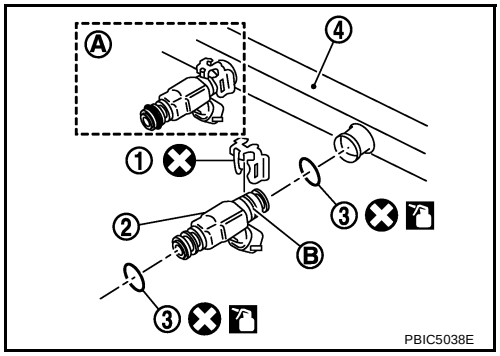
7. Disconnect harness connector from fuel injector.
8. Loosen mounting bolts in reverse order as shown in the figure, and remove fuel tube and fuel injector assembly.

CAUTION:
Do not tilt it, or remaining fuel in pipes may flow out from pipes.

⇦ : Engine front



9. Remove fuel injector (2) from fuel tube (4) as follows:

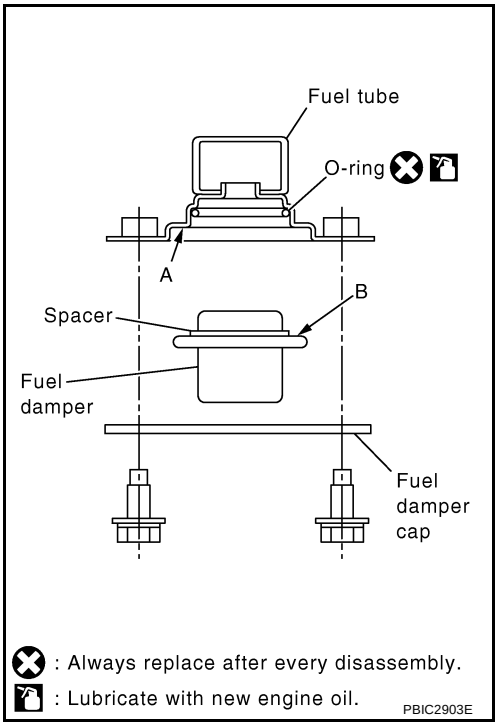
3 : O-ring
A : Installed condition
B : Clip mounting groove

a. Open and remove clip (1).
b. Remove fuel injector (2) from fuel tube (4) by pulling straight.

CAUTION:
- **Be careful with remaining fuel that may go out from fuel tube.**
- **Be careful not to damage injector nozzles during removal.**
- **Do not bump or drop fuel injector.**
- **Do not disassemble fuel injector.**

10. Remove fuel sub-tube and fuel damper, if necessary.

INSTALLATION



1. Install fuel damper as follows:

a. Install new O-ring to fuel tube as shown.

- When handling new O-ring, be careful of the following caution:

CAUTION:

- **Handle O-ring with bare hands. Do not wear gloves.**
- **Lubricate O-ring with new engine oil.**
- **Do not clean O-ring with solvent.**
- **Make sure that O-ring and its mating part are free of foreign material.**
- **When installing O-ring, be careful not to scratch it with tool or fingernails. Also be careful not to twist or stretch O-ring. If O-ring was stretched while it was being attached, do not insert it quickly into fuel tube.**
- **Insert new O-ring straight into fuel tube. Do not twist it.**

b. Install spacer to fuel damper.

c. Insert fuel damper straight into fuel tube.

CAUTION:

- **Insert straight, making sure that the axis is lined up.**
- **Do not pressure-fit with excessive force.**

Reference value : 130 N (13.3 kg, 29.2 lb)

- Insert fuel damper unit “B” is touching “A” of fuel tube.

d. Tighten bolts evenly in turn.

- After tightening bolts, make sure that there is no gap between fuel damper cap and fuel tube.

2. Install fuel sub-tube.

- When handling new O-ring, be careful of the following caution:

CAUTION:

- **Handle O-ring with bare hands. Do not wear gloves.**
- **Lubricate O-ring with new engine oil.**
- **Do not clean O-ring with solvent.**
- **Make sure that O-ring and its mating part are free of foreign material.**
- **When installing O-ring, be careful not to scratch it with tool or fingernails. Also be careful not to twist or stretch O-ring. If O-ring was stretched while it was being attached, do not insert it quickly into fuel tube.**
- **Insert O-ring straight into fuel tube. Do not decenter or twist it.**

- Insert fuel sub-tube straight into fuel tube.
- Tighten mounting bolts evenly in turn.
- After tightening mounting bolts, make sure that there is no gap between flange and fuel sub-tube.

3. Install O-rings to fuel injector, paying attention to the following.

CAUTION:

- **Upper and lower O-ring are different. Be careful not to confuse them.**

Fuel tube side : Black
Nozzle side : Green

- **Handle O-ring with bare hands. Do not wear gloves.**
- **Lubricate O-ring with new engine oil.**
- **Do not clean O-ring with solvent.**
- **Make sure that O-ring and its mating part are free of foreign material.**

- **When installing O-ring, be careful not to scratch it with tool or fingernails. Also be careful not to twist or stretch O-ring. If O-ring was stretched while it was being attached, do not insert it quickly into fuel tube.**
- **Insert O-ring straight into fuel injector. Do not decenter or twist it.**

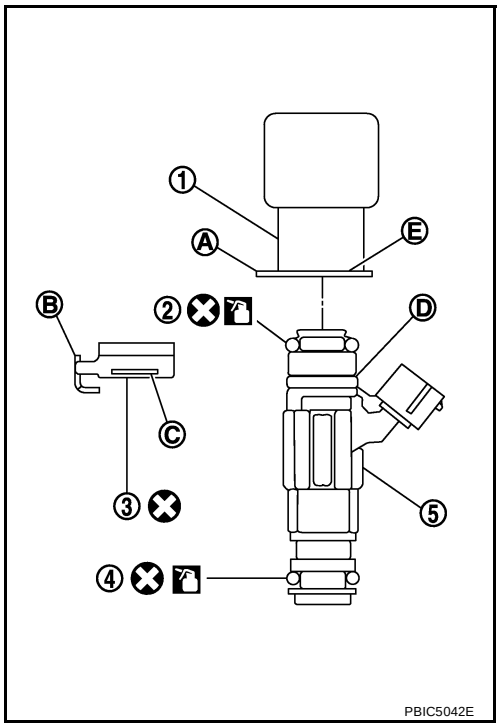
4. Install fuel injector to fuel tube as follows:

   2 : O-ring (Black)

   4 : O-ring (Green)

a. Insert clip (3) into clip mounting groove (D) on fuel injector (5).

CAUTION:



- **Do not reuse clip. Replace it with a new one.**
- **Be careful to keep clip from interfering with O-ring. If interference occurs, replace O-ring.**

b. Insert fuel injector (5) into fuel tube (1) with clip attached.

- Insert it while matching it to the axial center.
- Insert fuel injector (5) so that protrusion (A) of fuel tube matches cutout (B) of clip (3).
- Make sure that fuel tube flange (E) is securely fixed in flange fixing groove (C) on clip (3).

c. Make sure that installation is complete by checking that fuel injector does not rotate or come off.

- Make sure that protrusions of fuel injectors are aligned with cutouts of clips after installation.

5. Install fuel tube and fuel injector assembly to intake manifold.

CAUTION:

Be careful not to let tip of injector nozzle come in contact with other parts.

- Tighten mounting bolts in two steps in numerical order as shown in the figure.

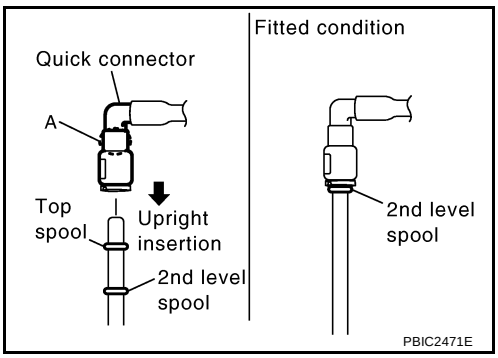
  ⇦ : Engine front

  1st step

  : 10.1 N·m (1.0 kg-m, 7 ft-lb)

  2nd step

  : 23.6 N·m (2.4 kg-m, 17 ft-lb)



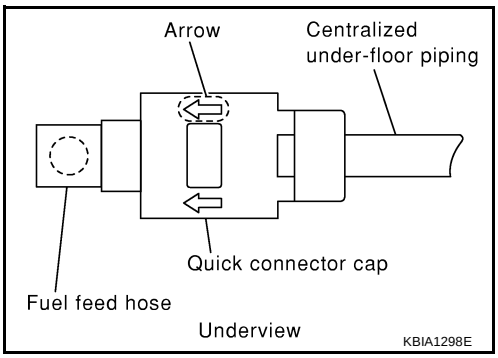
6. Connect fuel injector harness connector.
7. Connect fuel feed hose (with damper).
   - Handling procedure of O-ring is the same as that of fuel damper and fuel sub-tube.
   - Insert fuel damper straight into fuel sub-tube.
   - Tighten mounting bolts evenly in turn.
   - After tightening mounting bolts, make sure that there is no gap between flange and fuel sub-tube.
8. Connect quick connector between fuel feed hose (with damper) and centralized under-floor piping connection as follows:

a. Make sure no foreign substances are deposited in and around centralized under-floor piping and quick connector, and no damage on them.

b. Thinly apply new engine oil around centralized under-floor piping from tip end to spool end.

c. Align center to insert quick connector straightly into centralized under-floor piping.

- Insert quick connector to centralized under-floor piping until top spool is completely inside quick connector, and 2nd level spool exposes right below quick connector.



CAUTION:

- **Hold “A” position as shown in the figure when inserting centralized under-floor piping into quick connector.**
- **Carefully align center to avoid inclined insertion to prevent damage to O-ring inside quick connector.**
- **Insert until you hear a “click” sound and actually feel the engagement.**
- **To avoid misidentification of engagement with a similar sound, be sure to perform the next step.**

d. Pull quick connector by hand holding “A” position. Make sure it is completely engaged (connected) so that it does not come out from centralized under-floor piping.

e. Install quick connector cap to quick connector connection.

- Install quick connector cap with arrow on surface facing in direction of quick connector (fuel feed hose side).

CAUTION:

If cap cannot be installed smoothly, quick connector may have not been installed correctly. Check connection again.

9. Install in the reverse order of removal after this step.

INSPECTION AFTER INSTALLATION

Check on Fuel Leakage

1. Turn ignition switch “ON” (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.

   NOTE:
   Use mirrors for checking at points out of clear sight.

2. Start engine. With engine speed increased, check again for fuel leakage at connection points.

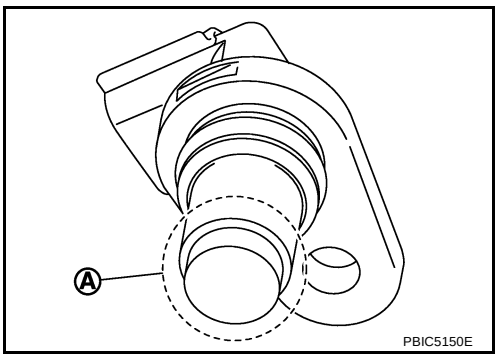
   CAUTION:
   Do not touch engine immediately after stopped, as engine becomes extremely hot.

ROCKER COVER

PFP:13264

Removal and Installation

NBS0000P



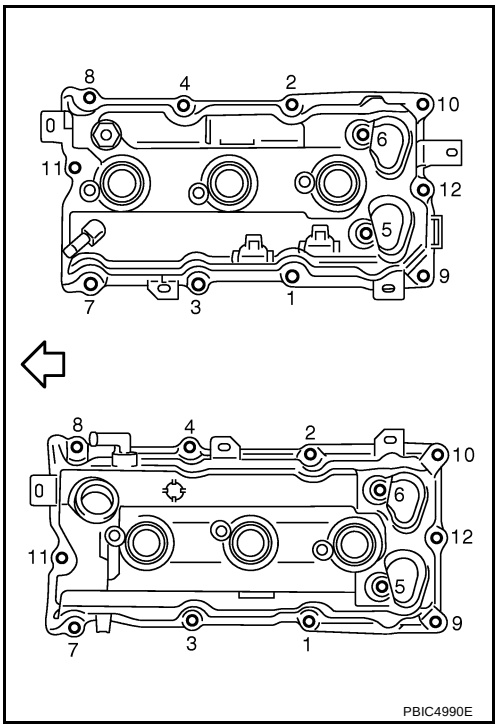
1.	PCV hose	2.	Clamp	3.	Ignition coil
4.	Spark plug	5.	PCV valve	6.	O-ring
7.	Rocker cover gasket (right bank)	8.	Rocker cover (right bank)	9.	O-ring
10.	Camshaft position sensor (bank 1)	11.	Exhaust valve timing control position sensor (bank 1)	12.	Camshaft position sensor (bank 2)
13.	Exhaust valve timing control position sensor (bank 2)	14.	Rocker cover gasket (left bank)	15.	Rocker cover (left bank)
16.	PCV hose	17.	Oil catcher	18.	Oil filler cap
19.	PCV hose				
A.	To intake manifold collector	B.	Refer to EM-40	C.	Camshaft bracket side
D.	To air duct				

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove engine cover. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Remove intake manifold collector. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
3. Separate engine harness removing their brackets from rocker covers.
4. Remove ignition coil. Refer to EM-31, "IGNITION COIL" .

5. Remove camshaft position sensor and exhaust valve timing control position sensor.



A : Keep off any magnetic materials

CAUTION:

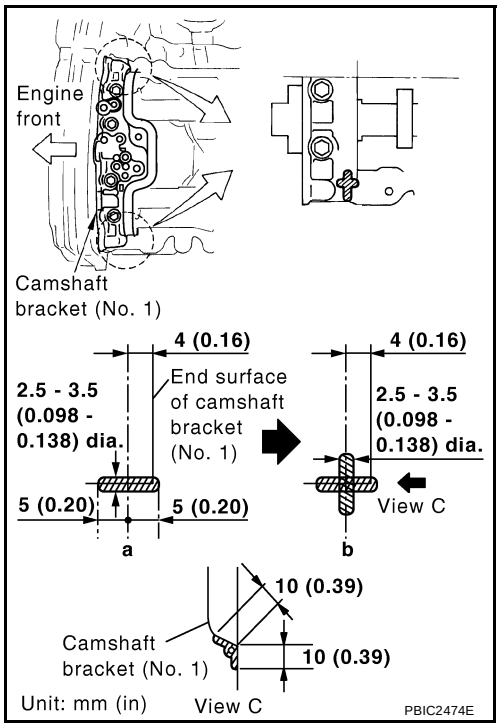
- **Handle carefully to avoid dropping and shocks.**
- **Do not disassemble.**
- **Do not allow metal powder to adhere to magnetic part at sensor tip.**
- **Do not place sensors in a location where they are exceed to magnetism.**

6. Remove PCV hoses from rocker covers.
7. Remove PCV valve and O-ring from rocker cover, if necessary.
8. Remove oil filler cap from rocker cover, if necessary.
9. Loosen mounting bolts with power tool in reverse order as shown in the figure.

⇦ : Engine front

10. Remove rocker cover gaskets from rocker covers.
11. Use scraper to remove all trances of liquid gasket from cylinder head and camshaft bracket (No. 1).

CAUTION:

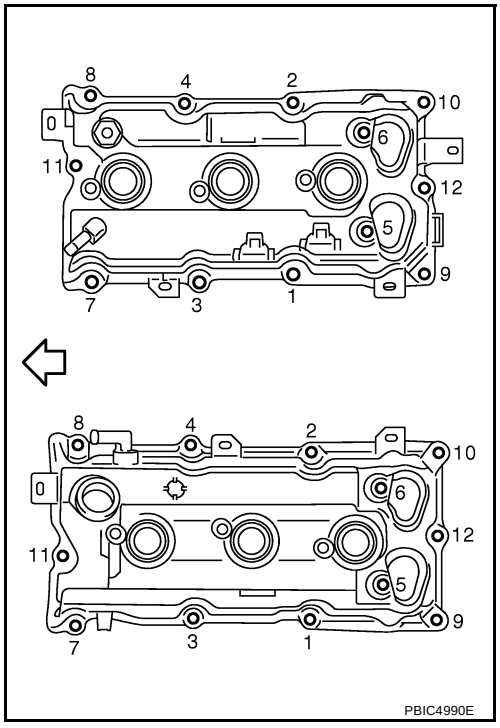


Do not scratch or damage the mating surface when cleaning off old liquid gasket.

INSTALLATION

1. Apply liquid gasket with tube presser [SST: WS39930000 (—)] to joint part among rocker cover, cylinder head and camshaft bracket (No. 1) as follows:
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
   NOTE:
   The figure shows an example of left bank side [zoomed in shows camshaft bracket (No. 1)].

a. Refer to the figure “a” to apply liquid gasket to joint part of camshaft bracket (No. 1) and cylinder head.



b. Refer to the figure “b” to apply liquid gasket to the figure “a” squarely.

2. Install new rocker cover gasket to rocker cover.
3. Install rocker cover.
   - Check if rocker cover gasket is not dropped from installation groove of rocker cover.
4. Tighten bolts in two steps separately in numerical order as shown in the figure.

   ⇦ : Engine front

   1st step
   : 2.0 N·m (0.2 kg-m, 18 in-lb)
   2nd step
   : 8.3 N·m (0.85 kg-m, 73 in-lb)

5. Install oil filler cap to rocker cover (left bank), if removed.
6. Install new O-ring and PCV valve to rocker cover (right bank), if removed.
7. Install PCV hose.
   - Insert PCV hose by 25 to 30 mm (0.98 to 1.18 in) from connector end.
   - When installing, be careful not to twist or come in contact with other parts.

- Install PCV hose between right and left rocker covers with its identification paint facing upward (right rocker cover side). Refer to component figure in EM-40, "Removal and Installation" .

8. Install in the reverse order of removal after this step.

FRONT TIMING CHAIN CASE

PFP:13599

Removal and Installation

NBS0000Q

NOTE:

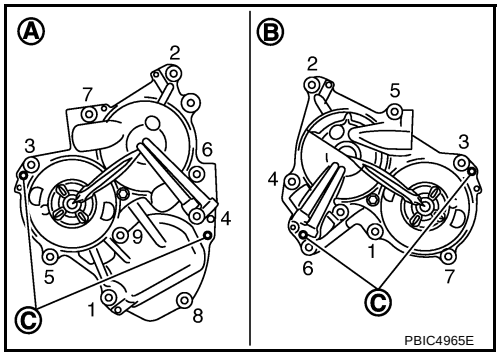
- This section describes removal/installation procedure of front timing chain case and timing chain related parts without removing oil pan (upper) on vehicle.
- When oil pan (upper) needs to be removed or installed, or when rear timing chain case is removed or installed, remove oil pans (upper and lower) first. Then remove front timing chain case, timing chain related parts, and rear timing chain case in this order, and install in the reverse order of removal. Refer to EM-53, "TIMING CHAIN" .
- Refer to EM-53, "TIMING CHAIN" for component parts location.

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Remove undercover with power tool.
3. Release the fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
4. Disconnect the battery cable from the negative terminal.
5. Drain engine oil. Refer to LU-7, "Changing Engine Oil" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine oil on drive belts.**
6. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
7. Remove radiator cooling fan assembly. Refer to CO-21, "COOLING FAN" .
8. Separate engine harnesses removing their brackets from front timing chain case.
9. Remove drive belts. Refer to EM-12, "DRIVE BELTS" .
10. Remove intake manifold collector. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
11. Remove harness bracket and fuel sub tube mounting bolt on front timing chain case.
12. Remove oil level gauge and guide.
13. Remove power steering oil pump from bracket with piping connected, and temporarily secure it to aside. Refer to PS-28, "POWER STEERING OIL PUMP" .
14. Remove power steering oil pump bracket. Refer to PS-28, "POWER STEERING OIL PUMP" .
15. Remove alternator. Refer to SC-20, "CHARGING SYSTEM" .
16. Remove water outlet and water piping. Refer to CO-28, "WATER OUTLET AND WATER PIPING" .
17. Remove left and right valve timing control covers with the following procedure.



a. Disconnect valve timing control harness connector.

b. Loosen mounting bolts in reverse order as shown in the figure.

   A : Right bank

   B : Left bank

   C : Dowel pin hole

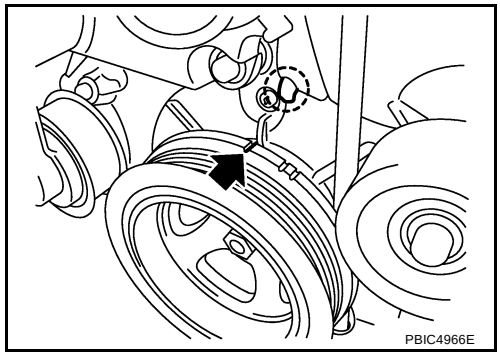
c. Shaft is engaged with intake side camshaft sprocket center hole on inside. Pull straight out so as not to tilt until the joint is disengaged.

- The mating surface of magnet retarder may be fitted with the exhaust side camshaft sprocket via the engine oil. Open valve timing control cover carefully.
- If the mating surface of magnet retarder is fitted with the camshaft sprocket, open the cover within the range that the load is not applied to the harness. And then, remove it so as to prevent magnet retarder from dropping.

CAUTION:

- **Be careful not to damage magnet retarder.**
- **When carrying valve timing control cover, face the magnet retarder side up to prevent the cover from falling from magnet retarder.**
- **Do not remove magnet retarder from valve timing control cover. (Disassembly prohibited parts)**

18. Remove rocker covers (right and left banks). Refer to EM-40, "ROCKER COVER" .

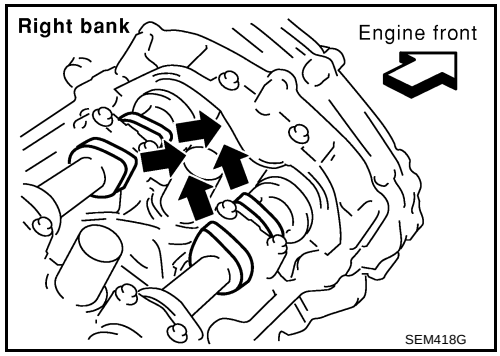


NOTE:
When only timing chain (primary) is removed, rocker cover does not need to be removed.

19. Obtain No. 1 cylinder at TDC of its compression stroke as follows:

NOTE:
When timing chain is not removed/installed, this step is not required.

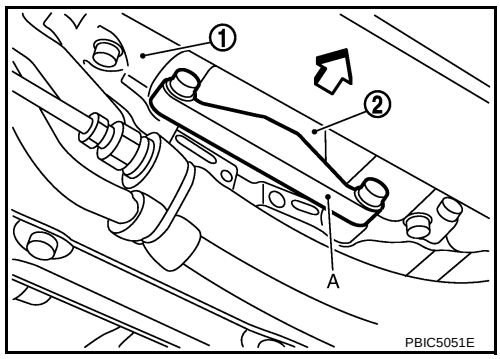
a. Rotate crankshaft pulley clockwise to align timing mark (grooved line without color) with timing indicator.



⬅ : Timing mark (grooved without color)

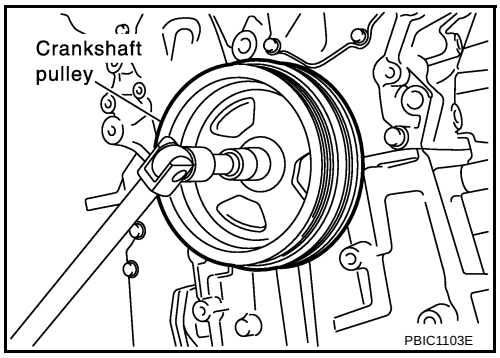
b. Make sure that intake and exhaust cam noses on No. 1 cylinder (engine front side of right bank) are located as shown in the figure.

- If not, turn crankshaft one revolution (360 degrees) and align as shown in the figure.



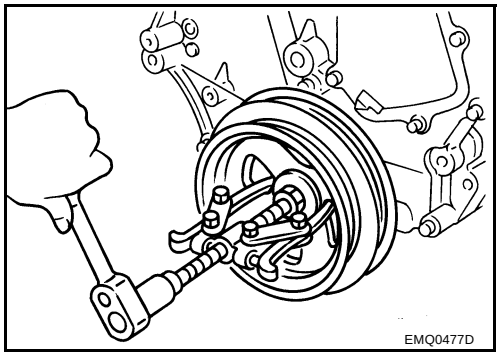
NOTE:
When only timing chain (primary) is removed, rocker cover does not need to be removed. To make sure that No. 1 cylinder is at its compression TDC, remove front timing chain case first. Then check mating marks on camshaft sprockets. Refer to EM-60, "INSTALLATION" .

20. Remove crankshaft pulley as follows:



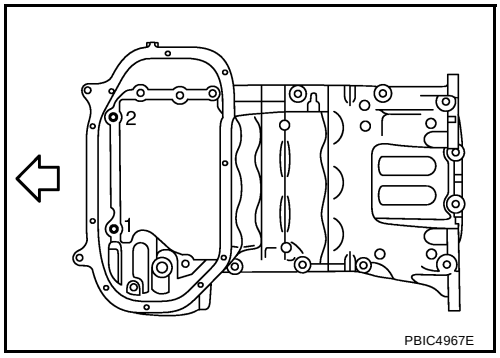
a. Remove rear cover plate and set ring gear stopper [SST: KV10118600 (J-48641)] (A) as shown in the figure.

1 : Oil pan
2 : Fly wheel (M/T models) or drive plate (A/T models)
⇦ : Vehicle front



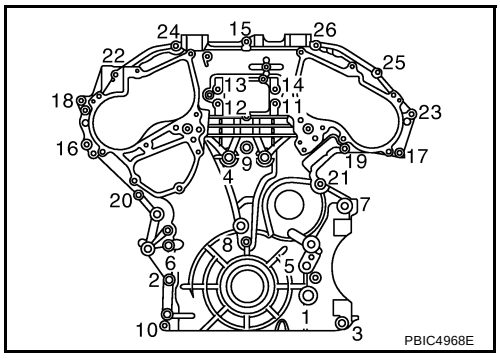
b. Loosen crankshaft pulley bolt and locate bolt seating surface as 10 mm (0.39 in) from its original position.

CAUTION:
Do not remove crankshaft pulley bolt as it will be used as a supporting point for suitable puller.



c. Place suitable puller tab on holes of crankshaft pulley, and pull crankshaft pulley through.

CAUTION:
Do not put suitable puller tab on crankshaft pulley periphery, as this will damage internal damper.

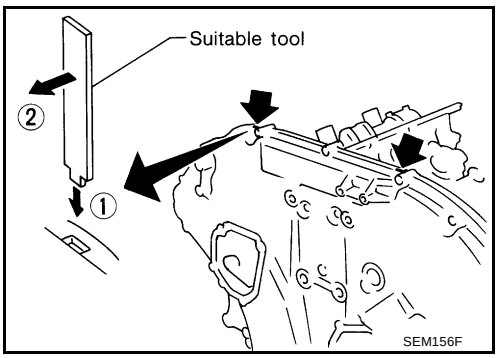


21. Remove oil pan (lower). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
22. Loosen two mounting bolts in front of oil pan (upper) in reverse order as shown in the figure.

⇦ : Engine front

23. Remove front timing chain case as follows:

a. Loosen mounting bolts in reverse order as shown in the figure.



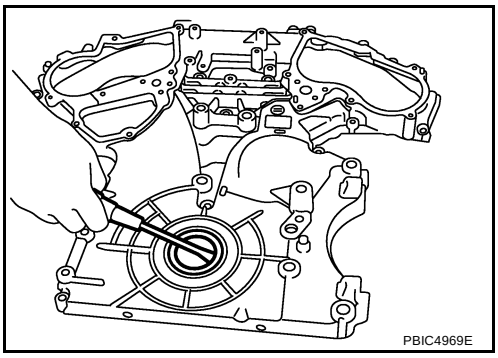
b. Insert suitable tool into the notch at the top of the front timing chain case as shown (1).

c. Pry off case by moving tool as shown (2).

- Use seal cutter [SST: KV10111100 (J37228)] to cut liquid gasket for removal.

CAUTION:

- **Do not use screwdriver or something similar.**
- **After removal, handle front timing chain case carefully so it does not tilt, cant, or warp under a load.**

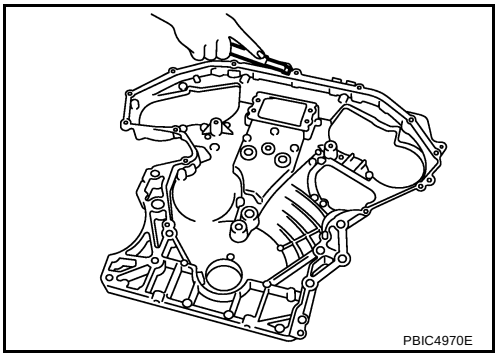


24. Remove front oil seal from front timing chain case using suitable tool.

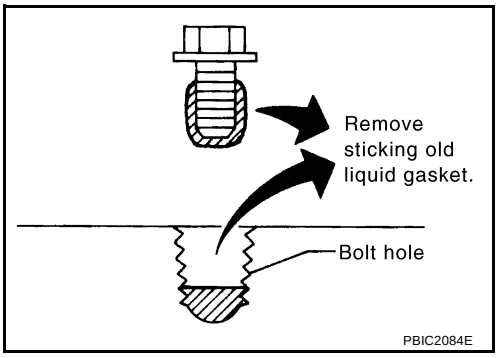
- Use screwdriver for removal.

CAUTION:

Be careful not to damage front timing chain case.



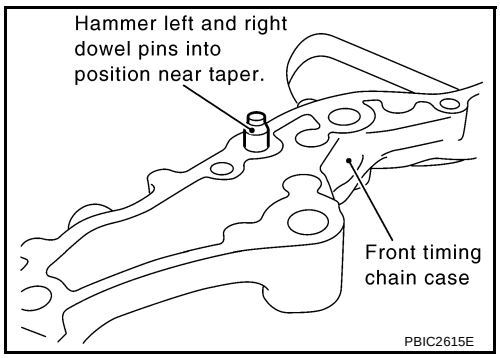
25. Remove timing chain and related parts. Refer to EM-53, "TIMING CHAIN" .



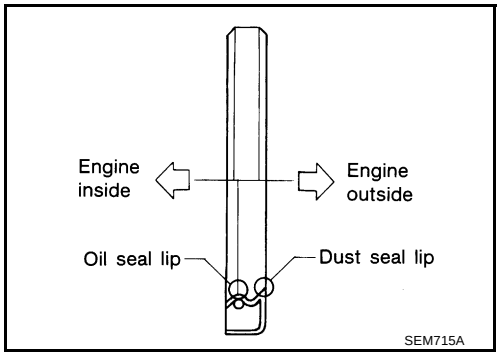
26. Use scraper to remove all traces of old liquid gasket from front and rear timing chain cases and oil pan (upper), and liquid gasket mating surfaces.

CAUTION:

Be careful not to allow gasket fragments to enter oil pan.

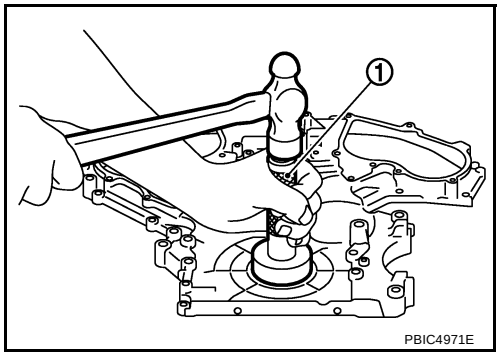


- Remove old liquid gasket from bolt hole and thread.



INSTALLATION

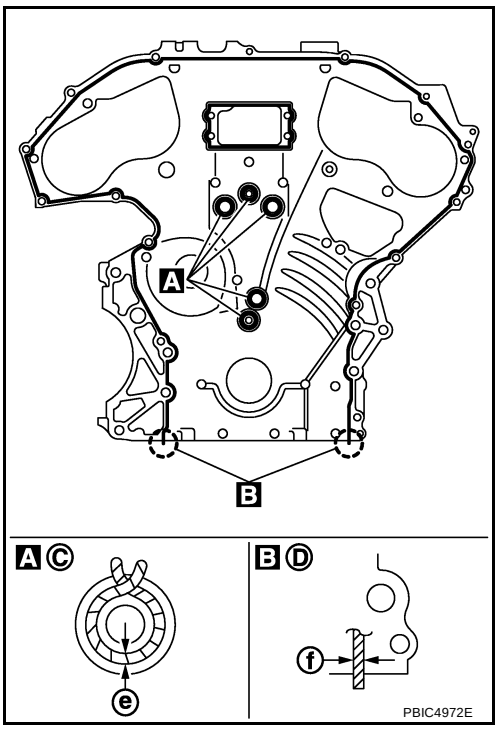
1. Install timing chain and related parts. Refer to EM-53, "TIMING CHAIN" .



2. Hammer dowel pins (right and left) into front timing chain case up to a point close to taper in order to shorten protrusion length.

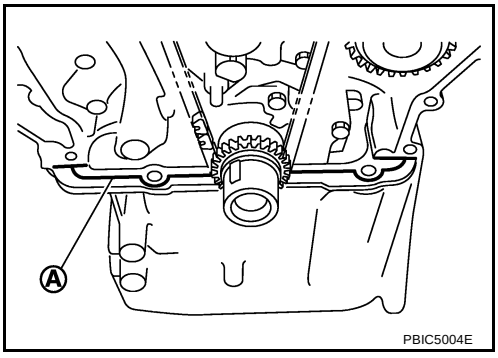
3. Install new front oil seal on the front timing chain case.
   - Apply new engine oil to both oil seal lip and dust seal lip.
   - Install it so that each seal lip is oriented as shown in the figure.

   - Using suitable drift [outer diameter: 60 mm (2.36 in)] (A), press-fit oil seal until it becomes flush with front timing chain case end face.
   - Make sure the garter spring is in position and seal lip is not inverted.



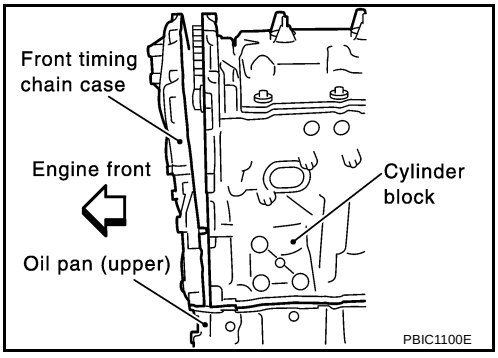
4. Install front timing chain case as follows:

a. Apply a continuous bead of liquid gasket with tube presser [SST: WS39930000 (—)] to front timing chain case back side as shown in the figure.
Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .



C : Bolt hole
D : Protrusion
e : 2.6 - 3.6 mm (0.102 - 0.142 in)
f : 3.4 - 4.4 mm (0.134 - 0.173 in)

NOTE:
Apply liquid gasket, start and end up application at the portions (A) shown in the figure.



- Apply liquid gasket with tube presser [SST: WS39930000 (—)] to top surface of oil pan (upper) as shown in the figure.
Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

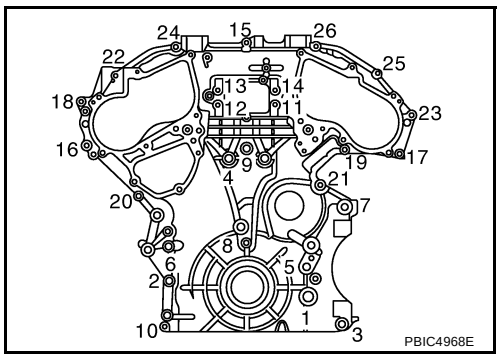
A : 4.0 - 5.0 mm (0.157 - 0.197 in)

b. Assemble front timing chain case as follows:
Fit lower end of front timing chain case tightly onto top face of oil pan (upper). From the fitting point, make entire front timing chain case contact rear timing chain case completely.

CAUTION:
- **Be careful not to damage front oil seal by interference with front end of crankshaft.**
- **Attaching should be done within 5 minutes after liquid gasket application.**

c. Install front timing chain case as to fit its dowel pin hole together dowel pin on rear timing chain case.

d. Tighten mounting bolts to the specified torque in numerical order as shown in the figure.



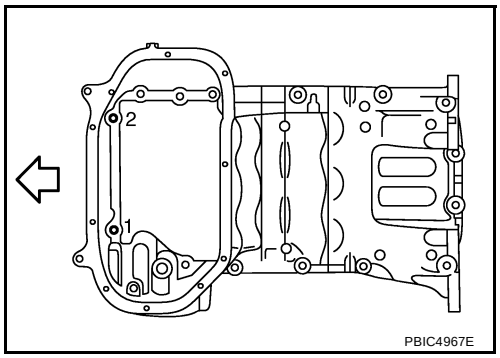
- There are two types of mounting bolts. Refer to the following for locating bolts.

M10 bolts : 1, 2, 3, 4, 5, 6, 7

: 55.0 N·m (5.6 kg-m, 41 ft-lb)

M6 bolts : Except the above

: 12.7 N·m (1.3 kg-m, 9 ft-lb)

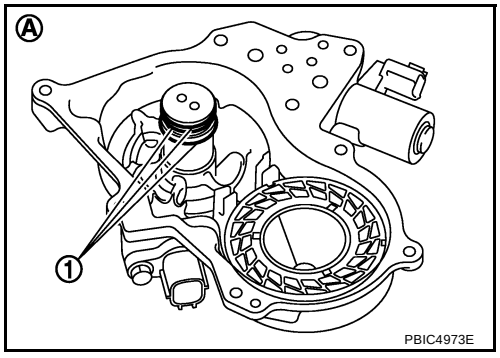


e. After all bolts tightened, retighten them to the specified torque in numerical order as shown in the figure.

5. Install two mounting bolts in front of oil pan (upper) in numerical order as shown in the figure.

: 17.2 N·m (1.8 kg-m, 13 ft-lb)

⇦ : Engine front



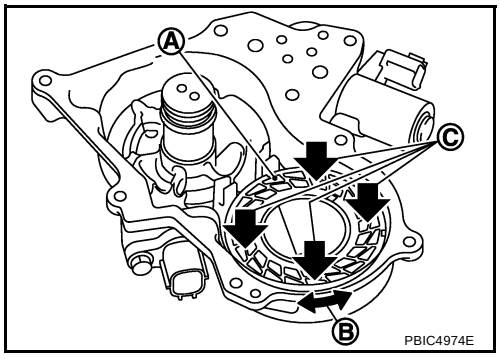
6. Install oil pan (lower). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
7. Install right and left valve timing control covers as follows.

a. Install new seal rings (1) in shaft grooves.

CAUTION:

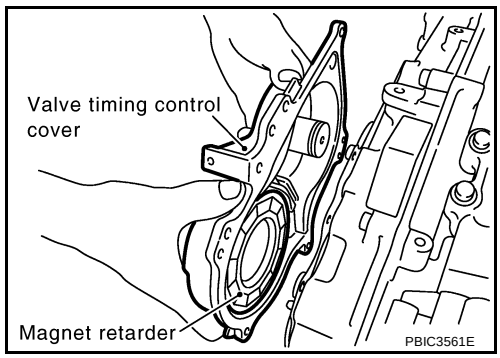
When replacing seal ring, replace all rings with new one.

A : Left bank



b. To check the joint between dowel pins and dowel pin holes, check the looseness in the axle direction by pushing the mating surface of magnet retarder (A) at several places and the circumferential looseness (between dowel pins and dowel pin holes) by twisting in the circumferential direction.

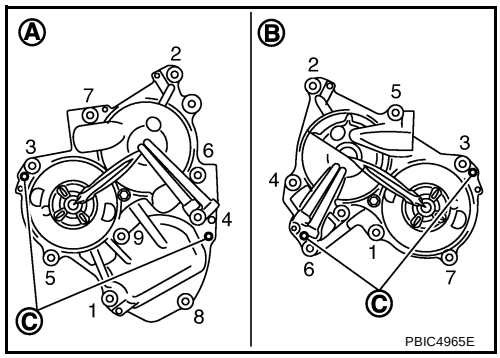
CAUTION:



Always perform this procedure when removing because the gap between dowel pins and dowel pin holes may not be caused on purpose.

B : Moves slightly

C : Not shaken



c. Install valve timing control cover with new gasket to front timing chain case.

CAUTION:

- **Do not face the magnet retarder side down to prevent magnet retarder from dropping.**
- **Check the mating surface of magnet retarder and the drum of exhaust side camshaft sprocket for foreign materials.**
- **Align the center of both shaft holes of the shaft and the intake side camshaft sprocket, and then insert them.**
- **Be careful not to drop the seal ring from the shaft groove.**
- **When setting the valve timing control cover in position by hand, if valve timing control cover is not contacting with the front timing chain case, the dowel pin of magnet retarder may not be aligned with the dowel pin holes of cover. In this case, return to step "b".**

d. Tighten mounting bolts in numerical order as shown in the figure.

CAUTION:

Completely tighten the mounting bolts with the seat surface of valve timing control cover contacting with front timing chain case.

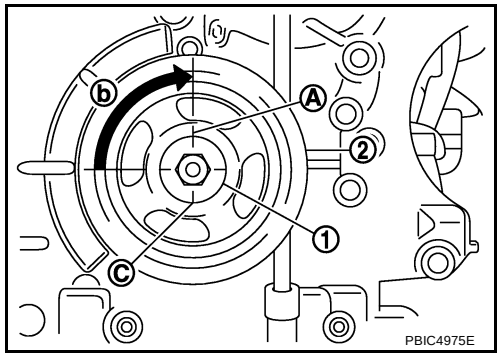
: 11.3 N·m (1.2 kg-m, 8 ft-lb)

A : Right bank
B : Left bank
C : Dowel pin hole

- After all bolt are tightened, tighten No.1 bolt to the specified torque again.

8. Install crankshaft pulley as follows:

a. Fix crankshaft using ring gear stopper [SST: KV10118600 (J-48641)].



b. Install crankshaft pulley, taking care not to damage front oil seal.

- When press-fitting crankshaft pulley with plastic hammer, tap on its center portion (not circumference).

c. Tighten crankshaft pulley bolt.

: 44.1 N·m (4.5 kg-m, 33 ft-lb)

d. Place a paint mark (A) on crankshaft pulley (2) aligning with the angle mark (C) on crankshaft pulley bolt (1). Tighten the bolt 90 degrees (one marks) (b).

9. Rotate crankshaft pulley in normal direction (clockwise when viewed from front) to confirm it turns smoothly.

10. Install in the reverse order of removal after this step.

INSPECTION AFTER INSTALLATION

Inspection for Leaks

The following are procedures for checking fluid leak, lubricates leak and exhaust gases leak.

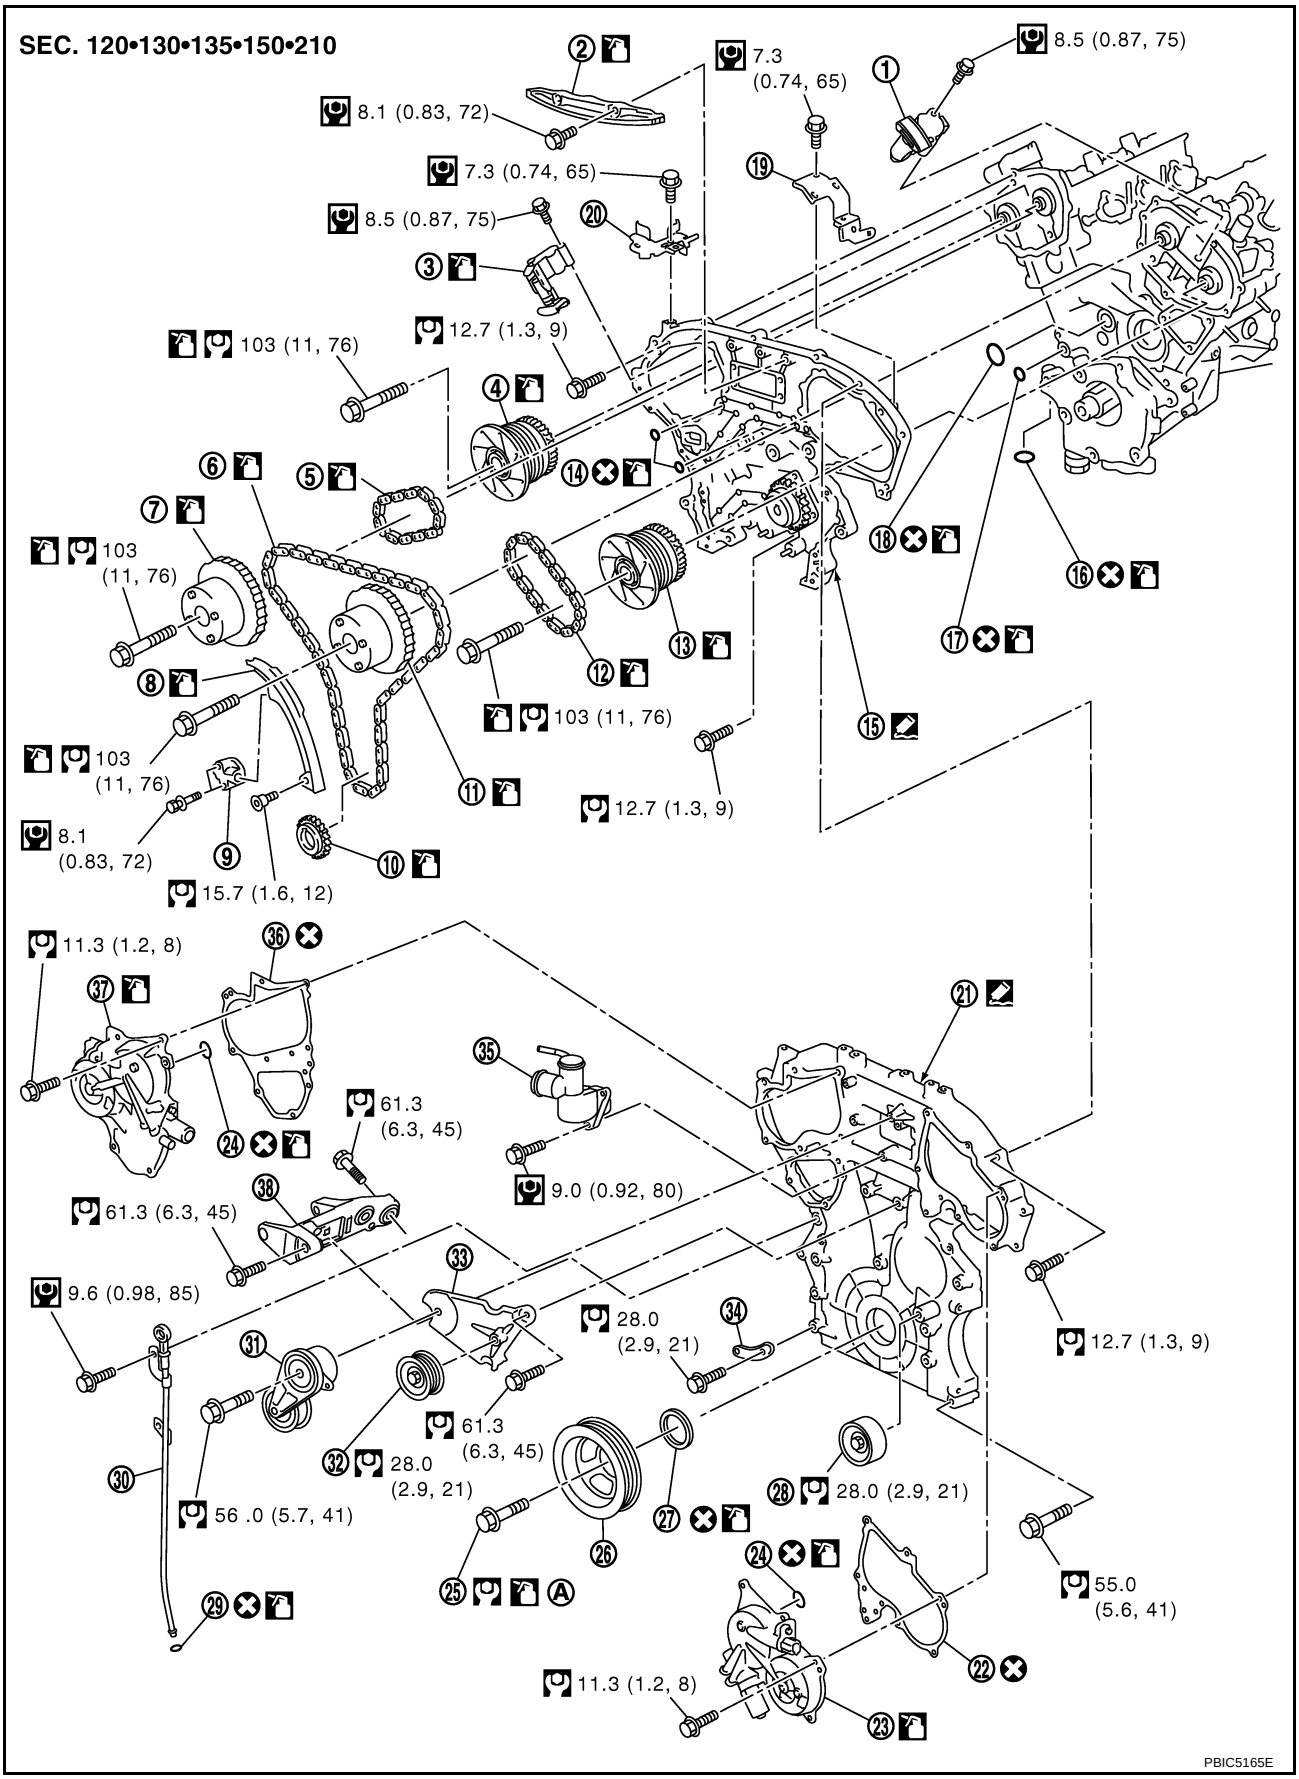
- Before starting engine, check oil/fluid levels including engine coolant and engine oil. If less than required quantity, fill to the specified level. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .

- Run engine to check for unusual noise and vibration.

  NOTE:
  If hydraulic pressure inside timing chain tensioner drops after removal/installation, slack in the guide may generate a pounding noise during and just after engine start. However, this is normal. Noise will stop after hydraulic pressure rises.
- Warm up engine thoroughly to make sure there is no leakage of exhaust gases, or any oil/fluids including engine oil and engine coolant.
- Bleed air from lines and hoses of applicable lines, such as in cooling system.
- After cooling down engine, again check oil/fluid levels including engine oil and engine coolant. Refill to the specified level, if necessary.

Summary of the inspection items:

Items	Before starting engine	Engine running	After engine stopped
Engine coolant	Level	Leakage	Level
Engine oil	Level	Leakage	Level
Other oils and fluid*	Level	Leakage	Level



* Transmission/transaxle/CVT fluid, power steering fluid, brake fluid, etc.

TIMING CHAIN

PFP:13028

Removal and Installation

NBS0000S

1.	Timing chain tensioner (secondary) (left bank)	2.	Internal chain guide	3.	Timing chain tensioner (secondary) (right bank)

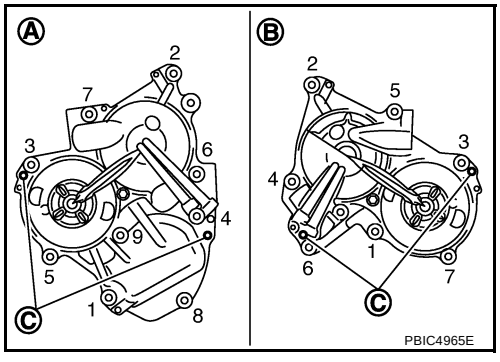
34.	Alternator bracket	35.	Water outlet (front)	36.	Valve timing control cover gasket (RH)
37.	Valve timing control cover (RH)	38.	Power steering oil pump bracket		
A.	Refer to EM-60				

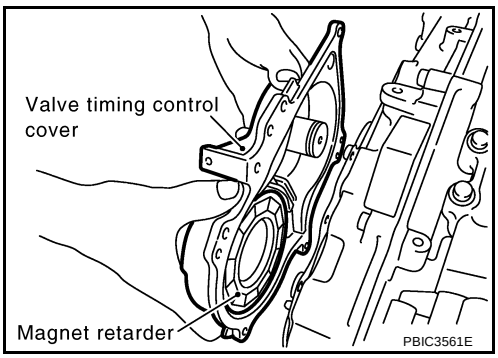
- Refer to GI-11, "Components" for symbol marks in the figure.

NOTE:



- This section describes procedures for removing/installing front timing chain case and timing chain related parts, and rear timing chain case, when oil pan (upper) needs to be removed/installed for engine overhaul, etc.
- To remove/install front timing chain case, timing chain, and its related parts without removing oil pan (upper), refer to EM-44, "FRONT TIMING CHAIN CASE" .

REMOVAL

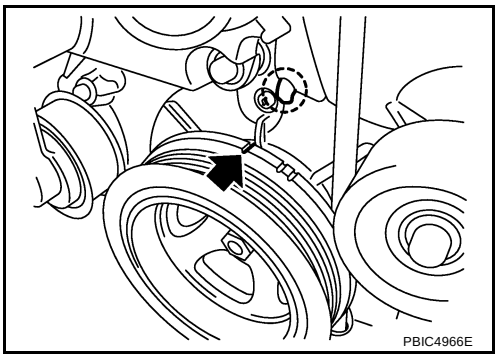


1. Remove engine assembly from the vehicle, and separate front suspension member and transmission from engine. Refer to EM-101, "ENGINE ASSEMBLY" .
2. Lift the engine with hoist and mount it onto widely use engine stand. Refer to EM-108, "DISASSEMBLY" .
3. Remove intake manifold collector. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
4. Remove power steering oil pump bracket. Refer to PS-28, "POWER STEERING OIL PUMP" .
5. Remove alternator. Refer to SC-20, "CHARGING SYSTEM" .
6. Remove water bypass hose, water hose clamp and idler pulley bracket from front timing chain case.
7. Remove left and right valve timing control covers (including magnet retarder and cover) with the following procedure.

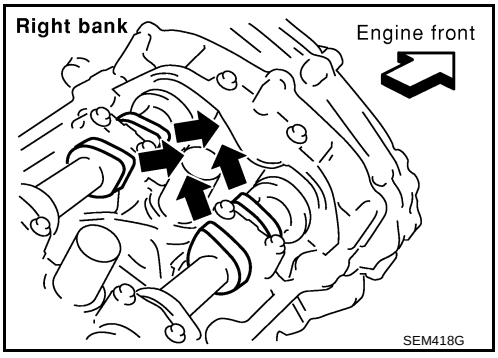
a. Loosen mounting bolts in reverse order as shown in the figure.

A : Right bank
B : Left bank
C : Dowel pin hole

b. Shaft is engaged with intake side camshaft sprocket center hole on inside. Pull straight out so as not to tilt until the joint is disengaged.
   - The mating surface of magnet retarder may be fitted with the exhaust side camshaft sprocket via the engine oil. Open valve timing control cover carefully.
   - If the mating surface of magnet retarder is fitted with the camshaft sprocket, open the cover within the range that the load is not applied to the harness. And then, remove it so as to prevent magnet retarder from dropping.



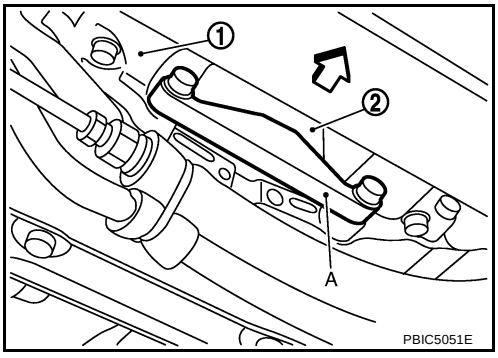
CAUTION:
- **Be careful not to damage magnet retarder.**
- **When carrying valve timing control cover, face the magnet retarder side up to prevent the cover from falling from magnet retarder.**
- **Do not remove magnet retarder from valve timing control cover. (Disassembly prohibited parts)**



8. Remove rocker covers (right and left banks). Refer to EM-40, "ROCKER COVER" .
9. Obtain No. 1 cylinder at TDC of its compression stroke as follows:

a. Rotate crankshaft pulley clockwise to align timing mark (grooved line without color) with timing indicator.

   ⬅ : Timing mark (grooved line without color)



b. Make sure that intake and exhaust cam noses on No. 1 cylinder (engine front side of right bank) are located as shown in the figure.
   - If not, turn crankshaft one revolution (360 degrees) and align as shown in the figure.

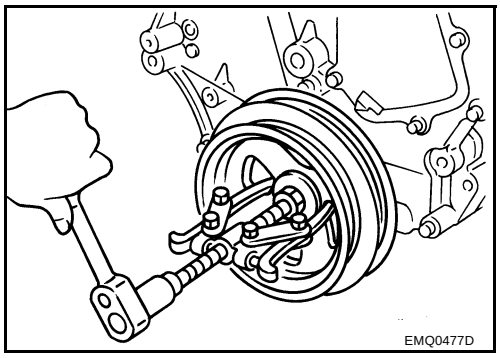
10. Remove crankshaft pulley as follows:

a. Remove rear cover plate and set ring gear stopper [SST: KV10118600 (J-48641)] (A) as shown in the figure.

   1 : Oil pan
   2 : Fly wheel (M/T models) or drive plate (A/T models)
   ⇦ : Vehicle front

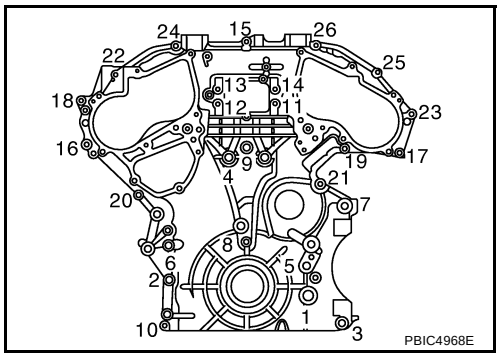
b. Loosen crankshaft pulley bolt and rotate bolt seating surface at 10 mm (0.39 in) from its original position.

CAUTION:



Do not remove crankshaft pulley bolt as it will be used as a supporting point for suitable puller.

c. Place suitable puller tab on holes of crankshaft pulley, and pull crankshaft pulley through.

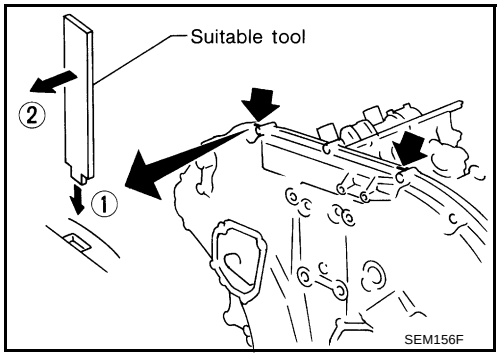


CAUTION:

Do not put suitable puller tab on crankshaft pulley periphery, as this will damage internal damper.

11. Remove oil pans (upper and lower). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
12. Remove front timing chain case as follows:

a. Loosen mounting bolts in reverse order as shown in the figure.

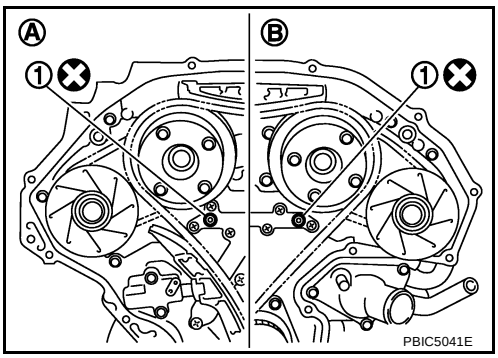


b. Insert suitable tool into the notch at the top of the front timing chain case as shown (1).

c. Pry off case by moving the tool as shown (2).

- Use seal cutter [SST: KV10111100 (J37228)] to cut liquid gasket for removal.

CAUTION:

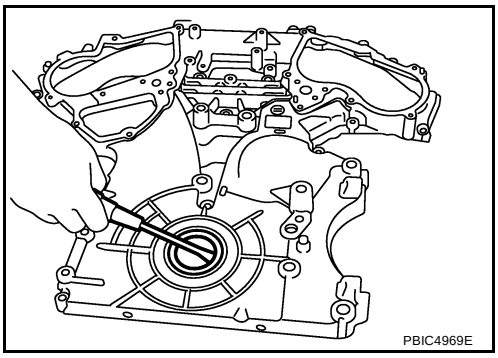


- **Do not use screwdriver or something similar.**
- **After removal, handle front timing chain case carefully so it does not tilt, cant, or warp under a load.**

13. Remove O-ring (1) from rear timing chain case.

A : Right bank

B : Left bank



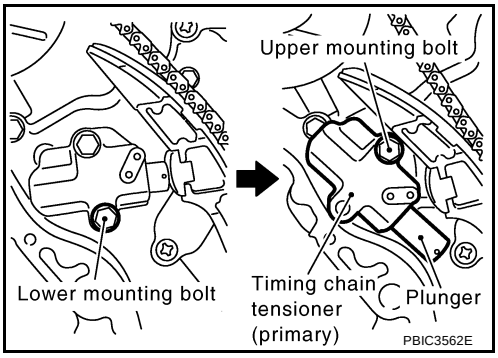
14. Remove front oil seal from front timing chain case using suitable tool.

- Use screwdriver for removal.

CAUTION:

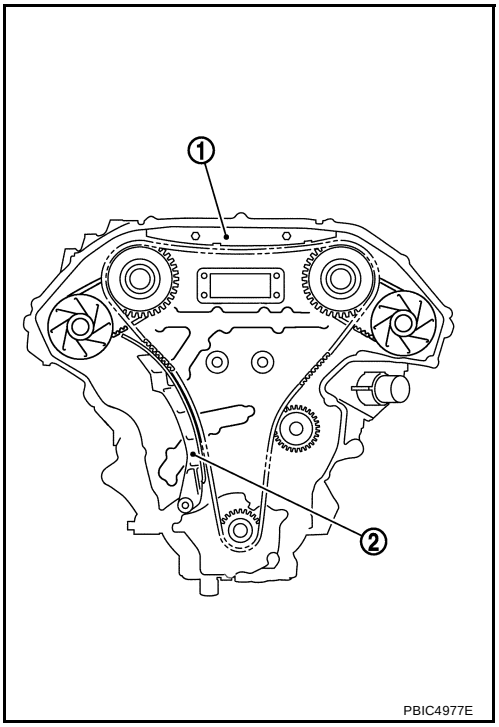
Be careful not to damage front timing chain case.

15. Remove timing chain tensioner (primary) as follows:



a. Remove lower mounting bolt.

b. Loosen upper mounting bolt slowly, and then turn timing chain tensioner (primary) on the mounting bolt so that plunger is fully expanded.

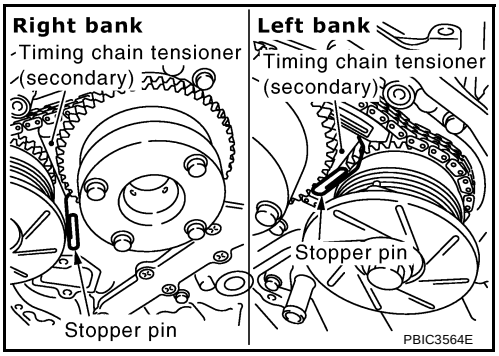


NOTE:

Even if plunger is fully expanded, it is not dropped from the body of timing chain tensioner (primary).

c. Remove upper mounting bolt, and then remove timing chain tensioner (primary).

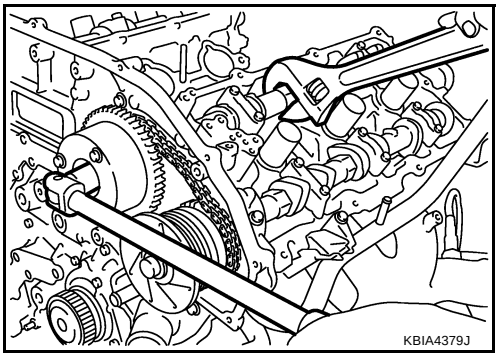
16. Remove internal chain guide (1) and slack guide (2).



17. Remove timing chain (primary) and crankshaft sprocket.

CAUTION:
After removing timing chain (primary), do not turn crankshaft and camshaft separately, or valves will strike the piston heads.

18. Remove timing chain (secondary) and camshaft sprockets as follows:

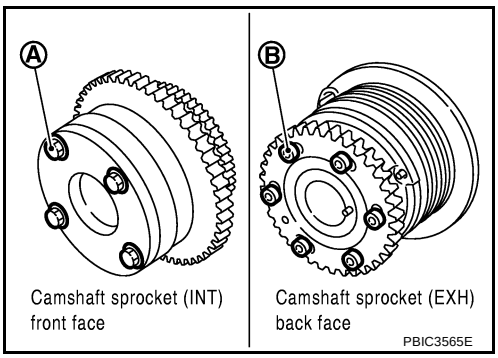


a. Attach suitable stopper pin to the right and left timing chain tensioners (secondary).

NOTE:
- Use approximately 0.5 mm (0.02 in) dia. hard metal pin as a stopper pin.
- For removal of timing chain tensioner (secondary), refer to EM-72, "CAMSHAFT" . [Removing camshaft bracket (No. 1) is required.]

b. Remove intake and exhaust camshaft sprocket bolts.
- Secure the hexagonal portion of camshaft using wrench to loosen mounting bolts.

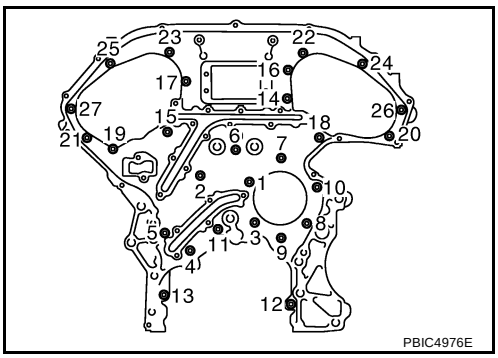
CAUTION:
Do not loosen mounting bolts with securing anything other than the camshaft hexagonal portion or with tensioning the timing chain.



c. Remove timing chain (secondary) together with camshaft sprockets.

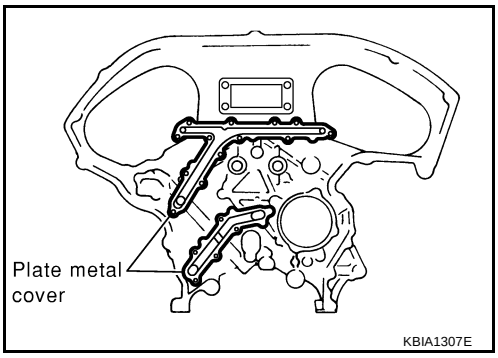
CAUTION:
- **Handle carefully to avoid any shock to camshaft sprocket.**

- **Do not disassemble. (Do not loosen bolts “A” and “B” as shown in the figure.)**



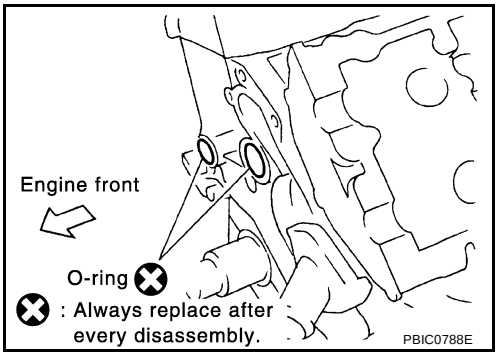
NOTE:
Camshaft sprocket (INT) is two-for-one structure of primary and secondary sprockets.

19. Remove water pump. Refer to CO-23, "WATER PUMP" .
20. Remove rear timing chain case as follows:



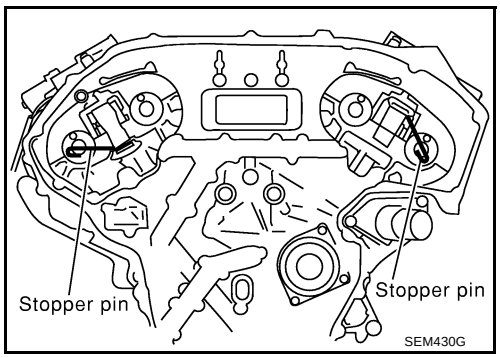
a. Loosen and remove mounting bolts in reverse order as shown in the figure.

b. Cut liquid gasket using seal cutter [SST: KV10111100 (J37228)] and remove rear timing chain case.

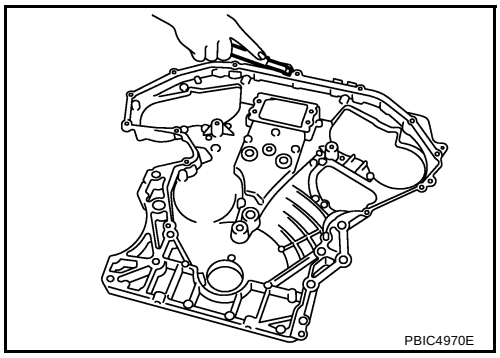


CAUTION:

- **Do not remove plate metal cover of oil passage.**
- **After removal, handle rear timing chain case carefully so it does not tilt, cant, or warp under a load.**

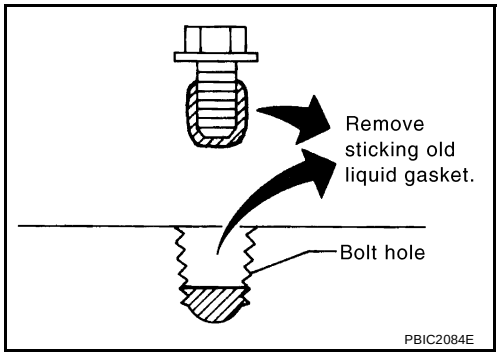


21. Remove O-rings from cylinder block.



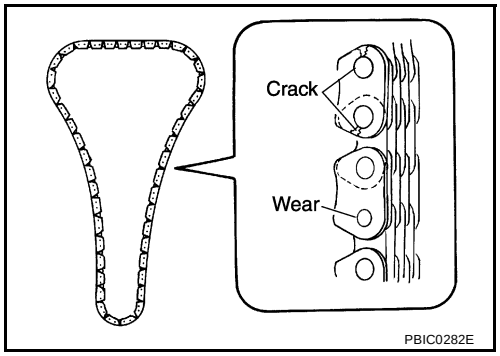
22. Remove timing chain tensioners (secondary) from cylinder head as follows, if necessary.

a. Remove camshaft brackets (No. 1). Refer to EM-72, "REMOVAL" .



b. Remove timing chain tensioners (secondary) with stopper pin attached.

23. Use scraper to remove all traces of old liquid gasket from front and rear timing chain cases, and opposite mating surfaces.

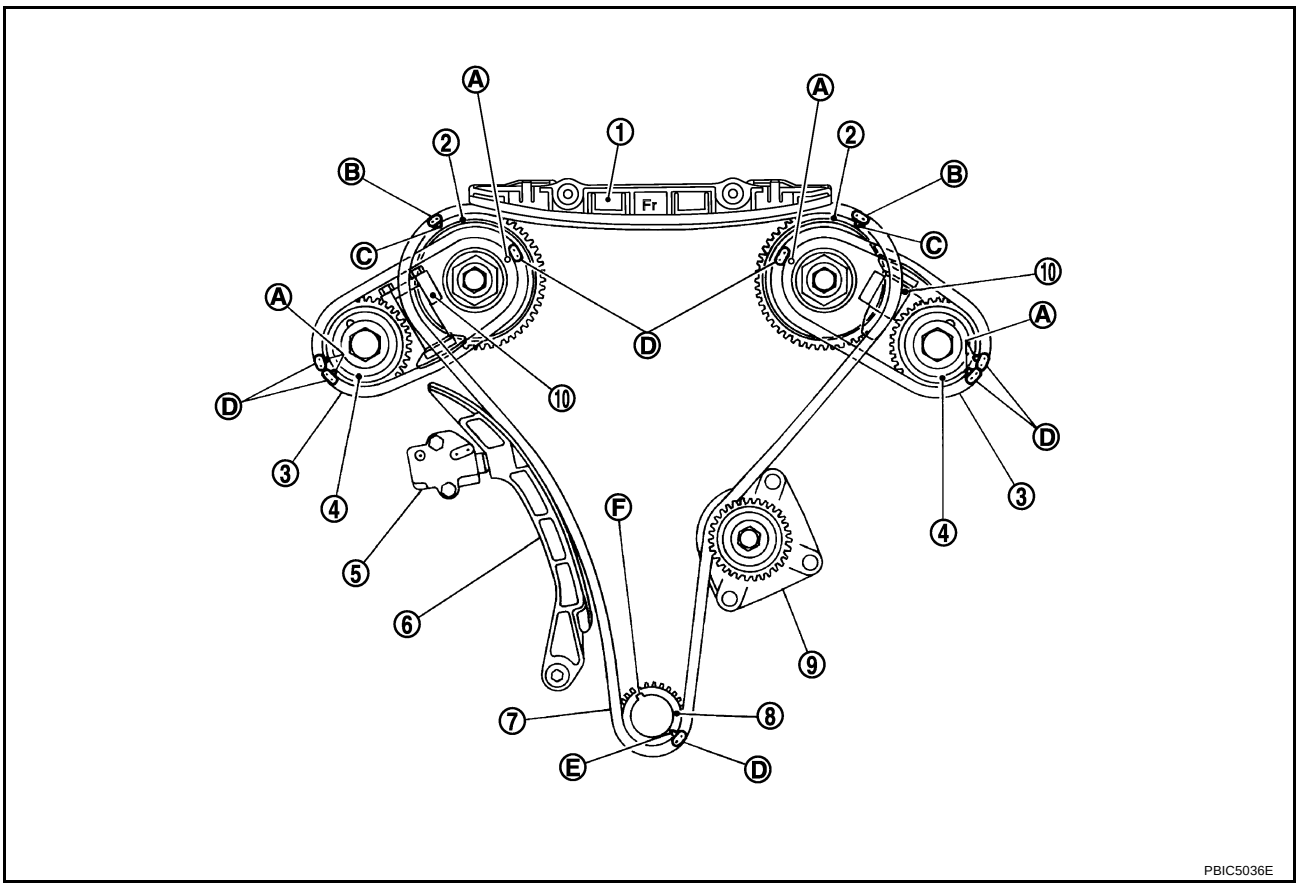


- Remove old liquid gasket from bolt hole and thread.

INSPECTION AFTER REMOVAL

Timing Chain

Check for cracks and any excessive wear at link plates and roller links of timing chain. Replace timing chain as necessary.



INSTALLATION

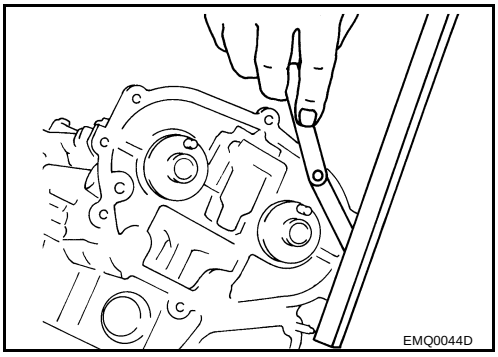
NOTE:

- The below figure shows the relationship between the mating mark on each timing chain and that on the corresponding sprocket, with the components installed.

- In this figure, the drum of exhaust side camshaft sprocket has been omitted.

1.	Internal chain guide	2.	Camshaft sprocket (INT)	3.	Timing chain (secondary)
4.	Camshaft sprocket (EXH)	5.	Timing chain tensioner (primary)	6.	Slack guide
7.	Timing chain (primary)	8.	Crankshaft sprocket	9.	Water pump
10.	Timing chain tensioner (secondary)				
A.	Mating mark [punched (back side)]	B.	Mating mark (yellow link)	C.	Mating mark (punched)
D.	Mating mark (orange link)	E.	Mating mark (notched)	F.	Crankshaft key

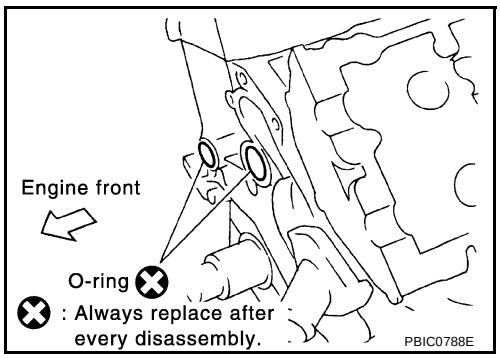
1. Install timing chain tensioners (secondary) to cylinder head as follows if removed. Refer to EM-77, "INSTALLATION" .



a. Install timing chain tensioners (secondary) with stopper pin attached and new O-ring.

b. Install camshaft brackets (No. 1). Refer to EM-77, "INSTALLATION" .

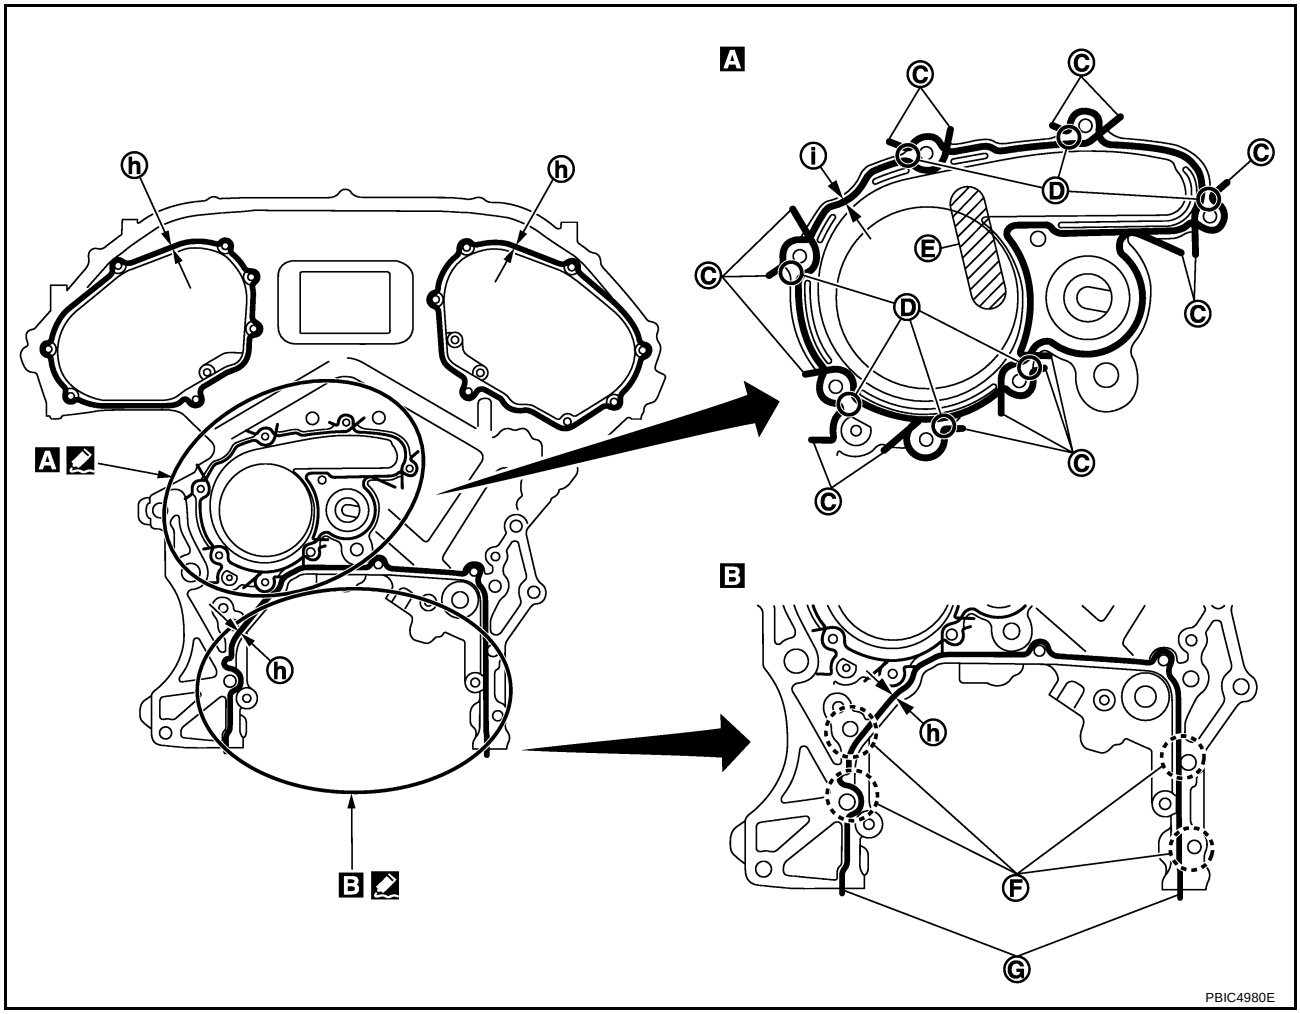
2. Measure difference in levels between front end faces of camshaft bracket (No.1) and cylinder head.



Standard : –0.14 to 0.14 mm (–0.0055 to 0.0055 in)

- Measure two positions (Both intake and exhaust side) for a single bank.
- If the measured value is out of the standard, re-install camshaft bracket (No.1).

3. Install rear timing chain case as follows:

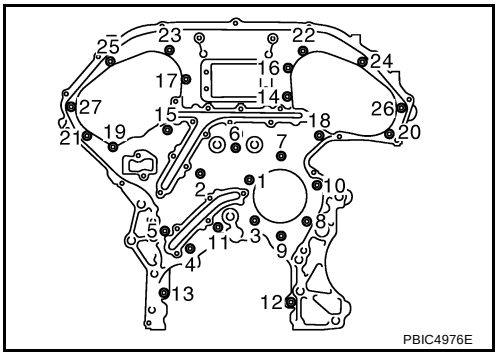


a. Install new O-rings onto cylinder block.

b. Apply liquid gasket with tube presser [SST: WS39930000 (—)] to rear timing chain case back side as shown in the figure.
Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

CAUTION:

- **For “A” in the figure, completely wipe out liquid gasket extended on a portion touching at engine coolant.**
- **Apply liquid gasket on installation position of water pump and cylinder head very completely.**



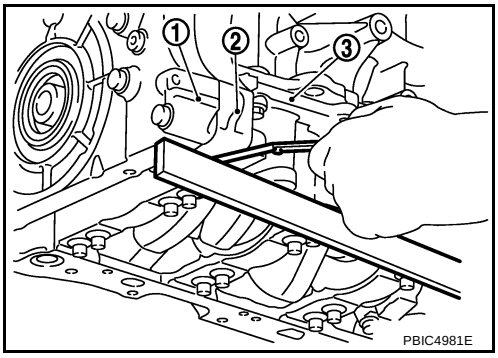
C.	Protrusion	D.	Clearance 1 mm (0.04 in)	E.	Do not protrude in this area
F.	Run along bolt hole inner side	G.	Protrusions at beginning and end of gasket		
h.	3.9 mm (0.154 in)	i	2.7 mm (0.106 in)		

- Refer to GI-11, "Components" for symbol marks in the figure.

c. Align rear timing chain case and water pump assembly with dowel pins (right and left) on cylinder block and install rear timing chain case.
   - Make sure O-rings stay in place during installation to cylinder block.

d. Tighten mounting bolts in numerical order as shown in the figure.
   - There are two types of mounting bolts. Refer to the following for locating bolts.

Bolt length: Bolt position



20 mm (0.79 in) : 1, 2, 3, 6, 7, 8, 9, 10

16 mm (0.63 in) : Except the above

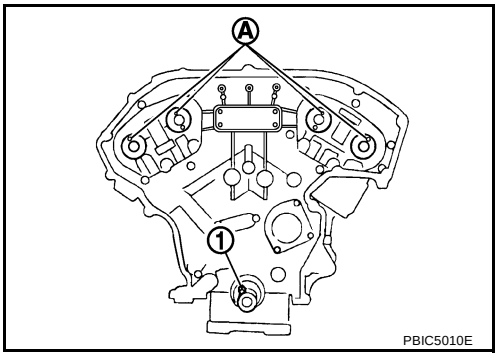
: 12.7 N·m (1.3 kg-m, 9 ft-lb)

e. After all bolts are tightened, retighten them to the specified in numerical order shown in the figure.
   - If liquid gasket protrudes, wipe it off immediately.

f. After installing rear timing chain case, check the surface height difference between following parts on oil pan (upper) mounting surface.

1 : Front timing chain case
2 : Rear timing chain case
3 : Lower cylinder block

Standard



Rear timing chain case to cylinder block:

–0.24 to 0.14 mm (–0.0094 to 0.0055 in)

   - If not within standard, repeat the installation procedure.

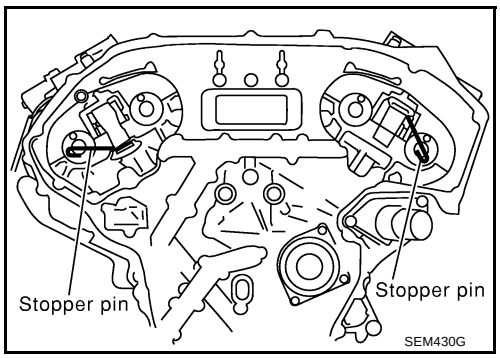
4. Install water pump with new O-rings. Refer to CO-23, "WATER PUMP" .

5. Make sure that dowel pin (A) and crankshaft key (1) are located as shown in the figure. (No. 1 cylinder at compression TDC)

NOTE:
Though camshaft does not stop at the position as shown in the figure, for the placement of cam nose, it is generally accepted camshaft is placed for the same direction of the figure.

Camshaft dowel pin

: At cylinder head upper face side in each bank.

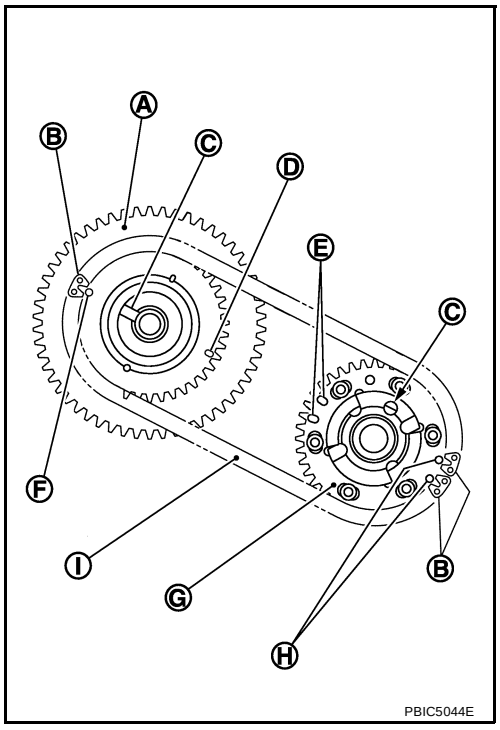


Crankshaft key

: At cylinder head side of right bank.

6. Install timing chains (secondary) and camshaft sprockets as follows:

CAUTION:
- **When replacing camshaft sprocket (EXH), replace valve timing control cover (including magnet retarder and cover).**
- **Mating marks between timing chain and sprockets slip easily. Confirm all mating mark positions repeatedly during the installation process.**



a. Push plunger of timing chain tensioner (secondary) and keep it pressed in with stopper pin.

b. Install timing chains (secondary) and camshaft sprockets.

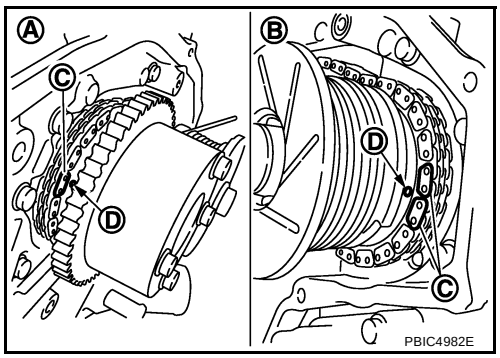
NOTE:
Figure shows right bank (rear view).

A : Camshaft sprocket (INT) back face
B : Orange link
C : Dowel groove or hole
D : Mating mark (oval)
E : Mating mark (2 oval)
F : Mating mark (circle)
G : Camshaft sprocket (EXH) back face
H : Mating mark (2 circle)
I : Timing chain (secondary)

- Align the mating marks on timing chain (secondary) (orange link) with the ones on intake and exhaust camshaft sprockets (punched), and install them.

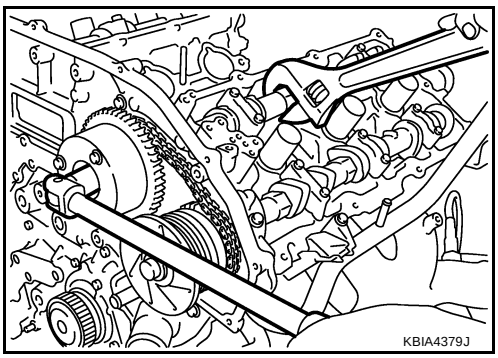
NOTE:
- Mating marks for intake camshaft sprocket are on the back side of camshaft sprocket (secondary).
- There are two types of mating marks, circle and oval types. They should be used for the right and left banks, respectively.

Right bank : Use circle type (F, H)
Left bank : Use oval type (D, E)



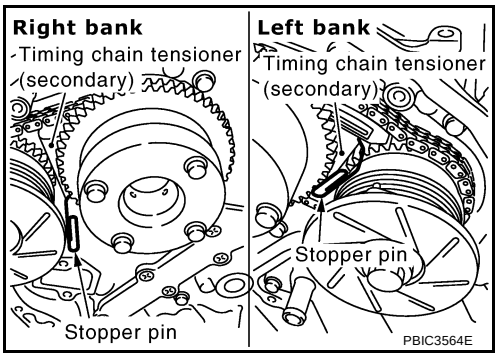
- Align dowel pin hole on the small diameter side of the camshaft front end with dowel pin on the back side of camshaft sprockets, and install them.
- In case that positions of each mating mark and each dowel pin are not fit on mating parts, make fine adjustment to the position holding the hexagonal portion on camshaft with wrench or equivalent.
- Mounting bolts for camshaft sprockets must be tightened in the step “d”. Tightening them by hand is enough to prevent the dislocation of dowel pins.

c. Make sure that timing chain (secondary) is not loose from each camshaft sprocket.



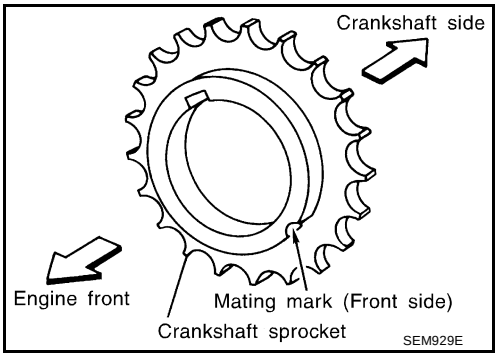
- Make sure the mating marks (punched) (D) on each camshaft sprocket are positioned on the mating marks (orange link) (C) on timing chain (secondary).

A : Intake side
B : Exhaust side



NOTE:
Mating mark (punched) in the figure is for checking loose at this step.

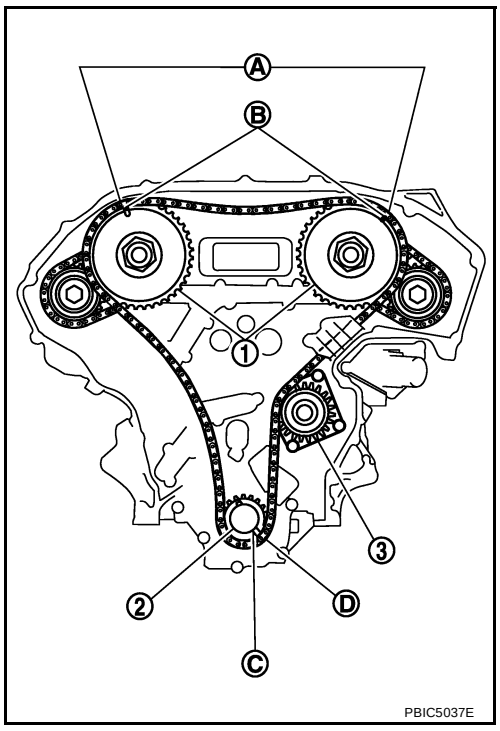
d. Tighten camshaft sprocket mounting bolts.
   - Secure camshaft using wrench at the hexagonal portion to tighten mounting bolts.



e. Pull stopper pins out from timing chain tensioners (secondary).

7. Install timing chain (primary) as follows:

a. Install crankshaft sprocket.
   - Make sure the mating marks on crankshaft sprocket face the front of engine.

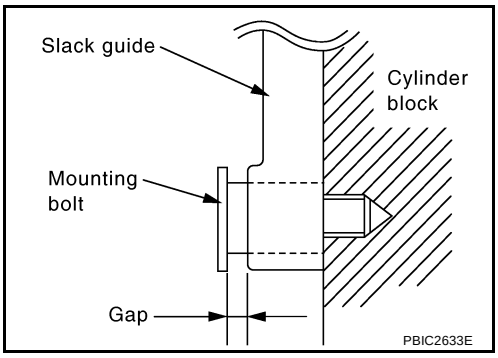


b. Install timing chain (primary).

- Install timing chain (primary) so the mating mark (punched) (B) on camshaft sprocket (INT) (1) is aligned with the yellow link (A) on timing chain, while the mating mark (notched) (C) on crankshaft sprocket (2) is aligned with the orange link (D) on timing chain, as shown in the figure.

  3 : Water pump

- When it is difficult to align mating marks of timing chain (primary) with each sprocket, gradually turn camshaft using wrench on the hexagonal portion to align it with the mating marks.
- During alignment, be careful to prevent dislocation of mating mark alignments of timing chains (secondary).



PBIC5037E

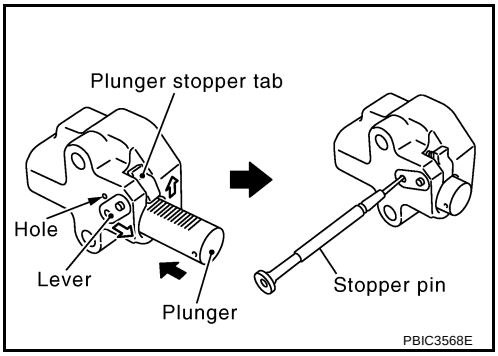
8. Install internal chain guide (1), slack guide (2) and timing chain tensioner (primary).

PBIC4977E

CAUTION:
Do not overtighten slack guide mounting bolts. It is normal for a gap to exist under the bolt seats when mounting bolts are tightened to specification.

9. Install the timing chain tensioner (primary) with the following procedure:

a. Pull plunger stopper tab up (or turn lever downward) so as to remove plunger stopper tab from the ratchet of plunger.



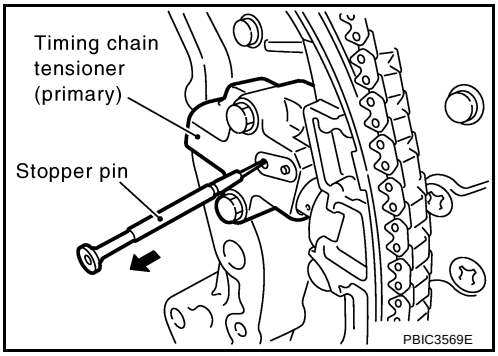
NOTE:
Plunger stopper tab and lever are synchronized.

b. Push plunger into the inside of tensioner body.

c. Hold plunger in the fully compressed position by engaging plunger stopper tab with the tip of ratchet.

d. To secure lever, insert stopper pin through hole of lever into tensioner body hole.

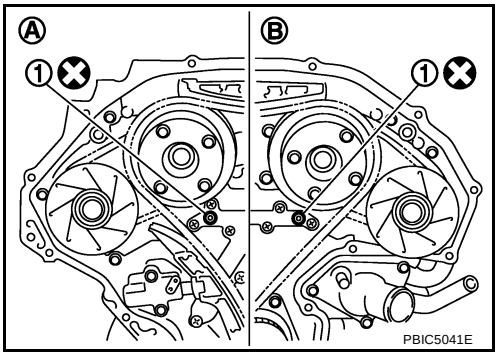
- The lever parts and the tab are synchronized. Therefore, the plunger will be secured under this condition.



NOTE:
Figure shows the example of 1.2 mm (0.047 in) diameter thin screwdriver being used as the stopper pin.

e. Install timing chain tensioner (primary).

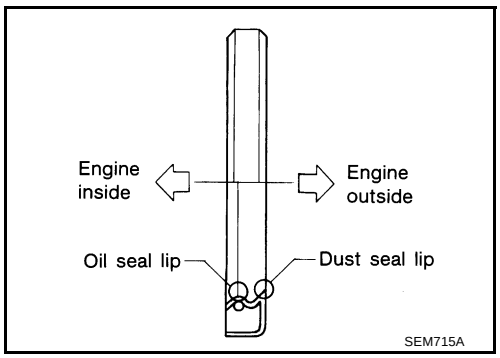
- Remove any dirt and foreign materials completely from the back and the mounting surfaces of timing chain tensioner (primary).



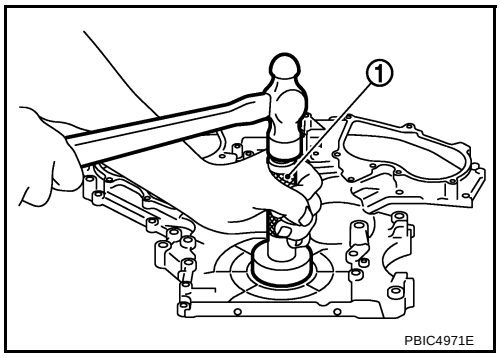
f. Pull out stopper pin after installing, and then release plunger.

10. Make sure again that the mating marks on sprockets and timing chain have not slipped out of alignment.

11. Install new O-ring (1) on rear timing chain case.



A : Right bank
B : Left bank

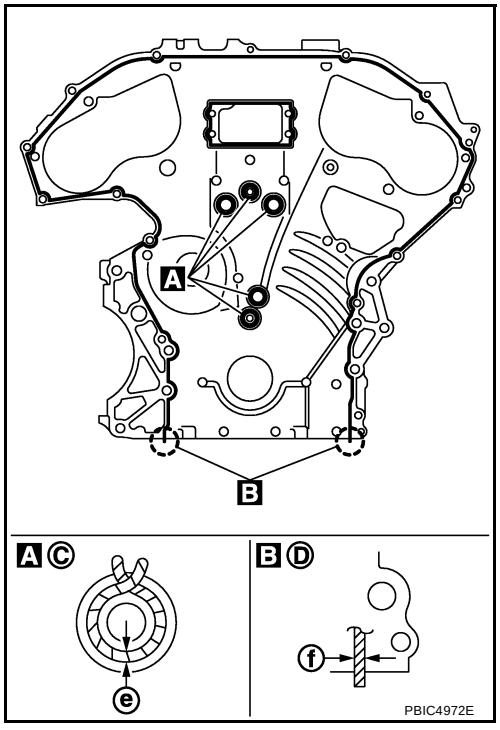


12. Install new front oil seal on front timing chain case.

- Apply new engine oil to both oil seal lip and dust seal lip.

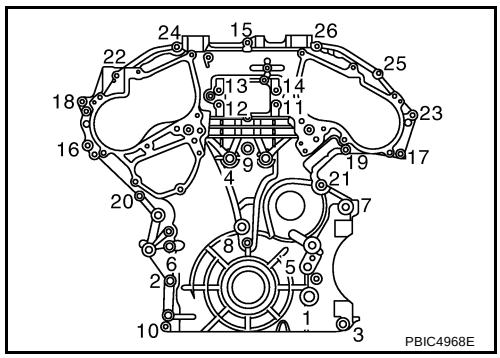
- Install it so that each seal lip is oriented as shown in the figure.

- Using suitable drift (1), press-fit oil seal until it becomes flush with front timing chain case end face.
- Make sure the garter spring is in position and seal lip is not inverted.



13. Install front timing chain case as follows:

a. Apply a continuous bead of liquid gasket with tube presser [SST: WS39930000 (—)] to front timing chain case back side as shown in the figure.
Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .



C : Bolt hole
D : Protrusion
e : 2.6 - 3.6 mm (0.102 - 0.142 in)
f : 3.4 - 4.4 mm (0.134 - 0.173 in)

NOTE:
Apply liquid gasket, start and end up application at the portions (a) shown in the figure.

b. Install front timing chain case as to fit its dowel pin hole together dowel pin on rear timing chain case.

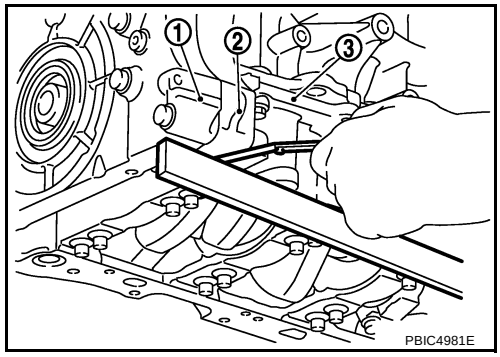
c. Tighten mounting bolts to the specified torque in numerical order as shown in the figure.

- There are two types of mounting bolts. Refer to the following for locating bolts.

M8 bolts : 1, 2, 3, 4, 5, 6, 7

: 55.0 N·m (5.6 kg-m, 41 ft-lb)

M6 bolts : Except the above



: 12.7 N·m (1.3 kg-m, 9 ft-lb)

d. After all bolts are tightened, retighten them to the specified torque in numerical order shown in the figure.

CAUTION:

Be sure to wipe off any excessive liquid gasket leaking on surface mating with oil pan (upper).

e. After installing front timing chain case, check the surface height difference between the following parts on the oil pan (upper) mounting surface.

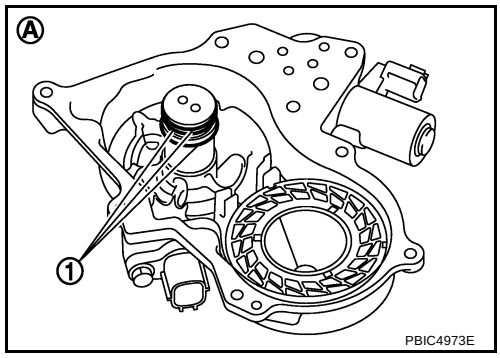
1 : Front timing chain case
2 : Rear timing chain case
3 : Lower cylinder block

Standard

Front timing chain case to rear timing chain case:

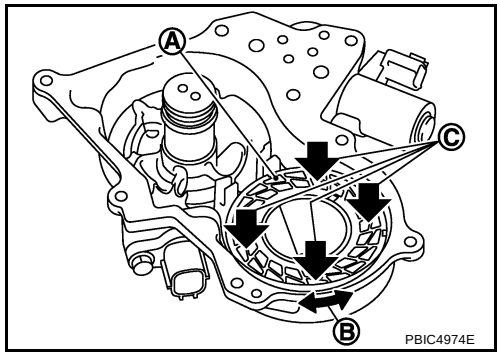
–0.14 to 0.14 mm (–0.005 to 0.0055 in)

- If not within standard, repeat the installation procedure.



14. Install right and left valve timing control covers as follows:

a. Install new seal rings (1) in shaft grooves.

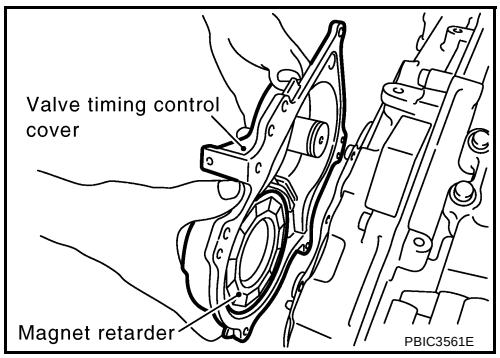


CAUTION:

When replacing seal rings, replace all rings with new one.

A : Left bank

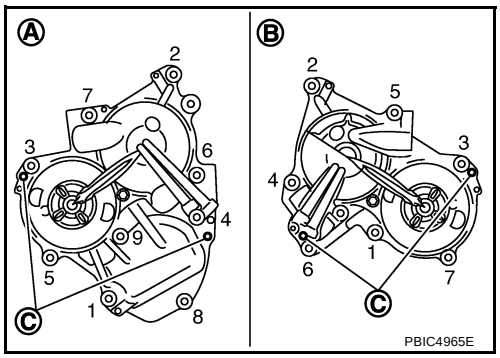
b. To check the joint between dowel pins and dowel pin holes, check the looseness in the axle direction by pushing the mating surface of magnet retarder (A) at several places and the circumferential looseness (between dowel pins and dowel pin holes) by twisting in the circumferential direction.



CAUTION:

Always perform this procedure when removing because the gap between dowel pins and dowel pin holes may not be caused on purpose.

B : Moves slightly
C : Not shaken



c. Install valve timing control cover to front timing chain case.

CAUTION:

- **Do not face the magnet retarder side down to prevent magnet retarder from dropping.**
- **Check the mating surface of magnet retarder and the drum of exhaust side camshaft sprocket for foreign materials.**
- **Align the center of both shaft holes of the shaft and the intake side camshaft sprocket, and then insert them.**
- **Be careful not to drop the seal ring from the shaft groove.**
- **When setting the valve timing control cover in position by hand, if valve timing control cover is not contacting with the front timing chain case, the dowel pin of magnet retarder may not be aligned with the dowel pin holes of cover. In this case, return to step "b".**

d. Tighten mounting bolts in numerical order as shown in the figure.

CAUTION:

Completely tighten the mounting bolts with the seat surface of valve timing control cover contacting with front timing chain case.

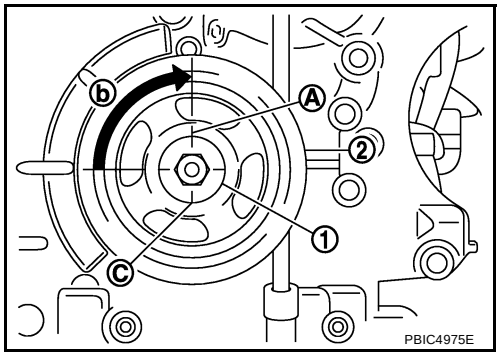
: 11.3 N·m (1.2 kg-m, 8 ft-lb)

A : Right bank
B : Left bank
C : Dowel pin hole

- After all bolts are tightened, tighten No.1 bolt to the specified torque again.

15. Install oil pans (upper and lower). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
16. Install rocker covers (right and left banks). Refer to EM-40, "ROCKER COVER" .
17. Install crankshaft pulley as follows:

a. Fix crankshaft using ring gear stopper [SST: KV10118600 (J-48641)].



b. Install crankshaft pulley, taking care not to damage front oil seal.

- When press-fitting crankshaft pulley with plastic hammer, tap on its center portion (not circumference).

c. Tighten crankshaft pulley bolt.

: 44.1 N·m (4.5 kg-m, 33 ft-lb)

d. Place a paint mark (A) on crankshaft pulley (2) aligning with the angle mark (C) on crankshaft pulley bolt (1). Tighten the bolt 90 degrees (one marks) (b).

18. Rotate crankshaft pulley in normal direction (clockwise when viewed from engine front) to confirm it turns smoothly.
19. Install in the reverse order of removal after this step.

INSPECTION AFTER INSTALLATION

Inspection for Leaks

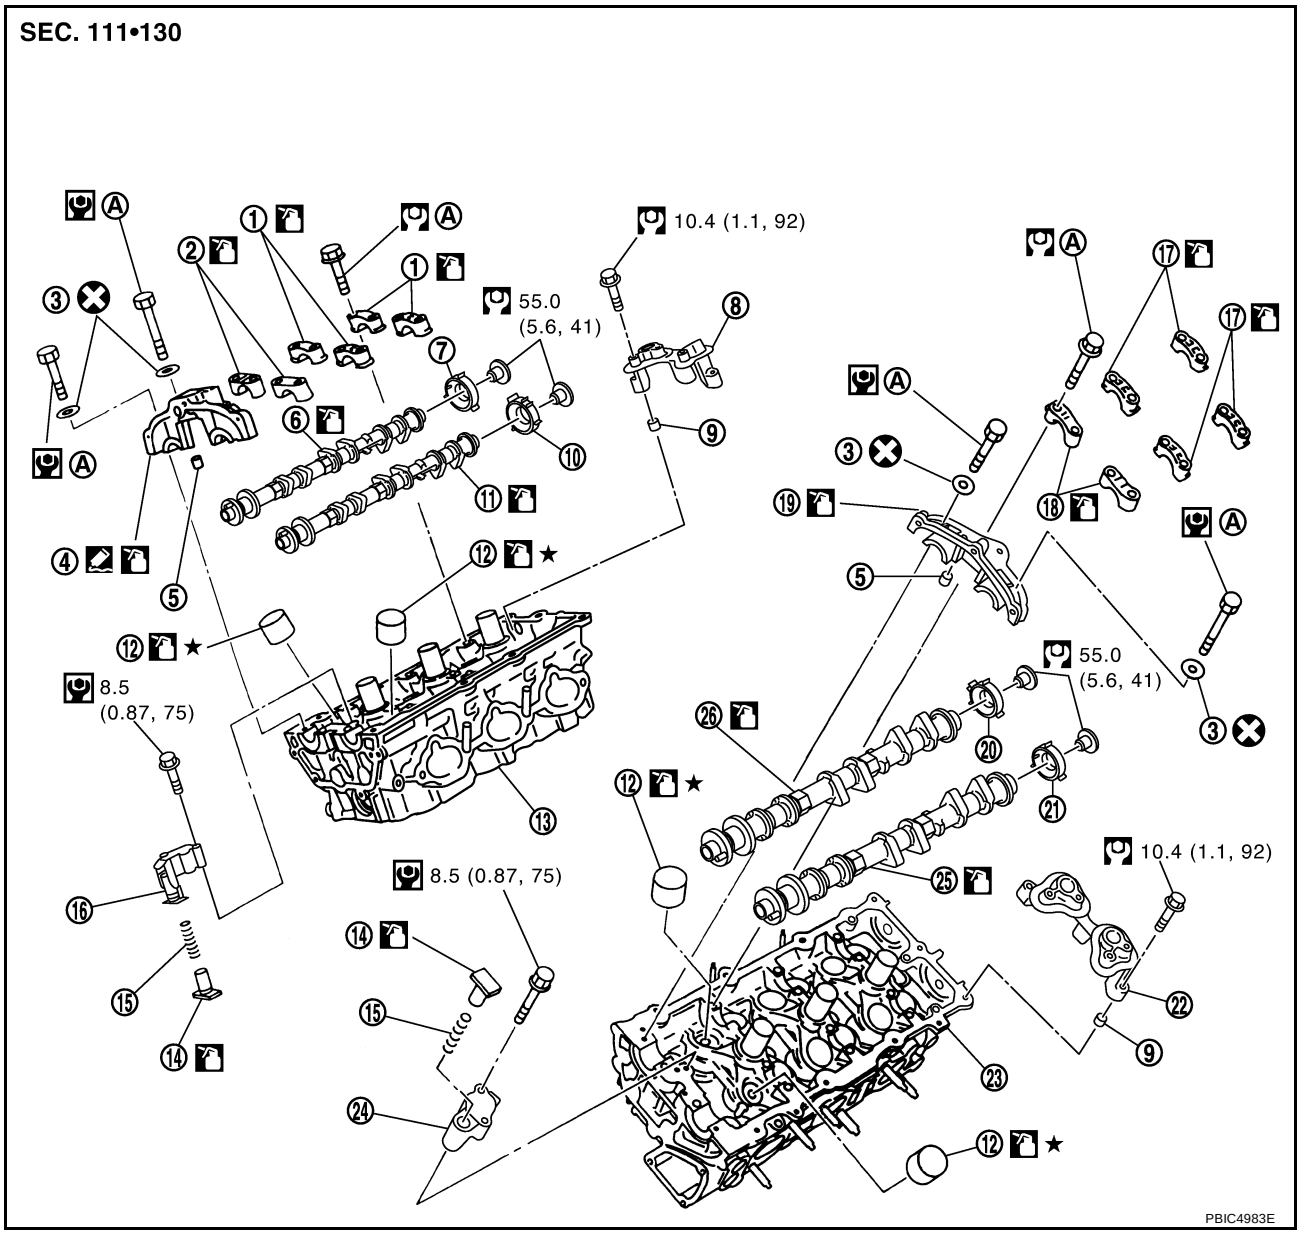
The following are procedures for checking fluids leak, lubricates leak and exhaust gases leak.

- Before starting engine, check oil/fluid levels including engine coolant and engine oil. If less than required quantity, fill to the specified level. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Use procedure below to check for fuel leakage.
  - Turn ignition switch “ON” (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.
  - Start engine. With engine speed increased, check again for fuel leakage at connection points.
- Run engine to check for unusual noise and vibration.

  NOTE:
  If hydraulic pressure inside timing chain tensioner drops after removal/installation, slack in the guide may generate a pounding noise during and just after engine start. However, this is normal. Noise will stop after hydraulic pressure rises.
- Warm up engine thoroughly to make sure there is no leakage of fuel, exhaust gases, or any oil/fluids including engine oil and engine coolant.
- Bleed air from lines and hoses of applicable lines, such as in cooling system.
- After cooling down engine, again check oil/fluid levels including engine oil and engine coolant. Refill to the specified level, if necessary.

Summary of the inspection items:

Items	Before starting engine	Engine running	After engine stopped
Engine coolant	Level	Leakage	Level
Engine oil	Level	Leakage	Level
Other oils and fluid*	Level	Leakage	Level
Fuel	Leakage	Leakage	Leakage
Exhaust gases	—	Leakage	—



* Transmission/transaxle/CVT fluid, power steering fluid, brake fluid, etc.

CAMSHAFT

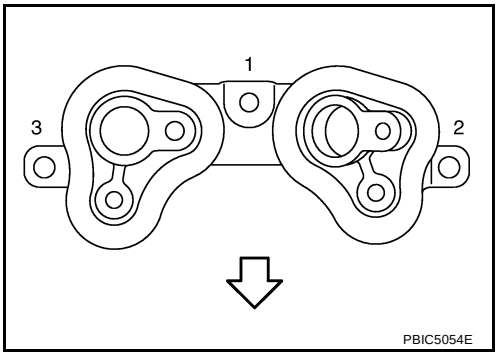
PFP:13001

Removal and Installation

NBS0000T

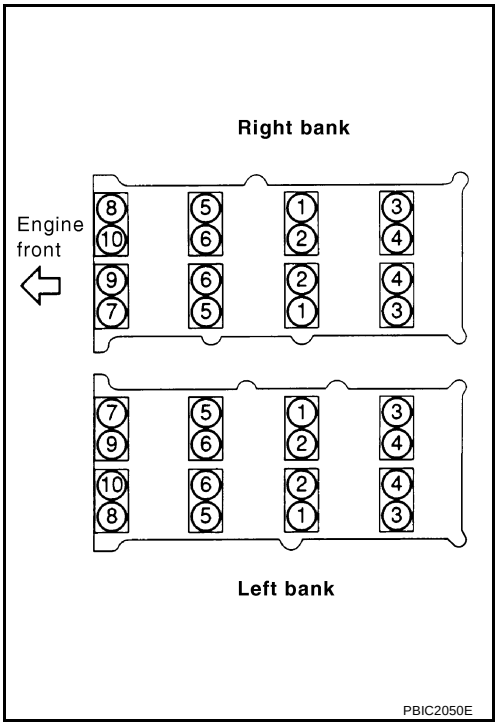
1. Camshaft bracket (No. 3, 4)	2. Camshaft bracket (No. 2)	3. Seal washer
4. Camshaft bracket (No. 1)	5. Dowel pin	6. Camshaft (EXH) (right bank)
7. Camshaft signal plate (EXH)	8. Camshaft sensor bracket	9. Dowel pin
10. Camshaft signal plate (INT)	11. Camshaft (INT) (right bank)	12. Valve lifter
13. Cylinder head (right bank)	14. Plunger	15. Spring
16. Timing chain tensioner (secondary) (right bank)	17. Camshaft bracket (No. 3, 4)	18. Camshaft bracket (No. 2)
19. Camshaft bracket (No. 1)	20. Camshaft signal plate (INT)	21. Camshaft signal plate (EXH)
22. Camshaft sensor bracket	23. Cylinder head (left bank)	24. Timing chain tensioner (secondary) (left bank)
25. Camshaft (EXH) (left bank)	26. Camshaft (INT) (left bank)	

A. Refer to EM-77



- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

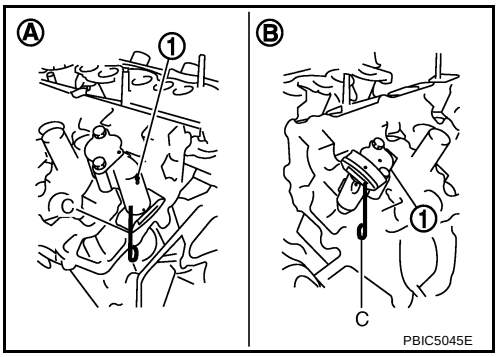


1. Remove front timing chain case, camshaft sprocket, and timing chain. Refer to EM-53, "TIMING CHAIN" .

2. Remove fuel sub tube. Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
3. Remove camshaft sensor bracket bolts in reverse order as shown in the figure.

   ⇦ : Engine front

4. Remove intake and exhaust camshaft brackets.
   - Mark camshafts, camshaft brackets and bolts so they are placed in the same position and direction for installation.
   - Equally loosen camshaft bracket bolts in several steps in reverse order as shown in the figure.



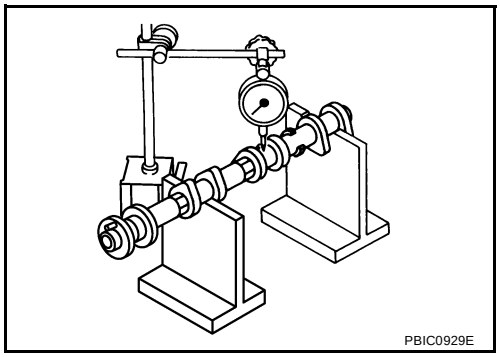
5. Remove camshaft.
6. Remove valve lifter.
   - Identify installation positions, and store them without mixing them up.
7. Remove timing chain tensioner (secondary) (1) from cylinder head.

   A : Right bank

   B : Left bank

   - Remove timing chain tensioner (secondary) (1) with its stopper pin (C) attached.

   NOTE:
   Stopper pin (C) was attached when timing chain (secondary) was removed.



INSPECTION AFTER REMOVAL

Camshaft Runout

1. Put V-block on precise flat table, and support No. 2 and 4 journals of camshaft.

   CAUTION:
   Do not support journal No. 1 (on the side of camshaft sprocket) because it has a different diameter from the other three locations.
2. Set dial indicator vertically to No. 3 journal.
3. Turn camshaft to one direction with hands, and measure the camshaft runout on a dial indicator. (Total indicator reading)

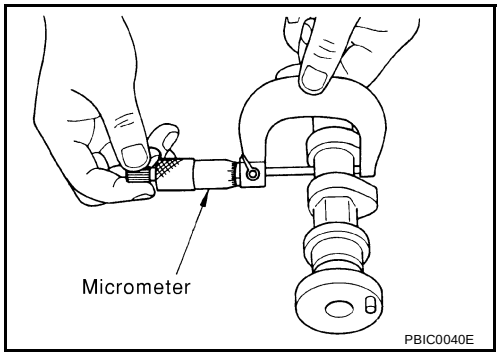
   Standard : Less than 0.02 mm (0.0008 in)
   Limit : 0.05 mm (0.0020 in)
4. If it exceeds the limit, replace camshaft.

PBIC0929E

Camshaft Cam Height

1. Measure the camshaft cam height with a micrometer.

   Standard cam height:
   Intake : 45.865 – 46.055 mm (1.8057 – 1.8132 in)
   Exhaust : 45.875 – 46.065 mm (1.8061 – 1.8136 in)
   Cam wear limit
   : 0.2 mm (0.008 in)
2. If wear is beyond the limit, replace camshaft.



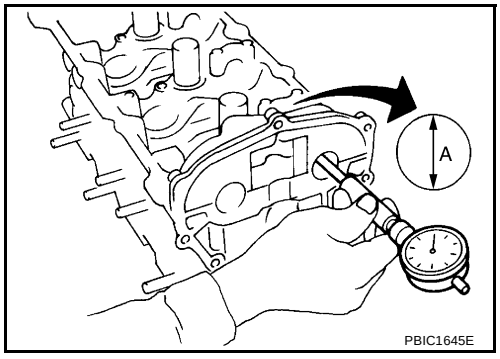
EMQ0072D

Camshaft Journal Oil Clearance

CAMSHAFT JOURNAL DIAMETER

- Measure the outer diameter of camshaft journal with a micrometer.

  Standard:
  No. 1 : 25.935 - 25.955 mm (1.0211 - 1.0218 in)
  No. 2, 3, 4 : 23.445 - 23.465 mm (0.9230 - 0.9238 in)



PBIC0040E

CAMSHAFT BRACKET INNER DIAMETER

- Tighten camshaft bracket bolt with the specified torque. Refer to EM-77, "INSTALLATION" for the tightening procedure.
- Measure the inner diameter “A” of camshaft bracket with a bore gauge.

  Standard:
  No. 1 : 26.000 - 26.021 mm (1.0236 - 1.0244 in)
  No. 2, 3, 4 : 23.500 - 23.521 mm (0.9252 - 0.9260 in)

PBIC1645E

CAMSHAFT JOURNAL OIL CLEARANCE

- (Oil clearance) = (Camshaft bracket inner diameter) – (Camshaft journal diameter)

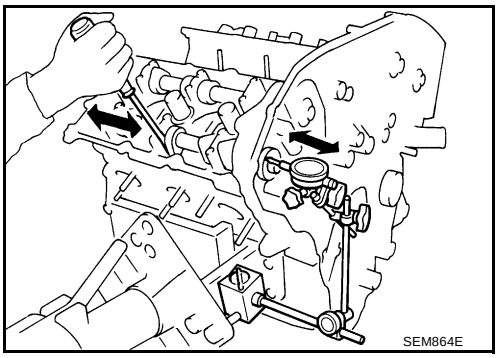
Standard:

No. 1 : 0.045 - 0.086 mm (0.0018 - 0.0034 in)

No. 2, 3, 4 : 0.035 - 0.076 mm (0.0014 - 0.0030 in)

Limit : 0.15 mm (0.0059 in)

- If it exceeds the limit, replace either or both camshaft and cylinder head.



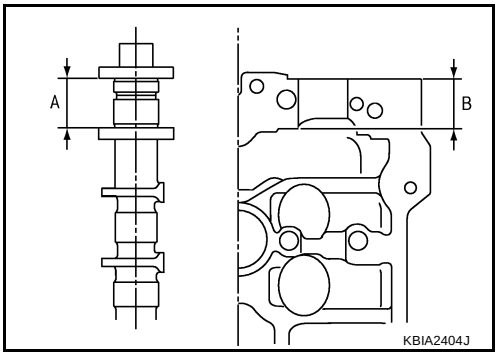
NOTE:
Camshaft brackets cannot be replaced as single parts, because there are machined together with cylinder head. Replace whole cylinder head assembly.

Camshaft End Play

- Install a dial indicator in thrust direction on front end of camshaft. Measure the end play of a dial indicator when camshaft is moved forward/backward (in direction to axis).

Standard : 0.115 - 0.188 mm (0.0045 - 0.0074 in)

Limit : 0.24 mm (0.0094 in)



- Measure the following parts if out of the limit.
  - Dimension “A” for camshaft No. 1 journal

Standard : 27.500 - 27.548 mm (1.0827 - 1.0846 in)

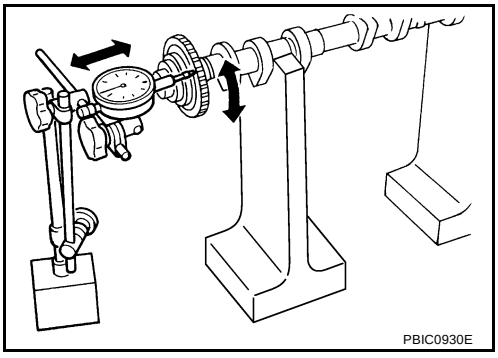
  - Dimension “B” for cylinder head No. 1 journal bearing

Standard : 27.360 - 27.385 mm (1.0772 - 1.0781 in)

- Refer to the standards above, and then replace camshaft and/or cylinder head.

Camshaft Sprocket Runout

1. Put V-block on precise flat table, and support No. 2 and 4 journal of camshaft.

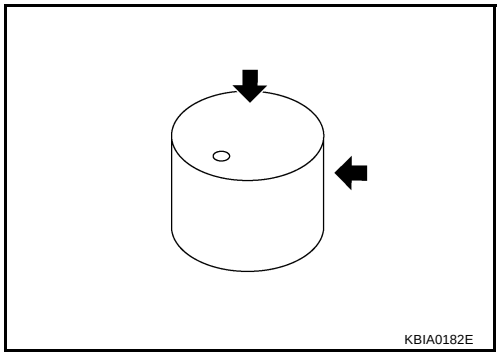


CAUTION:
Do not support journal No. 1 (on the side of camshaft sprocket) because it has a different diameter from the other three locations.

2. Measure the camshaft sprocket runout with a dial indicator. (Total indicator reading)

Limit : 0.15 mm (0.0059 in)

- If it exceeds the limit, replace camshaft sprocket.

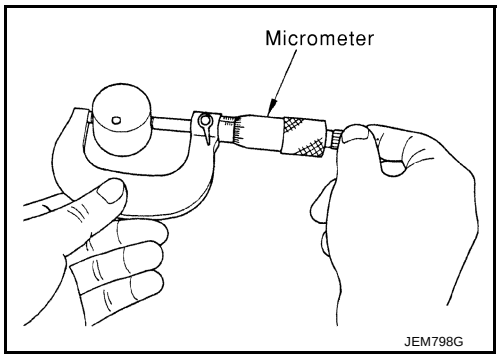


CAUTION:
When replacing camshaft sprocket (EXH), replace valve timing control cover (including magnet retarder and cover).

Valve Lifter

Check if surface of valve lifter has any wear or cracks.

- If anything above is found, replace valve lifter. Refer to EM-138, "Available Valve Lifter" .



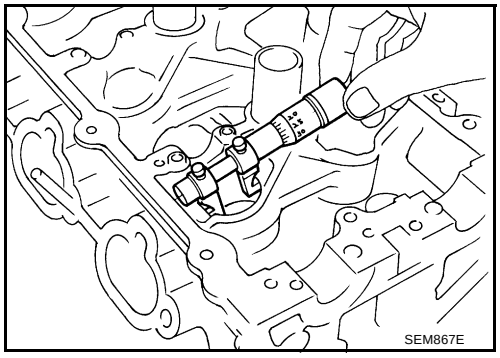
Valve Lifter Clearance

VALVE LIFTER OUTER DIAMETER

- Measure the outer diameter at 1/2 height of valve lifter with a micrometer since valve lifter is in barrel shape.

Standard (Intake and exhaust)

: 33.980 – 33.990 mm (1.3378 – 1.3382 in)



VALVE LIFTER HOLE DIAMETER

- Measure the inner diameter of valve lifter hole of cylinder head with an inside micrometer.

Standard (Intake and exhaust)

: 34.000 - 34.016 mm (1.3386 - 1.3392 in)

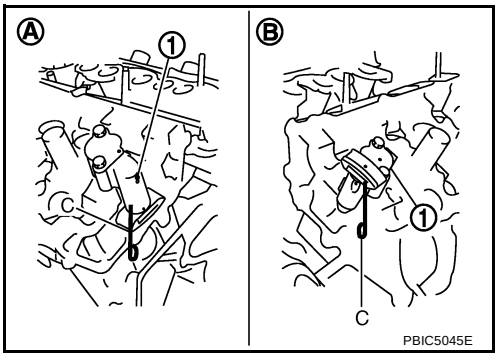
VALVE LIFTER CLEARANCE

- (Valve lifter clearance) = (Valve lifter hole diameter) – (Valve lifter outer diameter)

Standard (Intake and exhaust)

: 0.010 – 0.036 mm (0.0004 – 0.0014 in)

- If the calculated value is out of the standard, referring to each standard of valve lifter outer diameter and valve lifter hole diameter, replace either or both valve lifter and cylinder head.



INSTALLATION

1. Install timing chain tensioners (secondary) (1) on both sides of cylinder head.

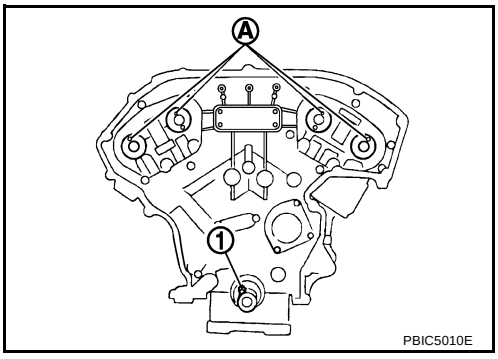
   A : Right bank

   B : Left bank

   - Install timing chain tensioner with its stopper pin (C) attached.
   - Install timing chain tensioner with sliding part facing downward on right-side cylinder head, and with sliding part facing upward on left-side cylinder head.

2. Install valve lifter.
   - Install it in the original position.
3. Install camshafts.
   - Follow your identification marks made during removal, or follow the identification marks that are present on new camshafts for proper placement and direction.

     ⇦ : Engine front

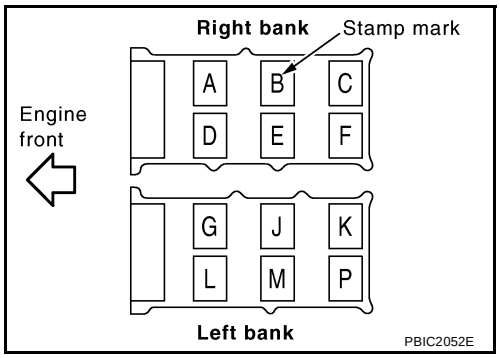


Bank	INT/EXH	Dowel pin (1)	Paint marks			Identification mark (D)
			M1 (E)	M2 (F)	M3 (C)	
RH	INT (A)	Yes	Green	No	Light blue	1E
	EXH (B)	Yes	No	Green	Light blue	1F
LH	INT (A)	Yes	Green	No	Light blue	1G
	EXH (B)	Yes	No	Green	Light blue	1H

   - Install camshaft so that and dowel pin (A) on front end face are positioned as shown in the figure. (No. 1 cylinder TDC on its compression stroke)

     1 : Crankshaft key

     NOTE:
     Though camshaft does not stop at the portion as shown in the figure, for the placement of cam nose, it is generally accepted camshaft is placed for the same direction of the figure.



4. Install camshaft brackets.
   - Remove foreign material completely from camshaft bracket backside and from cylinder head installation face.
   - Install camshaft bracket in original position and direction as shown in the figure.

   - Install camshaft brackets (No. 2 to 4) aligning the stamp marks as shown in the figure.

     NOTE:
     There are no identification marks indicating left and right for camshaft bracket (No. 1).

   - Apply liquid gasket to mating surface of camshaft bracket (No. 1) as shown on right and left banks.
     Use Genuine RTV Silicone Sealant or equivalent. Refer to **GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS"** **.**

     a : 8.5 mm (0.335 in)
     b : 2 mm
     c : Clearance 5 mm (0.20 in)
     d : ϕ 2.5 mm (0.098 in)

5. Tighten camshaft bracket bolts in the following steps, in numerical order as shown in the figure.

a. Tighten No. 7 to 10 in numerical order as shown.

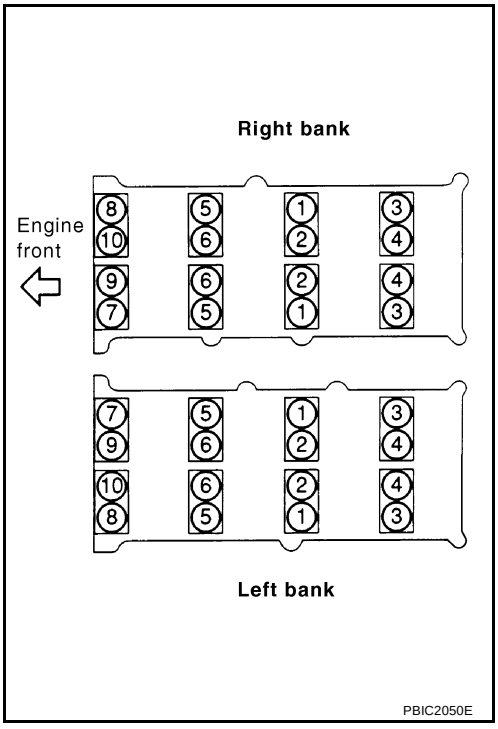
: **1.96 N·m (0.2 kg-m, 17 in-lb)**

b. Tighten No. 1 to 6 in numerical order as shown.

: **1.96 N·m (0.2 kg-m, 17 in-lb)**

c. Tighten No. 1 to 10 in numerical order as shown.

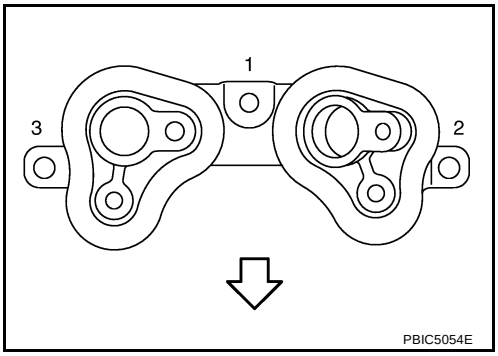
: **5.88 N·m (0.6 kg-m, 52 in-lb)**



d. Tighten No. 1 to 10 in numerical order as shown.

: **10.4 N·m (1.1 kg-m, 92 in-lb)**

CAUTION:



After tightening mounting bolts of camshaft brackets (No. 1), be sure to wipe off excessive liquid gasket from the parts list below.

- **Mating surface of rocker cover**
- **Mating surface of rear timing chain case**

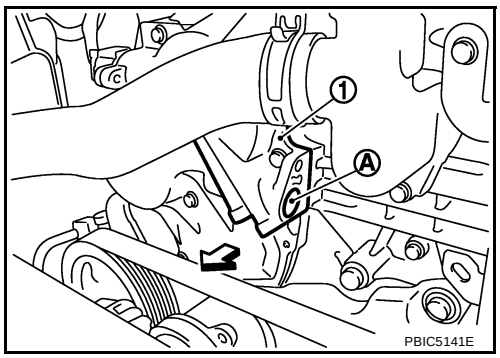
6. Inspect and adjust the valve clearance. Refer to EM-80, "Valve Clearance" .
7. Install camshaft sensor bracket.
   - Tighten camshaft sensor bracket bolts in numerical order as shown in the figure.

   : Engine front

8. Install in the reverse order of removal after this step.

INSPECTION AFTER INSTALLATION

Inspection of Camshaft Sprocket (INT) Oil Groove



CAUTION:

- **Perform this inspection only when DTC P0011 or P0021 are detected in self-diagnostic results of CONSULT-III and it is directed according to inspection procedure of EC section. Refer to EC-81, "TROUBLE DIAGNOSIS" .**
- **Check when engine is cold so as to prevent burns from any splashing engine oil.**

1. Check the engine oil level. Refer to LU-6, "ENGINE OIL" .
2. Perform the following procedure so as to prevent the engine from being unintentionally started while checking.

a. Release fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
b. Disconnect ignition coil and injector harness connectors.
3. Remove intake valve timing control solenoid valve. Refer to EM-72, "CAMSHAFT" .

4. Crank the engine, and then make sure that engine oil comes out from valve timing control solenoid valve hole. End crank after checking.

1 : Valve timing control solenoid valve

⇦ : Engine front

WARNING:

Be careful not to touch rotating parts (drive belts, idler pulley, and crankshaft pulley, etc.).

CAUTION:

Engine oil may squirt from intake valve timing control solenoid valve installation hole during cranking. Use a shop cloth to prevent the engine components and the vehicle. Do not allow engine oil to get on rubber components such as drive belt or engine mount insulators. Immediately wipe off any splashed engine oil.

- Clean oil groove between oil strainer and intake valve timing control solenoid valve if engine oil does not come out from valve timing control solenoid valve hole. Refer to LU-4, "LUBRICATION SYSTEM" .

5. Remove components between intake valve timing control solenoid valve and camshaft sprocket (INT), and then check each oil groove for clogging.
   - Clean oil groove if necessary. Refer to LU-4, "LUBRICATION SYSTEM" .
6. After inspection, install removed parts.

Inspection for Leaks

The following are procedures for checking fluids leak, lubricates leak and exhaust gases leak.

- Before starting engine, check oil/fluid levels including engine coolant and engine oil. If less than required quantity, fill to the specified level. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Use procedure below to check for fuel leakage.
  - Turn ignition switch “ON” (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.
  - Start engine. With engine speed increased, check again for fuel leakage at connection points.
- Run engine to check for unusual noise and vibration.

NOTE:

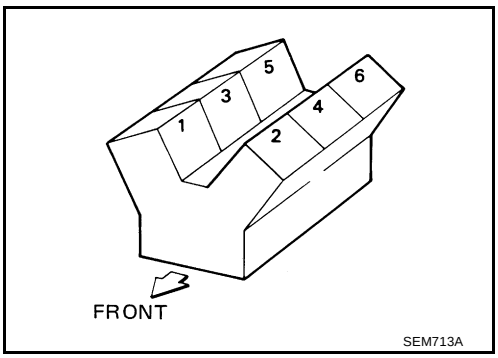
If hydraulic pressure inside timing chain tensioner drops after removal/installation, slack in the guide may generate a pounding noise during and just after engine start. However, this is normal. Noise will stop after hydraulic pressure rises.

- Warm up engine thoroughly to make sure there is no leakage of fuel, exhaust gases, or any oil/fluids including engine oil and engine coolant.
- Bleed air from lines and hoses of applicable lines, such as in cooling system.
- After cooling down engine, again check oil/fluid levels including engine oil and engine coolant. Refill to the specified level, if necessary.

Summary of the inspection items:

Items	Before starting engine	Engine running	After engine stopped
Engine coolant	Level	Leakage	Level
Engine oil	Level	Leakage	Level
Other oils and fluid*	Level	Leakage	Level
Fuel	Leakage	Leakage	Leakage
Exhaust gases	—	Leakage	—

* Transmission/transaxle/CVT fluid, power steering fluid, brake fluid, etc.



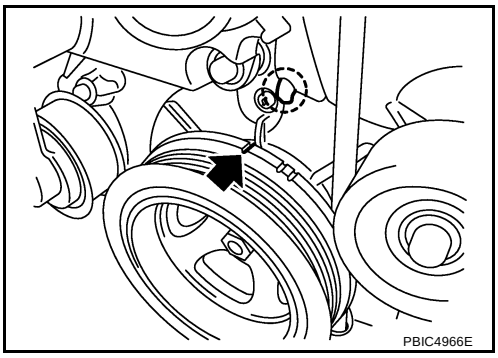
Valve Clearance

NBS0000U

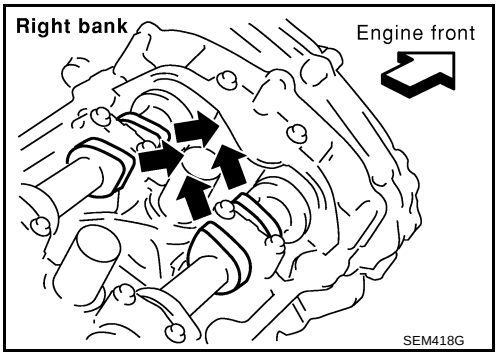
INSPECTION

Perform inspection as follows after removal, installation or replacement of camshaft or valve-related parts, or if there is unusual engine conditions regarding valve clearance.

In cases of removing/installing or replacing camshaft and valve-related parts, or of unusual engine conditions due to changes in valve clearance (found malfunctions during stating, idling or causing noise), perform inspection as follows:



1. Remove rocker covers (right and left bank). Refer to EM-40, "ROCKER COVER" .
2. Measure the valve clearance as follows:



a. Set No. 1 cylinder at TDC of its compression stroke.

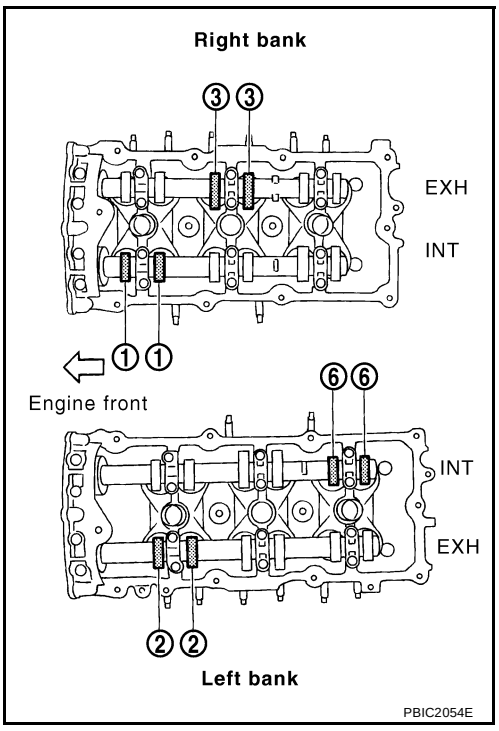
- Rotate crankshaft pulley clockwise to align timing mark (grooved line without color) with timing indicator.

  ⬅ : Timing mark (grooved line without color)

- Make sure that intake and exhaust cam nose on No. 1 cylinder (engine front side of right bank) are located as shown in the figure.
- If not, turn crankshaft one revolution (360 degrees) and align as shown in the figure.

b. Use a feeler gauge, measure the clearance between valve lifter and camshaft.

Valve clearance:

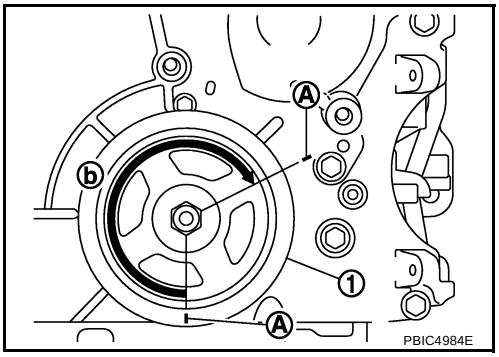


Unit: mm (in)

Items	Cold	Hot * (reference data)
Intake	0.26 - 0.34 (0.010 - 0.013)	0.304 - 0.416 (0.012 - 0.016)
Exhaust	0.29 - 0.37 (0.011 - 0.015)	0.308 - 0.432 (0.012 - 0.017)

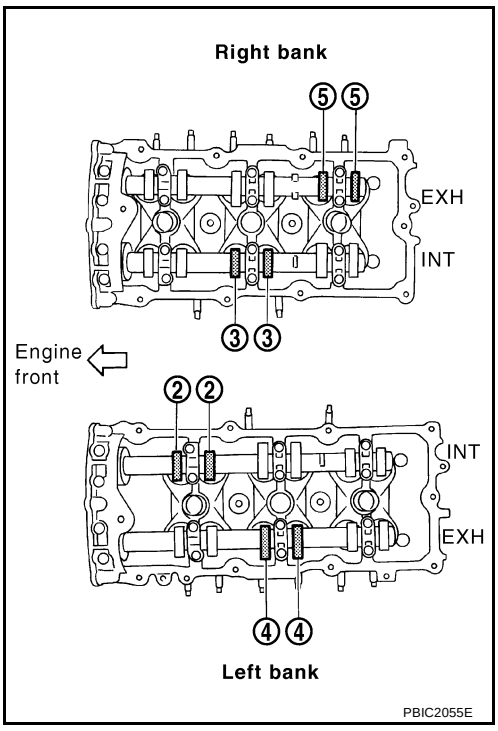
*: Approximately 80°C (176°F)

- By referring to the figure, measure the valve clearances at locations marked "×" as shown in the table below (locations indicated in the figure).
- No. 1 cylinder at compression TDC



Measuring position (right bank)		No. 1 CYL.	No. 3 CYL.	No. 5 CYL.
No. 1 cylinder at compression TDC	EXH		×	
	INT	×		
Measuring position (left bank)		No. 2 CYL.	No. 4 CYL.	No. 6 CYL.
No. 1 cylinder at compression TDC	INT			×
	EXH	×		

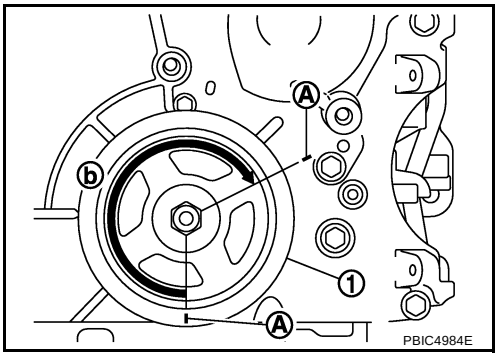
c. Rotate crankshaft by 240 degrees clockwise (when viewed from engine front) to align No. 3 cylinder at TDC of its compression stroke.



NOTE:

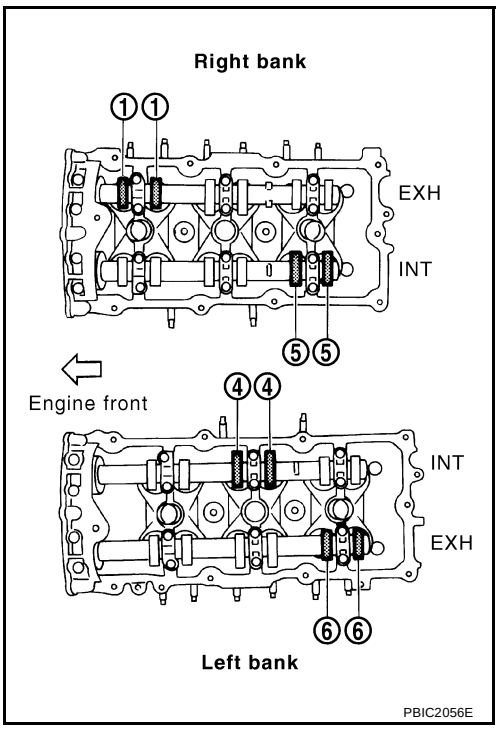
- To align cylinder No. 3 with the compression top dead center, place matching marks (A) on the crankshaft pulley (1) side and on the cylinder block side at a point 240° (b) counter-clockwise from the compression top dead center using the hex head of the crankshaft pulley bolt as a guide.

- By referring to the figure, measure the valve clearances at locations marked "×" as shown in the table below (locations indicated in the figure).
- No. 3 cylinder at compression TDC



Measuring position (right bank)		No. 1 CYL.	No. 3 CYL.	No. 5 CYL.
No. 3 cylinder at compression TDC	EXH			×
	INT		×	
Measuring position (left bank)		No. 2 CYL.	No. 4 CYL.	No. 6 CYL.
No. 3 cylinder at compression TDC	INT	×		
	EXH		×	

d. Rotate crankshaft by 240 degrees clockwise (when viewed from engine front) to align No. 5 cylinder at TDC of its compression stroke.

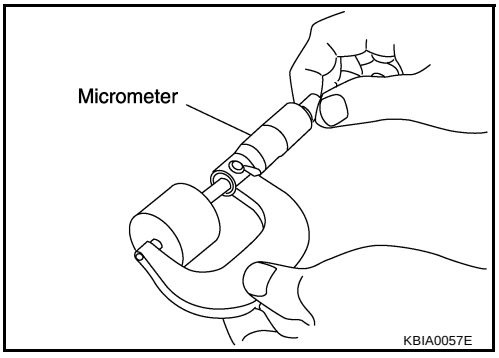


NOTE:

- To align cylinder No. 5 with the compression top dead center, place matching marks (A) on the crankshaft pulley (1) side and on the cylinder block side at a point 240° (b) counter-clockwise from the compression top dead center using the hex head of the crankshaft pulley bolt as a guide.

- By referring to the figure, measure the valve clearances at locations marked "×" as shown in the table below (locations indicated in the figure).
- No. 5 cylinder at compression TDC

Measuring position (right bank)		No. 1 CYL.	No. 3 CYL.	No. 5 CYL.
No. 5 cylinder at compression TDC	EXH	×		
	INT			×
Measuring position (left bank)		No. 2 CYL.	No. 4 CYL.	No. 6 CYL.
No. 5 cylinder at compression TDC	INT		×	
	EXH			×



3. If the measured values are out of the standard, perform adjustment. Refer to EM-84, "ADJUSTMENT" .

ADJUSTMENT

- Perform adjustment depending on selected head thickness of valve lifter.

1. Measure the valve clearance. Refer to EM-80, "INSPECTION" .
2. Remove camshaft. Refer to EM-72, "REMOVAL" .
3. Remove valve lifters at the locations that are out of the standard.
4. Measure the center thickness of removed valve lifters with a micrometer.

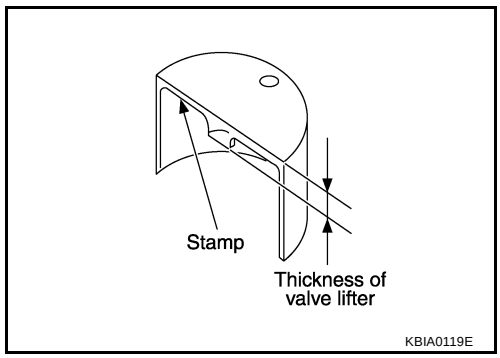
5. Use the equation below to calculate valve lifter thickness for replacement.

Valve lifter thickness calculation: $t = t_1 + (C_1 - C_2)$

t = Valve lifter thickness to be replaced

t_1 = Removed valve lifter thickness

C_1 = Measured valve clearance



C_2 = Standard valve clearance:

Intake : 0.30 mm (0.012 in)*

Exhaust : 0.33 mm (0.013 in)*

***: Approximately 20°C (68°F)**

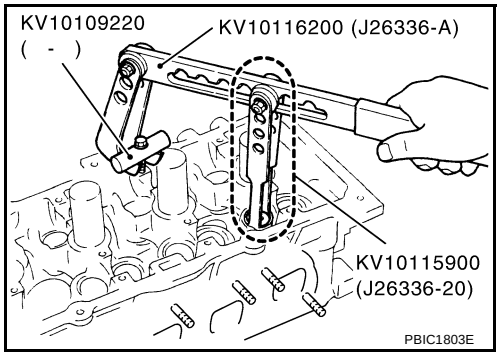
- Thickness of new valve lifter can be identified by stamp marks on the reverse side (inside the cylinder).
  Stamp mark 788T indicates 7.88 mm (0.3102 in) in thickness.

Available thickness of valve lifter: 27 sizes with range 7.88 to 8.40 mm (0.3102 to 0.3307 in) in steps of 0.02 mm (0.0008 in) (when manufactured at factory). Refer to EM-138, "Available Valve Lifter" .

6. Install selected valve lifter.
7. Install camshaft. Refer to EM-77, "INSTALLATION" .
8. Manually turn crankshaft pulley a few turns.
9. Make sure that the valve clearances for cold engine are within the specifications by referring to the specified values. Refer to EM-80, "INSPECTION" .
10. Install all removal parts in the reverse order of removal. Refer to EM-77, "INSTALLATION" .
11. Warm up the engine, and check for unusual noise and vibration.

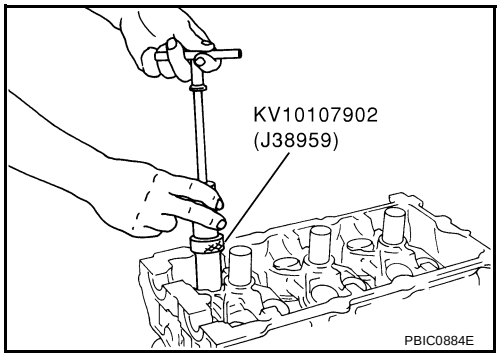
OIL SEAL

PFP:00100



Removal and Installation of Valve Oil Seal

NBS0000V

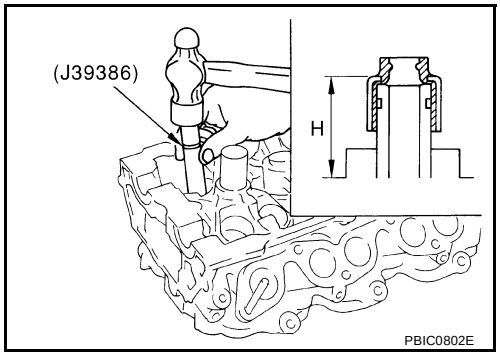


REMOVAL

1. Remove camshaft relating to valve oil seal to be removed. Refer to EM-72, "CAMSHAFT" .
2. Remove valve lifters. Refer to EM-72, "CAMSHAFT" .
3. Turn crankshaft until the cylinder requiring new oil seals is at TDC. This will prevent valve from dropping into cylinder.
4. Remove valve collet.
   - Compress valve spring with valve spring compressor, attachment, adapter (SST). Remove valve collet with magnet hand.

     CAUTION:
     When working, take care not to damage valve lifter holes.

5. Remove valve spring retainer, valve spring and valve spring seat.
6. Remove valve oil seal using valve oil seal puller (SST).



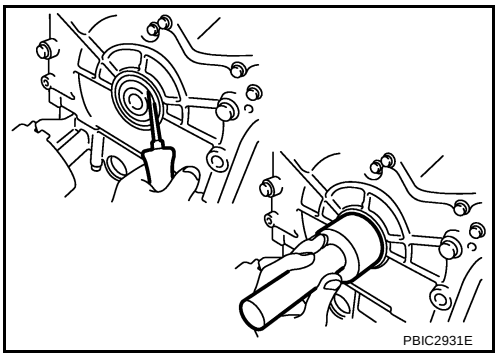
INSTALLATION

1. Apply engine oil on new valve oil seal joint and seal lip.
2. Using valve oil seal drift (SST), press fit valve oil seal to height “H” shown in the figure.

   NOTE:
   Dimension “H”: Height measured before valve spring seat installation

   Intake and exhaust : 14.3 - 14.9 mm (0.563 - 0.587 in)

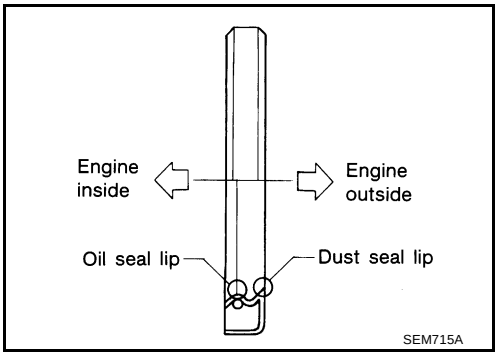
3. Install in the reverse order of removal after this step.



Removal and Installation of Front Oil Seal

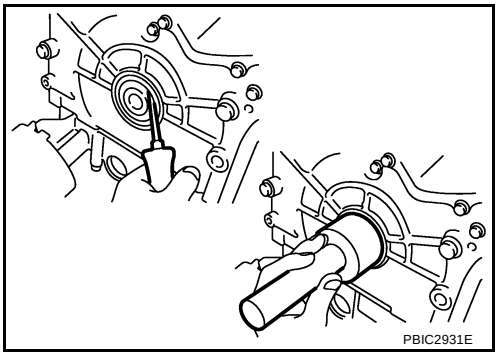
NBS0000W

REMOVAL



1. Remove the following parts:
   - Undercover
   - Drive belts: Refer to EM-12, "DRIVE BELTS" .
   - Radiator cooling fan assembly: Refer to CO-21, "COOLING FAN" .
   - Crankshaft pulley: Refer to EM-53, "TIMING CHAIN" .
2. Remove front oil seal using suitable tool.

CAUTION:
Be careful not to damage front timing chain case and crankshaft.



INSTALLATION

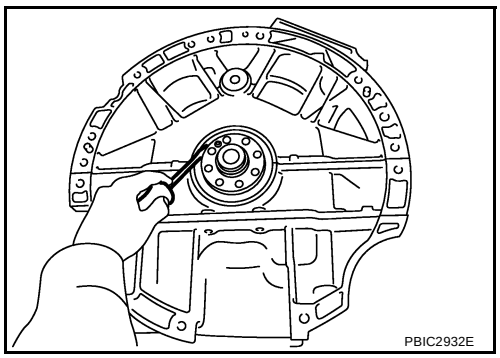
1. Apply engine oil to both oil seal lip and dust seal lip of new front oil seal.
2. Install front oil seal.
   - Install front oil seal so that each seal lip is oriented as shown in the figure.

   - Using suitable drift, press-fit until the height of front oil seal is level with the mounting surface.
     - Suitable drift: outer diameter 60 mm (2.36 in), inner diameter 50 mm (1.97 in).

CAUTION:
- **Be careful not to damage front timing chain case and crankshaft.**
- **Press-fit straight and avoid causing burrs or tilting oil seal.**

3. Install in the reverse order of removal after this step.

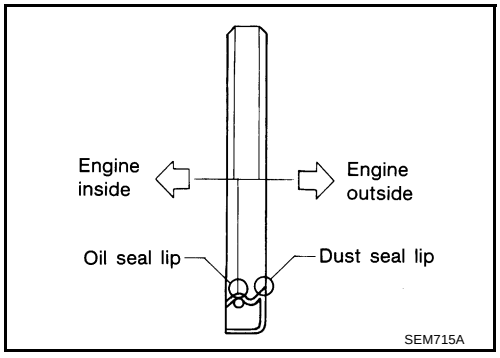
Removal and Installation of Rear Oil Seal



NBS0000X

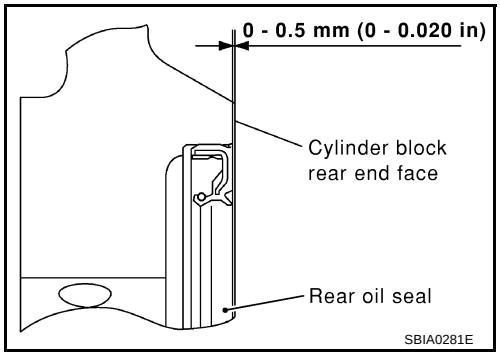
REMOVAL

1. Remove transmission assembly. Refer to MT-18, "TRANSMISSION ASSEMBLY" (M/T models) or AT-242, "TRANSMISSION ASSEMBLY" (A/T models).
2. Remove clutch cover and clutch disk (M/T models). Refer to CL-16, "CLUTCH DISC, CLUTCH COVER" .
3. Remove flywheel (M/T models) or drive plate (A/T models). Refer to EM-107, "CYLINDER BLOCK" .



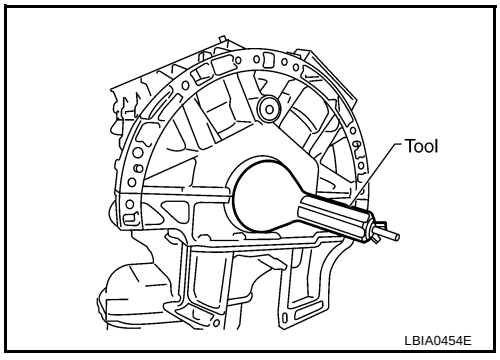
4. Remove rear oil seal with a suitable tool.

CAUTION:
Be careful not to damage crankshaft and cylinder block.



INSTALLATION

1. Apply new engine oil to new rear oil seal joint surface and seal lip.
2. Install rear oil seal so that each seal lip is oriented as shown.



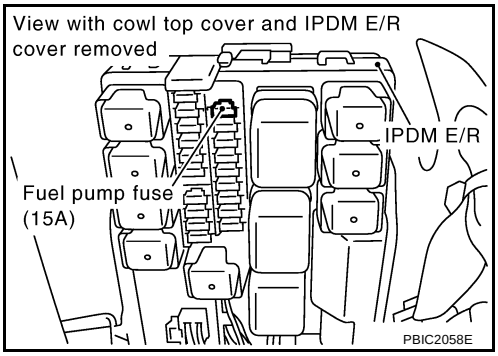
- Press in rear oil seal to the position as shown.

- Using suitable drift, press-fit until the height of front oil seal is level with the mounting surface.
  - Suitable drift: outer diameter 100 mm (3.94 in), inner diameter 85 mm (3.35 in).

CAUTION:
- **Be careful not to damage crankshaft and cylinder block.**
- **Press-fit oil seal straight to avoid causing burrs or tilting.**

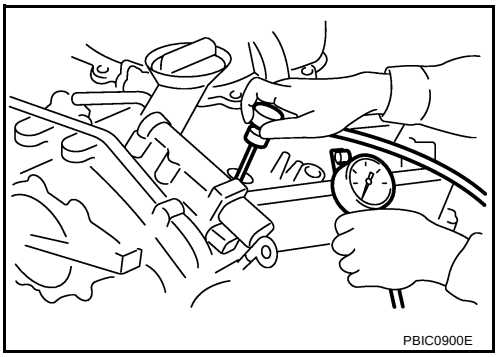
3. Install in the reverse order of removal after this step.

CYLINDER HEAD



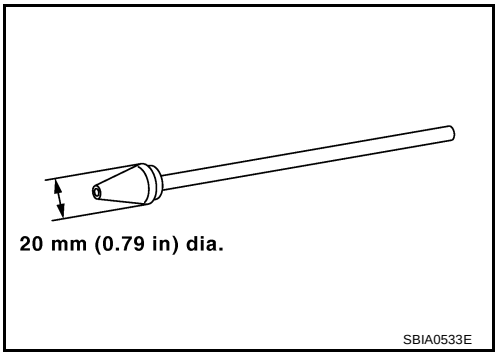
PFP:11041

On-Vehicle Service



NBS0000Y

CHECKING COMPRESSION PRESSURE



1. Warm up engine thoroughly. Then, stop it.
2. Release fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Disconnect fuel pump fuse to avoid fuel injection during measurement.

4. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
5. Remove ignition coil and spark plug from each cylinder. Refer to EM-31, "IGNITION COIL" and EM-32, "SPARK PLUG (IRIDIUM-TIPPED TYPE)" .
6. Connect engine tachometer (not required in use of CONSULT-III).
7. Install compression tester (Commercial service tool) with adapter onto spark plug hole.

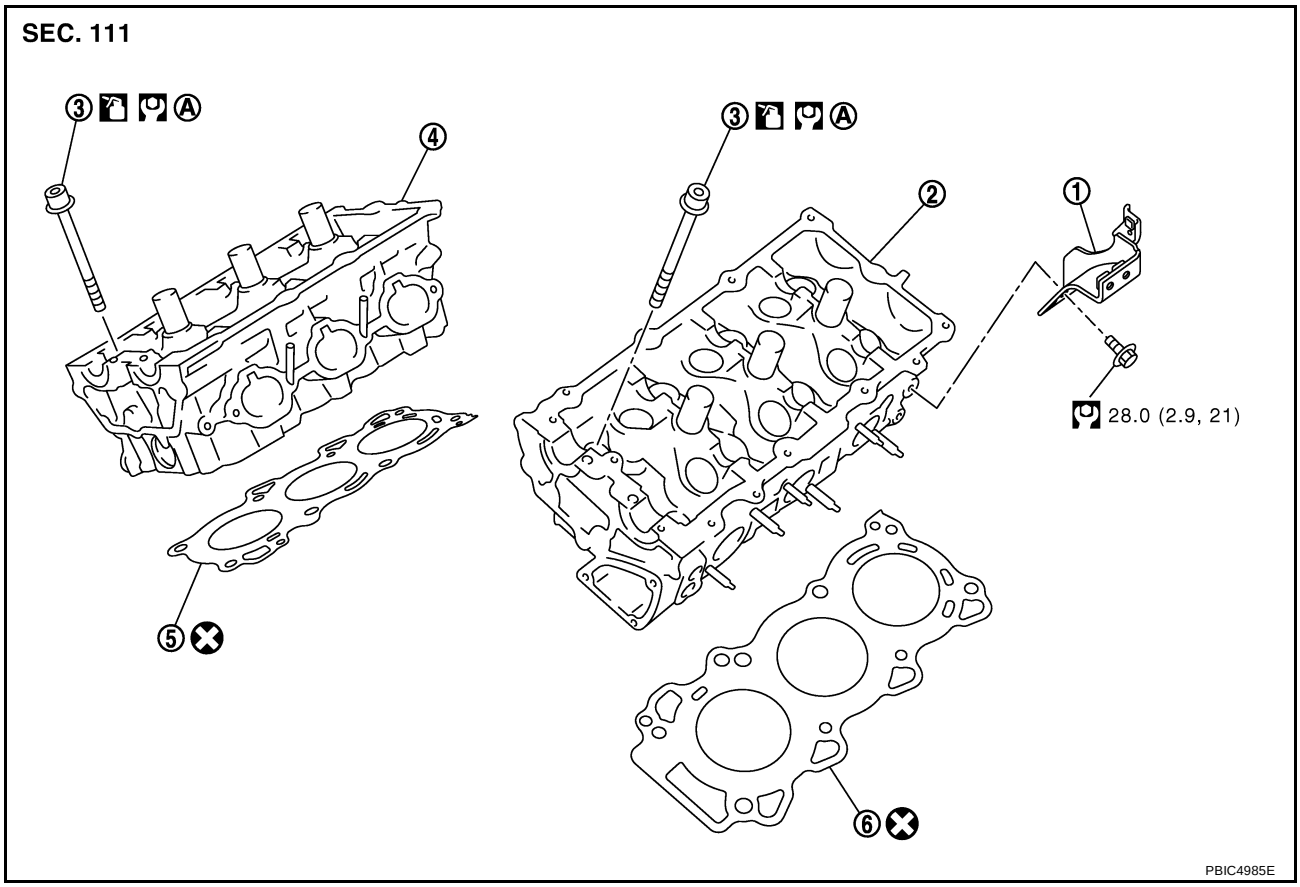
- Use the adapter whose picking up end inserted to spark plug hole is smaller than 20 mm (0.79 in) in diameter. Otherwise, it may be caught by cylinder head during removal.

8. With accelerator pedal fully depressed, turn ignition switch to “START” for cranking. When the gauge pointer stabilizes, read the compression pressure and engine rpm. Perform these steps to check each cylinder.

Compression pressure:

Unit: kPa (kg/cm^2 , psi) /rpm

Standard	Minimum	Differential limit between cylinders
1,275 (13.0, 185)/300	981 (10.0, 142)/300	98 (1.0, 14)/300



CAUTION:
Always use a fully changed battery to obtain specified engine speed.

- If the engine speed is out of specified range, check battery liquid for proper gravity. Check engine speed again with normal battery gravity.
- If compression pressure is below minimum value, check valve clearances and parts associated with combustion chamber (valve, valve seat, piston, piston ring, cylinder bore, cylinder head, cylinder head gasket). After the checking, measure compression pressure again.
- If some cylinders have low compression pressure, pour small amount of engine oil into the spark plug hole of the cylinder to re-check it for compression.
  - If the added engine oil improves the compression, piston rings may be worn out or damaged. Check the piston rings and replace if necessary.
  - If the compression pressure remains at low level despite the addition of engine oil, valves may be malfunctioning. Check valves for damage. Replace valve or valve seat accordingly.
- If two adjacent cylinders have respectively low compression pressure and their compression remains low even after the addition of engine oil, cylinder head gaskets are leaking. In such a case, replace cylinder head gaskets.

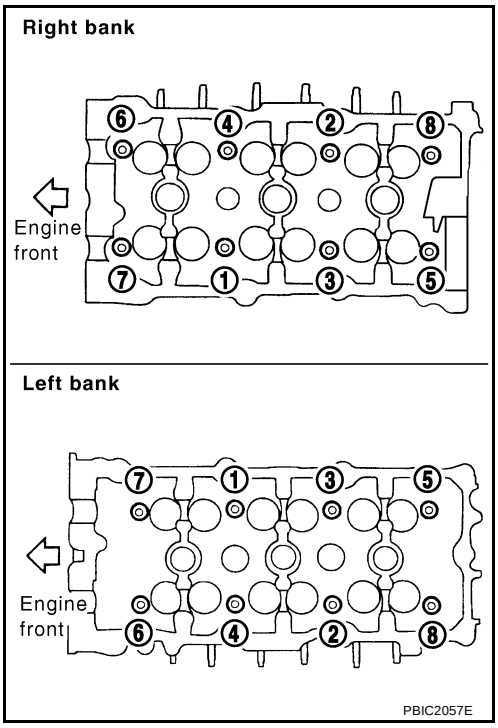
9. After inspection is completed, install removed parts.
10. Start engine, and make sure that engine runs smoothly.
11. Perform trouble diagnosis. If DTC appears, erase it. Refer to EC-81, "TROUBLE DIAGNOSIS" .

Removal and Installation

NBS0000Z

1. Engine rear lower slinger
2. Cylinder head (left bank)
3. Cylinder head bolt
4. Cylinder head (right bank)
5. Cylinder head gasket (right bank)
6. Cylinder head gasket (left bank)
7. Oil level gauge guide

A. Refer to EM-92



- Refer to GI-11, "Components" for symbol marks in the figure.

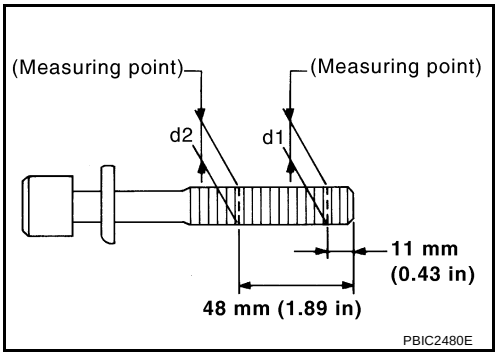
REMOVAL

1. Remove engine assembly from vehicle, and separate front suspension member and transmission from engine. Refer to EM-101, "ENGINE ASSEMBLY" .
2. Remove the following parts:

- Fuel tube and fuel injector assembly: Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .
- Intake manifold: Refer to EM-20, "INTAKE MANIFOLD" .
- Exhaust manifold: Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .
- Water inlet and thermostat assembly: Refer to CO-26, "WATER INLET AND THERMOSTAT ASSEMBLY" .
- Water outlet and water pipe: Refer to CO-28, "WATER OUTLET AND WATER PIPING" .
- Front and rear timing chain case: Refer to EM-53, "TIMING CHAIN" .

3. Remove camshaft (INT, EXH). Refer to EM-72, "CAMSHAFT" .
4. Remove cylinder head bolts in reverse order as shown in the figure with cylinder head bolt wrench (commercial service tool).

5. Remove cylinder head gaskets.



INSPECTION AFTER REMOVAL

Cylinder Head Bolts Outer Diameter

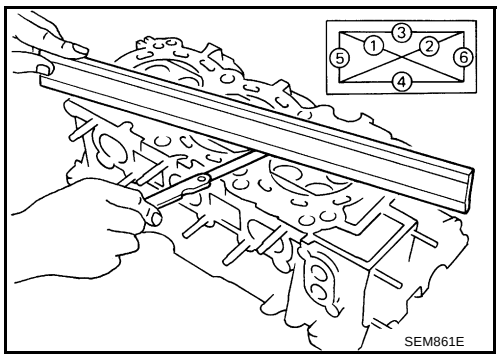
- Cylinder head bolts are tightened by plastic zone tightening method. Whenever the size difference between “d1” and “d2” exceeds the limit, replace them with new one.

  Limit (“d1” – “d2”) : 0.18 mm (0.0071 in)

- If reduction of outer diameter appears in a position other than “d2”, use it as “d2” point.

Cylinder Head Distortion

NOTE:
When performing this inspection, cylinder block distortion should be also checked. Refer to EM-128, "CYLINDER BLOCK DISTORTION" .



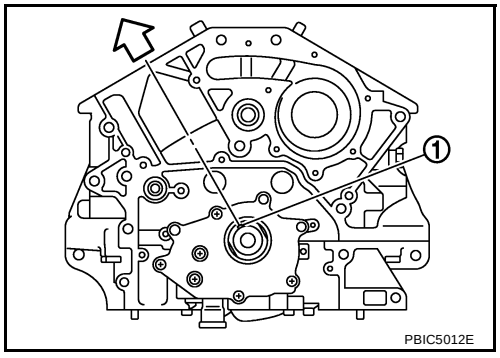
1. Using scraper, wipe off oil, scale, gasket, sealant and carbon deposits from surface of cylinder head.

   CAUTION:
   Do not allow gasket fragments to enter engine oil or engine coolant passages.

2. At each of several locations on bottom surface of cylinder head, measure the distortion in six directions.

   Limit : 0.1 mm (0.004 in)

   - If it exceeds the limit, replace cylinder head.



INSTALLATION

1. Install new cylinder head gaskets.
2. Turn crankshaft until No. 1 piston is set at TDC.
   - Crankshaft key should line up with the right bank cylinder center line as shown in the figure.

   1 : Crankshaft key

   ⇦ : Right bank side

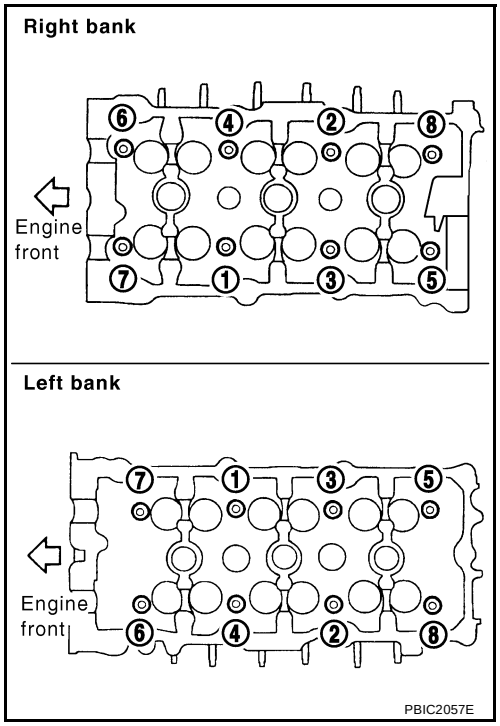
3. Install cylinder head follow the steps below to tighten cylinder head bolts in numerical order as shown in the figure.

   CAUTION:
   If cylinder head bolts re-used, check their outer diameters before installation. Refer to EM-91, "Cylinder Head Bolts Outer Diameter" .

a. Apply new engine oil to threads and seat surfaces of cylinder head bolts.

b. Tighten all cylinder head bolts.

   : 105 N·m (11 kg-m, 77 ft-lb)



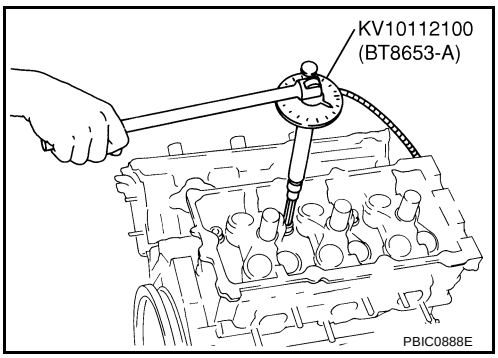
c. Completely loosen all cylinder head bolts.

   : 0 N·m (0 kg-m, 0 ft-lb)

   CAUTION:
   In step “c”, loosen bolts in reverse order of that indicated in the figure.

d. Tighten all cylinder head bolts.

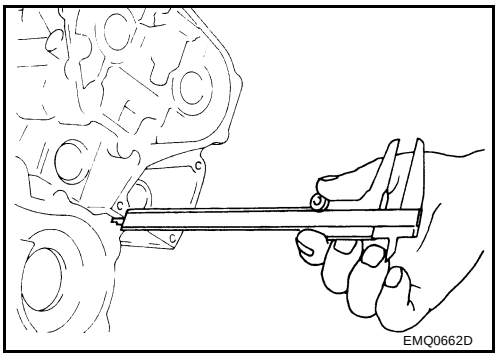
   : 39.2 N·m (4.0 kg-m, 29 ft-lb)



e. Turn all bolts 95 degrees clockwise (angle tightening).

CAUTION:
Check the tightening angle by using angle wrench (SST). Avoid judgment by visual inspection without tool.

- Check tightening angle indicated on angle wrench (SST) indicator plate.



f. Turn all bolts 95 degrees clockwise again (angle tightening).

4. After installing cylinder head, measure distance between front end faces of cylinder block and cylinder head (left and right banks).

Standard : 14.1 - 14.9 mm (0.555 - 0.587 in)

- If the measured value is out of the standard, re-install cylinder head.

5. Install in the reverse order of removal after this step.

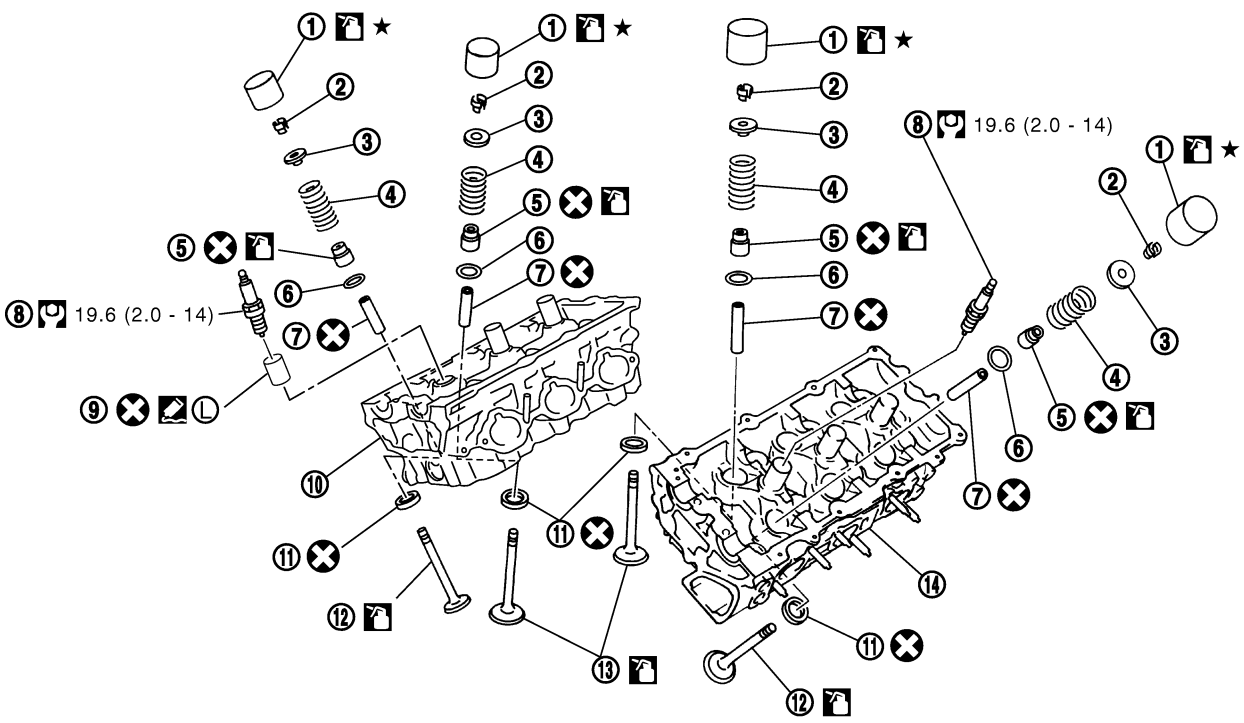
INSPECTION AFTER INSTALLATION

Inspection for Leaks

The following are procedures for checking fluids leak, lubricates leak and exhaust gases leak.

