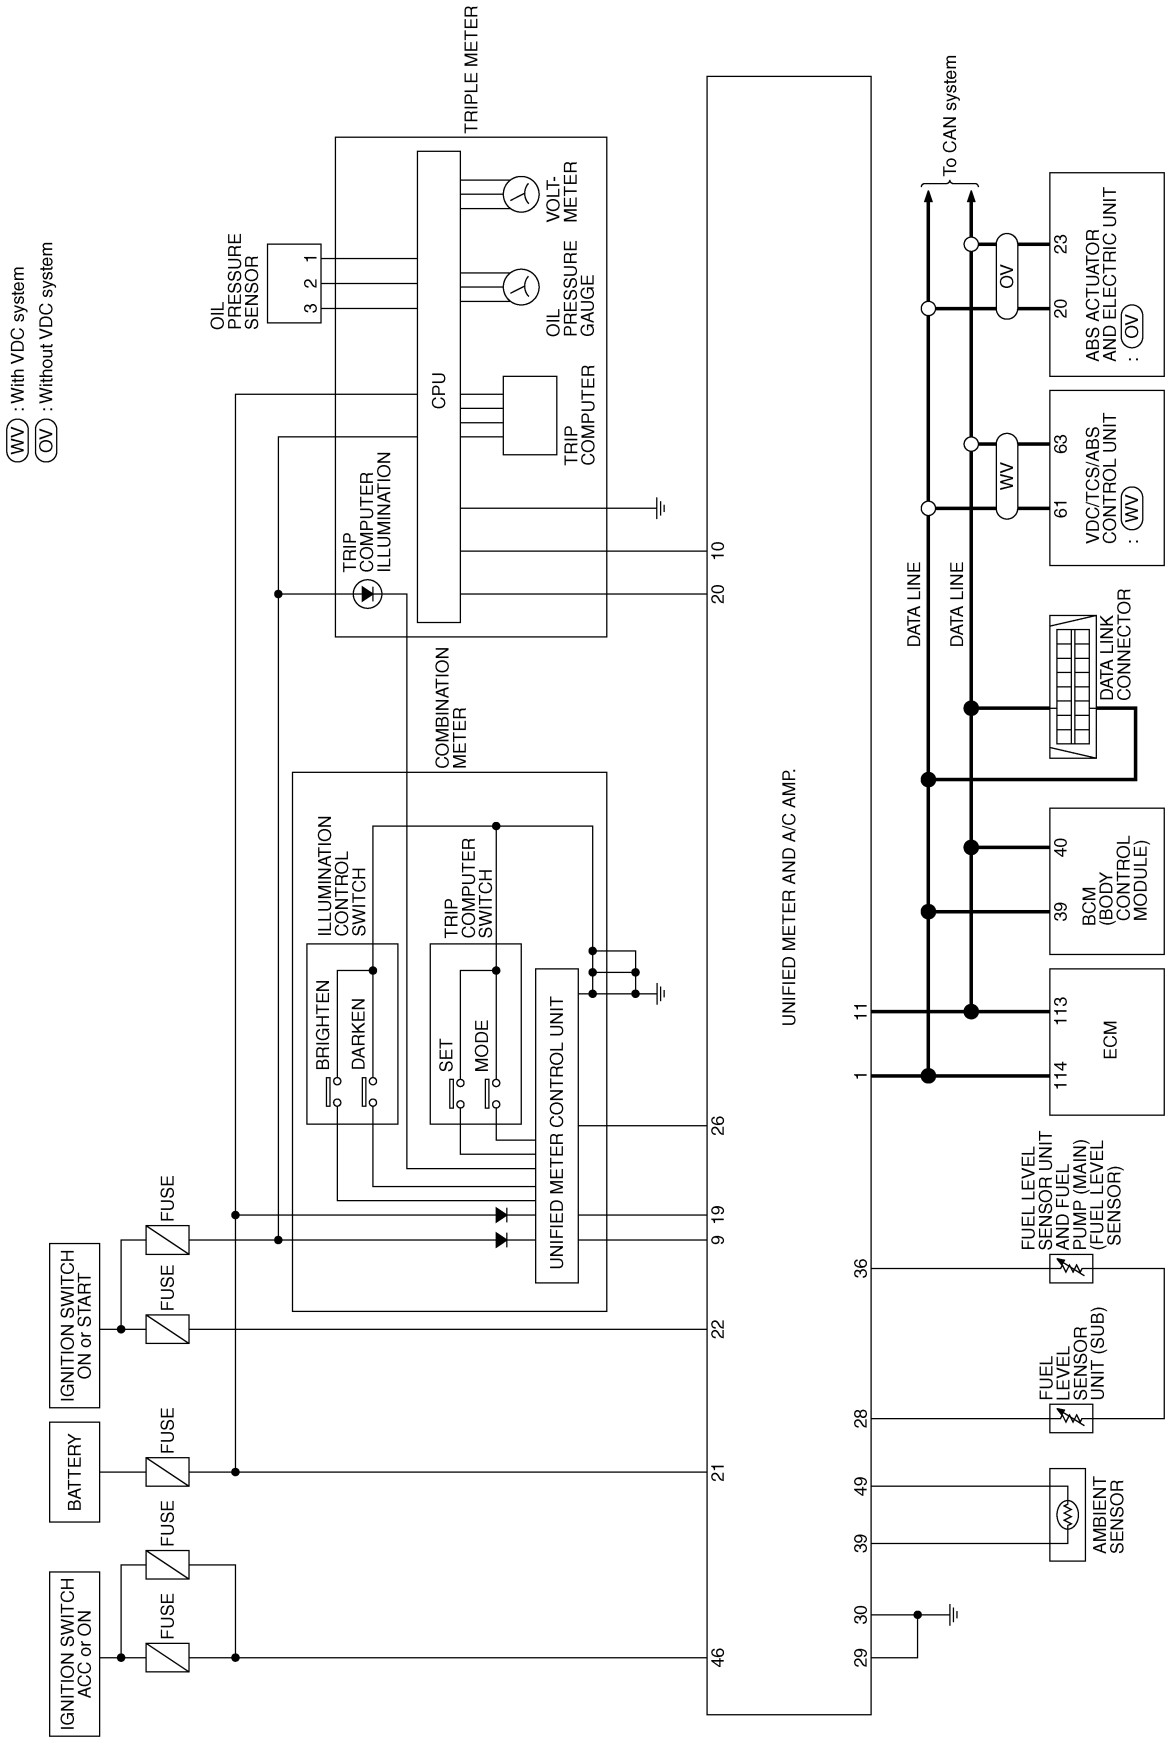
- After 100 hours, the time will start from the reset display again.
- Even if the display is switched to the other mode while the time is starting, the stopwatch continues to advance until the time in the stopwatch mode is stopped.
- When the ignition switch is turned OFF, the stopwatch is reset.

Shift-up Indicator Setting Mode

Trip computer setting switch	Press and hold (for more than 1 sec.)	Press (for less than 1 sec.)
Setting engine speed	Increase setting engine speed by 500 rpm.	Increase setting engine speed by 100 rpm.

NOTE:

The range of engine speed is 2,000 - 8,000 rpm (when exceeding 8,000 rpm returns to 2,000 rpm).



FAIL-SAFE

Triple meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning.

Function		Fail-safe operation
Trip computer	Vehicle speed indication	Displays “---”
	Outside air temperature indication	Displays “--”
	DTE (Distance to empty) indication	Displays “----”
	Average fuel consumption indication	
	Average vehicle speed indication	
	Trip distance indication	
	Trip time indication	Displays “--:--”
Illumination control	Triple meter illumination	Change to nighttime mode.

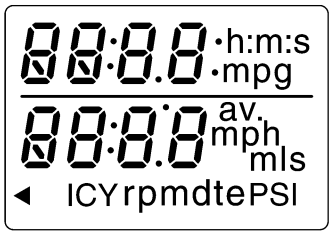
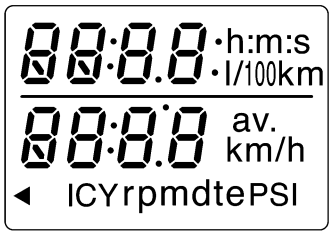
Self-Diagnosis Mode of Triple Meter





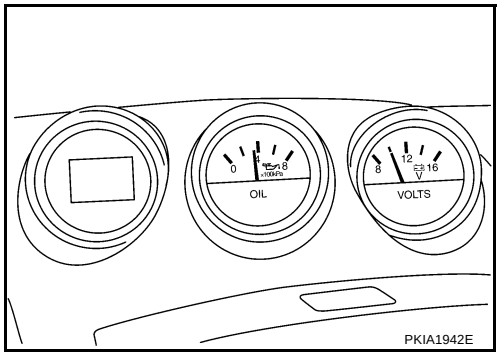
NKS0006L

SELF-DIAGNOSIS FUNCTION

Triple meter operation can be checked with self-diagnosis mode of combination meter.

OPERATION PROCEDURE

1. While pressing the odo/trip meter switch, turn ignition switch ON.
2. Make sure that the trip meter displays “0000.0”.
3. Press the odo/trip meter switch at least 3 times (within 7 seconds after the ignition switch is turned ON).
4. All the segments on the trip computer illuminate. At this time, the triple meter is turned to self-diagnosis mode.



For USA	For Canada
	

SKIA8981E

NOTE:
If any of the segments is not displayed, replace triple meter.

5. Press the odo/trip meter switch. voltmeter and oil pressure gauge should indicate as shown in the figure while pressing odo/trip meter switch.

   NOTE:
   If voltmeter or oil pressure gauge is not activated, replace triple meter.

PKIA1942E

CONSULT-III Function (METER A/C AMP)

NKS0006M

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Trouble Diagnosis

NKS0006N

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom or customer complaint.
2. Perform diagnosis according to diagnosis flow. Refer to DI-39, "PRELIMINARY CHECK" .
3. According to the symptom chart, repair or replace the cause of the symptom.
4. Does the meter operate normally? If so, GO TO 5. If not, GO TO 2.
5. INSPECTION END

PRELIMINARY CHECK

1. CHECK COMMUNICATION LINE

Perform self-diagnosis of unified meter and A/C amp.

Self-diagnostic results content

No malfunction detected>>GO TO 2.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

2. CHECK OPERATION OF SELF-DIAGNOSIS MODE (COMBINATION METER)

Activate self-diagnosis mode of combination meter. Refer to DI-15, "Self-Diagnosis Mode of Combination Meter" .

Does self-diagnosis mode operate?

YES >> GO TO 3.
NO >> Check combination meter power supply and ground circuit. If normal, replace combination meter.

3. CHECK OPERATION OF SELF-DIAGNOSIS MODE (TRIPLE METER)

Check operation of triple meter in self-diagnosis mode. Refer to DI-38, "Self-Diagnosis Mode of Triple Meter" .

Does self-diagnosis mode operation namely?

YES >> INSPECTION END
NO >> GO TO 4.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT OF TRIPLE METER

Check power supply and ground circuit of triple meter.

OK or NG

OK >> Replace triple meter.
NG >> Repair power supply and ground circuit of triple meter.

Symptom Chart

NKS0006O

Trouble phenomenon	Possible cause
Speed indication is not displayed properly.	Refer to DI-40, "Vehicle Speed Signal Inspection" .
Ambient air temperature indication is not displayed properly. (It may take a short time to steady the indication after ignition switch is turned ON.) **NOTE:** If the meter is powered up with the ambient sensor disconnected, ambient air temperature display will show “---” even if the sensor is reconnected. In this case, with the sensor connected, disconnect and reconnect the battery, then the correct temperature will be displayed.	Refer to ATC-92, "AMBIENT TEMPERATURE INPUT PROCESS" in “ATC”.
DTE (distance to empty) indication is not displayed properly.	Refer to DI-40, "Fuel Consumption Monitor Signal Inspection" .
Average fuel consumption indication is not displayed properly.	
Shift-up indicator setting indication is not displayed properly or shift-up indicator does not operate properly.	Refer to DI-42, "Trip Computer Switch Inspection" .

Trouble phenomenon	Possible cause
Average vehicle speed indication is not indicated properly.	Replace triple meter.
Trip distance indication is not indicated properly.	
Trip time indication is not indicated properly.	
Stopwatch indication is not displayed properly.	
Indication is malfunction of voltmeter.	
Indication is malfunction of oil pressure gauge.	Refer to DI-40, "Oil Pressure Sensor Signal Inspection" .
Trip computer switch is not operate.	Refer to DI-42, "Trip Computer Switch Inspection" .

Vehicle Speed Signal Inspection

NKS0006R

Symptom: Speed indication is not displayed properly.

1. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Start engine and select “METER A/C AMP” on CONSULT-III.
2. Using “SPEED METER” on the “DATA MONITOR”, compare the value of data monitor with speed indication of trip computer.

OK or NG

OK >> Refer to DI-18, "Vehicle Speed Signal Inspection" of “COMBINATION METERS”.
NG >> Replace triple meter.

Fuel Consumption Monitor Signal Inspection

NKS0006S

Symptom:

- DTE (distance to empty) indication is not displayed properly.
- Average fuel consumption indication is not displayed properly.

1. CHECK ECM (CONSULT-III)

Perform self-diagnosis of ECM. Refer to EC-116, "CONSULT-III Function (ENGINE)" .

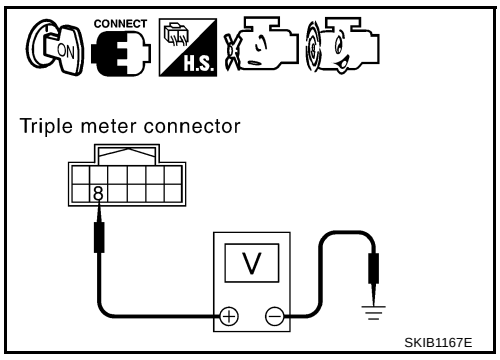
Self-diagnostic results

No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

Oil Pressure Sensor Signal Inspection

NKS0006T

Symptom: Indication is malfunction of oil pressure gauge.



1. CHECK OIL PRESSURE SENSOR SIGNAL INPUT

1. Turn ignition switch ON.
2. Check voltage between triple meter harness connector M44 terminal 8 and ground.

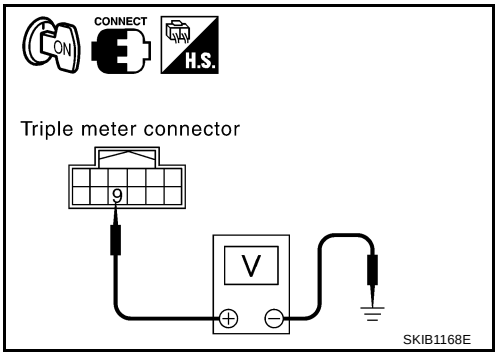
8 – Ground

When ignition switch is in ON position (Engine stopped.) : Approx. 1 V

Engine running [When the oil pressure is 80 psi (500 kPa)] : Approx. 3 V

OK or NG

OK >> Replace triple meter.
NG >> GO TO 2.



2. CHECK OIL PRESSURE SENSOR POWER SUPPLY

Check voltage between triple meter harness connector M44 terminal 9 and ground.

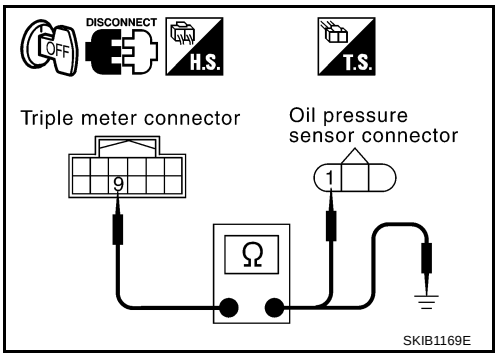
9 – Ground : Approx. 5 V

OK or NG

OK >> GO TO 3.
NG >> Replace triple meter.

3. CHECK OIL PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect triple meter and oil pressure switch connector.
3. Check continuity between triple meter harness connector M44 terminal 9 and oil pressure sensor harness connector F21 terminal 1.



9 – 1 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 9 and ground.

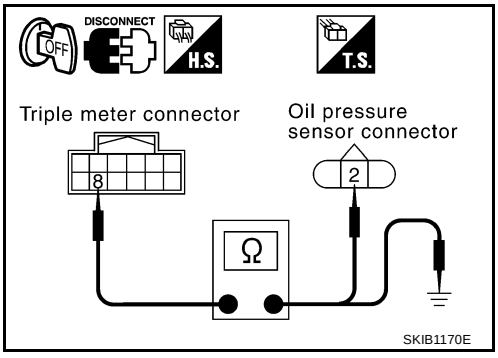
9 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK OIL PRESSURE SENSOR SIGNAL CIRCUIT

1. Check continuity between triple meter harness connector M44 terminal 8 and oil pressure sensor harness connector F21 terminal 2.



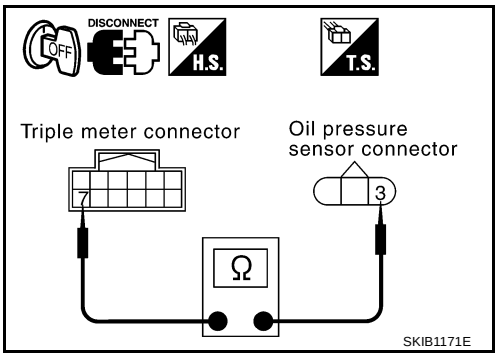
8 – 2 : Continuity should exist.

2. Check continuity between triple meter harness connector M44 terminal 8 and ground.

8 – Ground :Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



5. CHECK OIL PRESSURE SENSOR GROUND CIRCUIT

Check continuity between triple meter harness connector M44 terminal 7 and oil pressure sensor harness connector F21 terminal 3.

7 – 3 : Continuity should exist.

OK or NG

OK >> Replace oil pressure sensor.
NG >> Repair harness or connector.

Trip Computer Switch Inspection

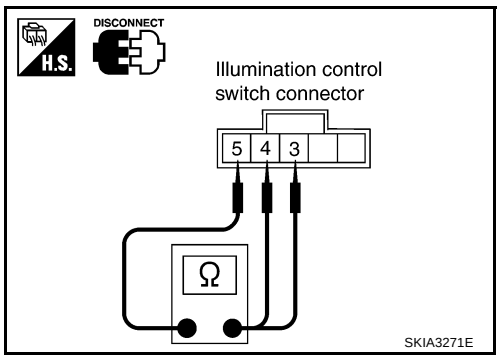
NKS0006U

Symptom:

- Shift-up indicator setting indication is not displayed properly or shift-up indicator does not operate properly.
- Trip computer switch does not operate.

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Remove combination meter. Refer to DI-24, "Removal and Installation for Combination Meter" .
3. Remove rear finisher to combination meter. Refer to DI-24, "Disassembly and Assembly for Combination Meter" .
4. Check trip computer switch connector for looseness.



OK or NG

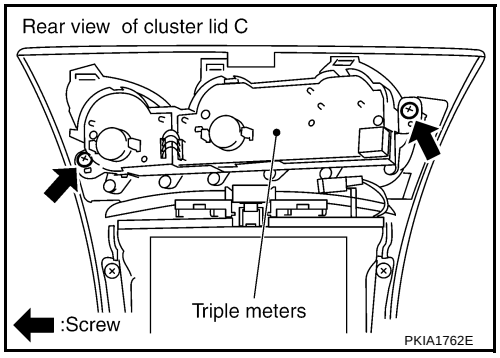
OK >> GO TO 2.
NG >> Repair trip computer switch connector.

2. CHECK CIRCUIT

1. Disconnect trip computer switch connector.
2. Check continuity between trip computer switch harness connector M208 terminals 3, 4 and 5.

Terminal		Condition	Continuity
3	5	Setting switch is pressed.	Yes
		Setting switch is released.	No
4		Mode switch is pressed.	Yes
		Mode switch is released.	No

OK or NG



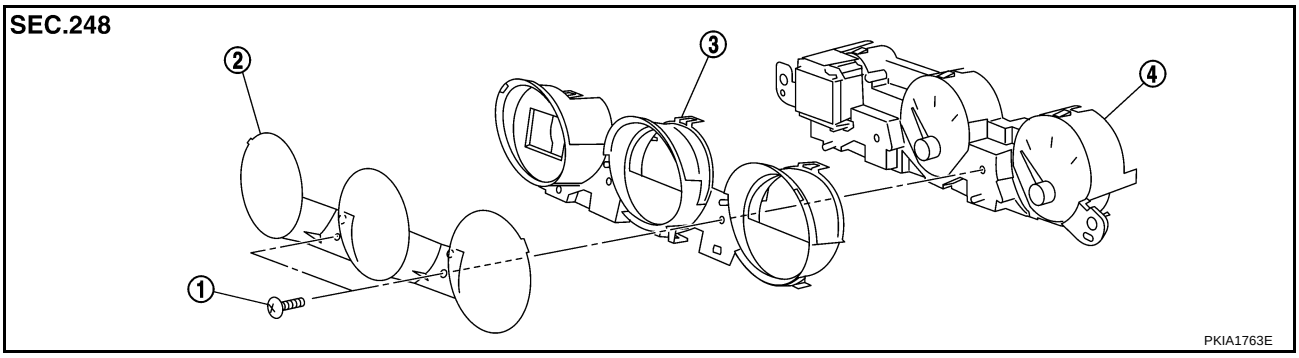
OK >> Replace combination meter.
NG >> Replace trip computer switch.

Removal and Installation of Triple Meters

NKS0006V

REMOVAL

1. Remove cluster lid C. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws (2), and remove triple meters.



INSTALLATION

Installation is the reverse order of removal.

Disassembly and Assembly for Triple Meters

NKS0006W

SEC.248

1. Screw
2. Front cover
3. Upper housing
4. Triple meter

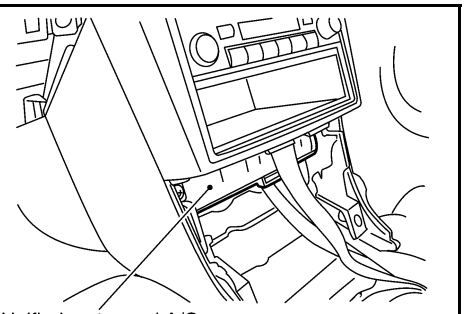
DISASSEMBLY

1. Remove screws (2), and remove front cover.
2. Disengage tabs (6) to separate upper housing.

ASSEMBLY

Assembly is the reverse order of disassembly.

UNIFIED METER AND A/C AMP



PFP:27760

System Description

NKS0006X

DESCRIPTION

- For the unified meter and A/C amp., the signal required for controlling the combination meter and triple meter are integrated in the A/C auto amp.
- Unified meter and A/C amp. corresponds a CONSULT-III function (self-diagnosis results, CAN diagnosis support monitor and data monitor).

Unified meter and A/C amp.
SKIB0018E

COMBINATION METER CONTROL FUNCTION

- Unified meter and A/C amp. receives necessary information for combination meter from each unit.
- Unified meter and A/C amp. converses with the combination meter transmits a signal through with communication line (TX, RX) between unified meter and A/C amp. and combination meter.

Input/output signals between unified meter and A/C amp. and combination meter.

Unit	Input	Output
Unified meter and A/C amp.	● Seat belt buckle switch signal (Driver's side) ● Trip computer mode switch signal ● Trip computer setting switch signal ● Illumination control nighttime required signal ● Refuel status signal ● Vehicle speed signal ● Low-fuel warning lamp condition signal ● Self-diagnosis condition signal ● Odo/trip switch signal ● Delivery destination data signal ● Combination meter receive error signal ● Combination meter specifications signal ● Triple meter specifications signal	● Engine speed signal ● Engine coolant temperature signal ● Fuel level sensor signal (resistance value) ● Malfunction indicator lamp signal ● ABS warning lamp signal ● Tire pressure warning lamp signal ● Brake warning lamp signal ● Oil pressure warning lamp signal ● Turn indicator signal ● High beam request signal ● VDC OFF indicator lamp signal ● TCS OFF indicator lamp signal ● SLIP indicator lamp signal ● CRUISE indicator lamp signal ● SET indicator lamp signal ● A/T CHECK indicator lamp signal ● A/T position indicator signal ● Manual mode indicator signal ● Manual mode gear position signal ● Shift-up indicator setting signal ● CAN communication condition signal of A/T ● Door switch signal ● Position lights request signal ● Buzzer output signal

NOTE:
Combination meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning. Refer to DI-7, "FAIL-SAFE" .

TRIPLE METER CONTROL FUNCTION

- Unified meter and A/C amp. receives necessary information for triple meter from each unit.
- Unified meter and A/C amp. calculates necessary information for trip computer.
- Unified meter and A/C amp. converses with the combination meter transmits a signal with through communication line (TX, RX) between unified meter and A/C amp. and triple meter.

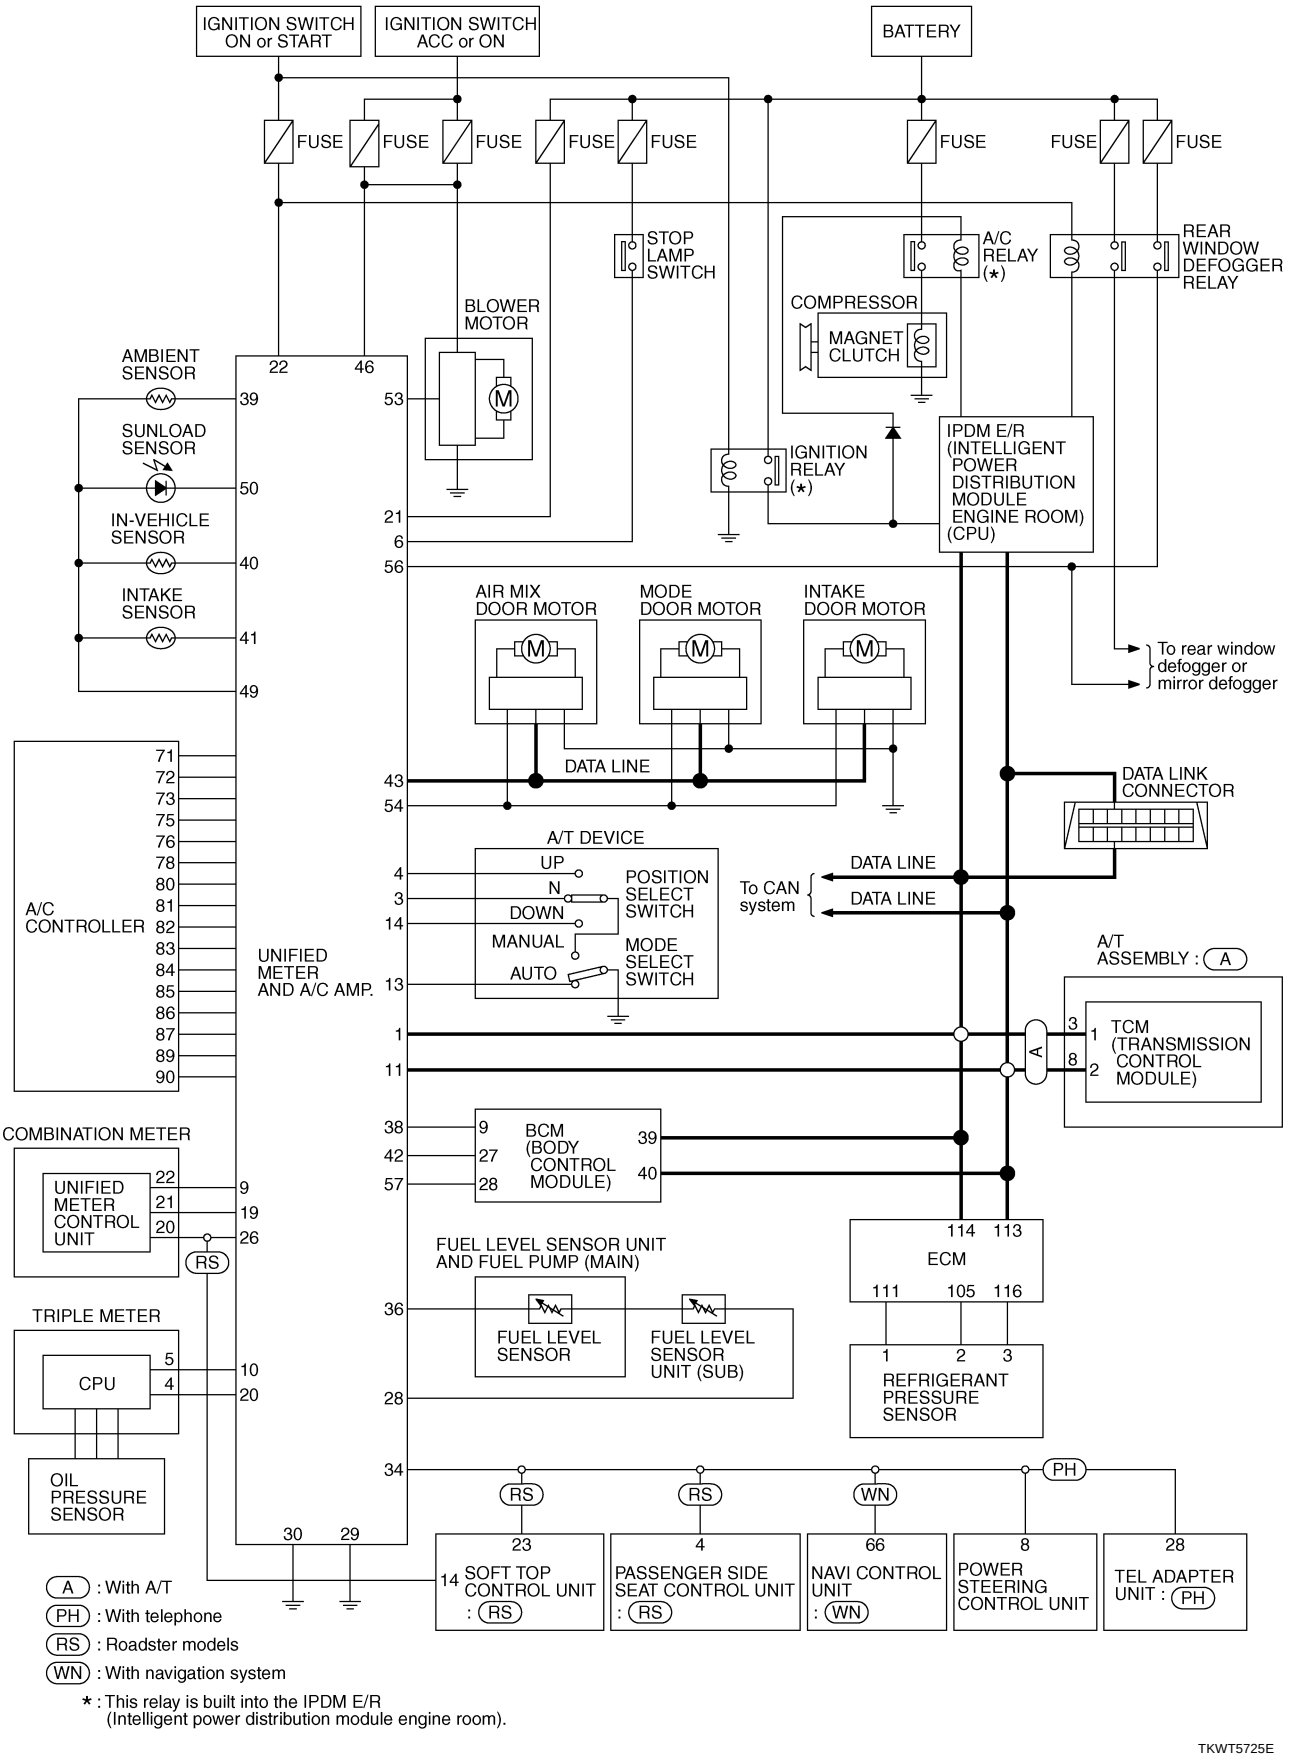
Input/output signals between unified meter and A/C amp. and triple meter

Unit	Input	Output
Unified meter and A/C amp.	● LCD indication condition signal ● Shift-up indicator setting signal ● Oil pressure warning lamp signal ● Triple meter receive error signal	● Ambient air temperature signal ● Ambient air temperature warning signal ● Trip distance signal ● Trip time signal ● Average vehicle speed signal ● Average fuel consumption signal ● Vehicle speed signal ● DTE (Distance to empty) signal ● DTE (Distance to empty) warning signal ● Tire pressure warning signal ● Trip computer mode switch signal ● Trip computer setting switch signal ● Self-diagnosis condition signal ● Odo/trip switch signal ● Triple meter specifications signal

NOTE:
Triple meter performs fail-safe operation when unified meter and A/C amp. communication is malfunctioning. Refer to DI-29, "FAIL-SAFE" .

A/C AUTO AMP. FUNCTION

Unified meter and A/C amp. controls each operation for A/C auto amp. Regarding A/C control, refer to ATC-24, "AIR CONDITIONER CONTROL" in ATC section.



OTHER FUNCTIONS

Signal Buffer Function

Unified meter and A/C amp. transmits each signal to other units with CAN communication.

Schematic

NKS004RD

TKWT5725E

CONSULT-III Function (METER A/C AMP)

NKS00071

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

System	Diagnosis mode	Description
METER A/C AMP	SELF-DIAG RESULTS	Unified meter and A/C amp. check the conditions and displays memorized erro.
	DATA MONOTOR	Displays unified meter and A/C amp. input data in real time.

SELF-DIAGNOSTIC RESULTS

Display Item List

Display item [Code]	Malfunction is detected when...	Reference page
CAN COMM CIRC [U1000]	When unifield meter and A/C amp. is not transmitting or receiving CAN communication signal for 2 seconds or less.	DI-50
T/METER COMM CIRC [B2201]	Malfunction is detected in communication of between triple meter and unified meter and A/C amp.	DI-50
METER COMM CIRC [B2202]	Malfunction is detected in communication of between combination meter and unified meter and A/C amp.	DI-52
VEHICLE SPEED CIRC [B2205]	When an erroneous signal is input. **CAUTION:** **Even when there is no malfunction on speed signal system, malfunction may be misinterpreted when battery has low voltage (when maintaining 7 - 8 V for about 2 seconds).**	DI-55

NOTE:
"TIME" means the following.

- 0: Means detected malfunction at present.
- 1-63: Means detected malfunction in past. (Displays number of ignition switch OFF → ON after detecting malfunction. "Self-diagnosis result" is erased when exceeding "63".)

DATA MONITOR

Display Item List

Monitor item [Unit]	MAIN SIGNALS	SELECTION FROM MENU	Contents
SPEED METER [km/h] or [mph]	X	X	This is the angle correction value after the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] is converted into the vehicle speed.
SPEED OUTPUT [km/h] or [mph]	X	X	This is the angle correction value before the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] is converted into the vehicle speed.
TACHO METER [rpm]	X	X	This is the converted value for the engine speed signal from the ECM.
W TEMP METER [°C] or [°F]	X	X	This is the converted value for the engine coolant temperature signal from the ECM.
FUEL METER [lit.]	X	X	This is the processed value for the signal (resistance value) from the fuel gauge.
DISTANCE [km] or [mile]	X	X	This is the calculated value for the speed signal from the VDC/TCS/ABS control unit [with VDC system] or ABS actuator and electric unit (control unit) [without VDC system] and the signal (resistance signal) from the fuel gauge.
FUEL W/L [ON/OFF]	X	X	Indicates [ON/OFF] condition of low-fuel warning lamp.
MIL [ON/OFF]		X	Indicates [ON/OFF] condition of malfunction indicator lamp.