- Before starting engine, check oil/fluid levels including engine coolant and engine oil. If less than required quantity, fill to the specified level. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Use procedure below to check for fuel leakage.
  - Turn ignition switch “ON” (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.
  - Start engine. With engine speed increased, check again for fuel leakage at connection points.
- Run engine to check for unusual noise and vibration.
- Warm up engine thoroughly to make sure there is no leakage of fuel, exhaust gases, or any oil/fluids including engine oil and engine coolant.
- Bleed air from lines and hoses of applicable lines, such as in cooling system.
- After cooling down engine, again check oil/fluid levels including engine oil and engine coolant. Refill to the specified level, if necessary.

Summary of the inspection items:



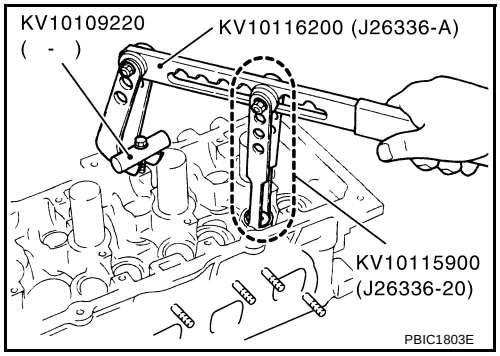
Items	Before starting engine	Engine running	After engine stopped
Engine coolant	Level	Leakage	Level
Engine oil	Level	Leakage	Level
Other oils and fluid*	Level	Leakage	Level
Fuel	Leakage	Leakage	Leakage
Exhaust gases	—	Leakage	—

* Transmission/transaxle/CVT fluid, power steering fluid, brake fluid, etc.

Disassembly and Assembly

NBS00010

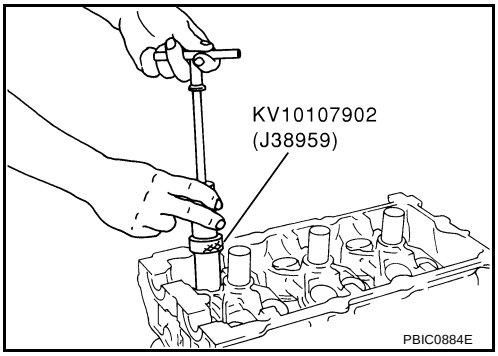
SEC. 111•130•220



1. Valve lifter	2. Valve collet	3. Valve spring retainer
4. Valve spring	5. Valve oil seal	6. Valve spring seat
7. Valve guide	8. Spark plug	9. Spark plug tube
10. Cylinder head (right bank)	11. Valve seat	12. Valve (EXH)
13. Valve (INT)	14. Cylinder head (left bank)	

- Refer to GI-11, "Components" for symbol marks in the figure.

DISASSEMBLY



1. Remove spark plug with spark plug wrench (commercial service tool).
2. Remove valve lifter.
   - Identify installation positions, and store them without mixing them up.
3. Remove valve collet.
   - Compress valve spring with valve spring compressor, attachment and adapter (SST). Remove valve collet with magnet hand.

   CAUTION:
   When working, take care not to damage valve lifter holes.

4. Remove valve spring retainer, valve spring and valve spring seat.
5. Push valve stem to combustion chamber side, and remove valve.
   - Identify installation positions, and store them without mixing them up.

6. Remove valve oil seals using valve oil seal puller (SST).

7. If valve seat must be replaced, refer to EM-99, "VALVE SEAT REPLACEMENT" .
8. If valve guide must be replaced, refer to EM-97, "VALVE GUIDE REPLACEMENT" .
9. Remove spark plug tube, as necessary.
   - Using pair of pliers, pull spark plug tube out of cylinder head.

   CAUTION:
   - **Take care not to damage cylinder head.**
   - **Once removed, spark plug tube will be deformed and cannot be reused. Do not remove it unless absolutely necessary.**

ASSEMBLY

1. When valve guide is removed, install it. Refer to EM-97, "VALVE GUIDE REPLACEMENT" .
2. When valve seat is removed, install it. Refer to EM-99, "VALVE SEAT REPLACEMENT" .
3. Install valve oil seals.
   - Install with valve oil seal drift (SST) to match dimension in the figure.

   Height “H” (Without valve spring seat installed)

   Intake and exhaust : 14.3 - 14.9 mm (0.563 - 0.587 in)

4. Install valve spring seat.
5. Install valves.

   NOTE:
   Larger diameter valves are for intake side.
6. Install valve spring (uneven pitch type).
   - Install narrow pitch end (paint mark) to cylinder head side (valve spring seat side).

   Paint mark color : Yellowish green

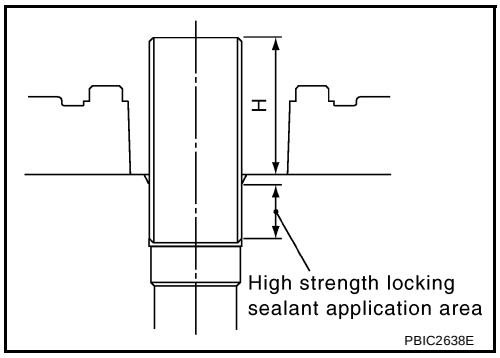
7. Install valve spring retainer.

8. Install valve collet.
   - Compress valve spring with valve spring compressor, attachment and adapter (SST). Install valve collet with magnet hand.

     CAUTION:
     When working, take care not to damage valve lifter holes.
   - Tap valve stem edge lightly with plastic hammer after installation to check its installed condition.

9. Install valve lifter.
   - Install it in the original position.
10. Install spark plug tube.
   - Press-fit spark plug tube as follows:

a. Remove old liquid gasket adhering to cylinder head mounting hole.



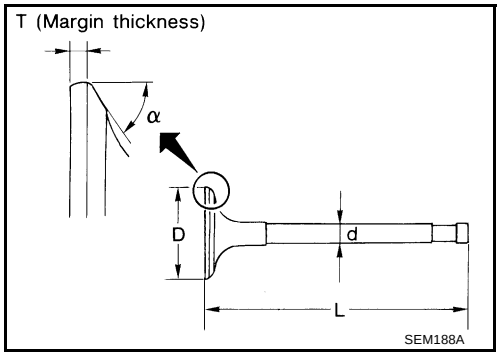
b. Apply liquid gasket to area within approximately 12 mm (0.47 in) from edge of spark plug tube press-fit side.
   Use Genuine High Strength Locking Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

c. Using drift, press-fit spark plug tube so that its height “H” is as specified in the figure.

   Standard press-fit height “H”:

   : 37.7 - 38.7 mm (1.484 - 1.524 in)

   CAUTION:
   - **When press-fitting, take care not to deform spark plug tube.**
   - **After press-fitting, wipe off liquid gasket protruding onto cylinder-head upper face.**

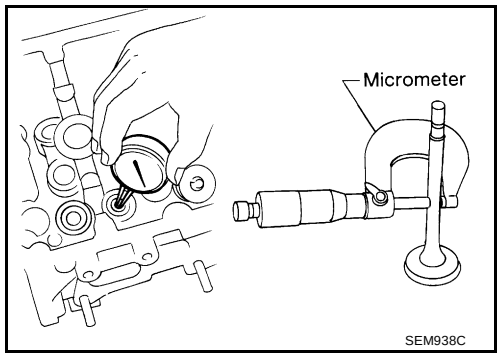


11. Install spark plug with spark plug wrench (commercial service tool).

Inspection After Disassembly

NBS00011

VALVE DIMENSIONS



- Check dimensions of each valve. For dimensions, refer to EM-139, "Valve Dimensions" .
- If dimensions are out of the standard, replace valve and check valve seat contact. Refer to EM-99, "VALVE SEAT CONTACT" .

VALVE GUIDE CLEARANCE

Valve Stem Diameter

Measure diameter of valve stem with micrometer.

Standard

Intake : 5.965 - 5.980 mm (0.2348 - 0.2354 in)

Exhaust : 5.962 - 5.970 mm (0.2347 - 0.2350 in)

Valve Guide Inner Diameter

Measure inner diameter of valve guide with inside micrometer.

Standard

Intake and Exhaust : 6.000 - 6.018 mm (0.2362 - 0.2369 in)

Valve Guide Clearance

(Valve guide clearance) = (Valve guide inner diameter) – (Valve stem diameter)

Valve guide clearance:

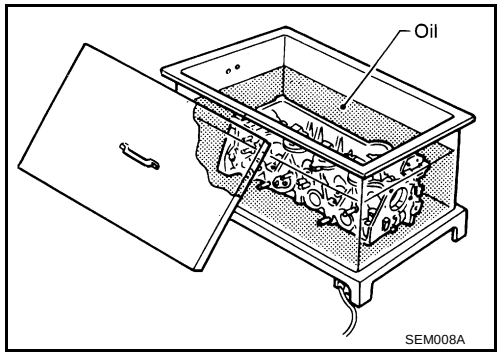
Standard

Intake : 0.020 - 0.053 mm (0.0008 - 0.0021 in)

Exhaust : 0.030 - 0.056 mm (0.0012 - 0.0022 in)

Limit

Intake : 0.08 mm (0.0031 in)

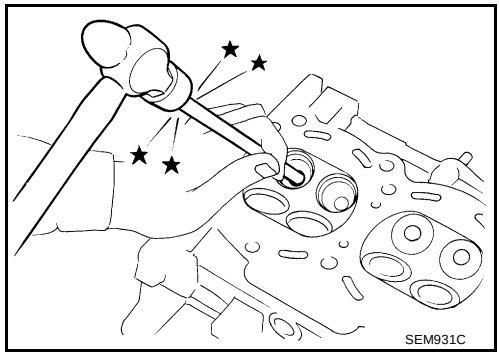


Exhaust : 0.09 mm (0.0035 in)

- If it exceeds the limit, replace valve and/or valve guide. When valve guide must be replaced, refer to EM-97, "VALVE GUIDE REPLACEMENT" .

VALVE GUIDE REPLACEMENT

When valve guide is removed, replace with Oversize (Service) [0.2 mm (0.008 in)] valve guide.

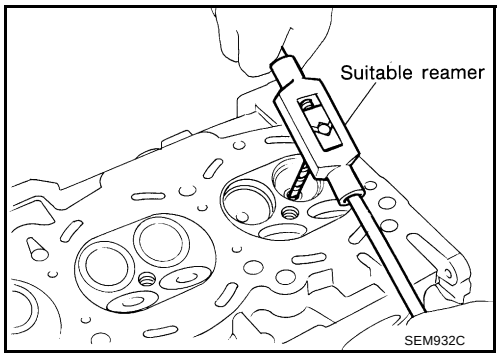


1. To remove valve guide, heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.

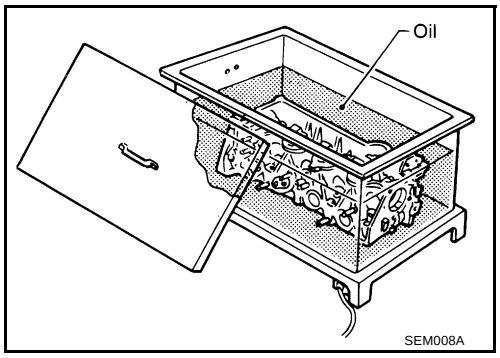
2. Drive out valve guide with a press [under a 20 kN (2 ton, 2.2 US ton, 2.0 lmp ton) pressure] or hammer and suitable tool.

WARNING:

Cylinder head contains heat. When working, wear protective equipment to avoid getting burned.



3. Using valve guide reamer (commercial service tool), ream cylinder head valve guide hole.



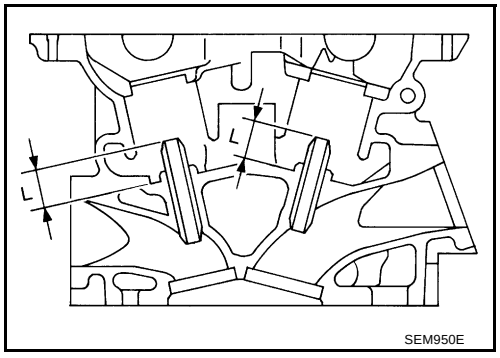
Valve guide hole diameter (for service parts):

Intake and exhaust

: 10.175 - 10.196 mm (0.4006 - 0.4014 in)

4. Heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.

5. Using valve guide drift (commercial service tool), press valve guide from camshaft side to the dimensions as in the figure.



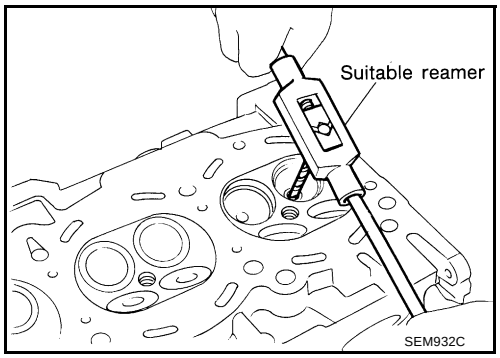
Projection "L"

Intake and exhaust

: 12.6 - 12.8 mm (0.496 - 0.504 in)

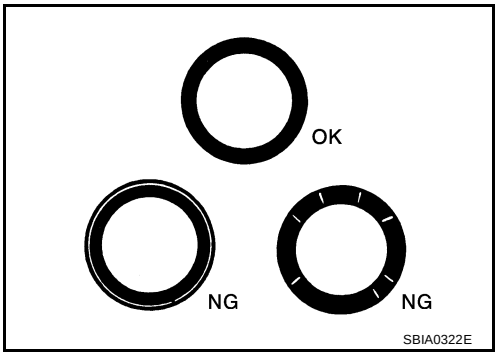
WARNING:

Cylinder head contains heat. When working, wear protective equipment to avoid getting burned.



6. Using valve guide reamer (commercial service tool), apply reamer finish to valve guide.

Standard:



Intake and exhaust

: 6.000 - 6.018 mm (0.2362 - 0.2369 in)

VALVE SEAT CONTACT

- After confirming that the dimensions of valve guides and valves are within the specifications, perform this procedure.
- Apply prussian blue (or white lead) onto contacting surface of valve seat to check the condition of the valve contact on the surface.
- Check if the contact area band is continuous all around the circumference.
- If not, grind to adjust valve fitting and check again. If the contacting surface still has “NG” conditions even after the re-check, replace valve seat. Refer to EM-99, "VALVE SEAT REPLACEMENT" .

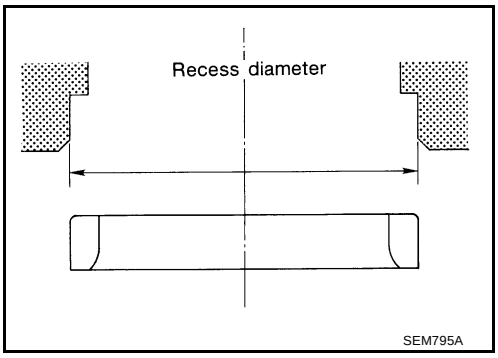
VALVE SEAT REPLACEMENT

When valve seat is removed, replace with Oversize (Service) [0.5 mm (0.020 in)] valve seat.

1. Bore out old seat until it collapses. Boring should not continue beyond the bottom face of the seat recess in cylinder head. Set the machine depth stop to ensure this. Refer to EM-141, "Valve Seat" .

   CAUTION:

   Prevent to scratch cylinder head by excessive boring.



2. Ream cylinder head recess diameter for service valve seat.

   Oversize (Service) [0.5 mm (0.020 in)]

   Intake : 38.500 - 38.516 mm (1.5157 - 1.5164 in)

   Exhaust : 32.100 - 32.116 mm (1.2638 - 1.2644 in)

   - Be sure to ream in circles concentric to valve guide center. This will enable valve to fit correctly.

3. Heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.

4. Provide valve seats cooled well with dry ice. Force fit valve seat into cylinder head.

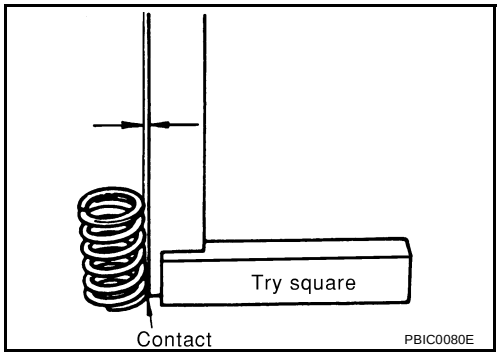
   WARNING:

   - **Avoid directly touching cold valve seats.**
   - **Cylinder head contains heat. When working, wear protective equipment to avoid getting burned.**

5. Using valve seat cutter set (commercial service tool) or valve seat grinder, finish seat to the specified dimensions. Refer to EM-141, "Valve Seat" .

   CAUTION:

   When using valve seat cutter, firmly grip cutter handle with both hands. Then, press on the contacting surface all around the circumference to cut in a single drive. Improper pressure on with cutter or cutting many different times may result in stage valve seat.



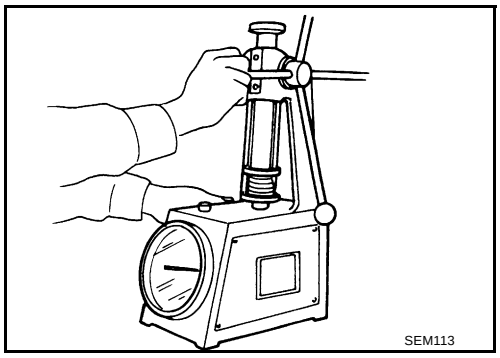
6. Using compound, grind to adjust valve fitting.
7. Check again for normal contact. Refer to EM-99, "VALVE SEAT CONTACT" .

VALVE SPRING SQUARENESS

- Set try square along the side of valve spring and rotate spring. Measure the maximum clearance between the top face of spring and try square.

  Limit: : 1.9 mm (0.075 in)

- If it exceeds the limit, replace valve spring.



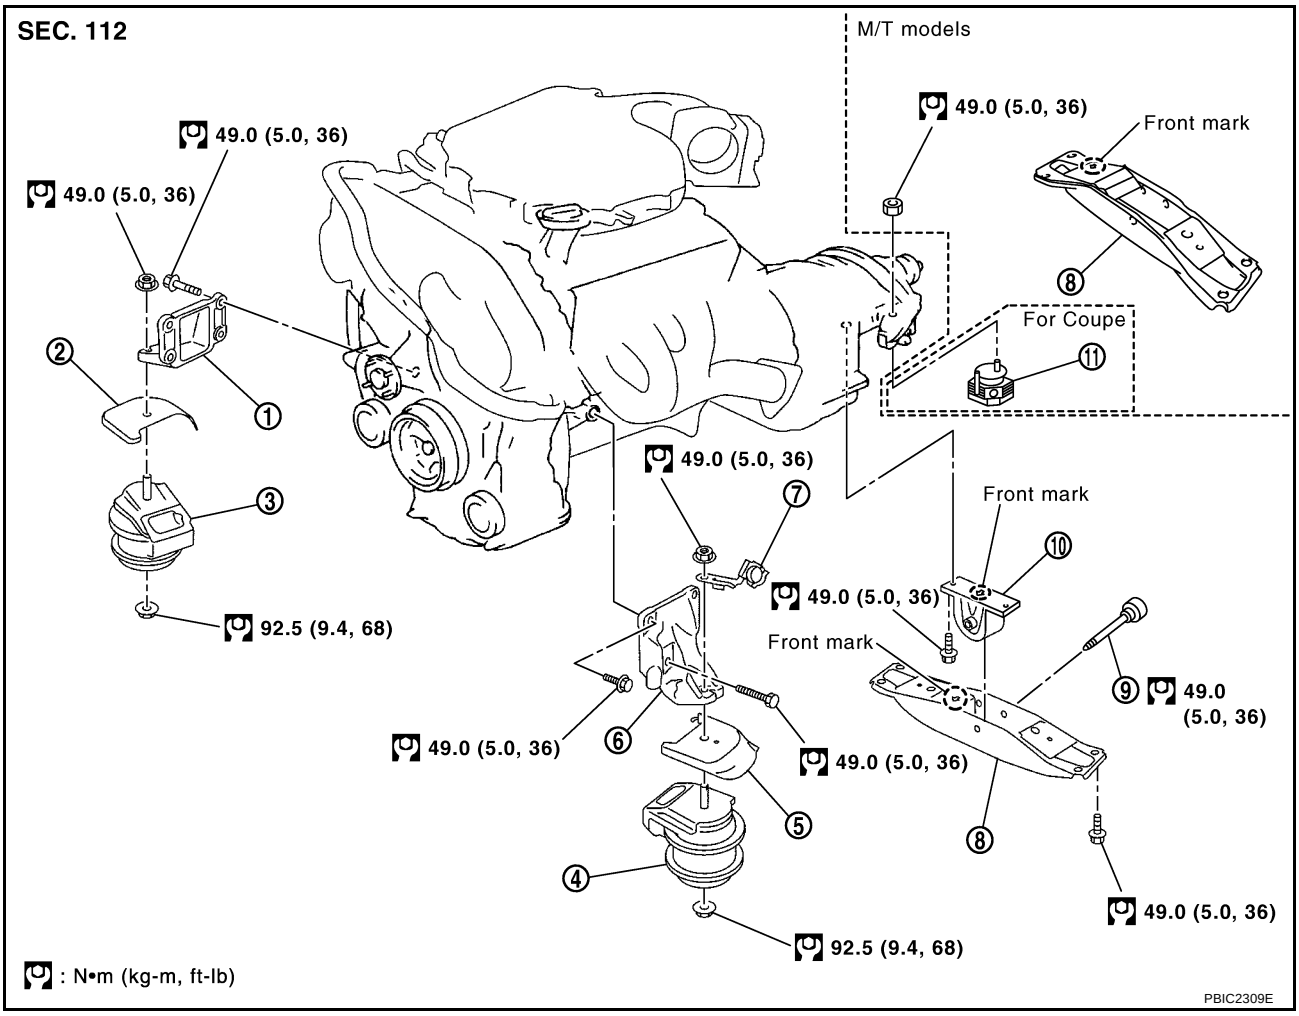
VALVE SPRING DIMENSIONS AND VALVE SPRING PRESSURE LOAD

- Check valve spring pressure at specified spring height.

Standard:

Intake and exhaust

Free height	**: 43.85 mm (1.7264 in)**
Installation height	**: 37.0 mm (1.457 in)**
Installation load	**: 166 – 188 N (16.9 – 19.2 kg, 37 – 42 lb)**
Height during valve open	**: 26.8 mm (1.055 in)**
Load with valve open	**: 502 – 566 N (51.2 – 57.7 kg, 113 – 127 lb)**



- If the installation load or load with valve open is out of the standard, replace valve spring.

ENGINE ASSEMBLY

PFP:10001

Removal and Installation

NBS00012

1. Engine mounting bracket (RH)
2. Heat insulator (RH)
3. Engine mounting Insulator (RH)
4. Engine mounting insulator (LH)
5. Heat insulator (LH)
6. Engine mounting bracket (LH)
7. Harness bracket
8. Rear engine mounting member
9. Mass damper
10. Engine mounting insulator (rear)
11. Dynamic damper

WARNING:

- **Situate vehicle on a flat and solid surface.**
- **Place chocks at front and back of rear wheels.**
- **For engines not equipped with engine slingers, attach proper slingers and bolts described in PARTS CATALOG.**

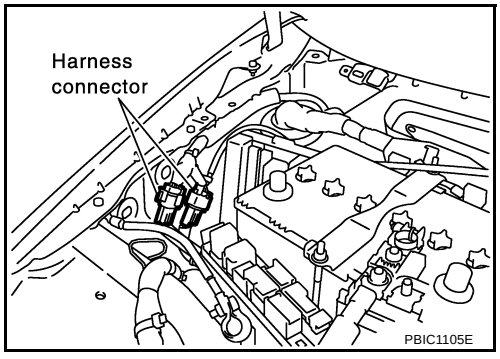
CAUTION:

- **Always be careful to work safely, avoid forceful or uninstructed operations.**
- **Do not start working until exhaust system and engine coolant are cool enough.**
- **If items or work required are not covered by the engine section, refer to the applicable sections.**
- **Always use the support point specified for lifting.**
- **Use either 2-pole lift type or separate type lift as best you can. If board-on type is used for unavoidable reasons, support at the rear axle jacking point with transmission jack or similar tool before starting work, in preparation for the backward shift of center of gravity.**
- **For supporting points for lifting and jacking point at rear axle, refer to GI-39, "Garage Jack and Safety Stand" .**

REMOVAL

Outline

At first, remove engine and transmission assembly with front suspension member from vehicle downward. Then separate engine from transmission.



Preparation

1. Release fuel pressure. Refer to EC-79, "FUEL PRESSURE RELEASE" .
2. Drain engine coolant from radiator. Refer to CO-10, "Changing Engine Coolant" .

   CAUTION:
   - **Perform this step when engine is cold.**
   - **Do not spill engine coolant on drive belts.**
3. Disconnect both battery cables. Refer to SC-4, "BATTERY" .
4. Remove the following parts:
   - Tower bar: Refer to FSU-20, "TOWER BAR" .
   - Engine cover: Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
   - Cowl top cover (RH): Refer to EI-20, "COWL TOP" .
   - Undercover
   - Drive belts: Refer to EM-12, "DRIVE BELTS" .
   - Front road wheels and tires
5. Remove air cleaner case and air duct. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
6. Discharge refrigerant from A/C circuit. Refer to ATC-123, "REFRIGERANT LINES" .
7. Remove radiator cooling fan assembly, reservoir tank and hoses. Refer to CO-21, "COOLING FAN" and CO-13, "RADIATOR" .

Engine Room

1. Disconnect heater hose at engine-side, and fit a plug onto hose end to prevent engine coolant leak.
2. Disconnect ground cable (between vehicle to left cylinder head).
3. Disconnect battery positive cable harness at vehicle side and temporarily fasten it on engine.
4. Disconnect A/C piping from A/C compressor, and temporarily fasten it on vehicle with a rope.
5. Remove engine room harness connectors as shown in the figure.

6. Disconnect two body ground cables.
7. Disconnect brake booster vacuum hose.
8. Disconnect fuel feed hose (with damper) and EVAP hose. Refer to EM-34, "FUEL INJECTOR AND FUEL TUBE" .

   CAUTION:
   Fit plugs onto disconnected hoses to prevent fuel leak.
9. Remove reservoir tank of power steering oil pump, and piping from vehicle, and temporarily secure them on engine.

   CAUTION:
   When temporarily securing, keep the reservoir tank upright to avoid a fluid leak.

Passenger Room Side

Follow procedure below to disconnect engine room harness connectors at passenger room side, and temporarily secure them on engine.

1. Remove passenger-side kicking plate inner, dash side finisher, and instrument passenger panel lower. Refer to EI-35, "BODY SIDE TRIM" and IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect engine room harness connectors at unit sides TCM (A/T models), ECM and other.

3. Disengage intermediate fixing point. Pull out engine room harnesses to engine room side, and temporarily secure them on engine.

CAUTION:

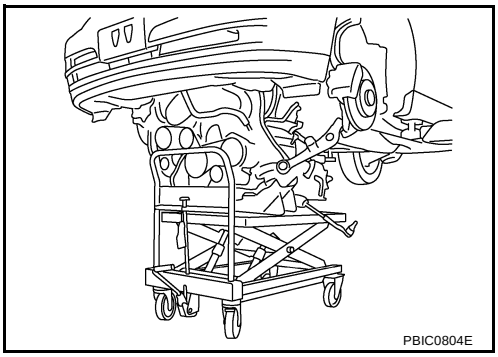
- **When pulling out harnesses, take care not to damage harnesses and connectors.**
- **After temporarily securing, cover connectors with vinyl or similar material to protect against foreign material adhesion.**

Vehicle Underbody

1. Remove exhaust front tube. Refer to EX-3, "EXHAUST SYSTEM" .
2. Disconnect steering lower joint at power steering gear assembly side, and release steering lower shaft. Refer to PS-10, "STEERING COLUMN" .
3. Remove propeller shaft. Refer to PR-5, "REAR PROPELLER SHAFT" .

CAUTION:

Do not impact or damage propeller shaft tube.



4. Disengage shift lever and remove clutch tube (M/T models). Refer to MT-18, "TRANSMISSION ASSEMBLY" and CL-15, "CLUTCH PIPING" .
5. Disengage A/T control rod at control device assembly side. Then, temporarily secure it on transmission, so that it does not sag (A/T models). Refer to AT-204, "SHIFT CONTROL SYSTEM" .
6. Remove rear plate cover from oil pan (upper). Then remove bolts fixing drive plate to torque converter (A/T models). Refer to EM-26, "OIL PAN AND OIL STRAINER" and AT-242, "TRANSMISSION ASSEMBLY" .
7. Remove bolts fixing transmission to lower rear side of oil pan (upper). Refer to MT-18, "TRANSMISSION ASSEMBLY" (M/T models) or AT-242, "TRANSMISSION ASSEMBLY" (A/T models).
8. Remove front stabilizer. Refer to FSU-18, "STABILIZER BAR" .
9. Separate steering outer sockets from steering knuckle. Refer to PS-17, "POWER STEERING GEAR AND LINKAGE" .
10. Separate transverse links from suspension member and vehicle body. Refer to FSU-13, "TRANSVERSE LINK" .

Removal Work

1. Use a manual lift table caddy (commercial service tool) or equivalently rigid tool such as transmission jack. Securely support bottom of suspension member and transmission.

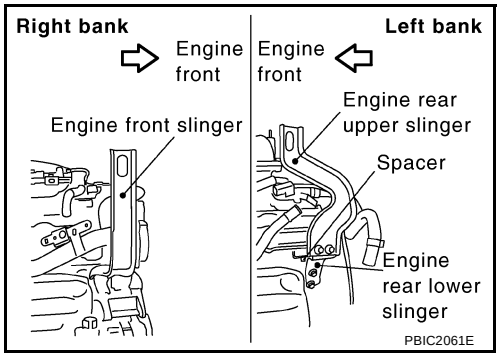
CAUTION:

Put a piece of wood or something similar as the supporting surface, secure a completely stable condition.

2. Remove front cross bar. Refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .

3. Remove rear engine mounting member bolts.
4. Remove front suspension member mounting nuts. Refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .
5. Carefully lower jack, or raise lift to remove the engine, transmission and front suspension member assembly. When performing work, observe the following caution:

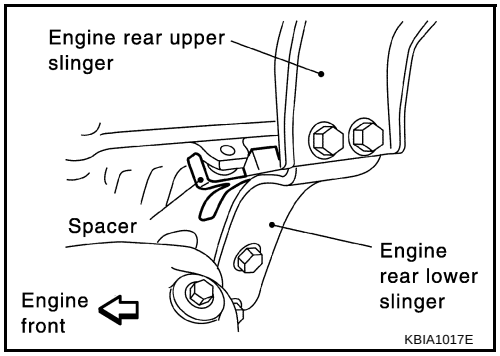
CAUTION:



- **Confirm there is no interference with the vehicle.**
- **Make sure that all connection points have been disconnected.**
- **Keep in mind the center of the vehicle gravity changes. If necessary, use jack(s) to support the vehicle at rear jacking point(s) to prevent it from falling it off the lift.**

Separation Work

1. Install engine slingers into front of cylinder head (right bank) and rear of cylinder head (left bank).



Slinger bolts:

: 28.0 N·m (2.9 kg-m, 21 ft-lb)

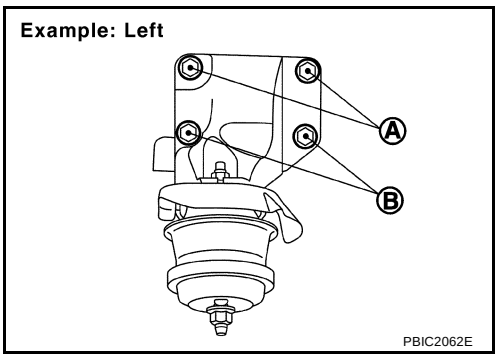
- To protect rocker cover against damage caused by tilting of engine slinger, insert spacer between cylinder head and engine rear lower slinger, in direction shown in the figure.

NOTE:
Spacer is a component part of engine rear upper slinger assembly.

2. Remove power steering oil pump from engine side. Refer to PS-28, "POWER STEERING OIL PUMP" .
3. Remove engine mounting insulators (RH and LH) under side nut.
4. Lift with hoist and separate engine and transmission assembly from front suspension member.

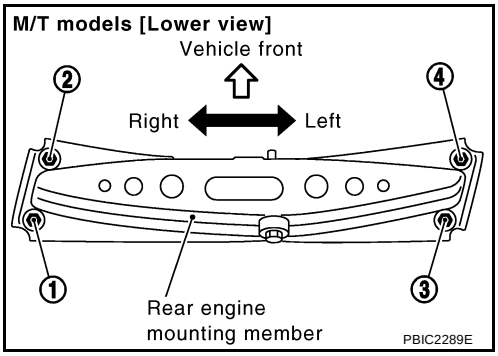
CAUTION:

- **Before and during this lifting, always make sure that any harnesses are left connected.**
- **Avoid damage to and oil/grease smearing or spills onto engine mounting insulator.**

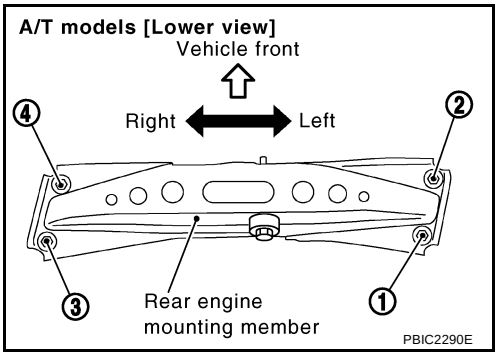


5. Remove alternator. Refer to SC-20, "CHARGING SYSTEM" .
6. Remove A/C compressor. Refer to ATC-125, "Removal and Installation of Compressor" .
7. Remove starter motor. Refer to SC-8, "STARTING SYSTEM" .
8. Separate engine from transmission. Refer to MT-18, "TRANSMISSION ASSEMBLY" (M/T models) or AT-242, "TRANSMISSION ASSEMBLY" (A/T models).
9. Remove engine mounting insulators (RH and LH) and brackets (RH and LH) from engine.
10. Remove rear engine mounting member and engine mounting insulator (rear) from transmission.

INSTALLATION



Note the following, and install in the reverse order of removal.



- Do not allow engine mounting insulator to be damage and careful no engine oil gets on it.
- For a location with a positioning pin, insert it securely into hole of mating part.
- For a part with a specified installation orientation, refer to component figure in EM-101, "Removal and Installation" .

- When installing engine mounting brackets (RH and LH) on cylinder block, tighten two upper bolts (shown as “A” in the figure) first. Then tighten two lower bolts (shown as “B” in the figure).

- Make sure all engine mounting insulators are seated properly, then tighten mounting nuts.
- Tighten rear engine mounting member bolts in numerical order as shown in the figure.

INSPECTION AFTER INSTALLATION

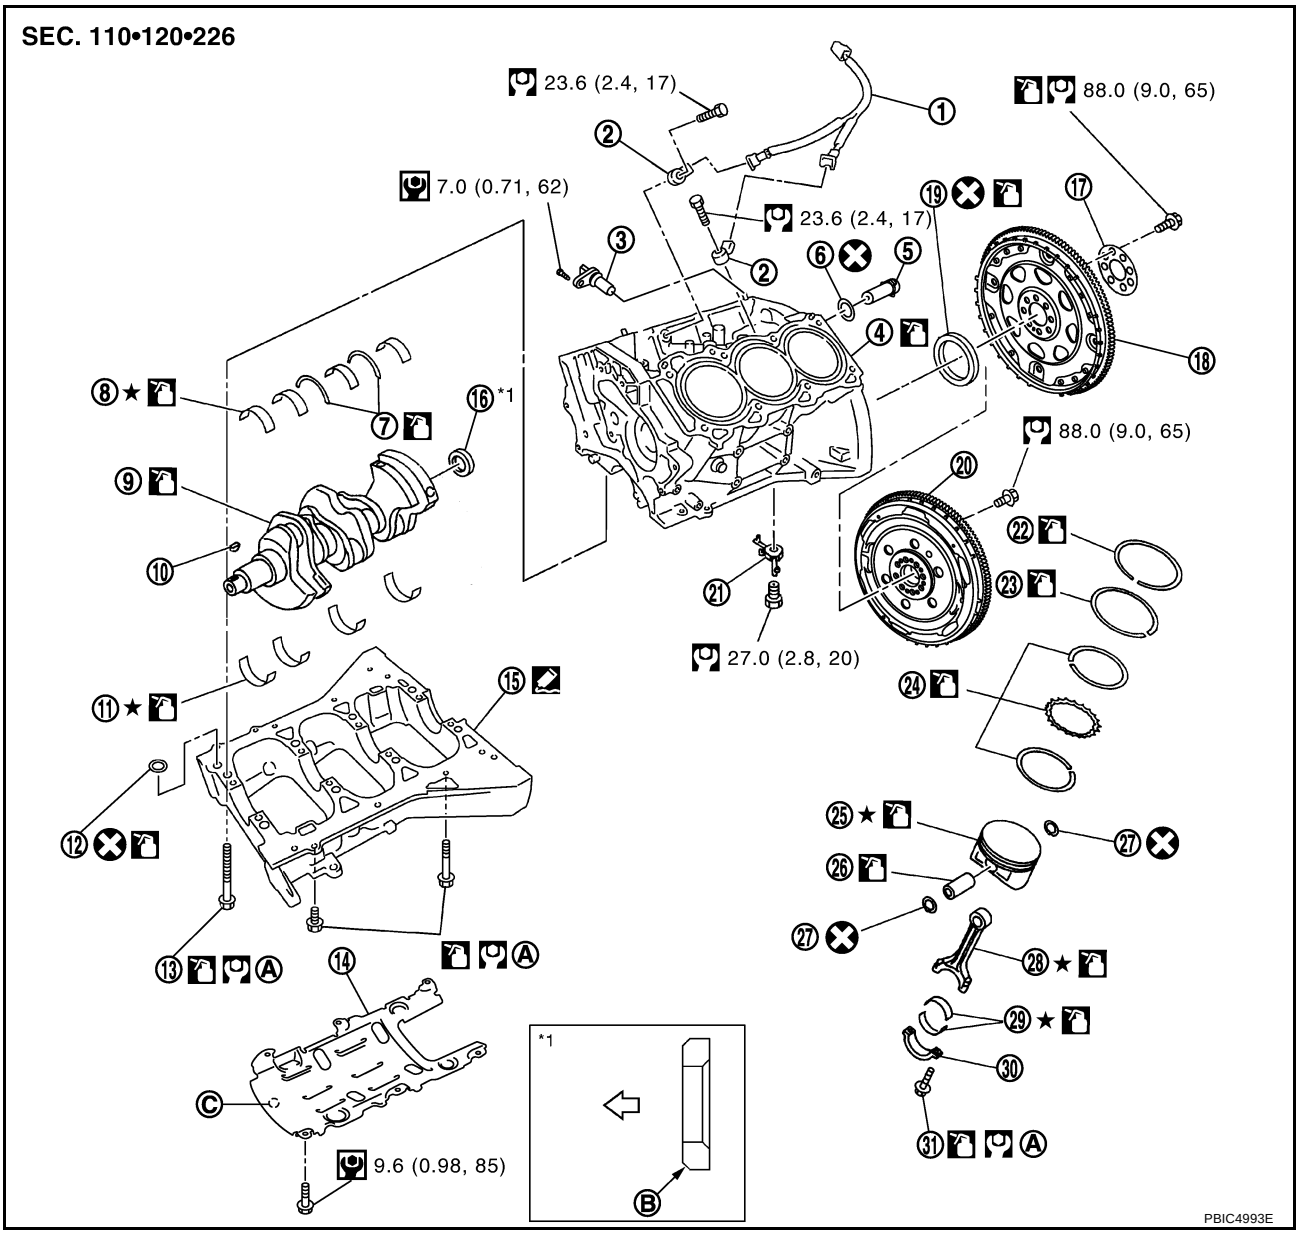
Inspection for Leaks

The following are procedures for checking fluids leak, lubricates leak and exhaust gases leak.

- Before starting engine, check oil/fluid levels including engine coolant and engine oil. If less than required quantity, fill to the specified level. Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
- Use procedure below to check for fuel leakage.
  - Turn ignition switch “ON” (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.
  - Start engine. With engine speed increased, check again for fuel leakage at connection points.
- Run engine to check for unusual noise and vibration.
- Warm up engine thoroughly to make sure there is no leakage of fuel, exhaust gases, or any oil/fluids including engine oil and engine coolant.
- Bleed air from lines and hoses of applicable lines, such as in cooling system.
- After cooling down engine, again check oil/fluid levels including engine oil and engine coolant. Refill to the specified level, if necessary.

Summary of the inspection items:

Items	Before starting engine	Engine running	After engine stopped
Engine coolant	Level	Leakage	Level
Engine oil	Level	Leakage	Level
Other oils and fluid*	Level	Leakage	Level
Fuel	Leakage	Leakage	Leakage
Exhaust gases	—	Leakage	—



* Transmission/transaxle/CVT fluid, power steering fluid, brake fluid, etc.

CYLINDER BLOCK

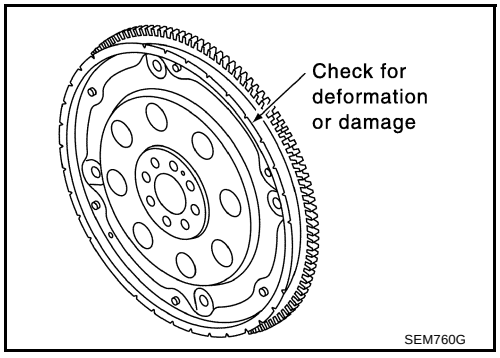
PFP:11010

Disassembly and Assembly

NBS00013

1. Sub harness	2. Knock sensor	3. Crankshaft position sensor
4. Cylinder block	5. Cylinder block heater (for Canada)	6. O-ring
7. Thrust bearing	8. Main bearing (upper)	9. Crankshaft
10. Crankshaft key	11. Main bearing (lower)	12. O-ring
13. Lower cylinder block bolt	14. Baffle plate	15. Lower cylinder block
16. Pilot converter	17. Reinforcement plate	18. Drive plate (A/T models)
19. Rear oil seal	20. Fly wheel (M/T models)	21. Oil jet
22. Top ring	23. Second ring	24. Oil ring
25. Piston	26. Piston pin	27. Snap ring
28. Connecting rod	29. Connecting rod bearing	30. Connecting rod bearing cap
31. Connecting rod bolt		
A. Refer to EM-111	B. Chamfered	C. Front mark
⇦ Crankshaft side		

- Refer toGI-11, "Components" for symbol marks in the figure.



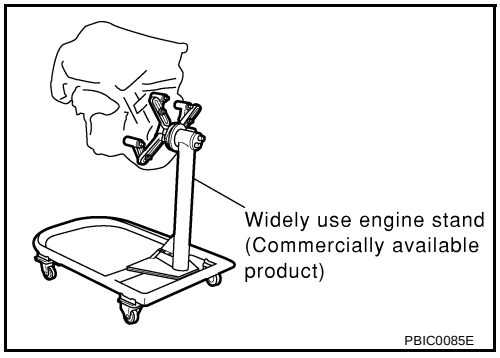
DISASSEMBLY

1. Remove engine assembly from vehicle, and separate front suspension member and transmission from engine. Refer to EM-101, "ENGINE ASSEMBLY" .
2. Remove engine mounting brackets (RH and LH). Refer to EM-101, "ENGINE ASSEMBLY" .
3. Remove the parts that may restrict installation of engine to widely use engine stand.

   NOTE:
   The procedure is described assuming that you use a widely use engine stand holding the surface, to which transmission is installed.

   - Remove clutch cover and clutch disk (M/T models). Refer to CL-16, "CLUTCH DISC, CLUTCH COVER" .
   - Remove flywheel (M/T models) or drive plate (A/T models). Fix crankshaft with a ring gear stopper [SST: KV10118600 (J-48641)], and remove mounting bolts.
   - Loosen mounting bolts in diagonal order.
   - Check for deformation or damage (A).

   CAUTION:
   - **Do not disassemble drive plate.**
   - **Never place drive plate with signal plate facing down.**
   - **When handling signal plate, take care not to damage or scratch it.**
   - **Handle signal plate in a manner that prevents it from becoming magnetized.**



4. Remove pilot bushing (M/T models) or pilot converter (A/T models) using pilot bushing puller [SST: ST16610001 (J-23907)] (A) or suitable tool as necessary.

5. Lift the engine with hoist to install it onto the widely use engine stand.
   - A widely use engine stand can be used.

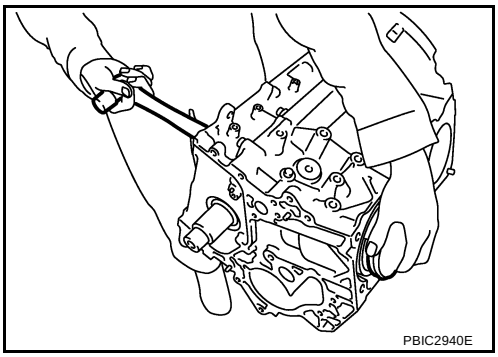
   CAUTION:
   Use engine stand that has a load capacity [approximately 220 kg (485 lb) or more] large enough for supporting the engine weight.

   NOTE:
   This example is engine stand for holding at transmission mounting side with flywheel (M/T models) or drive plate (A/T models) removed.

6. Drain engine oil. Refer to LU-7, "Changing Engine Oil" .

7. Drain engine coolant by removing water drain plugs (1, 4) from cylinder block both sides as shown in the figure.

   2 : Washer
   3 : Plug
   ⇦ : Engine front

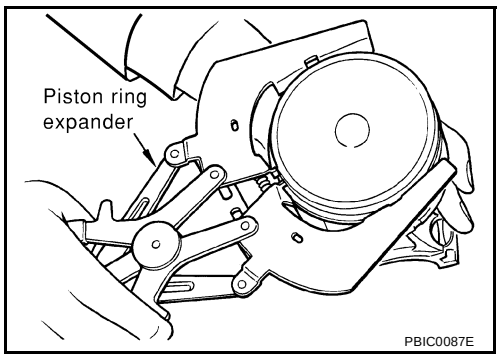


8. Remove oil pan (upper, lower). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
9. Remove front timing chain case, timing chain and rear timing chain case. Refer to EM-53, "TIMING CHAIN" .
10. Remove cylinder head. Refer to EM-89, "CYLINDER HEAD" .
11. Remove knock sensor.

    CAUTION:
    Carefully handle sensor avoiding shocks.
12. Remove rear oil seal.
13. Remove baffle plate from lower cylinder block.
14. Remove piston and connecting rod assembly as follows:
    - Before removing piston and connecting rod assembly, check the connecting rod side clearance. Refer to EM-125, "CONNECTING ROD SIDE CLEARANCE" .

a. Position crankshaft pin corresponding to connecting rod to be removed onto the bottom dead center.
b. Remove connecting rod bearing cap.
c. Using hammer handle or similar tool, push piston and connecting rod assembly out to the cylinder head side.

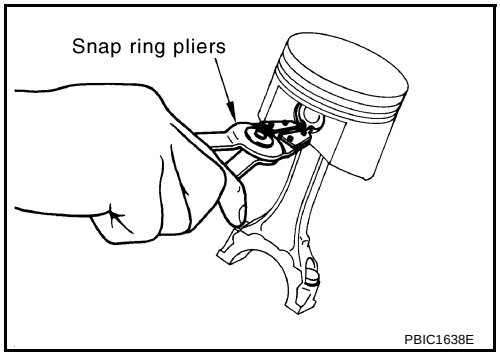
   CAUTION:
   Be careful not to damage the cylinder wall and crankshaft pin, resulting from an interference of the connecting rod big end.



15. Remove connecting rod bearings from connecting rod and connecting rod bearing cap.

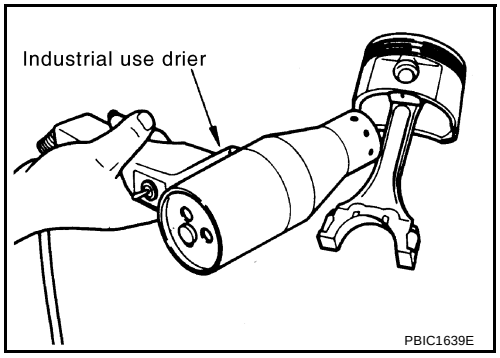
    CAUTION:
    Identify installation position, and store them without mixing them up.
16. Remove piston rings form piston.
    - Before removing piston rings, check the piston ring side clearance. Refer to EM-126, "PISTON RING SIDE CLEARANCE" .

- Use piston ring expander (commercial service tool).

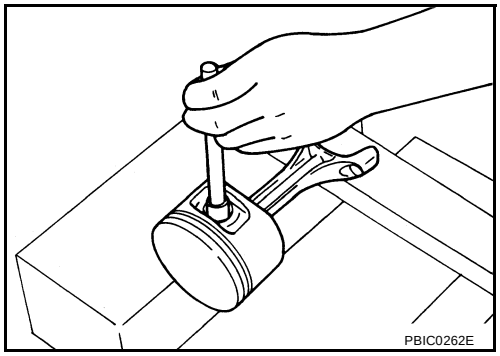


CAUTION:

- **When removing piston rings, be careful not to damage piston.**
- **Be careful not to damage piston rings by expanding them excessively.**



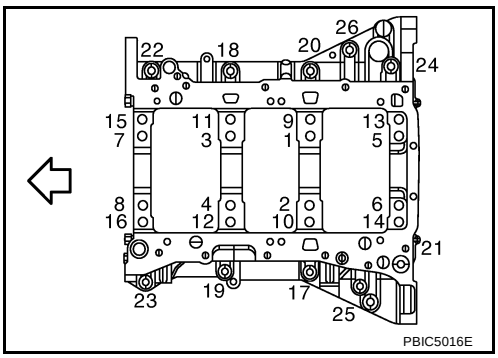
17. Remove piston from connecting rod as follows:



a. Using snap ring pliers, remove snap ring.

b. Heat piston to 60 to 70°C (140 to 158°F) with industrial use drier or equivalent.

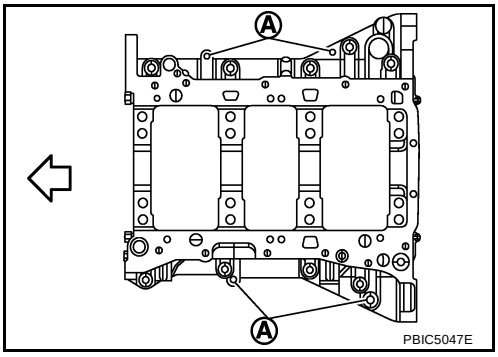
c. Push out piston pin with stick of outer diameter approximately 20 mm (0.79 in).



18. Remove lower cylinder block bolts.

NOTE:
Use TORX socket (size E14).

- Before loosening lower cylinder block bolts, measure the crankshaft end play. Refer to EM-125, "CRANKSHAFT END PLAY" .
- Loosen lower cylinder block bolts in reverse order shown in the figure in several different steps.



⇦ : Engine front

19. Remove lower cylinder block as follows:
Screw M8 bolt [Pitch: 1.25 mm (0.049 in), Length: approx. 50 mm (1.97 in)] into bolt holes (A) shown in the figure. Then equally tighten each bolt, and remove lower cylinder block.

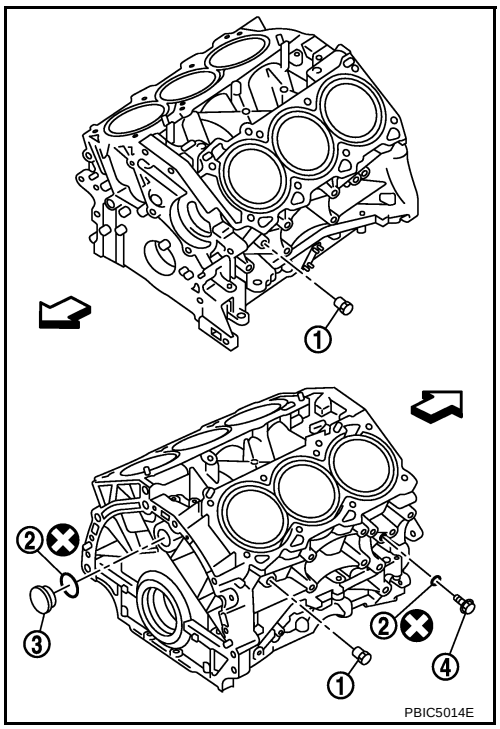
⇦ : Engine front

CAUTION:
- **Be careful not to damage the mating surface.**
- **Do not tighten bolts too much.**
- **Do not insert screw driver, this will damage the mating surface.**

20. Remove crankshaft.
21. Pull rear oil seal out from rear end of crankshaft.
22. Remove main bearings and thrust bearings from cylinder block and lower cylinder block.

CAUTION:
- **Identify installation positions, and store them without mixing them up.**
- **Be careful not to drop main bearing, and to scratch the surface.**

23. Remove oil jet.



ASSEMBLY

1. Fully air-blow engine coolant and engine oil passages in cylinder block, cylinder bore and crankcase to remove any foreign material.

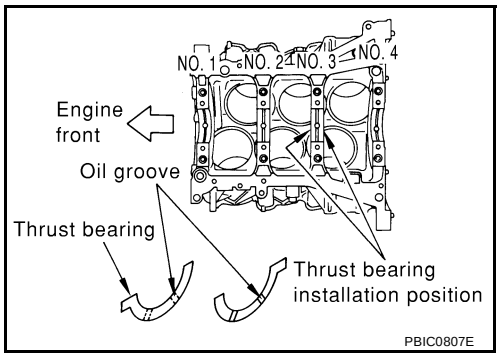
CAUTION:
Use a goggles to protect your eye.

2. Install each plug to cylinder block as shown in the figure.
   - Apply sealant to the thread of water drain plug (1).
     Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
   - Apply sealant to the thread of plugs (3) and (4).
     Use Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
   - Replace washers (2) with new one.

   ⇦ : Engine front

   - Tighten each plug as specified below.

Part	Washer	Tightening torque
1	No	19.6 N·m (2.0 kg-m, 14 in-lb)
3	Yes	78.0 N·m (8.0 kg-m, 58 ft-lb)
4	Yes	12.3 N·m (1.3 kg-m, 9 ft-lb)

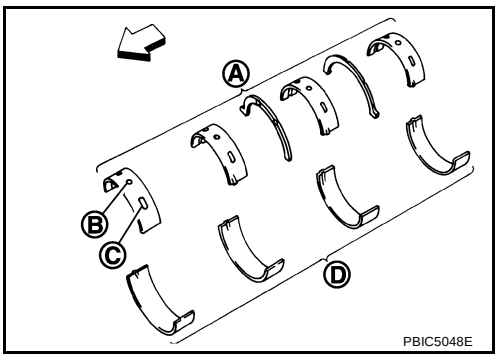


3. Install oil jet.
   - Insert oil jet dowel pin into cylinder block dowel pin hole, and tighten mounting bolts.

4. Install main bearings and thrust bearings as follows:

a. Remove dust, dirt, and engine oil on bearing mating surfaces of cylinder block and lower cylinder block.

b. Install thrust bearings to the both sides of the No. 3 journal housing on cylinder block.
   - Install thrust bearings with the oil groove facing crankshaft arm (outside).
   - Install thrust bearing with a protrusion on one end on cylinder block. Align each protrusion with mating notch.



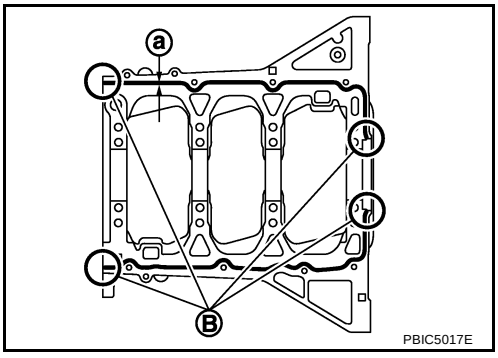
c. Install main bearings paying attention to the direction.

A : Cylinder block side

D : Lower cylinder block side

⇦ : Engine front

- Main bearing with oil hole (B) and groove (C) goes on cylinder block. The one without them goes on lower cylinder block.
- Before installing main bearings, apply engine oil to the bearing surface (inside). Do not apply engine oil to the back surface, but thoroughly clean it.
- When installing, align main bearing stopper protrusion to cut-out of cylinder block and lower cylinder block.
- Ensure the oil holes on cylinder block and those on the corresponding bearing are aligned.



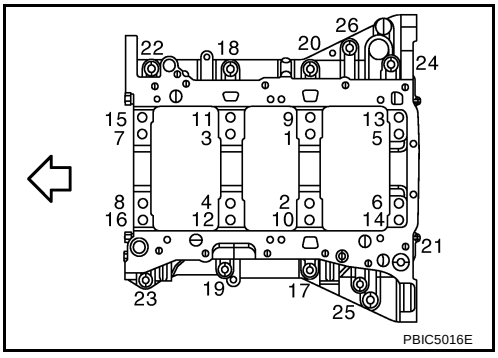
5. Install crankshaft to cylinder block.
   - While turning crankshaft by hand, check that it turns smoothly.
6. Install lower cylinder block.

NOTE:
Lower cylinder block cannot be replaced as a single part, because it is machined together with cylinder block.

- Apply a continuous bead of liquid gasket with the tube presser [SST: WS39930000(—)] to lower cylinder block as shown in the figure.

a : 3.5 – 4.5 mm (0.138 – 0.177 in) dia

b : Apply to end



7. Inspect the outer diameter of lower cylinder block bolt. Refer to EM-133, "LOWER CYLINDER BLOCK BOLT OUTER DIAMETER" .
8. Install lower cylinder block bolts in numerical order as shown in the figure as follows:

a. Apply new engine oil to threads and seat surfaces of lower cylinder block bolts.

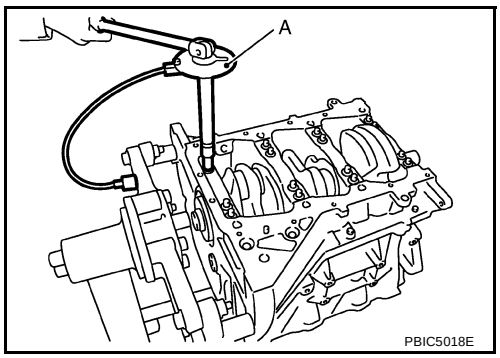
b. Tighten lower cylinder block bolt (No.17 to 26) in numerical order as shown in the figure.

: 25.0 N·m (2.6 kg-m, 18 ft-lb)

⇦ : Engine front

c. Repeat step b.

d. Tighten lower cylinder block bolts (No.1 to 16) in numerical order as shown in the figure.



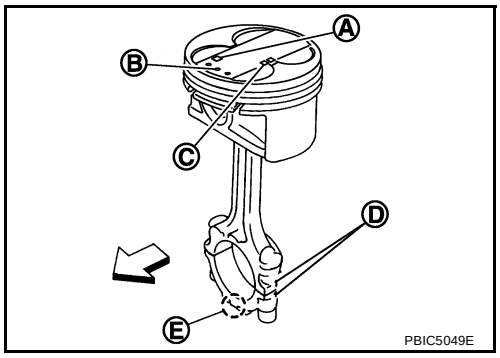
NOTE:
Use TORX socket (size E14) for bolts No.1 to 16.

: 35.3 N·m (3.6 kg-m, 26 ft-lb)

e. Turn lower cylinder block bolts (No.1 to 16) 90 degrees clockwise (angle tightening).

CAUTION:

Use the angle wrench [SST: KV10112100 (BT8653-A)] (A) to check tightening angle. Do not make judgment by visual inspection.

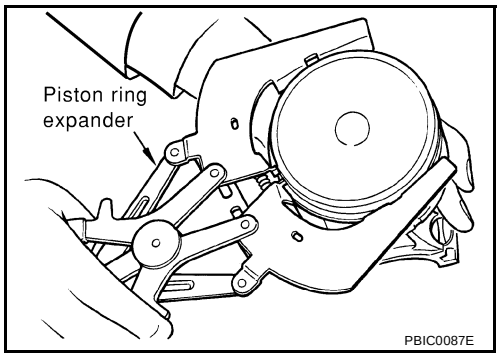


- After installing lower cylinder block bolts, make sure that crankshaft can be rotated smoothly by hand.
- Check the crankshaft end play. Refer to EM-125, "CRANKSHAFT END PLAY" .

9. Install piston to connecting rod as follows:

a. Using snap ring pliers, install new snap ring to the groove of piston rear side.
   - Insert it fully into groove to install.

b. Install piston to connecting rod.
   - Using industrial use drier or similar tool, heat piston until piston pin can be pushed in by hand without excess force [approx. 60 to 70°C (140 to 158°F)]. From the front to the rear, insert piston pin into piston and connecting rod.
   - Assemble so that the front mark on the piston head and the cylinder number on connecting rod are positioned as shown in the figure.

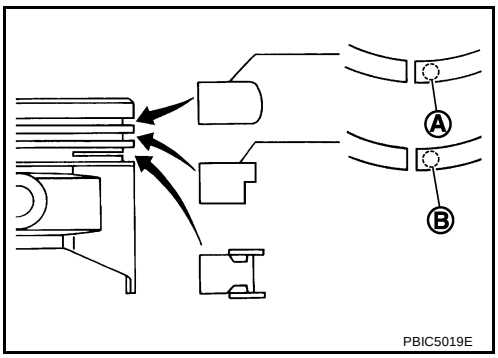


A	: Piston grade number
B	: Front mark
C	: Pin grade number
D	: Cylinder number
E	: Front mark
⇦	: Engine front

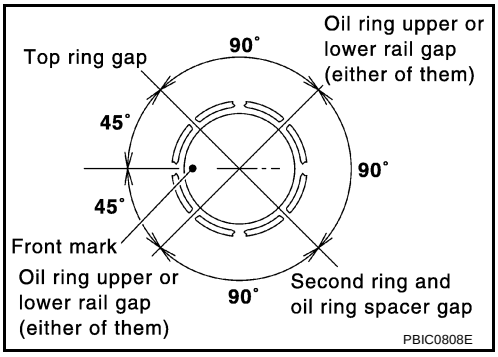
c. Install new snap ring to the groove of the piston front side.
   - Insert it fully into groove to install.
   - After installing, make sure that connecting rod moves smoothly.

10. Using piston ring expander (commercial service tool), install piston rings.

CAUTION:



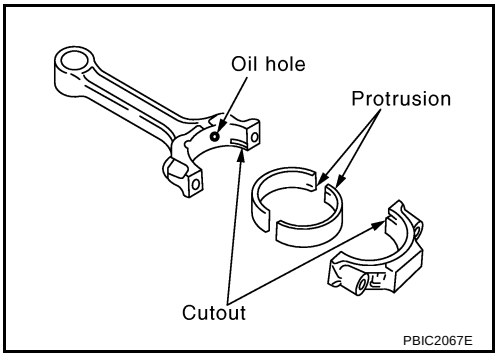
- **When installing piston rings, be careful not to damage piston.**
- **Be careful not to damage piston rings by expending them excessively.**



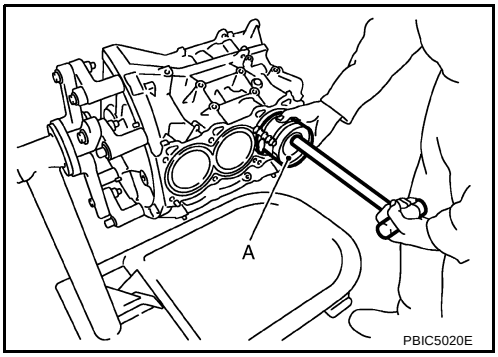
- If there is stamped mark on ring, mount it with marked side up.

Stamped mark:

Top ring (A)	**: 1N**
Second ring (B)	**: 2N**

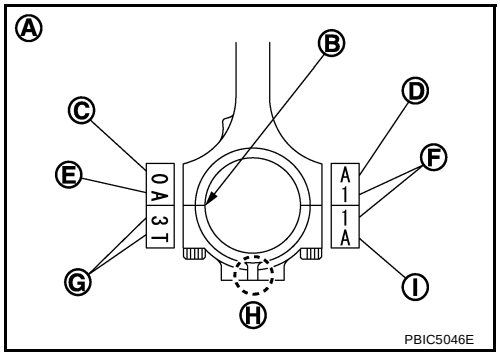


- Mount second ring with cut out side down.
- Position each ring with the gap as shown in the figure referring to the piston front mark.



- Check the piston ring side clearance. Refer to EM-126, "PISTON RING SIDE CLEARANCE" .

11. Install connecting rod bearings to connecting rod and connecting rod bearing cap.
    - Before installing connecting rod bearings, apply engine oil to the bearing surface (inside). Do not apply engine oil to the back surface, but thoroughly clean it.
    - When installing, align connecting rod bearing stopper protrusion with cutout of connecting rods and connecting rod bearing caps to install.
    - Ensure the oil hole on connecting rod and that on the corresponding bearing are aligned.



12. Install piston and connecting rod assembly to crankshaft.
    - Position crankshaft pin corresponding to connecting rod to be installed onto the bottom dead center.
    - Apply engine oil sufficiently to the cylinder bore, piston and crankshaft pin journal.
    - Match the cylinder position with the cylinder number on connecting rod to install.
    - Be sure that front mark on piston head is facing front of engine.
    - Using piston ring compressor [SST: EM03470000 (J8037)] (A) or suitable tool, install piston with the front mark on the piston head facing the front of engine.

CAUTION:
Be careful not to damage the cylinder wall and crankshaft pin, resulting from an interference of the connecting rod big end.

13. Install connecting rod bearing cap.
    - Match the stamped cylinder number marks on connecting rod with those on connecting rod bearing cap to install.
    - Be sure that front mark (H) on connecting rod bearing cap is facing front of engine.

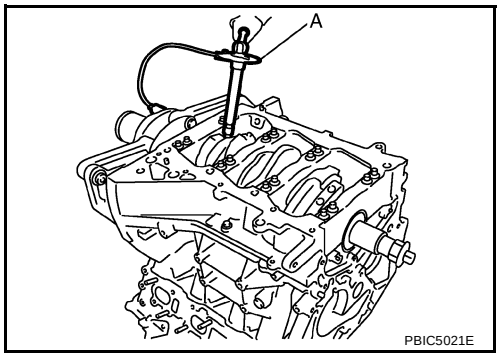
A : Sample code
B : Bearing stopper groove
C : Small-end diameter grade
D : Big end diameter grade
E : Weight grade
F : Cylinder No.
G : Management code
I : Management code

14. Inspect the outer diameter of connecting rod bolt. Refer to EM-133, "LOWER CYLINDER BLOCK BOLT OUTER DIAMETER" .
15. Tighten connecting rod bolts as follows:

a. Apply engine oil to the threads and seats of connecting rod bolts.

b. Tighten connecting rod bolts.

: 28.4 N·m (2.9 kg-m, 21 ft-lb)



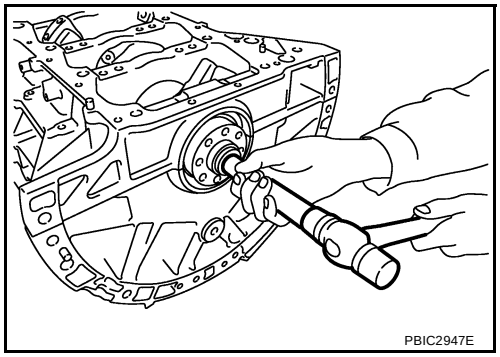
c. Completely loosen connecting rod bolts.

: 0 N·m (0 kg-m, 0 ft-lb)

d. Tighten connecting rod bolts.

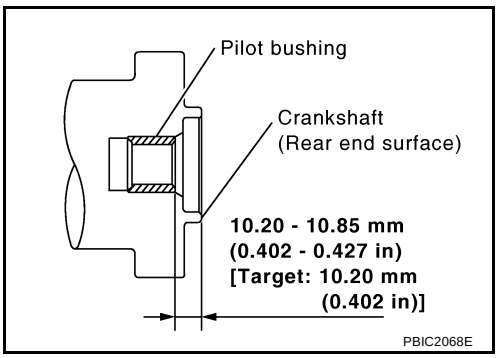
: 24.5 N·m (2.5 kg-m, 18 ft-lb)

e. Then turn connecting rod bolts 90 degrees clockwise (angle tightening).



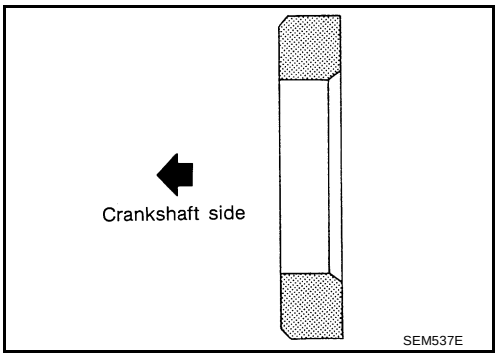
CAUTION:

Use angle wrench [SST: KV10112100 (BT8653-A)] (A) to check tightening angle. Do not make judgment by visual inspection.



- After tightening connecting rod bolts, make sure that crankshaft rotates smoothly.
- Check the connecting rod side clearance. Refer to EM-125, "CONNECTING ROD SIDE CLEARANCE" .

16. Install baffle plate.
17. Install new rear oil seal. Refer to EM-86, "OIL SEAL" .
18. Install pilot bushing (M/T models) or pilot converter (A/T models).
    - With drift of the following outer diameter, press-fit as far as it will go.



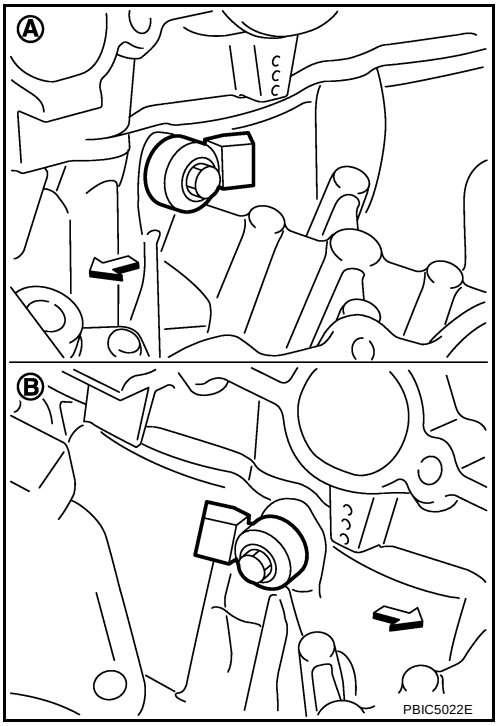
Pilot bushing : Approx. 17 mm (0.67 in)
Pilot converter : Approx. 33 mm (1.30 in)

- Press-fit pilot bushing as the dimension in the figure. (M/T models)

- Press-fit pilot converter with its chamfer facing crankshaft as shown in the figure. (A/T models)

19. Install cylinder head. Refer to EM-89, "CYLINDER HEAD" .
20. Install rear timing chain case. Refer to EM-53, "TIMING CHAIN" .
21. Install oil pan (upper). Refer to EM-26, "OIL PAN AND OIL STRAINER" .
22. Install knock sensors.

A : Right bank
B : Left bank
⇦ : Engine front



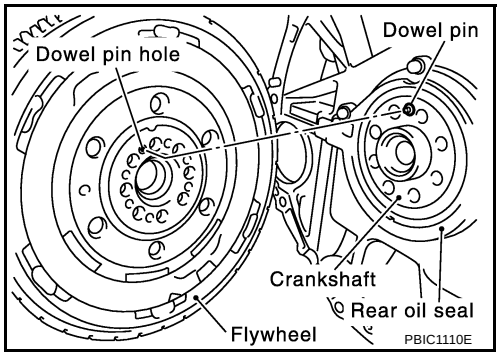
- Install knock sensor so that connector faces rear of engine.
- After installing knock sensor, connect harness connector, and lay it out to rear of engine.

CAUTION:

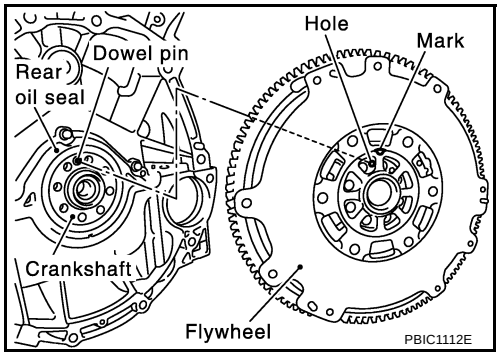
- **Do not tighten mounting bolts while holding connector.**
- **If any impact by dropping is applied to knock sensor, replace it with new one.**

NOTE:

- Make sure that there is no foreign material on the cylinder block mating surface and the back surface of knock sensor.
- Make sure that knock sensor does not interfere with other parts.



23. Note the following, assemble in the reverse order of disassembly after this step.

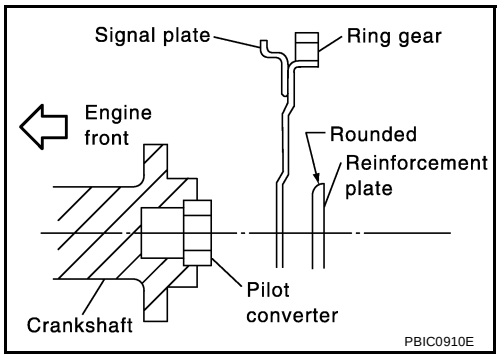


Flywheel (M/T models)

- When installing flywheel to crankshaft, be sure to correctly align crankshaft side dowel pin and flywheel side dowel pin hole.

  CAUTION:
  If these are not aligned correctly, engine runs roughly and "MIL" turns on.

- There is a mating mark on the clutch cover side of flywheel. Refer it during installation.



- Holding ring gear with ring gear stopper [SST: KV11018600 (J-48641)], tighten securing bolts with TORX socket (size: T55, commercial service tool).
- Tighten the mounting bolts crosswise over several times.

Drive plate (A/T models)

- When installing drive plate to crankshaft, be sure to correctly align crankshaft side dowel pin and drive plate side dowel pin hole.

  CAUTION:
  If these are not aligned correctly, engine runs roughly and "MIL" turns on.

- Install drive plate and reinforcement plate as shown in the figure.
- Holding ring gear with ring gear stopper [SST: KV10118600 (J-48641)].
- Tighten the mounting bolts crosswise over several times.

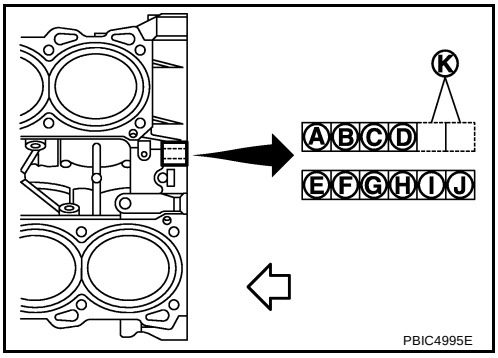
How to Select Piston and Bearing

NBS00014

DESCRIPTION

Selection points	Selection parts	Selection items	Selection methods
Between cylinder block to crankshaft	Main bearing	Main bearing grade (bearing thickness)	Determined by match of cylinder block bearing housing grade (inner diameter of housing) and crankshaft journal grade (outer diameter of journal)
Between crankshaft to connecting rod	Connecting rod bearing	Connecting rod bearing grade (bearing thickness)	Combining service grades for connecting rod big end diameter and crankshaft pin outer diameter determine connecting rod bearing selection.
Between cylinder block to piston	Piston and piston pin assembly (Piston is available together with piston pin as assembly.)	Piston grade (piston skirt diameter)	Piston grade = cylinder bore grade (inner diameter of bore)
Between piston to connecting rod*	—	—	—

*: For the service parts, the grade for fitting cannot be selected between piston pin and connecting rod. (Only “0” grade is available.) The information at the shipment from the plant is described as a reference.



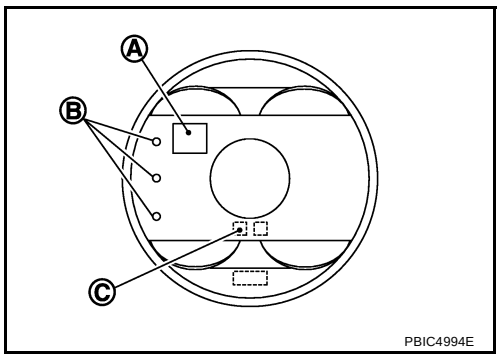
- The identification grade stamped on each part is the grade for the dimension measured in new condition. This grade cannot apply to reused parts.
- For reused or repaired parts, measure the dimension accurately. Determine the grade by comparing the measurement with the values of each selection table.
- For details of the measurement method of each part, the reuse standards and the selection method of the selective fitting parts, refer to the text.

HOW TO SELECT PISTON

When New Cylinder Block is Used

Check the cylinder bore grade (“1”, “2” or “3”) on rear side of cylinder block, and select piston of the same grade.

NOTE:
Piston is available with piston pin as a set for the service part. (Only “0” grade piston pin is available.)



A : Bearing housing grade No. 1
B : Bearing housing grade No. 2
C : Bearing housing grade No. 3
D : Bearing housing grade No. 4
E : Cylinder bore grade No. 1
F : Cylinder bore grade No. 2
G : Cylinder bore grade No. 3
H : Cylinder bore grade No. 4
I : Cylinder bore grade No. 5
J : Cylinder bore grade No. 6
K : Identification code
⇦ : Engine front

When Cylinder Block is Reused

1. Measure the cylinder bore inner diameter. Refer to EM-129, "Cylinder Bore Inner Diameter" .

2. Determine the bore grade by comparing the measurement with the values under the cylinder bore inner diameter of the “Piston Selection Table”.

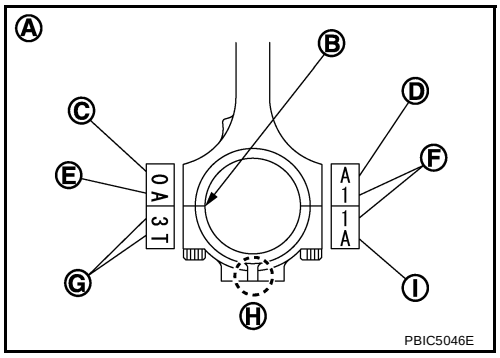
A : Piston grade number
B : Front mark
C : Piston pin grade number

3. Select piston of the same grade.

Piston Selection Table

Unit: mm (in)

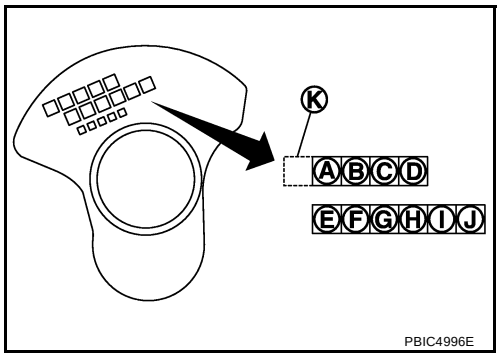
Grade	1	2	3
Cylinder bore inner diameter	95.500 - 95.510 (3.7598 - 3.7602)	95.510 - 95.520 (3.7602 - 3.7606)	95.520 - 95.530 (3.7606 - 3.7610)
Piston skirt diameter	95.480 - 95.490 (3.7590 - 3.7594)	95.490 - 95.500 (3.7594 - 3.7598)	95.500 - 95.510 (3.7598 - 3.7602)



NOTE:

- Piston is available together with piston pin as assembly.
- Piston pin (piston pin hole) grade is provided only for the parts installed at the plant. For service parts, no piston pin grades can be selected. (Only “0” grade is available.)
- No second grade mark is available on piston.

HOW TO SELECT CONNECTING ROD BEARING



When New Connecting Rod and Crankshaft are Used

1. “Connecting Rod Bearing Selection Table” rows correspond to connecting rod big end diameter grade (D) stamped on side face of connecting rod.

A : Sample code
B : Bearing stopper groove
C : Small end diameter grade
D : Big end diameter grade
E : Weight grade
F : Cylinder No.
G : Management code
H : Front mark
I : Management code

2. “Connecting Rod Bearing Selection Table” columns correspond to pin journal diameter grade (E - J) on front side of crankshafts.

A : Main journal diameter grade No. 1
B : Main journal diameter grade No. 2
C : Main journal diameter grade No. 3
D : Main journal diameter grade No. 4
E : Pin diameter grade No. 1
F : Pin diameter grade No. 2
G : Pin diameter grade No. 3
H : Pin diameter grade No. 4
I : Pin diameter grade No. 5
J : Pin diameter grade No. 6
K : Identification code

3. Select connecting rod bearing grade at the point where selected row and column meet in “Connecting Rod Bearing Selection Table”.

When Crankshaft and Connecting Rod are Reused

1. Measure the connecting rod big end diameter and crankshaft pin journal diameter. Refer to EM-127, "CONNECTING ROD BIG END DIAMETER" . and EM-131, "CRANKSHAFT PIN JOURNAL DIAMETER" .
2. Correspond the measured dimension in “Connecting rod big end diameter” row of “Connecting Rod Bearing Selection Table”.
3. Correspond the measured dimension in “Crankshaft pin journal diameter” column of “Connecting Rod Bearing Selection Table”.
4. Select connecting rod bearing grade at the point where selected row and column meet in following selection table.

Connecting Rod Bearing Selection Table

Crankshaft pin journal diameter Unit: mm (in) / Connecting rod big end diameter Unit: mm (in)		Mark	0	1	2	3	4	5	6	7	8	9	W	X	Y
		Hole diameter	57.000 - 57.001 (2.2441 - 2.2441)	57.001 - 57.002 (2.2441 - 2.2442)	57.002 - 57.003 (2.2442 - 2.2442)	57.003 - 57.004 (2.2442 - 2.2442)	57.004 - 57.005 (2.2442 - 2.2443)	57.005 - 57.006 (2.2443 - 2.2443)	57.006 - 57.007 (2.2443 - 2.2444)	57.007 - 57.008 (2.2444 - 2.2444)	57.008 - 57.009 (2.2444 - 2.2444)	57.009 - 57.010 (2.2444 - 2.2445)	57.010 - 57.011 (2.2445 - 2.2445)	57.011 - 57.012 (2.2445 - 2.2446)	57.012 - 57.013 (2.2446 - 2.2446)

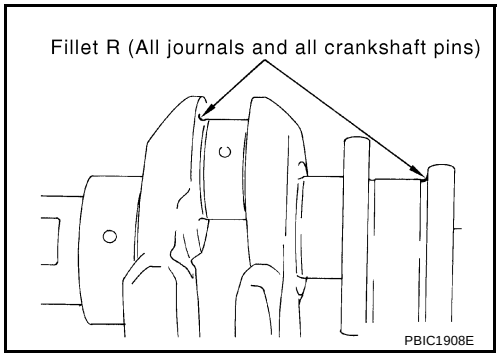
Connecting Rod Bearing Grade Table

Grade number	Thickness mm (in)	Identification color (mark)
0	1.497 – 1.500 (0.0589 – 0.0591)	Black
1	1.500 – 1.503 (0.0591 – 0.0592)	Brown



Grade number	Thickness mm (in)	Identification color (mark)
2	1.503 – 1.506 (0.0592 – 0.0593)	Green
3	1.506 – 1.509 (0.0593 – 0.0594)	Yellow
4	1.509 – 1.512 (0.0594 – 0.0595)	Blue

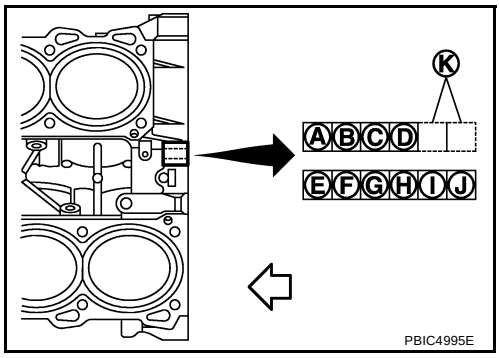
Undersize Bearings Usage Guide

- When the specified connecting rod bearing oil clearance is not obtained with standard size connecting rod bearings, use undersize (US) bearings.
- When using undersize (US) bearing, measure the connecting rod bearing inner diameter with bearing installed, and grind crankshaft pin so that the connecting rod bearing oil clearance satisfies the standard.

CAUTION:

In grinding crankshaft pin to use undersize bearings, keep the fillet R [1.5 – 1.7 mm (0.059 – 0.067 in)].

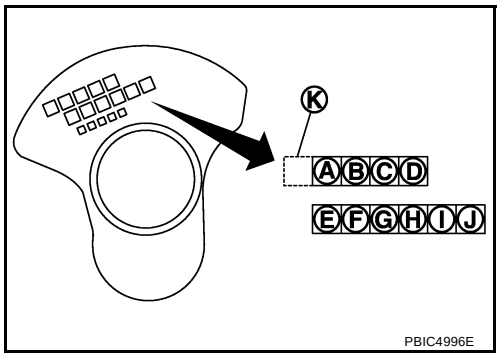
Bearing undersize table



Unit: mm (in)

Size	Thickness
US 0.25 (0.0098)	1.626 - 1.634 (0.0640 - 0.0643)

HOW TO SELECT MAIN BEARING



When New Cylinder Block and Crankshaft are Used

1. “Main Bearing Selection Table” rows correspond to bearing housing grade on rear left side of cylinder block.

A : Bearing housing grade No. 1
B : Bearing housing grade No. 2
C : Bearing housing grade No. 3
D : Bearing housing grade No. 4
E : Cylinder bore grade No. 1
F : Cylinder bore grade No. 2
G : Cylinder bore grade No. 3
H : Cylinder bore grade No. 4
I : Cylinder bore grade No. 5
J : Cylinder bore grade No. 6
K : Identification code
⇦ : Engine front

2. “Main Bearing Selection Table” columns correspond to journal diameter grade on front side of crankshaft.

A : Main journal diameter grade No. 1
B : Main journal diameter grade No. 2
C : Main journal diameter grade No. 3
D : Main journal diameter grade No. 4
E : Pin diameter grade No. 1
F : Pin diameter grade No. 2
G : Pin diameter grade No. 3
H : Pin diameter grade No. 4

I : Pin diameter grade No. 5

J : Pin diameter grade No. 6

K : Identification code

3. Select main bearing grade at the point where selected row and column meet in “Main Bearing Selection Table”.

When Cylinder Block and Crankshaft are Reused

1. Measure cylinder block main bearing housing inner diameter and crankshaft main journal diameter. Refer to EM-129, "MAIN BEARING HOUSING INNER DIAMETER" and EM-130, "CRANKSHAFT MAIN JOURNAL DIAMETER" .
2. Correspond the measured dimension in “Cylinder block main bearing housing inner diameter” row of “Main Bearing Selection Table”.
3. Correspond the measured dimension in “Crankshaft main journal diameter” column of “Main Bearing Selection Table”.
4. Select main bearing grade at the point where selected row and column meet in following selection table.

Main Bearing Selection Table

	LWR	2.518 - 2.521 (0.0991 - 0.0993)		Purple	

Undersize Bearing Usage Guide

- When the specified main bearing oil clearance is not obtained with standard size main bearings, use underside (US) bearing.
- When using undersize (US) bearing, measure the main bearing inner diameter with bearing installed, and grind main journal so that the main bearing oil clearance satisfies the standard.

CAUTION:

In grinding crankshaft main journal to use undersize bearings, keep the fillet R [1.5 – 1.7 mm (0.059 – 0.067 in)].

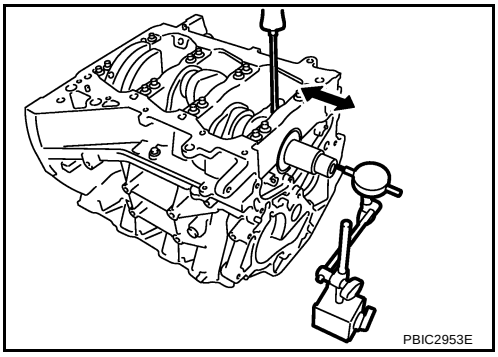
Bearing undersize table

Unit: mm (in)

Size	Thickness
US 0.25 (0.0098)	2.633 - 2.641 (0.1037 - 0.1040)

Inspection After Disassembly

NBS00015



CRANKSHAFT END PLAY

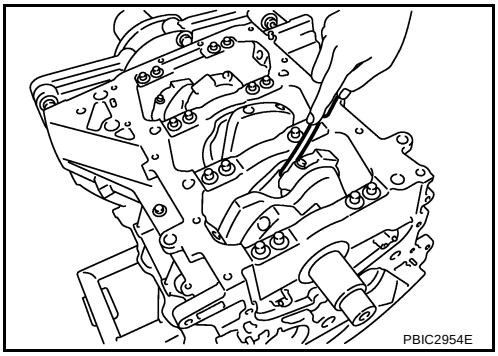
- Measure the clearance between thrust bearings and crankshaft arm when crankshaft is moved fully forward or backward with dial indicator.

Standard : 0.10 - 0.25 mm (0.0040 - 0.0098 in)

Limit : 0.30 mm (0.0120 in)

- If the measured value exceeds the limit, replace thrust bearings, and measure again. If it still exceeds the limit, replace crankshaft also.

PBIC2953E



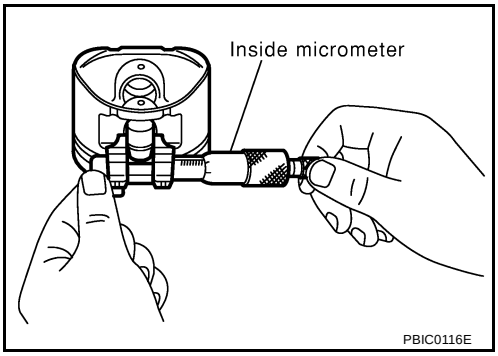
CONNECTING ROD SIDE CLEARANCE

- Measure the side clearance between connecting rod and crankshaft arm with feeler gauge.

Standard : 0.20 - 0.35 mm (0.0080 - 0.0138 in)

Limit : 0.40 mm (0.0160 in)

- If the measured value exceeds the limit, replace connecting rod, and measure again. If it still exceeds the limit, replace crankshaft also.



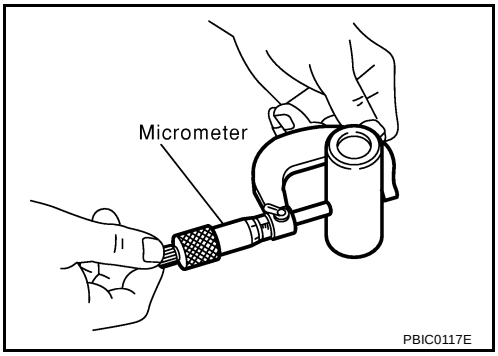
PBIC2954E

PISTON TO PISTON PIN OIL CLEARANCE

Piston Pin Hole Diameter

Measure the inner diameter of piston pin hole with inside micrometer.

Standard : 21.993 - 22.005 mm (0.8659 - 0.8663 in)



PBIC0116E

Piston Pin Outer Diameter

Measure the outer diameter of piston pin with micrometer.

Standard : 21.989 - 22.001 mm (0.8657 - 0.8662 in)

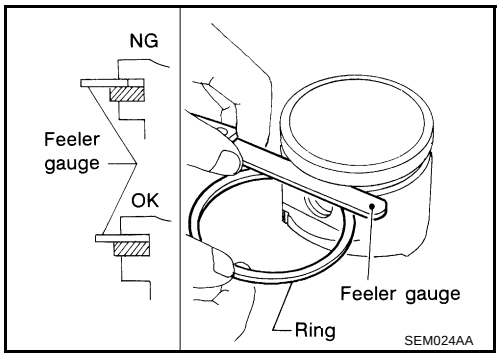
PBIC0117E

Piston to Piston Pin Oil Clearance

(Piston to piston pin oil clearance) = (Piston pin hole diameter) – (Piston pin outer diameter)

Standard : 0.002 - 0.006 mm (0.0001 - 0.0002 in)

- If the calculated value is out of the standard, replace piston and piston pin assembly.



- When replacing piston and piston pin assembly, refer to EM-119, "HOW TO SELECT PISTON" .

NOTE:

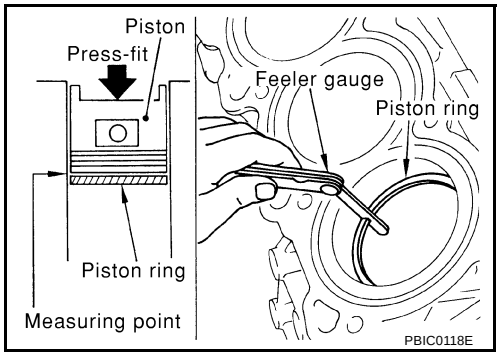
- Piston is available together with piston pin as assembly.
- Piston pin (piston pin hole) grade is provided only for the parts installed at the plant. For service parts, no piston pin grades can be selected. (Only “0” grade is available.)

PISTON RING SIDE CLEARANCE

- Measure the side clearance of piston ring and piston ring groove with feeler gauge.

Standard:

Top ring	**: 0.040 - 0.080 mm (0.0016 - 0.0031 in)**
2nd ring	**: 0.030 - 0.070 mm (0.0012 - 0.0028 in)**
Oil ring	**: 0.055 - 0.155 mm (0.0022 - 0.0061 in)**



Limit

Top ring	**: 0.11 mm (0.0043 in)**
2nd ring	**: 0.10 mm (0.0040 in)**
Oil ring	**: 0.19 mm (0.0075 in)**

- If the measured value exceeds the limit replace piston ring, and measure again. If it still exceeds the limit replace piston also.

PISTON RING END GAP

- Make sure that cylinder bore inner diameter is within the specification. Refer to EM-129, "Cylinder Bore Inner Diameter" .
- Lubricate with new engine oil to piston and piston ring, and then insert piston ring until middle of cylinder with piston, and measure the piston ring end gap with feeler gauge.

Standard:

Top ring	**: 0.23 - 0.33 mm (0.0091 - 0.0130 in)**
2nd ring	**: 0.33 - 0.48 mm (0.0130 - 0.0189 in)**
Oil ring	**: 0.17 - 0.47 mm (0.0067 - 0.0185 in)**

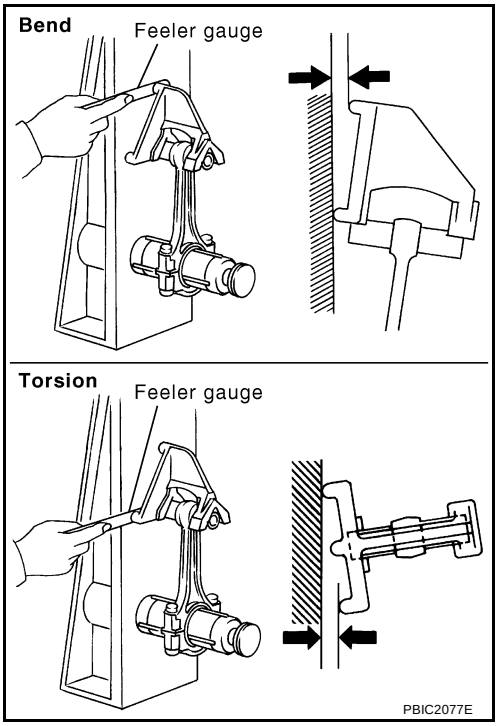
Limit:

Top ring	**: 0.42 mm (0.0165 in)**
2nd ring	**: 0.57 mm (0.0224 in)**
Oil ring	**: 0.63 mm (0.0248 in)**

- If the measured value exceeds the limit, replace piston ring, and measure again. If it still exceeds the limit, re-bore cylinder and use oversize piston and piston rings.

CONNECTING ROD BEND AND TORSION

- Check with connecting rod aligner.



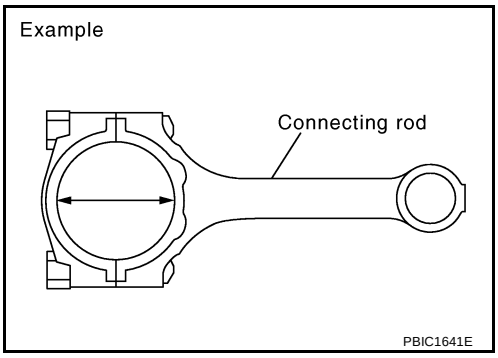
Bend:

Limit: 0.15 mm (0.0059 in) per 100 mm (3.94 in) length

Torsion:

Limit: 0.30 mm (0.0120 in) per 100 mm (3.94 in) length

- If it exceeds the limit, replace connecting rod assembly.

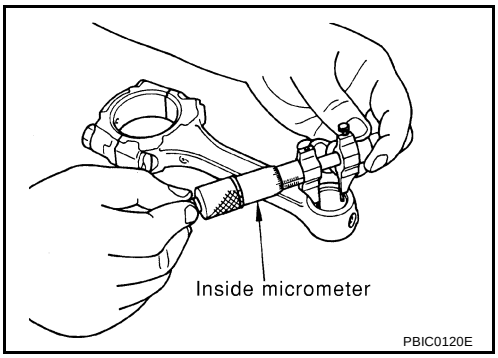


CONNECTING ROD BIG END DIAMETER

- Install connecting rod bearing cap without installing connecting rod bearing, and tightening connecting rod bolts to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.
- Measure the inner diameter of connecting rod big end with inside micrometer.

Standard : 57.000 - 57.013 mm (2.2441 - 2.2446 in)

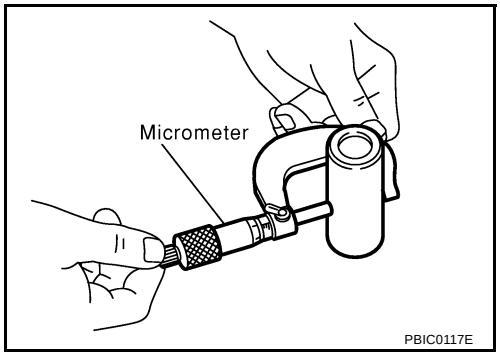
- If out of the standard, replace connecting rod assembly.



CONNECTING ROD BUSHING OIL CLEARANCE

Connecting Rod Bushing Inner Diameter

Measure the inner diameter of connecting rod bushing with inside micrometer.

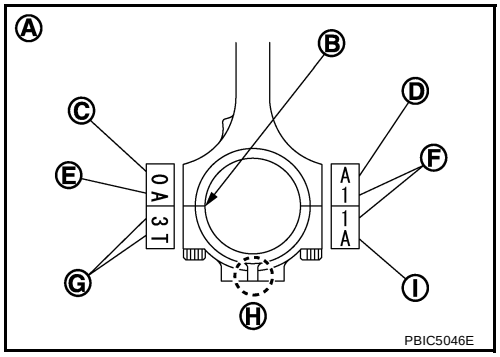


Standard : 22.000 - 22.012 mm (0.8661 - 0.8666 in)

Piston Pin Outer Diameter

Measure the outer diameter of piston pin with micrometer.

Standard : 21.989 - 22.001 mm (0.8657 - 0.8662 in)



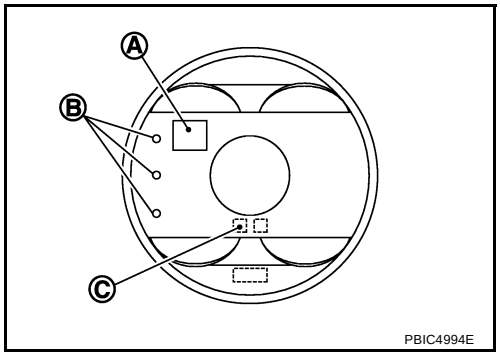
Connecting Rod Bushing Oil Clearance

(Connecting rod bushing oil clearance) = (Connecting rod bushing inner diameter) – (Piston pin outer diameter)

Standard : 0.005 - 0.017 mm (0.0002 - 0.0007 in)

Limit : 0.030 mm (0.0012 in)

- If the measured value exceeds the limit, replace connecting rod assembly and/or piston and piston pin assembly.
- If replacing piston and piston pin assembly, refer to EM-119, "HOW TO SELECT PISTON" .
- If replacing connecting rod assembly, refer to EM-131, "CONNECTING ROD BEARING OIL CLEARANCE" to select the connecting rod bearing.



A : Sample code
B : Bearing stopper groove
C : Small end diameter grade
D : Big end diameter grade
E : Weight grade
F : Cylinder No.
G : Management code
H : Front mark
I : Management code

Factory installed parts grading:

- Service parts apply only to grade “0”.

A : Piston grade number
B : Front mark
C : Piston pin grade number

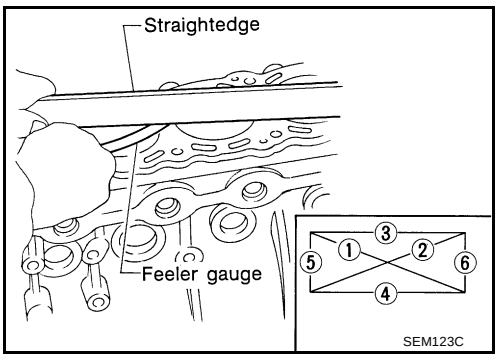
Unit: mm (in)

Grade	0	1
Connecting rod bushing inner diameter *	22.000 - 22.006 (0.8661 - 0.8664)	22.006 - 22.012 (0.8664 - 0.8666)
Piston pin hole diameter	21.993 - 21.999 (0.8659 - 0.8661)	21.999 - 22. 005 (0.8661 - 0.8663)
Piston pin outer diameter	21.989 - 21.995 (0.8657- 0.8659)	21.995 - 22.001 (0.8659 - 0.8662)

*: After installing in connecting rod

CYLINDER BLOCK DISTORTION

- Using scraper, remove gasket on the cylinder block surface, and also remove engine oil, scale, carbon, or other contamination.



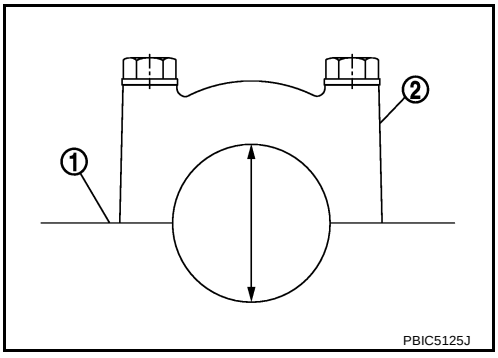
CAUTION:

Be careful not to allow gasket flakes to enter engine oil or engine coolant passages.

- Measure the distortion on the cylinder block upper face at some different points in six directions with straightedge and feeler gauge.

  Limit : 0.1 mm (0.004 in)

- If it exceeds the limit, replace cylinder block.



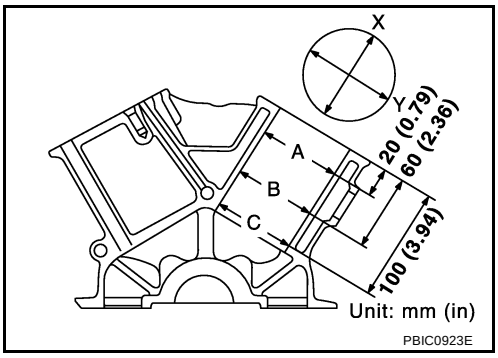
MAIN BEARING HOUSING INNER DIAMETER

- Install lower cylinder block (2) without installing main bearings, and tighten lower cylinder block bolts to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.
- Measure the inner diameter of main bearing housing with bore gauge.

  Standard : 69.993 - 70.017 mm (2.7556 - 2.7566 in)

- If out of the standard, replace cylinder block (1) and lower cylinder block (2) as assembly.

  NOTE:
  Cylinder block cannot be replaced as a single part, because it is machined together with lower cylinder block.



PISTON TO CYLINDER BORE CLEARANCE

Cylinder Bore Inner Diameter

- Using bore gauge, measure cylinder bore for wear, out-of-round and taper at six different points on each cylinder. (“X” and “Y” directions at “A”, “B” and “C”) (“X” is in longitudinal direction of engine)

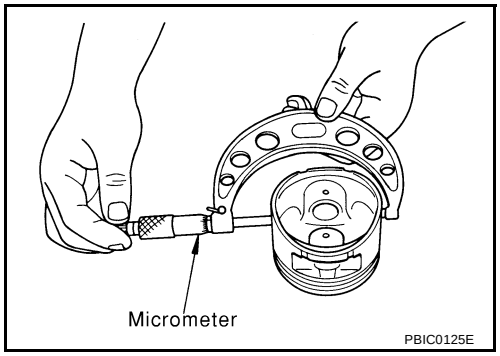
  Standard inner diameter:
  95.500 - 95.530 mm (3.7598 - 3.7610 in)
  Wear limit:
  0.2 mm (0.008 in)
  Out-of-round (Difference between “X” and “Y”):
  0.015 mm (0.0006 in)
  Taper limit (Difference between “A” and “C”):
  0.01 mm (0.0004 in)

- If the measured value exceeds the limit, or if there are scratches and/or seizure on the cylinder inner wall, hone or re-bore the inner wall.
- Oversize piston is provided. When using oversize piston, re-bore cylinder so that the clearance of the piston-to-cylinder bore satisfies the standard.

  CAUTION:
  When using oversize piston, use over size pistons for all cylinders with oversize piston rings.

  Oversize (OS) : 0.2 mm (0.008 in)

Piston Skirt Diameter



Measure the outer diameter of piston skirt with micrometer.

Measure point

: Distance from the top 38.8 mm (1.528 in)

Standard

: 95.480 - 95.510 mm (3.7590 - 3.7602 in)

Piston to Cylinder Bore Clearance

Calculate by piston skirt diameter and cylinder bore inner diameter (direction “Y”, position “B”).
(Clearance) = (Cylinder bore inner diameter) – (Piston skirt diameter).

Standard : 0.010 - 0.030 mm (0.0004 - 0.0012 in)

Limit : 0.08 mm (0.0031 in)

- If calculated value exceeds the limit, replace piston and piston pin assembly. Refer to EM-119, "HOW TO SELECT PISTON" .

Re-boring Cylinder Bore

1. Cylinder bore size is determined by adding piston to cylinder bore clearance to piston skirt diameter.

   Re-bored size calculation: D = A + B – C

   where,

   D: Bored diameter

   A: Piston skirt diameter as measured

   B: Piston to cylinder bore clearance (standard value)

   C: Honing allowance 0.02 mm (0.0008 in)

2. Install lower cylinder block, and tighten to the specified torque. Otherwise, cylinder bores may be distorted in final assembly.
3. Cut cylinder bores.

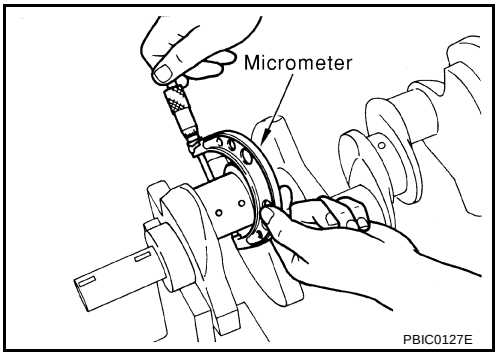
   NOTE:
   - When any cylinder needs boring, all other cylinders must also be bored.
   - Do not cut too much out of cylinder bore at a time. Cut only 0.05 mm (0.0020 in) or so in diameter at a time.
4. Hone cylinders to obtain the specified piston to cylinder bore clearance.
5. Measure finished cylinder bore for the out-of-round and taper.

   NOTE:
   Measurement should be done after cylinder bore cools down.

CRANKSHAFT MAIN JOURNAL DIAMETER

- Measure the outer diameter of crankshaft main journals with micrometer.

  Standard : 64.951 - 64.975 mm (2.5571 - 2.5581 in) dia.



- If out of the standard, measure the main bearing oil clearance. Then use undersize bearing. Refer to EM-132, "MAIN BEARING OIL CLEARANCE" .

CRANKSHAFT PIN JOURNAL DIAMETER

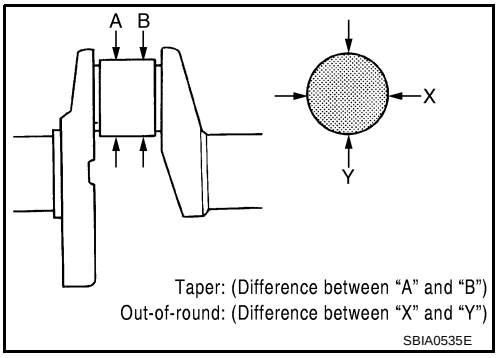
- Measure the outer diameter of crankshaft pin journal with micrometer.

Standard : 53.956 - 53.974 mm (2.1242 - 2.1250 in) dia.

- If out of the standard, measure the connecting rod bearing oil clearance. Then use undersize bearing. Refer to EM-131, "CONNECTING ROD BEARING OIL CLEARANCE" .

CRANKSHAFT OUT-OF-ROUND AND TAPER

- Measure the dimensions at four different points as shown in the figure on each main journal and pin journal with micrometer.
- Out-of-round is indicated by the difference in the dimensions between “X” and “Y” at “A” and “B”.
- Taper is indicated by the difference in the dimensions between “A” and “B” at “X” and “Y”.



Limit:

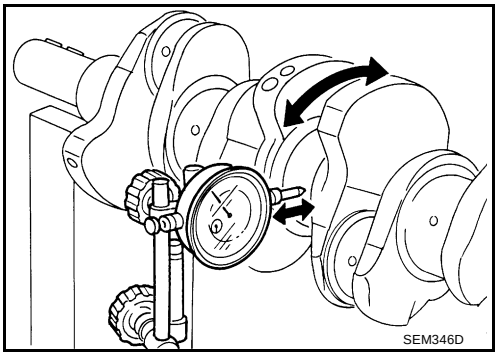
Out-of-round (Difference between “X” and “Y”)

: 0.0025 mm (0.0001 in)

Taper (Difference between “A” and “B”)

: 0.0025 mm (0.0001 in)

- If the measured value exceeds the limit, correct or replace crankshaft.
- If corrected, measure the bearing oil clearance of the corrected main journal and/or pin journal. Then select the main bearing and/or connecting rod bearing. Refer to EM-132, "MAIN BEARING OIL CLEARANCE" and/or EM-131, "CONNECTING ROD BEARING OIL CLEARANCE" .



CRANKSHAFT RUNOUT

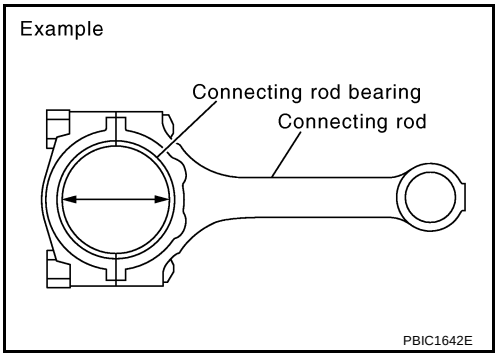
- Place V-block on precise flat table, and support the journals on the both end of crankshaft.
- Place dial indicator straight up on the No. 3 journal.
- While rotating crankshaft, read the movement of the pointer on dial indicator. (Total indicator reading)

Standard : Less than 0.05 mm (0.0020 in)

Limit : 0.10 mm (0.004 in)

- If it exceeds the limit, replace crankshaft.

CONNECTING ROD BEARING OIL CLEARANCE



Method by Calculation

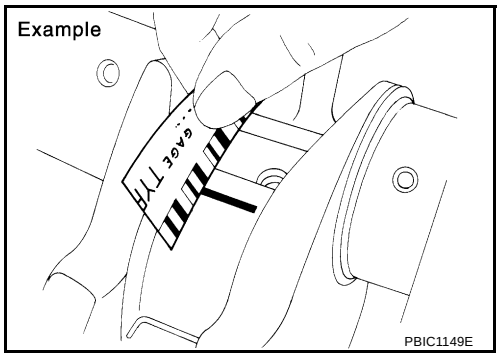
- Install connecting rod bearings to connecting rod and cap, and tighten connecting rod bolts to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.
- Measure the inner diameter of connecting rod bearing with inside micrometer.

(Bearing oil clearance) = (Connecting rod bearing inner diameter) – (Crankshaft pin journal diameter)

Standard : 0.040 - 0.053 mm (0.0016 - 0.0021 in) (actual clearance)

Limit : 0.070 mm (0.0028 in)

- If the calculated value exceeds the limit, select proper connecting rod bearing according to connecting rod big end diameter and crankshaft pin journal diameter to obtain the specified bearing oil clearance. Refer to EM-120, "HOW TO SELECT CONNECTING ROD BEARING" .



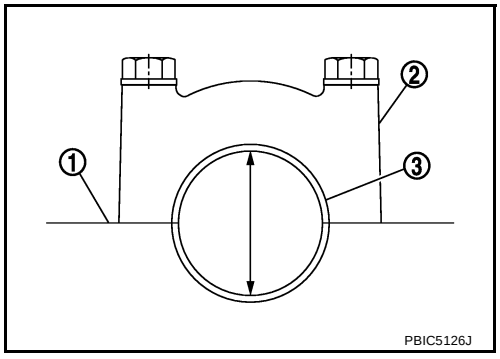
Method of Using Plastigage

- Remove oil and dust on crankshaft pin journal and the surfaces of each bearing completely.
- Cut plastigage slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Install connecting rod bearings to connecting rod and cap, and tighten connecting rod bolts to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.

  CAUTION:
  Do not rotate crankshaft.

- Remove connecting rod bearing cap and bearing, and using scale on plastigage bag, measure the plastigage width.

  NOTE:
  The procedure when the measured value exceeds the limit is same as that described in the “Method by Calculation”.



MAIN BEARING OIL CLEARANCE

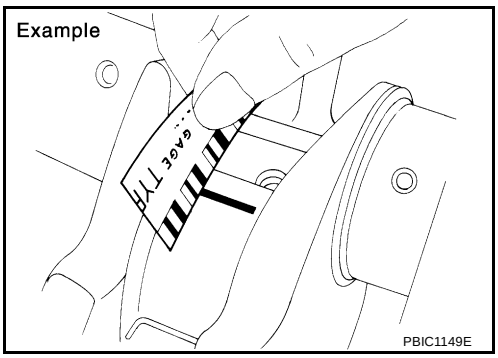
Method by Calculation

- Install main bearings (3) to cylinder block (1) and lower cylinder block (2), and tighten lower cylinder block bolts to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.
- Measure the inner diameter of main bearing with bore gauge.

(Bearing clearance) = (Main bearing inner diameter) – (Crankshaft main journal diameter)

Standard	**:**	**0.035 - 0.045 mm (0.0014 - 0.0018 in) (actual clearance)**
Limit	**:**	**0.065 mm (0.0026 in)**

- If the clearance exceeds the limit, select proper main bearing according to main bearing inner diameter and crankshaft main journal diameter to obtain the specified bearing oil clearance. Refer to EM-122, "HOW TO SELECT MAIN BEARING" .



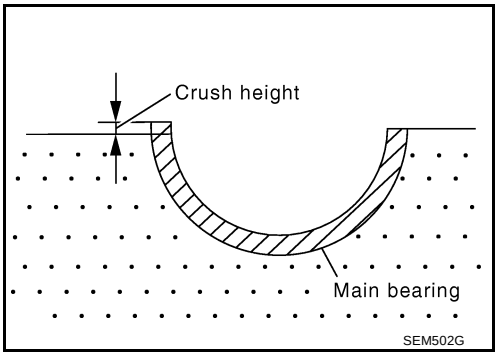
Method of Using Plastigage

- Remove oil and dust on crankshaft main journal and the surfaces of each bearing completely.
- Cut plastigage slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Install main bearings to cylinder block and lower cylinder block, and tighten lower cylinder block bolts with lower cylinder block to the specified torque. Refer to EM-111, "ASSEMBLY" for the tightening procedure.

  CAUTION:
  Do not rotate crankshaft.

- Remove lower cylinder block and bearings, and using scale on plastigage bag, measure the plastigage width.

  NOTE:
  The procedure when the measured value exceeds the limit is same as that described in the “Method by Calculation”.

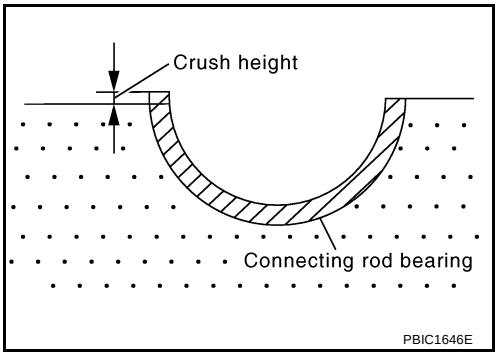


CRUSH HEIGHT OF MAIN BEARING

- When lower cylinder block is removed after being tightened to the specified torque with main bearings installed, the tip end of bearing must protrude. Refer to EM-111, "ASSEMBLY" for the tightening procedure.

  Standard : There must be crush height.

- If the standard is not met, replace main bearings.

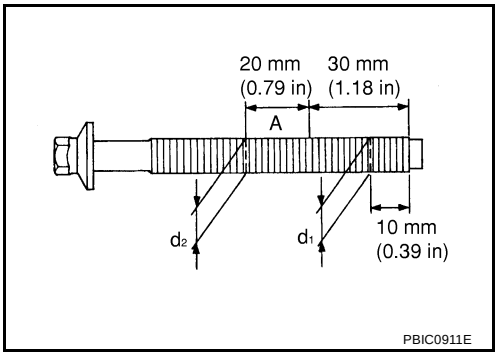


CRUSH HEIGHT OF CONNECTING ROD BEARING

- When connecting rod bearing cap is removed after being tightened to the specified torque with connecting rod bearings installed, the tip end of bearing must protrude. Refer to EM-111, "ASSEMBLY" for the tightening procedure.

  Standard : There must be crush height.

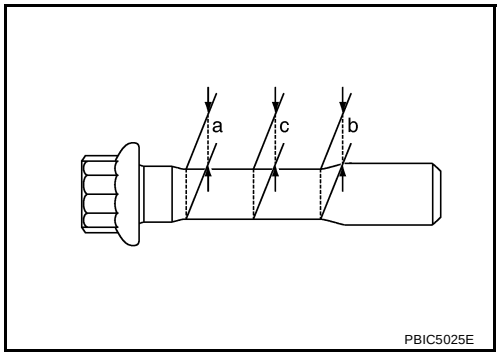
- If the standard is not met, replace connecting rod bearings.



LOWER CYLINDER BLOCK BOLT OUTER DIAMETER

- Measure the outer diameters (“d_1 ”, “d_2 ”) at two positions as shown in the figure.
- If reduction appears in “A” range, regard it as “d_2 ”.

  Limit (“d_1 ” – “d_2 ”) : 0.11 mm (0.0043 in)



- If it exceeds the limit (large difference in dimensions), replace lower cylinder block bolt with new one.

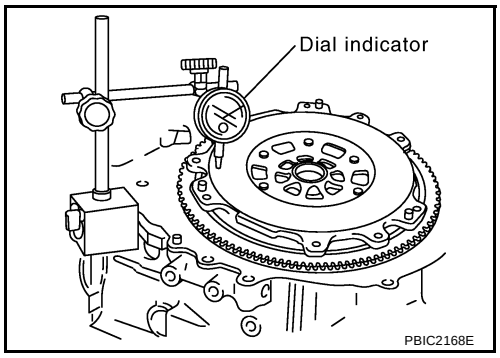
CONNECTING ROD BOLT OUTER DIAMETER

- Measure the outer diameter (“a”, “b” and “c”) at the position shown in the figure.

  a : Value at the end of the smaller diameter of the bolt
  b : Value at the end of the smaller diameter of the bolt (opposite side “a”)
  c : Value of the smallest diameter of the smaller of the bolt

- Obtain a mean value (d) of (a) and (b).
- Subtract (c) from (d).

Limit (“d” – “c”) : 0.09 mm (0.0035 in)



- If it exceeds the limit (large difference in dimensions), replace the bolt with new one.

FLYWHEEL DEFLECTION (M/T MODELS)

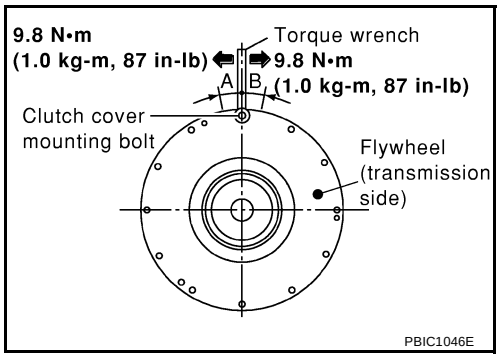
- Measure the deflection of flywheel contact surface to clutch with dial indicator.
- Measure the deflection at 210 mm (8.27 in) dia.

Standard : 0.45 mm (0.0177 in) or less

- If the measured value is out of the standard, replace flywheel.

MOVEMENT AMOUNT OF FLYWHEEL (M/T MODELS)

CAUTION:
Do not disassemble double mass flywheel.

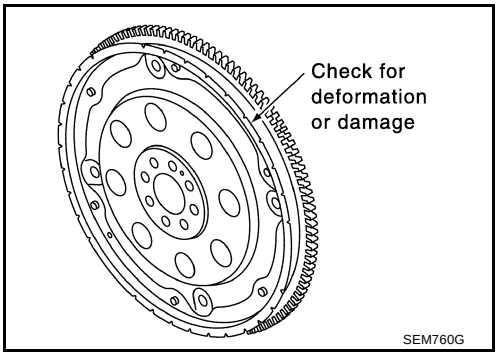


Movement Amount of Radial (Rotation) Direction

Check the movement amount of radial (rotation) direction as follows:

1. Install bolt to clutch cover mounting hole, and place a torque wrench on the extended line of the flywheel center line.
   - Tighten bolt at a force of 9.8 N·m (1.0 kg-m, 87 in-lb) to keep it from loosening.
2. Put a mating mark on circumferences of the two flywheel masses without applying any load (Measurement standard points).
3. Apply a force of 9.8 N·m (1.0 kg-m, 87 in-lb) in each direction, and mark the movement amount on the mass on the transmission side.
4. Measure dimensions of movement amounts “A” and “B” on circumference of flywheel on the transmission side.

Standard : 24 mm (0.94 in) or less

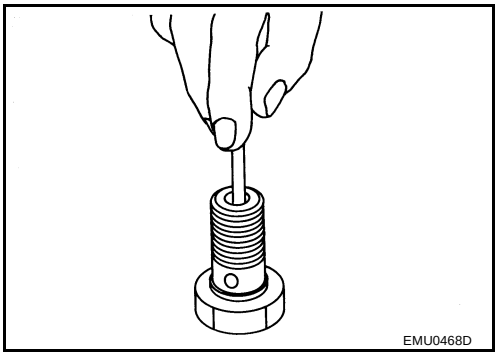


- If the measured value is out of the standard, replace flywheel.

DRIVE PLATE (A/T MODELS)

- Check drive plate and signal plate for deformation or cracks.

  CAUTION:
  - **Do not disassemble drive plate.**
  - **Do not place drive plate with signal plate facing down.**
  - **When handling signal plate, take care not to damage or scratch it.**
  - **Handle signal plate in a manner that prevents it from becoming magnetized.**
- If anything is found, replace drive plate.



OIL JET

- Check nozzle for deformation and damage.
- Blow compressed air from nozzle, and check for clogs.
- If it is not satisfied, clean or replace oil jet.

OIL JET RELIEF VALVE

- Using clean plastic stick, press check valve in oil jet relief valve. Make sure that valve moves smoothly with proper reaction force.
- If it is not satisfied, replace oil jet relief valve.

EXHAUST SYSTEM

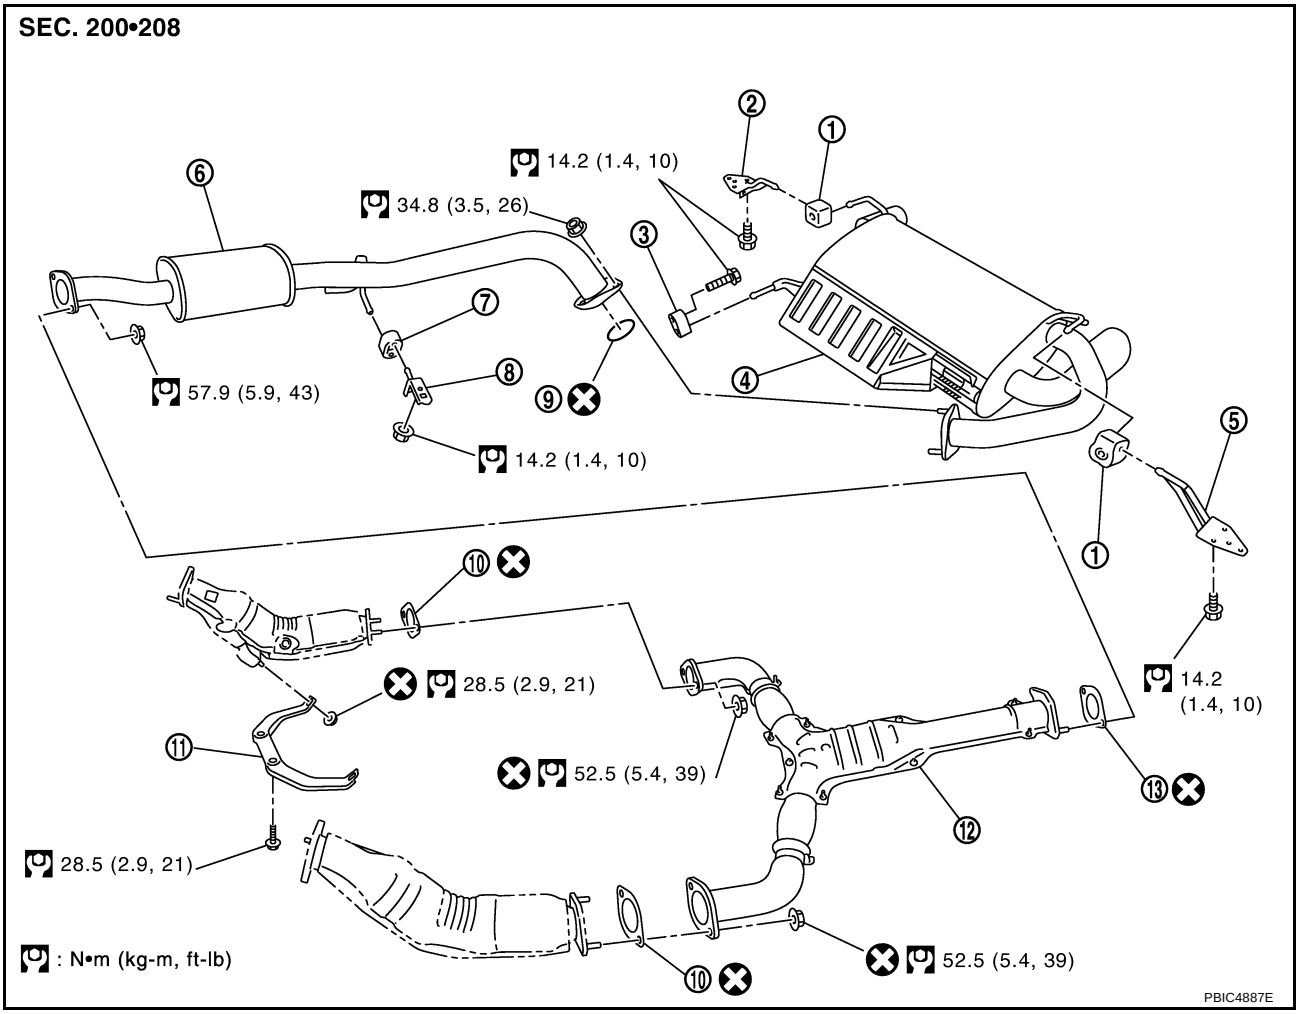
PFP:20100

Checking Exhaust System

NBS000J5

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage or deterioration.

- If anything is found, repair or replace damaged parts.



Removal and Installation

NBS000J6

CAUTION:

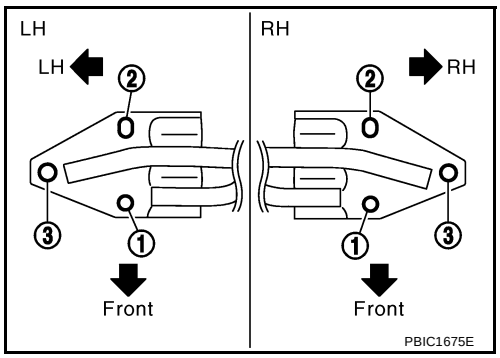
- **Be sure to use genuine exhaust system parts or equivalents which are specially designed for heat resistance, corrosion resistance, and shape.**
- **Perform the operation with the exhaust system fully cooled down because the system will be hot just after engine stops.**
- **Be careful not to cut your hand on the insulator edge.**

1. Mounting rubber
2. Main muffler mounting bracket
3. Mounting rubber
4. Main muffler
5. Main muffler mounting bracket
6. Center muffler
7. Mounting rubber
8. Mounting bracket
9. Ring gasket

10. Gasket
11. Exhaust mounting bracket
12. Exhaust front tube
13. Gasket

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL



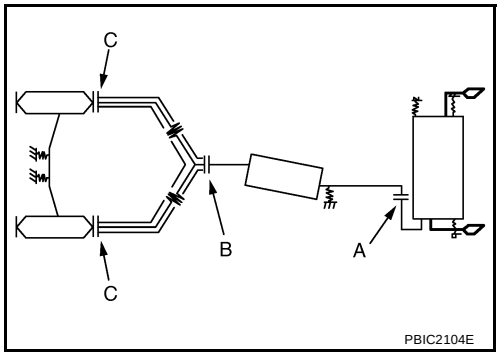
- Disconnect each joint and mounting with power tool.
- When removing main muffler, remove main muffler mounting bracket bolts.
- For removing and installing parts around propeller shaft, be careful of the following caution.

CAUTION:
Be sure to prevent propeller shaft from interfering parts and tools. If necessary, install protector to propeller shaft to prevent damage.
For propeller shaft protector, refer to PR-5, "REAR PROPELLER SHAFT" .

INSTALLATION

Note the following, and install in the reverse order of removal.

- Tighten main muffler mounting bracket bolts in numerical order as shown in the figure.



When reassembling main muffler only.

1. Temporarily tighten connecting flange (A).
2. Move main muffler front/rear/left/right so that clearance between tail tube and bumper is even.
3. Tighten connecting flange (A) to the specified torque.

When reassembling center muffler.

1. Temporarily tighten connecting flanges in order of (A) and (B).
2. Move main muffler front/rear/left/right so that clearance between tail tube and bumper is even.
3. Tighten connecting flanges in order of (A) and (B) to the specified torque.

When reassembling exhaust front tube.

1. Temporarily tighten connecting flanges of center muffler in order of (B) and (C).
2. Move main muffler front/rear/left/right so that clearance between tail tube and bumper is even.
3. Tighten connecting flanges in order of (B) and (C) to the specified torque.

CAUTION:

- **Always replace exhaust tube gaskets with new ones when reassembling.**
- **If heat insulator is badly deformed, repair or replace it. If deposits such as mud pile up on heat insulator, remove them.**
- **When installing heat insulator avoid large gaps or interference between heat insulator and each exhaust pipe.**
- **Remove deposits from the sealing surface of each connection. Connect them securely to avoid gas leakage.**
- **Temporarily tighten mounting nuts on the exhaust manifold side and mounting bolts on the vehicle side. Check each part for unusual interference, and then tighten them to the specified torque.**
- **When installing each mounting rubber, avoid twisting or unusual extension in up/down and right/left directions.**

INSPECTION AFTER INSTALLATION

- Make sure that clearance between tail tube and bumper is even.
- With engine running, check exhaust tube joints for gas leakage and unusual noises.
- Make sure that mounting brackets and mounting rubbers are installed properly and free from undue stress. Improper installation could result in excessive noise and vibration.

×: Applicable

FRONT WHEEL HUB AND KNUCKLE

PFP:40202

On-Vehicle Inspection

NDS0000Q

Make sure the mounting conditions (looseness, back lash) of each component and component status (wear, damage) are normal.

WHEEL BEARING INSPECTION

- Move wheel hub in the axial direction by hand. Make sure there is no looseness of wheel bearing.

  Axial end play : 0.05 mm (0.002 in) or less

- Rotate wheel hub and make sure there is no unusual noise or other irregular conditions. If there are any irregular conditions, replace wheel hub and bearing assembly.

Removal and Installation

NDS0000R

COMPONENTS

1. Steering knuckle
2. Ball seat
3. Cotter pin
4. Hub cap
5. Washer
6. Splash guard
7. Wheel hub and bearing assembly

Refer to GI-11, "Components" , for the symbols in figure

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-26, "FRONT DISC BRAKE" .

   NOTE:
   Avoid depressing brake pedal while brake caliper is removed.
4. Remove disc rotor.
5. Remove wheel sensor from steering knuckle. Refer to BRC-73, "WHEEL SENSORS" (with TCS), BRC-128, "WHEEL SENSORS" (with VDC).

   CAUTION:
   Do not pull on wheel sensor harness.
6. Remove brake hose bracket from steering knuckle. Refer to BR-12, "BRAKE TUBE AND HOSE" .
7. Remove cotter pin at steering outer socket, then loosen mounting nut.

8. Use a ball joint remover to remove steering outer socket from steering knuckle. Be careful not to damage ball joint boot.

CAUTION:
Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (SST) from coming off.

9. After removing upper link, transverse link, compression rod and cotter pin at steering knuckle, loosen mounting nut.
10. Use a ball joint remover (suitable tool) to remove upper link, transverse link and compression rod from steering knuckle. Be careful not to damage ball joint boot.

CAUTION:
Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.

11. Remove steering knuckle and wheel hub and bearing assembly fixing bolt.
12. Remove wheel hub and bearing assembly from steering knuckle.

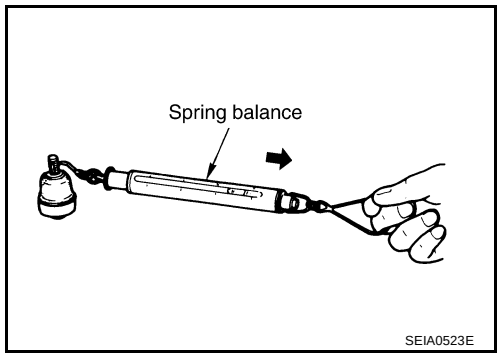
INSPECTION AFTER REMOVAL

- About the inspection for upper link, compression rod, steering outer socket, refer to FSU-14, "UPPER LINK" , FSU-16, "COMPRESSION ROD" , PS-17, "POWER STEERING GEAR AND LINKAGE" .

Visual Inspection

- Check steering knuckle and ball seat for deformation, cracks, and other damage. Replace steering knuckle and ball seat if cracks, deformation or other damage is found.
- Check ball joint boot for deformation, damage, and also for grease leakage. Replace steering knuckle assembly if cracks, deformation or also for grease leakage is found.

Steering Knuckle Ball Joint Inspection



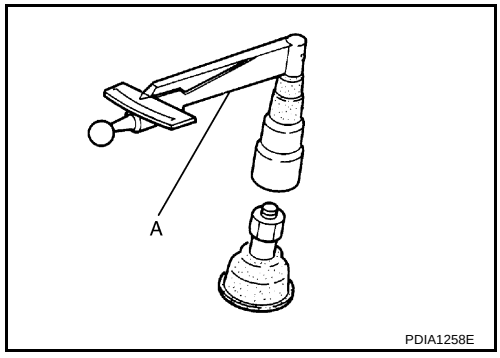
- Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

CAUTION:
Before measurement, move ball joint at least ten times by hand to check for smooth movement.

- Hook spring balance at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

Swing force:
0.147 - 1.4 N·m (0.02 - 0.14 kg-m, 2 - 12 in-lb)
Spring balance measurement
2.23 - 21.2 N (0.22 - 2.16 kg, 0.50 - 4.77 lb)



- If it is outside the standard, replace steering knuckle.

Rotating Torque Inspection

- Attach mounting nut to ball stud. Check that rotating torque is within specifications with a preload gauge.

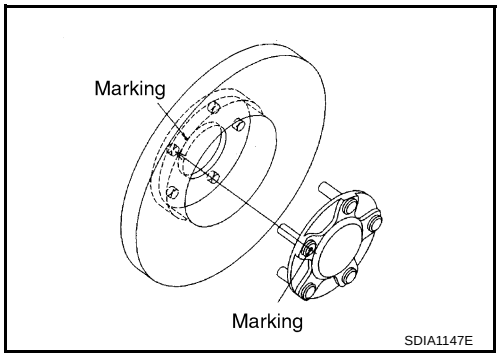
Tool number A: ST3127S000 (J–25765–A)
Rotating torque:
0.147 - 1.4 N·m (0.02 - 0.14 kg-m, 2 - 12 in-lb)

- If it is outside the standard, replace steering knuckle.

Axial End Play Inspection

- Move tip of ball joint in axial direction to check for looseness.

Axial end play : 0 mm (0 in)



- If it is outside the standard, replace steering knuckle.

INSTALLATION

- Refer to FAX-4, "Removal and Installation" for tightening torque. Install in the reverse order of removal.

NOTE:
Refer to component parts location and do not reuse non-reusable parts.

- Wheel hub and bearing assembly and disc must be installed to fit the marked position each other.

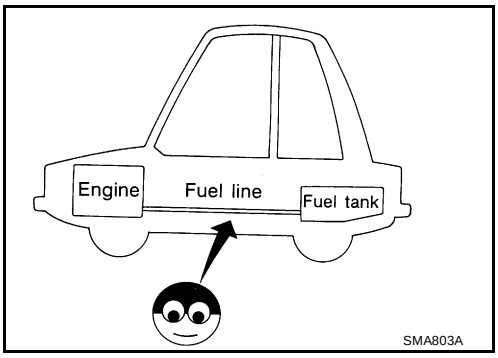
PRECAUTIONS

PFP:00001

Precautions for Battery Service

NBS000IW

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.



FUEL SYSTEM

PFP:17503

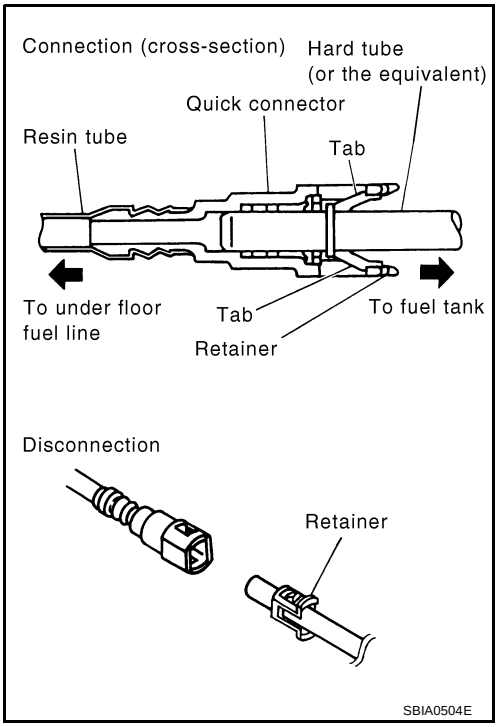
Checking Fuel Lines

NBS000IX

Inspect fuel lines, fuel filler cap and fuel tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.
If necessary, repair or replace damaged parts.

General Precautions

NBS000IY



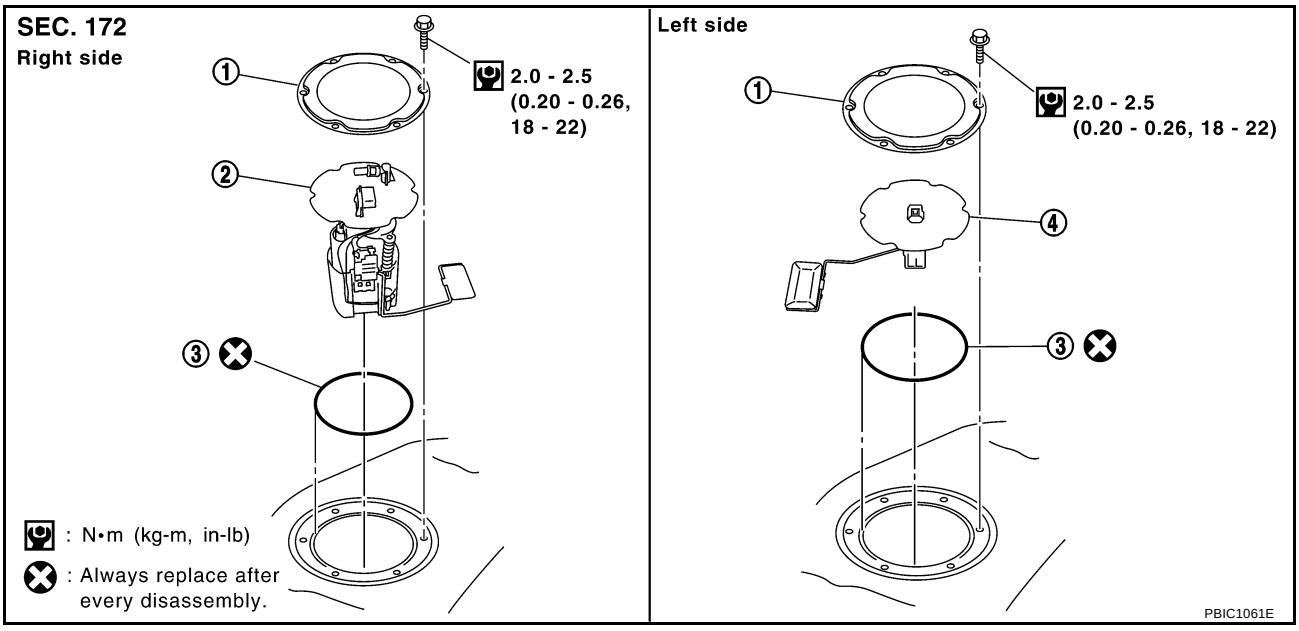
WARNING:

When replacing fuel line parts, be sure to observe the following.

- **Put a “CAUTION: FLAMMABLE” sign in the workshop.**
- **Be sure to work in a well ventilated area and furnish workshop with a CO_2 fire extinguisher.**
- **Do not smoke while servicing fuel system. Keep open flames and sparks away from the work area.**
- **Put drained fuel in an explosion-proof container and put the lid on securely. Keep the container in safe area.**

CAUTION:

- **Use gasoline required by the regulations for octane number. Refer to GI-5, "Precautions for Fuel (Unleaded Premium Gasoline Required)" .**
- **Before removing fuel line parts, perform the following procedures:**
  - **Release fuel pressure from the fuel lines. Refer to EC-79, "FUEL PRESSURE RELEASE" .**
  - **Disconnect negative battery terminal.**
- **Always replace O-rings and clamps with new ones.**
- **Do not kink or twist tubes when they are being installed.**
- **Do not tighten hose clamps excessively to avoid damaging hoses.**
- **After connecting fuel tube quick connectors, make sure quick connectors are secure.**
  Ensure that connector and resin tube do not contact any adjacent parts.
- **After installing tubes, make sure there is no fuel leakage at connections in the following steps.**
  - **Apply fuel pressure to fuel lines with turning ignition switch “ON” (with engine stopped). Then check for fuel leaks at connections.**
  - **Start engine and rev it up and check for fuel leaks at connections.**
- **Use only a genuine NISSAN fuel filler cap as a replacement. If an incorrect fuel filler cap is used, the “MIL” may come on.**
- **For servicing “Evaporative Emission System” parts, refer to EC-33, "EVAPORATIVE EMISSION SYSTEM" .**



FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

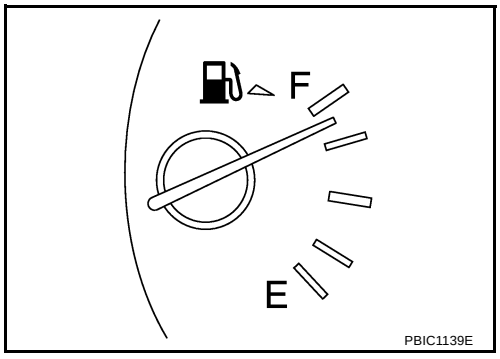
PFP:17042

Removal and Installation

NBS000IZ

1. Retainer
2. Main fuel level sensor unit, fuel filter and fuel pump assembly
3. O-ring
4. Sub fuel level sensor unit

REMOVAL



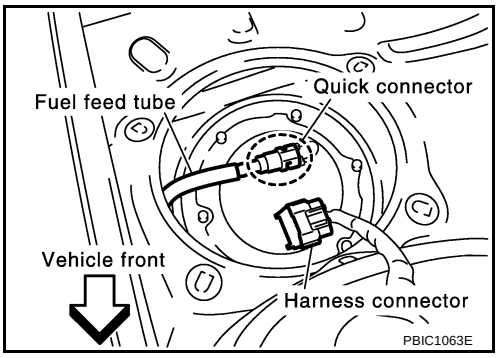
WARNING:

Be sure to read “General Precautions” when working on the fuel system. Refer to FL-3, "General Precautions" .

1. Check fuel level on fuel gauge. If fuel gauge indicates more than the level as shown in the figure (full or almost full), drain fuel from fuel tank until gauge indicates level as shown in the figure or below.

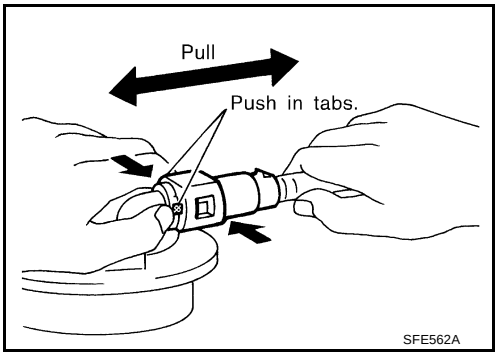
   NOTE:
   Because fuel will be spilled when removing main and sub fuel level sensor units for the top of the fuel is above the main and sub fuel level sensor units installation surface.

   - As a guide, fuel level becomes the position as shown in the figure or below when approximately 20 ℓ (5-1/4 US gal, 4-3/8 Imp gal) of fuel are drained from fuel tank.
   - In a case that fuel pump does not operate, perform the following procedure.



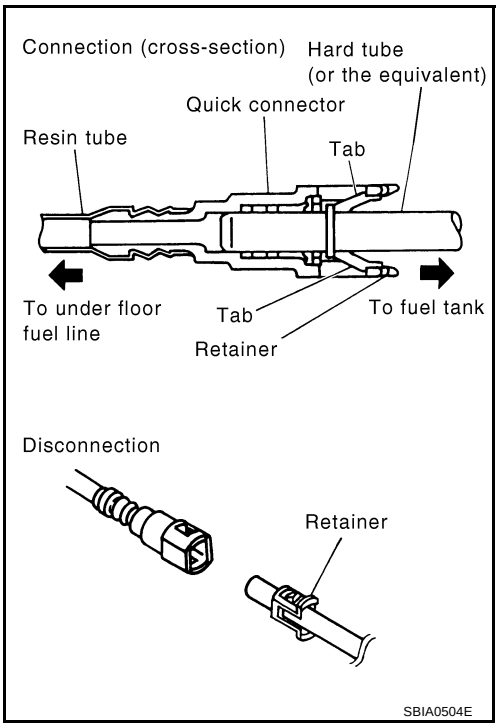
a. Insert hose of less than 25 mm (0.98 in) in diameter into fuel filler tube through fuel filler opening to draw fuel from fuel filler tube.
b. Disconnect fuel filler hose from fuel filler tube. Refer to FL-10, "FUEL TANK" .
c. Insert hose into fuel tank through fuel filler hose to draw fuel from fuel tank.
2. Release the fuel pressure from the fuel lines. Refer to EC-79, "FUEL PRESSURE RELEASE" .
3. Open fuel filler lid.
4. Open filler cap and release the pressure inside fuel tank.
5. Remove woofer or rear floor box mat and rear floor box. Refer to AV-49, "Removal and Installation of Woofer and Woofer Amp. (BOSE System)" or EI-39, "LUGGAGE FLOOR TRIM" .

6. Remove inspection hole cover for main and sub fuel level sensor units by turning clips clockwise by 90 degrees.

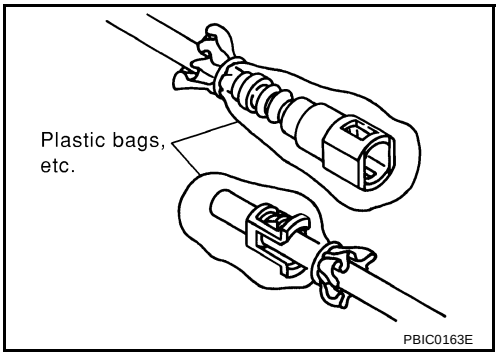


7. Disconnect harness connector and quick connector.

Disconnect quick connector as follows:



- Hold the sides of connector, push in tabs and pull out fuel feed tube.
- If quick connector sticks to tube of fuel level sensor unit, push and pull quick connector several times until it start to move. Then disconnect quick connector by pulling.



CAUTION:

- **Quick connector can be disconnected when the tabs are completely depressed. Do not twist it more than necessary.**
- **Do not use any tools to disconnect quick connector.**
- **Keep resin tube away from heat. Be especially careful when welding near the resin tube.**
- **Prevent acid liquid such as battery electrolyte, etc. from getting on resin tube.**
- **Do not bend or twist resin tube during installation and disconnection.**
- **Do not remove the remaining retainer on hard tube (or equivalent) except when resin tube or retainer is replaced.**
- **When resin tube or hard tube (or equivalent) is replaced, also replace retainer with new one.**
- **Replace same color retainer as before replacing.**

Retainer color: White

- **To keep the connecting portion clean and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.**

8. Remove main fuel level sensor unit, fuel filter and fuel pump assembly, and sub fuel level sensor unit as follows.

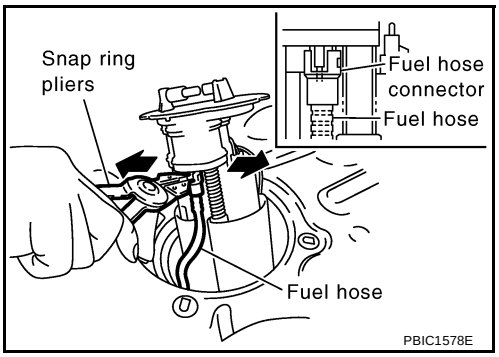
CAUTION:

- **Do not bend float arm during removal.**
- **Avoid polluting the inside by residue fuel. Draw out with avoiding inclination by supporting with a cloth.**
- **Avoid impacts such as falling when handling components.**

a. Removal of main fuel level sensor unit, fuel filter and fuel pump assembly:

i. Remove retainer.

ii. Raise main fuel level sensor unit, fuel filter and fuel pump assembly, and using snap ring pliers, remove fuel hose connector.



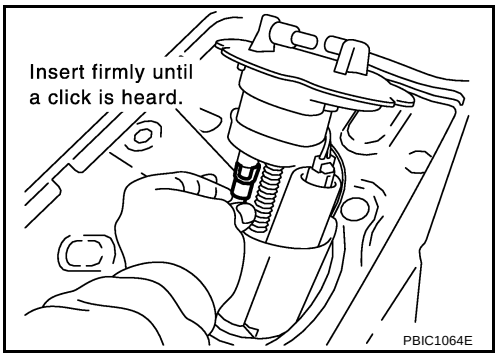
CAUTION:

Be careful not to damage fuel hose connector by expanding them excessively.

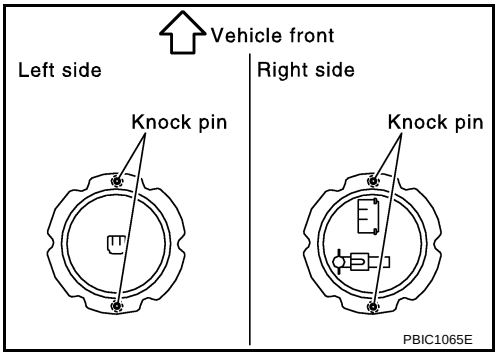
b. Removal of sub fuel level sensor unit:

i. Remove retainer.

ii. Raise and release sub fuel level sensor unit to remove.

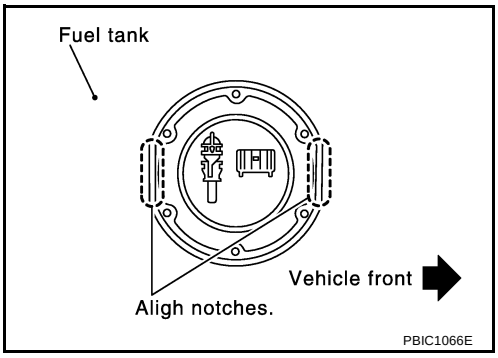


INSTALLATION



Note the following, and install in the reverse order of removal.

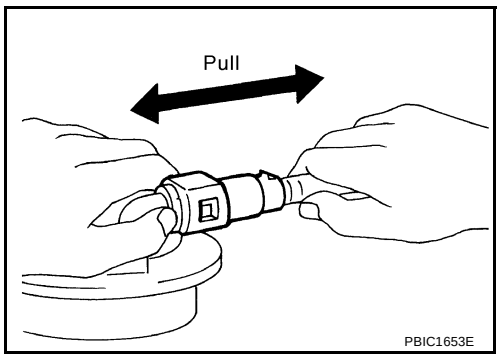
Main and Sub Fuel Level Sensor Unit



- When installing fuel hose connector insert them fully until a click sound of full stopper engagement is heard.

- Face main and sub fuel level sensor units as shown in the figure, and install them with the knock pin on back aligned with pin hole on fuel tank.

- Install retainer so that its notch becomes parallel with the notch on fuel tank.



- Tighten retainer mounting bolts evenly.

Quick Connector

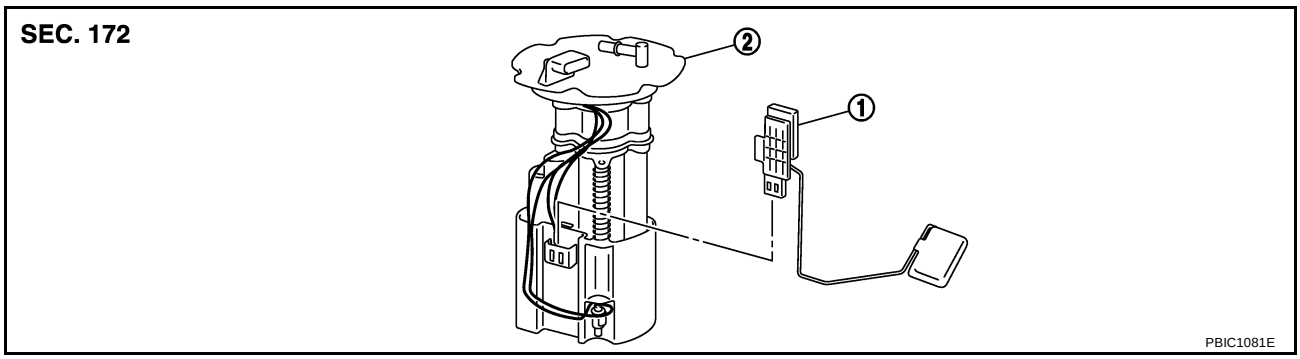
Connect quick connector of fuel feed hose as follows:

1. Check the connection for damage or any foreign materials.
2. Align the connector with the tube, then insert the connector straight into the tube until a click sound is heard.
3. After connecting, make sure that the connection is secure by following method.
   - Visually confirm that the two tabs are connected to the connector.

- Pull the tube and the connector to make sure they are securely connected.

Inspection Hole Cover

1. Install inspection hole cover with direction mark (arrow) facing front of vehicle.
2. Lock clips by turning counter-clockwise.



INSPECTION AFTER INSTALLATION

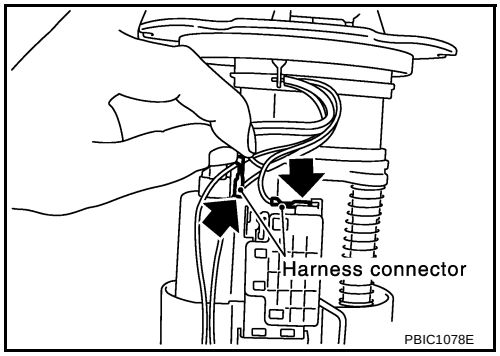
Use the following procedure to check for fuel leaks.

1. Turn ignition switch “ON” (with engine stopped), then check connections for leaks by applying fuel pressure to fuel piping.
2. Start engine and rev it up and make sure there are no fuel leaks at the fuel system connections.

Disassembly and Assembly

NBS000J0

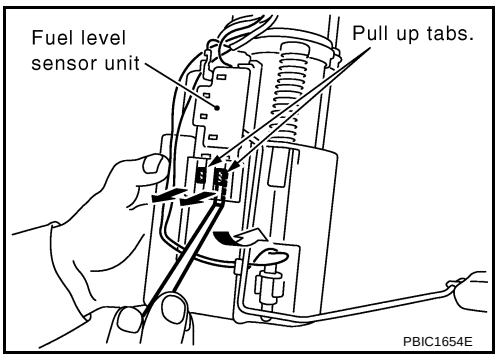
1. Fuel level sensor unit
2. Fuel filter and fuel pump assembly



CAUTION:

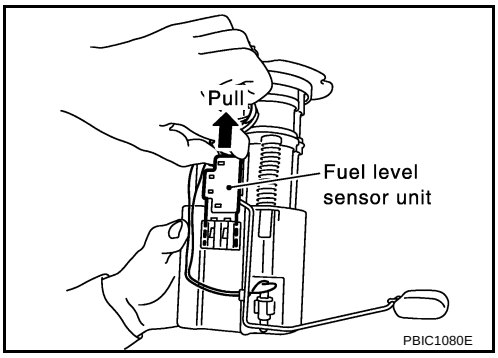
Sub fuel level sensor unit cannot be disassembled and should be replaced as a unit.

DISASSEMBLY



Remove fuel level sensor unit as follows.

1. Disconnect harness connector.
   - Hold connector by fingers and pull it out, because there is no stopper release tab.



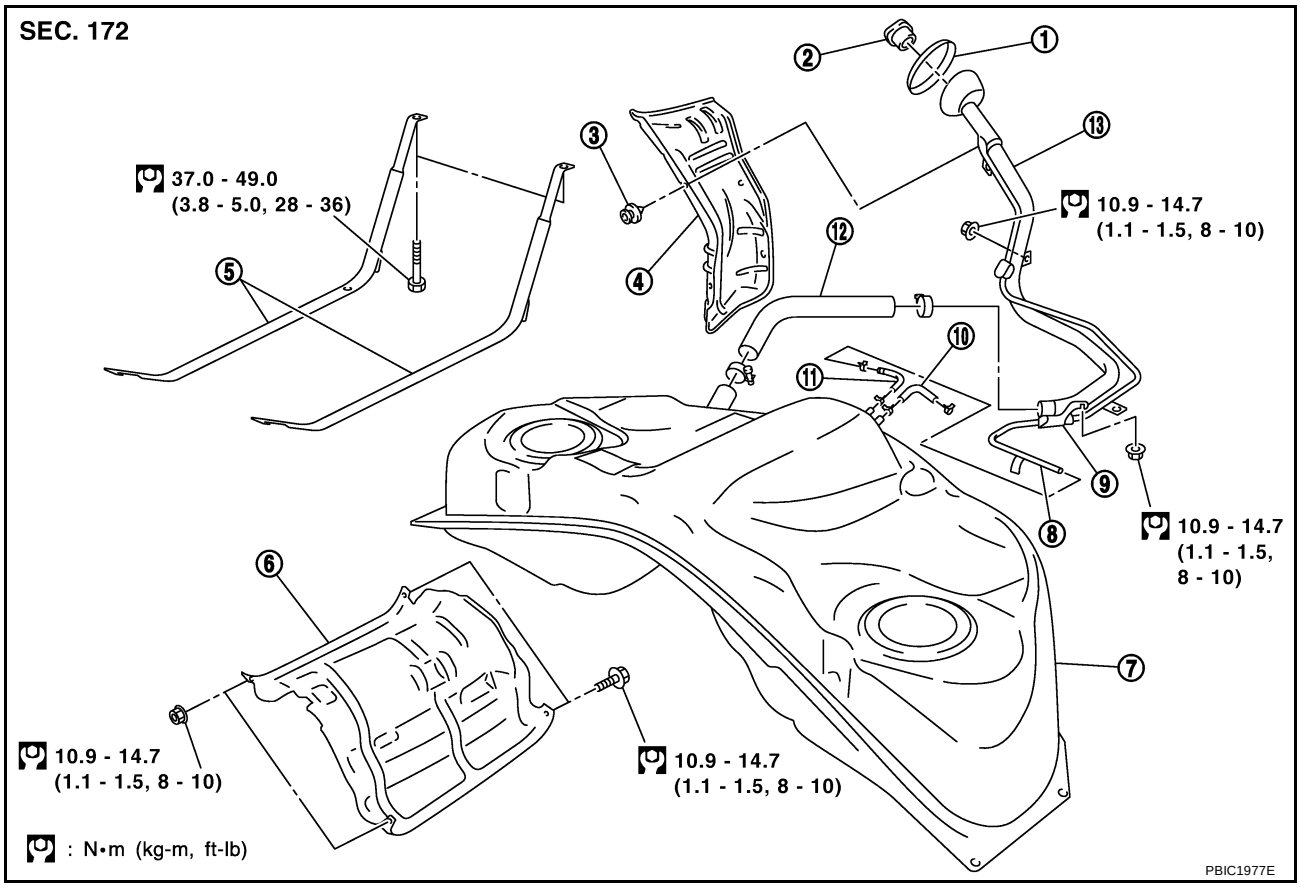
2. Using suitable tool, pull up tabs points as shown in the figure (two points) to release the lock.

CAUTION:
Be careful not to damage it.

3. After fixing tabs are disengaged, slide fuel level sensor unit out in direction shown by the arrow.

CAUTION:
Do not disassemble fuel filter and fuel pump assembly.

ASSEMBLY



1. Check for damage of fuel level sensor unit installation position on the side of fuel filter and fuel pump assembly.
2. Slide fuel level sensor unit until it aligns to installation groove, then insert it until it stops.
   - Insert until you hear a “click” sound and actually feel the engagement.
   - After inserting, apply force in reverse direction (removal direction) to ensure it cannot be pulled out.
3. Connect harness connector.
   - Securely insert harness connector until it stops.

FUEL TANK

PFP:17202

Removal and Installation

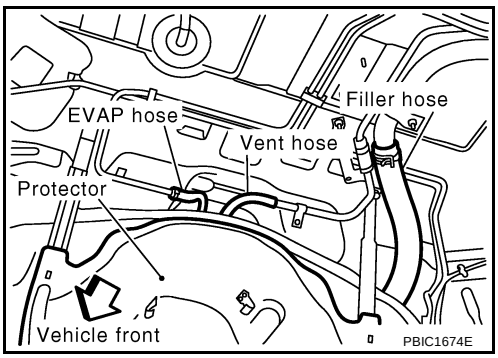
NBS000J1

1. Grommet
2. Fuel filler cap
3. Clip
4. Fuel filler tube protector
5. Fuel tank mounting band
6. Fuel tank protector
7. Fuel tank
8. Vent tube
9. Vent hose
10. EVAP hose
11. Vent hose
12. Fuel filler hose
13. Fuel filler tube

REMOVAL

WARNING:

Be sure to read “General Precautions” before working on the fuel system. Refer to FL-3, "General Precautions" .



- Drain fuel from fuel tank if necessary. Refer to FL-4, "REMOVAL" .
- Perform work on level place.

1. Perform steps 2 to 7 of “REMOVAL” in “ FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY” on main and sub fuel level sensor units. Refer to FL-4, "REMOVAL" .
2. Remove tunnel stay. Refer to RSU-5, "REAR SUSPENSION ASSEMBLY" .
3. Remove exhaust front tube, center muffler and main muffler. Refer to EX-3, "EXHAUST SYSTEM" .
4. Remove propeller shaft. Refer to PR-5, "REAR PROPELLER SHAFT" .

   CAUTION:

   Do not impact or damage propeller shaft tube.
5. Remove parking rear brake cables. Refer to PB-4, "PARKING BRAKE CONTROL" .
6. Remove rear suspension assembly. Refer to RSU-5, "REAR SUSPENSION ASSEMBLY" .
7. Remove fuel tank protector.

8. Disconnect fuel filler hose, vent hose and EVAP hoses at fuel tank side.

9. Remove fuel tank mounting band bolts while supporting fuel tank.

10. Supporting with hands, descend transmission jack carefully, and remove fuel tank.

CAUTION:

- **Make sure that all connection points have been disconnected.**
- **Confirm there is no interference with vehicle.**

11. Remove fuel filler tube, if necessary.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Surely clamp fuel hoses and insert hose to the length below.

Fuel filler hose	**: 35 mm (1.38 in)**
The other hoses	**: 25 mm (0.98 in)**

- Be sure hose clamp is not placed on swelled area of fuel tube.
- Tighten fuel hose clamp so that the distance between its lugs becomes to the following.

Fuel tank side	**: 8 - 12 mm (0.31 - 0.47 in)**
Fuel filler tube side	**: 5.7 - 9.7 mm (0.224 - 0.382 in)**

- To connect quick connector, refer to FL-7, "Quick Connector" .

INSPECTION AFTER INSTALLATION

Use the following procedure to check for fuel leaks.

1. Turn ignition switch “ON” (with engine stopped), and check connections for leakage by applying fuel pressure to fuel piping.
2. Start engine and rev it up and make sure there are no fuel leaks at the fuel system connections.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

NBS000J2

Fuel tank capacity	Approx. 76 ℓ (20 US gal, 16-3/4 Imp gal)
Fuel recommendation	Refer to GI-5

Tightening Torque

NBS000J3

Unit : N·m (kg-m, ft-lb)
N·m (kg-m, in-lb)*

Main fuel level sensor unit, fuel filter and fuel pump assembly	2.0 - 2.5 (0.20 - 0.26, 18 - 22)*
Sub fuel level sensor unit	2.0 - 2.5 (0.20 - 0.26, 18 - 22)*
Fuel tank mounting band	37.0 - 49.0 (3.8 - 5.0, 28 - 36)
Fuel filler tube	10.9 - 14.7 (1.1 - 1.5, 8 - 10)
Fuel tank protector	10.9 - 14.7 (1.1 - 1.5, 8 - 10)

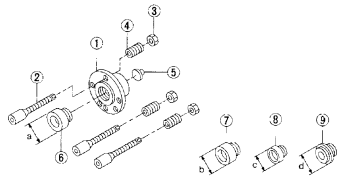
PRECAUTIONS

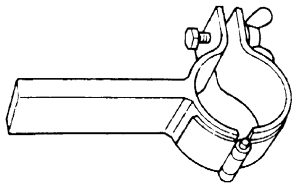
PFP:00001

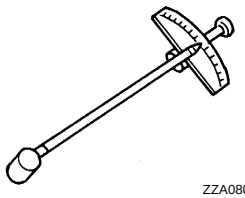
Caution

NES00001

- When installing rubber bushings, final tightening must be carried out under unladen conditions with tires on ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Caulking nuts are not reusable. Always use new ones when installing. Since new caulking nuts are pre-oiled, tighten as they are.
- Avoid burden to front cross bar.



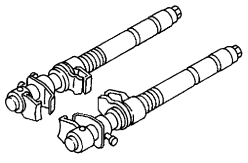


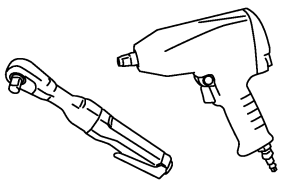


PREPARATION

PFP:00002

Special Service Tools





NES00002

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description

FRONT SUSPENSION ASSEMBLY

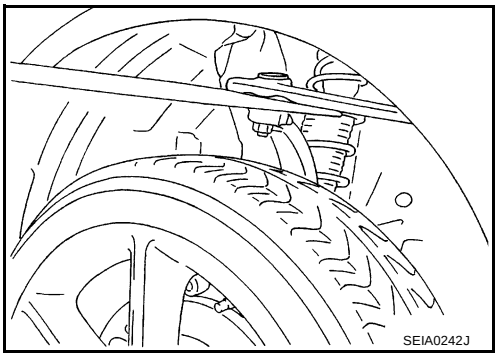
PFP:54010

On-Vehicle Inspection

NES00005

Make sure the mounting conditions (looseness, back lash) of each component and component statues (wear, damage) are normal.

INSPECTION OF BALL JOINT END PLAY OF EACH LINK

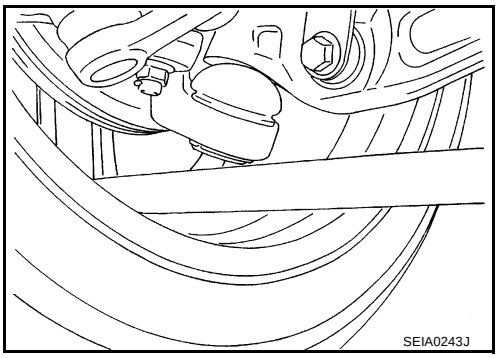


1. Set front wheels in a straight-ahead position. Do not depress brake pedal.
2. Check ball joint axial end play of each link.

CAUTION:
Be careful not to damage ball joint boot.

Upper Link Ball Joint

- Measure axial end play by installing and moving up/down with an iron pry bar or something similar between upper link and steering knuckle.

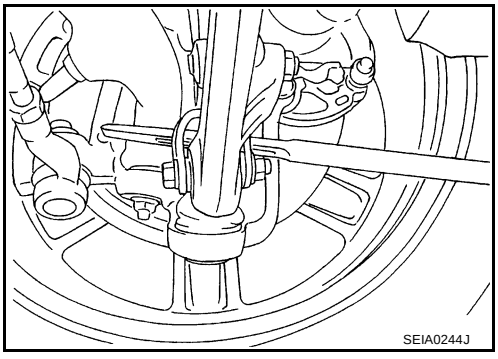


Axial end play : 0 mm (0 in)

SEIA0242J

Steering Knuckle Lower Ball Joint

- Measure axial end play by installing and moving up/down with an iron pry bar or something similar between steering knuckle and wheel.



Axial end play : 0 mm (0 in)

SEIA0243J

Compression Rod Ball Joint

- Measure axial end play by installing and moving up/down with an iron pry bar or something similar between compression rod and transverse link.

Axial end play : 0 mm (0 in)

SEIA0244J

SHOCK ABSORBER INSPECTION

Check shock absorber for oil leakage, damage and replace if necessary. Refer to FSU-10, "COIL SPRING AND SHOCK ABSORBER" .

Wheel Alignment Inspection

NES00006

DESCRIPTION

- Measure wheel alignment under unladen conditions.

  NOTE:
  Unladen conditions mean that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats are designated positions.

PRELIMINARY CHECK

- Check tires for improper air pressure and wear.
- Check road wheels for runout.
- Check wheel bearing axial end play.
- Check ball joint axial end play of compression rod, upper link, and steering knuckle
- Check shock absorber operation.
- Check each mounting part of axle and suspension for looseness and deformation.
- Check each link, rod and member for cracks, deformation and other damage.
- Check vehicle posture.

GENERAL INFORMATION AND RECOMMENDATIONS

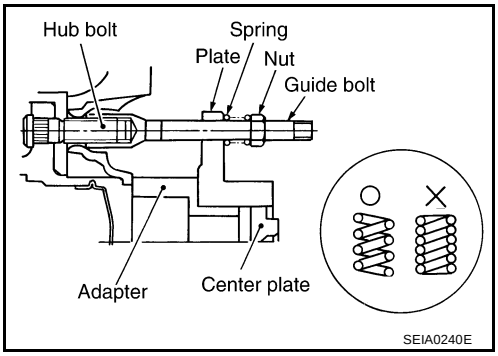
- A four-wheel thrust alignment should be performed.
  - This type of alignment is recommended for any NISSAN/INFINITI vehicle.
  - The four-wheel “thrust” process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
  - The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
  - The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
  - Your alignment equipment should be regularly calibrated in order to give correct information.
  - Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

THE ALIGNMENT PROCESS

IMPORTANT:

Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use “indicators”: (Green/red, plus or minus, Go/No Go). **Do not use these indicators.**
  - The alignment specifications programmed into your machine that operate these indicators may not be correct.
  - This may result in an ERROR.
- Some newer alignment machines are equipped with an optional “Rolling Compensation” method to “compensate” the sensors (alignment targets or head units). **Do not use this “Rolling Compensation” method.**
  - Use the “Jacking Compensation Method”. After installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
  - See Instructions in the alignment machine you're using for more information on this.

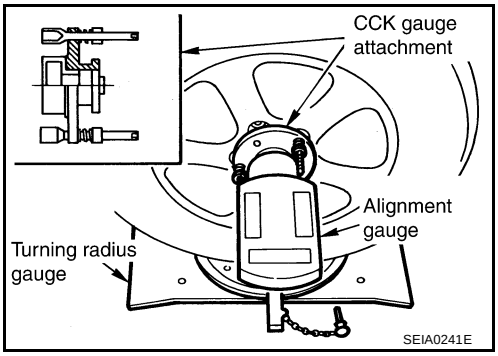


INSPECTION OF CAMBER, CASTER AND KINGPIN INCLINATION ANGLES

- Camber, caster, kingpin inclination angles cannot be adjusted.
- Before inspection, mount front wheels onto turning radius gauge. Mount rear wheels onto a stand that has same height so vehicle will remain horizontal.

Using a CCK Gauge

Install the CCK gauge attachment [SST: KV991040S0 (–)] with the following procedure on wheel, then measure wheel alignment.