Monitor item [Unit]		MAIN SIGNALS	SELECTION FROM MENU	Contents
AIR PRES W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of low tire pressure warning lamp.
SEAT BELT W/L*1	[ON/OFF]		X	Indicates [ON/OFF] condition of seat belt warning lamp.
BUZZER	[ON/OFF]	X	X	Indicates [ON/OFF] condition of buzzer.
DOOR W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of door warning lamp.
HI-BEAM IND	[ON/OFF]		X	Indicates [ON/OFF] condition of high beam indicator.
TURN IND	[ON/OFF]		X	Indicates [ON/OFF] condition of turn indicator.
OIL W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of oil pressure warning lamp.
VDC/TCS IND	[ON/OFF]		X	Indicates [ON/OFF] condition of VDC/TCS OFF indicator lamp.
ABS W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of ABS warning lamp.
SLIP IND	[ON/OFF]		X	Indicates [ON/OFF] condition of SLIP indicator lamp.
BRAKE W/L*2	[ON/OFF]		X	Indicates [ON/OFF] condition of brake warning lamp.
M RANGE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of manual mode range switch.
NM RANGE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of except for manual mode range switch.
AT SFT UP SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift up switch.
AT SFT DWN SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift down switch.
AT P MODE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T power mode switch.
AT S MODE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T snow mode switch.
BRAKE SW	[ON/OFF]		X	Indicates [ON/OFF] condition of brake switch (stop lamp switch).
AT-M IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T manual mode indicator.
AT-M GEAR	[5/4/3/2/1]	X	X	Indicates [5/4/3/2/1] condition of A/T manual mode gear position.
P RANGE IND	ON/OFF	X	X	Indicates [ON/OFF] condition of A/T shift P range indicator.
R RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift R range indicator.
N RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift N range indicator.
D RANGE IND	[ON/OFF]	X	X	Indicates [ON/OFF] condition of A/T shift D range indicator.
AT CHECK W/L	[ON/OFF]		X	Indicates [ON/OFF] condition of A/T CHECK warning lamp.
CRUISE IND	[ON/OFF]		X	Indicates [ON/OFF] condition of CRUISE indicator.
SET IND	[ON/OFF]		X	Indicates [ON/OFF] condition of SET indicator.

NOTE:

Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

*1: It dose not change when fastening or unfastening the passenger seat belt.

*2: Monitor keeps indicating “OFF” when brake warning lamp is on by the parking brake operation or low brake fluid level.

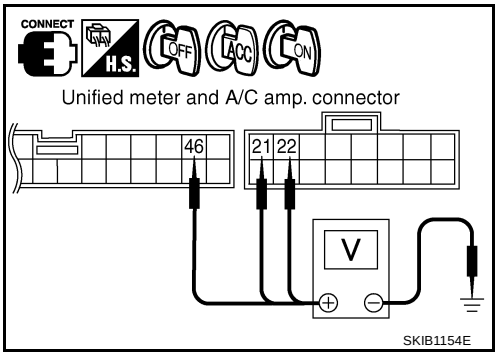
Power Supply and Ground Circuit Inspection

NKS001M5

1. CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	19
Ignition switch ACC or ON	10,11
Ignition switch ON or START	12



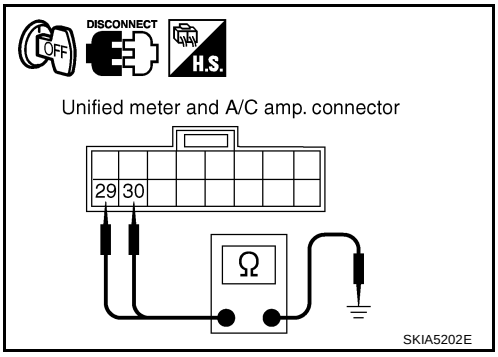
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between unified meter and A/C amp. harness connector terminals and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal				
M49	21	Ground	Battery voltage	Battery voltage	Battery voltage
M50	46		0 V	Battery voltage	Battery voltage
M49	22		0 V	0 V	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Check harness between unified meter and A/C amp. and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect unified meter and A/C amp. connector.
3. Check continuity between unified meter and A/C amp. harness connector and ground.

Connector	Terminal		Continuity
M49	29	Ground	Yes
	30		

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

DTC [U1000] CAN Communication Circuit

NKS00072

Symptom: Display CAN COMM CIRC [U1000] at the result of self-diagnosis for unified meter and A/C amp.

1. CHECK CAN COMMUNICATION

1. Select “SELF-DIAG RESULTS” mode for “METER A/C AMP” with CONSULT-III.

>> Go to “LAN system”. Refer to LAN-48, "CAN System Specification Chart" .

DTC [B2201] Triple Meter Communication Circuit

NKS00073

Symptom: Display T/METER COMM CIRC [B2201] at the result of self-diagnosis for unified meter and A/C amp.

NOTE:
For the wiring diagram, refer to DI-31, "Wiring Diagram — 3METER —" .

1. CHECK CONNECTOR

Check triple meter, unified meter and A/C amp. and terminals (triple meter side, unified meter and A/C amp. side, and harness side) for looseness or bent terminals.

OK or NG

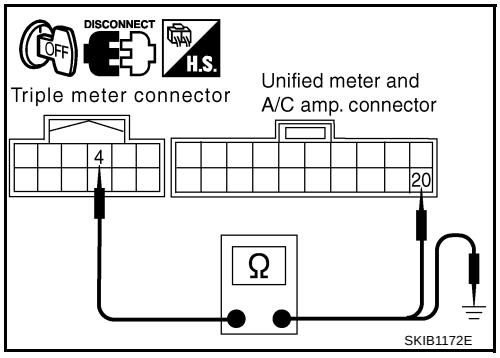
OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK METER/GAUGES VISUALLY

Does the pointer on the meter/gauges fluctuate at the engine start?

Is the fluctuation acceptable?

YES >> GO TO 3.
NO >> GO TO 6.



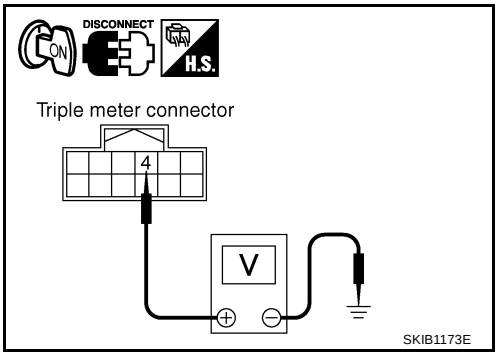
3. CHECK CONTINUITY COMMUNICATION CIRCUIT (TX: TRIPLE METER)

1. Turn ignition switch OFF.
2. Disconnect triple meter connector and unified meter and A/C amp. connector.
3. Check continuity between triple meter harness connector M44 terminal 4 and unified meter and A/C amp. harness connector M48 terminal 20.

4 – 20 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 4 (P) and ground.

4 – Ground : Continuity should not exist.



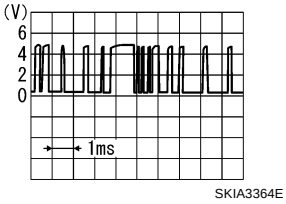
OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

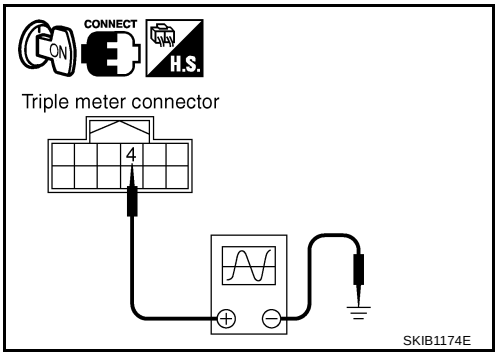
4. CHECK VOLTAGE OF UNIFIED METER AND A/C AMP.

1. Connect unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between triple meter harness connector M44 terminal 4 and ground.

4 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 5.
NG >> Replace unified meter and A/C amp.

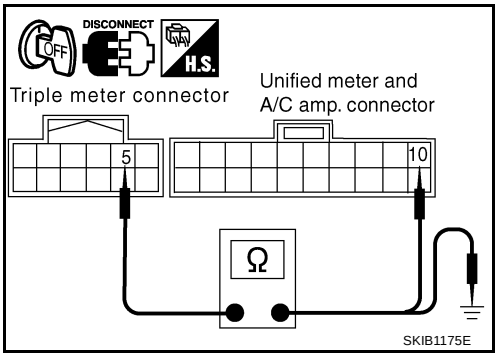
5. CHECK VOLTAGE SIGNAL OF COMBINATION METER

1. Turn ignition switch OFF.
2. Connect triple meter connector.
3. Turn ignition switch ON.
4. Check voltage signal between triple meter harness connector M44 terminal 4 and ground.

4 – Ground:

OK or NG

OK >> Replace unified meter and A/C amp.
NG >> Replace triple meter.



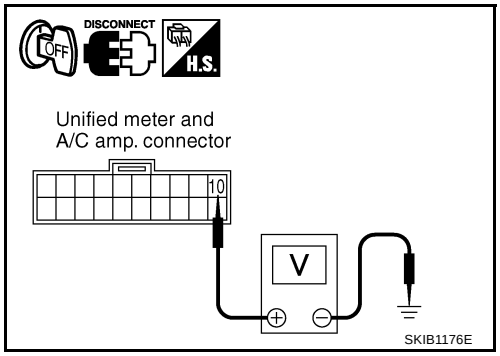
6. CHECK CONTINUITY COMMUNICATION CIRCUIT (RX: TRIPLE METER)

1. Turn ignition switch OFF.
2. Disconnect triple meter connector and unified meter and A/C amp. connector.
3. Check continuity between triple meter harness connector M44 terminal 5 and unified meter and A/C amp. harness connector M48 terminal 10.

5 – 10 : Continuity should exist.

4. Check continuity between triple meter harness connector M44 terminal 5 and ground.

5 – Ground : Continuity should not exist.



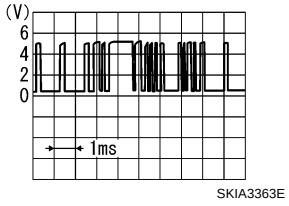
OK or NG

OK >> GO TO 7.
NG >> Repair harness or connector.

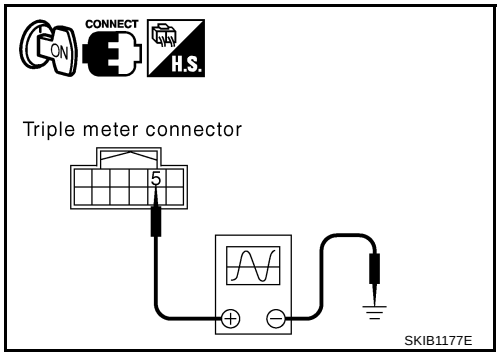
7. CHECK VOLTAGE OF COMBINATION METER

1. Connect triple meter connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M48 terminal 10 and ground.

10 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 8.
NG >> Replace triple meter.

8. CHECK VOLTAGE SIGNAL OF UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Connect triple meter connector and unified meter and A/C amp. connector.
3. Turn ignition switch ON.
4. Check voltage signal between triple meter harness connector M44 terminal 5 and ground.

5 – Ground :

OK or NG

OK >> Replace triple meter.
NG >> Replace unified meter and A/C amp.

DTC [B2202] Meter Communication Circuit

NKS00074

Symptom: Display METER COMM CIRC [B2202] at the result of self-diagnosis for unified meter and A/C amp.

NOTE:
For the wiring diagram, refer to DI-11, "Wiring Diagram — METER —" .

1. CHECK CONNECTOR

Check combination meter, unified meter and A/C amp. and terminals (combination meter side, unified meter and A/C amp. side, and harness side) for looseness or bent terminals.

OK or NG

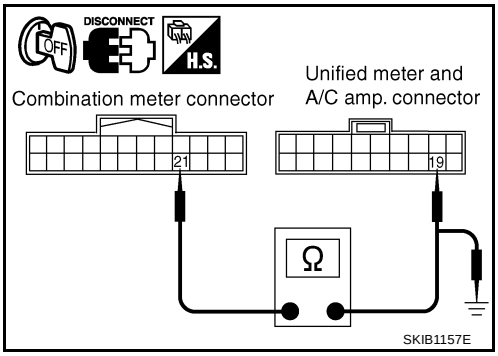
OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK METER/GAUGES VISUALLY

Does the pointer on the meter/gauges fluctuate at the engine start?

Is the fluctuation acceptable?

YES >> GO TO 3.
NO >> GO TO 6.



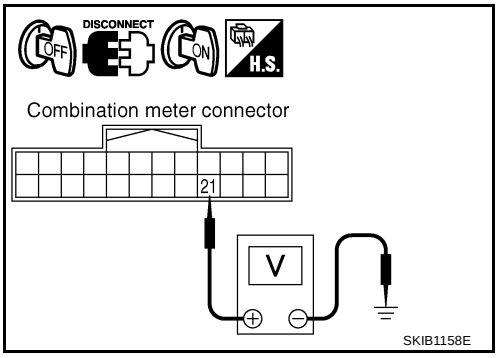
3. CHECK CONTINUITY COMMUNICATION CIRCUIT (TX: COMBINATION METER)

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 21 and unified meter and A/C amp. harness connector M48 terminal 19.

21 – 19 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 21 and ground.

21 – Ground : Continuity should not exist.



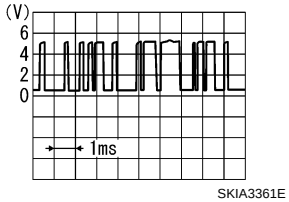
OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

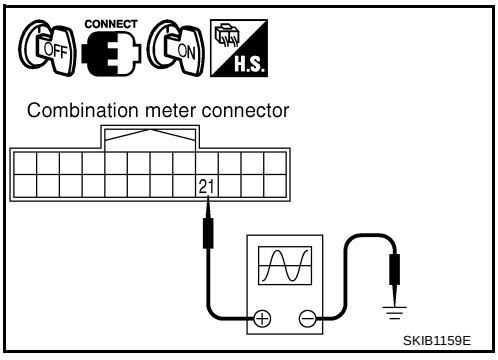
4. CHECK VOLTAGE OF UNIFIED METER AND A/C AMP.

1. Connect unified meter and A/C amp. connector.
2. Turn ignition switch ON.
3. Check voltage between combination meter harness connector M19 terminal 21 and ground.

21 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 5.
NG >> Replace unified meter and A/C amp.

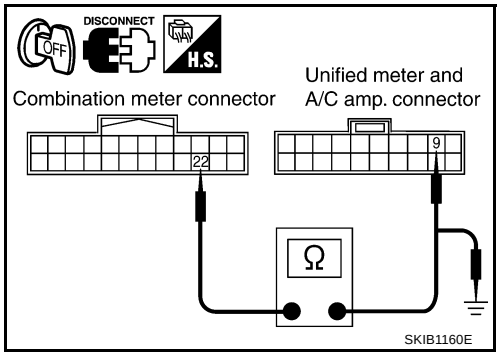
5. CHECK VOLTAGE SIGNAL OF COMBINATION METER

1. Turn ignition switch OFF.
2. Connect combination meter connector.
3. Turn ignition switch ON.
4. Check voltage signal between combination meter harness connector M19 terminal 21 and ground.

21 – Ground:

OK or NG

OK >> Replace unified meter and A/C amp.
NG >> Replace combination meter.



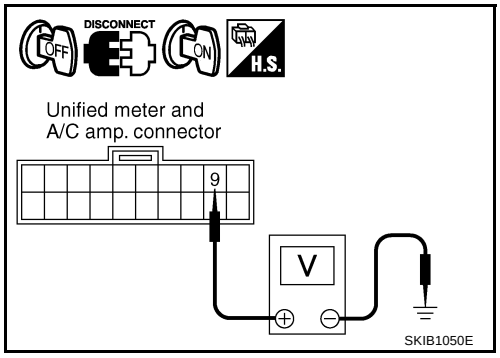
6. CHECK CONTINUITY COMMUNICATION CIRCUIT (RX: COMBINATION METER)

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and unified meter and A/C amp. connector.
3. Check continuity between combination meter harness connector M19 terminal 22 and unified meter and A/C amp. harness connector M48 terminal 9.

22 – 9 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 22 (L/OR) and ground.

22 – Ground : Continuity should not exist.



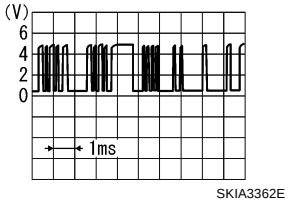
OK or NG

OK >> GO TO 7.
NG >> Repair harness or connector.

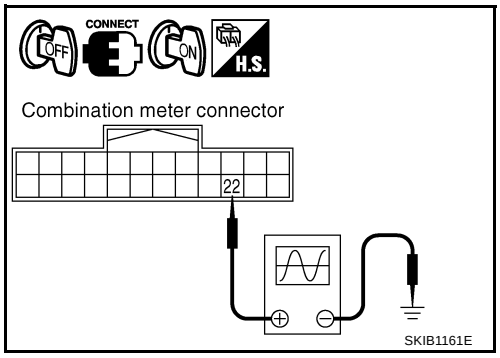
7. CHECK VOLTAGE OF COMBINATION METER

1. Connect combination meter connector.
2. Turn ignition switch ON.
3. Check voltage between unified meter and A/C amp. harness connector M48 terminal 9 and ground.

9 – Ground : Approx. 5 V



OK or NG



OK >> GO TO 8.
NG >> Replace combination meter.

8. CHECK VOLTAGE SIGNAL OF UNIFIED METER AND A/C AMP.

1. Turn ignition switch OFF.
2. Connect unified meter and A/C amp. connector.
3. Turn ignition switch ON.
4. Check voltage signal between combination meter harness connector M19 terminal 22 and ground.

22 – Ground:

OK or NG

OK >> Replace combination meter.
NG >> Replace unified meter and A/C amp.

DTC [B2205] Vehicle Speed Circuit

NKS00075

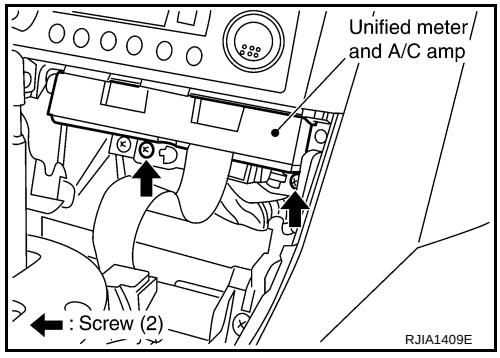
Symptom: Display VEHICLE SPEED CIRC [B2205] at the result of self-diagnosis for unified meter and A/C amp.

1. CHECK VDC/TCS/ABS CONTROL UNIT OR ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform the following unit self-diagnosis.

- VDC/TCS/ABS control unit [with VDC]. Refer to BRC-96, "CONSULT-III Functions (ABS)" .
- ABS actuator and electric unit (control unit) [without VDC]. Refer to BRC-52, "CONSULT-III MAIN FUNCTION" (with TCS) or BRC-19, "CONSULT-III MAIN FUNCTION" (without TCS).

Self-diagnostic results content



No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

Removal and Installation of Unified Meter and A/C Amp.

NKS00076

REMOVAL

1. Remove the console finisher (A/T) or console boot (M/T). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the fixing screws, then remove the unified meter and A/C amp.

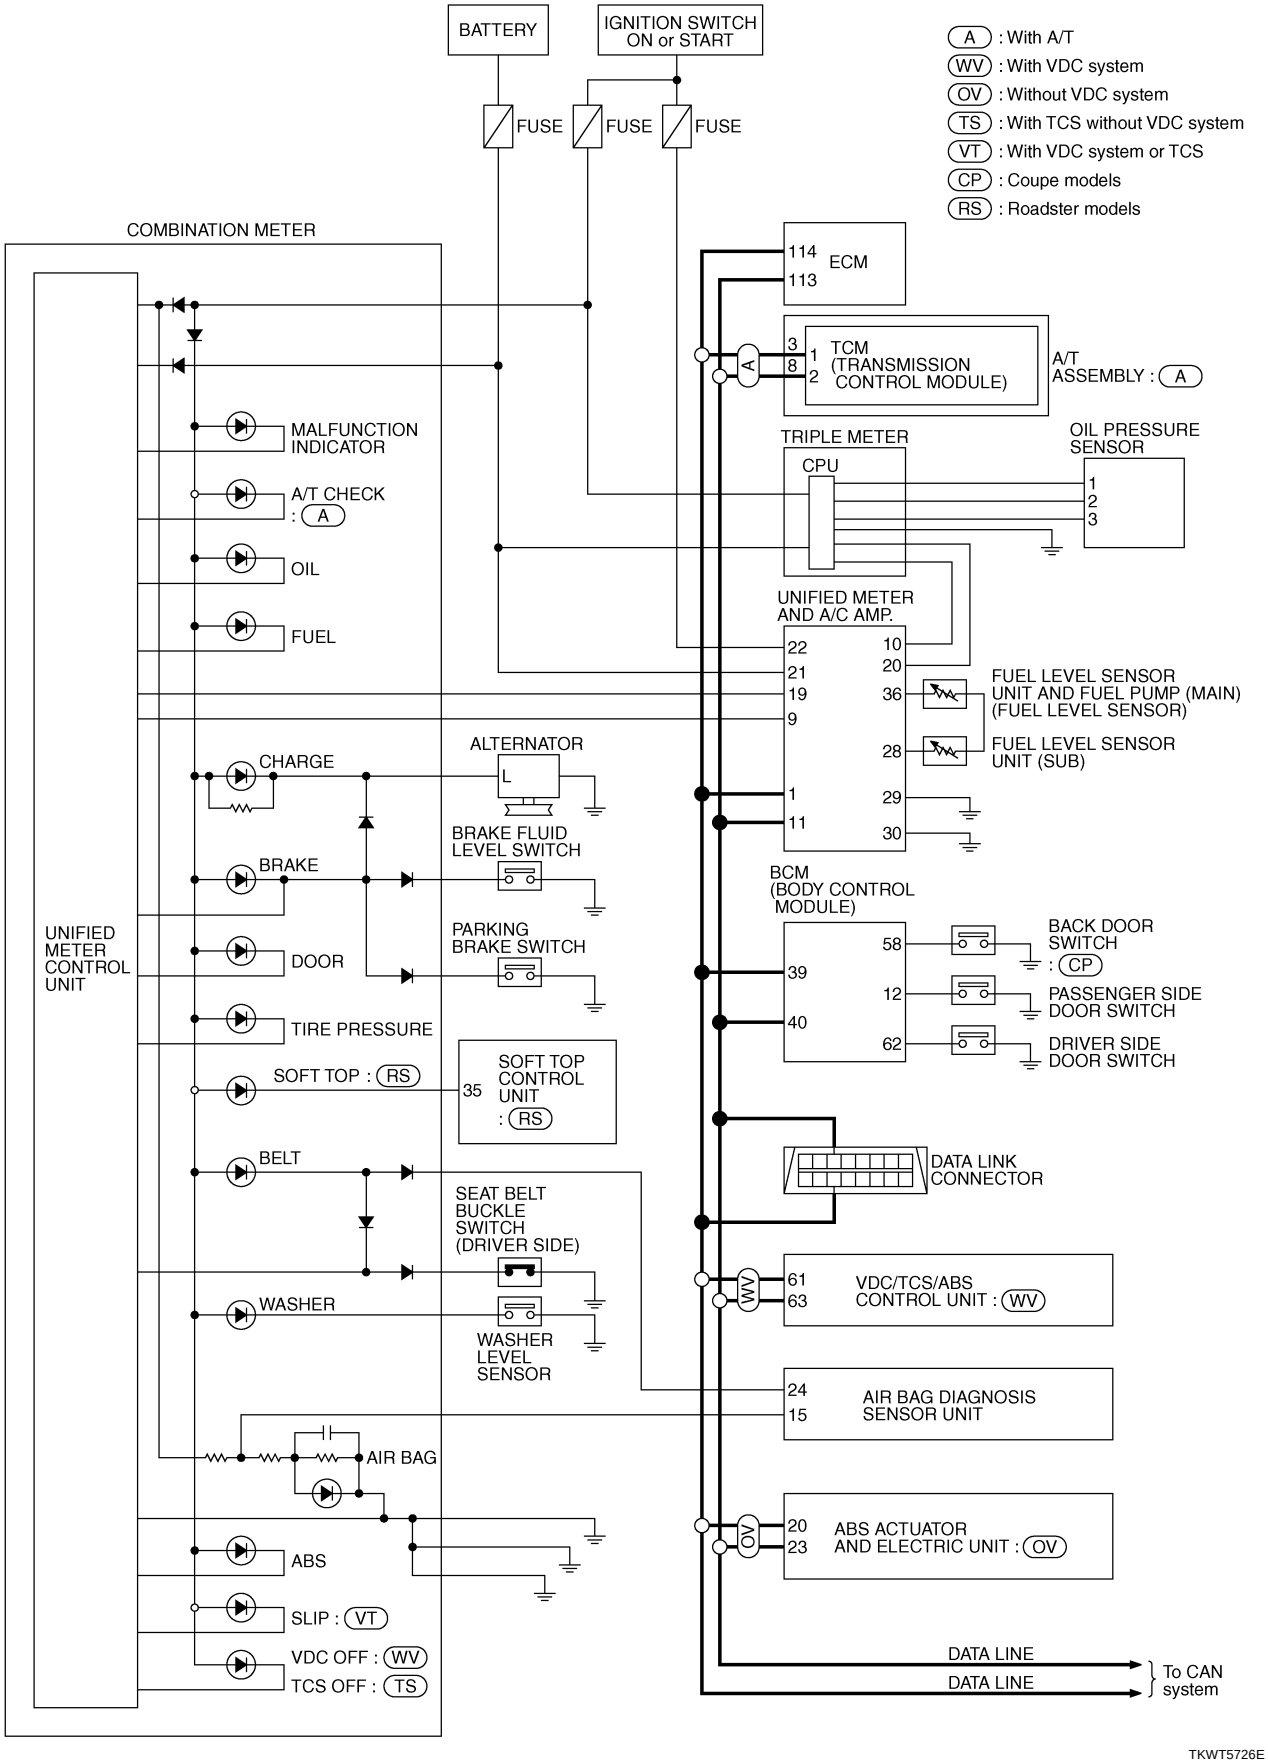
INSTALLATION

Installation is the reverse order of removal.

WARNING LAMPS

PFP:24814

System Description



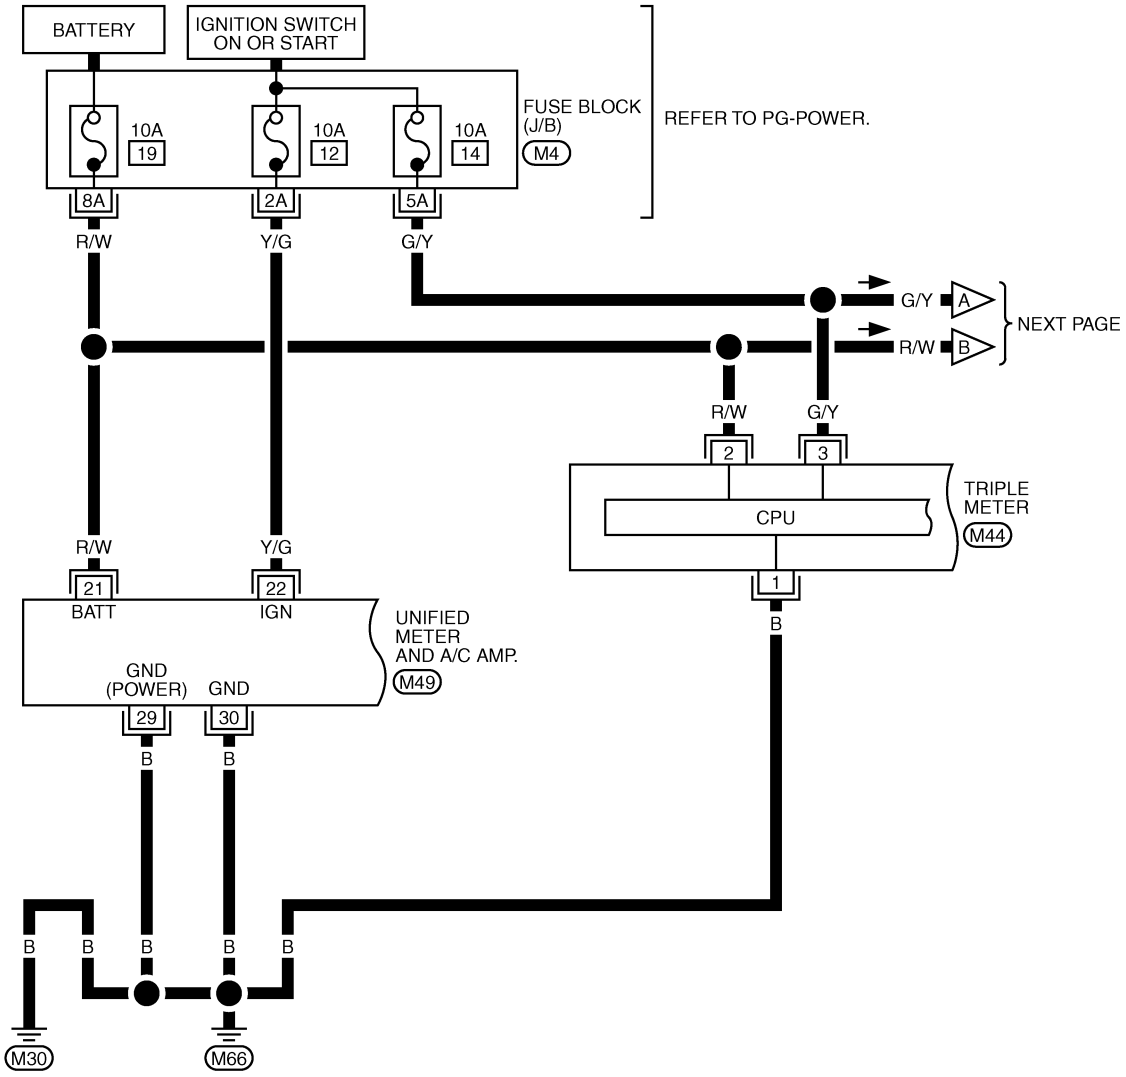
NKS00264

OIL PRESSURE WARNING LAMP

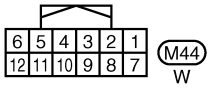
- Triple meter reads oil pressure signal from oil pressure sensor.
- Triple meter judges an oil pressure condition by oil pressure signal, and transmits oil pressure warning lamp signal to unified meter and A/C amp. with communication line.
- Unified meter and A/C amp. transmits oil pressure switch signal to combination meter with communication line.
- Combination meter turns oil pressure warning lamp according to oil pressure switch signal.

Schematic

NKS004RE



TKWT5726E



NOTE:
For the further details, refer to descriptions on each system.

CONSULT-III Function (METER A/C AMP)

NKS00079

Refer to DI-15, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

Oil Pressure Warning Lamp Stays Off (Ignition Switch ON) or Stays On (Oil Pressure Is Normal)

NKS0007A

NOTE:
For oil pressure inspection, refer to LU-7, "OIL PRESSURE CHECK" .

1. CHECK OIL PRESSURE GAUGE

Start the engine.

Does oil pressure gauge operate?

YES >> GO TO 2.
NO >> Check oil pressure sensor signal.

2. CHECK COMMUNICATION LINE

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-15, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>>GO TO 3.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

3. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

Select “METER A/C AMP” on CONSULT-III. Operate ignition switch with “OIL W/L” of “DATA MONITOR” and check operation status.

“OIL W/L”	
When ignition switch is in ON position (Engine stopped.)	: ON
When engine running	: OFF

OK or NG

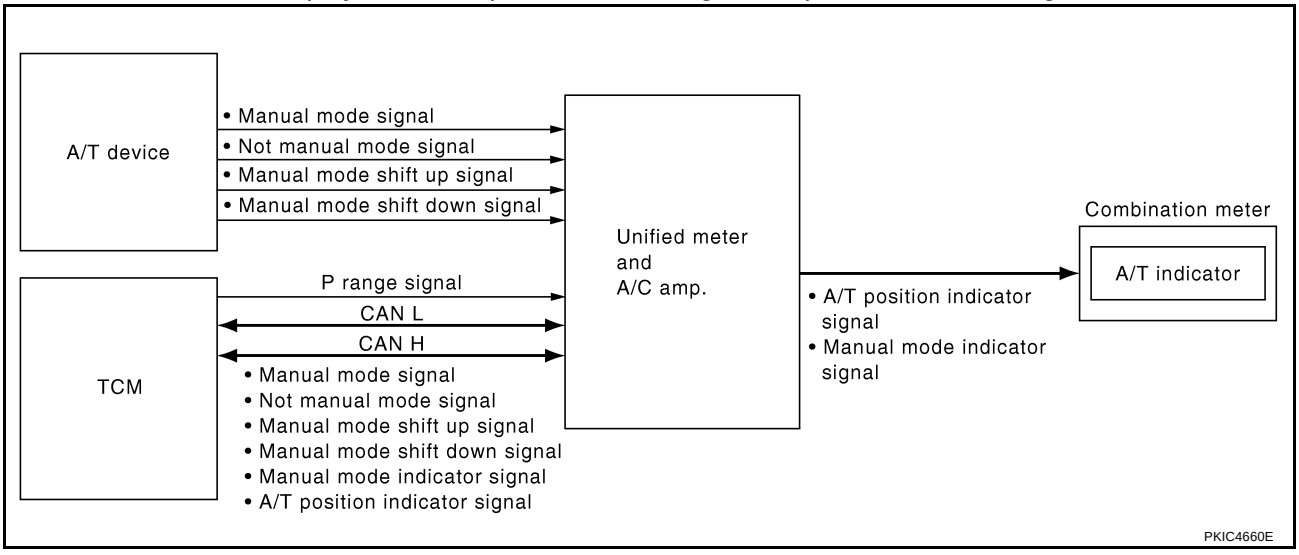
OK >> Replace combination meter.
NG >> Replace triple meter.

A/T INDICATOR

PFP:24814

System Description

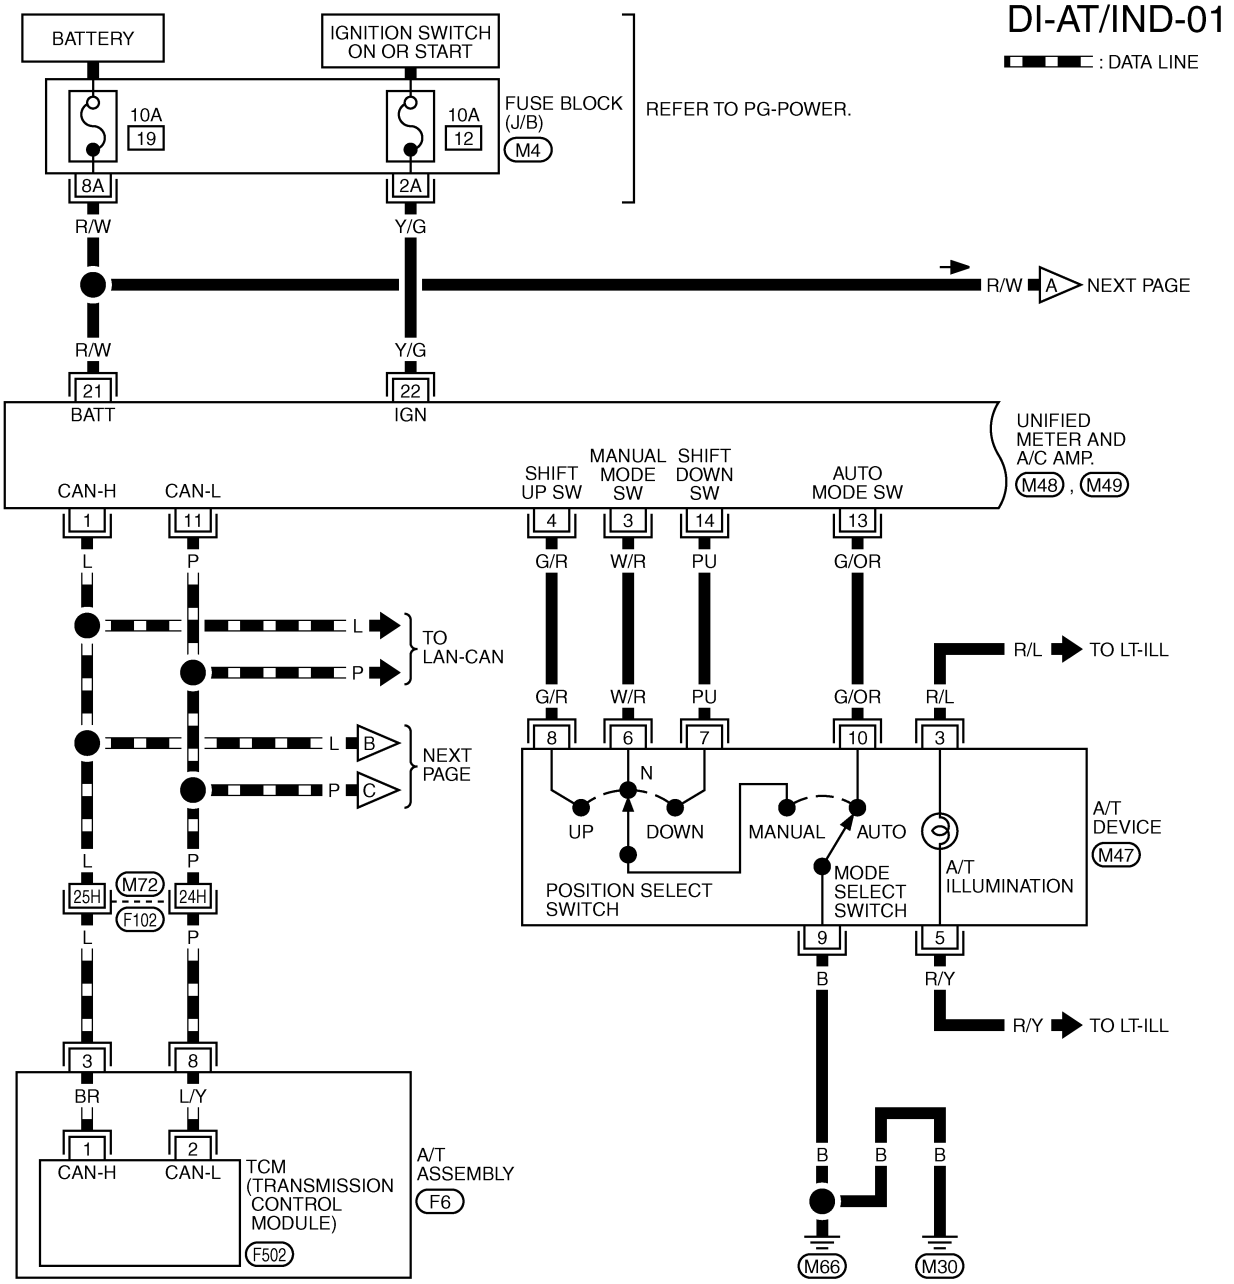
NKS00265



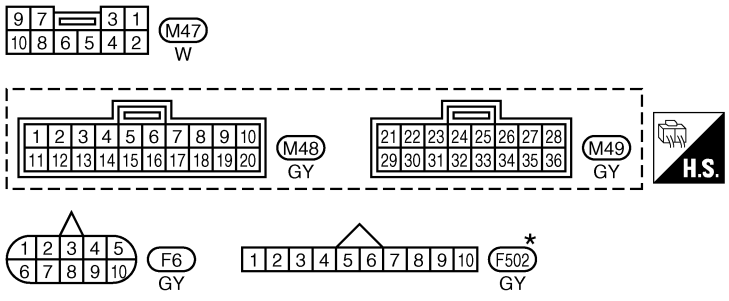
A/T position is displayed in the A/T indicator in the combination meter.

MANUAL MODE

- Unified meter and A/C amp. reads manual mode signal and shift-up/down signal from A/T device, and transmits the signals to TCM with CAN communication.
- TCM processes manual mode signal and shift-up/down signal, and transmits manual mode indicator signal and A/T position indicator signal to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits manual mode indicator signal and A/T position indicator signal to combination meter with the communication line.
- Combination meter displays A/T gear position and manual mode indicator according to A/T position indicator signal and manual mode indication signal.



NOT MANUAL MODE



- Unified meter and A/C amp. reads not manual mode signal from A/T device, and transmits the signals to TCM with CAN communication.
- TCM transmits A/T position indicator signal to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits A/T position indicator signal to combination meter with the communication line.
- Combination meter displays A/T shift position according to A/T position indicator signal.

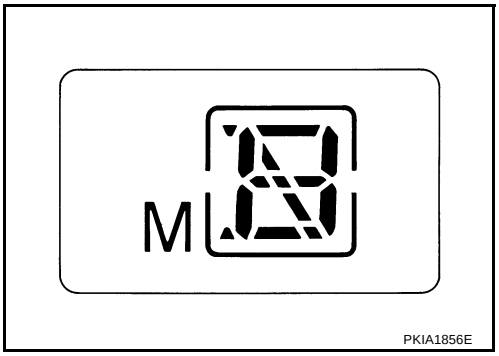
CONSULT-III Function (METER A/C AMP)

NKS0007C

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

A/T Indicator Is Malfunction



NKS0007D

1. CHECK A/T INDICATOR SEGMENTS

Perform self-diagnosis mode of combination meter. Refer to DI-15, "OPERATION PROCEDURE" .

Are all segments displayed?

YES >> GO TO 2.
NO >> Replace combination meter.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>>GO TO 3.
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

3. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Use “DATA MONITOR” of “METER A/C AMP” on CONSULT-III. Confirm each indication on the monitor when shifting the selector lever.

CONSULT-II display	Selector lever position	Status
AT-M IND	Manual mode range	ON
	Except for manual mode range	OFF
AT-M GEAR	Manual mode range (shift up or down)	5–1
	Except for manual mode range	1
P RANGE IND	P range	ON
	Except for P range	OFF
R RANGE IND	R range	ON
	Except for R range	OFF
N RANGE IND	N range position	ON
	Except for N range	OFF
D RANGE IND	D range position	ON
	Except for D range	OFF

OK or NG

OK >> Replace combination meter.
NG >> GO TO 4.

4. CHECK TCM (CONSULT-III)

Perform TCM self-diagnosis. Refer to AT-84, "CONSULT-III Function (TRANSMISSION)" .

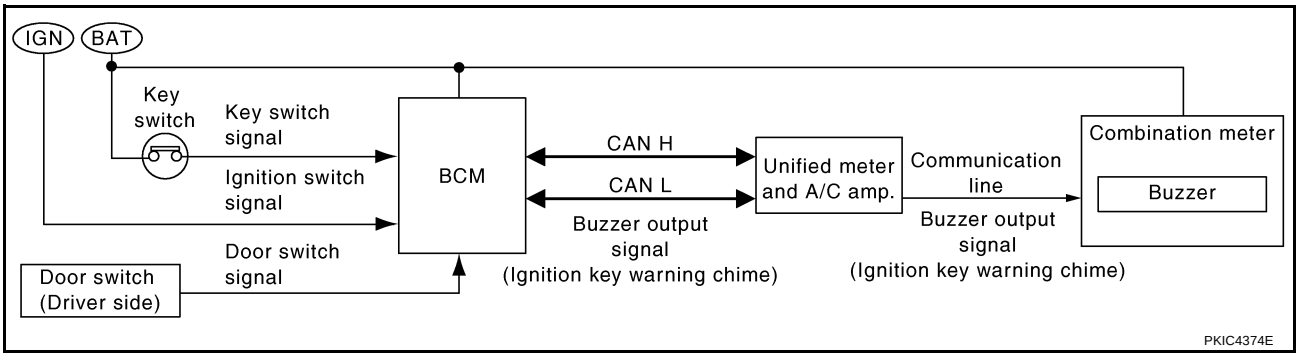
Self-diagnostic results

No malfunction detected>>Replace unified meter and A/C amp.
Malfunction detected>>Check applicable parts, and repair or replace corresponding parts.

WARNING CHIME

PFP:24814

System Description

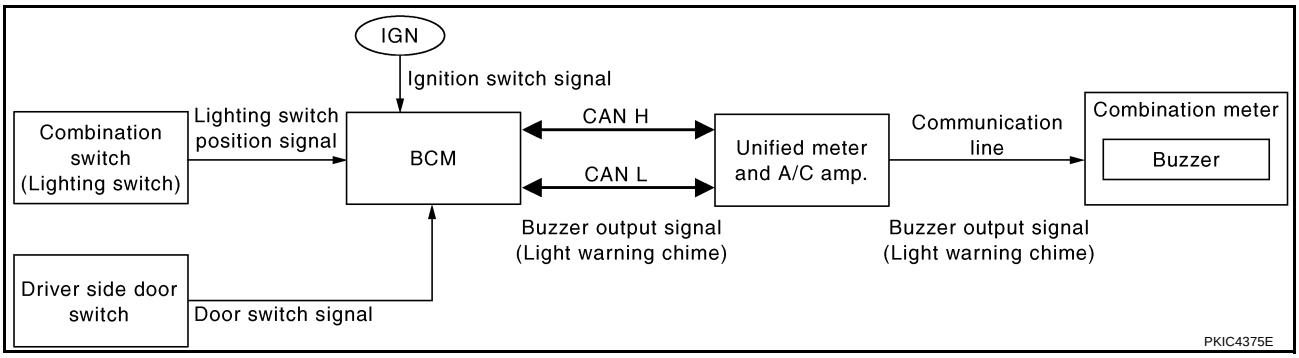


NKS00266

- The buzzer for warning chime system is installed in the combination meter.
- The buzzer sounds when the combination meter receives buzzer output signal from each unit through unified meter and A/C amp.

IGNITION KEY WARNING CHIME

With the key inserted into the key switch, and the ignition switch in OFF or ACC position, when driver's door is open, the ignition key warning chime sounds.

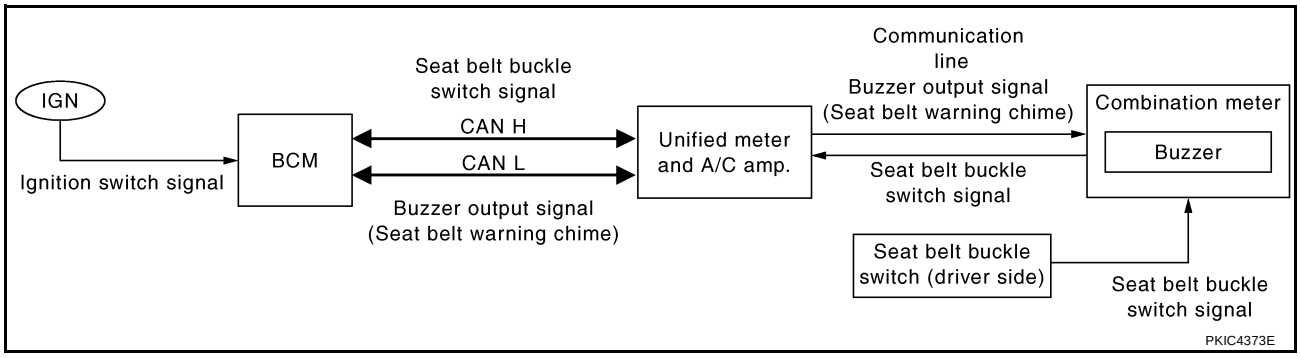


- BCM detects key inserted into the key switch, ignition switch in OFF or ACC position, and driver side door switch ON. And then, BCM transmits buzzer output signal (ignition key warning chime) to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits buzzer output signal (ignition key warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (ignition key warning chime), it sounds the buzzer.

LIGHT WARNING CHIME

With ignition switch in OFF or ACC position, drivers door open, and lighting switch in 1ST or 2ND position, the light warning chime will sounds.

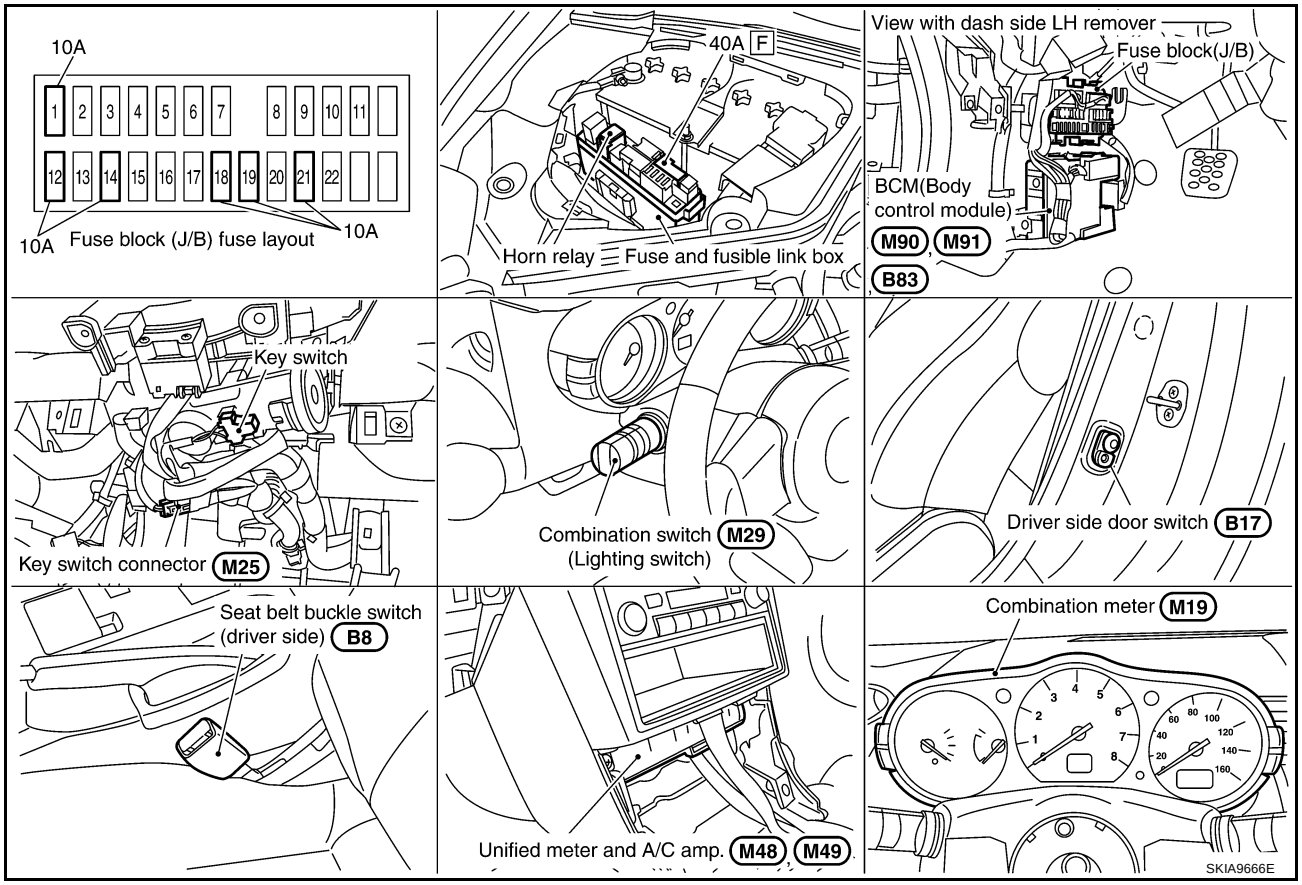
- BCM detects ignition switch in OFF or ACC position, driver side door switch ON, and lighting switch in 1ST or 2ND position. And then, BCM transmits buzzer output signal (light warning chime) to unified meter and A/C amp. with CAN communication line.
- Unified meter and A/C amp. transmits buzzer output signal (light warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (light warning chime), it sounds the buzzer.



NOTE:

For further details of combination switch, refer to LT-87, "Combination Switch Reading Function" .

SEAT BELT WARNING CHIME



With ignition switch turned ON and driver seat belt unfastened, seat belt warning chime sounds for approximately 6 seconds.

- Combination meter reads a ON/OFF signal from seat belt buckle switch, and transmits seat belt buckle switch signal to unified meter and A/C amp. with communication line.
- BCM receives seat belt buckle switch signal (driver side) from unified meter and A/C amp. with CAN communication line.
- BCM detects ignition switch turned ON and seat belt buckle switch (driver side) ON. And then, BCM transmits buzzer output signal (seat belt warning chime) to unified meter and A/C amp. with CAN communication.
- Unified meter and A/C amp. transmits buzzer output signal (seat belt warning chime) to combination meter with communication line.
- When combination meter receives buzzer output signal (seat belt warning chime), it sounds the buzzer.

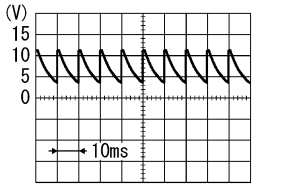
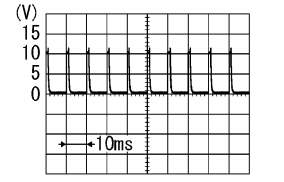
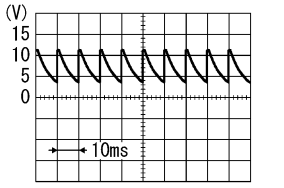
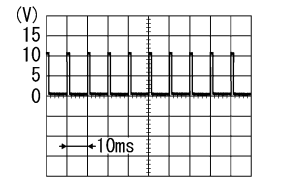
Terminals and Reference Value for BCM

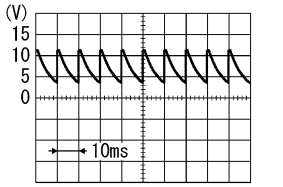


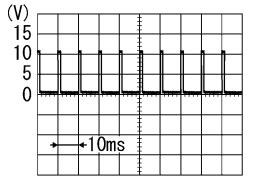


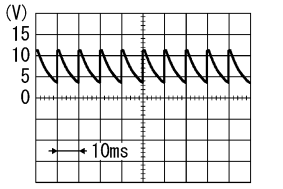


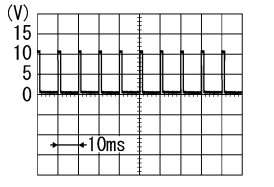


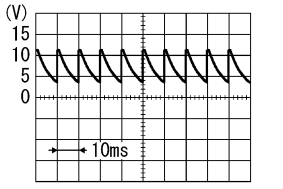
NKS0007K

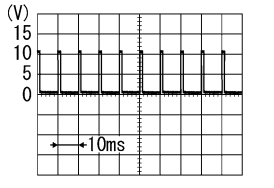










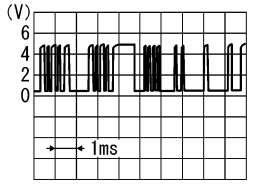


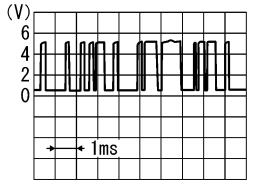
CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to LT-91, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value (Approx.)
			Ignition switch	Operation or condition		
2	GY	Combination switch input 5	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	0 V
					Any of the conditions below ● Lighting switch 1ST ● Lighting switch HIGH beam (Operates only HIGH beam switch) ● Turn signal switch to right	 PKIB4959J 1.0 V
					Lighting switch 2ND	 PKIB4953J 2.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	0 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch) ● Turn signal switch to left	 PKIB4959J 1.0 V
4	PU/W	Combination switch input 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	0 V
					Any of the conditions below ● Front wiper switch MIST ● Front wiper switch INT ● Front wiper switch LO	 PKIB4959J 1.0 V

Terminal No.	Wire color	Signal name	Measuring condition			Reference value (Approx.)
			Ignition switch	Operation or condition		
5	Y/R	Combination switch input 2	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	0 V
					Any of the conditions below ● Front washer switch ● Rear washer switch ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 5 ● Wiper intermittent dial position 6	 PKIB4959J 1.0 V
					Rear wiper switch ON (Wiper intermittent dial position 4)	 PKIB4955J 0.8 v
6	Y/G	Combination switch input 1	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	0 V
					Any of the conditions below ● Front wiper switch HI ● Rear wiper switch INT ● Wiper intermittent dial position 3	 PKIB4959J 1.0 V
					Any of the conditions below ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 2	 PKIB4952J 1.7 V
					Any of the conditions below ● Wiper intermittent dial position 6 ● Wiper intermittent dial position 7	 PKIB4955J 0.8 V





Terminal No.	Wire color	Signal name	Measuring condition			Reference value (Approx.)
			Ignition switch	Operation or condition		
18	B	Remote keyless entry receiver (Ground)	—	—		Refer to WT-20, "Control Unit Input/Output Signal Standard" .
19	Y	Remote keyless entry receiver (Power supply)				
20	L	Remote keyless entry receiver (Signal)				
32	G/B	Combination switch output 5	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	 PKIB4960J 7.2 V
					Any of the conditions below ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 2 ● Wiper intermittent dial position 6 ● Wiper intermittent dial position 7	 PKIB4956J 1.0 V
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	 PKIB4960J 7.2 V
					Any of the conditions below ● Lighting switch 1ST (The same result with lighting switch 2ND) ● Rear wiper switch INT ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 5 ● Wiper intermittent dial position 6	 PKIB4958J 1.2 V

Terminal No.	Wire color	Signal name	Measuring condition			Reference value (Approx.)

24	R/W	Battery power supply	OFF	—	Battery voltage

CONSULT-III Function (METER A/C AMP)

NKS0007O

Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" in “UNIFIED METER AND A/C AMP”.

CONSULT-III Function (BCM)

NKS0007P

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

DIAGNOSTIC ITEMS DESCRIPTION

System	Test item	Diagnosis mode	Description
BCM	BCM	SELF-DIAG RESULT	BCM performs self-diagnosis of CAN communication.
	BUZZER	DATA MONITOR	The input data to the BCM control unit is displayed in real time.
		ACTIVE TEST	Operation of electrical loads can be checked by sending driving signal to them.

DATA MONITOR

Display Item List

Monitor item [Unit]		ALL SIGNALS	SELECTION FROM MENU	Contents
IGN ON SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of ignition switch.
KEY ON SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	[ON/OFF]	X	X	Indicates [ON/OFF] condition of driver side door switch.
LIGHT SW 1ST	[ON/OFF]	X	X	Indicates [ON/OFF] condition of lighting switch.
BUCKLE SW	[ON/OFF]	X	X	Indicates [ON/OFF] condition of seat belt switch.

ACTIVE TEST

Display Item List

Test item	Malfunction is detected when…
LIGHT WARN ALM	This test is able to check light warning chime operation.
IGN KEY WARN ALM	This test is able to check ignition key warning chime operation.
SEAT BELT WARN ALM	This test is able to check seat belt warning chime operation.

SELF-DIAGNOSTIC RESULTS

Display Item List

Display item [Code]	Malfunction is detected when…
CAN communication [U1000]	Malfunction is detected in CAN communication.

NOTE:
If “CAN communication [U1000]” is indicated, after printing the monitor item, go to “CAN system”. Refer to LAN-48, "CAN System Specification Chart" .

Trouble Diagnosis

NKS00267

HOW TO PERFORM TROUBLE DIAGNOSIS

1. Confirm the symptom and customer complaint.
2. Understand the outline of system. Refer to DI-71, "System Description" .
3. Perform the preliminary inspection. Refer to DI-84, "PRELIMINARY INSPECTION" .
4. Referring to trouble diagnosis chart, make sure the cause of the malfunction and repair or replace applicable parts. Refer to DI-84, "Symptom Chart" .
5. Does warning chime system operate normally? If yes, GO TO 6. If no, GO TO 4.
6. INSPECTION END

PRELIMINARY INSPECTION

1. CHECK BCM (CONSULT-III)

Perform self-diagnosis of BCM. Refer to BCS-15, "CONSULT-III Function (BCM)" .

Self-diagnostic results

No malfunction detected>> GO TO 2.
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

2. CHECK UNIFIED METER AND A/C AMP. (CONSULT-III)

Perform self-diagnosis of unified meter and A/C amp. Refer to DI-47, "CONSULT-III Function (METER A/C AMP)" .

Self-diagnostic results

No malfunction detected>> INSPECTION END
Malfunction detected>> Check applicable parts, and repair or replace corresponding parts.

Symptom Chart

NKS00268

Symptom	Diagnoses/Service procedure
All warning chimes do not activate.	Perform the following inspections. 1. DI-84, "Power Supply and Ground Circuit Inspection". 2. DI-85, "Meter Buzzer Circuit Inspection". Replace BCM, found normal function in the above inspections.
Ignition key warning chime does not activate.	Perform the following inspections. 1. DI-87, "Key Switch Signal Inspection". 2. DI-86, "Driver Side Door Switch Signal Inspection". Replace BCM, found normal function in the above inspection.
Light warning chime does not activate.	Perform the following inspections. 1. DI-88, "Lighting Switch Signal Inspection". 2. DI-86, "Driver Side Door Switch Signal Inspection". Replace BCM, found normal function in the above inspection.
Seat belt warning chime does not activate.	Perform DI-88, "Seat Belt Buckle Switch (Driver Side) Signal Inspection" . Replace BCM, found normal function in the above inspection.

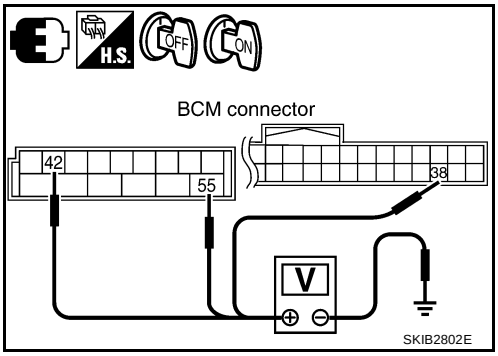
Power Supply and Ground Circuit Inspection

NKS00269

1. CHECK FUSE AND FUSIBLE LINK

Check for blown BCM fuse and fusible link.

Unit	Power source	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START	1



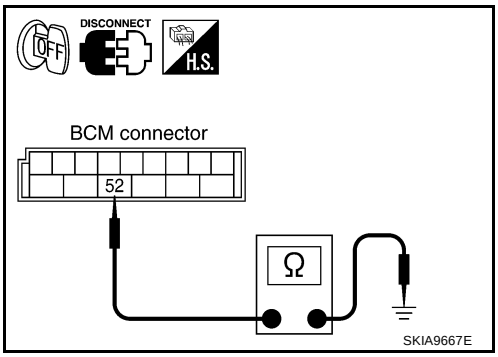
OK or NG

OK >> GO TO 2.
NG >> Be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position	
(+)		(–)	OFF	ON
Connector	Terminal (Wire color)			
M91	42	Ground	Battery voltage	Battery voltage
	55			
M90	38		0 V	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness between BCM and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector M91 terminal 52 and ground.

52 – Ground : Continuity should exist.

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

Meter Buzzer Circuit Inspection

NKS0026F

1. CHECK OPERATION OF METER BUZZER

1. Select “BUZZER” of “BCM” on CONSULT-III.
2. Perform “LIGHT WARN ALM”, “IGN KEY WARN ALM” or “SEAT BELT WARN ALM” of “ACTIVE TEST”.

Does meter buzzer beep?

YES >> GO TO 3.
NO >> GO TO 2.

2. CHECK UNIFIED METER AND A/C AMP. INPUT SIGNAL

1. Select “METER A/C AMP” on CONSULT-III.
2. With “DATA MONITOR”, confirm “BUZZER” under the condition of buzzer input. (Seat belt warning chime, turn signal lamp operate, etc.)

“BUZZER”
Under the condition of buzzer input : ON
Except above : OFF

OK or NG

OK >> Replace combination meter.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

3. CHECK BATTERY POWER SUPPLY OF COMBINATION METER

Check battery power supply of combination meter. Refer to DI-17, "Power Supply and Ground Circuit Inspection" in combination meter.

OK or NG

OK >> GO TO 4.
NG >> Repair battery power supply circuit of combination meter.

4. CHECK BATTERY POWER SUPPLY OF UNIFIED METER AND A/C AMP.

Check battery power supply of unified meter and A/C amp. Refer to DI-49, "Power Supply and Ground Circuit Inspection" in unified meter and A/C amp.

OK or NG

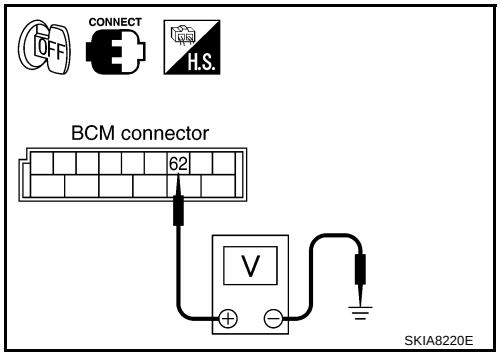
OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair battery power supply circuit of unified meter and A/C amp.

Driver Side Door Switch Signal Inspection

NKS0026A

1. CHECK BCM INPUT SIGNAL

With CONSULT-III



1. Select “BCM”.
2. With “DATA MONITOR” of “BUZZER”, confirm “DOOR SW-DR” when the driver side door is operated.

“DOOR SW-DR”
When driver side door is opened : ON
When driver side door is closed : OFF

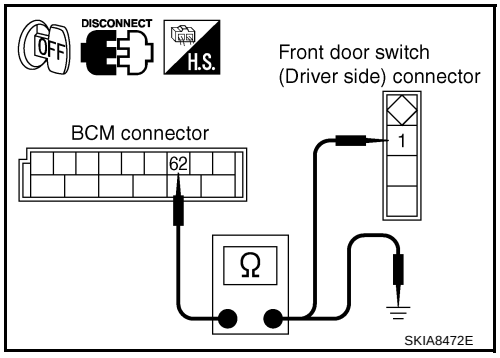
Without CONSULT-III

Check voltage between BCM harness connector B83 terminal 62 and ground.

62 – Ground
When driver side door is opened : Approx. 0 V
When driver side door is closed : Approx. 5 V

OK or NG

OK >> INSPECTION END
NG >> GO TO 2.



2. CHECK DRIVER SIDE DOOR SWITCH CIRCUIT

1. Disconnect BCM connector and driver side door switch connector.
2. Check continuity between BCM harness connector B83 terminal 62 and driver side door switch harness connector B17 terminal 1.

62 – 1 : Continuity should exist.

3. Check continuity between BCM harness connector B4 terminal 62 (W) and ground.

62 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK DRIVER SIDE DOOR SWITCH

Check driver side door switch. Refer to DI-90, "DRIVER SIDE DOOR SWITCH" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Replace driver side door switch.

Key Switch Signal Inspection

NKS0026B

1. CHECK FUSE

Check if the key switch 10A fuse [No. 21, located in the fuse block (J/B)] is blown.

OK or NG

OK >> GO TO 2.
NG >> Be sure to repair the cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK BCM INPUT SIGNAL

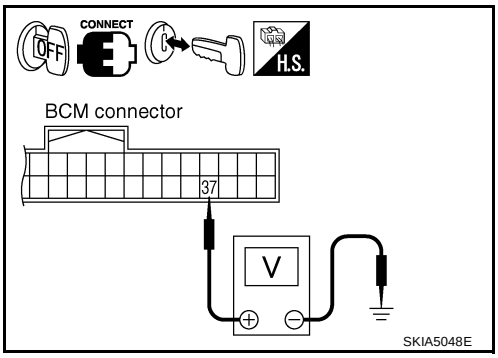
With CONSULT-III

1. Select “BCM”.
2. With “DATA MONITOR” of “BUZZER”, confirm “KEY ON SW” when the key switch is operated.

“KEY ON SW”

When key is inserted to ignition key cylinder : ON

When key is removed from ignition key cylinder : OFF



Without CONSULT-III

Check voltage between BCM harness connector M90 terminal 37 and ground.

37 – Ground

When key is inserted to ignition key cylinder : Approx. 12 V

When key is removed from ignition key cylinder : Approx. 0 V

OK or NG

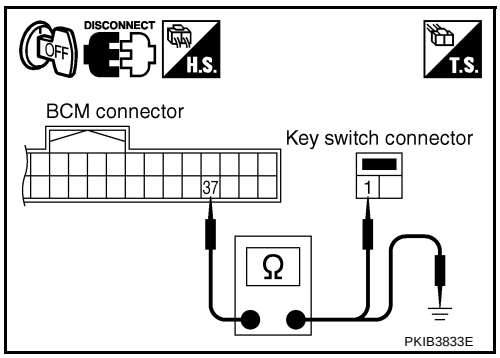
OK >> INSPECTION END
NG >> GO TO 3.

3. CHECK KEY SWITCH

Check continuity between key switch. Refer to DI-90, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace key switch.



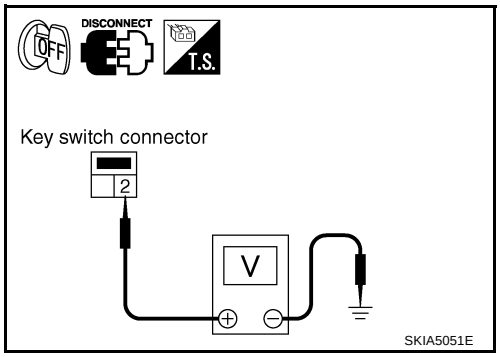
4. CHECK KEY SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M90 terminal 37 and key switch harness connector M25 terminal 1.

37 – 1 : Continuity should exist.

3. Check continuity between BCM harness connector M90 terminal 37 and ground.

37 – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

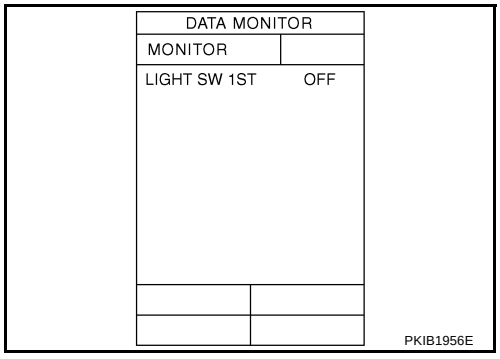
5. CHECK KEY SWITCH POWER SUPPLY CIRCUIT

Check voltage between key switch harness connector M25 terminal 2 and ground.

2 – Ground : Battery voltage

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check continuity between key switch and fuse.



Lighting Switch Signal Inspection

NKS0026C

1. CHECK BCM INPUT SIGNAL

1. Select “BCM” on CONSULT-III.
2. With “DATA MONITOR” of “BUZZER”, confirm “LIGHT SW 1ST” when the lighting switch is operated.

“LIGHT SW 1ST”
Lighting switch (1st position) : ON
Lighting switch (OFF) : OFF

OK or NG

OK >> INSPECTION END
NG >> Check lighting switch. Refer to LT-92, "Combination Switch Inspection" .

Seat Belt Buckle Switch (Driver Side) Signal Inspection

NKS0026D

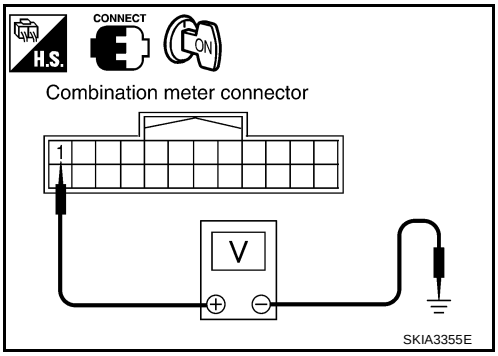
1. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) SIGNAL INPUT (BCM)

1. Select “BCM” on CONSULT-III.
2. With “DATA MONITOR” of “BUZZER”, confirm “BUCKLE SW” when the seat belt buckle switch (driver side) is operated.

“BUCKLE SW”
When seat belt is fastened : OFF
When seat belt is unfastened : ON

OK or NG

OK >> INSPECTION END
NG >> GO TO 2.



2. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) SIGNAL INPUT (COMBINATION METER)

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector M19 terminal 1 and ground.