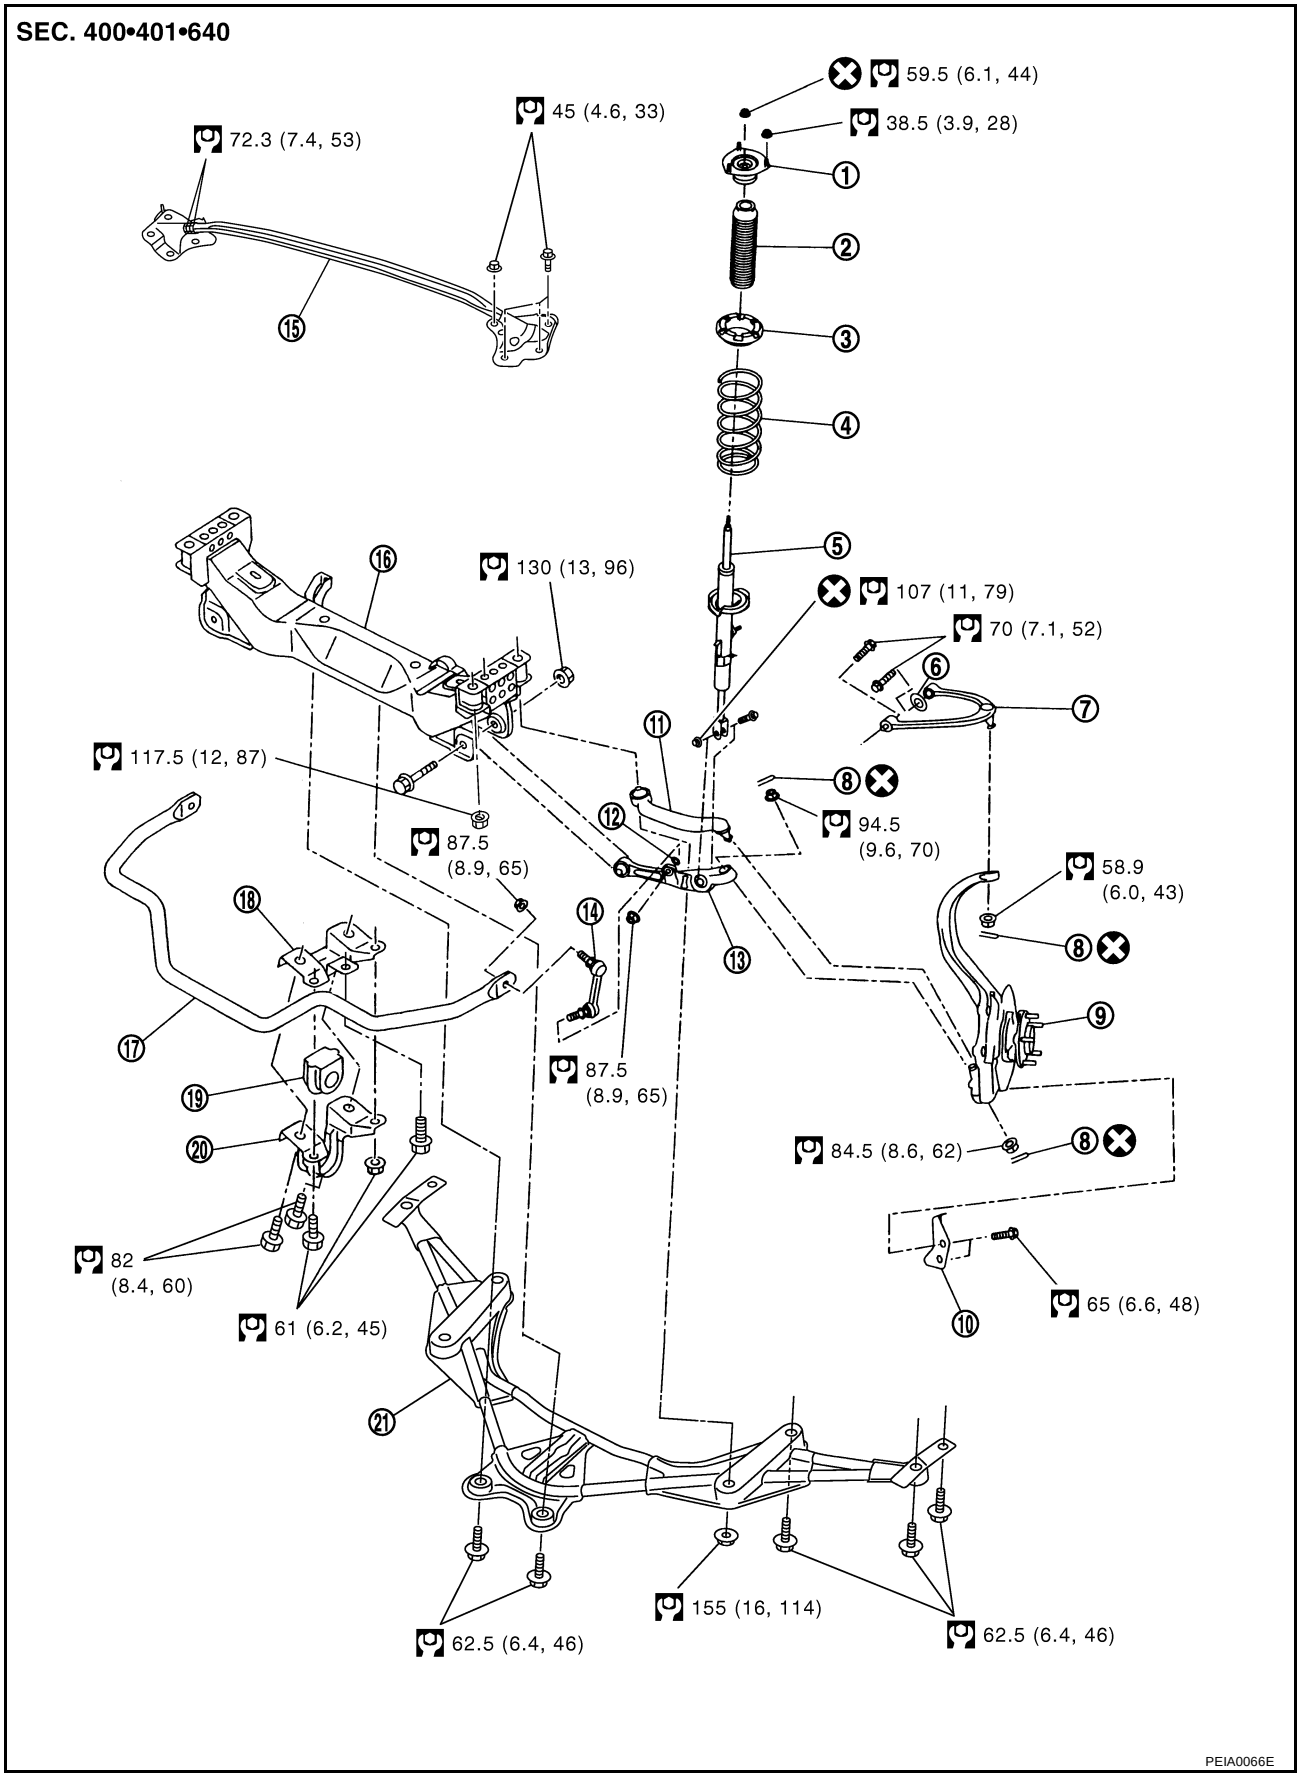


1. Remove there wheel nuts, and install a guide bolt to hub bolt.
2. Screw adapter into plate body until it contacts body tightly.
3. Screw center plate into plate.
4. Insert plate on guide bolt. Put spring in, and then evenly screw both guide bolt nut. When fastening guide bolt nut, do not completely compress spring.

5. Place the dent of alignment gauge onto the projection of center plate and tightly contact them to measure.

Camber, caster, kingpin inclination angles:

Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



CAUTION:

- **If camber, caster, or kingpin inclination angle is outside the standard, check front suspension parts for wear and damage, and replace suspect parts if necessary.**
- **King pin inclination angle is reference value, no inspection is required. (Due to the type of suspension, the kingpin inclination angle cannot be measured correctly using a normal alignment tester.)**

Components

NES00007

SEC. 400•401•640

1. Mounting insulator	2. Bound bumper	3. Spring upper seat
4. Coil spring	5. Shock absorber	6. Stopper rubber
7. Upper link	8. Cotter pin	9. Front axle
10. Steering stopper bracket	11. Compression rod	12. Washer
13. Transverse link	14. Stabilizer connecting rod	15. Tower bar
16. Front suspension member	17. Stabilizer bar	18. Stabilizer clamp bracket
19. Stabilizer bushing	20. Stabilizer clamp	21. Front cross bar

Refer to GI-11, "Components" ,for the symbols in the figure.

Removal and Installation

NES00008

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-26, "FRONT DISC BRAKE" .
3. Remove undercover with power tool.
4. Remove fixing bolts and nuts, then remove front cross bar from vehicle with power tool.
5. Remove steering hydraulic piping bracket from front suspension member. Refer to PS-33, "HYDRAULIC LINE" .
6. Remove steering gear and front suspension member attachment bolts and hang steering gear on vehicle. Refer to PS-17, "POWER STEERING GEAR AND LINKAGE" .
7. Set jack under engine.

   CAUTION:
   When setting jack to engine, use a wooden block or an equivalent for the setting.
8. Remove fixing bolt and nut between shock absorber and transverse link with power tool.
9. Remove cotter pin of upper link ball joint, then loosen mounting nut.
10. Use a ball joint remover (suitable tool) to remove upper link from steering knuckle. Be careful not to damage ball joint boot.

    CAUTION:
    Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.
11. Remove fixing nut and washer located at the bottom of stabilizer connecting rod, and then remove stabilizer connecting rod from transverse link with power tool.
12. Remove fixing nuts between engine mounting insulator and front suspension member. Refer to EM-101, "ENGINE ASSEMBLY" .
13. Remove fixing nuts between front suspension member and body with power tool.
14. Remove front suspension assembly form vehicle.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of shock absorber lower side (rubber bushing) under unladen condition with tires on ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

COIL SPRING AND SHOCK ABSORBER

PFP:54302

Removal and Installation

NES00009

REMOVAL

1. Remove tire with power tool.
2. Remove undercover with power tool.
3. Remove harness of wheel sensor from shock absorber. Refer to BRC-73, "WHEEL SENSORS" (With TCS), BRC-128, "WHEEL SENSORS" (With VDC).

   CAUTION:
   Do not pull on wheel sensor harness.
4. Remove mounting nuts of brake hose from shock absorber.
5. Remove mounting bolt and nut between shock absorber and transverse link with power tool.
6. Remove tower bar. Refer to FSU-20, "TOWER BAR" .
7. Remove mounting nuts on mounting insulator with power tool, then remove shock absorber from vehicle.

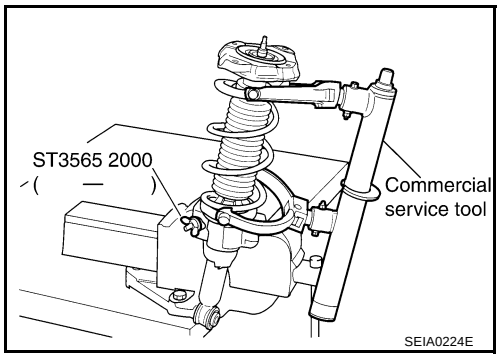
INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of shock absorber lower side (rubber bushing) under unladen condition with tires on ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

Disassembly and Assembly

NES0000A



DISASSEMBLY

NOTE:
Make sure piston rod on shock absorber is not damaged when removing components from shock absorber.

1. Install strut attachment (SST) to shock absorber and fix it in a vise.

   CAUTION:
   When installing strut attachment (SST) to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.
2. Using a spring compressor (commercial service tool), compress coil spring between spring upper seat and spring lower seat (on shock absorber) until coil spring is free.

   CAUTION:
   Be sure spring compressor (commercial service tool) is securely attached to coil spring. Compress coil spring.

3. Check that coil spring between spring upper seat and spring lower seat is free and then secure piston rod tip so that piston rod does not turn, and remove piston rod lock nut.
4. Remove mounting insulator, bound bumper, spring upper seat. Then remove coil spring from shock absorber.
5. Gradually release spring compressor (commercial service tool), and remove coil spring.

   CAUTION:
   Loosen while making sure coil spring attachment position does not move.
6. Remove strut attachment (SST) from shock absorber.

INSPECTION AFTER DISASSEMBLY

Shock Absorber Inspection

- Check shock absorber for deformation, cracks, damage, and replace if necessary.
- Check piston rod for damage, uneven wear, distortion, and replace if necessary.
- Check welded and sealed areas for oil leakage, and replace if necessary.

Mounting Insulator and Rubber Parts Inspection

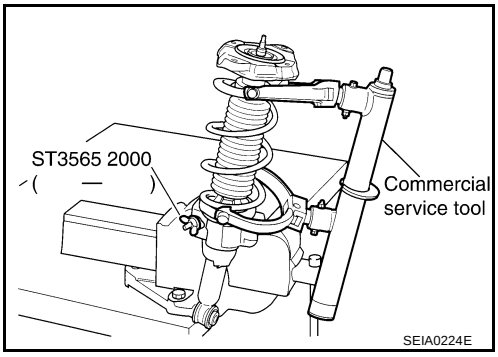
Check mounting insulator for cracks and rubber parts for wear. Replace them if necessary.

Coil Spring Inspection

Check coil spring for cracks, wear or damage, and replace if necessary.

ASSEMBLY

NOTE:



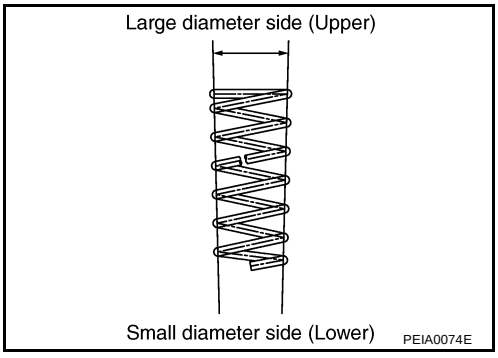
Make sure piston rod on shock absorber is not damaged when attaching components to shock absorber.

1. Install strut attachment (SST) to shock absorber and fix it in a vise.

   CAUTION:

   When installing strut attachment (SST) to shock absorber, wrap a shop cloth around shock absorber to protect it from damage.

2. Compress coil spring using a spring compressor (commercial service tool), and install it onto shock absorber.



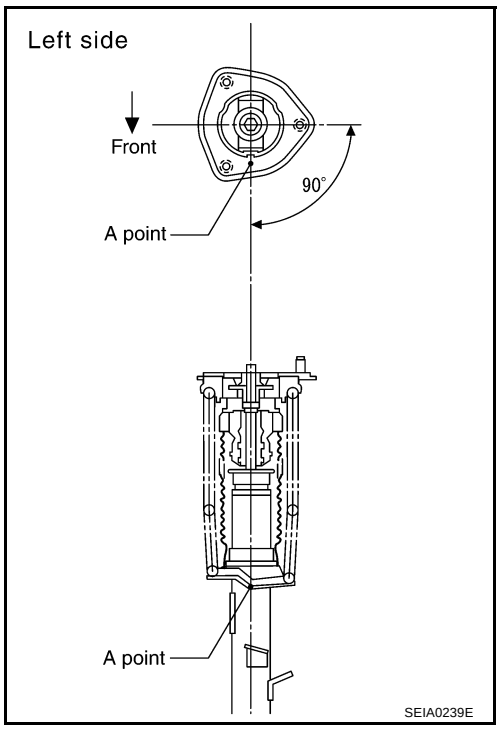
CAUTION:

- **Install coil spring as shown in the figure.**
- **Be sure spring compressor (commercial service tool) is securely attached to coil spring. Compress coil spring.**

3. Apply soapy water to bound bumper and insert into mounting insulator.

   CAUTION:

   Do not use machine oil.



4. Attach spring upper seat and mounting insulator as shown in the figure.

   CAUTION:
   - **Make sure coil spring is securely seated in spring mounting groove of spring upper seat.**
   - **The bottom part of spring should be at the position of A point of spring seat.**

5. Secure piston rod tip so that piston rod does not turn, and tighten the specified torque on piston rod lock nut.
6. Gradually release spring compressor (commercial service tool), and remove coil spring.

   CAUTION:
   Loosen spring compressor (commercial service tool) while making sure coil spring attachment position does not move.
7. Remove strut attachment (SST) from shock absorber.

TRANSVERSE LINK

PFP:54500

Removal and Installation

NES0000B

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove mounting nut and washer on lower portion of stabilizer connecting rod with power tool.
4. Remove mounting nut between transverse link and shock absorber on lower position.
5. Remove mounting nut between transverse link and front suspension member with power tool.
6. Remove transverse link from steering knuckle. Refer to FAX-4, "FRONT WHEEL HUB AND KNUCKLE" .
7. Remove transverse link from vehicle.

INSPECTION AFTER REMOVAL

Visual Inspection

Check transverse link and bushing for deformation, cracks, or damage. If any non-standard condition is found, replace it.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of front suspension member installation position and shock absorber lower side (rubber bushing) under unladen condition with tires on ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

UPPER LINK

PFP:54524

Removal and Installation

NES0000C

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove shock absorber. Refer to FSU-10, "COIL SPRING AND SHOCK ABSORBER" .
4. Remove cotter pin of upper link ball joint, then loosen mounting nut.
5. Use a ball joint remover (suitable tool) to remove upper link from steering knuckle. Be careful not to damage ball joint boot.

   CAUTION:
   Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.
6. Remove bolts holding upper link to body with power tool.
7. Remove upper link from vehicle.

INSPECTION AFTER REMOVAL

Visual Inspection

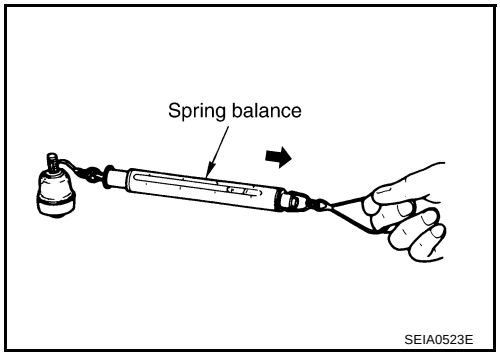
- Check upper link and bushing for deformation, cracks, or damage. If any non-standard condition is found, replace it.
- Check boot of ball joint for cracks, or other damage, and also for grease leakage. If any non-standard condition is found, replace it.

Ball Joint Inspection

- Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

NOTE:
Before measurement, move ball joint at least ten times by hand to check for smooth movement.



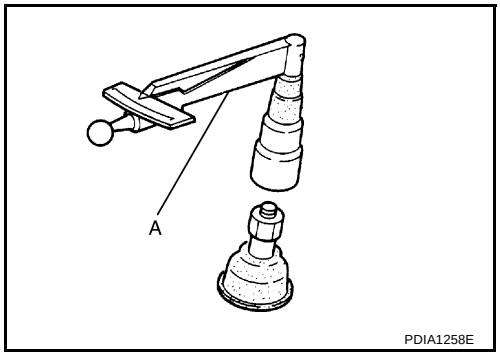
- Hook spring balance at ball stud. Confirm spring balance measurement value is within the specifications when ball stud begins moving.

  Swing torque:

  Less than 2.0 N·m (0.20 kg-m, 18 in-lb)

  Measured value of spring balance:

  Less than 34.8 N (3.5 kg, 7.8 lb)
- If it is outside the specified range, replace upper link assembly.



Rotating Torque Inspection

- Attach mounting nut to ball stud. Check that rotating torque is within specifications with a preload gauge.

  Tool number A: ST3127S000 (J–25765–A)

  Rotating torque:

  Less than 2.0 N·m (0.20 kg-m, 18 in-lb)
- If it is outside the specified range, replace upper link assembly.

Axial End Play Inspection

- Move tip of ball joint in axial direction to check for looseness.

Axial end play : 0 mm (0 in)

- If it is outside the specified range, replace upper link assembly.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.

NOTE:
Refer to component parts location and do not reuse non-reusable parts.

- Perform final tightening of front suspension member installation position (rubber bushing) under unladen condition with tires on ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

COMPRESSION ROD

PFP:54468

Removal and Installation

NES0000D

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove front cross bar from vehicle with power tool.
4. Remove cotter pin of compression rod ball joint, and loosen nut.
5. Use a ball joint remover (suitable tool) to remove compression rod from steering knuckle. Be careful not to damage ball joint boot.

   CAUTION:
   Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.
6. Remove compression rod from vehicle.

INSPECTION AFTER REMOVAL

Visual Inspection

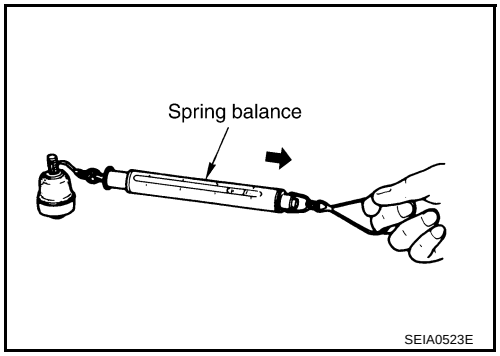
- Check compression rod and bushing for deformation, cracks, or damage. If any non-standard condition is found, replace it.
- Check boot of ball joint for cracks, or other damage, and also for grease leakage. If any non-standard condition is found, replace it.

Ball Joint Inspection

- Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

NOTE:
Before measurement, move ball joint at least ten times by hand to check for smooth movement.



- Hook spring balance at ball stud. Confirm spring balance measurement value is within the specifications when ball stud begins moving.

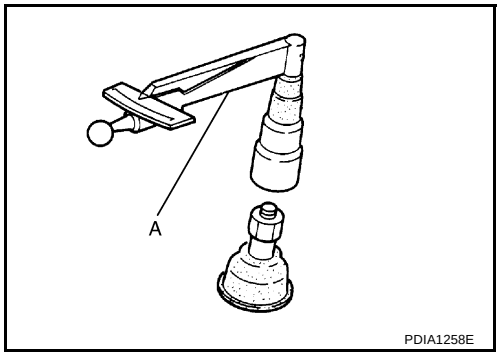
  Swing torque:

  0.147 - 2.45 N·m (0.02 - 0.24 kg-m, 2 - 21 in-lb)

  Measured value of spring balance:

  2.37 - 39.5 N (0.24 - 4.03 kg, 0.53 - 8.88 lb)

- If it is outside the specified range, replace compression rod assembly.



Rotating Torque Inspection

- Attach mounting nut to ball stud. Check that rotating torque is within the specifications with a preload gauge.

  Tool number A: ST3127S000 (J–25765–A)

  Rotating torque:

  0.147 - 2.45 N·m (0.02 - 0.24 kg-m, 2 - 21 in-lb)

- If it is outside the specified range, replace compression rod assembly.

AXIAL END PLAY INSPECTION

- Move tip of ball joint in axial direction to check for looseness.

Axial end play : 0 mm (0 in)

- If it is outside the specified range, replace compression rod assembly.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.

NOTE:
Refer to component parts location and do not reuse non-reusable parts.

- Perform final tightening of installation position between front suspension member and front cross bar (rubber bushing) under unladen condition with tires on ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

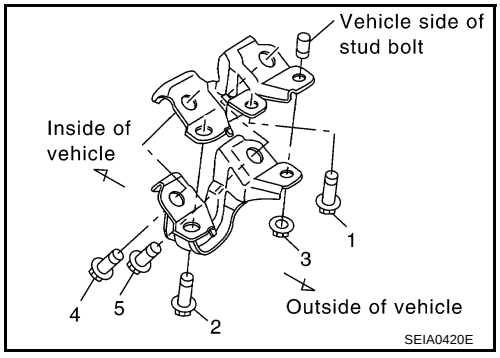
STABILIZER BAR

PFP:54611

Removal and Installation

NES0000E

REMOVAL



1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove mounting nut on upper portion of stabilizer connecting rod with power tool.
4. Remove fixing bolts and nuts, then remove stabilizer clamp, stabilizer bushing, and stabilizer clamp bracket.
5. Remove stabilizer bar from vehicle.

INSPECTION AFTER REMOVAL

Check stabilizer bar, stabilizer connecting rod, stabilizer bushing, stabilizer clamp and stabilizer clamp bracket for deformation, cracks and damage, and replace if necessary.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.
- Tighten each bolt and nut as shown in the figure for tightening stabilizer bracket and stabilizer clamp. Tightening order is as follows. 1 (fully tighten) → 2 (temporarily tighten) → 3 (temporarily tighten) → 2 (fully tighten) → 3 (fully tighten) → 4, 5 (temporarily tighten) → 4, 5 (fully tighten).

FRONT SUSPENSION MEMBER

PFP:54401

Removal and Installation

NES0000F

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove undercover with power tool.
3. Remove fixing bolts and nuts, then remove front cross bar from vehicle with power tool.
4. Remove steering hydraulic piping bracket from front suspension member. Refer to PS-33, "HYDRAULIC LINE" .
5. Remove steering gear and front suspension member attachment bolts and hang steering gear on vehicle. Refer to PS-17, "POWER STEERING GEAR AND LINKAGE" .
6. Remove transverse link from front suspension member with power tool. Refer to FSU-13, "TRANSVERSE LINK" .
7. Set jack under engine.

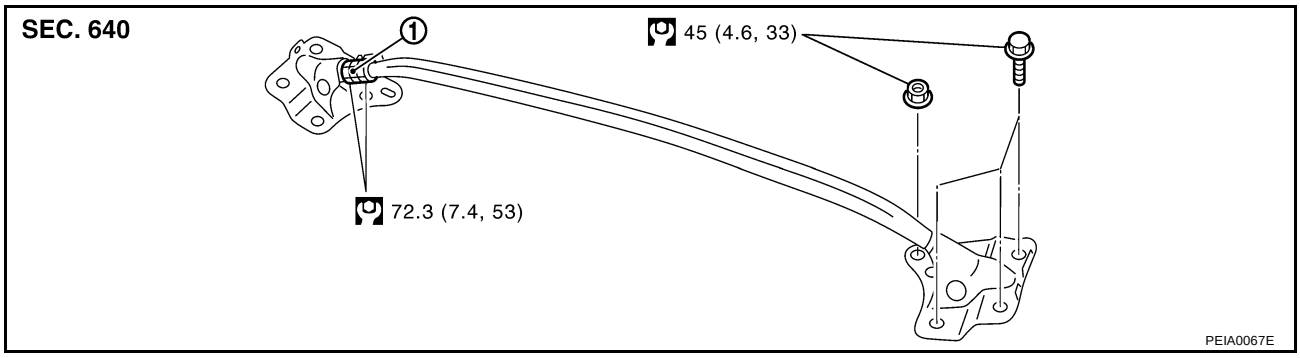
   CAUTION:
   When setting jack to engine, use a wooden block or an equivalent for the setting.
8. Remove fixing nuts between engine mounting insulator and front suspension member. Refer to EM-101, "ENGINE ASSEMBLY" .
9. Remove fixing nuts between front suspension member and body with power tool.
10. Remove front suspension member from vehicle.

INSPECTION AFTER REMOVAL

Check front suspension member for deformation, cracks, or any other damage. Replace if necessary.

INSTALLATION

- Refer to FSU-8, "Components" for tightening torque. Install in the reverse order of removal.
- Perform final tightening of installation position between front suspension member and transverse link (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to FSU-21, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



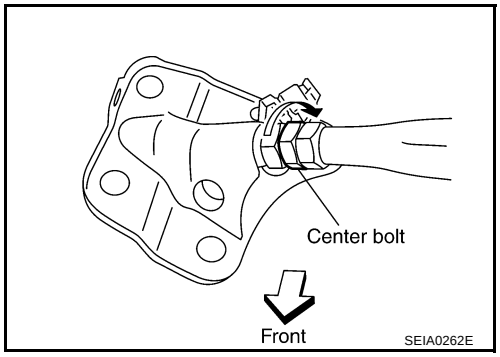
TOWER BAR

PFP:544A2

Removal and Installation

NES0000G

COMPONENTS

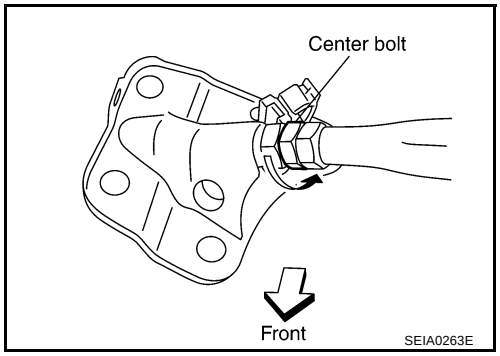


1. Center bolt

Refer to GI-11, "Components" ,for the symbols in the figure

REMOVAL

1. Fix center bolt, and then loosen nut in the right and left side.
2. Loosen center bolt to the direction in the figure on 660° (Or turn bolt 1.7 times) to place the black mark of center bolt above.
3. Remove tower bar fixing bolts and nuts, and remove tower bar from vehicle with power tool.



INSTALLATION

1. Install tower bar and tighten at the specified torque.

   NOTE:
   If it is hard to install tower bar, install it turning center bolt.
2. Tighten center bolt to the direction in the figure on 660° (Or turn bolt 1.7 times) to place the black mark of center bolt above.

   NOTE:
   The space between tower bar and engine collector should be between 10.0 mm (0.394 in) and 17.0 mm (0.669 in).
3. Tighten both nut of the right and left side of center bolt.

All rights reserved. No part of this Service Manual may be reproduced or stored in a retrieval system, or transmitted in any form, or by any means, electronic, mechanical, recording or otherwise, without the prior written permission of Nissan Motor Company Ltd., Tokyo, Japan.

FOREWORD

This manual contains maintenance and repair procedure for the 2007 NISSAN 350Z.

In order to assure your safety and the efficient functioning of the vehicle, this manual should be read thoroughly. It is especially important that the PRECAUTIONS in the GI section be completely understood before starting any repair task.

All information in this manual is based on the latest product information at the time of publication. The right is reserved to make changes in specifications and methods at any time without notice.

IMPORTANT SAFETY NOTICE

The proper performance of service is essential for both the safety of the technician and the efficient functioning of the vehicle.
The service methods in this Service Manual are described in such a manner that the service may be performed safely and accurately.
Service varies with the procedures used, the skills of the technician and the tools and parts available. Accordingly, anyone using service procedures, tools or parts which are not specifically recommended by NISSAN must first be completely satisfied that neither personal safety nor the vehicle's safety will be jeopardized by the service method selected.

NISSAN MOTOR CO., LTD.

QUICK REFERENCE CHART 350Z

PFP:00000

ENGINE TUNE-UP DATA (VQ35HR)

ELS0003W

Engine model		VQ35HR
Firing order		1-2-3-4-5-6
Idle speed rpm A/T (In “P” or “N” position) M/T (In “Neutral” position)		650 ± 50
Ignition timing (BTDC at idle speed) A/T (In “P” or “N” position) M/T (In “Neutral” position)		15° ± 5°
CO% at idle		0.7 - 9.9 % and engine runs smoothly
Tension of drive belts		Auto adjustment by auto tensioner
Radiator cap relief pressure kPa (kg/cm^2 , psi)	Standard	108 - 127 (1.1 - 1.3, 16 - 18)
	Limit	88 (0.9, 13)
Cooling system leakage testing pressure kPa (kg/cm^2 , psi)		157 (1.6, 23)
Compression pressure kPa (kg/cm^2 , psi)/rpm		
	Standard	1,275 (13.0, 185)/300
	Minimum	981 (10.0, 142)/300
	Differential limit between cylinders	98 (1.0, 14)/300
Spark plug	Standard type	FXE22HR11
	Gap (Nominal) mm (in)	1.1 (0.043)

FRONT WHEEL ALIGNMENT (Unladen*)

ELS0003X

Camber Degree minute (Decimal degree)		Minimum	–1°20′ (–1.33°)
		Nominal	–0°35′ (–0.58°)
		Maximum	0°10′ (0.17°)
		Left and right difference	45′ (0.75°)
Caster Degree minute (Decimal degree)		Minimum	7°25′ (7.42°)
		Nominal	8°10′ (8.17°)
		Maximum	8°55′ (8.92°)
		Left and right difference	45′ (0.75°)
Kingpin inclination Degree minute (Decimal degree)		Minimum	4°20′ (4.33°)
		Nominal	5°05′ (5.08°)
		Maximum	5°50′ (5.83°)
Total toe-in	Distance	Minimum	0 mm (0 in)
		Nominal	1 mm (0.04 in)
		Maximum	2 mm (0.08 in)
	Angle (left wheel or right wheel) Degree minute (Decimal degree)	Minimum	0°00′ (0.00°)
		Nominal	0°02′30″ (0.04°)
		Maximum	0°05′ (0.08°)

Wheel turning angle (Full turn)	Inside Degree minute (Decimal degree)	Minimum	35°55′ (35.9°)
		Nominal	38°55′ (38.9°)
		Maximum	39°55′ (39.9°)
	Outside Degree minute (Decimal degree)	Nominal	30°40′ (30.7°)

* : Fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

REAR WHEEL ALIGNMENT (Unladen*)

ELS0003Y

Camber Degree minute (Decimal degree)		Minimum	–2°05′ (–2.08°)
		Nominal	–1°35′ (–1.58°)
		Maximum	–1°05′ (–1.08°)
Total toe-in	Distance	Minimum	1.1 mm (0.043 in)
		Nominal	1.9 mm (0.075 in)
		Maximum	2.7 mm (0.106 in)
	Angle (left wheel or right wheel) Degree minute (Decimal degree)	Minimum	0°02′54″ (0.05°)
		Nominal	0°04′54″ (0.08°)
		Maximum	0°06′54″ (0.12°)

* : Fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.

BRAKE

ELS0003Z

Unit : mm (in)

Front brake	Pad repair limit thickness	2.0 (0.079)
	Rotor repair limit thickness	Other than brembo : 26.0 (1.024) With brembo : 28.4 (1.118)
Rear brake	Pad repair limit thickness	2.0 (0.079)
	Rotor repair limit thickness	Other than brembo : 14.0 (0.551) With brembo : 20.2 (0.795)
Brake pedal height (from dash lower panel top surface)		M/T : 153.2 - 163.2 (6.03 - 6.43) A/T : 161.5 - 171.5 (6.36 - 6.75)
Depressed pedal height*		M/T : More than 90 (3.54) A/T : More than 95 (3.74)

* : Under a force of 490 N(50 kg, 110 lb) with the engine running.

REFILL CAPACITIES

ELS00040

UNIT		Liter	US measure
Fuel tank		76	20 gal
Engine coolant (With reservoir tank)		9.0	9-1/2 qt
Engine	Drain and refill		
	With oil filter change	4.7	5 qt
	Without oil filter change	4.4	4-5/8 qt
	Dry engine (Overhaul)	5.4	5-3/4 qt
Transmission	A/T	10.3	10-7/8 qt
	M/T	2.9	3-1/8 qt
Differential carrier		1.4	3 pt
Power steering system		1.0	1 1/8 qt
Air conditioning system	Compressor oil	0.15	5.3 fl oz
	Refrigerant	0.55 kg	1.21 lb

PRECAUTIONS

PFP:00001

Description

NAS00001

Observe the following precautions to ensure safe and proper servicing. These precautions are not described in each individual section.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

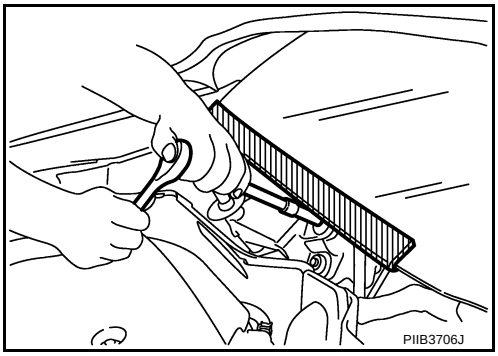
NAS00002

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

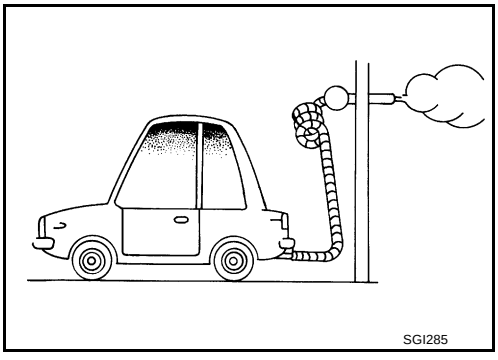


NAS00004

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

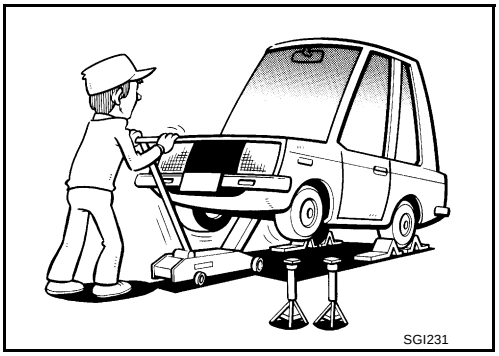
Precautions for Procedures without Cowl Top Cover

NAS0005O



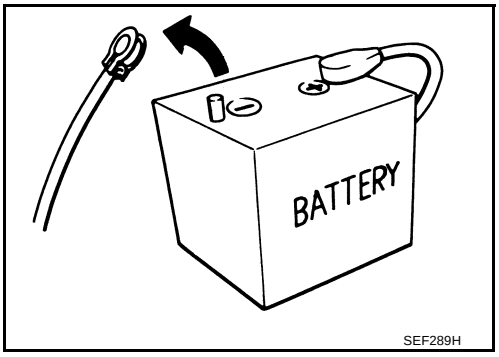
When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

PIIB3706J



General Precautions

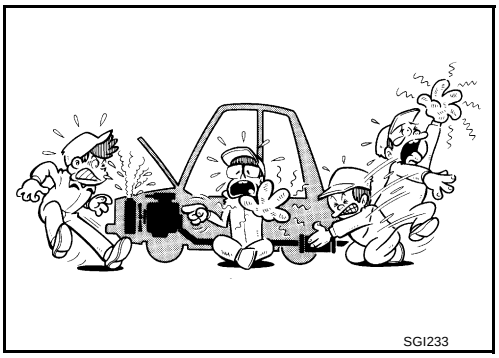
NAS00005



- Do not operate the engine for an extended period of time without proper exhaust ventilation.
  Keep the work area well ventilated and free of any flammable materials. Special care should be taken when handling any flammable or poisonous materials, such as gasoline, refrigerant gas, etc. When working in a pit or other enclosed area, be sure to properly ventilate the area before working with hazardous materials.
  Do not smoke while working on the vehicle.

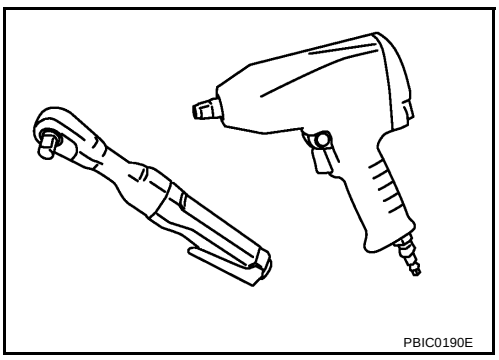
SGI285

- Before jacking up the vehicle, apply wheel chocks or other tire blocks to the wheels to prevent the vehicle from moving. After jacking up the vehicle, support the vehicle weight with safety stands at the points designated for proper lifting before working on the vehicle.
  These operations should be done on a level surface.
- When removing a heavy component such as the engine or transaxle/transmission, be careful not to lose your balance and drop them. Also, do not allow them to strike adjacent parts, especially the brake tubes and master cylinder.

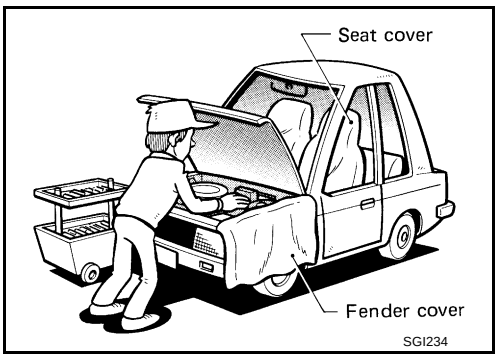


SGI231

- Before starting repairs which do not require battery power:
  Turn off ignition switch.
  Disconnect the negative battery terminal.
- If the battery terminals are disconnected, recorded memory of radio and each control unit is erased.
- Battery posts, terminals and related accessories contain lead and lead compounds. Wash hands after handling.



SEF289H



- To prevent serious burns:
  Avoid contact with hot metal parts.
  Do not remove the radiator cap when the engine is hot.
- Dispose of or recycle drained oil or the solvent used for cleaning parts in an appropriate manner.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically.
  Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.
- Clean all disassembled parts in the designated liquid or solvent prior to inspection or assembly.

SGI233

- Replace oil seals, gaskets, packings, O-rings, locking washers, cotter pins, self-locking nuts, etc. with new ones.
- Replace inner and outer races of tapered roller bearings and needle bearings as a set.
- Arrange the disassembled parts in accordance with their assembled locations and sequence.
- Do not touch the terminals of electrical components which use microcomputers (such as ECM).
  Static electricity may damage internal electronic components.
- After disconnecting vacuum or air hoses, attach a tag to indicate the proper connection.
- Use only the fluids and lubricants specified in this manual.
- Use approved bonding agent, sealants or their equivalents when required.
- Use hand tools, power tools (disassembly only) and recommended special tools where specified for safe and efficient service repairs.
- When repairing the fuel, oil, water, vacuum or exhaust systems, check all affected lines for leaks.

PBIC0190E

- Before servicing the vehicle:
  Protect fenders, upholstery and carpeting with appropriate covers.
  Take caution that keys, buckles or buttons do not scratch paint.

WARNING:
To prevent ECM from storing the diagnostic trouble codes, do not carelessly disconnect the harness connectors which are related to the engine control system and TCM (transmission control module) system. The connectors should be disconnected only when working according to the WORK FLOW of TROUBLE DIAGNOSES in EC and AT sections.

Precautions for Three Way Catalyst

NAS00006

If a large amount of unburned fuel flows into the catalyst, the catalyst temperature will be excessively high. To prevent this, follow the instructions.

- Use unleaded gasoline only. Leaded gasoline will seriously damage the three way catalyst.
- When checking for ignition spark or measuring engine compression, make tests quickly and only when necessary.
- Do not run engine when the fuel tank level is low, otherwise the engine may misfire, causing damage to the catalyst.

Do not place the vehicle on flammable material. Keep flammable material off the exhaust pipe and the three way catalyst.

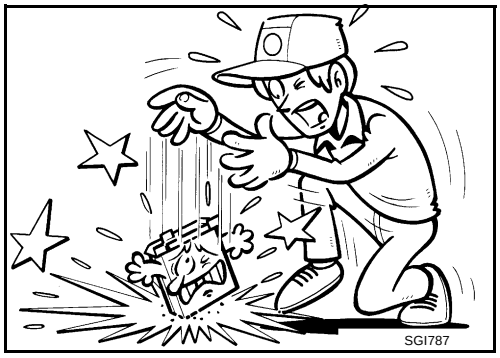
Precautions for Fuel (Unleaded Premium Gasoline Required)

NAS0005P

Use unleaded premium gasoline with an octane rating of at least 91 AKI (Anti-Knock Index) number (Research octane number 96).

If unleaded premium gasoline is not available, unleaded regular gasoline with an octane rating of at least 87 AKI number (Research octane number 91) can be used, but only under the following precautions:

- have the fuel tank filled only partially with unleaded regular gasoline, and fill up with unleaded premium gasoline as soon as possible.
- avoid full throttle driving and abrupt acceleration.



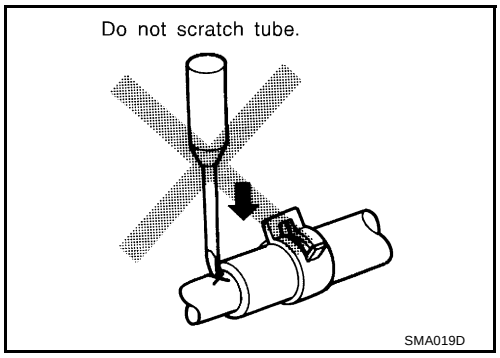
However, for maximum vehicle performance, the use of unleaded premium gasoline is recommended.

CAUTION:
Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst. Do not use E-85 fuel (85% fuel ethanol, 15% unleaded gasoline) unless the vehicle is specifically designed for E-85 fuel (i.e. Flexible Fuel Vehicle - FFV models). Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage validity.

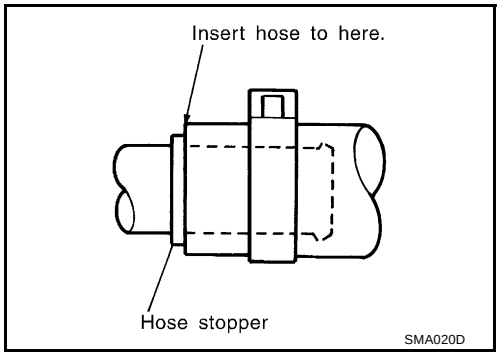
Precautions for Multiport Fuel Injection System or Engine Control System

NAS00008

- Before connecting or disconnecting any harness connector for the multiport fuel injection system or ECM:
  Turn ignition switch to “OFF” position.
  Disconnect negative battery terminal.
  Otherwise, there may be damage to ECM.
- Before disconnecting pressurized fuel line from fuel pump to injectors, be sure to release fuel pressure.
- Be careful not to jar components such as ECM and mass air flow sensor.



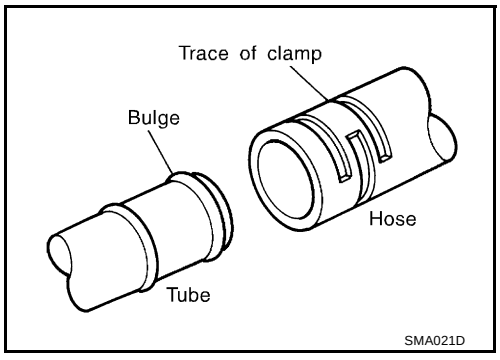
Precautions for Hoses



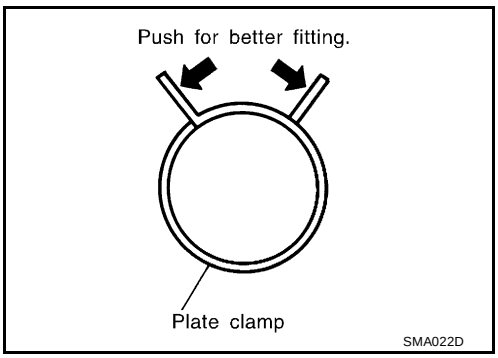
NAS00009

HOSE REMOVAL AND INSTALLATION

- To prevent damage to rubber hose, do not pry off rubber hose with tapered tool or screwdriver.



- To reinstall the rubber hose securely, make sure that hose insertion length and orientation is correct. (If tube is equipped with hose stopper, insert rubber hose into tube until it butts up against hose stopper.)



HOSE CLAMPING

- If old rubber hose is re-used, install hose clamp in its original position (at the indentation where the old clamp was). If there is a trace of tube bulging left on the old rubber hose, align rubber hose at that position.
- Discard old clamps; replace with new ones.

- After installing plate clamps, apply force to them in the direction of the arrow, tightening rubber hose equally all around.

Precautions for Engine Oils

NAS0000A

Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used oil.
If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

HEALTH PROTECTION PRECAUTIONS

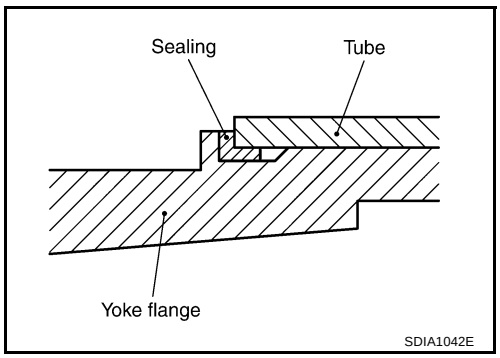
- Avoid prolonged and repeated contact with oils, particularly used engine oils.
- Wear protective clothing, including impervious gloves where practicable.
- Do not put oily rags in pockets.
- Avoid contaminating clothes, particularly underpants, with oil.
- Heavily soiled clothing and oil-impregnated footwear should not be worn. Overalls must be cleaned regularly.
- First aid treatment should be obtained immediately for open cuts and wounds.
- Use barrier creams, applying them before each work period, to help the removal of oil from the skin.
- Wash with soap and water to ensure all oil is removed (skin cleansers and nail brushes will help). Preparations containing lanolin replace the natural skin oils which have been removed.
- Do not use gasoline, kerosene, diesel fuel, gas oil, thinners or solvents for cleaning skin.
- If skin disorders develop, obtain medical advice without delay.
- Where practical, degrease components prior to handling.
- Where there is a risk of eye contact, eye protection should be worn, for example, chemical goggles or face shields; in addition an eye wash facility should be provided.

ENVIRONMENTAL PROTECTION PRECAUTIONS

Dispose of used oil and used oil filters through authorized waste disposal contractors to licensed waste disposal sites, or to the waste oil reclamation trade. if in doubt, contact the local authority for advice on disposal facilities.
It is illegal to pour used oil on to the ground, down sewers or drains, or into water sources.
The regulations concerning pollution vary between regions.

Precautions for Air Conditioning

NAS0000B



Use an approved refrigerant recovery unit any time the air conditioning system must be discharged. Refer to ATC/MTC section “HFC-134a (R-134a) Service Procedure”, “REFRIGERANT LINES” for specific instructions.

Precautions for Propeller Shaft

NAS0000C

- If propeller shaft is dropped, replace propeller shaft with new one.
- Do not hit, impact, or damage tube.

- If damage such as cracks or peeling off in sealing (joint between yoke and tube) is found, replace propeller shaft with new one.
- If there is chipping or looseness in tube, replace propeller shaft with new one.
- Protect propeller shaft with protector (special service tool) during work.

HOW TO USE THIS MANUAL

PFP:00008

Description

NAS0000D

This volume explains “Removal, Disassembly, Installation, Inspection and Adjustment” and “Trouble Diagnoses”.

Terms

NAS0000E

- The captions **WARNING** and **CAUTION** warn you of steps that must be followed to prevent personal injury and/or damage to some part of the vehicle.
  WARNING indicates the possibility of personal injury if instructions are not followed.
  CAUTION indicates the possibility of component damage if instructions are not followed.
  BOLD TYPED STATEMENTS except **WARNING** and **CAUTION** give you helpful information.
  Standard value:Tolerance at inspection and adjustment.
  Limit value:The maximum or minimum limit value that should not be exceeded at inspection and adjustment.

Units

NAS0000F

- The **UNITS** given in this manual are primarily expressed as the SI UNIT (International System of Unit), and alternatively expressed in the metric system and in the yard/pound system.
  Also with regard to tightening torque of bolts and nuts, there are descriptions both about range and about the standard tightening torque.

  “Example”
  Range

  Outer Socket Lock Nut : 59 - 78 N·m (6.0 - 8.0 kg-m, 43 - 58 ft-lb)

  Standard

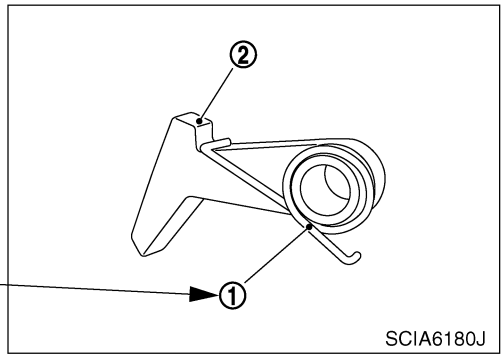
  Drive Shaft Installation Bolt : 44.3 N·m (4.5 kg-m, 33 ft-lb)

Contents

NAS0000G

- **ALPHABETICAL INDEX** is provided at the end of this manual so that you can rapidly find the item and page you are searching for.
- **A QUICK REFERENCE INDEX**, a black tab (e.g. BR) is provided on the first page. You can quickly find the first page of each section by matching it to the section's black tab.
- **THE CONTENTS** are listed on the first page of each section.
- **THE TITLE** is indicated on the upper portion of each page and shows the part or system.
- **THE PAGE NUMBER** of each section consists of two or three letters which designate the particular section and a number (e.g. “BR-5”).
- **THE SMALL ILLUSTRATIONS** show the important steps such as inspection, use of special tools, knacks of work and hidden or tricky steps which are not shown in the previous large illustrations.
  Assembly, inspection and adjustment procedures for the complicated units such as the automatic transaxle or transmission, etc. are presented in a step-by-step format where necessary.

Relation between Illustrations and Descriptions



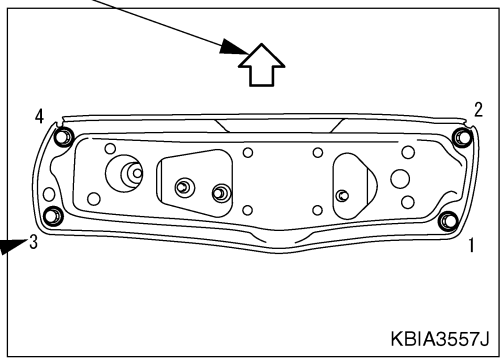
NAS000A2

The following sample explains the relationship between the part description in an illustration, the part name in the text and the service procedures.

< Example 1 >

1. Remove return spring (1) from parking pawl (2).

The identifier number of the part name in the text is consistent with the identifier part number in the illustration.

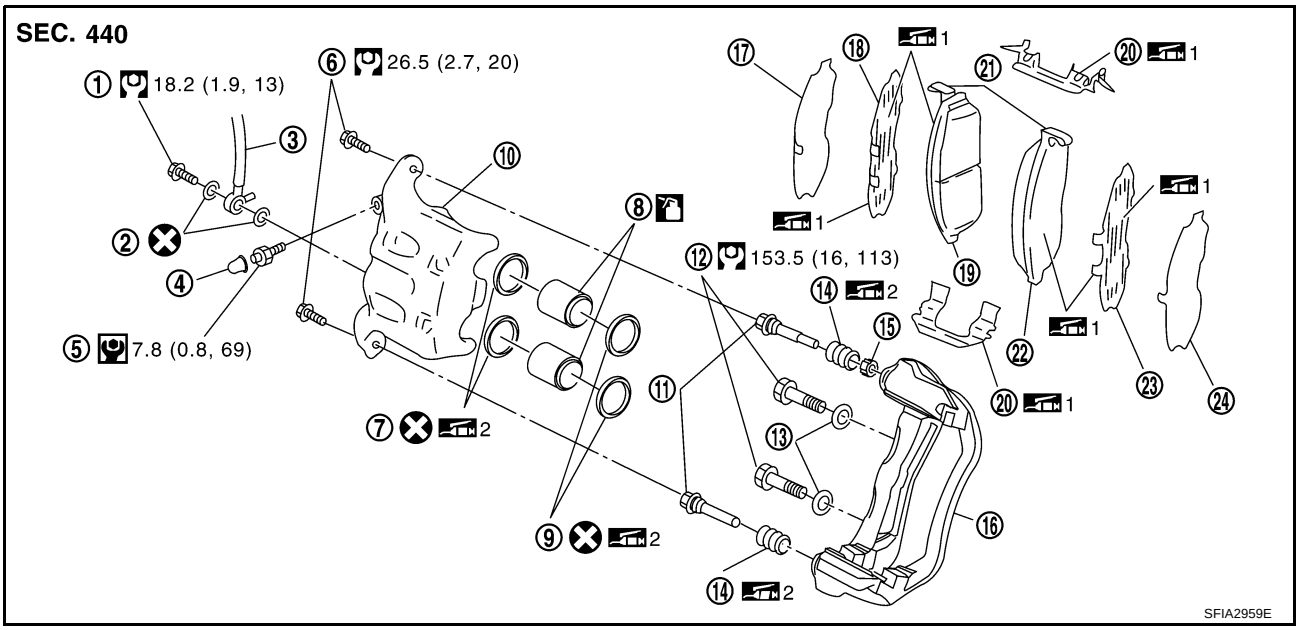


Direction mark

< Example 2 >

- ⇨ : Vehicle front
- Tighten rear member mounting bolts following the numerical order shown in the illustration.
- Note : View upward

The numbers in the illustration are consistent with the service operation instructions.



SAIA0519E

Components

NAS0000H

- **THE LARGE ILLUSTRATIONS** are exploded views (see the following) and contain tightening torques, lubrication points, section number of the **PARTS CATALOG** (e.g. SEC. 440) and other information necessary to perform repairs.
  The illustrations should be used in reference to service matters only. When ordering parts, refer to the appropriate **PARTS CATALOG** .
  Components shown in an illustration may be identified by a circled number. When this style of illustration is used, the text description of the components will follow the illustration.

1. Union bolt	2. Copper washer	3. Brake hose
4. Cap	5. Bleed valve	6. Sliding pin bolt
7. Piston seal	8. Piston	9. Piston boot
10. Cylinder body	11. Sliding pin	12. Torque member mounting bolt
13. Washer	14. Sliding pin boot	15. Bushing
16. Torque member	17. Inner shim cover	18. Inner shim
19. Inner pad	20. Pad retainer	21. Pad wear sensor
22. Outer pad	23. Outer shim	24. Outer shim cover
1: PBC (Poly Butyl Cuprysil) grease or silicone-based grease	2: Rubber grease	: Brake fluid

Refer to GI section for additional symbol definitions.

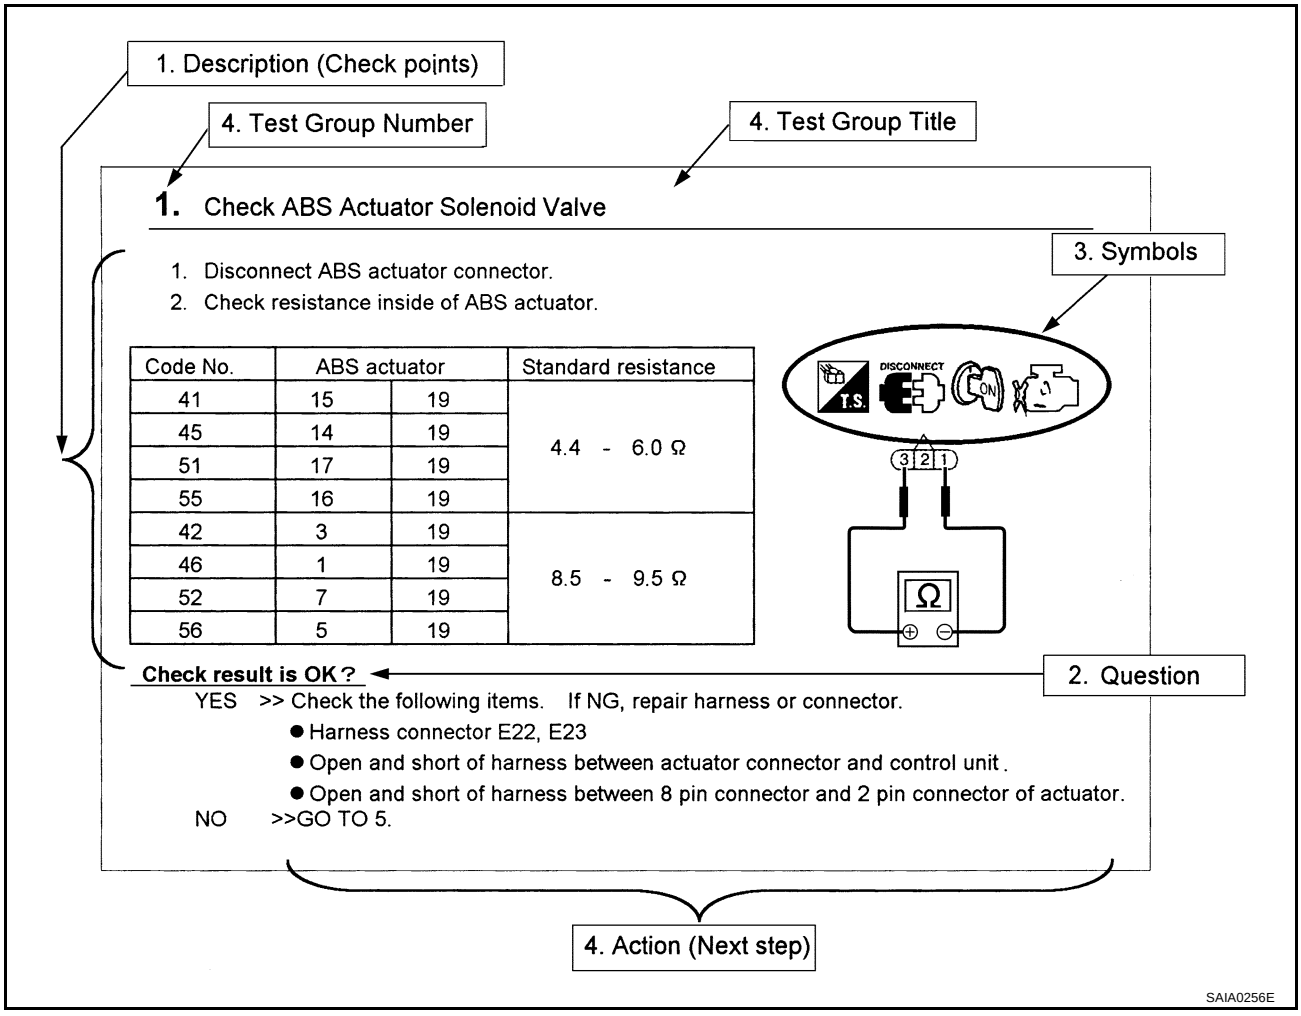
SYMBOLS

SYMBOL	DESCRIPTION		SYMBOL	DESCRIPTION
	Tightening torque The tightening torque specifications of bolts and nuts may be presented as either a range or a standard tightening torque.	: N•m (kg-m, ft-lb)		Always replace after every disassembly.
		: N•m (kg-m, in-lb)	Ⓟ	Apply petroleum jelly.
	Should be lubricated with grease. Unless otherwise indicated, use recommended multi-purpose grease.		Ⓜ	Apply molybdenum added petroleum jelly.
	Should be lubricated with oil.		ATF	Apply ATF.
	Sealing point		★	Select with proper thickness.
Ⓛ	Sealing point with locking sealant.		☆	Adjustment is required.
	Checking point			

SAIA0749E

How to Follow Trouble Diagnoses

NAS0000I



DESCRIPTION

NOTICE:

Trouble diagnoses indicate work procedures required to diagnose problems effectively. Observe the following instructions before diagnosing.

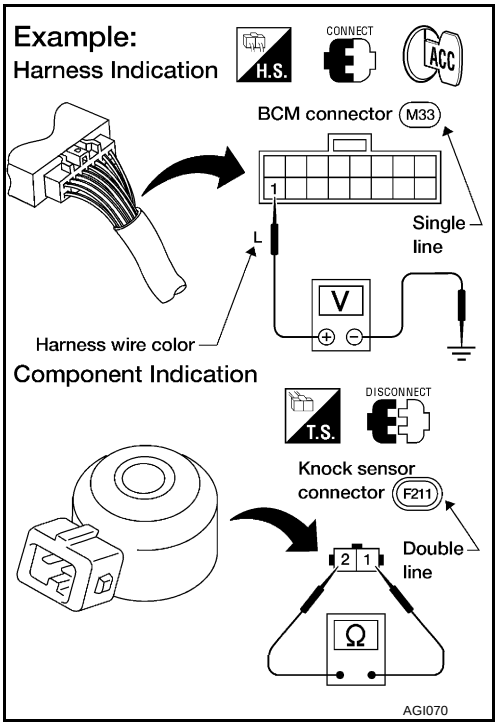
1. **Before performing trouble diagnoses, read the "Preliminary Check", the "Symptom Chart" or the "Work Flow".**
2. **After repairs, re-check that the problem has been completely eliminated.**
3. **Refer to Component Parts and Harness Connector Location for the Systems described in each section for identification/location of components and harness connectors.**
4. **Refer to the Circuit Diagram for quick pinpoint check.**
   If you need to check circuit continuity between harness connectors in more detail, such as when a sub-harness is used, refer to Wiring Diagram in each individual section and Harness Layout in PG section for identification of harness connectors.
5. **When checking circuit continuity, ignition switch should be OFF.**
6. **Before checking voltage at connectors, check battery voltage.**
7. **After accomplishing the Diagnostic Procedures and Electrical Components Inspection, make sure that all harness connectors are reconnected as they were.**

HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES

1. **Work and diagnostic procedure**
   Start to diagnose a problem using procedures indicated in enclosed test groups.
2. **Questions and required results**
   Questions and required results are indicated in bold type in test group.
   The meaning of are as follows:

a. Battery voltage → 11 - 14V or approximately 12V

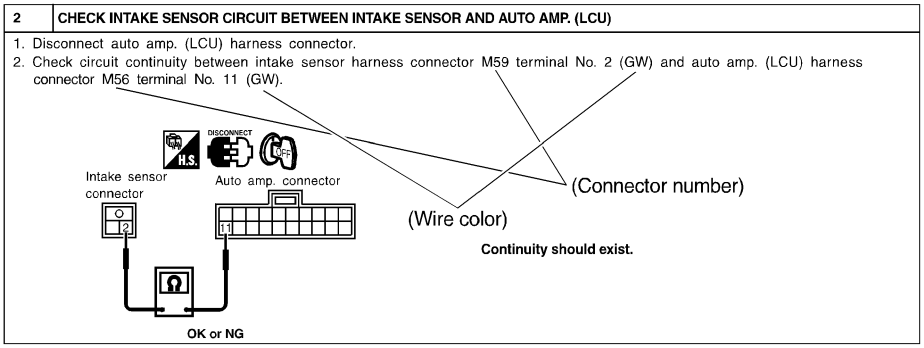
b. Voltage : Approximately 0V → Less than 1V



3. **Symbol used in illustration**
   Symbols included in illustrations refer to measurements or procedures. Before diagnosing a problem, familiarize yourself with each symbol. Refer to "Connector Symbols" in GI Section and "KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES" below.
4. **Action items**
   Next action for each test group is indicated based on result of each question. Test group number is shown in the left upper portion of each test group.

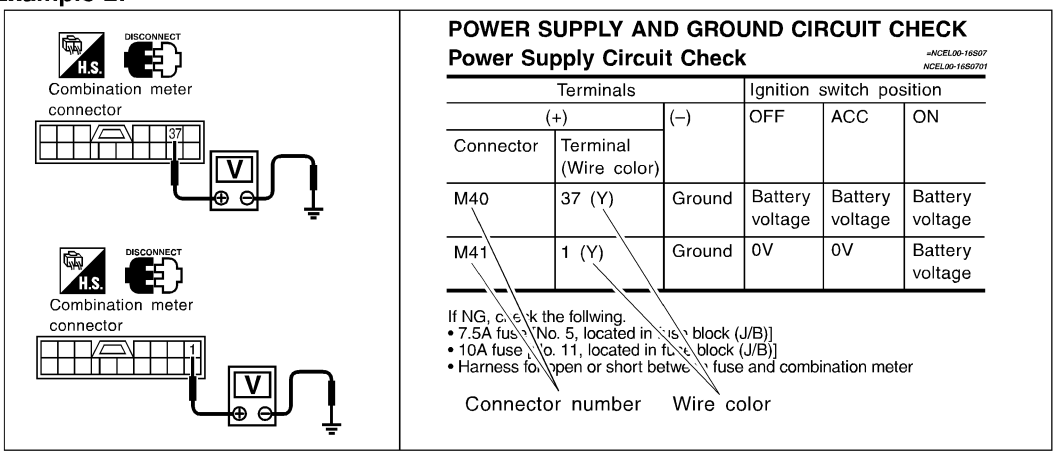
HARNESS WIRE COLOR AND CONNECTOR NUMBER INDICATION

There are two types of harness wire color and connector number indication.



TYPE 1: Harness Wire Color and Connector Number are Shown in Illustration

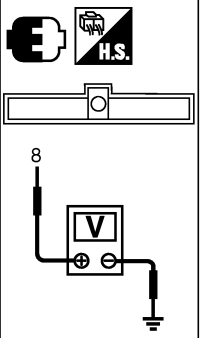
- Letter designations next to test meter probe indicate harness wire color.
- Connector numbers in a single circle (e.g. M33) indicate harness connectors.
- Connector numbers in a double circle (e.g. F211) indicate component connectors.



TYPE 2: Harness Wire Color and Connector Number are Shown in Text

Example 1:

Example 2:



SGI144A

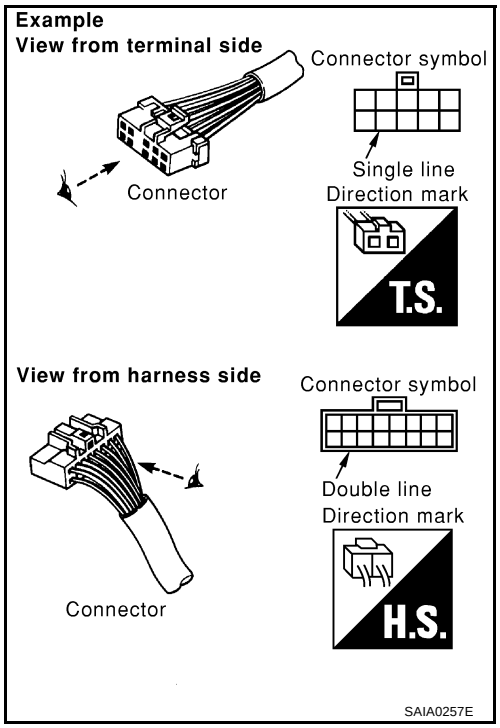
KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES

SYMBOL	DESCRIPTION	SYMBOL	DESCRIPTION
	Check after disconnecting the connector to be measured.	GST	Procedure with Generic Scan Tool. (GST, OBD-II scan tool)
	Check after connecting the connector to be measured.	NO TOOLS	Procedure without CONSULT-II, CONSULT-III or GST
	Insert key into ignition switch.	A/C OFF	A/C switch is “OFF”.
	Remove key from ignition switch.	A/C ON	A/C switch is “ON”.
	Insert and remove key repeatedly.		REC switch is “ON”.
OFF	Turn ignition switch to “OFF” position.		REC switch is “OFF”.
ACC	Turn ignition switch to “ACC” position.		Fan switch is “ON”. (At any position except for “OFF” position)
ON	Turn ignition switch to “ON” position.		Fan switch is “OFF”.
ST	Turn ignition switch to “START” position.	FUSE	Apply fuse.
OFF ACC	Turn ignition switch from “OFF” to “ACC” position.	FUSE BAT	Apply positive voltage from battery with fuse directly to components.
ACC ON	Turn ignition switch from “ACC” to “ON” position.		
ACC OFF	Turn ignition switch from “ACC” to “OFF” position.		

SAIA1539E

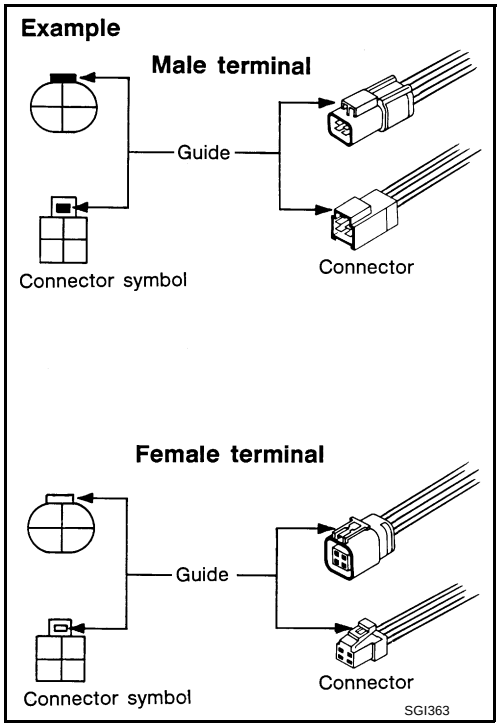
SYMBOL	DESCRIPTION	SYMBOL	DESCRIPTION
	Turn ignition switch from "OFF" to "ON" position.		Drive vehicle.
	Turn ignition switch from "ON" to "OFF" position.		
	Do not start engine, or check with engine stopped.		Disconnect battery negative cable.
	Start engine, or check with engine running.		Depress brake pedal.
	Apply parking brake.		Release brake pedal.
	Release parking brake.		Depress accelerator pedal.
	Check after engine is warmed up sufficiently.		Release accelerator pedal.
	Votage should be measured with a voltmeter.		Pin terminal check for SMJ type ECM or TCM connectors. **For details regarding the terminal arrangement, refer to the "ELECTRICAL UNITS" electrical reference page at the end of the manual.**
	Circuit resistance should be measured with an ohmmeter.		
	Current should be measured with an ammeter.		
	Pulse signal should be checked with an oscilloscope.		
	Procedure with CONSULT-III		
	Procedure without CONSULT-III		
	Place selector lever in "P" position.		
	Place selector lever in "N" position.		
	Jack up front portion.		
	Jack up rear portion.		
	Inspect under engine room.		
	Inspect under floor.		
	Inspect rear under floor.		

SAIA1540E



How to Read Wiring Diagrams

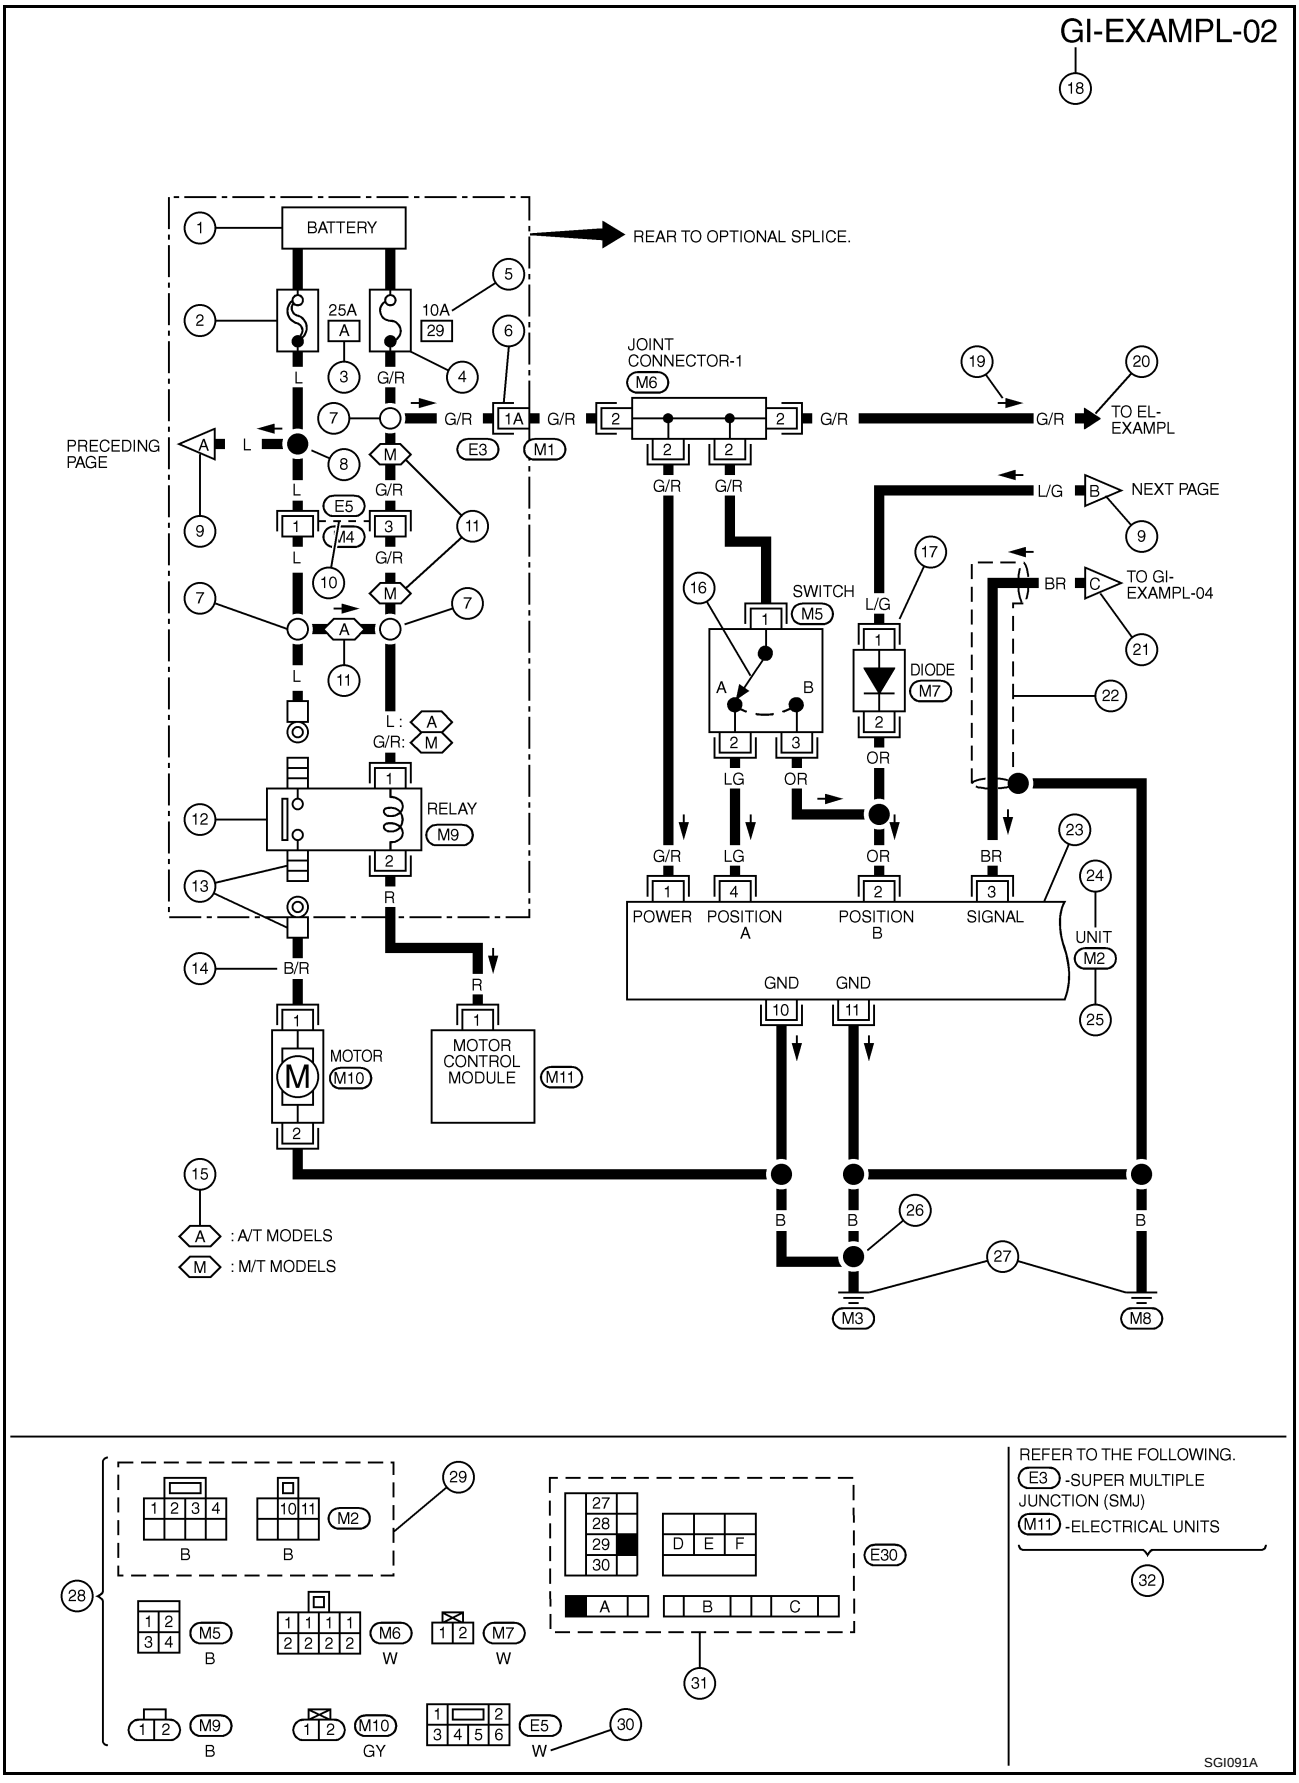
NAS000A3



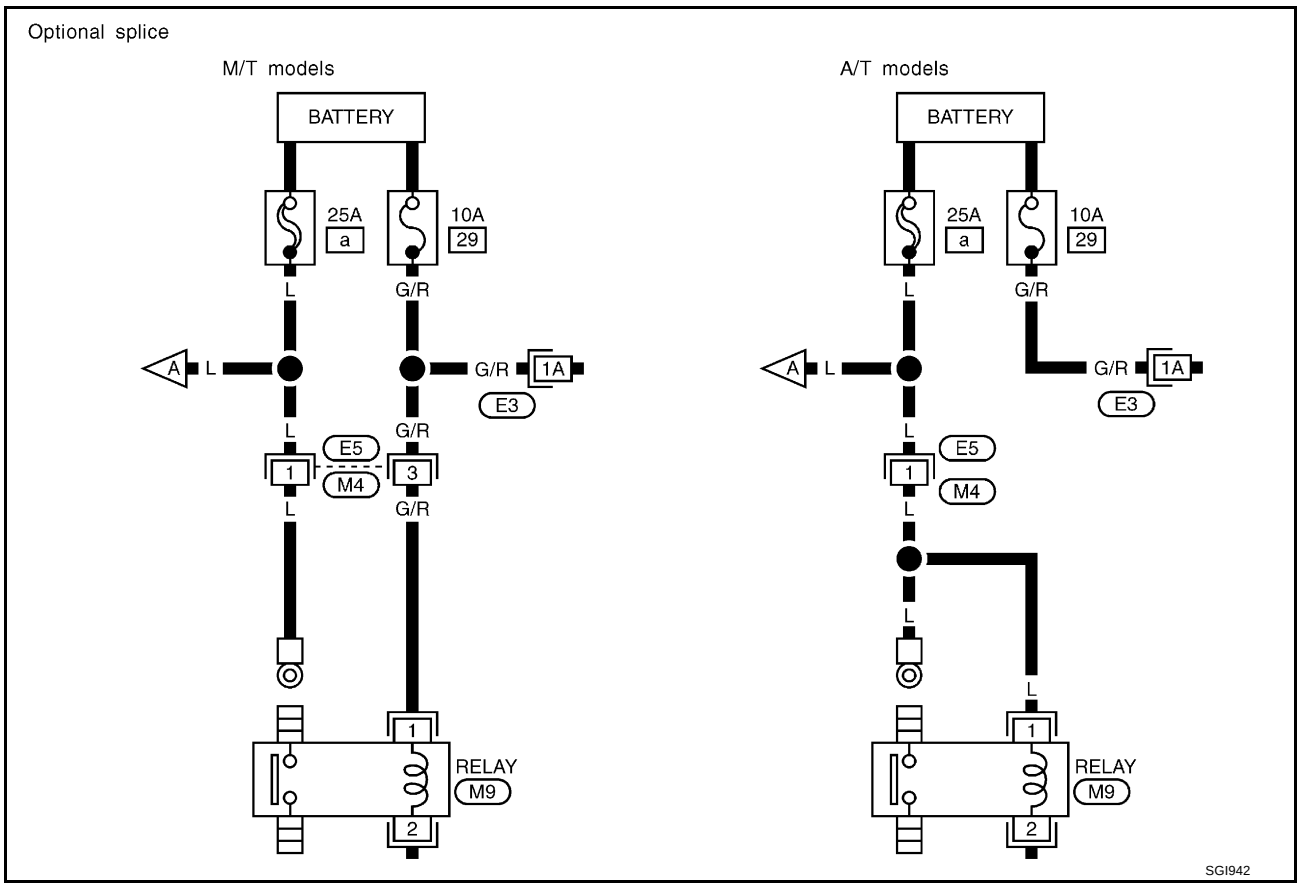
CONNECTOR SYMBOLS

Most of connector symbols in wiring diagrams are shown from the terminal side.

- Connector symbols shown from the terminal side are enclosed by a single line and followed by the direction mark.
- Connector symbols shown from the harness side are enclosed by a double line and followed by the direction mark.
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG section, “Description”, “HARNESS CONNECTOR”.



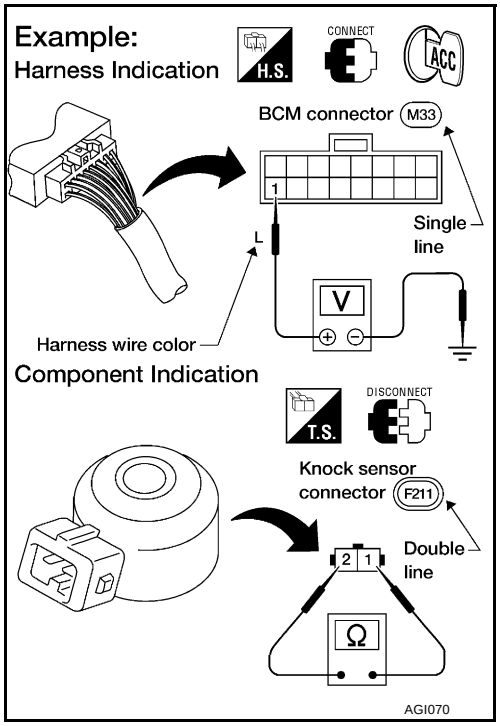
- Male and female terminals
  Connector guides for male terminals are shown in black and female terminals in white in wiring diagrams.



SAMPLE/WIRING DIAGRAM - EXAMPL -

- For detail, refer to following “DESCRIPTION”.

Optional Splice



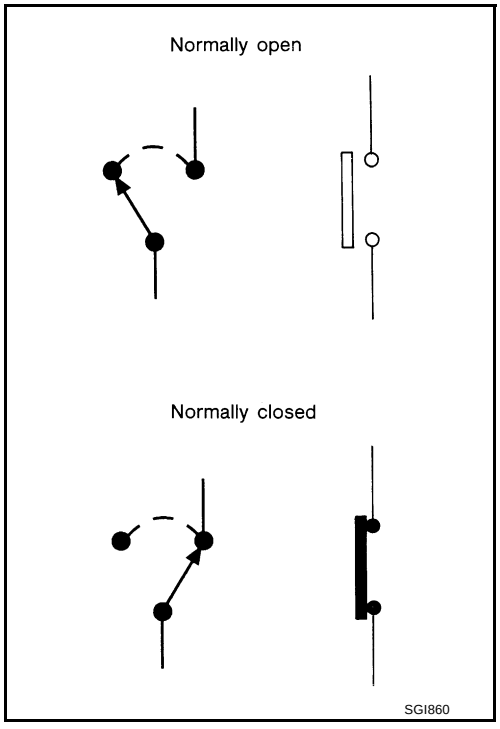
DESCRIPTION

Number	Item	Description
1	Power condition	● This shows the condition when the system receives battery positive voltage (can be operated).
2	Fusible link	● The double line shows that this is a fusible link. ● The open circle shows current flow in, and the shaded circle shows current flow out.
3	Fusible link/fuse location	● This shows the location of the fusible link or fuse in the fusible link or fuse box. For arrangement, refer to PG section, POWER SUPPLY ROUTING.
4	Fuse	● The single line shows that this is a fuse. ● The open circle shows current flow in, and the shaded circle shows current flow out.
5	Current rating	● This shows the current rating of the fusible link or fuse.
6	Connectors	● This shows that connector E3 is female and connector M1 is male. ● The G/R wire is located in the 1A terminal of both connectors. ● Terminal number with an alphabet (1A, 5B, etc.) indicates that the connector is SMJ connector. Refer to PG section, SMJ (SUPER MULTIPLE JUNCTION).
7	Optional splice	● The open circle shows that the splice is optional depending on vehicle application.
8	Splice	● The shaded circle shows that the splice is always on the vehicle.
9	Page crossing	● This arrow shows that the circuit continues to an adjacent page. ● The A will match with the A on the preceding or next page.
10	Common connector	● The dotted lines between terminals show that these terminals are part of the same connector.
11	Option abbreviation	● This shows that the circuit is optional depending on vehicle application.
12	Relay	● This shows an internal representation of the relay. For details, refer to PG section, STANDARDIZED RELAY.
13	Connectors	● This shows that the connector is connected to the body or a terminal with bolt or nut.

Number	Item	Description
14	Wire color	● This shows a code for the color of the wire.
		B = Black W = White R = Red G = Green L = Blue Y = Yellow LG = Light Green BR = Brown OR or O = Orange P = Pink PU or V (Violet) = Purple GY or GR = Gray SB = Sky Blue CH = Dark Brown DG = Dark Green
		When the wire color is striped, the base color is given first, followed by the stripe color as shown below: Example: L/W = Blue with White Stripe
15	Option description	● This shows a description of the option abbreviation used on the page.
16	Switch	● This shows that continuity exists between terminals 1 and 2 when the switch is in the A position. Continuity exists between terminals 1 and 3 when the switch is in the B position.
17	Assembly parts	● Connector terminal in component shows that it is a harness incorporated assembly.
18	Cell code	● This identifies each page of the wiring diagram by section, system and wiring diagram page number.
19	Current flow arrow	● Arrow indicates electric current flow, especially where the direction of standard flow (vertically downward or horizontally from left to right) is difficult to follow. ● A double arrow “ ⟷ ” shows that current can flow in either direction depending on circuit operation.
20	System branch	● This shows that the system branches to another system identified by cell code (section and system).
21	Page crossing	● This arrow shows that the circuit continues to another page identified by cell code. ● The C will match with the C on another page within the system other than the next or preceding pages.
22	Shielded line	● The line enclosed by broken line circle shows shield wire.
23	Component box in wave line	● This shows that another part of the component is also shown on another page (indicated by wave line) within the system.
24	Component name	● This shows the name of a component.
25	Connector number	● This shows the connector number. ● The letter shows which harness the connector is located in. ● Example: **M** : main harness. For detail and to locate the connector, refer to PG section "Main Harness", “Harness Layout”. A coordinate grid is included for complex harnesses to aid in locating connectors.
26	Ground (GND)	● The line spliced and grounded under wire color shows that ground line is spliced at the grounded connector.
27	Ground (GND)	● This shows the ground connection. For detailed ground distribution information, refer to "Ground Distribution" in PG section.
28	Connector views	● This area shows the connector faces of the components in the wiring diagram on the page.
29	Common component	● Connectors enclosed in broken line show that these connectors belong to the same component.
30	Connector color	● This shows a code for the color of the connector. For code meaning, refer to wire color codes, Number 14 of this chart.
31	Fusible link and fuse box	● This shows the arrangement of fusible link(s) and fuse(s), used for connector views of "POWER SUPPLY ROUTING" in PG section. The open square shows current flow in, and the shaded square shows current flow out.
32	Reference area	● This shows that more information on the Super Multiple Junction (SMJ) and Joint Connectors (J/C) exists on the PG section. Refer to "Reference Area" for details.

Harness Indication

- Letter designations next to test meter probe indicate harness (connector) wire color.
- Connector numbers in a single circle M33 indicate harness connectors.

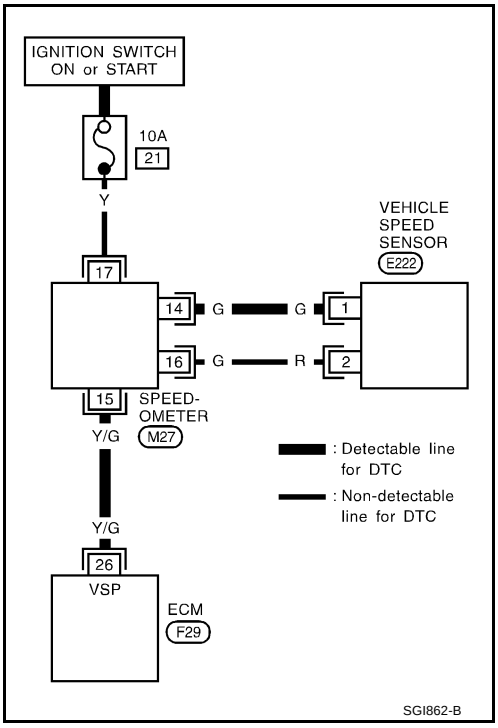


Component Indication

Connector numbers in a double circle F211 indicate component connectors.

Switch Positions

Switches are shown in wiring diagrams as if the vehicle is in the “normal” condition.
A vehicle is in the “normal” condition when:



- ignition switch is “OFF”,
- doors, hood and trunk lid/back door are closed,
- pedals are not depressed, and
- parking brake is released.

Detectable Lines and Non-Detectable Lines

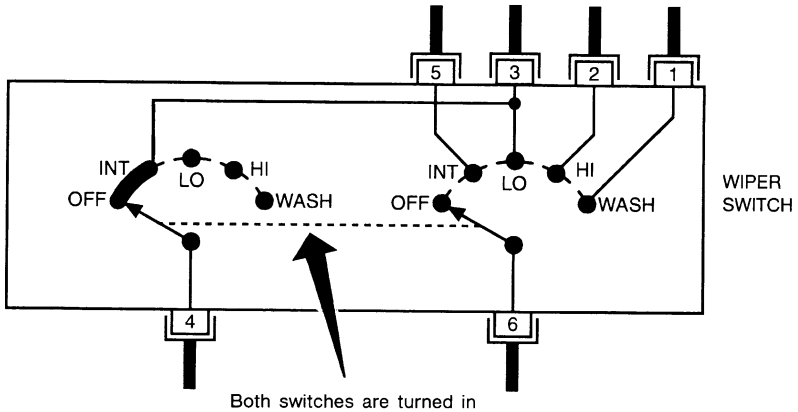
In some wiring diagrams, two kinds of lines, representing wires, with different weight are used.

- A line with regular weight (wider line) represents a “detectable line for DTC (Diagnostic Trouble Code)”. A “detectable line for DTC” is a circuit in which ECM can detect its malfunctions with the on board diagnostic system.
- A line with less weight (thinner line) represents a “non-detectable line for DTC”. A “non-detectable line for DTC” is a circuit in which ECM cannot detect its malfunctions with the on board diagnostic system.

Multiple Switch

The continuity of multiple switch is described in two ways as shown below.

- The switch chart is used in schematic diagrams.
- The switch diagram is used in wiring diagrams.



Example

(SWITCH CHART)

WIPER SWITCH

	OFF	INT	LO	HI	WASH
1					○
2				○	
3	○	○	○		
4	○	○			
5		○			
6		○	○	○	○

(SWITCH DIAGRAM)

Continuity circuit of wiper switch

SWITCH POSITION	CONTINUITY CIRCUIT
OFF	3 - 4
INT	3 - 4, 5 - 6
LO	3 - 6
HI	2 - 6
WASH	1 - 6

SGI875

Abbreviations

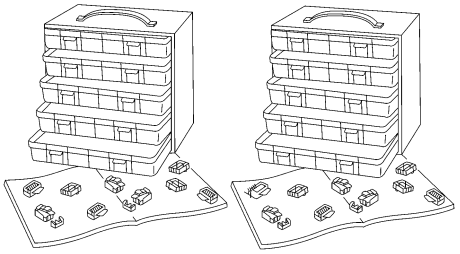
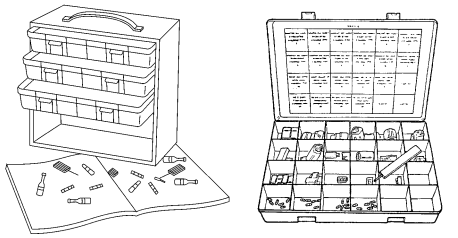
SERVICE INFORMATION FOR ELECTRICAL INCIDENT





PFP:00000

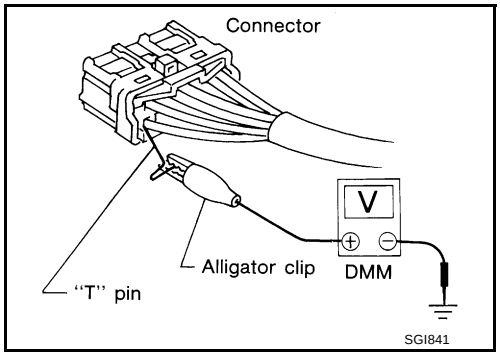
How to Check Terminal

NAS0000L

CONNECTOR AND TERMINAL PIN KIT

Use the connector and terminal pin kits listed below when replacing connectors or terminals.
The connector and terminal pin kits contain some of the most commonly used NISSAN/INFINITI connectors and terminals. For detailed connector and terminal pin replacement procedures, refer to the latest NISSAN/INFINITI CONNECTOR AND TERMINAL PIN SERVICE MANUAL.

Tool number (Kent-Moore No.) Tool name	Description
- (J38751-95NI) Connector and terminal pin kit (NISSAN) - (J38751-95INF) Connector and terminal pin kit (INFINITI) - (J42992-98KIT) OBD and terminal repair kit - (J42992-2000UPD) OBD-II Connector Kit Update	J38751-95NI, J38751-95INF  WAIA0004E J42992-98KIT, J42992-2000UPD  WAIA0005E

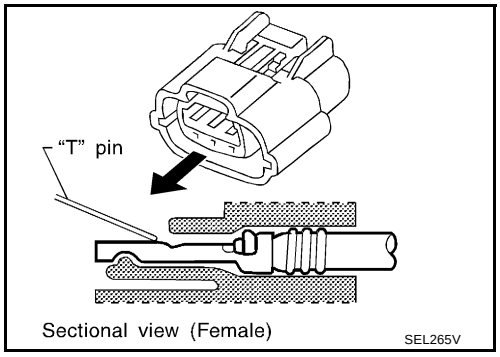


HOW TO PROBE CONNECTORS

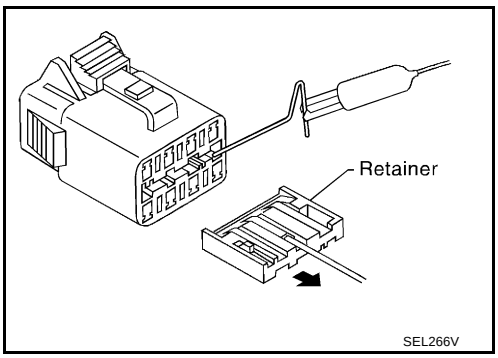
Connector damage and an intermittent connection can result from improperly probing of the connector during circuit checks.
The probe of a digital multimeter (DMM) may not correctly fit the connector cavity. To correctly probe the connector, follow the procedures below using a “T” pin. For the best contact grasp the “T” pin using an alligator clip.

Probing from Harness Side

Standard type (not waterproof type) connector should be probed from harness side with “T” pin.

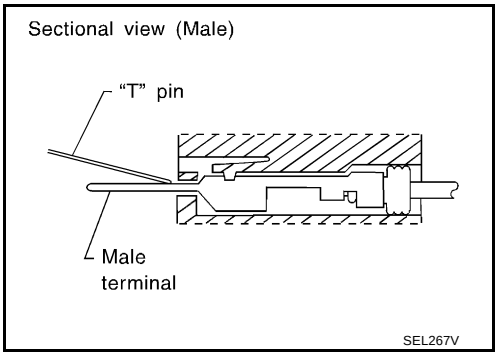


- If the connector has a rear cover such as a ECM connector, remove the rear cover before probing the terminal.
- Do not probe waterproof connector from harness side. Damage to the seal between wire and connector may result.



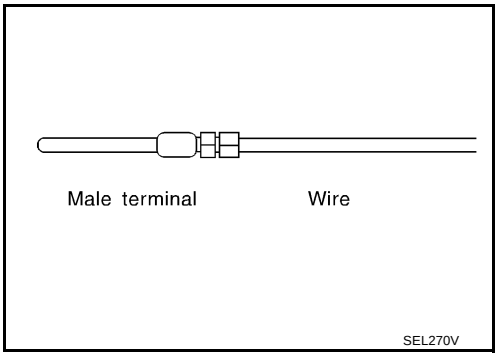
Probing from Terminal Side

FEMALE TERMINAL

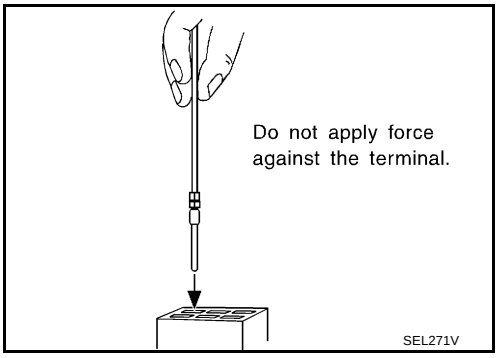


- There is a small notch above each female terminal. Probe each terminal with the “T” pin through the notch.
  Do not insert any object other than the same type male terminal into female terminal.

- Some connectors do not have a notch above each terminal. To probe each terminal, remove the connector retainer to make contact space for probing.

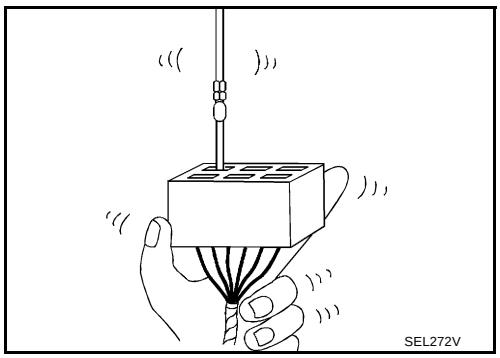


MALE TERMINAL
Carefully probe the contact surface of each terminal using a “T” pin.
Do not bend terminal.

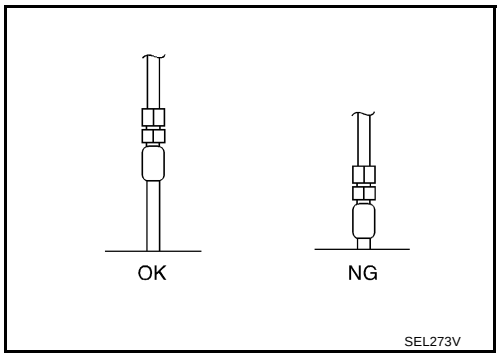


How to Check Enlarged Contact Spring of Terminal

An enlarged contact spring of a terminal may create intermittent signals in the circuit.
If the intermittent open circuit occurs, follow the procedure below to inspect for open wires and enlarged contact spring of female terminal.



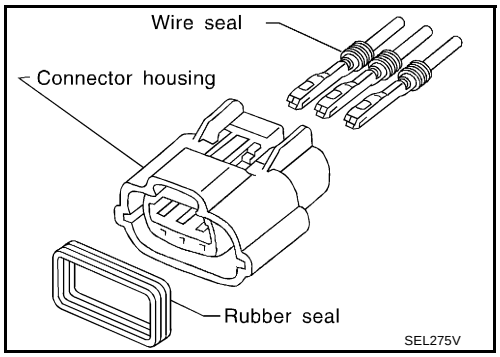
1. Assemble a male terminal and approx. 10 cm (3.9 in) of wire.
   Use a male terminal which matches the female terminal.
2. Disconnect the suspected faulty connector and hold it terminal side up.



3. While holding the wire of the male terminal, try to insert the male terminal into the female terminal.
   Do not force the male terminal into the female terminal with your hands.

4. While moving the connector, check whether the male terminal can be easily inserted or not.

- If the male terminal can be easily inserted into the female terminal, replace the female terminal.

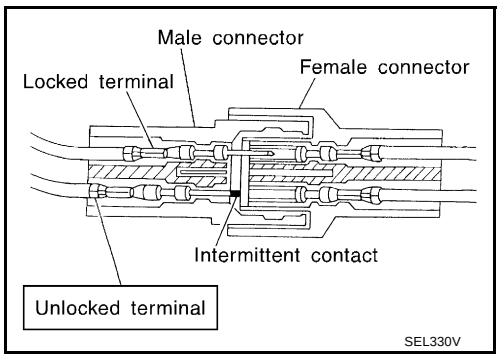


Waterproof Connector Inspection

If water enters the connector, it can short interior circuits. This may lead to intermittent problems. Check the following items to maintain the original waterproof characteristics.

RUBBER SEAL INSPECTION

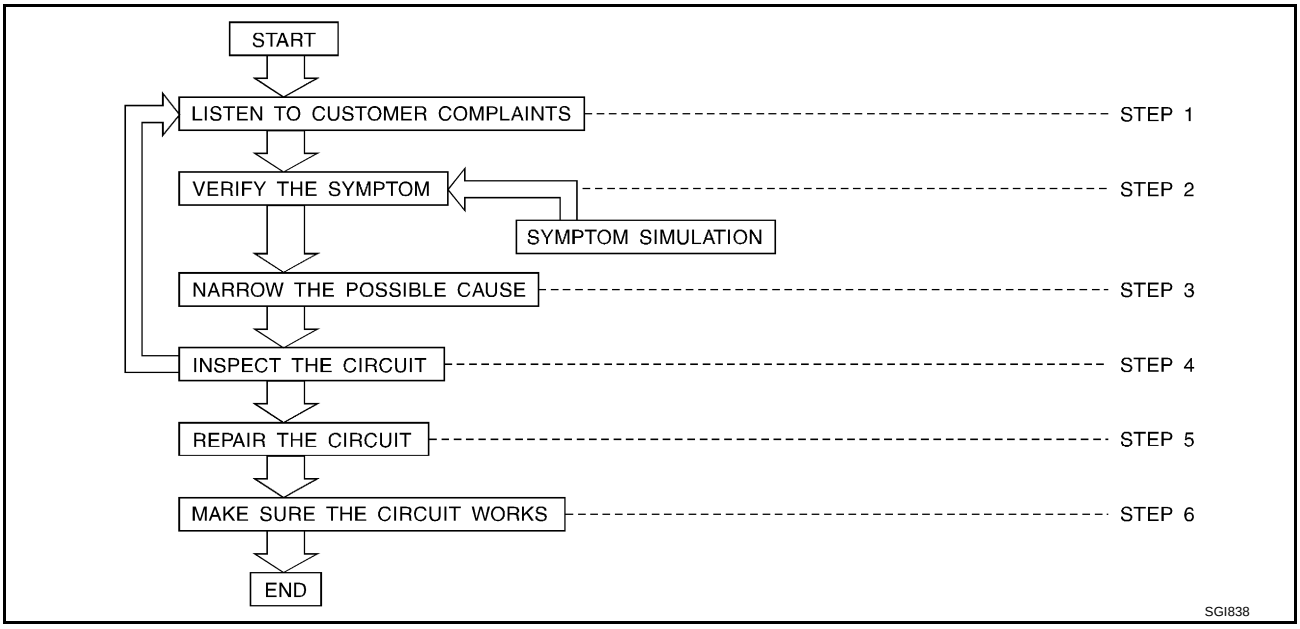
- Most waterproof connectors are provided with a rubber seal between the male and female connectors. If the seal is missing, the waterproof performance may not meet specifications.
- The rubber seal may come off when connectors are disconnected. Whenever connectors are reconnected, make sure the rubber seal is properly installed on either side of male or female connector.



WIRE SEAL INSPECTION

The wire seal must be installed on the wire insertion area of a waterproof connector. Be sure that the seal is installed properly.

Terminal Lock Inspection



Check for unlocked terminals by pulling wire at the end of connector. An unlocked terminal may create intermittent signals in the circuit.

How to Perform Efficient Diagnosis for an Electrical Incident

NAS0000M

WORK FLOW

STEP	DESCRIPTION	
STEP 1	Get detailed information about the conditions and the environment when the incident occurred. The following are key pieces of information required to make a good analysis:	
	WHAT	Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio).
	WHEN	Date, Time of Day, Weather Conditions, Frequency.
	WHERE	Road Conditions, Altitude and Traffic Situation.
	HOW	System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed.
STEP 2	Operate the system, road test if necessary. Verify the parameter of the incident. If the problem cannot be duplicated, refer to “Incident Simulation Tests”.	
STEP 3	Get the proper diagnosis materials together including: ● Power Supply Routing ● System Operation Descriptions ● Applicable Service Manual Sections ● Check for any Service Bulletins Identify where to begin diagnosis based upon your knowledge of the system operation and the customer comments.	
STEP 4	Inspect the system for mechanical binding, loose connectors or wiring damage. Determine which circuits and components are involved and diagnose using the Power Supply Routing and Harness Layouts.	
STEP 5	Repair or replace the incident circuit or component.	
STEP 6	Operate the system in all modes. Verify the system works properly under all conditions. Make sure you have not inadvertently created a new incident during your diagnosis or repair steps.	

INCIDENT SIMULATION TESTS

Introduction

Sometimes the symptom is not present when the vehicle is brought in for service. If possible, re-create the conditions present at the time of the incident. Doing so may help avoid a No Trouble Found Diagnosis. The following section illustrates ways to simulate the conditions/environment under which the owner experiences an electrical incident.

The section is broken into the six following topics:

- Vehicle vibration
- Heat sensitive

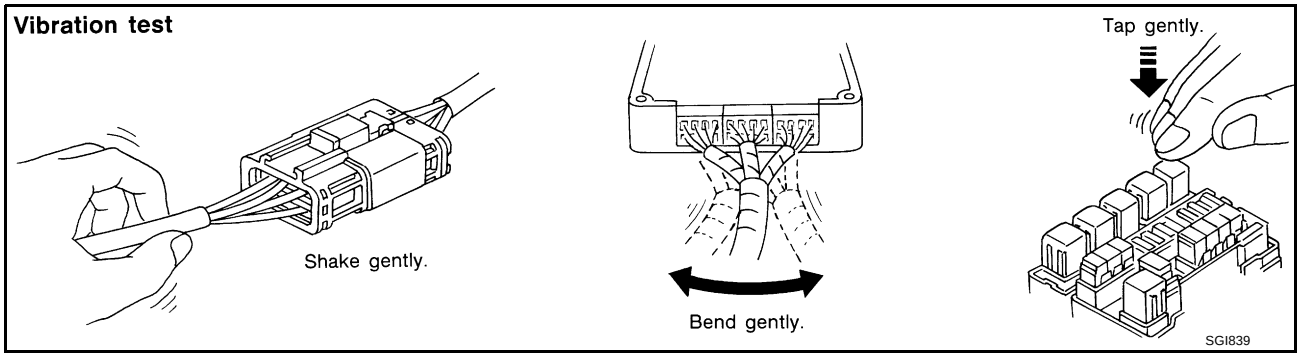
- Freezing
- Water intrusion
- Electrical load
- Cold or hot start up

Get a thorough description of the incident from the customer. It is important for simulating the conditions of the problem.

Vehicle Vibration

The problem may occur or become worse while driving on a rough road or when engine is vibrating (idle with A/C on). In such a case, you will want to check for a vibration related condition. Refer to the following illustration.

CONNECTORS & HARNESS



Determine which connectors and wiring harness would affect the electrical system you are inspecting. Gently shake each connector and harness while monitoring the system for the incident you are trying to duplicate. This test may indicate a loose or poor electrical connection.

HINT

Connectors can be exposed to moisture. It is possible to get a thin film of corrosion on the connector terminals. A visual inspection may not reveal this without disconnecting the connector. If the problem occurs intermittently, perhaps the problem is caused by corrosion. It is a good idea to disconnect, inspect and clean the terminals on related connectors in the system.

SENSORS & RELAYS

Gently apply a slight vibration to sensors and relays in the system you are inspecting.
This test may indicate a loose or poorly mounted sensor or relay.

ENGINE COMPARTMENT

There are several reasons a vehicle or engine vibration could cause an electrical complaint. Some of the things to check for are:

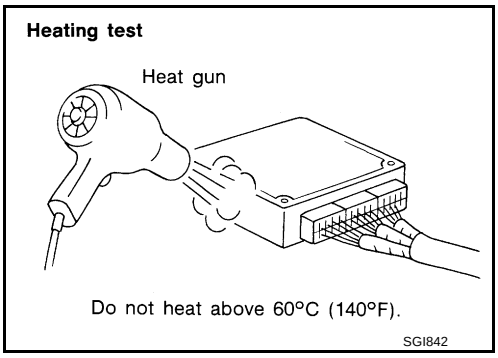
- Connectors not fully seated.
- Wiring harness not long enough and is being stressed due to engine vibrations or rocking.
- Wires laying across brackets or moving components.
- Loose, dirty or corroded ground wires.
- Wires routed too close to hot components.

To inspect components under the hood, start by verifying the integrity of ground connections. (Refer to Ground Inspection described later.) First check that the system is properly grounded. Then check for loose connection by gently shaking the wiring or components as previously explained. Using the wiring diagrams inspect the wiring for continuity.

BEHIND THE INSTRUMENT PANEL

An improperly routed or improperly clamped harness can become pinched during accessory installation. Vehicle vibration can aggravate a harness which is routed along a bracket or near a screw.

UNDER SEATING AREAS



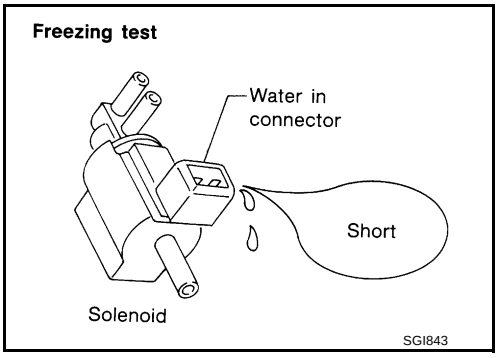
An unclamped or loose harness can cause wiring to be pinched by seat components (such as slide guides) during vehicle vibration. If the wiring runs under seating areas, inspect wire routing for possible damage or pinching.

Heat Sensitive

The customer's concern may occur during hot weather or after car has sat for a short time. In such cases you will want to check for a heat sensitive condition.

To determine if an electrical component is heat sensitive, heat the component with a heat gun or equivalent.

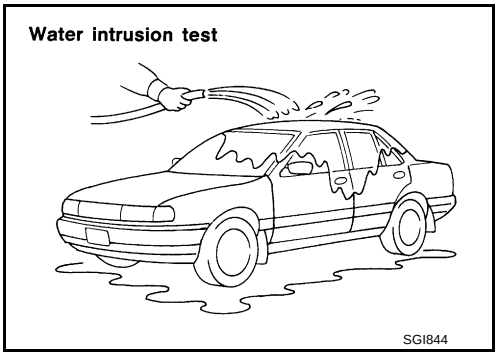
Do not heat components above 60°C (140°F). If incident occurs while heating the unit, either replace or properly insulate the component.



Freezing

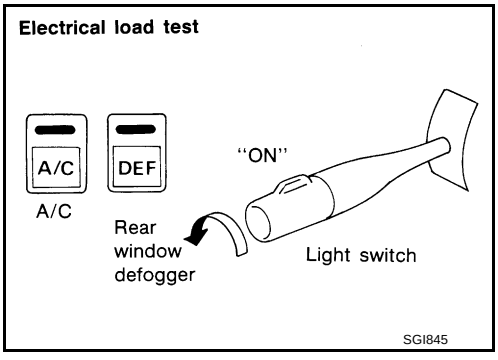
The customer may indicate the incident goes away after the car warms up (winter time). The cause could be related to water freezing somewhere in the wiring/electrical system.

There are two methods to check for this. The first is to arrange for the owner to leave his car overnight. Make sure it will get cold enough to demonstrate his complaint. Leave the car parked outside overnight. In the morning, do a quick and thorough diagnosis of those electrical components which could be affected.



The second method is to put the suspect component into a freezer long enough for any water to freeze. Reinstall the part into the car and check for the reoccurrence of the incident. If it occurs, repair or replace the component.

Water Intrusion



The incident may occur only during high humidity or in rainy/snowy weather. In such cases the incident could be caused by water intrusion on an electrical part. This can be simulated by soaking the car or running it through a car wash.

Do not spray water directly on any electrical components.

Electrical Load

The incident may be electrical load sensitive. Perform diagnosis with all accessories (including A/C, rear window defogger, radio, fog lamps) turned on.

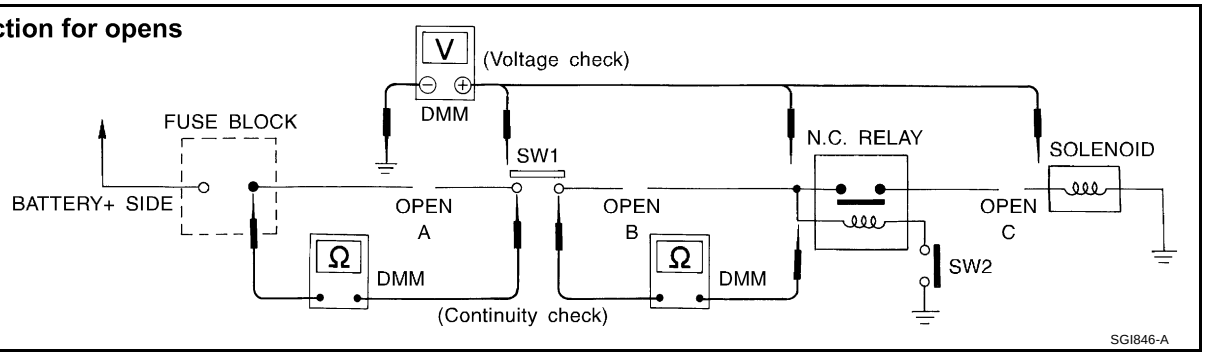
Cold or Hot Start Up

On some occasions an electrical incident may occur only when the car is started cold, or it may occur when the car is restarted hot shortly after being turned off. In these cases you may have to keep the car overnight to make a proper diagnosis.

CIRCUIT INSPECTION

Introduction

In general, testing electrical circuits is an easy task if it is approached in a logical and organized method. Before beginning it is important to have all available information on the system to be tested. Also, get a thorough understanding of system operation. Then you will be able to use the appropriate equipment and follow the correct test procedure.
You may have to simulate vehicle vibrations while testing electrical components. Gently shake the wiring harness or electrical component to do this.



OPEN	A circuit is open when there is no continuity through a section of the circuit.	
SHORT	There are two types of shorts.	
	● SHORT CIRCUIT	When a circuit contacts another circuit and causes the normal resistance to change.
	● SHORT TO GROUND	When a circuit contacts a ground source and grounds the circuit.

NOTE:
Refer to “How to Check Terminal” to probe or check terminal.

Testing for “Opens” in the Circuit

Before you begin to diagnose and test the system, you should rough sketch a schematic of the system. This will help you to logically walk through the diagnosis process. Drawing the sketch will also reinforce your working knowledge of the system.

Inspection for opens

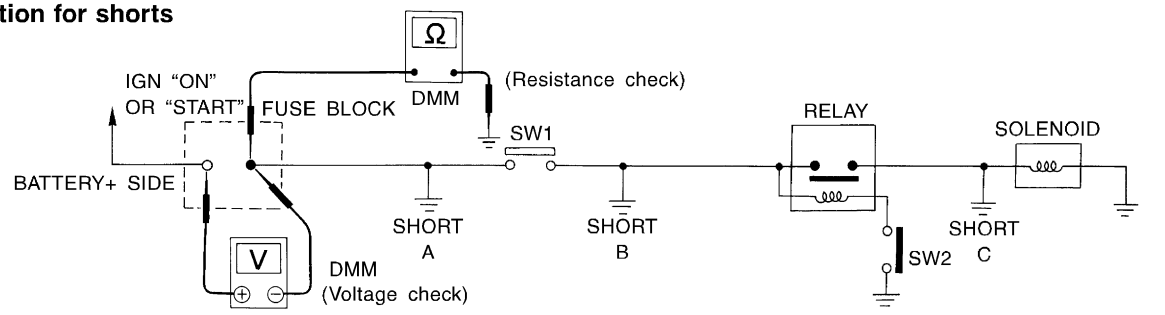
CONTINUITY CHECK METHOD
The continuity check is used to find an open in the circuit. The digital multimeter (DMM) set on the resistance function will indicate an open circuit as over limit (no beep tone or no ohms symbol). Make sure to always start with the DMM at the highest resistance level.
To help in understanding the diagnosis of open circuits, please refer to the previous schematic.

- Disconnect the battery negative cable.
- Start at one end of the circuit and work your way to the other end. (At the fuse block in this example)
- Connect one probe of the DMM to the fuse block terminal on the load side.
- Connect the other probe to the fuse block (power) side of SW1. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point A)
- Connect the probes between SW1 and the relay. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point B)
- Connect the probes between the relay and the solenoid. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point C)

Any circuit can be diagnosed using the approach in the previous example.

VOLTAGE CHECK METHOD

To help in understanding the diagnosis of open circuits please refer to the previous schematic.
In any powered circuit, an open can be found by methodically checking the system for the presence of voltage. This is done by switching the DMM to the voltage function.



- Connect one probe of the DMM to a known good ground.
- Begin probing at one end of the circuit and work your way to the other end.
- With SW1 open, probe at SW1 to check for voltage.
  voltage; open is further down the circuit than SW1.
  no voltage; open is between fuse block and SW1 (point A).
- Close SW1 and probe at relay.
  voltage; open is further down the circuit than the relay.
  no voltage; open is between SW1 and relay (point B).
- Close the relay and probe at the solenoid.
  voltage; open is further down the circuit than the solenoid.
  no voltage; open is between relay and solenoid (point C).

Any powered circuit can be diagnosed using the approach in the previous example.

Testing for “Shorts” in the Circuit

To simplify the discussion of shorts in the system, please refer to the following schematic.

Inspection for shorts

RESISTANCE CHECK METHOD

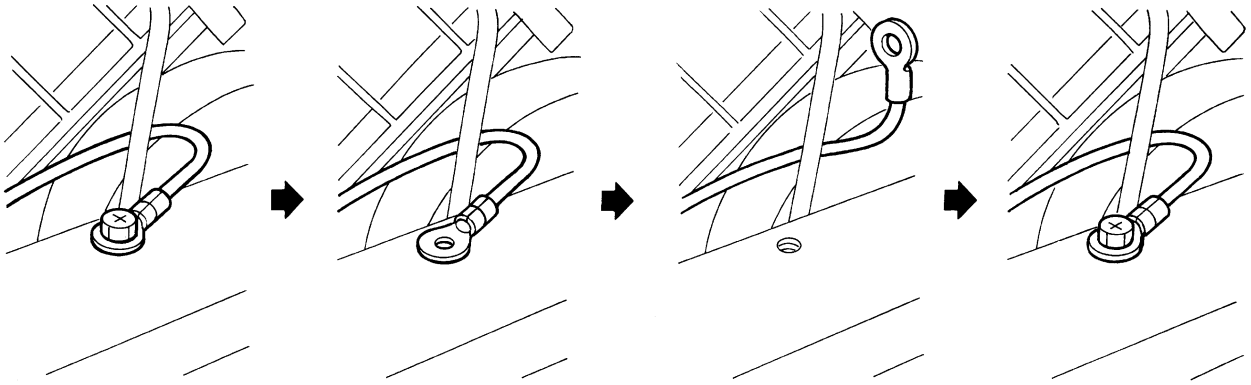
- Disconnect the battery negative cable and remove the blown fuse.
- Disconnect all loads (SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Connect one probe of the DMM to the load side of the fuse terminal. Connect the other probe to a known good ground.
- With SW1 open, check for continuity.
  continuity; short is between fuse terminal and SW1 (point A).
  no continuity; short is further down the circuit than SW1.
- Close SW1 and disconnect the relay. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
  continuity; short is between SW1 and the relay (point B).
  no continuity; short is further down the circuit than the relay.
- Close SW1 and jump the relay contacts with jumper wire. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
  continuity; short is between relay and solenoid (point C).
  no continuity; check solenoid, retrace steps.

VOLTAGE CHECK METHOD

- Remove the blown fuse and disconnect all loads (i.e. SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Turn the ignition key to the ON or START position. Verify battery voltage at the battery + side of the fuse terminal (one lead on the battery + terminal side of the fuse block and one lead on a known good ground).
- With SW1 open and the DMM leads across both fuse terminals, check for voltage.
  voltage; short is between fuse block and SW1 (point A).

no voltage; short is further down the circuit than SW1.

- With SW1 closed, relay and solenoid disconnected and the DMM leads across both fuse terminals, check for voltage.
  voltage; short is between SW1 and the relay (point B).
  no voltage; short is further down the circuit than the relay.
- With SW1 closed, relay contacts jumped with fused jumper wire check for voltage.
  voltage; short is down the circuit of the relay or between the relay and the disconnected solenoid (point C).
  no voltage; retrace steps and check power to fuse block.



Ground Inspection

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.
Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.
When inspecting a ground connection follow these rules:

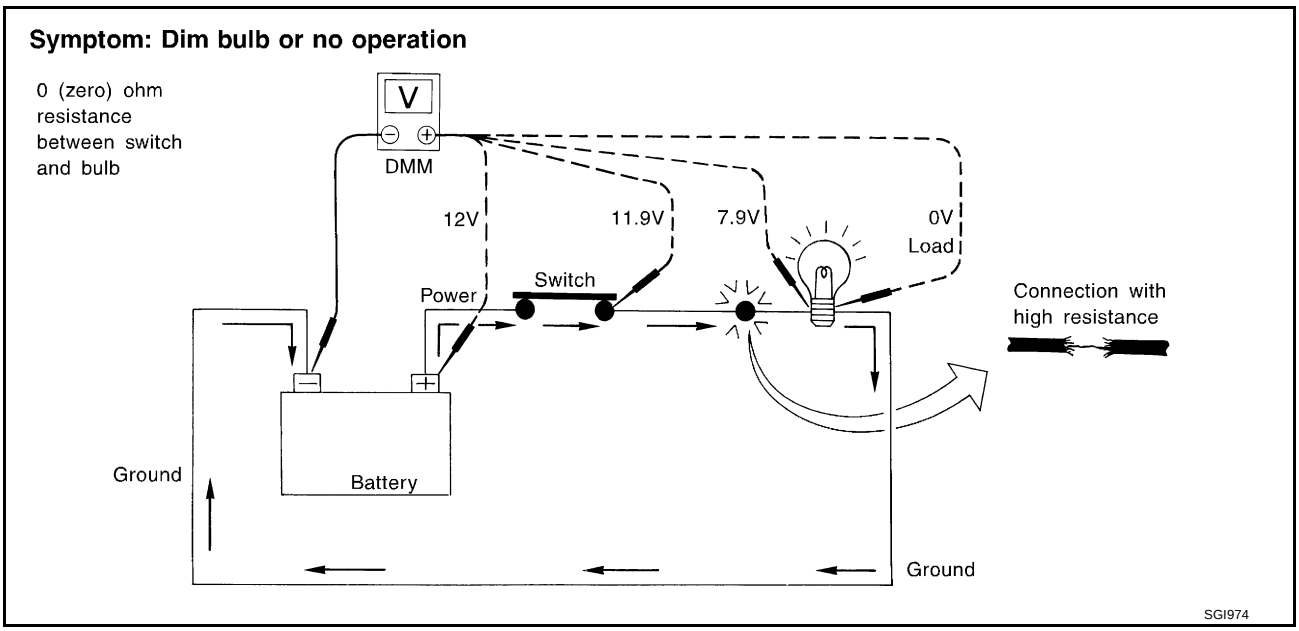
- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for “add-on” accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to “Ground Distribution” in PG section.

Ground Inspection

Voltage Drop Tests

Voltage drop tests are often used to find components or circuits which have excessive resistance. A voltage drop in a circuit is caused by a resistance when the circuit is in operation.
Check the wire in the illustration. When measuring resistance with DMM, contact by a single strand of wire will give reading of 0 ohms. This would indicate a good circuit. When the circuit operates, this single strand of wire is not able to carry the current. The single strand will have a high resistance to the current. This will be picked up as a slight voltage drop.
Unwanted resistance can be caused by many situations as follows:



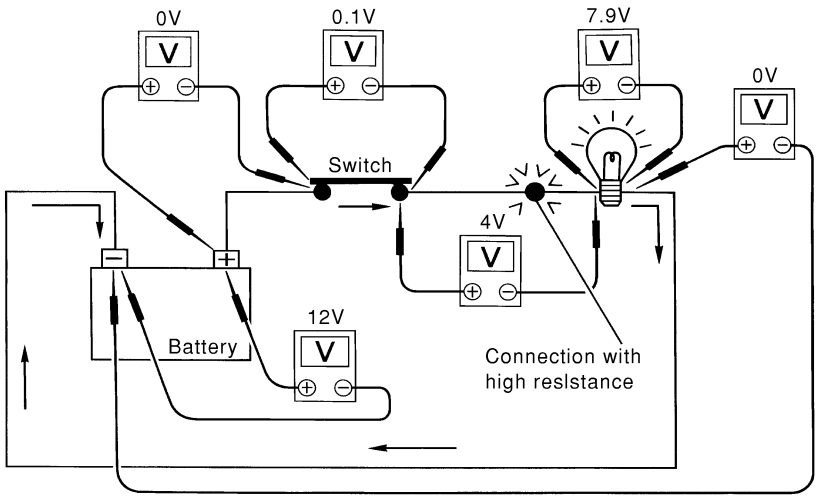
- Undersized wiring (single strand example)
- Corrosion on switch contacts
- Loose wire connections or splices.

If repairs are needed always use wire that is of the same or larger gauge.

MEASURING VOLTAGE DROP — ACCUMULATED METHOD

- Connect the DMM across the connector or part of the circuit you want to check. The positive lead of the DMM should be closer to power and the negative lead closer to ground.
- Operate the circuit.
- The DMM will indicate how many volts are being used to “push” current through that part of the circuit.

Note in the illustration that there is an excessive 4.1 volt drop between the battery and the bulb.



MEASURING VOLTAGE DROP — STEP-BY-STEP

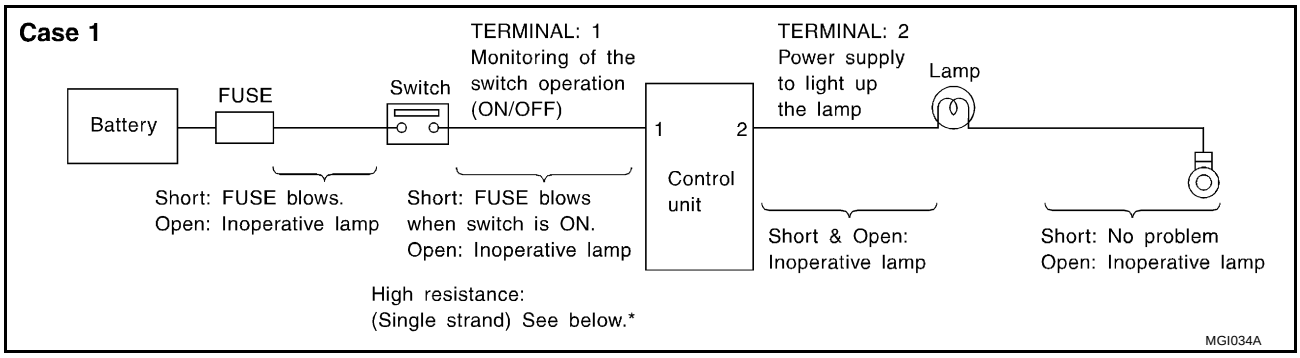
The step-by-step method is most useful for isolating excessive drops in low voltage systems (such as those in “Computer Controlled Systems”).

Circuits in the “Computer Controlled System” operate on very low amperage.

The (Computer Controlled) system operations can be adversely affected by any variation in resistance in the system. Such resistance variation may be caused by poor connection, improper installation, improper wire gauge or corrosion.

The step by step voltage drop test can identify a component or wire with too much resistance.

1. Connect the DMM as shown, starting at the battery and working your way around the circuit.
2. An unusually large voltage drop will indicate a component or wire that needs to be repaired, As you can see the illustration above, the poor connection causes a 4 volt drop.



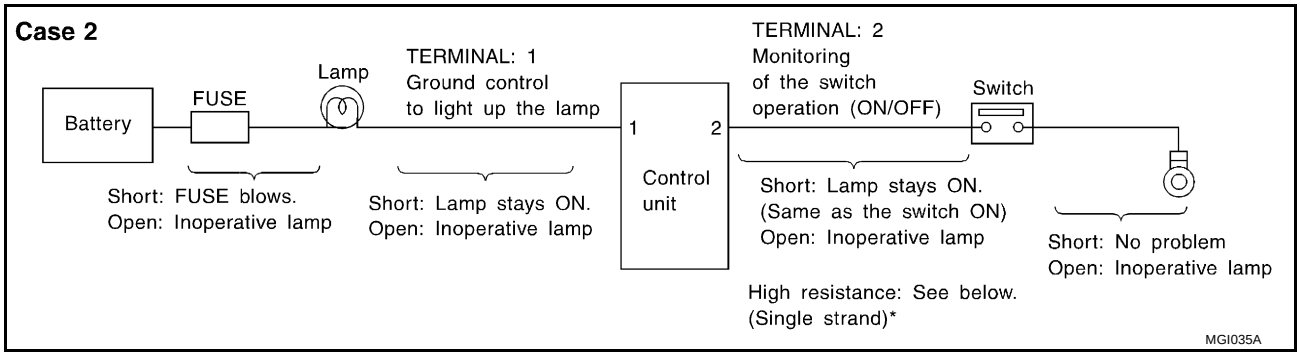
The chart that follows illustrates some maximum allowable voltage drops. These values are given as a guideline, the exact value for each component may vary.

COMPONENT	VOLTAGE DROP
Wire	negligible < .001 volts
Ground Connections	Approx. 0.1 volts
Switch Contacts	Approx. 0.3 volts

SAIA0258E

Control Unit Circuit Test

System Description:When the switch is ON, the control unit lights up the lamp.



INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Switch	Switch ON	Battery voltage	Lower than battery voltage Approx. 8 (Example)
		Switch OFF	Approx. 0	Approx. 0
2	Lamp	Switch ON	Battery voltage	Approx. 0 (Inoperative lamp)
		Switch OFF	Approx. 0	Approx. 0

The voltage value is based on the body ground.

*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 1 does not detect battery voltage. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not supply power to light up the lamp.

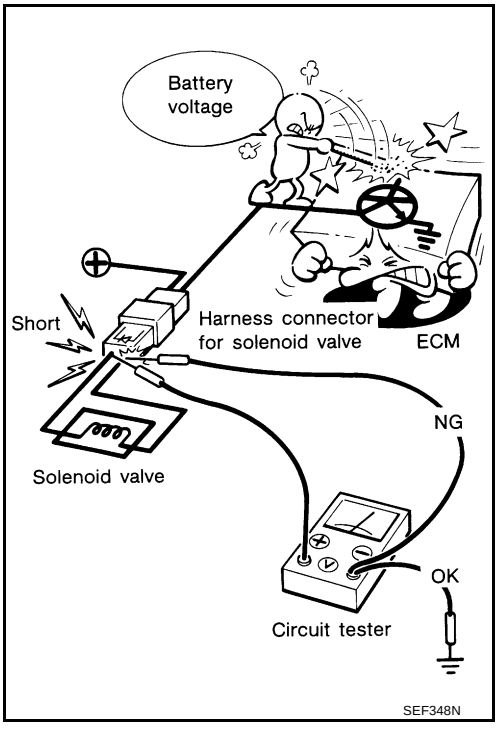
INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Lamp	Switch ON	Approx. 0	Battery voltage (Inoperative lamp)
		Switch OFF	Battery voltage	Battery voltage
2	Switch	Switch ON	Approx. 0	Higher than 0 Approx. 4 (Example)
		Switch OFF	Approx. 5	Approx. 5

The voltage value is based on the body ground.

*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 2 does not detect approx. 0V. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not control ground to light up the lamp.

Control Units and Electrical Parts



NAS0009Q

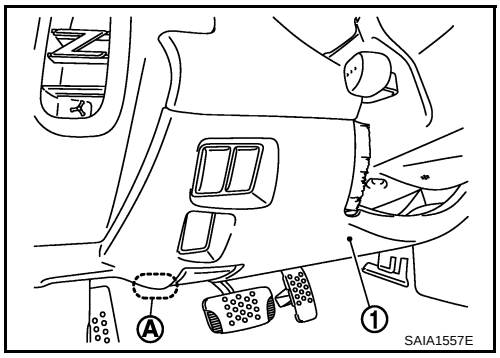
PRECAUTIONS

- Never reverse polarity of battery terminals.
- Install only parts specified for a vehicle.
- Before replacing the control unit, check the input and output and functions of the component parts.
- Do not apply excessive force when disconnecting a connector.
- Do not apply excessive shock to the control unit by dropping or hitting it.
- Be careful to prevent condensation in the control unit due to rapid temperature changes and do not let water or rain get on it. If water is found in the control unit, dry it fully and then install it in the vehicle.
- Be careful not to let oil to get on the control unit connector.
- Avoid cleaning the control unit with volatile oil.
- Do not disassemble the control unit, and do not remove the upper and lower covers.

- When using a DMM, be careful not to let test probes get close to each other to prevent the power transistor in the control unit from damaging battery voltage because of short circuiting.
- When checking input and output signals of the control unit, use the specified check adapter.

CONSULT-III/GST CHECKING SYSTEM

PFP:00000



Description

NAS000A4

- When CONSULT-III/GST is connected with a data link connector (A) equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests.

1 : Instrument driver lower panel

- Refer to CONSULT-III operation manual for more information.

Function and System Application

NAS0000P

Diagnostic test mode	Function	ENGINE	A/T	ABS (Including TCS)	ABS (Including VDC)	AIR BAG	BCM	METER A/C AMP	NATS(NVIS) *	AIR PRESSURE MONITOR	IPDM E/R
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.	x	-	-	x	-	x	-	-	x	-
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	x	x	x	x	x	x	x	x	x	x
Trouble diagnostic record	Current self-diagnostic results and all trouble diagnostic records previously stored can be read.	-	-	-	-	x	-	-	-	-	-
Data monitor	Input/Output data in the ECU can be read.	x	x	x	x	-	x	x	-	x	x
CAN diagnosis support monitor	The condition of CAN communication line can be read.	x	x	x	x	-	x	x	-	-	x
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECUs and also shifts some parameters in a specified range.	x	-	x	x	-	x	-	-	-	x
DTC & SRT confirmation	The results of SRT (System Readiness Test) and the self-diagnosis status/result can be confirmed.	x	-	-	-	-	-	-	-	-	-

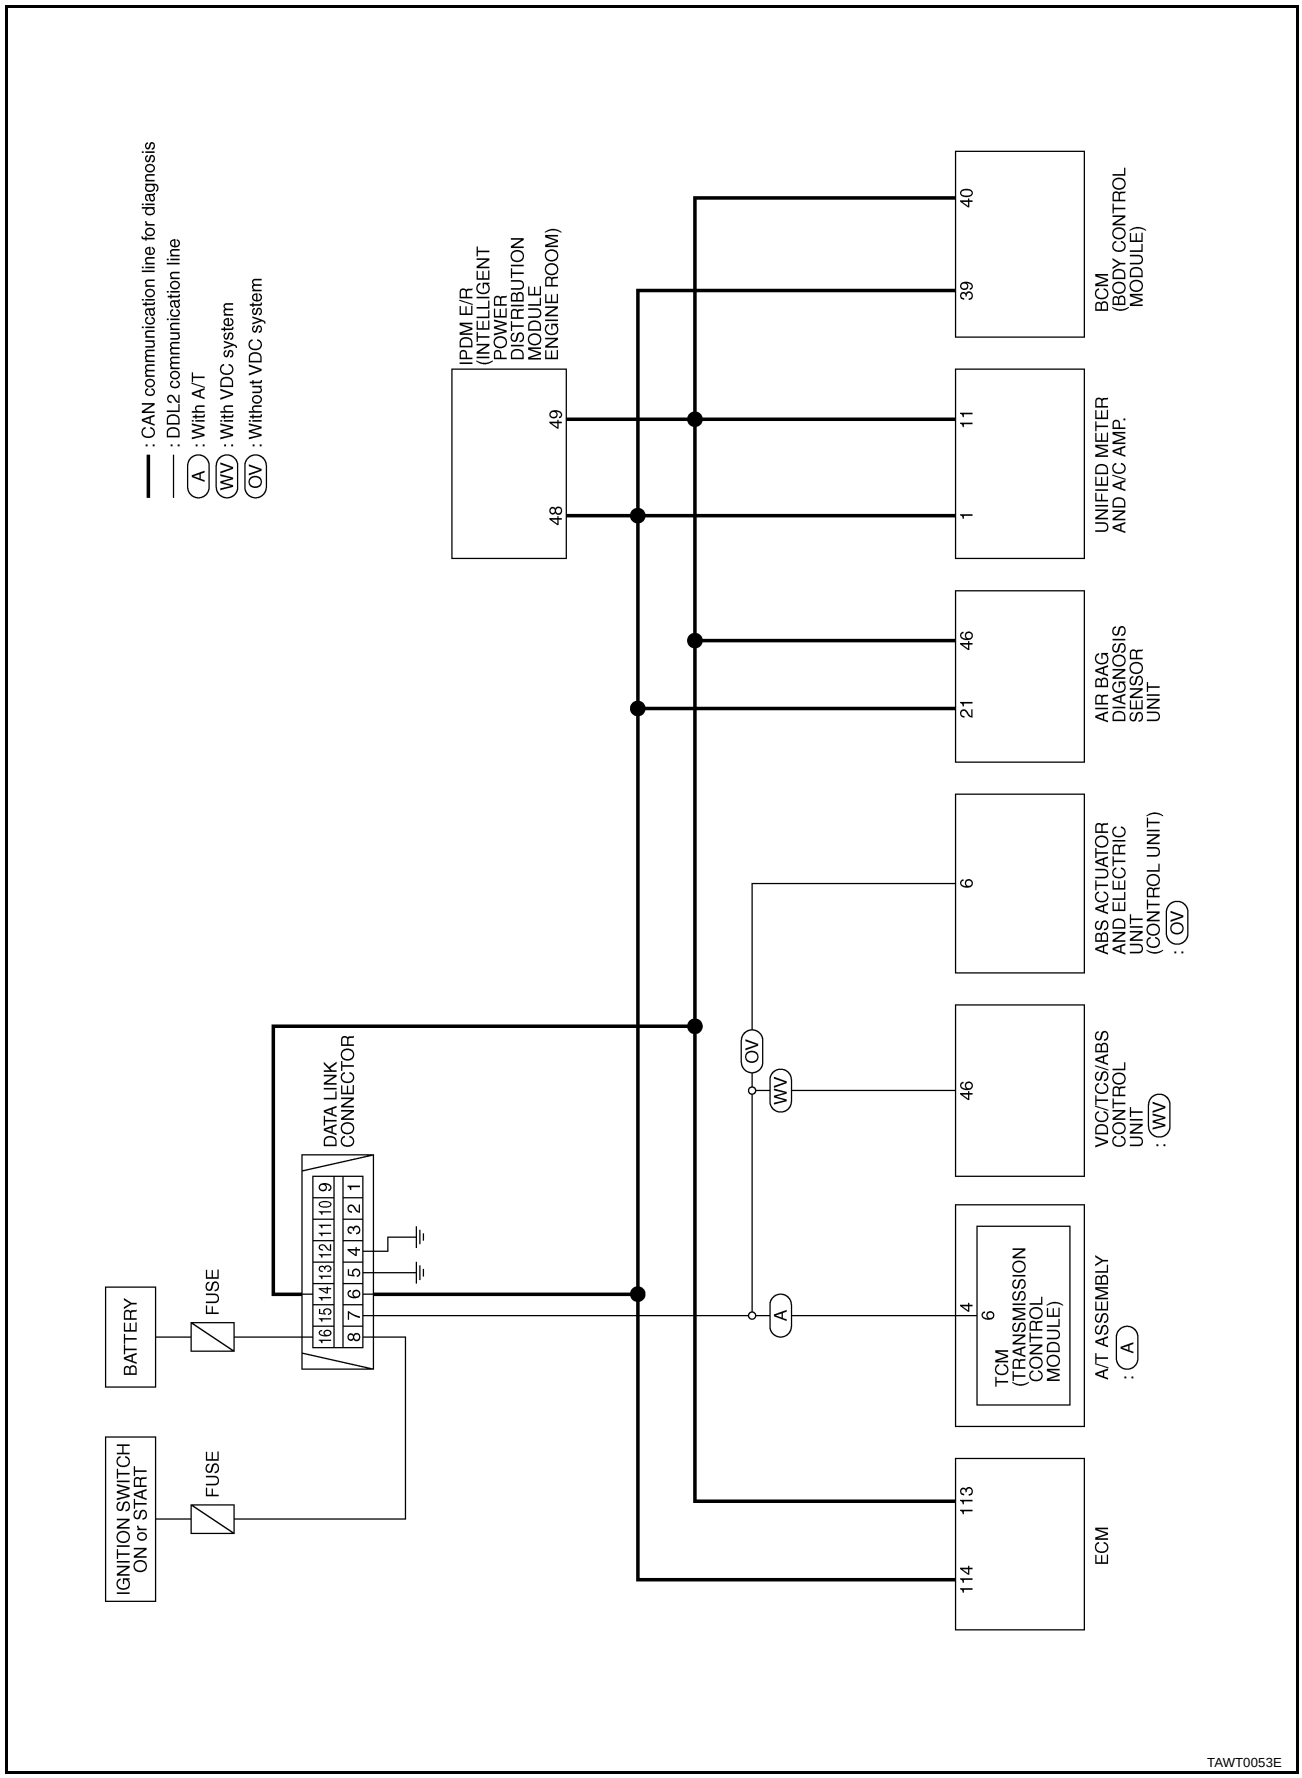
*: Nissan Anti-Theft System (Nissan Vehicle Immobilizer System)

CONSULT-III Data Link Connector (DLC) Circuit

NAS000A5

INSPECTION PROCEDURE



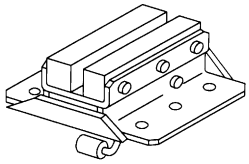
If the CONSULT-III cannot diagnose the system properly, check the following items.

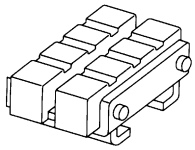
Symptom	Check item
CONSULT-III cannot access any system.	● CONSULT-III DLC power supply circuit (Terminal 8) and ground circuit (Terminal 4)
CONSULT-III cannot access individual system. (Other systems can be accessed.)	● Power supply and ground circuit for the control unit of the system (For detailed circuit, refer to wiring diagram for each system.) ● Open or short circuit between the system and CONSULT-III DLC (For detailed circuit, refer to wiring diagram for each system.) ● Open or short circuit CAN communication line. Refer to LAN-16, "Trouble Diagnosis Flow Chart" .

NOTE:

The DDL1 and DDL2 circuits from DLC pins 12, 13, 14 and 15 may be connected to more than one system. A short in a DDL circuit connected to a control unit in one system may affect CONSULT-III access to other systems.

CIRCUIT DIAGRAM





LIFTING POINT

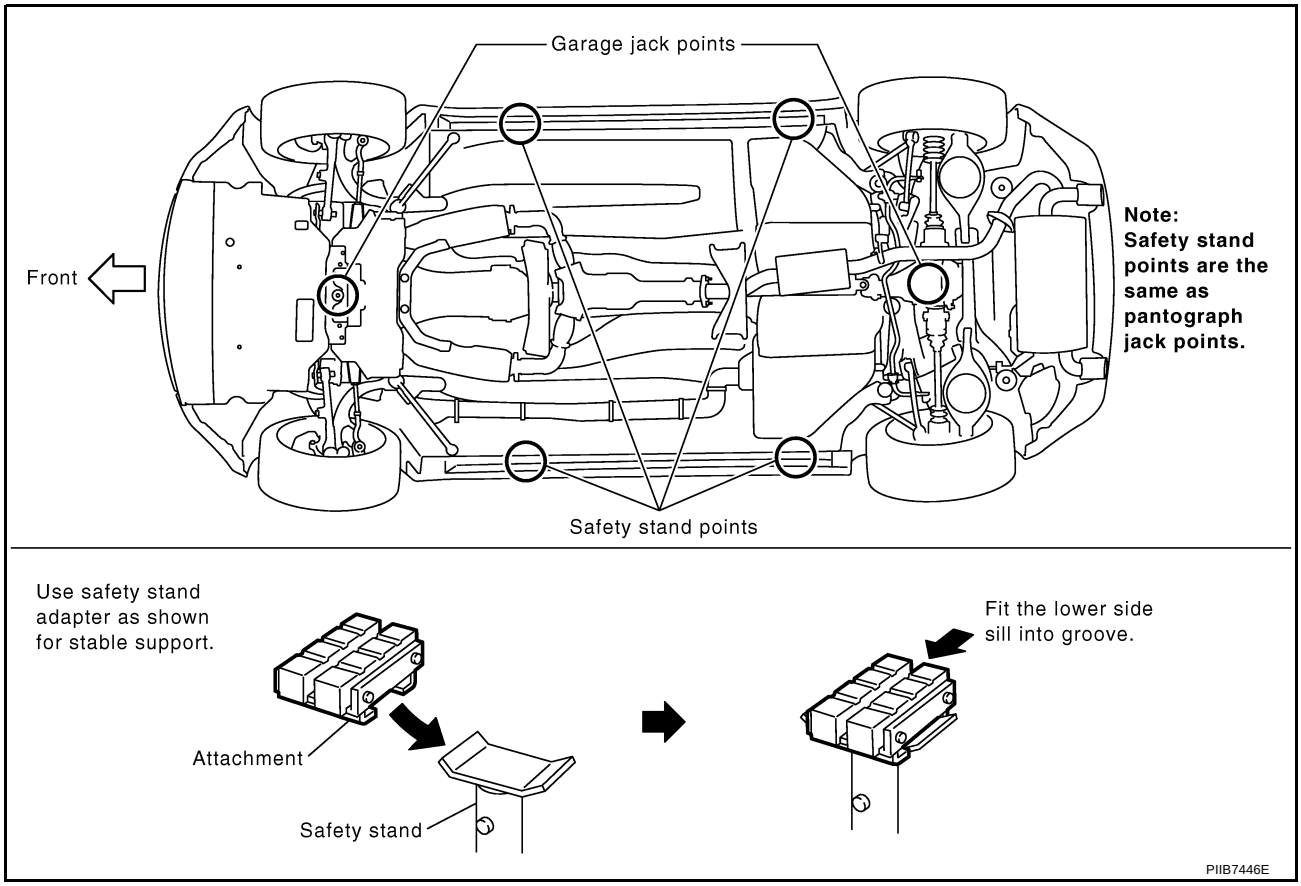
PFP:00000

Commercial Service Tools

NAS0000U

Tool name	Description
Board on attachment	 S-NT001
Safety stand attachment	 S-NT002

CAUTION:



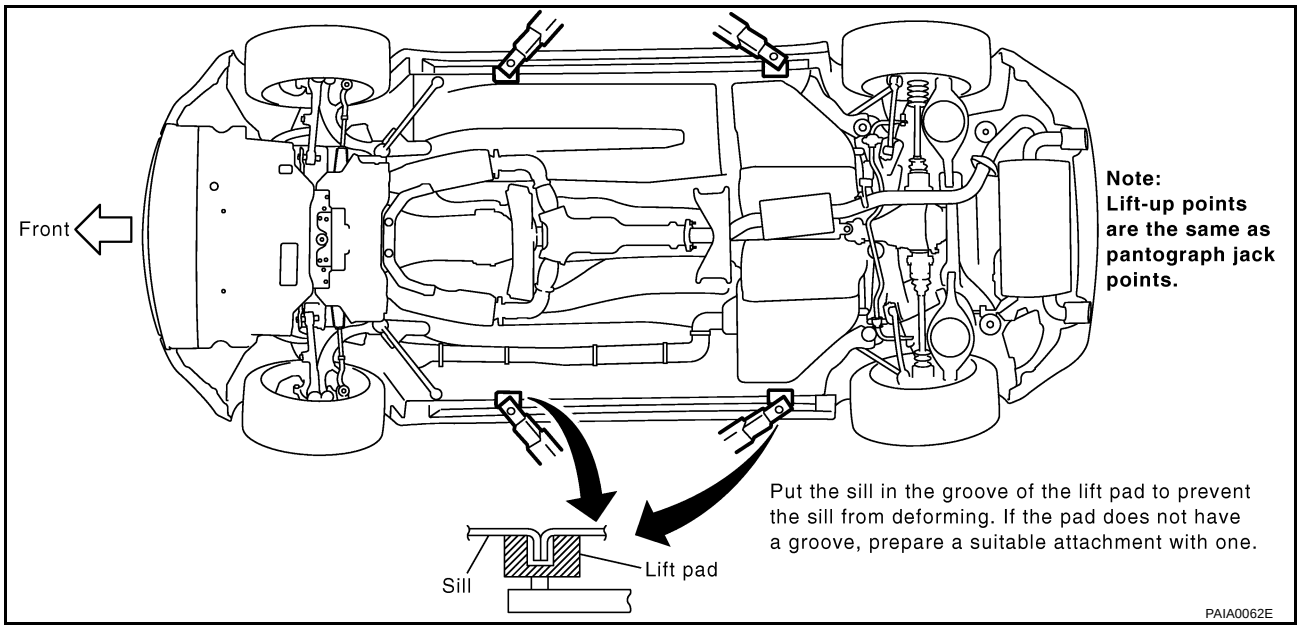
- **Every time the vehicle is lifted up, maintain the complete vehicle curb condition.**
- **Since the vehicle's center of gravity changes when removing main parts on the front side (engine, transmission, suspension etc.), support a jack up point on the rear side garage jack with a mission jack or equivalent.**
- **Since the vehicle's center of gravity changes when removing main parts on the rear side (rear axle, suspension, etc.), support a jack up point on the front side garage jack with a mission jack or equivalent.**
- **Be careful not to smash or do not do anything that would affect piping parts.**

Garage Jack and Safety Stand

NAS0000V

WARNING:

- **Park the vehicle on a level surface when using the jack. Make sure to avoid damaging pipes, tubes, etc. under the vehicle.**
- **Never get under the vehicle while it is supported only by the jack. Always use safety stands when you have to get under the vehicle.**
- **Place wheel chocks at both front and back of the wheels on the ground.**



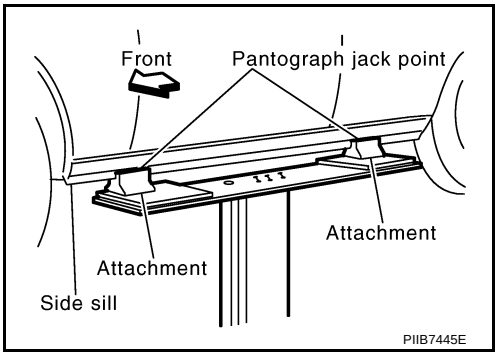
2-Pole Lift

NAS0000W

WARNING:

When lifting the vehicle, open the lift arms as wide as possible and ensure that the front and rear of the vehicle are well balanced.

When setting the lift arm, do not allow the arm to contact the brake tubes, brake cable, fuel lines and sill spoiler.



Board-on Lift

NAS0000X

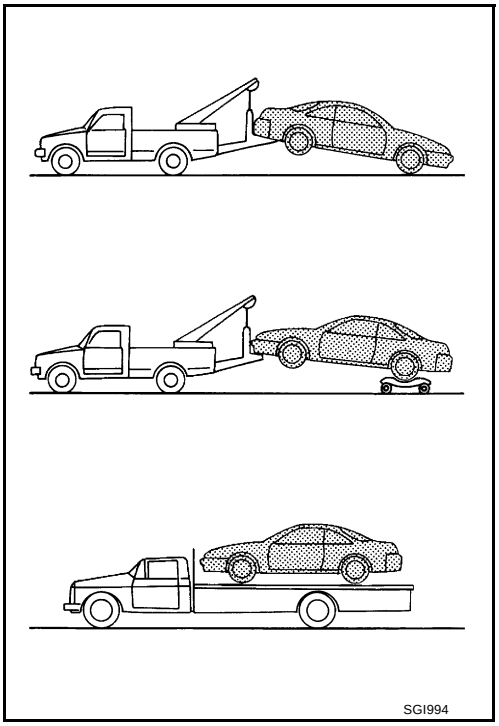
CAUTION:

Make sure vehicle is empty when lifting.

- **The board-on lift attachment set at front end of vehicle should be set on the front of the sill under the front door opening.**
- **Position attachments at front and rear ends of board-on lift.**

TOW TRUCK TOWING

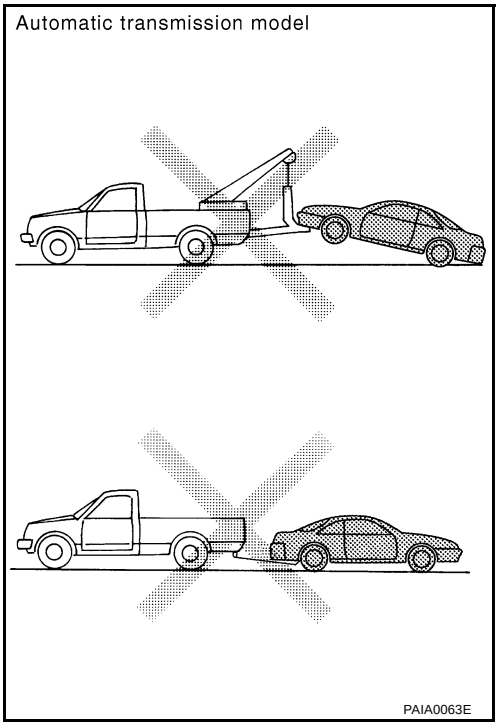
PFP:00000



Tow Truck Towing

NAS0000Y

CAUTION:



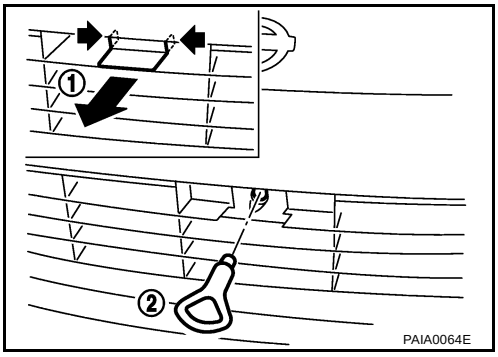
- **All applicable state or Provincial (in Canada) laws and local laws regarding the towing operation must be obeyed.**
- **It is necessary to use proper towing equipment to avoid possible damage to the vehicle during towing operation. Towing is in accordance with Towing Procedure Manual at dealer.**
- **Always attach safety chains before towing.**
- **When towing, make sure that the transmission, steering system and power train are in good order. If any unit is damaged, dollies must be used.**

NISSAN recommends that the vehicle be towed with the driving (rear) wheels off the ground as illustrated.

SGI994

CAUTION:

- **Never tow an automatic transmission model with the rear wheels or four wheels on the ground (forward or backward). This may cause serious and expensive damage to the transmission.**
- **When towing with the front wheels on the ground (if you do not use towing dollies), turn the ignition key to the OFF position, and secure the steering wheel in the straight-ahead position with a rope or similar device. Never place the ignition key in the LOCK position. This will result in damage to the steering lock mechanism.**
- **When towing a manual transmission model with the rear wheels on the ground (if you do not use towing dollies), release the parking brake and move the shift lever to the N (Neutral) position.**



PAIA0063E

Vehicle Recovery (Freeing a Stuck Vehicle)

NAS0000Z

FRONT

After removing the front licence plate (if so equipped),
1 Remove the recovery hook cover from the bumper.
2 Securely install the recovery hook stored with jacking tools.
Make sure that the hook is properly secured in the stored place after use.

WARNING:

- **Stand clear of a stuck vehicle.**
- **Do not spin your tires at high speed. This could cause them to explode and result in serious injury. Parts of your vehicle could also overheat and be damaged.**

CAUTION:

- **Tow chains or cables must be attached only to the vehicle recovery hooks or main structural members of the vehicle. Otherwise, the vehicle body will be damaged.**
- **Do not use the vehicle tie downs to free a vehicle stuck in sand, snow, mud, etc. Never tow a vehicle using the vehicle tie downs or recovery hooks.**
- **Always pull the cable straight out from the front of the vehicle. Never pull on the vehicle at an angle.**
- **Pulling devices should be routed so they do not touch any part of the suspension, steering, brake or cooling systems.**
- **Pull devices such as ropes or canvas straps are not recommended for use in vehicle towing or recovery.**

If your vehicle is stuck in sand, snow, mad, etc., use the following procedure:

1. Turn off the Vehicle Dynamic Control System (if so equipped).
2. Make sure the area in front and behind the vehicle is clear of obstructions.
3. Turn the steering wheel right and left to clear an area around front tires.
4. Slowly rock the vehicle forward and backward.
   - Shift back and forth between R (reverse) and D (drive) (automatic transmission models) or 1st (low) and R (reverse) (manual transmission models).
   - Apply the accelerator as little as possible to maintain the rocking motion.
   - Release the accelerator pedal before shifting between R and D (automatic transmission models) or 1st and R (manual transmission models).
   - Do not spin the tires above 35 MPH (55 km/h).
5. If the vehicle cannot be freed after a few tires, contact a professional towing service to remove the vehicle.

REAR

- Towing hook is not available.

RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS

PFP:00000

Recommended Chemical Products and Sealants

NAS00011

Refer to the following chart for help in selecting the appropriate chemical product or sealant.

	Product Description	Purpose	Nissan North America Part No. (USA)	Nissan Canada Part No. (Canada)	Aftermarket Cross-reference Part Nos.
1	Rear View Mirror Adhesive	Used to permanently remount rear view mirrors to windows.	999MP-AM000P	99998-50505	Permatex 81844
2	Anaerobic Liquid Gasket	For metal-to-metal flange sealing. Can fill a 0.38 mm (0.015 inch) gap and provide instant sealing for most powertrain applications.	999MP-AM001P	99998-50503	Permatex 51813 and 51817
3	High Performance Thread Sealant	Provides instant sealing on any threaded straight or parallel threaded fitting. (Thread sealant only, no locking ability.) ● Do not use on plastic.	999MP-AM002P	999MP-AM002P	Permatex 56521
4	Silicone RTV	Gasket Maker	999MP-AM003P (Ultra Grey)	99998-50506 (Ultra Grey)	Permatex Ultra Grey 82194; Three Bond 1207,1215, 1216, 1217F, 1217G and 1217H Nissan RTV Part No. 999MP-A7007
		Gasket Maker for Maxima/ Quest 5-speed automatic transmission (RE5F22A)	–	–	Three Bond 1281B or exact equivalent in its quality
5	High Temperature, High Strength Thread Locking Sealant (Red)	Threadlocker	999MP-AM004P	999MP-AM004P	Permatex 27200; Three Bond 1360, 1360N, 1305 N&P, 1307N, 1335, 1335B, 1363B, 1377C, 1386B, D&E and 1388 Loctite 648
6	Medium Strength Thread Locking Sealant (Blue)	Threadlocker (service tool removable)	999MP-AM005P	999MP-AM005P	Permatex 24200, 24206, 24240, 24283 and 09178; Three Bond 1322, 1322N, 1324 D&N, 1333D, 1361C, 1364D, 1370C and 1374

SAE J1930 Terminology List

NAS00017

All emission related terms used in this publication in accordance with SAE J1930 are listed. Accordingly, new terms, new acronyms/abbreviations and old terms are listed in the following chart.

NEW TERM	NEW ACRONYM / ABBREVIATION	OLD TERM
Air cleaner	ACL	Air cleaner
Barometric pressure	BARO	***
Barometric pressure sensor-BCDD	BAROS-BCDD	BCDD
Camshaft position	CMP	***
Camshaft position sensor	CMPS	Crank angle sensor
Canister	***	Canister
Carburetor	CARB	Carburetor
Charge air cooler	CAC	Intercooler
Closed loop	CL	Closed loop
Closed throttle position switch	CTP switch	Idle switch
Clutch pedal position switch	CPP switch	Clutch switch
Continuous fuel injection system	CFI system	***
Continuous trap oxidizer system	CTOX system	***
Crankshaft position	CKP	***
Crankshaft position sensor	CKPS	***
Data link connector	DLC	***
Data link connector for CONSULT-II	DLC for CONSULT-II	Diagnostic connector for CONSULT-II
Diagnostic test mode	DTM	Diagnostic mode
Diagnostic test mode selector	DTM selector	Diagnostic mode selector
Diagnostic test mode I	DTM I	Mode I
Diagnostic test mode II	DTM II	Mode II
Diagnostic trouble code	DTC	Malfunction code
Direct fuel injection system	DFI system	***
Distributor ignition system	DI system	Ignition timing control
Early fuel evaporation-mixture heater	EFE-mixture heater	Mixture heater
Early fuel evaporation system	EFE system	Mixture heater control
Electrically erasable programmable read only memory	EEPROM	***
Electronic ignition system	EI system	Ignition timing control
Engine control	EC	***
Engine control module	ECM	ECCS control unit
Engine coolant temperature	ECT	Engine temperature
Engine coolant temperature sensor	ECTS	Engine temperature sensor
Engine modification	EM	***
Engine speed	RPM	Engine speed

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

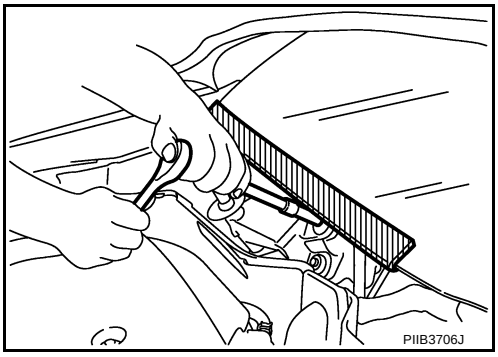
NIS00049

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service



NIS0004A

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Procedures without Cowl Top Cover

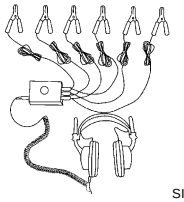
NIS001L6

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Handling for Adhesive and Primer

NIS0004B

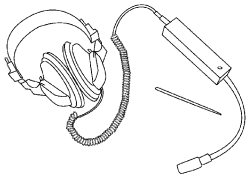
- Do not use an adhesive which is past its usable date. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.
- Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.
- Open the seal of the primer and adhesive just before application. Discard the remainder.
- Before application, be sure to shake the primer container to stir the contents. If any floating material is found, do not use it.
- If any primer or adhesive contacts the skin, wipe it off with gasoline or equivalent and wash the skin with soap.
- When using primer and adhesive, always observe the precautions in the instruction manual.

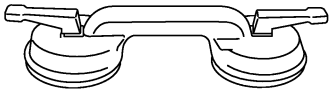


PREPARATION

PFP:00002

Special Service Tools





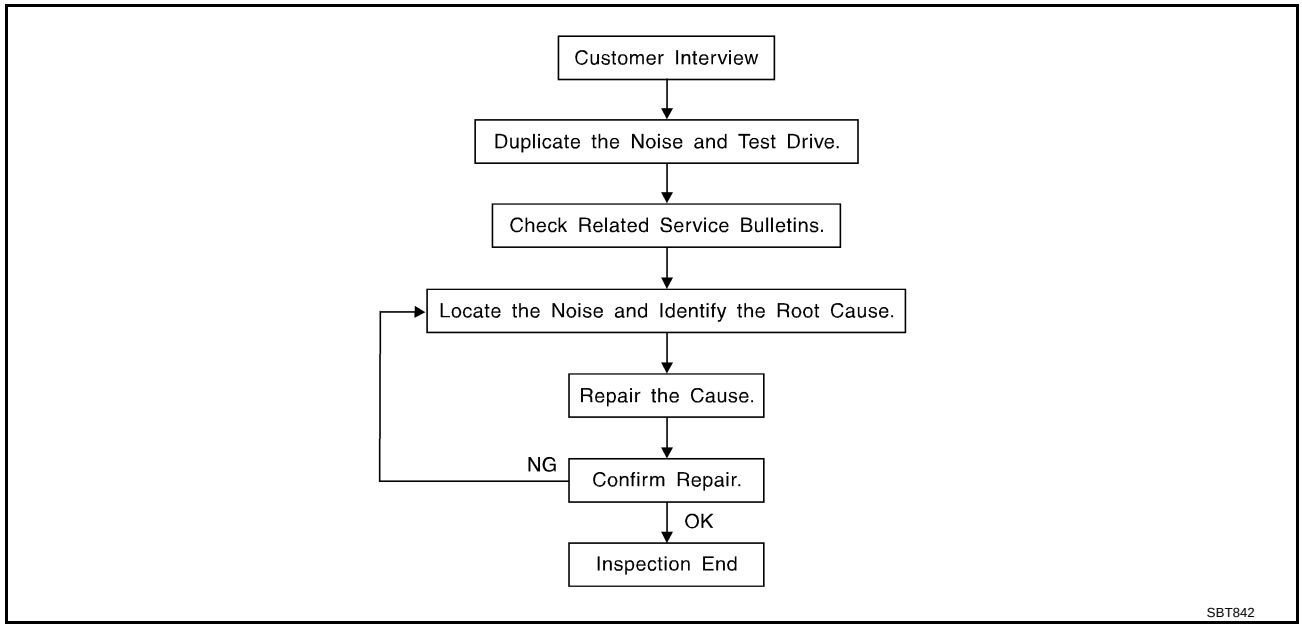
NIS0004D

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
(J39570) Chassis ear  SIIA0993E	Locating the noise
(J43980) NISSAN Squeak and Rattle Kit  SIIA0994E	Repairing the cause of noise

Commercial Service Tools

NIS0004E



Tool name	Description
Engine ear  SIIA0995E	Locating the noise
Suction lifter  PIIB1805J	Remove the windshield, back door window glass

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS0004F

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to GW-9, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to GW-7, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS0004G

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:
Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

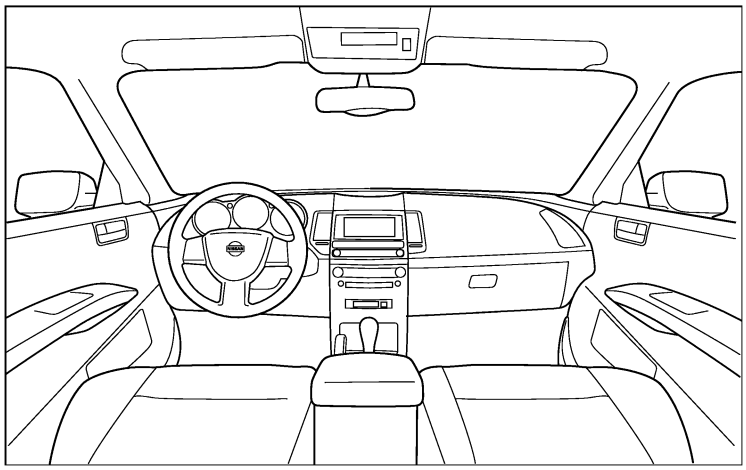
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

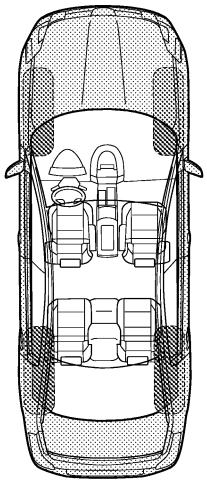
Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

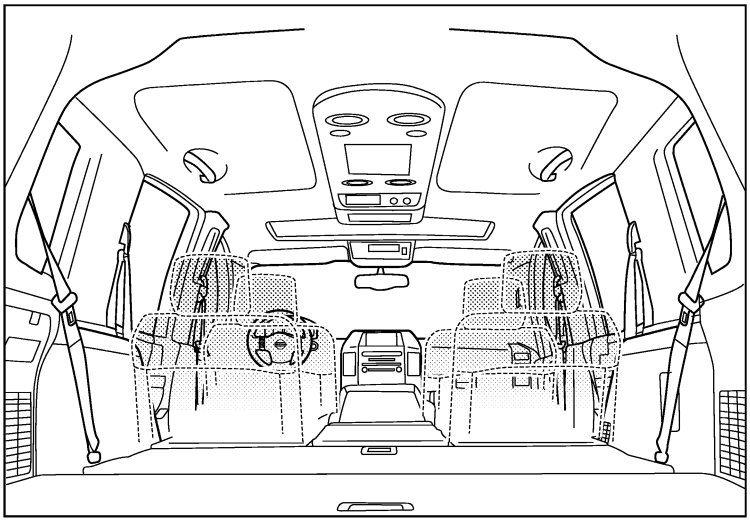
These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



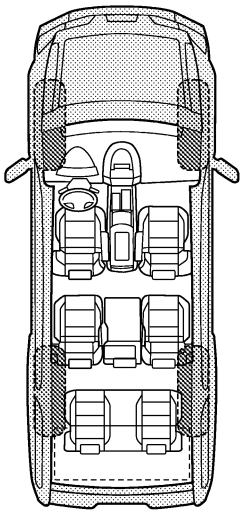
Diagnostic Worksheet



NIS0004H



SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET



Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

WINDSHIELD GLASS

PFP:72712

Removal and Installation

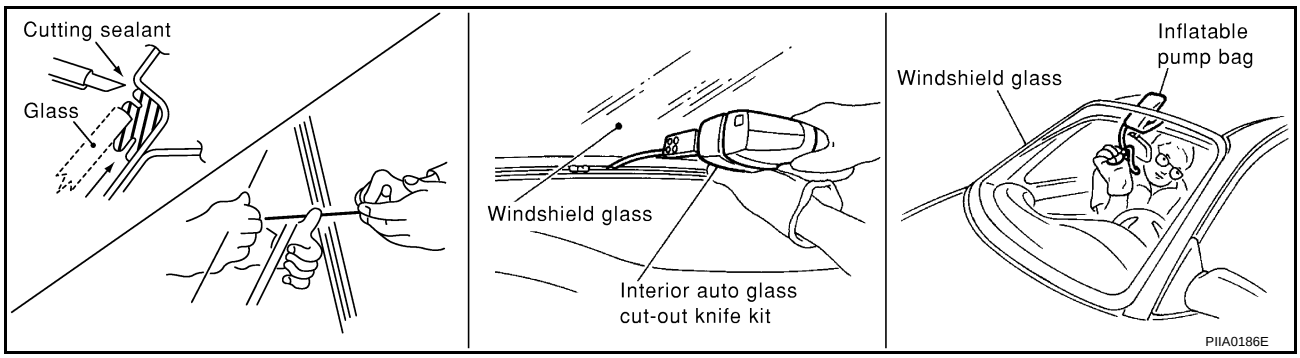
NIS0004I

1. Dam rubber
2. Fastener
3. Molding (upper)
4. Windshield glass
5. Insulator
6. Spacer
7. Mirror base

REMOVAL (COUPE)

1. Remove the front pillar finisher. Refer to EI-31, "Removal and Installation (for Coupe Models)" .
2. Partially remove the headlining (front edge). Refer to EI-44, "Removal and Installation (for Coupe Models)" .
3. Remove the front pillar garnish. Refer to EI-35, "Removal and Installation (for Coupe Models)" .
4. Remove the front wiper arms. Refer to WW-30, "Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location" .
5. Remove the cowl top cover. Refer to EI-20, "COWL TOP" .
6. Apply a protective tape around the windshield glass to protect the painted surface from damage.

NOTE:



- After removing moldings, remove glass using piano wire or power cutting tool and an inflatable pump bag.
- If a windshield glass is to be reused, mark the body and the glass with mating marks.

WARNING:
When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:
- **When a windshield glass is to be reused, do not use a cutting knife or power cutting tool.**
- **Be careful not to scratch the glass when removing.**

7. Remove the windshield glass, using suction lifter.

NOTE:
Do not set or stand the glass on its edge. Small chips may develop into cracks.

REMOVAL (ROADSTER)

1. Open the soft top.
2. Remove the front pillar finisher. Refer to EI-32, "Removal and Installation (for Roadster Models)" .
3. Remove the roof front finisher. Refer to EI-46, "Removal and Installation (for Roadster Models)" .
4. Remove the front pillar garnish. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
5. Remove the front wiper arms. Refer to WW-30, "Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location" .
6. Remove the cowl top cover. Refer to EI-20, "COWL TOP" .
7. Apply a protective tape around the windshield glass to protect the painted surface from damage.

NOTE:
- After removing moldings, remove glass using piano wire or power cutting tool and an inflatable pump bag.
- If a windshield glass is to be reused, mark the body and the glass with mating marks.

WARNING:
When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:
- **When a windshield glass is to be reused, do not use a cutting knife or power cutting tool.**
- **Be careful not to scratch the glass when removing.**

8. Remove the windshield glass, using suction lifter.

NOTE:
Do not set or stand the glass on its edge. Small chips may develop into cracks.

INSTALLATION

- Use a genuine Nissan Urethane Adhesive Kit (if available) or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.
- The molding must be installed securely so that it is in position and leaves no gap.
- Inform the customer that the vehicle should remain stationary until the urethane adhesive has completely cured (preferably 24 hours). Curing time varies with temperature and humidity.

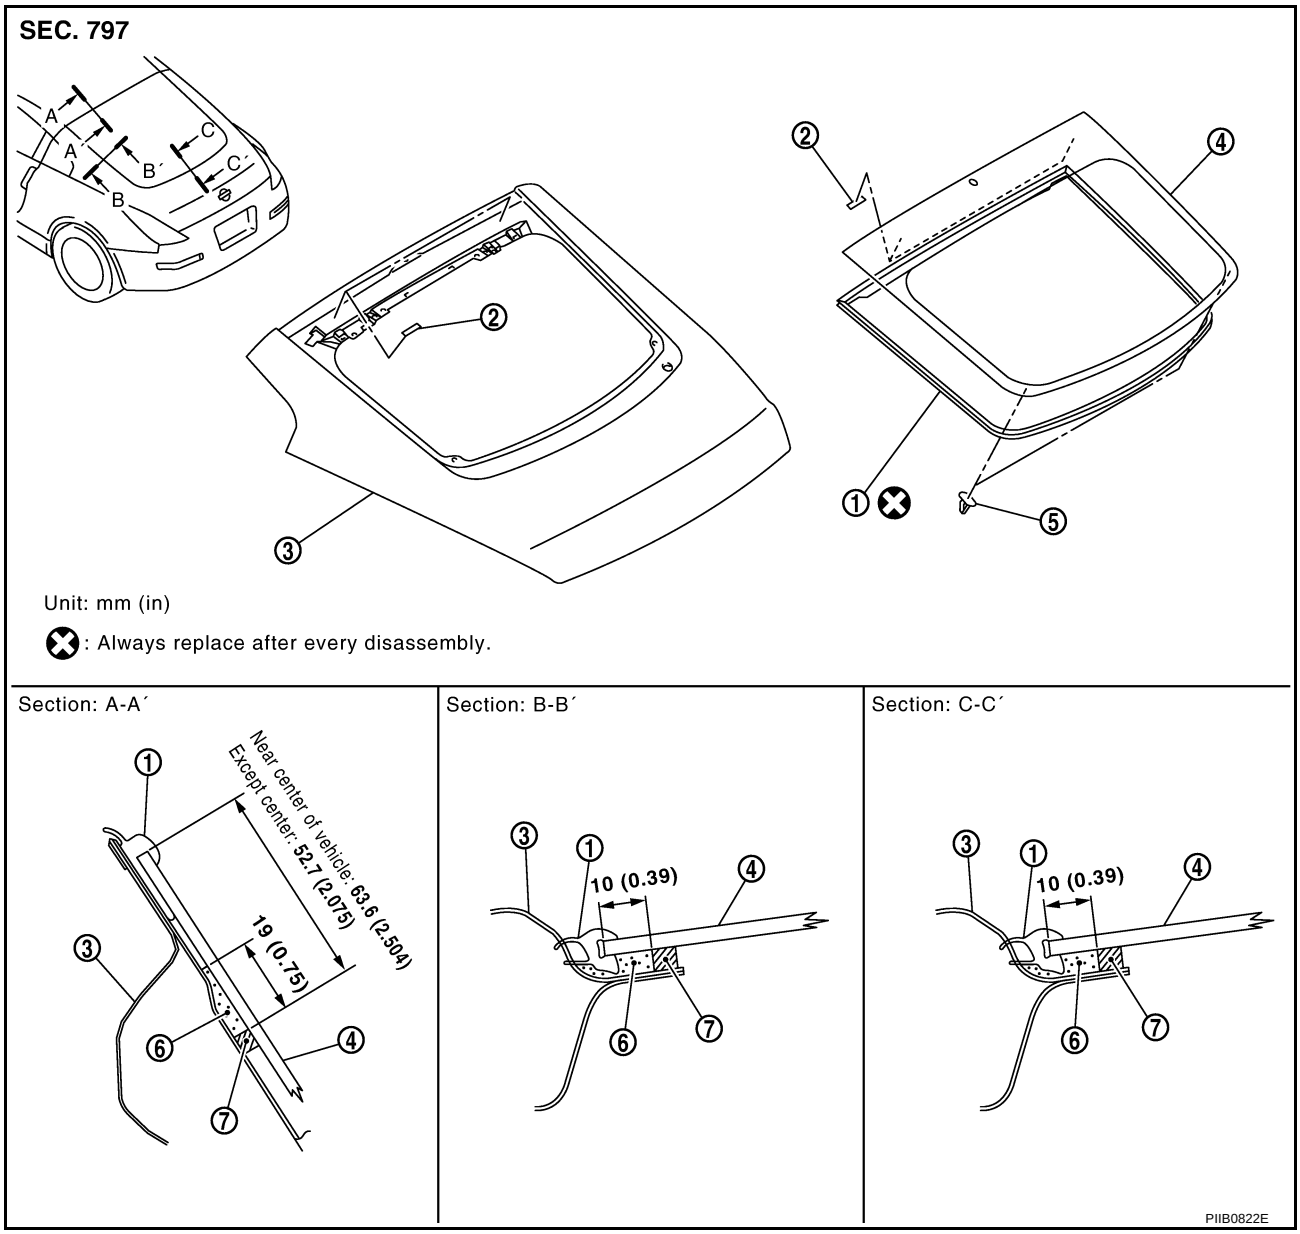
WARNING:
- **Keep heat and open flames away as primers and adhesive are flammable.**
- **The materials contained in the kit are harmful if swallowed, and may irritate skin and eyes. Avoid contact with the skin and eyes.**

- **Use in an open, well ventilated location. Avoid breathing the vapors. They can be harmful if inhaled. If affected by vapor inhalation, immediately move to an area with fresh air.**
- **Driving the vehicle before the urethane adhesive has completely cured may affect the performance of the windshield in case of an accident.**

CAUTION:

- **Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.**
- **Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.**
- **Do not leave primers or adhesive cartridge unattended with their caps open or off.**
- **The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidity. The curing time will increase under lower temperature and lower humidity.**

Repairing Water Leaks



Leaks can be repaired without removing and reinstalling glass.
If water is leaking between the urethane adhesive material and body or glass, determine the extent of leakage. This can be done by applying water to the windshield area while pushing glass outward.
To stop the leak, apply primer (if necessary) and then urethane adhesive to the leak point.