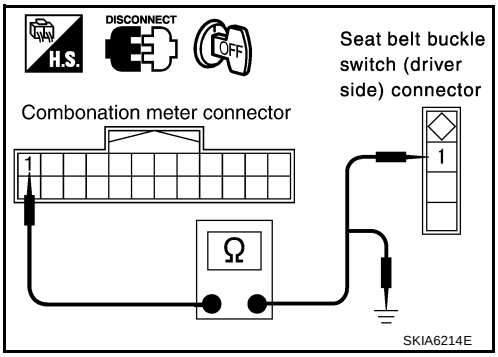
1 – Ground

When seat belt is fastened : Approx. 12 V

When seat belt is unfastened : Approx. 0 V

OK or NG

OK >> Replace combination meter.
NG >> GO TO 3.



3. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and seat belt buckle switch (driver side) connector.
3. Check continuity between combination meter harness connector M19 terminal 1 and seat belt buckle switch (driver side) harness connector B8 terminal 1.

1 – 1 : Continuity should exist.

4. Check continuity between combination meter harness connector M19 terminal 1 and ground.

1 – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

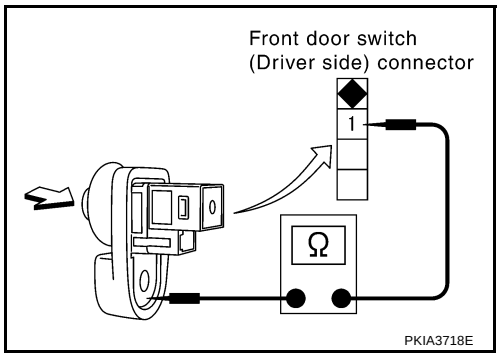
4. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check seat belt buckle switch (driver side). Refer to DI-90, "SEAT BELT BUCKLE SWITCH (DRIVER SIDE)" .

OK or NG

OK >> Check seat belt buckle switch (driver side) ground circuit.
NG >> Replace seat belt buckle switch (driver side).

Component Inspection



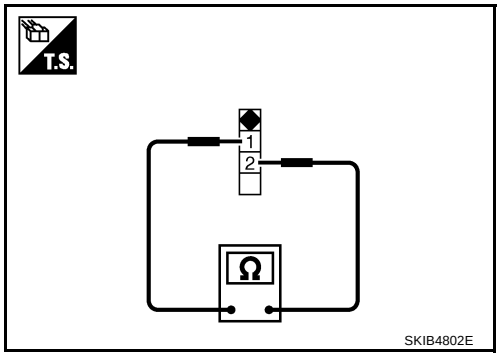
NKS0026E

DRIVER SIDE DOOR SWITCH

Check continuity between terminal 1 and door switch case ground.

1 – Door switch case ground

When driver side door switch is released	**: Continuity should exist.**
When driver side door switch is pressed	**: Continuity should not exist.**

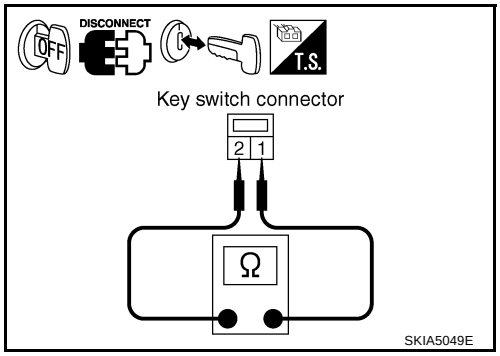


SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check continuity between terminals 1 and 2.

1 – 2

When seat belt (driver side) is fastened	**: Continuity should not exist.**
When seat belt (driver side) is unfastened	**: Continuity should exist.**



KEY SWITCH

Check continuity between key switch terminals 1 and 2.

1 – 2

When key is inserted to ignition key cylinder	**: Continuity should exist.**
When key is removed from ignition key cylinder	**: Continuity should not exist.**

CAN COMMUNICATION

PFP:23710

System Description

NKS001M6

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

NKS001M7

Refer to LAN-48, "CAN System Specification Chart" in “LAN SYSTEM”.

INDEX FOR DTC

PFP:00024

DTC No. Index

NBS00027

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the trouble diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

INDEX FOR DTC

DTC*1		Items (CONSULT-III screen terms)	Reference page
CONSULT-III GST*2	ECM*3		
P2A00	2A00	A/F SENSOR1 (B1)	EC-659
P2A03	2A03	A/F SENSOR1 (B2)	EC-659

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: The troubleshooting for this DTC needs CONSULT-III.

Alphabetical Index

NBS00028

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION" .**

*1: 1st trip DTC No. is the same as DTC No.

*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: The troubleshooting for this DTC needs CONSULT-III.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

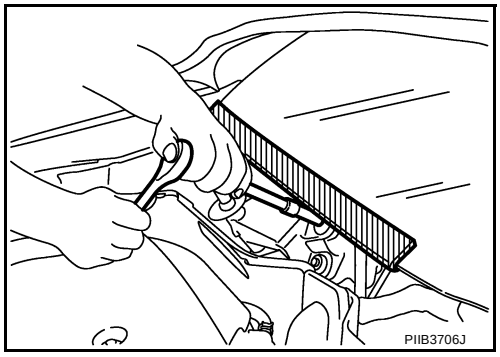
NBS00029

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NBS0002A

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

NBS006TI

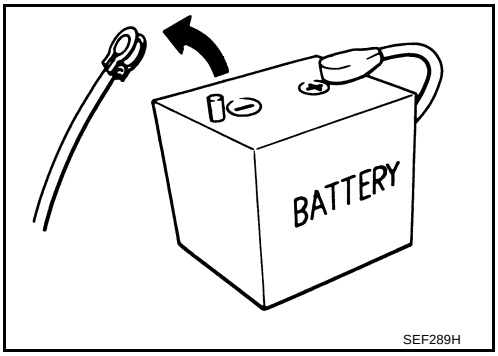
When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

On Board Diagnostic (OBD) System of Engine and A/T

NBS0002B

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

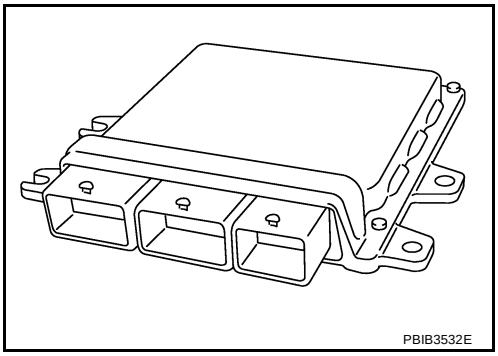
CAUTION:



- **Be sure to turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MIL to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG-76, "HARNESS CONNECTOR" .**
- **Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MIL to light up due to the short circuit.**

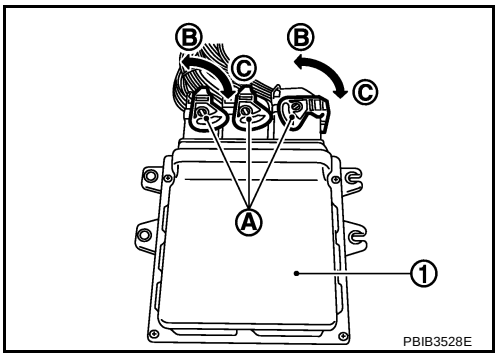
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to the malfunction of the EVAP system or fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.**

Precaution



NBS0002C

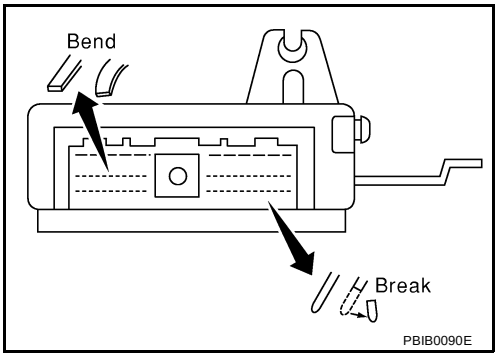
- **Always use a 12 volt battery as power source.**
- **Do not attempt to disconnect battery cables while engine is running.**
- **Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect battery ground cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned OFF.**
- **Before removing parts, turn ignition switch OFF and then disconnect battery ground cable.**



SEF289H

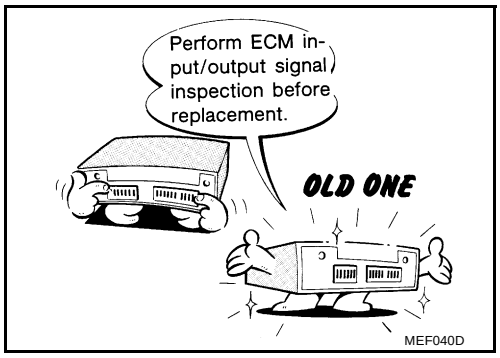
- **Do not disassemble ECM.**
- **If a battery cable is disconnected, the memory will return to the ECM value.**
  The ECM will now start to self-control at its initial value. Engine operation can vary slightly when the terminal is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.
- **If the battery is disconnected, the following emission related diagnostic information will be lost within 24 hours.**
  - **Diagnostic trouble codes**
  - **1st trip diagnostic trouble codes**
  - **Freeze frame data**
  - **1st freeze frame data**
  - **System readiness test (SRT) codes**
  - **Test values**

PBIB3532E



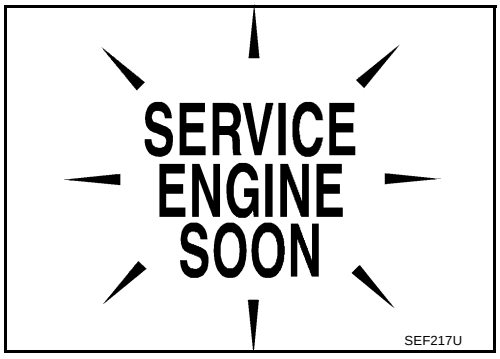
- **When connecting ECM harness connector (A), fasten (B) it securely with a lever as far as it will go as shown in the figure.**

  1 : ECM
  C : Loosen

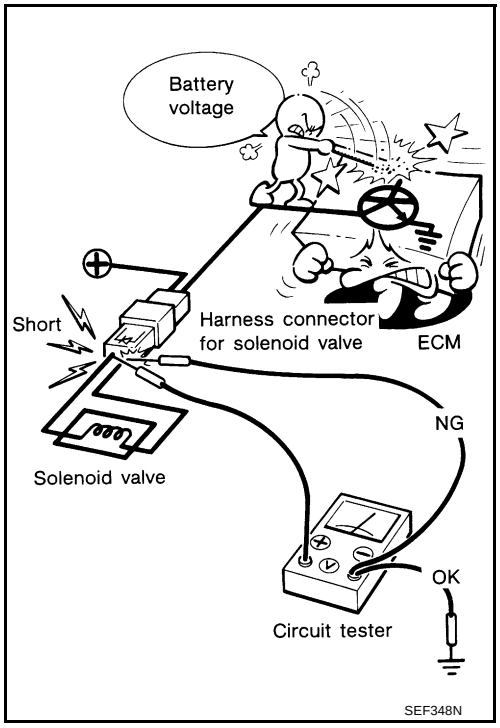


PBIB3528E

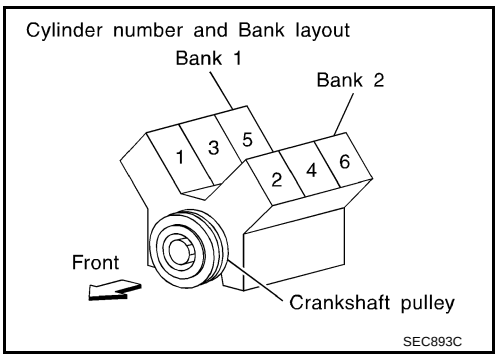
- **When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).**
  Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- **Securely connect ECM harness connectors.**
  A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.



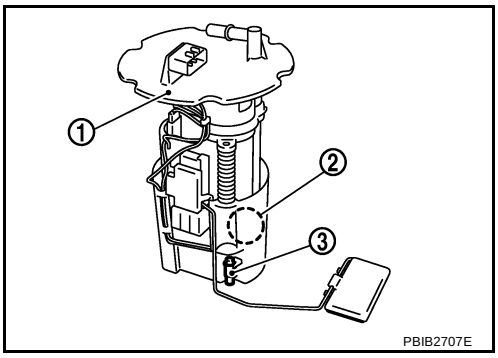
PBIB0090E



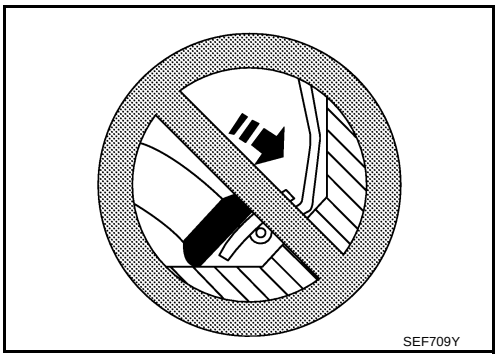
- Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.
- Keep engine control system parts and harness dry.
- Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to EC-103, "ECM Terminals and Reference Value".
- Handle mass air flow sensor carefully to avoid damage.
- Do not clean mass air flow sensor with any type of detergent.
- Do not disassemble electric throttle control actuator.
- Even a slight leak in the air intake system can cause serious incidents.
- Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).



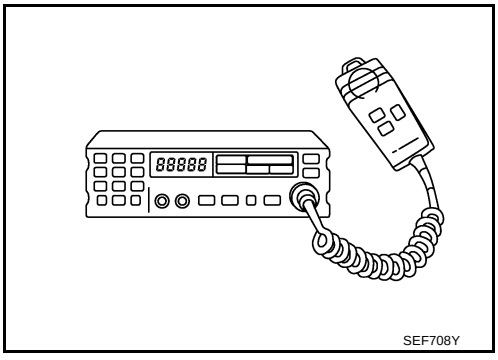
- After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Overall Function Check.
  The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Overall Function Check should be a good result if the repair is completed.



- When measuring ECM signals with a circuit tester, never allow the two tester probes to contact.
  Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.



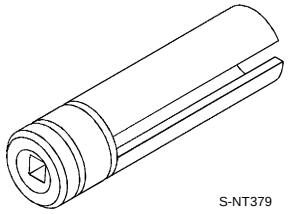
- **B1 indicates the bank 1, B2 indicates the bank 2 as shown in the figure.**

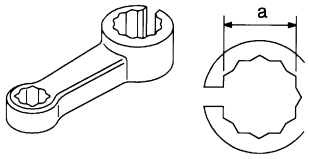


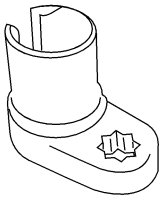
- **Do not operate fuel pump when there is no fuel in lines.**
  - 1 : Fuel level sensor unit and fuel pump
  - 2 : Fuel pressure regulator
  - 3 : Fuel tank temperature sensor
- **Tighten fuel hose clamps to the specified torque.**

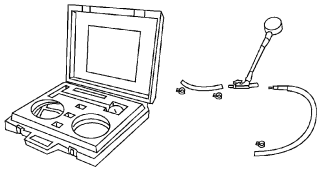
- **Do not depress accelerator pedal when starting.**
- **Immediately after starting, do not rev up engine unnecessarily.**
- **Do not rev up engine just prior to shutdown.**

- **When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.**
  - **Keep the antenna as far as possible from the electronic control units.**
  - **Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls. Do not let them run parallel for a long distance.**
  - **Adjust the antenna and feeder line so that the standing-wave radio can be kept smaller.**
  - **Be sure to ground the radio to vehicle body.**





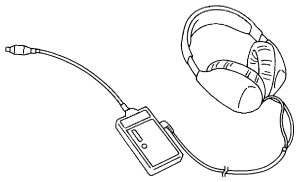


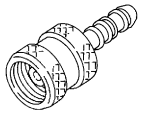


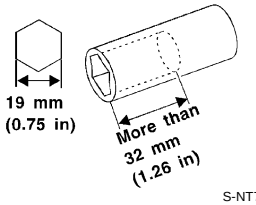
PREPARATION

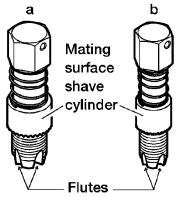
PFP:00002

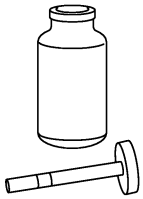
Special Service Tools











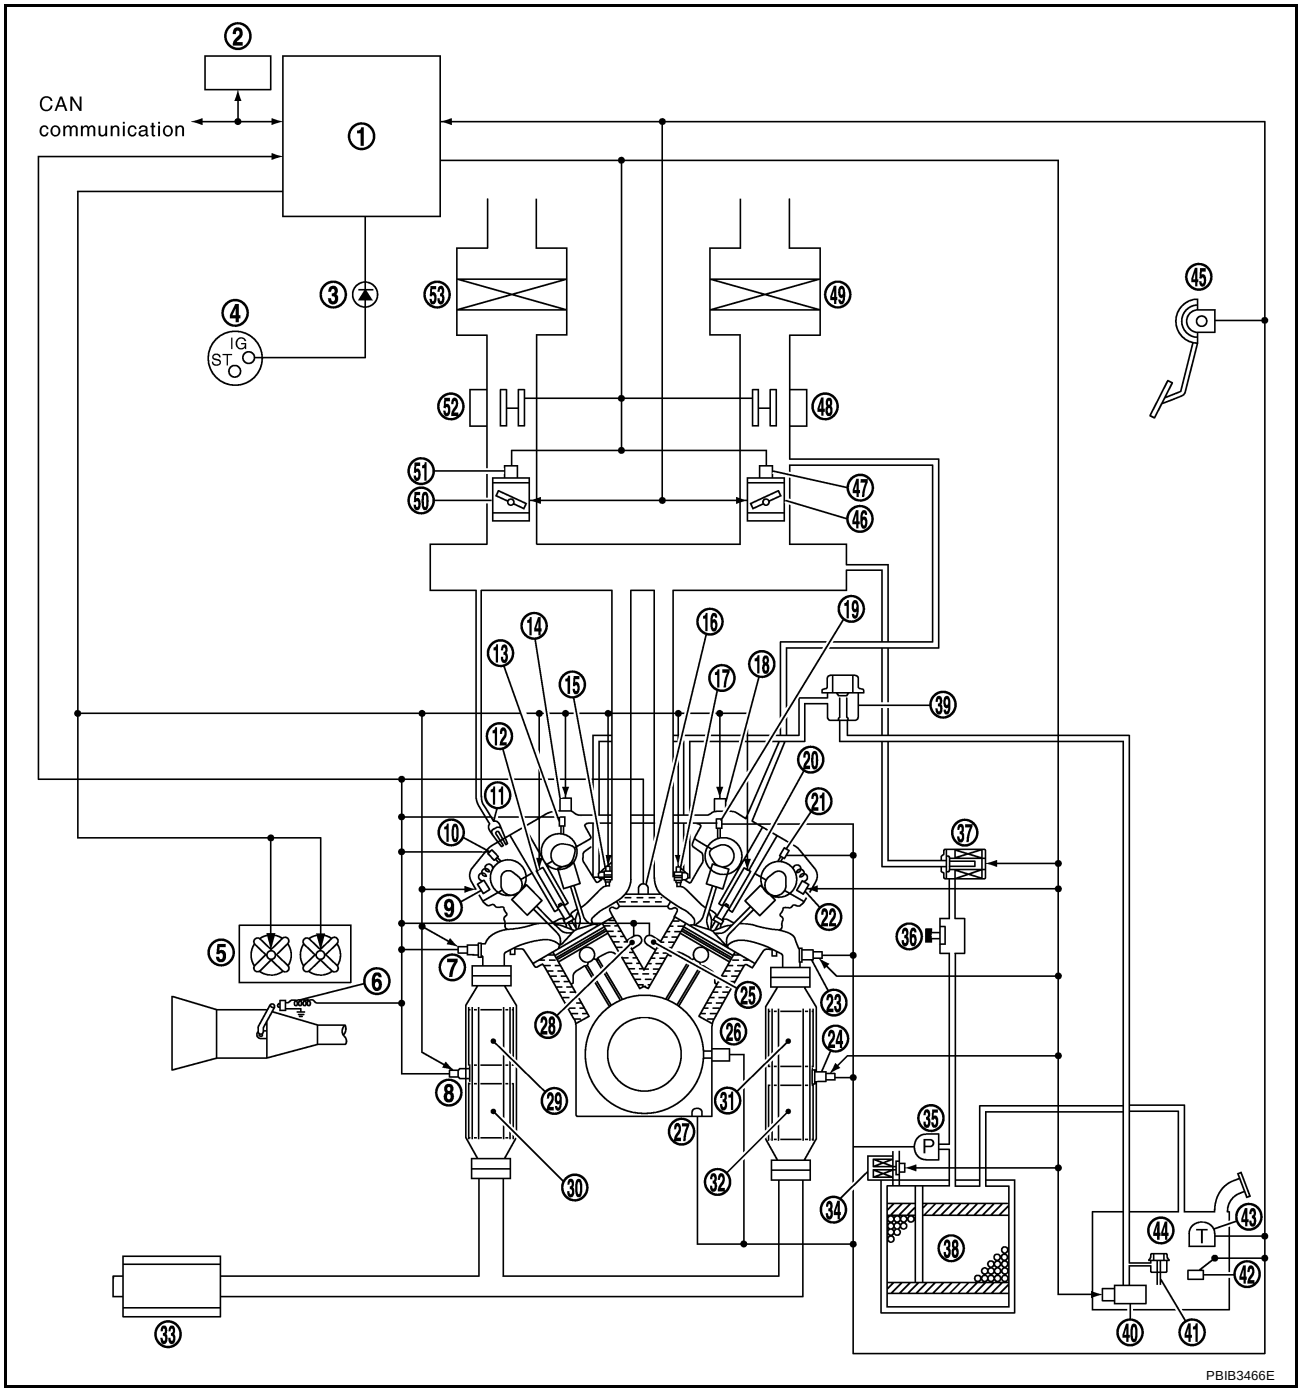
NBS0002E

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
KV10117100 (J-36471-A) Heated oxygen sensor wrench	 S-NT379	Loosening or tightening heated oxygen sensor with 22 mm (0.87 in) hexagon nut
KV10114400 (J-38365) Heated oxygen sensor wrench	 S-NT636	Loosening or tightening heated oxygen sensor **a: 22 mm (0.87 in)**
(J-44626) Air fuel ratio (A/F) sensor wrench	 LEM054	Loosening or tightening air fuel ratio (A/F) sensor 1
(J-44321) Fuel pressure gauge kit	 LEC642	Checking fuel pressure

Commercial Service Tools

NBS0002F



Tool name (Kent-Moore No.)		Description
Leak detector i.e.: (J-41416)	 S-NT703	Locating the EVAP leak
EVAP service port adapter i.e.: (J-41413-OBD)	 S-NT704	Applying positive pressure through EVAP service port
Fuel filler cap adapter i.e.: (MLR-8382)	 S-NT815	Checking fuel tank vacuum relief valve opening pressure
Socket wrench	 S-NT705	Removing and installing engine coolant temperature sensor
Oxygen sensor thread cleaner i.e.: (J-43897-18) (J-43897-12)	 AEM488	Reconditioning the exhaust system threads before installing a new oxygen sensor. Use with anti-seize lubricant shown below. **a: 18 mm diameter with pitch 1.5 mm for Zirconia Oxygen Sensor** **b: 12 mm diameter with pitch 1.25 mm for Titania Oxygen Sensor**
Anti-seize lubricant i.e.: (Permatex™ 133AR or equivalent meeting MIL specification MIL-A-907)	 S-NT779	Lubricating oxygen sensor thread cleaning tool when reconditioning exhaust system threads.

Heated oxygen sensor 2*1	Density of oxygen in exhaust gas		
Air conditioner switch	Air conditioner operation*2		
Wheel sensor	Vehicle speed*2		

*1: This sensor is not used to control the engine system under normal conditions.
*2: This signal is sent to the ECM through CAN communication line.
*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

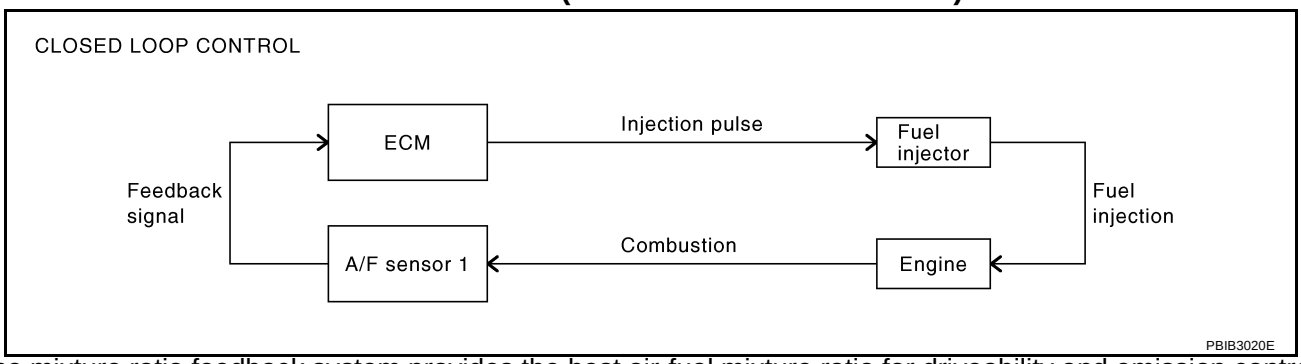
SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined by input signals (for engine speed and intake air) from both the crankshaft position sensor and the mass air flow sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

<Fuel increase>



- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation

- When selector lever is changed from N to D (A/T models)
- High-load, high-speed operation

<Fuel decrease>

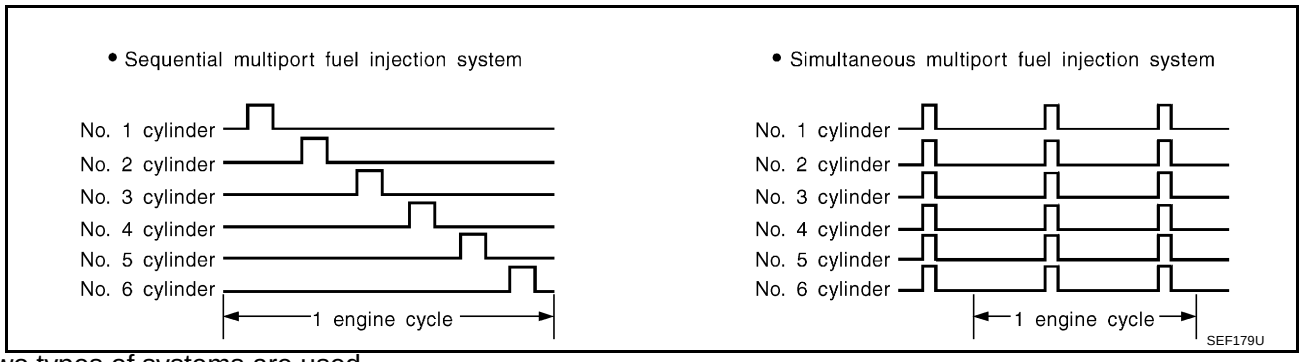
- During deceleration
- During high engine speed operation

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)

The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst 1 can then better reduce CO, HC and NOx emissions. This system uses air fuel ratio (A/F) sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about air fuel ratio (A/F) sensor 1, refer to EC-257, "DTC P0131, P0151 A/F SENSOR 1" . This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).
This stage is referred to as the closed loop control condition.
Heated oxygen sensor 2 is located downstream of the three way catalyst 1. Even if the switching characteristics of air fuel ratio (A/F) sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.



- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of air fuel ratio (A/F) sensor 1 or its circuit
- Insufficient activation of air fuel ratio (A/F) sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D (A/T models)
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from air fuel ratio (A/F) sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as originally designed. Both manufacturing differences (i.e., mass air flow sensor hot wire) and characteristic changes during operation (i.e., fuel injector clogging) directly affect mixture ratio.
Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.
“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.
“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from air fuel ratio (A/F) sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.

"Long term fuel trim" is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

FUEL INJECTION TIMING

Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all six cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.
The six fuel injectors will then receive the signals two times for each engine cycle.
This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration, operation of the engine at excessively high speeds or operation of the vehicle at excessively high speeds.

Electronic Ignition (EI) System

NBS0002J

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Crankshaft position sensor (POS)	Engine speed*2 Piston position	Ignition timing control	Power transistor
Camshaft position sensor (PHASE)			
Mass air flow sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage*2		
Wheel sensor	Vehicle speed*1		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

Firing order: 1-2-3-4-5-6
The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM.
The ECM receives information such as the injection pulse width and camshaft position sensor (PHASE) signal. Computing this information, ignition signals are transmitted to the power transistor.
During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.

- At starting

- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

Fuel Cut Control (at No Load and High Engine Speed)

NBS0002K

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM function	Actuator
Park/neutral position (PNP) switch	Neutral position	Fuel cut control	Fuel injector
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Wheel sensor	Vehicle speed*		

*: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 1,800 rpm under no load (for example, the shift position is neutral and engine speed is over 1,800 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.
Fuel cut will be operated until the engine speed reaches 1,500 rpm, then fuel cut will be cancelled.

NOTE:
This function is different from deceleration control listed under EC-25, "Multiport Fuel Injection (MFI) System" .

AIR CONDITIONING CUT CONTROL

PFP:23710

Input/Output Signal Chart

NBS0002L

Sensor	Input Signal to ECM	ECM function	Actuator

Engine coolant temperature sensor	Engine coolant temperature		
Refrigerant pressure sensor	Refrigerant pressure		
Power steering pressure sensor	Power steering operation		
Wheel sensor	Vehicle speed*1		
Battery	Battery voltage*2		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signal of engine speed and battery voltage.

SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned OFF.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

System Description

NBS006TJ

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When operating power steering during low engine speed or low vehicle speed.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

AUTOMATIC SPEED CONTROL DEVICE (ASCD)

PFP:18930

System Description

NBS0002M

INPUT/OUTPUT SIGNAL CHART

Sensor	Input signal to ECM	ECM function	Actuator
ASCD brake switch	Brake pedal operation	ASCD vehicle speed control	Electric throttle control actuator
Stop lamp switch	Brake pedal operation		
ASCD clutch switch (M/T models)	Clutch pedal operation		
ASCD steering switch	ASCD steering switch operation		
Park/neutral position (PNP) switch	Gear position		
Wheel sensor.	Vehicle speed*		
TCM (A/T models)	Powertrain revolution*		

*: This signal is sent to the ECM through CAN communication line.

BASIC ASCD SYSTEM

Refer to Owner's Manual for ASCD operating instructions.
Automatic Speed Control Device (ASCD) allows a driver to keep vehicle at predetermined constant speed without depressing accelerator pedal. Driver can set vehicle speed in advance between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH).
ECM controls throttle angle of electric throttle control actuator to regulate engine speed.
Operation status of ASCD is indicated by CRUISE indicator and SET indicator in combination meter. If any malfunction occurs in ASCD system, it automatically deactivates control.

NOTE:
Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.

SET OPERATION

Press MAIN switch. (The CRUISE indicator in combination meter illuminates.)
When vehicle speed reaches a desired speed between approximately 40 km/h (25 MPH) and 144 km/h (89 MPH), press SET/COAST switch. (Then SET indicator in combination meter illuminates.)

ACCELERATE OPERATION

If the RESUME/ACCELERATE switch is pressed during cruise control driving, increase the vehicle speed until the switch is released or vehicle speed reaches maximum speed controlled by the system.
And then ASCD will keep the new set speed.

CANCEL OPERATION

When any of following conditions exist, cruise operation will be canceled.

- CANCEL switch is pressed
- More than 2 switches at ASCD steering switch are pressed at the same time (Set speed will be cleared)
- Brake pedal is depressed
- Clutch pedal is depressed or gear position is changed to the neutral position (M/T models)
- Selector lever is changed to N, P, R position (A/T models)
- Vehicle speed decreased to 13 km/h (8 MPH) lower than the set speed
- VDC/TCS system is operated

When the ECM detects any of the following conditions, the ECM will cancel the cruise operation and inform the driver by blinking indicator lamp.

- Engine coolant temperature is slightly higher than the normal operating temperature, CRUISE lamp may blink slowly.
  When the engine coolant temperature decreases to the normal operating temperature, CRUISE lamp will stop blinking and the cruise operation will be able to work by pressing SET/COAST switch or RESUME/ACCELERATE switch.
- Malfunction for some self-diagnoses regarding ASCD control: SET lamp will blink quickly.

If MAIN switch is turned to OFF during ASCD is activated, all of ASCD operations will be canceled and vehicle speed memory will be erased.

COAST OPERATION

When the SET/COAST switch is pressed during cruise control driving, decrease vehicle set speed until the switch is released. And then ASCD will keep the new set speed.

RESUME OPERATION

When the RESUME/ACCELERATE switch is pressed after cancel operation other than pressing MAIN switch is performed, vehicle speed will return to last set speed. To resume vehicle set speed, vehicle condition must meet following conditions.

- Brake pedal is released
- Clutch pedal is released (M/T models)
- A/T selector lever is in other than P and N positions (A/T models)
- Vehicle speed is greater than 40 km/h (25 MPH) and less than 144 km/h (89 MPH)

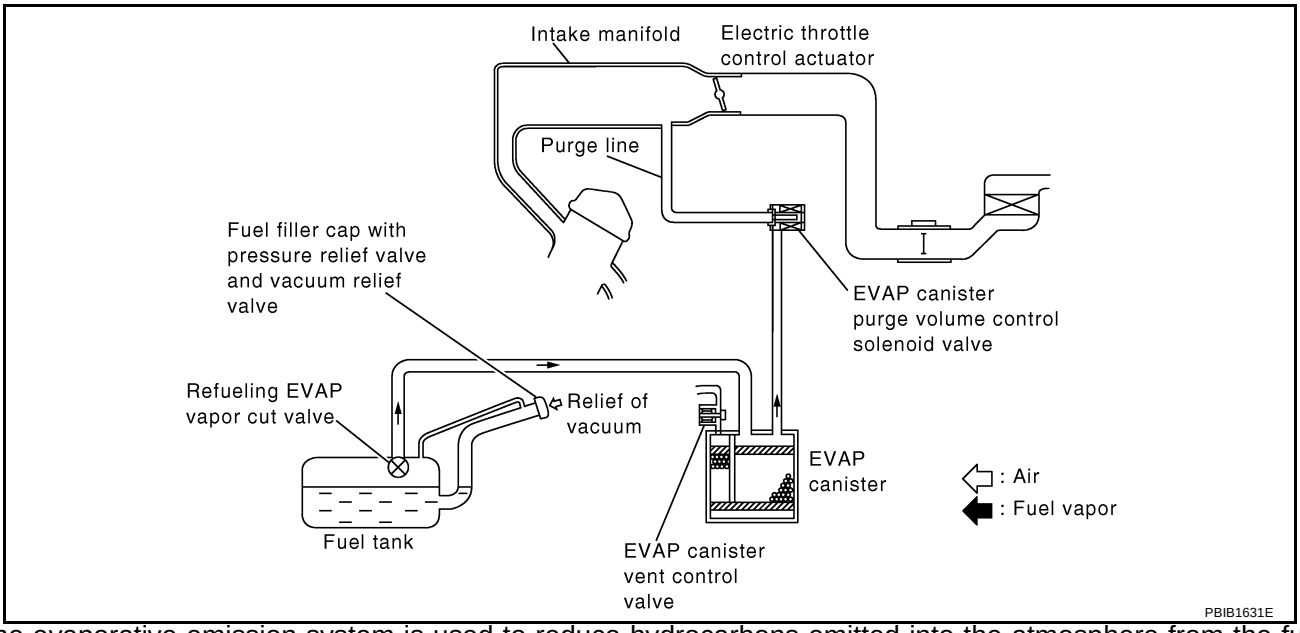
CAN COMMUNICATION

PFP:23710

System Description

NBS0002O

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
Refer to LAN-48, "CAN System Specification Chart" , about CAN communication for detail.



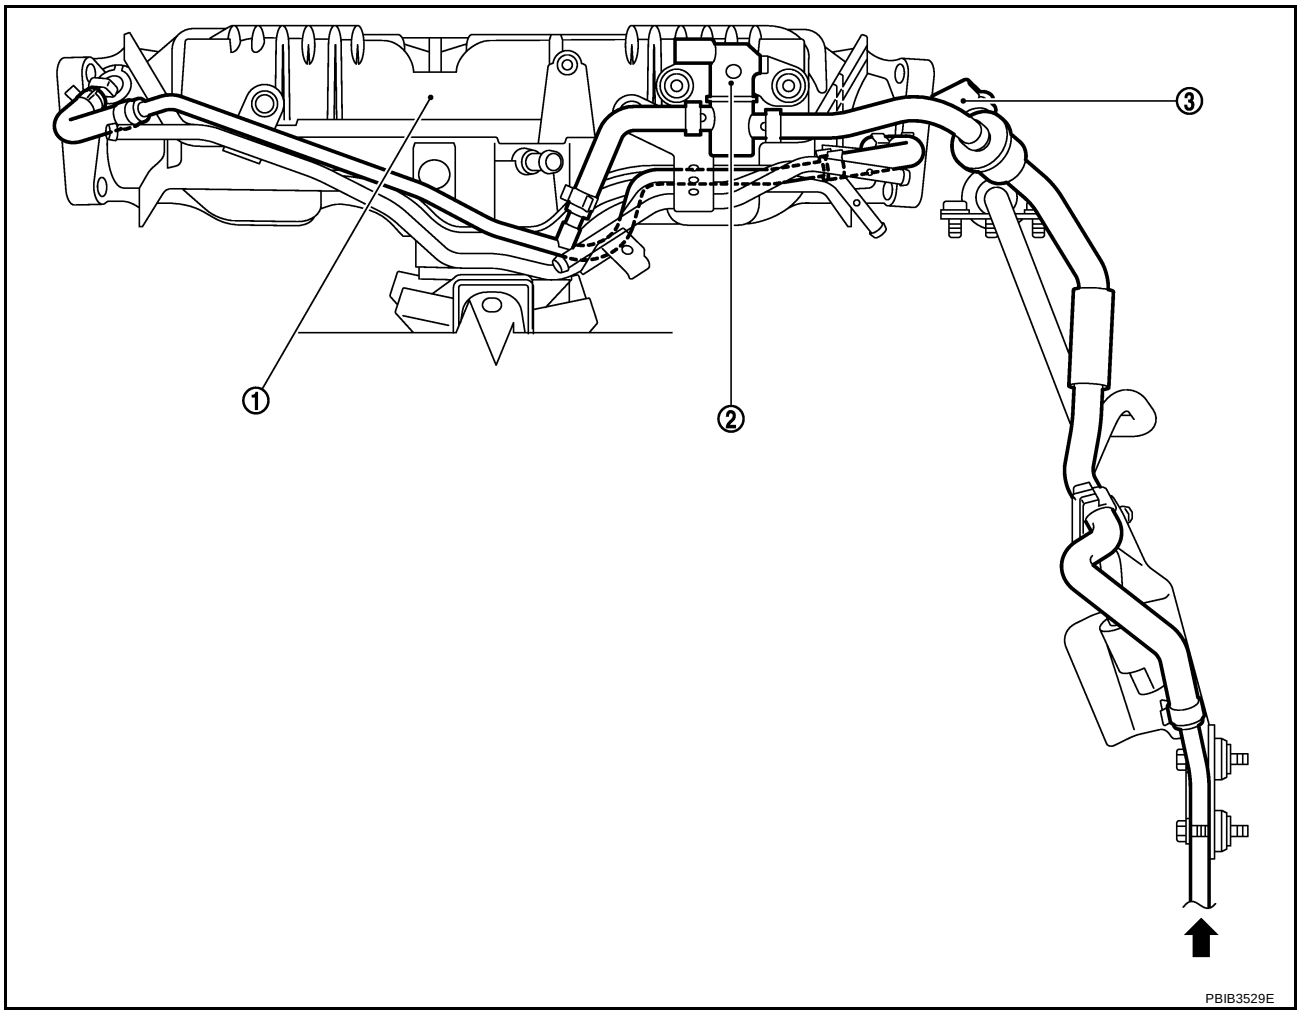
EVAPORATIVE EMISSION SYSTEM

PFP:14950

Description

NBS0002P

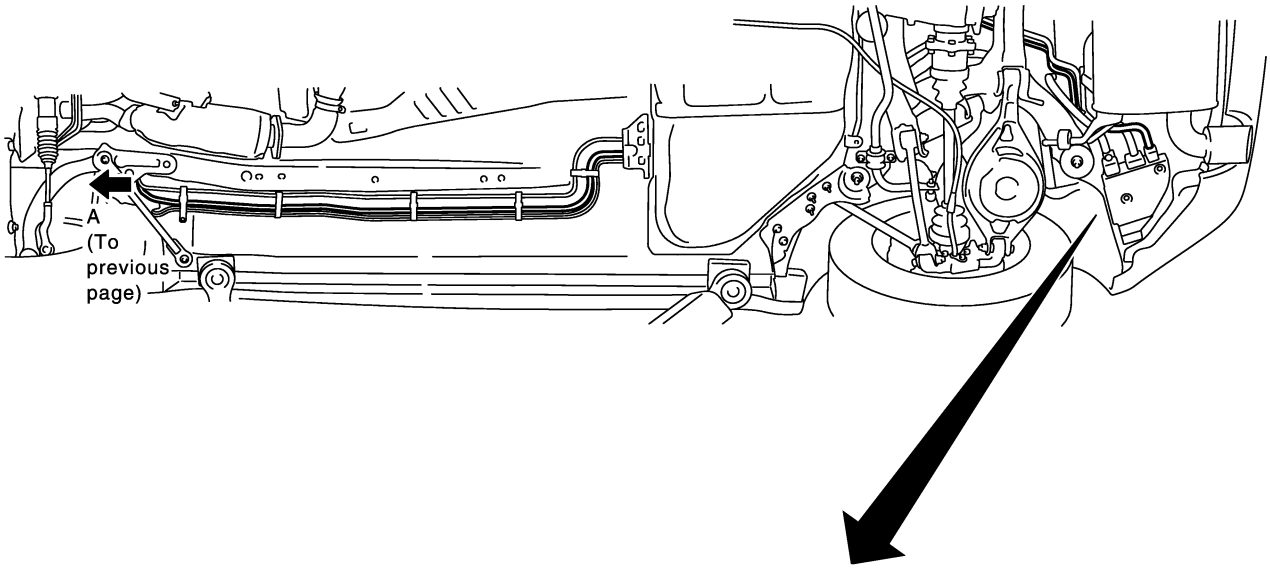
SYSTEM DESCRIPTION



The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.

The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.

The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.



EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

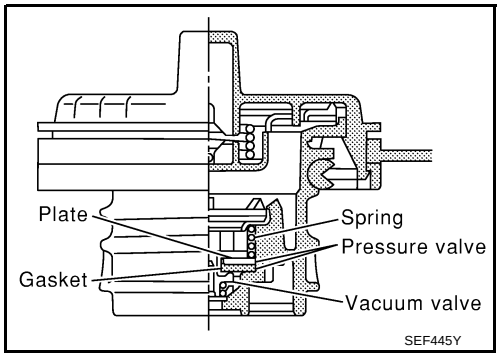
Component Inspection

NBS0002Q

EVAP CANISTER

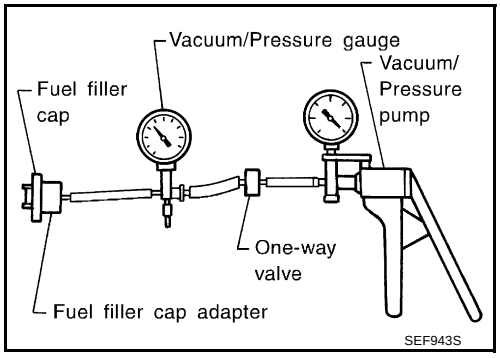


Check EVAP canister as follows:

1. Block port **B** .
2. Blow air into port **A** and check that it flows freely out of port **C** .
3. Release blocked port **B** .
4. Apply vacuum pressure to port **B** and check that vacuum pressure exists at the ports **A** and **C** .
5. Block port **A** and **B** .
6. Apply pressure to port **C** and check that there is no leakage.

FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

1. Wipe clean valve housing.



2. Check valve opening pressure and vacuum.

Pressure: **15.3 - 20.0 kPa (0.156 - 0.204 kg/cm^2 , 2.22 - 2.90 psi)**

Vacuum: **–6.0 to –3.3 kPa (–0.061 to –0.034 kg/cm^2 , –0.87 to –0.48 psi)**

3. If out of specification, replace fuel filler cap as an assembly.

CAUTION:

Use only a genuine fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the MIL may come on.

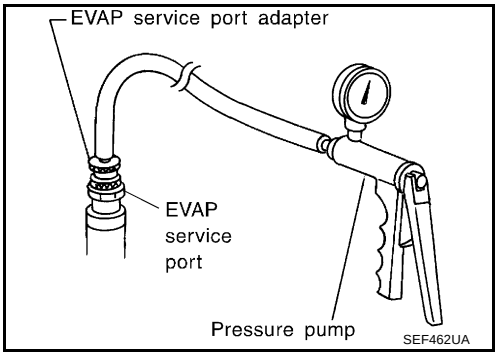
EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-436 .

FUEL TANK TEMPERATURE SENSOR

Refer to EC-347 .

EVAP CANISTER VENT CONTROL VALVE



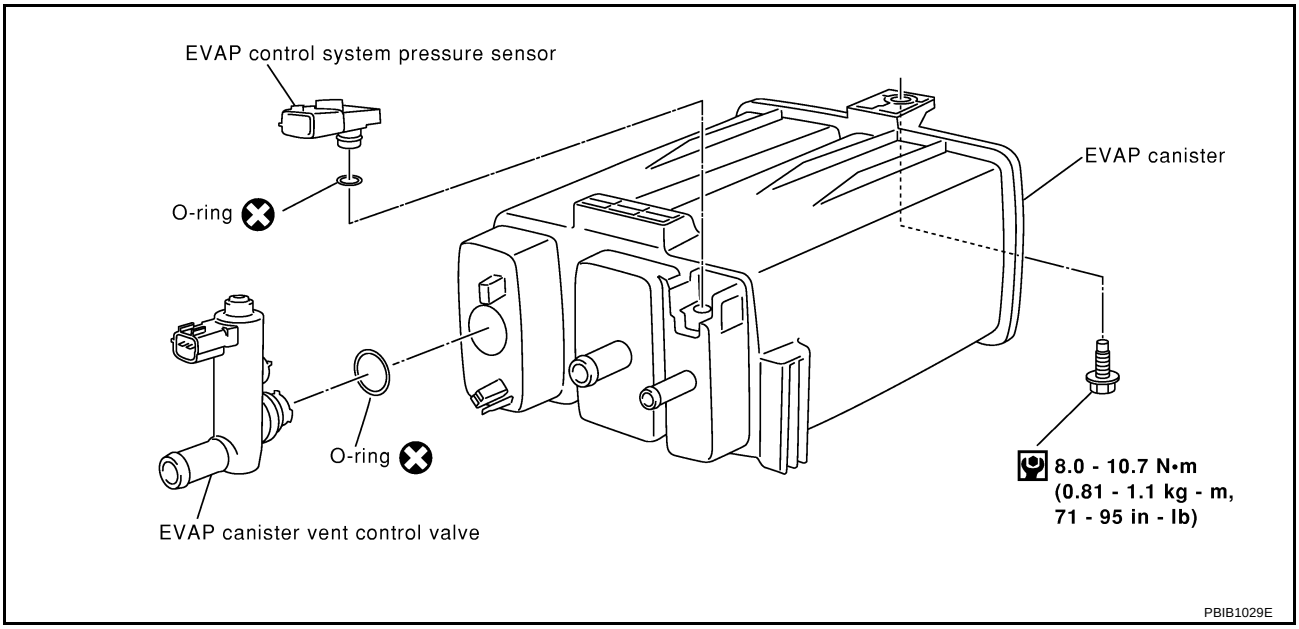
Refer to EC-442 .

EVAP CONTROL SYSTEM PRESSURE SENSOR

Refer to EC-455 .

EVAP SERVICE PORT

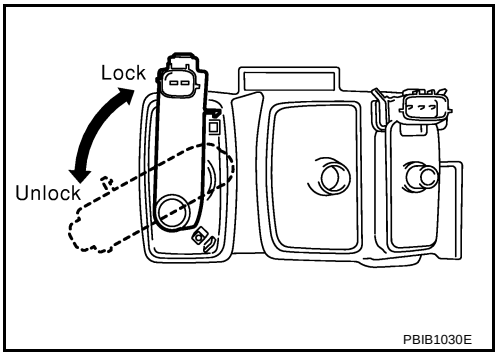
Positive pressure is delivered to the EVAP system through the EVAP service port. If fuel vapor leakage in the EVAP system occurs, use a leak detector to locate the leak.



Removal and Installation

NBS0002R

EVAP CANISTER



Tighten EVAP canister as shown in the figure.

EVAP CANISTER VENT CONTROL VALVE

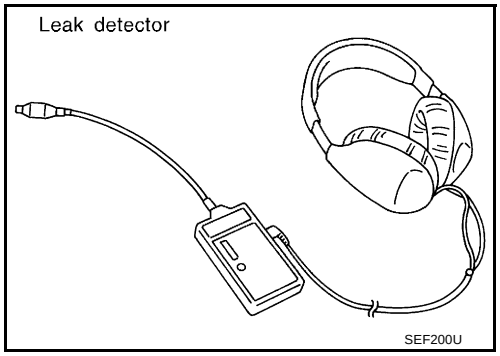
1. Turn EVAP canister vent control valve counterclockwise.
2. Remove the EVAP canister vent control valve.

Always replace O-ring with a new one.

How to Detect Fuel Vapor Leakage

NBS0002S

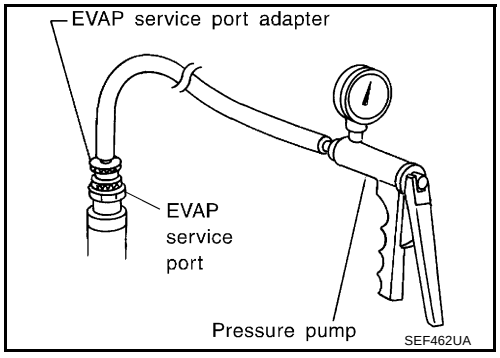
CAUTION:



- **Never use compressed air or a high pressure pump.**
- **Do not exceed 4.12 kPa (0.042 kg/cm^2 , 0.6 psi) of pressure in EVAP system.**

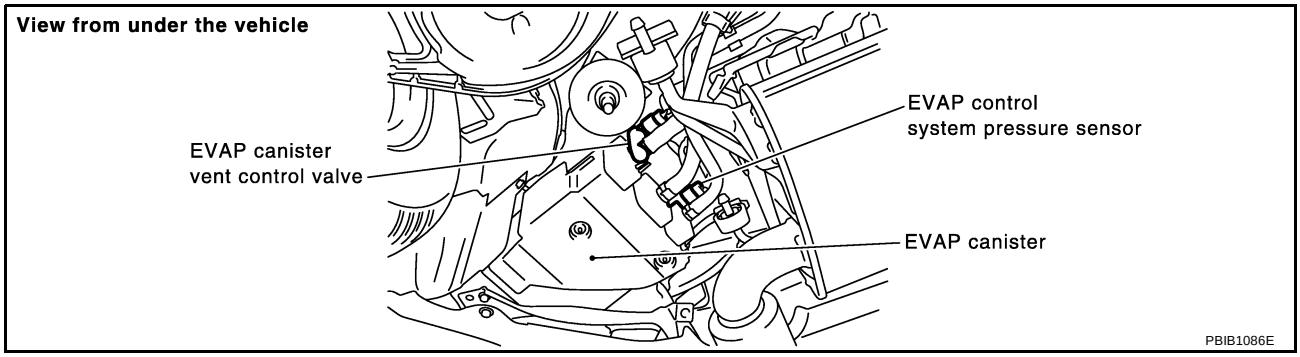
NOTE:

- Do not start engine.
- Improper installation of EVAP service port adapter to the EVAP service port may cause a leak.



WITH CONSULT-III

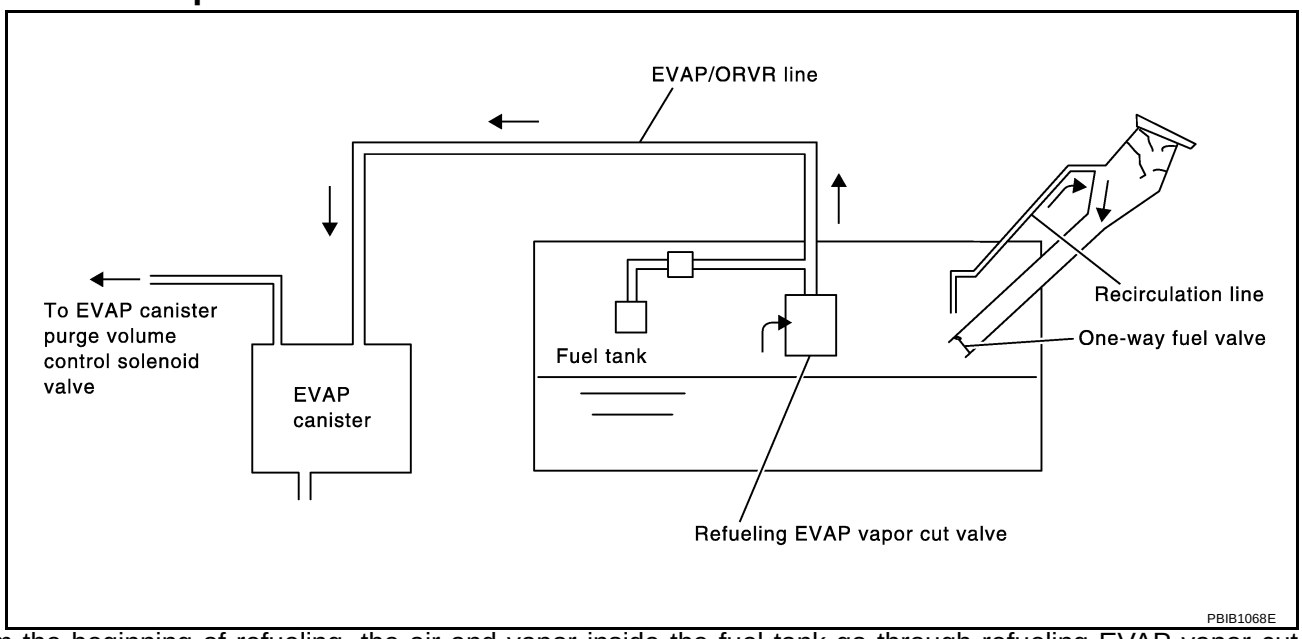
1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump and hose to the EVAP service port adapter.
3. Turn ignition switch ON.
4. Select the “EVAP SYSTEM CLOSE” of “WORK SUPPORT MODE” with CONSULT-III.
5. Touch “START”. A bar graph (Pressure indicating display) will appear on the screen.
6. Apply positive pressure to the EVAP system until the pressure indicator reaches the middle of the bar graph.
7. Remove EVAP service port adapter and hose with pressure pump.
8. Locate the leak using a leak detector. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .



WITHOUT CONSULT-III

1. Attach the EVAP service port adapter securely to the EVAP service port.
2. Also attach the pressure pump with pressure gauge to the EVAP service port adapter.

3. Apply battery voltage between the terminals of EVAP canister vent control valve to make a closed EVAP system.



4. To locate the leak, deliver positive pressure to the EVAP system until pressure gauge points reach 1.38 to 2.76 kPa (0.014 to 0.028 kg/cm^2 , 0.2 to 0.4 psi).
5. Remove EVAP service port adapter and hose with pressure pump.
6. Locate the leak using a leak detector. Refer to EC-34, "EVAPORATIVE EMISSION LINE DRAWING" .

ON BOARD REFUELING VAPOR RECOVERY (ORVR)

PFP:00032

System Description

NBS0002T

From the beginning of refueling, the air and vapor inside the fuel tank go through refueling EVAP vapor cut valve and EVAP/ORVR line to the EVAP canister. The vapor is absorbed by the EVAP canister and the air is released to the atmosphere.

When the refueling has reached the full level of the fuel tank, the refueling EVAP vapor cut valve is closed and refueling is stopped because of auto shut-off. The vapor which was absorbed by the EVAP canister is purged during driving.

WARNING:

When conducting inspections below, be sure to observe the following:

- **Put a “CAUTION: FLAMMABLE” sign in workshop.**
- **Do not smoke while servicing fuel system. Keep open flames and sparks away from work area.**
- **Be sure to furnish the workshop with a CO_2 fire extinguisher.**

CAUTION:

- **Before removing fuel line parts, carry out the following procedures:**
  - **Put drained fuel in an explosion-proof container and put lid on securely.**
  - **Release fuel pressure from fuel line. Refer to EC-79, "FUEL PRESSURE RELEASE" .**
  - **Disconnect battery ground cable.**
- **Always replace O-ring when the fuel gauge retainer is removed.**
- **Do not kink or twist hose and tube when they are installed.**
- **Do not tighten hose and clamps excessively to avoid damaging hoses.**
- **After installation, run engine and check for fuel leaks at connection.**
- **Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically. Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.**

Diagnostic Procedure

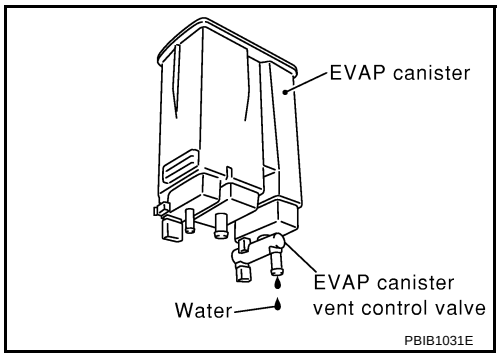
NBS0002U

SYMPTOM: FUEL ODOR FROM EVAP CANISTER IS STRONG.

1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
   The weight should be less than 2.2 kg (4.9 lb).

OK or NG



OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 3.
No >> GO TO 5.

3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

5. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "Component Inspection" .

OK or NG

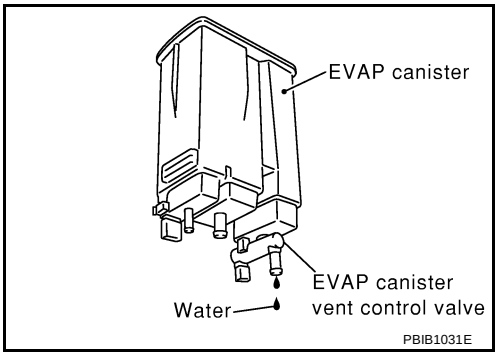
OK >> **INSPECTION END**
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

SYMPTOM: CANNOT REFUEL/FUEL ODOR FROM THE FUEL FILLER OPENING IS STRONG WHILE REFUELING.

1. CHECK EVAP CANISTER

1. Remove EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
2. Weigh the EVAP canister with EVAP canister vent control valve and EVAP control system pressure sensor attached.
   The weight should be less than 2.2 kg (4.9 lb).

OK or NG



OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK IF EVAP CANISTER SATURATED WITH WATER

Does water drain from the EVAP canister?

Yes or No

Yes >> GO TO 3.
No >> GO TO 5.

3. REPLACE EVAP CANISTER

Replace EVAP canister with a new one.

>> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the EVAP hose between EVAP canister and vehicle frame for clogging or poor connection.

>> Repair or replace EVAP hose.

5. CHECK VENT HOSES AND VENT TUBES

Check hoses and tubes between EVAP canister and refueling EVAP vapor cut valve for clogging, kink, looseness and improper connection.

OK or NG

OK >> GO TO 6.
NG >> Repair or replace hoses and tubes.

6. CHECK FILLER NECK TUBE

Check recirculation line for clogging, dents and cracks.

OK or NG

OK >> GO TO 7.
NG >> Replace filler neck tube.

7. CHECK REFUELING EVAP VAPOR CUT VALVE

Refer to EC-42, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace refueling EVAP vapor cut valve with fuel tank.

8. CHECK FUEL FILLER TUBE

Check filler neck tube and hose connected to the fuel tank for clogging, dents and cracks.

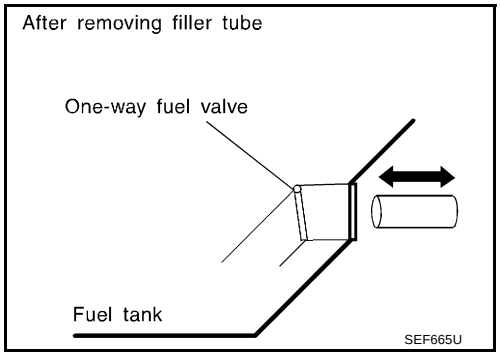
OK or NG

OK >> GO TO 9.
NG >> Replace fuel filler tube.

9. CHECK ONE-WAY FUEL VALVE-I

Check one-way valve for clogging.

OK or NG



OK >> GO TO 10.
NG >> Repair or replace one-way fuel valve with fuel tank.

10. CHECK ONE-WAY FUEL VALVE-II

1. Make sure that fuel is drained from the tank.
2. Remove fuel filler tube and hose.
3. Check one-way fuel valve for operation as follows.
   When a stick is inserted, the valve should open, when removing stick it should close.
   Do not drop any material into the tank.

OK or NG

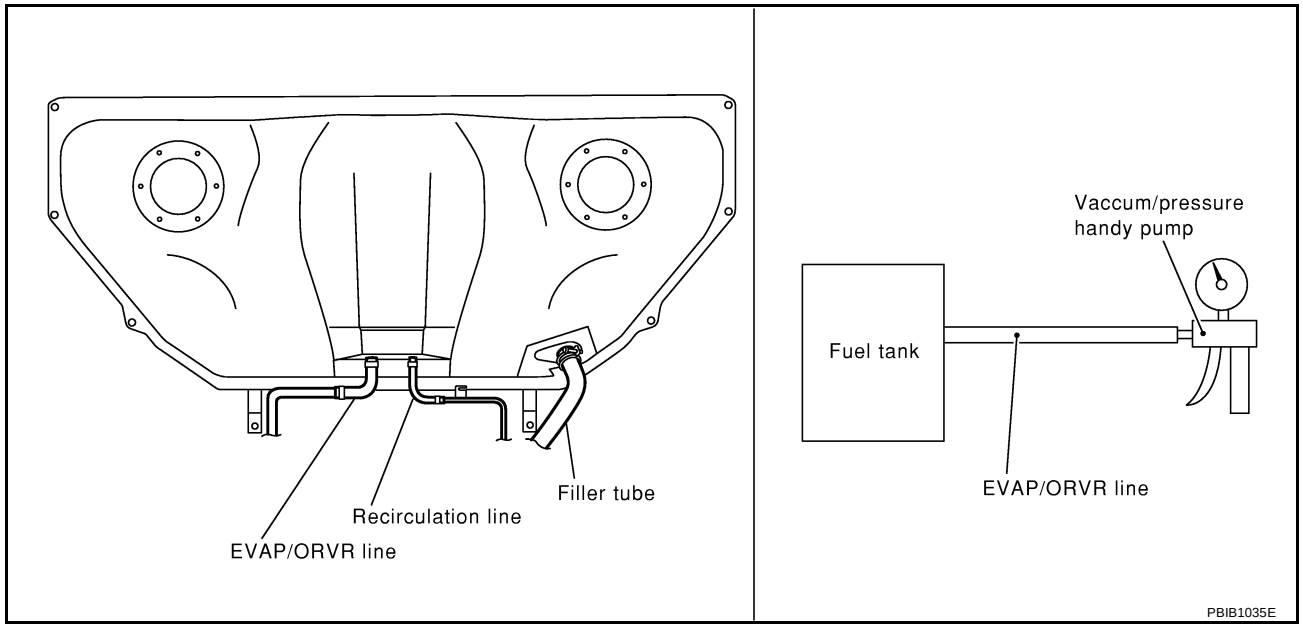
OK >> **INSPECTION END**
NG >> Replace fuel filler tube or replace one-way fuel valve with fuel tank.

Component Inspection

NBS0002V

REFUELING EVAP VAPOR CUT VALVE

With CONSULT-III



1. Remove fuel tank. Refer to FL-10, "FUEL TANK" .
2. Drain fuel from the tank as follows:

a. Remove fuel feed hose located on the fuel gauge retainer.
b. Connect a spare fuel hose, one side to fuel gauge retainer where the hose was removed and the other side to a fuel container.
c. Drain fuel using “FUEL PUMP RELAY” in “ACTIVE TEST” mode with CONSULT-III.

3. Check refueling EVAP vapor cut valve for being stuck to close as follows.
   Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.

a. Connect vacuum pump to hose end.
b. Remove fuel gauge retainer with fuel gauge unit.
   Always replace O-ring with new one.
c. Put fuel tank upside down.

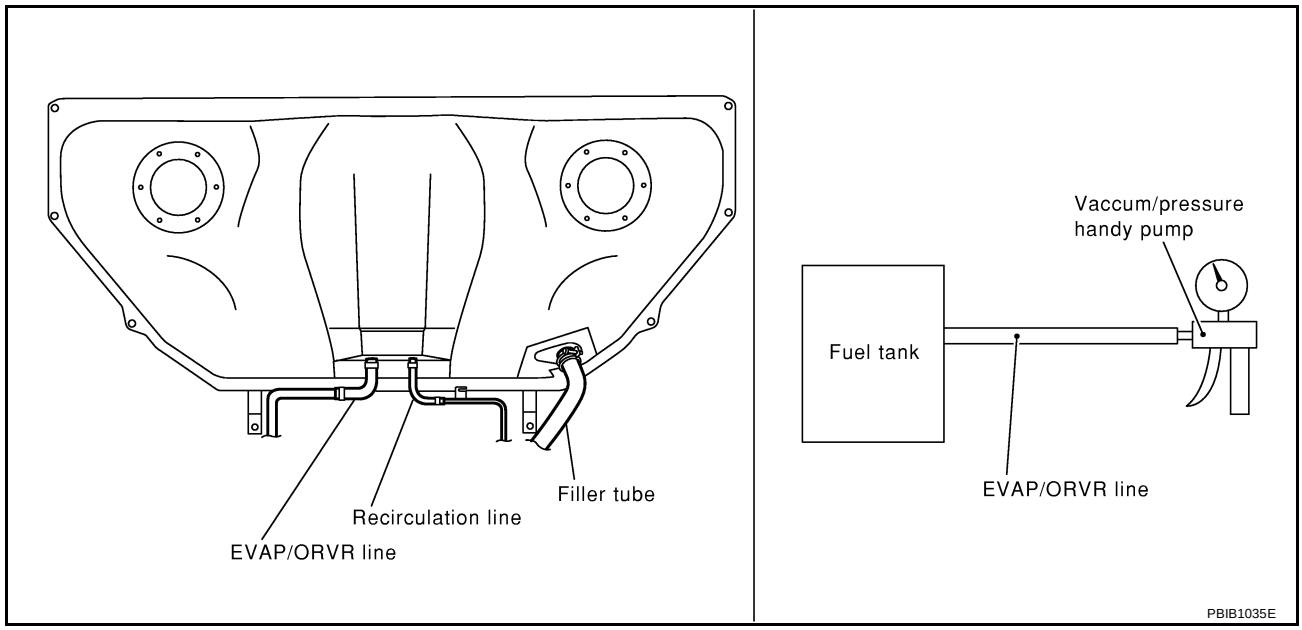
d. Apply vacuum pressure to hose end [–13.3 kPa (–100 mmHg, –3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.

Without CONSULT-III

1. Remove fuel tank. Refer to FL-10, "FUEL TANK" .
2. Drain fuel from the tank as follows:

a. Remove fuel gauge retainer.

b. Drain fuel from the tank using a handy pump into a fuel container.



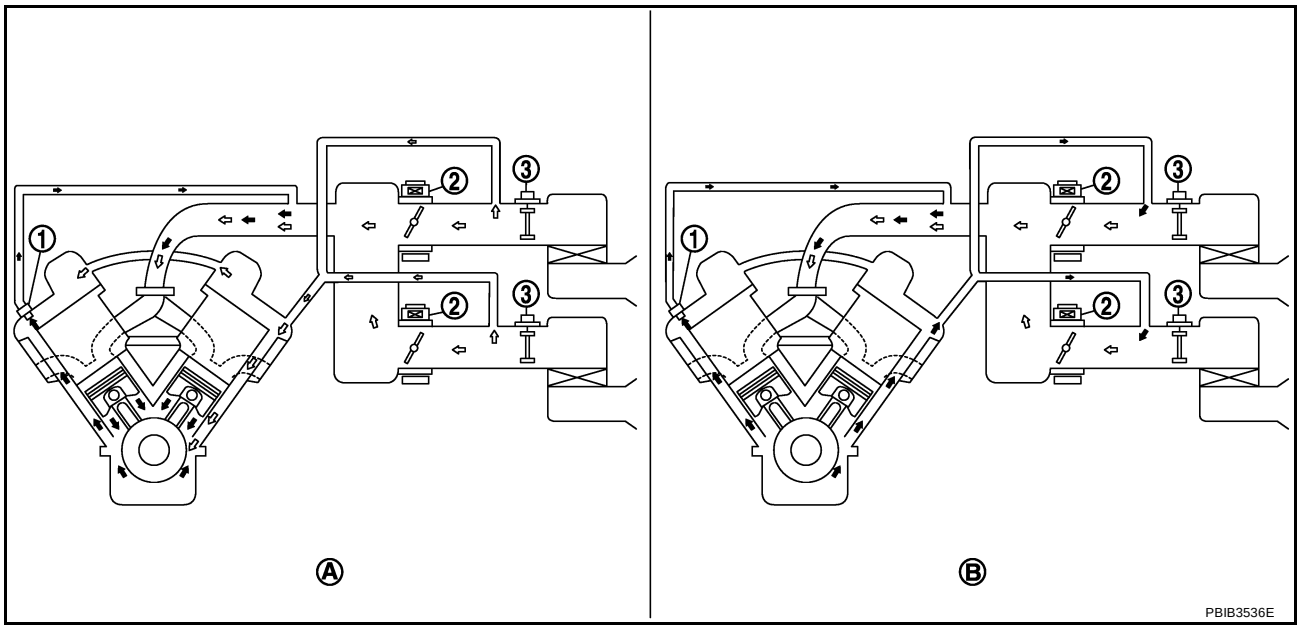
3. Check refueling EVAP vapor cut valve for being stuck to close as follows.
   Blow air into the refueling EVAP vapor cut valve (from the end of EVAP/ORVR line hose), and check that the air flows freely into the tank.
4. Check refueling EVAP vapor cut valve for being stuck to open as follows.

a. Connect vacuum pump to hose end.

b. Remove fuel gauge retainer with fuel gauge unit.
   Always replace O-ring with new one.

c. Put fuel tank upside down.

d. Apply vacuum pressure to hose end [–13.3 kPa (–100 mmHg, –3.94 inHg)] with fuel gauge retainer remaining open and check that the pressure is applicable.