BACK DOOR WINDOW GLASS

PFP:90300

Removal and Installation

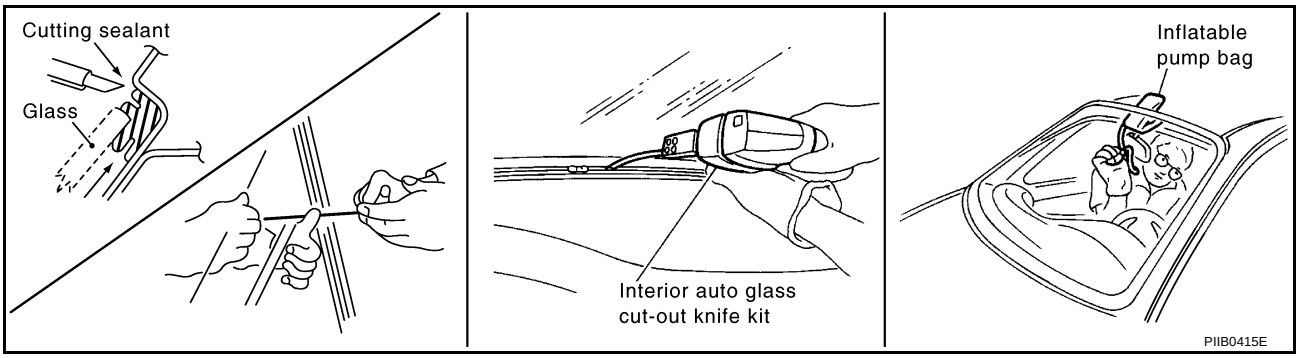
NIS0004J

1. Back door window molding
2. Dual lock fastener
3. Back door
4. Back door window glass
5. Holder
6. Adhesive
7. Dam rubber

REMOVAL

1. Remove back door finisher. Refer to EI-48, "BACK DOOR FINISHER" .
2. Remove rear wiper arm. Refer to WW-46, "Removal and Installation of Rear Wiper Arm, Adjustment of Wiper Arms Stop Location" .
3. Remove connectors and grounds for rear window defogger.
4. Apply a protective tape around the back door window glass to protect the painted surface from damage. remove glass using piano wire or power cutting tool and an inflatable pump bag.

NOTE:



If a back door window glass is to be reused, mark the body and the glass with mating marks.

WARNING:

When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:

- **When a back door window glass is to be reused, do not use a cutting knife or power cutting tool.**
- **Be careful not to scratch the glass when removing.**
- **Do not set or stand the glass on its edge. Small chips may develop into cracks.**

5. Remove the back door window glass, using suction lifter.

INSTALLATION

- Use a genuine Nissan Urethane Adhesive Kit (if available) or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.
- Inform the customer that the vehicle should remain stationary until the urethane adhesive has completely cured (preferably 24 hours). Curing time varies with temperature and humidity.

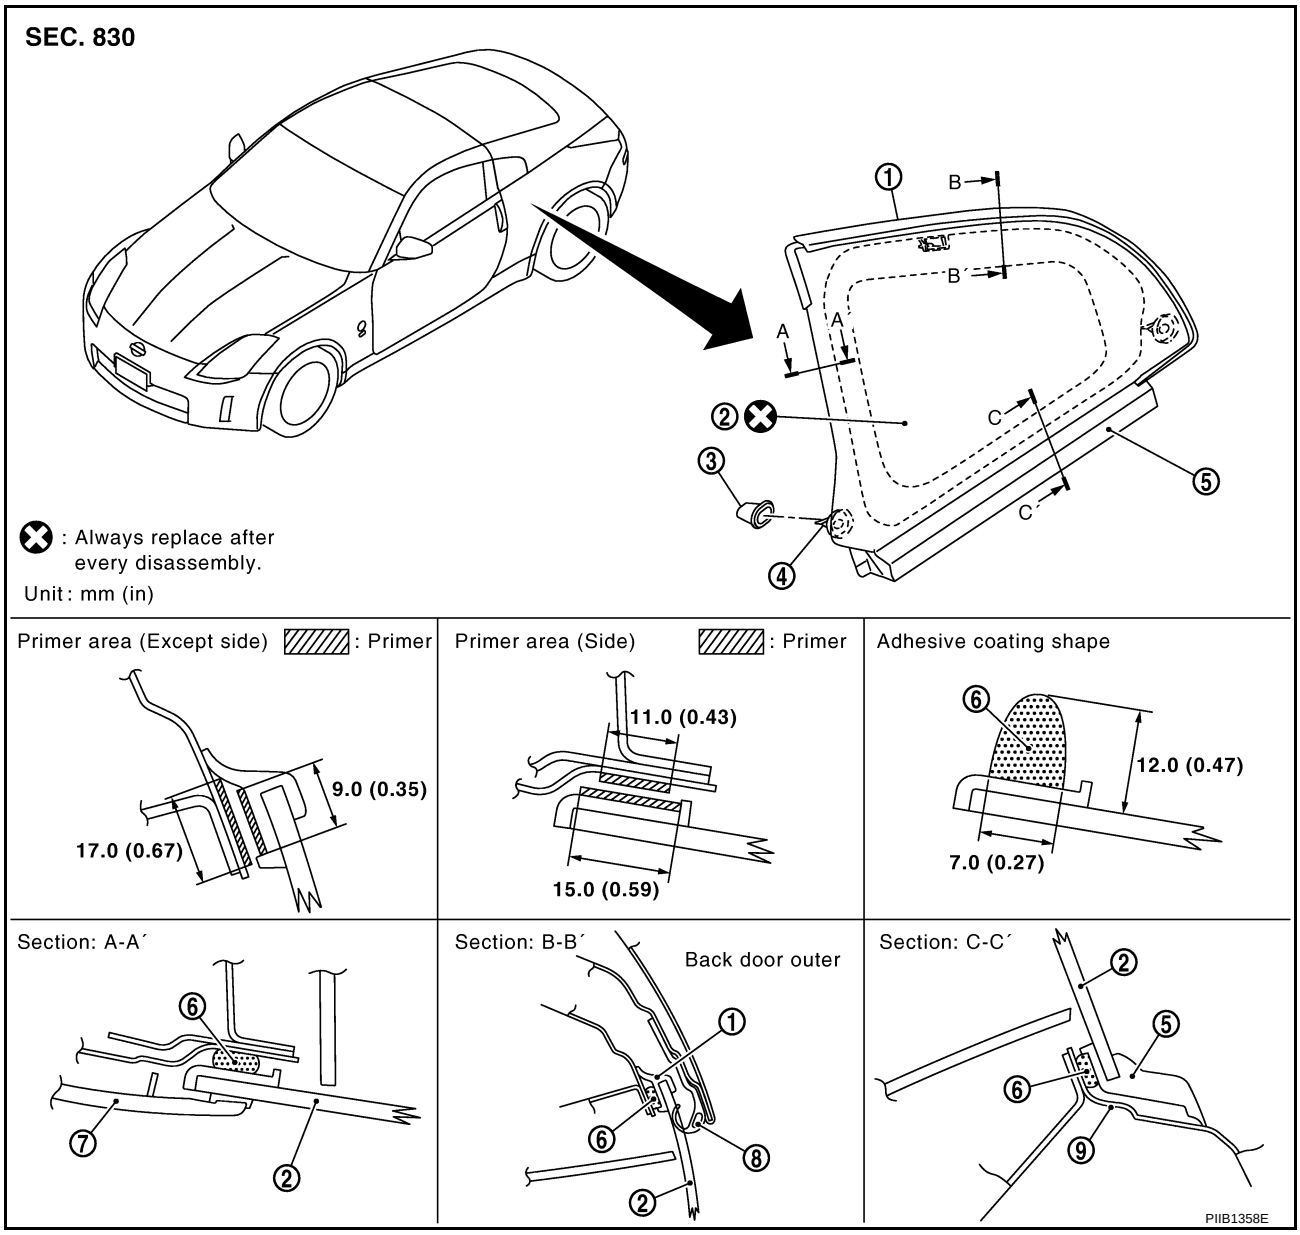
WARNING:

- **Keep heat and open flames away as primers and adhesive are flammable.**
- **The materials contained in the kit are harmful if swallowed, and may irritate skin and eyes. Avoid contact with the skin and eyes.**
- **Use in an open, well ventilated location. Avoid breathing the vapors. They can be harmful if inhaled. If affected by vapor inhalation, immediately move to an area with fresh air.**
- **Driving the vehicle before the urethane adhesive has completely cured may affect the performance of the back door window in case of an accident.**

CAUTION:

- **Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.**
- **Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.**
- **Do not leave primers or adhesive cartridge unattended with their caps open or off.**
- **The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidity. The curing time will increase under lower temperature and lower humidity.**

Repairing Water Leaks



Leaks can be repaired without removing and reinstalling glass.
If water is leaking between the urethane adhesive material and body or glass, determine the extent of leakage. This can be done by applying water to the back door window area while pushing glass outward.
To stop the leak, apply primer (if necessary) and then urethane adhesive to the leak point.

SIDE WINDOW GLASS

PFP:83300

Removal and Installation

NIS0004K

1. Side window glass molding (upper)
2. Side window glass
3. Grommet
4. Clip
5. Side window glass molding (lower)
6. Adhesive
7. Lock pillar finisher
8. Back door molding
9. Rear fender

REMOVAL

1. Remove rear side finisher. Refer to EI-35, "BODY SIDE TRIM" .
2. Remove rear pillar finisher. Refer to EI-35, "BODY SIDE TRIM" .
3. Remove headlining. Refer to EI-44, "HEADLINING" .
4. Remove lock pillar finisher. Refer to EI-31, "ROOF SIDE MOLDING" .

NOTE:
If a side window glass is to be reused, mark the body and the glass with mating marks.

WARNING:
When cutting the glass from the vehicle, always wear safety glasses and heavy gloves to help prevent glass splinters from entering your eyes or cutting your hands.

CAUTION:
- **Be careful not to scratch the glass when removing.**

- **Do not set or stand the glass on its edge. Small chips may develop into cracks.**

INSTALLATION

- Use a genuine Nissan Urethane Adhesive Kit (if available) or equivalent and follow the instructions furnished with it.
- While the urethane adhesive is curing, open a door window. This will prevent the glass from being forced out by passenger compartment air pressure when a door is closed.
- The molding must be installed securely so that it is in position and leaves no gap.
- Inform the customer that the vehicle should remain stationary until the urethane adhesive has completely cured (preferably 24 hours). Curing time varies with temperature and humidity.

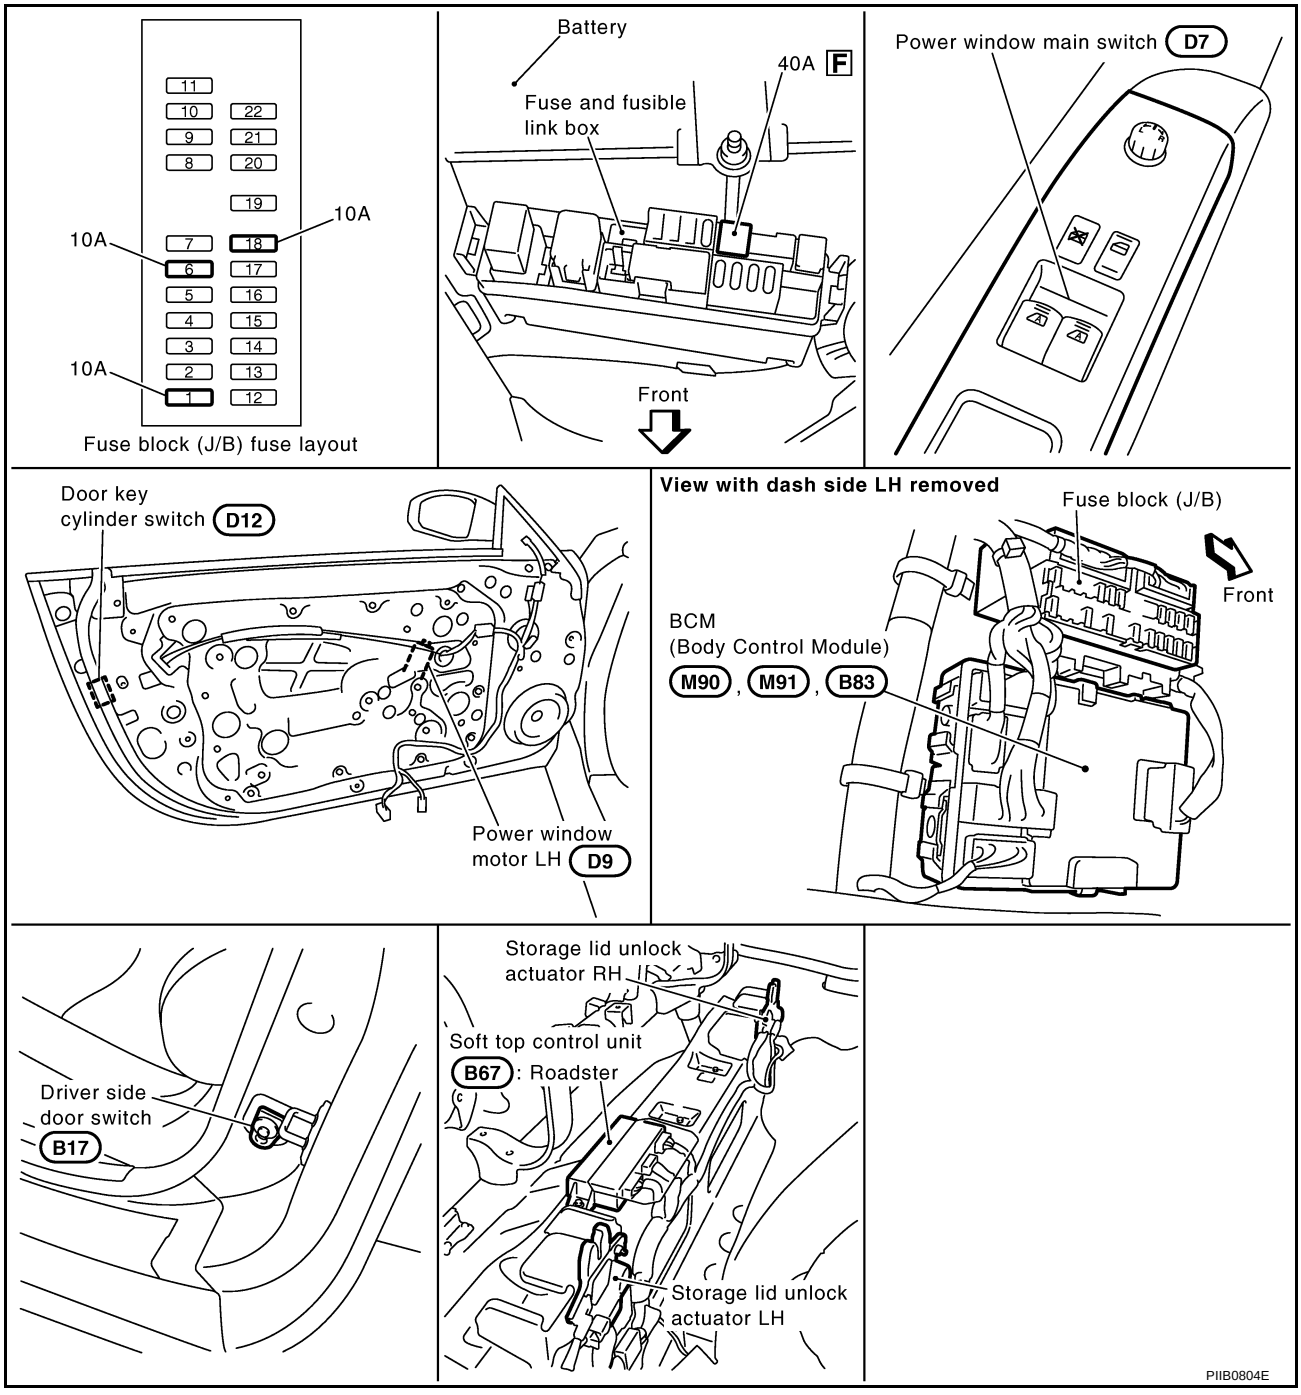
WARNING:

- **Keep heat and open flames away as primers and adhesive are flammable.**
- **The materials contained in the kit are harmful if swallowed, and may irritate skin and eyes. Avoid contact with the skin and eyes.**
- **Use in an open, well ventilated location. Avoid breathing the vapors. They can be harmful if inhaled. If affected by vapor inhalation, immediately move to an area with fresh air.**
- **Driving the vehicle before the urethane adhesive has completely cured may affect the performance of the side window in case of an accident.**

CAUTION:

- **Do not use an adhesive which is past its usable term. Shelf life of this product is limited to six months after the date of manufacture. Carefully adhere to the expiration or manufacture date printed on the box.**
- **Keep primers and adhesive in a cool, dry place. Ideally, they should be stored in a refrigerator.**
- **Do not leave primers or adhesive cartridge unattended with their caps open or off.**
- **The vehicle should not be driven for at least 24 hours or until the urethane adhesive has completely cured. Curing time varies depending on temperature and humidity. The curing time will increase under lower temperature and lower humidity.**

Repairing Water Leaks



Leaks can be repaired without removing and reinstalling glass.
If water is leaking between the urethane adhesive material and body or glass, determine the extent of leakage. This can be done by applying water to the side window area while pushing glass outward.
To stop the leak, apply primer (if necessary) and then urethane adhesive to the leak point.

POWER WINDOW SYSTEM

PFP:25401

Component Parts and Harness Connector Location

NIS0004L

System Description

NIS0004M

Power is supplied at all times

- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55.
- through 10A fuse [No. 18, located in the fuse block (J/B)]
- to BCM terminal 42.
- through BCM terminal 54
- to power window main switch terminal 1.
- to power window sub-switch terminal 10.

With ignition switch in ON or START position, power is supplied

- through 10A fuse [No.1, located in the fuse block (J/B)]
- to BCM terminal 38.
- through BCM terminal 53
- to power window main switch terminal 10.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66.
- to power window main switch terminal 15
- through grounds M30 and M66.
- to power window sub-switch terminal 11
- through grounds M30 and M66.

MANUAL OPERATION

Driver Side Door

WINDOW UP

When the driver side window switch in the power window main switch is pressed in the up position,
Power is supplied

- through power window main switch terminal 8
- to driver side power window motor terminal 2.

Ground is supplied

- through driver side power window motor terminal 1
- to power window main switch terminal 11.

Then, the motor raises the window until the switch is released.

WINDOW DOWN

When the driver side window switch in the power window main switch is pressed in the down position,
Power is supplied

- through power window main switch terminal 11
- to driver side power window motor terminal 1.

Ground is supplied

- through side power window motor terminal 2.
- to power window main switch terminal 8

Then, the motor lowers the window until the switch is released.

Passenger Side Door

POWER WINDOW SUB-SWITCH OPERATION

WINDOW UP

When the power window sub-switch is pressed in the up position,
Power is supplied

- through power window sub-switch terminal 8
- to passenger side power window motor terminal 2.

Ground is supplied

- through passenger side power window motor terminal 1.

- to power window sub-switch terminal 9

Then, the motor raises the window until the switch is released.

WINDOW DOWN

When the power window sub-switch is pressed in the down position,
Power is supplied

- through power window sub-switch terminal 9
- to passenger side power window motor terminal 1.

Ground is supplied

- through passenger side power window motor terminal 2.
- to power window sub-switch terminal 8

Then, the motor lowers the window until the switch is released.

POWER WINDOW MAIN SWITCH OPERATION

Signal is sent

- though power window main switch terminal 12.
- to power window sub-switch terminal 16

The operation of passenger side power window with power window main switch is as same as the operation with power window sub-switch.

POWER WINDOW SERIAL LINK

Power window main switch, power window sub-switch and BCM transmit and receive the signal by power window serial link.
The under mentioned signal is transmitted from BCM to power window main switch.

- Driver side door switch signal
- Keyless power window down signal

The under mentioned signal is transmitted from BCM to power window sub-switch.

- Passenger side door switch signal
- Keyless power window down signal

The under mentioned signal is transmitted from power window main switch to power window sub-switch.

- Passenger side door window operation signal
- Power window control by key cylinder switch signal
- Retained power operation signal
- Power window lock signal

AUTO OPERATION

The power window AUTO feature enables the driver to open or close the window without holding the window switch in the down or up position.

POWER WINDOW LOCK

The power window lock is designed to lock operation of passenger side door window.
When the lock position, power window lock signal is sent by using power window serial link from power window main switch to power window sub-switch.
When power window sub-switch is receiving the lock signal, prohibits the operation of passenger side power window by power window sub-switch.

RETAINED POWER OPERATION

When the ignition switch is turned to the OFF position from ON or START position.
Power is supplied for 45 seconds

- through BCM terminal 53.
- to power window main switch terminal 10

When power and ground are supplied, the BCM continues to be energized, and the power window can be operated.
The retained power operation is canceled when the driver side door or the passenger side door is opened.
RAP signal period can be changed by CONSULT-III. Refer to GW-29, "CONSULT-III Function (BCM)" .

ANTI-PINCH SYSTEM

Power window main switch and power window sub-switch monitors the power window motor operation and the power window position (full closed or other) for driver side and passenger side power window by the signals from encoder and limit switch in power window motor (driver side and passenger side).
When power window main switch detects interruption during the following close operation,

- automatic close operation when ignition switch is in the “ON” position
- automatic close operation during retained power operation
- manual close operation during retained power operation

Power window main switch or power window sub-switch controls each power window motor for open and the power window will be lowered about 150 mm (5.91 in).

POWER WINDOW CONTROL BY THE KEY CYLINDER SWITCH

When ignition key switch is OFF, power window can be opened or closed by turning the door key cylinder UNLOCK / LOCK position more then 1.5 second over condition.

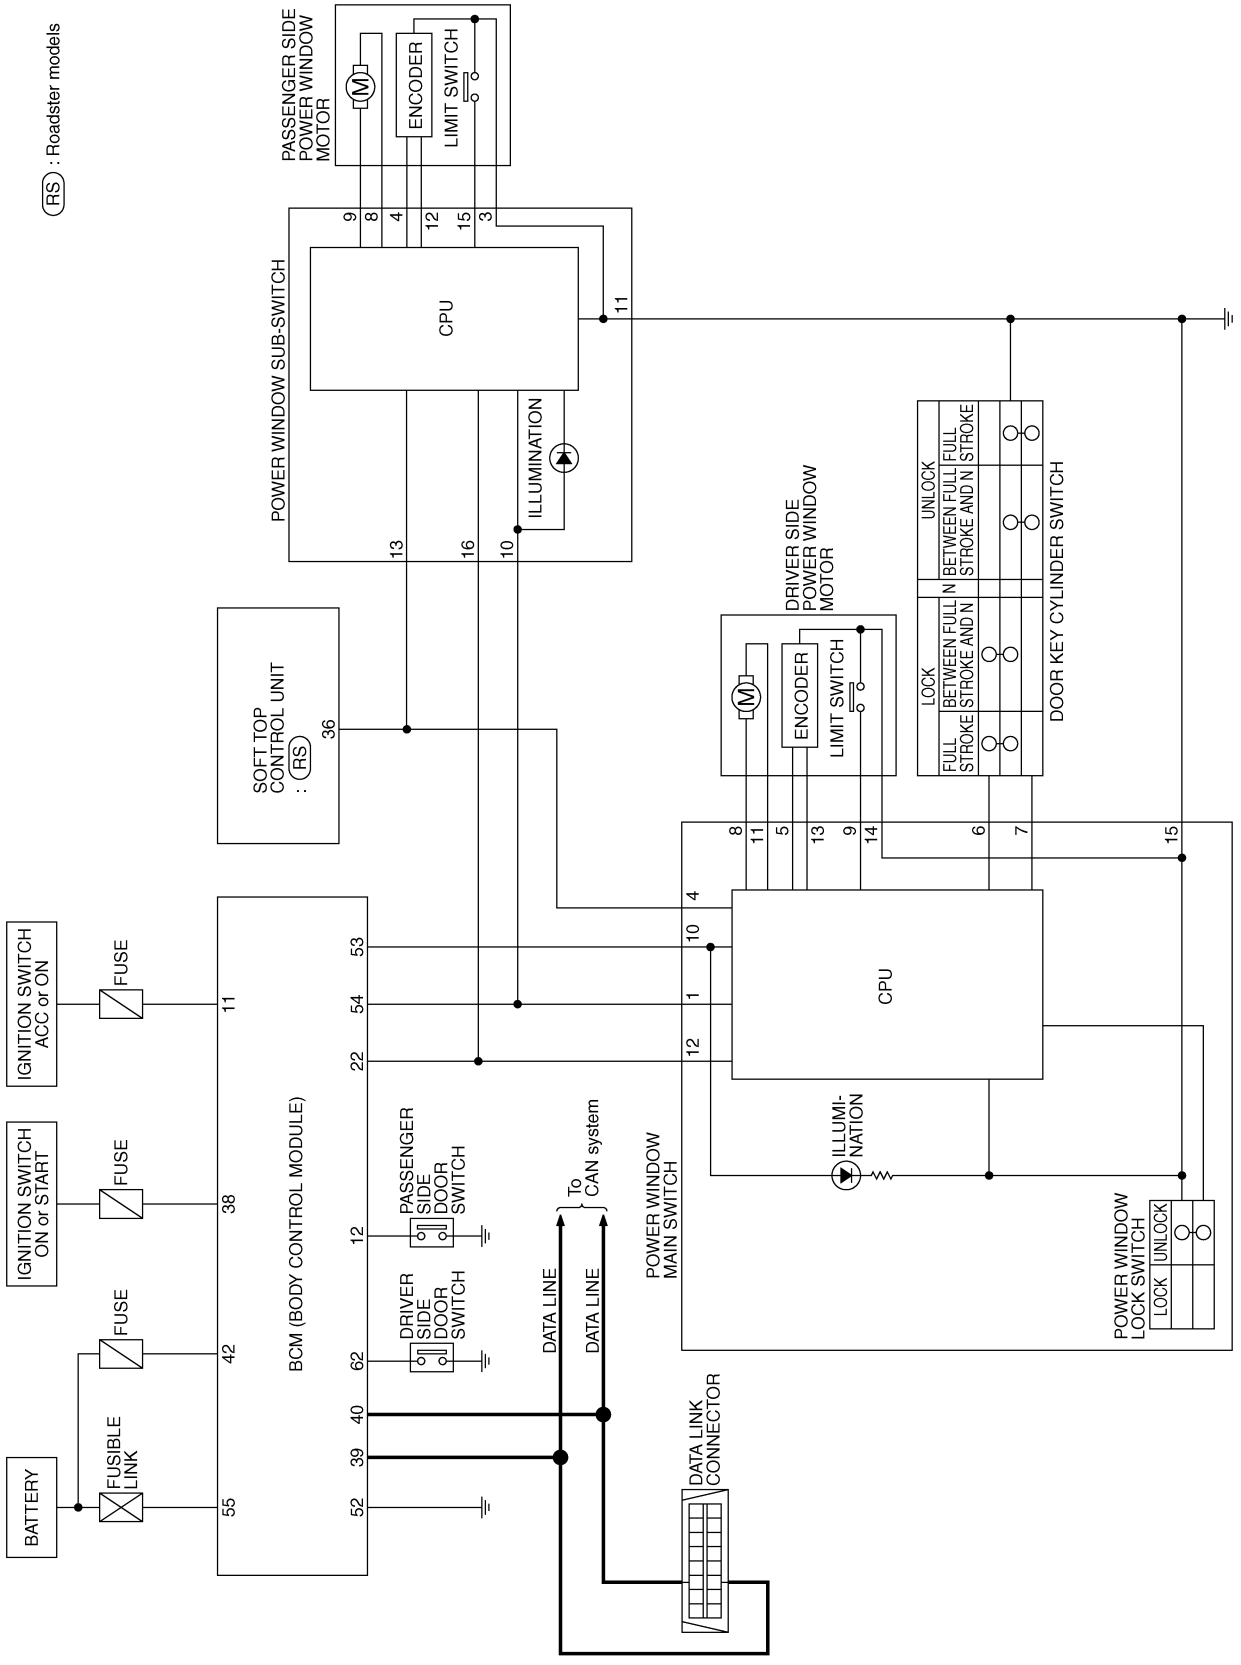
- Power window can be opened as the door key cylinder is kept fully turning to the UNLOCK position.
- Power window can be closed as the door key cylinder is kept fully turning to the LOCK position.

The power window operation by the key cylinder switch stops when the following operations are performed.

- While performing open / close the window with power window main switch.
- When the ignition switch is turned ON while the power window control operation by the key cylinder switch.

AUTOMATIC WINDOW ADJUSTING FUNCTION

When the driver's / passenger's door(s) is opened, the window of the opened door is lowered approx. 10 mm (0.39in).
When the door is closed, the window is raised to fully-closed positions.
Automatic window adjusting function system (opening operation) does not operate when the following.



- The window is 10 mm (0.39 in) or more open from fully-closed positions.

Automatic window adjusting function system (closing operation) does not operate when the following.

- The automatic window adjusting function system (opening operation) operation.
- The keyless power window operation.
- The power window control by the key cylinder switch operation.

CONSULT-III Function (BCM)

NIS0004S

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnostic test item	Check item diagnostic test mode	Content
RETAINED PWR	Work support	Changes setting of each function.
	Data monitor	Displays the input data of BCM in real time.
	Active test	Gives a drive signal to a load to check the operation.

WORK SUPPORT

Work item	Description
RETAINED PWR	Rap signal's power supply period can be changed by mode setting. Selects rap signal's power supply period between three steps ● MODE 1 (45 sec.) / MODE 2 (OFF) / MODE 3 (2 min.).

DATE MONITOR

Monitor item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
DOOR SW–DR	Indicates [ON/OFF] condition of driver side door switch.
DOOR SW–AS	Indicates [ON/OFF] condition of passenger side door switch.

ACTIVE TEST

Test item	Description
RETAINED PWR	This test is able to supply RAP signal (power) from BCM (body control module) to power window system and power sunroof system (if equipped). Those systems can be operated when turning on "RETAINED PWR" on CONSULT-III screen even if the ignition switch is turned OFF. **NOTE:** During this test, CONSULT-III can be operated with ignition switch in "OFF" position. "RETAINED PWR" should be turned "ON" or "OFF" on CONSULT-III screen when ignition switch is ON. Then turn ignition switch OFF to check retained power operation. CONSULT-III might be stuck if "RETAINED PWR" is turned to "ON" or "OFF" on CONSULT-III screen when ignition switch is OFF position.

Work Flow

NIS0004T

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to GW-19, "System Description" .
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to GW-30, "Trouble Diagnoses Symptom Chart" .
4. Does power window system operate normally? If Yes, GO TO 5, If No, GO TO 3.
5. INSPECTION END

Trouble Diagnoses Symptom Chart

NIS0004U

- Make sure that other systems using the signal of the following check systems operate normally.

Symptom	Diagnoses / service procedure	Reference page
None of the power windows can be operated using any switch.	1. Check BCM power supply and ground circuit	GW-32
	2. Check power window main switch power supply and ground circuit	GW-46
	3. Check power window serial link	GW-44
	4. Replace BCM.	BCS-17
Driver side power window cannot be operated	1.Check driver side power window motor circuit	GW-33
	2. Replace the power window main switch.	GW-46
Passenger side power window cannot be operated.	1. Check power window sub-switch power supply and ground circuit	GW-47
	2. Check power window serial link	GW-44
	3. Check passenger side power window motor circuit	GW-33
	4. Replace BCM.	BCS-17
Anti-pinch system does not operate normally (driver side).	1. Door window sliding part malfunction ● A foreign material adheres to window glass or grass run rubber. ● Glass run rubber wear or deformation. ● Sash is tilted too much, or not enough.	—
	2. Limit switch adjusting	GW-52
	3. Check limit switch circuit (driver side)	GW-34
	4. Check encoder circuit (driver side)	GW-37
Anti-pinch system does not operate normally (passenger side).	1. Door window sliding part malfunction ● A foreign material adheres to window glass or grass run rubber. ● Glass run rubber wear or deformation. ● Sash is tilted too much, or not enough.	—
	2. Limit switch adjusting	GW-52
	3. Check limit switch circuit (passenger side)	GW-36
	4. Check encoder circuit (passenger side)	GW-39
Power window retained power operation does not operate properly.	1. Check the retained power operation mode setting.	GW-29
	2. Check door switch	GW-42
	3. Replace BCM.	BCS-17

Symptom	Diagnoses / service procedure	Reference page
Automatic window adjusting function does not operate.	1. Check door switch	GW-42
	2. Limit switch adjusting	GW-52
	3. Check limit switch circuit (driver side)	GW-34
	4. Check limit switch circuit (passenger side)	GW-36
	5. Check power window serial link	GW-44
	6. Replace BCM.	BCS-17
Does not operate by the key cylinder switch.	1. Check door key cylinder switch	GW-48
	2. Replace the power window main switch.	EI-33
Power window lock switch does not function.	1. Check power window serial link	GW-44
	2. Replace the power window main switch.	EI-33
Auto operation does not operate but manual operate normally (driver side)	1. Check encoder circuit (driver side)	GW-37
	2. Replace power window main switch	EI-33
Auto operation does not operate but manual operate normally (passenger side)	1. Check encoder circuit (passenger side)	GW-39
	2. Replace power window sub-switch	EI-33

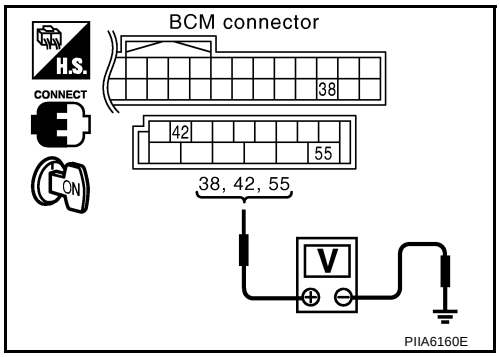
Check BCM Power Supply and Ground Circuit

NIS0004V

1. CHECK FUSE

- Check 10A fuse [No.1, located in fuse block (J/B)]
- Check 10A fuse [No.18, located in fuse block (J/B)]
- Check 40A fusible link (letter **F** , located in the fuse and fusible link box).

NOTE:
Refer to GW-18, "Component Parts and Harness Connector Location" .



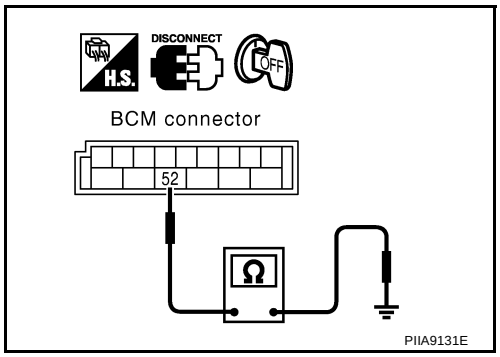
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M90, M91 terminal 38, 42, 55 and ground.

38 (W/L) – Ground : Battery voltage
42 (GY) – Ground : Battery voltage
55 (R) – Ground : Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Check BCM power supply circuit for open or short.

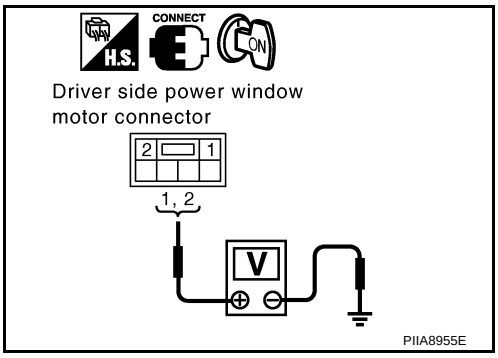
3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector M91 terminal 52 and ground.

52 (B) – Ground :Continuity should exist.

OK or NG

OK >> Power supply and ground circuit are OK.
NG >> Check BCM ground circuit for open or short.



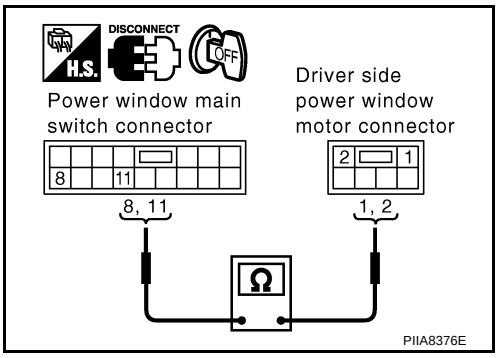
Check Drive Side Power Window Motor Circuit

NIS0004W

1. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Power window main switch operate, check voltage between driver side power window motor connector and ground.

Connector	Terminals (Wire color)		Condition of power window main switch	Voltage (V) (Approx.)
	(+)	(-)		
D9	1 (G)	Ground	UP	0
			DOWN	Battery voltage
	2 (L)		UP	Battery voltage
			DOWN	0



OK or NG

OK >> Replace driver side power window motor.
NG >> GO TO 2.

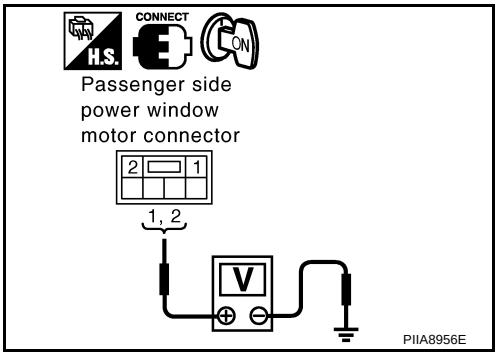
2. CHECK POWER WINDOW MAIN SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch and driver side power window motor connector.
3. Check continuity between power window main switch connector D7 terminals 8, 11 and driver side power window motor connector D9 terminals 1, 2.

8 (L) – 2 (L) : Continuity should exist.
11 (G) – 1 (G) : Continuity should exist.

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Repair or replace harness.



Check Passenger Side Power Window Motor Circuit

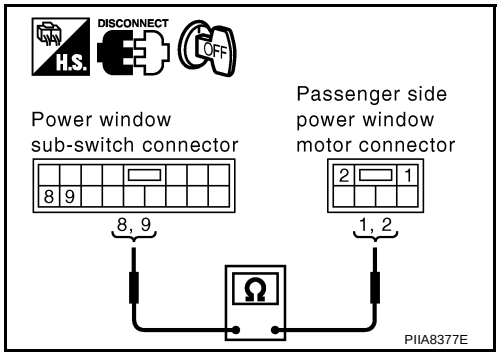
NIS0004X

1. CHECK POWER WINDOW SUB-SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Power window sub-switch operate, check voltage between passenger side power window motor connector and ground.

Connector	Terminals (Wire color)		Condition of power window sub-switch	Voltage (V) (Approx.)
	(+)	(-)		
D38	1 (G)	Ground	UP	0
			DOWN	Battery voltage
	2 (L)		UP	Battery voltage
			DOWN	0

OK or NG



OK >> Replace passenger side power window motor.
NG >> GO TO 2.

2. CHECK PASSENGER SIDE POWER WINDOW MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window sub-switch and passenger side power window motor connector.
3. Check continuity between power window sub-switch connector D37 terminals 8, 9 and passenger side power window motor connector D38 terminals 1, 2.

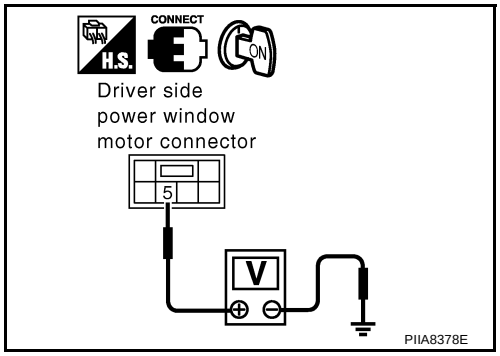
9 (G) – 1 (G) : Continuity should exist.

8 (L) – 2 (L) : Continuity should exist.

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.

NG >> Repair or replace harness.



Check Limit Switch Circuit (Driver Side)

NIS0004Y

1. CHECK DRIVER DOOR LIMIT SWITCH SIGNAL

1. Turn ignition switch ON.
2. Check voltage between driver side power window motor connector and ground.

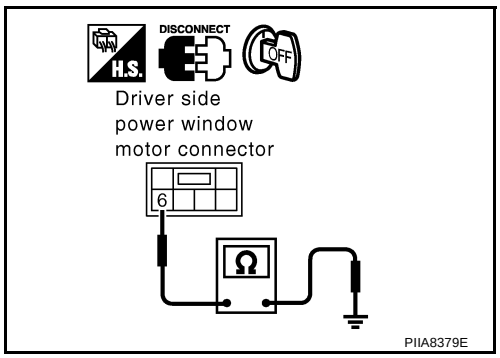
Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D9	5 (Y)	Ground	Driver side door window is between fully-open and just before fully-closed position (ON)	0
			Driver side door window is between just before fully-closed position and fully-closed position (OFF)	5

OK or NG

OK >> Limit switch circuit is OK.

NG >> GO TO 2.

2. CHECK LIMIT SWITCH GROUND CIRCUIT



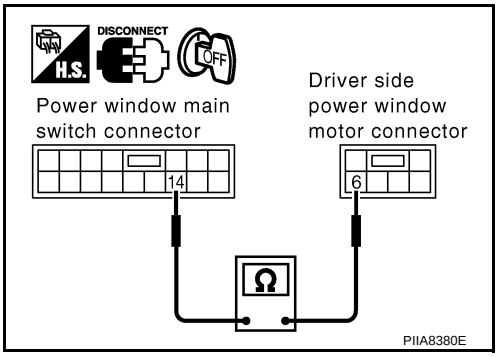
1. Turn ignition switch OFF.
2. Disconnect driver side power window motor connector.
3. Check continuity between driver side power window motor connector D9 terminal 6 and ground.

6 (LG) – Ground : Continuity should exist.

OK or NG

OK >> GO TO 4.

NG >> GO TO 3.



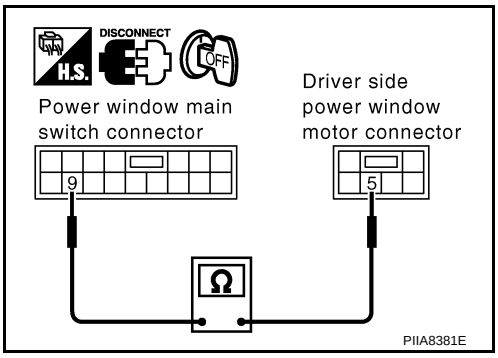
3. CHECK HARNESS CONTINUITY

1. Disconnect power window main switch connector.
2. Check continuity between power window main switch connector D7 terminal 14 and driver side power window motor connector D9 terminal 6.

14 (LG) – 6 (LG) : Continuity should exist.

OK or NG

OK >> Replace power window main switch.
NG >> Repair or replace harness.



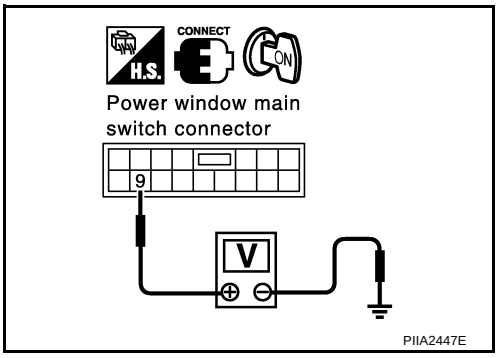
4. CHECK HARNESS CONTINUITY

1. Disconnect power window main switch connector.
2. Check continuity between power window main switch connector D7 terminal 9 and driver side power window motor connector D9 terminal 5.

9 (Y) – 5 (Y) : Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness.



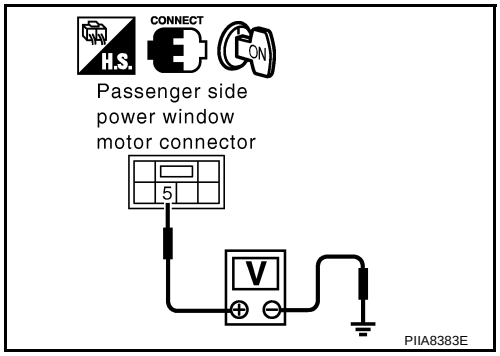
5. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Connect power window main switch connector.
2. Turn ignition switch ON.
3. Check voltage between power window main switch connector D7 terminal 9 and ground.

9 (Y) – Ground : Approx. 5V

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace power window main switch.



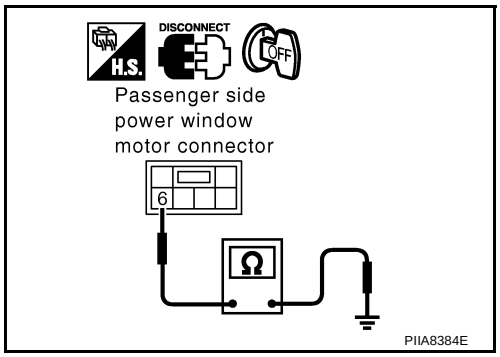
Check Limit Switch Circuit (Passenger Side)

NIS0004Z

1. CHECK POWER WINDOW LIMIT SWITCH SIGNAL

1. Turn ignition switch ON.
2. Check voltage between passenger side power window motor connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D38	5 (BR)	Ground	Passenger side door window is between fully-open and just before fully-closed position (ON)	0
			Passenger side door window is between just before fully-closed position and fully-closed position (OFF)	5



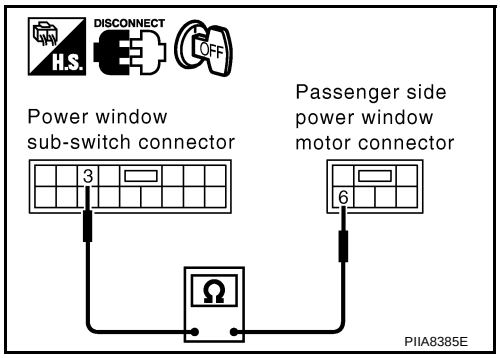
OK or NG

OK >> Limit switch circuit is OK.
NG >> GO TO 2.

2. CHECK LIMIT SWITCH GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect passenger side power window motor connector.
3. Check continuity between passenger side power window motor connector D38 terminal 6 and ground.

6 (GY) – Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

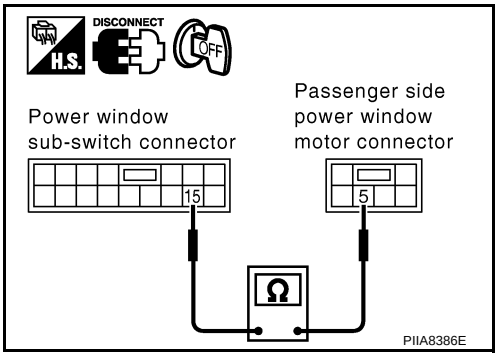
3. CHECK HARNESS CONTINUITY

1. Disconnect power window sub-switch connector.
2. Check continuity between power window sub-switch connector D37 terminal 3 and passenger side power window motor connector D38 terminal 6.

3 (GY) – 6 (GY) : Continuity should exist.

OK or NG

OK >> Replace power window sub-switch.
NG >> Repair or replace harness.



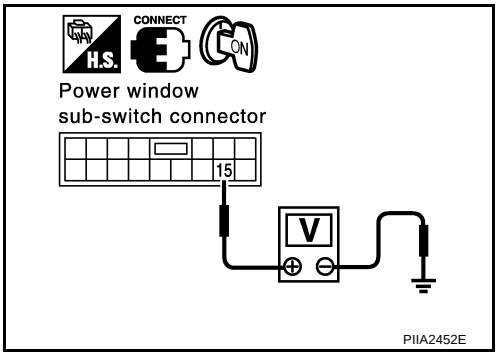
4. CHECK HARNESS CONTINUITY

1. Disconnect power window sub-switch connector.
2. Check continuity between power window sub-switch connector D37 terminal 15 and passenger side power window motor connector D38 terminal 5.

15 (BR) – 5 (BR) : Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness.



5. CHECK POWER WINDOW SUB-SWITCH OUTPUT SIGNAL

1. Connect power window sub-switch connector.
2. Turn ignition switch ON.
3. Check voltage between power window sub-switch connector D37 terminal 15 and ground.

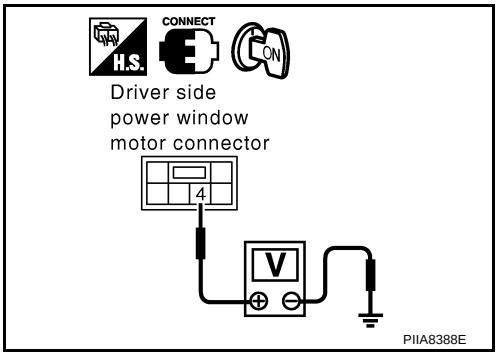
15 (BR) – Ground : Approx. 5V

OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace power window sub-switch.

Check Encoder Circuit (Driver Side)

NIS00050

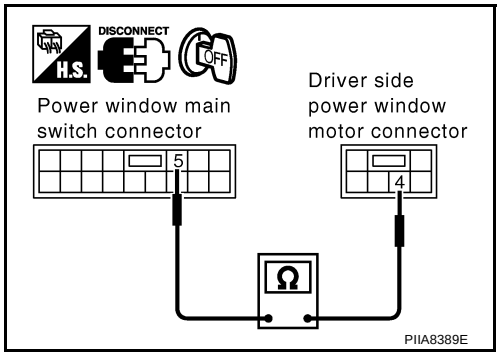


1. CHECK DRIVER SIDE POWER WINDOW MOTOR POWER SUPPLY

1. Turn ignition switch ON.
2. Check voltage between driver side power window motor connector D9 terminal 4 and ground.

4 (OR) – Ground : Approx. 10V

OK or NG

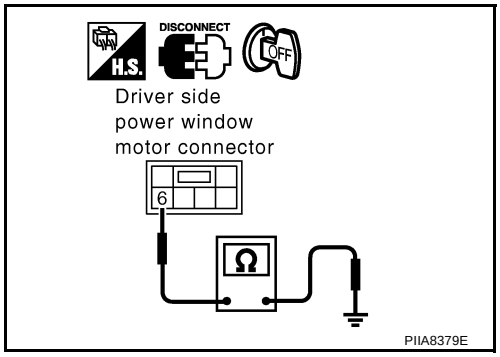


OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window main switch and driver side power window motor connector.
3. Check continuity between power window main switch connector D7 terminal 5 and driver side power window motor connector D9 terminal 4.

5 (OR) – 4 (OR) : Continuity should exist.



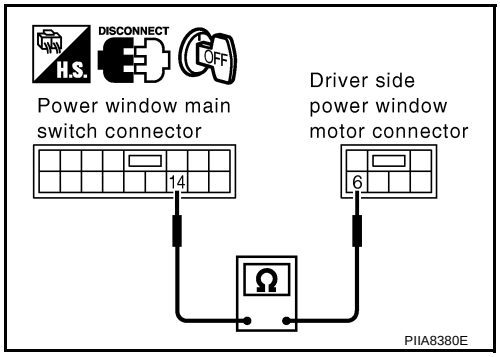
OK or NG

OK >> Replace power window main switch.
NG >> Repair or replace harness.

3. CHECK ENCODER GROUND

1. Turn ignition switch OFF.
2. Disconnect driver side power window motor connector.
3. Check continuity between driver side power window motor connector D9 terminal 6 and ground.

6 (LG) – Ground : Continuity should exist.



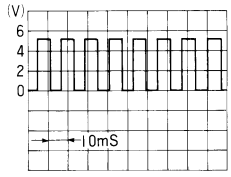
OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

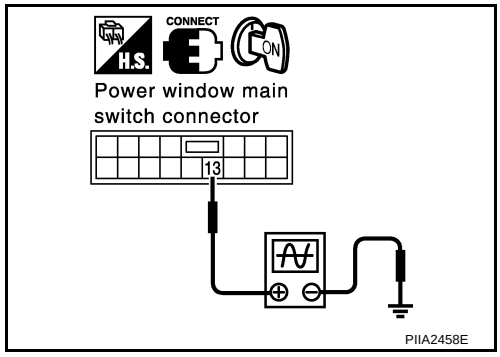
4. CHECK ENCODER GROUND CIRCUIT

1. Disconnect power window main switch connector.
2. Check continuity between power window main switch connector D7 terminal 14 and driver side power window motor connector D9 terminal 6.

14 (LG) – 6 (LG) : Continuity should exist.



OK or NG



OK >> Replace power window main switch.
NG >> Repair or replace harness.

5. CHECK ENCODER SIGNAL

1. Connect driver side power window motor connector.
2. Turn ignition switch ON.
3. Check signal between power window main switch connector and ground with oscilloscope.

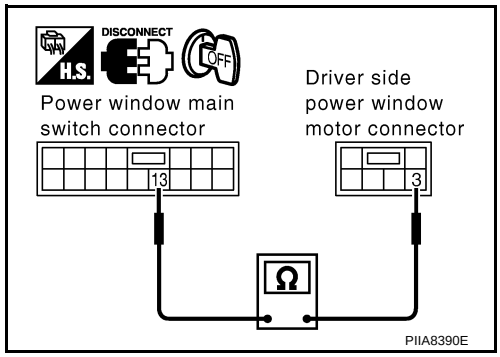
Connector	Terminals (Wire color)		Condition	Signal (Reference valve)
	(+)	(-)		
D7	13 (GY)	Ground	DOWN	

OCC3383D

PIIA2458E

OK or NG

OK >> Replace power window main switch.
NG >> GO TO 6.



6. CHECK ENCODER CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch and driver side power window motor connector.
3. Check continuity between power window main switch connector D7 terminal 13 and driver side power window motor connector D9 terminal 3.

13 (GY) – 3 (GY) : Continuity should exist.

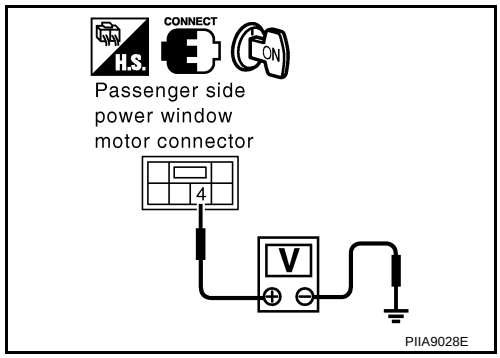
OK or NG

OK >> Replace driver side power window motor.
NG >> Repair or replace harness.

PIIA8390E

Check Encoder Circuit (Passenger Side)

NIS00051



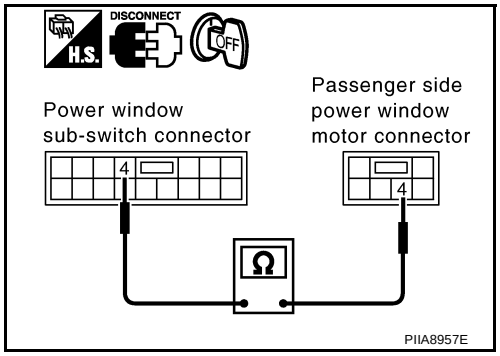
1. CHECK PASSENGER SIDE POWER WINDOW MOTOR POWER SUPPLY

1. Turn ignition switch ON.
2. Check voltage between passenger side power window motor connector D38 terminal 4 and ground.

4 (R) – Ground : Approx. 10V

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

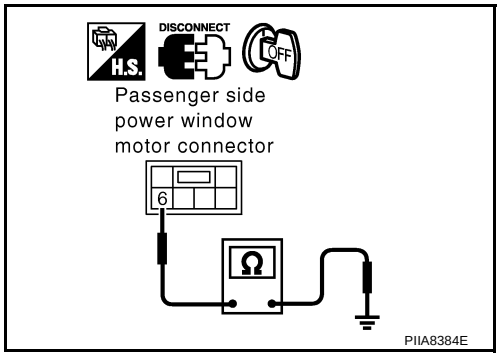


PIIA9028E

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window sub-switch and passenger side power window motor connector.
3. Check continuity between power window sub-switch connector D37 terminal 4 and passenger side power window motor connector D38 terminal 4.

4 (R) – 4 (R) : Continuity should exist.



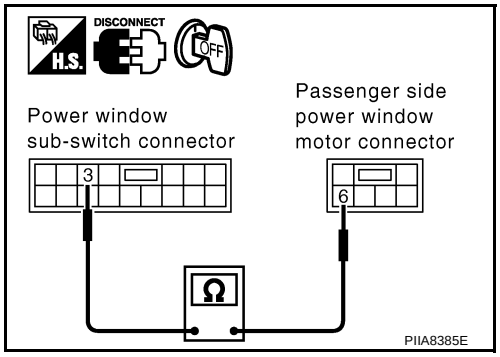
OK or NG

OK >> Replace power window sub-switch.
NG >> Repair or replace harness.

3. CHECK ENCODER GROUND

1. Turn ignition switch OFF.
2. Disconnect passenger side power window motor connector.
3. Check continuity between passenger side power window motor connector D38 terminal 6 and ground.

6 (GY) – Ground : Continuity should exist.



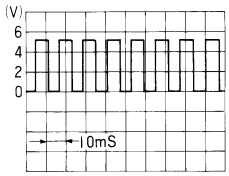
OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

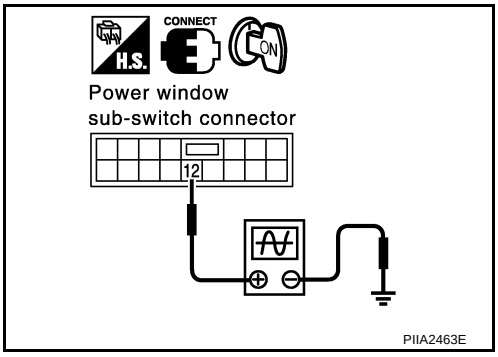
4. CHECK ENCODER GROUND CIRCUIT

1. Disconnect power window sub-switch connector.
2. Check continuity between power window sub-switch connector D37 terminal 3 and passenger side power window motor connector D38 terminal 6.

3 (GY) – 6 (GY) : Continuity should exist.



OK or NG



OK >> Replace power window sub switch.
NG >> Repair or replace harness.

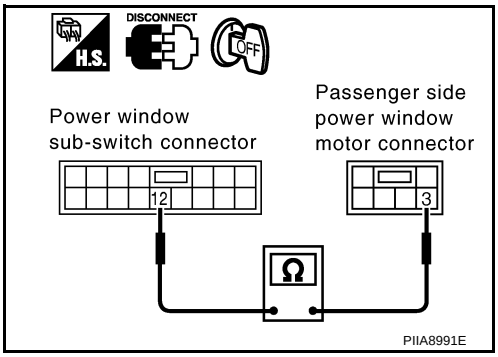
5. CHECK ENCODER SIGNAL

1. Connect passenger side power window motor connector.
2. Turn ignition ON.
3. Check signal between power window sub-switch connector and ground with oscilloscope.

Connector	Terminals (Wire color)		Condition	Signal (Reference valve)
	(+)	(-)		
D37	12 (PU)	Ground	DOWN	

OCC3383D

PIIA2463E



OK or NG

OK >> Replace power window sub-switch.
NG >> GO TO 6.

6. CHECK ENCODER CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window sub-switch and passenger side power window motor connector.
3. Check continuity between power window sub-switch connector D37 terminal 12 and passenger side power window motor connector D38 terminal 3.

12 (PU) – 3 (PU) : Continuity should exist.

PIIA8991E

OK or NG

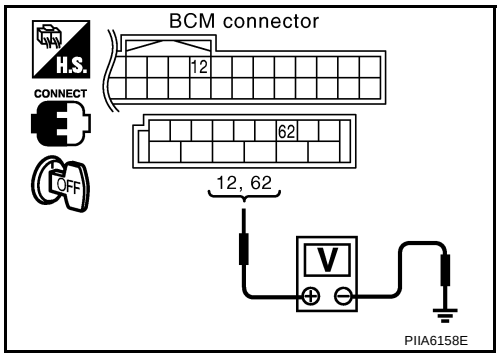
OK >> Replace passenger side power window motor.
NG >> Repair or replace harness.

Check Door Switch

NIS00052

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT-III



Check door switches (“DOOR SW-DR” and “DOOR SW-AS”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	: OFF
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

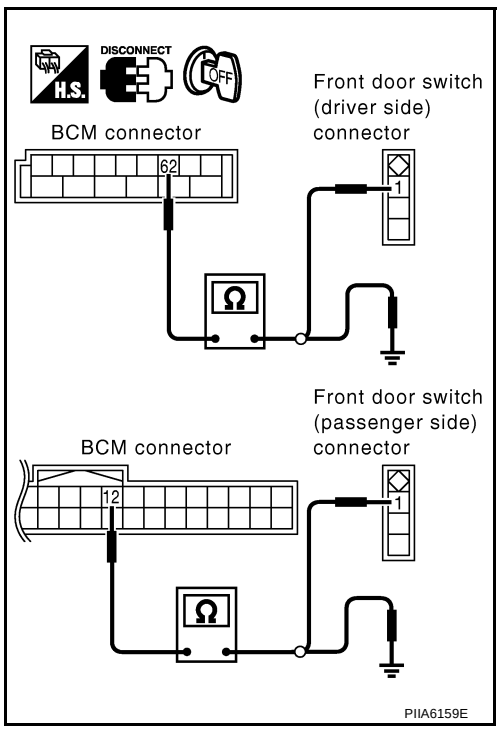
Without CONSULT-III

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Item	Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
		(+)	(–)		
Passenger side door switch	M90	12 (P)	Ground	OPEN	0
				CLOSE	Battery voltage
Driver side door switch	B83	62 (L)		OPEN	0
				CLOSE	Battery voltage

OK or NG

OK >> Door switch is OK.
NG >> GO TO 2.



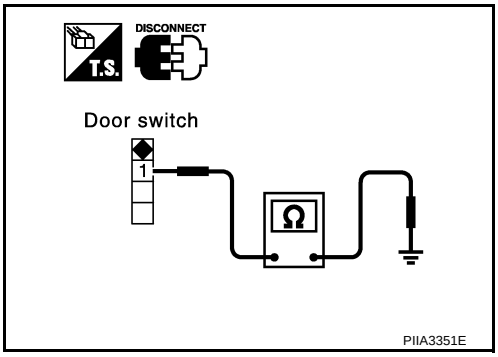
2. CHECK DOOR SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door switch and BCM connector.
3. Check continuity between BCM connector M90, B83 terminals 12, 62 and door switch connector B17, B23 terminals 1.

12 (P) – 1 (P) : Continuity should exist.
62 (L) – 1 (L) : Continuity should exist.

4. Check continuity between BCM connector M90, B83 terminals 12, 62 and ground.

12 (P) – Ground : Continuity should not exist.
62 (L) – Ground : Continuity should not exist.



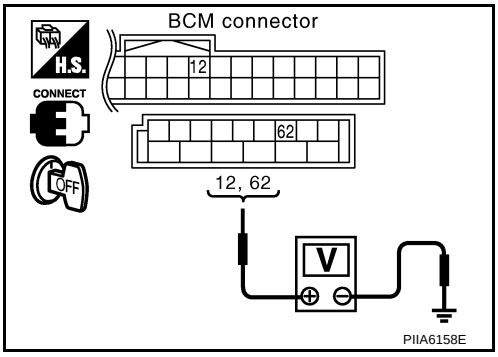
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between door switch (driver side) or (passenger side) and ground part of door switch.

Terminal		Condition of door switch	Continuity
1	Ground part of door switch	Pushed	No
		Released	Yes



OK or NG

OK >> GO TO 4.
NG >> Replace malfunction door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M90, B83 terminals 12, 62 and ground.

12 (P) – Ground : Battery voltage
62 (L) – Ground : Battery voltage

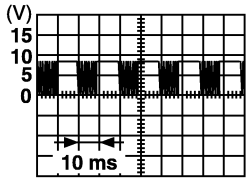
OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace BCM.

Check Power Window Serial Link

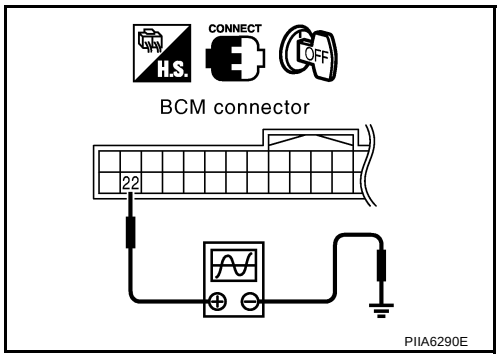
NIS00053

1. CHECK POWER WINDOW SWITCH OUTPUT SIGNAL



With CONSULT-III

Check door lock and unlock switch (“LOCK SW DR/AS”, “UNLK SW DR/AS”) in DATA MONITOR mode with CONSULT-III. Refer to BL-35, "DATA MONITOR" .



Monitor item	Condition
CDL LOCK SW	LOCK: ON
	UNLOCK: OFF
CDL UNLOCK SW	LOCK: OFF
	UNLOCK: ON

Without CONSULT-III

1. Remove key from ignition switch, and the door of driver side and passenger side is closed.
2. Check signal between BCM connector and ground with oscilloscope when door lock and unlock switch (driver side and passenger side) is turned “LOCK” or “UNLOCK”.
3. Make sure signals which are shown in the figure below can be detected during 10 second just after door lock and unlock switch (driver side and passenger side) is turned “LOCK” or “UNLOCK”.

Connector	Terminals (Wire color)		Signal (Reference valve)
	(+)	(–)	
M90	22 (Y)	Ground	

PIIA1297E

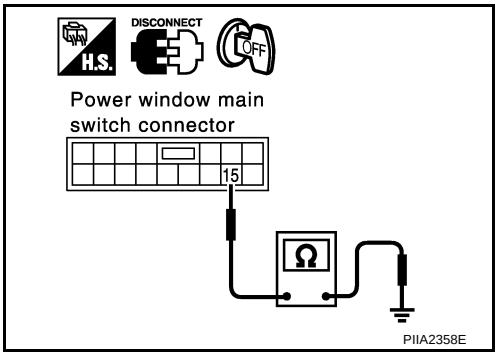
PIIA6290E

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK BCM OUTPUT SIGNAL

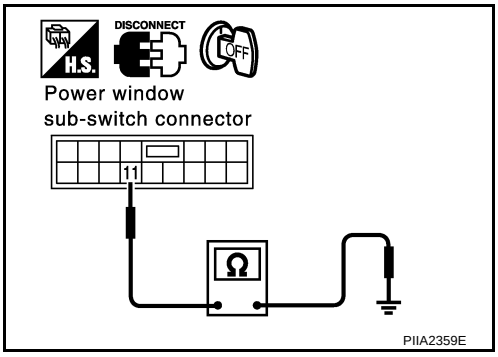
Check power window serial link (“POWER WINDOW DOWN”) in “ACTIVE TEST” mode with CONSULT-III. Refer to BL-74, "Active Test" .
When “ACTIVE TEST” is perform, is the window of driver side and passenger side lowered?



OK or NG

OK >> Further inspection is necessary. Refer to symptom chart.
NG >> Replace BCM.

3. CHECK POWER WINDOW SWITCH GROUND

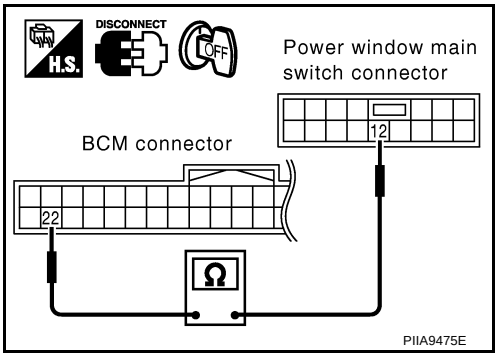


1. Turn ignition switch OFF.
2. Disconnect power window main switch and power window sub-switch connector.
3. Check continuity between power window main switch connector D7 terminals 15 and ground.

15 (B) – Ground : Continuity should exist.

4. Check continuity between power window sub-switch connector D37 terminal 11 and ground.

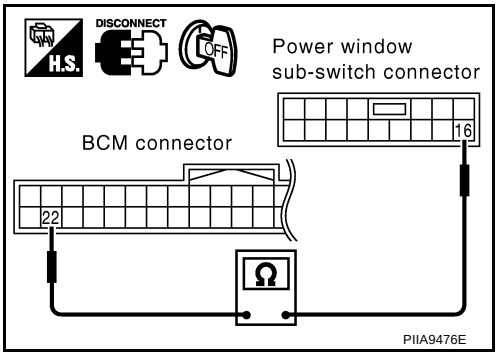
11 (B) – Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK POWER WINDOW SERIAL LINK CIRCUIT



1. Disconnect BCM connector.
2. Check continuity between BCM connector M90 terminal 22 and power window main switch connector D7 terminal 12.

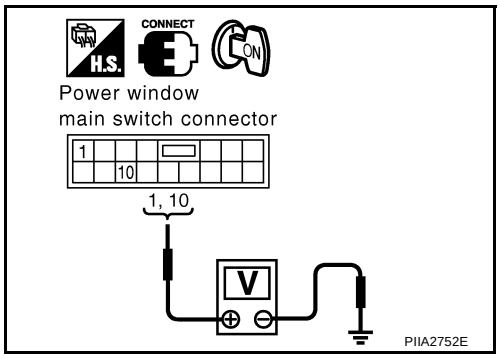
22 (Y) – 12 (PU/W) : Continuity should exist.

3. Check continuity between BCM connector M90 terminal 22 and power window sub-switch connector D37 terminal 16.

22 (Y) – 16 (SB) : Continuity should exist.

OK or NG

OK >> Replace power window main switch.
NG >> Repair or replace harness.



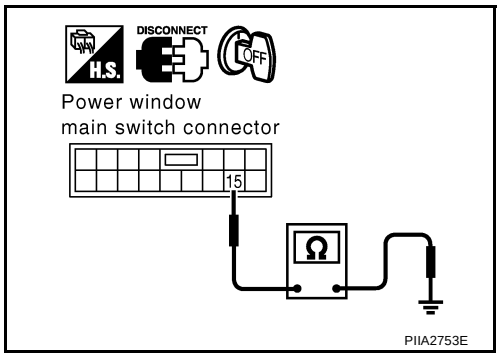
Check Power Window Main Switch Power Supply and Ground Circuit

NIS00054

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between power window main switch connector D7 terminals 1, 10 and ground.

1 (W) – Ground : Battery voltage
10 (BR) – Ground : Battery voltage



OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

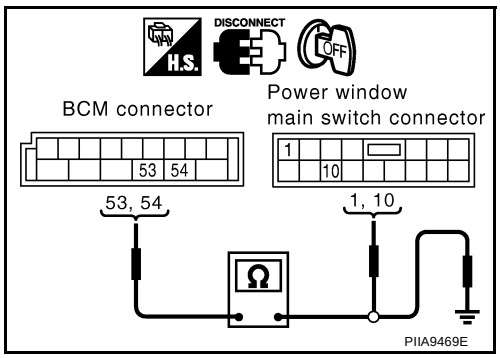
2. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch connector.
3. Check continuity between power window main switch connector D7 terminal 15 and ground.

15 (B) – Ground : Continuity should exist.

OK or NG

OK >> Power window main switch power supply and ground circuits are OK.
NG >> Repair or replace harness.



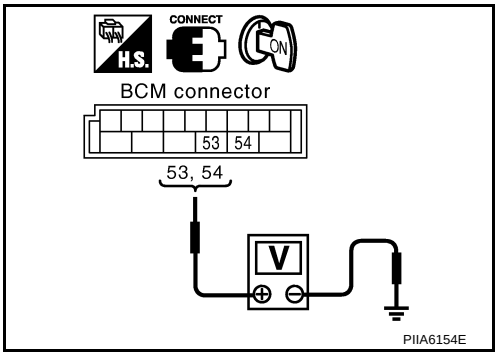
3. CHECK POWER WINDOW MAIN SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and power window main switch connector.
3. Check continuity between BCM connector M91 terminals 53, 54 and power window main switch connector D7 terminal 1, 10.

53 (Y/B) – 10 (BR) : Continuity should exist.
54 (W) – 1 (W) : Continuity should exist.

4. Check continuity between BCM connector M91 terminals 53, 54 and ground.

53 (Y/B) – Ground : Continuity should not exist.
54 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

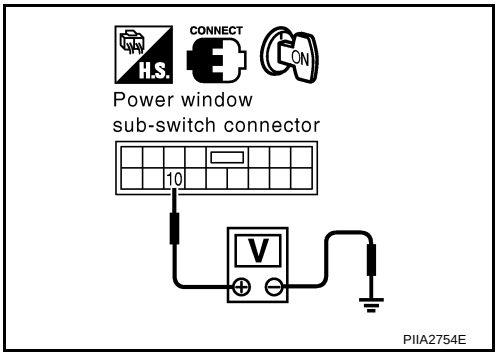
4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector M91 terminals 53, 54 and ground.

53 (Y/B) – Ground : Battery voltage
54 (W) – Ground : Battery voltage

OK or NG

OK >> Check condition of harness and connector.
NG >> Replace BCM.



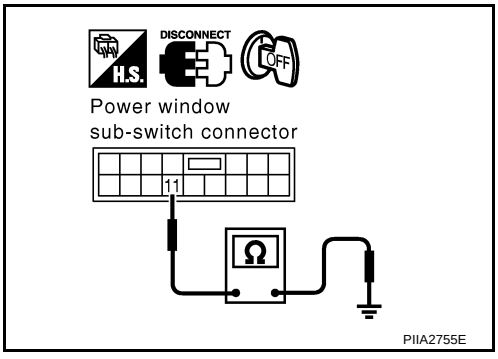
Check Power Window Sub-switch Power Supply and Ground

NIS00055

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between power window sub-switch connector D37 terminal 10 and ground.

10 (W) – Ground : Battery voltage



OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

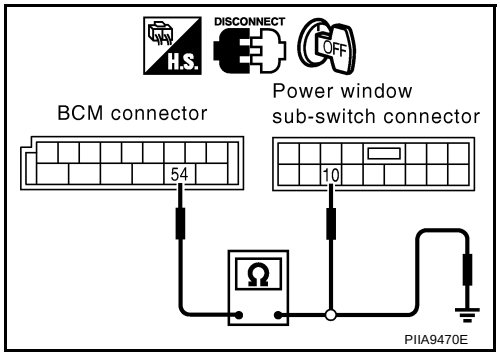
2. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window sub-switch connector.
3. Check continuity between power window sub-switch connector D37 terminal 11 and ground.

11 (B) – Ground : Continuity should exist.

OK or NG

OK >> Power window sub-switch power supply and ground circuit are OK.
NG >> Repair or replace harness.



3. CHECK POWER WINDOW SUB-SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and power window sub-switch connector.
3. Check continuity between BCM connector M91 terminal 54 and power window sub-switch connector D37 terminal 10.

54 (W) – 10 (W) : Continuity should exist.

4. Check continuity between BCM connector M91 terminal 54 and ground.

54 (W) – Ground : Continuity should not exist.

OK or NG

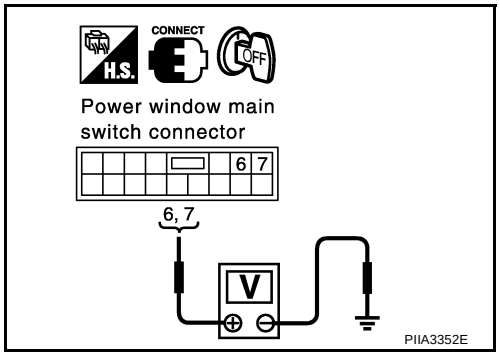
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

Check Door Key Cylinder Switch

NIS00056

1. CHECK DOOR KEY CYLINDER SWITCH INPUT SIGNAL

With CONSULT-III



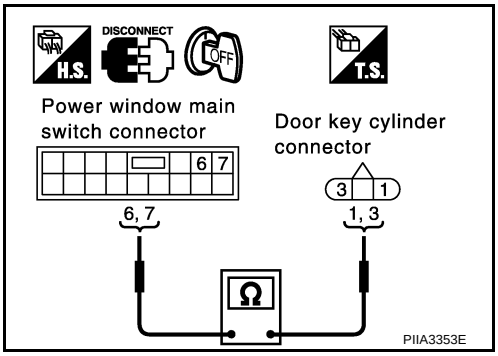
Check door key cylinder switch (“KEY CYL LK-SW”, “KEY CYL UN-SW”) in “DATA MONITOR” mode with CONSULT-III.

Monitor item	Condition
KEY CYL LK- SW	Lock: ON
	Neutral/Unlock: OFF
KEY CYL UN- SW	Unlock: ON
	Neutral/Lock: OFF

Without CONSULT-III

1. Turn ignition switch OFF.
2. Check voltage between power window main switch connector and ground.

Connector	Terminals (Wire color)		Key position	Voltage (V) (Approx.)
	(+)	(–)		
D7	6 (B/R)	Ground	Neutral/Unlock	5
			Lock	0
	7 (SB)		Neutral/Lock	5
			Unlock	0



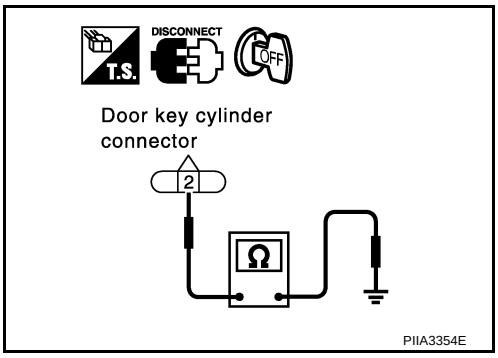
OK or NG

OK >> Door key cylinder switch is OK.
NG >> GO TO 2.

2. CHECK DOOR KEY CYLINDER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect power window main switch and door key cylinder switch connector.
3. Check continuity between power window main switch connector D7 terminal 6, 7 and door key cylinder switch connector D12 terminals 1, 3.

6 (B/R) – 3 (B/R) : Continuity should exist.
7 (SB) – 1 (SB) : Continuity should exist.



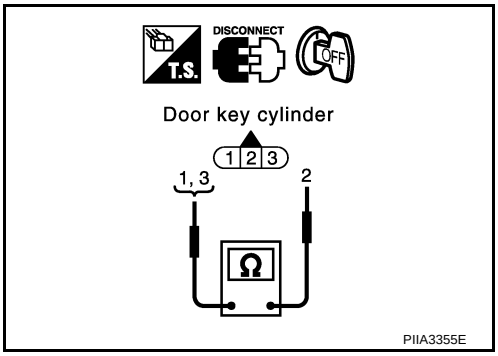
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR KEY CYLINDER SWITCH GROUND

Check continuity between door key cylinder switch connector D12 terminal 2 and ground.

2 (B) – Ground : Continuity should exist.



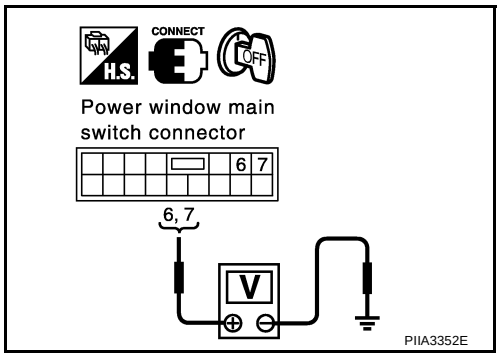
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK DOOR KEY CYLINDER SWITCH

Check continuity between door key cylinder switch connector D12 terminals 1, 3 and 2.

Connector	Terminal		Key position	Continuity
D12	1	2	Neutral/Lock	No
			Unlock	Yes
	3		Neutral/Unlock	No
			Lock	Yes



OK or NG

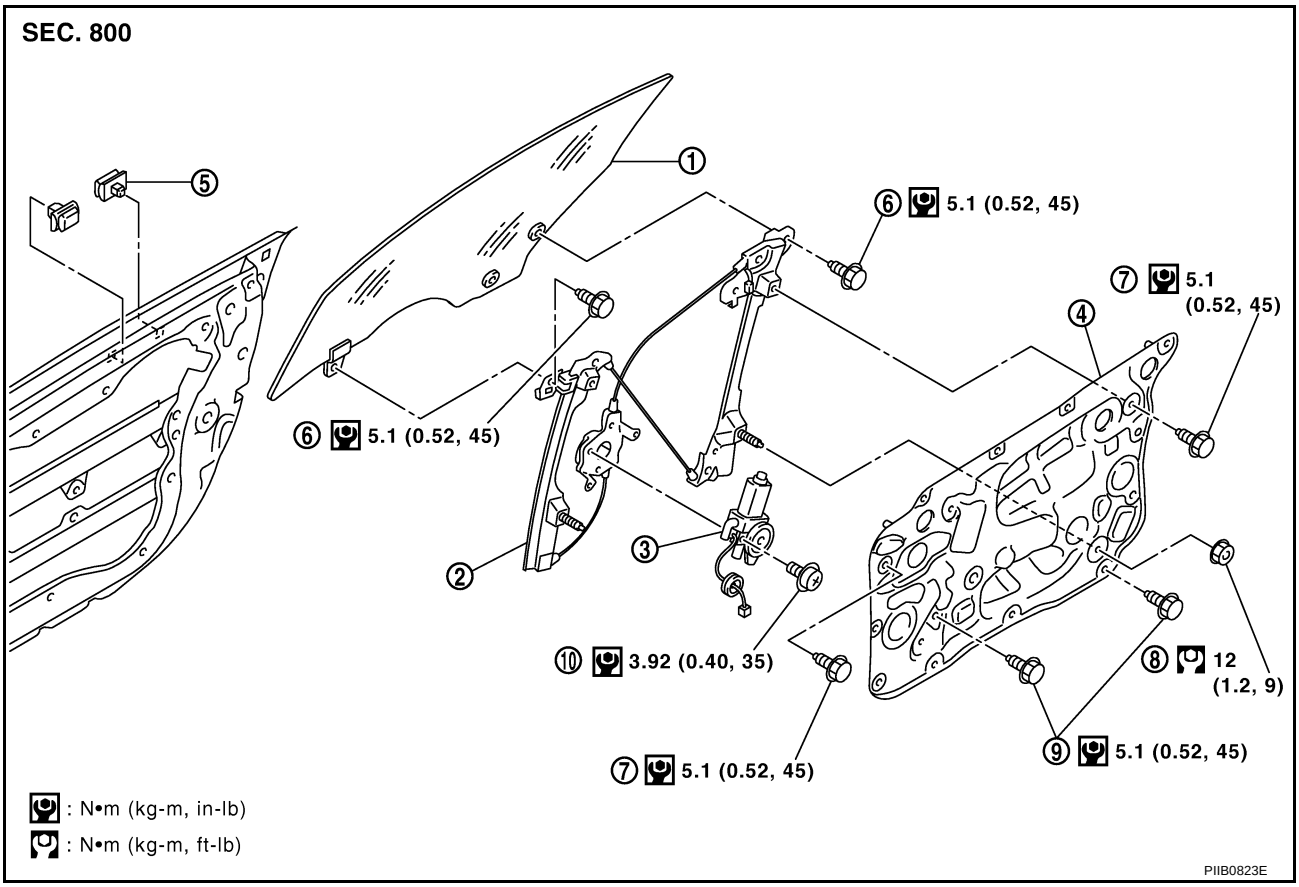
OK >> GO TO 5.
NG >> Replace door key cylinder switch.

5. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Connect power window main switch connector.
2. Check voltage between power window main switch connector D7 terminals 6, 7 and ground.

6 (B/R) – Ground : Battery voltage
7 (SB) – Ground : Battery voltage

OK or NG



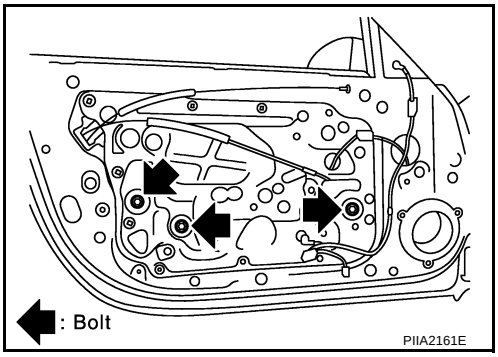
OK >> Check the condition of the harness and the connector.
NG >> Replace power window main switch.

FRONT DOOR GLASS AND REGULATOR

PFP:80300

Removal and Installation

NIS00057



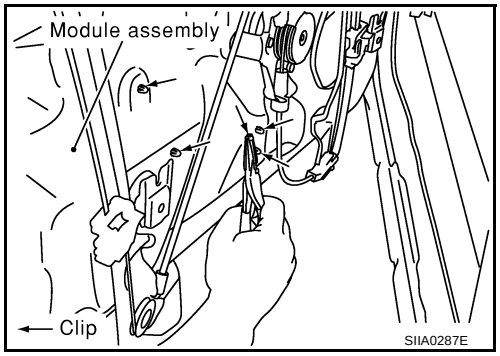
1. Door glass	2. Regulator assembly	3. Power window motor
4. Module assembly	5. Glass stabilizer	6. Glass mounting bolt
7. Regulator mounting bolt	8. Regulator mounting nut	9. Module mounting bolt
10. Power window motor mounting bolt		

DOOR GLASS

Removal

1. Remove front door finisher. Refer to EI-33, "DOOR FINISHER" .
2. Operate power window main switch to raise/lower door window until glass mounting bolts can be seen.
3. Remove the glass mounting bolts.

4. While holding door window, raise it at rear end to pull the glass out of sash toward outside of door.



Installation

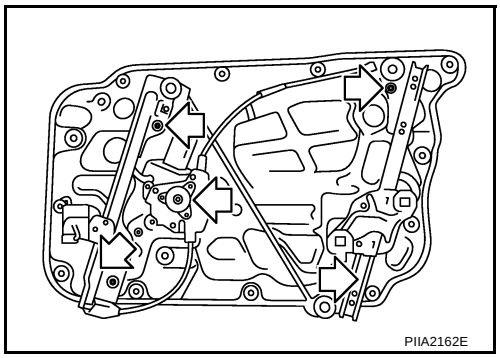
Install in the reverse order of removal.

REGULATOR ASSEMBLY

Removal

1. Remove front door finisher. Refer to GW-51, "DOOR GLASS" .
2. Remove mounting bolts, and remove module assembly.
3. Disconnect harness connector for the module assembly, and unclip the harness from the back.

Installation



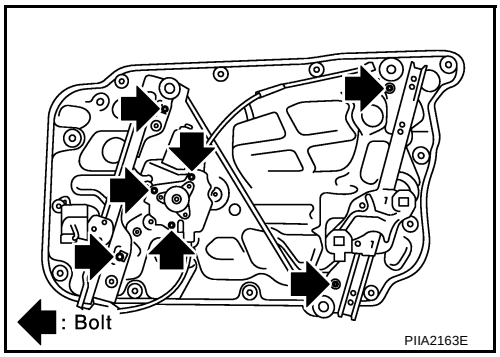
Install in the reverse order of removal.

Inspection after Removal

Check regulator assembly for the following items. If a malfunction is detected, replace or grease it.

- Wire wear
- Regulator deformation
- Grease condition for each sliding part

The arrows in the figure show the application points of body grease.



Disassembly and Assembly

NIS00058

REGULATOR ASSEMBLY

Disassembly

Remove power window motor and guide rail from module assembly.

Assembly

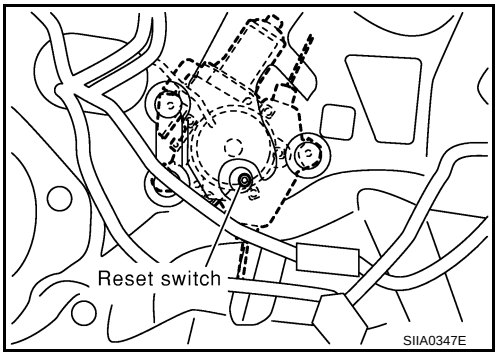
Assemble in the reverse order of removal.

Inspection after Installation

NIS00059

SETTING OF LIMIT SWITCH

If any of the following work has been done, set the limit switch (integrated in the motor).



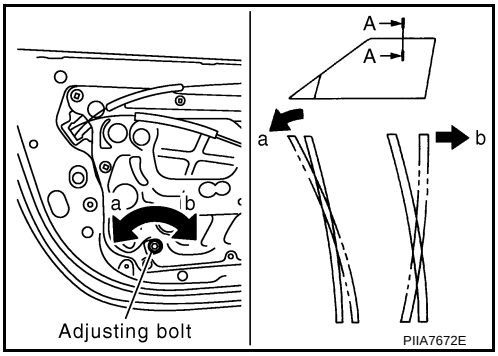
- Removal and installation of regulator.
- Removal and installation of motor from regulator.
- Operate the regulators as a unit.
- Removal and installation of the glass.

Resetting

After installing each component to the vehicle, follow the steps below.

1. With the door open, lift up and hold the power window switch until the door glass is fully closed.
2. Get inside the vehicle and close the door.

   NOTE:
   You need to close the door so the door switch is fully depressed.
3. Press and hold the reset switch. While holding the reset switch, press down and hold the power window switch until the door glass is fully opened.
4. Relese the reset switch.Then, lift up and hold the power window switch until the door glass is fully closed.
5. Open the door to release the door switch. The door glass should partially move down.



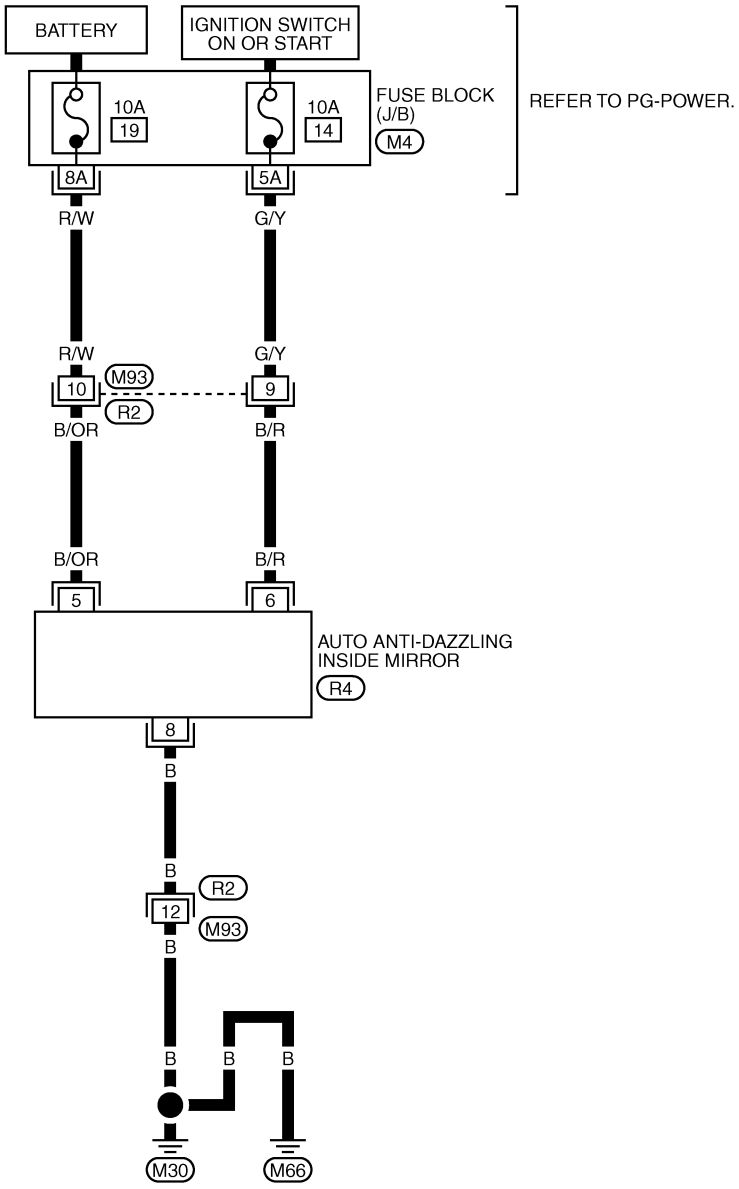
CAUTION:

- **Do not use the window auto function.**
- **Do not release the switch before the window is fully stopped.**

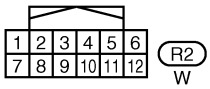
FITTING INSPECTION

- Check that glass is securely fit into glass run groove.
- Lower glass slightly [approx. 10 to 20 mm (0.39 to 0.79 in)] and check the distance between the edge of glass and the body side welt. If the distance is not constant, adjust the glass position by loosening and tightening following bolts.
  - Regulator mounting bolt and nut
  - Glass and guide rail mounting bolt
- Raise the glass fully and adjust the glass top end and body side welt fitting with the adjusting bolt at the lower of the regulator rear rail.

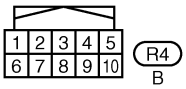
  NOTE:
  - Turn the adjusting bolt clockwise to move the door glass upper end outward.
  - Turn the adjusting bolt counterclockwise to move the door glass upper end inward.
  - If water leaks, repair the fitting (Roadster only). Refer to RF-116, "Repairing Method for Water Leakage Around Doors" .



INSIDE MIRROR



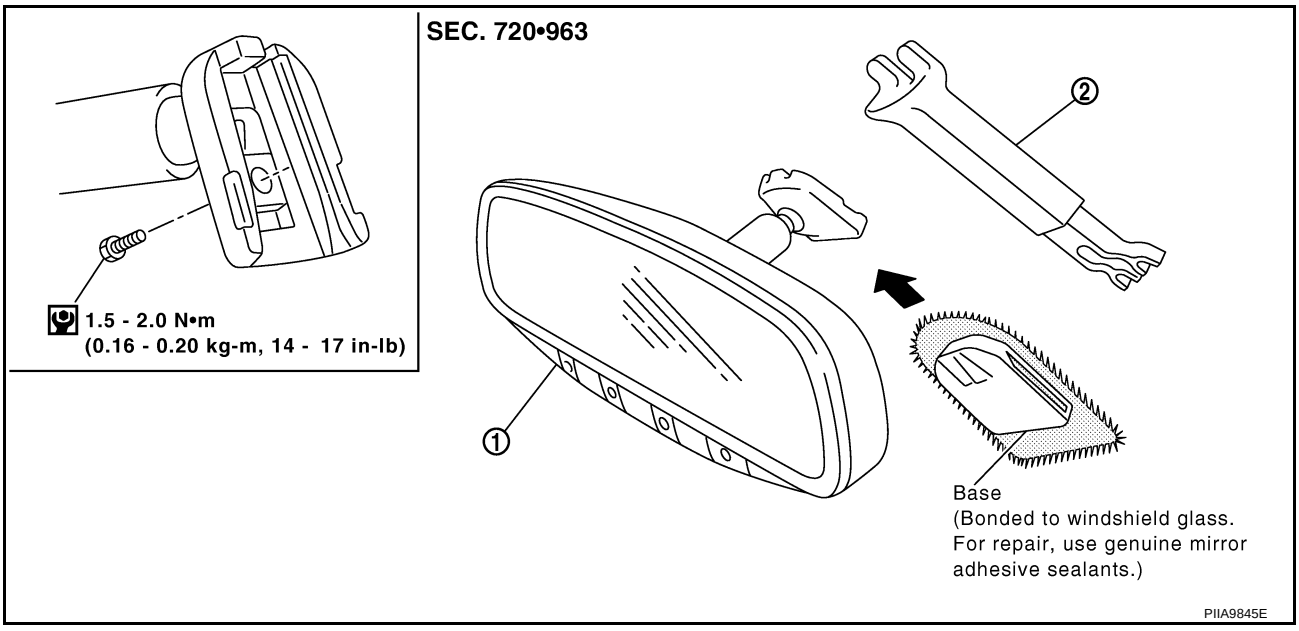
PFP:96321



Wiring Diagram –I/MIRR–

NIS0005A

GW-I/MIRR-01



REFER TO THE FOLLOWING.
M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TIWT2276E

Removal and Installation

NIS0005B

1. Inside mirror
2. Inside mirror finisher

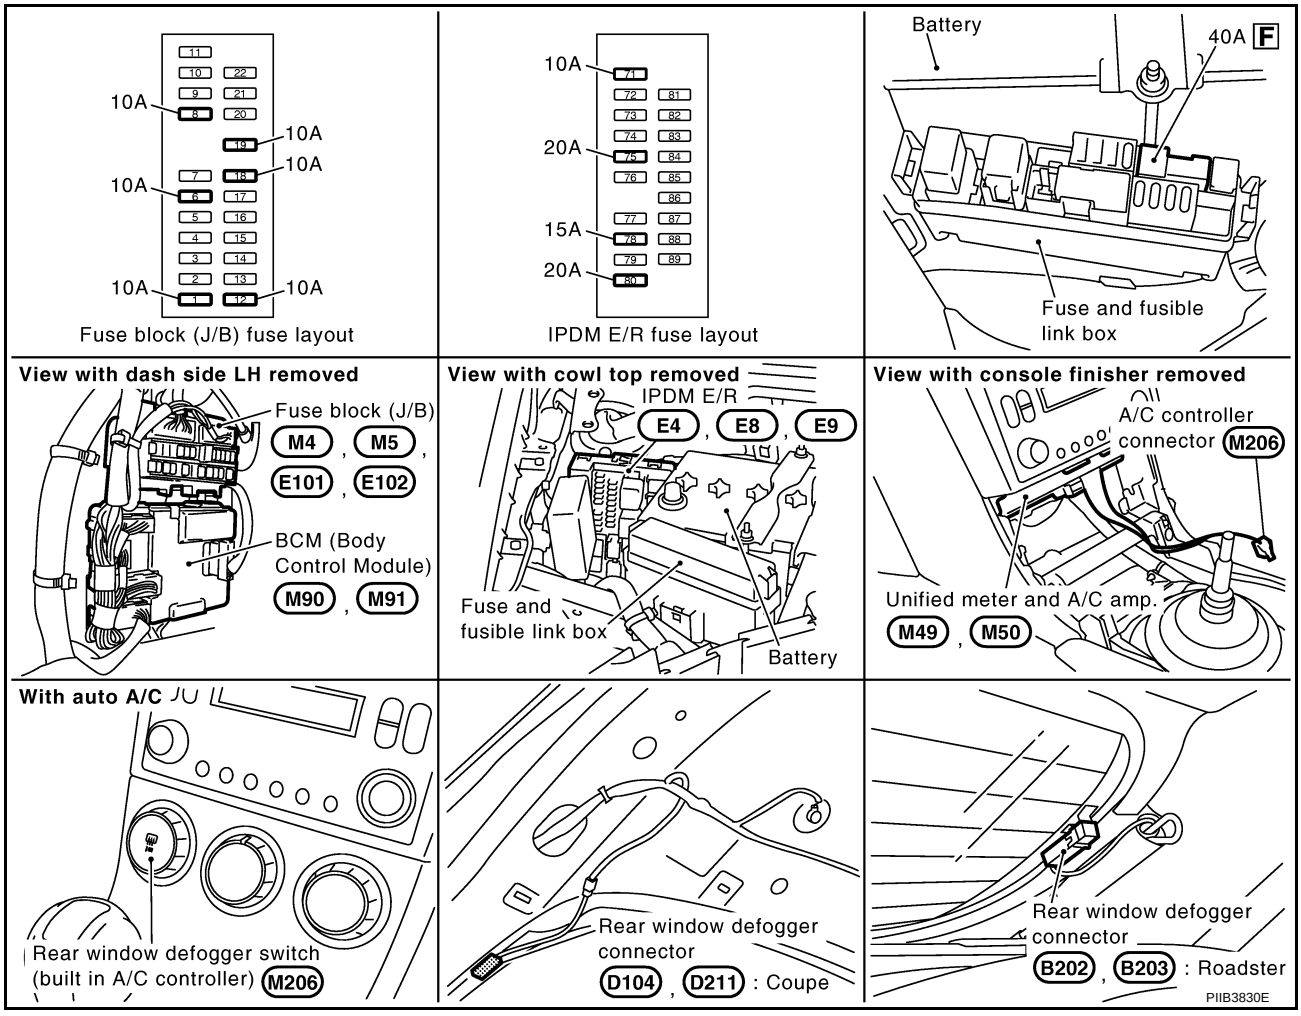
REMOVAL

1. Remove inside mirror finisher.
2. Remove screw of the mirror base.
3. Slide the mirror base upward to remove.
4. Disconnect the connector.

INSTALLATION

Install in the reverse order of removal.

CAUTION:



Apply Genuine Mirror Adhesive or equivalent to bonding surface of mounting bracket. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

REAR WINDOW DEFOGGER

PFP:25350

Component Parts and Harness Connector Location

NIS0005C

System Description

NIS0005D

The rear window defogger system is controlled by BCM (Body Control Module) and IPDM E/R (Intelligent Power Distribution Module Engine Room). The rear window defogger operates only for approximately 15 minutes.

Power is supplied at all times

- through 20A fuse [No. 75 and 80, located in the IPDM E/R]
- to rear window defogger relay terminal 3 and 6.
- through 40A fusible link (letter **F** , located in the fuse and fusible link box)
- to BCM terminal 55.
- through 10A fuse [No. 18, located in the fuse block (J/B)]
- to BCM terminal 42.
- through 10A fuse [No. 19, located in the fuse block (J/B)]
- to unified meter and A/C amp. terminal 21.

With the ignition switch turned to ON or START position, power is supplied

- through 10A fuse [No. 1, located in the fuse block (J/B)]
- to BCM terminal 38.
- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to unified meter and A/C amp. terminal 22 and rear window defogger relay terminal 1
- and then through unified meter and A/C amp.
- to A/C controller (rear window defogger switch) terminal 72 and 84.

Ground is supplied

- to BCM terminal 52
- through body grounds M30, and M66.
- to unified meter and A/C amp. terminal 29 and 30
- through body grounds M30 and M66.
- to internal CPU of IPDM E/R terminal 38 and 60
- through body grounds E17, E43, B102 (with VDC system or navigation system) and F152 (without VDC system and navigation system).

When A/C controller (rear window defogger switch) is turned ON,
Rear window defogger switch signals are transmitted,

- through A/C controller terminal 87
- to unified meter and A/C amp.

Then ground is supplied

- to BCM terminal 9
- through unified meter and A/C amp. terminal 38
- through unified meter and A/C amp. terminal 30
- through body grounds M30 and M66.

Then BCM recognizes that rear window defogger switch is turned ON.
Then it sends rear window defogger switch signals to IPDM E/R via DATA LINE (CAN H, CAN L).
When IPDM E/R receives rear window defogger switch signals,
Ground is supplied

- to rear window defogger relay terminal 2
- through IPDM E/R terminal 52
- through internal CPU of IPDM E/R
- through IPDM E/R terminal 60
- through body grounds E17, E43, B102 (with VDC system or navigation system), F152 (without VDC system and navigation system), and then rear window defogger relay is energized.

When rear window defogger relay is turned ON,
Signals are transmitted

- to rear window defogger terminal 1
- through rear window defogger relay terminals 5 and 7 (For Coupe)
- through rear window defogger relay terminal 5. (For Roadster)

Rear window defogger terminal 2 is grounded through body ground D212. (For Coupe)
Rear window defogger terminal 2 is grounded through body ground B5, B6 and T14. (For Roadster)
With power and ground supplied, rear window defogger filaments heat and defog the rear window.
When rear window defogger relay is turned ON,
Power is supplied

- through rear window defogger relay terminals 5 and 7 (For Coupe)
- through rear window defogger relay terminal 7 (For Roadster)
- through fuse block (J/B) terminal 2C
- through 10A fuse [No. 8, located in the fuse block (J/B)]
- through fuse block (J/B) terminal 5B
- to door mirror defogger (Driver side and passenger side) terminal 2.

Door mirror defogger (Driver side and passenger side) terminal 1 is grounded through body grounds M30 and M66.
With power and ground supplied, door mirror defogger filaments heat and defog the mirror.
When rear window defogger relay is turned ON,
Power is supplied

- through rear window defogger relay terminals 5 and 7 (For Coupe)
- through rear window defogger relay terminal 5. (For Roadster)
- to unified meter and A/C amp. terminal 56

Then ground is supplied

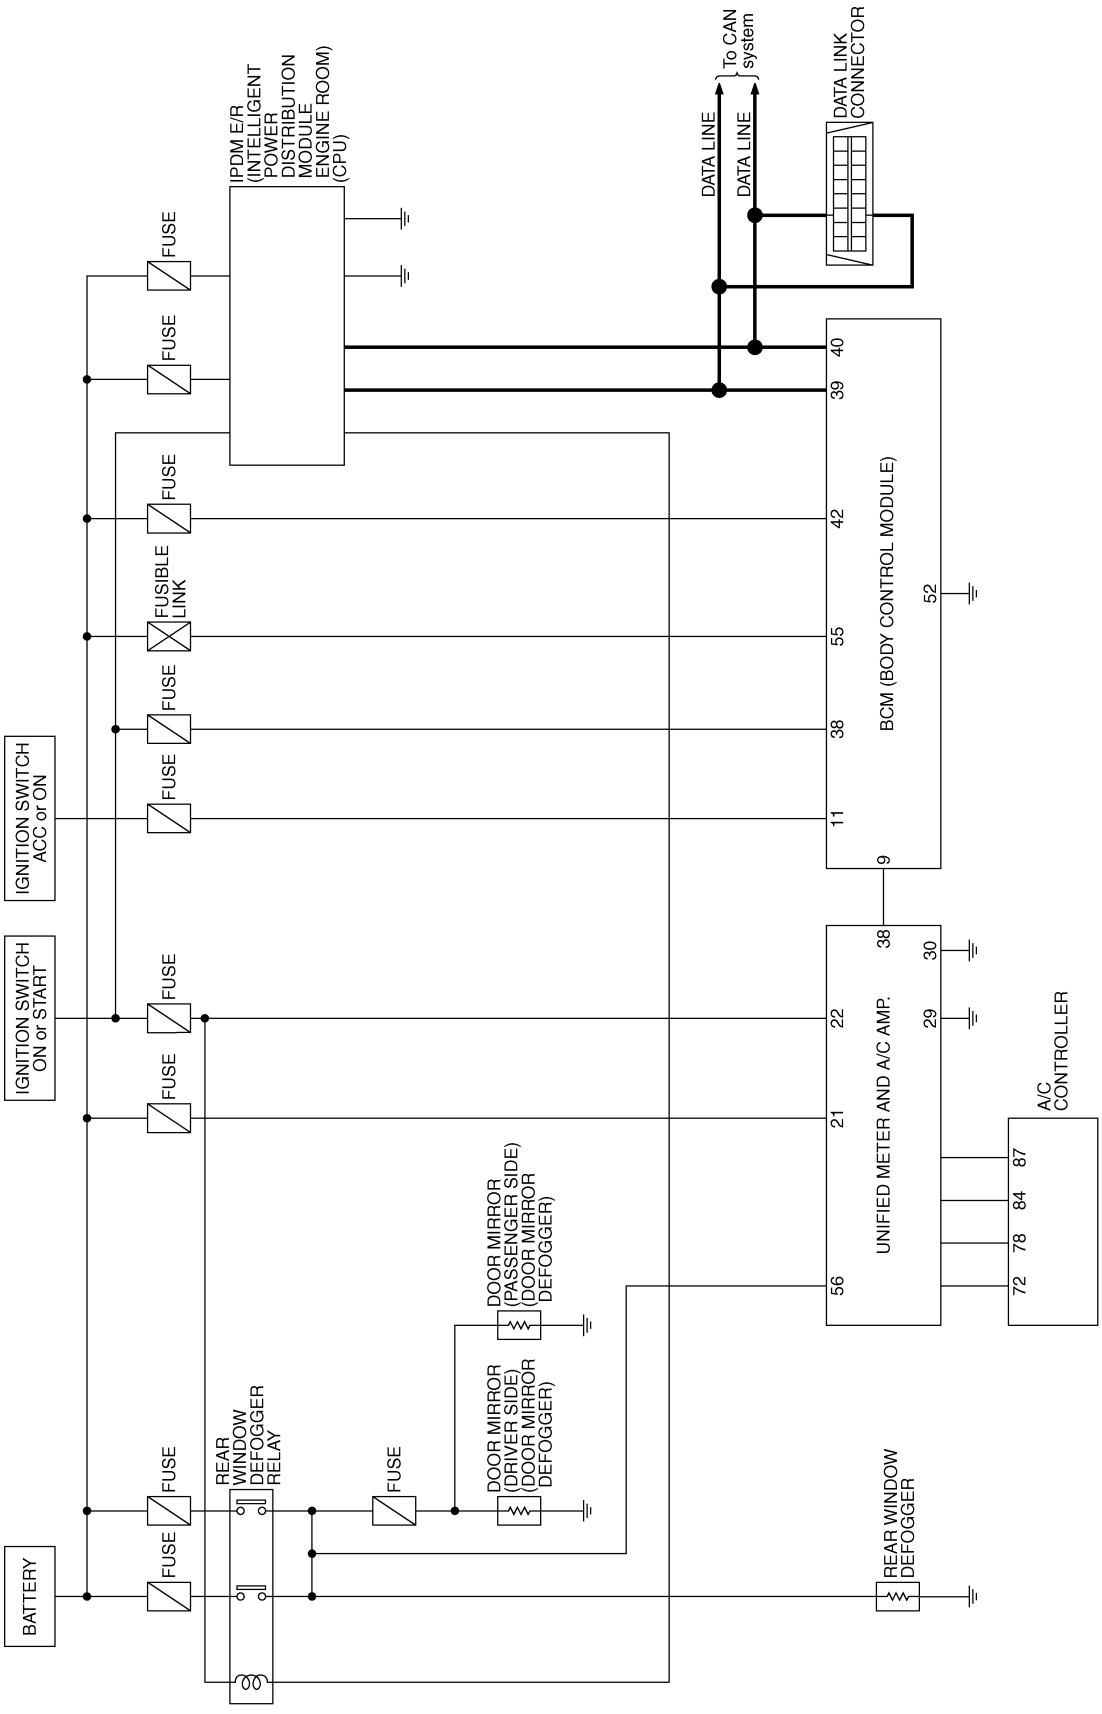
- to A/C controller terminal 78
- through unified meter and A/C amp.
- through unified meter and A/C amp. terminal 29 and 30
- through body grounds M30 and M66.

This energizes rear window defogger indicator.

CAN Communication System Description

NIS0005E

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NIS0005F

Refer to LAN-48, "CAN System Specification Chart" .

					: OFF	5

CONSULT-III Function (BCM)

NIS0005N

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnostic test item	Check item diagnostic test mode	Content
REAR DEFOGGER	Data monitor	Displays the input data of BCM in real time.
	Active test	Gives a drive signal to a load to check the operation.

DATA MONITOR

Display Item List

Monitor item “Operation”		Content
REAR DEF SW	“ON/OFF”	Displays “Press (ON)/others (OFF)” status determined with the rear window defogger switch.
IGN ON SW	“ON/OFF”	Displays “IGN (ON)/OFF” status determined with the ignition switch signal.

ACTIVE TEST

Display Item List

Test item	Content
REAR DEFOGGER	Gives a drive signal to the rear window defogger to activate it.

CONSULT-III Function (IPDM E/R)

NIS0005O

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

IPDM E/R diagnostic test item	Check item diagnostic test mode	Content
REAR DEFOGGER	Data monitor	Displays the input data of BCM in real time.
	Active test	Gives a drive signal to a load to check the operation.

DATA MONITOR

Monitored Item	Description
RR DEF REQ	Indicates [ON/OFF] condition of rear window defogger function by IPDM E/R.

ACTIVE TEST

Test Item	Description
REAR DEFOGGER	This test is able to check rear window defogger operation. Rear window defogger operates when “ON” on CONSULT-III screen is touched.

Work Flow

NIS0005P

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to GW-56, "System Description" .
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to GW-69, "Trouble Diagnoses Symptom Chart" .
4. Does rear window defogger operate normally? YES: GO TO 5, NO: GO TO 4.
5. INSPECTION END

Trouble Diagnoses Symptom Chart

NIS0005Q

Make sure that other systems using the signal of the following systems operate normally.

Symptom	Diagnoses / service procedure	Refer to page
Rear window defogger does not operate.	1. CAN communication inspection using CONSLUT-III (self-diagnosis)	BCS-16
	2. Check IPDM E/R operation	GW-70
	3. Check rear window defogger switch circuit	GW-70
	4. Check rear window defogger power supply circuit	GW-71
	5. Replace IPDM E/R.	PG-26
Rear window defogger does not response but door mirror defoggers operate.	1. Check rear window defogger circuit	GW-73*1 GW-74*2
	2. Check filament	GW-78
Both of door mirror defoggers do not response but rear window defogger operates.	Check door mirror defogger power supply circuit	GW-75
Driver side door mirror defogger does not operate.	Check driver side door mirror defogger circuit	GW-76
Passenger side door mirror defogger does not operate.	Check passenger side door mirror defogger circuit	GW-76

*1 : For Coupe

*2 : For Roadster

Check IPDM E/R Operation

NIS0005R

1. CHECK IPDM E/R OPERATION

With CONSULT-III

Check IPDM E/R “REAR DEFOGGER” in “ACTIVE TEST” mode with CONSULT-III.
Refer to GW-68, "ACTIVE TEST" .

When “ACTIVE TEST” is performed, does rear defogger switch indicator illuminate?

YES or NO

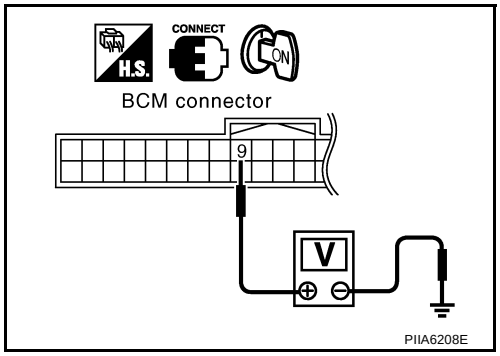
YES >> GO TO diagnosis/service procedure 3 in “Trouble Diagnosis Symptom Chart”. Refer to GW-69 .
NO >> GO TO diagnosis/service procedure 4 in “Trouble Diagnosis Symptom Chart”. Refer to GW-69 .

Check Rear Window Defogger Switch Circuit

NIS0005S

1. CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

With CONSULT-III



Check (“REAR DEF SW” and “IGN ON SW”) in DATA MONITOR mode with CONSULT-III. Refer to GW-68, "DATA MONITOR" .

When rear defogger switch is turned to ON
REAR DEF SW :ON
When ignition switch is turned to ON
IGN ON SW :ON

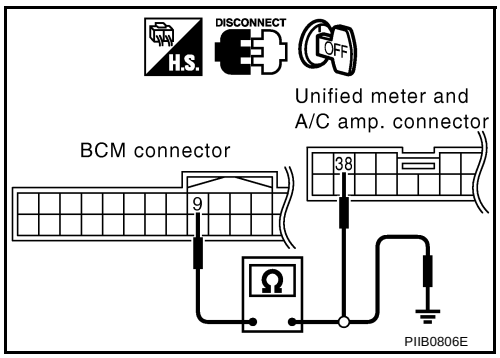
With out CONSULT-III

1. Turn ignition switch ON.
2. Check voltage between BCM connector ground.

Connector	Terminal (Wire color)		Condition		Voltage (V) (Approx.)
	(+)	(–)			
M90	9 (L/R)	Ground	Rear window defogger switch	: ON	0
				: OFF	5

OK or NG

OK >> Rear window defogger switch check is OK.
NG >> GO TO 2.



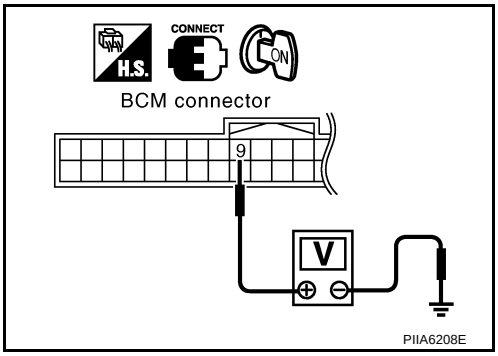
2. REAR WINDOW DEFOGGER SWITCH SIGNAL CIRCUIT HARNESS CONTINUITY INSPECTION

1. Turn ignition switch OFF.
2. Disconnect BCM connector and unified meter and A/C amp.connector.
3. Check continuity between BCM connector M90 terminal 9 and unified meter and A/C amp. connector M50 terminal 38.

9 (L/R) – 38 (L/R) : Continuity should exist

4. Check continuity between BCM harness connector M90 terminal 9 and ground

9 (L/R) – Ground : Continuity should not exist



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector M90 terminal 9 and ground.

9 (L/R) – Ground :Approx. 5V

OK or NG

OK >> Replace unified meter and A/C amp.
NG >> Replace BCM.

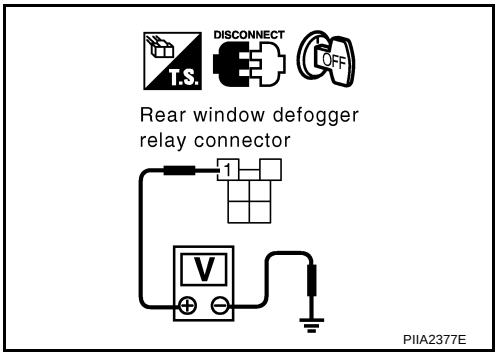
Check Rear Window Defogger Power Supply Circuit

NIS0005T

1. CHECK FUSE

Check 10A fuse [No. 12, located in fuse block (J/B)].

NOTE:
Refer to GW-56, "Component Parts and Harness Connector Location" .



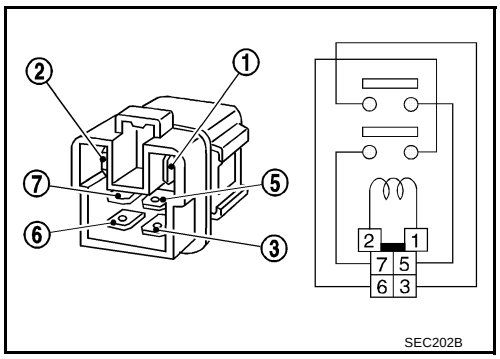
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse, refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. REAR WINDOW DEFOGGER RELAY POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition switch OFF.
2. Remove rear window defogger relay.
3. Check voltage between rear window defogger relay connector B34 terminal 1 and ground.

1 (G/R) – Ground : Battery voltage



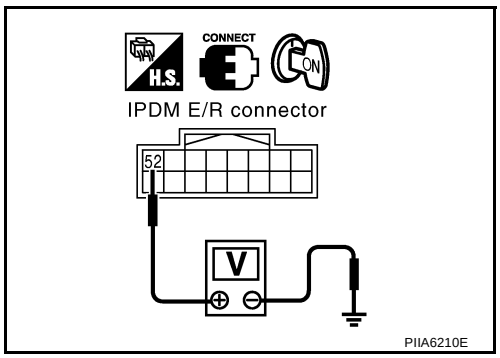
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. REAR WINDOW DEFOGGER RELAY INSPECTION

1. Remove rear window defogger relay.
2. Check continuity between rear window defogger relay terminals 3 and 5, 6 and 7.

Terminal		Condition	Continuity
3	5	12V direct current supply between terminals 1 and 2	Yes
		No current supply	No
6	7	12V direct current supply between terminals 1 and 2	Yes
		No current supply	No



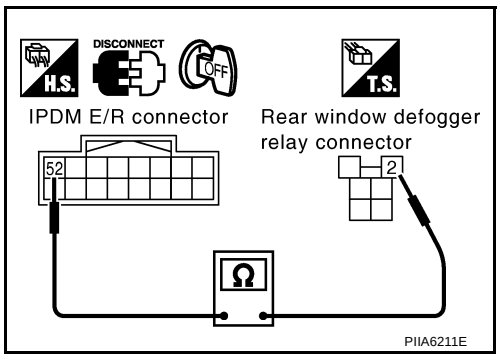
OK or NG

OK >> GO TO 4.
NG >> Replace rear window defogger relay.

4. REAR WINDOW DEFOGGER RELAY GROUND CIRCUIT INSPECTION

1. Installation rear window defogger relay.
2. Turn ignition switch ON.
3. Turn rear window defogger switch OFF.
4. Check voltage between IPDM E/R connector E9 terminal 52 and ground.

52 (B) – Ground : Battery voltage



OK or NG

OK >> Rear window defogger power supply circuit is OK.
NG >> GO TO 5.

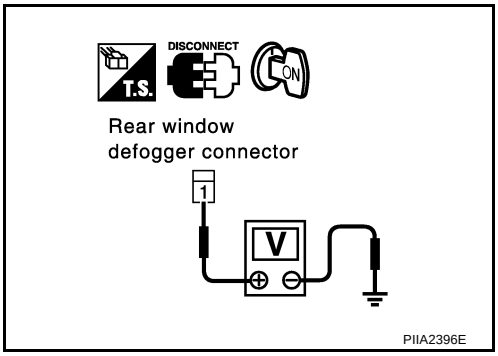
5. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and rear window defogger relay.
3. Check continuity between IPDM E/R connector E9 terminal 52 and rear window defogger relay connector B34 terminal 2.

52 (W) - 2 (W) :Continuity should exist.

OK or NG

OK >> Check the condition of harness and the connector.
NG >> Repair or replace harness.



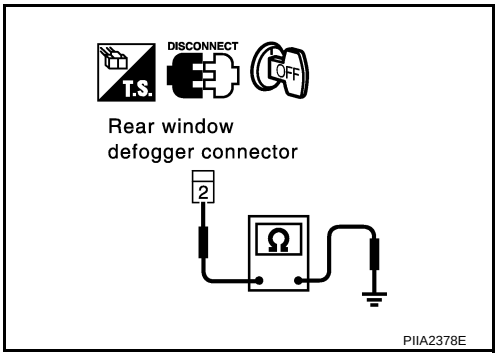
Check Rear Window Defogger Circuit / For Coupe

NIS0005U

1. REAR WINDOW DEFOGGER POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Turn ignition switch ON.
4. Check voltage between rear window defogger connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
D104	1 (B/W)	Ground	Rear window defogger switch	: ON	Battery voltage
				: OFF	0



OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

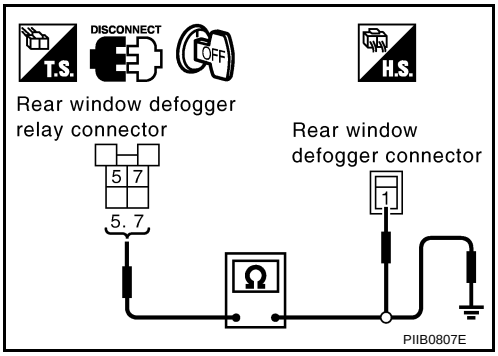
2. REAR WINDOW DEFOGGER GROUND HARNESS INSPECTION

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Check continuity between rear window defogger connector D211 terminal 2 and ground.

2 (B) – Ground : Continuity should exist

OK or NG

OK >> Rear window defogger circuit is OK.
NG >> Repair or replace harness.



3. CHECK HARNESS CONTINUITY

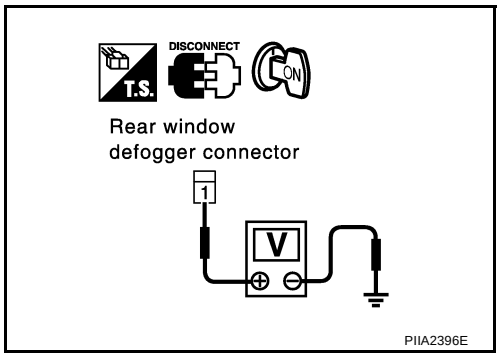
1. Turn ignition switch OFF.
2. Disconnect rear window defogger relay connector.
3. Check continuity between rear window defogger relay connector B34 terminal 5, 7 and rear window defogger connector D104 terminal 1.

5 (B/W) – 1 (B/W) : Continuity should exist.
7 (B/W) – 1 (B/W) : Continuity should exist.

4. Check continuity between rear window defogger relay connector B34 terminal 5, 7 and ground.

5 (B/W) – Ground : Continuity should not exist.
7 (B/W) – Ground : Continuity should not exist.

OK or NG



OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

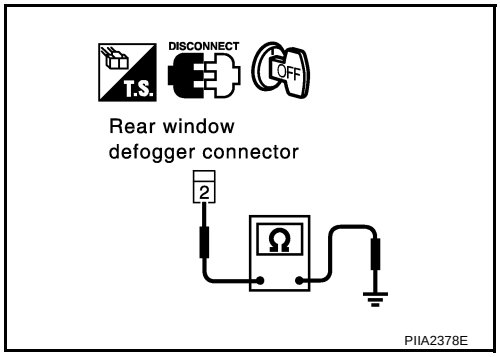
Check Rear Window Defogger Circuit / For Roadster

NIS0005V

1. REAR WINDOW DEFOGGER POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Turn ignition switch ON.
4. Check voltage between rear window defogger connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
B202	1 (B)	Ground	Rear window defogger relay	: ON	Battery voltage
				: OFF	0



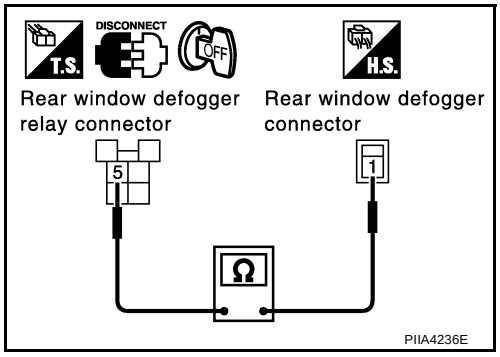
OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. REAR WINDOW DEFOGGER GROUND HARNESS INSPECTION

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Check continuity between rear window defogger connector D203 terminal 2 and ground.

2(B) – Ground : Continuity should exist



OK or NG

OK >> Rear window defogger circuit is OK.
NG >> Repair or replace harness.

3. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect rear window defogger relay connector.
3. Check continuity between rear window defogger relay connector B34 terminal 5 and rear window defogger connector B202 terminal 1.

5 (B/W) – 1 (B) : Continuity should exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

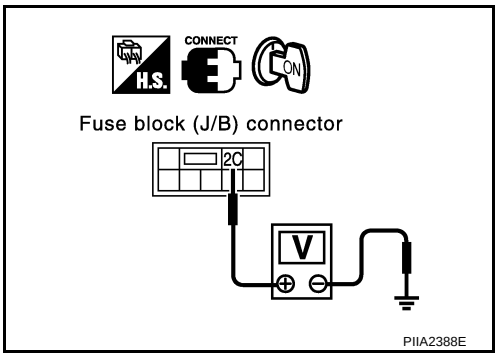
Check Door Mirror Defogger Power Supply Circuit

NIS0005W

1. CHECK FUSE

- Check 10A fuse [No. 8, located in fuse block (J/B)].

NOTE:
Refer to GW-56, "Component Parts and Harness Connector Location" .



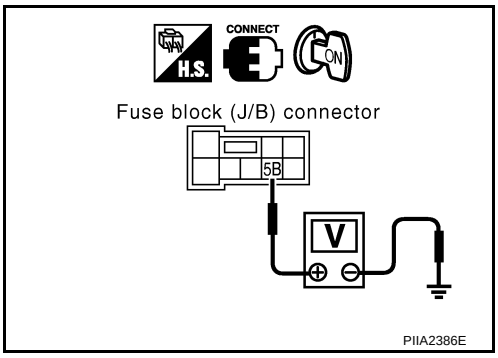
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse, refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT INSPECTION 1

1. Turn ignition switch ON.
2. Rear window defogger switch operate, check voltage between fuse block (J/B) connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
E101	2C (Y)	Ground	Rear window defogger switch	: ON	Battery voltage
				: OFF	0



OK or NG

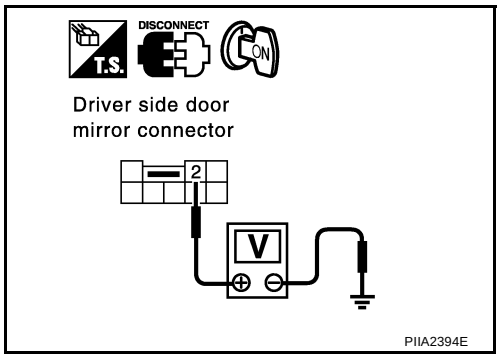
OK >> GO TO 3.
NG >> Repair or replace between harness.

3. DOOR MIRROR DEFOGGER POWER SUPPLY INSPECTION 2

Rear window defogger switch operate, check voltage between Fuse block (J/B) connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
M5	5B (L)	Ground	Rear window defogger switch	: ON	Battery voltage
				: OFF	0

OK or NG



OK >> Repair or replace harness.
NG >> Replace fuse block (J/B).

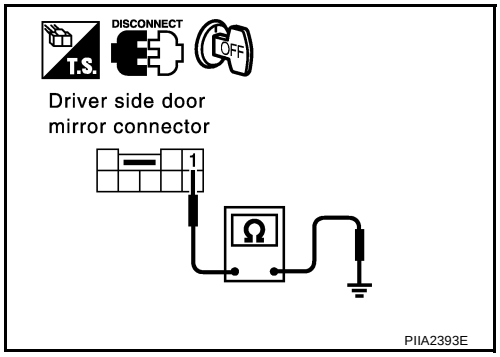
Check Driver Side Door Mirror Defogger Circuit

NIS0005X

1. DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition switch OFF.
2. Disconnect driver side door mirror defogger connector.
3. Turn ignition switch ON.
4. Rear window defogger switch operate, check voltage between driver side door mirror defogger connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
D2	2 (W/R)	Ground	Rear window defogger switch	: ON	Battery voltage
				: OFF	0



OK or NG

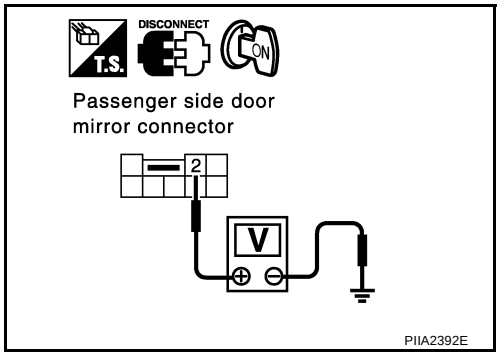
OK >> GO TO 2.
NG >> Repair or replace harness.

2. DOOR MIRROR DEFOGGER GROUND HARNESS INSPECTION

1. Turn ignition switch OFF.
2. Check continuity between driver side door mirror defogger connector D2 terminal 1 (B) and ground.

1 (B) – Ground : Continuity should exist.

OK or NG



OK >> Check door mirror defogger firmament continuity.
NG >> Repair or replace harness.

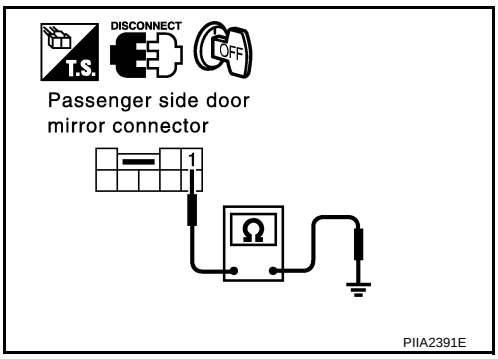
Check Passenger Side Door Mirror Defogger Circuit

NIS0005Y

1. DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition switch ON.
2. Disconnect passenger side door mirror defogger connector.
3. Rear window defogger switch operate, check voltage between passenger side door mirror defogger connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage [V] (Approx.)
	(+)	(–)			
D32	2 (P/B)	Ground	Rear window defogger switch	: ON	Battery voltage
				: OFF	0



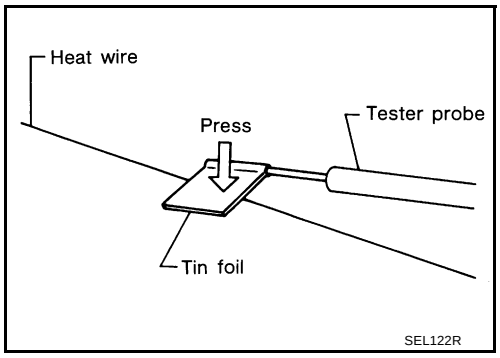
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness.

2. DOOR MIRROR DEFOGGER GROUND HARNESS INSPECTION

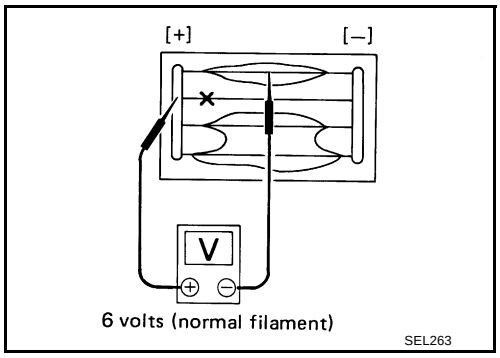
1. Turn ignition switch OFF.
2. Check continuity between passenger side door mirror defogger connector D32 terminal 1 and ground.

1 (B) – Ground : Continuity should exist.



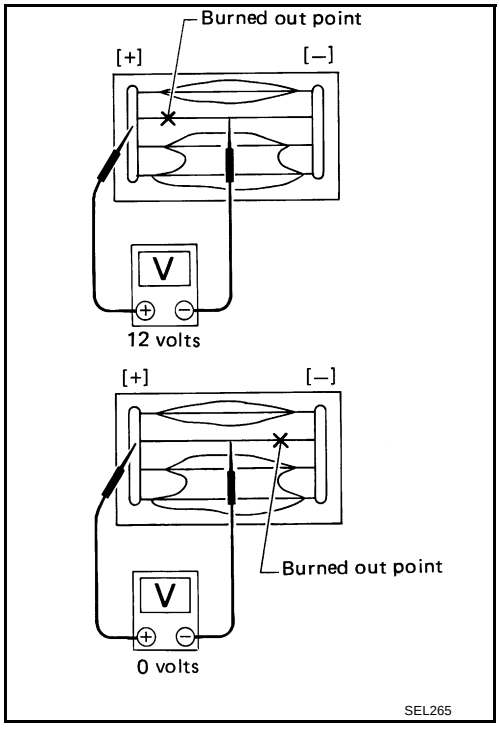
OK or NG

OK >> Check door mirror defogger firmament continuity.
NG >> Repair or replace harness.



Check Filament

NIS0005Z

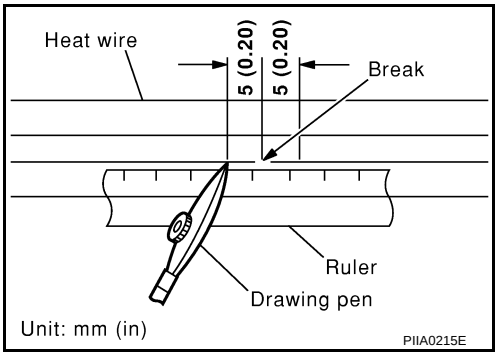


1. When measuring voltage, wrap tin foil around the top of the negative probe. Then press the foil against the wire with your finger.

2. Attach probe circuit tester (in Volt range) to middle portion of each filament.

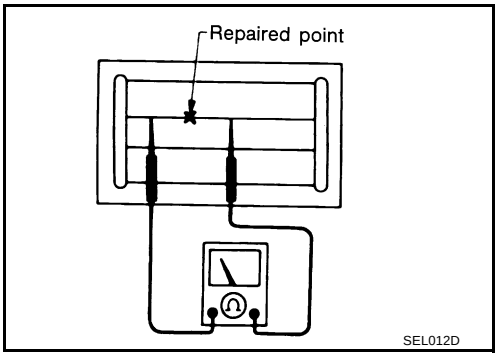
3. If a filament is burned out, circuit tester registers 0 or battery voltage.
4. To locate burned out point, move probe to left and right along filament. Test needle will swing abruptly when probe passes the point.

Filament Repair



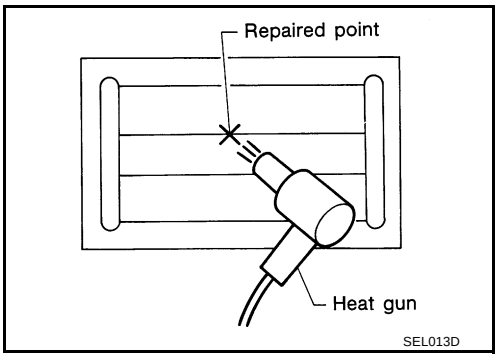
NIS00060

REPAIR EQUIPMENT



- Conductive silver composition (Dupont No. 4817 or equivalent)
- Ruler 30 cm (11.8 in) long
- Drawing pen
- Heat gun
- Alcohol
- Cloth

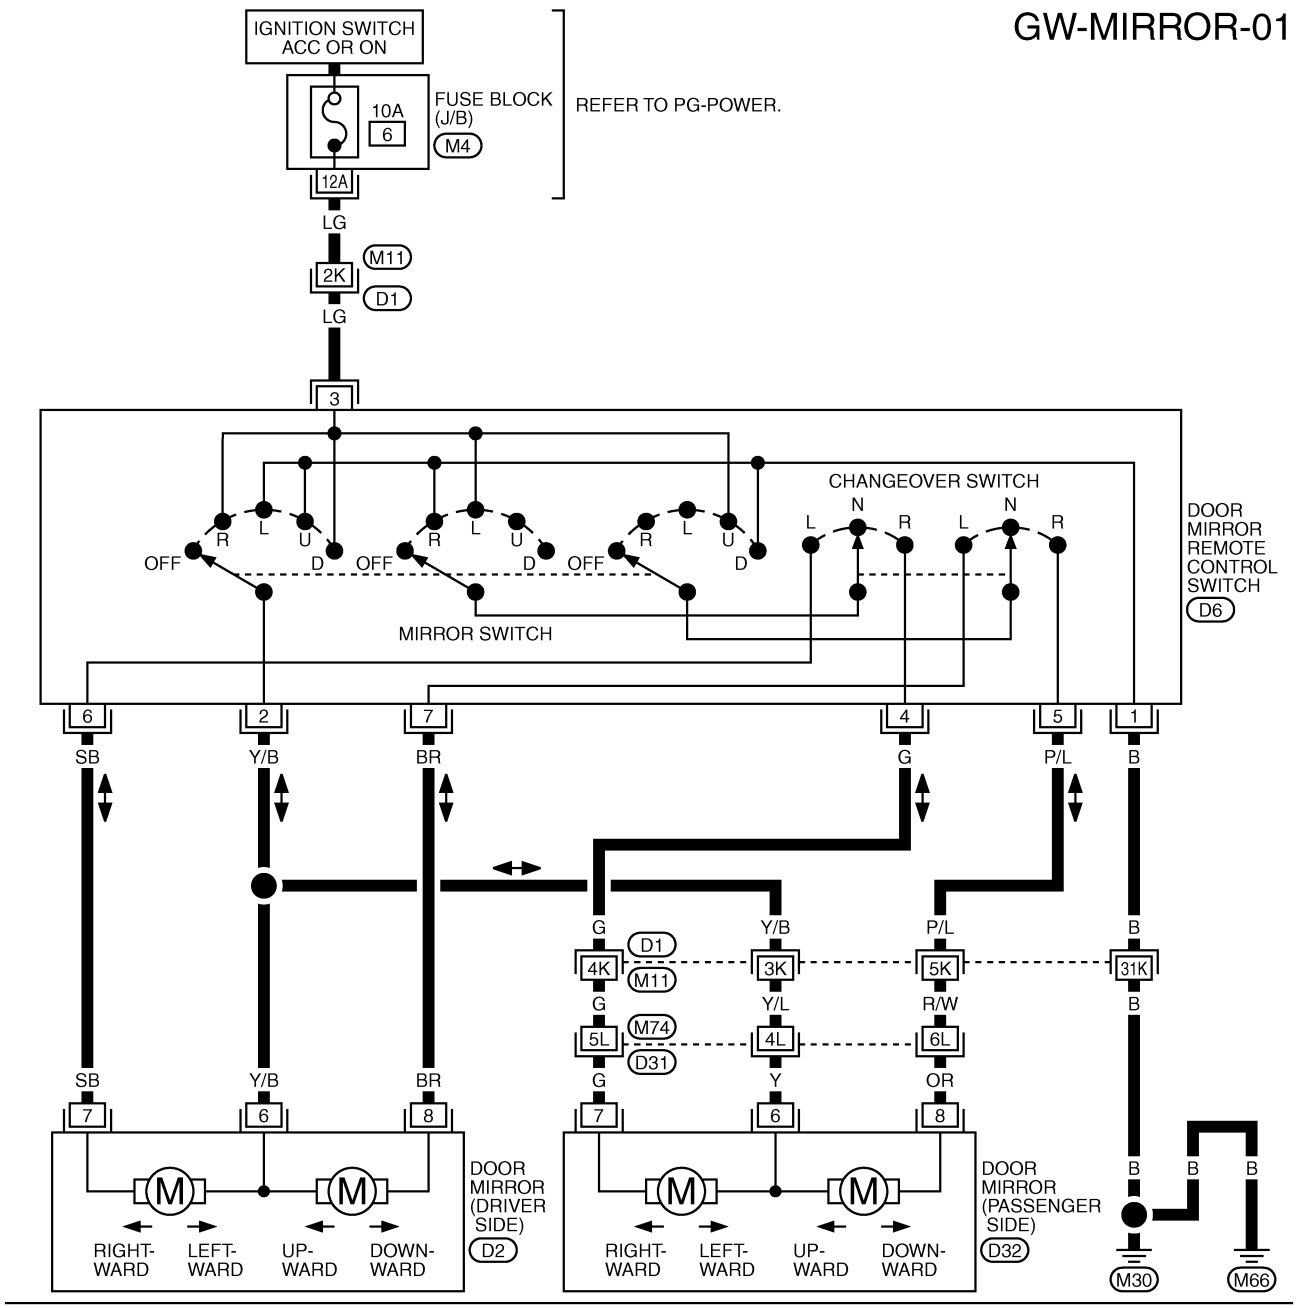
REPAIRING PROCEDURE

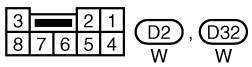


1. Wipe broken heat wire and its surrounding area clean with a cloth dampened in alcohol.
2. Apply a small amount of conductive silver composition to tip of drawing pen.
   Shake silver composition container before use.
3. Place ruler on glass along broken line. Deposit conductive silver composition on break with drawing pen. Slightly overlap existing heat wire on both sides [preferably 5 mm (0.20 in)] of the break.

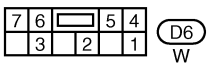
4. After repair has been completed, check repaired wire for continuity. This check should be performed 10 minutes after silver composition is deposited.
   Do not touch repaired area while test is being performed.

5. Apply a constant stream of hot air directly to the repaired area for approximately 20 minutes with a heat gun. A minimum distance of 3 cm (1.2 in) should be kept between repaired area and hot air outlet.
   If a heat gun is not available, let the repaired area dry for 24 hours.





DOOR MIRROR



PFP:96301

Wring Diagram –MIRROR–

NIS00061

REFER TO THE FOLLOWING.

M4 -FUSE BLOCK-JUNCTION BOX (J/B)

TIWT1601E

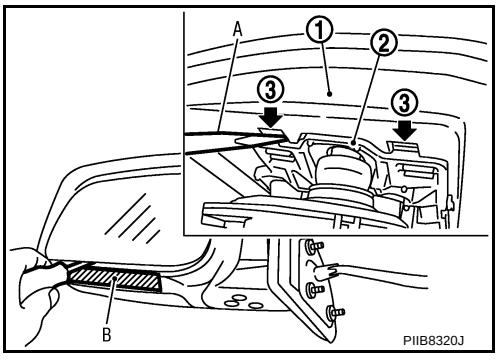
Removal and Installation

NIS00062

1. Door mirror assembly
2. Corner cover inner

REMOVAL

1. Remove door finisher. Refer to EI-33, "DOOR FINISHER" .
2. Remove corner cover inner.
3. Disconnect door mirror harness connector.
4. Remove door mirror mounting nuts, and remove door mirror assembly.



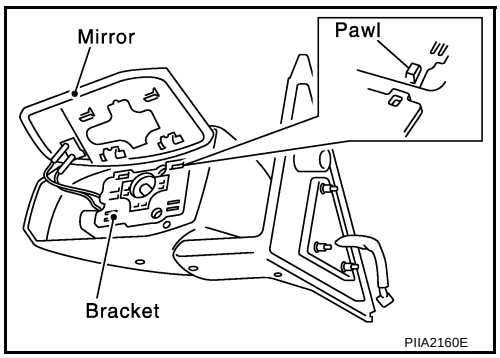
INSTALLATION

Install in the reverse order of removal.

DISASSEMBLY

1. Place the mirror body with mirror glass facing upward.
2. Put a strip of protective tape B on mirror body.
3. As shown in the figure, insert a small slotted screwdriver A into the recess between mirror base (mirror holder) (1) and mirror holder bracket (2) and push up two pawls (3) to remove mirror holder lower half side.

   NOTE:
   When pushing up pawls do not attempt to use one recess only, be sure to push up with both recesses.
   Insert screwdriver into recesses, and push up while rotating (twist) to make work easier.



4. Remove two terminals of mirror heater attachment.
5. Lightly lift up lower side of mirror surface from mirror surface, and detach pawls of upper side as if pulling it out. Remove mirror surface from mirror body.

NOTE:
Be certain not to allow grease on sealing agent in center of mirror body assembly (actuator) or back side of mirror surface (mirror holder).

ASSEMBLY

1. Place mirror holder bracket and mirror body assembly (actuator) in a horizontal position.
2. Connect terminals of heater installed mirror.
3. Fit the upper pawls on the mirror face onto the mirror holder bracket first, then press the lower side of mirror face until a click sound is heard to engage the lower pawls.

NOTE:
After installation, visually check that lower pawls are securely engaged from the bottom of mirror face.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NIS00090

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NIS00091

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

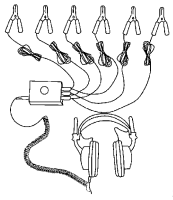
Precautions

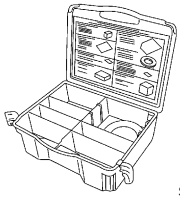
NIS00092

- Disconnect both battery cables in advance.
- Disconnect air bag system line in advance.
- Never tamper with or force air bag lid open, as this may adversely affect air bag performance.
- Be careful not to scratch pad and other parts.
- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.

- Do not use any organic solvent, such as thinner or benzine.

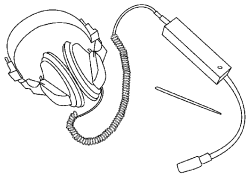




PREPARATION

PFP:00002

Special Service Tools



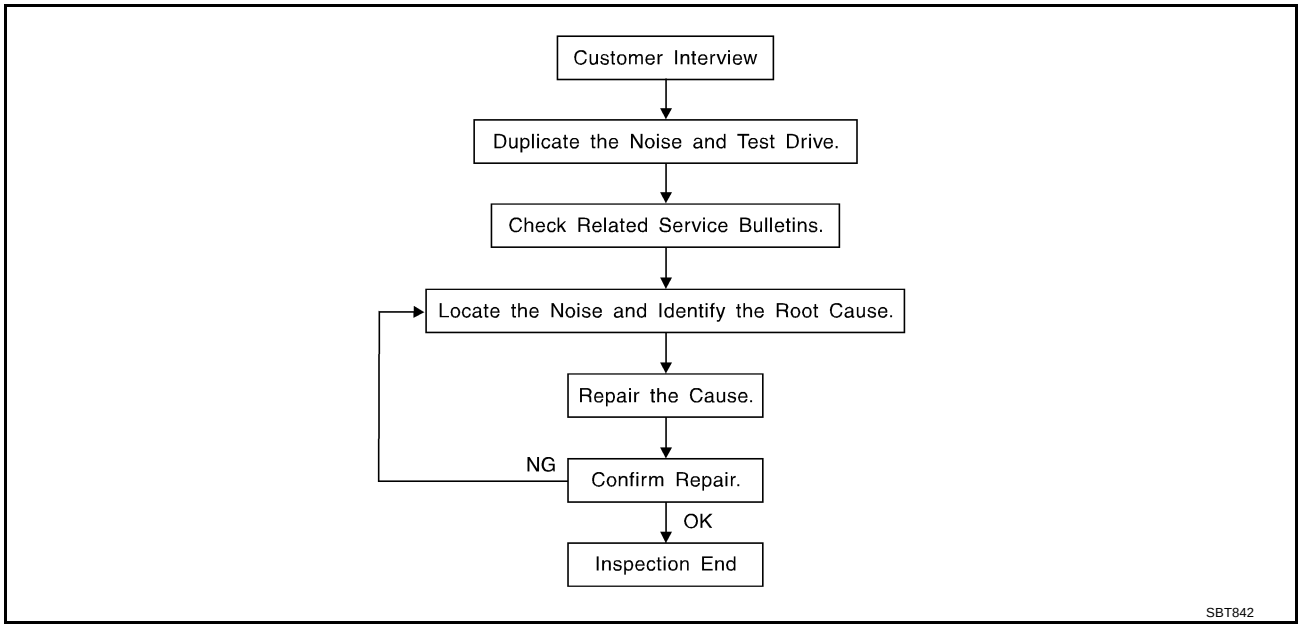
NIS00093

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
(J39570) Chassis ear  SIIA0993E	Locating the noise
(J43980) NISSAN Squeak and Rattle Kit  SIIA0994E	Repairing the cause of noise

Commercial Service Tools

NIS00094



Tool name	Description
Engine ear  SIIA0995E	Locating the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS00095

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to IP-8, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to IP-6, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS00096

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:
Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

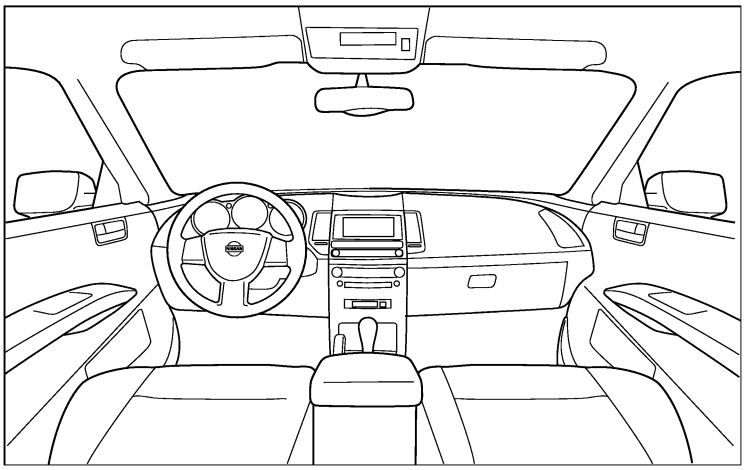
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

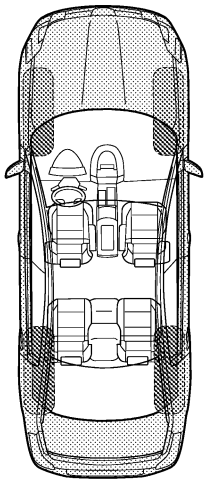
Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

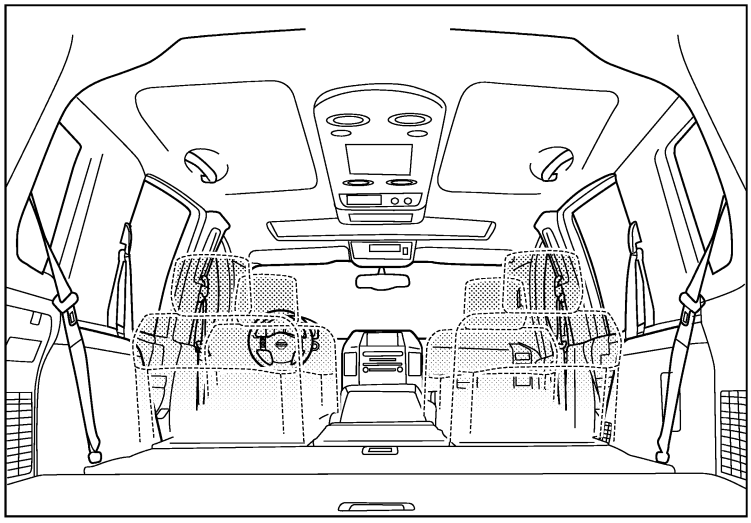
These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



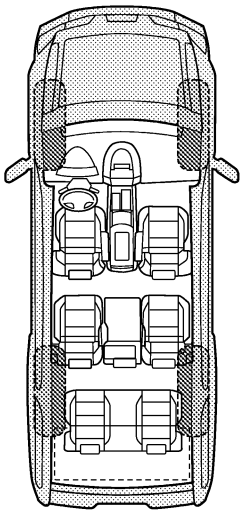
Diagnostic Worksheet



NIS00097



SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET



Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

30. Instrument side finisher (RH)
31. Knee protector (LH)

Pawl Clip Metal clip

Removal and Installation

NIS00099

WORK STEP

When removing instrument panel, combination meter, audio and console assembly, take steps in the order shown by the numbers below.

CAUTION:

- **Disconnect both battery cables in advance.**
- **Disconnect air bag system line in advance.**
- **Never tamper with or force air bag lid open, as this may adversely affect air bag performance.**
- **Be careful not to scratch pad and other parts.**

Parts		Reference page	Instrument panel	Combination meter	Audio	Center console
(A)	Kicking plate (RH / LH)	EI-35	[1]	[1]		
(B)	Foot rest	EI-43	[2]	[2]		
(C)	Dash side finisher (RH / LH)	EI-35	[3]	[3]		
(D)	Instrument driver panel lower	IP-12	[4]	[4]		
(E)	Steering column lower cover	IP-12	[5]	[5]		
(F)	Combination meter	IP-12	[6]	[6]		
(G)	Spiral cable	SRS-42	[7]			
(H)	Console finisher (A/T Models)	IP-13	[8]		[1]	[1]
(I)	Cluster lid C lower (A/T Models)	IP-13	[8]		[1]	[1]
(J)	Console boot (M/T Models)	IP-13	[8]		[1]	[1]
(K)	Center console *1	IP-13	[10]			[2]
(L)	Instrument passenger panel lower	IP-13	[11]			
(M)	Instrument side panel (RH / LH)	IP-13	[12]			
(N)	Unified meter and A/C amp.	IP-13	[13]		[2]	
(O)	Instrument center panel (with NAVI models)	IP-14	[14]		[3]	
(P)	NAVI switch (with NAVI models)	IP-14	[15]		[4]	
(Q)	Cluster lid C*2	IP-14	[16]		[5]	
(R)	Display unit (with NAVI models)	IP-14	[17]			
(S)	Front pillar garnish (RH / LH)	EI-36	[18]			
(T)	Instrument driver panel upper	IP-14	[19]			
(U)	Instrument passenger panel upper	IP-14	[20]			
(V)	Instrument side finisher (RH)	IP-14	[21]			
(V)	Instrument panel	IP-15	[22]			

[ ]:number indicates step in removal procedures.

NOTE:

*1: Console rear pocket and coin holder bracket assembly. Refer to IP-16, "CENTER CONSOLE" .

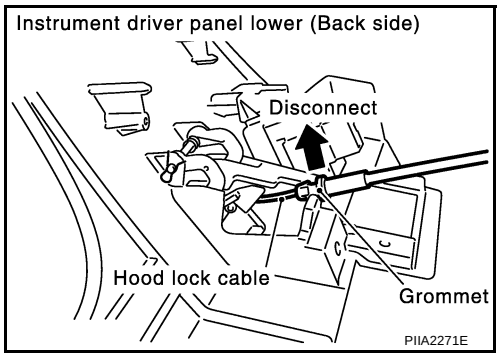
*2: Audio, Instrument upper box, and triple meter assembly. Refer to IP-17, "CLUSTER LID C" .

REMOVAL

(A) Kicking Plate (RH/LH)

Remove kicking plate (RH/LH). Refer to EI-35, "BODY SIDE TRIM" .

(B) Foot Rest



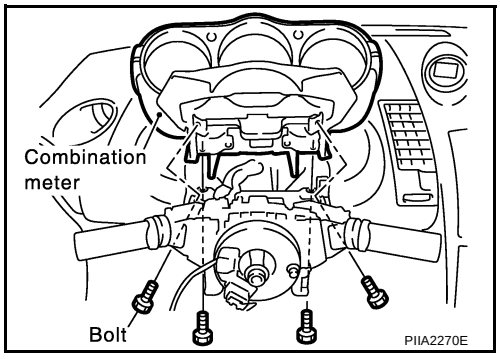
Remove foot rest. Refer to EI-43, "FLOOR TRIM" .

(C) Dash Side Finisher (RH/LH)

1. Remove plastics nut.
2. Remove dash side finisher (RH/LH).

(D) Instrument Driver Panel Lower

1. Remove screws.
2. Remove data link connector.
3. Pull to disengage metal clip by removing panel in horizontal direction.
4. Disconnect in-vehicle sensor and each electrical parts.
5. Remove the grommet, and remove hood lock cable.

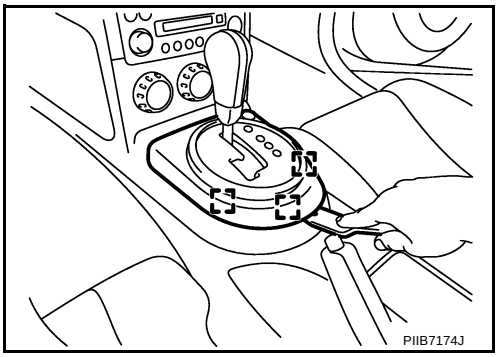


(E) Steering Column Lower Cover

1. Remove screws.
2. Disengage the tab, remove only lower side. (Upper side is integrated in combination meter.)

(F) Combination Meter

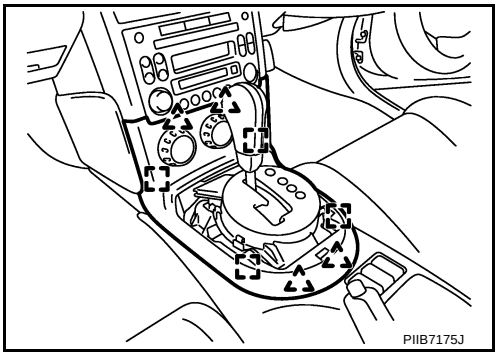
After removing bolts, remove harness connector.



(G) Spiral cable

Remove bolts and remove spiral cable. Refer to SRS-42, "SPIRAL CABLE" .

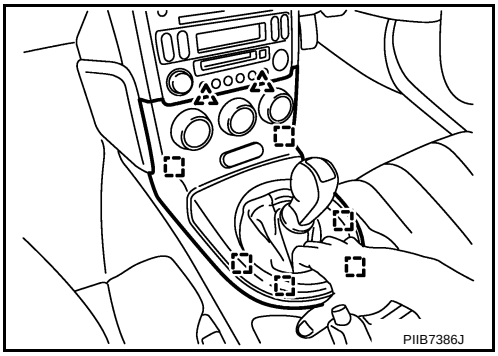
(H) Console Finisher (A/T Models)



1. Insert a thin flat-bladed screwdriver wrapped with tape from behind console finisher, and remove metal clip on back. Then pull up and back to disengage from front metal clip.
2. Disconnect harness connector, and remove console finisher.

NOTE:
A/C controller is assembled in the console finisher. Therefore, when installing and removing be careful not to use excessive force, etc.

(I) Cluster lid C lower (A/T Models)



1. Disconnect harness connector.
2. Remove metal clips and pawls, and remove cluster lid C lower.

(J) Console Boot (M/T Models)

1. Remove metal clip.
2. Remove shift knob. Refer to MT-12, "Removal and Installation" .
3. Disconnect harness connector, and remove console boot.

NOTE:
A/C controller is assembled in the console boot. Therefore, when installing and removing be careful not to use excessive force, etc.

(K) Center Console

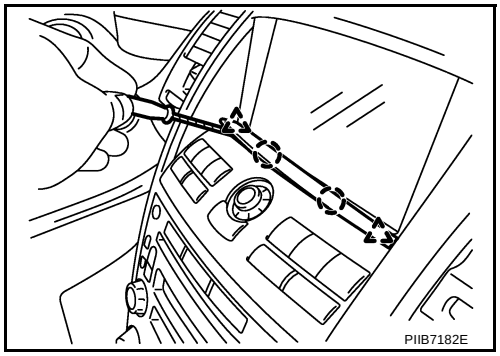
1. Remove coin holder and ashtray.
2. Remove screws.
3. Remove console sub-harness.
4. After removing, disassemble each parts. Refer to IP-16, "CENTER CONSOLE" .

NOTE:
When removing console, be careful not to pull the harness.

(L) Instrument Passenger Panel Lower

1. Remove screws and bolt.
2. Pull panel horizontally toward you and disengage from metal clip.

(M) Instrument Side Panel (RH/LH)



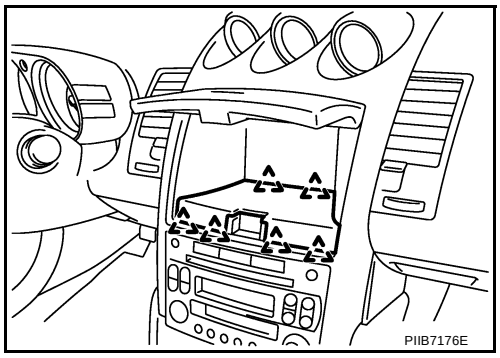
1. Remove screws.
2. Pull to the side, disconnect metal clips, and remove instrument side panel.

(N) Unified Meter And A/C Amp.

Remove screws, and disconnect harness connector, and remove unified meter and A/C amp. Refer to ATC-103, "AUTO AMP" .

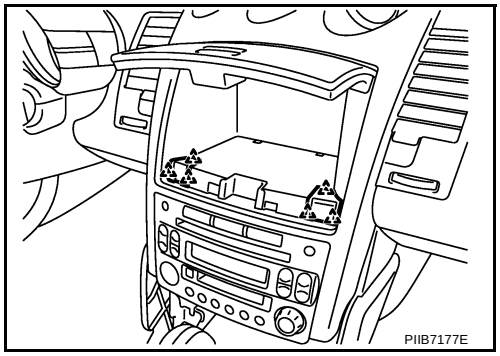
(O) Instrument Center Panel

Insert a screwdriver wrapped with tape into the gap and then remove instrument center panel.



(P) NAVI Switch (With NAVI Models)

Remove NAVI switch. Refer to AV-99, "Removal and Installation of NAVI Switch" .



(Q) Cluster Lid C

1. Lift upward while disengaging the pawls, and pull backward to remove the pocket mat. (Without NAVI)

2. Pull backward to remove the instrument finisher (left/right). (Without NAVI)
3. Disengage the metal clip with the upper center pawls.
4. Remove the harness connector of the triple meter and audio unit by pulling backward, and then remove cluster lid C.

   CAUTION:
   Unit is heavy, so be careful not to pinch your fingers when working.
5. After remove cluster lid C and then remove triple meter, instrument upper box and audio unit. Refer to IP-17, "CLUSTER LID C" .

(R) Display Unit (With NAVI Models)

Remove display unit. Refer to AV-99, "Removal and Installation of Display Unit" .

(S) Front Pillar Garnish

Pull to inside of vehicle, disconnect metal clips and remove front pillar garnish. Refer to EI-35, "BODY SIDE TRIM" .

(T) Instrument Driver Panel Upper

1. Remove screws.
2. Disconnect metal clips, then remove instrument driver panel upper.

(U) Instrument Passenger Panel Upper

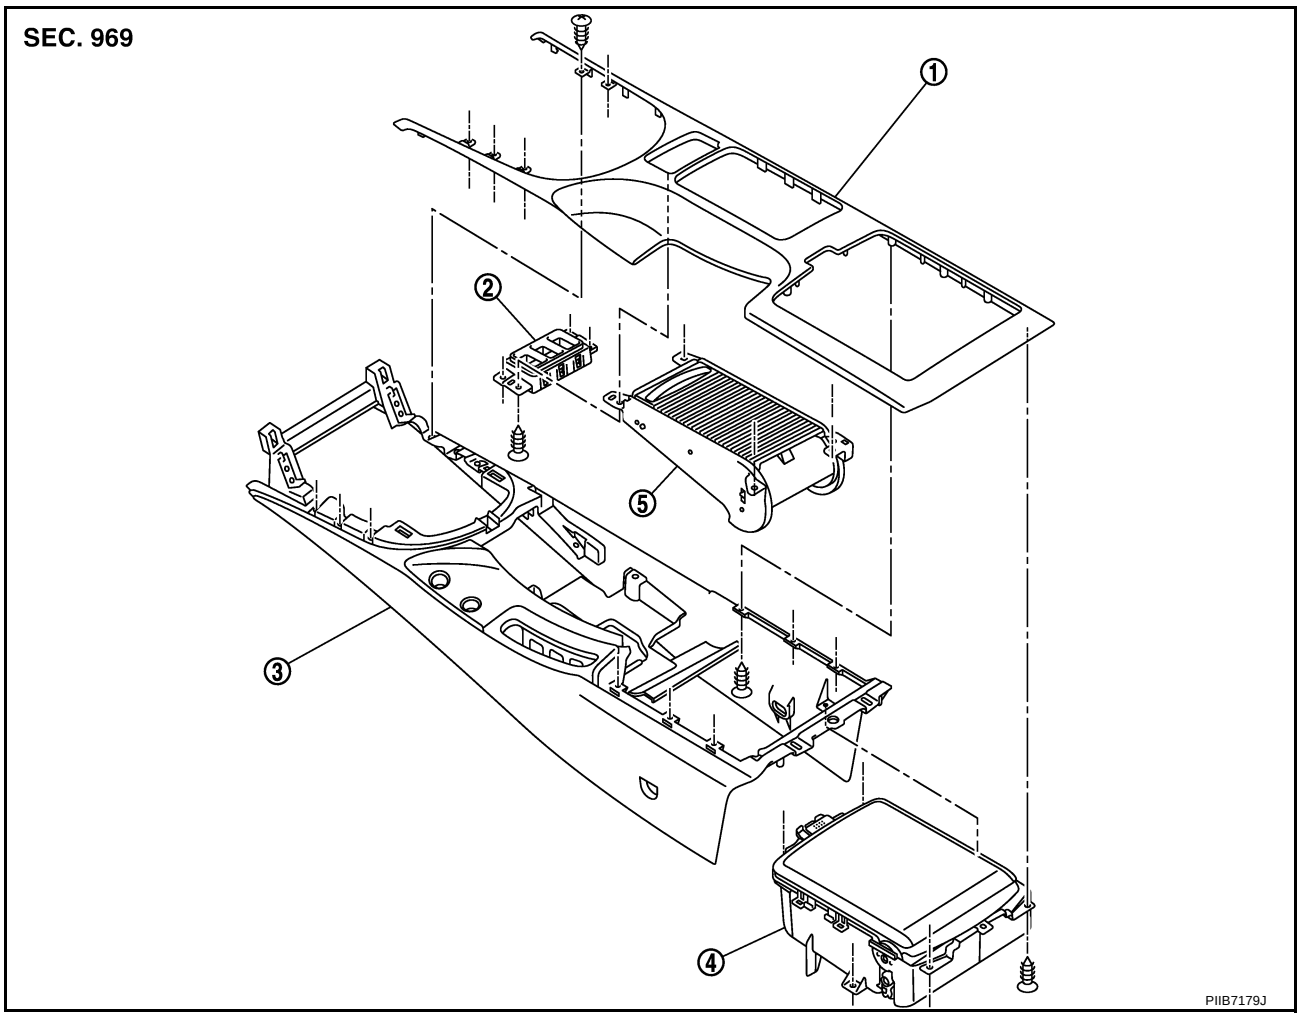
1. Remove screws.
2. Disconnect metal clips, then remove instrument passenger panel upper.

(V) Instrument Side Finisher (RH)

Using a screwdriver wrapped with tape, pry up and remove instrument side finisher.
Disconnect from metal clip and pull toward you.

(W) Instrument Panel

Remove bolts, nut and screws, and remove instrument panel from passenger door opening portion.



INSTALLATION

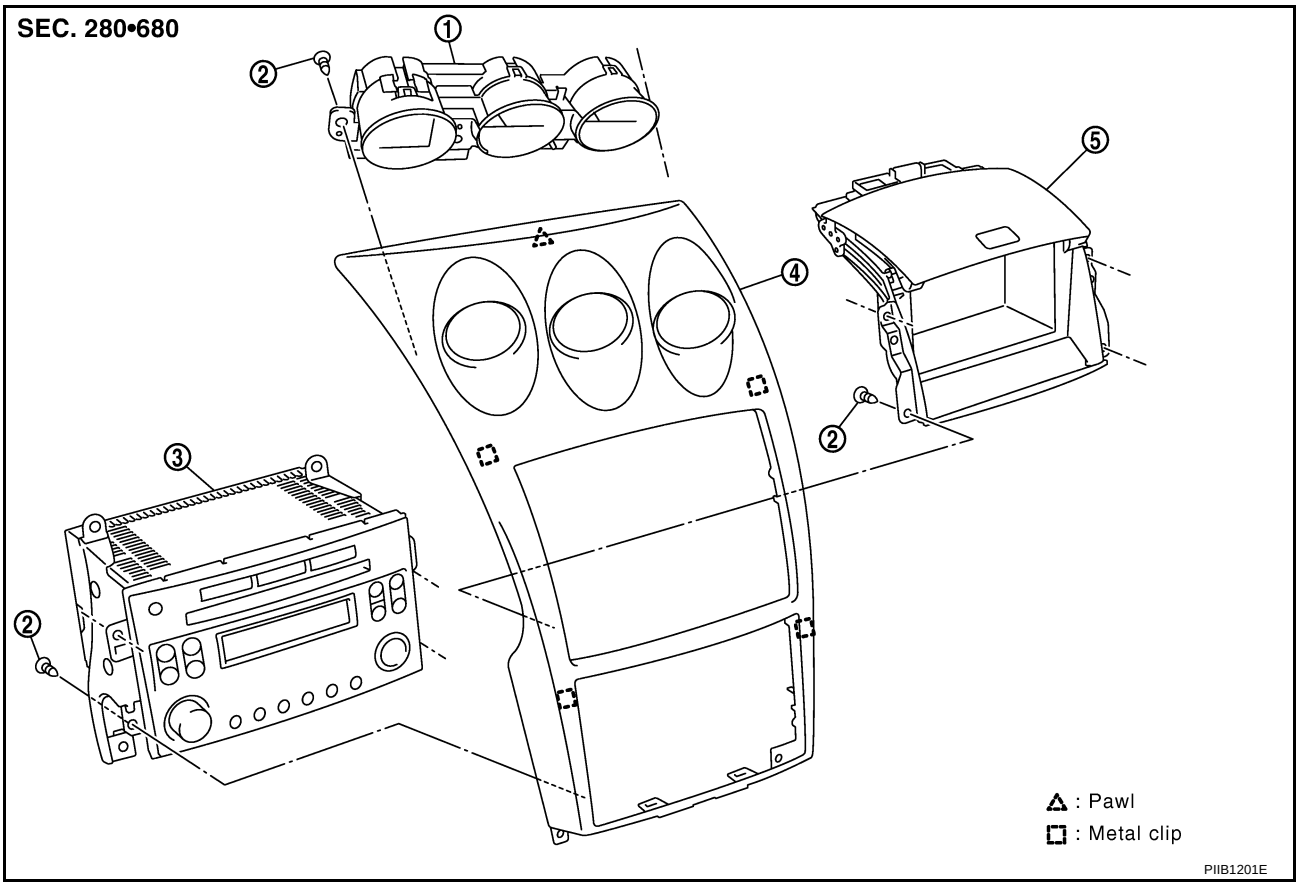
To install, reverse the removal procedure sequence.
Assemble the following three parts carefully.

Disassembly and Assembly

NIS0009A

CENTER CONSOLE

1. Console body upper
2. Switch bracket
3. Console body lower
4. Console rear pocket
5. Cup holder



Disassembly

1. Remove screws, remove console body upper.
2. Remove screws, and then remove console rear pocket from console body lower.
3. Remove screws, and then remove switch bracket from console body upper.
4. Remove screws, and then remove cup holder from console body upper.

Assembly

Assemble in the reverse order of disassembly.

CLUSTER LID C

1. Triple meter
2. Screw
3. Audio
4. Cluster lid C
5. Instrument upper box

Disassembly

1. Remove screws, and then triple meter.
2. Remove screws, and then instrument upper box. (Without NAVI models)
3. Remove screws, and then audio unit. Refer to AV-46, "Removal and Installation of Audio Unit (Base system)" ,AV-46, "Locking CD Auto Changer Mechanism (Audio unit of BOSE system)" and AV-47, "Removal and Installation of Audio Unit (BOSE system)" .

Assembly

Assemble in the reverse order of disassembly.

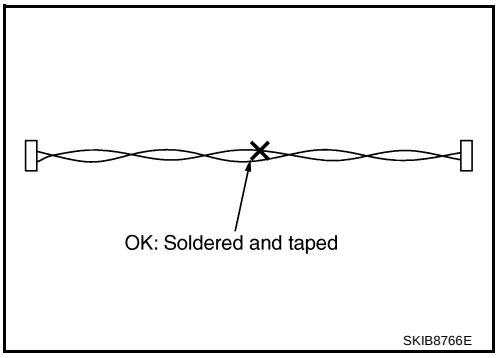
PRECAUTIONS

PFP:00001

Precautions for Trouble Diagnosis

NKS004PA

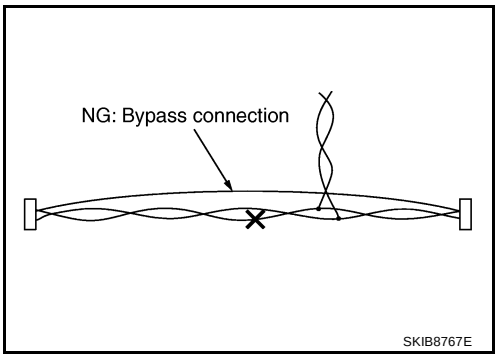
CAUTION:



- **Never apply 7.0 V or more to the measurement terminal.**
- **Use a tester with open terminal voltage of 7.0 V or less.**
- **Turn the ignition switch OFF and disconnect the battery cable from the negative terminal when checking the harness.**

Precautions for Harness Repair

NKS004PB



- Solder the repaired area and wrap tape around the soldered area.

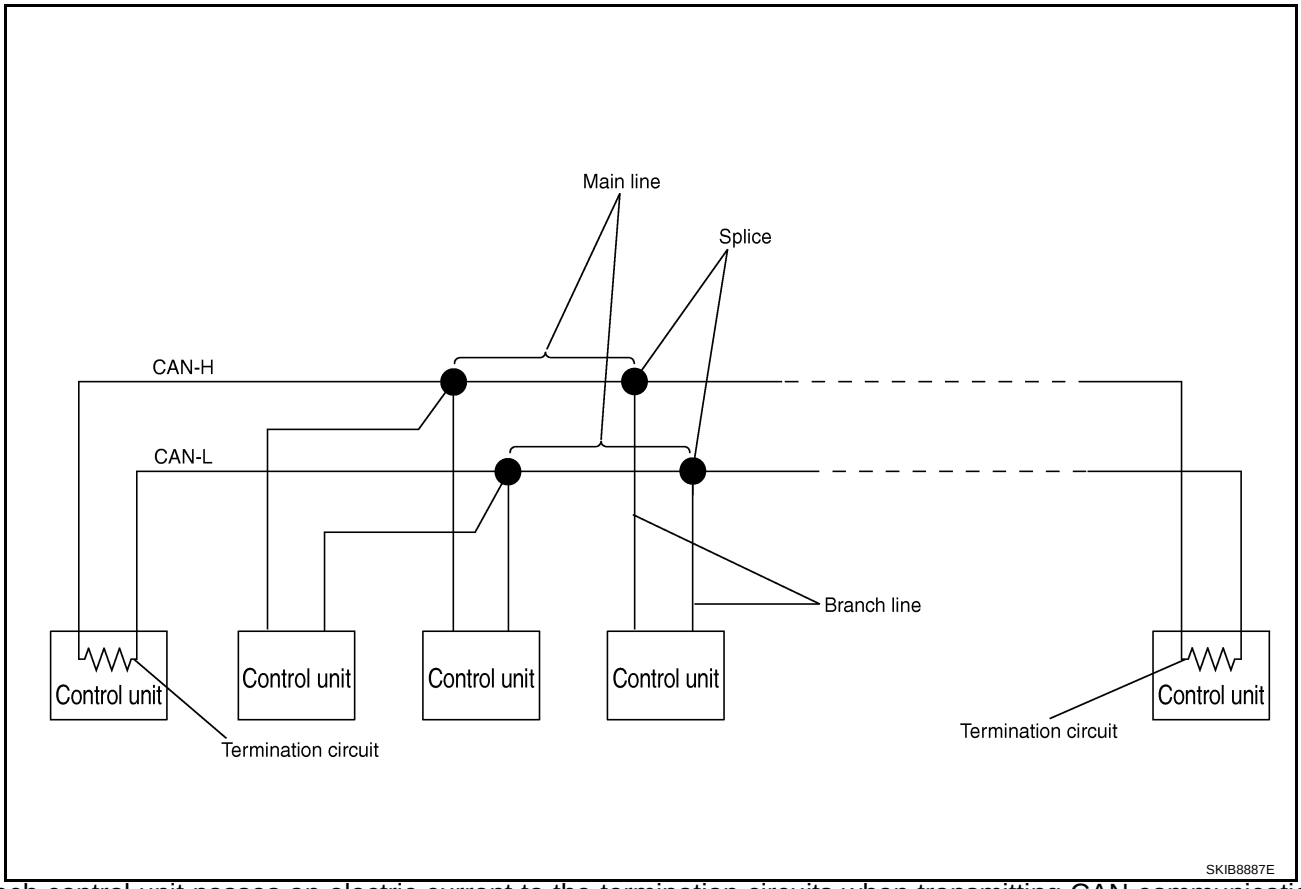
  NOTE:
  A fray of twisted lines must be within 110 mm (4.33 in).

- Bypass connection is never allowed at the repaired area.

  NOTE:
  Bypass connection may cause CAN communication error. The spliced wire becomes separated and the characteristics of twisted line are lost.

- Replace the applicable harness as an assembly if error is detected on the shield lines of CAN communication line.

SYSTEM DESCRIPTION

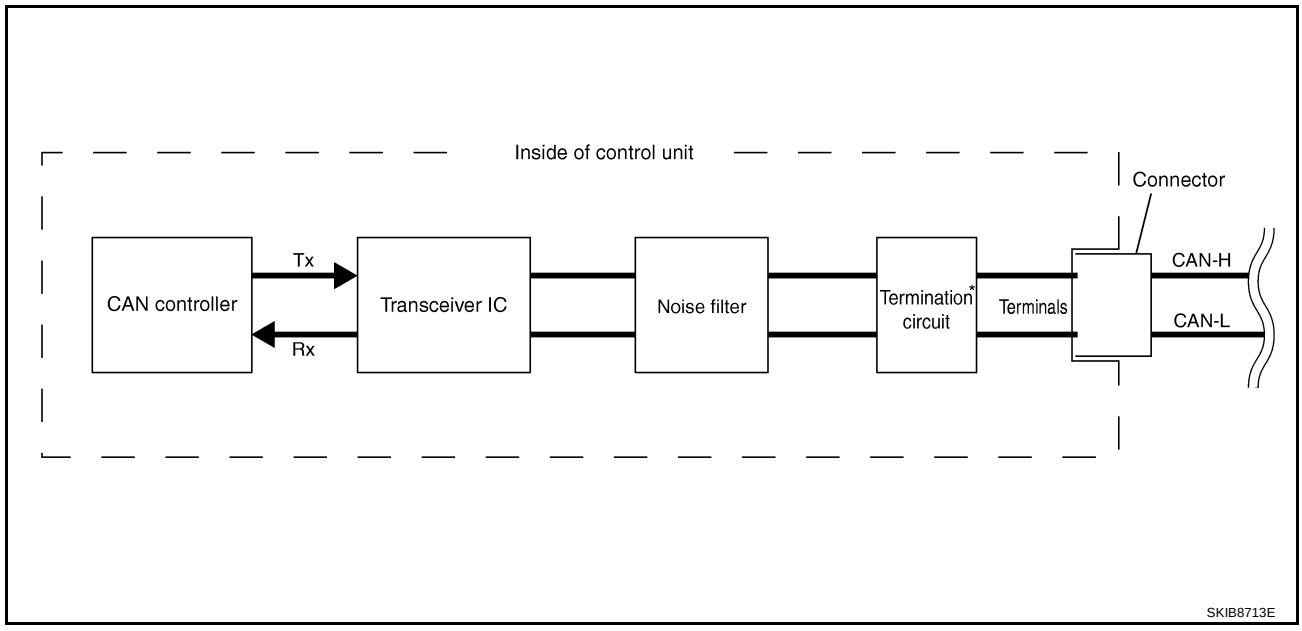


PFP:00000

CAN Communication System

NKS004PC

- CAN communication is a multiplex communication system. This enables the system to transmit and receive large quantities of data at high speed by connecting control units with two communication lines (CAN-H and CAN-L).
- Control units on the CAN network transmit signals using the CAN communication control circuit. They receive only necessary signals from other control units to operate various functions.
- CAN communication lines adopt twisted-pair line style (two lines twisted) for noise immunity.



SYSTEM DIAGRAM

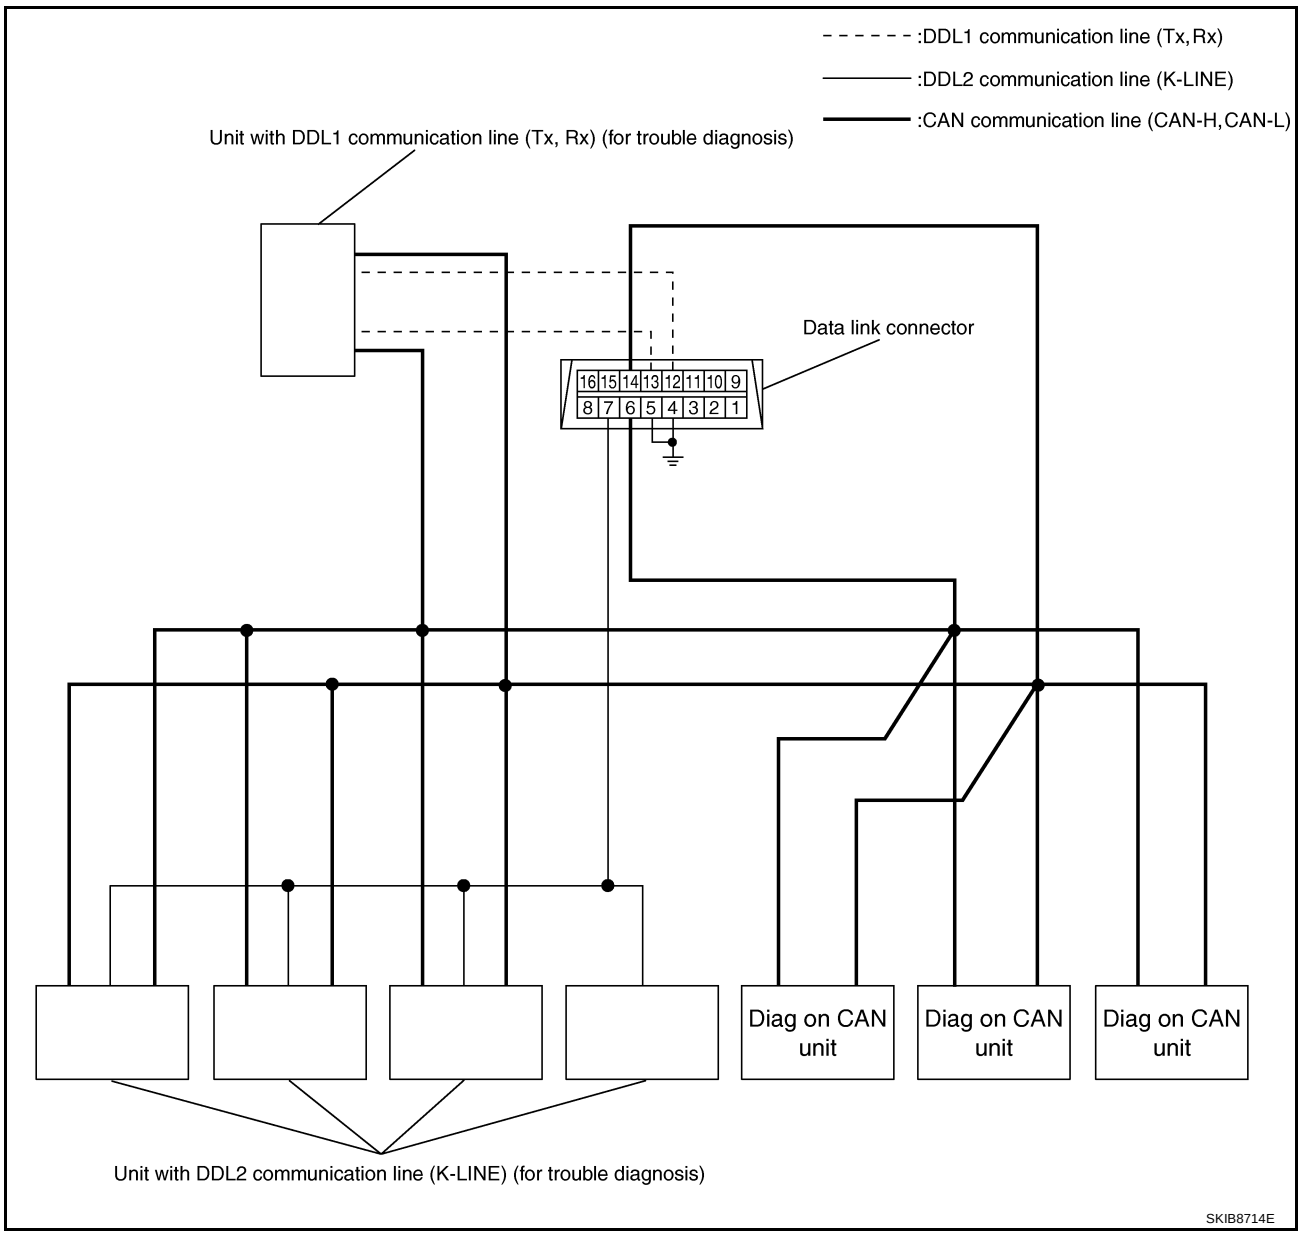
Each control unit passes an electric current to the termination circuits when transmitting CAN communication signal. The termination circuits produce an electrical potential difference between CAN-H and CAN-L. CAN communication system transmits and receives CAN communication signals by the potential difference.

Component	Description
Main line	CAN communication line between splices
Branch line	CAN communication line between splice and a control unit
Splice	A point connecting a branch line with a main line
Termination circuit	Refer to LAN-5, "CAN COMMUNICATION CONTROL CIRCUIT" .

CAN COMMUNICATION CONTROL CIRCUIT

Component	System description
CAN controller	It controls CAN communication signal transmission and reception, error detection, etc.
Transceiver IC	It converts digital signal into CAN communication signal, and CAN communication signal into digital signal.
Noise filter	It eliminates noise of CAN communication signal.
Termination circuit* (Resistance of approx. 120 Ω)	It produces potential difference.

*: These are the only control units wired with both ends of CAN communication system.



Diag on CAN

NKS004PD

DESCRIPTION

"Diag on CAN" is a diagnosis using CAN communication instead of previous DDL1 and DDL2 communication line, between control unit and diagnosis unit.

SYSTEM DIAGRAM

Name	Harness	Description
DDL1	Tx Rx	It is used for trouble diagnosis. (CAN-H and CAN-L are used for controlling)
DDL2	K-LINE	It is used for trouble diagnosis. (CAN-H and CAN-L are used for controlling)
Diag on CAN	CAN-H CAN-L	It is used for trouble diagnosis and control.

TROUBLE DIAGNOSIS

PFP:00004

Condition of Error Detection

NKS004PE

"U1000" or "U1001" is indicated on SELF-DIAG RESULTS on CONSULT-III if CAN communication signal is not transmitted or received between units for 2 seconds or more.

CAN COMMUNICATION SYSTEM ERROR

- CAN communication line open (CAN-H, CAN-L, or both)
- CAN communication line short (ground, between CAN communication lines, other harnesses)
- Error of CAN communication control circuit of the unit connected to CAN communication line

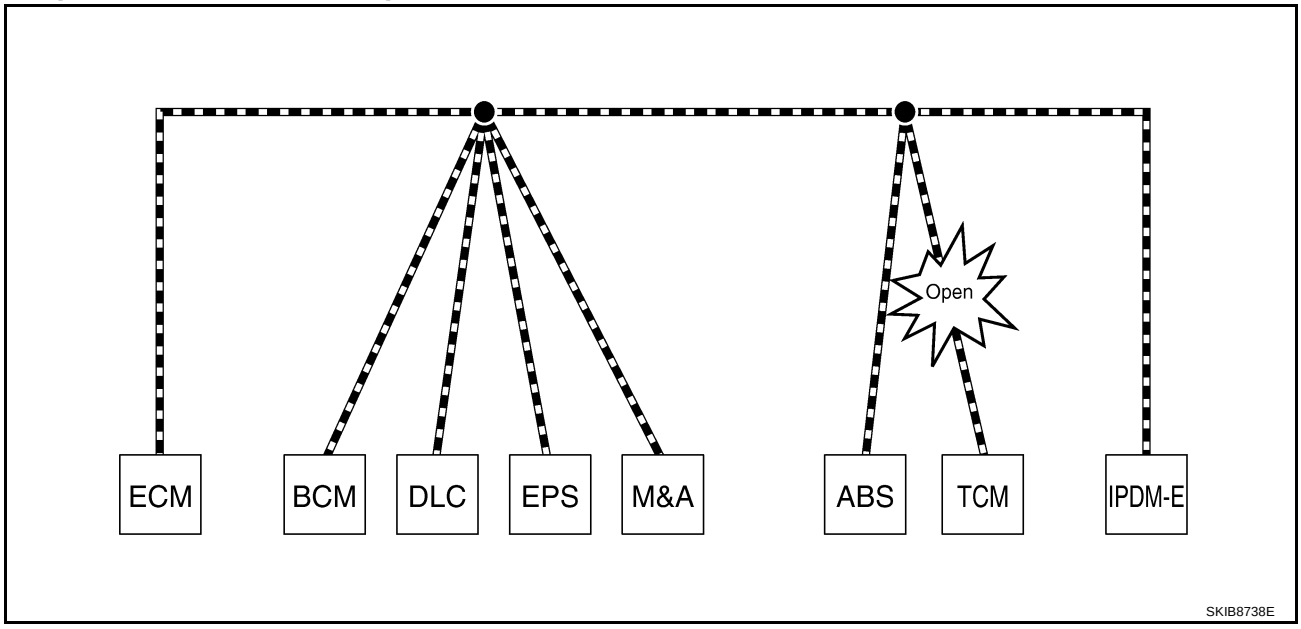
WHEN INDICATED "U1000" OR "U1001" IS INDICATED EVEN THOUGH CAN COMMUNICATION SYSTEM IS NORMAL

- Removal/installation of parts: Error may be detected when removing and installing CAN communication unit and related parts while turning the ignition switch ON. (A DTC except for CAN communication may be detected.)
- Fuse blown out (removed): CAN communication of the unit may cease.
- Voltage drop: Error may be detected if voltage drops due to discharged battery when turning the ignition switch ON (Depending on the control unit which carries out CAN communication).
- Error may be detected if the power supply circuit of the control unit, which carries out CAN communication, malfunctions (Depending on the control unit which carries out CAN communication).
- Error may be detected if reprogramming is not completed normally.

NOTE:
CAN communication system is normal if "U1000" or "U1001" is indicated on SELF-DIAG RESULTS of CONSULT-III under the above conditions. Erase the memory of the self-diagnosis of each unit.

Symptom When Error Occurs in CAN Communication System

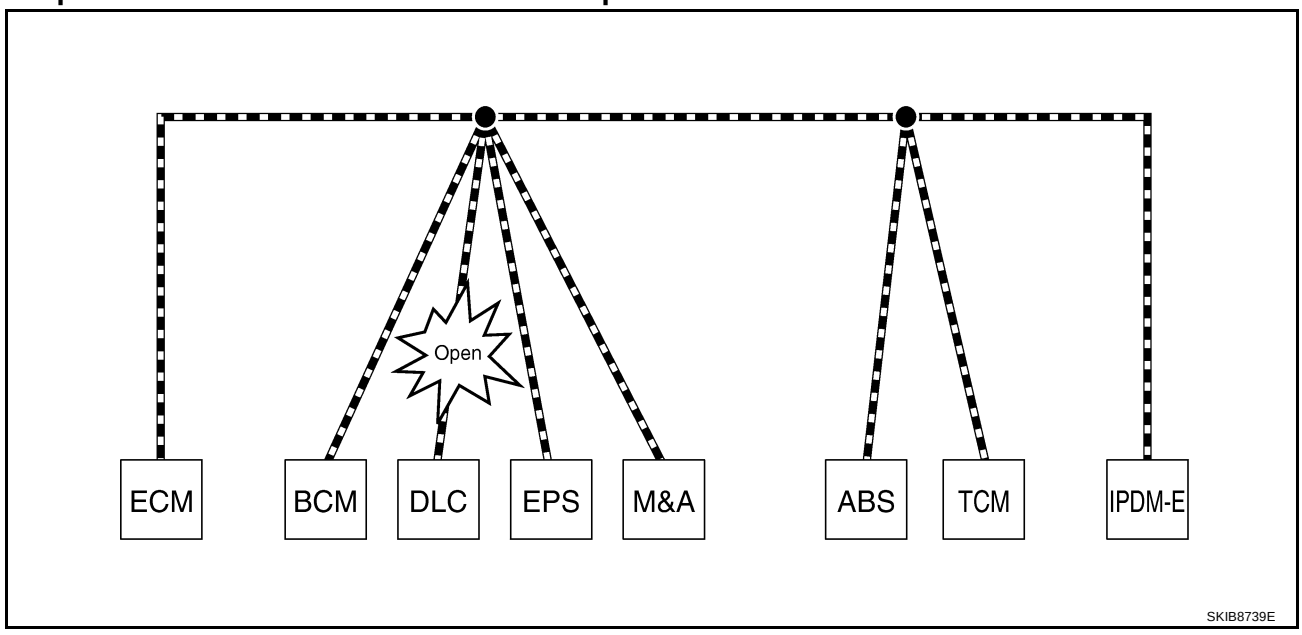
NKS004PF



In CAN communication system, multiple units mutually transmit and receive signals. Each unit cannot transmit and receive signals if any error occurs on CAN communication line. Under this condition, multiple control units related to the root cause malfunction or go into fail-safe mode.

ERROR EXAMPLE

NOTE:

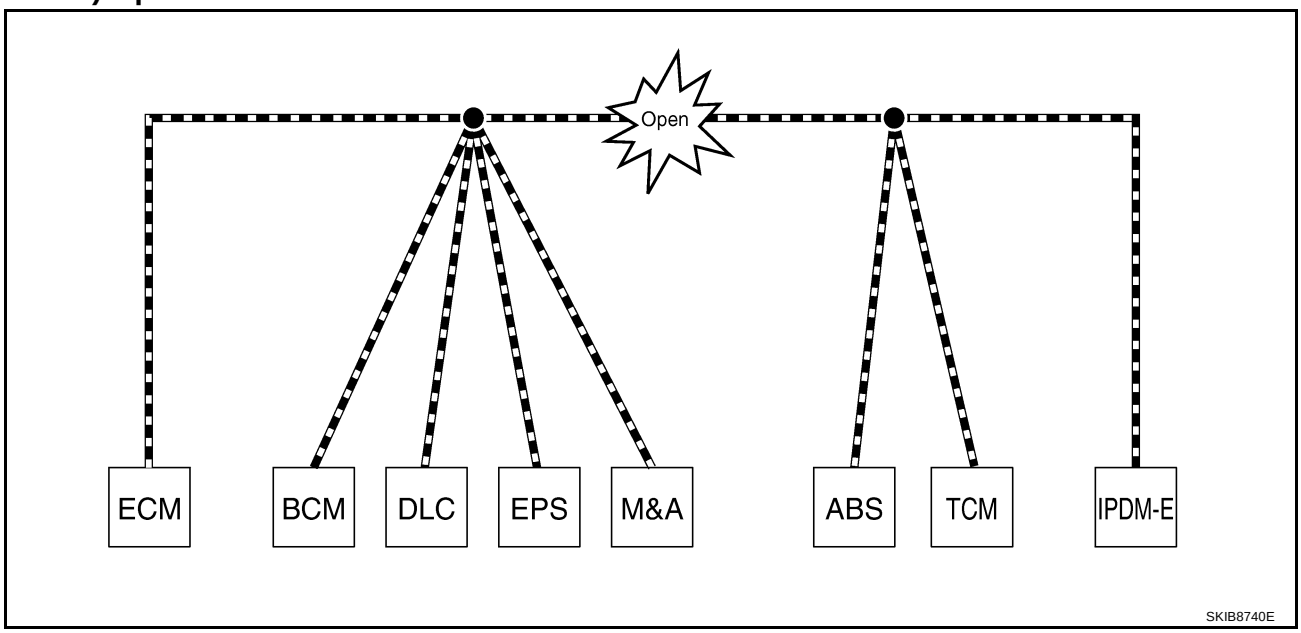


- Each vehicle differs in symptom of each unit under fail-safe mode and CAN communication line wiring.
- Refer to LAN-41, "Abbreviation List" for the unit abbreviation.

Example: TCM branch line open circuit

Unit name	Symptom
ECM	Engine torque limiting is affected, and shift harshness increases.
BCM	Reverse warning chime does not sound.
EPS control unit	Normal operation.
Combination meter	● Shift position indicator and OD OFF indicator turn OFF. ● Warning lamps turn ON.
ABS actuator and electric unit (control unit)	Normal operation.
TCM	No impact on operation.
IPDM E/R	Normal operation.

Example: Data link connector branch line open circuit



Unit name	Symptom
ECM	Normal operation.
BCM	
EPS control unit	
Combination meter	
ABS actuator and electric unit (control unit)	
TCM	
IPDM E/R	

NOTE:

- When data link connector branch line is open, transmission and reception of CAN communication signals is not affected. Therefore, no symptoms occur. However, be sure to repair malfunctioning circuit.
- When data link connector branch line is open, “ECU list” displayed on the CONSULT-III “CAN DIAG SUPPORT MNTR” may be the same as when the CAN communication line has short-circuit. However, symptoms differ depending on the case. See below chart for the differences.

	“ECU list” on the “CAN DIAG SUPPORT MNTR” (CONSULT-III)	Difference of symptom
Data link connector branch line open circuit	All Diag on CAN units are not indicated.	Normal operation.
CAN-H, CAN-L harness short-circuit		Most the units which are connected to the CAN communication system enter fail-safe mode or are deactivated.

Example: Main Line Between Data Link Connector and ABS Actuator and Electric Unit (Control Unit) Open Circuit

Unit name	Symptom
ECM	Engine torque limiting is affected, and shift harshness increases.
BCM	● Reverse warning chime does not sound. ● The front wiper moves under continuous operation mode even though the front wiper switch being in the intermittent position.
EPS control unit	The steering effort increases.
Combination meter	● The shift position indicator and OD OFF indicator turn OFF. ● The speedometer is inoperative. ● The odo/trip meter stops.
ABS actuator and electric unit (control unit)	Normal operation.
TCM	No impact on operation.
IPDM E/R	When the ignition switch is ON, ● The headlamps (Lo) turn ON. ● The cooling fan continues to rotate.

Example: CAN-H, CAN-L Harness Short Circuit

Unit name	Symptom
ECM	● Engine torque limiting is affected, and shift harshness increases. ● Engine speed drops.
BCM	● Reverse warning chime does not sound. ● The front wiper moves under continuous operation mode even though the front wiper switch being in the intermittent position. ● The room lamp does not turn ON. ● The engine does not start (if an error or malfunction occurs while turning the ignition switch is OFF.) ● The steering lock does not release (if an error or malfunction occurs while turning the ignition switch is OFF.)
EPS control unit	The steering effort increases.
Combination meter	● The tachometer and the speedometer do not move. ● Warning lamps turn ON. ● Indicator lamps do not turn ON.
ABS actuator and electric unit (control unit)	Normal operation.
TCM	No impact on operation.
IPDM E/R	When the ignition switch is ON, ● The headlamps (Lo) turn ON. ● The cooling fan continues to rotate.

Self-Diagnosis

NKS004PG

DTC	Self-diagnosis item (CONSULT-III indication)	DTC detection condition	Inspection/Action
U1000	CAN COMM CIRCUIT	When ECM is not transmitting or receiving CAN communication signal of OBD (emission-related diagnosis) for 2 seconds or more.	Refer to LAN-15, "TROUBLE DIAGNOSES WORK FLOW" .
		When a control unit (except for ECM) is not transmitting or receiving CAN communication signal for 2 seconds or more.	
U1001	CAN COMM CIRCUIT	When ECM is not transmitting or receiving CAN communication signal other than OBD (emission-related diagnosis) for 2 seconds or more.	
U1002	SYSTEM COMM	When a control unit is not transmitting or receiving CAN communication signal for 2 seconds or less.	Start the inspection. Refer to the applicable section of the indicated control unit.
U1010	CONTROL UNIT [CAN]	When an error is detected during the initial diagnosis for CAN controller of each control unit.	Replace the control unit indicating “U1010”.

CAN Diagnostic Support Monitor

NKS004PH

CONSULT-III and CAN diagnostic support monitor (on-board diagnosis function) are used for detecting root cause.

MONITOR ITEM (CONSULT-III)

Example: CAN DIAG SUPPORT MNTR indication

Without PAST

ECM		
	PRSNT	PAST
INITIAL DIAG	OK	
TRANSMIT DIAG	OK	
TCM	OK	
VDC/TCS/ABS	UNKWN	
METER/M&A	OK	
ICC	UNKWN	
BCM/SEC	OK	
IPDM E/R	OK	

With PAST

ECM		
	PRSNT	PAST
TRANSMIT DIAG	OK	OK
VDC/TCS/ABS	-	-
METER/M&A	OK	OK
BCM/SEC	OK	OK
ICC	-	-
HVAC	-	-
TCM	OK	OK
EPS	-	-
IPDM E/R	OK	OK
e4WD	-	-
AWD/4WD	OK	OK

PKID1075E

Without PAST

Item	PRSNT	Description
Initial diagnosis	OK	Normal at present
	NG	Control unit error (Except for some control units)
Transmission diagnosis	OK	Normal at present
	UNKWN	Unable to transmit signals for 2 seconds or more.
		Diagnosis not performed
Control unit name (Reception diagnosis)	OK	Normal at present
	UNKWN	Unable to receive signals for 2 seconds or more.
		Diagnosis not performed
		No control unit for receiving signals. (No applicable optional parts)

With PAST

Item	PRSNT	PAST	Description
Transmission diagnosis	OK	OK	Normal at present and in the past
		1 – 39	Normal at present, but unable to transmit signals for 2 seconds or more in the past. (The number indicates the number of ignition switch cycles from OFF to ON.)
	UNKWN	0	Unable to transmit signals for 2 seconds or more at present.
Control unit name (Reception diagnosis)	OK	OK	Normal at present and in the past
		1 – 39	Normal at present, but unable to receive signals for 2 seconds or more in the past. (The number indicates the number of ignition switch cycles from OFF to ON.)
	UNKWN	0	Unable to receive signals for 2 seconds or more at present
	–	–	Diagnosis not performed.
			No control unit for receiving signals. (No applicable optional parts)

MONITOR ITEM (ON-BOARD DIAGNOSIS)

NOTE:
For some models, CAN communication diagnosis result is received from the vehicle monitor. (CONSULT-III is not available.)

Example: Vehicle Display

Item	Result indicated	Error counter	Description
CAN_COMM (Initial diagnosis)	OK	0	Normal at present
	NG	1 – 50	Control unit error (The number indicates how many times diagnosis has been run.)
CAN_CIRC_1 (Transmission diagnosis)	OK	0	Normal at present
	UNKWN	1 – 50	Unable to transmit for 2 seconds or more at present. (The number indicates how many times diagnosis has been run.)
CAN_CIRC_2 – 9 (Reception diagnosis of each unit)	OK	0	Normal at present
	UNKWN	1 – 50	Unable to transmit for 2 seconds or more at present. (The number indicates how many times diagnosis has been run.)
			Diagnosis not performed.
			No control unit for receiving signals. (No applicable optional parts)

TROUBLE DIAGNOSES WORK FLOW

PFP:00004

Information Needed for Trouble Diagnosis

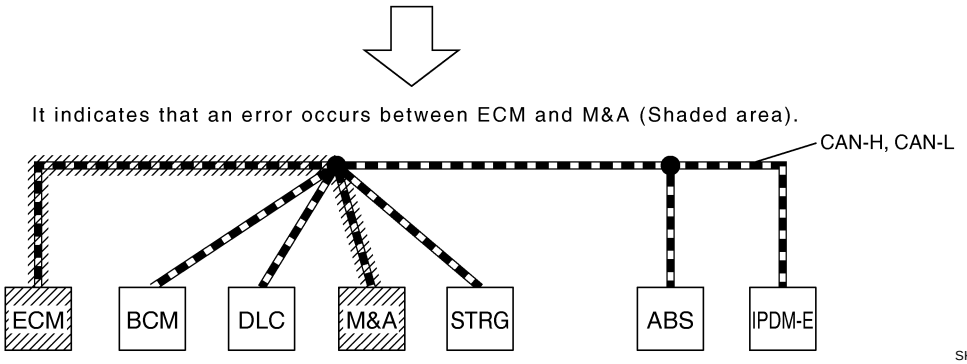
NKS004PI

CAN communication system performs trouble diagnosis with the following tools.

Tool	Usage
Interview sheet	For filling in vehicle information and interview with customer.
Data sheet	For copying on-board diagnosis data.
Diagnosis sheet	For detecting the root cause. (Diagnosis sheet includes system diagram for every CAN system type)
ECU list (On the “CAN DIAG SUPPORT MNTR”)	For checking the condition of control units and the status of CAN communication.
SELF-DIAG RESULTS (CONSULT-III)	
CAN DIAG SUPPORT MNTR (CONSULT-III)	
CAN communication signal chart	For converting information received from a customer into CAN communication signal transmission and reception. This information can be used to judge whether a circuit between control units is normal or abnormal.
Abbreviation list	For checking abbreviations in CAN communication signal chart and diagnosis sheet.

How to Use CAN Communication Signal Chart

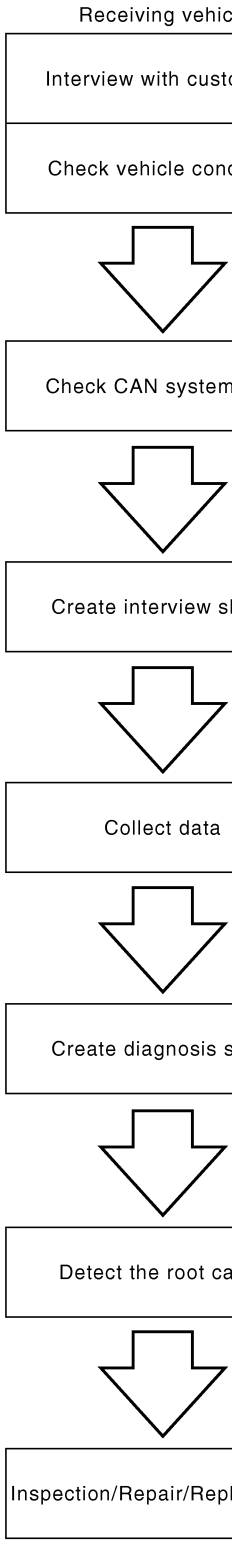
NKS004PJ



The CAN communication signal chart lists the signals needed for trouble diagnosis. It is useful for detecting the root cause by finding a signal related to the symptom, and by checking transmission and reception unit.

Example: Tachometer does not move even though the engine rotates.

T: Transmit R: Receive



Signal name/Connecting unit	ECM	BCM	M&A	STRG	ABS	IPDM-E
A/C compressor feedback signal	T		R			
A/C compressor request signal	T					R
Accelerator pedal position signal	T				R	
Cooling fan motor operation signal	T					R
Engine coolant temperature signal	T		R			
Engine speed signal	T		R		R	
Fuel consumption monitor signal	T		R			
Malfunction indicator lamp signal	T		R			
A/C switch signal	R	T				
Ignition switch signal		T				R
Sleep/wake up signal		T	R			R

No communication between ECM and M&A.

Trouble Diagnosis Flow Chart

NKS004PK

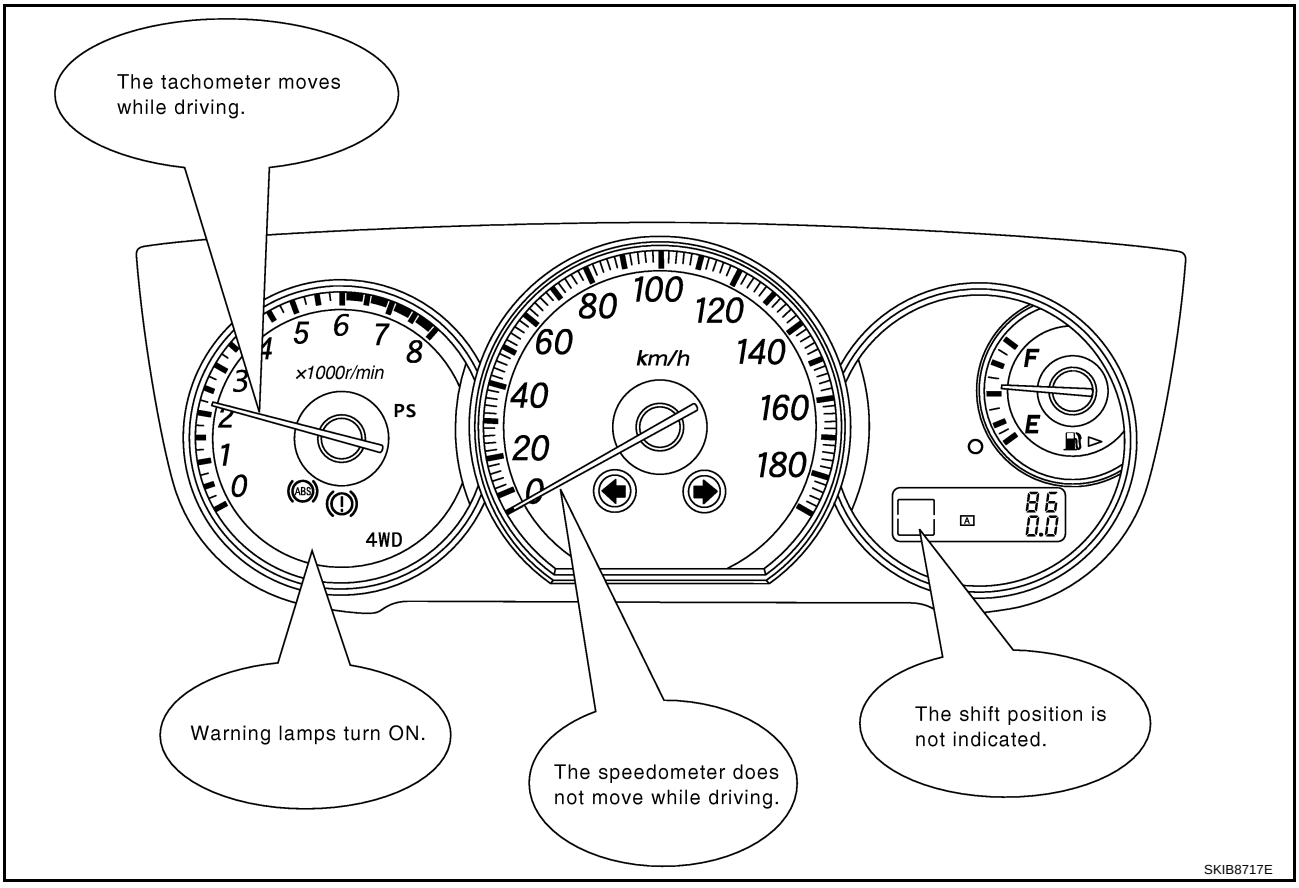
- Interview with customer. (Since when? In which condition? What symptoms? etc.)
- Check whether or not “U1000” or “U1001” is indicated on self-diagnosis results.
- Check whether or not it is reproduced error.
- Check CAN system type with CAN system type specification chart.
- Fill in interviewed items from customer on the interview sheet.
- Print out or save CONSULT-III data (SELF-DIAG RESULTS and CAN DIAG SUPPORT MNTR).
- Check the diagnosis result of CAN communication with on-board diagnosis function, and copy the item on on-board diagnosis copy sheet.
- Print out applicable CAN system type diagnosis sheet.
- Make sure that all ECUs are received, referring to “ECU list” on the CAN DIAG SUPPORT MNTR.
- Detect the root cause with diagnosis sheet.
- Inspect the root cause and repair or replace the applicable parts.

PKID1210E

Trouble Diagnosis Procedure

NKS004PL

INTERVIEW WITH CUSTOMER



Interview with the customer is important to detect the root cause of CAN communication system errors and to understand vehicle condition and symptoms for proper trouble diagnosis.

Points in interview

- What: Parts name, system name
- When: Date, Frequency
- Where: Road condition, Place
- In what condition: Driving condition/environment
- Result: Symptom

NOTE:

- Check normal units as well as error symptoms.
  - Example: Circuit between ECM and the combination meter is judged normal if the customer indicates tachometer functions normally.
- When a CAN communication system error is present, multiple control units may malfunction or go into fail-safe mode.
- Indication of the combination meter is important to detect the root cause because it is the most obvious from the customer, and it performs CAN communication with many units.

INSPECTION OF VEHICLE CONDITION

- Check whether or not “U1000” or “U1001” is indicated on “SELF-DIAG RESULTS” by CONSULT-III.

  NOTE:
  Root cause cannot be detected using the procedure in this section if “U1000” or “U1001” is not indicated.
- Check whether the symptom is reproduced or not.

  NOTE:
  - Never turn the ignition switch OFF or disconnect the battery cable while the reproducing the error. The error may temporarily correct itself, making it difficult to determine the root cause.
  - The procedures for present errors differ from the procedures for past errors. Refer to LAN-25, "DETECT THE ROOT CAUSE" .

CHECK OF CAN SYSTEM TYPE (HOW TO USE CAN SYSTEM TYPE SPECIFICATION CHART)

Determine CAN system type based on vehicle equipment. Then choose the correct diagnosis sheet.

NOTE:

There are two styles for CAN system type specification charts. Depending on the number of available system types, either style A or style B may be used.

CAN System Type Specification Chart (Style A)

NOTE:

CAN system type is easily checked with the vehicle equipment identification information shown in the chart.

Example:

Vehicle is equipped as follows: Wagon, AWD, VQ35DE, CVT, VDC, and Intelligent Key system. (oval shows an example of CAN system type.)

CAN System Specification Chart

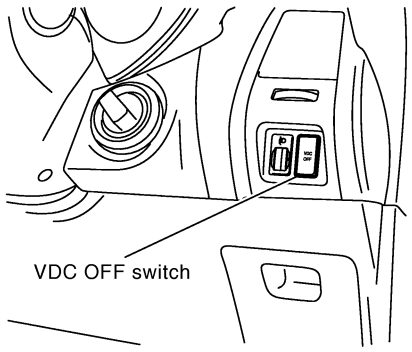
Determine CAN system type from the following specification chart. Then choose the correct diagnosis sheet.

Body type	Wagon					
Axle	2WD				AWD	
Engine	QR25DE		VQ35DE			
Transmission	A/T		CVT			
Brake control	ABS				VDC	
Intelligent Key system		×		×		×
CAN system type	1	2	3	4	5	6
Diagnosis sheet	(XX-XX)	(XX-XX)	(XX-XX)	(XX-XX)	(XX-XX)	(XX-XX)
CAN communication signal chart	XX-XX. "TYPE 1/TYPE 2"		XX-XX. "TYPE 3/TYPE 4"		XX-XX. "TYPE 5/TYPE 6"	

Check the vehicle equipment with the vehicle identification number plate.

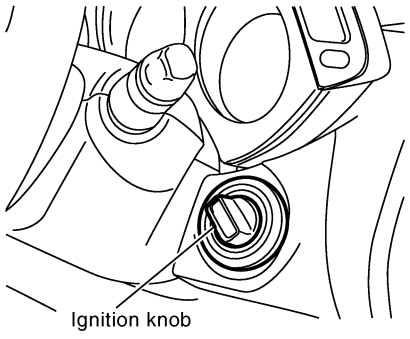
Check the vehicle equipment.

The number indicates the CAN system type of the vehicle.



×: Applicable

VEHICLE EQUIPMENT IDENTIFICATION INFORMATION



NOTE:

Check CAN system type from the vehicle shape and equipment.

With VDC

With Intelligent Key system

In the above example,

- Checking VDC OFF switch leads to judge whether or not VDC is equipped.
- Checking the ignition knob leads to judge whether or not Intelligent Key system is equipped.

For the above case, CAN system type is "6".

SKIB8888E

CAN System Type Specification Chart (Style B)

NOTE:
CAN system type is easily checked with the vehicle equipment identification information shown in the chart.

Example:
Vehicle is equipped as follows: Sedan, 2WD, MR20DE, CVT, ABS, Active AFS, Intelligent Key system, Navigation system and Automatic drive positioner. (⬭ shows an example of CAN system type.)

CAN System Specification Chart

Refer to the specification as shown in the chart.

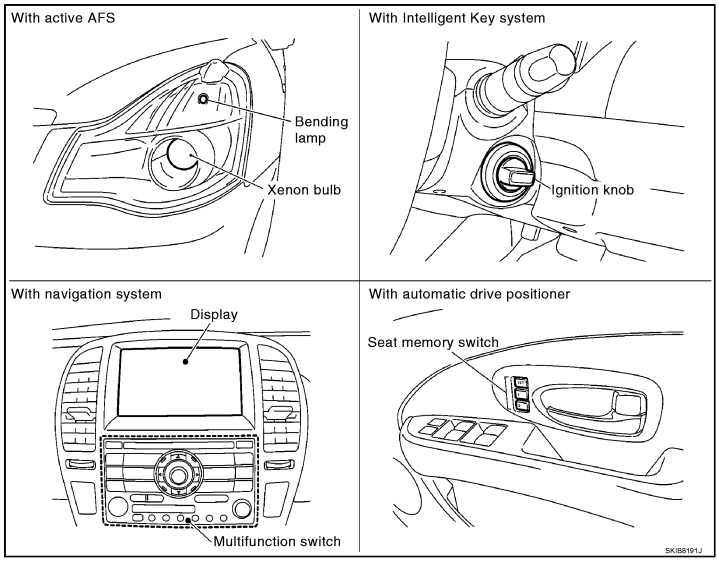
Body type	Sedan		
Axle	2WD		AWD
Engine	HR15DE	MR20DE	HR15DE
Transmission	A/T	CVT	A/T
Brake control	ABS		
Specification chart	XX.XX "SPECIFICATION CHART A"	YY.YY "SPECIFICATION CHART B"	XX.XX "SPECIFICATION CHART C"

Check the vehicle equipment with the vehicle identification number plate.
Check the vehicle equipment.
Select the applicable vehicle equipment. Refer to the specification chart.

×: Applicable

SPECIFICATION CHART B

Determine CAN system type from the following specification chart. Then choose the correct diagnosis sheet.



Body type	Sedan											
Axle	2WD											
Engine	MR20DE											
Transmission	CVT											
Brake control	ABS											
Active AFS		×			×	×			×	×		×
Intelligent Key system			×		×		×	×	×	×	×	×
Navigation system				×		×	×		×		×	×
Automatic drive positioner								×		×	×	×
CAN system type	9	10	11	12	13	14	15	16	17	18	19	20
Diagnosis sheet	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX	XX: XX
CAN communication signal chart	XX.XX "TYPE 9/TYPE 10/TYPE 11/TYPE 12/TYPE 13/TYPE 14/TYPE 15/TYPE 16/TYPE 17/TYPE 18/TYPE 19/TYPE 20"											

Check the vehicle equipment.
The number indicates the CAN system type of the vehicle.

×: Applicable

VEHICLE EQUIPMENT IDENTIFICATION INFORMATION

NOTE:
Check CAN system type from the vehicle shape and equipment.

In the above example,
- Checking Xenon bulb and bending lamp lead to judge whether or not Active AFS is equipped.
- Checking the ignition knob leads to judge whether or not Intelligent Key system is equipped.
- Checking display and multifunction switch lead to judge whether or not Navigation system is equipped.
- Checking seat memory switch leads to judge whether or not Automatic drive positioner is equipped.

For the above case, CAN system type is "20".

SKIB8889E

CREATE INTERVIEW SHEET

Fill out the symptom described by the customer, vehicle condition, and CAN system type on the interview sheet.

Interview Sheet (Example)

CAN Communication System Diagnosis Interview Sheet

Date received: 3, Feb. 2005

Type: DBA-KG11

VIN No.: KG11-005040

Model: BDRARGZ397EDA-E-J-

First registration: 10, Jan. 2005

Mileage: 621

CAN system type: Type 19

Symptom (Results from interview with customer)

- Headlamps suddenly turn ON while driving the vehicle.
- The engine does not restart after stopping the vehicle and turning the ignition switch OFF.
- The cooling fan continues rotating while turning the ignition switch ON.

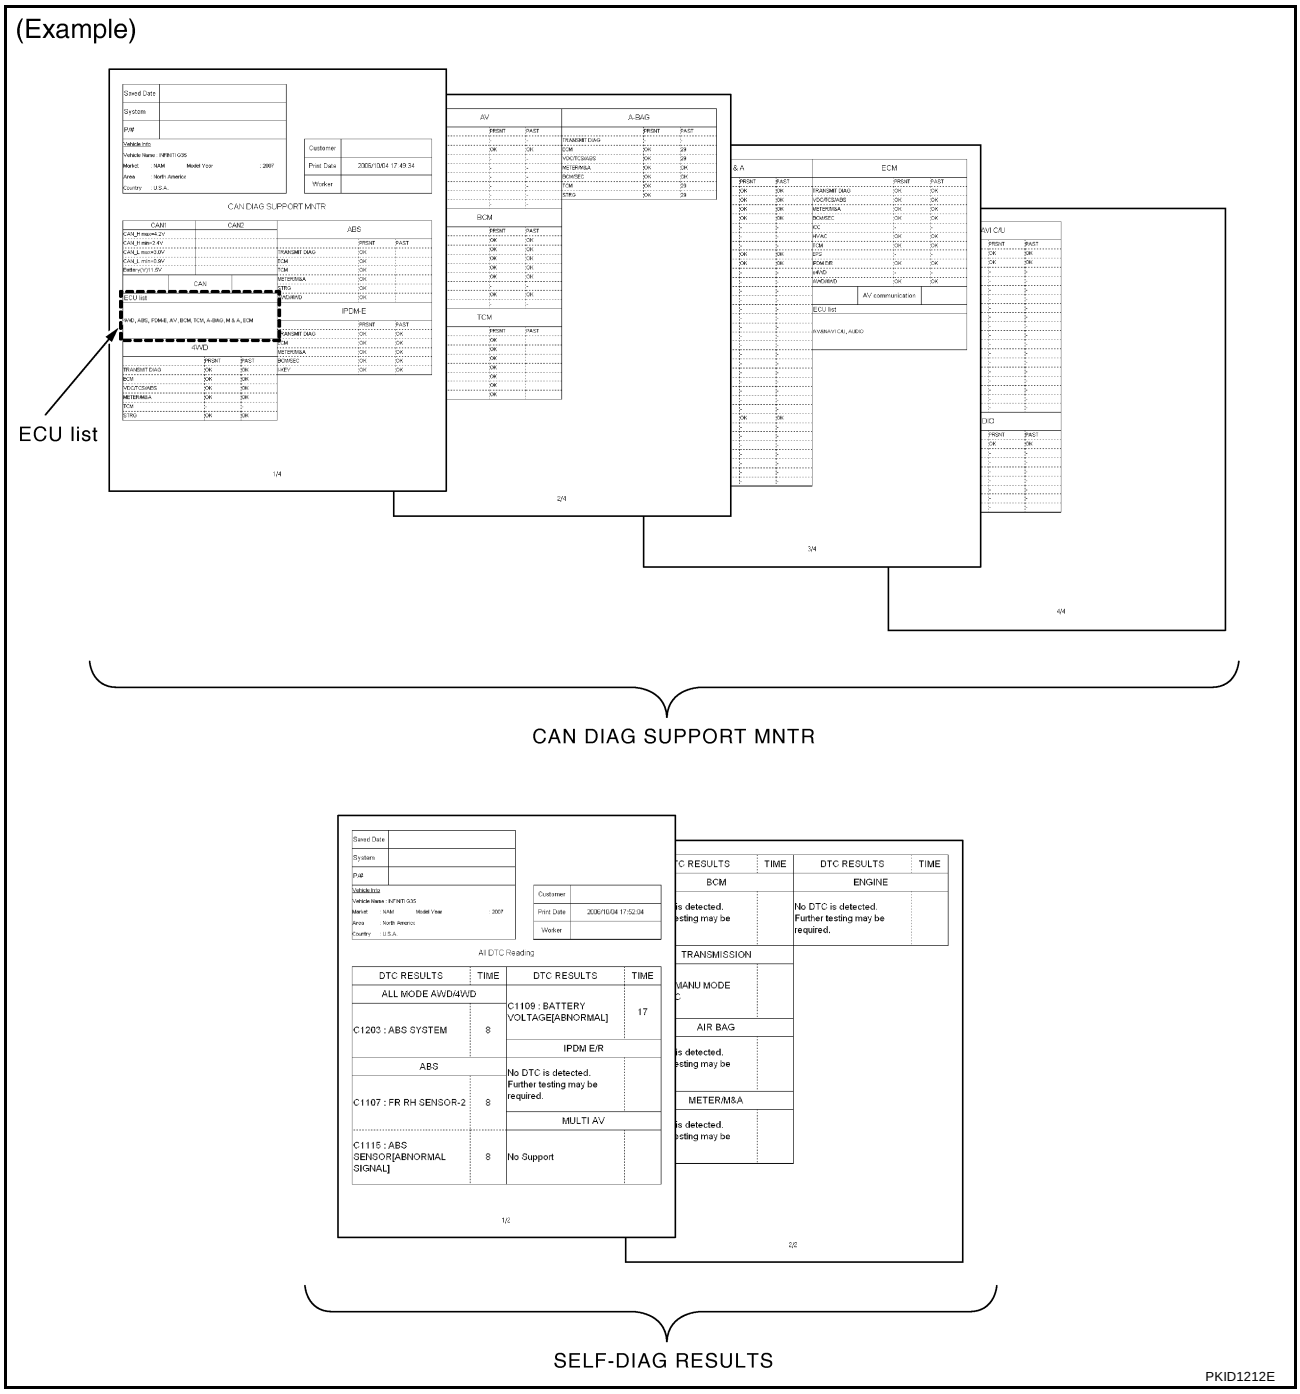
Condition at inspection

Error Symptom: (Present) / Past

The engine does not start.
While turning the ignition switch ON,
- The headlamps (Lo) turn ON, and the cooling fan continues rotating.
- The interior lamp does not turn ON.

On CONSULT-III screen,
- IPDM E/R is not indicated on SELECT SYSTEM.
- ENGINE: U1001
- BCM, ADAPTIVE LIGHT: U1000

PKID1211E



COLLECT DATA

Collect CONSULT-III Data

Print out or save the following CONSULT-III data.

- SELF-DIAG RESULTS
- CAN DIAG SUPPORT MNTR (“ECU list” included)

NOTE:
Some items may not be needed depending on CAN system type of vehicle.

Create On-board Diagnosis Copy Sheet

Display the trouble diagnosis result of CAN communication with the on-board diagnosis function on the vehicle monitor, etc. Copy them on the on-board diagnosis copy sheet.

NOTE:
For some models, CAN communication diagnosis result is received from the vehicle monitor. (CONSULT-III is not available.)

Example: Copy the diagnosis result of CAN communication from the vehicle monitor.

Vehicle monitor indication

CAN DIAG SUPPORT MONITOR

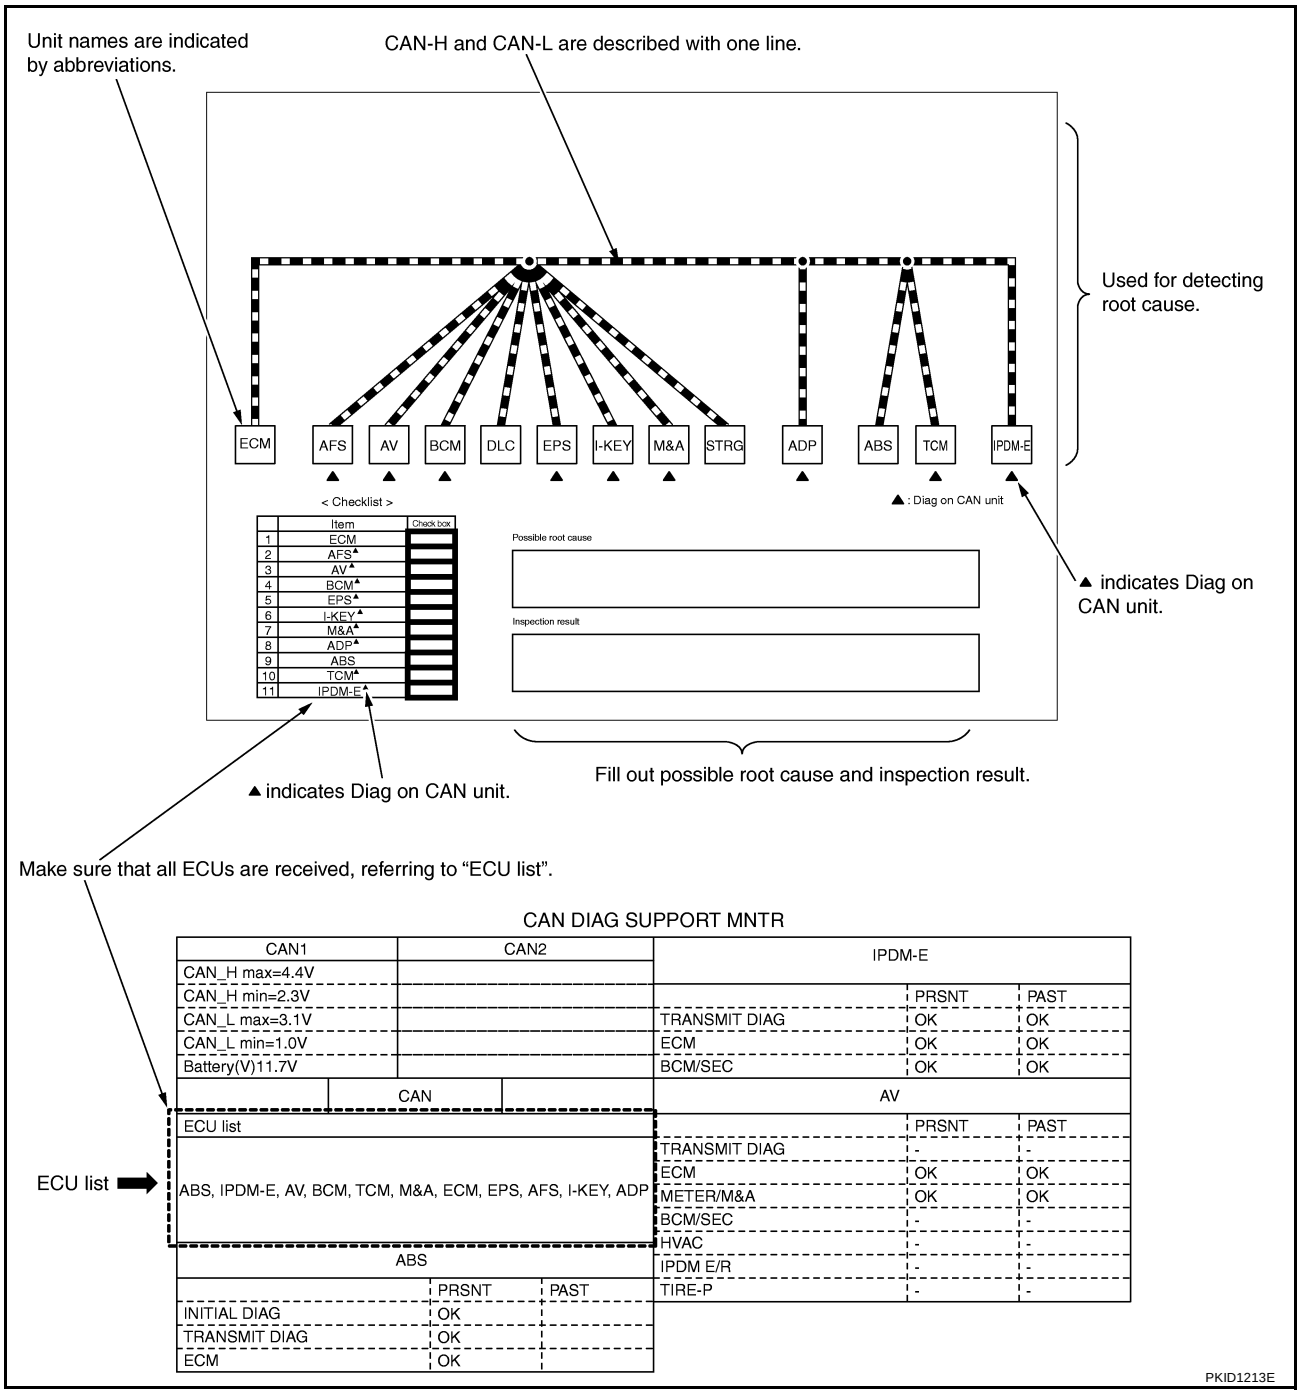
Result indicated: Fill in the indication (OK, NG or UNKWN).
Error counter: Fill in the indicated number.

SKIB8722E

CREATE DIAGNOSIS SHEET

NOTE:
Be sure to use the diagnosis sheet for the correct CAN system type.



Print Diagnosis Sheet

Print the diagnosis sheet for the applicable CAN system type.

Check Collected Data

Make sure that all ECUs are received, referring to “ECU list”.

- For abbreviations, refer to LAN-41, "Abbreviation List" .

DETECT THE ROOT CAUSE

Identify the root cause using the created diagnosis sheet.

Identifying the root cause

- Draw a line on the diagnosis sheet to indicate the possible cause. Narrow the search.

  NOTE:
  - Color-code when drawing lines.
  - Do not draw a line onto a existing line.
- Drawing a line is not necessary if the circuit is shorted. Refer to LAN-32, "Present Error — Short Circuit —" , LAN-39, "Past Error — Short Circuit —" .

Refer to the following for details of the trouble diagnosis procedure.

- LAN-26, "Present Error — Open Circuit —"
- LAN-32, "Present Error — Short Circuit —"
- LAN-33, "Past Error — Open Circuit —"
- LAN-39, "Past Error — Short Circuit —"

NOTE:
When the root cause appears to be a branch line or short circuit, be sure to check the control unit as well as the communication line.

Present Error — Open Circuit —

Identify the error circuit using information from the “CAN DIAG SUPPORT MNTR” (“ECU list” included).

1. ECU list: Check the items indicated in “ECU list”. Draw a line on the diagnosis sheet to indicate the error circuit.

   NOTE:
   CAN communication line has no error if units other than Diag on CAN units are indicated. An error may be on the power supply of the control unit, DDL1 line or DDL2 line.

a. “TCM” which is Diag on CAN unit, is not indicated on “ECU list”. This indicates that DLC is not receiving a signal from TCM. Draw a line to indicate an error between DLC and TCM (line 1-a in the figure).

   NOTE:
   - Diag on CAN units are not indicated on the “ECU list” when the CAN line between Diag on CAN unit and the data link connector is open.
   - For a description of Diag on CAN, refer to LAN-6, "Diag on CAN" .

(Example)

CAN DIAG SUPPORT MNTR

CAN1	CAN2	IPDM-E		
CAN_H max=4.3V				
CAN_H min=1.0V			PRSNT	PAST
CAN_L max=3.1V		TRANSMIT DIAG	OK	OK
CAN_L min=0.6V		ECM	OK	OK

	METER/M&A	OK	OK
	BCM/SEC	-	-
	HVAC	-	-
	[illegible]	-	

2. CAN DIAG SUPPORT MNTR: Check each item on “CAN DIAG SUPPORT MNTR”. Draw a line on the diagnosis sheet to indicate the error circuit.

a. Reception item of “ECM”: On “TCM”, “UNKWN” is indicated. This means ECM cannot receive the signal from TCM. Draw a line to indicate an error between ECM and TCM (line 2-a in the figure).

NOTE:
If “UNKWN” is indicated on “TRANSMIT DIAG”, then the control unit cannot transmit CAN communication signal to each unit. Draw a line between the control unit and the splice.

b. Reception item of “AFS”: On “TCM”, “UNKWN” is indicated. This means AFS cannot receive the signal from TCM. Draw a line to indicate an error between AFS and TCM (line 2-b in the figure).

c. Reception item of “AV”: “UNKWN” is not indicated. This indicates normal communication between AV and its receiving units. Do not draw any line.

(Example)

d. Reception item of “BCM”: On “TCM”, “UNKWN” is indicated. This means BCM cannot receive the signal from TCM. Draw a line to indicate an error between BCM and TCM (line 2-d in the figure).

e. Reception item of “EPS” and “I-KEY”: “UNKWN” is not indicated. This indicates normal communication between EPS and I-KEY and their receiving units. Do not draw any line.

NOTE:
On CAN DIAG SUPPORT MNTR (without PAST), “UNKWN” is indicated even though the item is not used in the trouble diagnosis. For the details of each item on CAN diagnostic support monitor, refer to LAN-44, "CAN Diagnostic Support Monitor" .

(Example)

BCM

	PRSNT	PAST
TRANSMIT DIAG	OK	OK

BCM/SEC	OK	OK
TCM	UNKWN	0

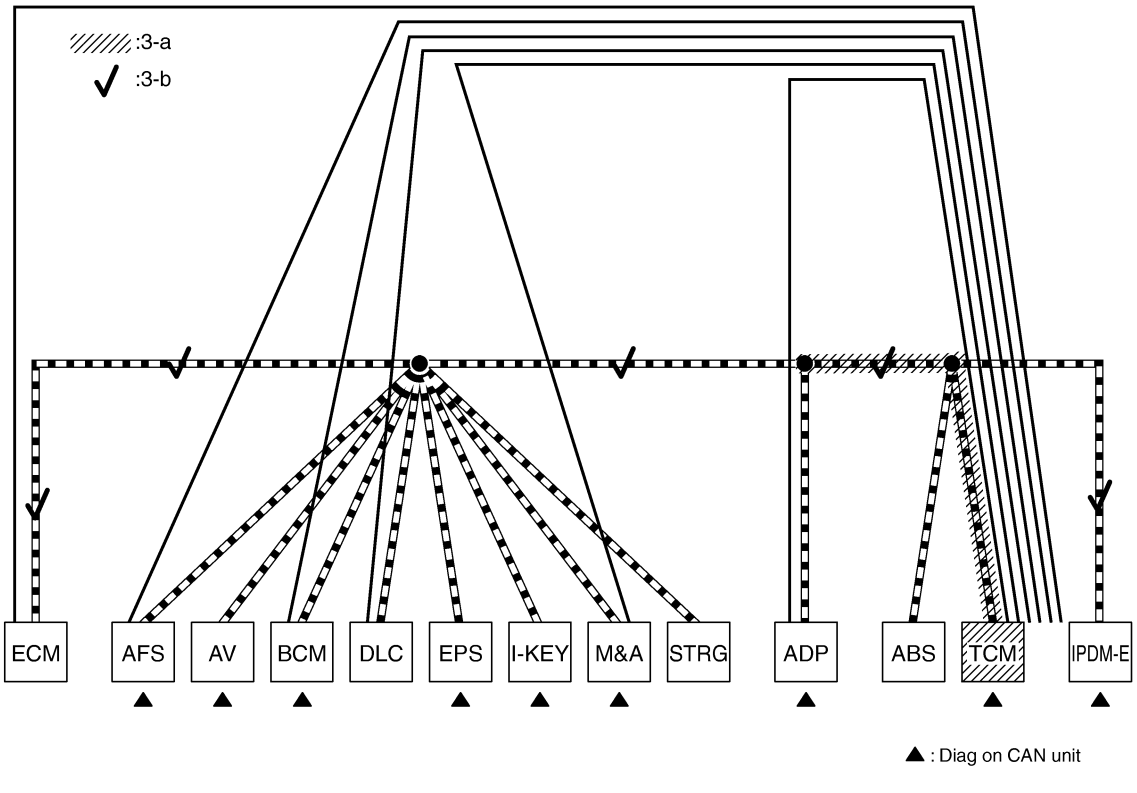
ABS

	PRSNT	PAST
INITIAL DIAG	OK	
TRANSMIT DIAG	OK	
ECM	OK	

i. Reception item of “IPDM-E”: “UNKWN” is not indicated. This indicates normal communication between IPDM-E and its receiving units. Do not draw any line.

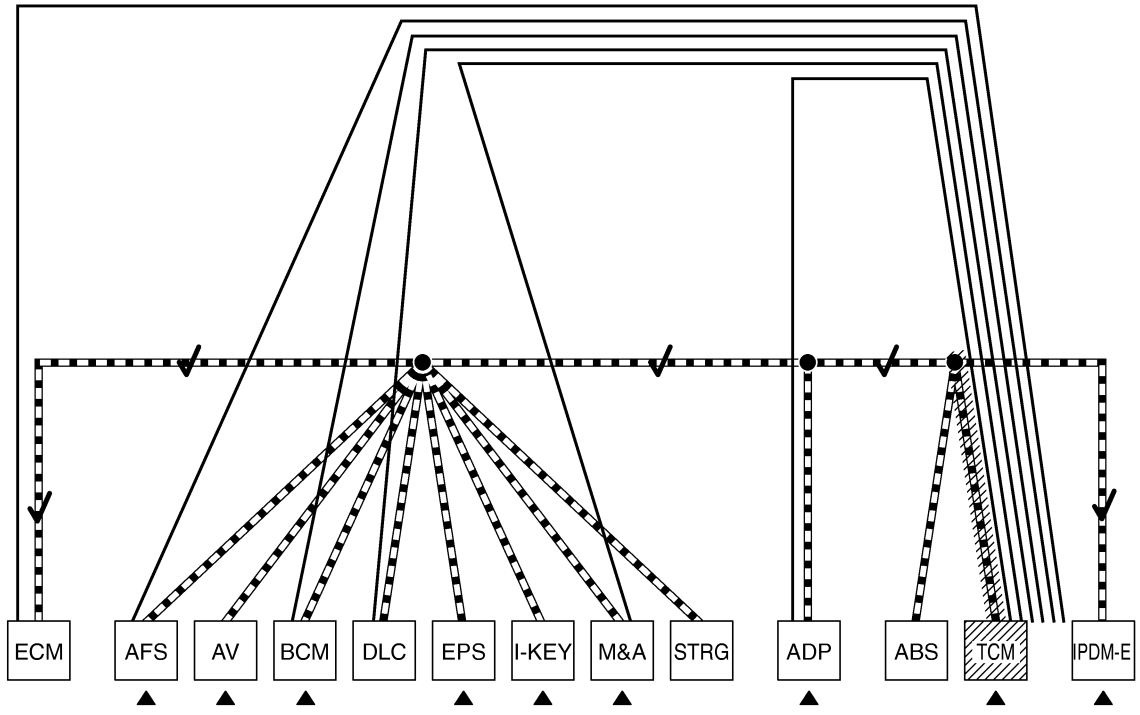
3. Based on information received from “CAN DIAG SUPPORT MNTR”, place a check mark on the known good CAN communication line between ECM and IPDM-E.



a. Through the previous procedure, the circuit between ADP splice and TCM has the most amount of lines (shade 3-a in the figure).

b. Place a check mark on the known good lines to establish the error circuit.
Reception item of “IPDM-E”: On “ECM”, “OK” is indicated. IPDM-E communicates normally with ECM. Put a check mark on the normal circuit between ECM and IPDM-E (check mark 3-b in the figure).

(Example)



IPDM-E

	PRSNT	PAST
TRANSMIT DIAG	OK	OK
ECM	OK	OK
BCM/SEC	OK	OK

4. Through the above procedure, the error is detected in the TCM branch line (shaded in the figure).
   NOTE:
   For abbreviations, refer to LAN-41, "Abbreviation List" .
5. Perform the inspection for the detected error circuit. For the inspection procedure, refer to LAN-65, "Malfunction Area Chart" .

(Example)

< Checklist >

	Item	Check box
1	ECM	✓
2	AFS▲	✓
3	AV▲	✓
4	BCM▲	✓
5	EPS▲	✓
6	I-KEY▲	✓
7	M&A▲	✓
8	ADP▲	✓
9	ABS	✓
10	TCM▲	N-IDC
11	IPDM-E▲	✓

Possible root cause

· Error between TCM and splice.
· Error in TCM.

Inspection result

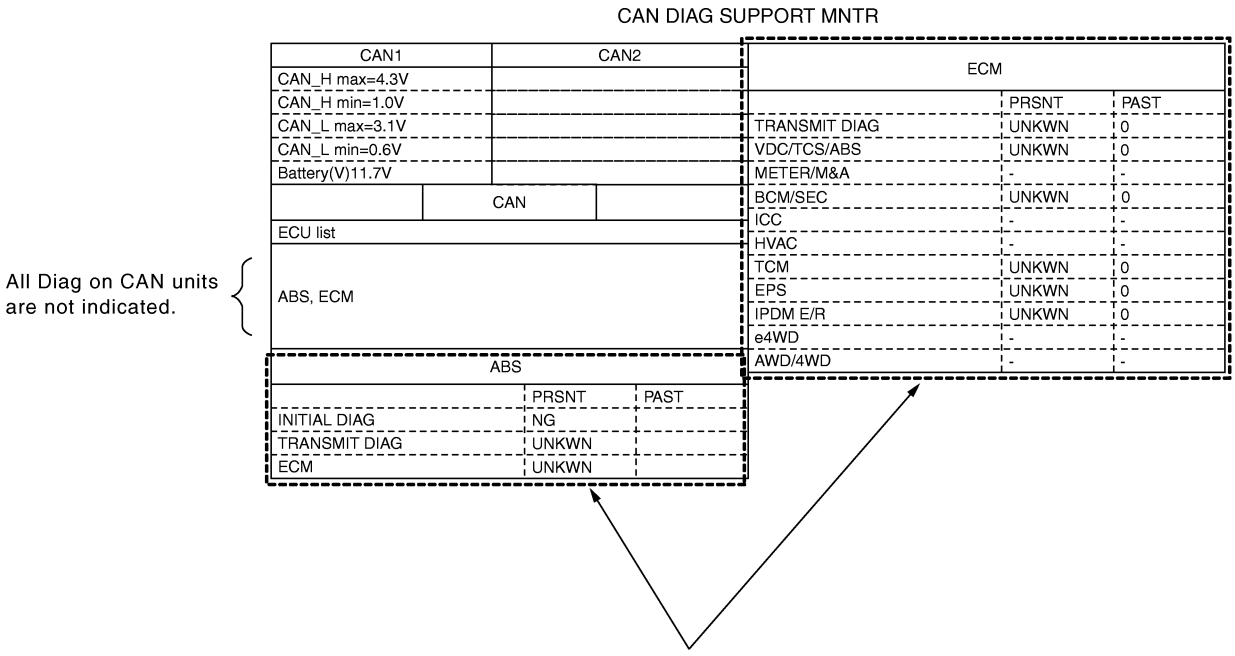
PKID1219E

Present Error — Short Circuit —

When the symptoms listed below exist, a short circuit of the CAN communication line is a possible cause.

Received data

Item (CONSULT-III)	Indication
ECU list (on the CAN DIAG SUPPORT MNTR)	All Diag on CAN units are not indicated.
CAN DIAG SUPPORT MNTR	“UNKWN” is indicated under “TRANSMIT DIAG” and most reception items.



Error symptom

- Most the units connected to the CAN communication system go into fail-safe mode or are deactivated.

Inspection procedure

- Refer to LAN-65, "Malfunction Area Chart" .

(Example)

Past Error — Open Circuit —

Review CAN communication signal chart based on information received from the interview with the customer and on past error information from SELF-DIAG RESULTS and CAN DIAG SUPPORT MNTR.

1. SELF-DIAG RESULTS: Inspect the control units indicating “U1000” or “U1001” on SELF-DIAG RESULTS.

ALL DTC READING

DTC RESULTS	TIME	DTC RESULTS	TIME
ABS		BCM	
U1000 : CAN COMM CIRCUIT	3	No DTC is detected. Further testing may be required.	
IPDM E/R		TRANSMISSION	
No DTC is detected. Further testing may be required.		U1000 : CAN COMM CIRCUIT	3
MULTI AV		METER	
No DTC is detected. Further testing may be required.		U1000 : CAN COMM CIRCUIT	3

DTC RESULTS	TIME	DTC RESULTS	TIME
EPS		AUTO DRIVE POS.	
U1000 : CAN COMM CIRCUIT	PAST	No DTC is detected. Further testing may be required.	
ENGINE			
U1001 : CAN COMM CIRCUIT	1t		
ADAPTIVE LIGHT			
No DTC is detected. Further testing may be required.			
INTELLIGENT KEY			
No DTC is detected. Further testing may be required.			

PKID1221E

2. CAN DIAG SUPPORT MNTR (with PAST): Check the CAN DIAG SUPPORT MNTR (with PAST) of units indicating “U1000” or “U1001” on SELF-DIAG RESULTS. Draw a line on the diagnosis sheet to indicate the possible error circuit.

NOTE:
For the details of each indication on CAN DIAG SUPPORT MNTR, refer to LAN-44, "CAN Diagnostic Support Monitor" .

a. Reception item of “ECM”: “VDC/TCS/ABS”, “3” is indicated in the “PAST”. This means ECM could not receive the signal from ABS in the past. Draw a line between ECM and ABS (line 2-a in the figure).

b. Reception item of “M&A”: “VDC/TCS/ABS”, “3” is indicated in the “PAST”. This means M&A could not receive the signal from ABS in the past. Draw a line between M&A and ABS (line 2-b in the figure).

c. Reception item of “TCM”: “VDC/TCS/ABS”, “3” is indicated in the “PAST”. This means TCM could not receive the signal from ABS in the past. Draw a line between TCM and ABS (line 2-c in the figure).

(Example)

ECM

	PRSNT	PAST
TRANSMIT DIAG	OK	OK
VDC/TCS/ABS	OK	3
METER/M&A	-	-

ECM	OK	OK
VDC/TCS/ABS	OK	3
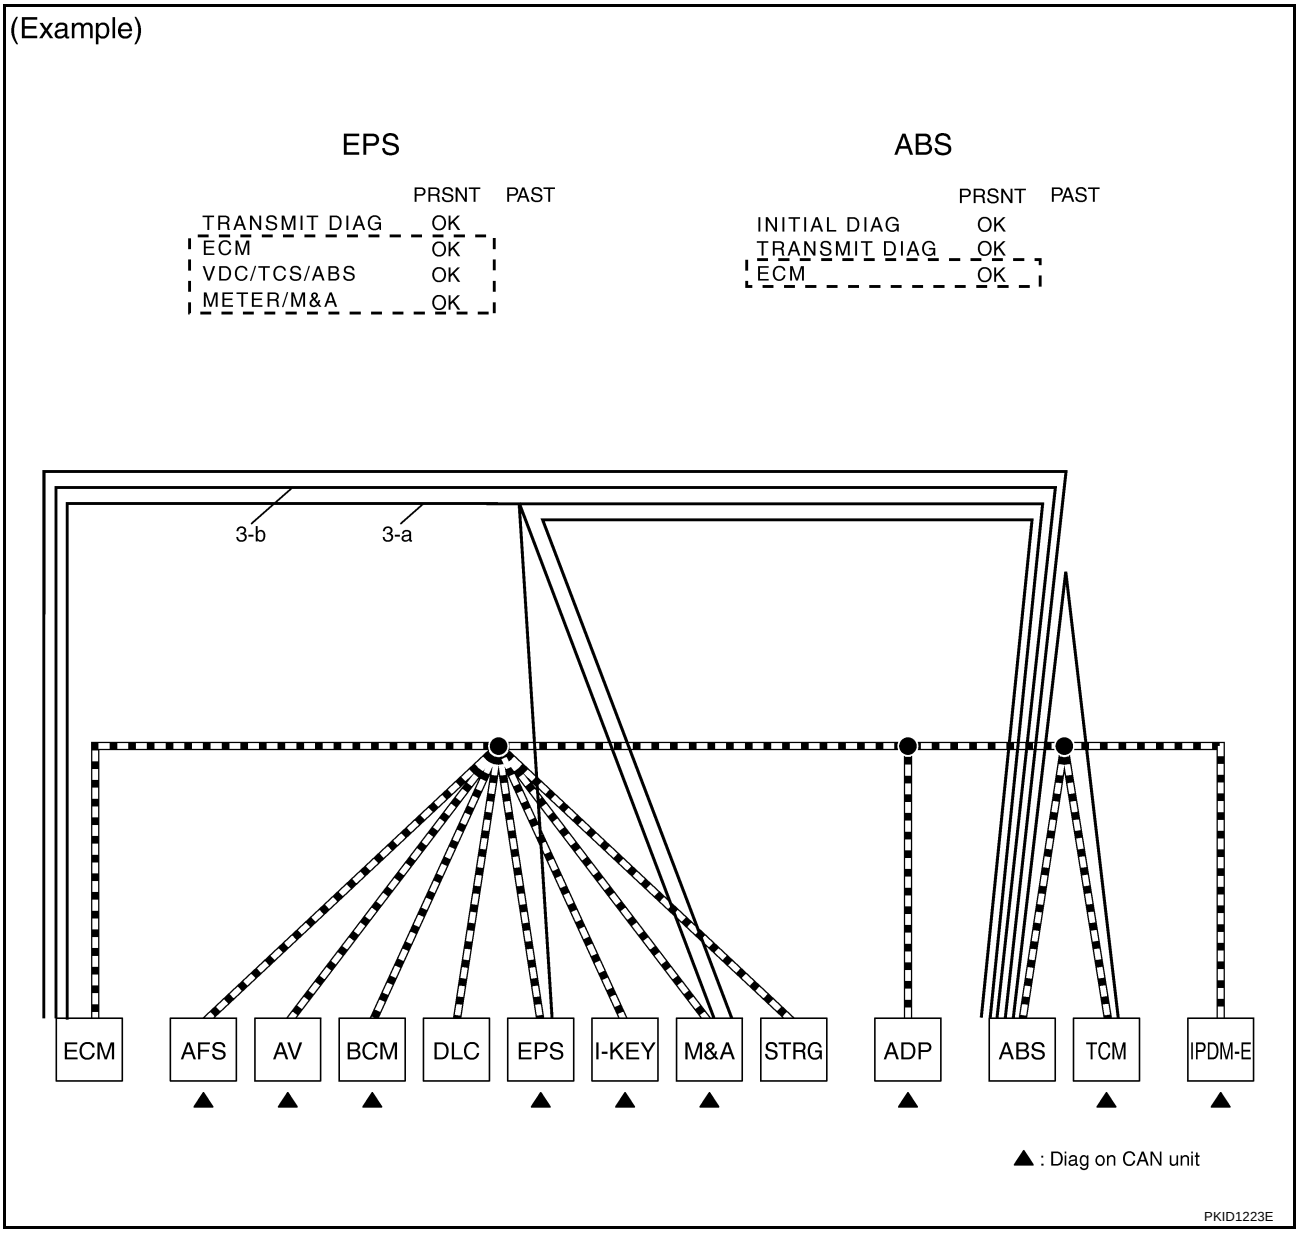
METER/M&A	OK	OK
BCM/SEC	OK	OK
ICC	-	-
e4WD	-	-
AWD/4WD	-	-

3. CAN DIAG SUPPORT MNTR (without PAST): Check the CAN DIAG SUPPORT MNTR (without PAST) of units indicating “U1000” or “U1001” on SELF-DIAG RESULTS. Draw a line on the diagnosis sheet to indicate the possible error circuit.



NOTE:

- While an error occurred in the past according to SELF-DIAG RESULTS, it is unclear which signal is not received. Assume that errors were detected from all reception items.
- Draw a single line among the unit and all reception items. (Work flow differs from CAN DIAG SUPPORT MNTR (with PAST).)

a. Reception item of “EPS”: Assume that the unit could not receive the signals from ECM, ABS, and M&A. Draw a line among EPS, ECM, ABS, and M&A (line 3-a in the figure).

b. Reception item of “ABS”: Assume that the unit could not receive the signal from ECM. Draw a line between ABS and ECM (line 3-b in the figure).

(Example)

4. Search for the possible cause using CAN communication signal chart using information from the interview with the customer.

NOTE:
For the details of CAN communication signal, refer to LAN-49, "CAN Communication Signal Chart" .

a. ABS warning lamp turned ON and speedometer did not move: This means that “ABS warning lamp signal” and “Vehicle speed signal” could not communicate between M&A and ABS (4-a in the figure).

b. The tachometer moved normally: This means that “Engine speed signal” could communicate normally between ECM and M&A (4-b in the figure).

(Example)

First registration: 28, Jan. 2005

CAN system type: Type 20

Symptom (Results from interview with customer)

While driving,
- ABS warning lamp turned ON.
- Speedometer did not move.
- Tachometer moved normally.

CAN Communication Signal Chart

T: Transmit R: Receive

Signal name/Connecting unit	ECM	AFS*1	AV*2	BCM	EPS	I-KEY*3	M&A	STRG*1	ADP*4	ABS	TCM	IPDM-E
A/C compressor request signal	T											R
Accelerator pedal position signal	T										R	
Closed throttle position signal	T										R

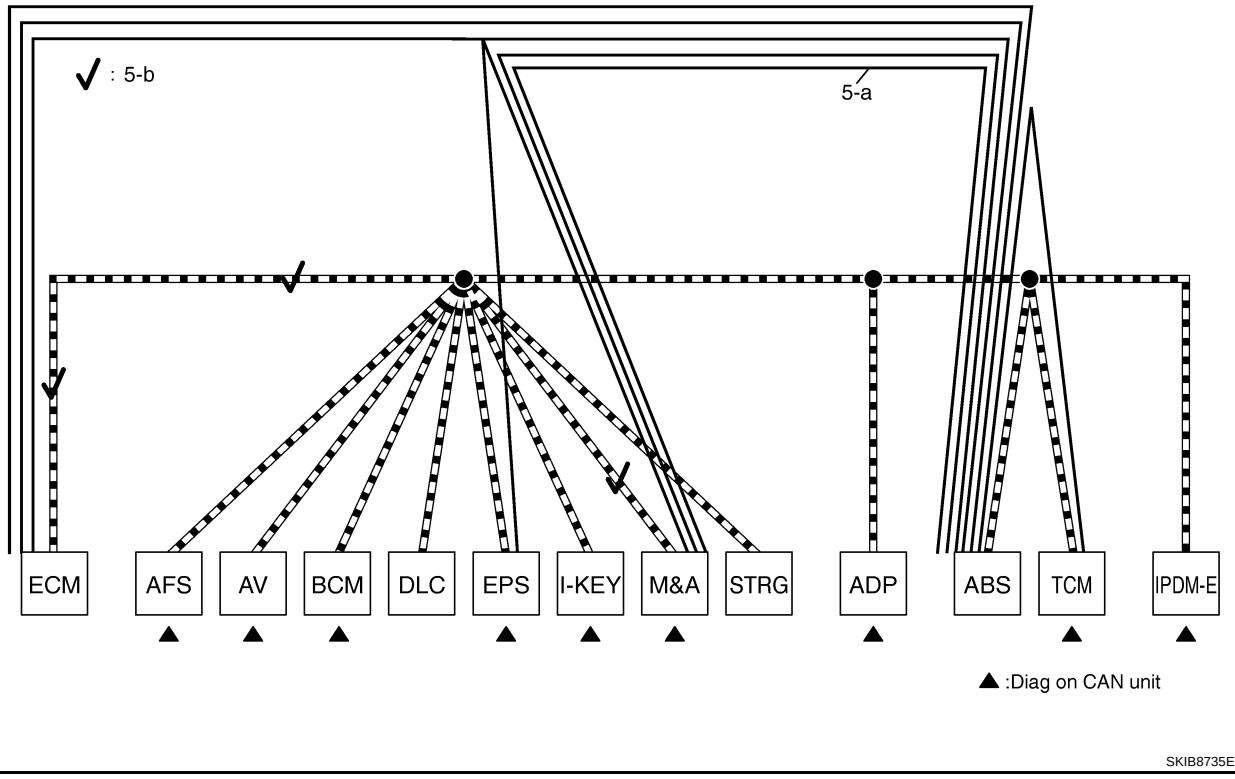
Vehicle speed signal	R				R		R			T	R	
		R		R	R	R	T		R			
Input shaft revolution signal	R										T	
Output shaft revolution signal	R										T	
Shift position indicator signal	R	R	R	R*5			R		R*6		T	
Second position indicator signal							R				T	
Front wiper stop position signal				R								T
High beam status signal	R	R										T
Low beam status signal	R	R										T



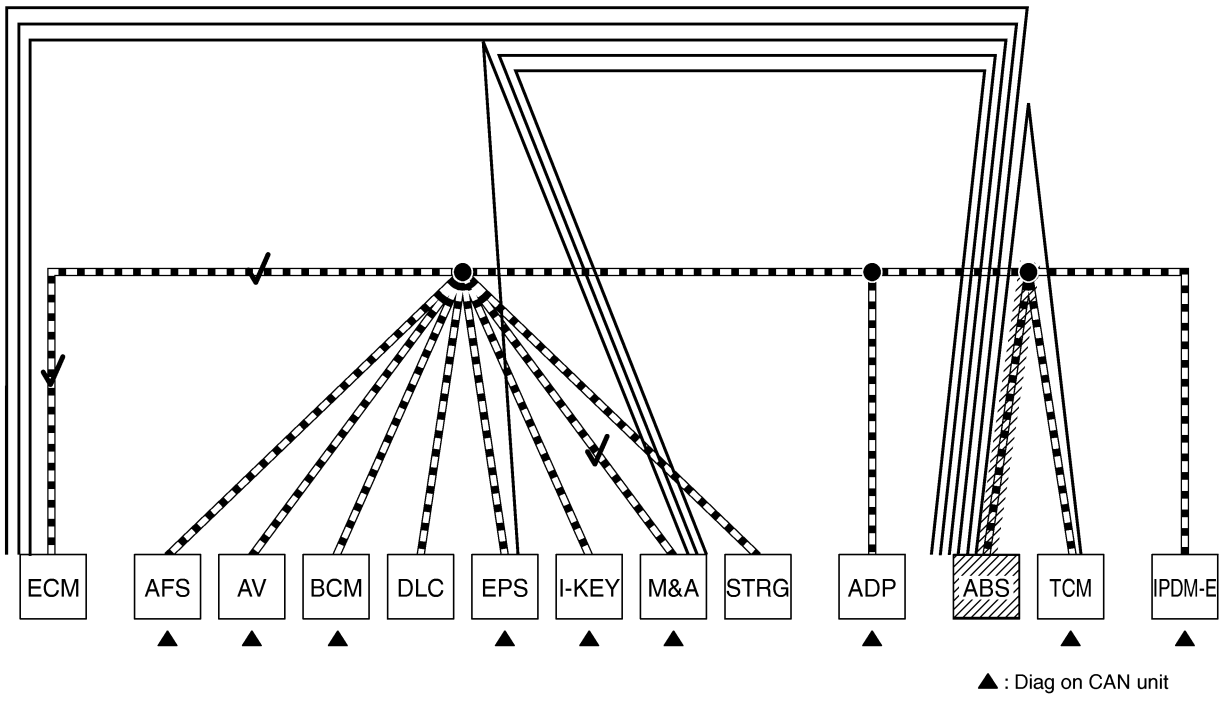
SKIB8895E

5. Fill out the diagnosis sheet based on information from step 4.

a. The ABS warning lamp turned ON and speedometer did not move: Assume that a possible cause is no communication between M&A and ABS. Draw a line between M&A and ABS. (Line 5-a in the figure).

b. The tachometer moved normally: Put check marks between ECM and M&A. The circuit between ECM and M&A is functioning properly (check marks 5-b in the figure).

(Example)



6. The circuit which has the most amount of lines are the possible cause. Error is detected from ABS actuator and electric unit (control unit) branch line (shaded in the figure).

   NOTE:
   For abbreviations, refer to LAN-41, "Abbreviation List" .

7. Perform the inspection procedure for the possible cause. Refer to LAN-65, "Malfunction Area Chart" .

(Example)

< Checklist >

	Item	Check box
1	ECM	✓
2	AFS▲	✓
3	AV▲	✓
4	BCM▲	✓
5	EPS▲	✓
6	I-KEY▲	✓
7	M&A▲	✓
8	ADP▲	✓
9	ABS	✓
10	TCM▲	✓
11	IPDM-E▲	✓

Possible root cause

- Error between ABS actuator and electric unit (control unit) and splice.
- Error in ABS actuator and electric unit (control unit).

Inspection result

PKID1224E

Past Error — Short Circuit —

When the symptoms listed below exist, a short circuit of the CAN communication line is a possible cause.

Item (CONSULT-III)	Indication	Inspection procedure
SELF-DIAG RESULTS	“U1000” and “U1001” is indicated in the past for most units.	Refer to LAN-65, "Malfunction Area Chart" .
CAN DIAG SUPPORT MNTR	Only on CAN DIAG SUPPORT MNTR (with PAST), “1 - 39” is indicated on “PAST” of “TRANSMIT DIAG” and the reception item.

INDEX FOR DTC

PFP:00004

DTC No. Index

NKS004PM

DTC	Self-diagnosis item (CONSULT-III indication)	DTC detection condition	Inspection
U1000	CAN COMM CIRCUIT	When ECM is not transmitting or receiving CAN communication signal of OBD (emission-related diagnosis) for 2 seconds or more.	Refer to LAN-41, "HOW TO USE THIS SECTION" .
		When a control unit (except for ECM) is not transmitting or receiving CAN communication signal for 2 seconds or more.	
U1001	CAN COMM CIRCUIT	When ECM is not transmitting or receiving CAN communication signal other than OBD (emission-related diagnosis) for 2 seconds or more.	
U1002	SYSTEM COMM	When a control unit is not transmitting or receiving CAN communication signal for 2 seconds or less.	Start the inspection. Refer to the applicable section of the indicated control unit.
U1010	CONTROL UNIT [CAN]	When an error is detected during the initial diagnosis for CAN controller of each control unit.	Replace the control unit indicating “U1010”.

HOW TO USE THIS SECTION

PFP:00008

Caution

NKS004PN

- This section describes information peculiar to a vehicle, sheets for trouble diagnosis, and inspection procedures.
- For trouble diagnosis procedure, refer to LAN-17, "Trouble Diagnosis Procedure" .

Abbreviation List

NKS004PO

Abbreviations in CAN communication signal chart, and the diagnosis sheet are as per the following list.

Abbreviation	Unit name	SELECT SYSTEM (CONSULT-III)	CAN DIAG SUPPORT MNTR (CONSULT-III)
A-BAG	Air bag diagnosis sensor unit	AIR BAG	—
ABS	ABS actuator and electric unit (control unit)	ABS	VDC/TCS/ABS
	VDC/TCS/ABS control unit		
BCM	BCM	BCM	BCM/SEC
DLC	Data link connector	—	—
ECM	ECM	ENGINE	ECM
IPDM-E	IPDM E/R	IPDM E/R	IPDM E/R
M&A	Unified meter and A/C amp.	METER/M&A	METER/M&A
STRG	Steering angle sensor	—	STRG
TCM	TCM	A/T	TCM

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS004PP

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

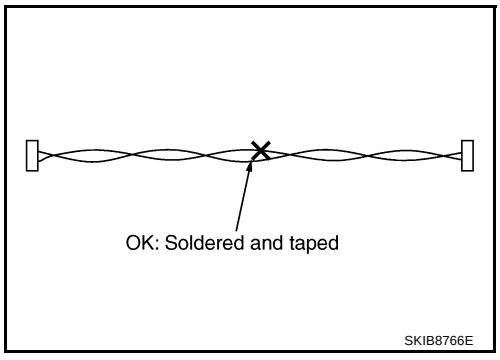
NKS0053P

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Trouble Diagnosis

NKS004PR

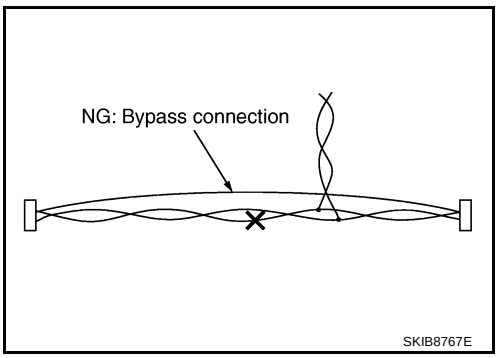
CAUTION:



- **Never apply 7.0 V or more to the measurement terminal.**
- **Use a tester with open terminal voltage of 7.0 V or less.**
- **Turn the ignition switch OFF and disconnect the battery cable from the negative terminal when checking the harness.**

Precautions for Harness Repair

NKS004PS



- Solder the repaired area and wrap tape around the soldered area.

  NOTE:
  A fray of twisted lines must be within 110 mm (4.33 in).

- Bypass connection is never allowed at the repaired area.

  NOTE:
  Bypass connection may cause CAN communication error. The spliced wire becomes separated and the characteristics of twisted line are lost.

- Replace the applicable harness as an assembly if error is detected on the shield lines of CAN communication line.

TROUBLE DIAGNOSIS

PFP:00004

CAN Diagnostic Support Monitor

NKS004PT

Use “CAN DIAG SUPPORT MNTR” for detecting the root cause.

MONITOR ITEM LIST (CONSULT-III)

ECM

0: Error at present, 1 – 39: Error in the past (Number means the number of times the ignition switch is turned OFF→ON)

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal		Error	
			PRSNT	PAST	PRSNT	PAST
ECM	TRANSMIT DIAG	Signal transmission status	OK	OK or 1 – 39*	UNKWN	0
	VDC/TCS/ABS	With VDC: Signal receiving status from the VDC/TCS/ABS control unit				
		With TCS: Signal receiving status from the ABS actuator and electric unit (control unit)				
		With ABS: Not used even though indicated				
	METER/M&A	Signal receiving status from the unified meter and A/C amp.	OK	OK or 1 – 39*	UNKWN	0
	BCM/SEC	Signal receiving status from the BCM				
	ICC	Not used even though indicated				
	HVAC					
	TCM	Signal receiving status from the TCM	OK	OK or 1 – 39*	UNKWN	0
	EPS	Not used even though indicated				
	IPDM E/R	Signal receiving status from the IPDM E/R	OK	OK or 1 – 39*	UNKWN	0
	e4WD	Not used even though indicated				
	AWD/4WD					

*: 39 or higher number is fixed at 39 until the self-diagnosis result is erased.

VDC/TCS/ABS Control Unit

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal	Error
			PRSNT	
ABS	INITIAL DIAG	Status of CAN controller	OK	NG[Caution]
	TRANSMIT DIAG	Signal transmission status		UNKWN
	ECM	Signal receiving status from the ECM		
	TCM	Signal receiving status from the TCM		
	METER/M&A	Signal receiving status from the unified meter and A/C amp.		
	STRG	Signal receiving status from the steering angle sensor		

CAUTION:

Never replace the unit even when “NG” is indicated on the “INITIAL DIAG” at this stage. Follow the trouble diagnosis procedures.

TCM

NOTE:
Replace the unit when “NG” is indicated on the “INITIAL DIAG”.

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal	Error
			PRSNT	
TCM	INITIAL DIAG	Status of CAN controller	OK	NG
	TRANSMIT DIAG	Signal transmission status		UNKWN
	ECM	Signal receiving status from the ECM		
	VDC/TCS/ABS	With VDC: Signal receiving status from the VDC/TCS/ABS control unit		
		Without VDC: Signal receiving status from the ABS actuator and electric unit (control unit)		
	METER/M&A	Signal receiving status from the unified meter and A/C amp.		
	ICC/e4WD	Not used even though indicated		
	AWD/4WD			

BCM

NOTE:
Replace the unit when “NG” is indicated on the “INITIAL DIAG”.

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal	Error
			PRSNT	
BCM	INITIAL DIAG	Status of CAN controller	OK	NG
	TRANSMIT DIAG	Signal transmission status		UNKWN
	ECM	Signal receiving status from the ECM		
	IPDM E/R	Signal receiving status from the IPDM E/R		
	METER/M&A	Signal receiving status from the unified meter and A/C amp.		
	I-KEY	Not used even though indicated		

Unified Meter and A/C Amp.

0: Error at present, 1 – 39: Error in the past (Number means the number of times the ignition switch is turned OFF→ON)

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal		Error	
			PRSNT	PAST	PRSNT	PAST
M&A	TRANSMIT DIAG	Signal transmission status	OK	OK or 1 – 39*	UNKWN	0
	ECM	Signal receiving status from the ECM				
	TCM	Signal receiving status from the TCM				
	BCM/SEC	Signal receiving status from the BCM				
	VDC/TCS/ABS	With VDC: Signal receiving status from the VDC/TCS/ABS control unit				
		Without VDC: Signal receiving status from the ABS actuator and electric unit (control unit)				
	IPDM E/R	Not used even though indicated				
	DISPLAY					
	I-KEY

	AWD/4WD					
	e4WD					
	ICC					
	LANE KEEP					
	TIRE-P					

*: 39 or higher number is fixed at 39 until the self-diagnosis result is erased.

ABS Actuator and Electric Unit (Control Unit)

Models with ABS

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal	Error
			PRSNT	
ABS	INITIAL DIAG	Status of CAN controller	OK	NG[Caution]
	TRANSMIT DIAG	Signal transmission status		UNKWN
	ECM	Signal receiving status from the ECM		

CAUTION:

Never replace the unit even when “NG” is indicated on the “INITIAL DIAG” at this stage. Follow the trouble diagnosis procedures.

Models with TCS

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal	Error
			PRSNT	
ABS	INITIAL DIAG	Status of CAN controller	OK	NG[Caution]
	TRANSMIT DIAG	Signal transmission status		UNKWN
	ECM	Signal receiving status from the ECM		
	TCM	Signal receiving status from the TCM		

CAUTION:

Never replace the unit even when “NG” is indicated on the “INITIAL DIAG” at this stage. Follow the trouble diagnosis procedures.

IPDM E/R

0: Error at present, 1 – 39: Error in the past (Number means the number of times the ignition switch is turned OFF→ON)

ITEM	CAN DIAG SUPPORT MNTR	Description	Normal		Error	
			PRSNT	PAST	PRSNT	PAST
IPDM-E	TRANSMIT DIAG	Signal transmission status	OK	OK or 1 – 39*	UNKWN	0
	ECM	Signal receiving status from the ECM				
	BCM/SEC	Signal receiving status from the BCM				

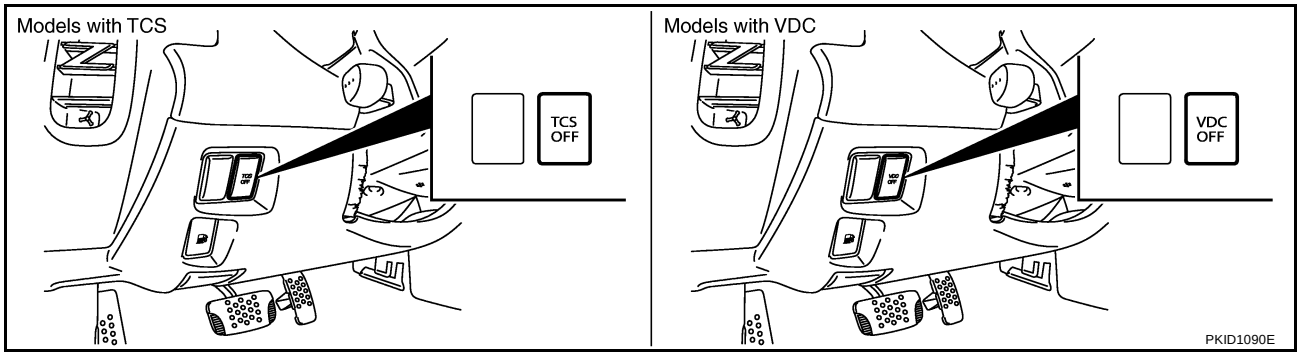
*: 39 or higher number is fixed at 39 until the self-diagnosis result is erased.

CAN System Specification Chart

NKS004PU

Determine CAN system type from the following specification chart. Then choose the correct diagnosis sheet.

NOTE:



Refer to LAN-19, "CHECK OF CAN SYSTEM TYPE (HOW TO USE CAN SYSTEM TYPE SPECIFICATION CHART)" for how to use CAN system specification chart.

Body type	Coupe/Roadster				
Axle	2WD				
Engine	VQ35HR				
Transmission	M/T		A/T	M/T	A/T
Brake control	ABS	TCS		VDC	
CAN system type	1	2	3	4	5
Diagnosis sheet	LAN-59	LAN-60	LAN-61	LAN-62	LAN-63
CAN communication signal chart	LAN-49, "TYPE 1"	LAN-50, "TYPE 2/TYPE 3"		LAN-51, "TYPE 4/TYPE 5"	

VEHICLE EQUIPMENT IDENTIFICATION INFORMATION

NOTE:

Check CAN system type from the vehicle shape and equipment.

CAN Communication Signal Chart

NKS004PV

Refer to LAN-15, "How to Use CAN Communication Signal Chart" for how to use CAN communication signal chart.

TYPE 1

NOTE:
Refer to LAN-41, "Abbreviation List" for the abbreviations of the connecting units.

T: Transmit R: Receive

Signal name/Connecting unit	ECM	BCM	M&A	ABS	IPDM-E
A/C compressor feedback signal	T		R		
A/C compressor request signal	T				R
Accelerator pedal position signal	T			R	
ASCD CRUISE lamp signal	T		R		
ASCD SET lamp signal	T		R		
Cooling fan speed request signal	T				R
Engine coolant temperature signal	T		R		
Engine speed signal	T		R	R

Main Line Between VDC/TCS/ABS Control Unit and Data Link Connector

NKS0054K

INSPECTION PROCEDURE

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
- ECM harness connector
- Harness connectors B101 and M73
4. Check the continuity between the Harness connector M73 and the data link connector.

Harness connector		Data link connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
M73	4M	M8	6	Yes
	5M		14	Yes

OK or NG

OK >> ● Present error: Check the following items again.
- Decision of CAN system type.
- Not received CONSULT-III data [SELF-DIAG RESULTS, CAN DIAG SUPPORT MNTR (“ECU list” included)].
- Procedure for detecting root cause.

● Past error: Error was detected in the main line between the VDC/TCS/ABS control unit and the data link connector.

NG >> Repair the main line between the harness connector M73 and the data link connector.

Main Line Between TCM and Data Link Connector

NKS0054L

INSPECTION PROCEDURE

1. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect the following harness connectors.
- ECM harness connector
- Harness connectors F102 and M72
4. Check the continuity between the Harness connector M72 and the data link connector.

Harness connector		Data link connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
M72	25H	M8	6	Yes
	24H		14	Yes

OK or NG

OK >> ● Present error: Check the following items again.
- Decision of CAN system type.
- Not received CONSULT-III data [SELF-DIAG RESULTS, CAN DIAG SUPPORT MNTR (“ECU list” included)].
- Procedure for detecting root cause.

● Past error: Error was detected in the main line between the TCM and the data link connector.

NG >> Repair the main line between the harness connector M72 and the data link connector.

Main Line Between Data Link Connector and ABS Actuator and Electric Unit (Control Unit)

NKS0054M

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M15
- Harness connector E108

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the harness connectors M15 and E108.
2. Check the continuity between the data link connector and the harness connector.

Data link connector		Harness connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
M8	6	M15	2G	Yes
	14		7G	Yes

OK or NG

OK >> GO TO 3.
NG >> Repair the main line between the data link connector and the harness connector M15.

3. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the continuity between the harness connector and the ABS actuator and electric unit (control unit) harness connector.

Harness connector		ABS actuator and electric unit (control unit) harness connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
E108	2G	E51	20	Yes
	7G		23	Yes

OK or NG

OK >> ● Present error: Check the following items again.
- Decision of CAN system type.
- Not received CONSULT-III data [SELF-DIAG RESULTS, CAN DIAG SUPPORT MNTR (“ECU list” included)].
- Procedure for detecting root cause.

● Past error: Error was detected in the main line between the data link connector and the ABS actuator and electric unit (control unit).

NG >> Replace the main line between the harness connector E108 and the ABS actuator and electric unit (control unit).

ECM Branch Line Circuit

NKS0054N

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ECM for damage, bend and loose connection (unit side and connector side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ECM.
2. Check the resistance between the ECM harness connector terminals.

ECM harness connector			Resistance (Ω)
Connector No.	Terminal No.		
M71	114	113	Approx. 108 – 132

OK or NG

OK >> GO TO 3.
NG >> Repair the ECM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ECM. Refer to EC-142, "POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >> ● Present error: Replace the ECM. Refer to EC-76, "Procedure After Replacing ECM" .
● Past error: Error was detected in the ECM branch line.
NG >> Repair the power supply and the ground circuit.

Air Bag Diagnosis Sensor Unit Branch Line Circuit

NKS0054O

INSPECTION PROCEDURE

1. CHECK AIR BAG DIAGNOSIS SENSOR UNIT

Check the air bag diagnosis sensor unit. Refer to SRS-9, "TROUBLE DIAGNOSIS" .

OK or NG

OK >> Replace the main harness.
NG >> Replace parts whose air bag system has a malfunction.

VDC/TCS/ABS Control Unit Branch Line Circuit

NKS0054P

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).

- VDC/TCS/ABS control unit connector
- Harness connector B101
- Harness connector M73

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of VDC/TCS/ABS control unit.
2. Check the resistance between the VDC/TCS/ABS control unit harness connector terminals.

VDC/TCS/ABS control unit harness connector			Resistance (Ω)
Connector No.	Terminal No.		
B114	61	63	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the VDC/TCS/ABS control unit branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the VDC/TCS/ABS control unit. Refer to BRC-87, "Wiring Diagram — VDC —" .

OK or NG

OK >> ● Present error: Replace the VDC/TCS/ABS control unit. Refer to BRC-129, "Removal and Installation" .
● Past error: Error was detected in the VDC/TCS/ABS control unit branch line.
NG >> Repair the power supply and the ground circuit.

TCM Branch Line Circuit

NKS0054Q

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).

- A/T assembly connector
- Harness connector F102
- Harness connector M72

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of A/T assembly.
2. Check the resistance between the A/T assembly harness connector terminals.

A/T assembly harness connector			Resistance (Ω)
Connector No.	Terminal No.		
F6	3	8	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the TCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the TCM. Refer to AT-162, "MAIN POWER SUPPLY AND GROUND CIRCUIT" .

OK or NG

OK >>
- Present error: Replace the control valve with TCM. Refer to AT-242, "Removal and Installation" .
- Past error: Error was detected in the TCM branch line.

NG >> Repair the power supply and the ground circuit.

BCM Branch Line Circuit

NKS0054R

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the BCM for damage, bend and loose connection (unit side and connector side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of BCM.
2. Check the resistance between the BCM harness connector terminals.

BCM harness connector			Resistance (Ω)
Connector No.	Terminal No.		
M90	39	40	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the BCM branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the BCM. Refer to BCS-11, "Schematic" .

OK or NG

OK >>
- Present error: Replace the BCM. Refer to BCS-17, "Removal and Installation of BCM" .
- Past error: Error was detected in the BCM branch line.

NG >> Repair the power supply and the ground circuit.

Data Link Connector Branch Line Circuit

NKS0054S

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the data link connector for damage, bend and loose connection (connector side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check the resistance between the data link connector terminals.

Data link connector			Resistance (Ω)
Connector No.	Terminal No.		
M8	6	14	Approx. 54 – 66

OK or NG

OK >>
- Present error: Check the following items again.
  - Decision of CAN system type.
  - Not received CONSULT-III data [SELF-DIAG RESULTS, CAN DIAG SUPPORT MNTR (“ECU list” included)].
  - Procedure for detecting root cause.
- Past error: Error was detected in the data link connector branch line circuit.

NG >> Repair the data link connector branch line.

Unified Meter and A/C Amp. Branch Line Circuit

NKS0054T

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the unified meter and A/C amp. for damage, bend and loose connection (unit side and connector side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of unified meter and A/C amp.
2. Check the resistance between the unified meter and A/C amp. harness connector terminals.

Unified meter and A/C amp. harness connector			Resistance (Ω)
Connector No.	Terminal No.		
M48	1	11	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the unified meter and A/C amp. branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the unified meter and A/C amp. Refer to DI-49, "Power Supply and Ground Circuit Inspection" .

OK or NG

OK >> ● Present error: Replace the unified meter and A/C amp. Refer to DI-55, "Removal and Installation of Unified Meter and A/C Amp." .
● Past error: Error was detected in the unified meter and A/C amp. branch line.

NG >> Repair the power supply and the ground circuit.

Steering Angle Sensor Branch Line Circuit

NKS0054U

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the steering angle sensor for damage, bend and loose connection (unit side and connector side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of steering angle sensor.
2. Check the resistance between the steering angle sensor harness connector terminals.

Steering angle sensor harness connector			Resistance (Ω)
Connector No.	Terminal No.		
M22	4	5	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the steering angle sensor branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the steering angle sensor. Refer to BRC-86, "Schematic" .

OK or NG

OK >> ● Present error: Replace the steering angle sensor. Refer to BRC-133, "Removal and Installation" .
● Past error: Error was detected in the steering angle sensor branch line.

NG >> Repair the power supply and the ground circuit.

ABS Actuator and Electric Unit (Control Unit) Branch Line Circuit

NKS0054V

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the terminals and connectors of the ABS actuator and electric unit (control unit) for damage, bend and loose connection (unit side and connector side).

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of ABS actuator and electric unit (control unit).
2. Check the resistance between the ABS actuator and electric unit (control unit) harness connector terminals.

ABS actuator and electric unit (control unit) harness connector			Resistance (Ω)
Connector No.	Terminal No.		
E51	20	23	Approx. 54 – 66

OK or NG

OK >> GO TO 3.
NG >> Repair the ABS actuator and electric unit (control unit) branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the ABS actuator and electric unit (control unit). Refer to BRC-13, "Schematic" .

OK or NG

OK >>
- Present error: Replace the ABS actuator and electric unit (control unit). Refer to BRC-36, "Removal and Installation" .
- Past error: Error was detected in the ABS actuator and electric unit (control unit) branch line.

NG >> Repair the power supply and the ground circuit.

IPDM E/R Branch Line Circuit

NKS0054W

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Check the following terminals and connectors for damage, bend and loose connection (unit side and connector side).

- IPDM E/R connector
- Harness connector E108 (Models with VDC)
- Harness connector M15 (Models with VDC)

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect the connector of IPDM E/R.
2. Check the resistance between the IPDM E/R harness connector terminals.

IPDM E/R harness connector			Resistance (Ω)
Connector No.	Terminal No.		
E9	48	49	Approx. 108 – 132

OK or NG

OK >> GO TO 3.
NG >> Repair the IPDM E/R branch line.

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Check the power supply and the ground circuit of the IPDM E/R. Refer to PG-24, "IPDM E/R Power/Ground Circuit Inspection" .

OK or NG

OK >> ● Present error: Replace the IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
● Past error: Error was detected in the IPDM E/R branch line.

NG >> Repair the power supply and the ground circuit.

CAN Communication Circuit

NKS0054X

INSPECTION PROCEDURE

1. CONNECTOR INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect all the unit connectors on CAN communication system.
4. Check terminals and connectors for damage, bend and loose connection.

OK or NG

OK >> GO TO 2.
NG >> Repair the terminal and connector.

2. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector terminals.

Data link connector			Continuity
Connector No.	Terminal No.		
M8	6	14	No

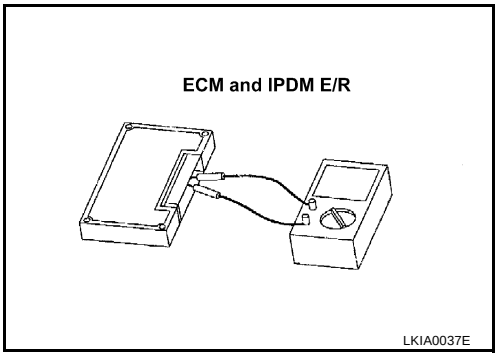
OK or NG

OK >> GO TO 3.
NG >> Check the harness and repair the root cause.

3. CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

Check the continuity between the data link connector and the ground.

Data link connector		Ground	Continuity
Connector No.	Terminal No.		
M8	6		No
	14		No



OK or NG

OK >> GO TO 4.
NG >> Check the harness and repair the root cause.

4. CHECK ECM AND IPDM E/R TERMINATION CIRCUIT

1. Remove the ECM and the IPDM E/R.
2. Check the resistance between the ECM terminals.

ECM		Resistance (Ω)
Terminal No.		
114	113	Approx. 108 – 132

3. Check the resistance between the IPDM E/R terminals.

IPDM E/R		Resistance (Ω)
Terminal No.		
48	49	Approx. 108 – 132

OK or NG

OK >> GO TO 5.
NG >> Replace the ECM and/or the IPDM E/R.

5. CHECK SYMPTOM

Connect all the connectors. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.

Inspection result

Reproduced>>GO TO 6.
Non-reproduced>>Start the diagnosis again. Follow the trouble diagnosis procedure when past error is detected.

6. CHECK UNIT REPRODUCTION

Perform the reproduction test as per the following procedure for each unit.

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect one of the unit connectors of CAN communication system.

   NOTE:
   ECM and IPDM E/R have a termination circuit. Check other units first.
4. Connect the battery cable to the negative terminal. Check if the symptoms described in the “Symptom (Results from interview with customer)” are reproduced.

   NOTE:
   Although unit-related error symptoms occur, do not confuse them with other symptoms.

Inspection result

Reproduced>>Connect the connector. Check other units as per the above procedure.
Non-reproduced>>Replace the unit whose connector was disconnected.

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS00541

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

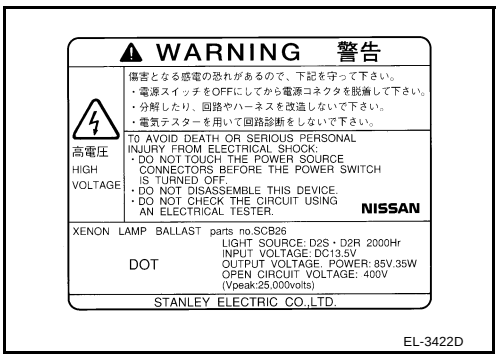
- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS00542

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

General Precautions for Service Operations



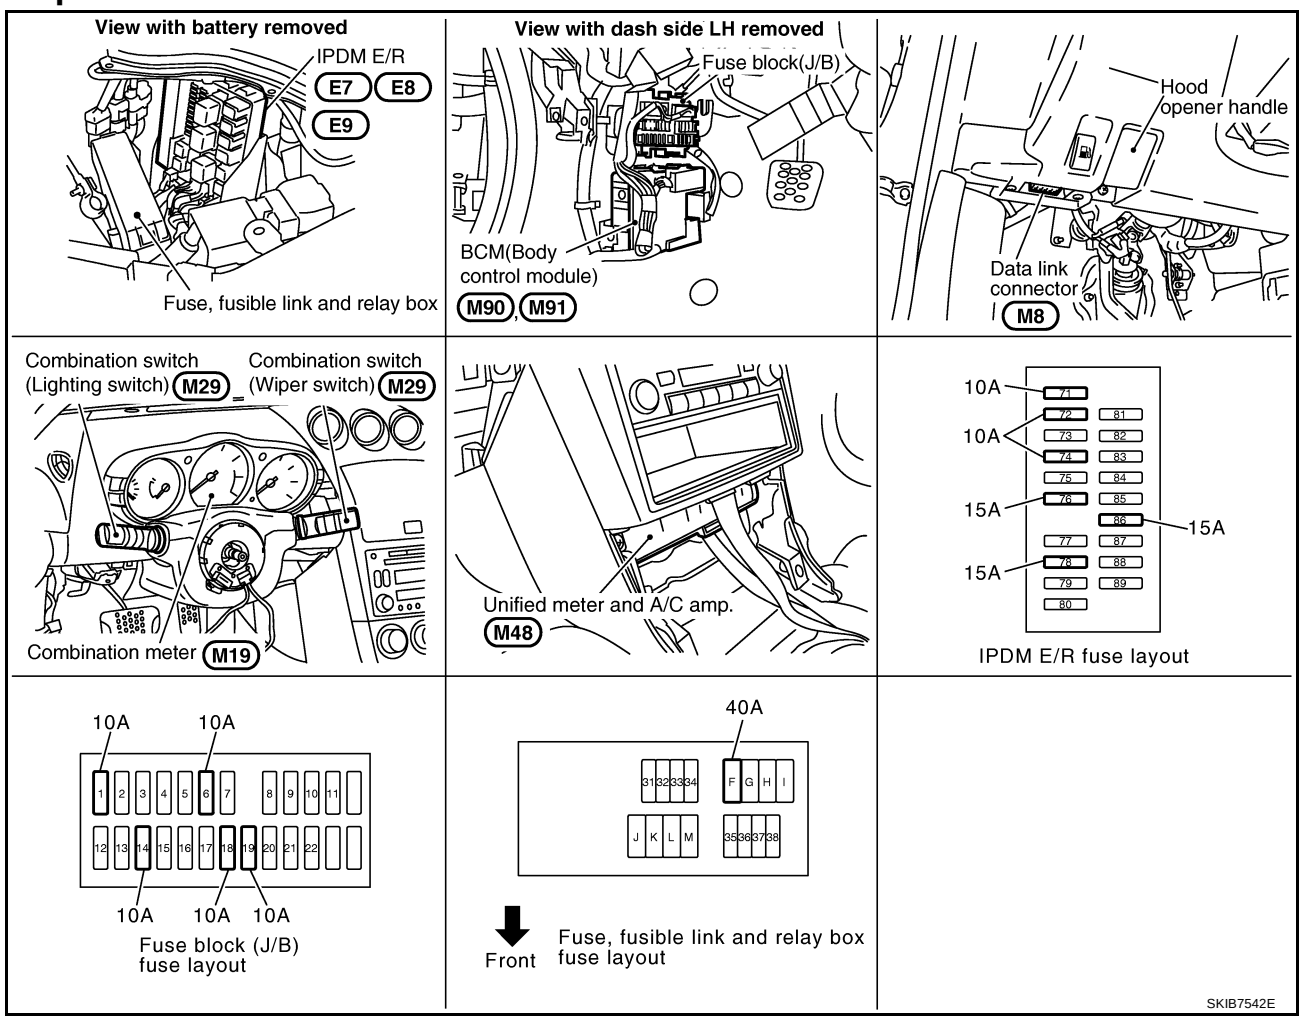
NKS00543

- Never work with wet hands.
- Xenon headlamp includes high voltage generating part. Be sure to disconnect battery negative cable (negative terminal) or power fuse before removing, installing, or touching the xenon headlamp (including lamp bulb).
- Turn the lighting switch OFF before disconnecting and connecting the connector.
- When turning the xenon headlamp on and while it is illuminated, never touch the harness, bulb, and socket of the headlamp.
- When checking the headlamp on/off operation, check it on vehicle and with the power connected to the vehicle-side connector.

PKIB7344E

- Do not touch the headlamp bulb glass surface with bare hands or allow oil or grease to get on it. Do not touch the headlamp bulb just after the headlamp is turned off, because it is very hot.
- Install the xenon headlamp bulb socket correctly. If it is installed improperly, high-voltage leak or corona discharge may occur that can melt the bulb, connector, and housing. Do not illuminate the xenon headlamp bulb out of the headlamp housing. Doing so can cause fire and harm your eyes.
- When the bulb has burned out, wrap it in a thick vinyl bag and discard. Do not break the bulb.
- Leaving the bulb removed from the headlamp housing for a long period of time can deteriorate the performance of the lens and reflector (dirt, clouding). Always prepare a new bulb and have it on hand when replacing the bulb.

EL-3422D



- When adjusting the headlamp aiming, turn the aiming adjustment screw only in the tightening direction. (If it is necessary to loosen the screw, first fully loosen the screw, and then turn it in the tightening direction.)
- Do not use organic solvent (paint thinner or gasoline) to clean lamps and to remove old sealant.

HEADLAMP (FOR USA)

PFP:26010

Component Parts and Harness Connector Location

NKS004WM

System Description

NKS004WN

Control of the headlamp system operation is dependent upon the position of the combination switch (lighting switch). When the lighting switch is placed in the 2ND position, the BCM (body control module) receives input signal requesting the headlamps (and tail lamps) illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) through the CAN communication lines. The CPU (central processing unit) of the IPDM E/R controls the headlamp high and headlamp low relay coils. These relays, when energized, direct power to the respective headlamps, which then illuminate.

OUTLINE

Power is supplied at all times

- to headlamp high relay, located in IPDM E/R and
- to headlamp low relay, located in IPDM E/R, from battery directly,
- through 40A fusible link [letter F, located in fuse, fusible link and relay box]
- to BCM terminal 55,
- through 10A fuse [No.18, located in fuse block (J/B)]
- to BCM terminal 42,
- through 15A fuse [No.78 located in IPDM E/R]
- to CPU located in IPDM E/R,
- through 10A fuse [No.71,located in IPDM E/R]
- to CPU located in IPDM E/R,
- through 10A fuse [No.19, located in fuse block (J/B)]

- to combination meter terminal 24.

With ignition switch in ON or START position, power is supplied

- to CPU located in IPDM E/R,
- through 10A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No.14, located in fuse block (J/B)]
- to combination meter terminal 23.

With ignition switch in ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66,
- to IPDM E/R terminals 38 and 60
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to combination meter terminals 10, 11 and 12
- through grounds M30 and M66.

HEADLAMP OPERATION

Low Beam Operation

With the lighting switch in 2ND position, the BCM receives input signal from combination switch reading function (Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION") the headlamp to illuminate. This input signal is communicated to the IPDM E/R through the CAN communication lines. The CPU located in the IPDM E/R controls the headlamp low relay coil, which when energized, supplies power,

- through 15A fuse [No. 76, located in IPDM E/R]
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 7,
- through 15A fuse [No. 86, located in IPDM E/R]
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 7.

Ground is supplied

- to front combination lamp RH terminal 4, and
- to front combination lamp LH terminal 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With power and ground supplied, low beam headlamps illuminate.

High Beam Operation/Flash-to-Pass Operation

With the lighting switch in 2ND position and placed in HIGH or PASS position, the BCM receives input signal requesting headlamp high beams to illuminate. High beam request signal and low beam request signal is communicated to the IPDM E/R through CAN communication. The CPU located in the IPDM E/R controls headlamp high relay and headlamp low relay turned ON, which when energized, supplies power,

- through 15A fuse [No. 76, located in IPDM E/R]
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 7,
- through 15A fuse [No. 86, located in IPDM E/R]
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 7,
- through 10A fuse [No. 72, located in IPDM E/R]
- through IPDM E/R terminal 27

- to front combination lamp RH terminal 3,
- through 10A fuse [No. 74, located in IPDM E/R]
- through IPDM E/R terminal 28
- to front combination lamp LH terminal 3.

Ground is supplied

- to front combination lamp RH terminals 4, and
- to front combination lamp LH terminals 4,
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With the power and ground supplied, headlamp bulbs illuminate. High beam solenoids move the bulb shades in the front combination lamps, and the bulb shades change to high beam position.
Unified meter and A/C amp. receives signal from BCM through CAN communication lines, and then combination meter indicator illuminates high beam.

COMBINATION SWITCH READING FUNCTION

Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION" .

EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (ON), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.
Under this condition, the headlamps remain illuminated for 5 minutes, then the headlamps are turned off.
Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

REMOTE KEYLESS ENTRY SYSTEM OPERATION

Refer to BL-59, "REMOTE KEYLESS ENTRY SYSTEM" .

VEHICLE SECURITY SYSTEM

The vehicle security system will flash the high beams if the system is triggered. Refer to BL-125, "VEHICLE SECURITY (THEFT WARNING) SYSTEM" .

XENON HEADLAMP

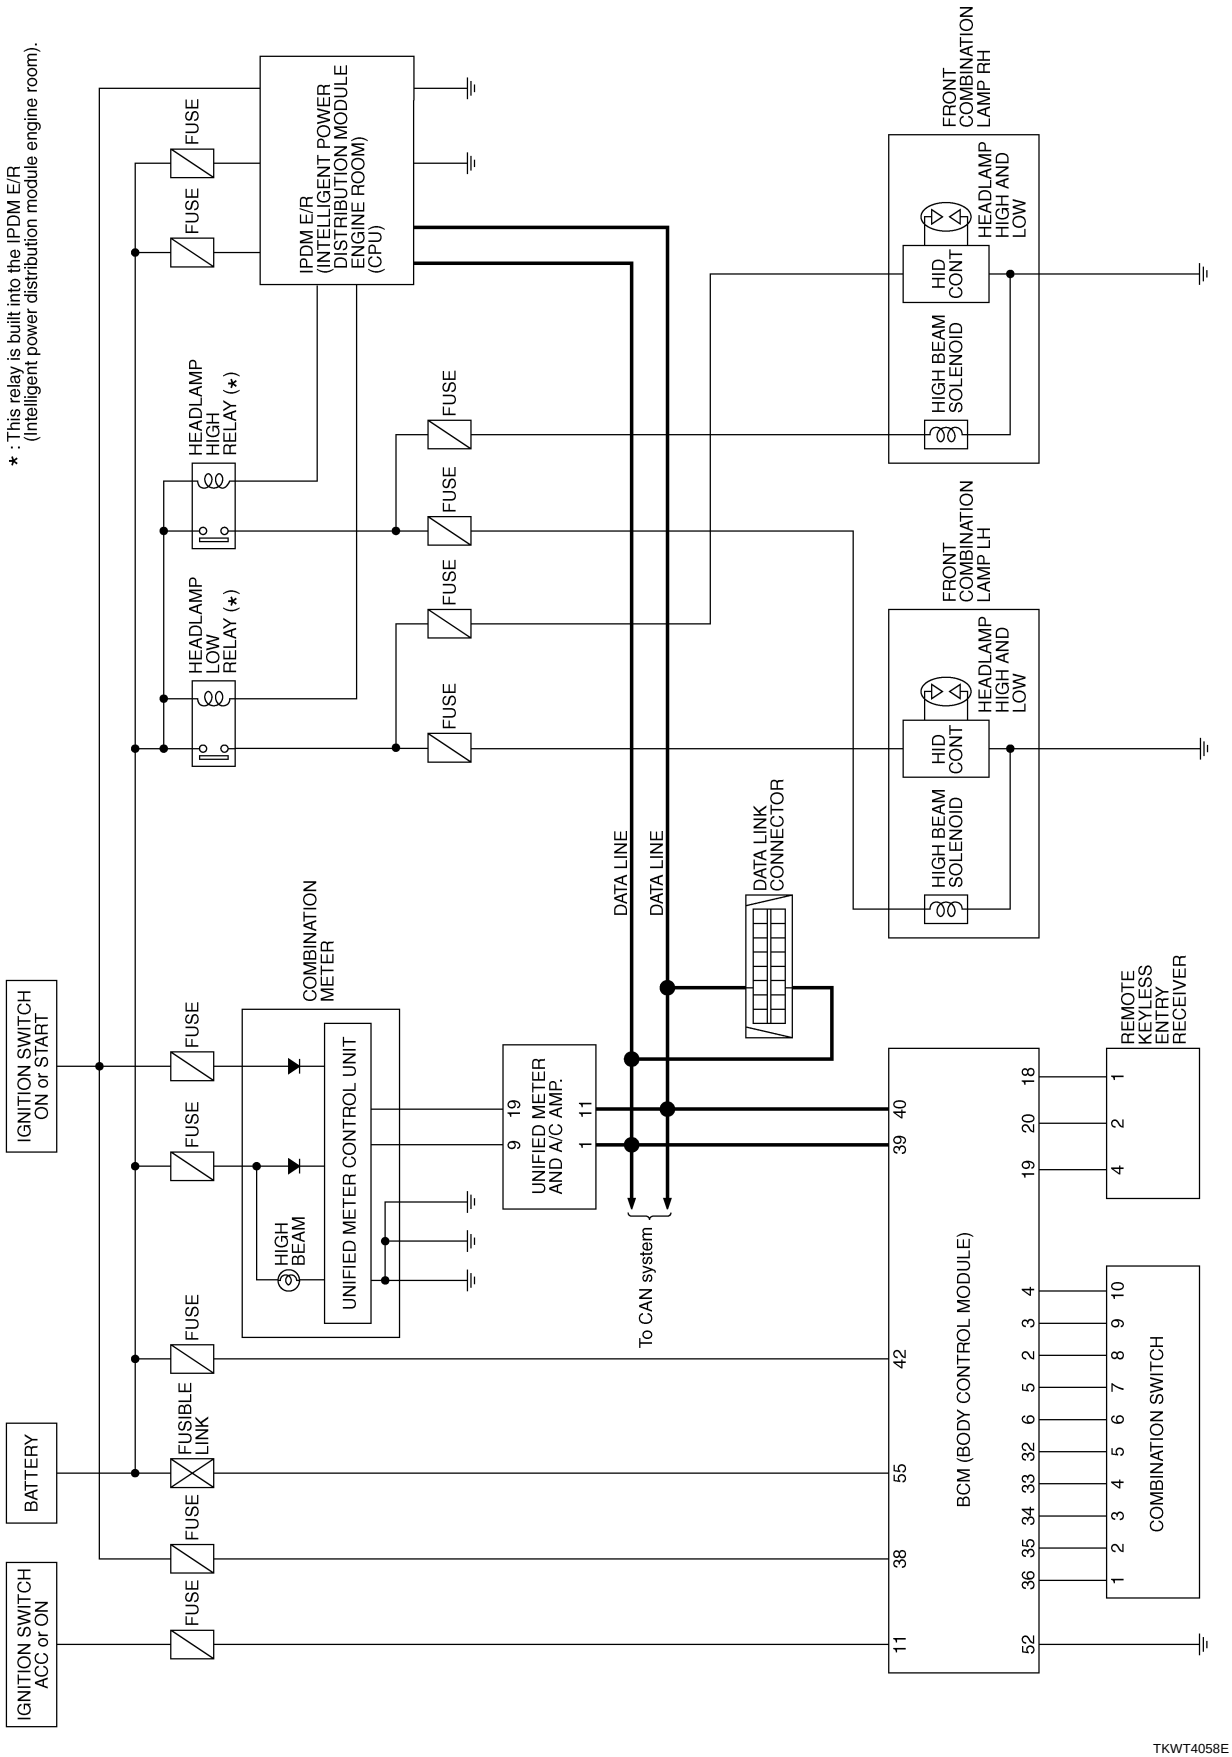
Xenon type lamps are used for headlamps. Xenon bulbs do not use a filament. Instead, they produce light when a high voltage current is passed between two tungsten electrodes through a mixture of xenon (an inert gas) and certain other metal halides. In addition to strong lighting power, electronic control of the power supply gives the headlamps stable quality and tone color.
Followings are some advantages of the xenon type headlamp.

- The light produced by the headlamps is white color similar to sunlight that is easy to the eyes.
- Light output is nearly double that of halogen headlamps, affording increased area of illumination.
- Counter-reflected luminance increases and the contrast enhances on the wet road in the rain. That makes visibility go up more than the increase of the light volume.
- Power consumption is approximately 25 percent less than halogen headlamps, reducing battery load.

CAN Communication System Description

NKS004WO

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

					Lighting switch 2ND	 PKIB4953J Approx. 2.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch)	 PKIB4959J Approx. 1.0 V
11	LG	Ignition switch (ACC)	ACC	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Lighting switch 1ST (The same result with lighting switch 2ND)	 PKIB4958J Approx. 1.2 V
34	W/L	Combination switch output 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch HI beam (Operates only HI beam switch)	 PKIB4958J Approx. 1.2 V
35	W/G	Combination switch output 2	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch)	 PKIB4958J Approx. 1.2 V
38	W/L	Ignition switch (ON)	ON	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition		Reference value
			Ignition switch	Operation or condition	
39	L	CAN – H	—	—	—
40	P	CAN – L	—	—	—
42	GY	Battery power supply	OFF	—	Battery voltage
52	B	Ground	ON	—	Approx. 0 V
55	R	Battery power supply	OFF	—	Battery voltage

Terminals and Reference Values for IPDM E/R

NKS004WT

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
20	R/L	Headlamp low (RH)	ON	Lighting switch 2ND position	OFF	Approx. 0 V
					ON	Battery voltage
27	BR	Headlamp high (RH)	ON	Lighting switch HIGH or PASS position	OFF	Approx. 0 V
					ON	Battery voltage
28	R/Y	Headlamp high (LH)	ON	Lighting switch HIGH or PASS position	OFF	Approx. 0 V
					ON	Battery voltage
30	R/W	Headlamp low (LH)	ON	Lighting switch 2ND position	OFF	Approx. 0 V
					ON	Battery voltage
38	B	Ground	ON	—		Approx. 0 V
48	L	CAN – H	—	—		—
49	P	CAN – L	—	—		—
60	B	Ground	ON	—		Approx. 0 V

How to Proceed With Trouble Diagnosis

NKS004WU

1. Confirm the symptom or customer complaint.
2. Understand operation description and function description. Refer to LT-5, "System Description" .
3. Perform the preliminary check. Refer to LT-15, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does headlamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

NKS004WV

CHECK POWER SUPPLY AND GROUND CIRCUIT

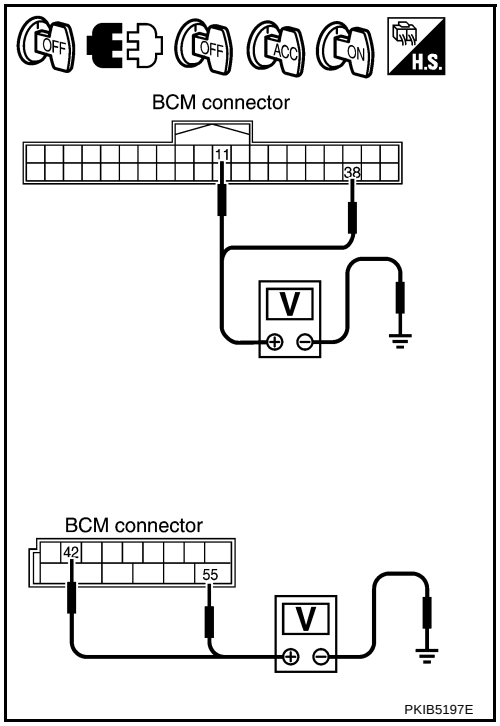
1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

Unit	Power source	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START position	1
	Ignition switch ACC or ON position	6

Unit	Power source	Fuse and fusible link No.
IPDM E/R	Battery	72
		74
		76
		86

Refer to LT-9, "Wiring Diagram — H/LAMP —" .



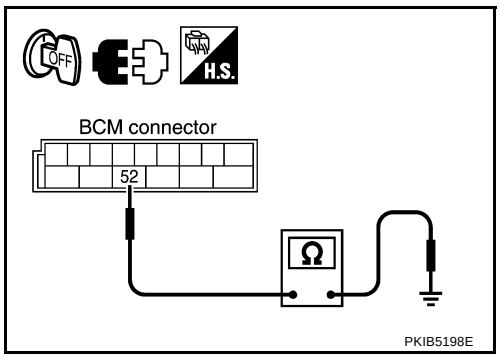
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(-)	OFF	ACC	ON
BCM connector	Terminal				
M90	11	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS004WW

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis part	Diagnosis mode	Description
HEADLAMP	WORK SUPPORT	Changes the setting for each function.
	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.
BCM	SELF-DIAG RESULTS	BCM performs self-diagnosis of CAN communication.
	CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.

WORK SUPPORT
Display Item List

Item	Description	CONSULT-III	Factory setting
BATTERY SAVER SET	Exterior lamp battery saver control mode can be changed in this mode. Selects exterior lamp battery saver control mode between two ON/OFF.	ON	×
		OFF	—

DATA MONITOR
Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “IGN position (ON)/OFF, ACC position (OFF)” judged from the ignition switch signal.
ACC ON SW	“ON/OFF”	Displays “ACC (ON)/OFF, Ignition OFF (OFF)” status judged from ignition switch signal.
HI BEAM SW	“ON/OFF”	Displays status (high beam switch: ON/Others: OFF) of high beam switch judged from lighting switch signal.
HEAD LAMP SW 1	“ON/OFF”	Displays status (headlamp switch 1: ON/Others: OFF) of headlamp switch 1 judged from lighting switch signal.
HEAD LAMP SW 2	“ON/OFF”	Displays status (headlamp switch 2: ON/Others: OFF) of headlamp switch 2 judged from lighting switch signal.
LIGHT SW 1 ST	“ON/OFF”	Displays status (lighting switch 1ST or 2ND position: ON/Others: OFF) of lighting switch judged from lighting switch signal.
PASSING SW	“ON/OFF”	Displays status (flash-to-pass switch: ON/Others: OFF) of flash-to-pass switch judged from lighting switch signal.
FR FOG SW NOTE	“ON/OFF”	—
DOOR SW - DR	“ON/OFF”	Displays status of driver door as judged from driver door switch signal. (Door is open: ON/Door is closed: OFF)
DOOR SW - AS	“ON/OFF”	Displays status of passenger door as judged from passenger door switch signal. (Door is open: ON/Door is closed: OFF)
DOOR SW - RR NOTE	“OFF”	—
DOOR SW - RL NOTE	“OFF”	—
BACK DOOR SW	“ON/OFF”	● Displays status of back door as judged from back door switch signal. (Coupe models) ● Displays status of rear trunk hood as judged from trunk lamp switch signal. (Roadster models)
TURN SIGNAL R	“ON/OFF”	Displays status (Turn right: ON/Others: OFF) as judged from lighting switch signal.
TURN SIGNAL L	“ON/OFF”	Displays status (Turn left: ON/Others: OFF) as judged from lighting switch signal.
CARGO LAMP SW NOTE	“OFF”	—

NOTE:
This item is displayed, but cannot be monitored.

ACTIVE TEST
Display Item List

Test item	Description
TAIL LAMP	Allows tail lamp relay to operate by switching ON–OFF.
HEAD LAMP	Allows headlamp relay to operate by switching ON–OFF.
FR FOG LAMP NOTE	—
CORNERING LAMP NOTE	—

NOTE:
This item is displayed, but cannot be tested.

CONSULT-III Function (IPDM E/R)

NKS004WX

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

Check Item, Diagnosis Mode	Description
SELF-DIAGNOSTIC RESULTS	Refer to PG-18, "SELF-DIAG RESULTS" .
DATA MONITOR	The input/output data of IPDM E/R is displayed in real time.
CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.
ACTIVE TEST	IPDM E/R sends a drive signal to electronic components to check their operation.

DATA MONITOR
All Signals, Main Signals, Selection From Menu

Item name	CONSULT-III screen display	Display or unit	Monitor item selection			Description
			ALL SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
Position lights request	TAIL & CLR REQ	ON/OFF	×	×	×	Signal status input from BCM
Headlamp low beam request	HL LO REQ	ON/OFF	×	×	×	Signal status input from BCM
Headlamp high beam request	HL HI REQ	ON/OFF	×	×	×	Signal status input from BCM

NOTE:
Perform monitoring of IPDM E/R data with ignition switch ON. When ignition switch is at ACC, the display may not be correct.

ACTIVE TEST
Display Item List

Test item	CONSULT-III screen display	Description
Tail lamp relay output	TAIL LAMP	Allows tail lamp relay to operate by switching operation ON–OFF at your option.
Headlamp relay (HI, LO) output	LAMPS	Allows headlamp relay (HI, LO) to operate by switching operation (OFF, HI ON, LO ON) at your option (Headlamp high beam repeats ON–OFF every 1 second).

Headlamp Does Not Change To High Beam (Both Sides)

NKS004WY

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select “HI BEAM SW” of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is HIGH BEAM : HI BEAM SW ON

CHECK THE COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. HEADLAMP ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "LAMPS" of IPDM E/R active test item.
2. With operating the test item, check the headlamp high beam operation.

Headlamp high beam should operate.
(Headlamp high beam repeats ON-OFF every 1 second).

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. Check that the headlamp high beam operation.

Headlamp high beam should operate.

OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

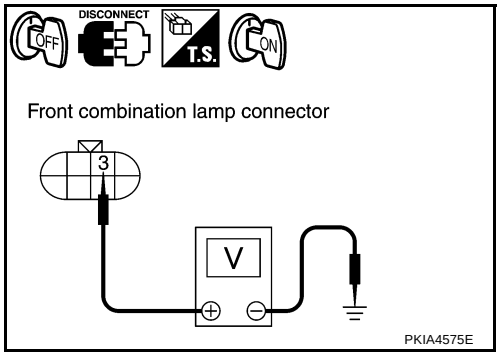
3. CHECK IPDM E/R

CONSULT-III DATA MONITOR

1. Select "HL LO REQ" and "HL HI REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status

When lighting switch is HIGH BEAM : HL LO REQ ON : HL HI REQ ON

OK or NG



OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK HEADLAMP INPUT SIGNAL

CONSULT-III ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Select "LAMPS" of IPDM E/R active test item
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

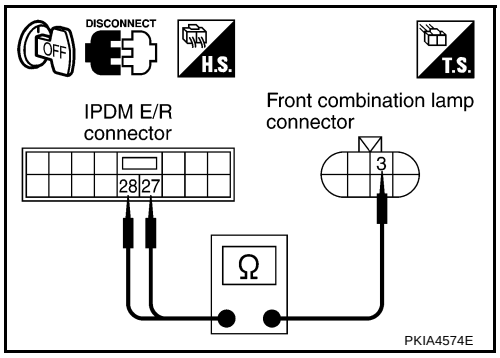
NOTE:
Headlamp high beam repeats ON–OFF every 1 second.

Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		

IPDM E/R AUTO ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

NOTE:
Headlamp high beam repeats ON–OFF every 1 second.



Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		

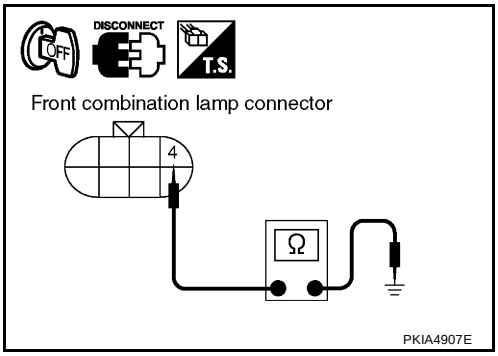
OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp (RH and LH) harness connector.

Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	27	E24	3	Yes
LH		28	E40	3	



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

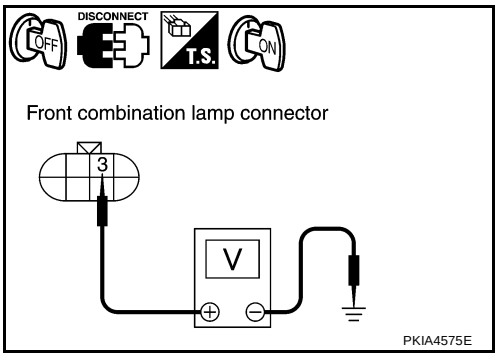
6. CHECK HEADLAMP GROUND

Check continuity between front combination lamp (RH and LH) harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness, connector and bulb.
NG >> Repair harness or connector.



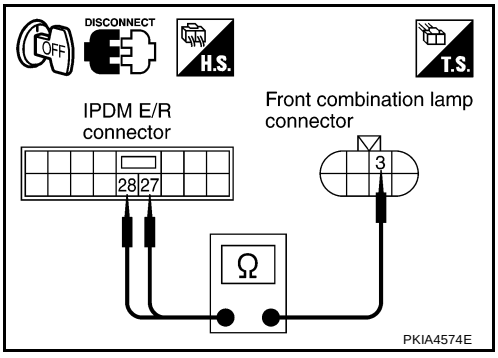
Headlamp Does Not Change To High Beam (One Side)

NKS004WZ

1. CHECK HEADLAMP INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH or LH connector.
3. Turn ignition switch ON.
4. Lighting switch is turned HIGH BEAM position.
5. Check voltage between front combination lamp RH or LH harness connector and ground.

Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		



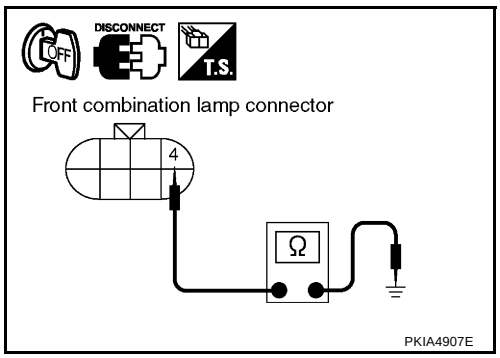
OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp RH or LH harness connector.

Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	27	E24	3	Yes
LH		28	E40	3	



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

3. CHECK HEADLAMP GROUND

Check continuity between front combination lamp RH or LH harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness and connector.
NG >> Repair harness or connector.

High Beam Indicator Lamp Does Not Illuminate

NKS004X0

1. CHECK BULB

Check bulb of high beam indicator lamp.

OK or NG

OK >> Replace combination meter. Refer to DI-24, "Removal and Installation for Combination Meter" .
NG >> Replace indicator bulb.

Headlamp Low Beam Does Not Illuminate (Both Sides)

NKS004X1

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP SW1" and "HEAD LAMP SW2" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 2ND position : HEAD LAMP SW1 ON
: HEAD LAMP SW2 ON

CHECK THE COMBINATION SWITCH
Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. HEADLAMP ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "LAMPS" of IPDM E/R active test item.
2. With operating the test item, check the headlamp low beam operation.

Headlamp low beam should operate.

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. Check that the headlamp low beam operation.

Headlamp low beam should operate.

OK or NG

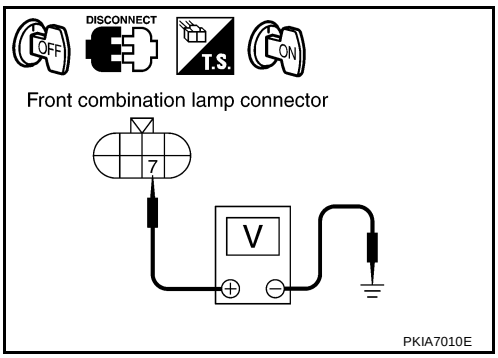
OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK IPDM E/R

CONSULT-III DATA MONITOR

1. Select "HL LO REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 2ND position : HL LO REQ ON



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK HEADLAMP INPUT SIGNAL

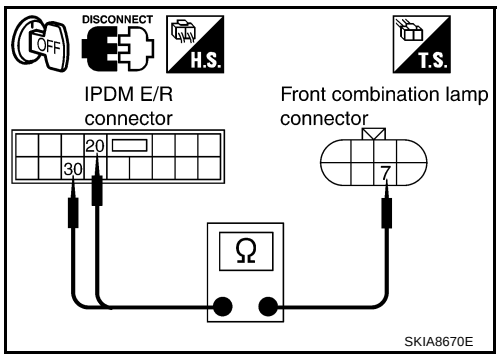
CONSULT-III ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Select "LAMPS" of IPDM E/R active test item.
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(-)	
Front combination lamp connector	Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

IPDM E/R AUTO ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.



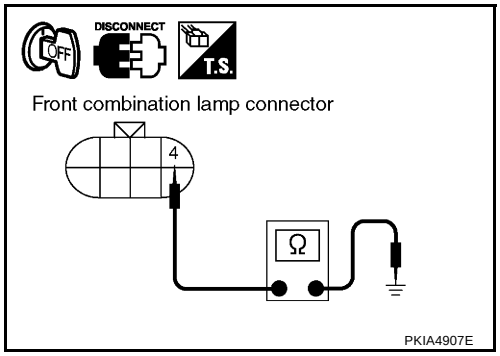
Terminals			Voltage (Approx.)
(+)		(-)	
Front combination lamp connector	Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp (RH and LH) harness connector.



Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	20	E24	7	Yes
LH		30	E40	7	

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

6. CHECK HEADLAMP GROUND

1. Turn ignition switch OFF.
2. Check continuity between front combination lamp (RH and LH) harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

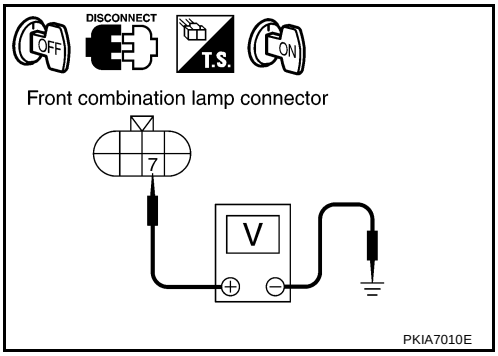
OK or NG

OK >> Check headlamp harness and connectors, ballasts (HID control unit), and xenon bulbs. Refer to LT-27, "Xenon Headlamp Trouble Diagnosis" .
NG >> Repair harness or connector.

Headlamp Low Beam Does Not Illuminate (One Side)

NKS004X2

1. CHECK BULB



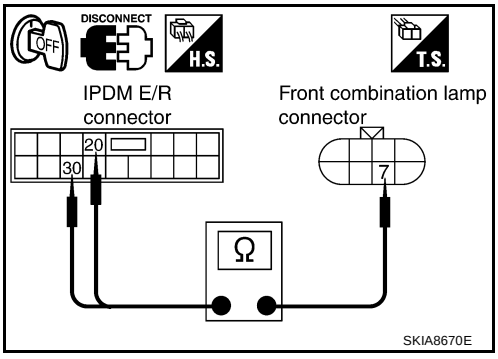
Check ballast (HID control unit) and xenon bulb of lamp which does not illuminate. Refer to LT-27, "Xenon Headlamp Trouble Diagnosis" .

OK or NG

OK >> GO TO 2.
NG >> Replace malfunctioning part.

2. CHECK HEADLAMP INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH or LH connector.
3. Turn ignition switch ON.
4. Lighting switch is turned 2ND position.
5. Check voltage between front combination lamp RH or LH harness connector and ground.



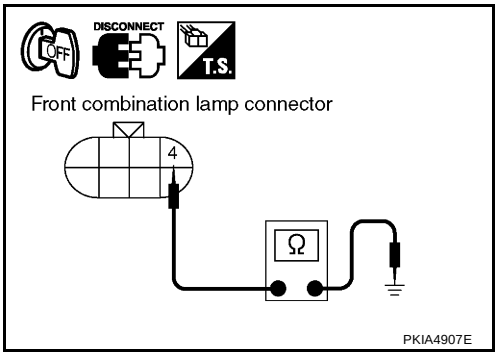
Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp RH or LH harness connector.



Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	20	E24	7	Yes
LH		30	E40	7	

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

4. CHECK HEADLAMP GROUND

Check continuity between front combination lamp RH or LH harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness and connector.
NG >> Repair harness or connector.

Headlamps Does Not Turn OFF

NKS004X3

1. CHECK HEADLAMP TURN OFF

Make sure that lighting switch is OFF. And check if headlamp turns off when ignition switch is turned OFF.

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP1" and "HEAD LAMP2" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is OFF : HEAD LAMP SW1 OFF
: HEAD LAMP SW2 OFF

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

3. CHECKING CAN COMMUNICATIONS BETWEEN BCM AND IPDM E/R

Perform self-diagnosis for “BCM” with CONSULT-III.

Display of self-diagnosis results

NO DTC>> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
CAN COMM CIRCUIT>> Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

General Information for Xenon Headlamp Trouble Diagnosis

NKS004X4

In most cases, malfunction of xenon headlamp - “does not illuminate”, “flickers” or “dark” - is caused by a malfunctioning xenon bulb. A malfunctioning HID control unit or lamp housing, however, may be a cause. Be sure to perform trouble diagnosis following the steps described below.

Caution:

NKS004X5

- Installation or removal of connector must be done with lighting switch OFF.
- Disconnect the battery cable from the negative terminal or remove power fuse.

  CAUTION:
  After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
- When the lamp is illuminated (when lighting switch is ON), never touch harness, HID control unit, inside of lamp, or lamp metal parts.
- To check illumination, temporarily install lamp in vehicle. Be sure to connect power at vehicle side connector.
- If error can be traced directly to electrical system, first check for items such as blown fuses and fusible links, broken wires or loose connectors, dislocated terminals, and improper connections.
- Never work with wet hands.
- Using a tester for HID control unit circuit trouble diagnosis is prohibited.
- Disassembling HID control unit or harnesses (bulb socket harness, ECM harness) is prohibited.
- Immediately after illumination, light intensity and color will fluctuate, but there is nothing wrong.
- When bulb has come to end of its life, brightness will drop significantly, it will flash repeatedly, or light color will turn reddish.

Xenon Headlamp Trouble Diagnosis

NKS004X6

1. CHECK 1: XENON HEADLAMP LIGHTING

Install normal xenon bulb to corresponding xenon bulb headlamp, and check if lamp lights up.

OK or NG

OK >> Replace xenon bulb.
NG >> GO TO 2.

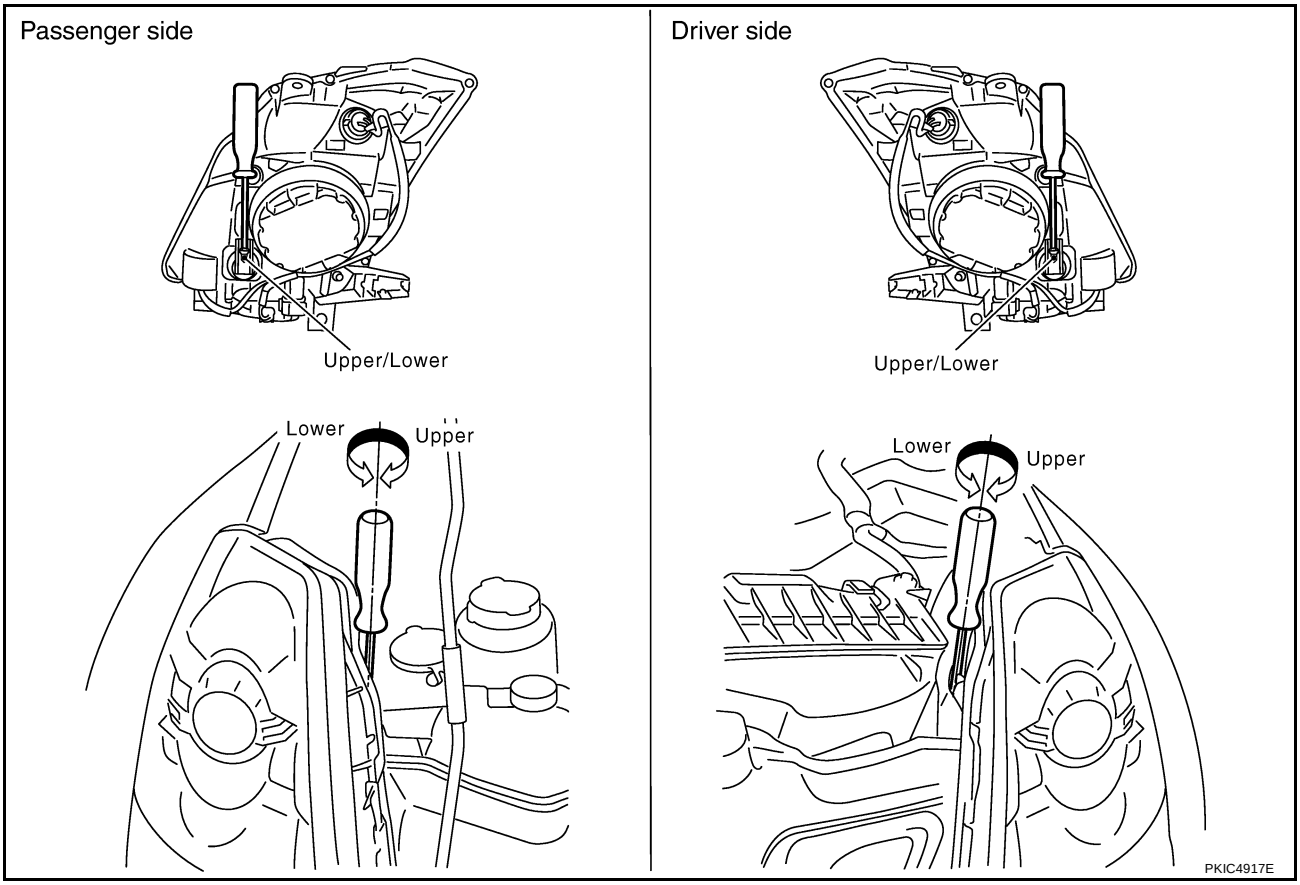
2. CHECK 2: XENON HEADLAMP LIGHTING

Install normal HID control unit to corresponding xenon headlamp, and check if lamp lights up.

OK or NG

OK >> Replace HID control unit.
NG >> GO TO 3.

3. CHECK 3: XENON HEADLAMP LIGHTING



Install normal xenon lamp housing assembly to corresponding xenon headlamp, and check if lamp lights up.

OK or NG

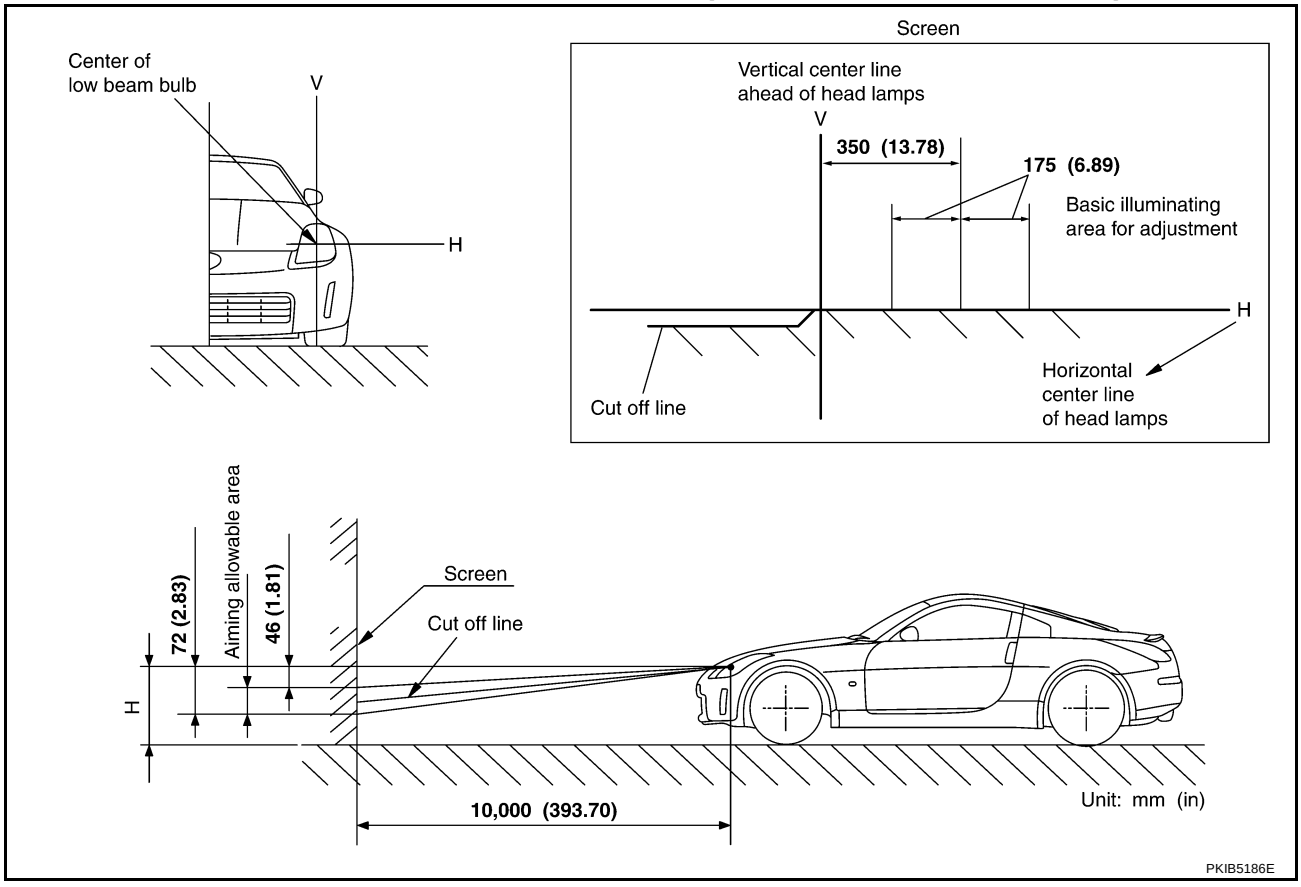
OK >> Replace xenon headlamp housing assembly. [Malfunction in starter (boosting circuit) in xenon headlamp housing]
NG >> INSPECTION END

Aiming Adjustment

NKS004X7

PREPARATION BEFORE ADJUSTING

For details, refer to the regulations in your own country.
Before performing aiming adjustment, check the following.



1. Keep all tires inflated to correct pressures.
2. Place vehicle on level surface.

3. Set that there is no-load in vehicle other than the driver (or equivalent weight placed in driver's position). Coolant, engine oil filled up to correct level and full fuel tank.

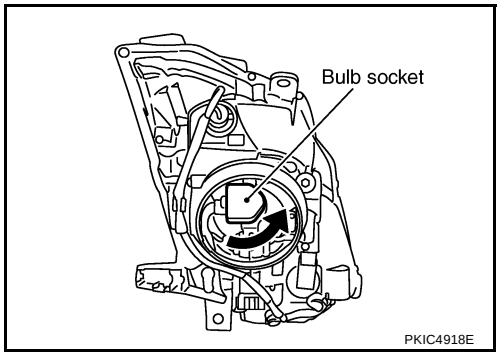
LOW BEAM AND HIGH BEAM

1. Turn headlamp low beam ON.
2. Use adjusting screws to perform aiming adjustment.

ADJUSTMENT USING AN ADJUSTMENT SCREEN (LIGHT/DARK BORDERLINE)

If the vehicle front body has been repaired and/or the headlamp assembly has been replaced, check aiming. Use the aiming chart shown in the figure.

- Basic illumination area for adjustment should be within the range shown on the aiming chart. Adjust headlamp accordingly.



Bulb Replacement

NKS004X8

HEADLAMP HIGH/LOW BEAM

1. Turn lighting switch OFF.
2. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal or remove power fuse.

   CAUTION:
   After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
3. Remove headlamp. Refer to LT-29, "Removal and Installation" .
4. Turn plastic cap counterclockwise and unlock it.
5. Turn bulb socket counterclockwise and unlock it.
6. Unlock retaining spring and remove bulb from headlamp.
7. Installation is reverse order of removal.

NOTE:
After installation, perform aiming adjustment. Refer to LT-27, "Aiming Adjustment" .

Headlamp high/low beam (Xenon) : 12V - 35W (D2R)

PARKING LAMP

1. Turn lighting switch OFF.
2. Remove fender protector (front). Refer to EI-21, "FENDER PROTECTOR" .
3. Turn bulb socket counterclockwise and unlock it.
4. Remove bulb from its socket.
5. Installation is reverse order of removal.

Parking lamp : 12V - 5W

FRONT TURN SIGNAL LAMP

1. Turn lighting switch OFF.
2. Remove fender protector (front). Refer to EI-21, "FENDER PROTECTOR" .
3. Turn bulb socket counterclockwise and unlock it.
4. Remove bulb from its socket.
5. Installation is reverse order of removal.

Front turn signal lamp/— : 12V - 28/8W (amber)

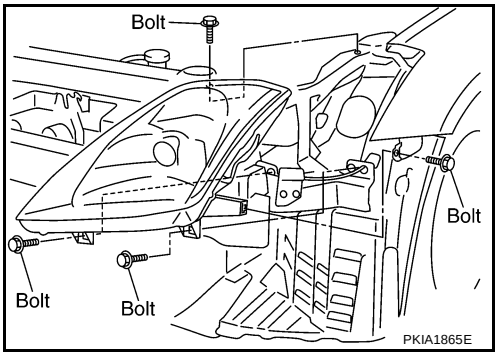
FRONT SIDE MARKER LAMP

1. Remove headlamp. Refer to LT-29, "Removal and Installation" .
2. Replacement integral with headlamp housing assembly.
3. Installation is reverse order of removal.

Front side marker lamp : LED

CAUTION:
After installing bulb, be sure to install plastic cap and bulb socket securely to insure watertightness.

Removal and Installation



NKS004X9

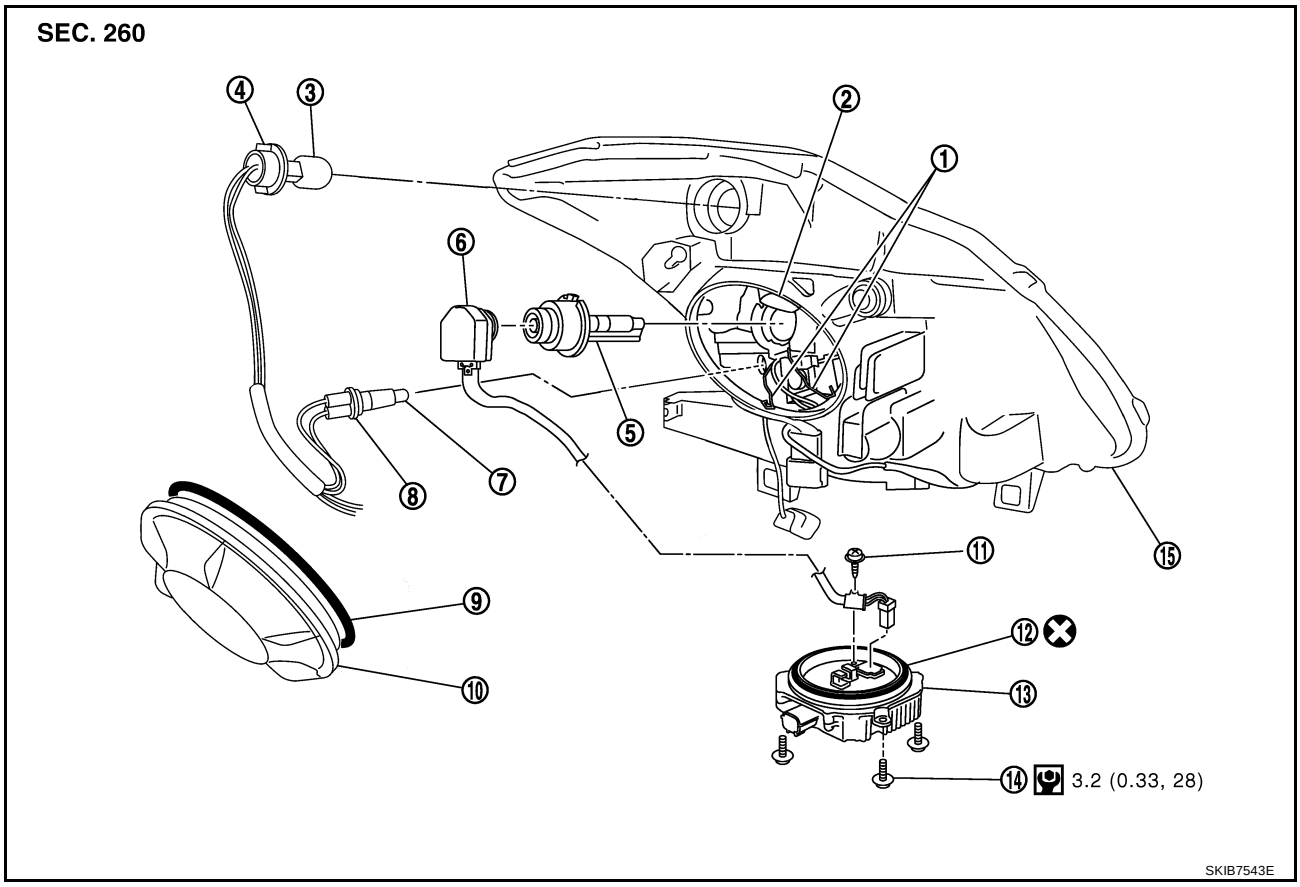
REMOVAL

1. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal or remove power fuse.

   CAUTION:
   After battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.

2. Remove front bumper fascia. Refer to EI-14, "FRONT BUMPER" .
3. Remove headlamp mounting bolts.
4. Pull head lamp toward vehicle front, disconnect connector, and remove headlamp.

INSTALLATION



Installation is the reverse order of removal.

Headlamp mounting bolt : 6.1 N·m (0.62 kg-m, 54 in-lb)

NOTE:
After installation, perform aiming adjustment. Refer to LT-27, "Aiming Adjustment" .

Disassembly and Assembly

NKS004XA

1. Retaining spring
2. Xenon bulb socket ground
3. Front turn signal lamp bulb
4. Front turn signal lamp bulb socket
5. Xenon bulb
6. Xenon bulb socket
7. Parking lamp bulb
8. Parking lamp bulb socket
9. Seal packing
10. Plastic cap
11. Ground screw
12. Seal packing
13. HID control unit
14. HID control unit mounting screw
15. Headlamp housing assembly

:N·m (kg-m, in-lb)

: Always replace after every disassembly.

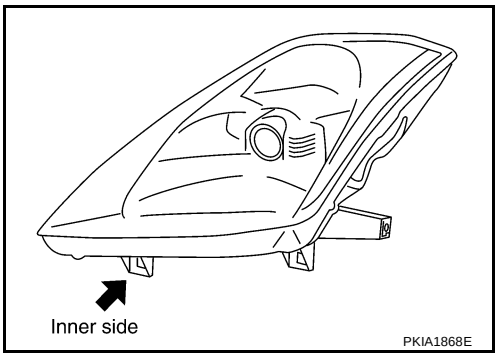
DISASSEMBLY

1. Turn plastic cap counterclockwise, and unlock it.
2. Turn xenon bulb socket counterclockwise, and unlock it.
3. Unlock retaining spring, and remove xenon bulb.
4. Disconnect xenon bulb socket ground.
5. Remove HID control unit mounting screws.
6. Remove ground screw from HID control unit.
7. Disconnect connectors from HID control unit.
8. Pull out xenon bulb socket from head lamp housing assembly.
9. Turn parking lamp bulb socket counterclockwise and unlock it.
10. Remove parking lamp bulb from its socket.
11. Turn front turn signal lamp bulb socket counterclockwise and unlock it.
12. Remove front turn signal lamp bulb from its socket.

ASSEMBLY

Assembly is the reverse order of disassembly.

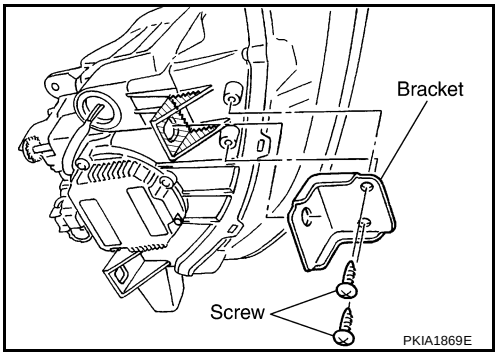
HID control unit mounting screw : 3.2 N·m (0.33 kg-m, 28 in-lb)



CAUTION:

- **When HID control unit is removed, reinstall it securely and avoid any looseness.**
- **After installing bulb, be sure to install plastic cap and bulb socket securely to insure watertightness**

Servicing to Replace Headlamps When Damaged

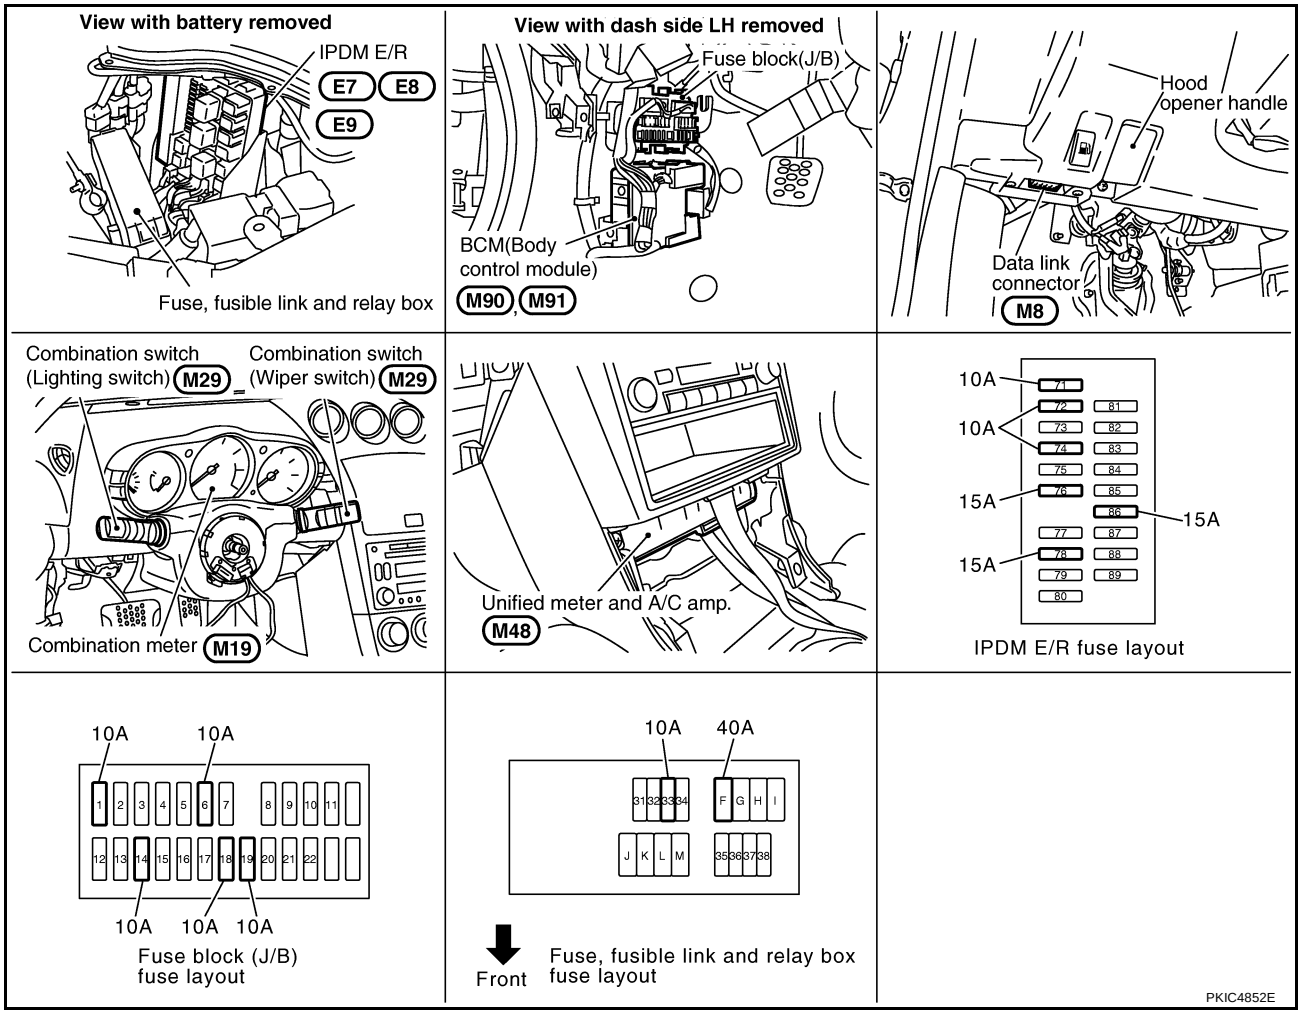


NKS004XB

If only installation part as shown in the figure is damaged, and headlamp housing itself is not damaged, repair can be completed easily by installing correction brackets.

INSTALLATION OF HEADLAMP BRACKET

1. Remove headlamps. Refer to LT-29, "Removal and Installation" .
2. Cut damaged section of installation part, then shape with sandpaper.
3. Attach each correction bracket to headlamp housing boss with 2 screws.



HEADLAMP (FOR CANADA) - DAYTIME LIGHT SYSTEM -

PFP:26010

Component Parts and Harness Connector Location

NKS004XC

System Description

NKS004XD

- BCM (Body Control Module) controls headlamps low beam, high beam and daytime light operation.
- Daytime light system operates parking, license plate, side marker, tail lamps and headlamp low beam according to signals from unified meter and A/C amp. (receive parking brake switch signal through CAN communication), ECM (receive engine status signal through CAN communication), lighting switch, and ignition switch.
- IPDM E/R (Intelligent Power Distribution Module Engine Room) operates parking, license plate, side marker, tail lamps, headlamp bulbs and high beam solenoids according to CAN communication signals from BCM.
- Unified meter and A/C amp. operates high beam indicator lamp according to CAN communication signals from BCM.