POSITIVE CRANKCASE VENTILATION

PFP:11810

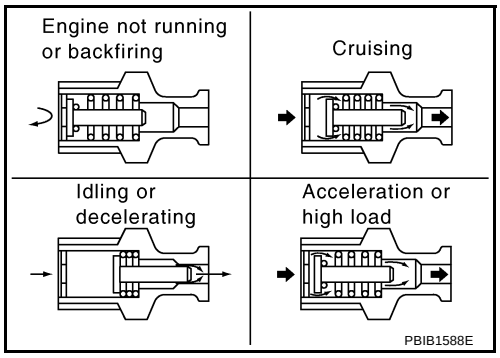
Description

NBS0002W

SYSTEM DESCRIPTION

1. PCV valve
2. Electric throttle control actuator
3. Mass air flow sensor

A. Normal condition
B. Hi-load condition



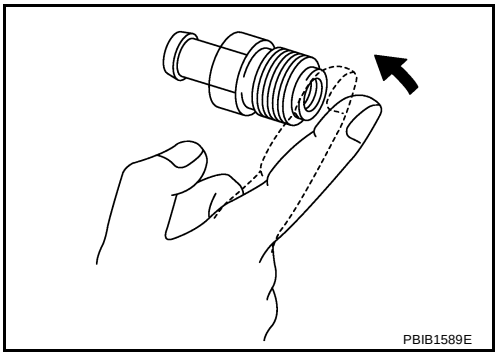
⇦: Fresh air

⬅: Blow-by air

This system returns blow-by gas to the intake manifold.

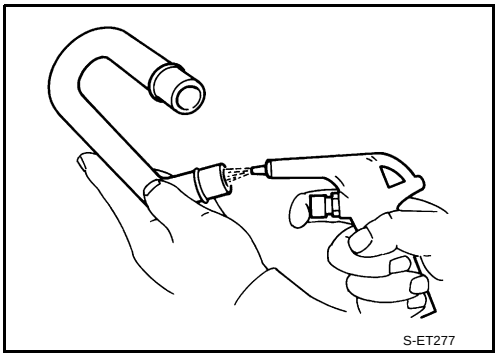
The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.



Component Inspection

NBS0002X



PCV (POSITIVE CRANKCASE VENTILATION) VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.

PCV VALVE VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)

PFP:25386

Description

NBS0002Y

- **If the security indicator lights up with the ignition switch in the ON position or “NATS MALFUNCTION” is displayed on “SELF-DIAG RESULTS” screen, perform self-diagnostic results mode with CONSULT-III using NATS program card. Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .**
- **Confirm no self-diagnostic results of NVIS (NATS) is displayed before touching “ERASE” in “SELF-DIAG RESULTS” mode with CONSULT-III.**
- **When replacing ECM, initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs must be carried out with CONSULT-III using NATS program card.**
  Therefore, be sure to receive all keys from vehicle owner. Regarding the procedures of NVIS (NATS) initialization and all NVIS (NATS) ignition key ID registration, refer to CONSULT-III Operation Manual, IVIS/NVIS.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction

NBS0002Z

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	Diagnostic service
Diagnostic Trouble Code (DTC)	Service $03 of SAE J1979
Freeze Frame data	Service $02 of SAE J1979
System Readiness Test (SRT) code	Service $01 of SAE J1979
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Service $07 of SAE J1979
1st Trip Freeze Frame data	
Test values and Test limits	Service $06 of SAE J1979
Calibration ID	Service $09 of SAE J1979

The above information can be checked using procedures listed in the table below.

×: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT status	SRT code	Test value
CONSULT-III	×	×	×	×	×	×	—
GST	×	×	×	—	×	×	×
ECM	×	×*	—	—	×	—	—

*: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator lamp (MIL) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode.
(Refer to EC-89, "Fail-safe Chart" .)

Two Trip Detection Logic

NBS00030

When a malfunction is detected for the 1st time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MIL will not light up at this stage. <1st trip>
If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MIL lights up. The MIL lights up at the same time when the DTC is stored. <2nd trip> The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MIL, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

Items	MIL				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip displaying	2nd trip displaying	1st trip displaying	2nd trip displaying
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0306 is being detected	×	—	—	—	—	—	×	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0306 is being detected	—	—	×	—	—	×	—	—
One trip detection diagnoses (Refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" .)	—	×	—	—	×	—	—	—
Except above	—	—	—	×	—	×	×	—

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.

Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by SAE J2012.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: SRT code will not be set if the self-diagnostic result is NG.
*5: The troubleshooting for this DTC needs CONSULT-III.
*6: When the fail-safe operations for both self-diagnoses occur, the MIL illuminates.
*7: When the ECM is in the mode of displaying SRT status, MIL may flash. For the details, refer to EC-56, "How to Display SRT Status" .

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic results obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.
If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MIL will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MIL lights up. In other words, the DTC is stored in the ECM memory and the MIL lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MIL during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.
Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
For malfunctions in which 1st trip DTCs are displayed, refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" . These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-III.
1st trip DTC is specified in Service $07 of SAE J1979. 1st trip DTC detection occurs without lighting up the MIL and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.
When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step 2, refer to EC-82, "WORK FLOW" . Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

With CONSULT-III

With GST

CONSULT-III or GST (Generic Scan Tool) Examples: P0340, P0850, P1148, etc.
These DTCs are prescribed by SAE J2012.
(CONSULT-III also displays the malfunctioning component or system.)

No Tools

The number of blinks of the MIL in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0340, 0850, 1148, etc.
These DTCs are controlled by NISSAN.

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-III can identify malfunction status as shown below. Therefore, using CONSULT-III (if available) is recommended.**

A sample of CONSULT-III display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-III. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

If the DTC is being detected currently, the time data will be [0].
If a 1st trip DTC is stored in the ECM, the time data will be [1t].

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, absolute throttle position, base fuel schedule and intake air temperature at the moment a malfunction is detected.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-III or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-III screen, not on the GST. For details, see EC-119, "Freeze Frame Data and 1st Trip Freeze Frame Data" .
Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.
Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Service $01 of SAE J1979.
As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.
If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating “INCMP”, use the information in this Service Manual to set the SRT to “CMPLT”.
In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate “CMPLT” for each application system. Once set as “CMPLT”, the SRT status remains “CMPLT” until the self-diagnosis memory is erased.
Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate “INCMP” for these items.

NOTE:
The SRT will also indicate “INCMP” if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.
If, during the state emissions inspection, the SRT indicates “CMPLT” for all test items, the inspector will continue with the emissions test. However, if the SRT indicates “INCMP” for one or more of the SRT items the vehicle is returned to the customer untested.

NOTE:
If MIL is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates “CMPLT” for all test items. Therefore, it is important to check SRT (“CMPLT”) and DTC (No DTCs) before the inspection.

SRT Item

The table below shows required self-diagnostic items to set the SRT to “CMPLT”.

SRT item (CONSULT-III indication)	Performance Priority*	Required self-diagnostic items to set the SRT to "CMPLT"	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420, P0430
EVAP SYSTEM	1	EVAP control system	P0442
	2	EVAP control system	P0456
	2	EVAP control system purge flow monitoring	P0441
HO2S	2	Air fuel ratio (A/F) sensor 1	P0133, P0153
		Heated oxygen sensor 2	P0139, P0159
		Heated oxygen sensor 2	P0137, P0157
		Heated oxygen sensor 2	P0138, P0158

*: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-III.

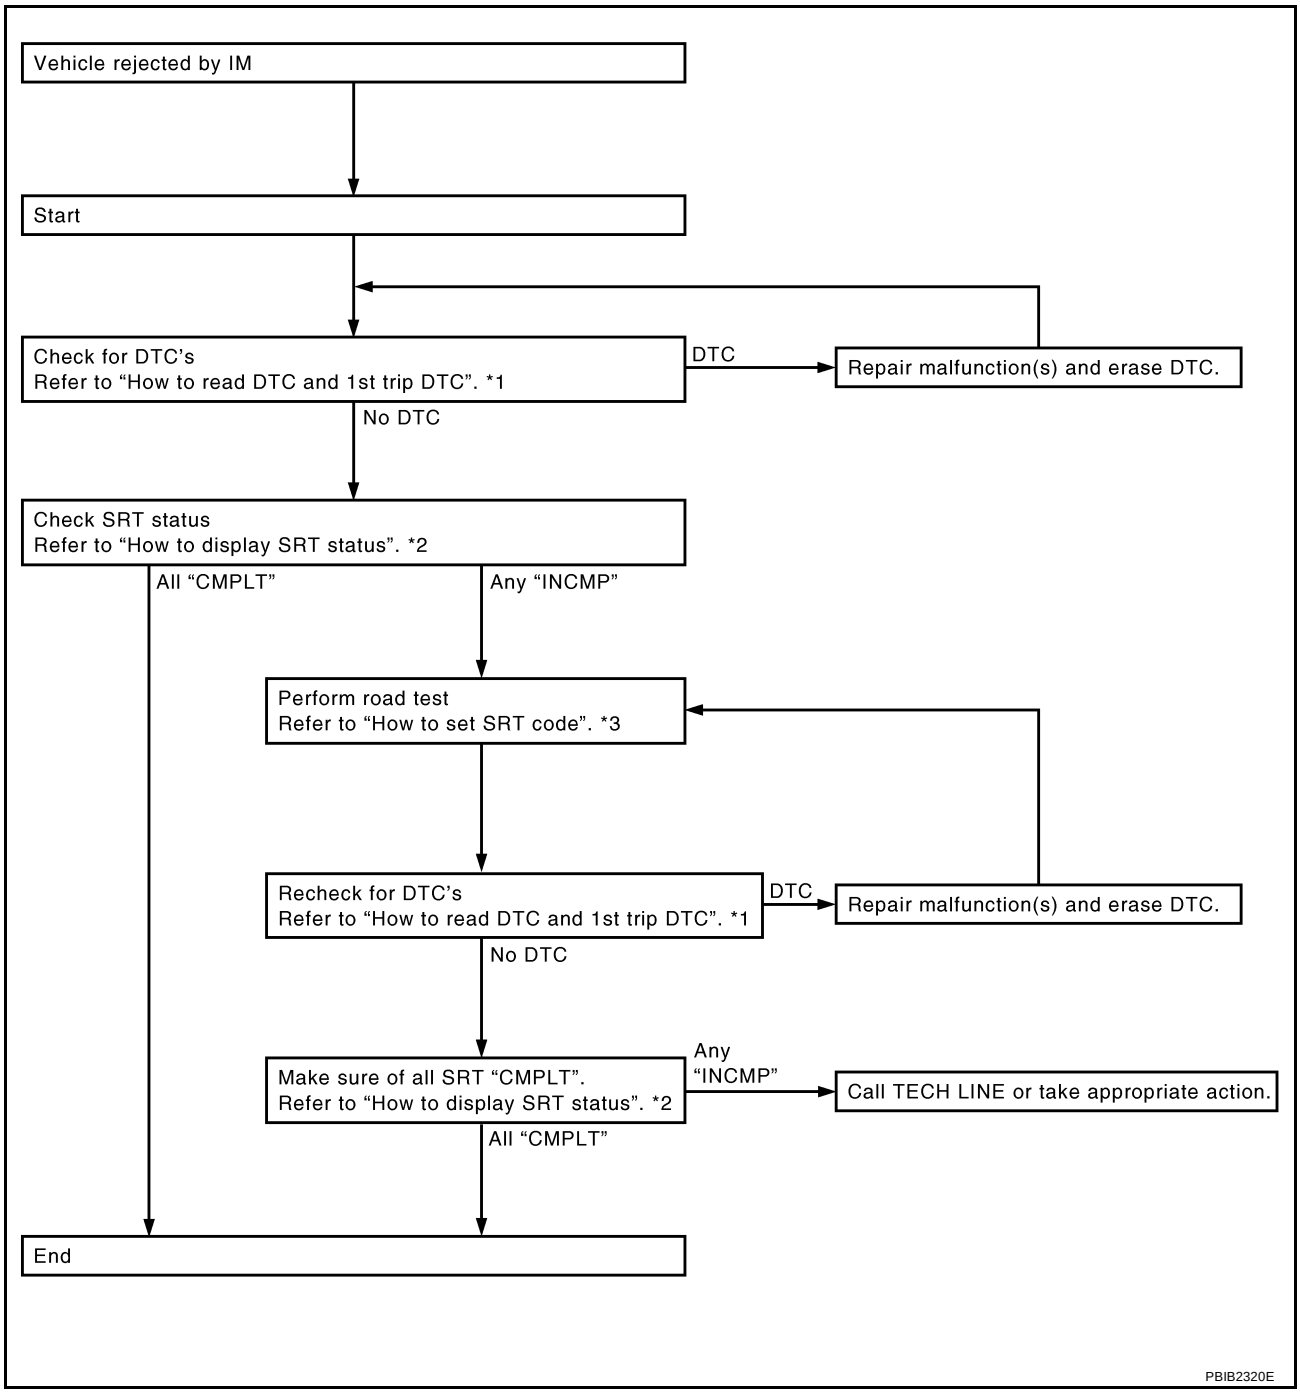
SRT Set Timing

SRT is set as "CMPLT" after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example				
		Diagnosis	Ignition cycle ← ON →	OFF	← ON →	OFF ← ON →	OFF ← ON →
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)
		P0402	OK (1)	— (1)	— (1)	OK (2)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	"CMPLT"	"CMPLT"	"CMPLT"	"CMPLT"
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)
		P0402	— (0)	— (0)	OK (1)	— (1)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	"INCMP"	"INCMP"	"CMPLT"	"CMPLT"
NG exists	Case 3	P0400	OK	OK	—	—
		P0402	—	—	—	—
		P1402	NG	—	NG	NG (Consecutive NG)
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MIL "ON")
		SRT of EGR	"INCMP"	"INCMP"	"INCMP"	"CMPLT"

OK: Self-diagnosis is carried out and the result is OK.
NG: Self-diagnosis is carried out and the result is NG.
—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate "CMPLT". → Case 1 above
When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate "CMPLT" at the time the respective self-diagnoses have at least one OK result. → Case 2 above
If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate "CMPLT". → Case 3 above
The table above shows that the minimum number of cycles for setting SRT as "INCMP" is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:



- The SRT will indicate "CMPLT" at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires "CMPLT" of the SRT only with OK self-diagnosis results.

- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to “CMPLT” of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate “INCMP”.

NOTE:
SRT can be set as “CMPLT” together with the DTC(s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates “CMPLT”.

SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating “INCMP”, review the flowchart diagnostic sequence on the next page.

*1 EC-52 *2 EC-56 *3 EC-57

How to Display SRT Status

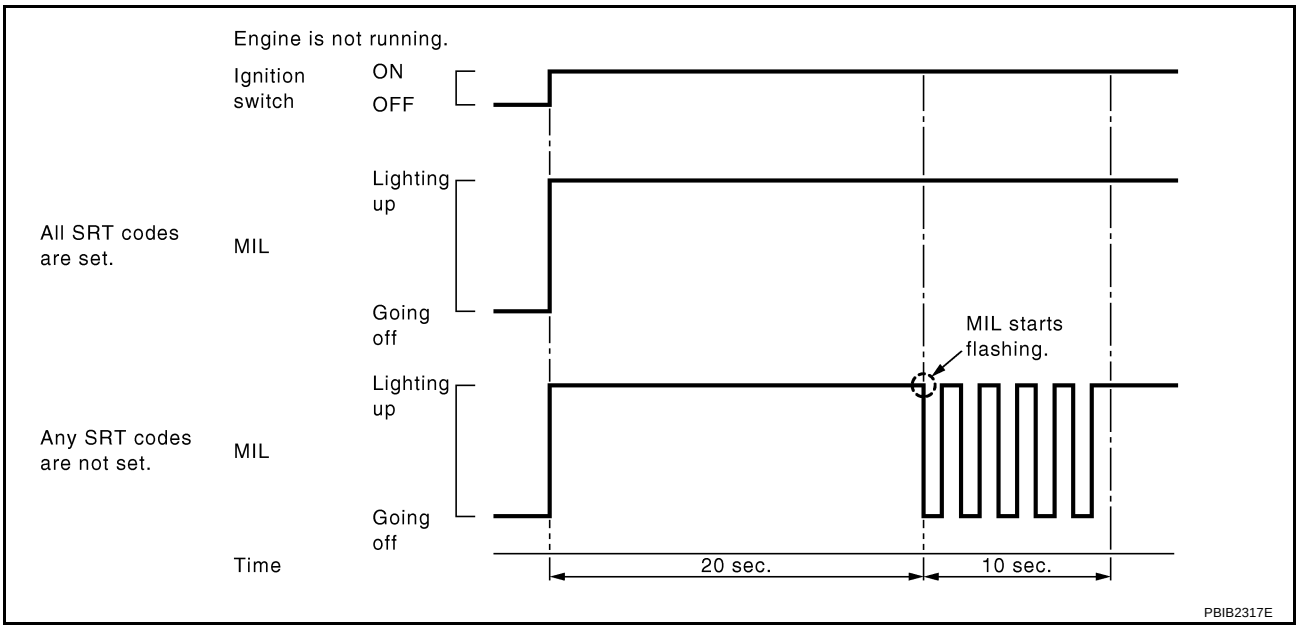
WITH CONSULT-III

Selecting “SRT STATUS” in “DTC & SRT CONFIRMATION” mode with CONSULT-III.
For items whose SRT codes are set, a “CMPLT” is displayed on the CONSULT-III screen; for items whose SRT codes are not set, “INCMP” is displayed.
A sample of CONSULT-III display for SRT code is shown in the figure.
“INCMP” means the self-diagnosis is incomplete and SRT is not set. “CMPLT” means the self-diagnosis is complete and SRT is set.

NOTE:

Though displayed on the CONSULT-III screen, “HO2S HTR” is not SRT item.

WITH GST



Selecting Service $01 with GST (Generic Scan Tool)

NO TOOLS

A SRT code itself can not be displayed while only SRT status can be.

1. Turn ignition switch ON and wait 20 seconds.
2. SRT status is indicated as shown below.

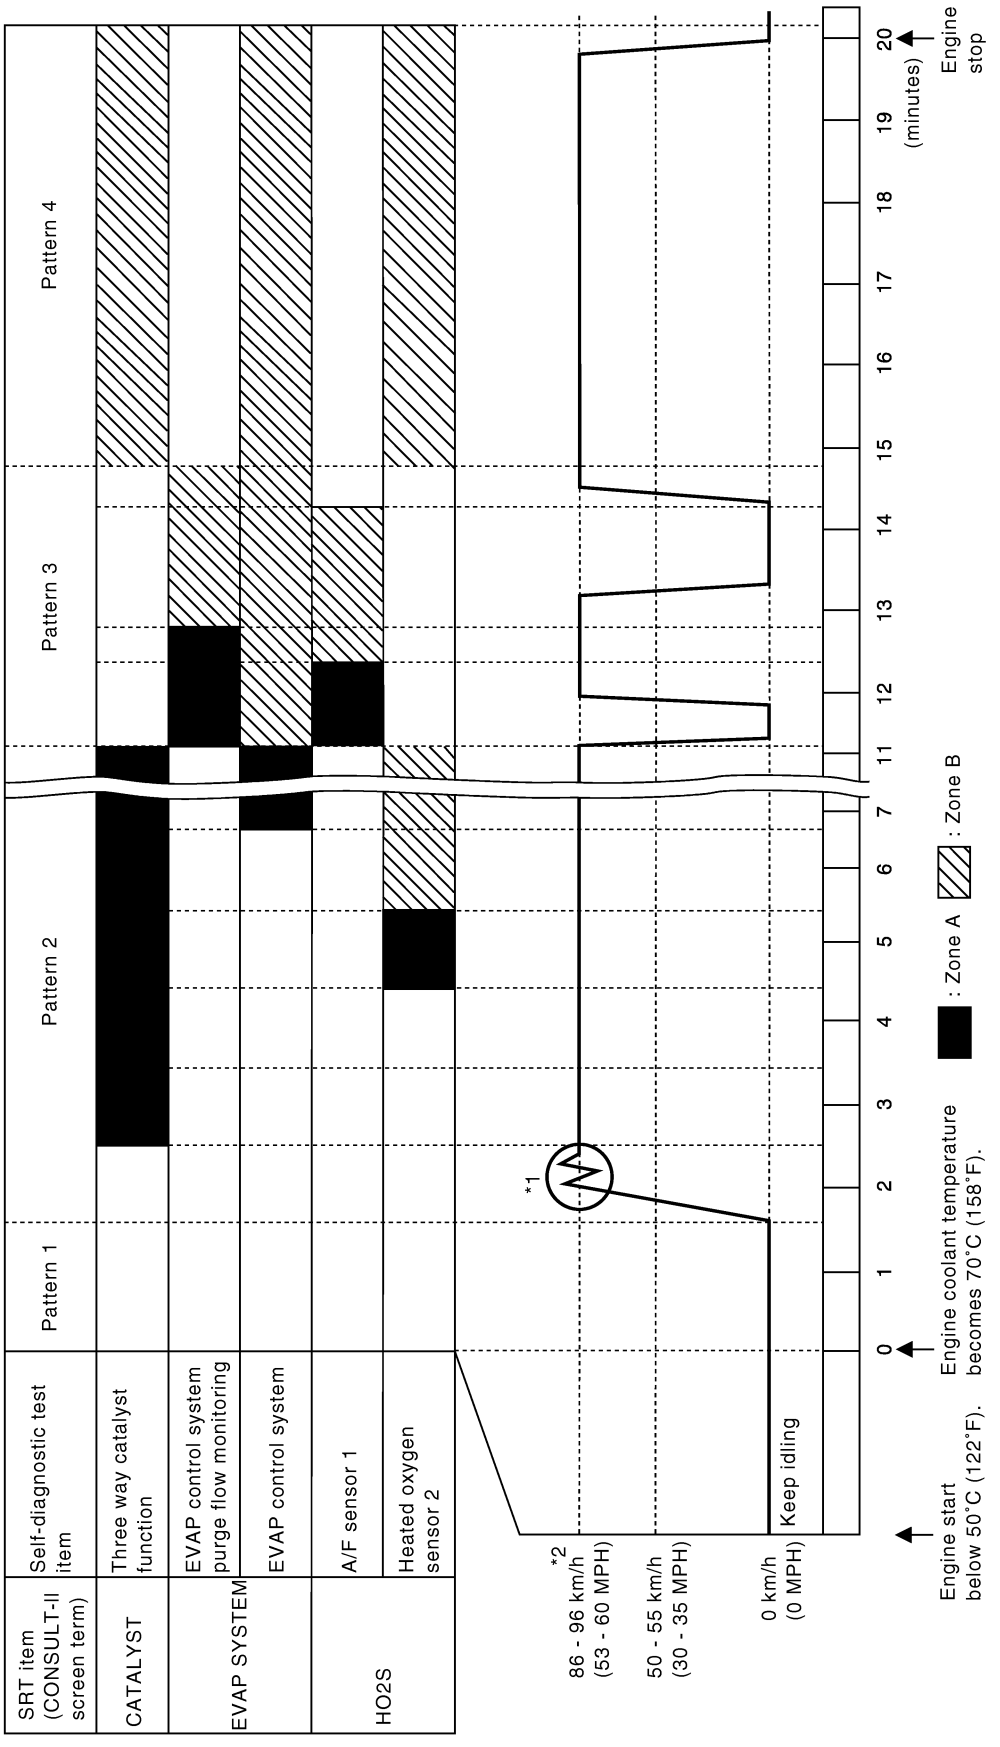
- When all SRT codes are set, MIL lights up continuously.
- When any SRT codes are not set, MIL will flash periodically for 10 seconds.

How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

WITH CONSULT-III

Perform corresponding DTC Confirmation Procedure one by one based on Performance Priority in the table on EC-53, "SRT Item" .



WITHOUT CONSULT-III

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

Driving Pattern

Note: Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws.
Refer to next page for more information and explanation of chart.

Driving pattern

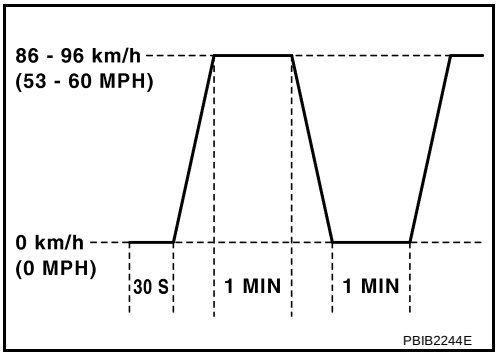
PBIB2906E

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.
  Zone A refers to the range where the time, required for the diagnosis under normal conditions*, is the shortest.
  Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.
  Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:



- **The engine is started at the engine coolant temperature of −10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 71 and ground is 3.0 - 4.3V).**
- **The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 71 and ground is lower than 1.4V).**
- **The engine is started at the fuel tank temperature of warmer than 0°C (32°F) (where the voltage between the ECM terminal 106 and ground is less than 4.1V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

Pattern 3:

- Operate vehicle following the driving pattern shown in the figure.
- Release the accelerator pedal during decelerating vehicle speed from 90 km/h (56 MPH) to 0 km/h (0 MPH).

Pattern 4:

- The accelerator pedal must be held very steady during steady-state driving.
- If the accelerator pedal is moved, the test must be conducted all over again.

*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.
*2: Checking the vehicle speed with GST is advised.

Suggested Transmission Gear Position for A/T Models

Set the selector lever in the D position.

Suggested Upshift Speeds for M/T Models

Shown below are suggested vehicle speeds for shifting into a higher gear. These suggestions relate to fuel economy and vehicle performance. Actual upshift speeds will vary according to road conditions, the weather and individual driving habits.

	For normal acceleration in low altitude areas [less than 1,219 m (4,000 ft)]:		For quick acceleration in low altitude areas and high altitude areas [over 1,219 m (4,000 ft)]:
Gear change	ACCEL shift point km/h (MPH)	CRUISE shift point km/h (MPH)	km/h (MPH)
1st to 2nd	21 (13)	13 (8)	24 (15)
2nd to 3rd	37 (23)	26 (16)	40 (25)
3rd to 4th	48 (30)	40 (25)	64 (40)
4th to 5th	60 (37)	45 (28)	72 (45)
6th	68 (42)	53 (33)	80 (50)

Suggested Maximum Speed in Each Gear

Downshift to a lower gear if the engine is not running smoothly, or if you need to accelerate.
Do not exceed the maximum suggested speed (shown below) in any gear. For level road driving, use the highest gear suggested for that speed. Always observe posted speed limits and drive according to the road conditions to ensure sage operation. Do not over-rev the engine when shifting to a lower gear as it may cause engine damage or loss of vehicle control.

Gear	km/h (MPH)
1st	65 (40)
2nd	106 (66)
3rd	152 (95)
4th	—
5th	—
6th	—

TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-III)

The following is the information specified in Service $06 of SAE J1979.
The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.
These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

Item	Self-diagnostic test item	DTC	Test value (GST display)		Test limit	Conversion
			TID	CID		
CATALYST	Three way catalyst function (Bank 1)	P0420	01H	01H	Max.	1/128
		P0420	02H	81H	Min.	1
	Three way catalyst function (Bank 2)	P0430	03H	02H	Max.	1/128
		P0430	04H	82H	Min.	1
EVAP SYSTEM	EVAP control system (Small leak)	P0442	05H	03H	Max.	1/128 mm^2
	EVAP control system purge flow monitoring	P0441	06H	83H	Min.	20 mV
	EVAP control system (Very small leak)	P0456	07H	03H	Max.	1/128 mm^2

Item	Self-diagnostic test item	DTC	Test value (GST display)		Test limit	Conversion
			TID	CID		
HO2S	Air fuel ratio (A/F) sensor 1 (Bank 1)	P0131	41H	8EH	Min.	5mV
		P0132	42H	0EH	Max.	5mV
		P2A00	43H	0EH	Max.	0.002
		P2A00	44H	8EH	Min.	0.002
		P0133	45H	8EH	Min.	0.004
		P0130	46H	0EH	Max.	5mV
		P0130	47H	8EH	Min.	5mV
		P0133	48H	8EH	Min.	0.004
	Air fuel ratio (A/F) sensor 1 (Bank 2)	P0151	4CH	8FH	Min.	5mV
		P0152	4DH	0FH	Max	5mV
		P2A03	4EH	0FH	Max.	0.002
		P2A03	4FH	8FH	Min.	0.002
		P0153	50H	8FH	Min.	0.004
		P0150	51H	0FH	Max.	5mV
		P0150	52H	8FH	Min.	5mV
		P0153	53H	8FH	Min.	0.004
	Heated oxygen sensor 2 (Bank 1)	P0138	1CH	06H	Max.	10mV
		P0139	19H	86H	Min.	10mV/500 ms
		P0137	1AH	86H	Min.	10 mV
		P0138	1BH	06H	Max.	10 mV
	Heated oxygen sensor 2 (Bank 2)	P0158	24H	07H	Max	10mV

		P0057	30H	8BH	Min.	20 mV

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

How to Erase DTC

WITH CONSULT-III

The emission related diagnostic information in the ECM can be erased by selecting “ERASE” in the “SELF-DIAG RESULTS” mode with CONSULT-III.

If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

NOTE:

If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip steps 2 through 4.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Turn CONSULT-III ON and touch “A/T”.
3. Touch “SELF-DIAG RESULTS”.

4. Touch “ERASE”. [The DTC in the TCM (Transmission control module) will be erased.] Then touch “BACK” twice.
5. Touch “ENGINE”.
6. Touch “SELF-DIAG RESULTS”.
7. Touch “ERASE”. (The DTC in the ECM will be erased.)

WITH GST

The emission related diagnostic information in the ECM can be erased by selecting Service $04 with GST.

NOTE:
If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-38, "HOW TO ERASE DTC (WITH GST)" . (The DTC in the TCM will be erased.)
3. Select Service $04 with GST (Generic Scan Tool).

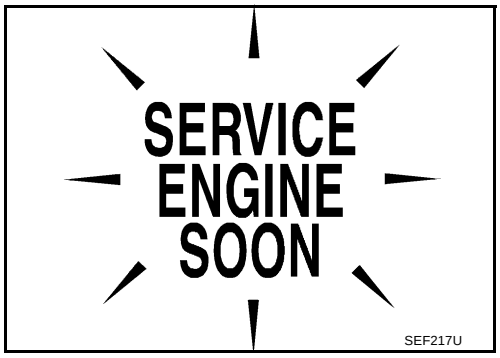
NO TOOLS

NOTE:
If the DTC is not for A/T related items (see EC-8, "INDEX FOR DTC"), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Perform AT-38, "HOW TO ERASE DTC (NO TOOLS)" . (The DTC in the TCM will be erased.)
3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to EC-63, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours.**
- **The following data are cleared when the ECM memory is erased.**
  - Diagnostic trouble codes
  - 1st trip diagnostic trouble codes
  - Freeze frame data
  - 1st trip freeze frame data
  - System readiness test (SRT) codes
  - Test values

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.



Malfunction Indicator Lamp (MIL)

NBS00032

DESCRIPTION

The MIL is located on the instrument panel.

1. The MIL will light up when the ignition switch is turned ON without the engine running. This is a bulb check. If the MIL does not light up, refer to DI-56, "WARNING LAMPS" , or see EC-716, "MIL AND DATA LINK CONNECTOR" .
2. When the engine is started, the MIL should go off. If the MIL remains on, the on board diagnostic system has detected an engine system malfunction.

ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following three functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position  Engine stopped 	BULB CHECK	This function checks the MIL bulb for damage (blown, open circuit, etc.). If the MIL does not come on, check MIL circuit.
	Engine running 	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MIL will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MIL in the 1st trip. ● Misfire (Possible three way catalyst damage) ● One trip detection diagnoses
Mode II	Ignition switch in ON position  Engine stopped 	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.

When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

MIL Flashing Without DTC

When any SRT codes are not set, MIL may flash without DTC. For the details, refer to EC-56, "How to Display SRT Status" .

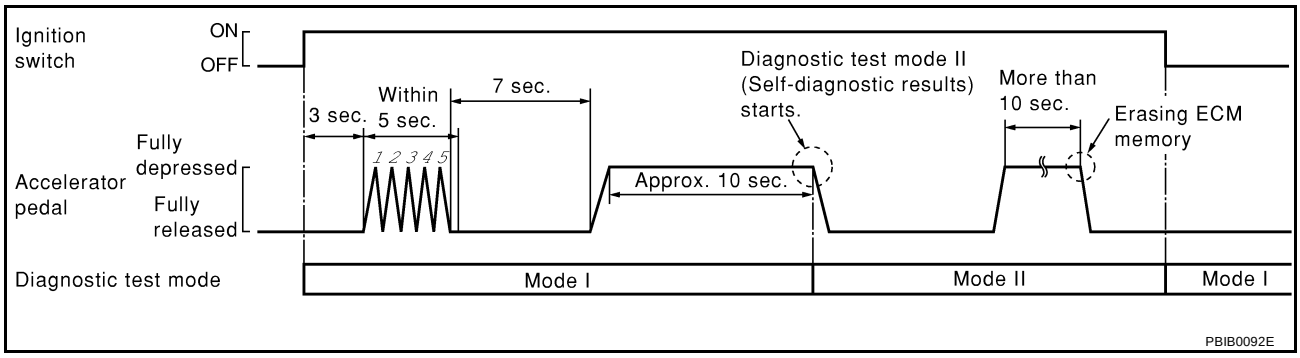
HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**
- **Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.**

How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
2. Repeat the following procedure quickly 5 times within 5 seconds.



a. Fully depress the accelerator pedal.
b. Fully release the accelerator pedal.

3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MIL starts blinking.

NOTE:
Do not release the accelerator pedal for 10 seconds if MIL may start blinking on the halfway of this 10 seconds. This blinking is displaying SRT status and is continued for another 10 seconds. For the details, refer to EC-56, "How to Display SRT Status" .

4. Fully release the accelerator pedal.
   ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).

NOTE:
Wait until the same DTC (or 1st trip DTC) appears to confirm all DTCs certainly.

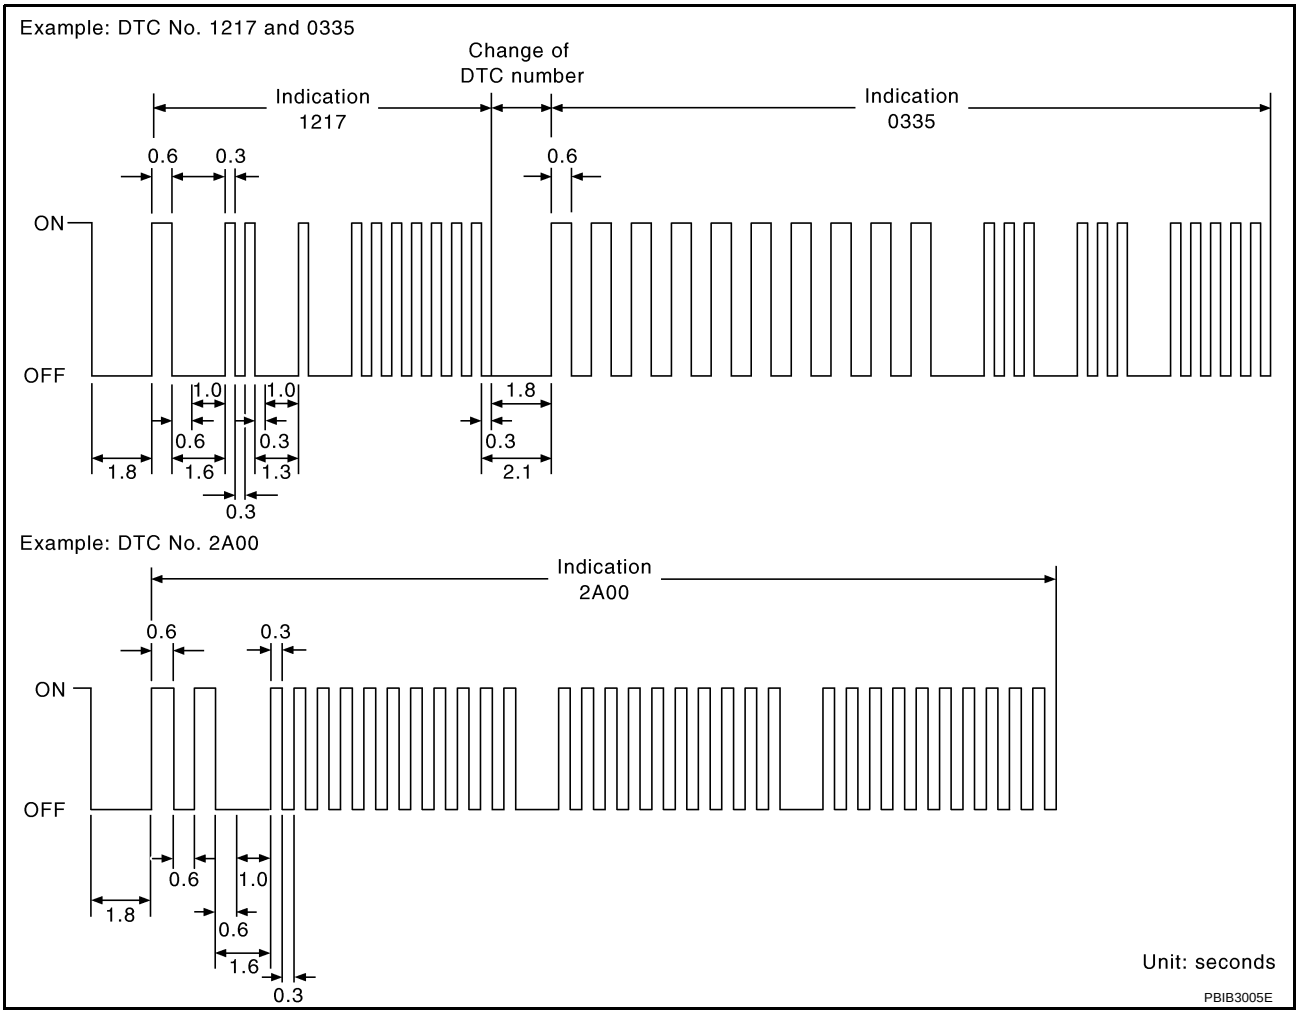
How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results).
   Refer to EC-63, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.
   The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MIL on the instrument panel should stay ON. If it remains OFF, check the bulb.
Refer to DI-56, "WARNING LAMPS" or see EC-716, "MIL AND DATA LINK CONNECTOR" .

DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING



MIL	Condition
ON	When the malfunction is detected.
OFF	No malfunction.

These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MIL as shown below. The DTC and 1st trip DTC are displayed at the same time. If the MIL does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MIL illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These uniden-

tified codes can be identified by using the CONSULT-III or GST. A DTC will be used as an example for how to read a code.

A particular trouble code can be identified by the number of four-digit numeral flashes as follows. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle. The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle. A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.

Number	0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F
Flashes	10	1	2	3	4	5	6	7	8	9	11	12	13	14	15	16

A change from one trouble code to another occurs at an interval of 1.8-second OFF.
In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See EC-8, "INDEX FOR DTC")

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal.
Refer to EC-64, "How to Erase Diagnostic Test Mode II (Self-diagnostic Results)" .

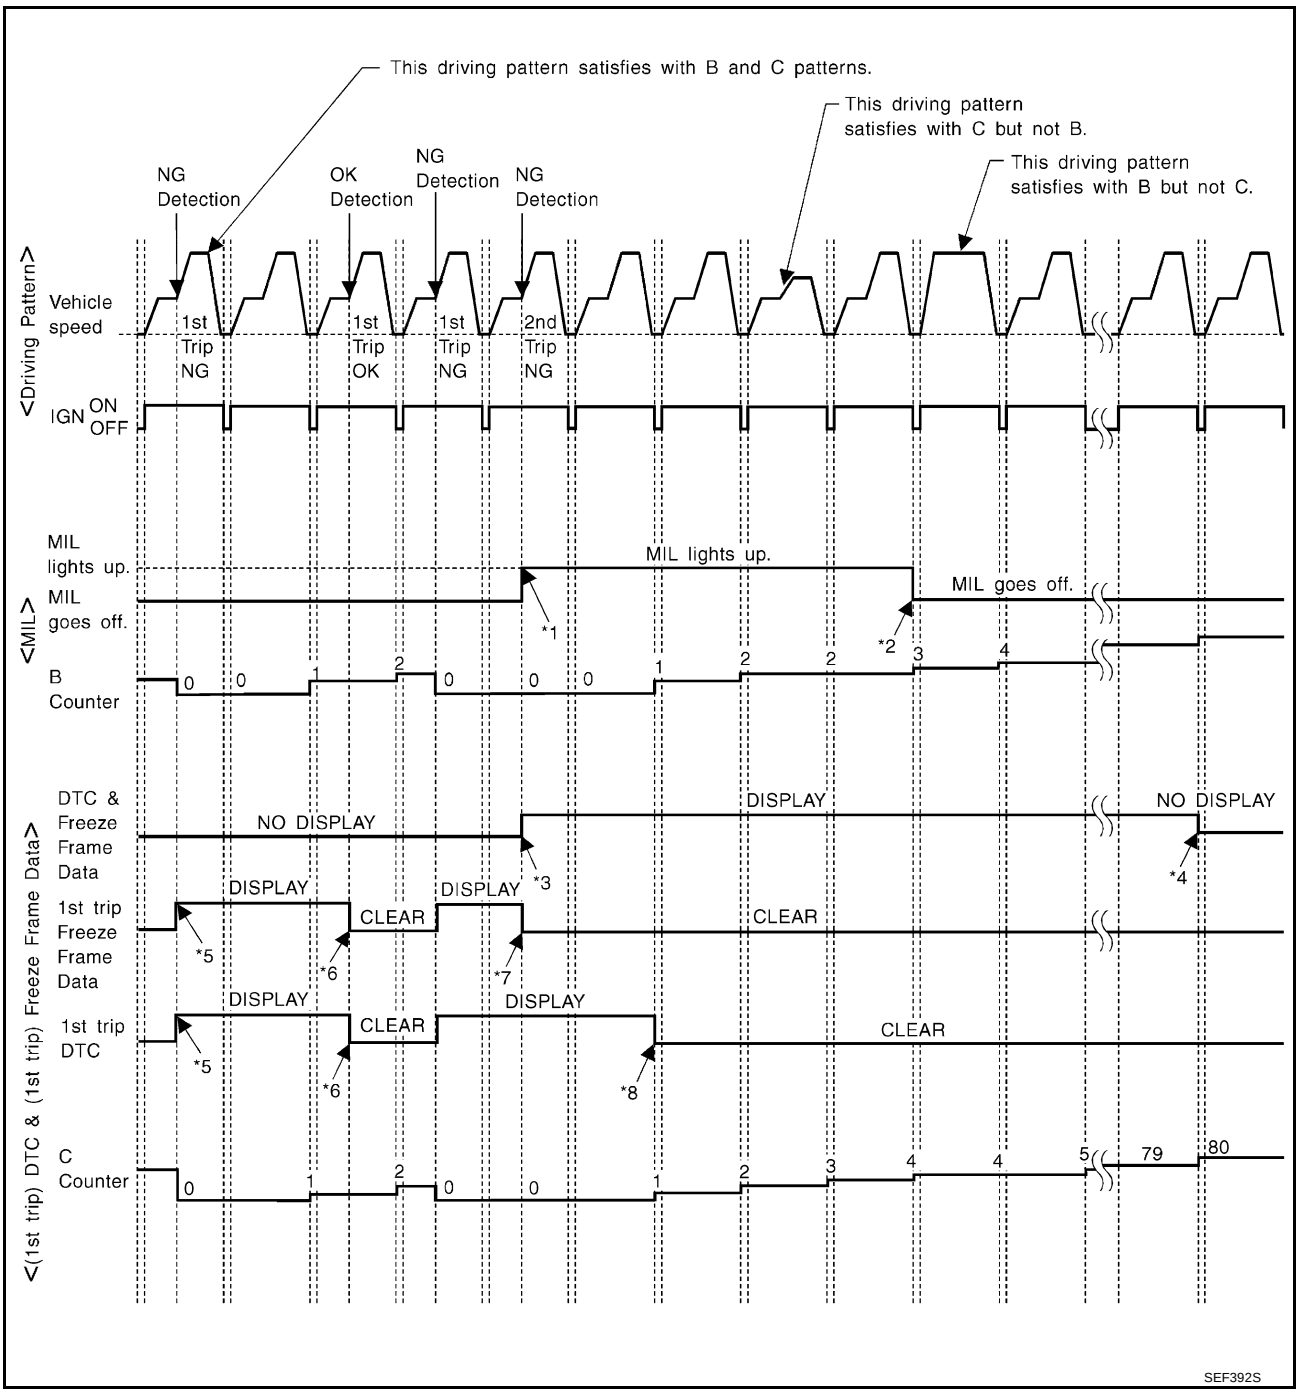
- **If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.**
- **Be careful not to erase the stored memory before starting trouble diagnoses.**

OBD System Operation Chart

NBS00033

RELATIONSHIP BETWEEN MIL, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.



- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MIL will come on. For details, refer to EC-47, "Two Trip Detection Logic" .
- The MIL will go off after the vehicle is driven 3 times (driving pattern B) with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The “TIME” in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-III will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

SUMMARY CHART

Items	Fuel Injection System	Misfire	Other
MIL (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)
1st Trip Freeze Frame Data (clear)	*1, *2	*1, *2	1 (pattern B)

For details about patterns B and C under “Fuel Injection System” and “Misfire”, see EC-68 .
For details about patterns A and B under “Other”, see EC-70 .
*1: Clear timing is at the moment OK is detected.
*2: Clear timing is when the same malfunction is detected in the 2nd trip.

RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR “MISFIRE ” <EXHAUST QUALITY DETERIORATION>, “FUEL INJECTION SYSTEM”

*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

*5: When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

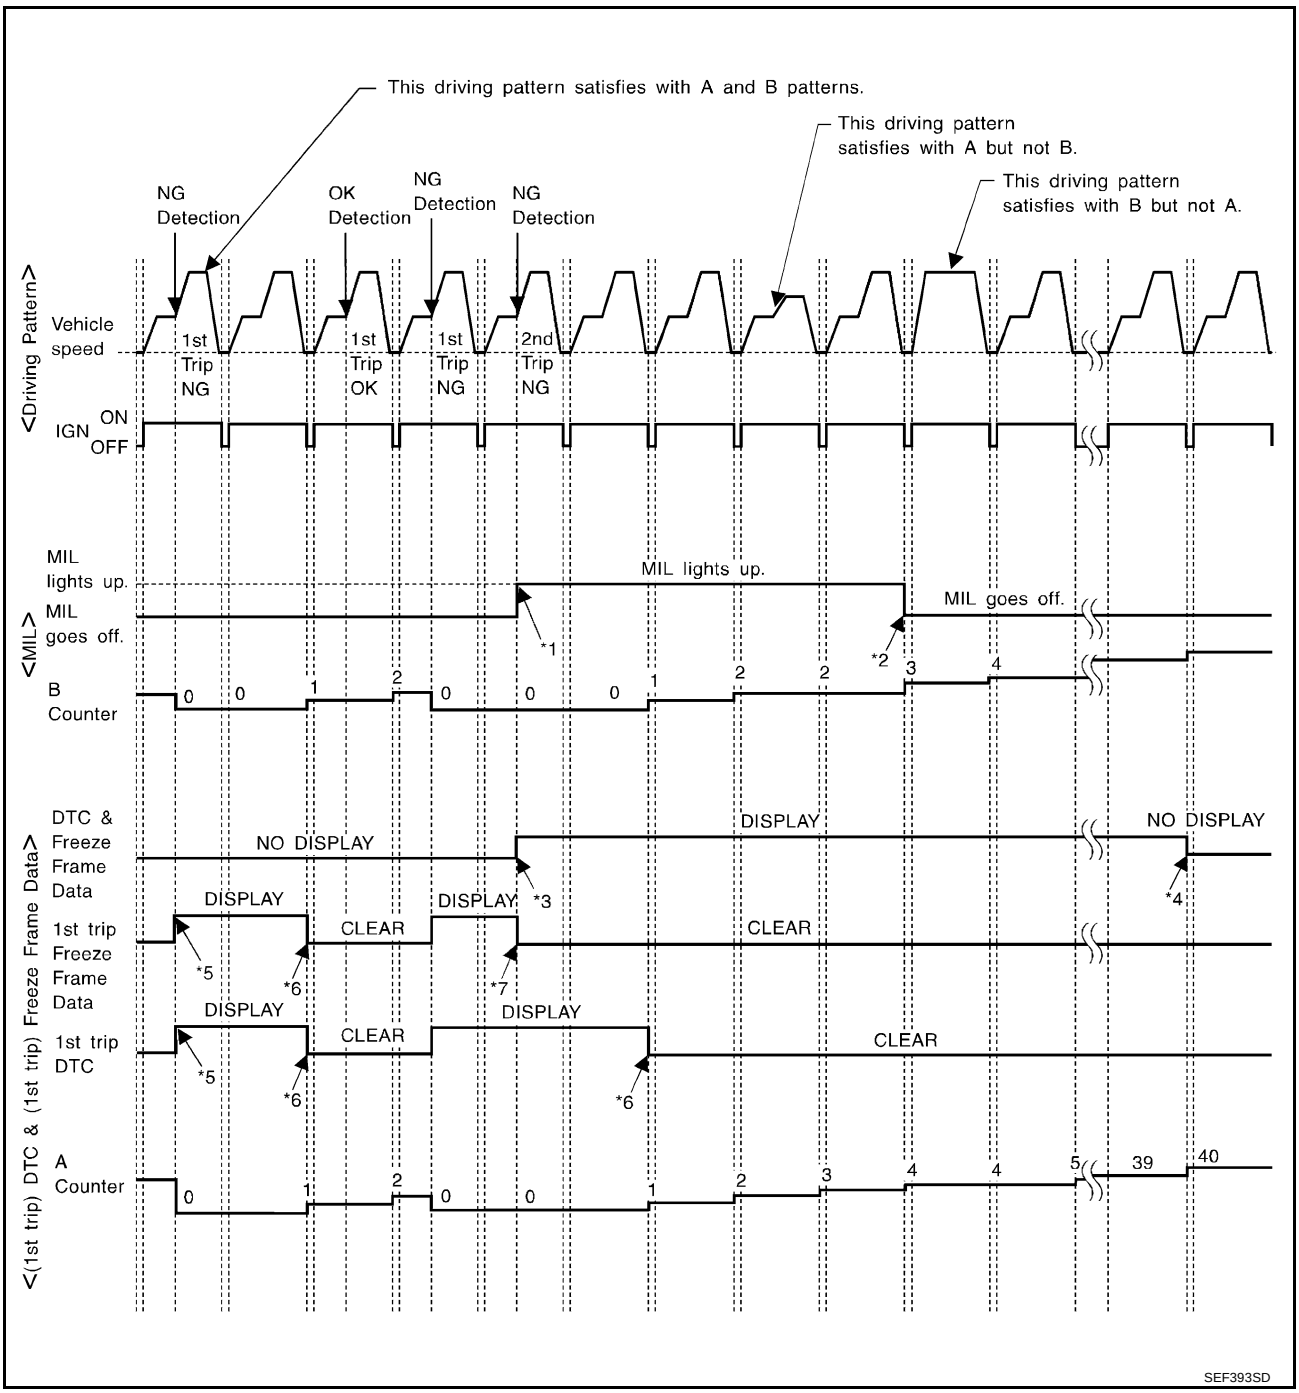
EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MIL will go off when the B counter reaches 3. (*2 in OBD SYSTEM OPERATION CHART)

<Driving Pattern C>



Driving pattern C means the vehicle operation as follows:
The following conditions should be satisfied at the same time:
Engine speed: (Engine speed in the freeze frame data) ±375 rpm
Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%]
Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), T should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), T should be higher than or equal to 70°C (158°F).

Example:
If the stored freeze frame data is as follows:
Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)
To be satisfied with driving pattern C, the vehicle should run under the following conditions:
Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.
- The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.(*2 in OBD SYSTEM OPERATION CHART)
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

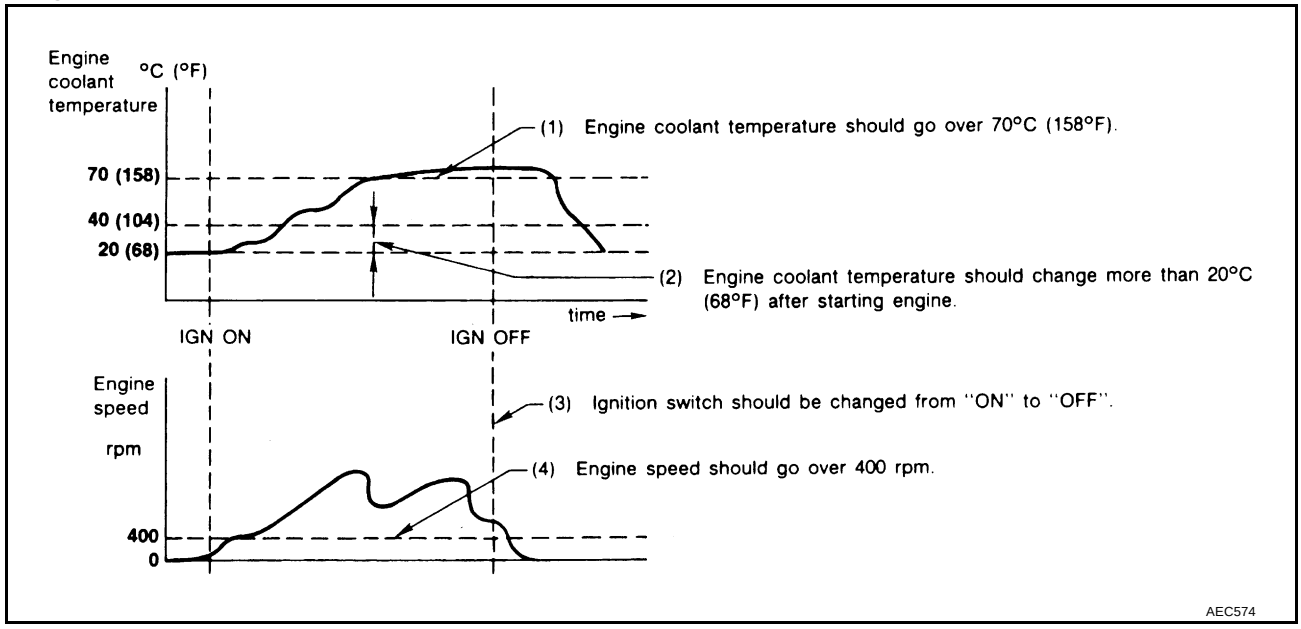
RELATIONSHIP BETWEEN MIL, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

*1: When the same malfunction is detected in two consecutive trips, MIL will light up.

*2: MIL will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)



*5: When a malfunction is detected for the 1st time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

<Driving Pattern A>

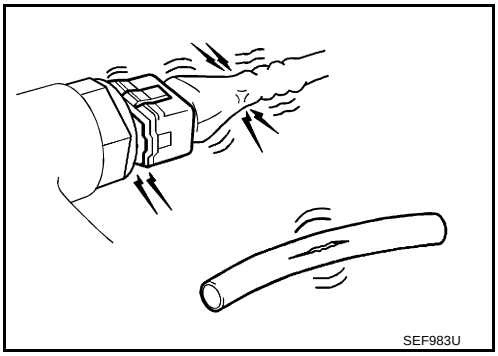
- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.(*2 in OBD SYSTEM OPERATION CHART)

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MIL will go off when the B counter reaches 3 (*2 in OBD SYSTEM OPERATION CHART).

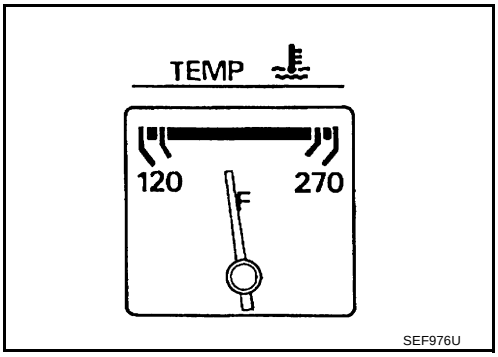
BASIC SERVICE PROCEDURE



PFP:00018

Basic Inspection

NBS00034



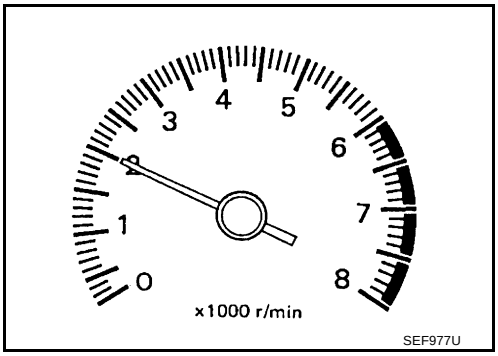
1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
- Harness connectors for improper connections
- Wiring harness for improper connections, pinches and cut
- Vacuum hoses for splits, kinks and improper connections
- Hoses and ducts for leaks
- Air cleaner clogging
- Gasket

SEF983U

3. Confirm that electrical or mechanical loads are not applied.
- Headlamp switch is OFF.
- Air conditioner switch is OFF.
- Rear window defogger switch is OFF.
- Steering wheel is in the straight-ahead position, etc.

4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
Ensure engine stays below 1,000 rpm.



SEF976U

5. Run engine at about 2,000 rpm for about 2 minutes under no-load.
6. Make sure that no DTC is displayed with CONSULT-III or GST.

OK or NG

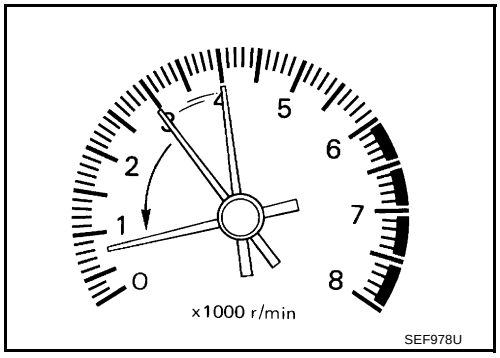
OK >> GO TO 3.
NG >> GO TO 2.

SEF977U

2. REPAIR OR REPLACE

Repair or replace components as necessary according to corresponding Diagnostic Procedure.

>> GO TO 3.



3. CHECK TARGET IDLE SPEED

With CONSULT-III

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Read idle speed in “DATA MONITOR” mode with CONSULT-III. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

Without CONSULT-III

1. Run engine at about 2,000 rpm for about 2 minutes under no-load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no-load, then run engine at idle speed for about 1 minute.
3. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .

>> GO TO 5.

5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-77, "Throttle Valve Closed Position Learning" .

>> GO TO 6.

6. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-77, "Idle Air Volume Learning" .

Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 7.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

7. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-III.
   Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)

M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit.
  Refer to EC-394, "DTC P0340, P0345 CMP SENSOR (PHASE)" .
- Check crankshaft position sensor (POS) and circuit.
  Refer to EC-386, "DTC P0335 CKP SENSOR (POS)" .

OK or NG

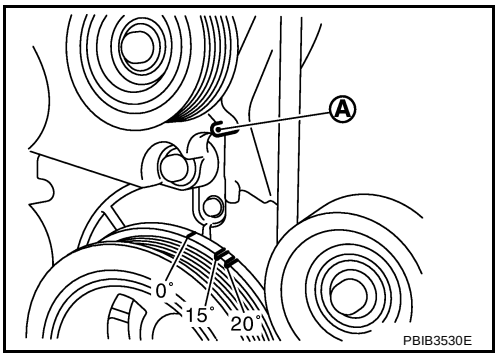
OK >> GO TO 9.
NG >> 1. Repair or replace.
2. GO TO 4.

9. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .

>> GO TO 4.

10. CHECK IGNITION TIMING



1. Run engine at idle.
2. Check ignition timing with a timing light.

   A : Timing indicator

   Refer to EC-76, "IGNITION TIMING" .

A/T: 15 ± 5° BTDC (in P or N position)

M/T: 15 ± 5° BTDC (in Neutral position)

OK or NG

OK >> GO TO 19.
NG >> GO TO 11.

11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-77, "Accelerator Pedal Released Position Learning" .

>> GO TO 12.

12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-77, "Throttle Valve Closed Position Learning" .

>> GO TO 13.

13. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-77, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 14.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

14. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-III.
Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)
M/T: 650 ± 50 rpm (in Neutral position)

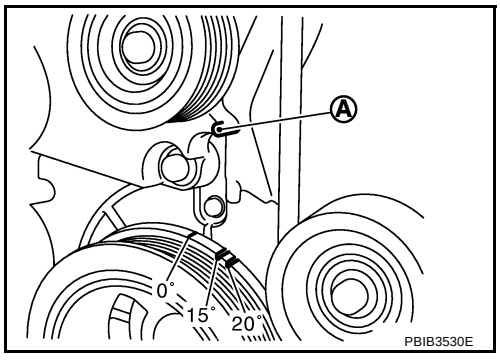
Without CONSULT-III

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed. Refer to EC-76, "IDLE SPEED" .

A/T: 650 ± 50 rpm (in P or N position)
M/T: 650 ± 50 rpm (in Neutral position)

OK or NG

OK >> GO TO 15.
NG >> GO TO 17.



15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.

A : Timing indicator

Refer to EC-76, "IGNITION TIMING" .

A/T: 15 ± 5° BTDC (in P or N position)
M/T: 15 ± 5° BTDC (in Neutral position)

OK or NG

OK >> GO TO 19.
NG >> GO TO 16.

16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to EM-53, "TIMING CHAIN" .

OK or NG

OK >> GO TO 17.
NG >> 1. Repair the timing chain installation.
2. GO TO 4.

17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit.
  Refer to EC-394, "DTC P0340, P0345 CMP SENSOR (PHASE)" .
- Check crankshaft position sensor (POS) and circuit.
  Refer to EC-386, "DTC P0335 CKP SENSOR (POS)" .

OK or NG

OK >> GO TO 18.
NG >> 1. Repair or replace.
2. GO TO 4.

18. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs.
   Refer to BL-150, "NVIS (NISSAN VEHICLE IMMOBILIZER SYSTEM-NATS)" .

>> GO TO 4.

19. INSPECTION END

Did you replace the ECM, referring this Basic Inspection procedure?

Yes or No

Yes >> 1. Perform EC-76, "VIN Registration"
2. Perform EC-76, "Exhaust Valve Timing Control Learning" .
3. **INSPECTION END**

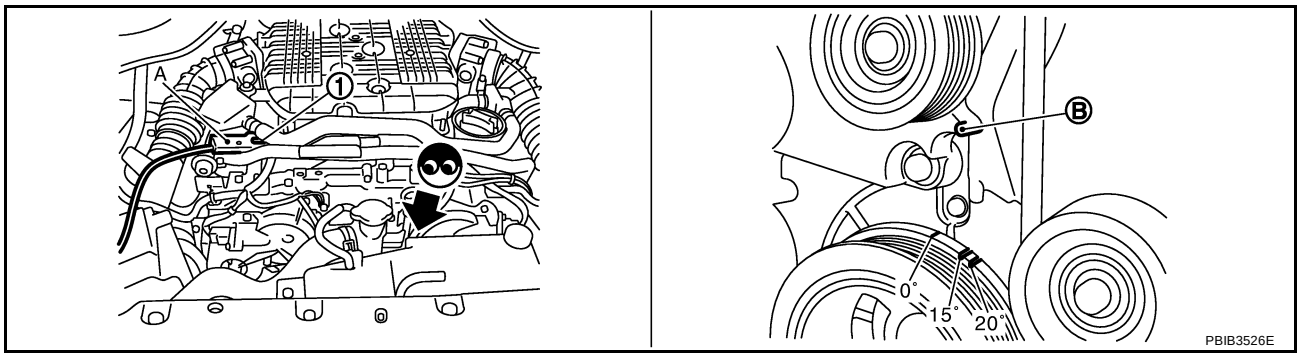
No >> **INSPECTION END**

Idle Speed and Ignition Timing Check

NBS00035

IDLE SPEED

With CONSULT-III



Check idle speed in “DATA MONITOR” mode with CONSULT-III.

With GST

Check idle speed in Service $01 with GST.

IGNITION TIMING

1. Attach timing light to loop wire as shown.

1. Loop wire
A. Timing light
B. Timing indicator

2. Check ignition timing.

Procedure After Replacing ECM

NBS006SZ

When replacing ECM, the following procedure must be performed.

1. Perform initialization of NVIS (NATS) system and registration of all NVIS (NATS) ignition key IDs. Refer to BL-152, "ECM Re-communicating Function" .
2. Perform EC-76, "VIN Registration" .
3. Perform EC-76, "Exhaust Valve Timing Control Learning" .
4. Perform EC-77, "Accelerator Pedal Released Position Learning" .
5. Perform EC-77, "Throttle Valve Closed Position Learning" .
6. Perform EC-77, "Idle Air Volume Learning" .

VIN Registration

NBS00037

DESCRIPTION

VIN Registration is an operation to registering VIN in ECM. It must be performed each time ECM is replaced.

NOTE:

Accurate VIN which is registered in ECM may be required for Inspection & Maintenance (I/M).

OPERATION PROCEDURE

With CONSULT-III

1. Check the VIN of the vehicle and note it. Refer to GI-46, "IDENTIFICATION INFORMATION" .
2. Turn ignition switch ON and engine stopped.
3. Select “VIN REGISTRATION” in “WORK SUPPORT” mode.
4. Follow the instruction of CONSULT-III display.

Exhaust Valve Timing Control Learning

NBS00038

DESCRIPTION

Exhaust Valve Timing Control Learning is an operation to learn the characteristic of exhaust valve timing control magnet retarder by comparing the target angle of exhaust camshaft with the actual retarded angle of exhaust camshaft. It must be performed each time exhaust valve timing control magnet retarder is disconnected or replaced, or ECM is replaced.

OPERATION PROCEDURE

With CONSULT-III

1. Start engine and warm it up to normal operation temperature.
2. Set shift lever in neutral position and confirm that following electrical or mechanical loads are not applied.
   - Headlamp switch is OFF
   - Air conditioner switch is OFF
   - Rear defogger switch is OFF
   - Steering wheel is in the straight-ahead position, etc
3. Keep the engine speed between 1,800 and 2,000 rpm.
4. Select “EXH V/T CONTROL LEARN” in “WORK SUPPORT” mode with CONSULT-III.
5. Touch “START” and wait 20 seconds.
6. Make sure that “CMPLT” is displayed on CONSULT-III screen.

Learning completed : CMPLT
Learning not yet : YET

Without CONSULT-III

1. Start engine and warm it up to normal operation temperature.
2. Set shift lever in neutral position and confirm that following electrical or mechanical loads are not applied.
   - Headlamp switch is OFF
   - Air conditioner switch is OFF
   - Rear defogger switch is OFF
   - Steering wheel is in the straight-ahead position, etc
3. Keep the engine speed between 1,800 and 2,000 rpm at 20 seconds.

Accelerator Pedal Released Position Learning

NBS00039

DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF and wait at least 10 seconds.

Throttle Valve Closed Position Learning

NBS0003A

DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
   Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning

NBS0003B

DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.

- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied. Learning will be cancelled if any of the following conditions are missed for even a moment.

- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 100°C (158 - 212°F)
- Park/neutral position (PNP) switch: ON
- Electric load switch: OFF
  (Air conditioner, headlamp, rear window defogger)
  On vehicles equipped with daytime light systems, if the parking brake is applied before the engine is started, the headlamp will not be illuminated.
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up

– For A/T models with CONSULT-III

• Drive vehicle until “ATF TEMP SE 1” in “DATA MONITOR” mode of “A/T” system indicates less than 0.9V.

– For A/T models without CONSULT-III and M/T models

• Drive vehicle for 10 minutes.

OPERATION PROCEDURE

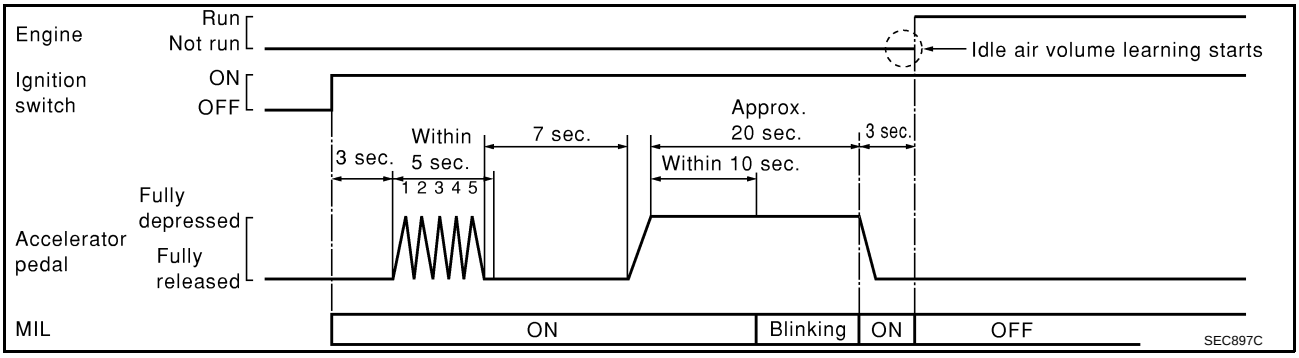
With CONSULT-III

1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Select “IDLE AIR VOL LEARN” in “WORK SUPPORT” mode.
6. Touch “START” and wait 20 seconds.
7. Make sure that “CMPLT” is displayed on CONSULT-III screen. If “CMPLT” is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSIS PROCEDURE below.
8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	A/T: 650 ± 50 rpm (in P or N position) M/T: 650 ± 50 rpm (in Neutral position)
Ignition timing	A/T: 15 ± 5° BTDC (in P or N position) M/T: 15 ± 5° BTDC (in Neutral position)

Without CONSULT-III

NOTE:



- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**

1. Perform EC-77, "Accelerator Pedal Released Position Learning" .
2. Perform EC-77, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
7. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.

b. Fully release the accelerator pedal.

8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MIL stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MIL turned ON.
10. Start engine and let it idle.
11. Wait 20 seconds.

12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	A/T: 650 ± 50 rpm (in P or N position) M/T: 650 ± 50 rpm (in Neutral position)
Ignition timing	A/T: 15 ± 5° BTDC (in P or N position) M/T: 15 ± 5° BTDC (in Neutral position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the DIAGNOSTIC PROCEDURE below.

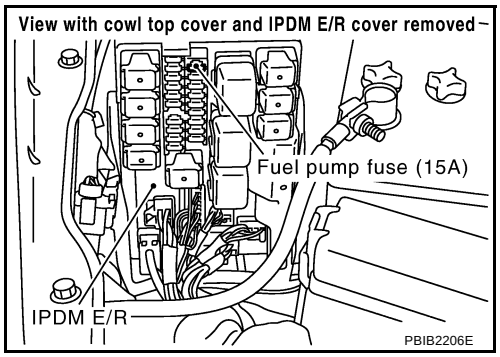
DIAGNOSTIC PROCEDURE

If Idle Air Volume Learning cannot be performed successfully, proceed as follows:

1. **Check that throttle valve is fully closed.**
2. **Check PCV valve operation.**
3. **Check that downstream of throttle valve is free from air leakage.**
4. **When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.**
   It is useful to perform EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .
5. **If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle Air Volume Learning all over again:**
   - **Engine stalls.**
   - **Erroneous idle.**

Fuel Pressure Check

NBS0003C



FUEL PRESSURE RELEASE

With CONSULT-III

1. Turn ignition switch ON.
2. Perform “FUEL PRESSURE RELEASE” in “WORK SUPPORT” mode with CONSULT-III.
3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.

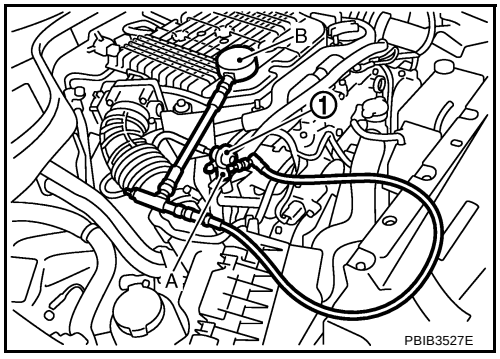
Without CONSULT-III

1. Remove fuel pump fuse (1) located in IPDM E/R (2).
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.

FUEL PRESSURE CHECK

CAUTION:

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.