OUTLINE

Power is supplied at all times

- to headlamp high relay, located in IPDM E/R and
- to headlamp low relay, located in IPDM E/R, from battery directly,
- through 15A fuse [No. 78, located in IPDM E/R]
- to CPU (central processing unit) located in IPDM E/R,
- through 40A fusible link [letter F, located in the fuse, fusible link and relay box]
- to BCM terminal 55,
- through 10A fuse [No.18, located in fuse block (J/B)]

- to BCM terminal 42,
- through 10A fuse [No. 71, located in IPDM E/R]
- to CPU located in IPDM E/R,
- through 10A fuse [No.19, located in fuse block (J/B)]
- to combination meter terminal 24,
- through 10A fuse [No.33, located in the fuse, fusible link and relay box]
- to daytime light relay terminals 1 and 3.

With ignition switch in ON or START position, power is supplied

- to CPU located in IPDM E/R,
- through 10A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No.14, located in fuse block (J/B)]
- to combination meter terminal 23.

With ignition switch in ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to IPDM E/R terminals 38 and 60
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to BCM terminal 52
- through grounds M30 and M66,
- to combination meter terminals 10, 11 and 12
- through grounds M30 and M66.

HEADLAMP OPERATION

Low Beam Operation

With the lighting switch in 2ND position, the BCM receives input signal requesting the headlamps to illuminate. This input signal is communicated to the IPDM E/R through CAN communication. The CPU located in the IPDM E/R controls the headlamp low relay turned ON, which when energized, supplies power,

- through 15A fuse [No. 76, located in IPDM E/R]
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 7,
- through 15A fuse [No. 86, located in IPDM E/R]
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 7.

Ground is supplied

- to front combination lamp RH terminal 4, and
- to front combination lamp LH terminal 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With power and ground supplied, headlamp bulbs illuminate.

High Beam Operation /Flash-to-Pass Operation

With the lighting switch in 2ND position and placed in HIGH or PASS position, the BCM receives input signal requesting headlamp high beams to illuminate. High beam request signal and low beam request signal is communicated to the IPDM E/R through CAN communication. The CPU located in the IPDM E/R controls headlamp high relay and headlamp low relay turned ON, which when energized, supplies power,

- through 15A fuse [No. 76, located in IPDM E/R]
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 7,

- through 15A fuse [No. 86, located in IPDM E/R]
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 7,
- through 10A fuse [No.72, located in IPDM E/R]
- through IPDM E/R terminal 27
- to front combination lamp RH terminal 3,
- through 10A fuse [No.74, located in IPDM E/R]
- through IPDM E/R terminal 28
- to front combination lamp LH terminal 3.

Ground is supplied

- to front combination lamp RH terminal 4, and
- to front combination lamp LH terminal 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With the power and ground supplied, headlamp bulbs illuminate. High beam solenoids move the bulb shades in the front combination lamps, and the bulb shades change to high beam position.
Unified meter and A/C amp. receives signal from BCM through CAN communication, and then combination meter indicator illuminates high beam,

DAYTIME LIGHT OPERATION

Once the parking brake is turned OFF after ignition switch ON, if the lighting switch is turned OFF while engine is running, the BCM outputs the signal requesting parking, license plate, side marker, tail lamps and headlamp low beam to illuminate. This output signal is communicated to the IPDM E/R through CAN communication. The CPU located in the IPDM E/R controls headlamp low relay and daytime light relay turned ON, which when energized, supplies power,

- through 15A fuse [No.76, located in the IPDM E/R]
- through IPDM E/R terminal 20
- to front combination lamp RH terminal 7,
- through 15A fuse [No.86, located in the IPDM E/R]
- through IPDM E/R terminal 30
- to front combination lamp LH terminal 7,
- through 10A fuse [No.33, located in the fuse, fusible link and relay box]
- through daytime light relay terminal 2
- to IPDM E/R terminal 55,
- through daytime light relay terminal 5
- to front combination lamp RH terminal 6
- to front combination lamp LH terminal 6
- to rear combination lamp RH terminal 2
- to rear combination lamp LH terminal 2
- to license plate lamp RH terminal 2
- to license plate lamp LH terminal 2.

Ground is supplied

- to front combination lamp RH terminal 4
- to front combination lamp LH terminal 4
- to front combination lamp RH terminal 8
- to front combination lamp LH terminal 8
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to rear combination lamp RH terminal 3
- to rear combination lamp LH terminal 3
- to license plate lamp RH terminal 1

- to license plate lamp LH terminal 1
- through grounds B5, B6, D105 and T14 (Coupe models)
- through grounds B5, B6 and T14 (Roadster models).

With power and ground supplied, the headlamp low, parking, license plate and tail lamps illuminate.

OPERATION

Engine		With engine stopped									With engine running								
Lighting switch		OFF			1ST			2ND			OFF			1ST			2ND		
		OFF	Hi	P	T	Hi	P	Lo	Hi	P	OFF	Hi	P	T	Hi	P	Lo	Hi	P
Headlamp	High beams	–	–	–	–	–	×	–	×	×	–	–	×	–	–	×	–	×	×
	Low beams	–	–	–	–	–	–	×	–	–	×*	×*	–	×*	×*	–	×	–	–
Parking, license plate, side marker and tail lamps		–	–	–	×	–	×	×	×	×	×*	×*	–	×	×	×	×	×	×
Illumination		–	–	–	×	–	×	×	×	×	–	–	–	×	×	×	×	×	×

- T: “TAIL LAMP” position
- Hi: “HIGH BEAM” position
- Lo: “LOW BEAM” position
- P: “FLASH TO PASS” position
- ×: Lamp “ON”
- –: Lamp “OFF”
- *: Once the parking brake is turned OFF after ignition switch ON, parking, license plate, side marker, tail lamps and headlamp low are turned ON.

COMBINATION SWITCH READING FUNCTION

Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION" .

EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (ON), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.
Under this condition, the headlamps remain illuminated for 5 minutes, then the headlamps are turned off.
Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

INTERLOCKED OPERATION WITH REMOTE KEYLESS ENTRY SYSTEM

Refer to BL-59, "REMOTE KEYLESS ENTRY SYSTEM" .

INTERLOCKED OPERATION WITH VEHICLE SECURITY SYSTEM

Refer to BL-125, "VEHICLE SECURITY (THEFT WARNING) SYSTEM" .

XENON HEADLAMP

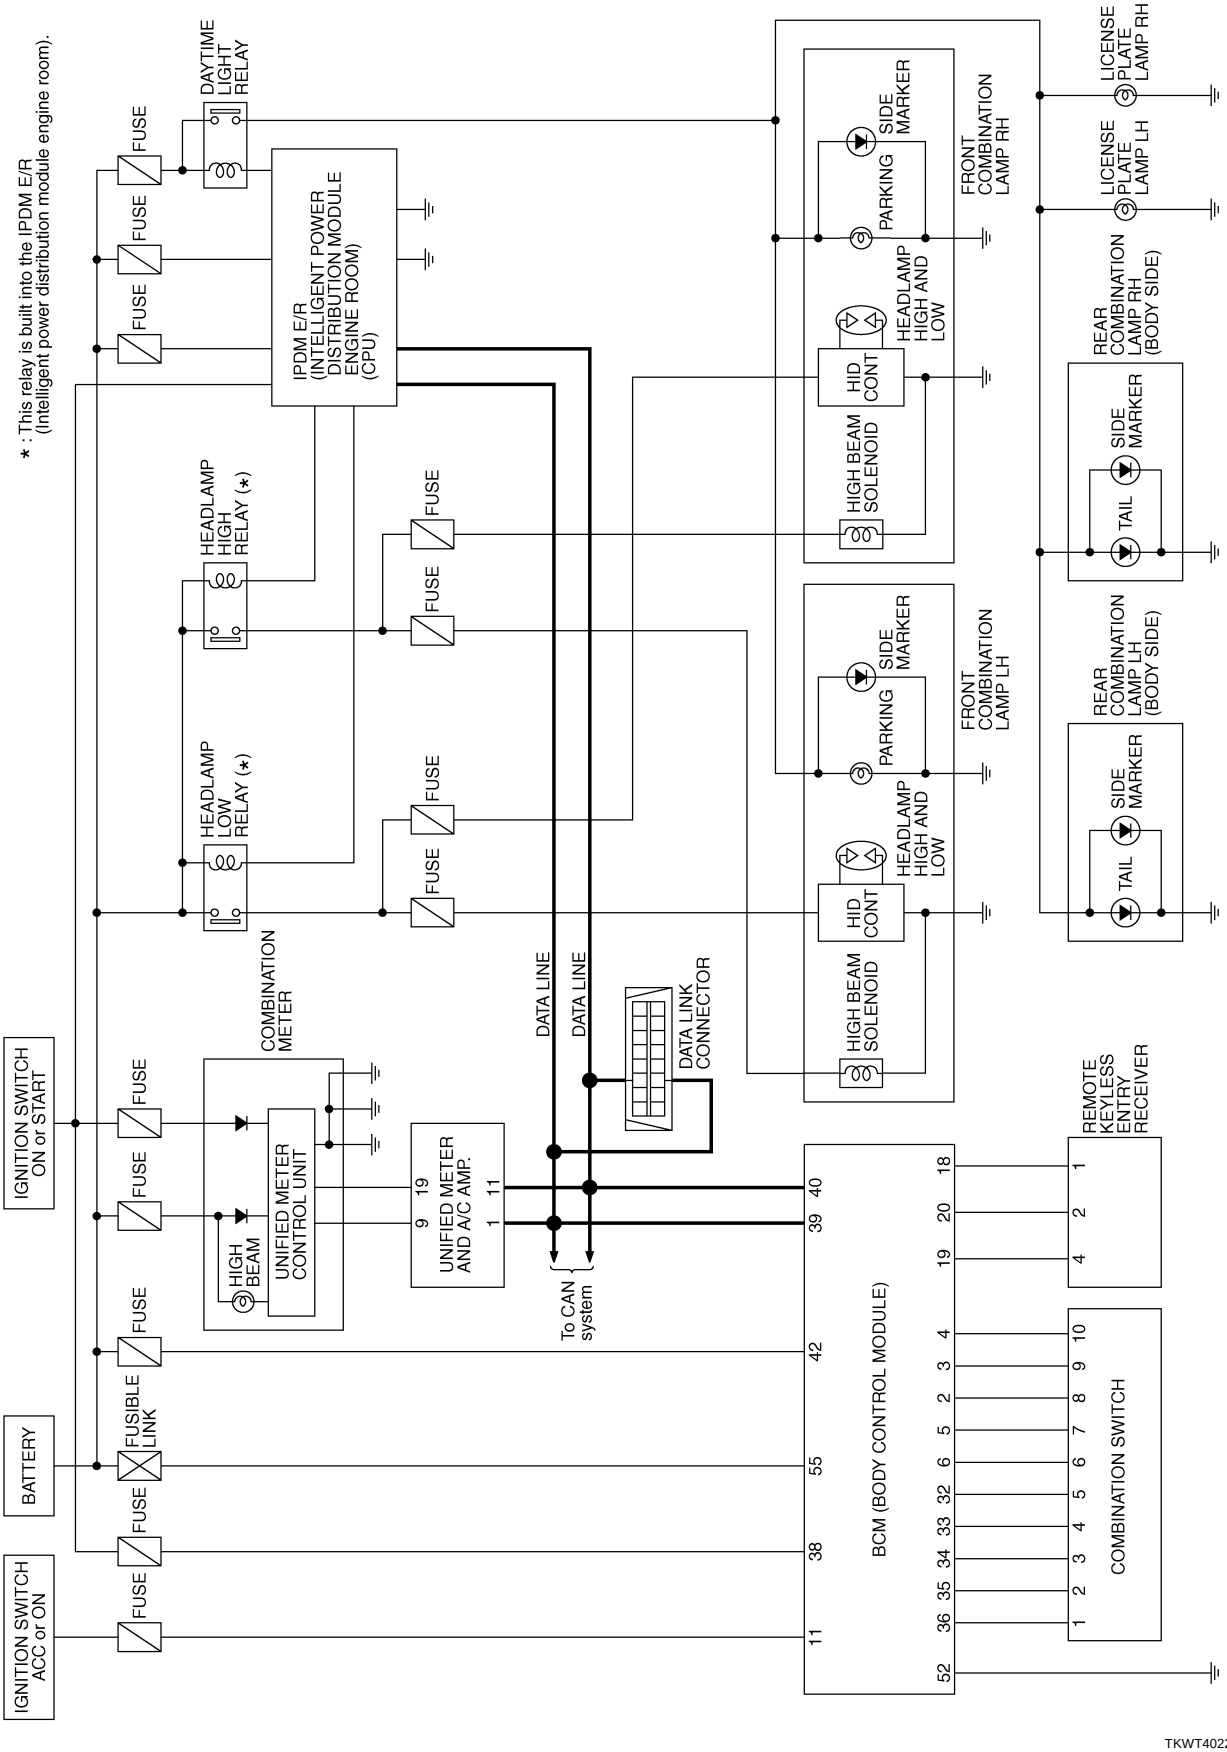
Xenon type lamps are used for headlamps. Xenon bulbs do not use a filament. Instead, they produce light when a high voltage current is passed between two tungsten electrodes through a mixture of xenon (an inert gas) and certain other metal halides. In addition to strong lighting power, electronic control of the power supply gives the headlamps stable quality and tone color.
Followings are some advantages of the xenon type headlamp.

- The light produced by the headlamps is white color similar to sunlight that is easy to the eyes.
- Light output is nearly double that of halogen headlamps, affording increased area of illumination.
- Counter-reflected luminance increases and the contrast enhances on the wet road in the rain. That makes visibility go up more than the increase of the light volume.
- Power consumption is approximately 25 percent less than halogen headlamps, reducing battery load.

CAN Communication System Description

NKS004XE

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NKS004XF

Refer to LAN-48, "CAN System Specification Chart" .

Terminals and Reference Values for BCM

NKS004XI

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to LT-91, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
2	GY	Combination switch input 5	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 1ST ● Lighting switch HIGH beam (Operates only HIGH beam switch)	 PKIB4959J Approx. 1.0 V
					Lighting switch 2ND	 PKIB4953J Approx. 2.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch)	 PKIB4959J Approx. 1.0 V
11	LG	Ignition switch (ACC)	ACC	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Lighting switch 1ST (The same result with lighting switch 2ND)	 PKIB4958J Approx. 1.2 V
34	W/L	Combination switch output 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V

How to Proceed With Trouble Diagnosis

NKS004XK

1. Confirm the symptom or customer complaint.
2. Understand operation description and function description. Refer to LT-32, "System Description" .
3. Perform the preliminary check. Refer to LT-47, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does headlamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

NKS004XL

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES AND FUSIBLE LINK

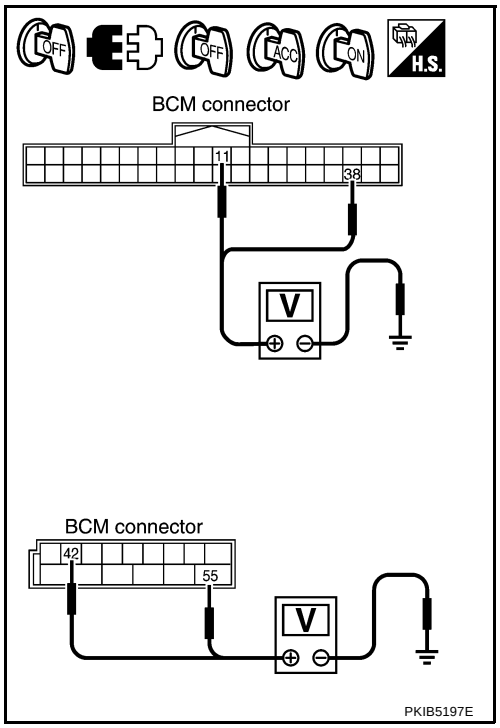
Check for blown fuses and fusible link.

UNIT	POWER SOURCE	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START position	1
	Ignition switch ACC or ON position	6

UNIT	POWER SOURCE	Fuse and fusible link No.
IPDM E/R	Battery	33
		72
		74
		76
		86

Refer to LT-38, "Wiring Diagram — DTRL —" .

OK or NG



OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

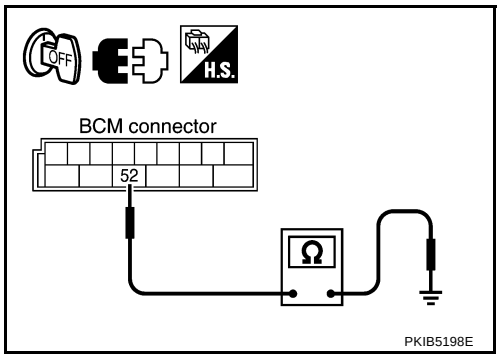
Terminals			Ignition switch position		
(+)		(-)	OFF	ACC	ON
BCM connector	Terminal				
M90	11	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage	Battery voltage

OK or NG

OK >> GO TO 3.

NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT



Check continuity between BCM harness connector and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END

NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS004XM

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis part	Diagnosis mode	Description
HEADLAMP	WORK SUPPORT	Changes the setting for each function.
	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Operation of electrical loads can be checked by sending drive signal to them.
BCM	SELF-DIAG RESULTS	BCM performs self-diagnosis of CAN communication.
	CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.

WORK SUPPORT
Display Item List

Item	Description	CONSULT-III	Factory setting
BATTERY SAVER SET	Exterior lamp battery saver control mode can be changed in this mode. Select exterior lamp battery saver control mode between two ON/OFF.	ON	×
		OFF	—

DATA MONITOR
Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “IGN position (ON)/OFF, ACC position (OFF)” judged from the ignition switch signal.
ACC ON SW	“ON/OFF”	Displays “ACC (ON)/OFF, Ignition OFF (OFF)” status judged from ignition switch signal.
HI BEAM SW	“ON/OFF”	Displays status (high beam switch: ON/Others: OFF) of high beam switch judged from lighting switch signal.
HEAD LAMP SW 1	“ON/OFF”	Displays status (headlamp switch 1: ON/Others: OFF) of headlamp switch 1 judged from lighting switch signal.
HEAD LAMP SW 2	“ON/OFF”	Displays status (headlamp switch 2: ON/Others: OFF) of headlamp switch 2 judged from lighting switch signal.
LIGHT SW 1 ST	“ON/OFF”	Displays status (lighting switch 1ST or 2ND position: ON/Others: OFF) of lighting switch judged from lighting switch signal.
PASSING SW	“ON/OFF”	Displays status (flash-to-pass switch: ON/Others: OFF) of flash-to-pass switch judged from lighting switch signal.
FR FOG SW NOTE	“ON/OFF”	—
DOOR SW - DR	“ON/OFF”	Displays status of driver door as judged from driver door switch signal. (Door is open: ON/ Door is closed: OFF)
DOOR SW - AS	“ON/OFF”	Displays status of passenger door as judged from passenger door switch signal. (Door is open: ON/Door is closed: OFF)
DOOR SW - RR NOTE	“OFF”	—
DOOR SW - RL NOTE	“OFF”	—
BACK DOOR SW	“ON/OFF”	● Displays status of back door as judged from back door switch signal. (Coupe models) ● Displays status of rear trunk hood as judged from trunk lamp switch signal. (Roadster models)
TURN SIGNAL R	“ON/OFF”	Displays status (Turn right: ON/Others: OFF) as judged from lighting switch signal.
TURN SIGNAL L	“ON/OFF”	Displays status (Turn left: ON/Others: OFF) as judged from lighting switch signal.
ENGINE RUN	“ON/OFF”	Displays status (engine running: ON/ engine stopped: OFF) of engine judged from engine run signal.
PKB SW	“ON/OFF”	Displays status (parking brake released: ON/ parking brake applied: OFF) of parking brake switch judged from parking brake switch signal.
CARGO LAMP SW NOTE	“OFF”	—

NOTE:
This item is displayed, but cannot be monitored.

ACTIVE TEST
Display Item List

Test item	Description
TAIL LAMP	Allows tail lamp relay to operate by switching ON–OFF.
HEAD LAMP	Allows headlamp relay to operate by switching ON–OFF.
FR FOG LAMP NOTE	—
CORNERING LAMP NOTE	—
DAYTIME RUNNING LIGHT	Allows headlamp low relay and daytime light relay to operate switching ON–OFF.

NOTE:
This item is displayed, but cannot be tested.

CONSULT-III Function (IPDM E/R)

NKS004XN

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

Check Item, Diagnosis Mode	Description
SELF-DIAG RESULTS	Refer to PG-18, "SELF-DIAG RESULTS" .
DATA MONITOR	The input/output data of IPDM E/R is displayed in real time.
CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.
ACTIVE TEST	IPDM E/R sends a drive signal to electronic components to check their operation.

DATA MONITOR
All Signals, Main Signals, Selection From Menu

Item name	CONSULT-III screen display	Display or unit	Monitor item selection			Description
			ALL SIG-NALS	MAIN SIGNALS	SELECTION FROM MENU	
Position lights request	TAIL&CLR REQ	ON/OFF	×	×	×	Signal status input from BCM
Headlamp low beam request	HL LO REQ	ON/OFF	×	×	×	Signal status input from BCM
Headlamp high beam request	HL HI REQ	ON/OFF	×	×	×	Signal status input from BCM
Daytime running light request	DTRL REQ	ON/OFF	×		×	Signal status input from BCM

NOTE:
Perform monitoring of IPDM E/R data with ignition switch ON. When ignition switch is at ACC, the display may not be correct.

ACTIVE TEST
Display Item List

Test item	CONSULT-III screen display	Description
Tail lamp relay output	TAIL LAMP	Allows tail lamp relay to operate by switching operation ON–OFF at your option.
Headlamp relay (HI, LO) output	LAMPS	Allows headlamp relay (HI, LO) to operate by switching operation (OFF, HI ON, LO ON) at your option (Headlamp high beam repeats ON–OFF every 1 second).

Daytime Light Control Does Not Operate

NKS004XO

NOTE:
Check if parking, license plate, side marker, tail lamps and head lamps low operates normally.

1. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "DAYTIME RUNNING LIGHT" of BCM active test item.
2. With operating the test item, check the headlamp low beam, parking, license plate and tail lamps operate.

Headlamp low beam, parking, license plate and tail lamps should operate.

OK or NG

OK >> GO TO 2.
NG >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

2. CHECK INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP" of BCM data monitor item.
2. With the engine running or stop, check the monitor status.

Engine running	**: ENGINE RUN ON**
Engine stop	**: ENGINE RUN OFF**

3. With operating the parking brake, check the monitor status.

Parking brake ON	**: PKB SW ON**
Parking brake OFF	**: PKB SW OFF**

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

Headlamp Does Not Change To High Beam (Both Sides)

NKS004XP

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is HIGH BEAM	**: HI BEAM SW ON**

Without CONSULT-III
Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. HEADLAMP ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "LAMPS" of IPDM E/R active test item.
2. With operating the test item, check the headlamp high beam operation.

Headlamp high beam should operate.
(Headlamp high beam repeats ON-OFF every 1 second).

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. Check that the headlamp high beam operation.

Headlamp high beam should operate.

OK or NG

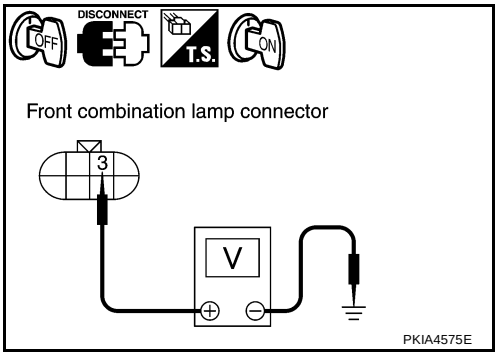
OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK IPDM E/R

1. Select "HL LO REQ" and "HL HI REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status

When lighting switch is	**: HL LO REQ ON**
HIGH BEAM	**: HL HI REQ ON**

OK or NG



OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK HEADLAMP INPUT SIGNAL

CONSULT-III ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Select "LAMPS" of IPDM E/R active test item
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

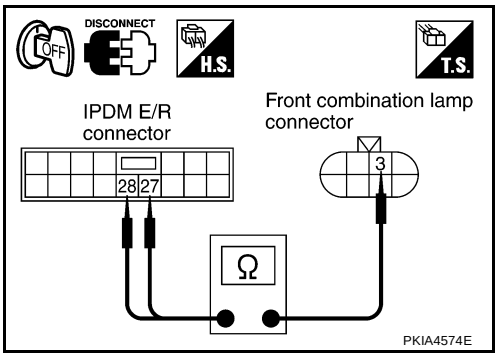
NOTE:
Headlamp high beam repeats ON–OFF every 1 second.

Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		

IPDM E/R AUTO ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

NOTE:
Headlamp high beam repeats ON–OFF every 1 second.



Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		

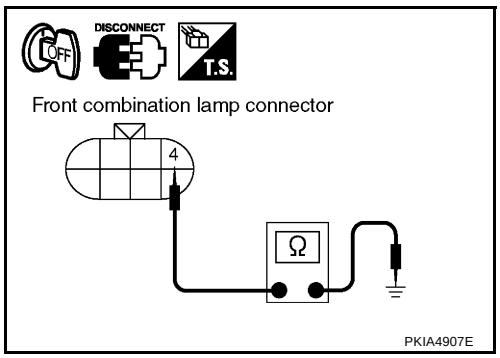
OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp (RH and LH) harness connector.

Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	27	E24	3	Yes
LH		28	E40	3	



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

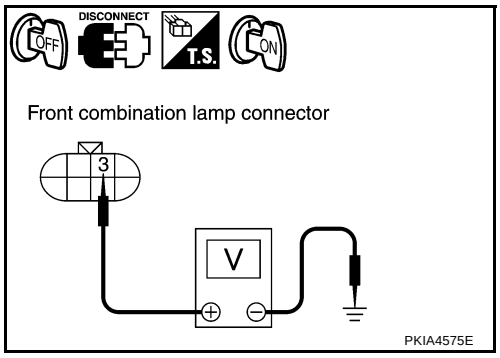
6. CHECK HEADLAMP GROUND

Check continuity between front combination lamp (RH and LH) harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness, connector and bulb.
NG >> Repair harness or connector.



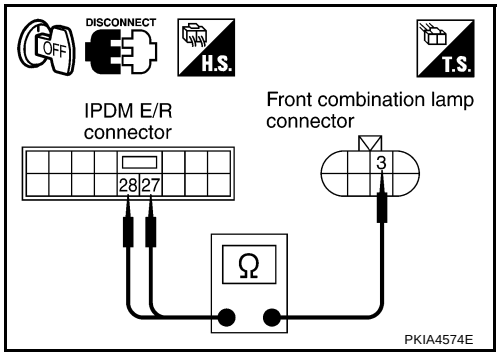
Headlamp Does Not Change To High Beam (One Side)

NKS004XQ

1. CHECK HEADLAMP INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH or LH connector.
3. Turn ignition switch ON.
4. Lighting switch is turned HIGH BEAM position.
5. Check voltage between front combination lamp RH or LH harness connector and ground.

Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	3	Ground	Battery voltage
LH	E40	3		



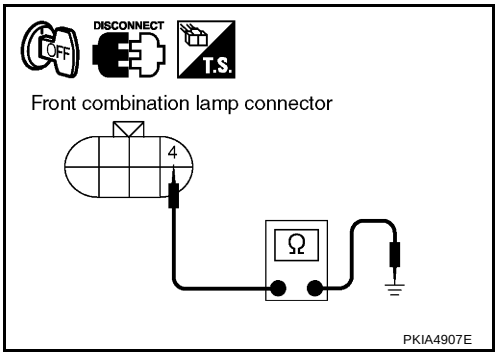
OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp RH or LH harness connector.

Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	27	E24	3	Yes
LH		28	E40	3	



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

3. CHECK HEADLAMP GROUND

Check continuity between front combination lamp RH or LH harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness and connector.
NG >> Repair harness or connector.

High Beam Indicator Lamp Does Not Illuminate

NKS004XR

1. CHECK BULB

Check bulb of high beam indicator lamp.

OK or NG

OK >> Replace combination meter. Refer to DI-24, "Removal and Installation for Combination Meter" .
NG >> Replace indicator bulb.

Headlamp Low Beam Does Not Illuminate (Both Sides)

NKS004XS

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP SW1" and "HEAD LAMP SW2" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 2ND : HEAD LAMP SW 1 ON
: HEAD LAMP SW 2 ON

CHECK COMBINATION SWITCH
Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. HEADLAMP ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "LAMPS" of IPDM E/R active test item.
2. With operating the test item, check the headlamp low beam operation.

Headlamp low beam should operate.

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. Check that the headlamp low beam operation.

Headlamp low beam should operate.

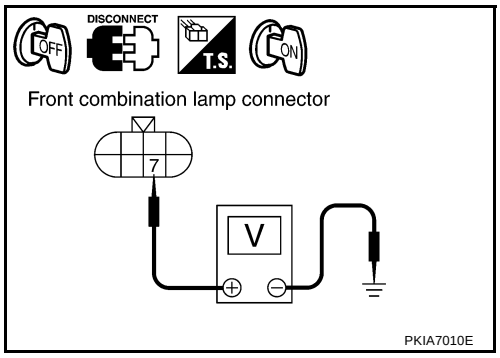
OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK IPDM E/R

1. Select "HL LO REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 2ND position : HL LO REQ ON



OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK HEADLAMP INPUT SIGNAL

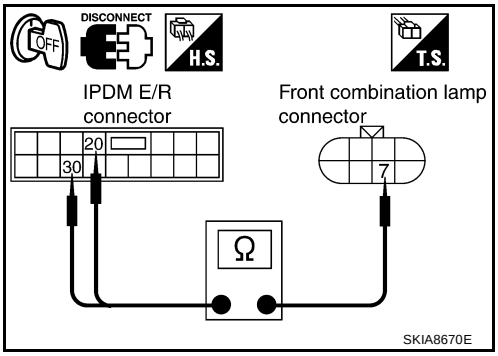
CONSULT-III ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Select "LAMPS" of IPDM E/R active test item.
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.

Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

IPDM E/R AUTO ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH and LH connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp (RH and LH) harness connector and ground.



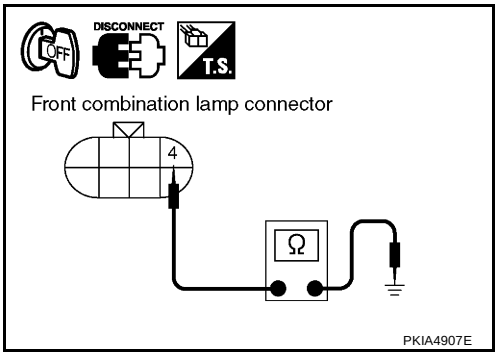
Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp (RH and LH) harness connector.



Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	20	E24	7	Yes
LH		30	E40	7	

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

6. CHECK HEADLAMP GROUND

1. Turn ignition switch OFF.
2. Check continuity between front combination lamp (RH and LH) harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

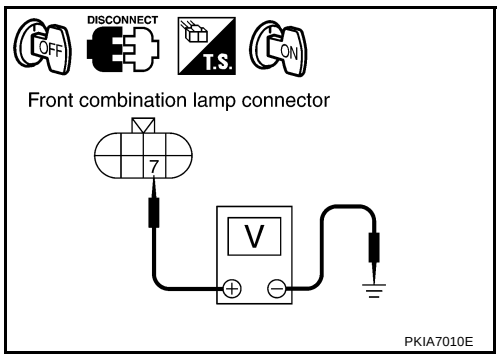
OK or NG

OK >> Check headlamp harness and connectors, ballasts (HID control unit), and xenon bulbs. Refer to LT-60, "Xenon Headlamp Trouble Diagnosis" .
NG >> Repair harness or connector.

Headlamp Low Beam Does Not Illuminate (One Side)

NKS004XT

1. CHECK BULB



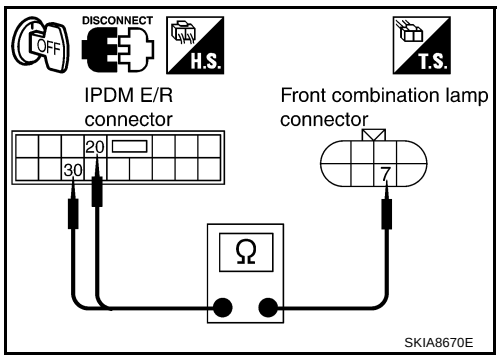
Check ballast (HID control unit) and xenon bulb of lamp which does not illuminate. Refer to LT-60, "Xenon Headlamp Trouble Diagnosis" .

OK or NG

OK >> GO TO 2.
NG >> Replace malfunctioning part.

2. CHECK HEADLAMP INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect front combination lamp RH or LH connector.
3. Turn ignition switch ON.
4. Lighting switch is turned 2ND position.
5. Check voltage between front combination lamp RH or LH harness connector and ground.



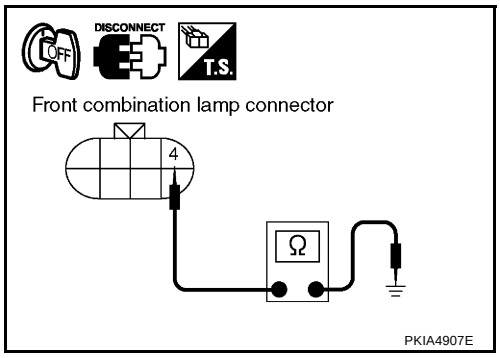
Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	7	Ground	Battery voltage
LH	E40	7		

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK HEADLAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp RH or LH harness connector.



Terminals					Continuity
IPDM E/R			Front combination lamp		
Connector		Terminal	Connector	Terminal	
RH	E7	20	E24	7	Yes
LH		30	E40	7	

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

4. CHECK HEADLAMP GROUND

Check continuity between front combination lamp RH or LH harness connector and ground.

Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	4		Yes
LH	E40	4		

OK or NG

OK >> Check headlamp harness and connector.
NG >> Repair harness or connector.

Headlamps Does Not Turn OFF

NKS004XU

1. CHECK HEADLAMP TURN OFF

Make sure that lighting switch is OFF. And check if headlamp turns off when ignition switch is turned OFF.

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "HEAD LAMP1" and "HEAD LAMP2" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is OFF : HEAD LAMP SW1 OFF
: HEAD LAMP SW2 OFF

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

3. CHECKING CAN COMMUNICATIONS BETWEEN BCM AND IPDM E/R

Perform self-diagnosis for “BCM” with CONSULT-III.

Display of self-diagnosis results

NO DTC>> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
CAN COMM CIRCUIT>> Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

General Information for Xenon Headlamp Trouble Diagnosis

NKS004XV

In most cases, malfunction of xenon headlamp - “does not illuminate”, “flickers” or “dark” - is caused by a malfunctioning xenon bulb. A malfunctioning HID control unit or lamp housing, however, may be a cause. Be sure to perform trouble diagnosis following the steps described below.

Caution:

NKS004XW

- Installation or removal of connector must be done with lighting switch OFF.
- Disconnect the battery cable from the negative terminal or remove power fuse.

  CAUTION:
  After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
- When the lamp is illuminated (when lighting switch is ON), never touch harness, HID control unit, inside of lamp, or lamp metal parts.
- To check illumination, temporarily install lamp in vehicle. Be sure to connect power at vehicle side connector.
- If error can be traced directly to electrical system, first check for items such as blown fuses and fusible links, broken wires or loose connectors, dislocated terminals, and improper connections.
- Never work with wet hands.
- Using a tester for HID control unit circuit trouble diagnosis is prohibited.
- Disassembling HID control unit or harnesses (bulb socket harness, ECM harness) is prohibited.
- Immediately after illumination, light intensity and color will fluctuate, but there is nothing wrong.
- When bulb has come to end of its life, brightness will drop significantly, it will flash repeatedly, or light color will turn reddish.

Xenon Headlamp Trouble Diagnosis

NKS004XX

1. CHECK 1: XENON HEADLAMP LIGHTING

Install normal xenon bulb to corresponding xenon bulb headlamp, and check if lamp lights up.

OK or NG

OK >> Replace xenon bulb.
NG >> GO TO 2.

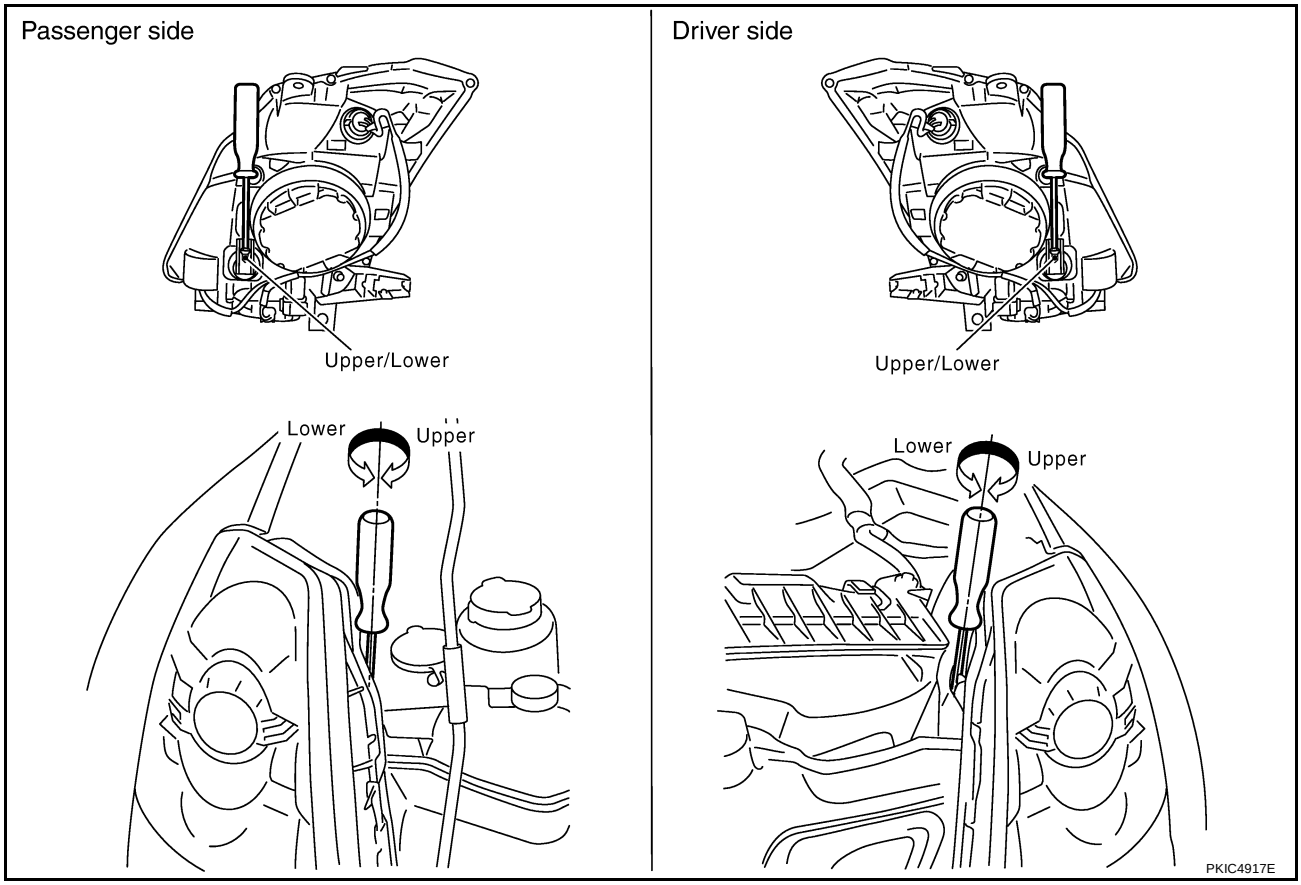
2. CHECK 2: XENON HEADLAMP LIGHTING

Install normal HID control unit to corresponding xenon headlamp, and check if lamp lights up.

OK or NG

OK >> Replace HID control unit.
NG >> GO TO 3.

3. CHECK 3: XENON HEADLAMP LIGHTING



Install normal xenon lamp housing assembly to corresponding xenon headlamp, and check if lamp lights up.

OK or NG

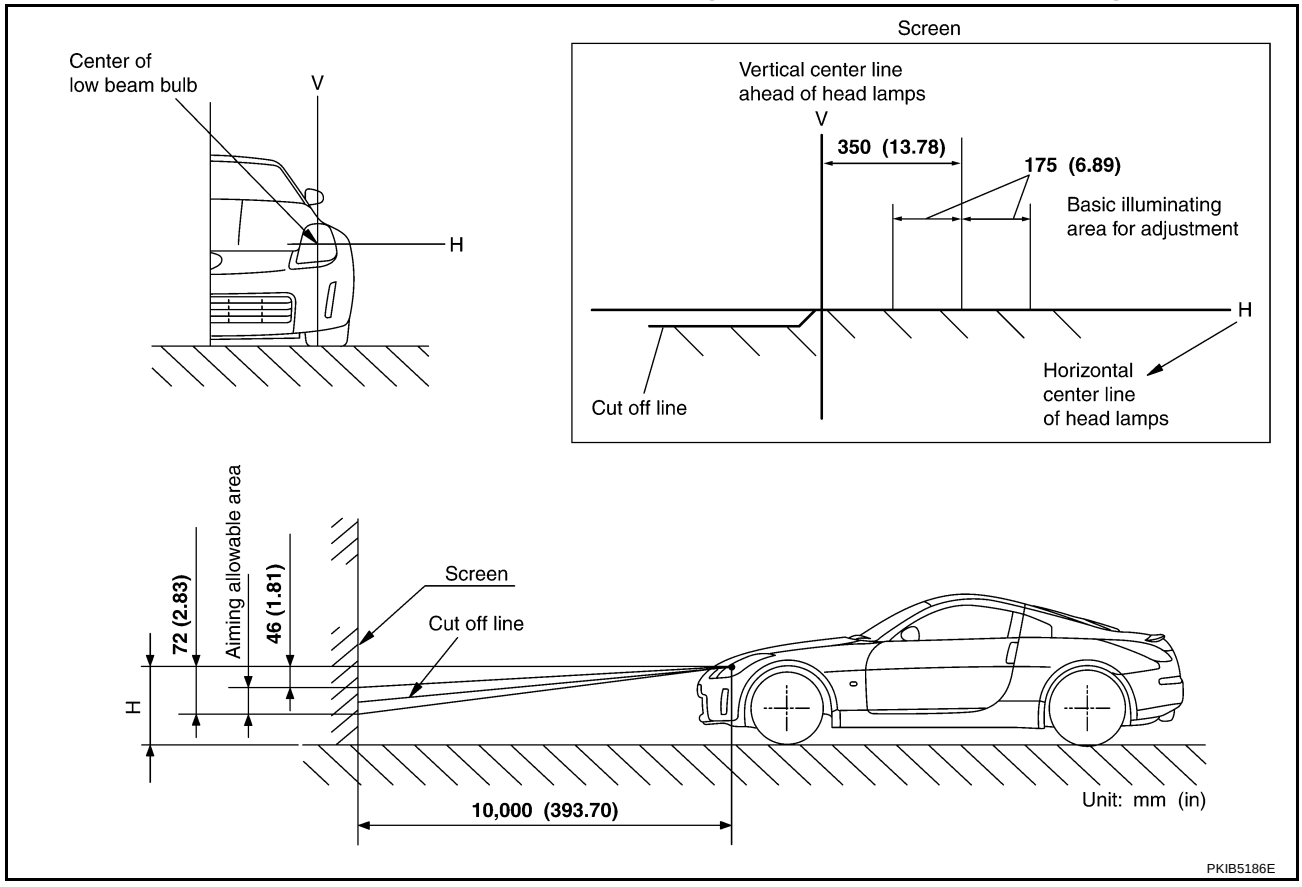
OK >> Replace xenon headlamp housing assembly. [Malfunction in starter (boosting circuit) in xenon headlamp housing]
NG >> INSPECTION END

Aiming Adjustment

NKS004XY

PREPARATION BEFORE ADJUSTING

For details, refer to the regulations in your own country.
Before performing aiming adjustment, check the following.



1. Keep all tires inflated to correct pressures.
2. Place vehicle on level surface.

3. Set that there is no-load in vehicle other than the driver (or equivalent weight placed in driver's position). Coolant, engine oil filled up to correct level and full fuel tank.

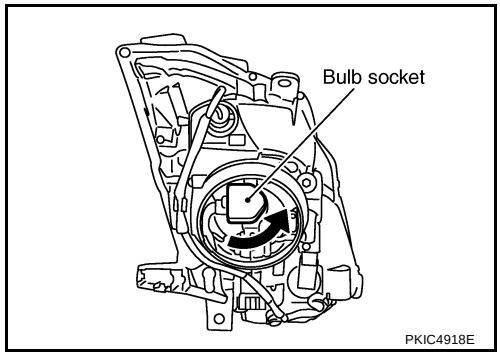
LOW BEAM AND HIGH BEAM

1. Turn headlamp low beam ON.
2. Use adjusting screws to perform aiming adjustment.

ADJUSTMENT USING AN ADJUSTMENT SCREEN (LIGHT/DARK BORDERLINE)

If the vehicle front body has been repaired and/or the headlamp assembly has been replaced, check aiming. Use the aiming chart shown in the figure.

- Basic illumination area for adjustment should be within the range shown on the aiming chart. Adjust headlamp accordingly.



Bulb Replacement

NKS004XZ

HEADLAMP HIGH/LOW BEAM

1. Turn lighting switch OFF.
2. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal or remove power fuse.

   CAUTION:
   After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.
3. Remove headlamp. Refer to LT-62, "Removal and Installation" .
4. Turn plastic cap counterclockwise and unlock it.
5. Turn bulb socket counterclockwise and unlock it.
6. Unlock retaining spring and remove bulb from headlamp.
7. Installation is the reverse order of removal.

NOTE:
After installation, perform aiming adjustment. Refer to LT-60, "Aiming Adjustment" .

Headlamp high/low beam (Xenon) : 12V - 35W (D2R)

PARKING LAMP

1. Turn lighting switch OFF.
2. Remove fender protector (front). Refer to EI-21, "FENDER PROTECTOR" .
3. Turn bulb socket counterclockwise and unlock it.
4. Remove bulb from its socket.
5. Installation is the reverse order of removal.

Parking lamp : 12V - 5W

FRONT TURN SIGNAL LAMP

1. Turn lighting switch OFF.
2. Remove fender protector (front). Refer to EI-21, "FENDER PROTECTOR" .
3. Turn bulb socket counterclockwise and unlock it.
4. Remove bulb from its socket.
5. Installation is the reverse order of removal.

Front turn signal lamp/— : 12V - 28/8W (amber)

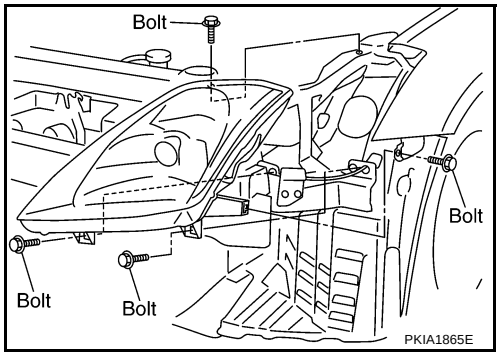
FRONT SIDE MARKER LAMP

1. Remove headlamp. Refer to LT-62, "Removal and Installation" .
2. Replacement integral with headlamp housing assembly.
3. Installation is reverse order of removal.

Front side marker lamp : LED

CAUTION:
After installing bulb, be sure to install plastic cap and bulb socket securely to insure watertightness.

Removal and Installation



NKS004Y0

REMOVAL

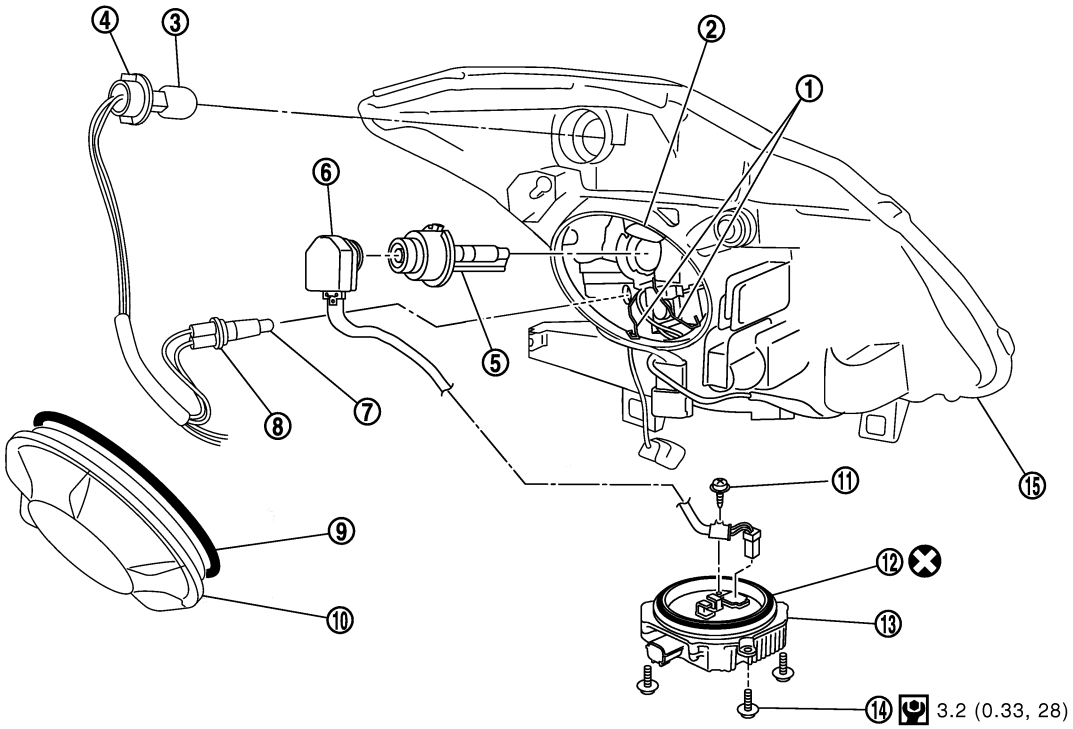
1. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal or remove power fuse.

   CAUTION:
   After the battery cables are disconnected, never open/close the driver and/or front passenger door with the window in the full up position. The automatic window adjusting function will not work and the side roof panel may be damaged.

2. Remove front bumper fascia. Refer to EI-14, "FRONT BUMPER" .
3. Remove headlamp mounting bolts.
4. Pull head lamp toward vehicle front, disconnect connector, and remove headlamp.

INSTALLATION

Installation is the reverse order of removal.



Headlamp mounting bolt : 6.1N·m (0.62 kg-m, 54 in lb)

NOTE:
After installation, perform aiming adjustment. Refer to LT-60, "Aiming Adjustment" .

Disassembly and Assembly

NKS004Y1

SEC. 260

1. Retaining spring	2. Xenon bulb socket ground	3. Front turn signal lamp bulb
4. Front turn signal lamp bulb socket	5. Xenon bulb	6. Xenon bulb socket
7. Parking lamp bulb	8. Parking lamp bulb socket	9. Seal packing
10. Plastic cap	11. Ground screw	12. Seal packing
13. HID control unit	14. HID control unit mounting screw	15. Headlamp housing assembly

:N·m (kg-m, in-lb)

: Always replace after every disassembly.

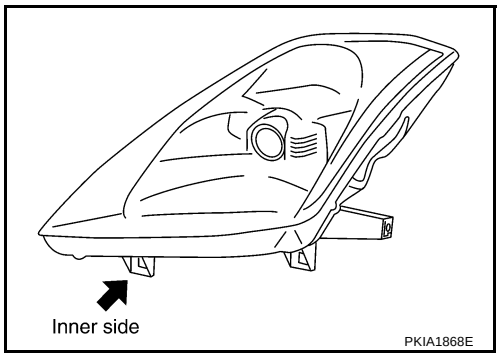
DISASSEMBLY

1. Turn plastic cap counterclockwise, and unlock it.
2. Turn xenon bulb socket counterclockwise, and unlock it.
3. Unlock retaining spring, and remove xenon bulb.
4. Disconnect xenon bulb socket ground.
5. Remove HID control unit mounting screws.
6. Remove ground screw from HID control unit.
7. Disconnect connectors from HID control unit.
8. Pull out xenon bulb socket from head lamp housing assembly.
9. Turn parking lamp bulb socket counterclockwise and unlock it.
10. Remove parking lamp bulb from its socket.
11. Turn front turn signal lamp bulb socket counterclockwise and unlock it.
12. Remove front turn signal lamp bulb from its socket.

ASSEMBLY

Assembly is the reverse order of disassembly.

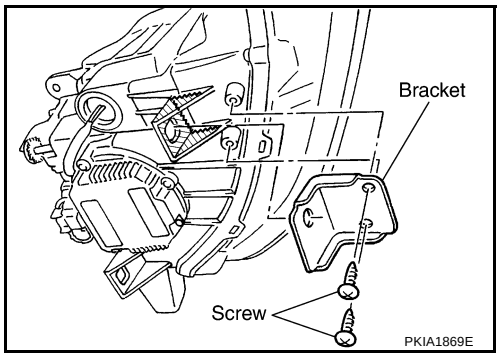
HID control unit mounting screw : 3.2 N·m (0.33 kg-m, 28 in-lb)



CAUTION:

- **When HID control unit is removed, reinstall it securely and avoid any looseness.**
- **After installing bulb, be sure to install plastic cap and bulb socket securely to insure watertightness**

Serving to Replace Headlamps When Damaged

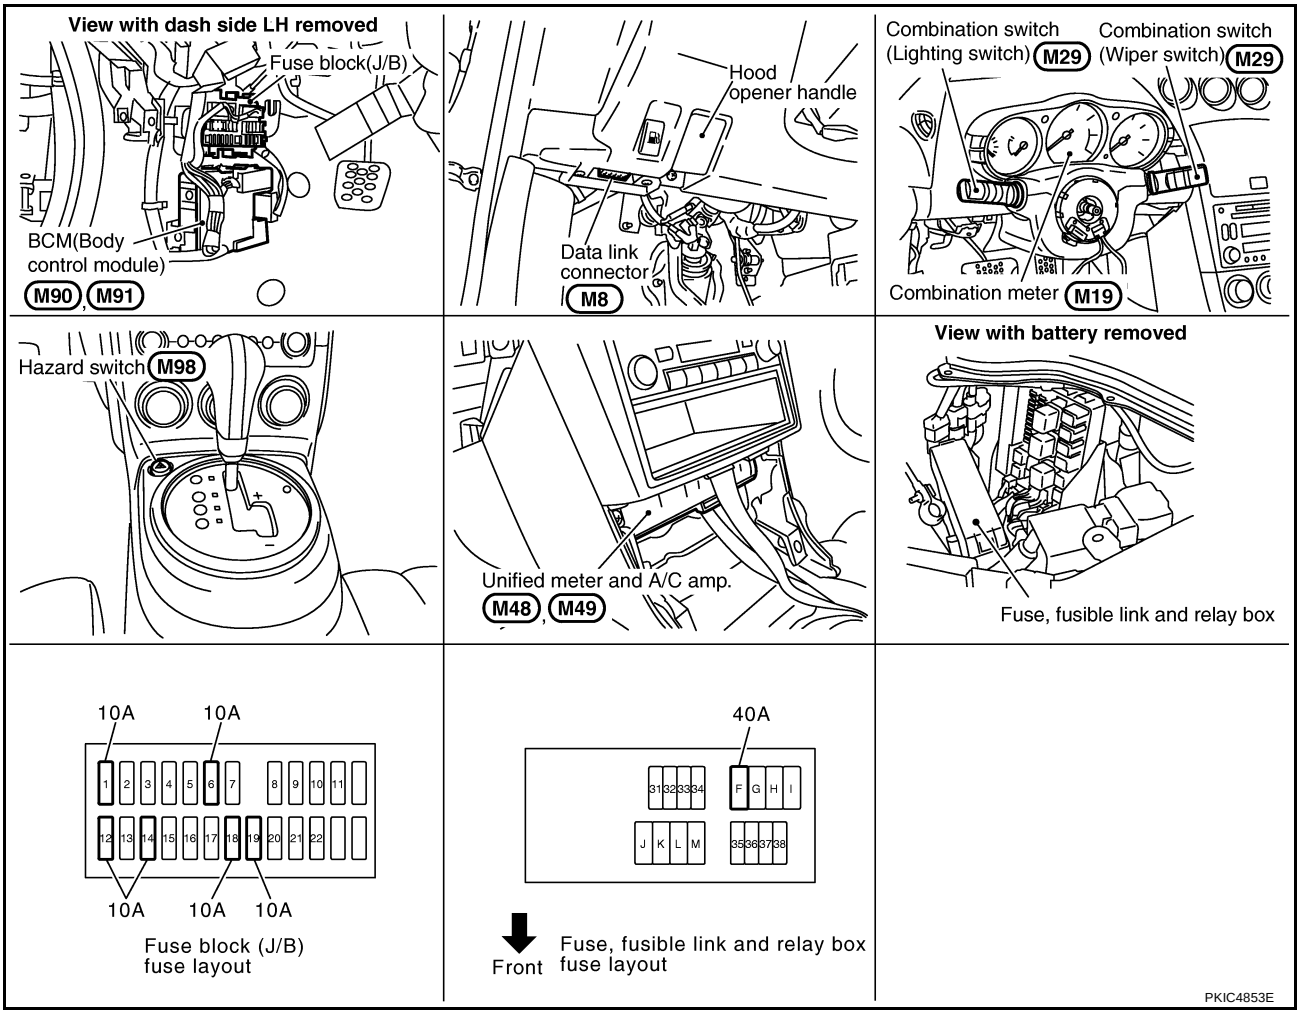


NKS004Y2

If only installation part as shown in the figure is damaged, and headlamp housing itself is not damaged, repair can be completed easily by installing correction brackets.

INSTALLATION OF HEADLAMP BRACKET

1. Remove headlamps. Refer to LT-62, "Removal and Installation" .
2. Cut damaged section of installation part, then shape with sandpaper.
3. Attach each correction bracket to headlamp housing boss with 2 screws.



TURN SIGNAL AND HAZARD WARNING LAMPS

PFP:26120

Component Parts and Harness Connector Location

NKS004Y3

System Description

NKS004Y4

TURN SIGNAL OPERATION

When the ignition switch is in ON or START position, power is supplied

- through 10A fuse [No.1, located in fuse block (J/B)]
- to BCM (body control module) terminal 38,
- through 10A fuse [No.12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 22,
- through 10A fuse [No.14, located in fuse block (J/B)]
- to combination meter terminal 23.

Ground is supplied

- to BCM terminal 52
- to unified meter and A/C amp. terminals 29 and 30, and
- to combination meter terminals 10, 11 and 12
- through grounds M30 and M66.

LH Turn Signal Lamp

When the turn signal switch is moved to the left position, the BCM receives left turn signal by combination switch reading function (Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION"). Power is supplied

- through BCM terminal 45
- to front combination lamp LH terminal 2

- to rear combination lamp LH terminal 2.

Ground is supplied

- to front combination lamp LH terminal 8
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to rear combination lamp LH terminal 4
- through grounds B5, B6, D105 and T14 (Coupe models)
- through grounds B5, B6 and T14 (Roadster models).

The BCM also supplies ground to unified meter and A/C amp. terminals 1and 11 through the CAN communication lines. This input signal is processed by the unified meter control unit in the combination meter through unified meter and A/C amp., which in turn supplies ground to left turn signal indicator lamp.
With the power and ground supplied, BCM controls the flashing of LH turn signal lamps.

RH Turn Signal Lamp

When the turn signal switch is moved to the right position, the BCM receives right turn signal by combination switch reading function (Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION"). Power is supplied

- through BCM terminal 46
- to front combination lamp RH terminal 2
- to rear combination lamp RH terminal 2.

Ground is supplied

- to front combination lamp RH terminal 8
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to rear combination lamp RH terminal 4
- through grounds B5, B6, D105 and T14 (Coupe models)
- through grounds B5, B6 and T14 (Roadster models).

The BCM also supplies ground to unified meter and A/C amp. terminals 1 and 11 through CAN communication lines. This input signal is processed by unified meter control unit in combination meter through unified meter and A/C amp., which in turn supplies ground to the right turn signal indicator lamp.
With power and ground supplied, BCM controls the flashing of RH turn signal lamps.

HAZARD WARNING LAMP OPERATION

Power is supplied at all times

- through 40A fusible link (letter F, located in fuse, fusible link and relay box)
- to BCM terminal 55,
- through 10A fuse [No. 18, located in fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No. 19, located in fuse block (J/B)]
- to combination meter terminal 24, and
- to unified meter and A/C amp. terminal 21.

Ground is supplied

- to BCM terminals 52
- to unified meter and A/C amp. terminals 29 and 30, and
- to combination meter terminals 10, 11 and 12
- through grounds M30 and M66.

When the hazard switch is depressed, power is supplied

- through BCM terminal 29
- to hazard lamp switch terminal 2.

Ground is supplied

- through hazard lamp switch terminal 1
- to grounds M30 and M66.

The BCM then supplies power

- through BCM terminal 45
- to front combination lamp LH terminal 2
- to rear combination lamp LH terminal 2,
- through BCM terminal 46
- to front combination lamp RH terminal 2
- to rear combination lamp RH terminal 2.

Ground is supplied

- to front combination lamp LH terminal 8, and
- to front combination lamp RH terminal 8
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to rear combination lamp LH terminal 4, and
- to rear combination lamp RH terminal 4
- through grounds B5, B6, D105 and T14 (Coupe models)
- through grounds B5, B6 and T14 (Roadster models).

The BCM also supplies input to unified meter and A/C amp. terminals 1 and 11 through the CAN communication lines. This input signal is processed by the unified meter control unit in the combination meter through the unified meter and A/C amp., which in turn supplies ground to the left and right turn signal indicator lamps. With the power and ground supplied, BCM controls the flashing of hazard warning lamps.

REMOTE KEYLESS ENTRY SYSTEM OPERATION

Refer to BL-59, "REMOTE KEYLESS ENTRY SYSTEM" .

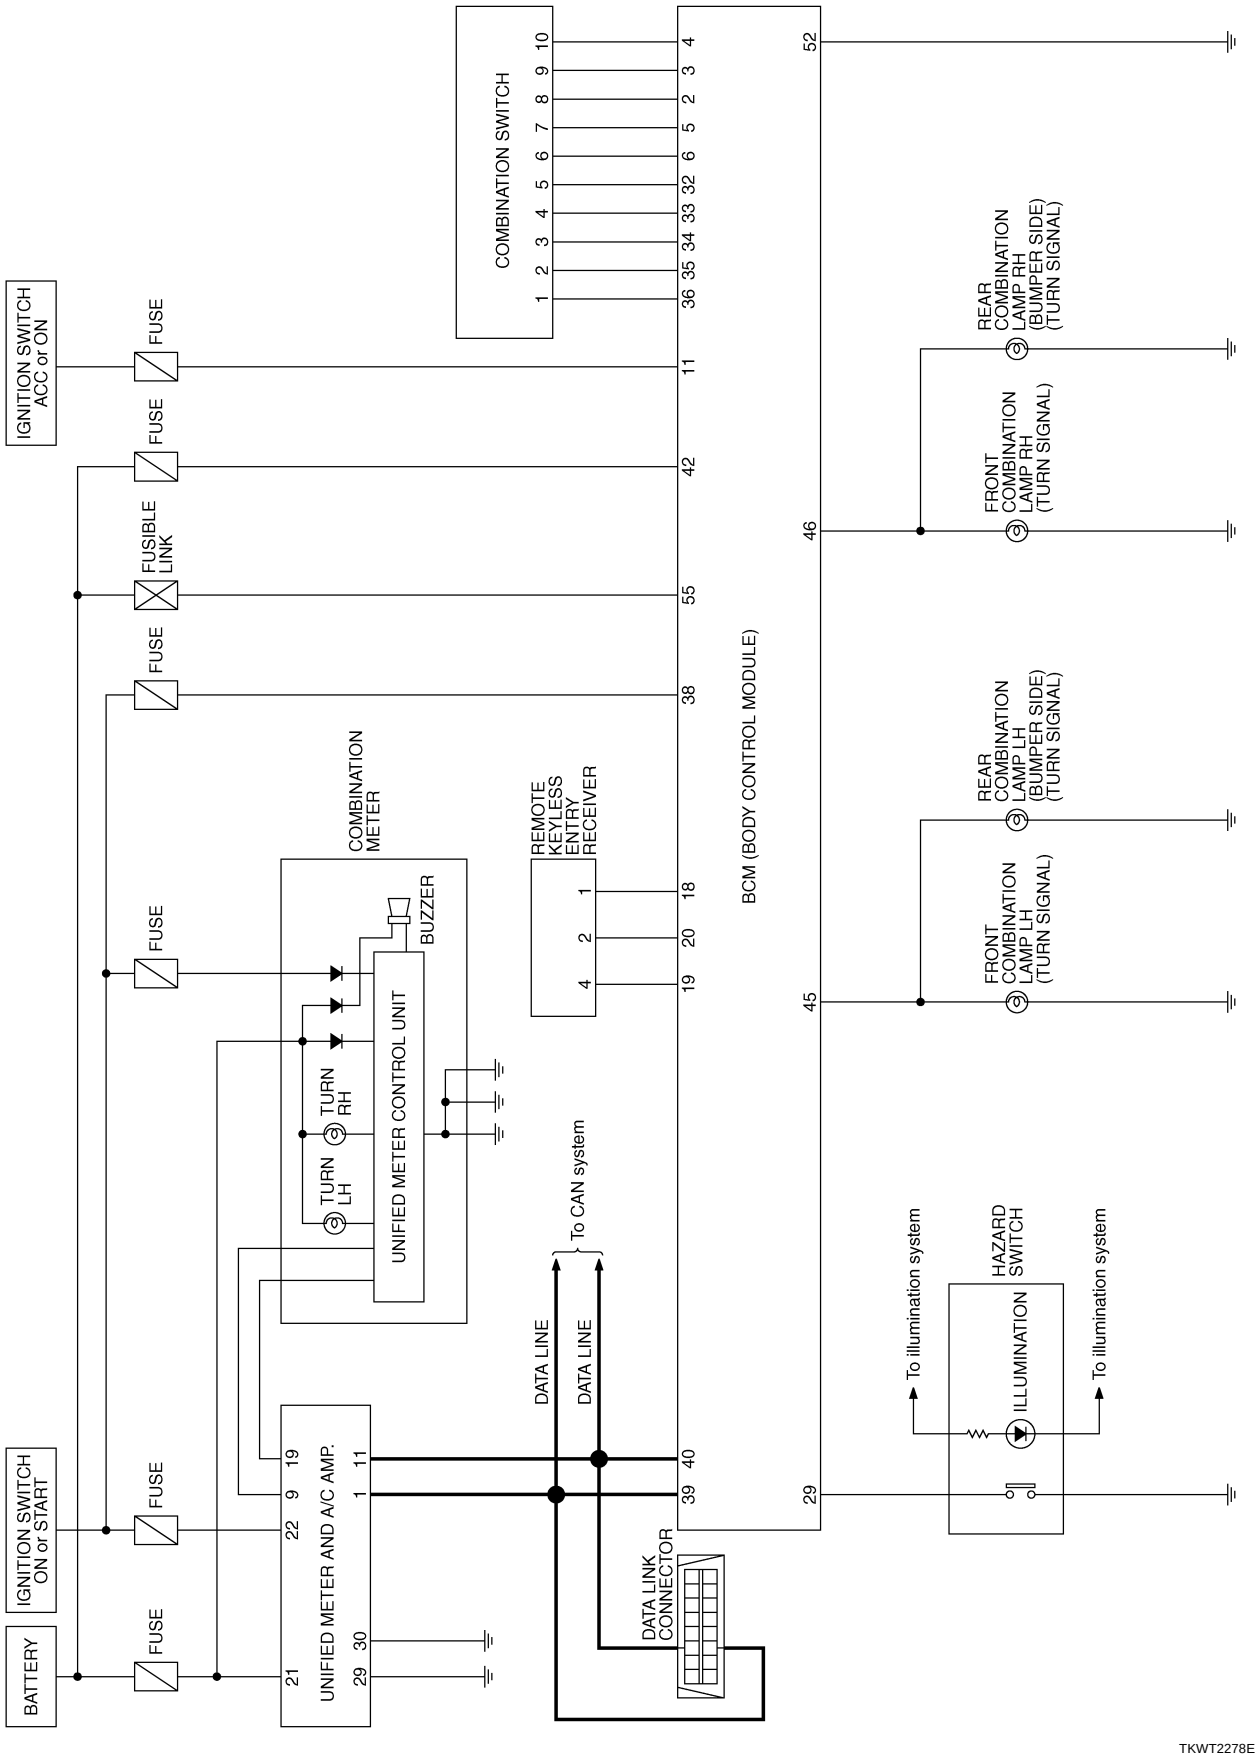
COMBINATION SWITCH READING FUNCTION

Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION" .

CAN Communication System Description

NKS004Y5

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NKS004Y6

Refer to LAN-48, "CAN System Specification Chart" .

Terminals and Reference Values for BCM

NKS004Y9

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to LT-91, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
2	GY	Combination switch input 5	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Turn signal switch to right	 PKIB4959J Approx. 1.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Turn signal switch to left	 PKIB4959J Approx. 1.0 V
11	LG	Ignition switch (ACC)	ACC	—		Battery voltage
29	G/R	Hazard signal	OFF	Hazard switch	OFF	Battery voltage
					ON	Approx. 0 V
36	W/R	Combination switch output 1	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Turn signal switch to right ● Turn signal switch to left	 PKIB4958J Approx. 1.2 V
38	W/L	Ignition switch (ON)	ON	—		Battery voltage
39	L	CAN – H	—	—		—
40	P	CAN – L	—	—		—

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
42	GY	Battery power supply	OFF	—		Battery voltage
45	G/W	Turn signal (left)	ON	Combination switch	Turn left ON	 SKIA3009J
46	PU/W	Turn signal (right)	ON	Combination switch	Turn right ON	 SKIA3009J
52	B	Ground	ON	—		Approx. 0V
55	R	Battery power supply	OFF	—		Battery voltage

How to Proceed With Trouble Diagnosis

NKS004YA

1. Confirm the symptom or customer complaint.
2. Understand operation description and function description. Refer to LT-65, "System Description" .
3. Perform preliminary check. Refer to LT-79, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Do turn signal and hazard warning lamps operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

NKS004YB

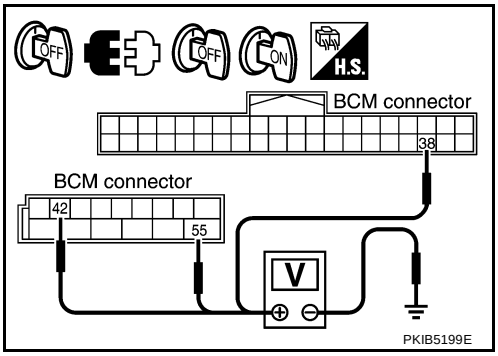
CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

UNIT	POWER SOURCE	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START position	1
	Ignition switch ACC or ON position	6

Refer to LT-69, "Wiring Diagram — TURN —" .



OK or NG

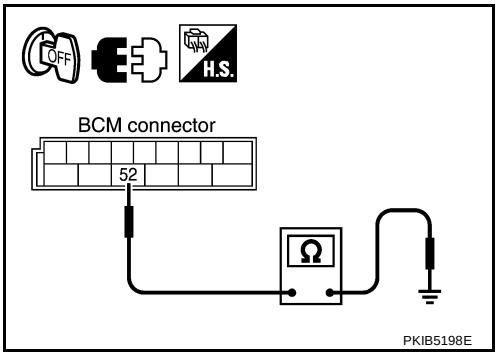
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector terminals and ground.

Terminals			Ignition switch position	
(+)		(-)	OFF	ON
BCM connector	Terminal			
M90	38	Ground	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.

NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector terminal and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END

NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS004YC

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis part	Diagnosis mode	Description
FLASHER	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Operation of electrical loads can be checked by sending driving signal to them.

DATA MONITOR

Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “IGN position (ON)/OFF, ACC position (OFF)” judged from ignition switch signal.
HAZARD SW	“ON/OFF”	Displays “Hazard ON (ON)/Hazard OFF (OFF)” status, determined from hazard switch signal.
TURN SIGNAL R	“ON/OFF”	Displays “Turn right (ON)/Other (OFF)” status, determined from lighting switch signal.
TURN SIGNAL L	“ON/OFF”	Displays “Turn left (ON)/Other (OFF)” status, determined from lighting switch signal.
BRAKE SW NOTE	“OFF”	—

NOTE:
This item is displayed, but cannot be monitored.

ACTIVE TEST

Display Item List

Test item	Description
FLASHER	With a certain operation (OFF, RH, LH), turn signal lamp can be operated.

Turn Signal Lamp Does Not Operate

NKS004YD

1. CHECK BULB

Check bulb standard of each turn signal lamp is correct.

OK or NG

OK >> GO TO 2.
NG >> Replace turn signal lamp bulb.

2. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "TURN SIGNAL R" and "TURN SIGNAL L" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is TURN RH position : TURN SIGNAL R ON

When lighting switch is TURN LH position : TURN SIGNAL L ON

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

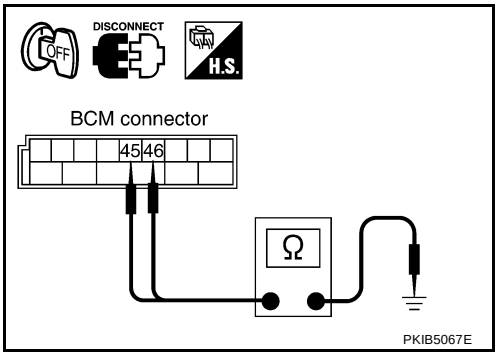
3. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "FLASHER" of BCM active test item.
2. With operating the test item, check the turn signal lamp operation.

Turn signal lamp should operate.

GO TO 4



OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> GO TO 4.

4. CHECK SHORT CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and all turn signal lamp connectors.
3. Check continuity (short circuit) between BCM harness connector and ground.

BCM connector		Terminal	Ground	Continuity
RH	M91	46		No
LH		45		

OK or NG

OK >> Replace BCM if turn signal lamps does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

Hazard Warning Lamp Does Not Operate But Turn Signal Lamp Operate

NKS004YE

1. CHECK BULB

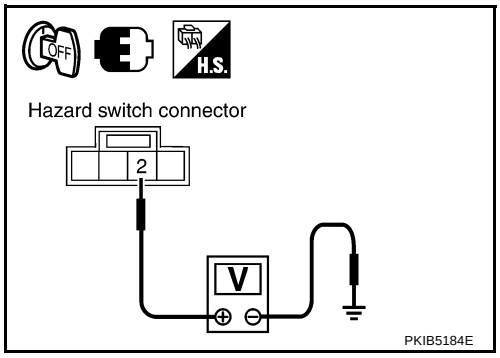
Make sure bulb standard of each turn signal lamp is correct.

OK or NG

OK >> GO TO 2.
NG >> Replace bulb.

2. CHECK HAZARD SWITCH INPUT SIGNAL

With CONSULT-III



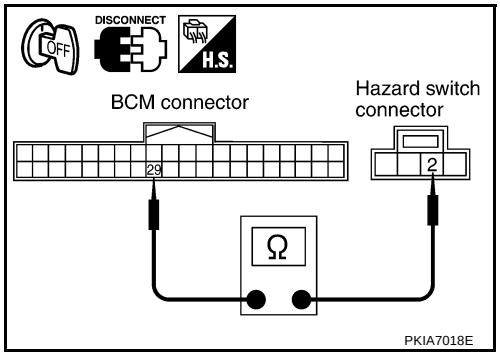
1. Select "HAZARD SW" of BCM data monitor item.
2. With operating the hazard switch, check the monitor status.

When hazard switch is ON position : HAZARD SW ON

Without CONSULT-III

Check voltage between hazard switch harness connector and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(-)		
Hazard switch connector	Terminal			
M98	2	Ground	Hazard switch is ON	0V
			Hazard switch is OFF	5V



OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> GO TO 3.

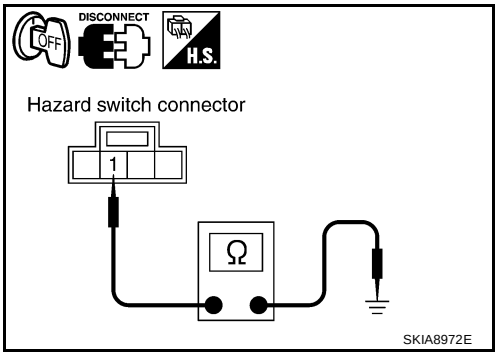
3. CHECK HAZARD SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and hazard switch connector.
3. Check continuity BCM harness connector and hazard switch harness connector.

Terminals				Continuity
BCM		Hazard switch		
Connector	Terminal	Connector	Terminal	
M90	29	M98	2	Yes

OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.



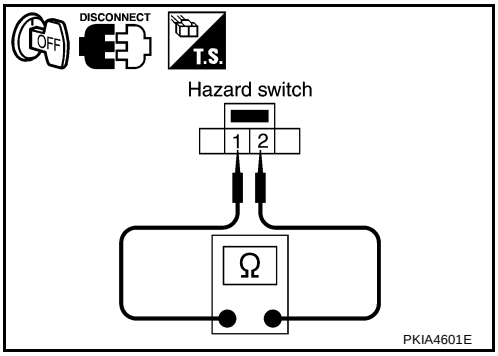
4. CHECK GROUND

Check continuity hazard switch harness connector and ground.

Hazard switch connector	Terminal	Ground	Continuity
M98	1		Yes

OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.



5. CHECK HAZARD SWITCH

Check continuity hazard switch.

Terminal		Condition	Continuity
Hazard switch			
1	2	Hazard switch is ON.	Yes
		Hazard switch is OFF.	No

OK or NG

OK >> Replace BCM if turn signal lamps does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Replace hazard switch.

Turn Signal Indicator Lamp Does Not Operate

NKS004YF

1. CHECK BULB

Check bulb of turn signal indicator lamp in combination meter.

OK or NG

OK >> Replace combination meter.
NG >> Replace indicator bulb.

Bulb Replacement (Front Turn Signal Lamp)

NKS004YG

Refer to LT-28, "Bulb Replacement" .

Bulb Replacement (Rear Turn Signal Lamp)

NKS004YH

Refer to LT-126, "Bulb Replacement" .

Removal and Installation of Front Turn Signal Lamp

NKS004YI

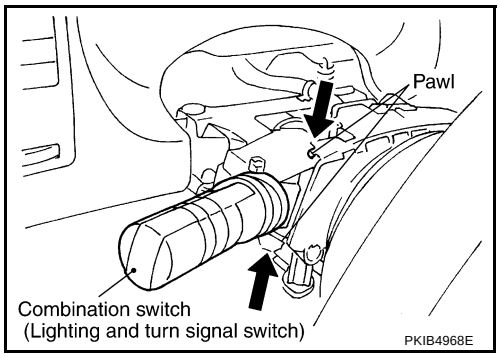
Refer to LT-29, "Removal and Installation" .

Removal and Installation of Rear Turn Signal Lamp

NKS004YJ

Refer to LT-127, "Removal and Installation" .

LIGHTING AND TURN SIGNAL SWITCH



PFP:25540

Removal and Installation

NKS004YK

REMOVAL

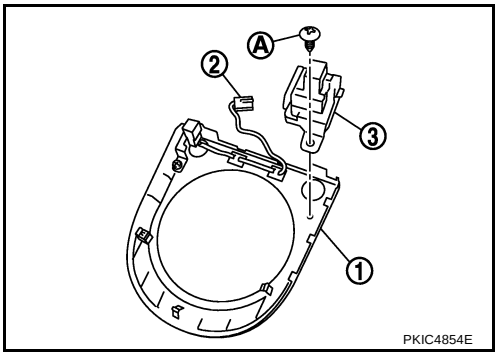
1. Remove steering column lower cover. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove column upper cover and combination meter assembly. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
3. While pressing pawls in direction as shown in the figure, pull lighting and turn signal switch toward driver door and disconnect from the base.

INSTALLATION

Installation is the reverse order of removal.

HAZARD SWITCH

PFP:25290



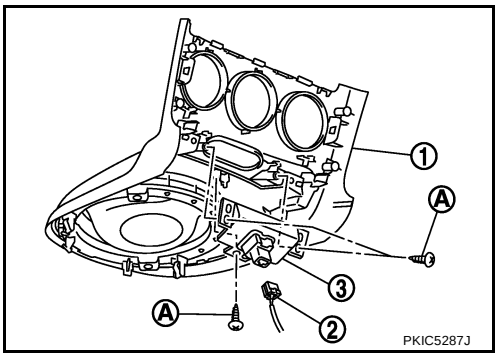
Removal and Installation

NKS004YL

HAZARD SWITCH (A/T MODELS)

Removal

1. Remove console finisher (1). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect hazard switch connector (2).
3. Remove screw (A), and remove hazard switch (3).



Installation

Installation is the reverse order of removal.

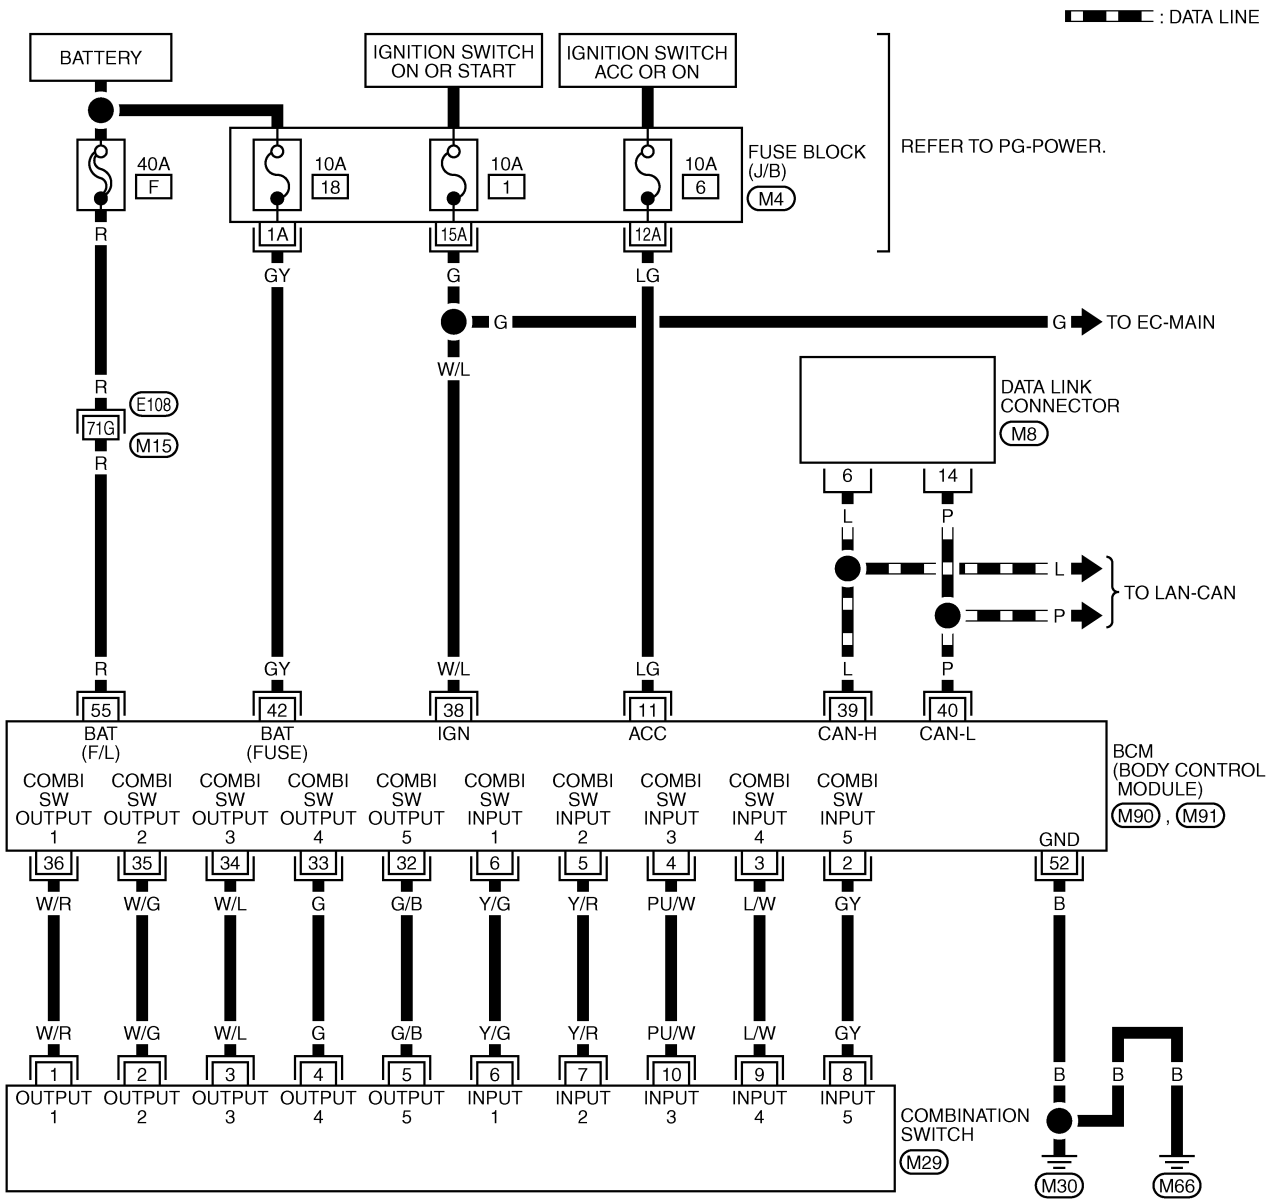
HAZARD SWITCH (M/T MODELS)

Removal

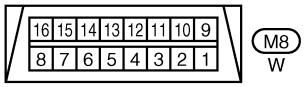
1. Removal console boot (1). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect hazard switch connector (2).
3. Remove screw (A), and remove hazard switch (3).

Installation

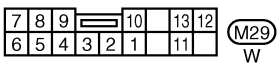
Installation is the reverse order of removal.



COMBINATION SWITCH



PFP:25567



Wiring Diagram —COMBSW—

NKS004YM

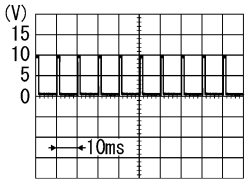
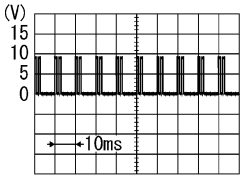
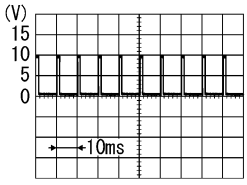
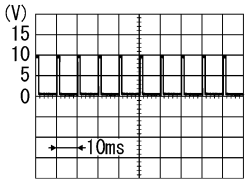
Combination Switch Reading Function

NKS004YN

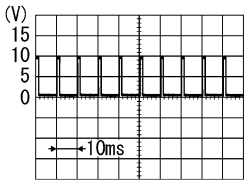


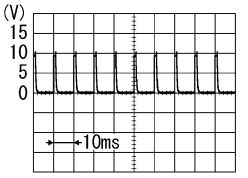


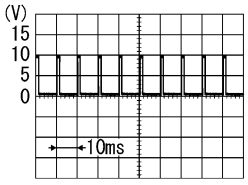


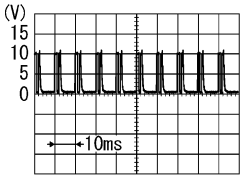


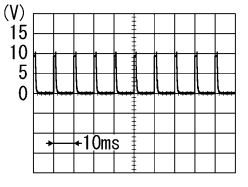
Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION" .



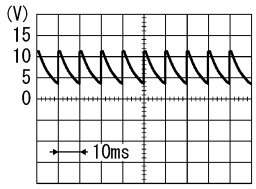


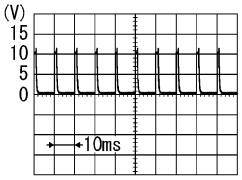


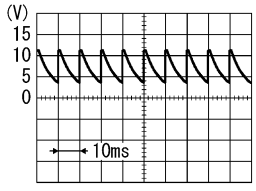


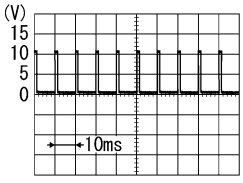


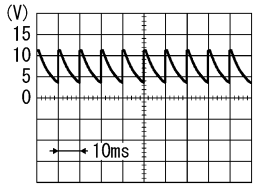
Terminals and Reference Values for BCM

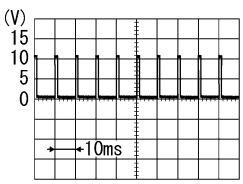




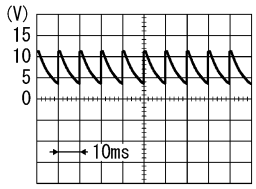


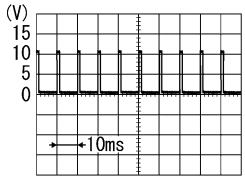


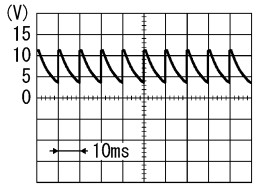


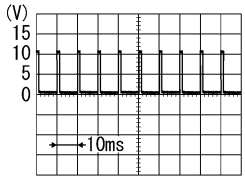


NKS004YO









CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to LT-91, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
2	GY	Combination switch input 5	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 1ST ● Lighting switch HIGH beam (Operates only HIGH beam switch) ● Turn signal switch to right	 PKIB4959J Approx. 1.0 V
					Lighting switch 2ND	 PKIB4953J Approx. 2.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch) ● Turn signal switch to left	 PKIB4959J Approx. 1.0 V
4	PU/W	Combination switch input 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Front wiper switch MIST ● Front wiper switch INT ● Front wiper switch LO	 PKIB4959J Approx. 1.0 V

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
5	Y/R	Combination switch input 2	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	Approx. 0 V
					Any of the conditions below ● Front washer switch ● Rear washer switch ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 5 ● Wiper intermittent dial position 6	 PKIB4959J Approx. 1.0 V
					Rear wiper switch ON (Wiper intermittent dial position 4)	 PKIB4955J Approx. 0.8 v
6	Y/G	Combination switch input 1	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	Approx. 0 V
					Any of the conditions below ● Front wiper switch HI ● Rear wiper switch INT ● Wiper intermittent dial position 3	 PKIB4959J Approx. 1.0 V
					Any of the conditions below ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 2	 PKIB4952J Approx. 1.7 V
					Any of the conditions below ● Wiper intermittent dial position 6 ● Wiper intermittent dial position 7	 PKIB4955J Approx. 0.8 V
11	LG	Ignition switch (ACC)	ACC	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
32	G/B	Combination switch output 5	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 2 ● Wiper intermittent dial position 6 ● Wiper intermittent dial position 7	 PKIB4956J Approx. 1.0 V
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 1ST (The same result with lighting switch 2ND) ● Rear wiper switch INT ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 5 ● Wiper intermittent dial position 6	 PKIB4958J Approx. 1.2 V
34	W/L	Combination switch output 3	ON	Lighting, turn, wiper switch	OFF (Wiper intermittent dial position 4)	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch HI beam (Operates only HI beam switch) ● Rear washer switch ● Wiper intermittent dial position 1 ● Wiper intermittent dial position 2 ● Wiper intermittent dial position 3	 PKIB4958J Approx. 1.2 V

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition

CONSULT-III Function (BCM)

NKS004YP

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis part	Diagnosis mode	Description
COMB SW	DATA MONITOR	Displays BCM input data in real time.

DATA MONITOR
Display Item List

Monitor item name “OPERATION OR UNIT”		Contents
TURN SIGNAL R	“ON/OFF”	Displays “Turn Right (ON)/Other (OFF)” status, determined from lighting switch signal.
TURN SIGNAL L	“ON/OFF”	Displays “Turn Left (ON)/Other (OFF)” status, determined from lighting switch signal.
HI BEAM SW	“ON/OFF”	Displays status (high beam switch: ON/Others: OFF) of high beam switch judged from lighting switch signal.
HEAD LAMP SW 1	“ON/OFF”	Displays status (headlamp switch 2: ON/Others: OFF) of headlamp switch 1 judged from lighting switch signal.
HEAD LAMP SW 2	“ON/OFF”	Displays status (headlamp switch 2: ON/Others: OFF) of headlamp switch 2 judged from lighting switch signal.
LIGHT SW 1ST	“ON/OFF”	Displays status (lighting switch 1ST or 2ND position: ON/Others: OFF) of lighting switch judged from lighting switch signal.
PASSING SW	“ON/OFF”	Displays status (flash-to-pass switch: ON/Others: OFF) of flash-to-pass switch judged from lighting switch signal.
FR FOG SW NOTE	“ON/OFF”	—
FR WIPER HI	“ON/OFF”	Displays “Front Wiper HI (ON)/Other (OFF)” status, determined from wiper switch signal.
FR WIPER LOW	“ON/OFF”	Displays “Front Wiper LOW (ON)/Other (OFF)” status, determined from wiper switch signal.
FR WIPER INT	“ON/OFF”	Displays “Front Wiper INT (ON)/Other (OFF)” status, determined from wiper switch signal.
FR WASHER SW	“ON/OFF”	Displays “Front Washer Switch (ON)/Other (OFF)” status, determined from wiper switch signal.
INT VOLUME	[1 - 7]	Displays intermittent operation knob setting (1 - 7), determined from wiper switch signal.
RR WIPER ON	“ON/OFF”	Displays “rear Wiper (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WIPER INT	“ON/OFF”	Displays “rear Wiper INT (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WASHER SW	“ON/OFF”	Displays “rear Washer Switch (ON)/Other (OFF)” status as judged from wiper switch signal.

NOTE:
This item is displayed, but cannot be monitored.

Combination Switch Inspection

NKS004YQ

1. SYSTEM CHECK

Referring to table below, check which system malfunctioning switch belongs to.

System 1	System 2	System 3	System 4	System 5
—	FR WASHER	FR WIPER LO	TURN LH	TURN RH
FR WIPER HI	—	FR WIPER INT	PASSING	HEAD LAMP 1
INT VOLUME 1	RR WASHER	—	HEAD LAMP 2	HI BEAM
RR WIPER INT	INT VOLUME 3	—	—	LIGHT SW 1ST
INT VOLUME 2	RR WIPER ON	—	—	—

>> Check the system to which malfunctioning switch belongs, and GO TO 2.

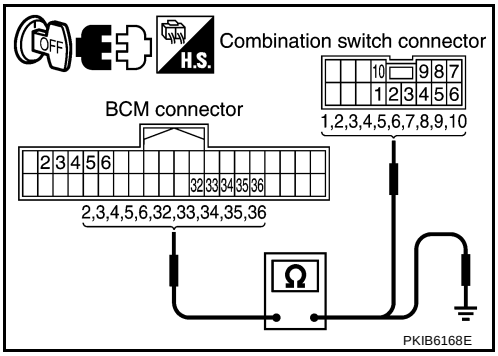
2. SYSTEM CHECK

With CONSULT-III

1. Select "COMBI SW" of BCM data monitor item.
2. Confirm that other switches in malfunctioning system operate normally.
   Example: When the HI BEAM switch is malfunctioning, confirm that “TURN RH”, “HEAD LAMP 1” and “LIGHT SW 1 ST” in System 5, to which the HI BEAM switch belongs, turn ON-OFF normally.

Without CONSULT-III

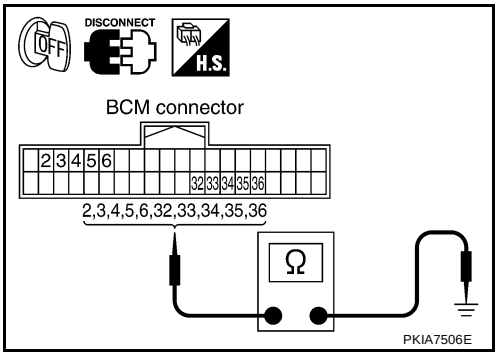
Operating combination switch, and confirm that other switches in malfunctioning system operate normally.
Example: When the HI BEAM switch is malfunctioning, confirm that “TURN RH”, “HEAD LAMP 1” and “LIGHT SW 1 ST” in System 5, to which HI BEAM switch belongs, turn ON-OFF normally.



Check results

Other switches in malfunctioning system operate normally.>>Replace lighting switch or wiper switch.
Other switches in malfunctioning system do not operate normally.>>GO TO 3.

3. HARNESS INSPECTION

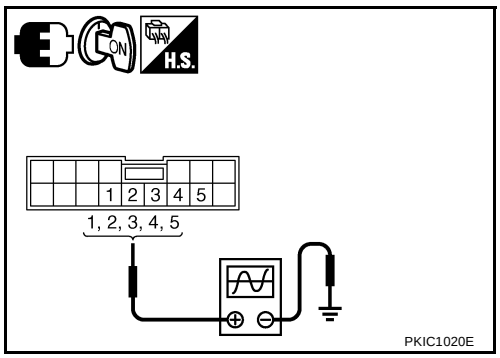


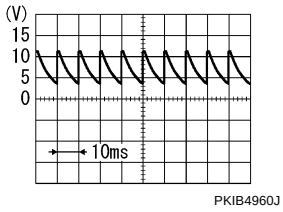
1. Turn ignition switch OFF.
2. Disconnect BCM and combination switch connectors.
3. Check for continuity between BCM harness connector of the suspect system and the corresponding combination switch harness connector.

Suspect system	BCM			Combination switch		Continuity
	Connector	Terminal		Connector	Terminal	
1	M90	Input 1	6	M29	6	Yes
		Output 1	36		1	
2		Input 2	5		7	
		Output 2	35		2	
3		Input 3	4		10	
		Output 3	34		3	
4		Input 4	3		9	
		Output 4	33		4	
5		Input 5	2		8	
		Output 5	32		5	

4. Check for continuity between BCM harness connector in suspect malfunctioning system and ground.

Suspect system	BCM				Continuity
	Connector	Terminal			
1	M90	Input 1	6	Ground	No
		Output 1	36		
2		Input 2	5		
		Output 2	35		
3		Input 3	4		
		Output 3	34		
4		Input 4	3		
		Output 4	33		
5		Input 5	2		
		Output 5	32		





OK or NG

OK >> GO TO 4.
NG >> Check harness between BCM and combination switch for open or short circuit.

4. BCM OUTPUT TERMINAL INSPECTION

1. Connect BCM and combination switch connectors.
2. Set wiper intermittent dial position 4.
3. Turn ignition switch ON.
4. Check BCM output terminal voltage waveform of suspect malfunctioning system.

Suspect system	Terminals (+) Combination switch connector	Terminals (+) Terminal	Terminals (-)	Reference value (Approx.)
1	M29	1	Ground	 PKIB4960J 7.2 V
2		2		
3		3		
4		4		
5		5		

OK or NG

OK >> Open circuit in combination switch, GO TO 5.
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

5. COMBINATION SWITCH INSPECTION

Referring to table below, perform combination switch inspection.

Procedure										
1	2		3	4		5	6		7	
Replace lighting switch	Confirm check results	OK	INSPECTION END	Confirm check results	OK	INSPECTION END	Confirm check results	OK	INSPECTION END	
		NG	Replace wiper switch		NG	Replace switch base		NG	Confirm symptom again	

>> INSPECTION END

Removal and Installation

PARKING, LICENSE PLATE AND TAIL LAMPS

PFP:26550

Component Parts and Harness Connector Location

NKS004YZ

System Description

NKS004Z0

Control of parking, license plate, side maker and tail lamps operation is dependent upon the position of lighting switch (combination switch). When the lighting switch is in the 1ST position, the BCM (body control module) receives input signal requesting the parking, license plate, side marker and tail lamps to illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) through CAN communication. The CPU (central processing unit) located in the IPDM E/R controls the tail lamp relay coil and daytime light relay* coil. These relay, when energized, directs power to parking, license plate, side marker and tail lamps, which then illuminate.

NOTE:
Daytime light relay*: Canada models

OUTLINE

Power is supplied at all times

- through 10A fuse (No.71, located in IPDM E/R)
- to tail lamp relay, located in IPDM E/R, and
- to CPU located in IPDM E/R,
- through 15A fuse (No.78, located in IPDM E/R)
- to CPU located in IPDM E/R,
- through 40A fusible link (letter F, located in fuse, fusible link and relay box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in fuse block (J/B)]

- to BCM terminal 42.

With ignition switch in ON or START position, power is supplied

- to CPU located in IPDM E/R,
- through 10A fuse [No.1, located in fuse block (J/B)]
- to BCM terminal 38.

With ignition switch in ACC or ON position, power is supplied

- through 10A fuse [No. 6, located in fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66,
- to IPDM E/R terminals 38 and 60
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

OPERATION BY LIGHTING SWITCH

With the lighting switch in the 1ST or 2ND position, the BCM receives input signal requesting the parking, license plate, side marker and tail lamps to illuminate. This input is communicated to the IPDM E/R through the CAN communication lines. The CPU located in the IPDM E/R controls the tail lamp relay coil and daytime light relay* coil. These relay, when energized, directs power to parking, license plate, side marker and tail lamps, which when energized, directs power

- through IPDM E/R terminal 22 (USA models)
- through daytime light relay terminal 5 (Canada models)
- to front combination lamp LH terminals 6
- to front combination lamp RH terminals 6
- to rear combination lamp LH terminals 2
- to rear combination lamp RH terminals 2
- to license plate lamp LH terminal 2, and
- to license plate lamp RH terminal 2.

Ground is supplied at all times

- to front combination lamp LH terminal 8, and
- to front combination lamp RH terminal 8
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to rear combination lamp LH terminals 3
- to rear combination lamp RH terminals 3
- to license plate lamp LH terminal 1, and
- to license plate lamp RH terminal 1
- through grounds B5, B6, D105 and T14 (Coupe models)
- through grounds B5, B6 and T14 (Roadster models).

With power and ground supplied, parking, license plate side marker and tail lamps illuminate.

NOTE:
Daytime light relay*: Canada models

COMBINATION SWITCH READING FUNCTION

Refer to BCS-3, "COMBINATION SWITCH READING FUNCTION" .

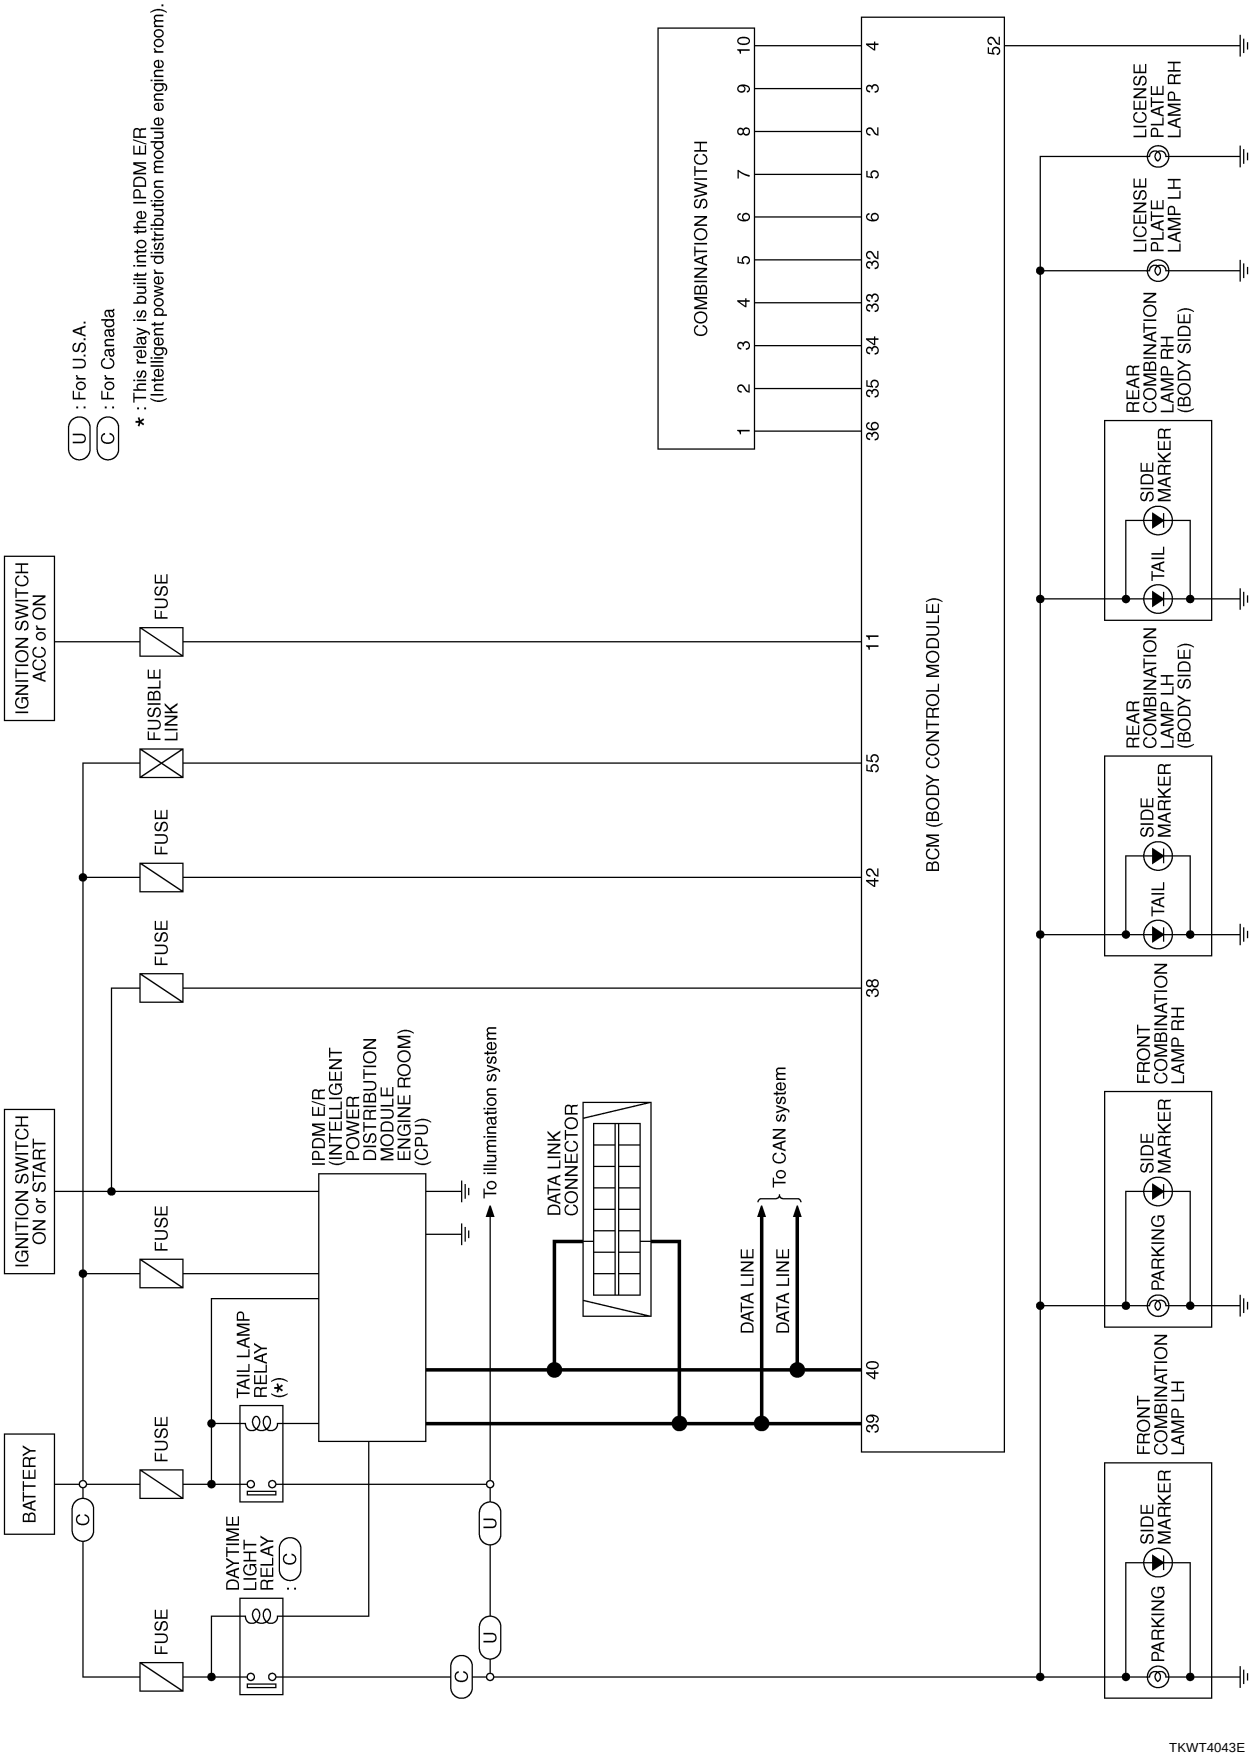
EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 2ND position (ON), and the ignition switch is turned from ON or ACC to OFF, the battery saver control function is activated.
Under this condition, the parking, license, side marker and tail lamps remain illuminated for 5 minutes, then the headlamps are turned off.
Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

CAN Communication System Description

NKS004Z1

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NKS004Z2

Refer to LAN-48, "CAN System Specification Chart" .

Terminals and Reference Values for BCM

NKS004Z5

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to LT-91, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
2	GY	Combination switch input 5	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 1ST ● Lighting switch HIGH beam (Operates only HIGH beam switch)	 PKIB4959J Approx. 1.0 V
					Lighting switch 2ND	 PKIB4953J Approx. 2.0 V
3	L/W	Combination switch input 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch)	 PKIB4959J Approx. 1.0 V
11	LG	Ignition switch (ACC)	ACC	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Lighting switch 1ST (The same result with lighting switch 2ND)	 PKIB4958J Approx. 1.2 V
34	W/L	Combination switch output 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch HI beam (Operates only HI beam switch)	 PKIB4958J Approx. 1.2 V
35	W/G	Combination switch output 2	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Any of the conditions below ● Lighting switch 2ND ● Lighting switch PASSING (Operates only PASSING switch)	 PKIB4958J Approx. 1.2 V
38	W/L	Ignition switch (ON)	ON	—		Battery voltage

Terminal No.	Wire color	Signal name	Measuring condition		Reference value
			Ignition switch	Operation or condition	
39	L	CAN – H	—	—	—
40	P	CAN – L	—	—	—
42	GY	Battery power supply	OFF	—	Battery voltage
52	B	Ground	ON	—	Approx. 0 V
55	R	Battery power supply	OFF	—	Battery voltage

Terminals and Reference Values for IPDM E/R

NKS004Z6

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
22	R	Parking, license plate, side marker and tail lamp	ON	Lighting switch 1ST position	OFF	Approx. 0 V
					ON	Battery voltage
38	B	Ground	ON	—		Approx. 0 V
48	L	CAN – H	—	—		—
49	P	CAN – L	—	—		—
60	B	Ground	ON	—		Approx. 0 V

How to Proceed With Trouble Diagnosis

NKS004Z7

1. Confirm the symptom or customer complaint.
2. Understand operation description and function description. Refer to LT-103, "System Description" .
3. Carry out preliminary check. Refer to LT-114, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Do parking, license plate, side marker and tail lamps operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

NKS004Z8

CHECK POWER SUPPLY AND GROUND CIRCUIT

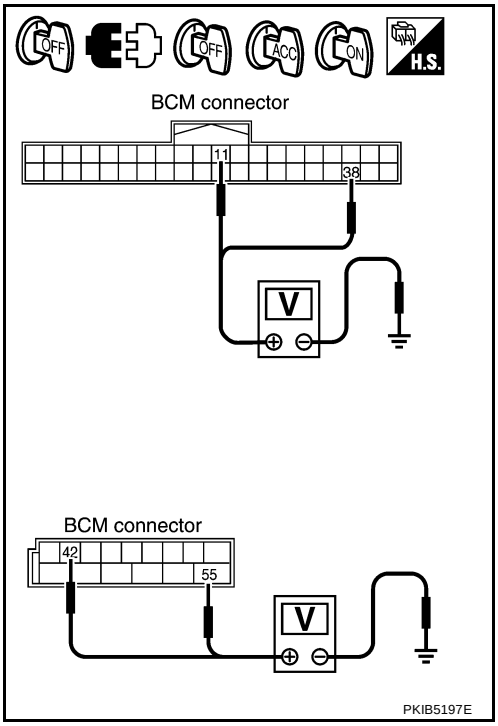
1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

Unit	Power source	Fuse and fusible link No.
BCM	Battery	F
		18
	Ignition switch ON or START position	1
	Ignition switch ACC or ON position	6
IPDM E/R	Battery	71

Refer to LT-107, "Wiring Diagram — TAIL/L —" .

OK or NG



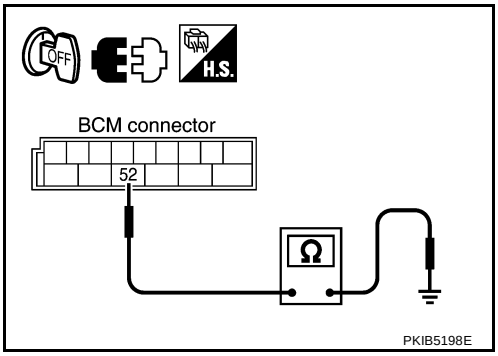
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector terminals and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
BCM connector	Terminal				
M90	11	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector terminal and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS004Z9

Refer to LT-17, "CONSULT-III Function (BCM)" in HEADLAMP (FOR USA).
Refer to LT-49, "CONSULT-III Function (BCM)" in HEADLAMP (FOR CANADA).

CONSULT-III Function (IPDM E/R)

NKS004ZA

Refer to LT-18, "CONSULT-III Function (IPDM E/R)" in HEADLAMP (FOR USA).
Refer to LT-50, "CONSULT-III Function (IPDM E/R)" in HEADLAMP (FOR CANADA).

Parking, License Plate, Side Marker and Tail Lamps Do Not Illuminate (for USA)

NKS004ZB

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "LIGHT SW 1ST" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 1ST position : LIGHT SW 1ST ON

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "TAIL LAMP" of IPDM E/R active test item.
2. With operating the test item, check the parking, license plate, side marker and tail lamps operation.

Parking, license plate, side marker and tail lamps should operate.

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. Check that the parking, license plate, side marker and tail lamps operation.

Parking, license plate, side marker and tail lamps should operate.

OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK IPDM E/R

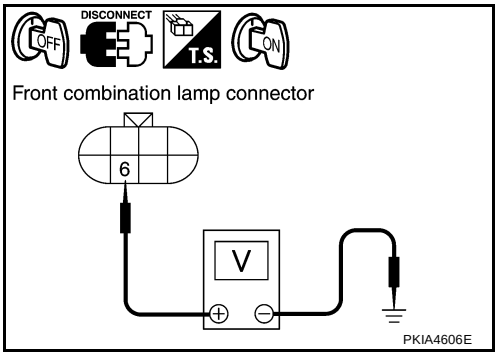
1. Select "TAIL&CLR REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 1ST position : TAIL&CLR REQ ON

OK or NG

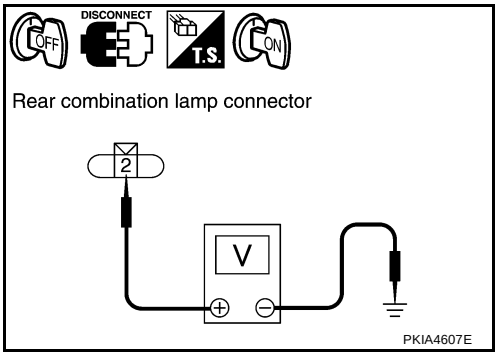
OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK IPDM E/R



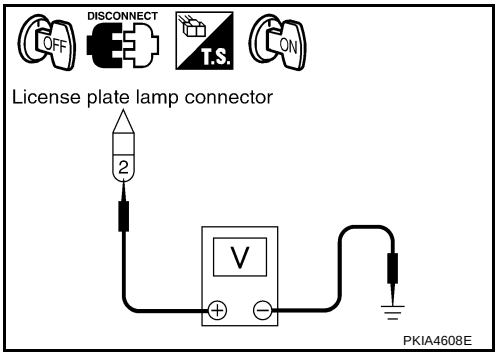
CONSULT-III ACTIVE TEST

1. Turn ignition switch OFF.
2. Disconnect front combination lamp, rear combination lamp and license plate lamp connectors.
3. Select "TAIL LAMP" of IPDM E/R active test item.
4. With operating the test item, check voltage between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



IPDM E/R AUTO ACTIVE TEST

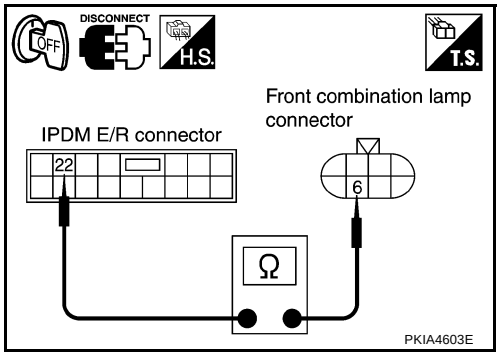
1. Turn ignition switch OFF.
2. Disconnect front combination lamp, rear combination lamp and license plate lamp connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	6	Ground	Battery voltage
LH	E40			

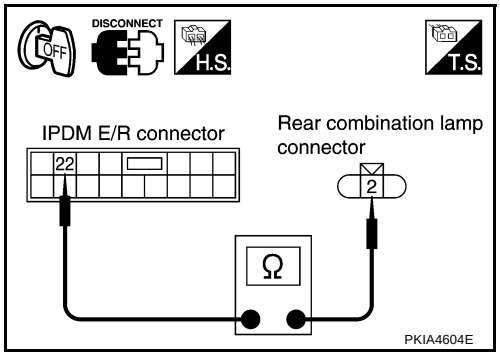
Terminals				Voltage (Approx.)
(+)			(-)	
Rear combination lamp connector		Terminal		
RH	T17	2	Ground	Battery voltage
LH	T9			

Terminals				Voltage (Approx.)
(+)			(-)	
License plate lamp connector		Terminal		
RH	T104	2	Ground	Battery voltage
LH	T102			



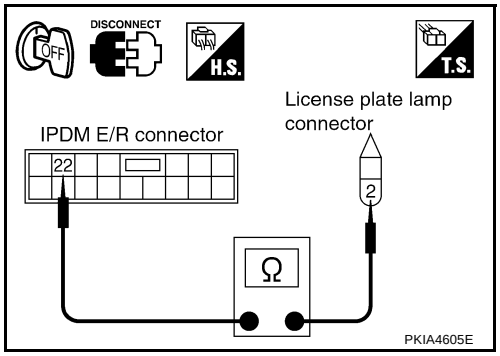
OK or NG

OK >> GO TO 6.
NG >> GO TO 5.



5. CHECK CIRCUIT BETWEEN IPDM E/R AND PARKING, LICENSE PLATE, SIDE MARKER AND TAIL LAMPS

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp, rear combination lamp and license plate lamp harness connector.

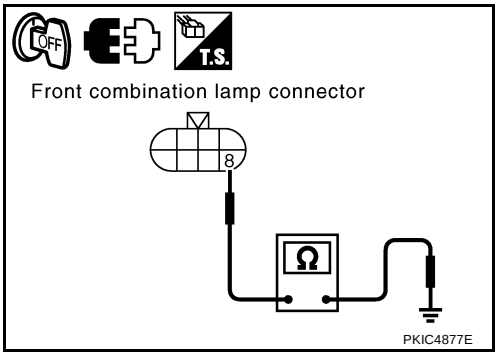


Terminals					Continuity
IPDM E/R		Front combination lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	E24	6	Yes
		LH	E40	6	

Terminals					Continuity
IPDM E/R		Rear combination lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	T17	2	Yes
		LH	T9	2	

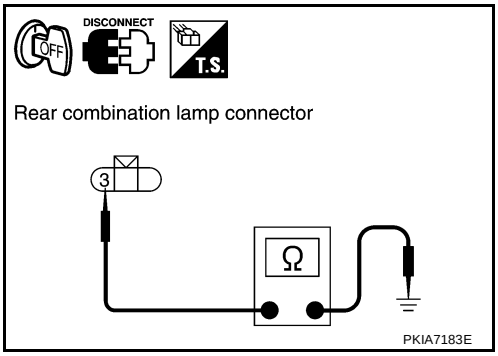
Terminals					Continuity
IPDM E/R		Licence plat lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	T104	2	Yes
		LH	T102	2	

OK or NG



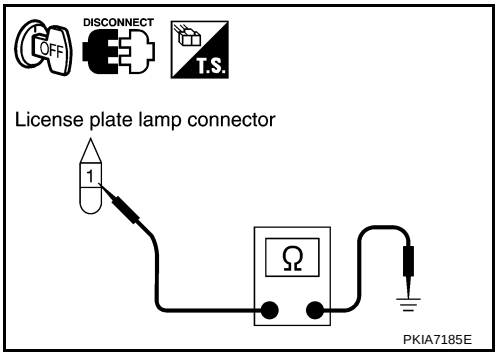
OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

NG >> Repair harness or connector.



6. CHECK GROUND

1. Check continuity between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	8		Yes
LH	E40			

Rear combination lamp connector		Terminal	Ground	Continuity
RH	T17	3		Yes
LH	T9			

License plate lamp connector		Terminal	Ground	Continuity
RH	T104	1		Yes
LH	T102			

OK or NG

OK >> Check bulb.
NG >> Repair harness or connector.

Parking, License Plate, Side Marker, and Tail Lamps Do Not Illuminate (for Canada)

NKS004ZC

1. CHECK COMBINATION SWITCH INPUT SIGNAL

CONSULT-III DATA MONITOR

1. Select "LIGHT SW 1ST" of BCM data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 1ST position : LIGHT SW 1ST ON

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Check combination switch (lighting switch). Refer to LT-92, "Combination Switch Inspection" .

2. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "TAIL LAMP" of IPDM E/R active test item.
2. With operating the test item, check the parking, license plate, side marker and tail lamps operation.

Parking, license plate, side marker and tail lamps should operate.

IPDM E/R AUTO ACTIVE TEST

1. Start auto active test. Refer to PG-20, "Auto Active Test" .
2. With operating the test item, check the parking, license plate, side marker and tail lamps operation.

Parking, license plate, side marker and tail lamps should operate.

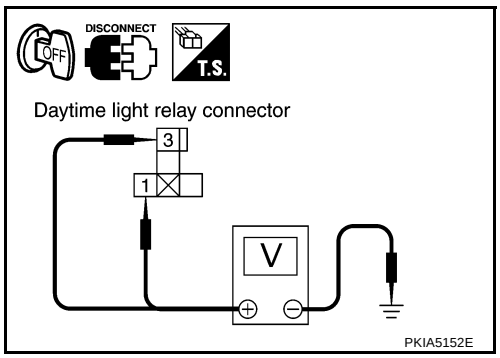
OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK IPDM E/R

1. Select "TAIL&CLR REQ" of IPDM E/R data monitor item.
2. With operating the lighting switch, check the monitor status.

When lighting switch is 1ST position : TAIL&CLR REQ ON



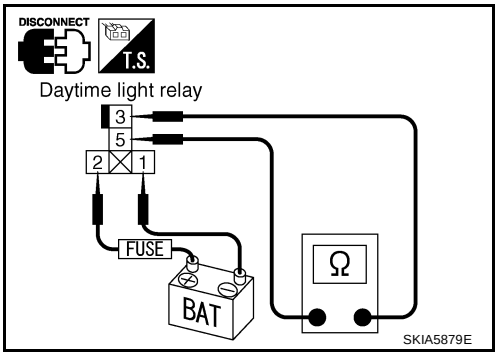
OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

4. CHECK POWER SUPPLY CIRCUIT TO DAYTIME LIGHT RELAY

1. Turn ignition OFF.
2. Disconnect daytime light relay.
3. Check voltage between daytime light relay harness connector and ground.

Terminal			
(+)		(–)	voltage (Approx.)
Daytime light relay connector	Terminal		
E20	1	Ground	Battery voltage
	3		



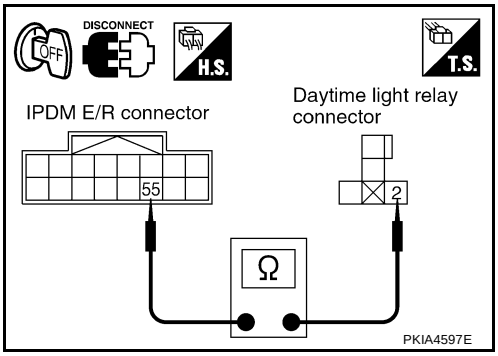
OK or NG

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK DAYTIME LIGHT RELAY

Apply battery voltage to between daytime light relay E20 terminal 1, 2 and check continuity between terminal 3 and 5.

3 – 5 : Continuity should exist.



OK or NG

OK >> GO TO 6.
NG >> Replace daytime light relay.

6. CHECK DAYTIME LIGHT RELAY CIRCUIT

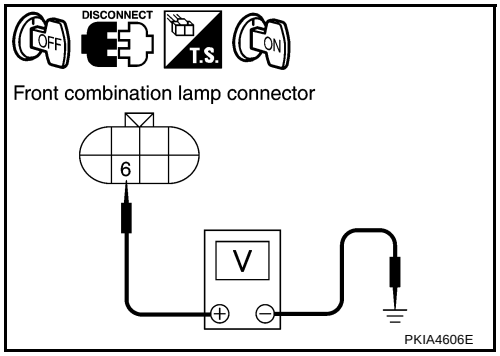
1. Disconnect IPDM E/R connector.
2. Check continuity between IPDM E/R harness connector and daytime light relay harness connector.

Terminals				Continuity
IPDM E/R		Daytime light relay		
Connector	Terminal	Connector	Terminal	
E9	55	E20	2	Yes

OK or NG

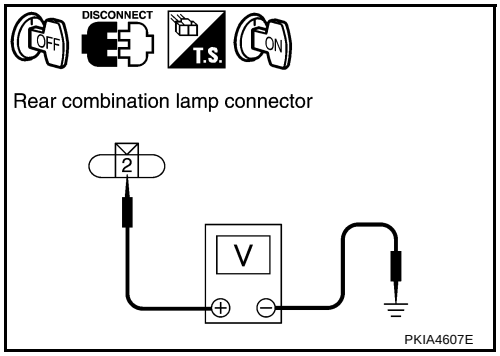
OK >> GO TO 7.
NG >> Repair harness or connector.

7. CHECK IPDM E/R



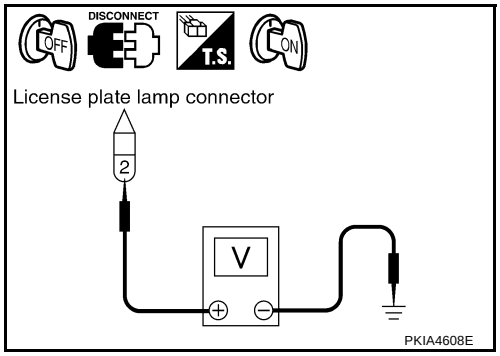
CONSULT-III ACTIVE TEST

1. Connect daytime light relay and IPDM E/R connector.
2. Disconnect front combination lamp, rear combination lamp and license plate lamp connectors.
3. Select "TAIL LAMP" of IPDM E/R active test item.
4. With operating the test item, check voltage between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



IPDM E/R AUTO ACTIVE TEST

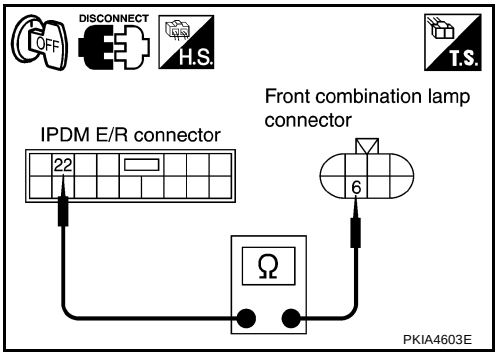
1. Connect daytime light relay and IPDM E/R connector.
2. Disconnect front combination lamp, rear combination lamp and license plate lamp connector.
3. Start auto active test. Refer to PG-20, "Auto Active Test" .
4. With operating the test item, check voltage between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



Terminals				Voltage (Approx.)
(+)			(-)	
Front combination lamp connector		Terminal		
RH	E24	6	Ground	Battery voltage
LH	E40			

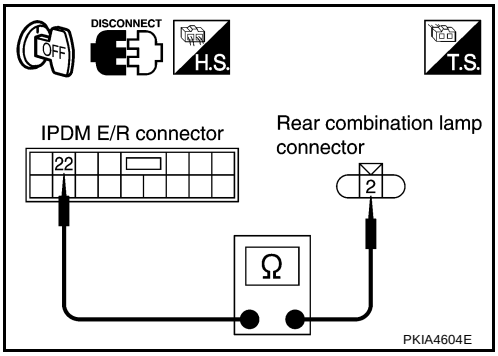
Terminals				Voltage (Approx.)
(+)			(-)	
Rear combination lamp connector		Terminal		
RH	T17	2	Ground	Battery voltage
LH	T9			

Terminals				Voltage (Approx.)
(+)			(-)	
License plate lamp connector		Terminal		
RH	T104	2	Ground	Battery voltage
LH	T102			



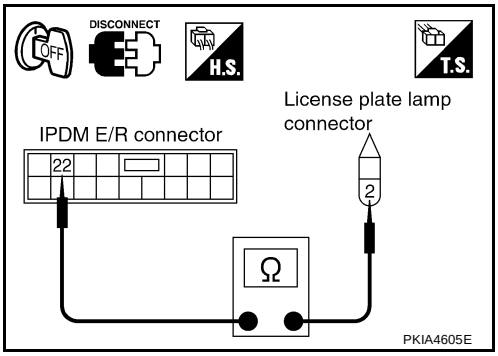
OK or NG

OK >> GO TO 9.
NG >> GO TO 8.



8. CHECK CIRCUIT BETWEEN IPDM E/R AND PARKING, LICENSE PLATE, SIDE MARKER AND TAIL LAMPS

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front combination lamp, rear combination lamp and license plate lamp harness connector.

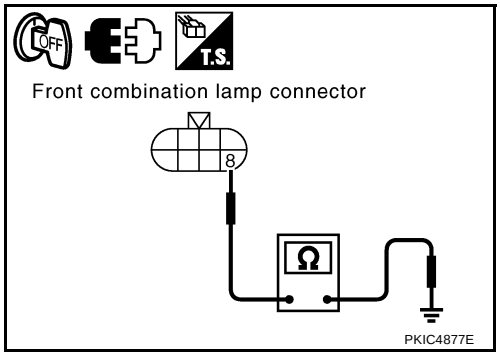


Terminals					Continuity
IPDM E/R		Front combination lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	E24	6	Yes
		LH	E40	6	

Terminals					Continuity
IPDM E/R		Rear combination lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	T17	2	Yes
		LH	T9	2	

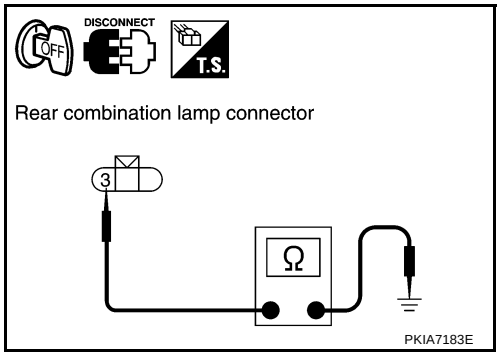
Terminals					Continuity
IPDM E/R		Licence plat lamp			
Connector	Terminal	Connector		Terminal	
E7	22	RH	T104	2	Yes
		LH	T102	2	

OK or NG



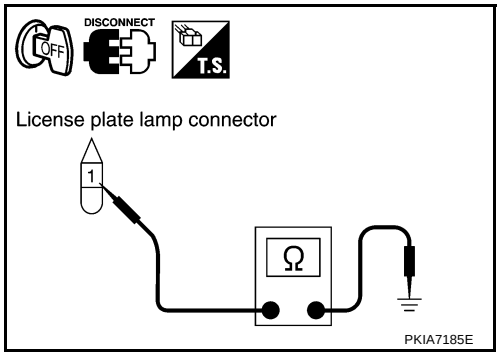
OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

NG >> Repair harness or connector.



9. CHECK GROUND

1. Check continuity between front combination lamp, rear combination lamp and license plate lamp harness connector and ground.



Front combination lamp connector		Terminal	Ground	Continuity
RH	E24	8		Yes
LH	E40			

Rear combination lamp connector		Terminal	Ground	Continuity
RH	T17	3		Yes
LH	T9			

License plate lamp connector		Terminal	Ground	Continuity
RH	T104	1		Yes
LH	T102			

OK or NG

OK >> Check bulb.
NG >> Repair harness or connector.

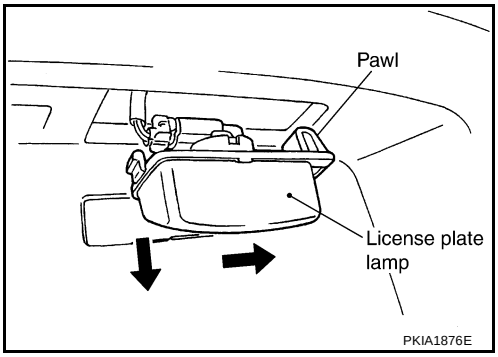
Parking, Side Marker, License Plate and Tail Lamps Do Not Turn OFF (After Approx. 10 Minutes)

NKS004ZD

1. CHECK IPDM E/R

1. Turn ignition switch ON. Place combination switch (lighting switch) in the ON position. Turn ignition switch OFF.
2. Make sure parking, license plate, and tail lamps turn OFF after approximately 10 minutes.

OK or NG

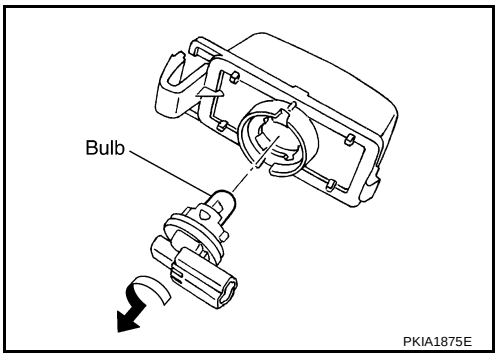


OK >> INSPECTION END.
NG >> Ignition relay malfunction. Refer to PG-17, "Function of Detecting Ignition Relay Malfunction" .

License Plate Lamp

NKS004ZE

BULB REPLACEMENT, REMOVAL AND INSTALLATION



1. While pressing license plate lamp to rightward, pull left side of it and remove.
2. Disconnect license plate lamp connector.

3. Turn bulb socket counterclockwise and unlock it.
4. Remove bulb from it's socket.

License plate lamp : 12V - 5W

5. Installation is the reverse order of removal.

Front Parking Lamp

NKS004ZF

BULB REPLACEMENT

Refer to LT-28, "Bulb Replacement" .

REMOVAL AND INSTALLATION

Refer to LT-29, "Removal and Installation" .

Tail Lamp

NKS004ZG

BULB REPLACEMENT

Refer to LT-126, "Bulb Replacement" .

REMOVAL AND INSTALLATION

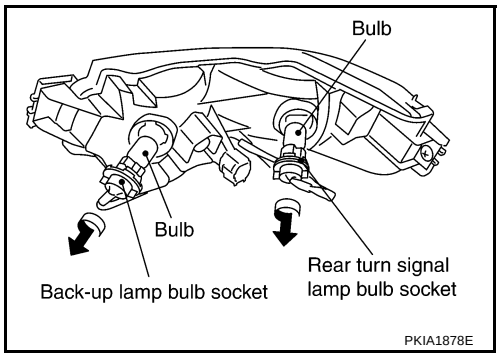
Refer to LT-127, "Removal and Installation" .

REAR COMBINATION LAMP

PFP:26554

Bulb Replacement

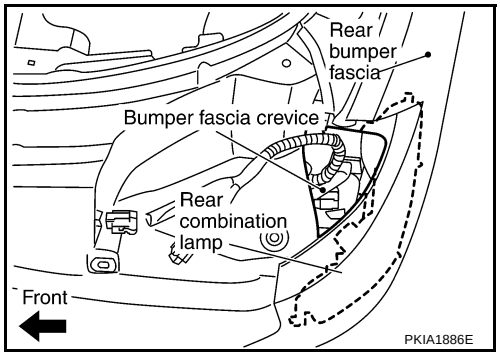
NKS004ZH



REAR FENDER SIDE (STOP & TAIL LAMP, REAR SIDE MARKER LAMP)

1. Remove rear combination lamp. Refer to LT-127, "Removal and Installation" .
2. Replacement integral with rear combination lamp (rear fender side).

Stop/tail lamp	**: LED**
Rear side marker lamp	**: LED**

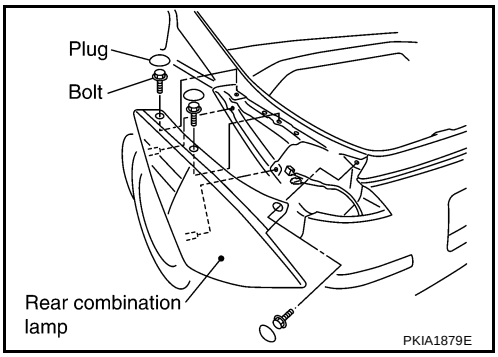


REAR BUMPER SIDE (BACK-UP LAMP BULB, REAR TURN SIGNAL LAMP BULB)

1. Remove rear combination lamp. Refer to LT-127, "Removal and Installation"
2. Turn bulb socket counterclockwise and unlock it through bumper fascia crevice.

3. Remove bulb.
4. Installation is the reverse order of removal.

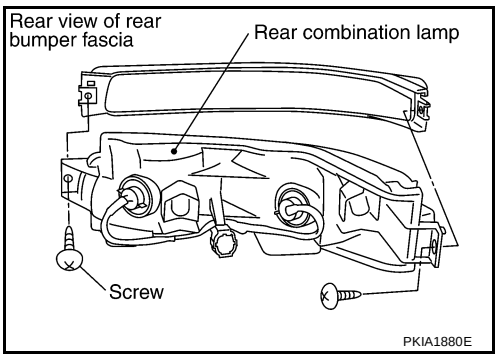
Rear turn signal lamp (rear bumper side)	**: 12 V - 21 W (amber)**
Back-up lamp (rear bumper side)	**: 12 V - 21 W**



Removal and Installation

NKS004ZI

REMOVAL



Rear Fender Side

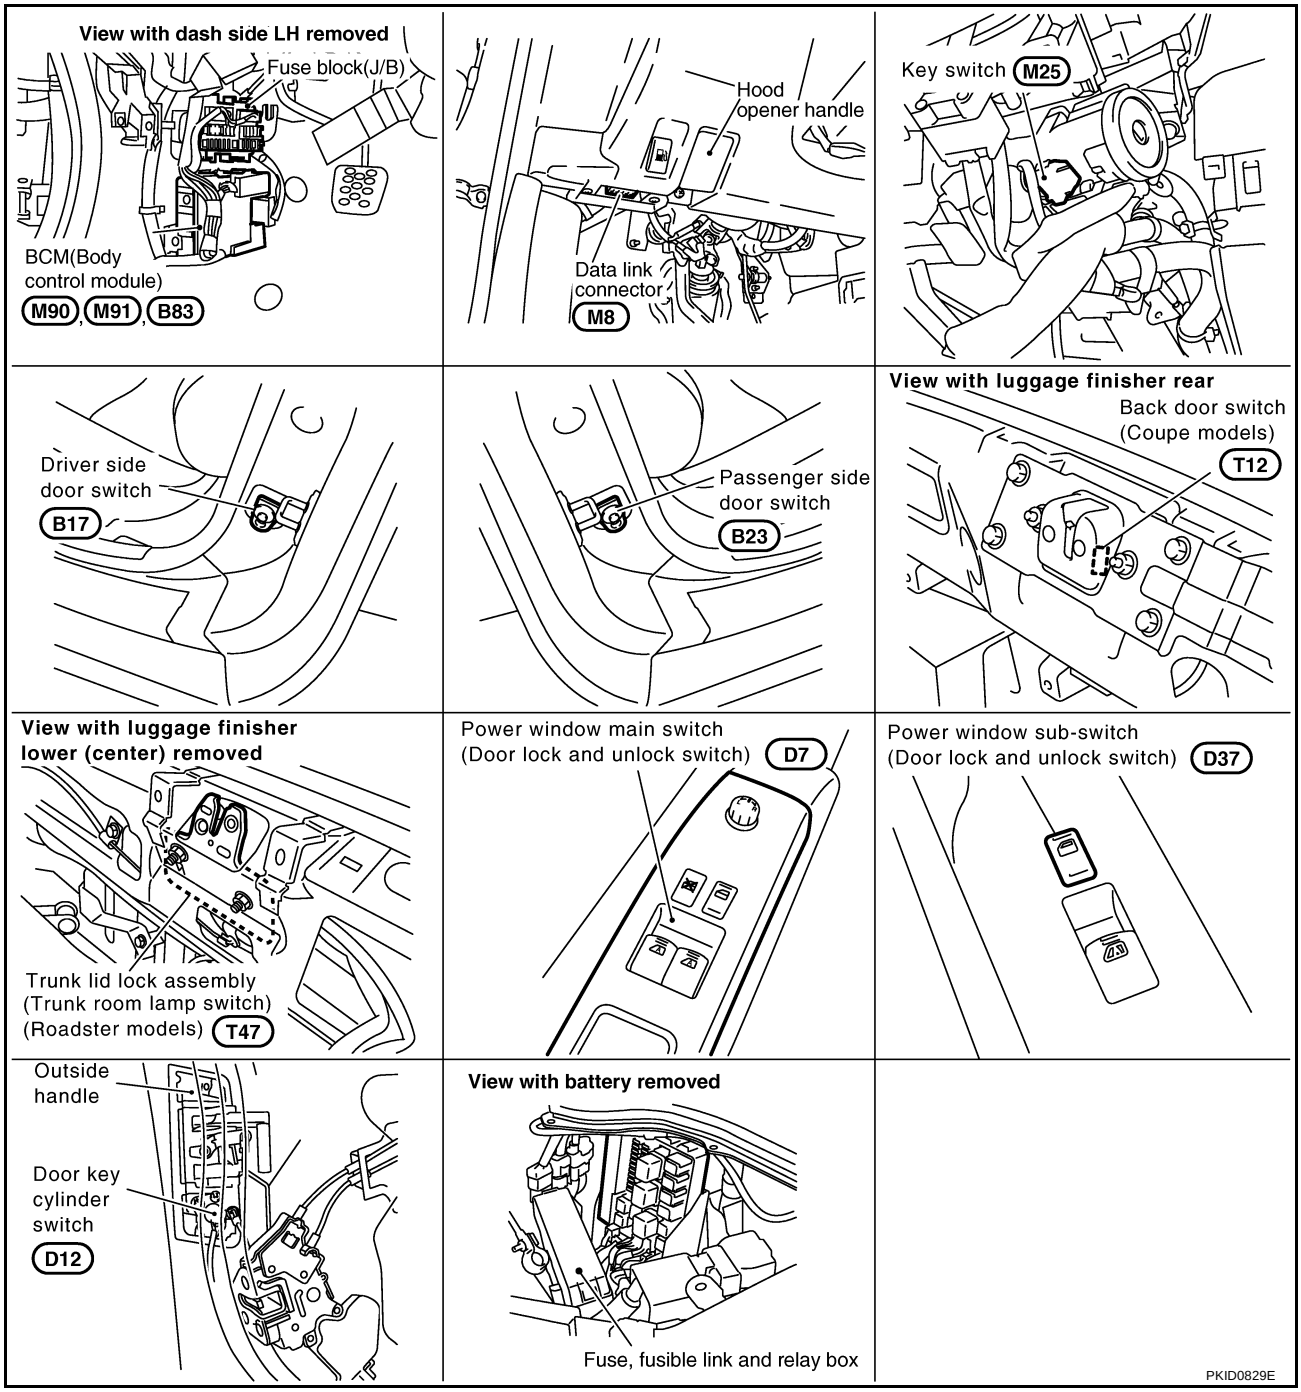
1. Remove plugs and remove rear combination lamp mounting bolts.
2. Pull rear combination lamp toward side of the vehicle and remove from the vehicle.
3. Disconnect rear combination lamp connector.

Rear Bumper Side

1. Remove rear bumper fascia. Refer to EI-17, "REAR BUMPER" .
2. Disconnect rear combination lamp connector.
3. Remove rear combination lamp mounting screws.
4. Remove rear combination lamp from rear bumper fascia.

INSTALLATION

Installation is the reverse order of removal. Be careful of the following:



Rear combination lamp (Rear fender side) mounting bolt : 5.5 N·m (0.56 kg-m, 49 in-lb)

INTERIOR ROOM LAMP

PFP:26410

Component Parts and Harness Connector Location

NKS004ZJ

System Description

NKS004ZK

When the map lamp switch is in the DOOR position, map lamp ON/OFF is controlled by timer according to signals from switches including key switch, door switch driver side and assist side, unlock and lock signal from key fob, door lock and unlock switch, key cylinder lock and unlock switch, ignition switch.
When the map lamp turns ON, there is a gradual brightening over 1 second. When map lamp turns OFF, there is a gradual dimming over 1 second.
Map lamp timer is controlled by BCM (body control module).
Map lamp timer control settings can be changed with CONSULT-III.
Ignition key hole illumination turns ON at time when driver door is opened (door switch ON) or removed key fob from key cylinder. Illumination turns OFF when driver door is closed (door switch OFF).

POWER SUPPLY AND GROUND

Power is supplied at all times

- through 10A fuse [No.21, located in fuse block (J/B)]
- to key switch terminal 2,
- through 10A fuse [No.18, located in fuse block (J/B)]
- to BCM terminal 42,
- through 40A fusible link (letter F, located in fuse, fusible link and relay box)
- to BCM terminal 55.

When key is removed from ignition key cylinder, power is interrupted

- through key switch terminal 1
- to BCM terminal 37.

With ignition switch in ON or START position, power is supplied

- through 10A fuse [No.1, located in fuse block (J/B)]
- to BCM terminal 38.

When map lamp and vanity mirror lamp power is supplied at times

- through BCM terminal 41
- to ignition key hole illumination terminal1
- to map lamp terminal 3 (Coupe models)
- to map lamp terminal 2 (Roadster models)
- to luggage room lamp terminal 1 (Coupe models)
- to trunk room lamp terminal 1 (Roadster models) and
- to vanity mirror lamp LH and RH terminals 1.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66.

When driver side door is opened, ground is supplied

- through case ground of driver side door switch
- to BCM terminal 62.

When passenger side door is opened, ground is supplied

- through case ground of passenger side door switch
- to BCM terminal 12.

When back door is opened, ground is supplied (Coupe models)

- through grounds B5, B6, D105 and T14
- to back door switch terminal 3
- through back door switch terminal 1
- to BCM terminal 58.

When trunk lid is opened, ground is supplied (Roadster models)

- through grounds B5, B6 and T14
- to trunk lid lock assembly (trunk room lamp switch) terminal 1
- through trunk lid lock assembly (trunk room lamp switch) terminal 3
- to BCM terminal 57.

When the driver side door or passenger side door is unlocked by door lock and unlock switch, The BCM receives unlock signal with power window serial link

- through grounds M30 and M66
- to power window main switch (door lock and unlock switch) terminal 15 or power window sub switch (door lock and unlock switch) terminal 11
- through power window main switch (door lock and unlock switch) terminal 12 and power window sub switch (door lock and unlock switch) terminal 16
- to BCM terminal 22.

When the driver side door is unlocked by door key cylinder switch, The BCM receives information by communicating with power window main switch

- through grounds M30 and M66
- to door key cylinder switch terminal 2
- through door key cylinder switch terminal 1
- to power window main (door lock and unlock switch) switch terminal 7
- through power window main switch (door lock and unlock switch) terminal 12
- to BCM terminal 22.

When a signal, or combination of signals is received by BCM, ground is supplied

- through BCM terminal 48
- to map lamp terminal 2 (Coupe models)
- to map lamp terminal 3 (Roadster models).

With power and ground are supplied, map lamp illuminates.

SWITCH OPERATION

When map lamp switch is ON, ground is supplied

- to map lamp terminal 1 (Coupe models)
- to map lamp terminal 1 (Roadster models)
- through grounds M30 and M66.

And power is supplied

- through BCM terminal 41
- to ignition key hole illumination terminal 1
- to map lamp terminal 3 (Coupe models)
- to map lamp terminal 2 (Roadster models).

When vanity mirror lamp LH and RH is ON, ground is supplied

- to vanity mirror lamp LH and RH terminals 2
- through grounds M30 and M66.

And power is supplied

- through BCM terminal 41
- to vanity mirror lamp terminal 1.

MAP LAMP TIMER OPERATION

When the map lamp switch is in the DOOR position, and when all conditions below are met, BCM performs timer control (maximum 30 seconds) for map lamp ON/OFF.
In addition, when map lamp turns ON or OFF there is gradual brightening or dimming over 1 second.
Power is supplied at all times

- to 10A fuse [No. 21 located in fuse block (J/B)]
- through key switch terminal 2.

When all doors are closed (all door switches OFF) and key is removed from key cylinder (key switch OFF), power will not be supplied to BCM terminal 37.
Ground is supplied

- through BCM terminal 22
- to power window main switch (door lock and unlock switch) terminal 12.

At this time, BCM detects that driver door is unlocked. It determines that map lamp timer operation conditions are met, and turns map lamp ON for 30 seconds.
When all doors are closed (all door switches OFF) and key is in key cylinder (key switch ON),
Power is supplied

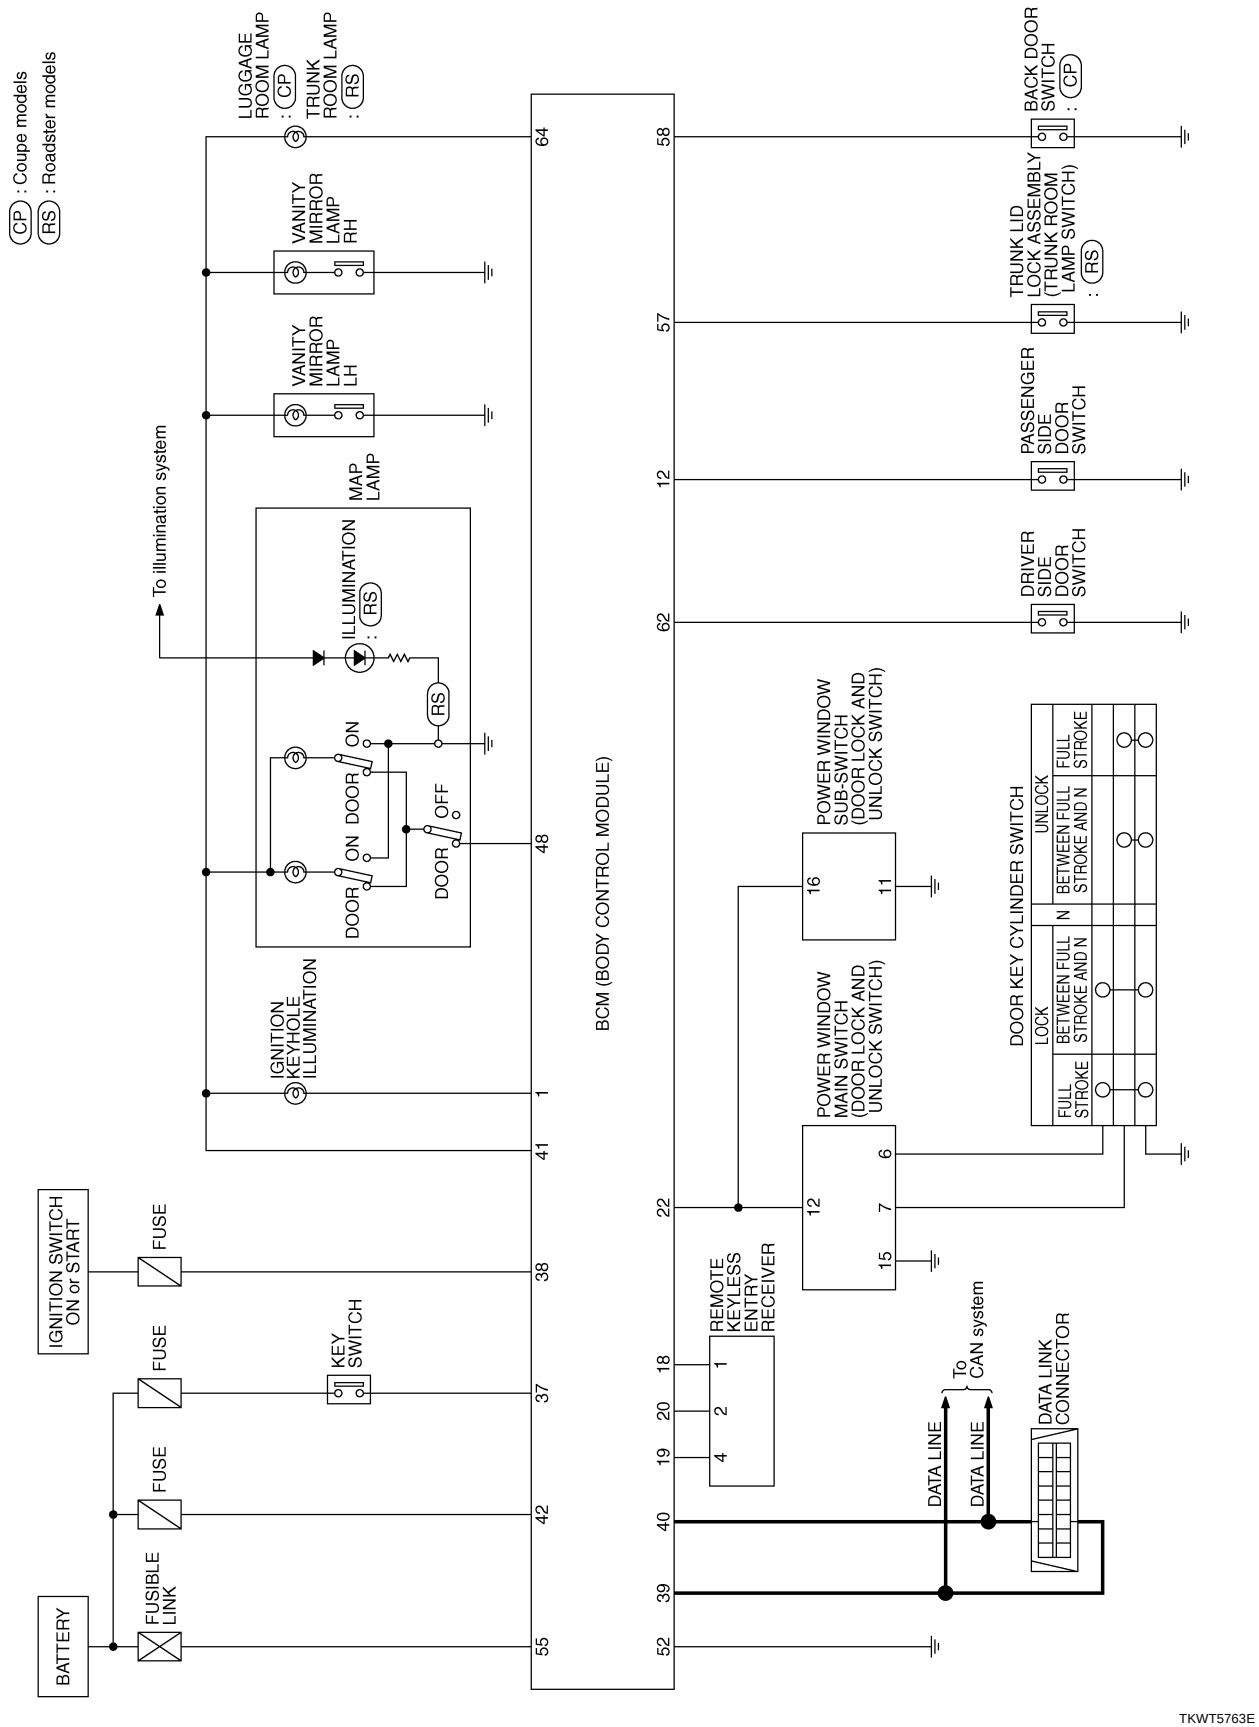
- through key switch terminal 1
- to BCM terminal 37.

When the key is removed from key switch (key switch OFF), power supply to BCM terminal 37 is terminated. BCM detects that key has been removed. It determines that map lamp timer conditions are met, and turns map lamp ON for 30 seconds.

When driver door opens → closes, and key is not inserted in key switch (key switch OFF), BCM terminal 62 changes between 0V (door open) → 5V (door closed). BCM determines that conditions for spot lamp operation are met and turns interior lamp ON for 30 seconds.
Timer control is canceled under the following conditions.

- Driver door is locked (When locked key fob or power window main switch (door lock and unlock switch, door key cylinder switch).
- Driver door is opened (driver door switch turns ON).
- Ignition switch ON.

INTERIOR LAMP BATTERY SAVER CONTROL



If the room lamp remains illuminated by door switch open signal, or if room lamp switch is in the ON position for more than 30 minutes after the ignition switch is turned to the OFF position, BCM will automatically turn off map lamp, luggage room lamp (Coupe models), trunk room lamp (Roadster models) and vanity mirror lamp.
After lamps turn OFF by battery saver system, the lamps illuminate again when

- signal from key fob, door lock and unlock switch, or key cylinder is locked or unlocked,
- door is opened or closed,
- key is removed from ignition key cylinder or inserted in ignition key cylinder.

Interior lamp battery saver control period can be changed by the function setting of CONSULT-III.

Terminals and Reference Values for BCM

NKS004ZN

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
1	PU	Ignition keyhole illumination signal	OFF	Door is locked. (SW OFF)		Battery voltage
				Door is unlocked. (SW ON)		Approx. 0 V
12	P	Front door switch AS signal	OFF	Front door switch AS	ON (open)	Approx. 0 V
					OFF (closed)	Battery voltage
22	Y	Power window switch serial link	ON	—		 PKIA7023E
37	B/R	Key-in detection switch signal	OFF	Vehicle key is removed.		Approx. 0 V
				Vehicle key is inserted.		Battery voltage
38	W/L	Ignition power supply	ON	—		Battery voltage
39	L	CAN – H	—	—		—
40	P	CAN – L	—	—		—
41	R/B	Battery saver output signal	OFF	30 minutes after ignition switch is turned to OFF.		Approx. 0 V
			ON	—		Battery voltage
42	GY	Battery power supply	OFF	—		Battery voltage
48	P	Map lamp output signal	OFF	Map lamp door switch: DOOR position	Any door switch: ON (open)	Approx. 0 V
					Any door switch: OFF (closed)	Battery voltage
52	B	Ground	ON	—		Approx. 0 V
55	R	Battery power supply	OFF	—		Battery voltage
57*1	R/W	Trunk room lamp switch signal	OFF	Trunk room lamp switch	ON (open)	Approx. 0 V
					OFF (closed)	Battery voltage
58*2	R/W	Back door switch signal	OFF	Luggage room lamp switch	ON (open)	Approx. 0 V
					OFF (closed)	Battery voltage
62	L	Front door switch DR signal	OFF	Front door switch DR	ON (open)	Approx. 0 V
					OFF (closed)	Battery voltage
64	GY/R*1 BR*2	Trunk room lamp*1 or luggage lamp*2 switch signal	OFF	Trunk room lamp*1 or back door*2 switch	ON (open)	Approx. 0 V
					OFF (closed)	Battery voltage

*1: Roadster models, *2: Coupe models

How to Proceed with Trouble Diagnosis

NKS004ZO

1. Confirm the symptom or customer complaint.
2. Understand operation description and function description. Refer to LT-128, "System Description" .
3. Perform preliminary check. Refer to LT-142, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does interior room lamp operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

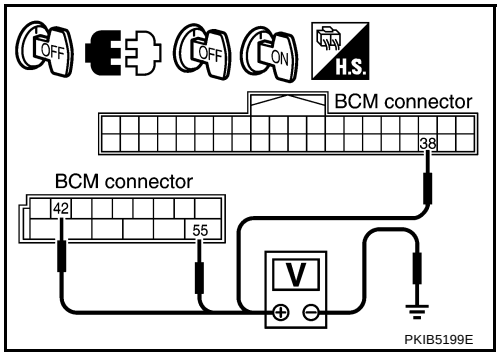
NKS004ZP

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

Unit	Power source	Fuse and fusible link No.
BCM	Battery	F
		18
		21
	Ignition switch ON or START position	1



Refer to LT-133, "Wiring Diagram — ROOM/L —" .

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

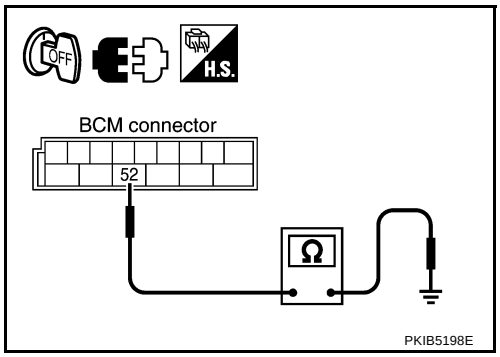
2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector and ground.

Terminals			Ignition switch position	
(+)		(-)	OFF	ON
BCM connector	Terminal			
M90	38	Ground	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.



3. CHECK GROUND CIRCUIT

Check continuity between BCM and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS004ZQ

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis part	Diagnosis mode	Description
INT LAMP	WORK SUPPORT	Changes the setting for each function.
	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Operation of electrical loads can be checked by sending driving signal to them.

WORK SUPPORT
Display Item List

Item	Description	CONSULT-III
SET I/L D–UNLCK INTCON	The 30 seconds glowing function interior room lamps and ignition keyhole illumination can be selected when driver door is released (unlocked).	ON/OFF
ROOM LAMP ON TIME SET	The time in order to escalate illumination can be adjusted when interior room lamps and ignition keyhole illumination is turned on.	MODE 1 – 7
ROOM LAMP OFF TIME SET	The time in order to diminish illumination can be adjusted when interior room lamps and ignition keyhole illumination is turned off.	MODE 1 – 7

Reference between “MODE” and “TIME” for “TURN ON/OFF”

MODE	1	2	3	4	5	6	7
Time (sec.)	0.5	1	2	3	4	5	0

DATA MONITOR
Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “IGN position (ON)/OFF, ACC position (OFF)” judged from ignition switch signal.
KEY ON SW	“ON/OFF”	Displays “Key inserted (ON)/key removed (OFF)” status judged from key switch signal.
DOOR SW - DR	“ON/OFF”	Displays status of driver door as judged from driver door switch signal. (Door is open: ON/Door is closed: OFF)
DOOR SW - AS	“ON/OFF”	Displays “Door open (ON)/Door closed (OFF)” status, determined from passenger door switch signal.
DOOR SW - RR NOTE	“OFF”	—
DOOR SW - RL NOTE	“OFF”	—
BACK DOOR SW	“ON/OFF”	● Displays status of back door as judged from back door switch signal. (Coupe models) ● Displays status of rear trunk hood as judged from trunk lamp switch signal. (Roadster models)
KEY CYL LK - SW	“ON/OFF”	Displays “Door locked (ON) status, determined from key cylinder lock switch in driver door.
KEY CYL UN - SW	“ON/OFF”	Displays “Door unlocked (OFF) status, determined from key cylinder lock switch in driver door.
CDL LOCK SW	“ON/OFF”	Displays “Door locked (ON)/Door unlocked (OFF) status, determined from locking detection switch in driver door.
CDL UNLOCK SW	“ON/OFF”	Displays “Door unlocked (OFF)” status, determined from locking detection switch in passenger door.
KEYLESS LOCK	“ON/OFF”	Displays “Locked (ON)/Other (OFF)” status, determined from lock signal.
KEYLESS UNLOCK	“ON/OFF”	Displays “Unlocked (ON)/Other (OFF)” status, determined from unlock signal.

NOTE:
This item is displayed, but cannot be monitored.

ACTIVE TEST

Display Item List

Test item	Description
INT LAMP	Map lamp can be operated by any ON–OFF operations.
IGN ILLUM NOTE	—
STEM LAMP TEST NOTE	—
LUGGAGE LAMP TEST	● Luggage room lamp can be operated by any ON–OFF operations. (Coupe models) ● Trunk room lamp can be operated by any ON–OFF operations. (Roadster models)

NOTE:
This item is displayed, but cannot be tested.

Map Lamp Control Does Not Operate (Coupe models)

NKS004ZR

1. CHECK BETWEEN EACH SWITCH AND BCM

1. Select "INT LAMP" of BCM data monitor item.
2. Make sure switches listed in display item list turn ON-OFF linked with switch operation. Refer to LT-143, "Display Item List" for switches and their functions.

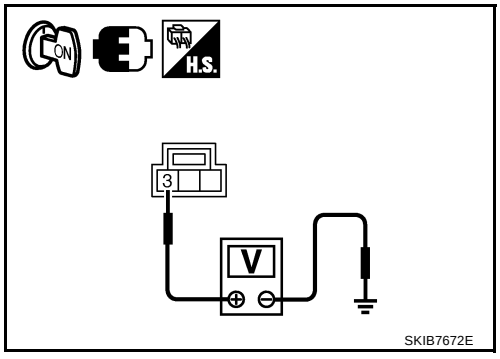
OK or NG

OK >> GO TO 2.
NG >> Inspect malfunctioning switch system.

2. CHECK BETWEEN BCM AND MAP LAMP

1. Select "INT LAMP" of BCM active test item.
2. With operating the test item, check the map lamp operation (When map lamp switch is in DOOR position).

Map lamp should operate.



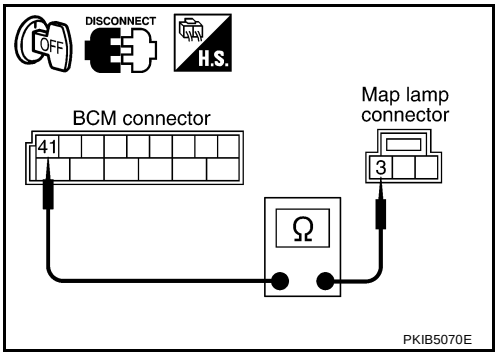
OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> GO TO 3.

3. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between map lamp harness connector and ground.

Terminal			Voltage (Approx.)
(+)		(-)	
Map lamp connector	Terminal		
R52	3	Ground	Battery voltage

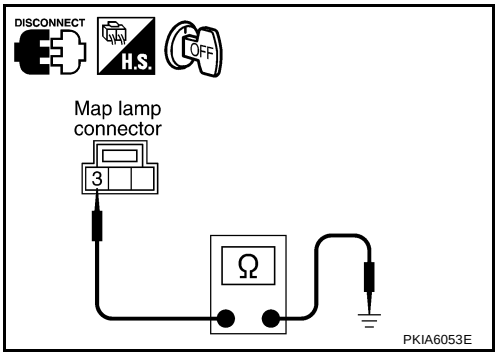


OK or NG

OK >> GO TO 6.
NG >> GO TO 4.

4. CHECK MAP LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and map lamp connector.
3. Check continuity between BCM harness connector and map lamp harness connector.



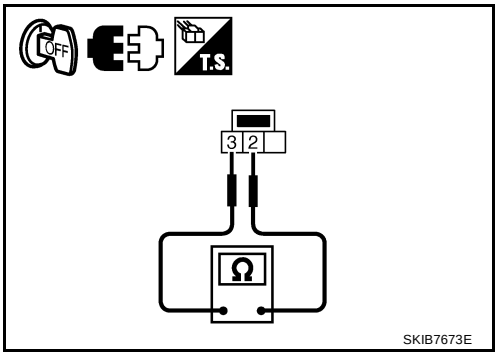
Terminals				Continuity
BCM		Map lamp		
Connector	Terminal	Connector	Terminal	
M91	41	R52	3	Yes

OK or NO

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK SHORT CIRCUIT

Check continuity between map lamp harness connector and ground.



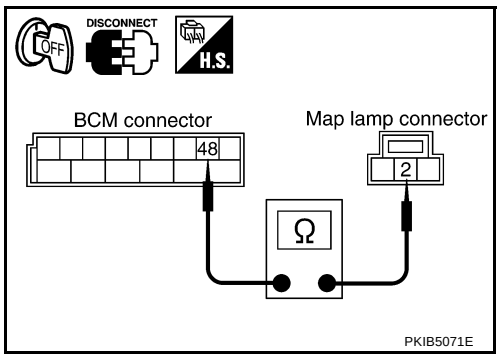
Map lamp connector	Terminal	Ground	Continuity
R52	3		No

OK or NG

OK >> Replace BCM if map lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

6. CHECK MAP LAMP

1. Turn ignition switch OFF.
2. Disconnect map lamp connector.
3. Check continuity between map lamp.



Terminal		Condition	Continuity
Map lamp			
3	2	Map lamp switch is DOOR.	Yes
		Map lamp switch is OFF.	No

OK or NG

OK >> GO TO 7.
NG >> Replace map lamp.

7. CHECK MAP LAMP CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector and map lamp harness connector.

Terminals				Continuity
BCM		Map lamp		
Connector	Terminal	Connector	Terminal	
M91	48	R52	2	Yes

OK or NO

OK >> Replace BCM if map lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

Map Lamp Control Does Not Operate (Roadster models)

NKS004ZS

1. CHECK BETWEEN EACH SWITCH AND BCM

1. Select "INT LAMP" of BCM data monitor item.
2. Make sure switches listed in display item list turn ON-OFF linked with switch operation. Refer to LT-143, "Display Item List" for switches and their functions.

OK or NG

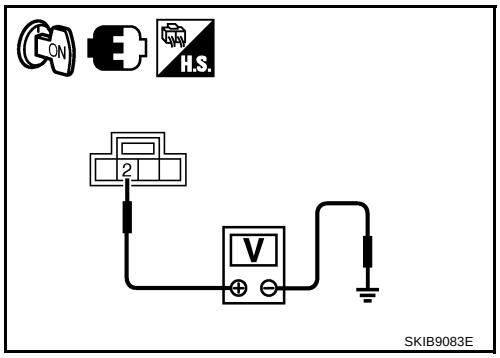
OK >> GO TO 2.

NG >> Inspect malfunctioning switch system.

2. CHECK BETWEEN BCM AND MAP LAMP

1. Select "INT LAMP" of BCM active test item.
2. With operating the test item, check the map lamp operation (When map lamp switch is in DOOR position).

Map lamp should operate.



OK or NG

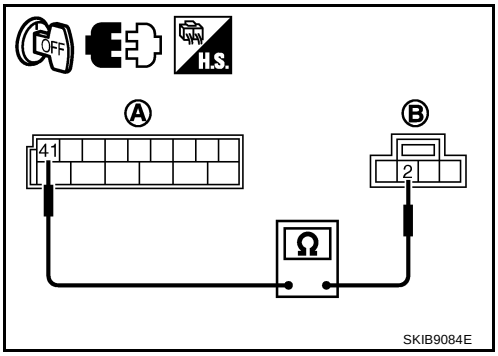
OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> GO TO 3.

3. CHECK BETWEEN BCM AND MAP LAMP

1. Turn ignition switch ON.
2. Check voltage between map lamp harness connector and ground.

Terminal			Voltage (Approx.)
(+)		(-)	
Map lamp connector	Terminal		
R53	2	Ground	Battery voltage



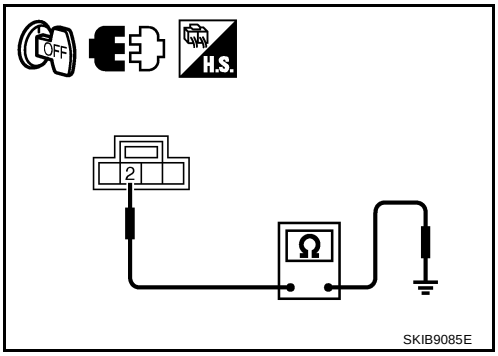
OK or NG

OK >> GO TO 6.

NG >> GO TO 4.

4. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and map lamp connector.
3. Check continuity between BCM harness connector (A) and map lamp harness connector (B).



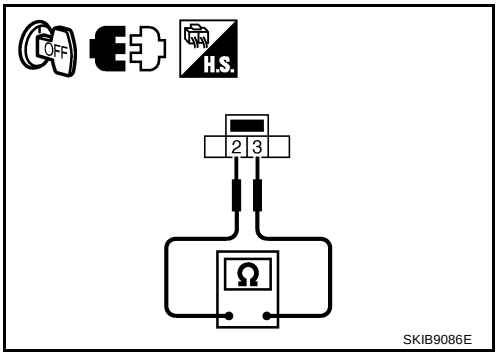
Terminals				Continuity
A		B		
Connector	Terminal	Connector	Terminal	
M91	41	R53	2	Yes

OK or NO

OK >> GO TO 5.
NG >> Repair harness or connector.

5. CHECK SHORT CIRCUIT

Check continuity between map lamp harness connector and ground.



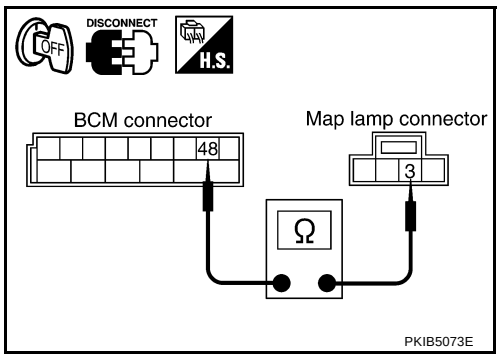
Map lamp connector	Terminal	Ground	Continuity
R53	2		No

OK or NG

OK >> Replace BCM if map lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

6. CHECK MAP LAMP

1. Turn ignition switch OFF.
2. Disconnect map lamp connector.
3. Check continuity between map lamp.



Terminal		Condition	Continuity
Map lamp			
3	2	Map lamp switch is DOOR.	Yes
		Map lamp switch is OFF.	No

OK or NG

OK >> GO TO 7.
NG >> Replace map lamp.

7. CHECK MAP LAMP CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector and map lamp harness connector.

Terminals				Continuity
BCM		Map lamp		
Connector	Terminal	Connector	Terminal	
M91	48	R53	3	Yes

OK or NO

OK >> Replace BCM if map lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

Ignition Key Hole Illumination Does Not Illuminate

NKS004ZT

1. CHECK BULB

Check bulb of lamp which does not operate.

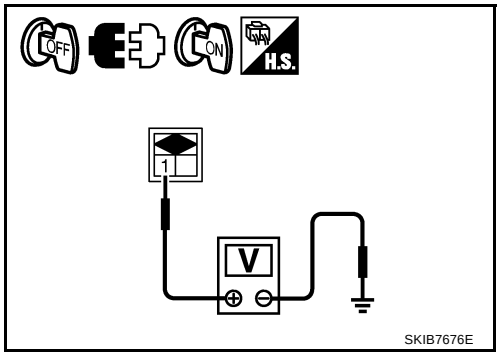
OK or NG

OK >> GO TO 2.

NG >> Replace bulb.

2. CHECK BETWEEN EACH SWITCH AND BCM

1. Select "INT LAMP" of BCM data monitor item.
2. Make sure switches listed in display item list turn ON-OFF linked with switch operation. Refer to LT-143, "Display Item List" for switches and their functions.



OK or NG

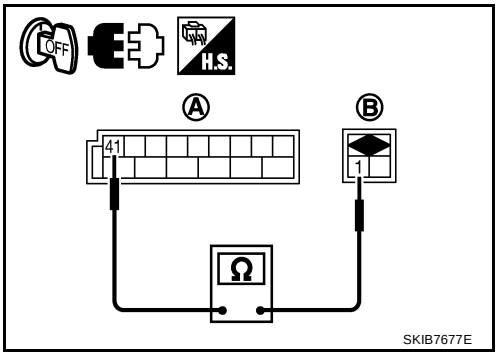
OK >> GO TO 3.

NG >> Inspect malfunctioning switch system.

3. CHECK POWER SUPPLY TO IGNITION KEY HOLE ILLUMINATION

1. Turn ignition switch OFF.
2. Disconnect ignition key hole illumination connector.
3. Turn ignition switch ON.
4. Check voltage between ignition key hole illumination harness connector and ground.

Terminal			Voltage (Approx.)
(+)		(-)	
Ignition key hole illumination connector	Terminal		
M26	1	Ground	Battery voltage



OK or NG

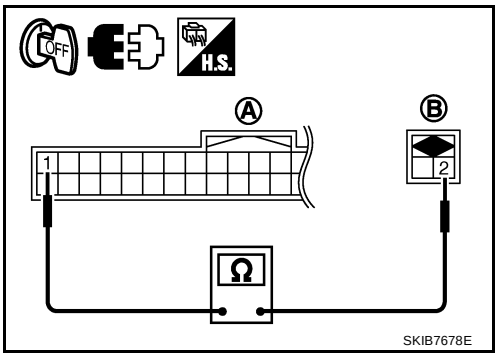
OK >> GO TO 5.

NG >> GO TO 4.

4. CHECK POWER SUPPLY CIRCUIT FOR IGNITION KEY HOLE ILLUMINATION

1. Turn ignition switch OFF.
2. Disconnect BCM connector and key hole illumination connector.
3. Check continuity between BCM harness connector (A) and ignition key hole illumination harness connector (B).

Terminals				Continuity
A		B		
Connector	Terminal	Connector	Terminal	
M91	41	M26	1	Yes



OK or NG

OK >> Replace BCM if ignition key hole illumination does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

5. CHECK GROUND CIRCUIT FOR IGNITION KEY HOLE ILLUMINATION

1. Turn ignition switch OFF.
2. Disconnect BCM connector and key hole illumination connector.
3. Check continuity between BCM harness connector (A) and ignition key hole illumination harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
M90	1	M26	2	Yes

OK or NG

OK >> Replace BCM if ignition key hole illumination does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

Luggage Room Lamp Does Not Illuminate (Coupe Models)

NKS004ZU

1. CHECK BULB

Inspect bulb of luggage room lamp.