NOTE:

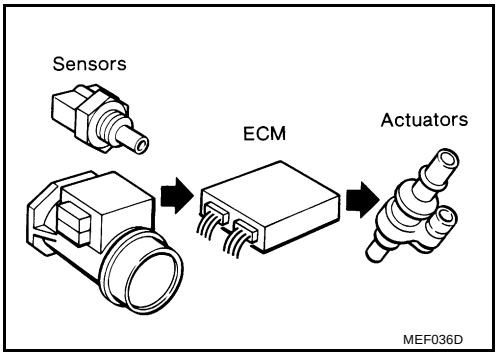
Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because Z33 models do not have fuel return system.
Use Fuel Pressure Gauge Kit (J-44321) to check fuel pressure.

1. Release fuel pressure to zero. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Install the inline fuel quick disconnected fitting (A) between fuel damper (1) and fuel injector tube.
3. Connect the fuel pressure gauge (quick connector adapter hose) (B) to the inline fuel quick disconnected fitting.
4. Turn ignition switch ON and check for fuel leakage.
5. Start engine and check for fuel leakage.
6. Read the indication of fuel pressure gauge.

At idling: Approximately 350 kPa (3.57 kg/cm^2 , 51 psi)

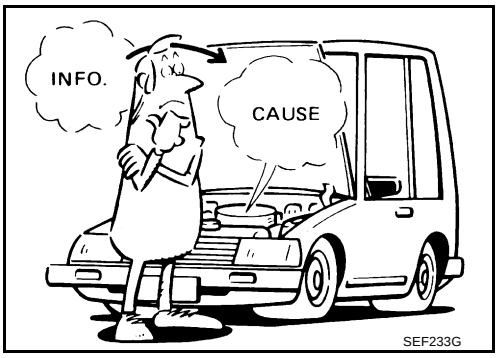
7. If result is unsatisfactory, go to next step.
8. Check fuel hoses and fuel tubes for clogging.
   If OK, replace “fuel filter and fuel pump assembly”.
   If NG, repair or replace.

TROUBLE DIAGNOSIS



PFP:00004

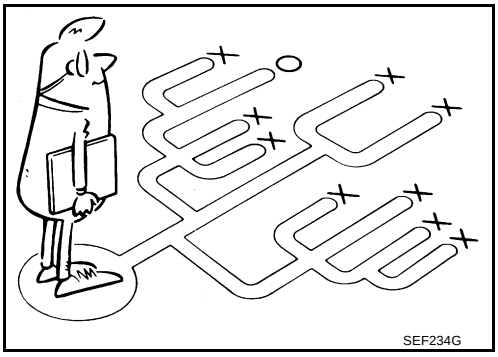
Trouble Diagnosis Introduction



NBS0003D

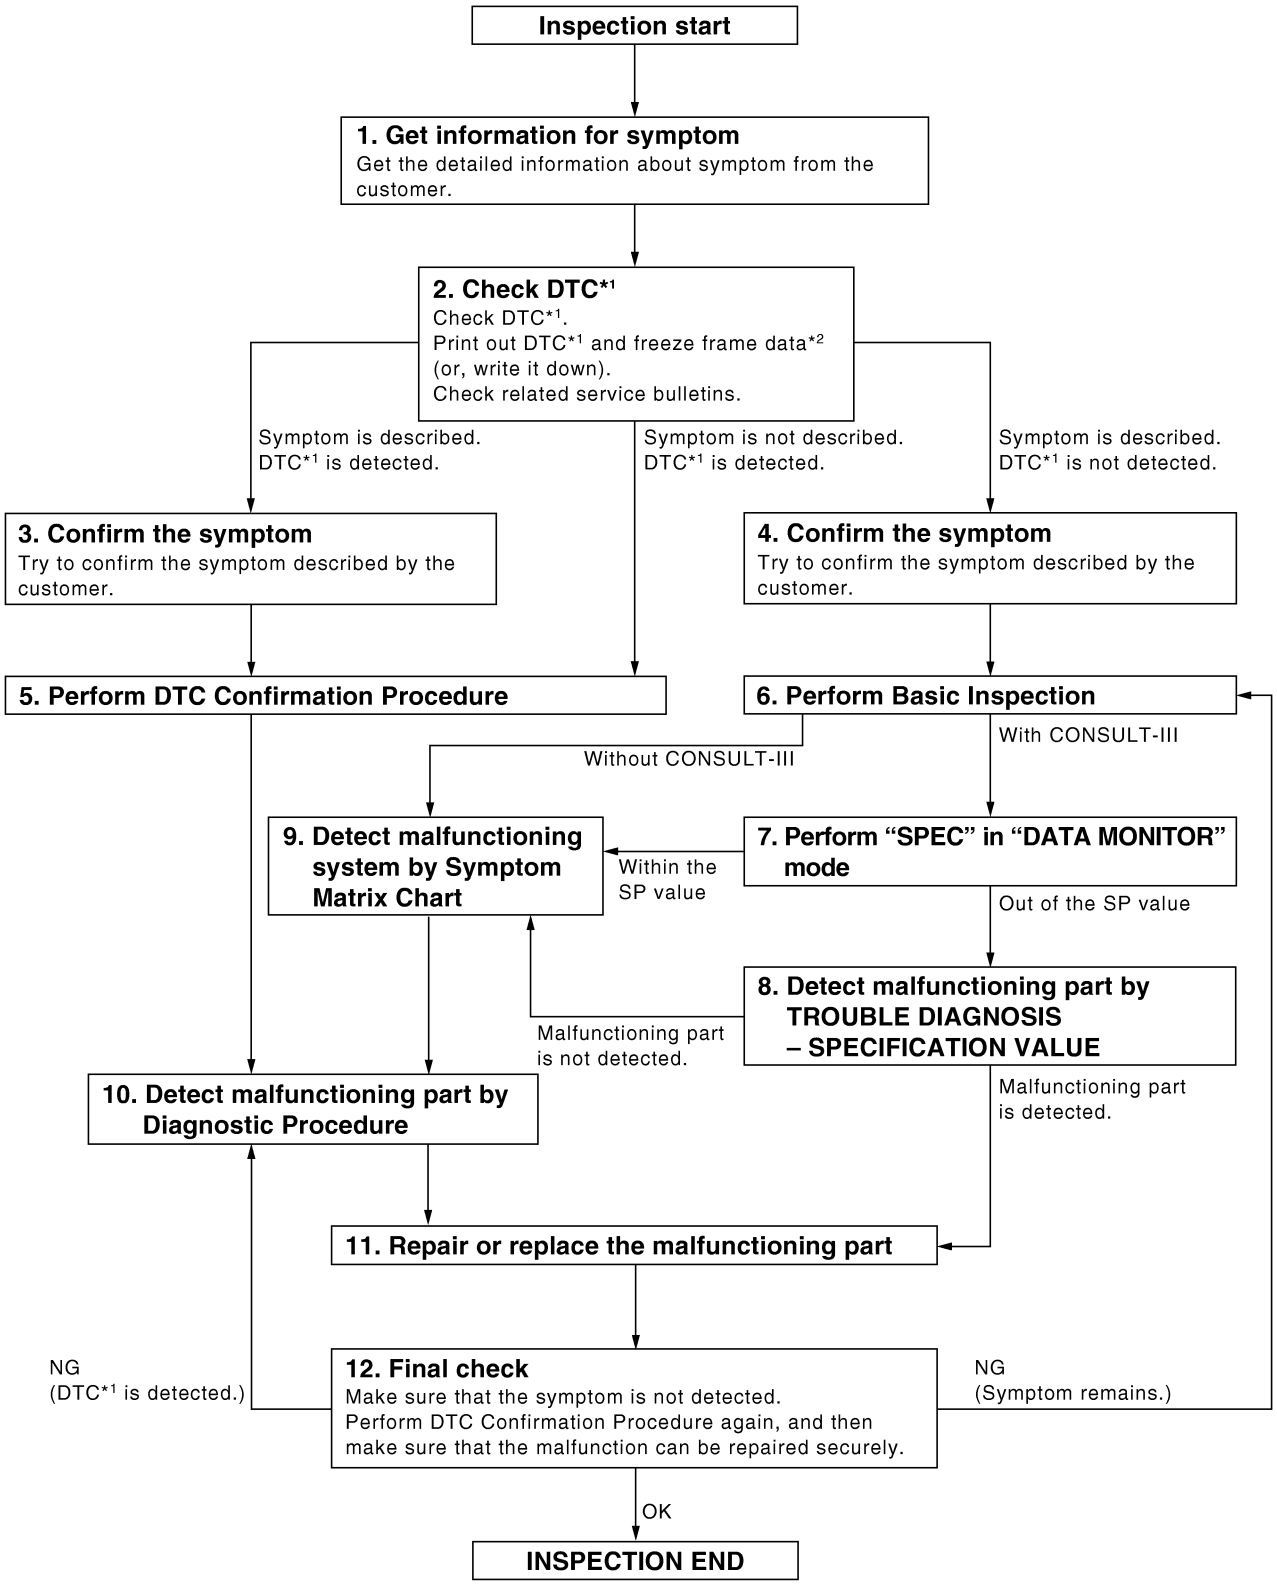
INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.



It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

A visual check only may not find the cause of the incidents. A road test with CONSULT-III (or GST) or a circuit tester connected should be performed. Follow the WORK FLOW on EC-82 .



Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A DIAGNOSTIC WORKSHEET like the example on EC-86 should be used.

Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

WORK FLOW

Overall Sequence

*1: Include 1st trip DTC.
*2: Include 1st trip freeze frame data.

PBIB3456E

Detailed Flow

1. GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the EC-85, "DIAGNOSTIC WORKSHEET" .

>> GO TO 2.

2. CHECK DTC*1

1. Check DTC*1 .
2. Perform the following procedure if DTC*1 is displayed.

- Record DTC*1 and freeze frame data*2 . (Print them out with CONSULT-III or GST.)
- Erase DTC*1 . (Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .)
- Study the relationship between the cause detected by DTC*1 and the symptom described by the customer. (Symptom Matrix Chart is useful. Refer to EC-90, "Symptom Matrix Chart" .)

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC*1 is displayed>>GO TO 3.
Symptom is described, DTC*1 is not displayed>>GO TO 4.
Symptom is not described, DTC*1 is displayed>>GO TO 5.

3. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer (except MIL ON).
DIAGNOSIS WORK SHEET is useful to verify the incident.
Connect CONSULT-III to the vehicle and check diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4. CONFIRM THE SYMPTOM

Try to confirm the symptom described by the customer.
DIAGNOSIS WORK SHEET is useful to verify the incident.
Connect CONSULT-III to the vehicle and check diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5. PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC*1 , and then make sure that DTC*1 is detected again.

If two or more DTCs*1 are detected, refer to EC-87, "DTC Inspection Priority Chart" and determine trouble diagnosis order.

NOTE:

- Freeze frame data*2 is useful if the DTC*1 is not detected.
- Perform Overall Function Check if DTC Confirmation Procedure is not included on Service Manual. This simplified check procedure is an effective alternative though DTC*1 cannot be detected during this check. If the result of Overall Function Check is NG, it is the same as the detection of DTC*1 by DTC Confirmation Procedure.

Is DTC*1 detected?

Yes >> GO TO 10.
No >> Check according to EC-141, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

6. PERFORM BASIC INSPECTION

Perform EC-71, "Basic Inspection" .

With CONSULT-III>>GO TO 7.
Without CONSULT-III>>GO TO 9.

7. PERFORM SPEC IN DATA MONITOR MODE

With CONSULT-III
Make sure that “MAS A/F SE-B1”, “MAS A/F SE-B2”, “B/FUEL SCHDL”, and “A/F ALPHA-B1”, “A/F ALPHA-B2” are within the SP value using CONSULT-III “SPEC” in "DATA MONITOR" mode.
Refer to EC-133, "Diagnostic Procedure" .

Are they within the SP value?

Yes >> GO TO 9.
No >> GO TO 8.

8. DETECT MALFUNCTIONING PART BY TROUBLE DIAGNOSIS - SPECIFICATION VALUE

Detect malfunctioning part according to EC-132, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .

Is malfunctioning part detected?

Yes >> GO TO 11.
No >> GO TO 9.

9. DETECT MALFUNCTIONING SYSTEM BY SYMPTOM MATRIX CHART

Detect malfunctioning system according to EC-90, "Symptom Matrix Chart" based on the confirmed symptom in step 4, and determine the trouble diagnosis order based on possible causes and symptom.

>> GO TO 10.

10. DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.

NOTE:
The Diagnostic Procedure in EC section described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in GI-27, "How to Perform Efficient Diagnosis for an Electrical Incident" .

Is malfunctioning part detected?

Yes >> GO TO 11.
No >> Monitor input data from related sensors or check voltage of related ECM terminals using CONSULT-III. Refer to EC-127, "CONSULT-III Reference Value in Data Monitor" , EC-103, "ECM Terminals and Reference Value" .

11. REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it, refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 12.

12. FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Overall Function Check again, and then make sure that the malfunction have been repaired securely.
When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and make sure that the symptom is not detected.

OK or NG

NG (DTC*1 is detected)>>GO TO 10.
NG (Symptom remains)>>GO TO 6.
OK >> 1. Before returning the vehicle to the customer, make sure to erase unnecessary DTC*1 in ECM and TCM (Transmission Control Module). (Refer to EC-61, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" and AT-38, "HOW TO ERASE DTC" .)
2. If the completion of SRT is needed, drive vehicle under the specific driving pattern. Refer to EC-58, "Driving Pattern" .
3. **INSPECTION END**

*1: Include 1st trip DTC.
*2: Include 1st trip freeze frame data.

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.
Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.
Some conditions may cause the MIL to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.

KEY POINTS

WHAT ..... Vehicle & engine model
WHEN ..... Date, Frequencies
WHERE..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SEF907L

Worksheet Sample

Customer name MR/MS		Model & Year	VIN
Engine #		Trans.	Mileage
Incident Date		Manuf. Date	In Service Date
Fuel and fuel filler cap		☐ Vehicle ran out of fuel causing misfire ☐ Fuel filler cap was left off or incorrectly screwed on.	
Symptoms	☐ Startability	☐ Impossible to start ☐ No combustion ☐ Partial combustion ☐ Partial combustion affected by throttle position ☐ Partial combustion NOT affected by throttle position ☐ Possible but hard to start ☐ Others [ ]	
	☐ Idling	☐ No fast idle ☐ Unstable ☐ High idle ☐ Low idle ☐ Others [ ]	
	☐ Driveability	☐ Stumble ☐ Surge ☐ Knock ☐ Lack of power ☐ Intake backfire ☐ Exhaust backfire ☐ Others [ ]	
	☐ Engine stall	☐ At the time of start ☐ While idling ☐ While accelerating ☐ While decelerating ☐ Just after stopping ☐ While loading	
Incident occurrence		☐ Just after delivery ☐ Recently ☐ In the morning ☐ At night ☐ In the daytime	
Frequency		☐ All the time ☐ Under certain conditions ☐ Sometimes	
Weather conditions		☐ Not affected	
	Weather	☐ Fine ☐ Raining ☐ Snowing ☐ Others [ ]	
	Temperature	☐ Hot ☐ Warm ☐ Cool ☐ Cold ☐ Humid °F	
Engine conditions		☐ Cold ☐ During warm-up ☐ After warm-up Engine speed 0 2,000 4,000 6,000 8,000 rpm	
Road conditions		☐ In town ☐ In suburbs ☐ Highway ☐ Off road (up/down)	
Driving conditions		☐ Not affected ☐ At starting ☐ While idling ☐ At racing ☐ While accelerating ☐ While cruising ☐ While decelerating ☐ While turning (RH/LH) Vehicle speed 0 10 20 30 40 50 60 MPH	
Malfunction indicator lamp		☐ Turned on ☐ Not turned on	

MTBL0017

DTC Inspection Priority Chart

NBS0003E

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:

- **If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-151, "DTC U1000, U1001 CAN COMMUNICATION LINE" .**
- **If DTC U1010 is displayed with other DTC, first perform the diagnosis for DTC U1010. Refer to EC-154, "DTC U1010 CAN COMMUNICATION".**

Priority	Detected items (DTC)
1	● U1000 U1001 CAN communication line ● U1010 CAN communication ● P0101 P0102 P0103 P010B P010C P010D Mass air flow sensor ● P0112 P0113 P0127 Intake air temperature sensor ● P0117 P0118 P0125 Engine coolant temperature sensor ● P0122 P0123 P0222 P0223 P0227 P0228 P1225 P1226 P1234 P1235 P1239 P2132 P2133 P2135 Throttle position sensor ● P0128 Thermostat function ● P0181 P0182 P0183 Fuel tank temperature sensor ● P0196 P0197 P0198 Engine oil temperature sensor ● P0327 P0328 P0332 P0333 Knock sensor ● P0335 Crankshaft position sensor (POS) ● P0340 P0345 Camshaft position sensor (PHASE) ● P0460 P0461 P0462 P0463 Fuel level sensor ● P0500 Vehicle speed sensor ● P0605 ECM ● P0643 Sensor power supply ● P0700 TCM ● P0705 P0850 Park/neutral position (PNP) switch ● P1610 - P1615 NATS ● P2122 P2123 P2127 P2128 P2138 Accelerator pedal position sensor

Priority	Detected items (DTC)
2	● P0031 P0032 P0051 P0052 Air fuel ratio (A/F) sensor 1 heater ● P0037 P0038 P0057 P0058 Heated oxygen sensor 2 heater ● P0075 P0081 Intake valve timing control solenoid valve ● P0078 P0084 Exhaust valve timing control magnet retarder* ● P0130 P0131 P0132 P0133 P0150 P0151 P0152 P0153 P2A00 P2A03 Air fuel ratio (A/F) sensor 1 ● P0137 P0138 P0139 P0158 P0159 Heated oxygen sensor 2 ● P0441 EVAP control system purge flow monitoring ● P0443 P0444 P0445 EVAP canister purge volume control solenoid valve ● P0447 P0448 EVAP canister vent control valve ● P0451 P0452 P0453 EVAP control system pressure sensor ● P0550 Power steering pressure sensor ● P0603 ECM power supply ● P0710 P0717 P0720 P0731 P0732 P0733 P0734 P0735 P0740 P0744 P0745 P1730 P1752 P1757 P1762 P1767 P1772 P1774 A/T related sensors, solenoid valves and switches ● P1078 P1084 Exhaust valve timing control position sensor ● P1217 Engine over temperature (OVERHEAT) ● P1233 P2101 Electric throttle control function ● P1236 P2118 Throttle control motor ● P1290 P2103 P2103 Throttle control motor relay ● P1805 Brake switch

Fail-safe Chart

NBS0003F

When the DTC listed below is detected, the ECM enters fail-safe mode and the MIL lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P0102 P0103 P010C P010D	Mass air flow sensor circuit	Engine speed will not rise more than 2,400 rpm due to the fuel cut.
P0117 P0118	Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-III displays the engine coolant temperature decided by ECM.
		Condition: Just as ignition switch is turned ON or START — Engine coolant temperature decided (CONSULT-III display): 40°C (104°F)
		Condition: More than approx. 4 minutes after ignition ON or START — Engine coolant temperature decided (CONSULT-III display): 80°C (176°F)
		Condition: Except as shown above — Engine coolant temperature decided (CONSULT-III display): 40 - 80°C (104 - 176°F) (Depends on the time)
		When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.
P0122 P0123 P0222 P0223 P0227 P0228 P1239 P2132 P2133 P2135	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0643	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1233 P2101	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1236 P2118	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1238 P2119	Electric throttle control actuator	(When electric throttle control actuator does not function properly due to the return spring malfunction:) ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
		(When throttle valve opening angle in fail-safe mode is not in specified range:) ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
		(When ECM detects the throttle valve is stuck open:) While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P (A/T), Neutral (M/T) position, and engine speed will not exceed 1,000 rpm or more.
P1290 P2100 P2103	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

- When there is an open circuit on MIL circuit, the ECM cannot warn the driver by lighting up MIL when there is malfunction on engine control system.
  Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system malfunctions and MIL circuit is open by means of operating fail-safe function.
  The fail-safe function also operates when above diagnoses except MIL circuit are detected and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

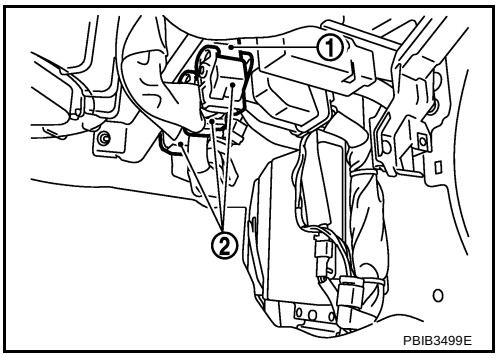
ECM Harness Connector Terminal Layout

NBS0003L



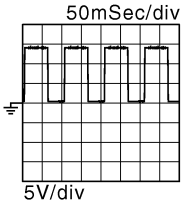
ECM Terminals and Reference Value

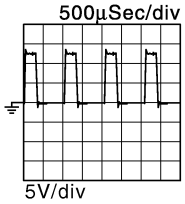
NBS0003M

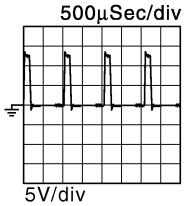
PREPARATION

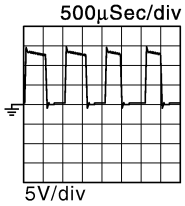
ECM (1) is located behind the passenger side instrument lower panel. For this inspection, remove passenger side instrument lower panel.

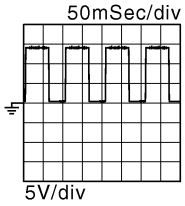
2 : ECM harness connector

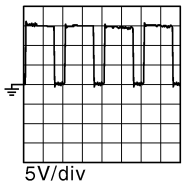




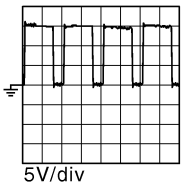


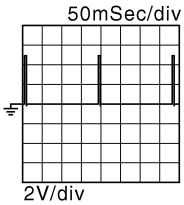


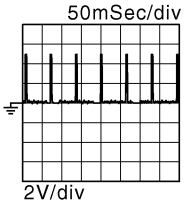


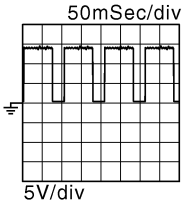


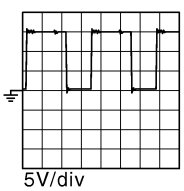
ECM INSPECTION TABLE



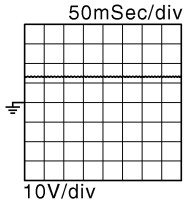


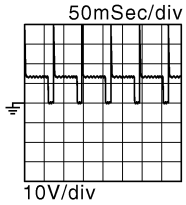


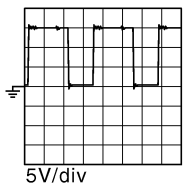




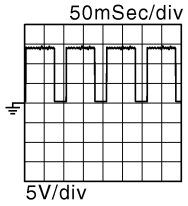
Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-III.



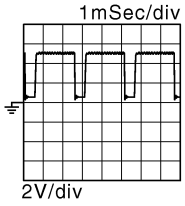


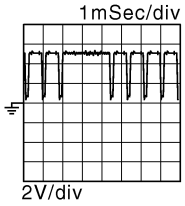


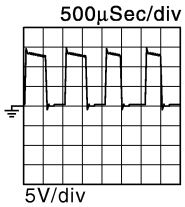
CAUTION:



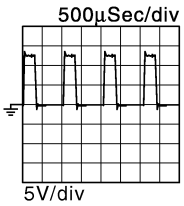
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECMs transistor. Use a ground other than ECM terminals, such as the ground.

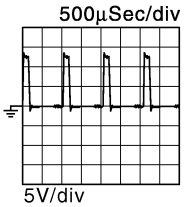


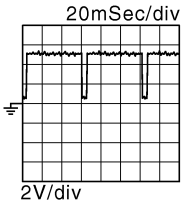


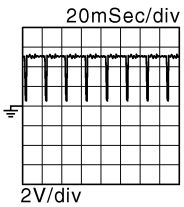


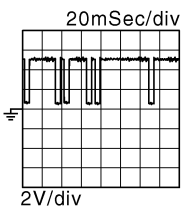
TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	W/R	A/F sensor 1 heater (bank 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed (More than 140 seconds after starting engine)	2.9 - 8.8V★  PBIB3538E

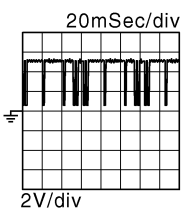












TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	G	Throttle control motor (Open) (bank 1)	**[Ignition switch: ON]** ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB3539E
			[Ignition switch: ON] ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: Fully released	0 - 14V★  PBIB3540E
3	R/W	Throttle control motor relay power supply (bank 1)	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)
4	BR	Throttle control motor (Close) (bank 1)	**[Ignition switch: ON]** ● Engine stopped ● Shift lever: D (A/T) or 1st (M/T) ● Accelerator pedal: In the middle of releasing operation	0 - 14V★  PBIB3541E
5	GY/L	A/F sensor 1 heater (bank 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed (More than 140 seconds after starting engine)	2.9 - 8.8★  PBIB3538E
6	L/OR	Exhaust valve timing control magnet retarder (bank 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	BATTERY VOLTAGE (11 - 14V)

107	BR	Sensor power supply (EVAP control system pressure sensor)	**[Ignition switch: ON]**	5V
108	B/Y	Sensor ground (ASCD steering switch)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V
109	BR	PNP switch	**[Ignition switch: ON]** ● Shift lever: P or N (A/T), Neutral (M/T) position	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch: ON] ● Shift lever: Except above position	0V

TER-MINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
110	Y	Engine speed output signal	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle	1V★  PBIB3557E
			[Engine is running] ● Engine speed: 2,000 rpm	1V★  PBIB3558E
111	OR	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch: ON]**	5V
112	PU	Sensor ground (EVAP control system pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V
113	P	CAN communication line	—	—
114	L	CAN communication line	—	—
116	W	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	0V
117	PU	Data link connector	**[Ignition switch: ON]** ● GST: Disconnected	5V - Battery voltage (11 - 14V)
121	LG	EVAP canister vent control valve	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)
122	P/L	Stop lamp switch	**[Ignition switch: OFF]** ● Brake pedal: Fully released	0V
			[Ignition switch: OFF] ● Brake pedal: Slightly depressed	BATTERY VOLTAGE (11 - 14V)
123 124	B/W B/R	ECM ground	**[Engine is running]** ● Idle speed	Body ground
125	R	Power supply for ECM	**[Ignition switch: ON]**	BATTERY VOLTAGE (11 - 14V)
126	L/OR	ASCD brake switch	**[Ignition switch: ON]** ● Brake pedal: Slightly depressed (A/T) ● Brake pedal and/or clutch pedal: Slightly depressed (M/T)	0V
			[Ignition switch: ON] ● Brake pedal: Fully released (A/T) ● Brake pedal and clutch pedal: Fully released (M/T)	BATTERY VOLTAGE (11 - 14V)
127 128	B B	ECM ground	**[Engine is running]** ● Idle speed	Body ground

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

*: This may vary depending on internal resistance of the tester.

CONSULT-III Function (ENGINE)

NBS0003N

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-III unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*
Data monitor	Input/Output data in the ECM can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-III drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
ECU Identification	ECM part number can be read.

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values

ENGINE CONTROL COMPONENT PARTS/CONTROL SYSTEMS APPLICATION

		Item	DIAGNOSTIC TEST MODE						
			WORK SUPPORT	SELF-DIAGNOSTIC RESULTS		DATA MONITOR	ACTIVE TEST	DTC & SRT CONFIRMATION	
				DTC*1	FREEZE FRAME DATA*2			SRT STATUS	DTC WORK SUPPORT
ENGINE CONTROL COMPONENT PARTS	INPUT	Crankshaft position sensor (POS)		×	×	×			
		Camshaft position sensor (PHASE)		×	×	×

X: Applicable

*1: This item includes 1st trip DTCs.

*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-III screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to EC-119, "Freeze Frame Data and 1st Trip Freeze Frame Data" .

*3: Always “CMPLT” is displayed.

INSPECTION PROCEDURE

Refer to GI-36, "CONSULT-III/GST CHECKING SYSTEM" .

WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	● FUEL PUMP WILL STOP BY TOUCHING START DURING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	● THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	● THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEFFICIENT.	When clearing the coefficient of self-learning control value

WORK ITEM	CONDITION	USAGE
EVAP SYSTEM CLOSE	CLOSE THE EVAP CANISTER VENT CONTROL VALVE IN ORDER TO MAKE EVAP SYSTEM CLOSE UNDER THE FOLLOWING CONDITIONS. ● IGN SW ON ● ENGINE NOT RUNNING ● AMBIENT TEMPERATURE IS ABOVE 0°C (32°F). ● NO VACUUM AND NO HIGH PRESSURE IN EVAP SYSTEM ● FUEL TANK TEMP. IS MORE THAN 0°C (32°F). ● WITHIN 10 MINUTES AFTER STARTING EVAP SYSTEM CLOSE ● WHEN TRYING TO EXECUTE EVAP SYSTEM CLOSE UNDER THE CONDITION EXCEPT ABOVE, CONSULT-III WILL DISCONTINUE IT AND DISPLAY APPROPRIATE INSTRUCTION. **NOTE:** **WHEN STARTING ENGINE, CONSULT-III MAY DISPLAY "BATTERY VOLTAGE IS LOW. CHARGE BATTERY", EVEN IN USING CHARGED BATTERY.**	When detecting EVAP vapor leak point of EVAP system
VIN REGISTRATION	● IN THIS MODE, VIN IS REGISTERED IN ECM.	When registering VIN in ECM
EXH V/T CONTROL LEARN	● IN THIS MODE, OPERATION TO LEARN EXHAUST VALVE TIMING CONTROL MAGNET RETARDER CHARACTERISTIC.	When learning the exhaust valve timing control
TARGET IDLE RPM ADJ*	● IDLE CONDITION	When setting target idle speed
TARGET IGN TIM ADJ*	● IDLE CONDITION	When adjusting target ignition timing

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE

Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" .)

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	● The engine control component part/control system has a trouble code, it is displayed as PXXXX. (Refer to EC-8, "INDEX FOR DTC" .)
FUEL SYS-B1	● "Fuel injection system status" at the moment a malfunction is detected is displayed.
FUEL SYS-B2	● One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	● The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	● The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	● "Long-term fuel trim" at the moment a malfunction is detected is displayed.
L-FUEL TRM-B2 [%]	● The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	● "Short-term fuel trim" at the moment a malfunction is detected is displayed.
S-FUEL TRM-B2 [%]	● The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.

Freeze frame data item*	Description
ENGINE SPEED [rpm]	● The engine speed at the moment a malfunction is detected is displayed.
VEHICL SPEED [km/h] or [mph]	● The vehicle speed at the moment a malfunction is detected is displayed.
ABSOL TH-P/S [%]	● The throttle valve operating angle at the moment a malfunction is detected is displayed.
B/FUEL SCHDL [msec]	● The base fuel schedule at the moment a malfunction is detected is displayed.
INT/A TEMP SE [°C] or [°F]	● The intake air temperature at the moment a malfunction is detected is displayed.

*: This item is the same as that of 1st trip freeze frame data.

DATA MONITOR MODE

Monitored Item

×: Applicable

Monitored item [Unit]	Description	Remarks
ENG SPEED [rpm]	● Indicates the engine speed computed from the signals of the crankshaft position sensor (POS) and camshaft position sensor (PHASE).	● Accuracy becomes poor if engine speed drops below the idle rpm. ● If the signal is interrupted while the engine is running, an abnormal value may be indicated.
MAS A/F SE-B1 [V]	● The signal voltage of the mass air flow sensor is displayed.	● When the engine is stopped, a certain value is indicated. ● When engine is running specification range is indicated in “SPEC”.
MAS A/F SE-B2 [V]		
B/FUEL SCHDL [msec]	● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	● When engine is running specification range is indicated in “SPEC”.
A/F ALPHA-B1 [%]	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When the engine is stopped, a certain value is indicated. ● This data also includes the data for the air-fuel ratio learning control. ● When engine is running specification range is indicated in “SPEC”.
A/F ALPHA-B2 [%]		
COOLAN TEMP/S [°C] or [°F]	● The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed.	● When the engine coolant temperature sensor is open or short-circuited, ECM enters fail-safe mode. The engine coolant temperature determined by the ECM is displayed.
A/F SEN1 (B1) [V]	● The A/F signal computed from the input signal of the A/F sensor 1 is displayed.	
A/F SEN1 (B2) [V]		
HO2S2 (B1) [V]	● The signal voltage of the heated oxygen sensor 2 is displayed.	
HO2S2 (B2) [V]		
HO2S2 MNTR(B1) [RICH/LEAN]	● Display of heated oxygen sensor 2 signal: RICH: Means the amount of oxygen after three way catalyst is relatively small. LEAN: Means the amount of oxygen after three way catalyst is relatively large.	● When the engine is stopped, a certain value is indicated.
HO2S2 MNTR(B2) [RICH/LEAN]		
VHCL SPEED SE [km/h] or [mph]	● The vehicle speed computed from the vehicle speed signal sent from combination meter is displayed.	
BATTERY VOLT [V]	● The power supply voltage of ECM is displayed.	
ACCEL SEN 1 [V]	● The accelerator pedal position sensor signal voltage is displayed.	● ACCEL SEN 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.
ACCEL SEN 2 [V]		

Monitored item [Unit]	Description	Remarks
TP SEN 1-B1 [V]	● The throttle position sensor signal voltage is displayed.	● THRTL SEN 2-B1 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.
TP SEN 2-B1 [V]		
FUEL T/TMP SE [°C] or [°F]	● The fuel temperature (determined by the signal voltage of the fuel tank temperature sensor) is displayed.	
INT/A TEMP SE [°C] or [°F]	● The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
EVAP SYS PRES [V]	● The signal voltage of EVAP control system pressure sensor is displayed.	
FUEL LEVEL SE [V]	● The signal voltage of the fuel level sensor is displayed.	
START SIGNAL [ON/OFF]	● Indicates start signal status [ON/OFF] computed by the ECM according to the signals of engine speed and battery voltage.	● After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	● Indicates idle position [ON/OFF] computed by ECM according to the accelerator pedal position sensor signal.	
AIR COND SIG [ON/OFF]	● Indicates [ON/OFF] condition of the air conditioner switch as determined by the air conditioner signal.	
P/N POSI SW [ON/OFF]	● Indicates [ON/OFF] condition from the park/neutral position (PNP) switch signal.	
PW/ST SIGNAL [ON/OFF]	● [ON/OFF] condition of the power steering system (determined by the signal voltage of the power steering pressure sensor) is indicated.	
LOAD SIGNAL [ON/OFF]	● Indicates [ON/OFF] condition from the electrical load signal. ON: Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF: Both rear window defogger switch and lighting switch are OFF.	
IGNITION SW [ON/OFF]	● Indicates [ON/OFF] condition from ignition switch signal.	
HEATER FAN SW [ON/OFF]	● Indicates [ON/OFF] condition from the heater fan switch signal.	
BRAKE SW [ON/OFF]	● Indicates [ON/OFF] condition from the stop lamp switch signal.	
INJ PULSE-B1 [msec]	● Indicates the actual fuel injection pulse width compensated by ECM according to the input signals.	● When the engine is stopped, a certain computed value is indicated.
INJ PULSE-B2 [msec]		
IGN TIMING [BTDC]	● Indicates the ignition timing computed by ECM according to the input signals.	● When the engine is stopped, a certain value is indicated.
CAL/LD VALUE [%]	● “Calculated load value” indicates the value of the current air flow divided by peak air flow.	
MASS AIRFLOW [g·m/s]	● Indicates the mass air flow computed by ECM according to the signal voltage of the mass air flow sensor.