OK or NG

OK >> GO TO 2.

NG >> Replace bulb of luggage room lamp.

2. CHECK BETWEEN EACH SWITCH AND BCM

1. Select "LUGGAGE LAMP TEST" of BCM data monitor item.
2. Make sure switches listed in display item list turn ON-OFF linked with switch operation. Refer to LT-143, "Display Item List" for switches and their functions.

OK or NG

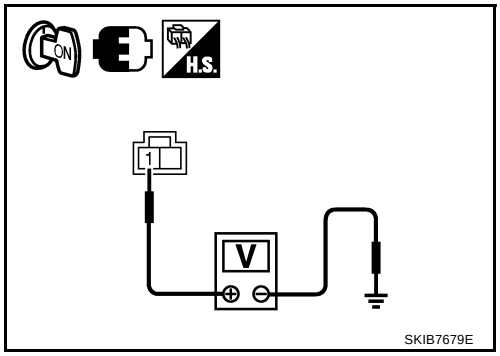
OK >> GO TO 3.

NG >> Inspect malfunctioning switch system.

3. CHECK BETWEEN BCM AND LUGGAGE ROOM LAMP

1. Select "LUGGAGE LAMP TEST" of BCM active test item.
2. With operating the test item, check the luggage room lamp operation.

Luggage room lamp should operate.



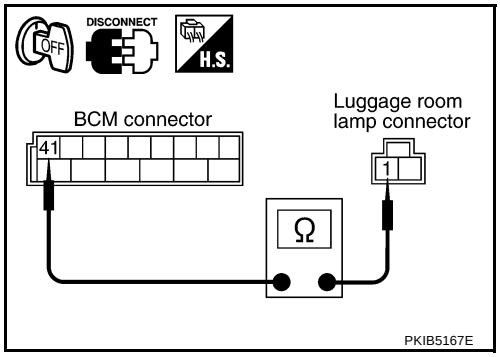
OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> GO TO 4.

4. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between luggage room lamp harness connector and ground.

Terminal			Voltage (Approx.)
(+)		(-)	
Luggage room lamp connector	Terminal		
T13	1	Ground	Battery voltage



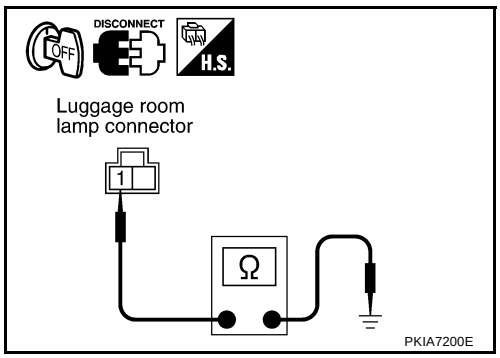
OK or NG

OK >> GO TO 7.
NG >> GO TO 5.

5. CHECK LUGGAGE ROOM LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and luggage room lamp connector.
3. Check continuity between BCM harness connector and luggage room lamp harness connector.

Terminals				Continuity
BCM		Luggage room lamp		
Connector	Terminal	Connector	Terminal	
M91	41	T13	1	Yes



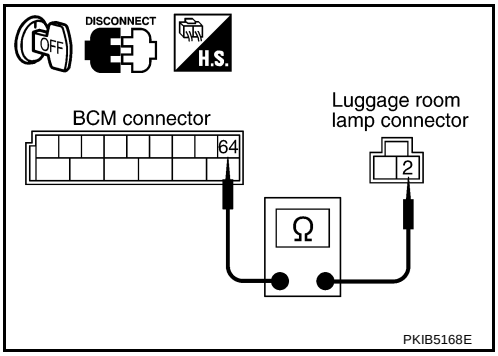
OK or NO

OK >> GO TO 6.
NG >> Repair harness or connector.

6. CHECK SHORT CIRCUIT

Check continuity between luggage room lamp harness connector and ground.

Luggage room lamp connector	Terminal	Ground	Continuity
T13	1		No



OK or NG

OK >> Replace BCM if luggage room lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

7. CHECK LUGGAGE ROOM LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector and luggage room lamp harness connector.

Terminals				Continuity
BCM		Luggage room lamp		
Connector	Terminal	Connector	Terminal	
B83	64	T13	2	Yes

OK or NO

OK >> Replace BCM if luggage room lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

Trunk Room Lamp Does Not Illuminate (Roadster Models)

NKS004ZV

1. CHECK BULB

Inspect bulb of trunk room lamp.

OK or NG

OK >> GO TO 2.

NG >> Replace map lamp.

2. CHECK BETWEEN EACH SWITCH AND BCM

1. Select "LUGGAGE LAMP TEST" of BCM data monitor item.
2. Make sure switches listed in display item list turn ON-OFF linked with switch operation. Refer to LT-143, "Display Item List" for switches and their functions.

OK or NG

OK >> GO TO 3.

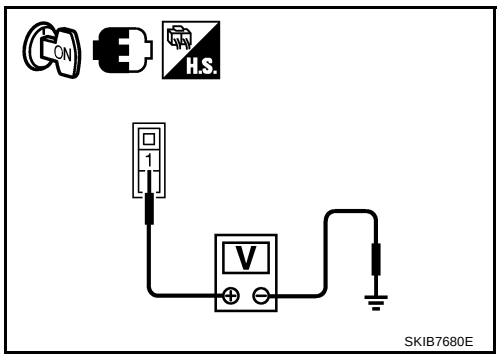
NG >> Inspect malfunctioning switch system.

3. CHECK BETWEEN BCM AND TRUNK ROOM LAMP

1. Select “BCM” on CONSULT-III. Select “LUGGAGE LAMP TEST” active test.
2. With operating the test item, check the trunk room lamp operation.

Trunk room lamp should operate.

OK or NG



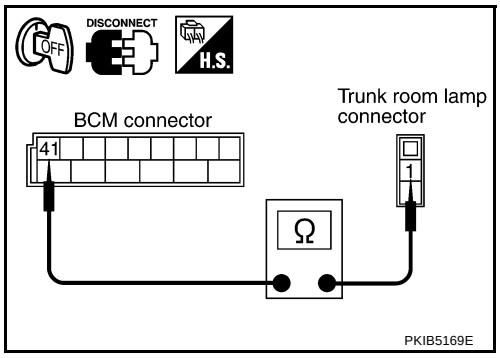
OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> GO TO 4.

4. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between trunk room lamp harness connector and ground.

Terminal			Voltage (Approx.)
(+)		(-)	
Trunk room lamp connector	Terminal		
T29	1	Ground	Battery voltage



OK or NG

OK >> GO TO 7.
NG >> GO TO 5.

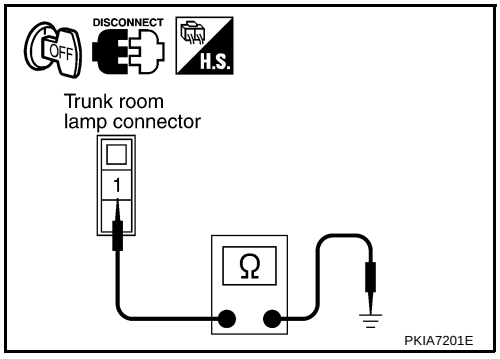
5. CHECK TRUNK ROOM LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and trunk room lamp connector.
3. Check continuity between BCM harness connector and trunk room lamp harness connector.

Terminals				Continuity
BCM		Trunk room lamp		
Connector	Terminal	Connector	Terminal	
M91	41	T29	1	Yes

OK or NO

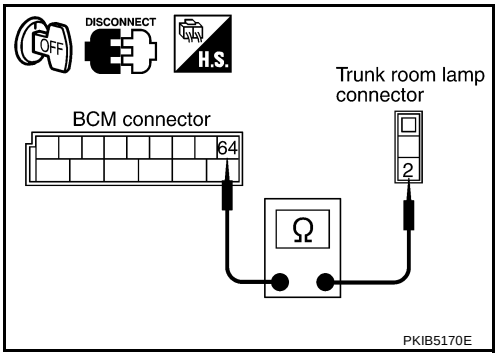
OK >> GO TO 6.
NG >> Repair harness or connector.



6. CHECK SHORT CIRCUIT

Check continuity between trunk room lamp harness connector and ground.

Trunk room lamp connector	Terminal	Ground	Continuity
T29	1		No



OK or NG

OK >> Replace BCM if trunk room lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

7. CHECK TRUNK ROOM LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector and trunk room lamp harness connector.

Terminals				Continuity
BCM		Trunk room lamp		
Connector	Terminal	Connector	Terminal	
B83	64	T29	2	Yes

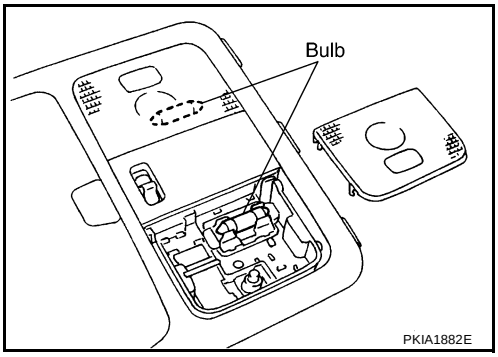
OK or NO

OK >> Replace BCM if trunk room lamp does not work after setting the connector again. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair harness or connector.

Bulb Replacement

NKS004ZW



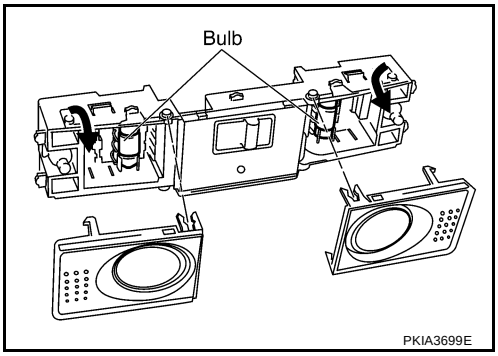
MAP LAMP

Coupe Models

1. Open driver and passenger window, and then disconnect battery cable from the negative terminal.

   CAUTION:
   After battery cables are disconnected, never open/close driver and/or passenger door with the window in the full up position. Automatic window adjusting function will not work and side roof panel may be damaged.
2. Remove lens using clip driver or suitable tool.
3. Remove bulb.

   Map lamp : 12V - 8W
4. Installation is the reverse order of removal.

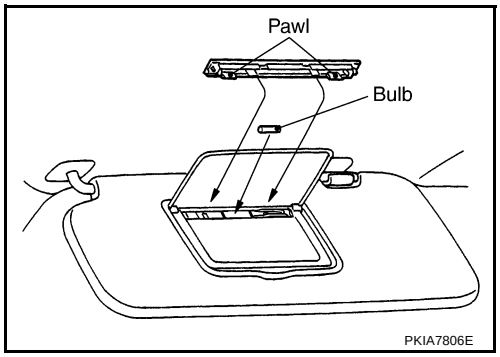


Roadster Models

1. Open driver and passenger window, and then disconnect battery cable from the negative terminal.

   CAUTION:
   After battery cables are disconnected, never open/close driver and/or passenger door with the window in the full up position. Automatic window adjusting function will not work and side roof panel may be damaged.
2. Remove lens using clip driver or suitable tool.
3. Remove bulb.

   Map lamp : 12V - 8W
4. Installation is the reverse order of removal.

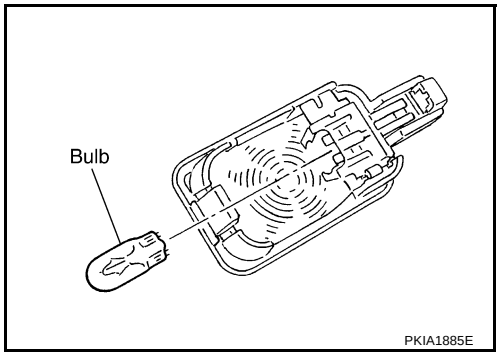


VANITY MIRROR LAMP

1. Insert a thin screwdriver in the lens end and remove lens.
2. Remove bulb.

Vanity mirror lamp : 12V - 1.32W

3. Installation is the reverse order of removal.



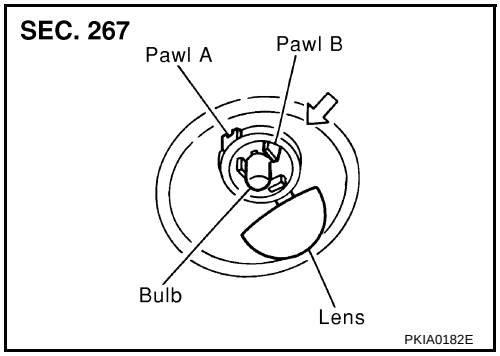
LUGGAGE ROOM LAMP & TRUNK ROOM LAMP

Luggage Room Lamp (Coupe Models)

1. Remove luggage room lamp. Refer to LT-155, "Removal and Installation" .
2. Remove bulb.

Luggage room lamp : 12V - 5W

3. Installation is the reverse order of removal.

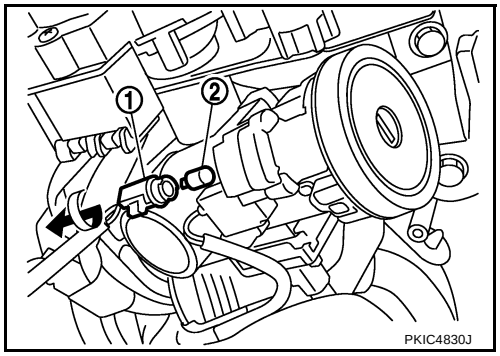


Trunk Room Lamp (Roadster Models)

1. Unfold pawl A and remove lens.
2. Remove trunk room lamp while pressing pawl B in the direction of the arrow.
3. Disconnect trunk room lamp connector.

Trunk room lamp : 12V - 3.4W

4. Installation is the reverse order of removal.

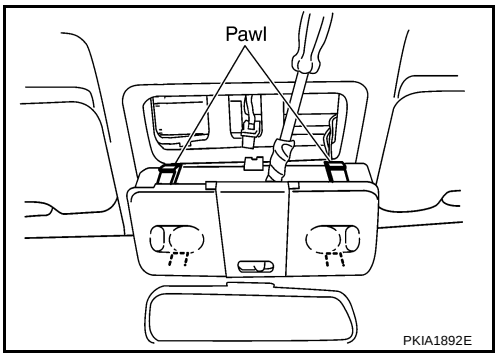


IGNITION KEY HOLE ILLUMINATION

1. Remove instrument lower driver panel. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Turn bulb socket to left to release lock and remove bulb socket (1).
3. Remove ignition key illumination bulb (2) from its socket.

Ignition key hole illumination : 12V - 1.4W

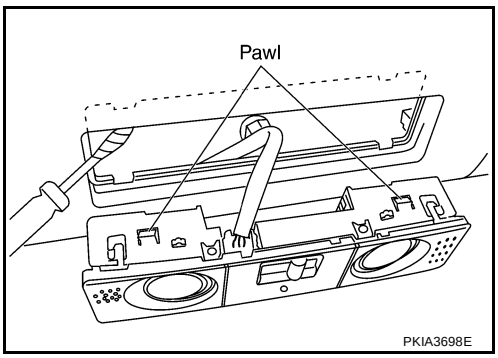
4. Installation is the reverse order of removal.



Removal and Installation

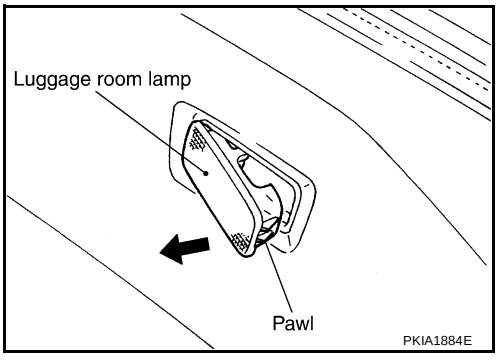
NKS004ZX

MAP LAMP



Coupe Models

1. Insert a clip driver or suitable tool and disengage pawl fittings of map lamp.
2. Disconnect map lamp connector and remove map lamp.
3. Installation is the reverse order of removal.



Roadster Models

1. Insert a clip driver or suitable tool and disengage pawl fittings of map lamp.
2. Disconnect map lamp connector and remove map lamp.
3. Installation is the reverse order of removal.

LUGGAGE ROOM LAMP

1. Pull out luggage room lamp in direction shown by the arrow in the figure.
2. Disconnect luggage room lamp connector.
3. Installation is the reverse order of removal.

ILLUMINATION

PFP:27545

System Description

NKS004ZY

Control of the illumination lamp operation is dependent upon the position of the lighting switch (combination switch). When the lighting switch is placed in the 1ST or 2ND position, the BCM (body control module) receives input signal requesting illumination lamps to illuminate. This input signal is communicated to the IPDM E/R (intelligent power distribution module engine room) through the CAN communication lines. The CPU (central processing unit) located in the IPDM E/R controls tail lamp relay coil. This relay, when energized, directs power to illumination lamps, which then illuminate.

OUT LINE

Power is supplied at all times

- through 10A fuse (No.71, located in IPDM E/R)
- to tail lamp relay, located in IPDM E/R, and
- to CPU located in IPDM E/R,
- through 15A fuse (No.78, located in IPDM E/R)
- to CPU located in IPDM E/R.

Power is also supplied at all times

- through 40A fusible link (letter F, located in fuse, fusible link and relay box)
- to BCM terminal 55,
- through 10A fuse [No.18, located in fuse block (J/B)]
- to BCM terminal 42,
- through 10A fuse [No.19, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 21,
- through 10A fuse [No.19, located in fuse block (J/B)]
- to combination meter terminal 24.

With ignition switch in the ON or START position, power is supplied

- to CPU located in IPDM E/R,
- through 10A fuse [No.1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10A fuse [No.12, located in fuse block (J/B)]
- to unified meter and A/C amp. terminal 22, and
- to NAVI control unit terminal 63 (With navigation system),
- through 10A fuse [No.14, located in fuse block (J/B)]
- to combination meter terminal 23.

With ignition switch in the ACC or ON position, power is supplied

- through 10A fuse [No.6, located in fuse block (J/B)]
- to BCM terminal 11.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66,
- to IPDM E/R terminals 38 and 60
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone)
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to unified meter and A/C amp. terminals 29 and 30
- through grounds M30 and M66,
- to combination meter terminals 10, 11 and 12
- through grounds M30 and M66,
- to NAVI control unit terminal 1 (With navigation system)
- through ground B115 (With navigation system).

ILLUMINATION OPERATION BY LIGHTING SWITCH

With the lighting switch in the 1ST or 2ND position, the BCM receives input signal requesting illumination lamps to illuminate. This input signal is communicated to the IPDM E/R through the CAN communication lines. CPU located in the IPDM E/R controls tail lamp relay coil, which, when energized, directs power

- through terminal 22 of IPDM E/R
- to NAVI control unit terminal 61 (With navigation system)
- to NAVI switch terminal 2 (With navigation system)
- to audio unit terminal 8.
- to combination switch (spiral cable) terminal 26 (with steering switch)
- to soft top switch (illumination) terminal 5 (Roadster model)
- to A/T device (A/T illumination) terminal 3 (With A/T)
- to VDC off switch (illumination) terminal 3 (With VDC)
- to TCS off switch (illumination) terminal 3 (With TCS)
- to map lamp (illumination) terminal 4 (Roadster models)
- to hazard switch (illumination) terminal 3
- to heated seat switch (driver side) (illumination) terminal 5 (With hated seat)
- to heated seat switch (passenger side) (illumination) terminal 5 (With heated seat)
- to bottle holder illumination (driver side) terminal 1
- to bottle holder illumination (passenger side) terminal 1
- to cup holder illumination terminal 1
- to luggage floor box lamp terminal 1.

Ground is supplied at all times

- to NAVI control unit terminal 1 (with navigation system)
- through ground B115,
- to NAVI switch terminal 3 (With navigation system)
- to audio unit terminal 7
- to combination switch (spiral cable) terminal 27 (with steering switch)
- to soft top switch (illumination) terminal 6 (Roadster models)
- to A/T device (A/T illumination) terminal 5 (With A/T)
- to VDC off switch (illumination) terminal 4 (With VDC)
- to TCS off switch (illumination) terminal 4 (With TCS)
- to hazard switch (illumination) terminal 4
- to heated seat switch (driver side) (illumination) terminal 6 (With heated seat)
- to heated seat switch (passenger side) (illumination) terminal 6 (With heated seat)
- to bottle holder illumination (driver side) terminal 2, and
- to bottle holder illumination (passenger side) terminal 2
- through combination meter terminal 18,
- to map lamp (illumination) terminal 1 (Roadster models)
- to cup holder illumination terminal 2
- through grounds M30 and M66,
- to luggage floor box lamp terminal 2
- through grounds B5, B6, D105 and T14 (Coupe model)
- through grounds B5, B6 and T14 (Roadster model).

With power and ground supplied, illumination lamps illuminate.

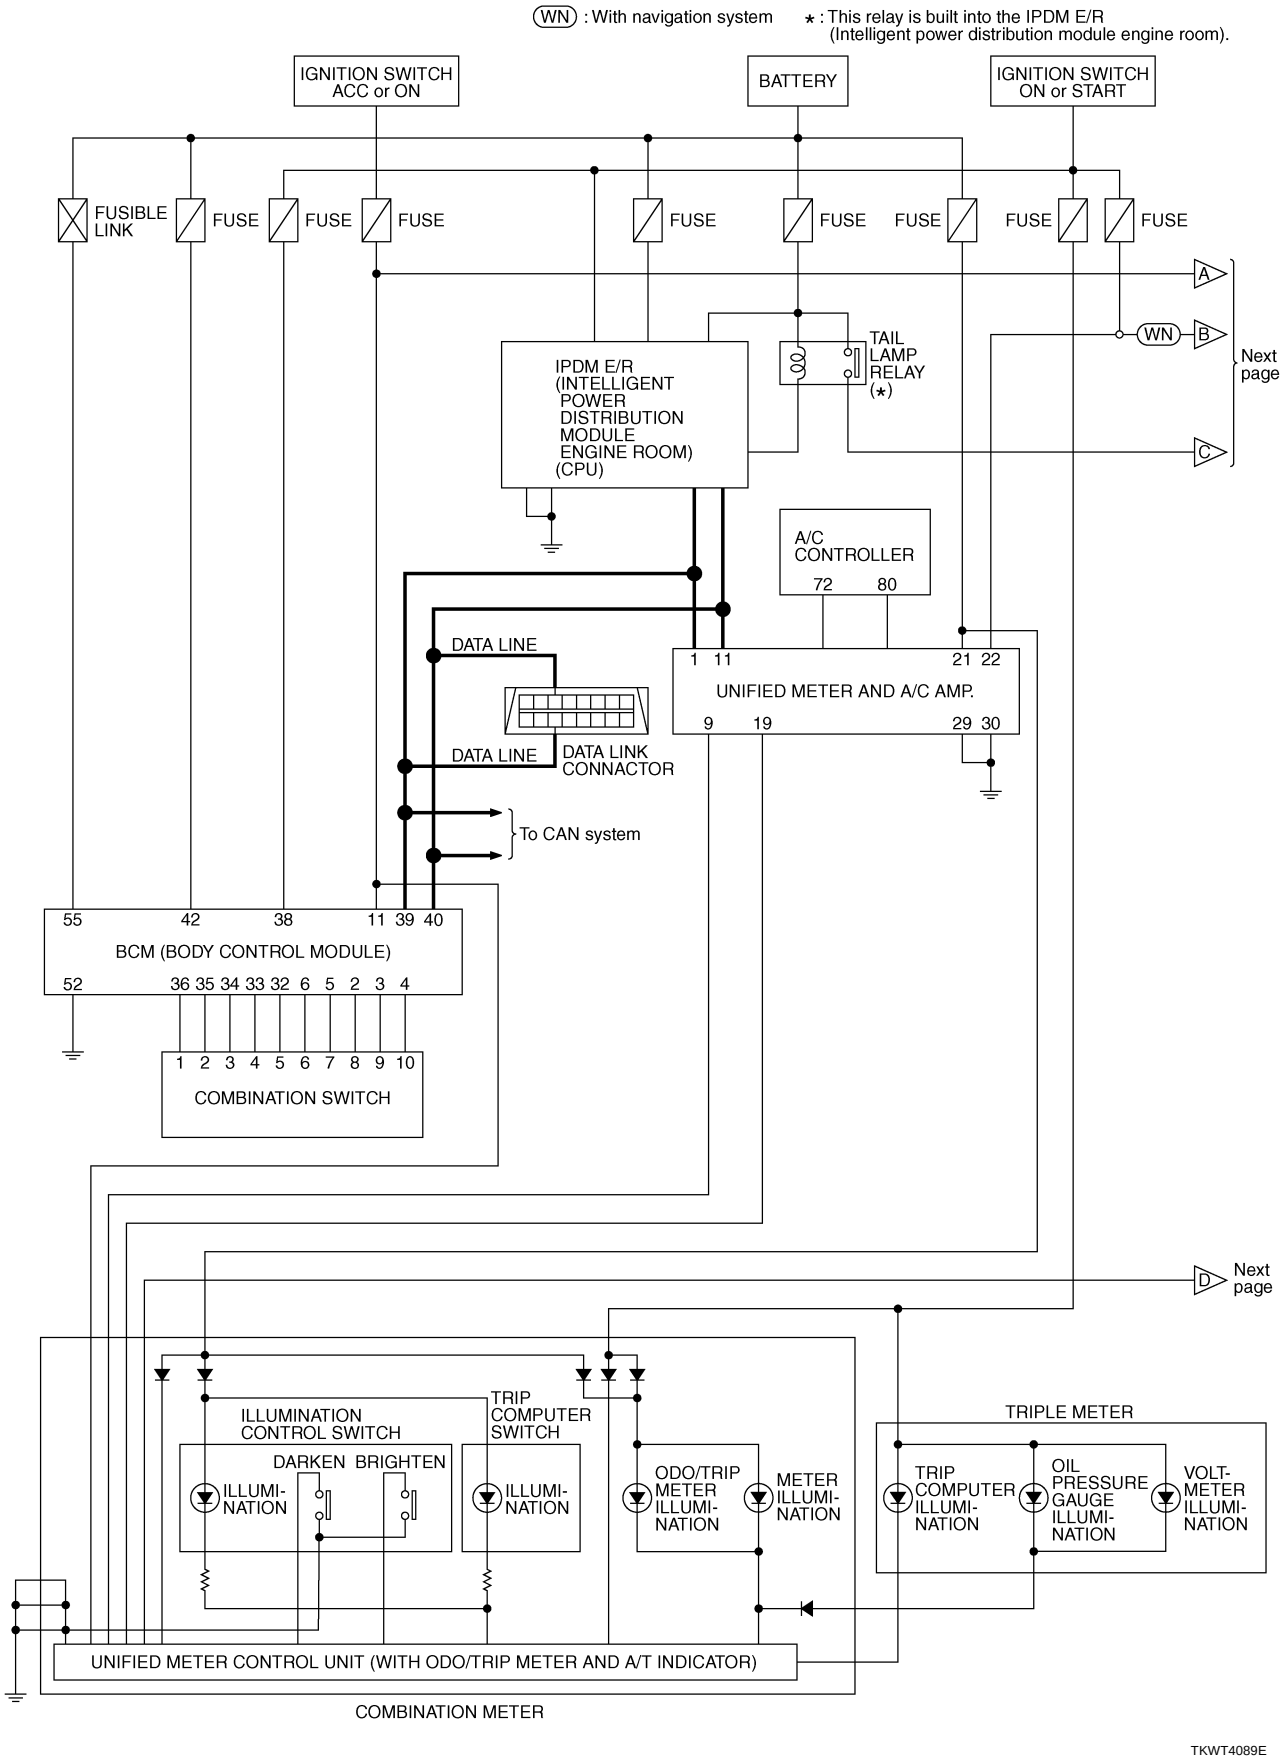
EXTERIOR LAMP BATTERY SAVER CONTROL

When the combination switch (lighting switch) is in the 1ST or 2ND position, and the ignition switch is turned from ON or ACC to OFF, battery saver control function is activated.
Under this condition, the illumination lamps remain illuminated for 5 minutes, then illumination lamps are turned off.
When the lighting switch is turned from OFF to 1ST or 2ND position after illumination lamps are turned off by battery saver control, and illumination lamps illuminate again.
Exterior lamp battery saver control mode can be changed by the function setting of CONSULT-III.

CAN Communication System Description

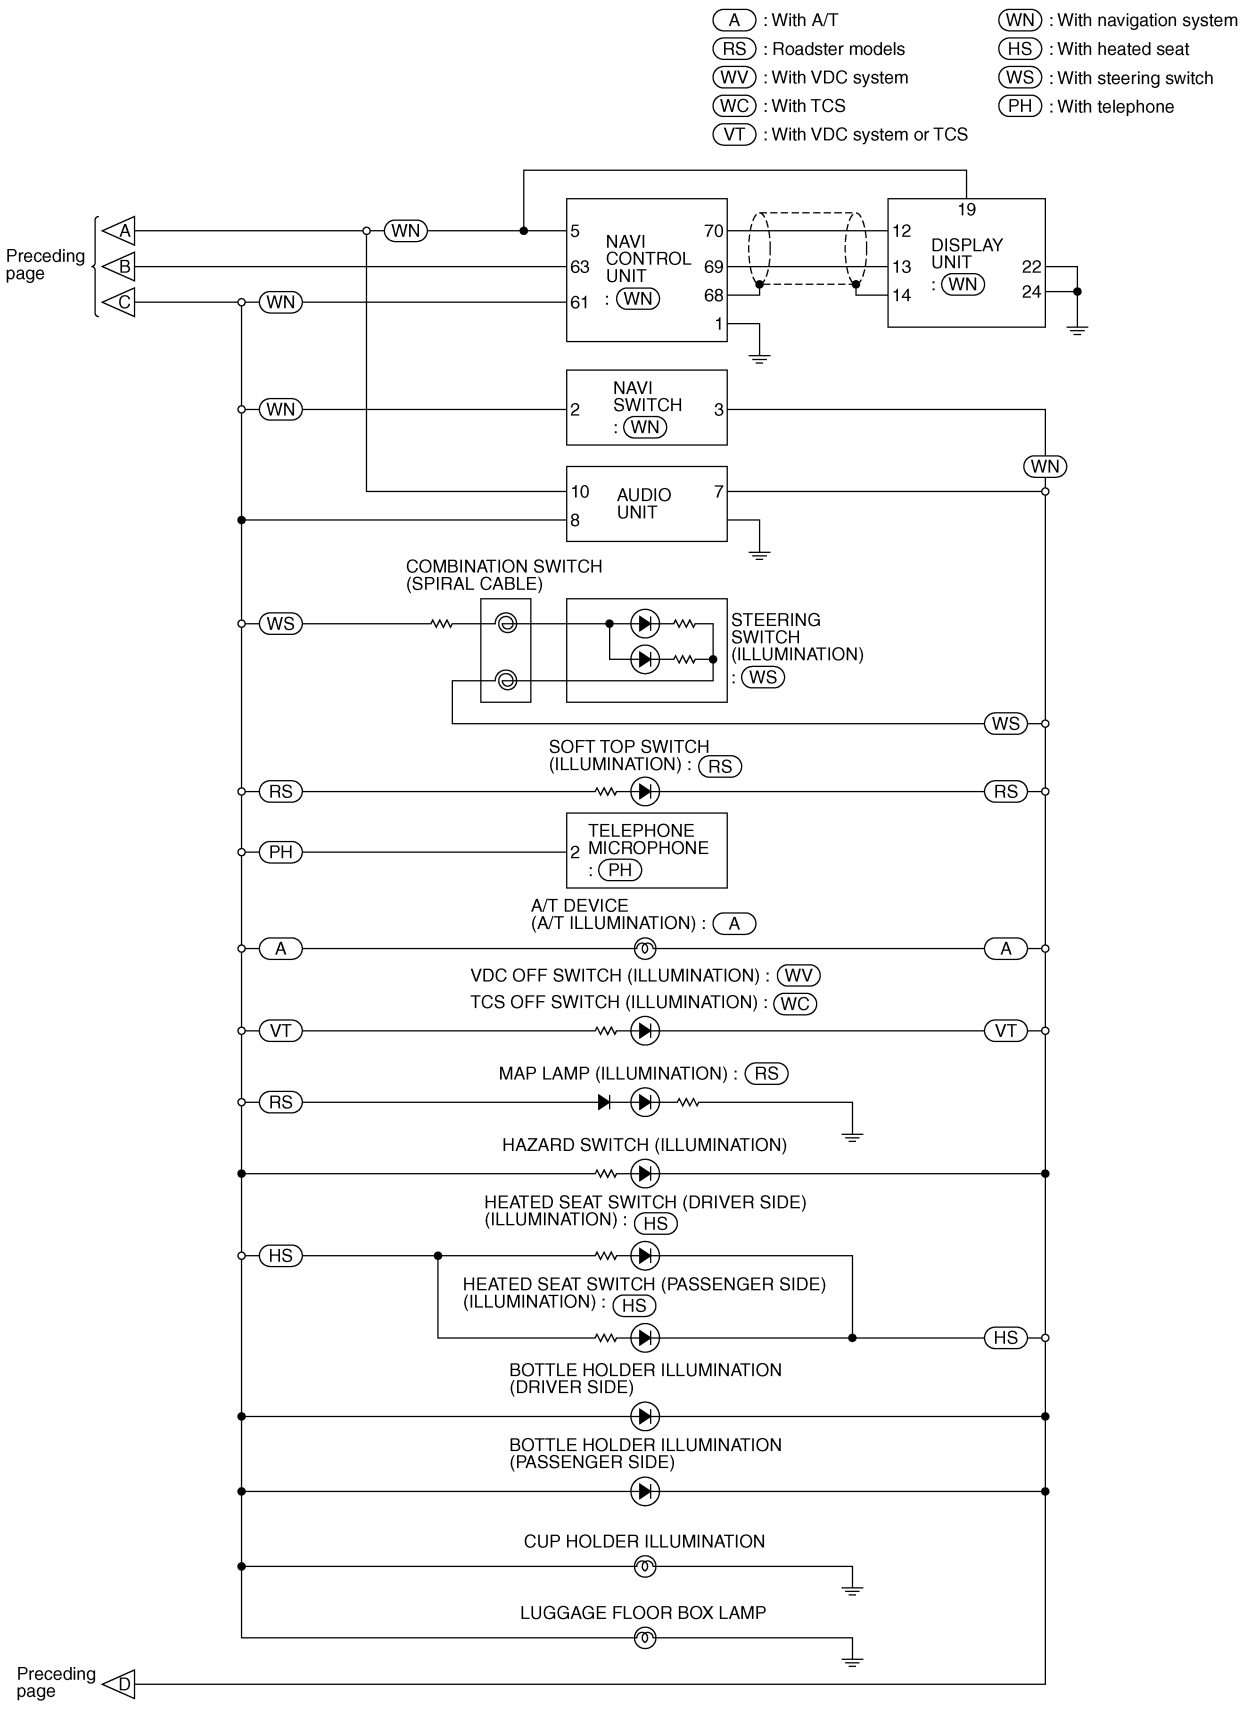
NKS004ZZ

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NKS00500



Refer to LAN-48, "CAN System Specification Chart" .

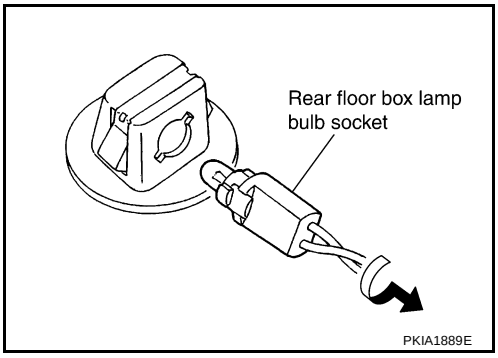
Bulb Replacement



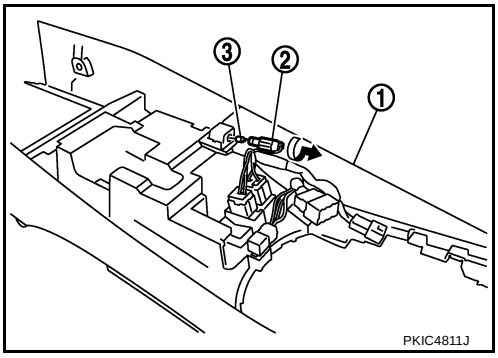
NKS00503

LUGGAGE FLOOR BOX LAMP

1. Remove luggage floor box lamp. Refer to
2. Turn bulb socket counterclockwise to release lock and remove it.

Luggage floor box lamp : 12 V - 1.4W

3. Installation is the reverse order of removal.

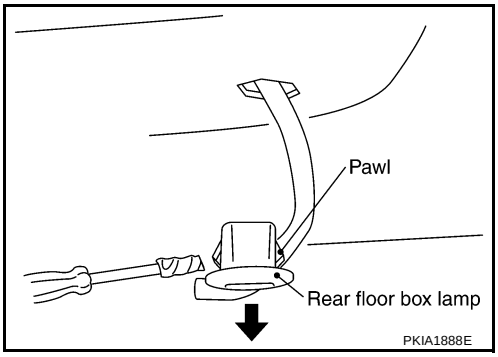


CUP HOLDER ILLUMINATION

1. Remove center console assembly (1). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Turn bulb socket counterclockwise to release lock and remove bulb socket (2).
3. Remove cup holder illumination bulb (3) from its socket.

Cup holder illumination : 12V - 1.1W

4. Installation is the reverse order of removal.



Removal and Installation

NKS00504

LUGGAGE FLOOR BOX LAMP

1. Pull out rear floor box lamp using screwdriver or similar tool.
2. Installation is the reverse order of removal.

PRECAUTIONS

PFP:00001

Precautions for Battery Service

NBS00018

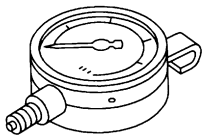
Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

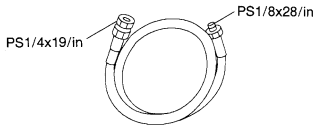
Precautions for Liquid Gasket

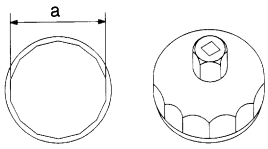
NBS00019

LIQUID GASKET APPLICATION PROCEDURE

1. Removal old liquid gasket adhering to the liquid gasket application surface and the mating surface.
   - Remove liquid gasket completely from the liquid gasket application surface, mounting bolts, and bolt holes.
2. Wipe the liquid gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.
3. Apply liquid gasket to the liquid gasket application surface.
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .
   - Within five minutes of liquid gasket application, install the mating component.
   - If liquid gasket protrudes, wipe it off immediately.
   - Do not retighten mounting bolts or nuts after the installation.
   - After 30 minutes or more have passed from the installation, fill engine oil and engine coolant.



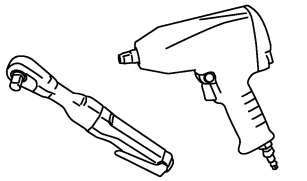


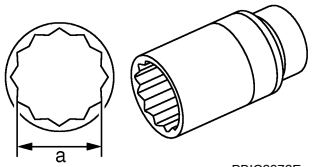


PREPARATION

PFP:00002

Special Service Tools





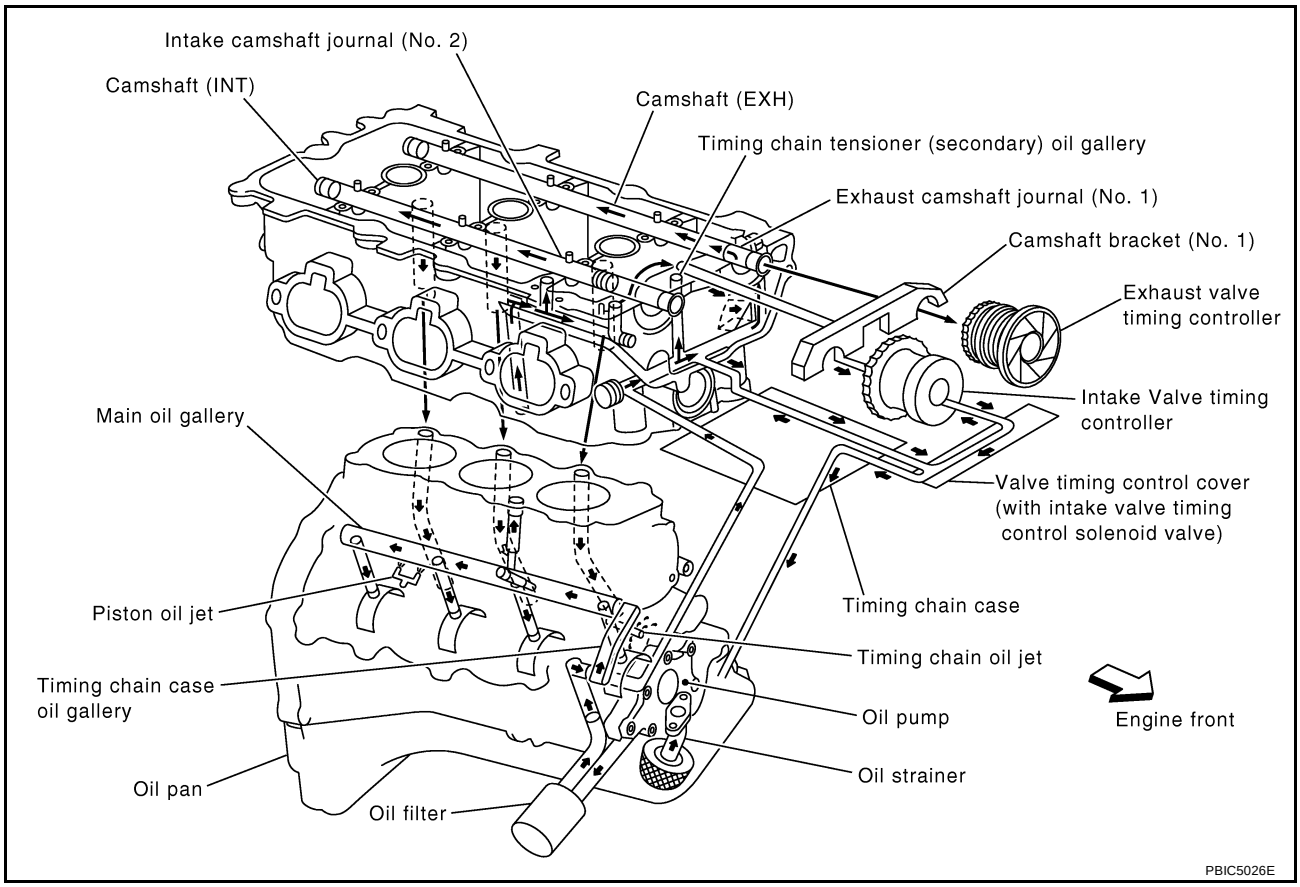
NBS0001A

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
ST25051001 (J25695-1) Oil pressure gauge  NT050	Measuring oil pressure **Maximum measuring range: 2,452 kPa (25 kg/cm^2 , 356 psi)**
ST25052000 (J25695-2) Hose  S-NT559	Adapting oil pressure gauge to oil pan (upper)
KV10115801 (J38956) Oil filter wrench  S-NT375	Removing oil filter **a: 64.3 mm (2.531 in)**

Commercial Service Tools

NBS0001B



Tool name	Description
Power tool  PBIC0190E	Loosening nuts and bolts
Deep socket  PBIC2072E	Removing and installing oil pressure sensor **a: 24 mm (0.94 in)**

LUBRICATION SYSTEM

Lubrication Circuit

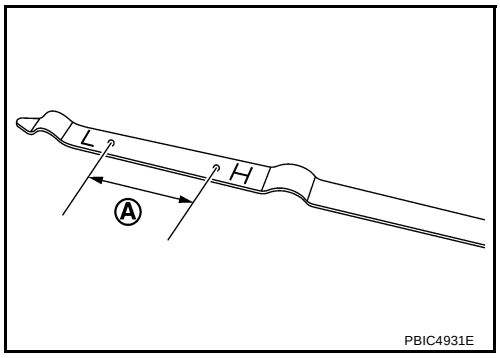
NBS0001C

System Chart

NBS0001D

ENGINE OIL

PFP:KLA92

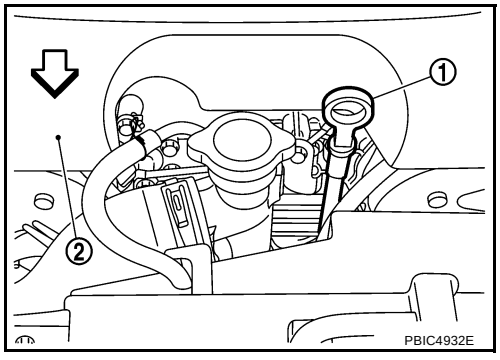


Inspection

NBS0001E

ENGINE OIL LEVEL

NOTE:
Before starting engine, put vehicle horizontally and check the engine oil level. If engine is already started, stop it and allow 10 minutes before checking.



1. Pull out oil level gauge and wipe it clean.
2. Insert oil level gauge and make sure the engine oil level is within the range (A) shown in the figure.
3. If it is out of range, adjust it.

NOTE:
When checking oil level, insert oil level gauge (1) with its tip aligned with oil level gauge guide on cylinder head.

2 : Engine cover

⇦ : Engine front

ENGINE OIL APPEARANCE

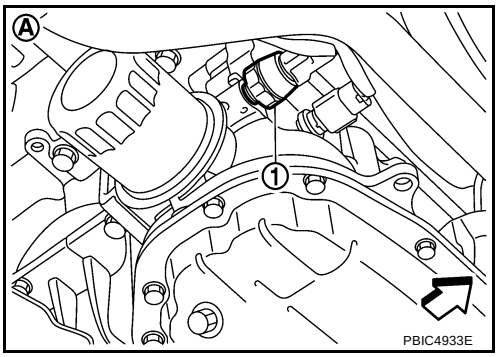
- Check engine oil for white turbidity or heavy contamination.
- If engine oil becomes turbid and white, it is highly probable that it is contaminated with engine coolant. Repair or replace damaged parts.

ENGINE OIL LEAKAGE

Check for oil leakage around the following areas:

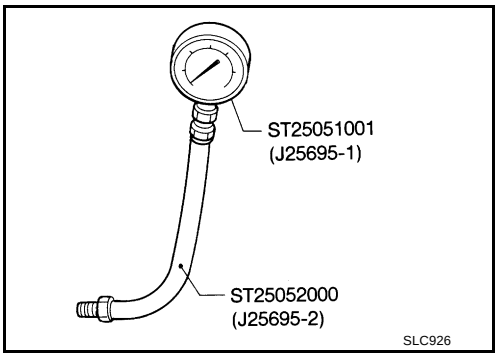
- Oil pans (lower and upper)
- Oil pan drain plug
- Oil pressure sensor
- Oil filter
- Valve timing control cover
- Mating surface between cylinder head and rocker cover
- Mating surface between front timing chain case and rear timing chain case
- Mating surface between rear timing chain case and cylinder head
- Mating surface between rear timing chain case and cylinder block
- Mating surface between rear timing chain case and oil pan (upper)
- Mating surface between cylinder block and cylinder head
- Mating surface between lower cylinder block and cylinder block
- Crankshaft oil seals (front and rear)
- Camshaft position sensor and exhaust valve timing control position sensor.

OIL PRESSURE CHECK



WARNING:

- **Be careful not to burn yourself, as engine oil may be hot.**
- **Oil pressure check should be done in “Neutral position” (M/T models) or “Parking position” (A/T models).**



1. Check the engine oil level. Refer to LU-6, "ENGINE OIL LEVEL" .
2. Remove undercover with power tool.
3. Disconnect harness connector at oil pressure sensor, and remove oil pressure sensor using deep socket (commercial service tool).

   CAUTION:
   Do not drop or shock oil pressure sensor.

   1 : Oil pressure switch
   A : 2WD
   ⇦ : Engine front

4. Install the oil pressure gauge (SST) and hose (SST).

5. Start the engine and warm it up to normal operating temperature.
6. Check the engine oil pressure with engine running under no-load.

   NOTE:
   When the engine oil temperature is low, the engine oil pressure becomes high.

   Engine oil pressure [Engine oil temperature at 80 °C (176 °F)]

kPa (kg/cm^2 , psi)

Engine speed	Approximate discharge pressure
Idle speed	More than 98 (1.0, 14)
2,000 rpm	More than 294 (3.0, 43)

   If difference is extreme, check engine oil passage and oil pump for engine oil leaks.
7. After the inspections, install oil pressure sensor as follows:

a. Remove old liquid gasket adhering to oil presser sensor and the mating surface.
b. Apply liquid gasket and tighten oil pressure sensor to the specification.
   Use Genuine RTV Silicone Sealant or equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .

   : 14.7 N·m (1.5 kg-m, 11 ft-lb)

c. After warming up engine, make sure there is no leakage of engine oil with running engine.

Changing Engine Oil

NBS0001F

WARNING:

- **Be careful not to burn yourself, as engine oil may be hot.**

- **Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Warm up engine, put vehicle horizontally and check for oil leakage from engine components. Refer to LU-6, "ENGINE OIL LEAKAGE" .
2. Stop the engine and wait for 10 minutes.
3. Loosen oil filler cap and then remove drain plug.
4. Drain engine oil.
5. Install drain plug with new washer. Refer to EM-26, "OIL PAN AND OIL STRAINER" .

   CAUTION:
   Be sure to clean drain plug and install with new washer.

   Oil pan drain plug:

   : 34.3 N·m (3.5 kg-m, 25 ft-lb)

6. Refill with new engine oil.
   Engine oil specification and viscosity:
   Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .

   Engine oil capacity (Approximate):

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	4.9 (5-1/8, 4-1/4)
	Without oil filter change	4.6 (4-7/8, 4)
Dry engine (Overhaul)		5.5 (5-3/4, 4-7/8)

CAUTION:
- **When filling engine oil, do not pull out oil level gauge.**
- **The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.**
- **Always use oil level gauge to determine the proper amount of engine oil in the engine.**

7. Warm up engine and check area around drain plug and oil filter for oil leakage.
8. Stop engine and wait for 10 minutes.
9. Check the engine oil level. Refer to LU-6, "ENGINE OIL LEVEL" .

OIL FILTER

PFP:15208

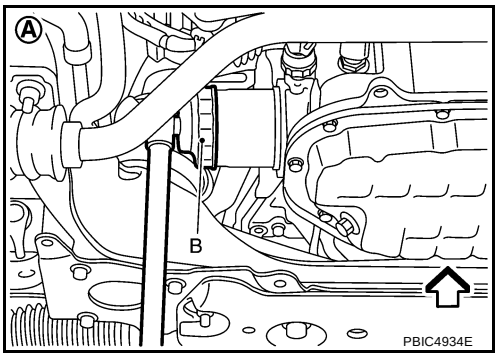
Removal and Installation

NBS0001G

REMOVAL

WARNING:

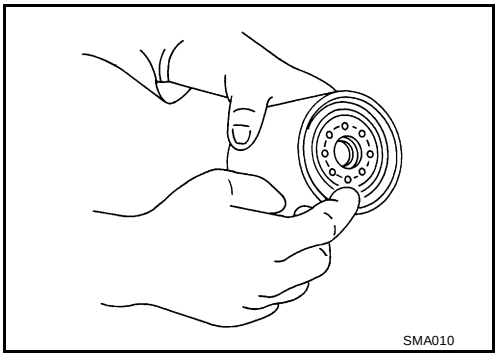
Be careful not to get burned when engine and engine oil may be hot.



CAUTION:

- **Oil filter is provided with relief valve. Use Genuine NISSAN Oil Filter or equivalent.**
- **When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.**
- **Do not allow engine oil to adhere to drive belts.**
- **Completely wipe off any engine oil that adheres to engine and vehicle.**

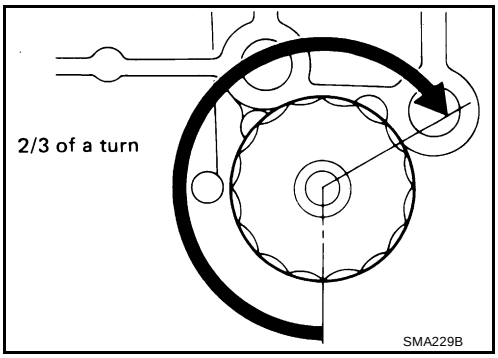
1. Remove undercover with power tool.
2. Using oil filter wrench [SST: KV10115801(J38956)] (B), remove oil filter.



A : 2WD

⇦ : Engine front

INSTALLATION



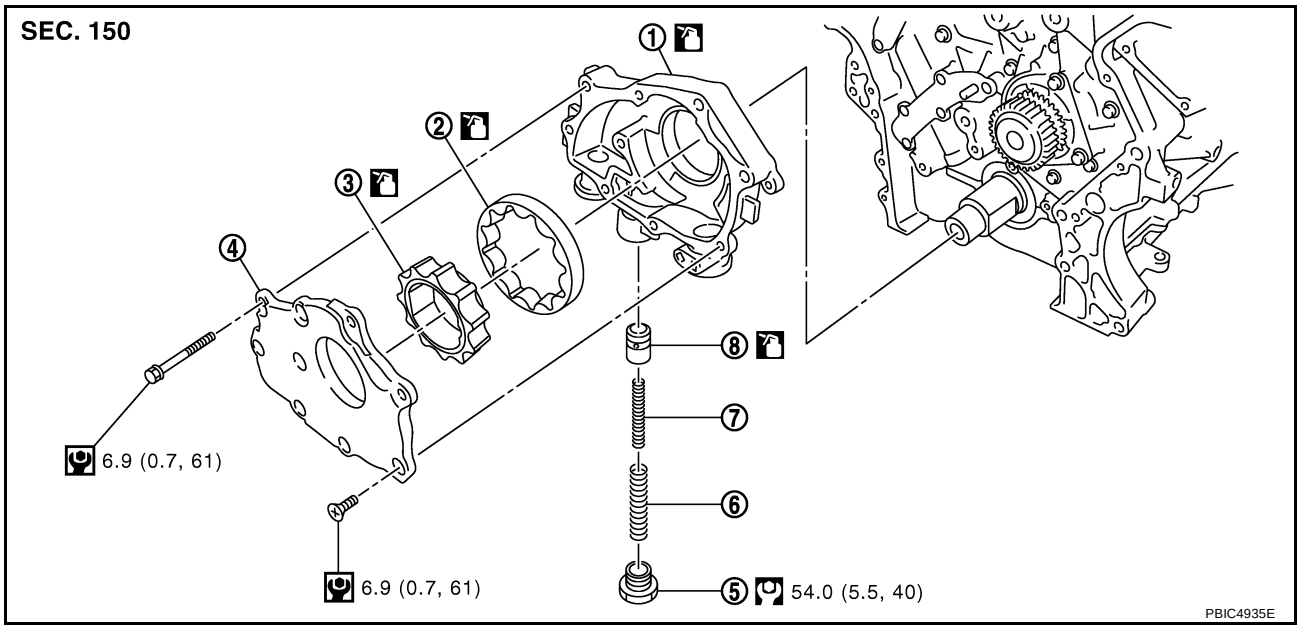
1. Remove foreign materials adhering to oil filter installation surface.
2. Apply engine oil to the oil seal contact surface of new oil filter.

3. Screw oil filter manually until it touches the installation surface, then tighten it by 2/3 turn. Or tighten to specification.

Oil filter:

: 17.7 N·m (1.8 kg-m, 13 ft-lb)

INSPECTION AFTER INSTALLATION



1. Check the engine oil level. Refer to LU-6, "ENGINE OIL" .
2. Start engine, and check there is no leaks of engine oil.
3. Stop engine and wait for 10 minutes.
4. Check the engine oil level and adjust engine oil. Refer to LU-6, "ENGINE OIL" .

OIL PUMP

PFP:15010

Removal and Installation

NBS0001I

1. Oil pump body
2. Oil pump outer rotor
3. Oil pump inner rotor
4. Oil pump cover
5. Regulator valve plug
6. Regulator valve spring
7. Regulator valve spring
8. Regulator valve

- Refer to GI-11, "Components" for symbol marks in the figure.

REMOVAL

1. Remove oil pan (lower) and oil strainer. Refer to EM-26, "OIL PAN AND OIL STRAINER" .
2. Remove front timing chain case and timing chain (primary). Refer to EM-53, "TIMING CHAIN" .
3. Remove oil pump assembly.

INSTALLATION

CAUTION:

Before installation, apply new engine oil to the parts as instructed in the figure.

Note the following, and install in the reverse order of removal.

- When installing, align crankshaft flat faces with inner rotor flat faces.

INSPECTION AFTER INSTALLATION

1. Check the engine oil level. Refer to LU-6, "ENGINE OIL" .
2. Start engine, and check there is no leaks of engine oil.
3. Stop engine and wait for 10 minutes.
4. Check the engine oil level and adjust engine oil. Refer to LU-6, "ENGINE OIL" .

Disassembly and Assembly

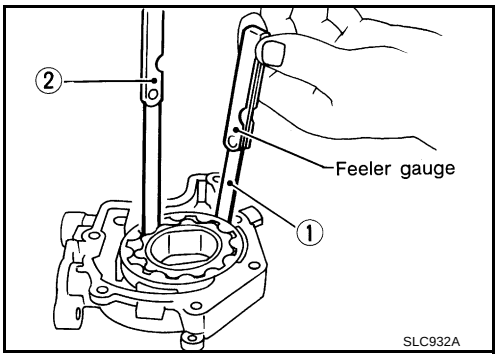
NBS0001J

DISASSEMBLY

1. Remove oil pump cover.
2. Remove oil pump inner rotor and oil pump outer rotor from oil pump body.
3. After removing regulator valve plug, remove regulator valve spring and regulator valve.

INSPECTION AFTER DISASSEMBLY

Oil Pump Clearance



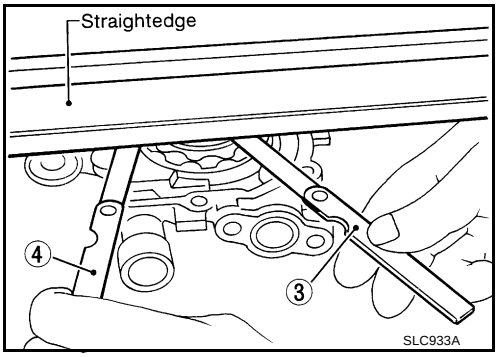
- Measure the clearance with feeler gauge.

– Clearance between oil pump outer rotor and oil pump body (Position “1”)

Standard : 0.114 - 0.260 mm (0.0045 - 0.0102 in)

– Tip clearance between oil pump inner rotor and oil pump outer rotor (Position “2”)

Standard : Below 0.180 mm (0.0071 in)



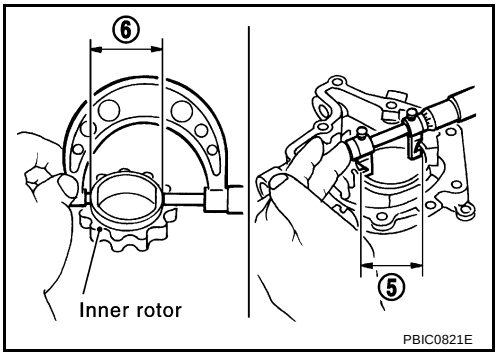
- Measure the clearance with feeler gauge and straightedge.

– Side clearance between oil pump inner rotor and oil pump body (Position “3”)

Standard : 0.030 - 0.070 mm (0.0012 - 0.0028 in)

– Side clearance between oil pump outer rotor and oil pump body (Position “4”)

Standard : 0.030 - 0.090 mm (0.0012 - 0.0035 in)



- Calculate the clearance between oil pump inner rotor and oil pump body as follows:

OIL PUMP BODY INNER DIAMETER

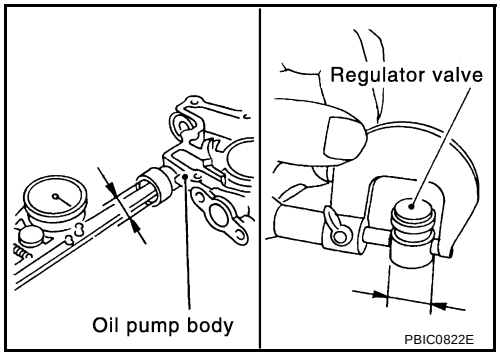
– Measure the inner diameter of oil pump body with inside micrometer. (Position “5”)

OIL PUMP INNER ROTOR OUTER DIAMETER

– Measure the outer diameter of protruded portion of oil pump inner rotor with micrometer. (Position “6”)

OIL PUMP INNER ROTOR TO OIL PUMP BODY CLEARANCE

– (Clearance) = (Oil pump body inner diameter) – (Oil pump inner rotor outer diameter)



Standard : 0.045 - 0.091 mm (0.0018 - 0.0036 in)

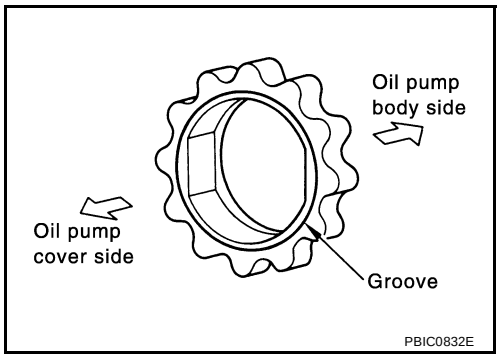
- If measured/calculated values are out of the standard, replace oil pump assembly.

Regulator Valve Clearance

(Clearance) = (Valve hole diameter) – (Regulator valve outer diameter)

Standard : 0.040 - 0.097 mm (0.0016 - 0.0038 in)

- If the calculated value is out of the standard, replace oil pump assembly.



CAUTION:

- **Coat regulator valve with engine oil.**
- **Make sure that it falls smoothly into valve hole by its own weight.**

ASSEMBLY

Note the following, and assemble in the reverse order of disassembly.

- Install oil pump inner rotor with the groove faced to oil pump cover side.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

NBS0001K

OIL PRESSURE

kPa (kg/cm^2 , psi)

Engine speed	Approximate discharge pressure*
Idle speed	More than 98 (1.0, 14)
2,000 rpm	More than 294 (3.0, 43)

*: Engine oil temperature at 80°C (176°F)

Spark plug wrench  PBIC3874E	Removing and installing spark plug

GENERAL MAINTENANCE

PFP:00000

Explanation of General Maintenance

NLS00004

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform checks and inspections themselves or have their NISSAN dealers do them.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
Tires	Check the pressure with a gauge, including the spare, at least once a month and always prior to a long distance trips. Adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	—
Wheel nuts	When checking the tires, make sure no nuts are missing, and check for any loose nuts. Tighten if necessary.	—
Windshield	Clean the windshield on a regular basis. Check the windshield at least every six months for cracks or other damage. Repair as necessary.	—
Tire rotation	Tires cannot be rotated in this vehicle, as front tires are different size from rear tires and the direction of wheel rotation is fixed in each tire.	MA-25
Transmitter components in tire pressure monitoring system (TPMS)	Replace grommet seal, valve core and cap of the transmitter in TPMS every tire replacement by reaching wear limit of tire.	WT-10
Wheel alignment and balance	If the vehicle pulls to either side while driving on a straight and level road, or if you detect uneven or abnormal tire wear, there may be a need for wheel alignment. If the steering wheel or seat vibrates at normal highway speeds, wheel balancing may be needed.	MA-23, FSU-6
Windshield wiper blades	Check for cracks or wear if they do not wipe properly.	—
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the trunk lid and back hatch. Also make sure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check lubrication frequently.	MA-28
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim. Clean the headlamps on a regular basis.	—

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Warning lamps and chimes	Make sure that all warning lamps and chimes are operating properly.	—
Windshield wiper and washer	Check that the wipers and washer operate properly and that the wipers do not streak.	—
Windshield defroster	Check that the air comes out of the defroster outlets properly and in sufficient quantity when operating the heater or air conditioner.	—
Steering wheel	Check that it has the specified play. Be sure to check for changes in the steering condition, such as excessive play, hard steering or strange noises. **Free play: Less than 35 mm (1.38 in)**	—
Seats	Check seat position controls such as seat adjusters, seatback recliner, etc. to make sure they operate smoothly and that all latches lock securely in every position. Check that the head restrains move up and down smoothly and that the locks (if equipped) hold securely in all latched positions. Check that the latches lock securely for folding-down rear seatbacks.	—

Item		Reference page
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	MA-29
Accelerator pedal	Check the pedal for smooth operation and make sure the pedal does not catch or require uneven effort. Keep the floor mats away from the pedal.	—
Clutch Pedal	Make sure the pedal operates smoothly and check it has the proper free play.	—
Brakes	Check that the brake does not pull the vehicle to one side when applied.	—
Brake pedal and booster	Check the pedal for smooth operation and make sure it has the proper distance under it when depressed fully. Check the brake booster function. Be sure to keep the floor mats away from the pedal.	BR-7, BR-23
Parking brake	Check that the lever has the proper travel and make sure that the vehicle is held securely on a fairly steep hill when only the parking brake is applied.	PB-3
Automatic transmission "Park" mechanism	Check that the lock release button on the selector lever operates properly and smoothly. On a fairly steep hill check that the vehicle is held securely with the selector lever in the "P" position without applying any brakes.	—

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically (e.g. each time you check the engine oil or refuel).

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	—
Engine coolant level	Check the coolant level when the engine is cold.	MA-13
Radiator and hoses	Check the front of the radiator and clean off any dirt, insects, leaves, etc., that may have accumulated. Make sure the hoses have no cracks, deformation, deterioration or loose connections.	—
Brake and clutch fluid levels	Make sure that the brake and clutch fluid levels are between the "MAX" and "MIN" lines on the reservoirs.	MA-25, MA-20
Battery	Check the fluid level in each cell. It should be between the "MAX" and "MIN" lines. Vehicles operated in high temperatures or under severe conditions require frequent checks of the battery fluid level.	—
Engine drive belts	Make sure that no belt is frayed, worn, cracked or oily.	MA-13
Engine oil level	Check the level on oil level gauge after parking the vehicle on a level spot and turning off the engine.	MA-16
Power steering fluid level and lines	Check the level on the dipstick with the engine off. Check the lines for improper attachment, leaks, cracks, etc.	MA-27
Exhaust system	Make sure there are no loose supports, cracks or holes. If the sound of the exhaust seems unusual or there is a smell of exhaust fumes, immediately locate the trouble and correct it.	MA-20
Underbody	The underbody is frequently exposed to corrosive substances such as those used on icy roads or to control dust. It is very important to remove these substances, otherwise rust will form on the floor pan, frame, fuel lines and around the exhaust system. At the end of winter, the underbody should be thoroughly flushed with plain water, being careful to clean those areas where mud and dirt can easily accumulate.	—
Fluid leaks	Check under the vehicle for fuel, oil, water or other fluid leaks after the vehicle has been parked for a while. Water dripping from the air conditioner after use is normal. If you should notice any leaks or gasoline fumes are evident, check for the cause and correct it immediately.	—

PERIODIC MAINTENANCE

PFP:00026

Introduction of Periodic Maintenance

NLS00005

Two different maintenance schedules are provided, and should be used, depending upon the conditions in which the vehicle is mainly operated. **After 60,000 miles (96,000 km) or 48 months, continue the periodic maintenance at the same mileage/time intervals.**

Schedule 1	Follow Periodic Maintenance Schedule 1 if the driving habits frequently include one or more of the following driving conditions: ● Repeated short trips of less than 5 miles (8 km). ● Repeated short trips of less than 10 miles (16 km) with outside temperatures remaining below freezing. ● Operating in hot weather in stop-and-go “rush hour” traffic. ● Extensive idling and/or low speed driving for long distances, such as police, taxi or door-to-door delivery use. ● Driving in dusty conditions. ● Driving on rough, muddy, or salt spread roads. ● Towing a trailer, using a camper or a car-top carrier.	Emission Control System Maintenance	MA-8
		Chassis and Body Maintenance	MA-9
Schedule 2	Follow Periodic Maintenance Schedule 2 if none of driving conditions shown in Schedule 1 apply to the driving habits.	Emission Control System Maintenance	MA-10
		Chassis and Body Maintenance	MA-10

Schedule 1

NLS00006

EMISSION CONTROL SYSTEM MAINTENANCE

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary. [ ]: At the mileage intervals only

Spark plugs (Iridium-tipped type)		Replace every 105,000 miles (169,000 km).								MA-18
Intake & exhaust valve clearance*	NOTE (5)									EM-80

NOTE:

(1) After 60,000 miles (96,000 km) or 48 months, inspect every 15,000 miles (24,000 km) or 12 months. Replace the drive belts if found damaged or if auto belt tensioner reading reaches maximum limit.

(2) If operating mainly in dusty conditions, more frequent maintenance may be required.

(3) Maintenance-free item. For service procedures, refer to FL section.

(4) After 60,000 miles (96,000 km) or 48 months, replace every 30,000 miles (48,000 km) or 24 months.

(5) If valve noise increases, inspect valve clearance.

* Maintenance items and intervals with “*” are recommended by NISSAN for reliable vehicle operation. The owner need not perform such maintenance in order to maintain the emission warranty or manufacturer recall liability. Other maintenance items and intervals are required.

CHASSIS AND BODY MAINTENANCE

Abbreviations: R = Replace. I = Inspect. Correct or replace if necessary.

MAINTENANCE OPERATION		MAINTENANCE INTERVAL								Reference Section - Page or - Content Title
Perform at number of miles, kilometers or months, whichever comes first.	Miles x 1,000 (km x 1,000) Months	3.75 (6) 3	7.50 (12) 6	11.25 (18) 9	15 (24) 12	18.75 (30) 15	22.5 (36) 18	26.25 (42) 21	30 (48) 24

(1) Using automatic transmission fluid other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty.

(2) Tires cannot be rotated in this vehicle. Refer to "Tire rotation" under the "GENERAL MAINTENANCE" heading earlier in this section.

RECOMMENDED FLUIDS AND LUBRICANTS

PFP:00000

Fluids and Lubricants

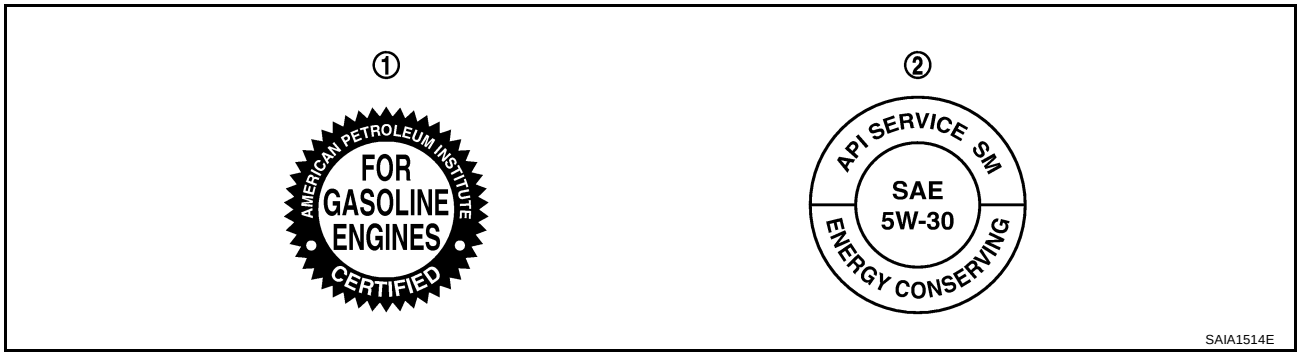
NLS00008

		Capacity (Approximate)			Recommended Fluids/Lubricants
		US measure	Imp measure	Liter	
Engine oil Drain and refill	With oil filter change	5-1/8 qt	4-1/4 qt	4.9	● Engine oil with API Certification Mark*1 ● Viscosity SAE 5W-30
	Without oil filter change	4-7/8 qt	4 qt	4.6	
Dry engine (Overhaul)		5-3/4 qt	4-7/8 qt	5.5	
Cooling system	With reservoir tank	9-1/2 qt	7-7/8 qt	9.0	Genuine NISSAN Long Life Antifreeze/ Coolant or equivalent
	Reservoir tank	7/8 qt	3/4 qt	0.8	
Automatic transmission fluid		10-7/8 qt	9-1/8 qt	10.3	Genuine NISSAN Matic J ATF*2
Manual transmission gear oil		6-1/4 pt	5-1/8 pt	2.93	Genuine NISSAN Manual Transmission Fluid (MTF) HQ Multi 75W-85 or API GL-4,Viscosity SAE 75W-85 or 75W-90
Power steering fluid (PSF)		1-1/8 qt	7/8 qt	1.0	Genuine NISSAN PSF or equivalent*3
Brake and clutch fluid		—	—	—	Genuine NISSAN Super Heavy Duty Brake Fluid*4 or equivalent DOT 3 (US FMVSS No. 116)
Differential gear oil		3 pt	2-1/2 pt	1.4	API GL-5, Viscosity SAE 80W-90*5
Multi-purpose grease		—	—	—	NLGI No. 2 (Lithium soap base)
Windshield washer fluid		—	—	—	Genuine NISSAN Windshield Washer Concentrate Cleaner & Antifreeze or equivalent
Fuel recommendation		—	—	—	Refer toGI-5, "Precautions for Fuel (Unleaded Premium Gasoline Required)" .

*1: For further details, see “Engine Oil Recommendation”.

*2: **Using automatic transmission fluid other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and automatic transmission durability, and may damage the automatic transmission, which is not covered by the NISSAN new vehicle limited warranty** .

*3: For Canada, NISSAN Automatic Transmission Fluid (ATF), DEXRON™ III/ MERCON™ or equivalent ATF may also be used.



*4: Available in mainland U.S.A. through your NISSAN dealer.

*5: For hot climates, viscosity SAE 90 is suitable for ambient temperatures above 0°C(32°F).

Engine Oil Recommendation

NLS0009U

NISSAN recommends the use of an energy conserving oil in order to improve fuel economy.
Select only engine oils that meet the American Petroleum Institute (API) certification and International Lubricant Standardization and Approval Committee (ILSAC) certification and SAE viscosity standard. These oils have the API certification mark on the front of the container. Oils which do not have the specified quality label should not be used as they could cause engine damage.

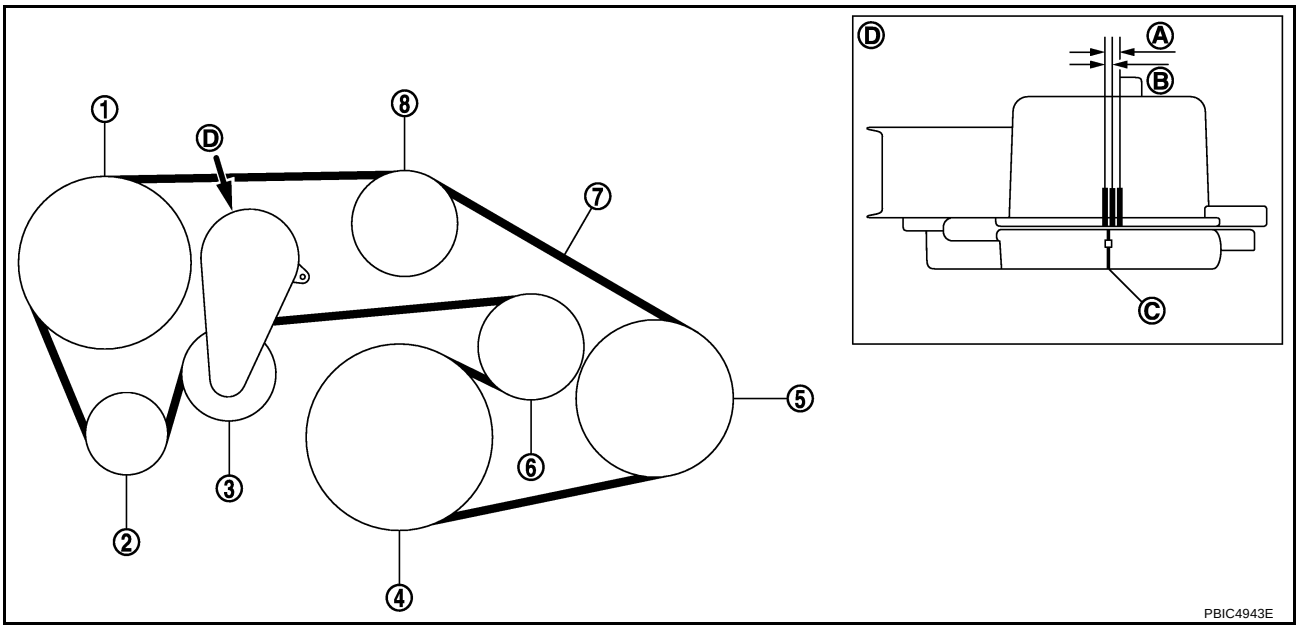
1. API certification mark
2. API service symbol

ANTI-FREEZE COOLANT MIXTURE RATIO

The engine cooling system is filled at the factory with a high-quality, year-round, anti-freeze coolant solution. The anti-freeze solution contains rust and corrosion inhibitors. Therefore, additional cooling system additives are not necessary.

CAUTION:
When adding or replacing coolant, be sure to use only Genuine NISSAN Long Life Antifreeze/ Coolant or equivalent with the proper mixture ratio of 50% anti-freeze and 50% demineralized water/distilled water.
Other types of coolant solutions may damage your cooling system.

Outside temperature down to		Anti-freeze	Demineralized water or distilled water
°C	°F		
–35	–30	50%	50%



SMA947CA

ENGINE MAINTENANCE

PFP:00000

Checking Drive Belts

NLS0009V

1.	Power steering oil pump	2.	Alternator	3.	Drive belt auto-tensioner
4.	Crankshaft pulley	5.	A/C compressor	6.	Idler pulley
7.	Drive belt	8.	Idler pulley		
A.	Possible use range	B.	Range when new drive belt is installed	C.	Indicator
D.	View D				

WARNING:

Be sure to perform this step when engine is stopped.

- Make sure that the indicator (C) (notch on fixed side) of drive belt auto-tensioner is within the possible use range (A).

  NOTE:
  Check the drive belt auto-tensioner indication when the engine is cold.
- When new drive belt is installed, the indicator (C) (notch on fixed side) should be within the range (B) in the figure.
- Visually check entire drive belt for wear, damage or cracks.
- If the indicator (C) (notch on fixed side) is out of the possible use range or belts is damaged, replace drive belt.

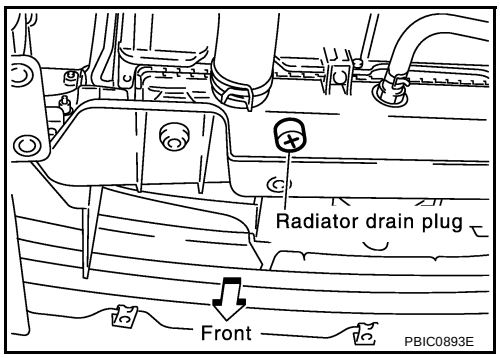
Tension Adjustment

NLS0009W

Belt tension is not necessary, as it is automatically adjusted by drive belt auto-tensioner.

Changing Engine Coolant

NLS0000C



WARNING:

- **To avoid being scalded, do not change engine coolant when engine is hot.**
- **Wrap a thick cloth around cap and carefully remove cap. First, turn cap a quarter of a turn to release built-up pressure. Then turn cap all the way.**
- **Be careful not to allow engine coolant to contact drive belts.**

DRAINING ENGINE COOLANT

1. Remove undercover with power tool.

2. Open radiator drain plug at the bottom of radiator, and then remove radiator cap.

When drain all of engine coolant in the system, open water drain plugs on engine cylinder block. Refer to EM-108, "DISASSEMBLY" .

3. Remove reservoir tank as necessary, and drain engine coolant and clean reservoir tank before installing.
4. Check drained engine coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush the engine cooling system. Refer to MA-15, "FLUSHING COOLING SYSTEM" .

REFILLING ENGINE COOLANT

1. Install reservoir tank, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .

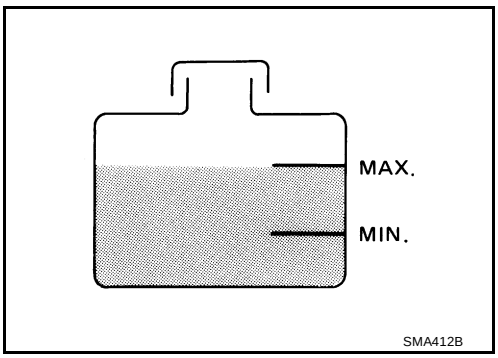
2. Make sure that each hose clamp has been firmly tightened.
3. Remove air relief plug (1) on heater hose (2).

   ⇦ **: Vehicle front**

4. Fill radiator and reservoir tank to specified level.
   - **Pour engine coolant through engine coolant filler neck slowly of less than 2 ℓ (2-1/8 US qt, 1-3/4 Imp qt) a minute to allow air in system to escape.**
   - **Use Genuine NISSAN Long Life Antifreeze/Coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS".**

   Engine coolant capacity
   (with reservoir tank at "MAX" level)

   : Approx. 9.0 ℓ (9-1/2 US qt, 7-7/8 Imp qt)



Reservoir tank capacity (at "MAX" level)

: 0.8 ℓ (7/8 US qt, 3/4 Imp qt)

- When engine coolant overflows air relief hole on heater hose, install air relief plug with new O-ring.

Air relief plug:

: 1.2 N·m (0.12 kg-m, 11 in-lb)

5. Install radiator cap.
6. Warm up until opening thermostat. Standard for warming-up time is approximately 10 minutes at 3,000 rpm.
   - Make sure thermostat condition by touching radiator hose (lower) to see flow of warm water.

   CAUTION:
   Watch water temperature gauge so as not to overheat engine.
7. Stop engine and cool down to less than approximately 50°C (122°F).
   - Cool down using fan to reduce the time.
   - If necessary, refill radiator up to filler neck with engine coolant.
8. Refill reservoir tank to "MAX" level line with engine coolant.
9. Repeat steps 4 through 7 two or more times with radiator cap installed until engine coolant level no longer drops.
10. Check cooling system for leaks with engine running.
11. Warm up engine, and check for sound of engine coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between "COOL" and "WARM".
    - Sound may be noticeable at heater unit.
12. Repeat step 11 three times.
13. If sound is heard, bleed air from cooling system by repeating step 4 through 7 until engine coolant level no longer drops.
    - **Clean excess engine coolant from engine.**

FLUSHING COOLING SYSTEM

1. Install reservoir tank, and radiator drain plug.

   CAUTION:
   Be sure to clean drain plug and install with new O-ring.

   Radiator drain plug:

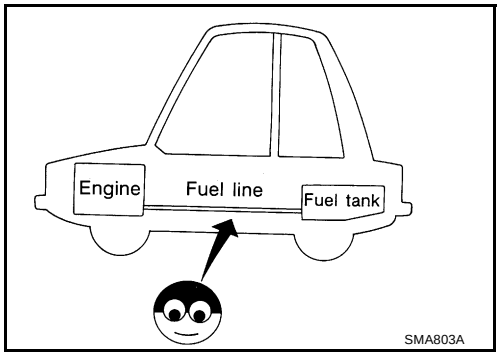
   : 1.2 N·m (0.12 kg-m, 11 in-lb)

   If water drain plugs on cylinder block are removed, close and tighten them. Refer to EM-111, "ASSEMBLY" .
2. Remove air relief plug (1) on heater hose (2).

   ⇦ **: Vehicle front**

3. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.

Air relief plug:



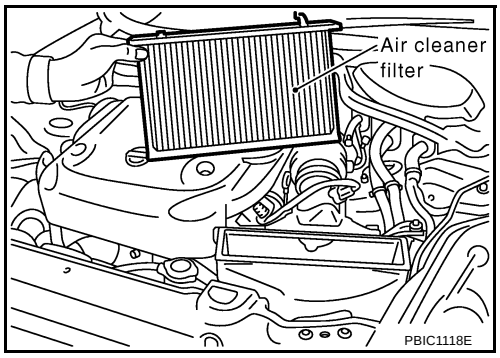
: 1.2 N·m (0.12 kg-m, 11 in-lb)

4. Run engine and warm it up to normal operating temperature.
5. Rev engine two or three times under no-load.
6. Stop engine and wait until it cools down.
7. Drain water from the system. Refer to MA-13, "DRAINING ENGINE COOLANT" .
8. Repeat steps 1 through 7 until clear water begins to drain from radiator.

Checking Fuel Lines

NLS0000D

Inspect fuel lines, fuel filler cap and fuel tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.
If necessary, repair or replace damaged parts.



Changing Air Cleaner Filter

NLS0000E

VISCOUS PAPER TYPE

The viscous paper type filter does not need cleaning between replacement intervals. Refer to MA-7, "PERIODIC MAINTENANCE" .

Changing Engine Oil

NLS0000F

WARNING:

- **Be careful not to burn yourself, as engine oil may be hot.**
- **Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used engine oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Warm up engine, put vehicle horizontally and check for oil leakage from engine components. Refer to LU-6, "ENGINE OIL LEAKAGE" .
2. Stop engine and wait for 10 minutes.
3. Loosen oil filler cap and then remove drain plug.
4. Drain engine oil.
5. Install drain plug with new washer. Refer to EM-26, "OIL PAN AND OIL STRAINER" .

   CAUTION:
   Be sure to clean drain plug and install with new washer.

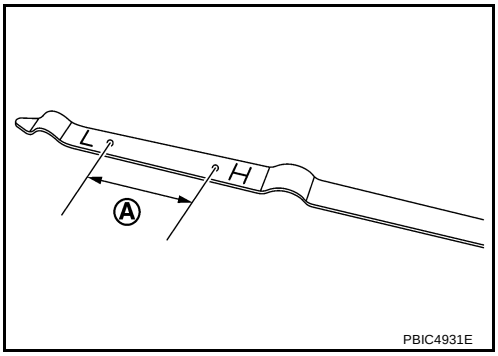
   Oil pan drain plug:

   : 34.3 N·m (3.5 kg-m, 25 ft-lb)

6. Refill with new engine oil.
   Engine oil specification and viscosity:
   Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .

Engine oil capacity (Approximate):

Unit: ℓ (US qt, Imp qt)



Drain and refill	With oil filter change	4.9 (5-1/8, 4-1/4)
	Without oil filter change	4.6 (4-7/8, 4)
Dry engine (Overhaul)		5.5 (5-3/4, 4-7/8)

CAUTION:

- **When filling engine oil, do not pull out oil level gauge.**
- **The refill capacity depends on the engine oil temperature and drain time. Use these specifications for reference only.**
- **Always use oil level gauge to determine the proper amount of engine oil in the engine.**

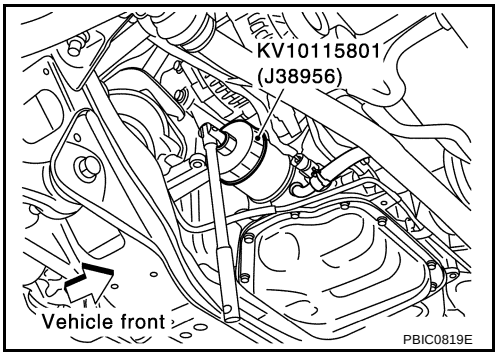
7. Warm up engine and check area around drain plug and oil filter for oil leakage.
8. Stop engine and wait for 10 minutes.
9. Check the engine oil level.

A : Make sure that the oil level is between "L" and "H"

Changing Oil Filter

NLS0000G

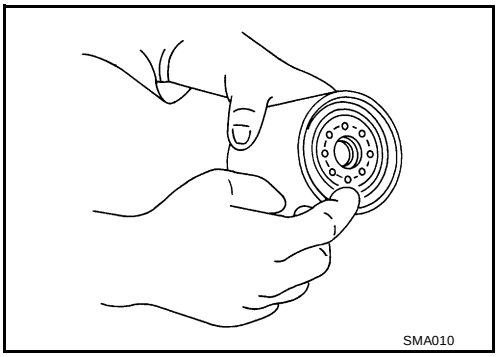
REMOVAL



WARNING:

Be careful not to get burned when engine and engine oil may be hot.

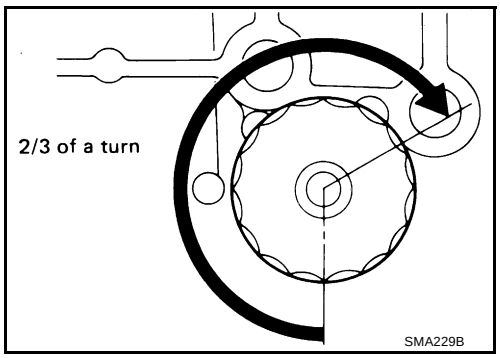
1. Remove undercover with power tool.
2. Using oil filter wrench [SST], remove oil filter.



CAUTION:

- **Oil filter is provided with relief valve. Use Genuine NISSAN Oil Filter or equivalent.**
- **When removing, prepare a shop cloth to absorb any engine oil leakage or spillage.**
- **Do not allow engine oil to adhere to drive belts.**
- **Completely wipe off any engine oil that adheres to engine and vehicle.**

INSTALLATION



1. Remove foreign materials adhering to oil filter installation surface.
2. Apply engine oil to the oil seal contact surface of new oil filter.

3. Screw oil filter manually until it touches the installation surface, then tighten it by 2/3 turn. Or tighten to specification.

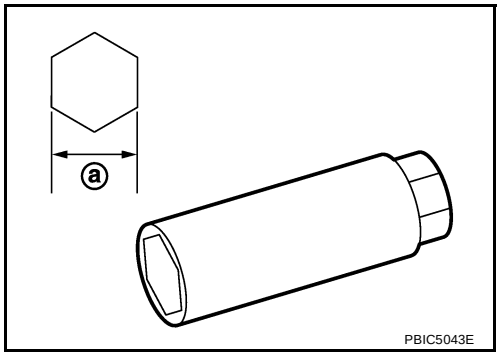
Oil filter:

: 17.7 N·m (1.8 kg-m, 13 ft-lb)

INSPECTION AFTER INSTALLATION

1. Check the engine oil level. Refer to MA-16, "Changing Engine Oil" .
2. Start engine, and check there is no leak of engine oil.
3. Stop engine and wait for 10 minutes.
4. Check the engine oil level and adjust engine oil. Refer to MA-16, "Changing Engine Oil" .

Changing Spark Plugs (Iridium-Tipped Type)



NLS0000H

REMOVAL

1. Remove engine cover with power tool. Refer to EM-17, "INTAKE MANIFOLD COLLECTOR" .
2. Remove ignition coil. Refer to EM-31, "IGNITION COIL" .
3. Remove spark plug using spark plug wrench (commercial service tool).

CAUTION:
Do not drop or shock it.

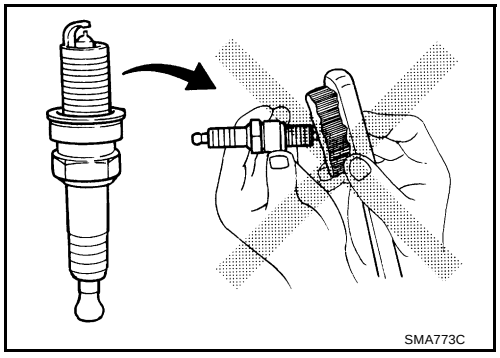
a : 14 mm (0.55 in)

INSPECTION AFTER REMOVAL

Make	DENSO
Standard type	FXE22HR-11

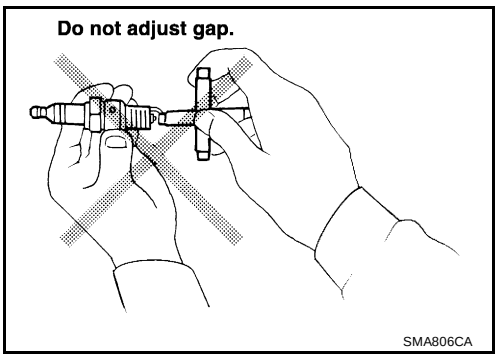
Gap (Nominal) : 1.1 mm (0.043 in)

CAUTION:



- **Do not drop or shock spark plug.**
- **Do not use wire brush for cleaning.**
- **If plug tip is covered with carbon, spark plug cleaner may be used.**

Cleaner air pressure:



Less than 588 kPa (6 kg/cm^2 , 85 psi)

Cleaning time:

Less than 20 seconds

- **Checking and adjusting plug gap is not required between change intervals.**

INSTALLATION

Installation is the reverse order of removal.

Spark plug:

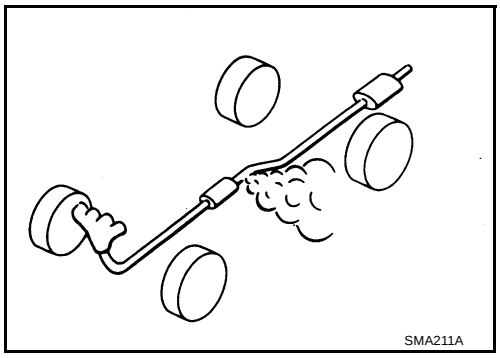
: 19.6 N·m (2.0 kg-m, 14 ft-lb)

Checking EVAP Vapor Lines

NLS0000I

1. Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration.
2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc.
   Refer to EC-33, "EVAPORATIVE EMISSION SYSTEM" .

CHASSIS AND BODY MAINTENANCE

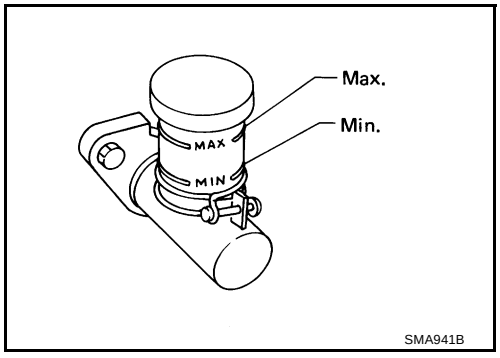


PFP:00100

Checking Exhaust System

NLS0000J

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, chafing or deterioration.



- If anything is found, repair or replace damaged parts.

Checking Clutch Fluid Level and Leaks

NLS0000K

If fluid level is extremely low, check clutch system for leaks.

Checking M/T Oil

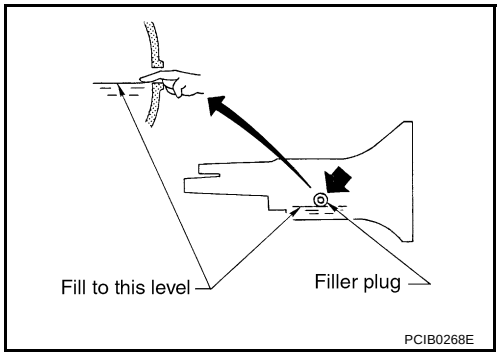
NLS0000L

Check for oil leakage.

Changing M/T Oil

NLS0000M

1. Drain oil from drain plug and refill with new gear oil.
2. Check oil level.



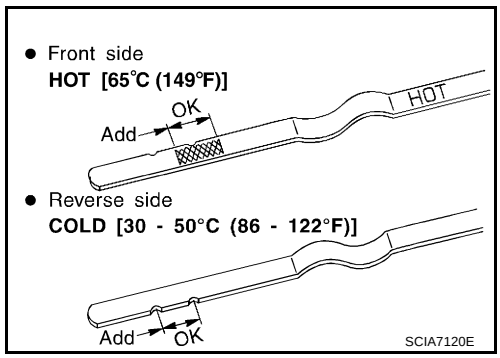
Oil grade and viscosity: **Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .**

Oil capacity: **Approx. 2.9 ℓ (3-1/8 US qt, 2-1/2 Imp qt)**

Filler plug and drain plug:

: 34.5 N·m (3.5 kg-m, 25 ft-lb)

CAUTION:
Do not reuse gasket.



Checking A/T Fluid

NLS0000N

1. Warm up engine.
2. Check for A/T fluid leakage.
3. Loosen the level gauge bolt.

4. Before driving, A/T fluid level can be checked at A/T fluid temperatures of 30 to 50°C (86 to 122°F) using “COLD” range on A/T fluid level gauge as follows.

a. Park vehicle on level surface and set parking brake.

b. Start engine and move selector lever through each gear position. Leave selector lever in “P” position.

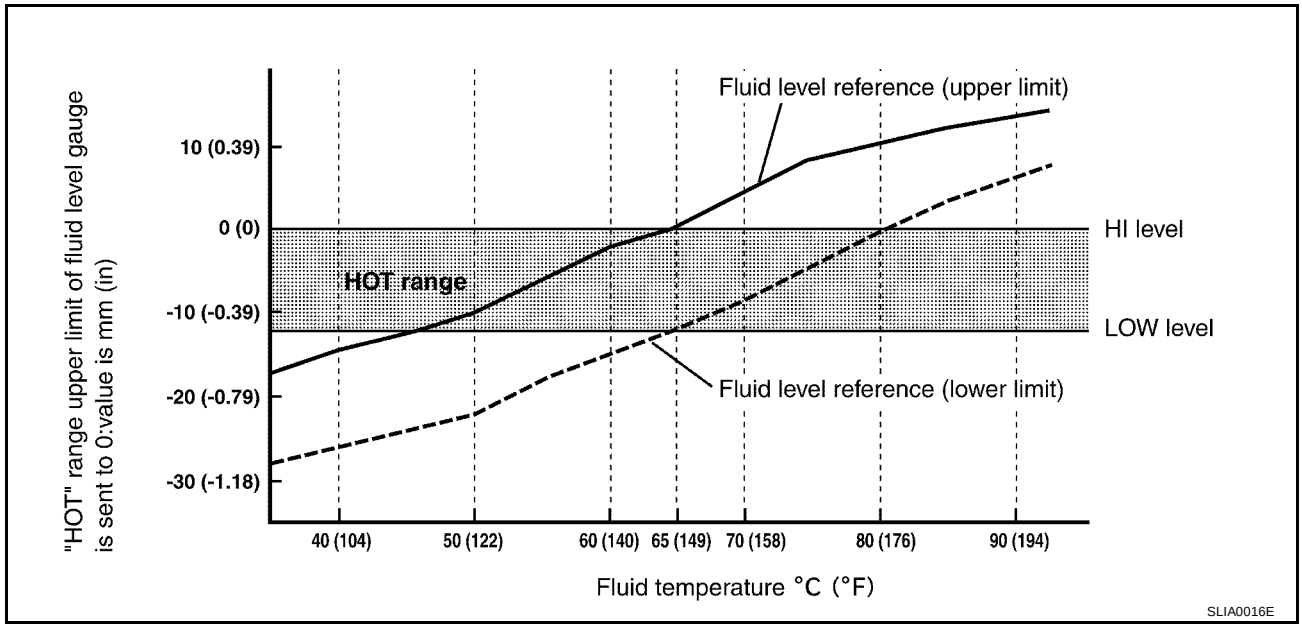
c. Check A/T fluid level with engine idling.

d. Remove A/T fluid level gauge and wipe clean with lint-free paper.

CAUTION:
When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.

e. Re-insert A/T fluid level gauge into A/T fluid charging pipe as far as it will go.

CAUTION:
To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the A/T fluid level gauge reversed from the normal attachment conditions.



f. Remove A/T fluid level gauge and note reading. If reading is at low side of range, add ATF to the A/T fluid charging pipe.

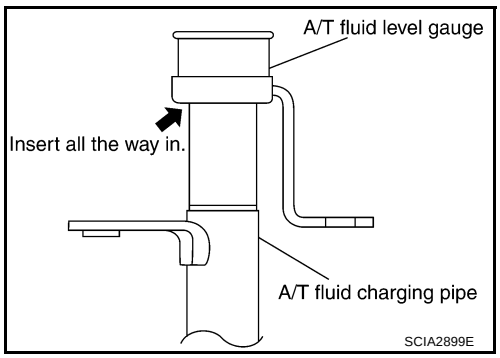
CAUTION:
Do not overfill.

5. Drive vehicle for approximately 5 minutes in urban areas.

6. Make the A/T fluid temperature approximately 65°C (149°F).

NOTE:
A/T fluid level will be greatly affected by temperature as shown in figure. Therefore, be certain to perform operation while checking data with CONSULT-II.

a. Connect CONSULT-II to data link connector.

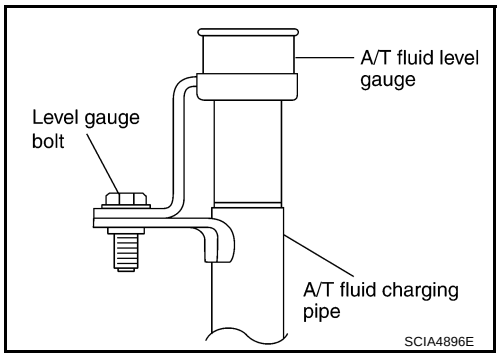


b. Select “MAIN SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.

c. Read out the value of “ATF TEMP 1”.

7. Re-check A/T fluid level at A/T fluid temperatures of approximately 65°C (149°F) using “HOT” range on A/T fluid level gauge.

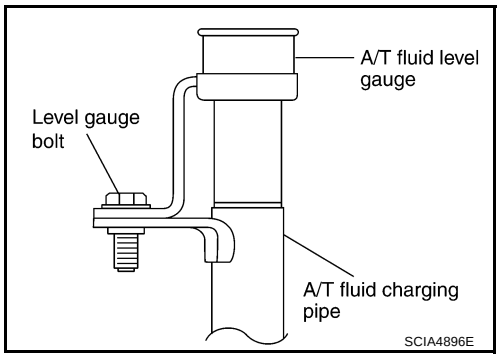
CAUTION:
- **When wiping away the A/T fluid level gauge, always use lint-free paper, not a cloth one.**



- **To check A/T fluid level, insert the A/T fluid level gauge until the cap contacts the end of the A/T fluid charging pipe, with the gauge reversed from the normal attachment conditions as shown.**

8. Check A/T fluid condition.
   - If ATF is very dark or smells burned, check operation of A/T. Flush cooling system after repair of A/T.
   - If ATF contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-13, "RADIATOR" and AT-14, "A/T Fluid Cooler Cleaning" .
9. Install the removed A/T fluid level gauge in the A/T fluid charging pipe.
10. Tighten the level gauge bolt.

Level gauge bolt:



: 5.1N·m (0.52 kg-m, 45 in-lb)

Changing A/T Fluid

NLS0000O

1. Warm up ATF.
2. Stop engine.
3. Loosen the level gauge bolt.
4. Drain ATF from drain plug and refill with new ATF. Always refill same volume with drained ATF.
   - To replace the ATF, pour in new ATF at the A/T charging pipe with the engine idling and at the same time drain the old ATF from the radiator cooler hose return side.
   - When the color of the ATF coming out is about the same as the color of the new ATF, the replacement is complete. The amount of new ATF to use should be 30 to 50% increase of the stipulated amount.

ATF: Genuine NISSAN Matic J ATF

Fluid capacity: 10.3 ℓ (10-7/8 US qt, 9-1/8 Imp qt)

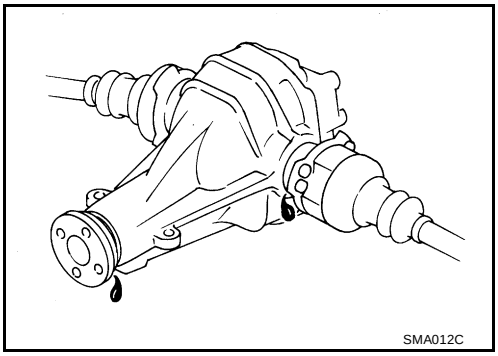
CAUTION:

- **Use only Genuine NISSAN Matic J ATF. Do not mix with other ATF.**
- **Using ATF other than Genuine NISSAN Matic J ATF will cause deterioration in driveability and A/T durability, and may damage the A/T, which is not covered by the NISSAN new vehicle limited warranty.**
- **When filling ATF, take care not to scatter heat generating parts such as exhaust.**
- **Do not reuse drain plug gasket.**

Drain plug:

: 34 N·m (3.5 kg-m, 25 ft-lb)

5. Run engine at idle speed for 5 minutes.
6. Check A/T fluid level and condition. Refer to MA-20, "Checking A/T Fluid" . If ATF is still dirty, repeat step 2. through 5.
7. Install the removed A/T fluid level gauge in the A/T fluid charging pipe.
8. Tighten the level gauge bolt.



Level gauge bolt:

: 5.1 N·m (0.52 kg-m, 45 in-lb)

Checking Differential Gear Oil

NLS0000P

Check for oil leakage.

Changing Differential Gear Oil

NLS0000Q

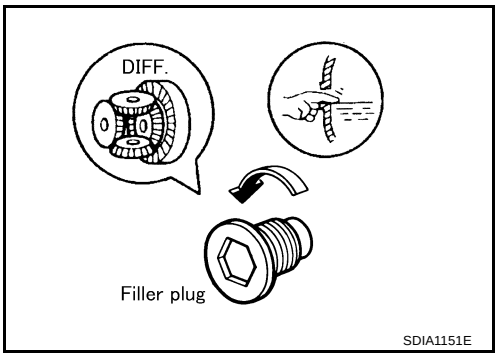
1. Drain oil from drain plug and refill with new gear oil.
2. Check oil level.

Oil grade and Viscosity:

Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .

Capacity:

R200, R200V



1.4 ℓ (3 US pt, 2 - 1/2 Imp pt)

Drain plug:

: 34.5 N·m (3.5 kg-m, 25 ft-lb)

Filler plug:

: 34.5 N·m (3.5 kg-m, 25 ft-lb)

CAUTION:

Gaskets are not reusable. Never reuse them.

Balancing Wheels (Bonding Weight Type)

NLS0000R

REMOVAL

1. Remove inner and outer balance weights from the road wheel.

CAUTION:

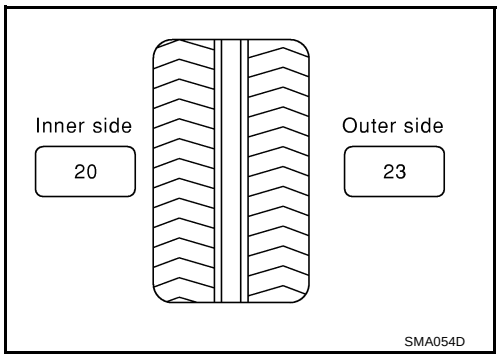
Be careful not to scratch the road wheel during removal.

2. Using releasing agent, remove double-faced adhesive tape from the road wheel.

CAUTION:

- **Be careful not to scratch the road wheel during removal.**
- **After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.**

WHEEL BALANCE ADJUSTMENT

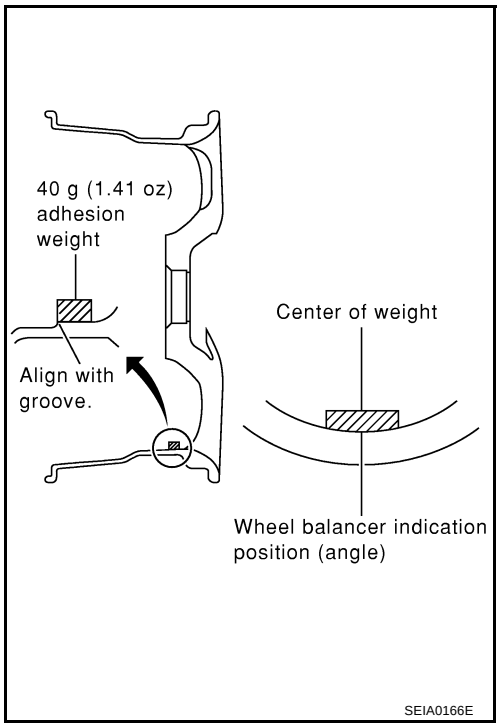


- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.

1. Set road wheel on tire balance machine using the center hole as a guide. Start the tire balance machine.
2. When inner and outer unbalance values are shown on the tire balance machine indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

CAUTION:

- **Do not install the inner balance weight before installing the outer balance weight.**
- **Before installing the balance weight, be sure to clean the mating surface of the road wheel.**

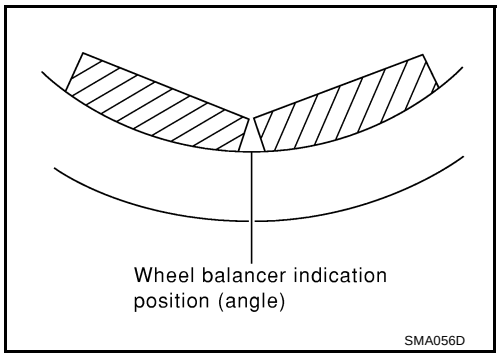


Indicated unbalance value × 5/3 = balance weight to be installed
Calculation example:
23 g (0.81 oz) × 5/3 = 38.33 g (1.35 oz) = 40 g (1.41 oz) balance weight (closer to calculated balance weight value)
Note that balance weight value must be closer to the calculated balance weight value.
Example:
37.4 = 35 g (1.23 oz)
37.5 = 40 g (1.41 oz)

a. Install balance weight in the position shown in the figure at right.
b. When installing balance weight to road wheels, set it into the grooved area on the inner wall of the road wheel as shown in the figure so that the balance weight center is aligned with the tire balance machine indication position (angle).

CAUTION:

- **Always use genuine NISSAN adhesion balance weights.**
- **Balance weights are unreusable; always replace with new ones.**
- **Do not install more than three sheets of balance weight.**



c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other (as shown in the figure).

CAUTION:
Do not install one balance weight sheet on top of another.

3. Start tire balance machine again.
4. Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).

CAUTION:
Do not install more than two balance weights.

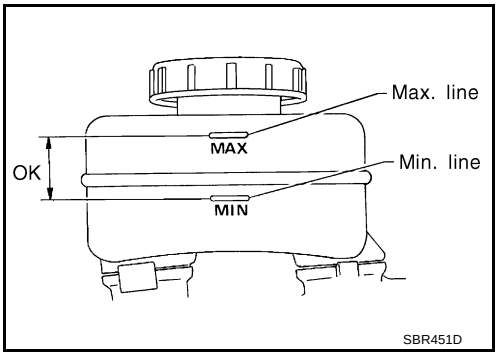
5. Start tire balance machine. Make sure that inner and outer residual unbalance values are 5 g (0.17 oz) each or below.
   - If either residual unbalance value exceeds 5 g (0.17 oz), repeat installation procedures.

Wheel balance (Maximum allowable unbalance):

Maximum allowable unbalance	Dynamic (At rim flange)	Less than 5 g (0.17 oz) (one side)
	Static (At rim flange)	Less than 10 g (0.35 oz)

Tire Rotation

NLS0000S

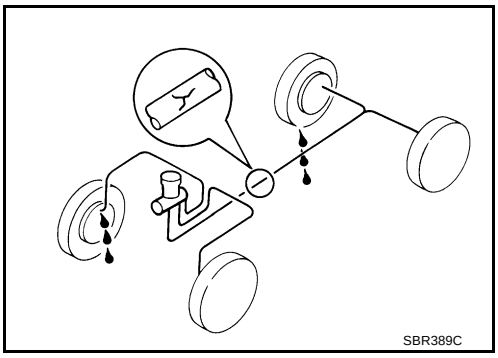


CAUTION:
Do not include the T-type spare tire when rotating the tires.
Use NISSAN genuine wheel nuts for aluminum wheels.

NOTE:
Tire cannot be rotated in vehicle, as front tire are different size from rear tire and the direction of wheel rotation is fixed in each tire.

Checking Brake Fluid Level and Leaks

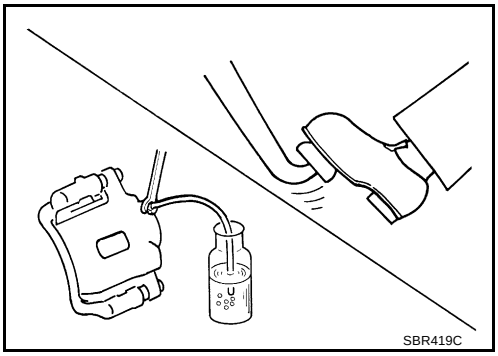
NLS0000T



- If fluid level is extremely low, check brake system for leaks.

Checking Brake Lines and Cables

NLS0000U



- Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.

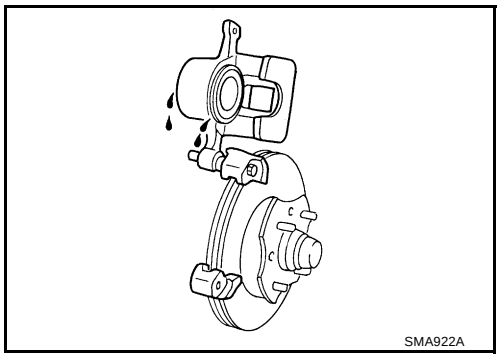
Changing Brake Fluid

NLS0000V

1. Drain brake fluid from each bleed valve.
2. Refill until new brake fluid comes out from each bleed valve.
   Use same procedure as in bleeding hydraulic system to refill brake fluid.
   Refer to BR-10, "BRAKE FLUID" .
   - Refill with recommended Genuine Brake Fluid or equivalent DOT 3 (US FMVSS No. 116).
     Refer to MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS" .
   - Never reuse drained brake fluid.
   - Be careful not to splash brake fluid on painted areas.

Checking Disc Brake

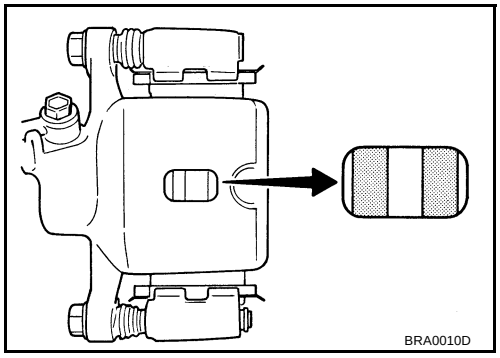
NLS0000W



ROTOR

Check condition, wear, and damage.

	Front		Rear	
Brake model	Other than brembo	With brembo	Other than brembo	With brembo
Standard thickness (new)	28.0 mm (1.102 in)	30.0 mm (1.181 in)	16.0 mm (0.630 in)	22.0 mm (0.866 in)
Runout limit (with it attached to the vehicle)	0.035 mm (0.0014 in)	0.040 mm (0.0016 in)	0.055 mm (0.0022 in)	0.07 mm (0.0028 in)
Repair limit thickness	26.0 mm (1.024 in)	28.4 mm (1.118 in)	14.0 mm (0.551 in)	20.2 mm (0.795 in)



CALIPER

- Check for leakage.

PAD

- Check for wear or damage.

	Front		Rear	
Brake model	Other than brembo	With brembo	Other than brembo	With brembo
Standard thickness (new)	11.0 mm (0.433 in)	9.3 mm (0.366 in)	8.5 mm (0.335 in)	9.1 mm (0.358 in)
Repair limit thickness	2.0 mm (0.079 in)	2.0 mm (0.079 in)	2.0 mm (0.079 in)	2.0 mm (0.079 in)

Checking Steering Gear and Linkage

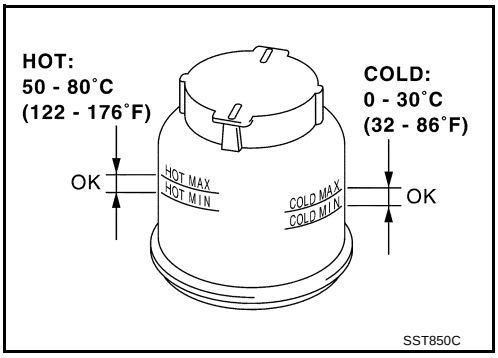
NLS0000X

STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.

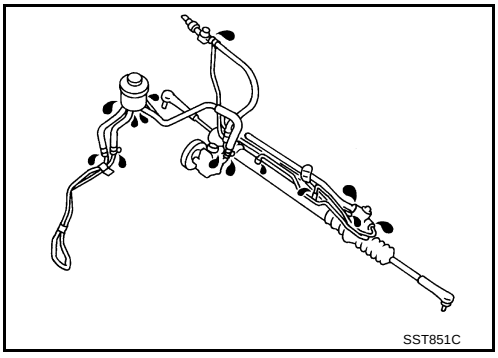
STEERING LINKAGE

Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.



Checking Power Steering Fluid and Lines

NLS0000Y

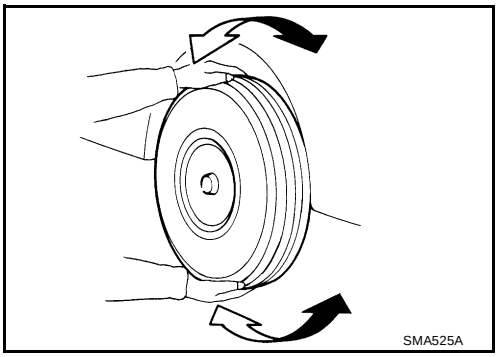


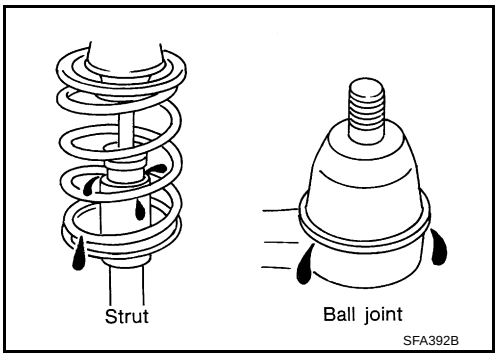
Check fluid level in reservoir tank with engine off.
Use “HOT” range at fluid temperatures of 50 to 80°C (122 to 176°F) or “COLD” range at fluid temperatures of 0 to 30°C (32 to 86°F).

CAUTION:

- **Do not overfill.**
- **Recommended fluid is Genuine NISSAN PSF or equivalent. Refer to** **MA-11, "RECOMMENDED FLUIDS AND LUBRICANTS"**

- **Check lines for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.**
- **Check rack boots for accumulation of power steering fluid.**

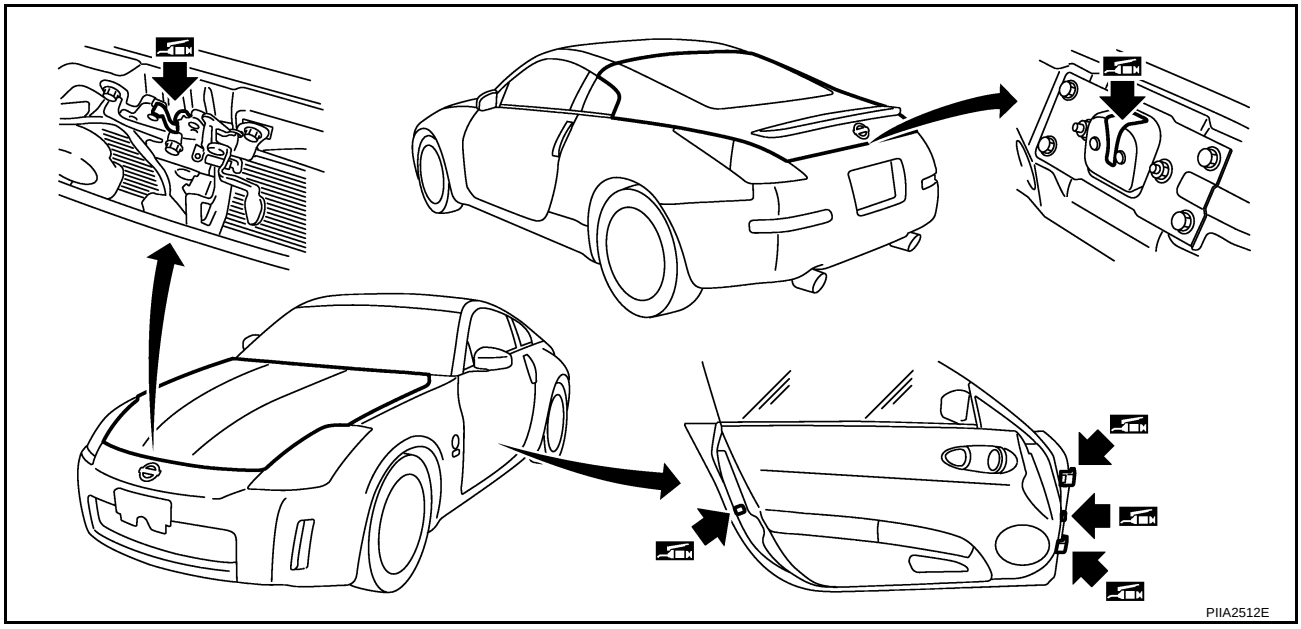




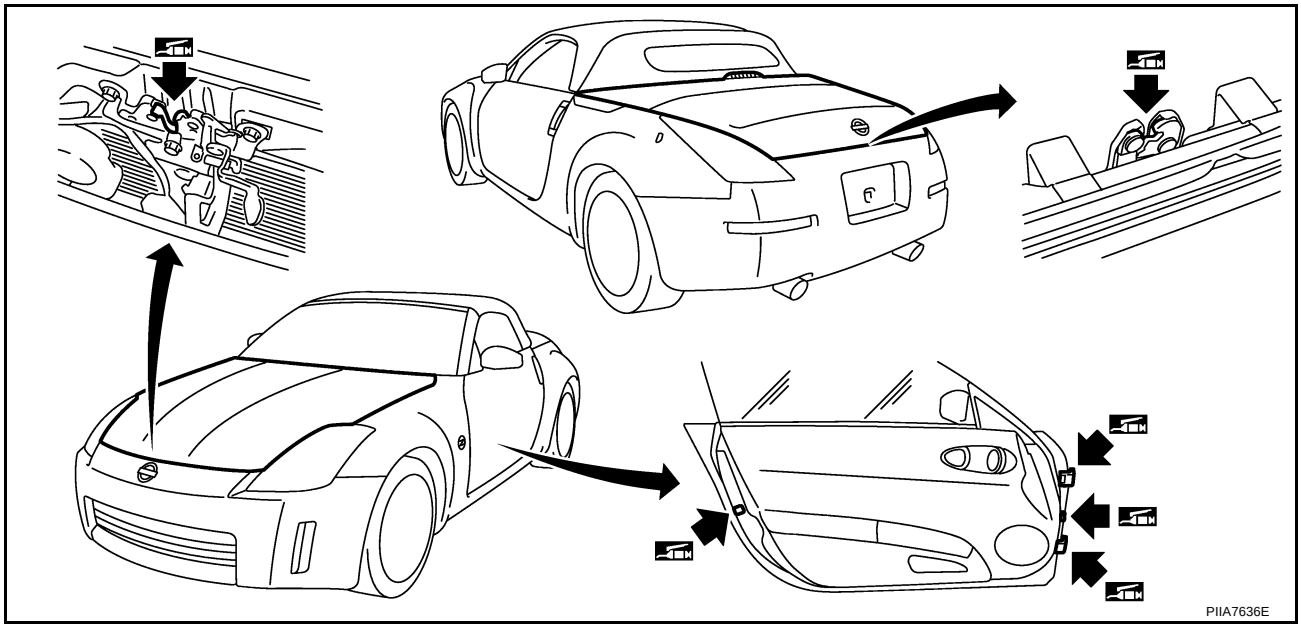
Axle and Suspension Parts

NLS0000Z

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

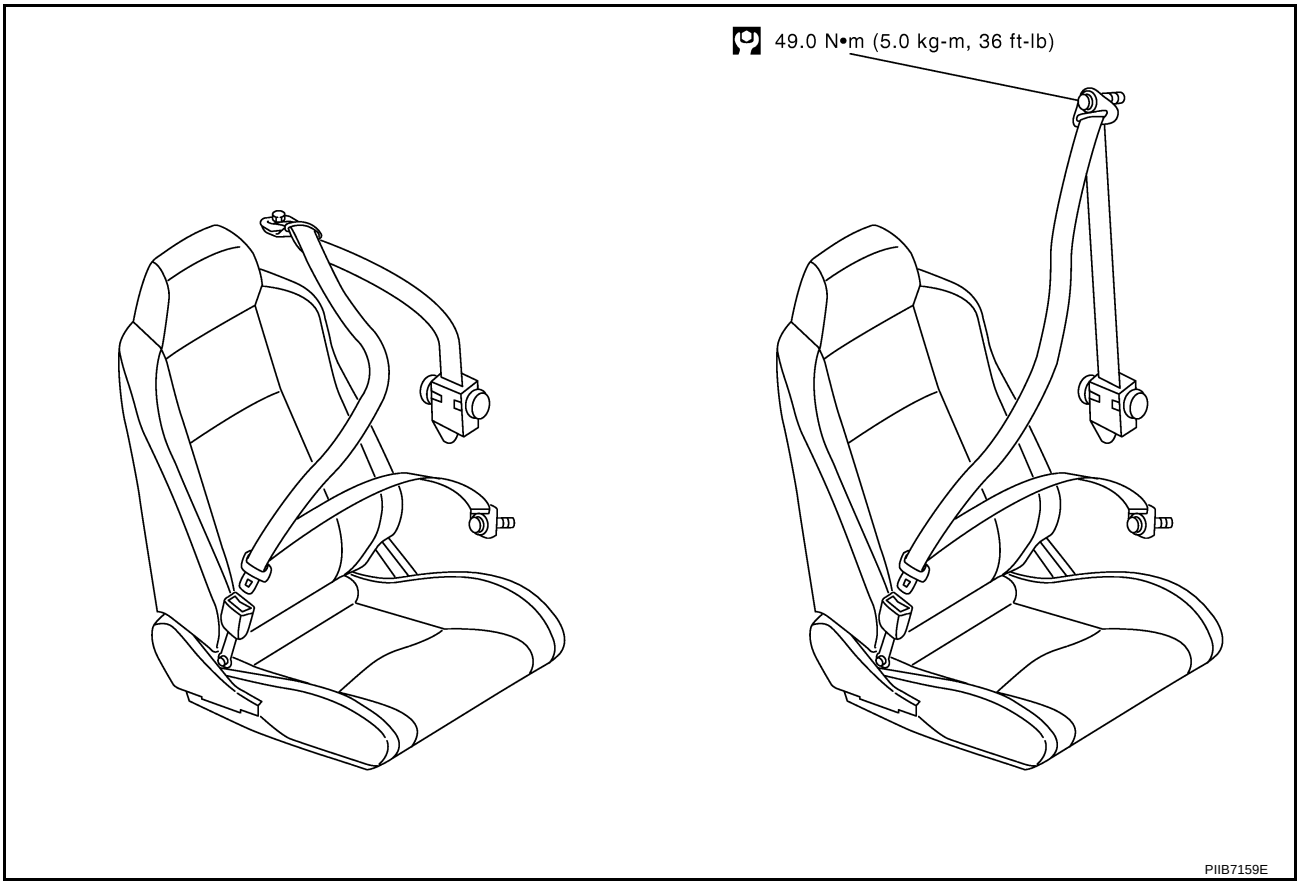


- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.



Lubricating Locks, Hinges and Hood Latch (Coupe)

NLS00010



Lubricating Locks, Hinges and Hood Latch (Roadster)

NLS00011

Checking Seat Belt, Buckles, Retractors, Anchors and Adjusters

NLS0005L

CAUTION:

- **After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (I.e. anchor bolt, guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision.**
  Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating.
  Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision where the driver and passenger air bags are deployed.
- **If any component of seat belt assembly is questionable, do not repair.**
  Replace as seat belt assembly.
- **If webbing is cut, frayed, or damaged, replace belt assembly.**
- **Never oil tongue and buckle.**
- **Use a genuine NISSAN seat belt assembly.**

For details, refer to Refer to Service Manual in SB section.

- Check anchors for loose mounting
- Check belts for damage
- Check retractor for smooth operation
- Check function of buckles and tongues when buckled and released

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

NLS00014

BELT DEFLECTION AND TENSION

Tension of drive belts	Auto adjustment by auto tensioner

ENGINE COOLANT CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Engine coolant capacity (With reservoir tank at “MAX” level)	9.0 (9-1/2, 7-7/8)
Reservoir tank engine coolant capacity (at MAX level)	0.8 (7/8, 3/4)

ENGINE OIL CAPACITY (APPROXIMATE)

Unit: ℓ (US qt, Imp qt)

Drain and refill	With oil filter change	4.9 (5-1/8, 4-1/4)

PRECAUTIONS

PFP:00001

Precautions for Battery Service

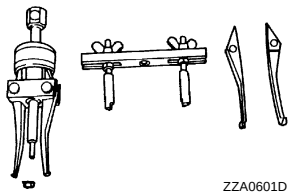
NCS0000N

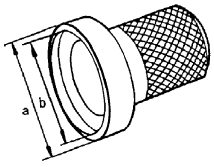
Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

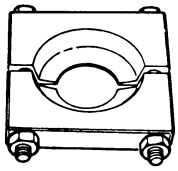
Service Notice or Precautions

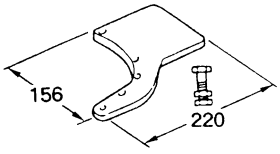
NCS0000O

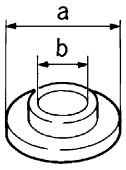
- If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube . Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.
- Do not reuse transmission oil, once it has been drained.
- Check oil level or replace oil with vehicle on level ground.
- During removal or installation, keep inside of transmission clear of dust or dirt.
- Check for the correct installation status prior to removal or disassembly. If matching marks are required, be certain they do not interfere with the function of the parts they are applied to.
- In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, observe it.
- Be careful not to damage sliding surfaces and mating surfaces.
- Do not hold control lever housing to prevent bushing of control lever housing from deformation when moving transmission assembly.

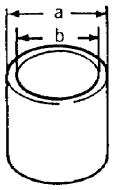


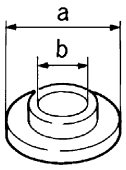




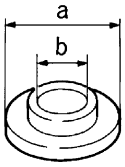


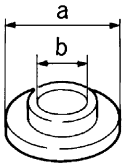


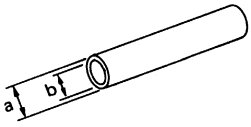


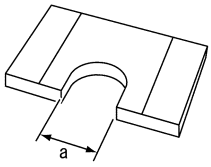


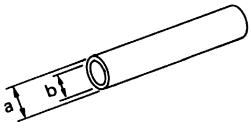
PREPARATION

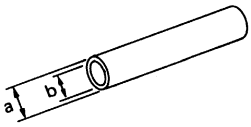


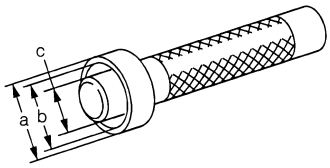




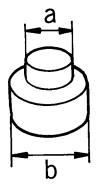


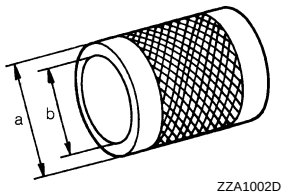






PFP:00002

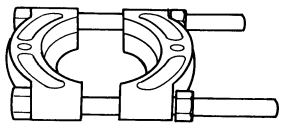


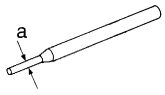


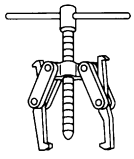
Special Service Tools

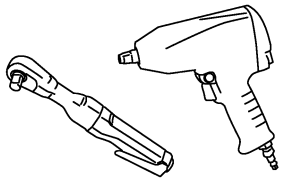
NCS0000P

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.









Tool number (Kent-Moore No.) Tool name		Description
KV381054S0 (J-34286) Oil seal puller	 ZZA0601D	Removing rear oil seal
ST33400001 (J-26082) Drift a: 60 mm (2.36 in) dia. b: 47 mm (1.85 in) dia.	 ZZA0814D	Installing rear oil seal
ST30031000 (J-22912-01) Puller	 ZZA0537D	Measuring wear of inner baulk ring
ST22490000 (—) Adapter setting plate	 156 220 ZZC0465D	Holding a adapter plate
ST30911000 (—) Inserter a: 98 mm (3.86 in) dia. b: 40.5 mm (1.594 in) dia.	 a b ZZA0920D	● Installing main shaft bearing ● Installing 5th-6th synchronizer assembly ● Installing reverse main gear bushing ● Installing 3rd gear bushing ● Installing 3rd-4th synchronizer assembly
ST27861000 (—) Support ring a: 62 mm (2.44 in) dia. b: 52 mm (2.05 in) dia.	 a b ZZA0832D	● Installing 1st-2nd synchronizer assembly ● Installing 1st gear bushing
ST30022000 (—) Inserter a: 110 mm (4.33 in) dia. b: 46 mm (1.81 in) dia.	 a b ZZA0920D	● Installing 3rd main gear ● Installing 4th main gear

Tool number (Kent-Moore No.) Tool name	Description
KV40100630 (J-26092) Inserter a: 67.5 mm (2.657 in) dia. b: 38.5 mm (1.516 in) dia.  ZZA0920D	Installing 4th counter gear thrust washer
ST30032000 (J-26010-01) Inserter a: 80 mm (3.15 in) dia. b: 31 mm (1.22 in) dia.  ZZA0920D	Installing counter rear bearing inner race
KV32102700 (—) Drift a: 48.6 mm (1.913 in) dia. b: 41.6 mm (1.638 in) dia.  ZZA0534D	Installing main drive gear bearing

27. 6th main gear
28. Transmission case
29. 5th-6th coupling sleeve
30. 5th-6th synchronizer hub

DOUBLE-CONE SYNCHRONIZER

The 4th gear is equipped with a double-cone synchronizer to reduce the operating force of the shift lever.

TRIPLE-CONE SYNCHRONIZER

The 1st, 2nd and 3rd gears are equipped with a triple-cone synchronizer to reduce the operating force of the shift lever.

M/T OIL

PFP:KLD20

Changing M/T Oil

NCS0000T

DRAINING

1. Start the engine and warm up the transmission unit sufficiently.
2. After stopping engine, remove filler plug and drain plug to drain oil.
3. Replace gasket on drain plug with new one. Screw drain plug into transmission case, and tighten to the specified torque. Refer to MT-22, "Case Components" .

   CAUTION:
   Do not reuse gasket.

FILLING

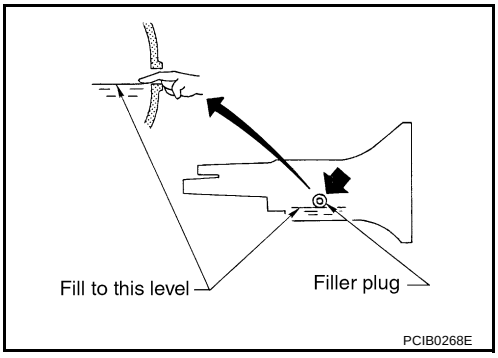
1. Fill new oil into the transmission to the level of the filler plug mounting hole.

   Oil grade and viscosity : Refer to MA-11, "Fluids and Lubricants" .
   Oil capacity : Approx. 2.93 ℓ (6-1/4 US pt, 5-1/8 Imp pt)

2. Replace gasket on filler plug with new one. Screw filler plug into transmission case, and tighten to the specified torque. Refer to MT-22, "Case Components" .

   CAUTION:
   Do not reuse gasket.

Checking M/T Oil



NCS0000U

OIL LEAKAGE AND OIL LEVEL

- Check if oil is leaking from transmission or around it.
- Check oil level from filler plug mounting hole as shown in the figure.

  CAUTION:
  Never start engine while checking oil level.
- When screwing in filler plug with a new gasket, first screw into the transmission by hand, then tighten to the specified torque. Refer to MT-22, "Case Components" .

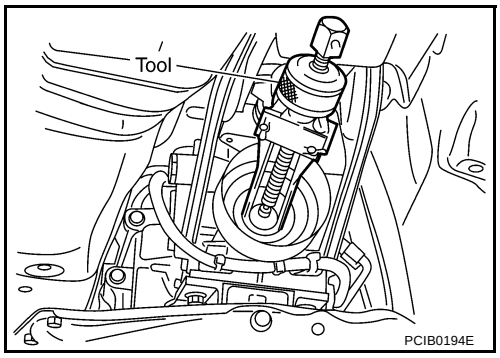
  CAUTION:
  Do not reuse gasket.

REAR OIL SEAL

PFP:33140

Removal and Installation

NCS0000V



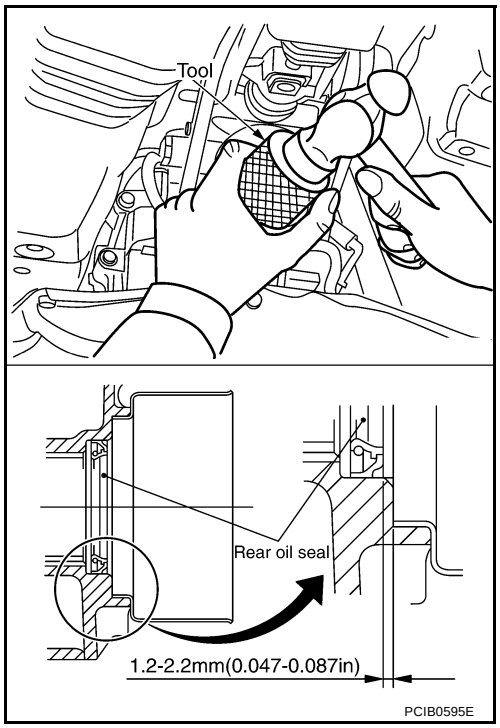
REMOVAL

1. Remove propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:
   Do not impact or damage propeller shaft tube.

2. Remove rear oil seal using oil seal puller.

   Tool number : KV381054S0 (J-34286)



INSTALLATION

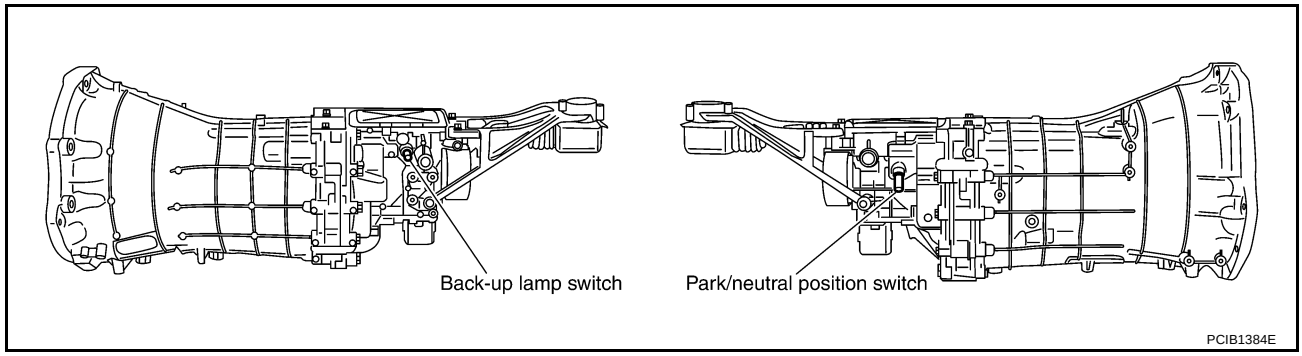
1. Apply multi-purpose grease to rear oil seal lip. Drive in rear oil seal until the edge is approximately 1.2 - 2.2 mm (0.047 - 0.087 in) above the boss edge using drift.

   Tool number : ST33400001 (J-26082)

   CAUTION:
   - **Do not reuse rear oil seal.**
   - **When installing, do not incline the rear oil seal.**

2. Install propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:
   - **Do not impact or damage propeller shaft tube.**
   - **If lubricant leak has occurred, after finishing work, check oil level. Refer to MT-9, "Checking M/T Oil" .**

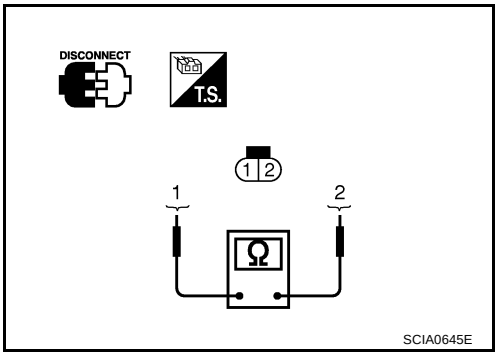


POSITION SWITCH

PFP:32005

Checking

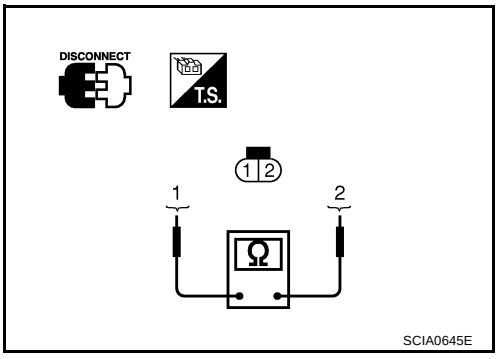
NCS0000W



COMPONENT LOCATION

BACK-UP LAMP SWITCH

- Check continuity.

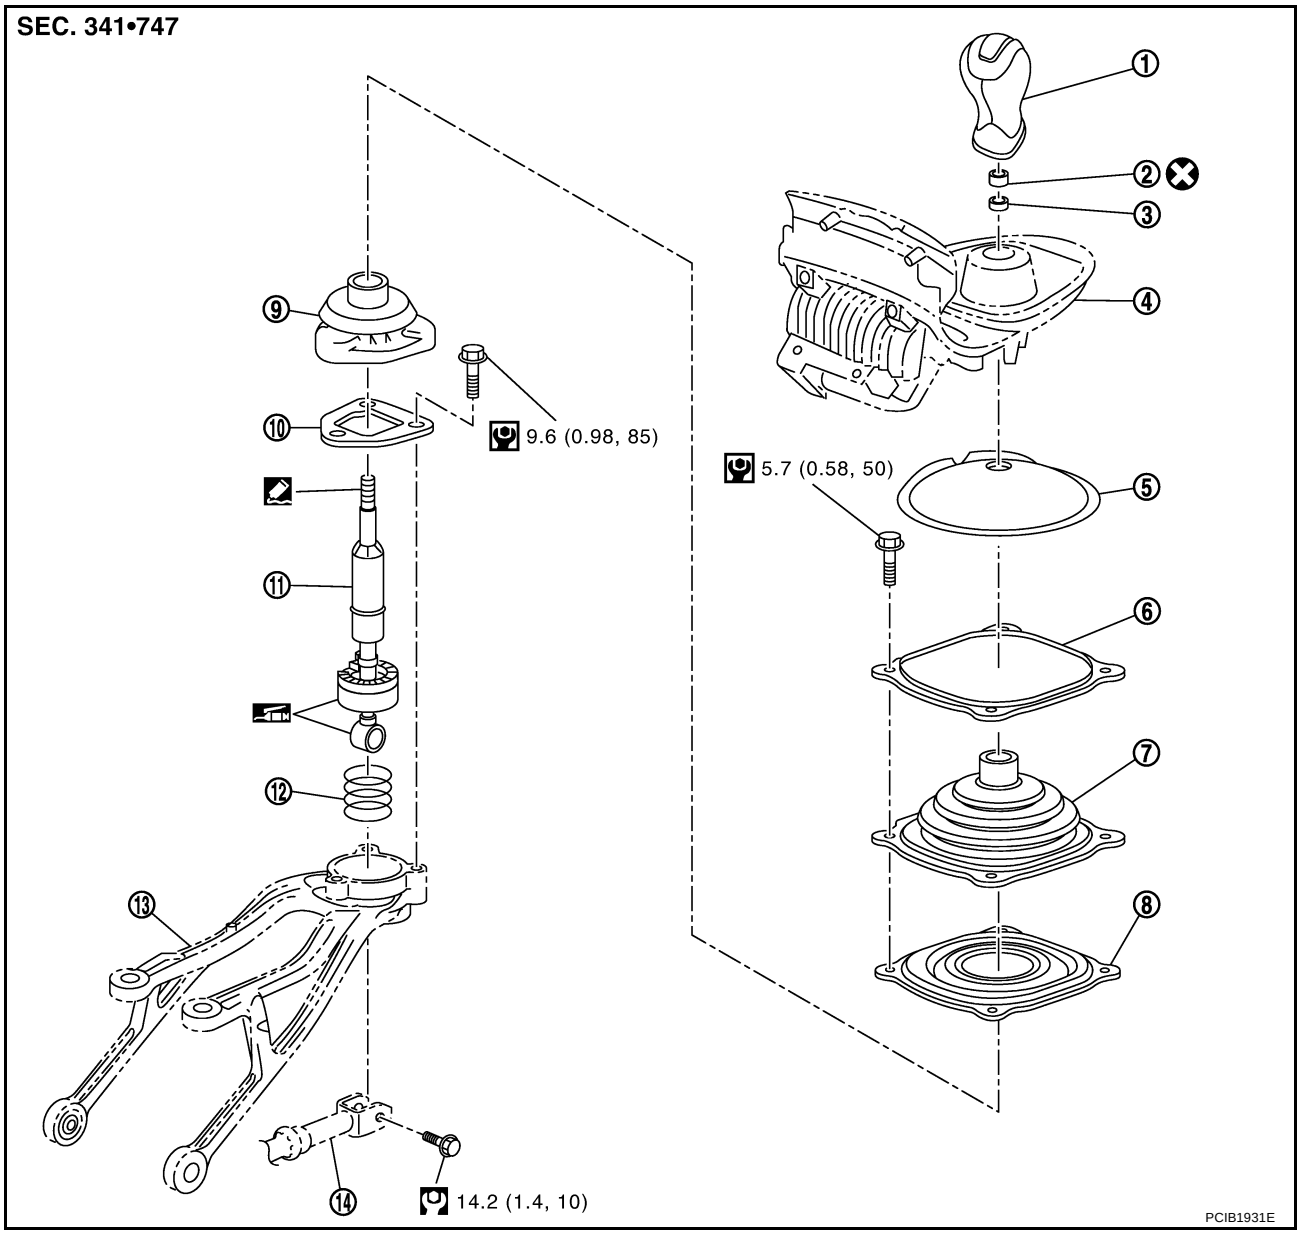


Gear position	Continuity
Reverse	Yes
Except reverse	No

PARK/NEUTRAL POSITION SWITCH

- Check continuity.

Gear position	Continuity
Neutral	Yes
Except neutral	No



SHIFT CONTROL

PFP:34103

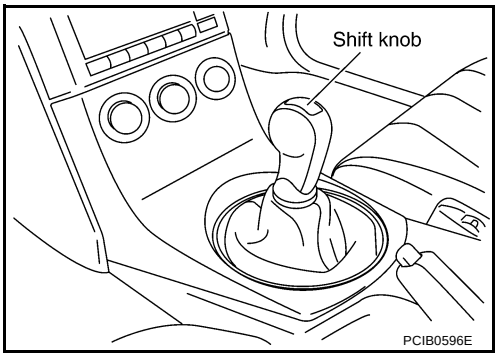
Removal and Installation

NCS0000X

COMPONENTS

1. Shift knob	2. Insulator	3. Seat
4. Console boot	5. Felt	6. Hole cover
7. Control lever boot B	8. Hole insulator	9. Control lever boot A
10. Guide plate	11. Control lever assembly	12. Control lever spring
13. Control lever housing	14. Control rod	

Refer to GI-11, "Components" and the followings for the symbols in the figure.

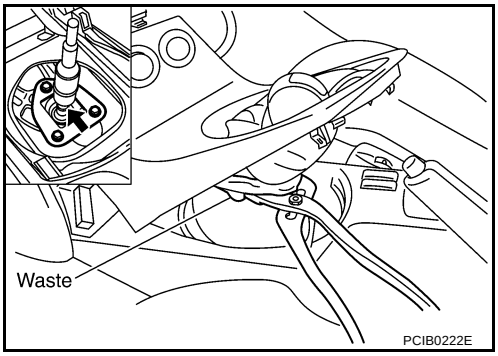


: Apply multi-purpose grease.

: Apply Genuine Medium Strength Thread Locking Sealant or an equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

REMOVAL

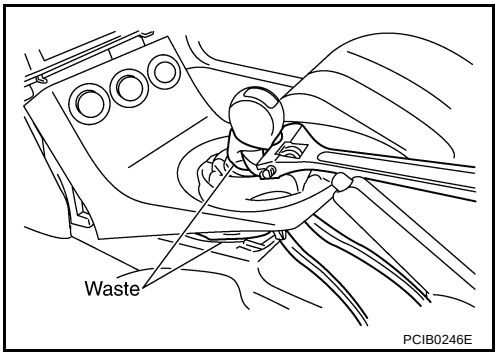
1. Remove the shift knob with the following procedure.



a. Release metal clips on console boot from center console. Refer to IP-11, "Removal and Installation" .

b. Lift console boot, and push down control lever boot B and control lever boot A. Set water pump pliers and others to control lever assembly.

CAUTION:

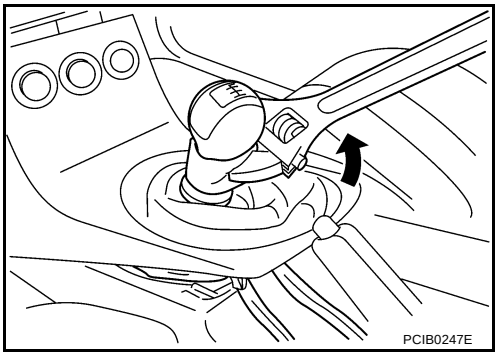


Put waste cloth between water pump pliers and control lever assembly to avoid damaging control lever assembly.

c. Set monkey wrench to shift knob.

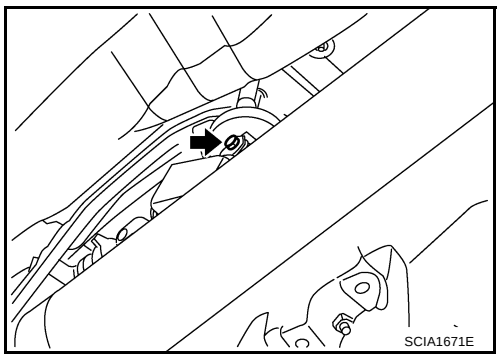
CAUTION:

Put waste cloth between shift knob and monkey wrench to avoid damaging shift knob.



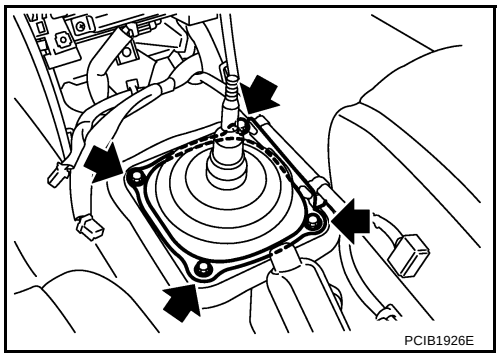
d. Keeping control lever assembly in place with water pump pliers, turn monkey wrench counterclockwise to loosen shift knob.

NOTE:



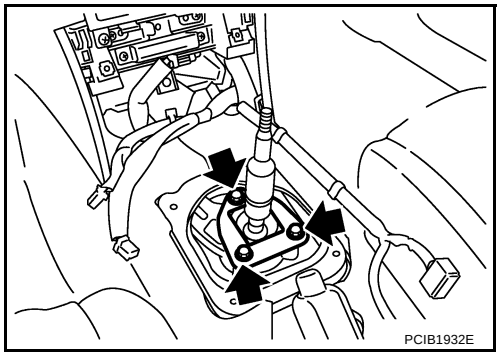
Remove shift knob from control lever assembly keeping water pump pliers in place because a certain power to turn shift knob is still necessary even after adhesive is peeled.

e. Remove shift knob from control lever assembly.



2. Remove insulator and seat from control lever assembly.
3. Remove console boot.
4. Remove center console assembly. Refer to IP-11, "Removal and Installation" .
5. Remove felt.

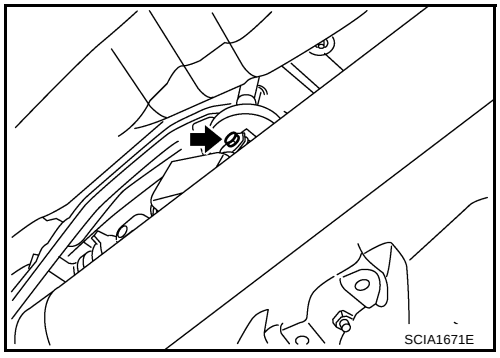
6. Release the boot, remove control rod mounting bolt, and separate control lever and control rod.



7. Remove the hole cover mounting bolts and then remove the hole cover.
8. Remove the control lever boot B and the hole insulator.
9. Remove the control lever boot A.

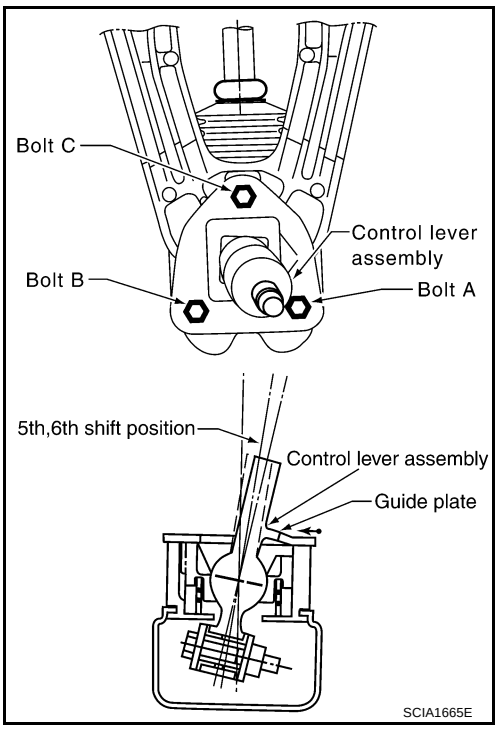
10. Remove guide plate mounting bolts, and then remove control lever assembly and control lever spring from control lever housing.

CAUTION:
Restrain guide plate while doing this because there is a danger control lever assembly will fly out of control lever housing.



INSTALLATION

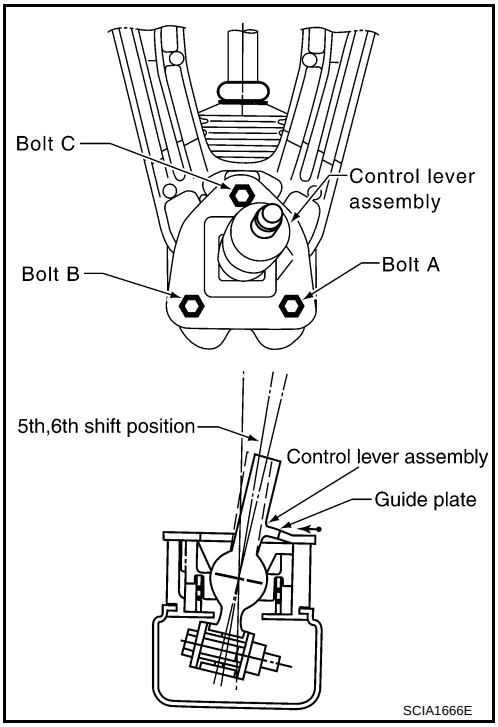
1. Set control lever spring, control lever assembly, and guide plate to control lever housing and then temporarily tightening guide plate mounting bolts.



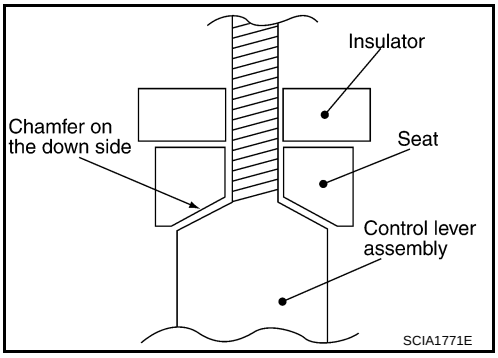
CAUTION:
Restrain guide plate while doing this because there is a danger control lever assembly will fly out of control lever housing.

2. Install control lever assembly to control rod and then tighten bolt to the specified torque. Refer to MT-12, "COMPONENTS" .
3. Install boot to control lever housing.

CAUTION:
Fit the boot to the groove on the control lever housing.



4. After shifting control lever assembly into 6th gear, push it toward reverse gear (to the right) until it comes to a stop.
5. At the point where the control lever assembly stops, bring the guide plate closer until guide plate stopper contacts control lever assembly claw, and then loosely tighten mounting bolt A.



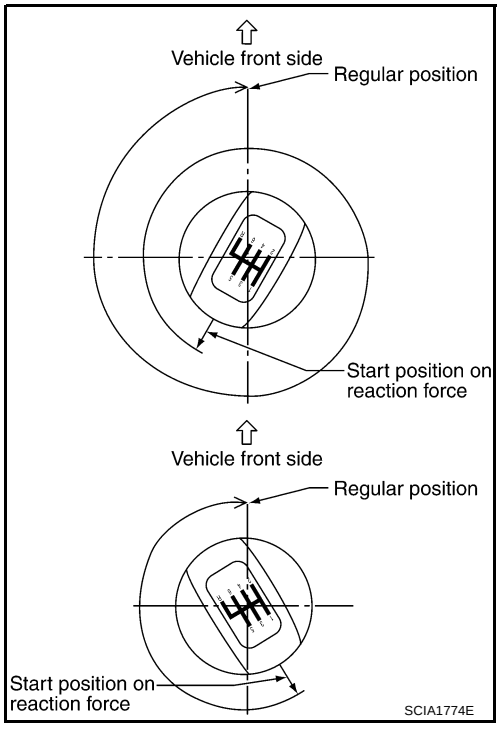
6. After shifting control lever assembly into 5th gear, push it toward reverse gear (to the right) until it comes to a stop.
7. At the point where control lever assembly stops, bring guide plate closer until the guide plate stopper contacts control lever assembly claw, and then tighten mounting bolt C to the specified torque. Refer to MT-12, "COMPONENTS" .
8. Tighten guide plate bolts A and B to the specified torque. Refer to MT-12, "COMPONENTS" .
9. Install control lever boot A.

   CAUTION:
   Fit the control lever boot A to the groove on the control lever housing.
10. Install hole insulator and control lever boot B.
11. Install hole cover and tighten bolts to the specified torque. Refer to MT-12, "COMPONENTS" .
12. Install felt.
13. Install center console assembly. Refer to IP-11, "Removal and Installation" .
14. Install console boot to center console assembly. Refer to IP-11, "Removal and Installation" .

15. As shown in the figure, assemble seat and insulator to control lever assembly.

    CAUTION:
    - **Do not reuse insulator.**
    - **Be careful with the orientation of seat.**
16. Apply locking sealant to control lever assembly threads, install shift knob.
    - **Use Genuine Medium Strength Thread Locking Sealant or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

CAUTION:
Remove the remaining adhesive on control lever and shift knob threads.



17. Put the shift knob in the correct position as the following indicates.

a. When tightening shift knob, if shift knob comes to the proper position within 1/2 turn from the position at which resistance begins to be felt, tighten it 1 more turn to set it in the proper position.

b. If it takes more than 1/2 turn from the position at which resistance begins to be felt, tighten it to set it in the proper position.

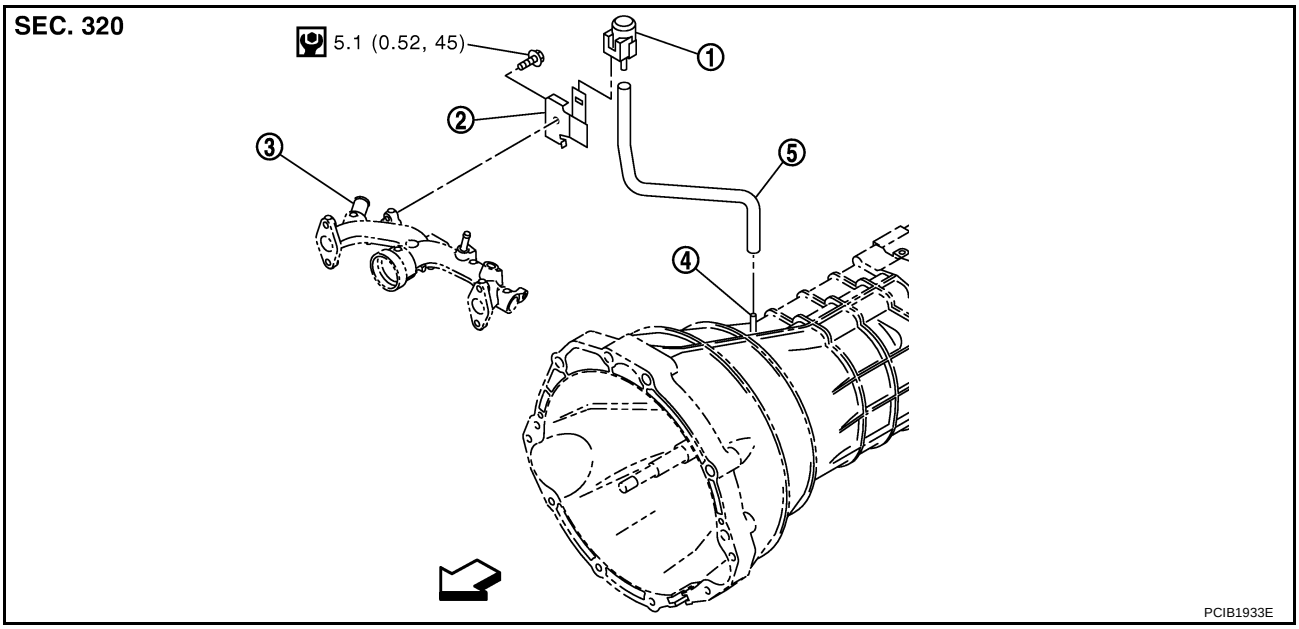
CAUTION:

- **Do not adjust the knob with loosing.**
- **After adjusting to the regular position, until 30 minutes pass, do not operate the shift intensely such as screwing or turning the shift knob to opposite direction since a locking sealant because stiff.**

INSPECTION AFTER INSTALLATION

After installing, confirm the following items:

- When control lever assembly is shifted to each position, make sure there is no binding or disconnection in each boot.
- When shifted to each position, make sure there is no noise, binding, and backlash. Especially when control lever assembly is shifted to 5th, 6th without pressing downward, check for binding.
- When control lever assembly is shifted to 1st, 2nd side and 5th, 6th side, confirm control lever assembly returns to neutral position smoothly.
- In any position other than reverse, confirm that control lever assembly can be pressed downward.
- With control lever assembly pressed downward, confirm that it can be shifted to reverse.
- When shifted from reverse to neutral position, confirm control lever assembly returns to neutral position smoothly with spring power.
- Without control lever assembly pressed downward, confirm that it cannot be shifted to reverse.



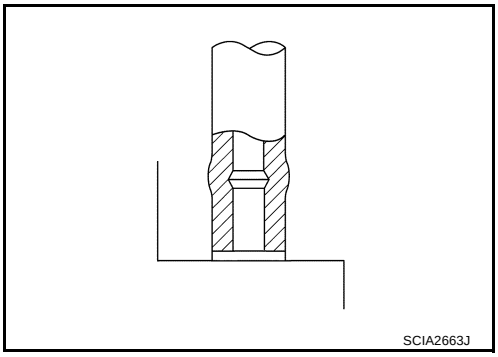
AIR BREATHER HOSE

PFP:31098

Removal and Installation

NCS0000Y

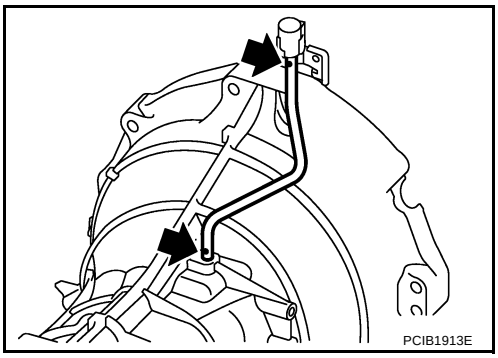
Refer to the figure for air breather hose removal and installation information.



1. Breather
2. Bracket
3. Water outlet (rear)
4. Breather tube
5. Air breather hose

⇦ : Vehicle front

Refer to GI-11, "Components" ,for the symbols in the figure.



CAUTION:

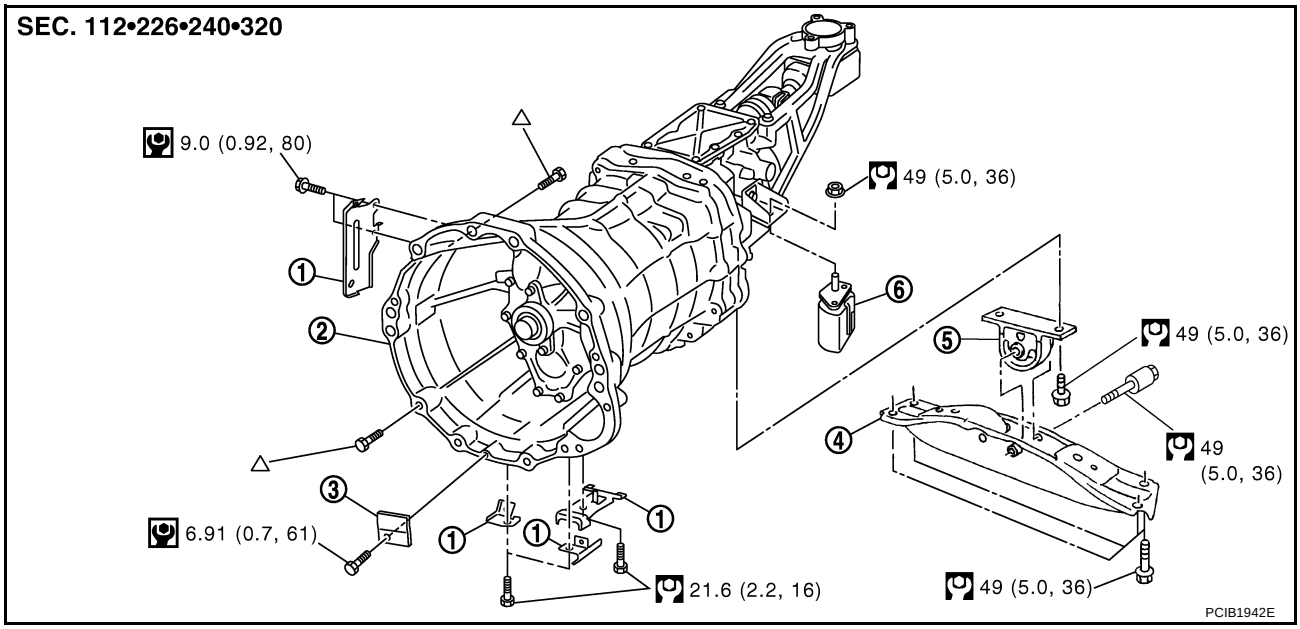
- **Make sure there are no pinched or restricted areas on the air breather hose caused by bending or winding when installing it.**
- **Be sure to insert air breather hose into breather tube until hose end reaches the tube's base.**
- **Be sure to insert air breather hose into breather until hose end reaches the breather's base.**

- **Set air breather hose with painted mark facing backward.**

⇦ : Painted mark

TRANSMISSION ASSEMBLY

PFP:32010



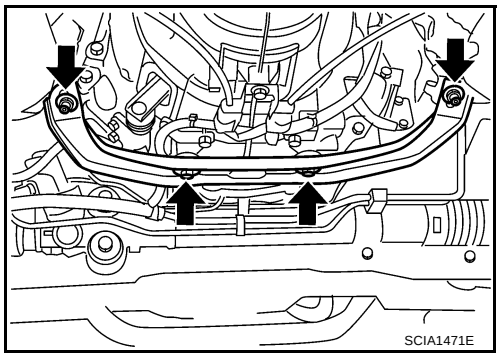
Removal and Installation

NCS0000Z

CAUTION:

If transmission assembly is removed from the Vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.

COMPONENTS



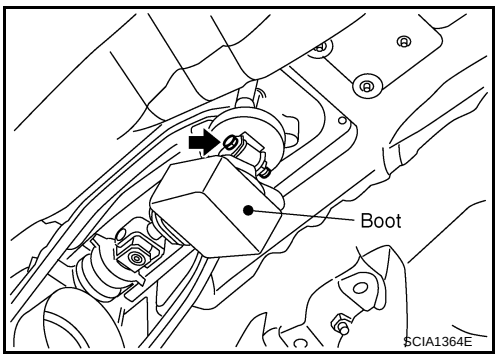
1. Harness bracket
2. Transmission assembly
3. Rear plate cover
4. Rear engine mounting member
5. Engine mounting insulator (rear)
6. Dynamic damper (For coupe)

Refer to GI-11, "Components" and the following for the symbols in the figure.

△: For the bolt tightening torque, refer to MT-20, "INSTALLATION" .

REMOVAL

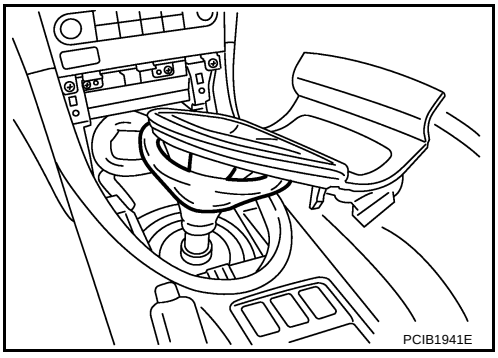
1. Disconnect the battery cable from the negative terminal.
2. Remove tower bar. Refer to FSU-20, "Removal and Installation" .
3. Remove front cross bar with power tool. Refer to FSU-9, "REMOVAL" .
4. Remove exhaust mounting bracket. Refer to EX-3, "Removal and Installation" .



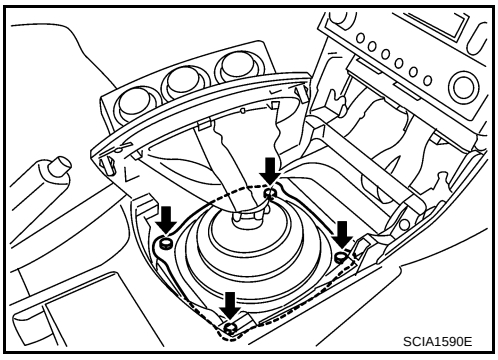
5. Remove nut connecting catalytic converter to exhaust manifold, and then remove three way catalyst and exhaust front tube as one unit. Refer to EX-3, "Removal and Installation" and EM-22, "Removal and Installation" .
6. Remove propeller shaft. Refer to PR-6, "Removal and Installation" .

   CAUTION:

   Do not impact or damage propeller shaft tube.

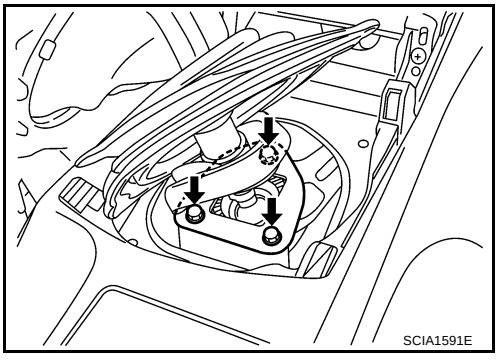


7. Remove control rod mounting bolt and then separate control lever assembly from the control rod.

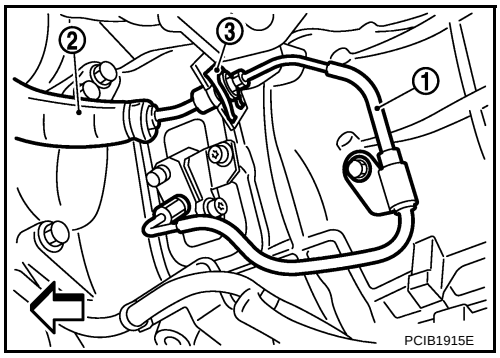


8. Using a suitable tool, release claws and separate console boot from center console. Refer to IP-11, "Removal and Installation" .

9. Remove felt as shown in the figure.
10. Slide center console assembly to remove hole cover mounting bolts.



11. Remove hole cover.
12. Remove control lever boot B, hole insulator, and control lever boot A.



13. Remove guide plate mounting bolts and then separate control lever assembly from the control lever housing.

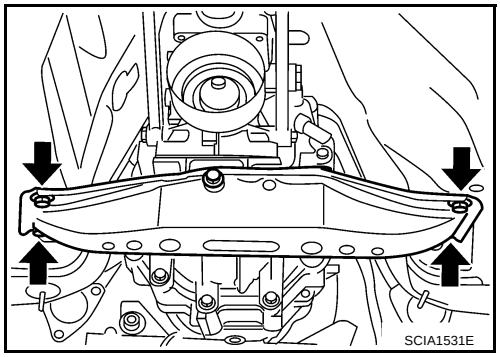
CAUTION:
Restrain guide plate while doing this because there is a danger control lever assembly will fly out of control lever housing.

14. Remove clutch tube (1), clutch hose (2), and lock plate (3). Refer to CL-15, "Removal and Installation" .

⇦ : Vehicle front

CAUTION:
- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**
- **Do not depress clutch pedal during removal procedure.**

NOTE:
Insert a suitable plug into clutch hose and CSC (Concentric Slave Cylinder) tube after removing clutch tube.



15. Remove crankshaft position sensor (POS). Refer to EM-107, "Disassembly and Assembly" .

CAUTION:
- **Do not subject it to impact by dropping or hitting.**
- **Do not disassemble.**
- **Do not allow iron dust, etc., to get on the sensor's front edge magnetic area.**
- **Do not place in an area affected by magnetism.**

16. Remove starter motor. Refer to SC-17, "Removal and Installation" .
17. Remove rear plate cover. Refer to EM-26, "Removal and Installation" .
18. Disconnect Park/Neutral position (PNP) switch harness connector.
19. Remove harness brackets.
20. Separate heated oxygen sensor 2 wire harness, back-up lamp switch wire harness and Park/Neutral position (PNP) switch wire harness from the transmission.
21. Set transmission jack to the transmission assembly.

CAUTION:
When setting transmission jack, be careful not to contact with the switch.

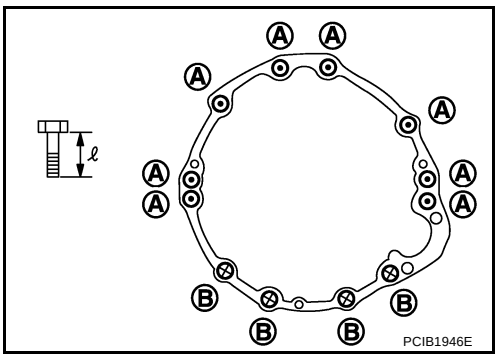
22. Remove rear engine mounting member. Refer to EM-101, "Removal and Installation" .

23. Remove engine and transmission mounting bolts with power tool.
24. Lower a suitable jack to the position where the back-up lamp switch harness connector can be disconnect. Then disconnect back-up lamp switch harness connector.
25. Remove transmission assembly from the vehicle.

CAUTION:
- **Secure transmission assembly to a suitable jack while removing it.**
- **The transmission assembly must not interfere with the wire harnesses and clutch hose.**
- **Do not hold control lever housing to prevent bushing of control lever housing from deformation when moving transmission assembly.**

26. Remove dynamic damper.
27. Remove CSC (Concentric Slave Cylinder) body and tube. Refer to CL-11, "COMPONENTS" .

CAUTION:
If transmission assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder) body and CSC tube. Return CSC body insert to original position to remove transmission assembly. Dust on clutch disc sliding parts may damage seal of CSC body and may cause clutch fluid leakage.



INSTALLATION

Note the following, and install in the reverse order of removal.

- Tighten transmission assembly mounting bolts to the specified torque. The figure is the view from the vehicle forward.

  : Transmission to engine

  : Engine to transmission

Bolt symbol	A	B
Quantity	8	4
" ℓ " mm (in)	65 (2.56)	35 (1.38)
Tightening torque N·m (kg-m, ft-lb)	75 (7.7,55)	46.6 (4.8,34)

- Install clutch tube (1), clutch hose (2), and lock plate (3) and then tighten clutch tube flare nut to the specified torque. Refer to CL-15, "Removal and Installation" .

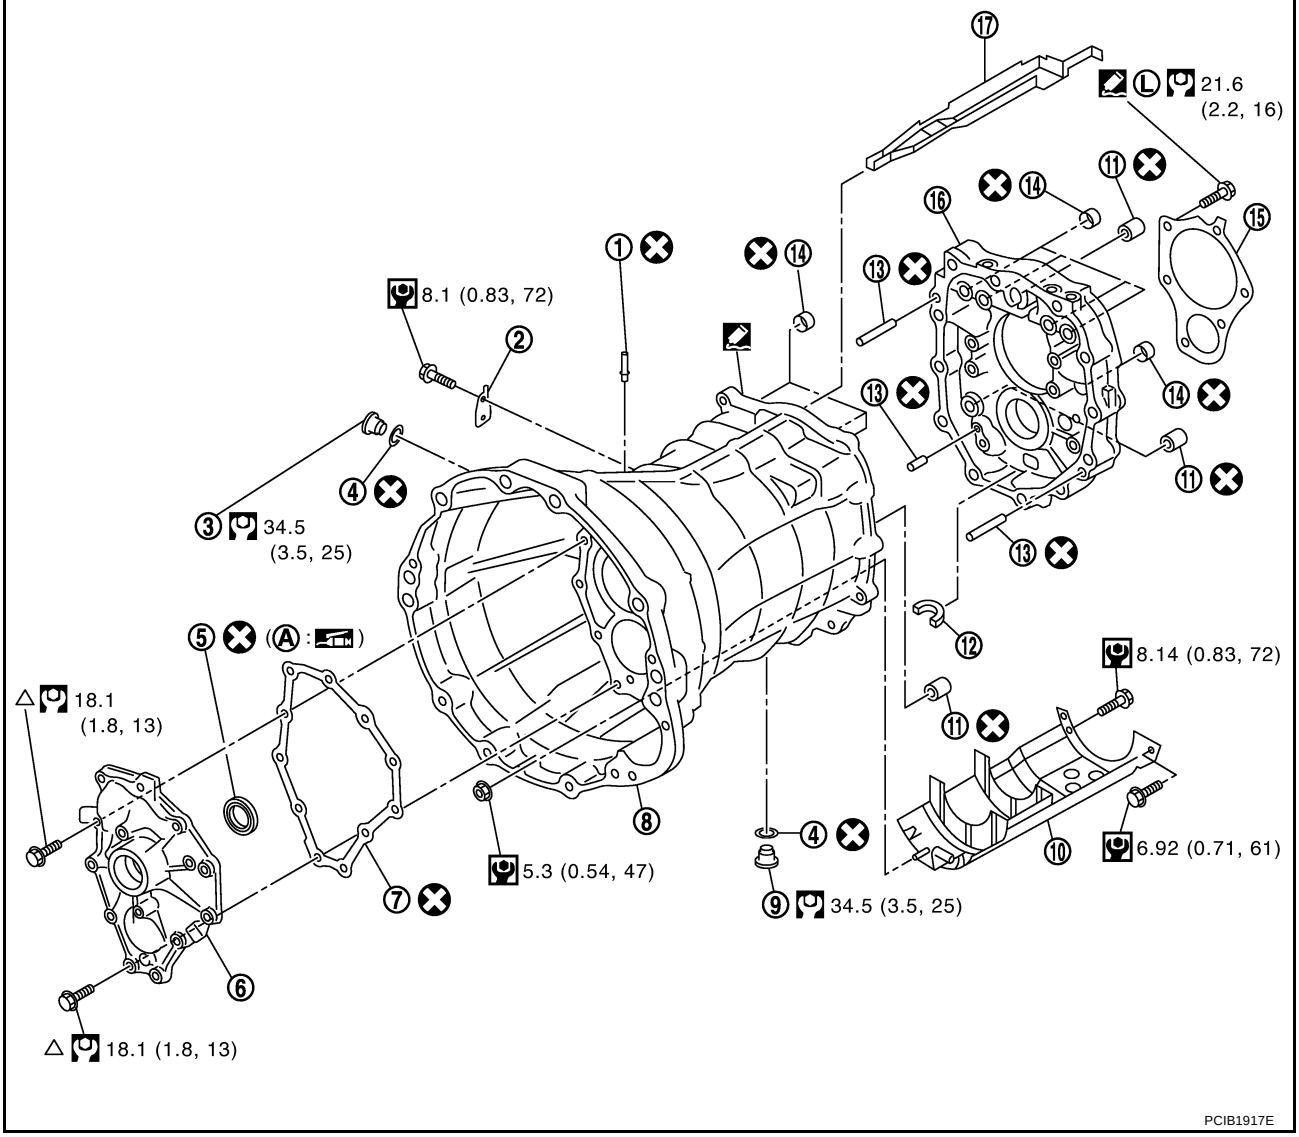
  : Vehicle front

Clutch tube mounting bolt tightening torque

: 8.1 N·m (0.83 kg-m, 72 in-lb)

CAUTION:

- **The transmission assembly must not interfere with the wire harnesses and clutch hose.**
- **When installing, be careful to avoid interference between transmission main drive gear and clutch cover.**
- **If flywheel is removed, align dowel pin with the smallest hole of flywheel. Refer to EM-111, "ASSEMBLY" .**
- **Do not impact or damage propeller shaft tube.**
- **Refer to MT-14, "INSTALLATION" and MT-16, "INSPECTION AFTER INSTALLATION" for control lever installation information.**
- **After installation, check oil level, and oil leaks and loose mechanisms. Refer to MT-9, "Checking M/T Oil" .**
- **Do not hold control lever housing to prevent bushing of control lever housing from deformation when moving transmission assembly.**



Disassembly and Assembly

20. 3rd-4th coupling sleeve
21. 4th outer baulk ring
22. 4th synchronizer cone
23. 4th inner baulk ring
24. Reverse idler shaft
25. Reverse idler needle bearing
26. Reverse idler gear
27. Reverse idler thrust washer
28. 4th counter gear
29. Counter end bearing

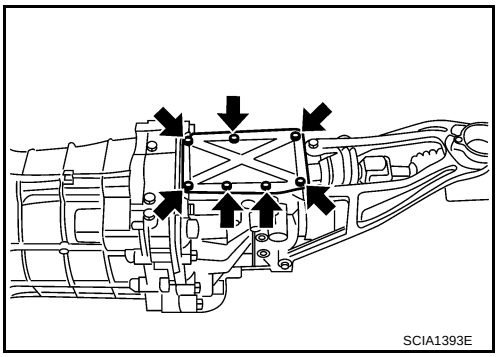
Shift Control Components

1. Check ball plug
2. Check ball spring
3. Check ball
4. Interlock pin
5. Retaining pin
6. Striking lever
7. 3rd-4th fork rod bracket
8. 3rd-4th fork rod
9. 3rd-4th fork rod (reversal side)
10. 1st-2nd fork rod
11. 1st-2nd shift fork
12. 3rd-4th shift fork
13. 5th-6th shift fork
14. 5th-6th fork rod (reversal side)
15. 5th-6th fork rod
16. Shiftier cap
17. 3rd-4th control lever
18. 5th-6th fork rod bracket
19. 5th-6th control lever
20. Adapter plate
21. Reverse fork rod
22. Reverse shift fork
23. Striking rod
24. Low/high control lever
25. Stopper ring
26. Interlock plunger

SEC. 321

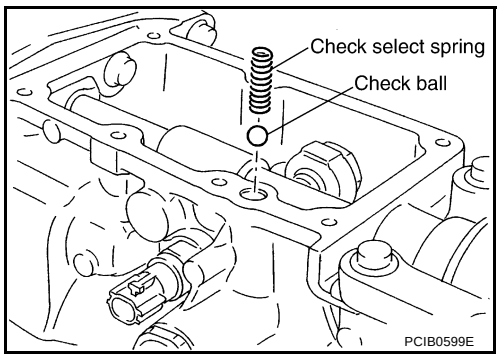
1. Control lever housing
2. Check shift pin
3. Control bracket
4. Return spring plug
5. Return spring plunger
6. Return spring
7. Rear extension
8. Boot
9. Control rod
10. Retaining pin

Refer to GI-11, "Components" and the followings for the symbols in the figure.



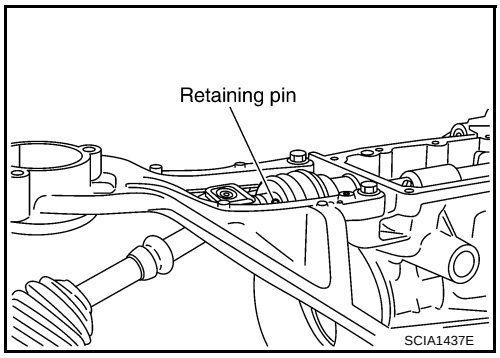
: Apply gear oil.

: Apply Genuine Silicone RTV or an equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

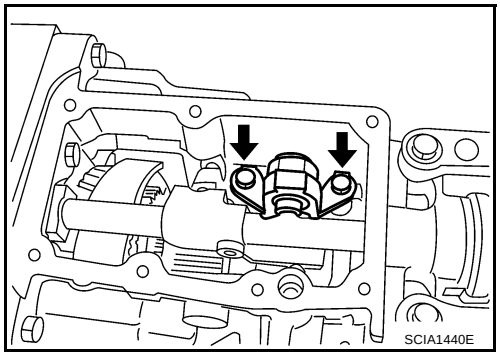


DISASSEMBLY

Case Components

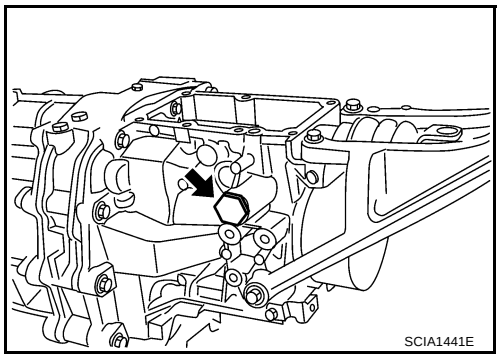


1. Remove rear extension upper cover mounting bolts.
2. Remove rear extension upper cover and rear extension upper cover gasket from the rear extension.



3. Remove check select spring and check ball from the rear extension.

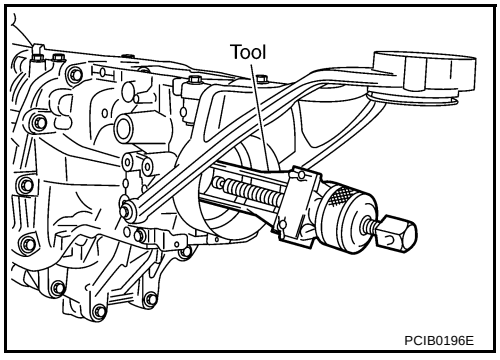
4. Remove retaining pin using a pin punch, and remove control rod.
5. Remove Park/Neutral position (PNP) switch, plunger and back-up lamp switch from the rear extension.



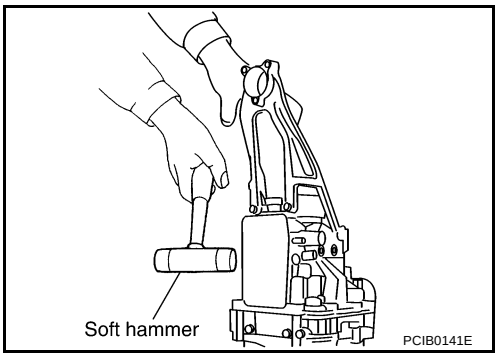
6. Remove control bracket mounting bolts. Then remove check shift pin and control bracket as one unit from the rear extension.

7. Remove right and left return spring plugs. Then remove return springs and return spring plungers from the rear extension.

CAUTION:
Return spring and return spring plunger have different lengths for right and left sides. Identify right and left side and then store.



8. Remove bracket mounting bolts. Then remove brackets from the rear extension.

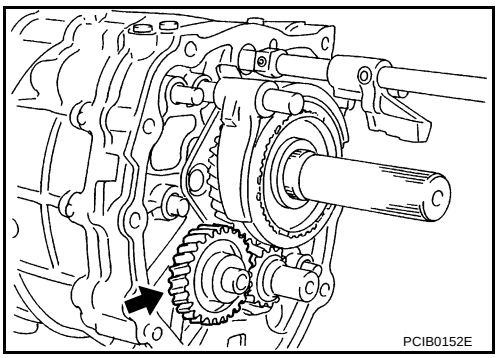


9. Remove rear oil seal from the rear extension using an oil seal puller.

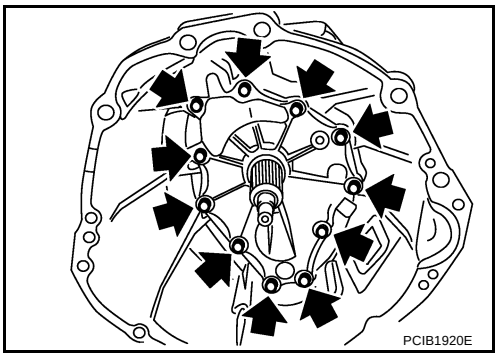
Tool number : KV381054S0 (J-34286)

CAUTION:
Be careful not to damage rear extension.

10. Remove rear extension mounting bolts. Using a soft hammer, tap rear extension assembly to remove.



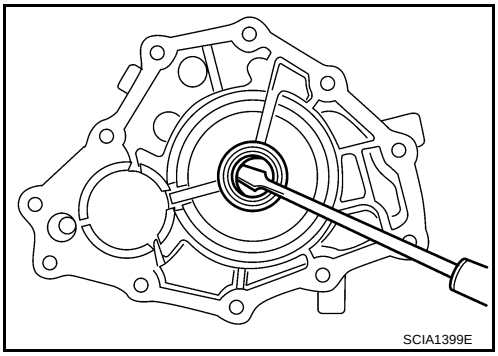
CAUTION:
Do not hold control lever housing to prevent bushing of control lever housing from deformation when moving transmission assembly.



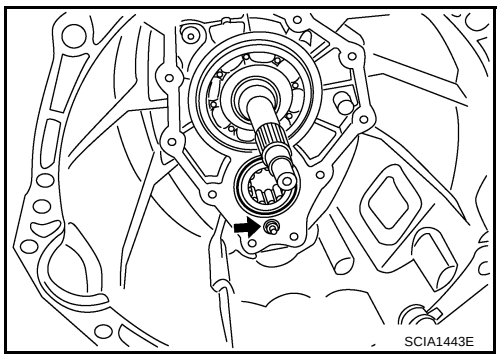
11. Remove control lever housing mounting bolts, and remove control lever housing from the rear extension.
12. Remove striking rod oil seal from the rear extension. Refer to MT-22, "Case Components" .

CAUTION:
Be careful not to damage rear extension.

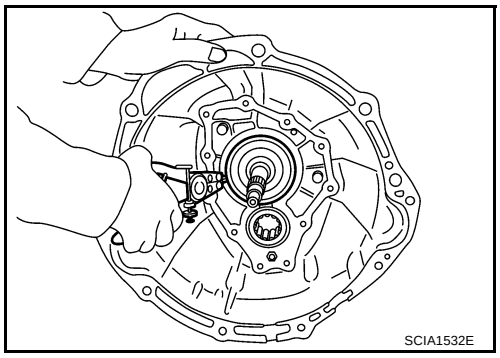
13. Remove rear extension oil gutter and cap from the rear extension. Refer to MT-22, "Case Components" .
14. Remove reverse idler thrust washer, revers idler gear, and reverse idler needle bearing from the reverse idler shaft.
15. Remove reverse idler shaft from the adapter plate.



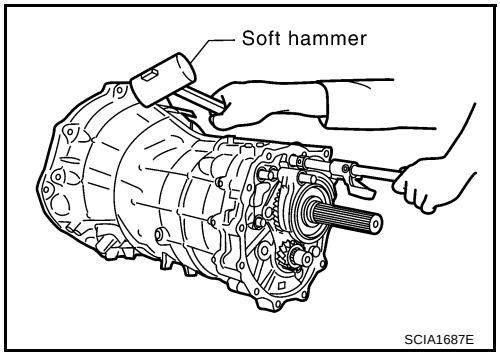
16. Remove front cover mounting bolts, then remove front cover and front cover gasket from the transmission case.



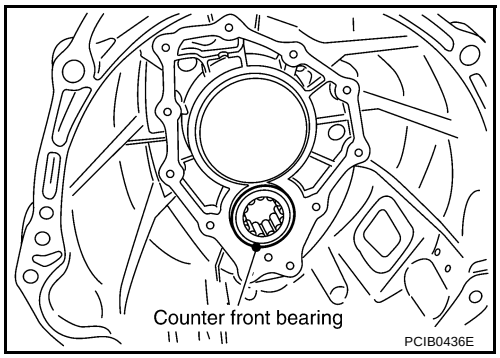
17. Remove front cover oil seal from the front cover, using a flat-bladed screwdriver.



CAUTION:
Be careful not to damage front cover mating surface.



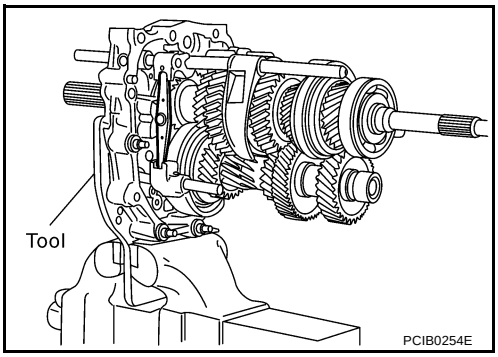
18. Remove baffle plate mounting nut from the transmission case.



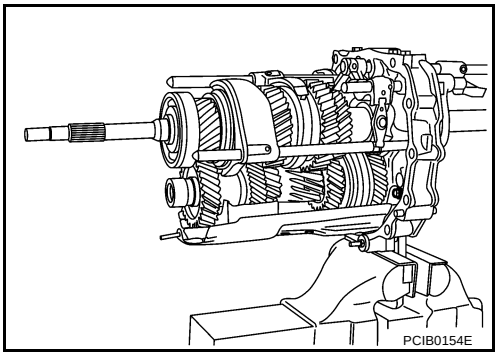
19. Remove snap ring from the main drive gear bearing, using snap ring pliers.

20. Using a soft hammer to carefully tap main shaft and counter shaft from the transmission case side, and then separate adapter plate and transmission case.

21. Remove counter front bearing from the transmission case.
22. Remove oil gutter and breather tube from the transmission case.
23. Remove filler plug, drain plug, and gaskets from transmission case.
24. Remove bracket mounting bolt and then remove bracket from transmission case.



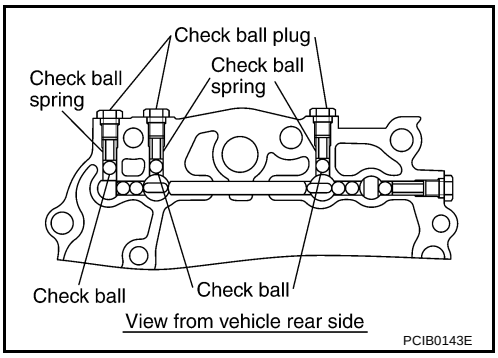
Shift Control Components



1. Install adapter setting plate to the adapter plate and then fixing in adapter setting plate using a vise.

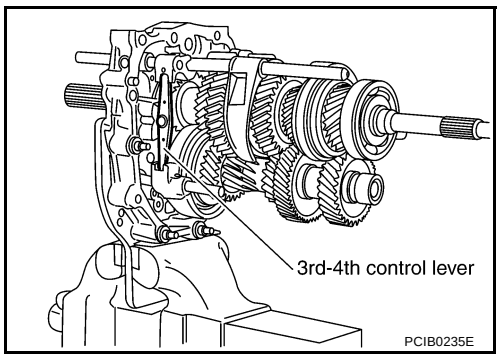
   Tool number : ST22490000 (—)

   CAUTION:
   Do not directly secure the surface in a vise.

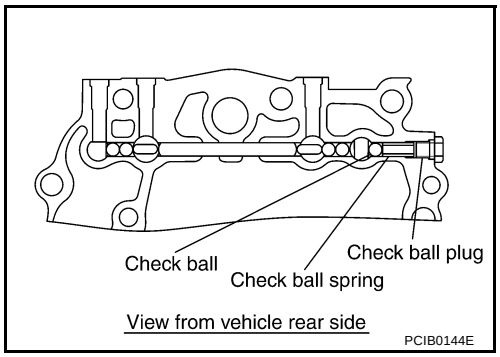


2. Remove baffle plate mounting bolts, and remove baffle plate from the adapter plate.

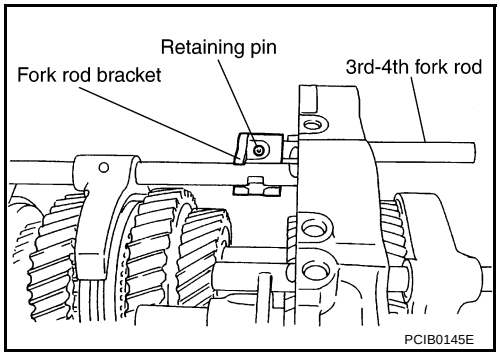
3. Remove retaining pin using a pin punch, and remove striking lever and striking rod.



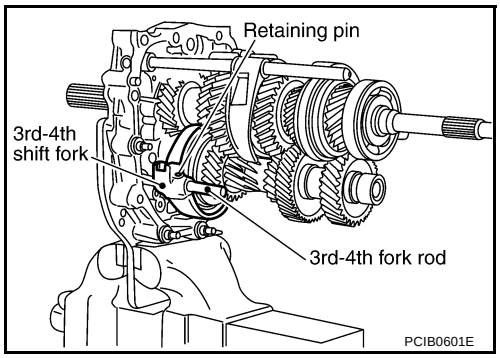
4. Remove check ball plugs and then remove check ball springs and check balls from the adapter plate.



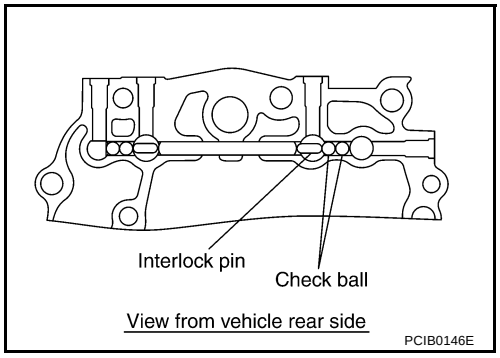
5. Remove 3rd-4th control lever mounting bolts and then remove 3rd-4th control lever and shifter cap.



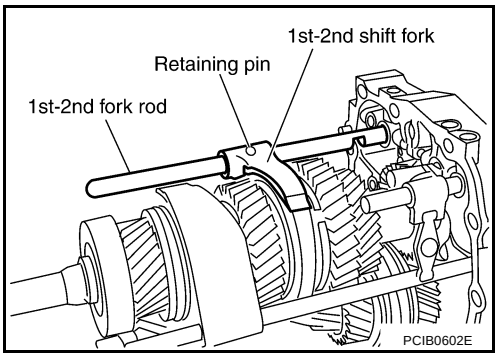
CAUTION:
Be careful not to lose shifter cap.



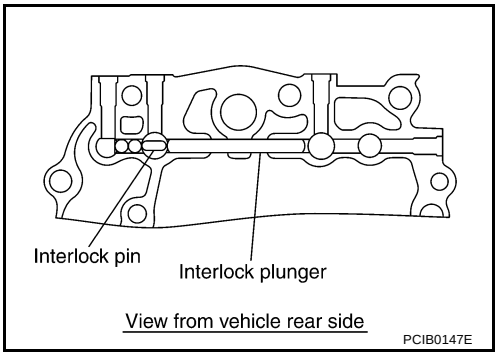
6. Remove check ball plug and then remove check ball spring and check ball from the adapter plate.



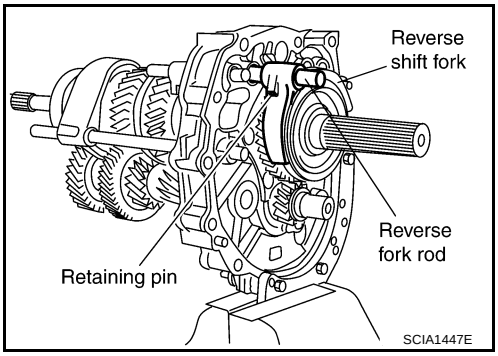
7. Using a pin punch to knock out retaining pin, and then remove 3rd-4th fork rod bracket and 3rd-4th fork rod.



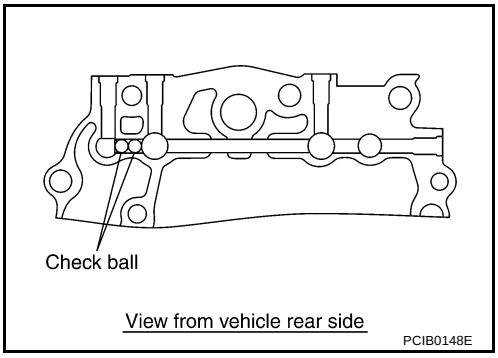
8. Using a pin punch to knock out retaining pin, and then remove 3rd-4th shift fork and 3rd-4th fork rod (reversal side).



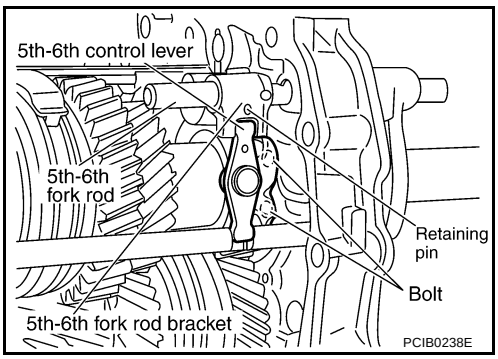
9. Remove check balls and interlock pin from the adapter plate.



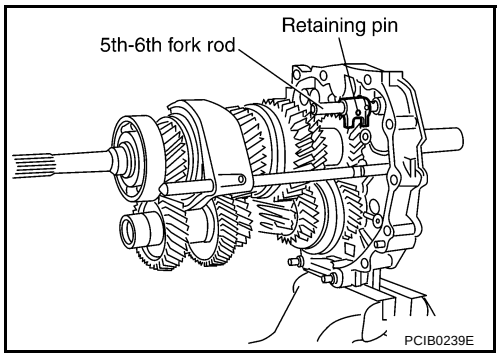
10. Using a pin punch to knock out retaining pin, and then remove 1st-2nd shift fork and 1st-2nd fork rod.



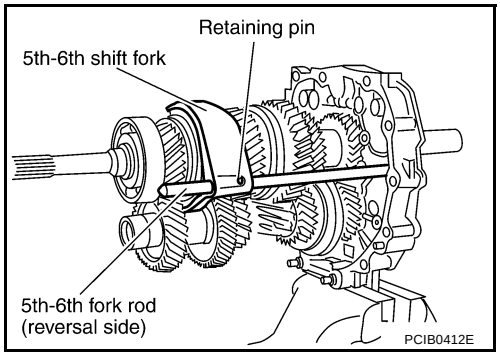
11. Remove interlock plunger and interlock pin from the adapter plate.



12. Using a pin punch to knock out retaining pin, and then remove reverse shift fork and reverse fork rod.



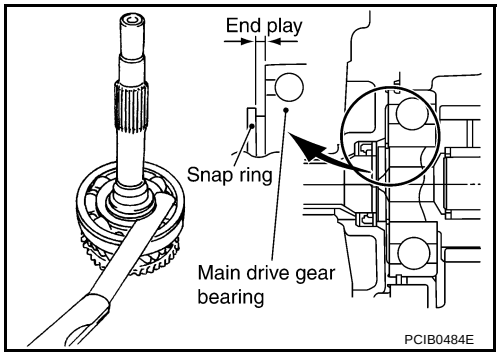
13. Remove check balls from the adapter plate.



14. Remove 5th-6th control lever mounting bolts and then remove 5th-6th control lever from the adapter plate.

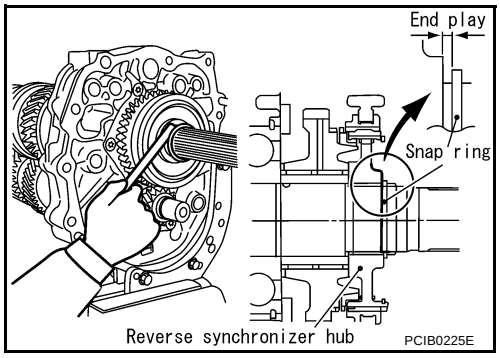
15. Using a pin punch to knock out retaining pin, and then remove 5th-6th fork rod bracket and 5th-6th fork rod.

16. Using a pin punch to knock out retaining pin, and then remove 5th-6th fork rod (reversal side) and 5th-6th shift fork.



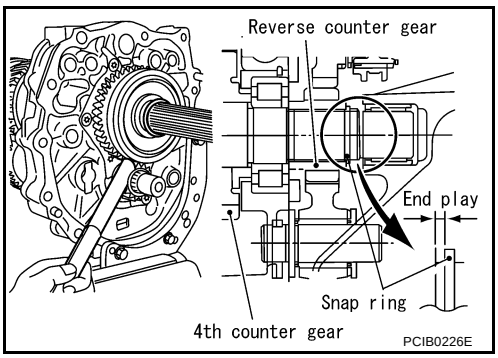
Gear Components

- Before disassembly, measure end play for each position. If the end play is outside the standards, disassemble and inspect.



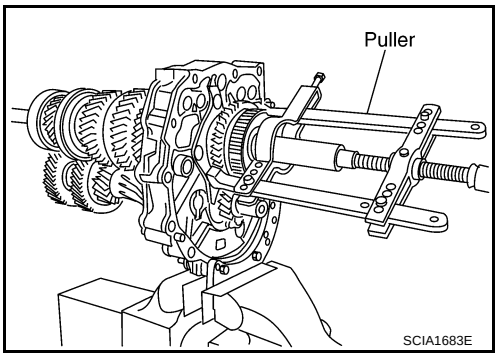
– Main drive gear

End play : 0 - 0.10 mm (0 - 0.004 in)

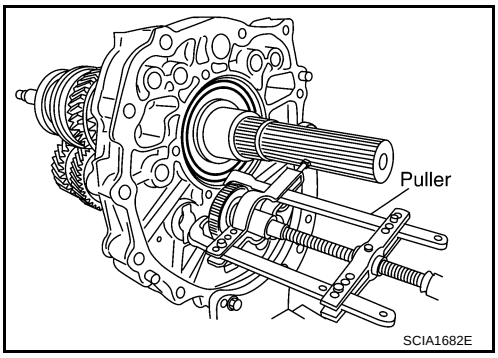


– Main shaft

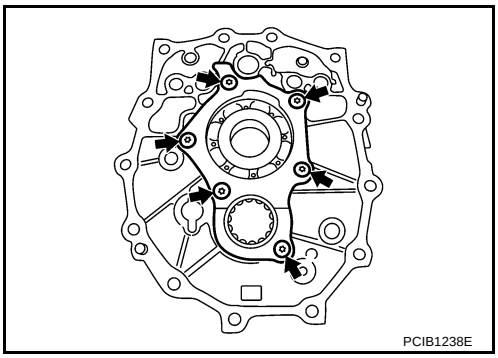
End play : 0 - 0.10 mm (0 - 0.004 in)



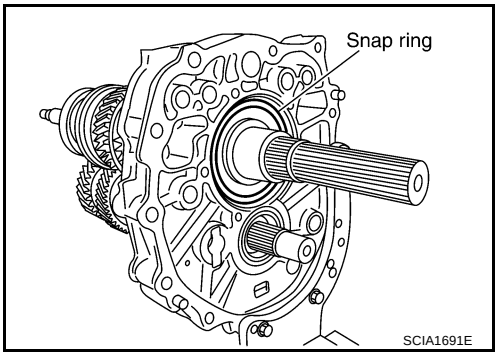
– Counter shaft



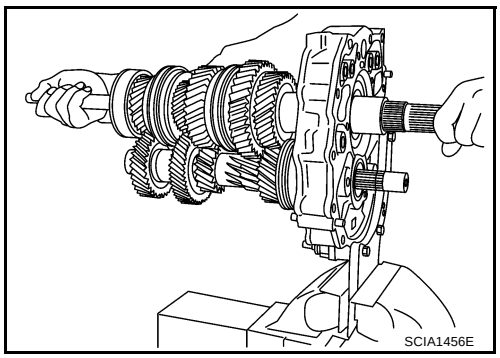
End play : 0 - 0.10 mm (0 - 0.004 in)



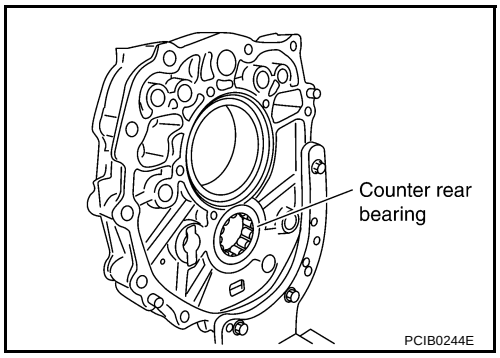
1. After removing snap ring and reverse coupling snap ring, using a puller to remove reverse main gear and reverse synchronizer assembly.
2. Remove reverse main needle bearing.



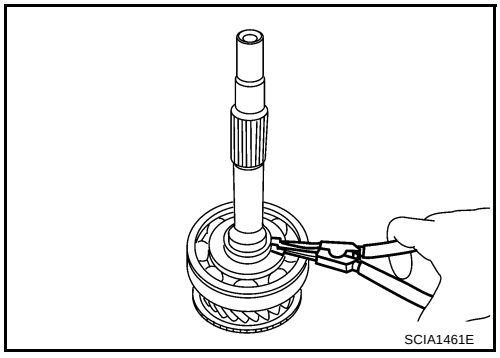
3. After removing snap ring, using the puller to remove reverse counter gear and counter rear bearing spacer.



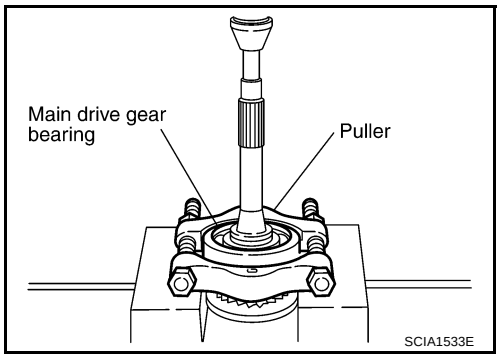
4. Remove main shaft bearing retainer mounting bolts and then remove main shaft bearing retainer.



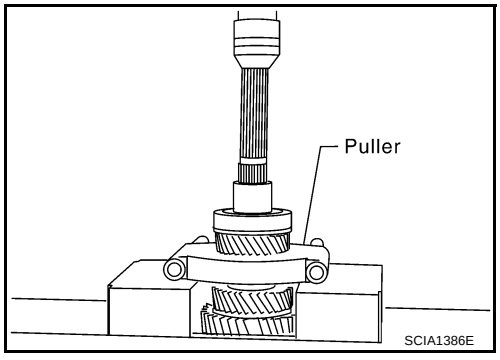
5. Remove snap ring from the main shaft bearing.



6. Carefully tap main shaft with a plastic hammer and then remove main shaft, main drive gear, and counter shaft from adapter plate.
7. Remove main pilot bearing, pilot bearing spacer and 5th baulk ring.

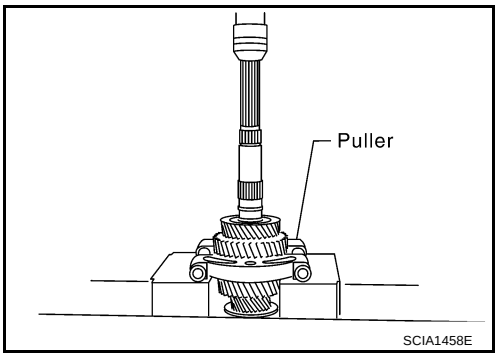


8. Remove counter rear bearing from the adapter plate.
9. Remove magnet from adapter plate.



10. Remove snap ring from the main drive gear using snap ring pliers.

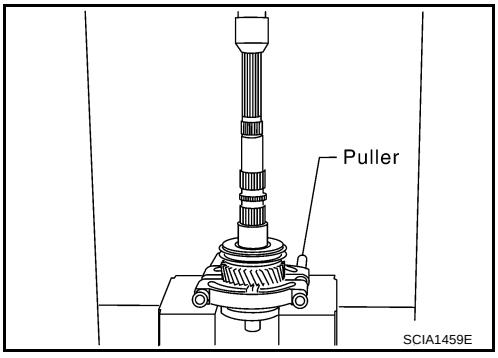
11. Set the suitable puller on the main drive gear and then using a press to remove main drive gear bearing from the main drive gear.



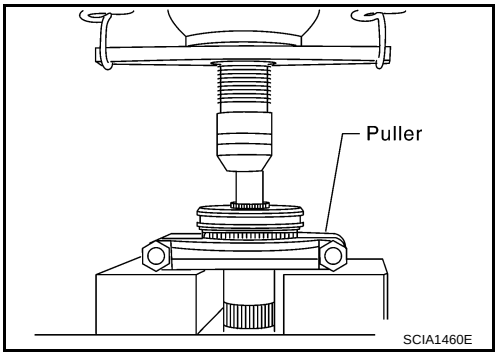
12. Using a press to remove the reverse main gear bushing, main shaft bearing and 4th main gear.
13. Remove 3rd-4th main spacer.

14. Using a press to remove 1st main gear and 3rd main gear.

CAUTION:
Be careful not to damage the baulk ring.

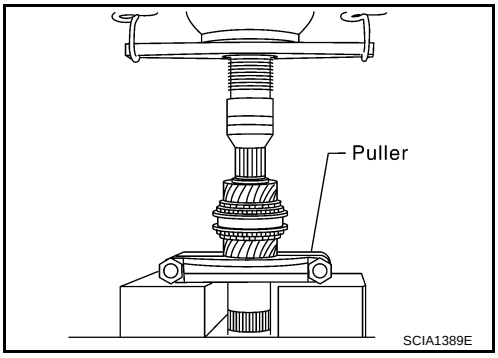


15. Remove 1st needle bearing.



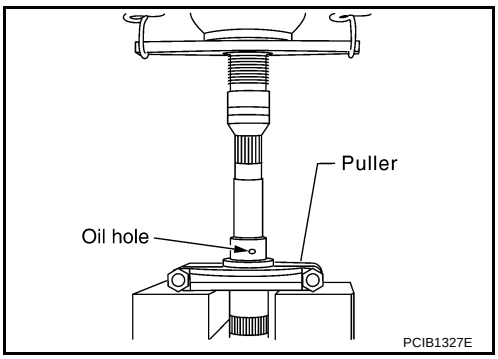
16. Using a press to remove 1st gear bushing, 1st-2nd synchronizer assembly, and 2nd main gear.

CAUTION:
Be aware that when using the press, if the main shaft gear positioner catches on the V-block, etc., the main shaft could be damaged.



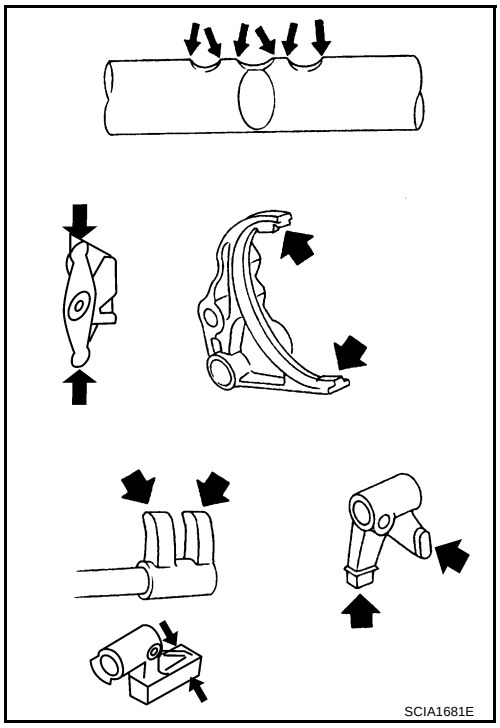
17. Remove 2nd needle bearing.

18. After removing snap ring, using a press to remove 6th main gear and 5th-6th synchronizer assembly.
19. Remove 6th needle bearing.



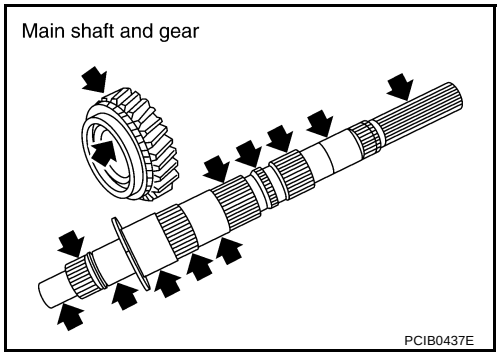
20. Using a press to remove the 3rd counter gear, 3rd-4th synchronizer assembly, 4th counter gear, 4th needle bearing, 4th gear bushing, 4th counter gear thrust washer, and counter rear bearing inner race.
21. Remove 3rd needle bearing.

22. Using a press to remove the 3rd gear bushing.

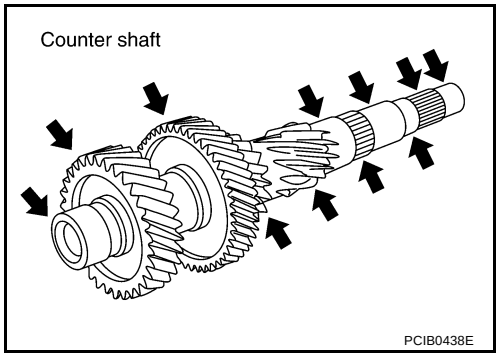


CAUTION:
Do not use oil hole of 3rd gear bushing when press out.

INSPECTION AFTER DISASSEMBLY

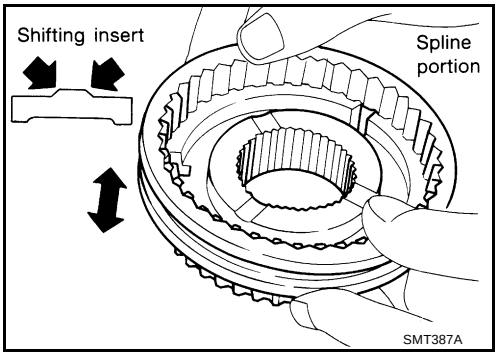


Shift Control

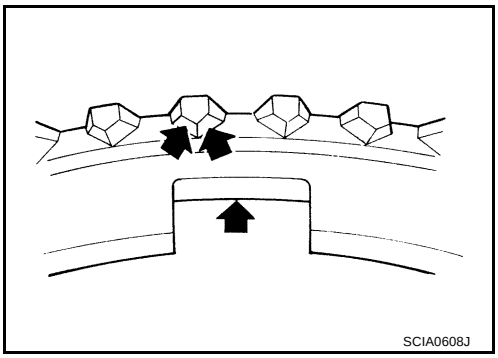


If the contact surface on striking lever, fork rod, shift fork, etc. has excessive wear, abrasion, bend, or any other damage, replace the components.

Gear and Shaft



If the contact surface on each gear, main shaft, main drive gear, and counter shaft, etc. has damage, peeling, abrasion, dent, bent, or any other damage, replace the components.

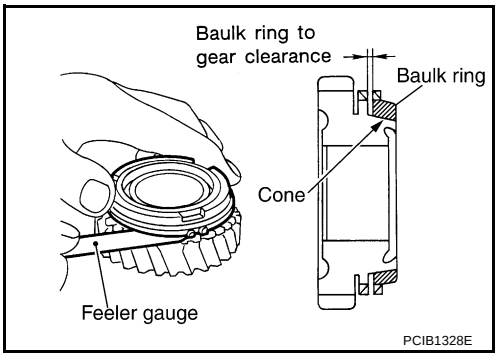


Synchronizer

- If the contact surface on coupling sleeve, synchronizer hub, and shifting insert has damage or abrasion, replace the components.
- Coupling sleeve and synchronizer hub shall move smoothly.

- If the cam surface on baulk ring or contact surface on insert has damage or excessive wear, replace with a new one.
- If spread spring is damaged, replace with a new one.

Baulk Ring Clearance



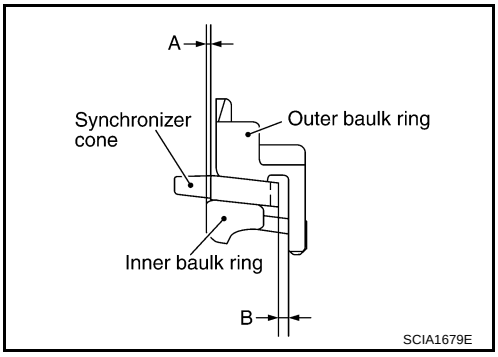
- **Single cone synchronizer (5th and 6th)**

– Push baulk ring on the cone and measure baulk ring back surface clearance at two locations or more on opposite sides, find the average value, and replace it if it is outside the limit value.

Clearance

Standard value : 0.70 - 1.35 mm (0.028 - 0.053 in)

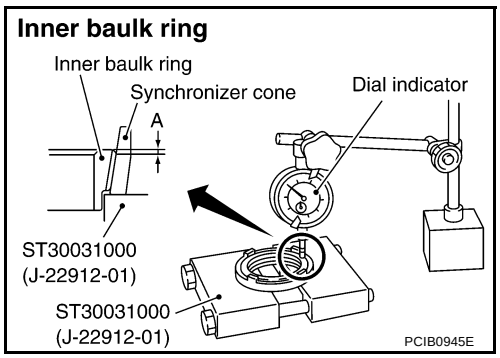
Limit value : 0.5 mm (0.020 in) or less



- **Double cone synchronizer (4th)**

Follow the instructions below and inspect the clearance of the outer baulk ring, synchronizer cone, inner baulk ring.

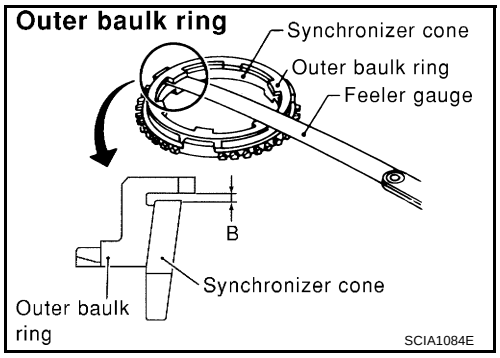
CAUTION:



Clearances “A” and “B” of the outer baulk ring, synchronizer cone, and inner baulk ring are controlled as a set, so if the clearance is outside the limit value, replace the synchronizer assembly.

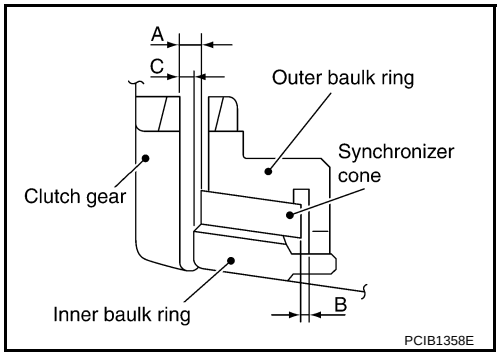
1. Using a dial indicator, measure clearance A at 2 or more points diagonally opposite, and calculate mean value.

Clearance A



Standard value	**: 0.50 - 0.70 mm (0.020 - 0.028 in)**
Limit value	**: 0.3 mm (0.012 in) or less**

2. Using a feeler gauge, measure clearance B at 2 or more points diagonally opposite, and calculate mean value.



Clearance B

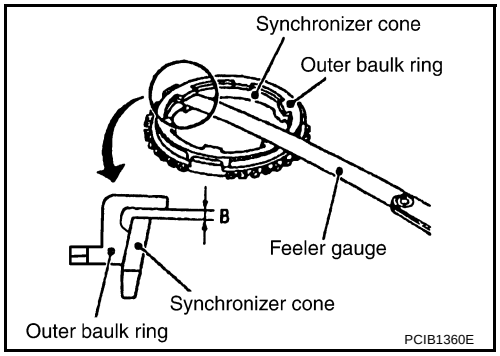
Standard value	**: 0.85 - 1.35 mm (0.033 - 0.053 in)**
Limit value	**: 0.7 mm (0.028 in) or less**

- **Triple cone synchronizer (1st, 2nd and 3rd)**
  Check clearance for outer baulk ring, synchronizer cone and inner baulk ring of triple cone synchronizer following the direction.

  NOTE:
  Outer baulk ring, synchronize cone and inner baulk ring, three control “clearance A, B and C” as a three-piece suite. If the value exceeds the limit value, replace them as a three-piece suite.

1. Using feeler gauge put and press baulk ring on gear taper cone, and then measure “clearance A” at more then 2 diagonal points, and calculate the average.

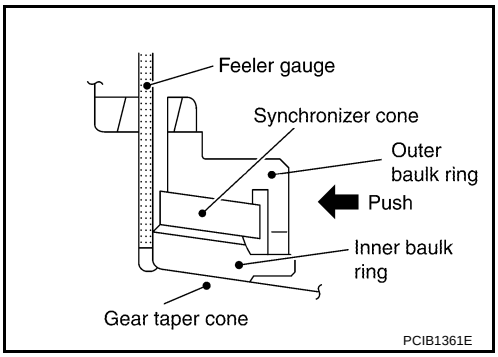
Clearance A



Standard value (1st)	**: 0.65 - 1.25 mm (0.026 - 0.049 in)**
Standard value (2nd, 3rd)	**: 0.60 - 1.30 mm (0.024 - 0.051 in)**
Limit value	**: 0.3 mm (0.012 in) or less**

2. Using feeler gauge measure “clearance B” at more than 2 diagonal positions, and calculate the average.

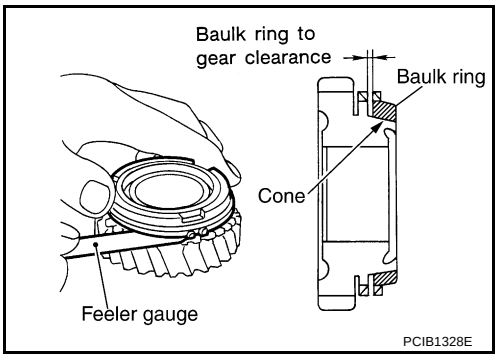
Clearance B



Standard value	**: 0.85 - 1.35 mm (0.033 - 0.053 in)**
Limit value	**: 0.7 mm (0.028 in) or less**

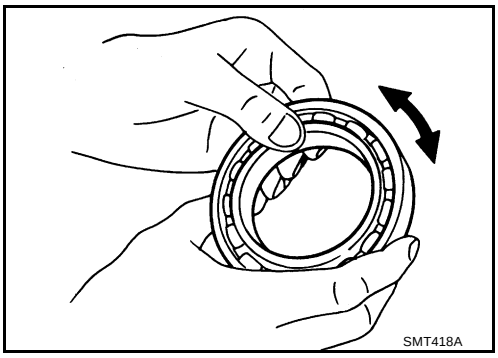
3. Using feeler gauge put and press baulk ring on gear taper cone, and then measure “clearance C” at more then 2 diagonal points, and calculate the average.

Clearance C



Standard value (1st)	**: 0.80 - 1.2 mm (0.031 - 0.047 in)**
Standard value (2nd, 3rd)	**: 0.75 - 1.25 mm (0.030 - 0.049 in)**
Limit value	**: 0.3 mm (0.012 in) or less**

- **Reverse synchronizer**
  Push baulk ring on the cone and measure baulk ring back surface clearance at two locations or more on opposite sides, find the average value, and replace if it is outside the limit value.

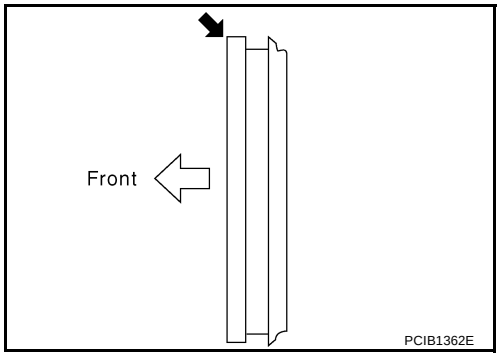


Clearance

Standard value	**: 0.75 - 1.20 mm (0.030 - 0.047 in)**
Limit value	**: 0.5 mm (0.020 in) or less**

Bearing

If the bearing does not rotate smoothly or the contact surface on ball or race is damaged or peeled, replace with new ones.

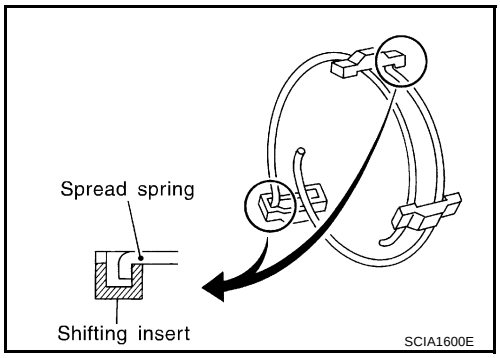


ASSEMBLY

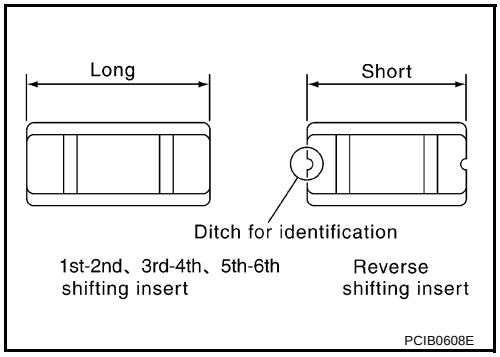
Gear Components

1. Install 5th-6th coupling sleeve and 5th-6th shifting inserts in the 5th-6th synchronizer hub.

CAUTION:



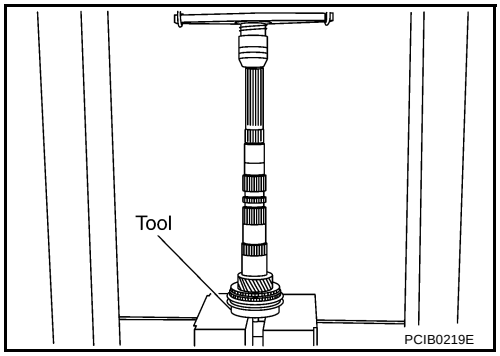
- **Do not reuse 5th-6th coupling sleeve and 5th-6th synchronizer hub.**
- **Replace 5th-6th coupling sleeve and 5th-6th synchronizer hub as a set.**
- **Install 5th-6th coupling sleeve with the large chamfer on the rear side.**



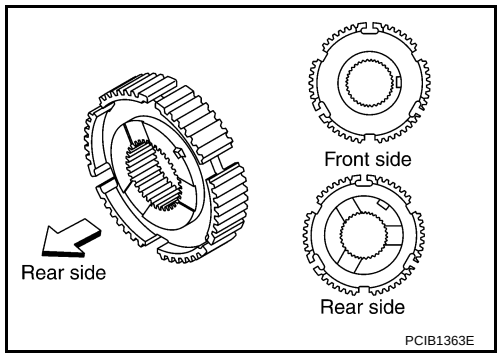
2. Install 5th-6th spread springs in the 5th-6th shifting inserts.

CAUTION:

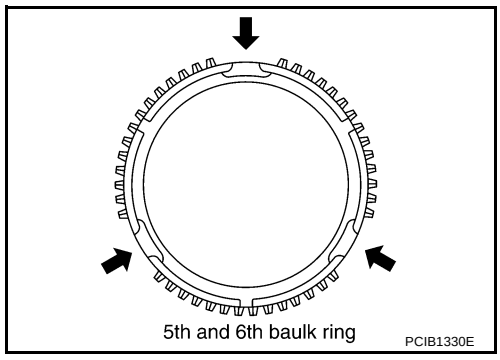
- **Do not install 5th-6th spread spring hook onto the same 5th-6th shifting insert.**



- **Be careful with the shape of reverse shifting insert to avoid misassembly.**

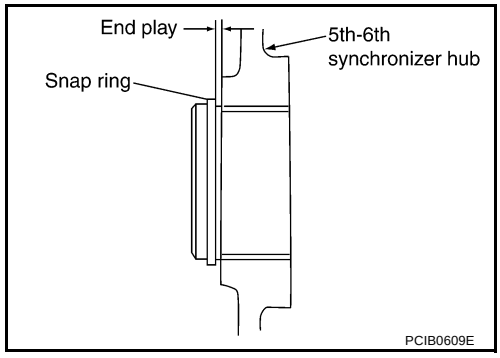


3. Apply recommended grease to 6th needle bearing.
4. Install 6th needle bearing, 6th main gear and 6th baulk ring on the main shaft and then using an inserter and a press to press fit the 5th-6th synchronizer assembly.



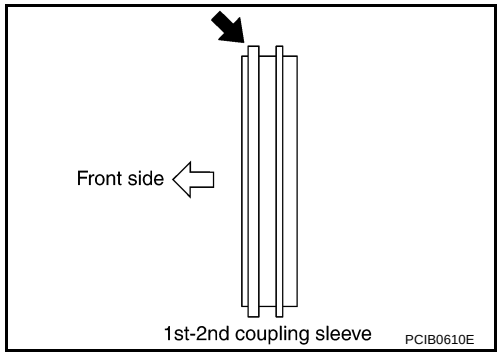
Tool number : ST30911000 (—)

CAUTION:
When press fitting, install with the side having the three boss edge oil grooves facing the rear side.



NOTE:
5th and 6th baulk rings have three spaces that four gear teeth are missing as shown in the figure.

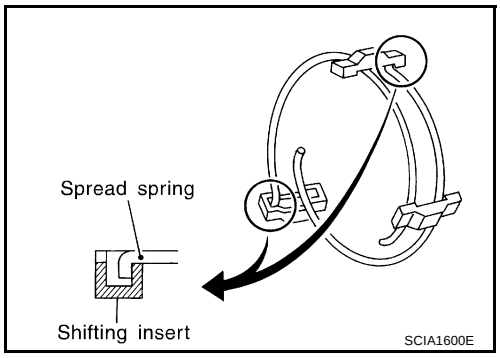
5. Select and install a snap ring so that the end play comes within the standard value.



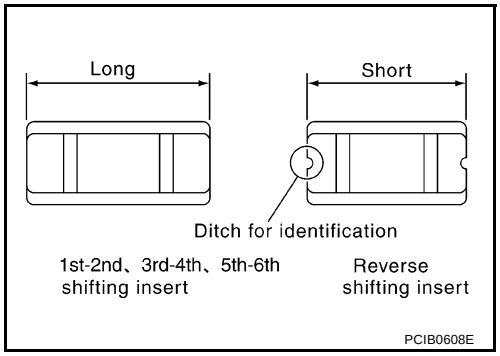
End play : 0 - 0.10 mm (0 - 0.004 in)

CAUTION:
Do not reuse snap ring.

6. Install 1st-2nd coupling sleeve and 1st-2nd shifting inserts into the 1st-2nd synchronizer hub.



CAUTION:
- **Do not reuse 1st-2nd coupling sleeve and 1st-2nd synchronizer hub.**
- **Replace 1st-2nd coupling sleeve and 1st-2nd synchronizer hub as a set.**
- **Install 1st-2nd coupling sleeve with the thicker flange faced the front side.**

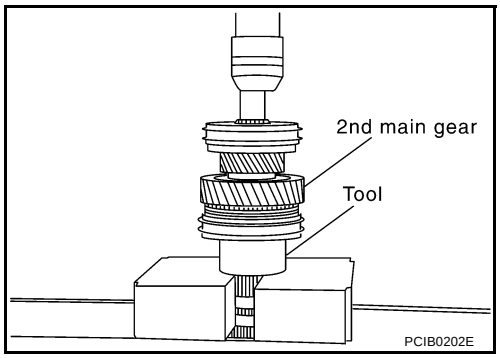


7. Install 1st-2nd spread springs in the 1st-2nd shifting inserts.

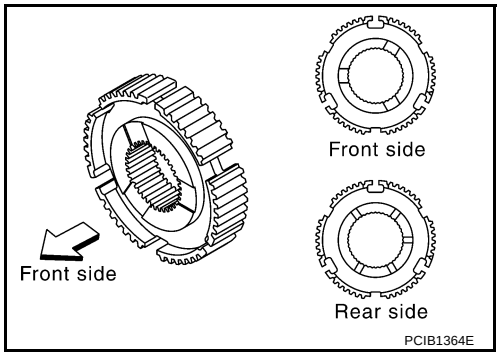
CAUTION:

- **Do not install 1st-2nd spread spring hook onto the same 1st-2nd shifting insert.**

- **Be careful with the shape of reverse shifting insert to avoid misassembly.**

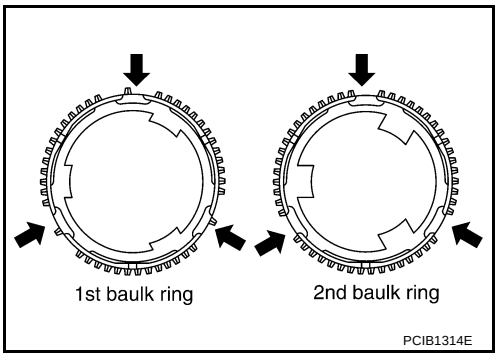


8. Apply recommended grease to 2nd needle bearing.
9. Install 2nd main gear, 2nd needle bearing, 2nd inner baulk ring, 2nd synchronizer cone and 2nd outer baulk ring on the main shaft and then using a support ring and a press to press fit the 1st-2nd synchronizer assembly.



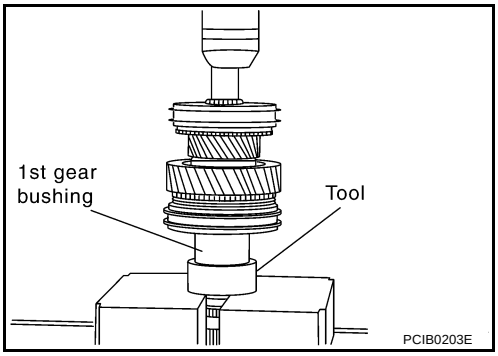
Tool number : ST27861000 (—)

CAUTION:



- **Replace 2nd inner baulk ring, 2nd synchronizer cone and 2nd outer baulk ring as a set.**

- **When press fitting, install with the side having the three boss edge oil grooves facing the front side.**



NOTE:
1st baulk ring has three spaces that four gear tooth is missing and 2nd baulk ring has three spaces that two gear teeth are missing.

10. Using a support ring and a press to press fit the 1st gear bushing.

    Tool number : ST27861000 (—)

11. Apply recommended grease to 1st needle bearing.
12. Install 1st outer baulk ring, 1st synchronizer cone, 1st inner baulk ring, 1st needle bearing and 1st main gear on the main shaft and then using the inserter and a press to press fit the 3rd main gear.

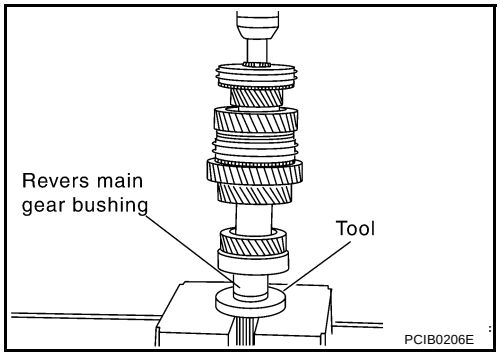
    Tool number : ST30022000 (—)

    CAUTION:
    - **Do not reuse 3rd main gear.**
    - **Replace 1st outer baulk ring, 1st synchronizer cone and 1st inner baulk ring as a set.**

13. Install 3rd-4th main spacer on the main shaft and then using the inserter and a press to press fit the 4th main gear.

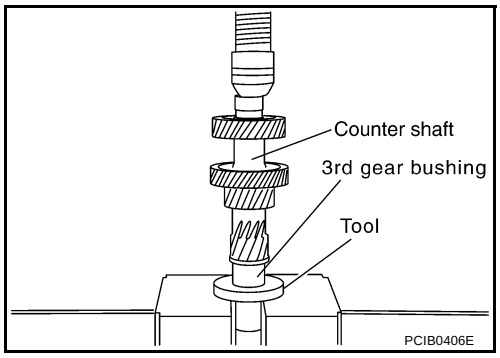
    Tool number : ST30022000 (—)

    CAUTION:
    - **Do not reuse 4th main gear.**
    - **When installing, set boss to rear side.**



14. Using the inserter and a press to press fit the main shaft bearing onto the main shaft.

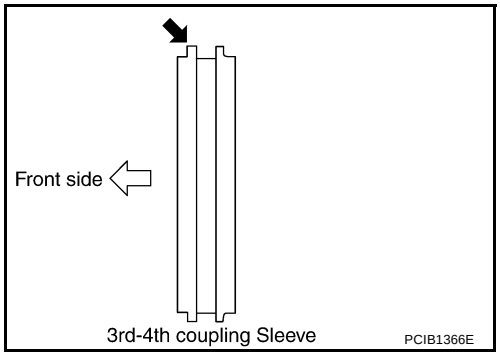
Tool number : ST30911000 (—)



15. Using the inserter and a press to press fit the reverse main gear bushing onto the main shaft.

Tool number : ST30911000 (—)

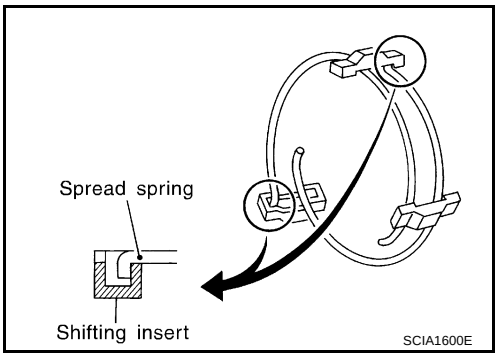
16. Using the inserter and a press to press fit the 3rd gear bushing onto the counter shaft.



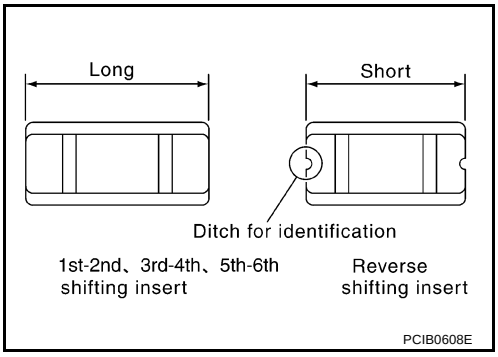
Tool number : ST30911000 (—)

17. Install 3rd-4th coupling sleeve and 3rd-4th shifting inserts into the 3rd-4th synchronizer hub.

CAUTION:



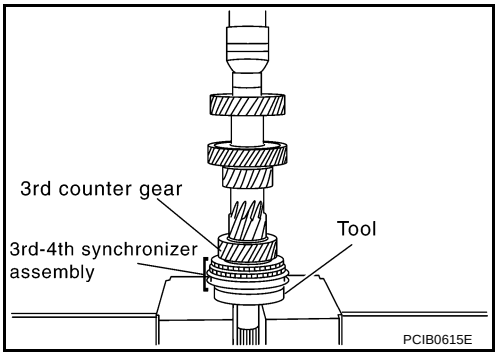
- **Do not reuse 3rd-4th coupling sleeve and 3rd-4th synchronizer hub.**
- **Replace 3rd-4th coupling sleeve and 3rd-4th synchronizer hub as a set.**
- **Install 3rd-4th coupling sleeve with the thicker flange faced the front side.**



18. Install 3rd-4th spread springs in the 3rd-4th shifting inserts.

CAUTION:

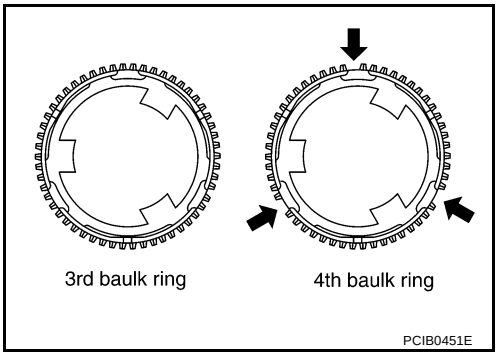
- **Do not install 3rd-4th spread spring hook onto the same 3rd-4th shifting insert.**



- **Be careful with the shape of reverse shifting insert to avoid misassembly.**

19. Apply recommended grease to 3rd needle bearing.
20. Apply gear oil to the hole spline press fitting side of 3rd-4th synchronizer hub.
21. Install 3rd needle bearing, 3rd counter gear, 3rd inner baulk ring, 3rd synchronizer cone and 3rd outer baulk ring on the counter shaft and then using the inserter and a press to press fit the 3rd-4th synchronizer assembly.

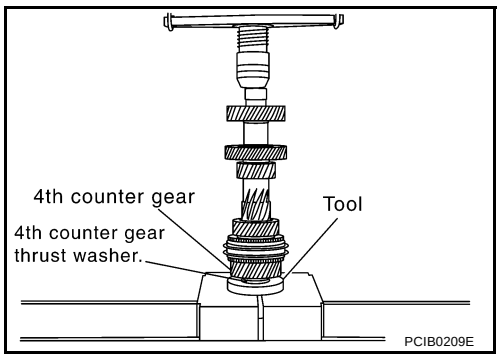
Tool number : ST30911000 (—)



CAUTION:

Replace 3rd inner baulk ring, 3rd synchronizer cone and outer baulk ring as a set.

NOTE:



4th baulk ring has three spaces that one gear tooth is missing but 3rd baulk ring doesn't.

22. Apply recommended grease to 4th needle bearing.
23. Install 4th outer baulk ring, 4th synchronizer cone, 4th inner baulk ring, 4th needle bearing and 4th counter gear onto the counter shaft and then using the inserter and a press to press fit the 4th gear bushing and 4th counter gear thrust washer.

    Tool number : KV40100630 (J-26092)

    CAUTION:
    Replace 4th outer baulk ring, 4th synchronizer cone and 4th inner baulk ring as a set.

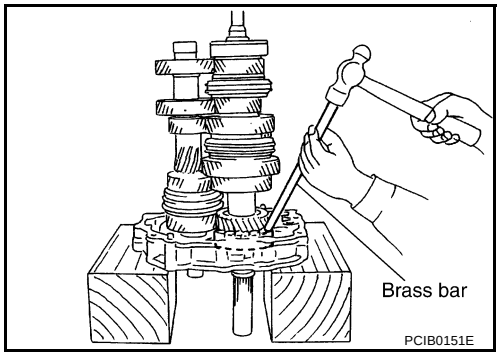
24. Using the inserter and a press to press fit the counter rear bearing inner race onto the counter shaft.

    Tool number : ST30032000 (J-26010-01)

    CAUTION:
    Replace counter rear bearing inner race, counter rear bearing and counter rear bearing spacer as a set.

25. Using the drift and a press to press fit the main drive gear bearing onto the main drive gear.

    Tool number : KV32102700 (—)

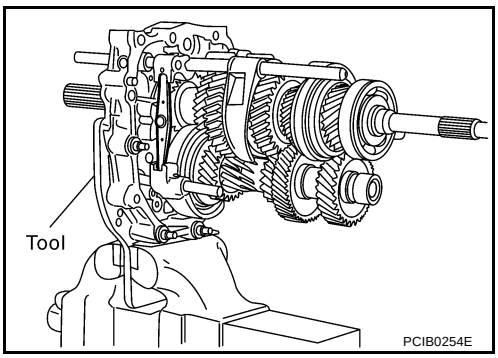


26. Select and install a snap ring to the main drive gear bearing so that the end play comes within the standard value.

    End play : 0 - 0.10 mm (0 - 0.004 in)

    CAUTION:
    Do not reuse snap ring.
27. Apply recommended grease to main pilot bearing.
28. Install main pilot bearing, pilot bearing spacer and 5th baulk ring to main drive gear.

29. Install main drive gear assembly, main shaft assembly, and counter shaft assembly combined in one unit to adapter plate using brass bar.

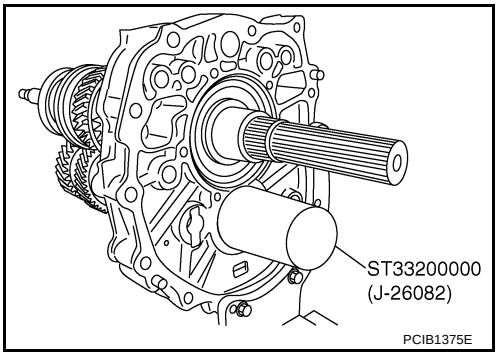


30. Install the adapter setting plate to adapter plate and then fixing in adapter setting plate using a vise.

    Tool number : ST22490000 (—)

    CAUTION:
    Do not directly secure the surface in a vise.

31. Install magnet to adapter plate.



32. Install snap ring to mainshaft bearing.

    CAUTION:
    Do not reuse snap ring.

33. Install counter rear bearing onto the adapter plate using the drift.

    CAUTION:
    Replace counter rear bearing inner race, counter rear bearing and counter rear bearing spacer as a set.

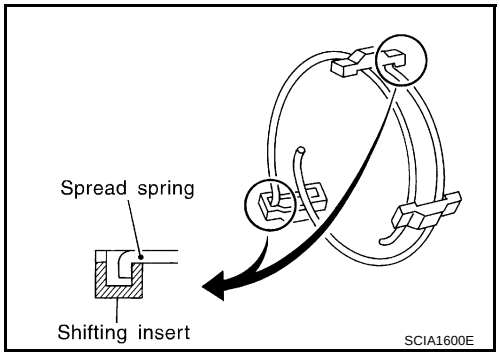
34. Apply recommended thread locking sealant to the end of the bolts (first 3 to 4 threads), screw the bolts into the main shaft bearing retainer, and tighten it to the specified torque. Refer to MT-22, "Case Components" .

    - **Use Genuine Medium Strength Thread Locking Sealant or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

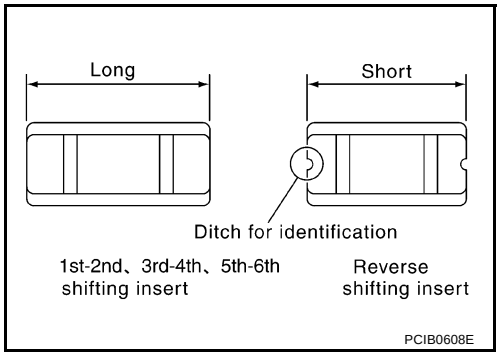
      CAUTION:
      Remove old sealant and oil adhering to threads.

35. Install reverse coupling sleeve and reverse shifting inserts into the reverse synchronizer hub.

    CAUTION:
    - **Do not reuse reverse coupling sleeve and reverse synchronizer hub.**
    - **Replace reverse coupling sleeve and reverse synchronizer hub as a set.**



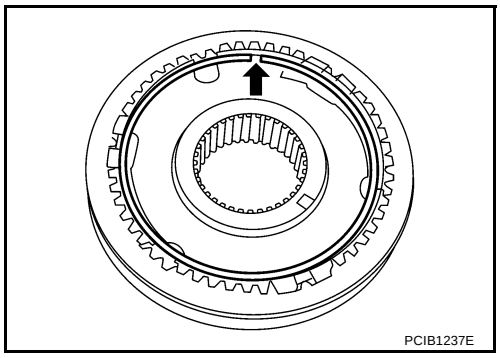
- **Install reverse coupling sleeve with the flat flange on the rear side.**



36. Install reverse spread springs in the reverse shifting inserts.

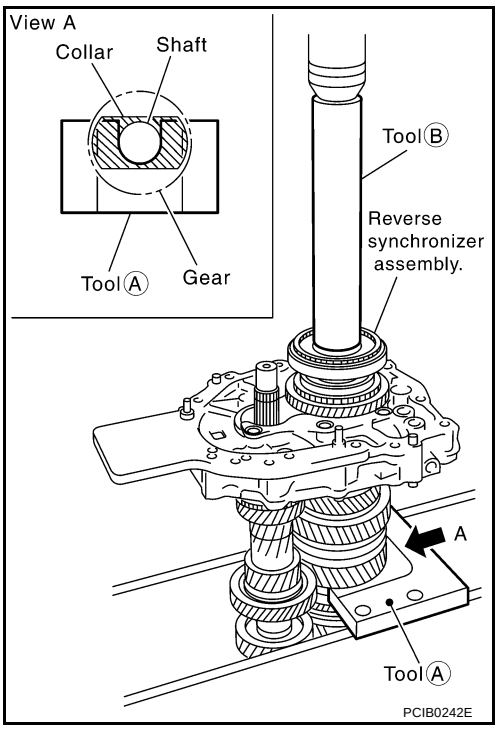
CAUTION:

- **Do not install reverse spread spring hook onto the same reverse shifting insert.**



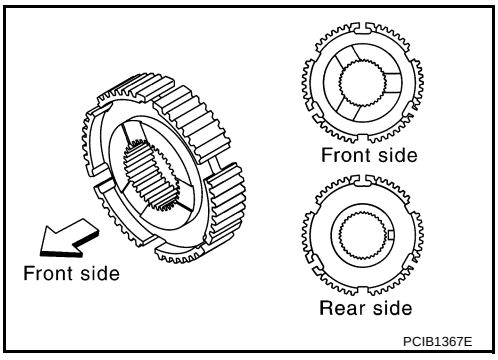
- **Be careful with the shape of 1st-2nd, 3rd-4th and 5th-6th shifting insert to avoid misassembly.**

37. Install snap ring to reverse synchronizer hub.

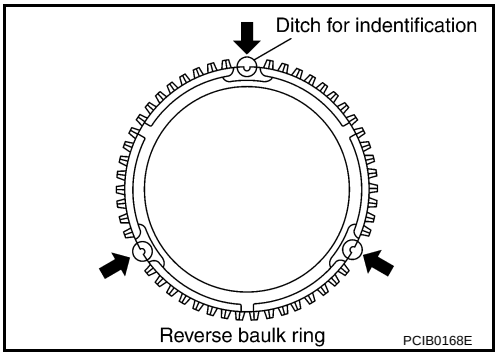


CAUTION:

- **Do not reuse snap ring.**
- **Do not align the snap ring notch with synchronizer hub groove when assembling.**

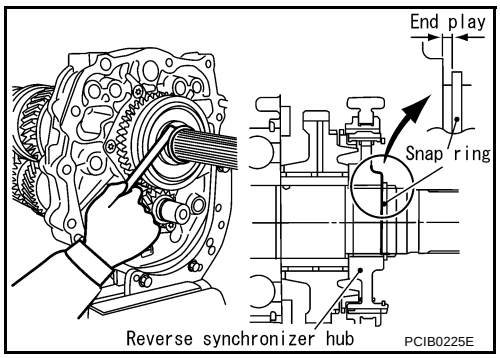


38. Apply recommended grease to reverse main needle bearing.
39. After installing reverse main gear bushing, reverse main needle bearing, reverse main gear and reverse baulk ring onto the main shaft, using the drift and press plate and a press to press fit the reverse synchronizer assembly.



Tool number A: KV32103300 (J-46529)
Tool number B: ST01530000 (—)

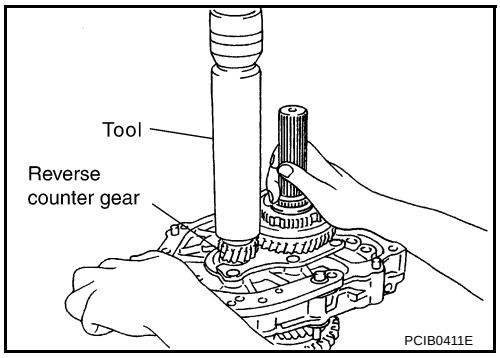
CAUTION:
When installing, face the side with three ditches to the front side.



NOTE:
Reverse baulk ring has three spaces that two gear teeth are missing, and each space has small ditch for identification as shown in the figure.

40. Select and install a snap ring so that the end play comes within the standard value.

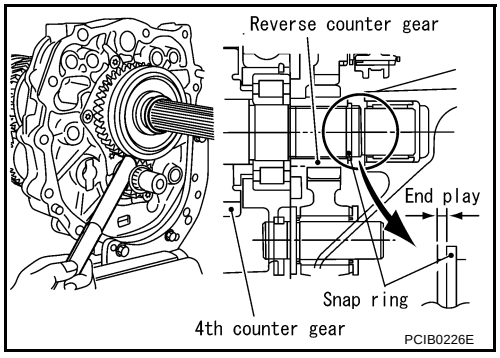
End play : 0 - 0.10 mm (0 - 0.004 in)



CAUTION:
Do not reuse snap ring.

41. After installing counter rear bearing spacer, press and fit reverse counter gear onto counter shaft with drift and press.

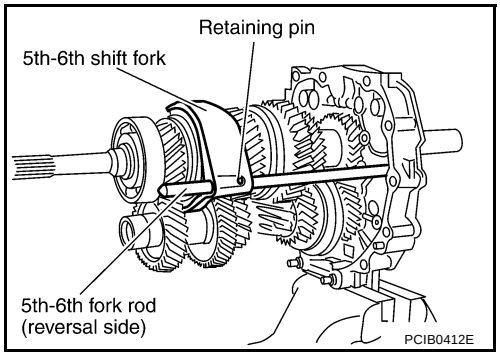
Tool number : ST23860000 (—)



CAUTION:
- **Do not reuse reverse counter gear.**
- **When installing counter rear bearing spacer, identification ditch should face to the rear side.**
- **Replace counter rear bearing inner race, counter rear bearing and counter rear bearing spacer as a set.**

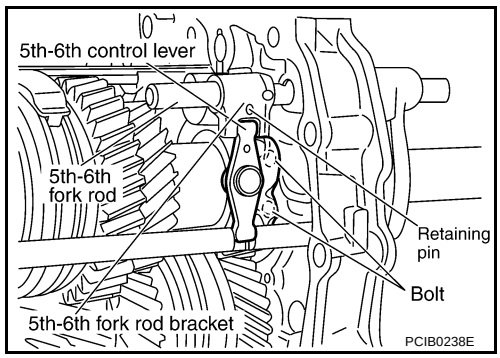
42. Select and install a snap ring so that the end play comes within the standard value.

End play : 0 - 0.10 mm (0 - 0.004 in)



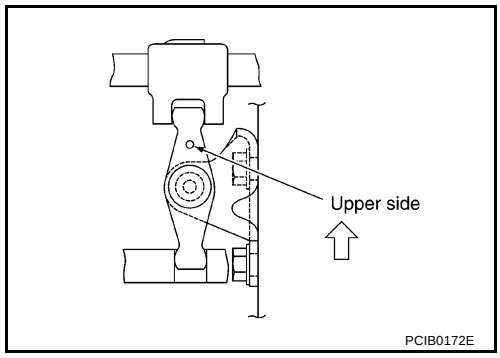
CAUTION:
Do not reuse snap ring.

Shift Control Components



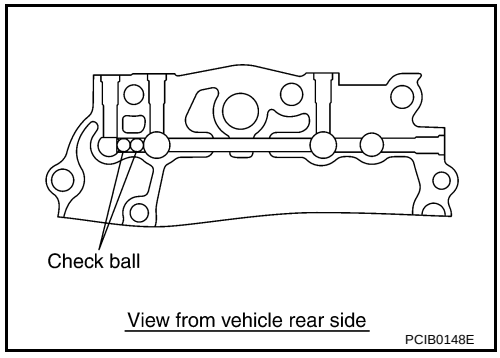
1. Install 5th-6th shift fork to the 5th-6th coupling sleeve.
2. Install 5th-6th fork rod (reversal side) to the 5th-6th shift fork.
3. Using a pin punch to tap the retaining pin into the 5th-6th shift fork.

CAUTION:
Do not reuse retaining pin.



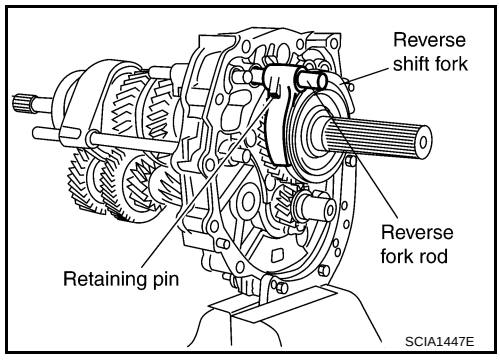
4. Install 5th-6th fork rod to the adapter plate.
5. Install 5th-6th fork rod bracket to the 5th-6th fork rod.
6. Using a pin punch to tap the retaining pin into the 5th-6th fork rod bracket.

CAUTION:
Do not reuse retaining pin.

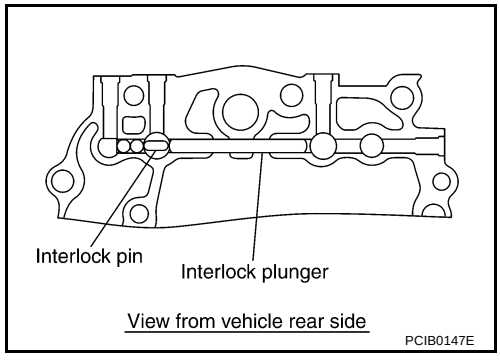


7. Install 5th-6th control lever to the adapter plate and then tighten mounting bolts to the specified torque. Refer to MT-26, "Shift Control Components" .

CAUTION:
Set the projection upward.

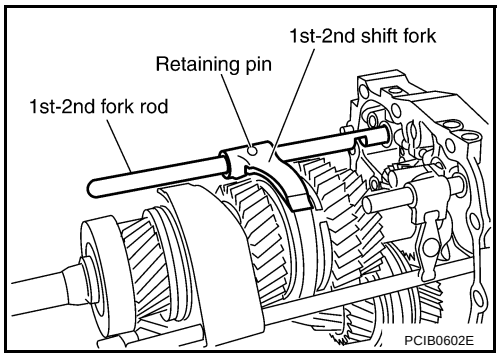


8. Apply recommended grease check balls and then install check balls to the adapter plate.

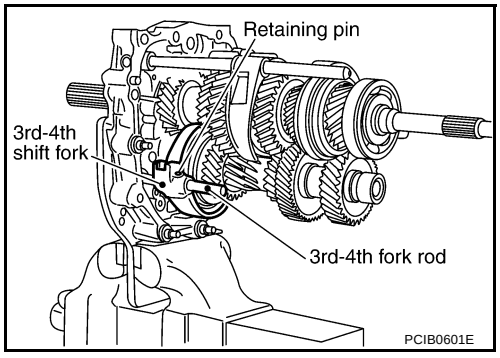


9. Install reverse shift fork to the reverse coupling sleeve.
10. Install reverse fork rod to the reverse shift fork.
11. Using a pin punch to tap the retaining pin into the reverse shift fork.

CAUTION:
Do not reuse retaining pin.

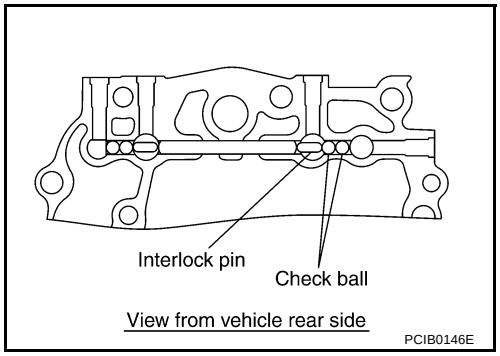


12. Apply recommended grease to interlock pin and interlock plunger.
13. Install interlock pin and interlock plunger to the adapter plate.



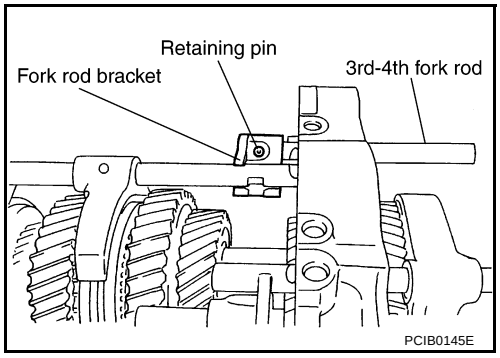
14. Install 1st-2nd shift fork to the 1st-2nd coupling sleeve.
15. Install 1st-2nd fork rod to the 1st-2nd shift fork.
16. Using a pin punch to tap the retaining pin into the 1st-2nd shift fork.

CAUTION:
Do not reuse retaining pin.

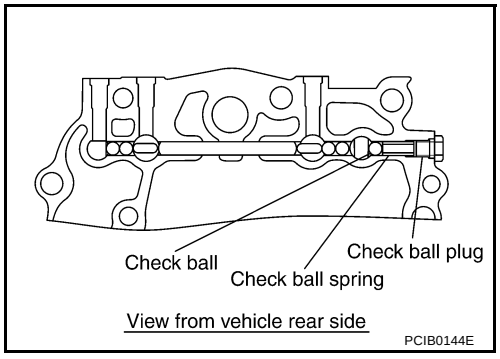


17. Install 3rd-4th shift fork to the 3rd-4th coupling sleeve.
18. Install 3rd-4th fork rod (reversal side) to the 3rd-4th shift fork.
19. Using a pin punch to tap the retaining pin into the 3rd-4th shift fork (reversal side).

CAUTION:
Do not reuse retaining pin.



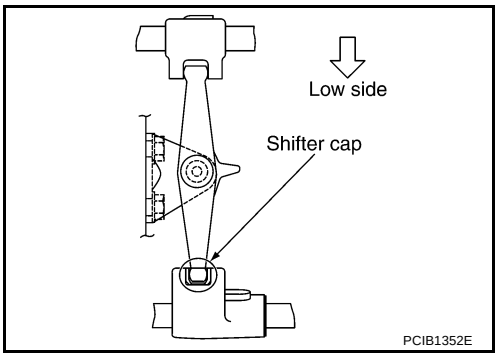
20. Apply recommended grease to interlock pin and check balls.
21. Install interlock pin and check balls to the adapter plate.



22. Install 3rd-4th fork rod to the adapter plate.
23. Install 3rd-4th fork rod bracket to the 3rd-4th fork rod.
24. Using a pin punch to tap the retaining pin into the 3rd-4th fork rod bracket.

CAUTION:
Do not reuse retaining pin.

25. Apply recommended grease to check ball and then install check ball and check ball spring into adapter plate.
26. Apply recommended sealant to threads of check ball plugs, and tighten check ball plugs to the specified torque. Refer to MT-26, "Shift Control Components" .
    - **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

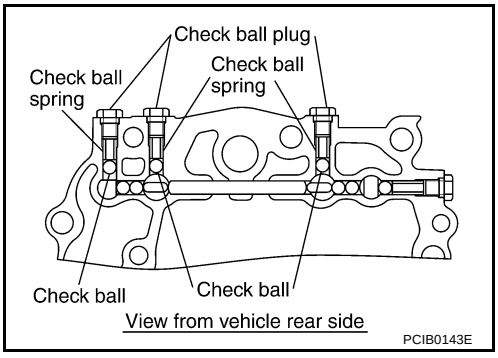


CAUTION:
Remove old sealant and oil adhering to threads.

27. Install 3rd-4th control lever to the adapter plate, and then tighten mounting bolts to the specified torque. Refer to MT-26, "Shift Control Components" .

CAUTION:

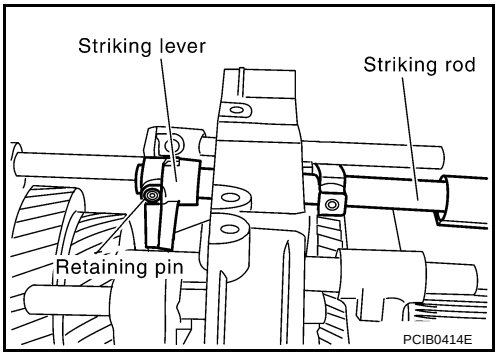
- **Make sure the top and bottom are oriented correctly.**
- **Do not drop shifter cap.**



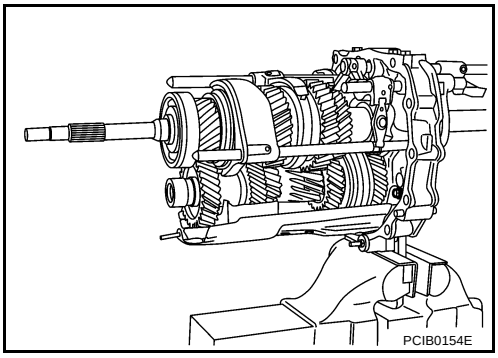
28. Apply recommended grease to check ball and then install check balls and check ball springs into adapter plate.
29. Apply recommended sealant to threads of check ball plugs, and tighten check ball plugs to the specified torque. Refer to MT-26, "Shift Control Components" .

- **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

CAUTION:



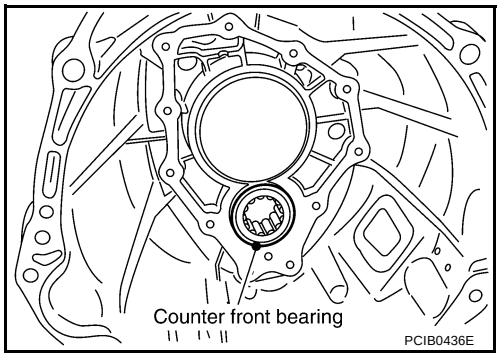
Remove old sealant and oil adhering to threads.



30. Install striking rod to the adapter plate.
31. Install striking lever to the striking rod.
32. Using a pin punch to tap the retaining pin into the striking lever.

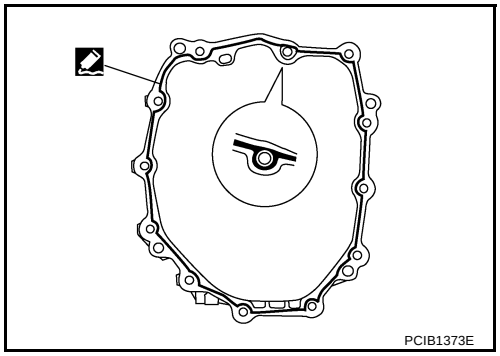
CAUTION:

Do not reuse retaining pin.



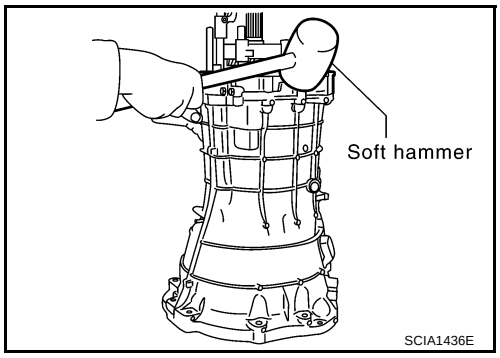
33. Install baffle plate to the adapter plate, and then tighten mounting bolts to the specified torque.

Case Components



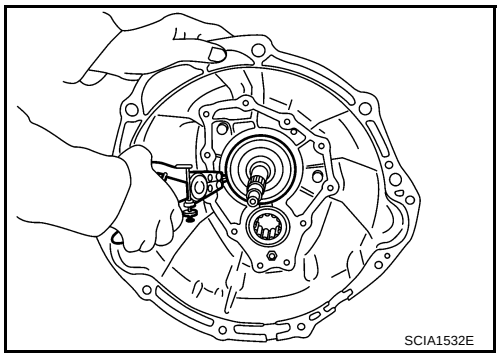
1. Install counter front bearing to the transmission case.
2. Install oil gutter to transmission case.
3. Install breather tube to transmission case.

CAUTION:
Do not reuse breather tube.

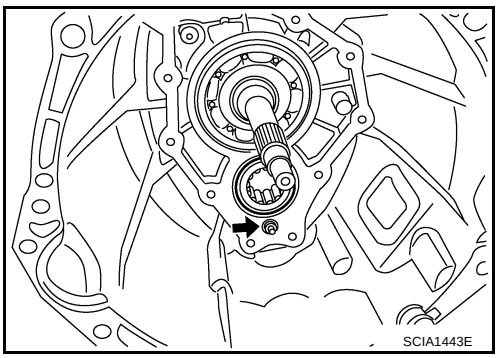


4. Apply recommended sealant to the transmission case adapter plate mounting surface as shown in the figure.
   - **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

CAUTION:
Remove old sealant adhering to the mounting surfaces. Also remove any moisture, oil, or foreign material adhering to both mounting surfaces.

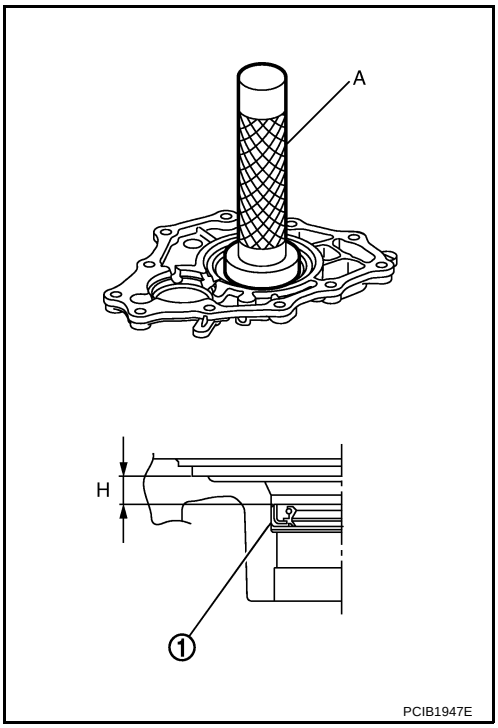


5. Place the adapter plate in the transmission case, using soft hammer to tap the adapter plate to install it into the transmission case.



6. Install snap ring to main drive gear bearing, using snap ring pliers.

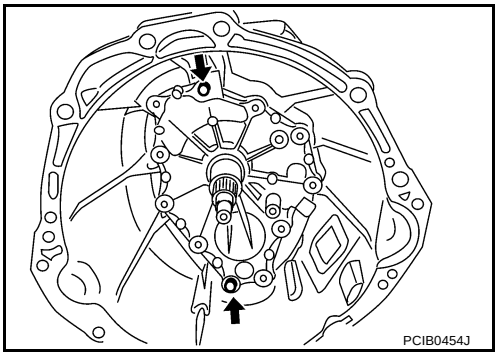
CAUTION:
Do not reuse snap ring.



7. Tighten baffle plate mounting nut to the specified torque. Refer to MT-22, "Case Components" .

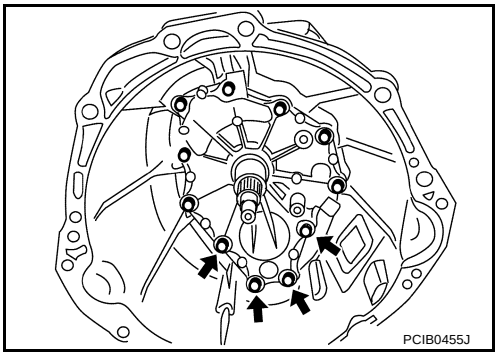
8. Apply multi-purpose grease to the lip of the front cover oil seal (1). Using a drift (A), to install oil seal approx. 8.55-9.55 mm (0.336-0.376 in) above from the front cover edge surface.

Tool number : KV38102100 (J-25803-01)



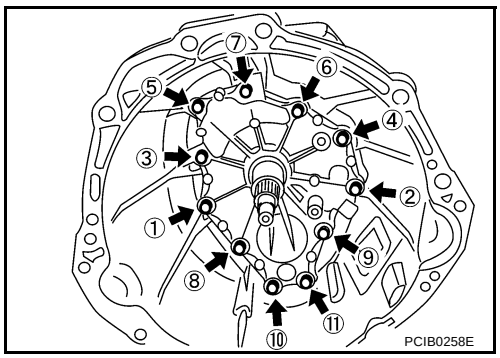
CAUTION:
- **Do not reuse front cover oil seal.**
- **When installing, do not incline the front cover oil seal.**

9. Install front cover gasket and front cover to the transmission case.



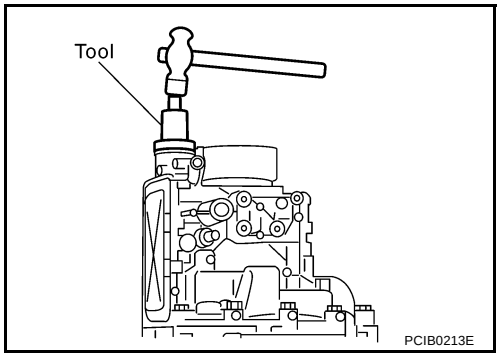
CAUTION:
- **Do not reuse front cover gasket.**
- **Do not damage front cover oil seal.**

10. Temporary tightening 2 bolts in the positions shown in the figure.



11. Temporary tightening remaining 9 bolts.

CAUTION:
Four bolts pointed by arrows in the figure are not reusable.



12. Tighten bolts to the specified torque in order as shown in the figure. Refer to MT-22, "Case Components"

13. Install rear extension oil gutter and cap to rear extension and then tighten mounting bolt to the specified torque. Refer to MT-22, "Case Components" .
14. Install bracket to transmission case and then tighten mounting bolt to the specified torque. Refer to MT-22, "Case Components" .
15. Apply recommended grease to reverse idler needle bearing.
16. Install reverse idler shaft, reverse idler needle bearing, reverse idler gear, and reverse idler thrust washer to the adapter plate.
17. Apply multi-purpose grease to the striking rod oil seal lip, and then using the drift to install striking rod oil seal.

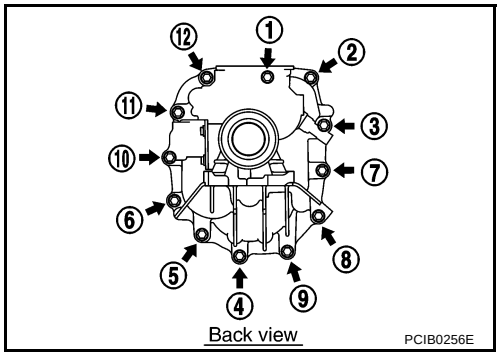
    Tool number : ST33061000 (J-8107-2)

    CAUTION:
    - **Do not reuse striking rod oil seal.**
    - **When installing, do not incline the striking rod oil seal.**

18. Apply multi-purpose grease to the lip of the rear oil seal. Using a drift to install rear oil seal. 1.2 - 2.2 mm (0.047 - 0.087 in) above from the rear extension edge surface.

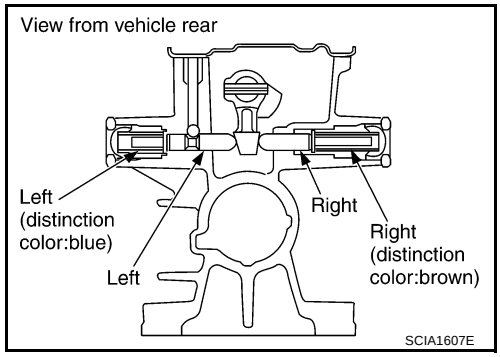
    Tool number : ST33400001 (J-26082)

    CAUTION:
    - **Do not reuse rear oil seal.**
    - **When installing, do not incline the rear oil seal.**



19. Apply recommended sealant to the adapter plate rear extension mounting surface as shown in the figure.
    - **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

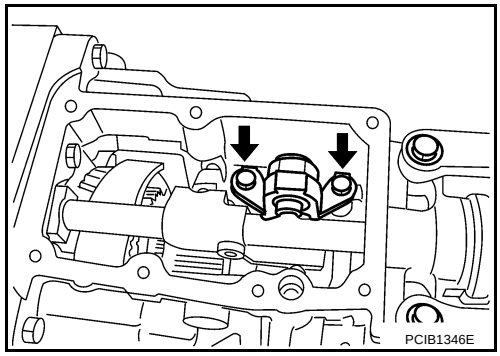
    CAUTION:
    Remove old sealant adhering to the mounting surfaces. Also remove any moisture, oil, or foreign material adhering to both mounting surfaces.



20. Install rear extension to the adapter plate and then tighten mounting bolts to the specified torque in order as shown on the figure. Refer to MT-22, "Case Components" .

    CAUTION:
    Do not damage rear oil seal and striking rod oil seal.
21. Install control lever housing to the rear extension and then tighten mounting bolts to the specified torque. Refer to MT-26, "Shift Control Components" .

CAUTION:
Do not hold control lever housing to prevent bushing of control lever housing from deformation when moving transmission assembly.

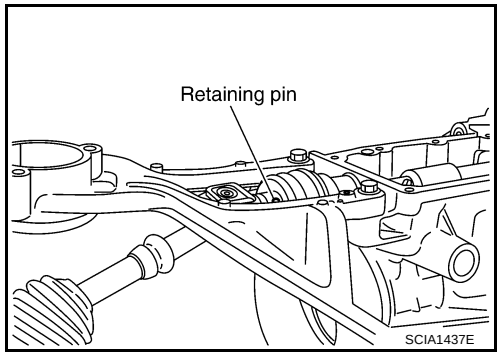


22. Apply gear oil to return spring plungers.
23. Install return spring plungers and return springs into the rear extension, apply recommended sealant to threads of return spring plugs, and then tighten return spring plugs to the specified torque. Refer to MT-26, "Shift Control Components" .
    - **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**

Region	Return spring identification mark	Plunger groove
RH	Brown	No
LH	Blue	Yes

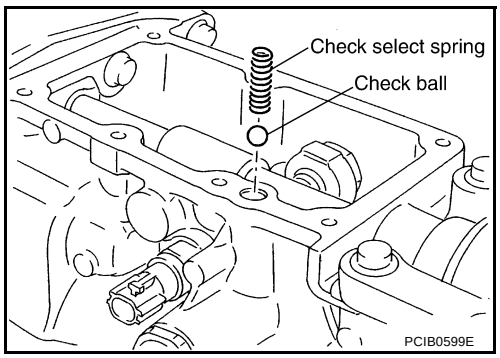
CAUTION:
- **The right and left return springs and return spring plungers are different, so make sure they are installed correctly.**
- **Remove old sealant and oil adhering to threads.**

24. Install shift check pin as a one unit with the control bracket to rear extension and then tighten mounting bolts to the specified torque. Refer to MT-26, "Shift Control Components" .
25. Install plunger to the rear extension, and then screwing Park/Neutral position (PNP) switch and back-up lamp switch to the rear extension with 1-2 pitches. Apply recommended sealant to threads of switches, and tighten switches to the specified torque. Refer to MT-22, "Case Components" .
    - **Use Genuine Silicone RTV or an equivalent. Refer to GI-45, "RECOMMENDED CHEMICAL PRODUCTS AND SEALANTS" .**



CAUTION:
Remove old sealant and oil adhering to threads.

26. Install brackets to rear extension and then tighten bracket mounting bolts to the specified torque. Refer tp MT-22, "Case Components" .
27. Install boot and control rod to striking rod.
28. Install retaining pin into the control rod, using a pin punch.

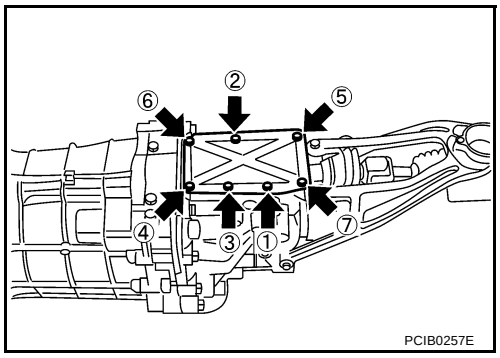


CAUTION:
Do not reuse retaining pin.

29. Install boot to control rod.

CAUTION:
Fit the boot to the groove on the control rod.

30. Install check ball and check select spring into the rear extension.



31. Install rear extension upper cover gasket and rear extension upper cover to rear extension.

CAUTION:

- **Do not reuse rear extension upper cover gasket.**
- **Avoid tangling check select spring.**

32. Tighten rear extension upper cover bolts to the specified torque in order as shown in the figure. Refer to MT-22, "Case Components" .

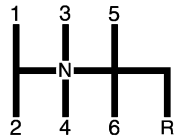
33. Install gasket to drain plug and then install it to transmission case. Tighten drain plug to the specified torque. Refer to MT-22, "Case Components" .

CAUTION:

Do not reuse gasket.

34. Install gasket to filler plug and then install it to transmission case. Tighten filler plug to the specified torque. Refer to MT-22, "Case Components" .

CAUTION:



- **Do not reuse gasket.**
- **After oil is filled, tighten filler plug to specified torque.**

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

General Specifications

NCS00012

Transmission model		FS6R31A
Number of speed		6
Shift pattern		 SCIA0955E
Synchromesh type		Warner
Gear ratio	1st	3.794
	2nd	2.324
	3rd	1.624
	4th	1.271
	5th	1.000
	6th	0.794
	Reverse	3.446
Main gear (Number of teeth)	Drive	26
	1st	37
	2nd	34
	3rd	33
	4th	31
	6th	31
	Reverse	42

PARKING BRAKE SYSTEM

PFP:36010

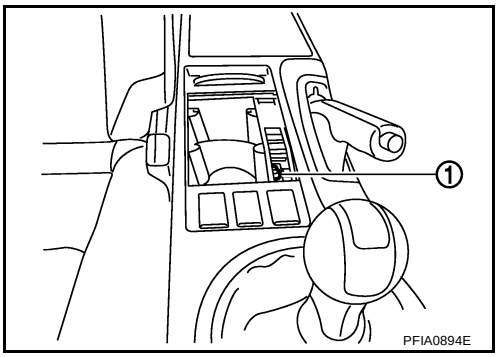
On-Vehicle Service

NFS0001F

LEVER STROKE

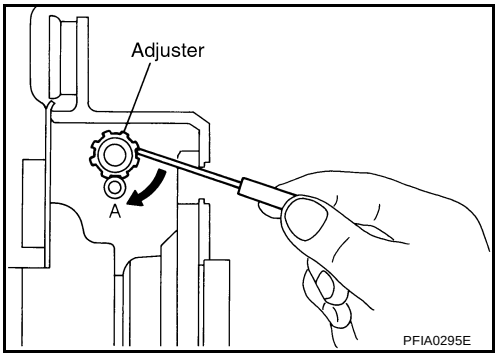
- When parking brake lever is operated with a force of 196 N (20 kg, 44 lb), check that the stroke is within the specified number of notches. (Check it by listening and counting the ratchet clicks.)

Lever stroke : 6 to 7 notches



INSPECT COMPONENTS

- Make sure the components are attached properly (check for looseness, backlash, etc.).
- Check parking lever assembly for bend, damage and cracks, and replace if necessary.
- Check that there is no wear or damage to the cable, and replace if there is.
- Inspecting parking brake warning lamp switch is inspected and exchange if there is a faulty.



ADJUSTMENT

- To perform adjustment operations, remove tire from the vehicle with power tool.

1. Remove the coin pocket. Insert a deep socket wrench to rotate adjusting nut (1) and loosen the cable sufficiently. Then, return the lever.
2. Using wheel nuts, fix the disc rotor to the hub and prevent it from tilting.

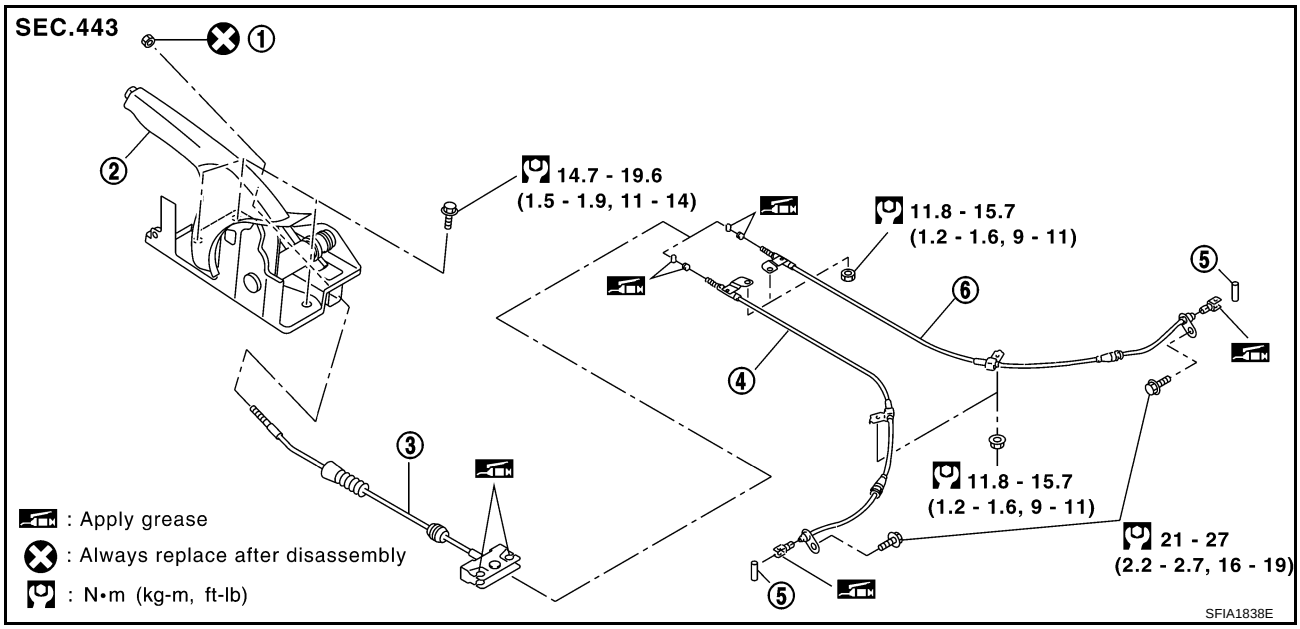
3. Remove adjusting hole plug installed on the disc. Using a flat-bladed screwdriver, turn the disc in direction “A” as shown in the figure until the disc is locked. After locking, turn the adjuster in the opposite direction by 5 or 6 notches.
4. Rotate the disc to make sure there is no drag. Install the adjusting hole plug.
5. Adjust cable as follows:

a. Operate lever 10 or more times with a force of 294 N (30 kg, 66 lb).
b. Rotate adjusting nut with deep socket to adjust lever stroke.

CAUTION:
Do not reuse the adjusting nut after removing it.

c. When parking brake lever is operated with a force of 196 N (20 kg, 44 lb), check that the stroke is within the specified number of notches. (Check it by listening and counting the ratchet clicks.)

Lever stroke : 6 to 7 notches



d. With the lever completely returned, make sure there is no drag on the rear brake.

PARKING BRAKE CONTROL

PFP:36010

Components

NFS0001G

1. Adjusting nut
2. Device assembly
3. Front cable
4. Rear left cable
5. Pin
6. Rear right cable

Removal and Installation

NFS0001H

REMOVAL

1. Remove center console. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove adjusting nut from device assembly.
3. Remove exhaust center muffler. Refer to EX-3, "EXHAUST SYSTEM" .
4. Remove propeller shaft. Refer to PR-5, "REAR PROPELLER SHAFT" .

   CAUTION:
   Do not impact or damage propeller shaft tube.
5. Remove rear disc caliper and disc rotors. Refer to BR-44, "Removal and Installation of Brake Caliper Assembly (Other than Brembo Calipers)" or BR-45, "Removal and Installation of Brake Caliper Assembly (With Brembo Calipers)" .
6. Remove parking brake shoe, and remove rear cable from toggle lever. Refer to PB-5, "Components" .
7. Remove cable mounting nuts and bolts.
8. Remove right and left rear cables.
9. Remove front cable.
10. Remove device assembly mounting bolts and remove device assembly from vehicle.

INSTALLATION

1. Refer to “Component Parts Location” for tightening torque. Install in the reverse order of removal.

   CAUTION:
   Since the adjusting nut is not a reusable part, do not reuse it.
2. Adjust parking brake. Refer to PB-3, "ADJUSTMENT" .

PARKING BRAKE SHOE

PFP:44060

Components

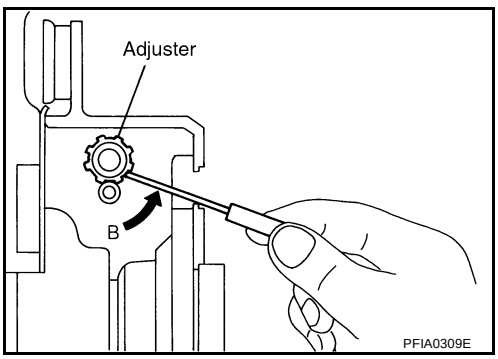
NFS0001I

1. Return spring
2. Adjuster assembly
3. Shoe
4. Anti-rattle pin
5. Retainer
6. Anti-rattle spring
7. Toggle lever

Removal and Installation

NFS0001J

REMOVAL



WARNING:

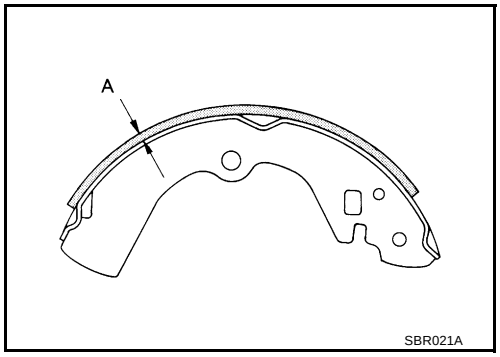
Clean brakes with a vacuum dust collector to minimize the hazard of air borne particles or other materials.

Be careful of the following:

- Remove the disc rotor only with the parking brake lever completely in the returned position.
- If disc rotor cannot be removed, remove as follows:

1. Fix the disc rotor in place with wheel nuts and remove disc rotor plug. Using a flat-bladed screwdriver, rotate star wheel on the adjuster assembly in direction “B” to retract and loosen brake shoes.

INSPECTION AFTER REMOVAL



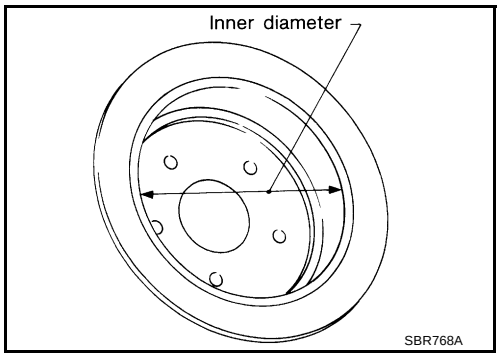
Lining Thickness Inspection

- Check the thickness of the lining.

Standard

Standard thickness “A” : 3.2 mm (0.126 in)

Wear limit thickness “A” : 1.5 mm (0.059 in)



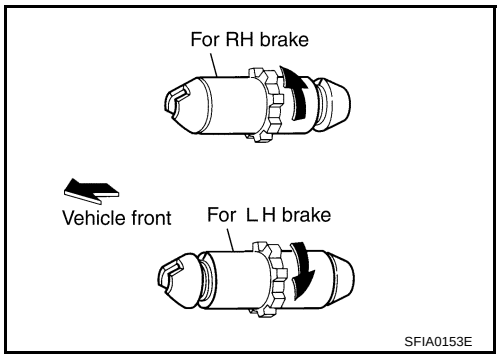
Drum Inner Diameter Inspection

- Check the inner diameter of the drum.

Standard

Standard inner diameter : 172 mm (6.77 in) dia.

Wear limit of inner diameter : 173 mm (6.81 in) dia.



Other Inspections

- Check shoe sliding surface for excessive wear and damage.
- Check anti-rattle pin for excessive wear and corrosion.
- Check return spring for sagging.
- Does the adjustor move smoothly?
- Check either visually or with a vernier caliper to see if there is any excessive wear, cracks, or damage inside the drum.

INSTALLATION

Be careful of the following:

- Refer to “Component Parts Location” and apply brake grease to the specified points during assembly.
- Orientation of the adjuster is different from left to right. Assemble the adjuster so that threaded part expands when rotating it in the direction shown by the arrow.
- Collapse the adjuster to assemble
- When disassembling the adjuster, apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease to the threads.
- After replacing brake shoes or disc rotors, or if brakes do not function well, perform break-in operation as follows.

1. Adjust the parking brake lever stroke to the specified stroke.
2. Perform parking brake break-in (drag run) operation by driving the vehicle under the following conditions:

Drive forward

- **Perform the following.**
- **Vehicle speed approx. 30 ± 5 km/h (19 ± 3 MPH) set (forward)**
- **Parking brake operating force approx. 294 ± 49 N (30 ± 5 kg, 67 ± 11 lb) set**
- **Time (other than brembo): Approx. 30 sec.**
- **Time (made by brembo): Approx. 60 sec.**

3. After break-in operation, check lever stroke of the parking brake. Readjust if it is no longer at the specified stroke.
   - To prevent the lining from getting too hot, allow a cool off period of approximately 5 minutes after every break-in operation.
   - Do not perform excessive break-in operations, because it may cause uneven or early wear of the lining.

SERVICE DATA AND SPECIFICATIONS (SDS)

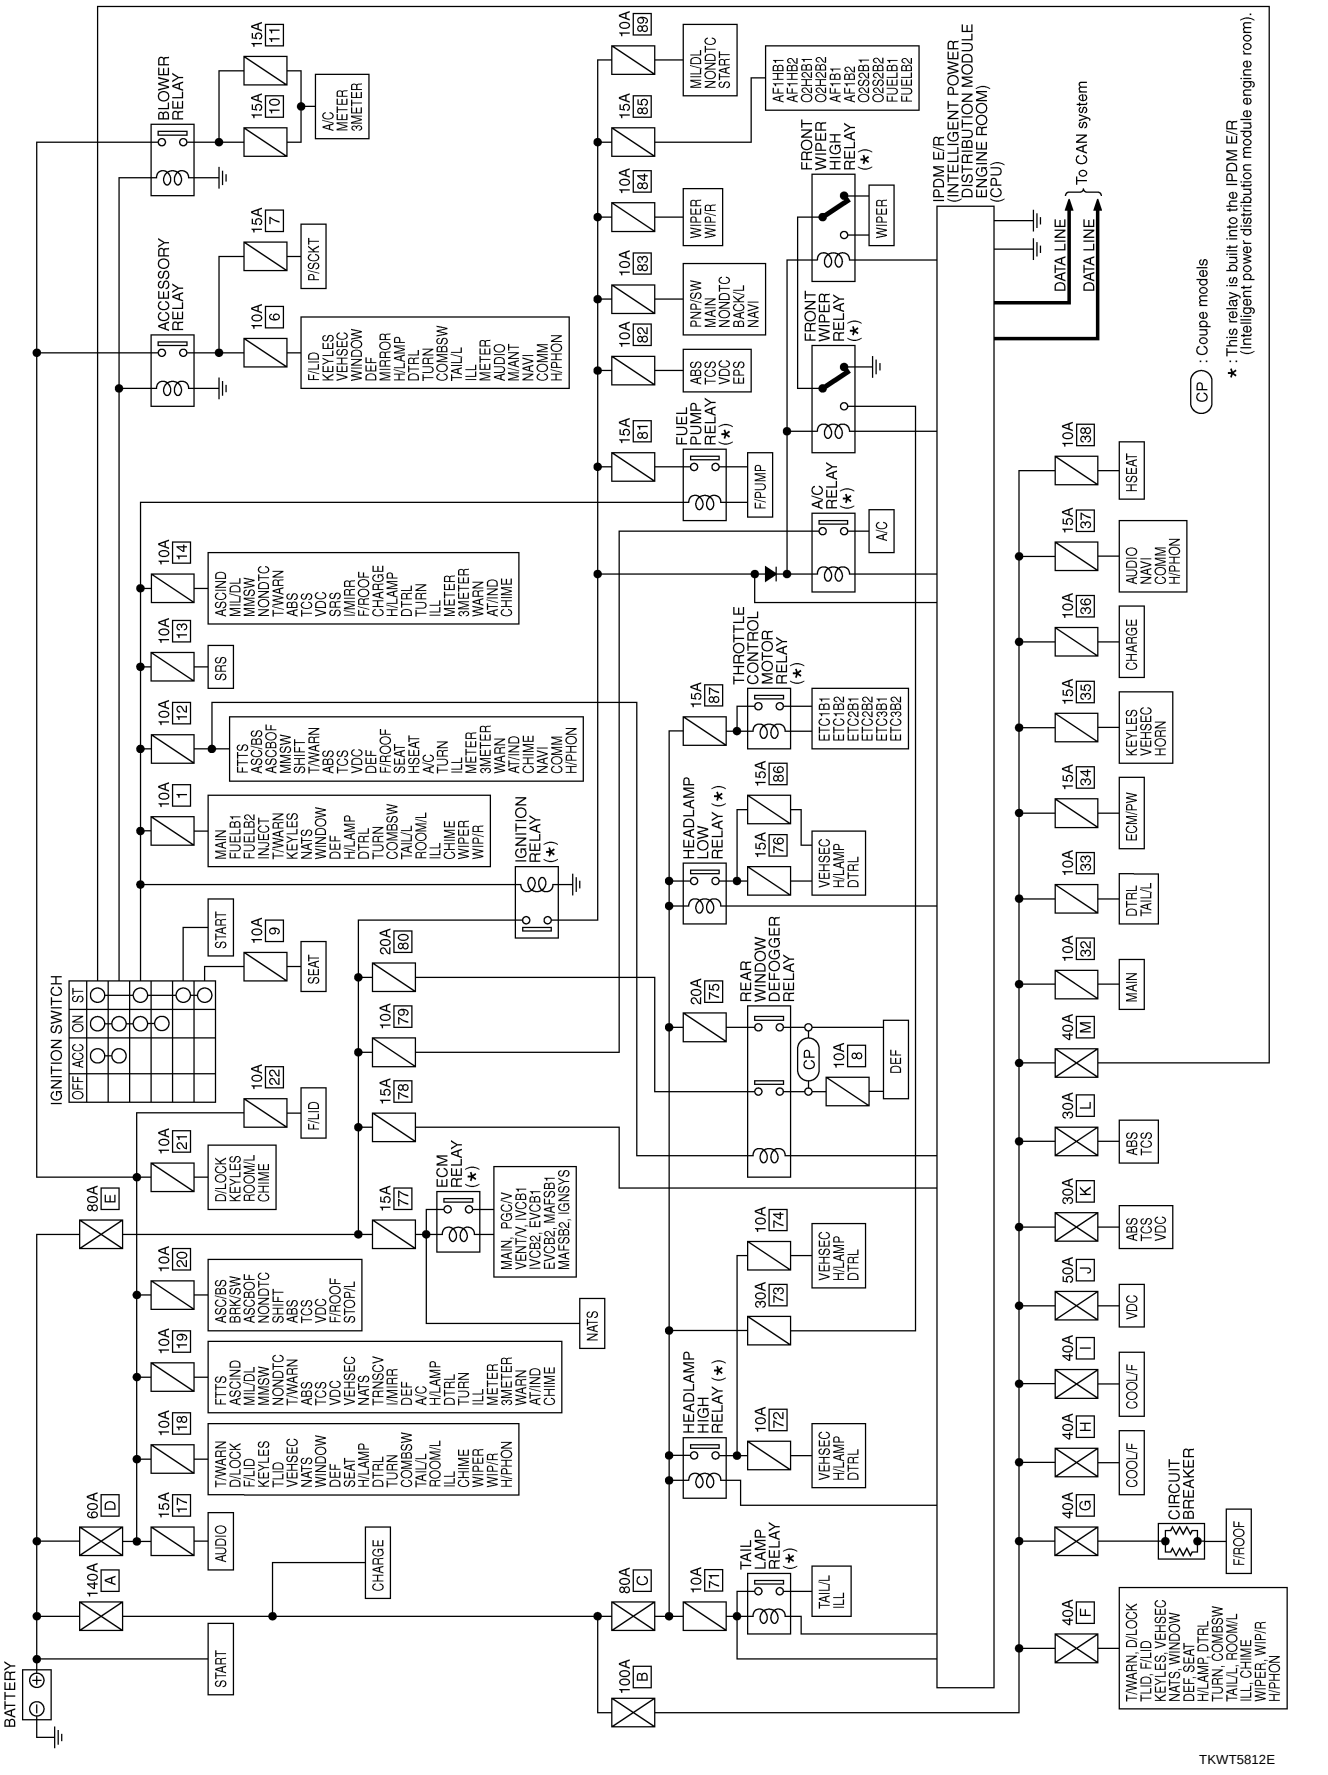
PRECAUTIONS

PFP:00001

Precautions for Battery Service

NKS0054E



Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

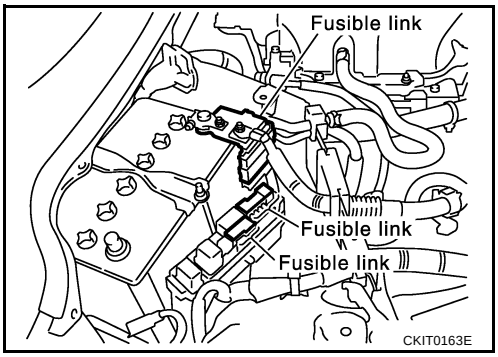
Fuse

NKS000E1

- If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse.
- Use fuse of specified rating. Never use fuse of more than specified rating.
- Do not partially install fuse; always insert it into fuse holder properly.
- Remove fuse for “ELECTRICAL PARTS (BAT)” if vehicle is not used for a long period of time.

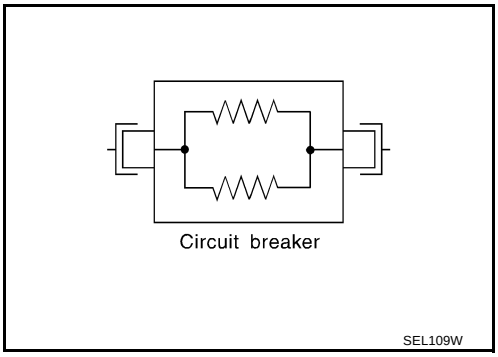


Fusible Link

NKS000E2

A melted fusible link can be detected either by visual inspection or by feeling with finger tip. If its condition is questionable, use circuit tester or test lamp.

CAUTION:



- **If fusible link should melt, it is possible that critical circuit (power supply or large current carrying circuit) is shorted. In such a case, carefully check and eliminate cause of malfunction.**
- **Never wrap outside of fusible link with vinyl tape. Important: Never let fusible link touch any other wiring harness, vinyl or rubber parts.**

Circuit Breaker

NKS000E3

The PTC thermistor generates heat in response to current flow. The temperature (and resistance) of the thermistor element varies with current flow. Excessive current flow will cause the element's temperature to rise. When the temperature reaches a specified level, the electrical resistance will rise sharply to control the circuit current. Reduced current flow will cause the element to cool. Resistance falls accordingly and normal circuit current flow is allowed to resume.

IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)

PFP:284B7

System Description

NKS000E4

- IPDM E/R (Intelligent Power Distribution Module Engine Room) integrates relays and fuse blocks which were originally placed in engine room. It controls integrated relays via IPDM E/R control circuit.
- IPDM E/R integrated control unit performs ON-OFF operation of relay, hood switch signal reception, etc.
- It controls operation of each electrical part via ECM, BCM and CAN communication lines.

CAUTION:

None of the IPDM E/R-integrated relays can be removed.

SYSTEMS CONTROLLED BY IPDM E/R

IPDM E/R receives a request signal from each control unit with CAN communication. It controls each system.

Control system	Transmit control unit	Control part
Lamp control	BCM	● Head lamps (HI, LO) ● Parking lamps, license plate lamps and tail lamps
Wiper control	BCM	Front wipers
Rear window defogger control	BCM	Rear window defogger
A/C compressor control	ECM	A/C compressor (magnet clutch)
Cooling fan control	ECM	Cooling fan

CAN COMMUNICATION LINE CONTROL

With CAN communication, by connecting each control unit using two communication lines (CAN L line, CAN H line), it is possible to transmit maximum amount of information with minimum wiring. Each control unit can transmit and receive data, and reads necessary information only.

1. Fail-safe control
   - When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.
   - Operation of control parts by IPDM E/R during fail-safe mode is as follows:

Controlled system	Fail-safe mode
Headlamp	● With the ignition switch ON, the headlamp (low) is ON. ● With the ignition switch OFF, the headlamp (low) is OFF.
Parking, license plate and tail lamps	● With the ignition switch ON, the parking, license plate and tail lamps are ON. ● With the ignition switch OFF, the parking, license plate and tail lamps are OFF.
Cooling fan	● With the ignition switch ON, the cooling fan HI operates. ● With the ignition switch OFF, the cooling fan stops.
Front wiper	Until the ignition switch is turned OFF, the front wiper LO and HI remains in the same status it was in just before fail–safe control was initiated.
Rear window defogger	Rear window defogger relay OFF
A/C compressor	A/C compressor OFF

IPDM E/R STATUS CONTROL

In order to save power, IPDM E/R switches status by itself based on each operating condition.

1. CAN communication status
   - CAN communication is normally performed with other control units.
   - Individual unit control by IPDM E/R is normally performed.
   - When sleep request signal is received from BCM, mode is switched to sleep waiting status.
2. Sleep waiting status
   - Process to stop CAN communication is activated.
   - All systems controlled by IPDM E/R are stopped. When 3 seconds have elapsed after CAN communication with other control units is stopped, mode switches to sleep status.
3. Sleep status
   - IPDM E/R operates in low power mode.
   - CAN communication is stopped.
   - When a change in CAN communication line is detected, mode switches to CAN communication status.
   - When a change in hood switch or ignition switch signal is detected, mode switches to CAN communication status.

CAN Communication System Description

NKS000E5

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

NKS000E6

Refer to LAN-48, "CAN System Specification Chart" .

Function of Detecting Ignition Relay Malfunction

NKS000E7

- When contact point of integrated ignition relay is stuck and cannot be turned OFF, IPDM E/R turns ON parking lamp, license plate lamp and tail lamp for 10 minutes to indicate ignition relay malfunction.
- When a state of ignition relay having built-in does not agree with a state of Ignition switch signal input by a CAN communication from BCM, IPDM E/R lets tail lamp relay operate.

Ignition switch signal	Ignition relay status	Tail lamp relay and daytime light relay*1
ON	ON	—
OFF	OFF	—
ON	OFF	—
OFF	ON	ON (10 minutes)

NOTE:

- When the ignition switch is turned ON, tail lamp relay and daytime light relay are OFF.
- *1: Canada model only

CONSULT-III Function (IPDM E/R)

NKS000E8

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Inspection Item, Diagnosis Mode	Description
SELF-DIAG RESULTS	The IPDM E/R performs diagnosis of the CAN communication and self-diagnosis.
DATA MONITOR	The input/output data of the IPDM E/R is displayed in real time.
CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.
ACTIVE TEST	The IPDM E/R sends a drive signal to electronic components to check their operation.

SELF-DIAG RESULTS

Display Item List

Display Items	CONSULT-III display code	Malfunction detecting condition	TIME		Possible causes
			CRNT	PAST	
NO DTC IS DETECTED.FURTHER TESTING MAY BE REQUIRED.	-	-	-	-	-
CAN COMM CIRC	U1000	● If CAN communication reception/transmission data has a malfunction, or if any of the control units malfunction, data reception/ transmission cannot be confirmed. ● When the data in CAN communication is not received before the specified time	×	×	Any of or several items below have errors. ● TRANSMIT DIAG ● ECM ● BCM

NOTE:

The details for display of the period are as follows:

- CRNT: Error currently detected with IPDM E/R.
- PAST: Error detected in the past and memorized with IPDM E/R.

NOTE:

- Perform monitoring of IPDM E/R data with the ignition switch ON. When the ignition switch is at ACC, the display may not be correct.
- *1: This items is displayed, but does not function.
- *2: The vehicle without intelligent key system displays only ON without change.
- *3: Only the vehicle with daytime light system operates.

ACTIVE TEST

Display Item List

Test item	CONSULT-III screen display	Description
Tail lamp operation	TAIL LAMP	With a certain ON-OFF operation, the tail lamp relay can be operated.
Rear window defogger operation	REAR DEFOGGER	With a certain ON-OFF operation, the rear window defogger relay can be operated.
Front wiper (HI, LO) operation	FRONT WIPER	With a certain operation (OFF, HI ON, LO ON), the front wiper relay (Lo, Hi) can be operated.
Cooling fan operation	MOTOR FAN	With a certain operation (1,2,3,4), the cooling fan can be operated.
Headlamp washer NOTE 1	HEAD LAMP WASHER	—
Lamp (HI, LO, FOG NOTE 2) operation	LAMPS	With a certain operation (OFF, HI ON, LO ON, FOG ON NOTE), the lamp relay (Lo, Hi, Fog NOTE) can be operated.
Horn operation	HORN	Push “ON” button, horn relay operates 20 ms.

NOTE:

1. Headlamp washer item is displayed, but it cannot be tested.
2. Fog lamp item is displayed, but it cannot be tested.

Auto Active Test

NKS000E9

DESCRIPTION

In auto active test mode, operation inspection can be performed when IPDM E/R sends a drive signal to the following systems:

- Rear window defogger
- Front wipers
- Parking lamp, license plate lamp and tail lamp
- Headlamps (Hi, Lo)
- A/C compressor (magnetic clutch)
- Cooling fan

OPERATION PROCEDURE

1. Close hood and front door (passenger side), and then lift wiper arms away from windshield (to prevent glass damage by wiper operation).

   NOTE:
   When auto active test is performed with hood opened, sprinkle water on windshield beforehand.
2. Turn ignition switch OFF.
3. Turn ignition switch ON, and, within 20 seconds, press driver's front door switch 10 times (close other door). Then turn ignition switch OFF.
4. Turn ignition switch ON within 10 seconds after ignition switch OFF.
5. When auto active test mode is actuated, horn chirps once. Oil pressure warning lamp starts blinking.
6. After a series of operations is repeated three times, auto active test is completed.

   NOTE:
   When auto active test mode has to be cancelled halfway, turn ignition switch OFF.

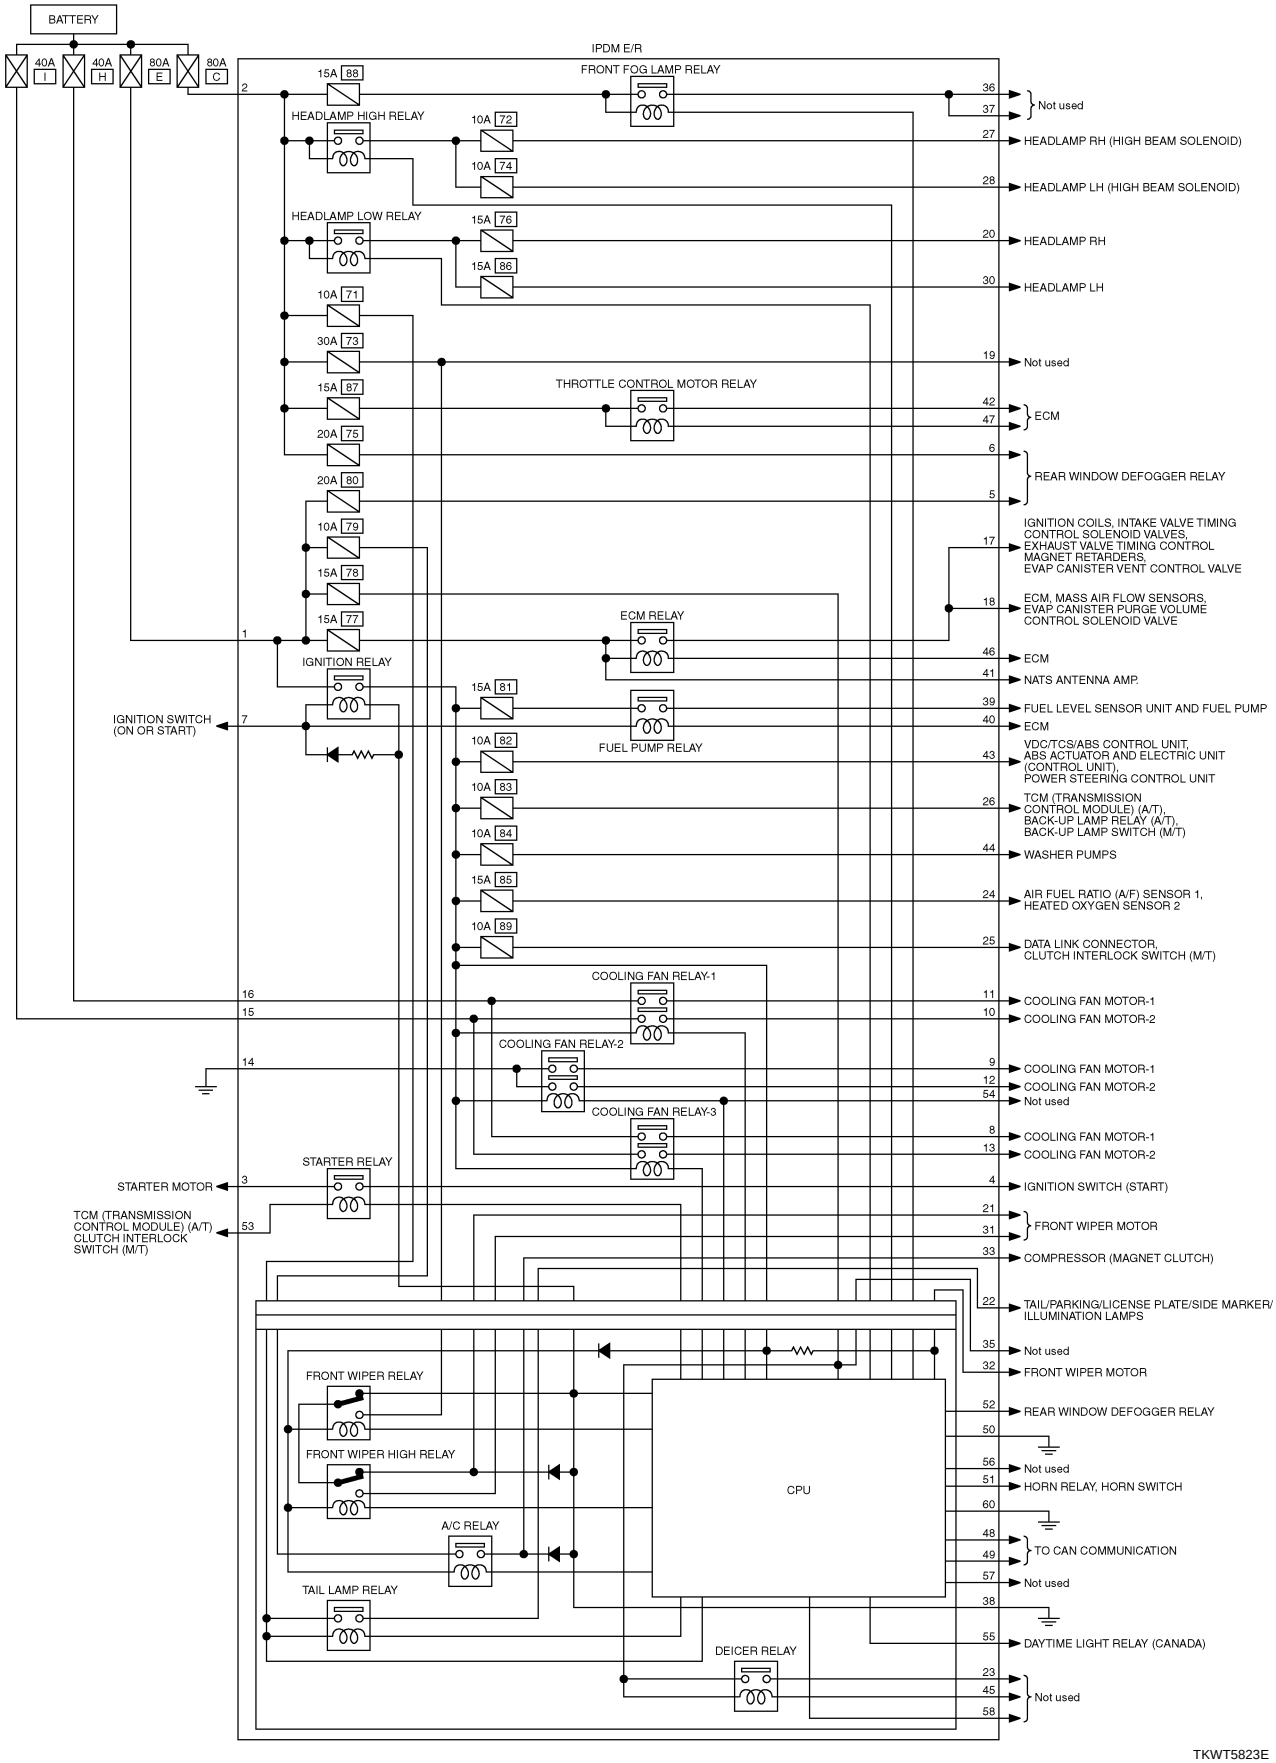
   CAUTION:
   Be sure to inspect BL-38, "Check Door Switch" when the auto active test cannot be performed.

INSPECTION IN AUTO ACTIVE TEST MODE

When auto active test mode is actuated, the following eight steps are repeated three times.

NOTE:
It takes 10 seconds from 3 to 4.

Concept of Auto Active Test



- IPDM E/R actuates auto active test mode when it receives door switch signal from BCM via CAN communication line. Therefore, when auto active test mode is activated successfully, CAN communication between IPDM E/R and BCM is normal.
- If any of systems controlled by IPDM E/R cannot be operated, possible cause can be easily diagnosed using auto active test.

Diagnosis chart in auto active test mode

Symptom	Inspection contents		Possible cause
Rear window defogger does not operate.	Perform auto active test. Does rear window defogger operate?	YES	● BCM signal input circuit
		NO	● Rear window defogger relay circuit ● Open circuit of rear window defogger ● IPDM E/R malfunction
Any of front wipers, tail and parking lamps, front fog lamps, and head lamps (Hi, Lo) do not operate.	Perform auto active test. Does system in question operate?	YES	● BCM signal input system
		NO	● Lamp/wiper motor malfunction ● Lamp/wiper motor ground circuit malfunction ● Harness/connector malfunction between IPDM E/R and system in question ● IPDM E/R (integrated relay) malfunction
A/C compressor does not operate.	Perform auto active test. Does magnetic clutch operate?	YES	● BCM signal input circuit ● CAN communication signal between BCM and ECM. ● CAN communication signal between ECM and IPDM E/R
		NO	● Magnetic clutch malfunction ● Harness/connector malfunction between IPDM E/R and magnetic clutch ● IPDM E/R (integrated relay) malfunction
Cooling fan does not operate.	Perform auto active test. Does cooling fan operate?	YES	● ECM signal input circuit ● CAN communication signal between ECM and IPDM E/R
		NO	● Cooling fan motor malfunction ● Harness/connector malfunction between IPDM E/R and cooling fan motor ● IPDM E/R (integrated relay) malfunction

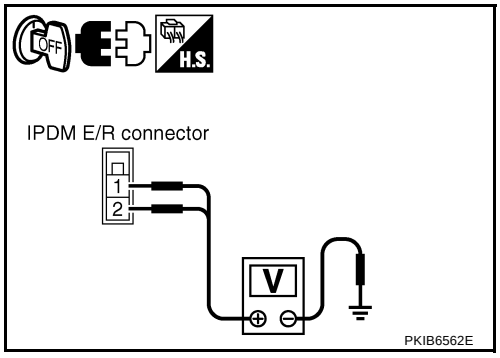
CKIT0850E

IPDM E/R Power/Ground Circuit Inspection

NKS000EC

1. CHECK FUSE AND FUSIBLE LINK

Make sure the following fusible links or IPDM E/R fuses are not blown.



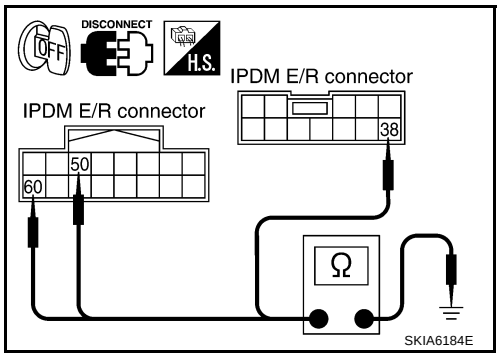
Terminal No.	Signal name	Fuse and fusible link No.
1	Battery power	E
2		C
—		71
		78

OK or NG

OK >> GO TO 2.
NG >> If fuse or fusible link is blown, be sure to eliminate cause of malfunction before installing new fuse or fusible link.

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector.
3. Check voltage between IPDM E/R harness connector and ground.



Terminal			Voltage (Approx.)
(+)		(-)	
IPDM E/R connector	Terminal		
E3	1	Ground	Battery voltage
	2		

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

1. Disconnect IPDM E/R harness connectors.
2. Check continuity between IPDM E/R harness connectors and ground.

IPDM E/R connector	Terminal		Continuity
E8	38	Ground	Yes
E9	50		
	60		

OK or NG

OK >> INSPECTION END
NG >> Repair harness or connector.

Inspection With CONSULT-III (Self-Diagnosis)

NKS000ED

1. CHECK SELF DIAGNOSTIC RESULT

CONSULT-III display	CONSULT-III display code	TIME		Details of diagnosis result
		CRNT	PAST	
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	—	—	—	No malfunction
CAN COMM CIRC	U1000	×	×	Any of or several items below have errors. ● TRANSMIT DIAG ● ECM ● BCM

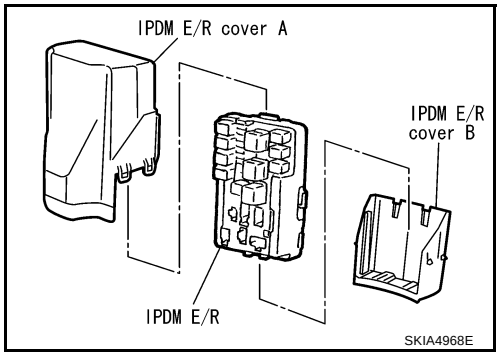
NOTE:

The details for display of the period are as follows:

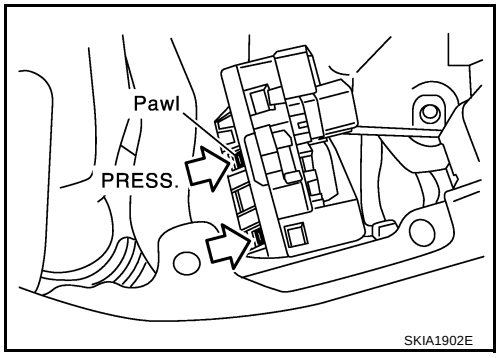
- CRNT: Error currently detected with IPDM E/R.
- PAST: Error detected in the past and memorized with IPDM E/R.

Contents displayed

NO DTC IS DETECTED.FURTHER TESTING MAY BE REQUIRED.>>INSPECTION END

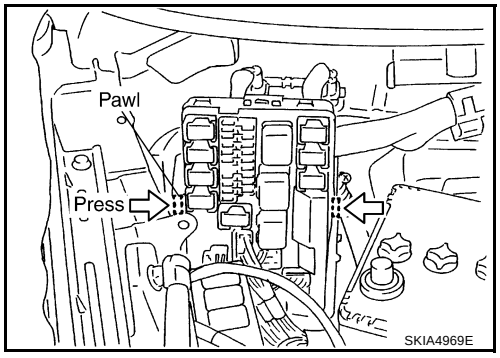


CAN COMM CIRC>>After print-out of the monitor items, refer to LAN-49, "CAN Communication Signal Chart" .



Removal and Installation of IPDM E/R

NKS000EE



REMOVAL

1. Remove battery. Refer to SC-7, "Removal and Installation" .
2. Remove IPDM E/R cover A. While pressing pawl on backside of IPDM E/R cover B toward vehicle front to unlock, lift up IPDM E/R.

3. While pressing pawls on right and left side of IPDM E/R, remove IPDM E/R cover B from IPDM E/R.
4. Remove harness connector from IPDM E/R.

INSTALLATION

Installation is the reverse order of removal.

HOW TO READ HARNESS LAYOUT

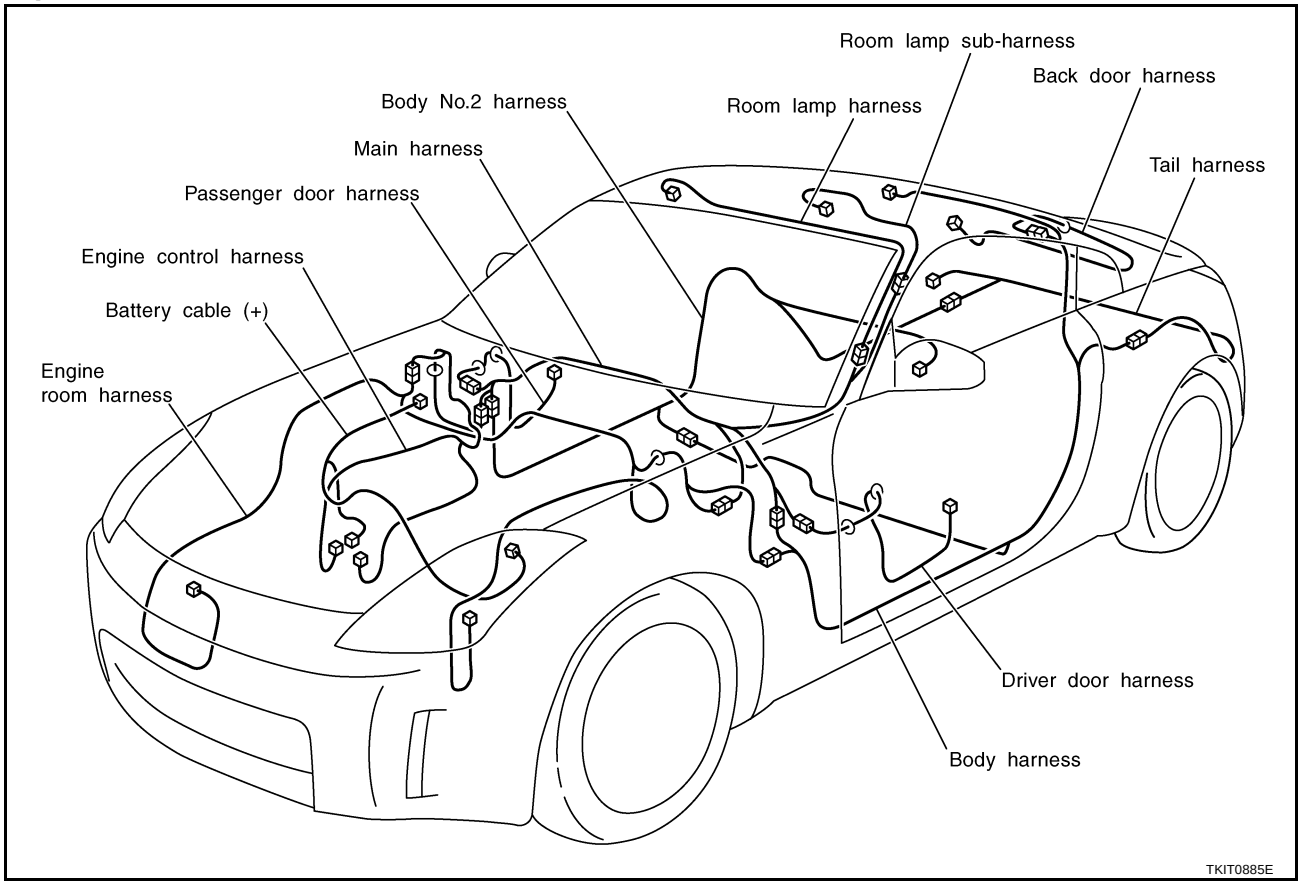
The following Harness Layouts use a map style grid to help locate connectors on the figures:

- Main Harness
- Engine Room Harness (Engine Compartment)
- Engine Control Harness (Engine Compartment)
- Body Harness

To Use the Grid Reference

1. Find the desired connector number on the connector list.
2. Find the grid reference.
3. On the figure, find the crossing of the grid reference letter column and number row.
4. Find the connector number in the crossing zone.
5. Follow the line (if used) to the connector.

CONNECTOR SYMBOL



Main symbols of connector (in Harness Layout) are indicated in the below.

Connector type	Water proof type		Standard type	
	Male	Female	Male	Female
• Cavity: Less than 4 • Relay connector				
• Cavity: From 5 to 8				
• Cavity: More than 9				
• Ground terminal etc.	—

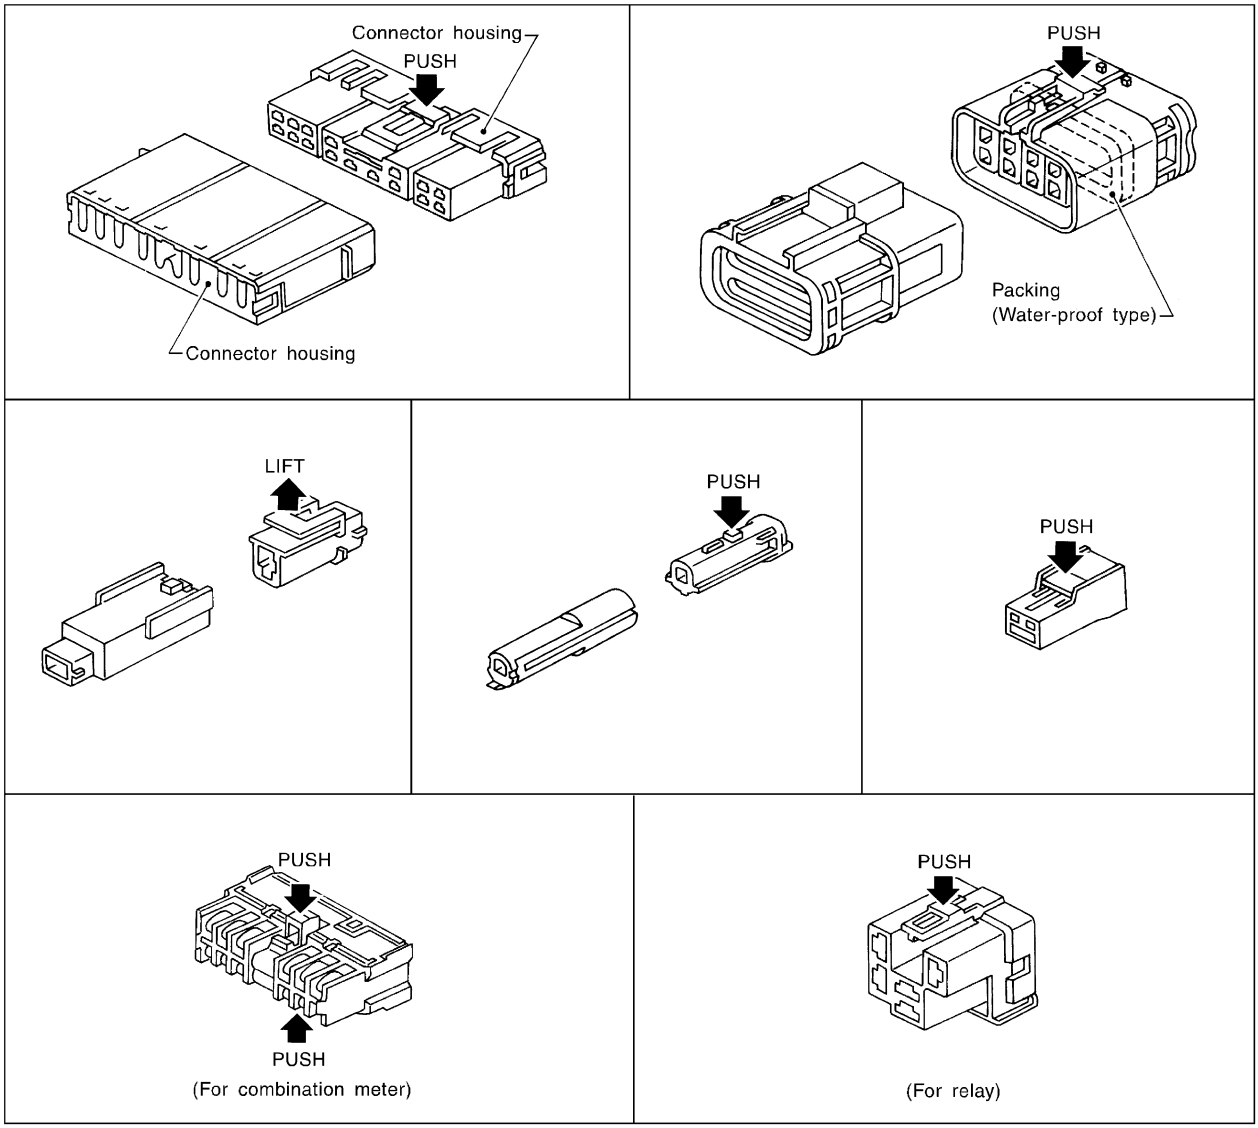
HARNESS CONNECTOR

PFP:00011

Description

NKS004SA



HARNESS CONNECTOR (TAB-LOCKING TYPE)

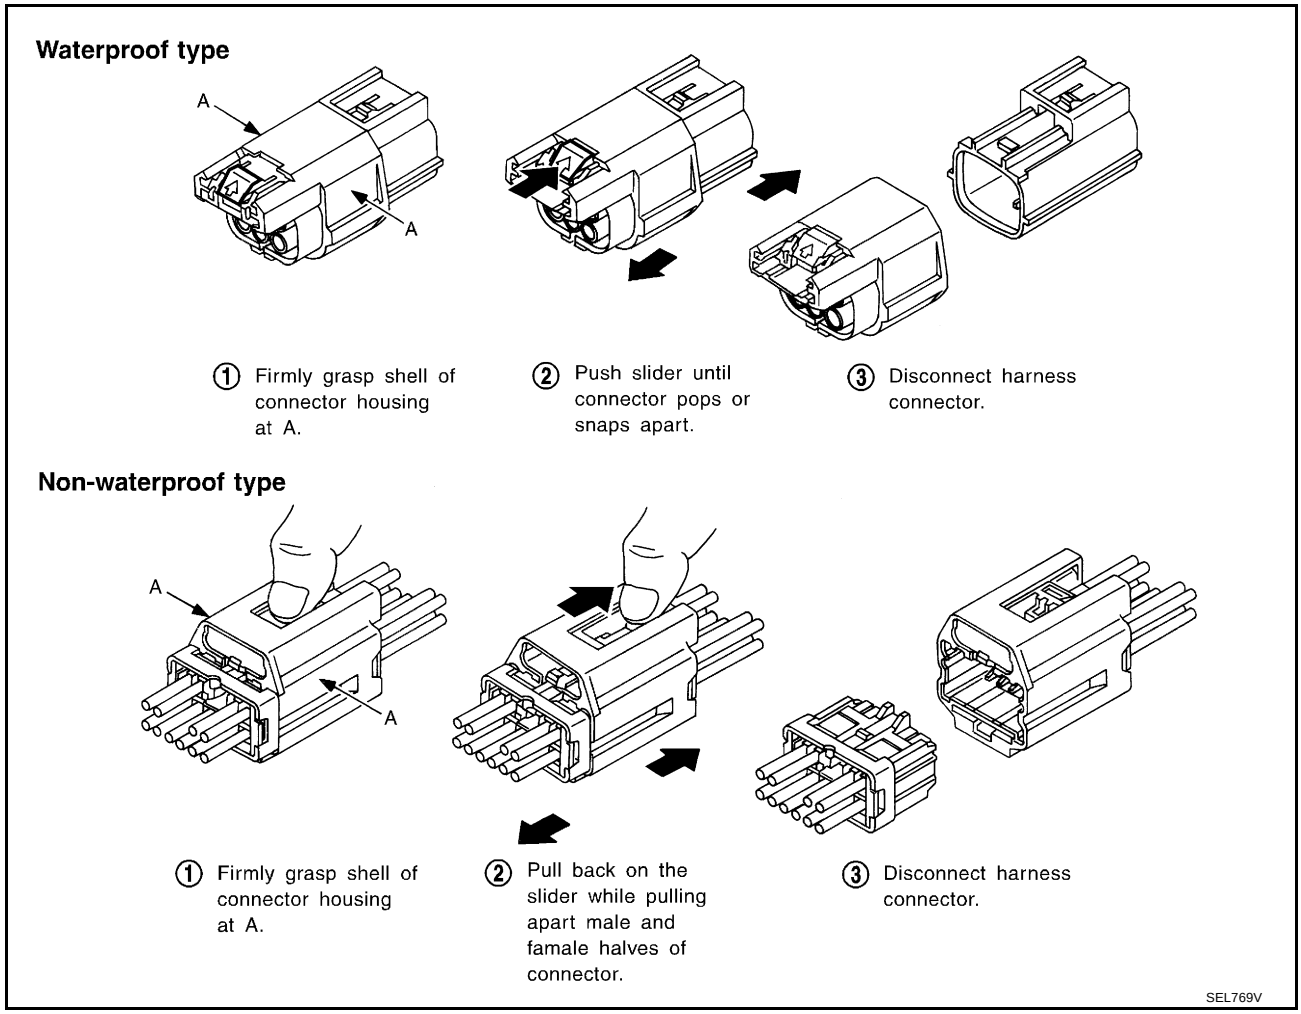
- The tab-locking type connectors help prevent accidental looseness or disconnection.
- The tab-locking type connectors are disconnected by pushing or lifting the locking tab(s). Refer to the figure below.

CAUTION:

Never pull the harness or wires when disconnecting the connector.

[Example]

SEL769DA



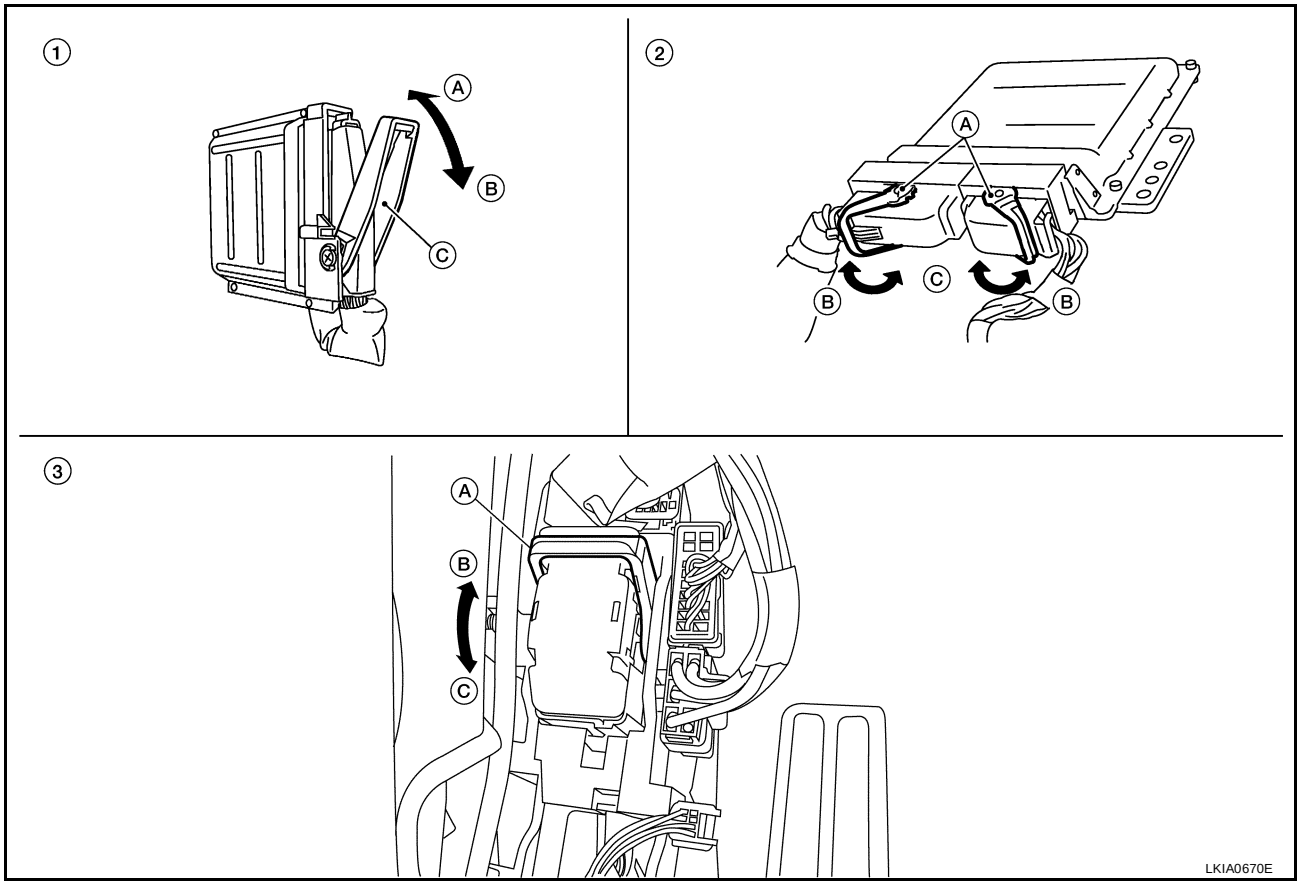
HARNESS CONNECTOR (SLIDE-LOCKING TYPE)

- A new style slide-locking type connector is used on certain systems and components, especially those related to OBD.
- The slide-locking type connectors help prevent incomplete locking and accidental looseness or disconnection.
- The slide-locking type connectors are disconnected by pushing or pulling the slider. Refer to the figure below.

CAUTION:

- **Never pull the harness or wires when disconnecting the connector.**
- **Be careful not to damage the connector support bracket when disconnecting the connector.**

[Example]



HARNESS CONNECTOR (LEVER LOCKING TYPE)

- Lever locking type harness connectors are used on certain control units and control modules such as ECM, ABS actuator and electric unit (control unit), etc.
- Lever locking type harness connectors are also used on super multiple junction (SMJ) connectors.
- Always confirm the lever is fully locked in place by moving the lever as far as it will go to ensure full connection.

CAUTION:

Always confirm the lever is fully released (loosened) before attempting to disconnect or connect these connectors to avoid damage to the connector housing or terminals.

1. Control unit with single lever
   A. Fasten
   B. Loosen
   C. Lever
2. Control unit with dual levers

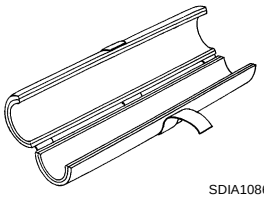
PRECAUTIONS

PFP:00001

Precautions for Propeller Shaft

NDS00001

- If propeller shaft is dropped, replace propeller shaft with new one.
- Do not hit, impact, or damage tube.
- If damage such as cracks or peeling off in sealing (joint between yoke and tube) is found, replace propeller shaft with new one.
- If there is chipping or bend in tube, replace propeller shaft with new one.
- Check that the clearance is between tube and yoke flange. If there is no clearance, replace propeller shaft.
- Protect propeller shaft with protector (special service tool) during work.



PREPARATION

PFP:00002

Special Service Tools

NDS00002

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
— (J-46208) Propeller shaft protector  SDIA1086E	Removing and installing propeller shaft

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

NDS00003

Use the chart below to help you find the cause of the symptom. If necessary, repair or replace these parts.

		Reference page	PR-5	—	—	—	—	PR-5	PR-7	NVH in RFD section	NVH in FAX, RAX, FSU, and RSU section	NVH in WT section	NVH in WT section	NVH in RAX section	NVH in BR section	NVH in PS section
		Possible cause and SUSPECTED PARTS	Uneven rotating torque	Center bearing improper installation	Excessive center bearing axial end play	Center bearing mounting (insulator) cracks, damage or deterioration	Excessive joint angle	Rotation imbalance	Excessive runout	DIFFERENTIAL	AXLE AND SUSPENSION	TIRES	ROAD WHEEL	DRIVE SHAFT	BRAKES	STEERING
Symptom	Noise		×	×	×	×	×	×	×	×	×	×	×	×	×	×

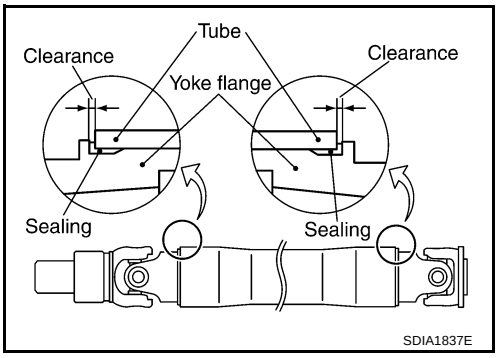
	Vibration		×	×	×	×	×	×	×		×	×		×		×

×: Applicable

REAR PROPELLER SHAFT



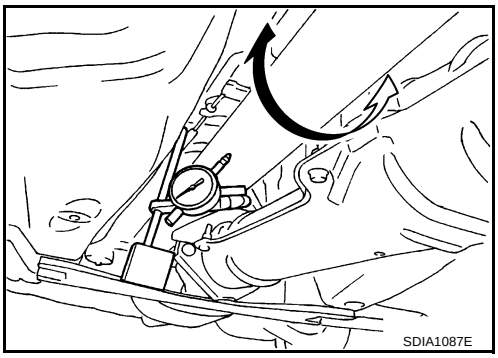
PFP:37000

On-Vehicle Inspection

NDS00004

APPEARANCE AND NOISE INSPECTION

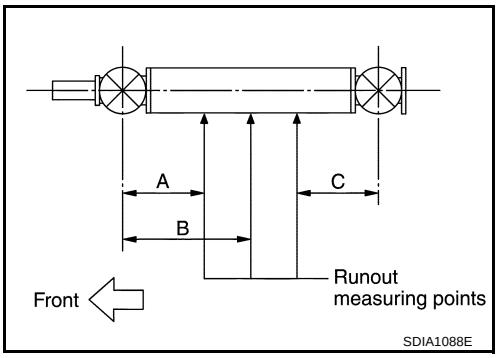
- Check the propeller shaft tube surface for dents or cracks. If damaged, replace propeller shaft assembly.
- If damage such as cracks or peeling off sealing (joint between yoke and tube) is found, replace propeller shaft with new one.
- Check that the gap is between tube and yoke flange. If there is no gap, replace propeller shaft.



PROPELLER SHAFT VIBRATION

If vibration is present at high speed, inspect propeller shaft runout first.

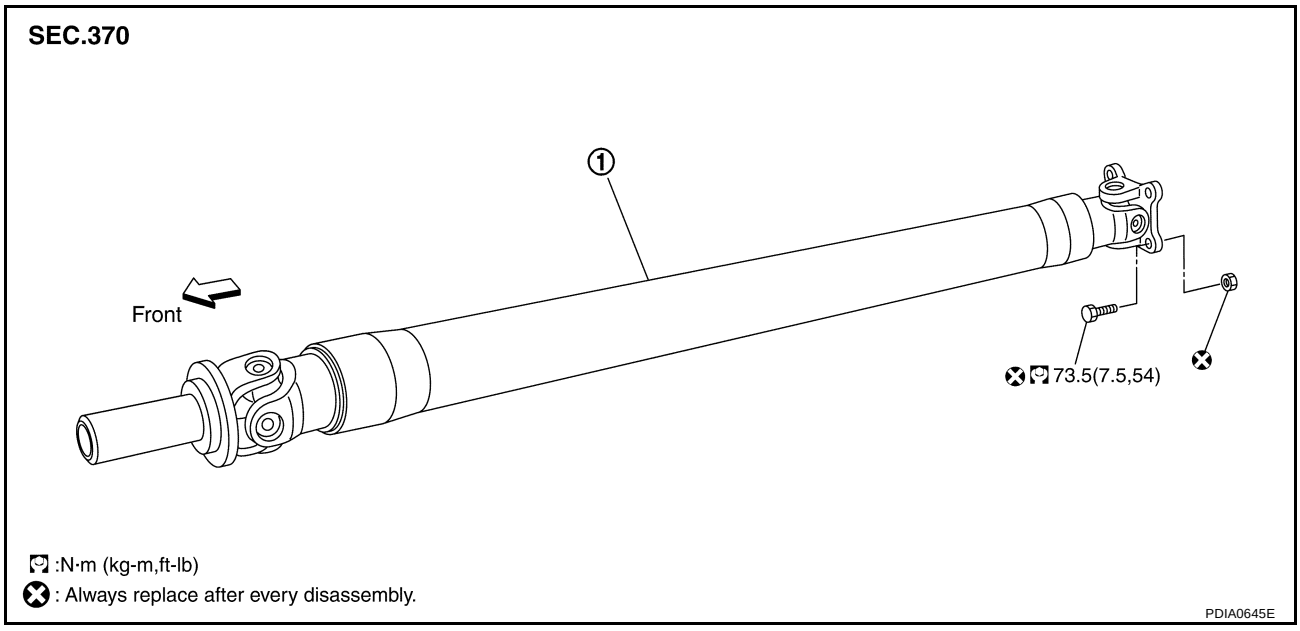
1. Measure propeller shaft runout at runout measuring points by rotating final drive companion flange with hands.



Propeller shaft runout limit : 1.5 mm (0.059 in) or less

Propeller shaft runout measuring points

Dimension for M/T models
A: 340 mm (13.39 in)
B: 660.5 mm (26.00 in)
C: 340 mm (13.39 in)

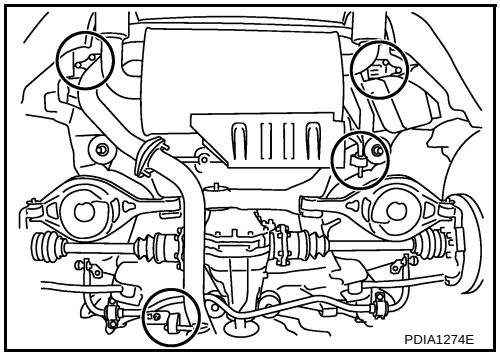


Dimension for A/T models
A: 340 mm (13.39 in)
B: 641.5 mm (25.26 in)
C: 340 mm (13.39 in)

2. If runout still exceeds specifications, separate propeller shaft at final drive companion flange; then rotate companion flange 90, 180, 270 degrees and install propeller shaft.
3. Check runout again. If runout still exceeds specifications, replace propeller shaft assembly.
4. Check the vibration by driving vehicle.

Components

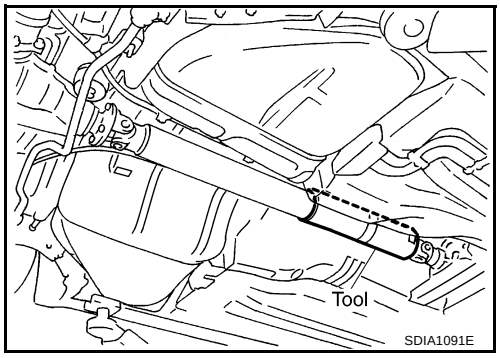
NDS00005



1. Propeller shaft

Removal and Installation

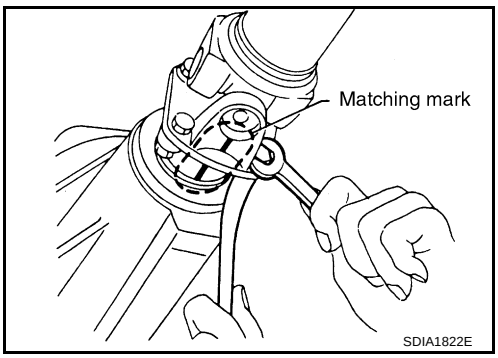
NDS00006



REMOVAL

1. Set transmission to neutral position.
2. Release parking brake.
3. To keep space for removing propeller shaft, first detach rear-side mounts (4 locations) of exhaust tube and main muffler. Then lower exhaust tube and main muffler, and support them with jack or equivalent. (See the figure.)

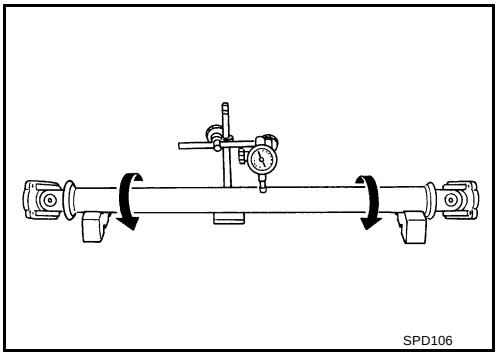
4. Attach protector (special service tool) to propeller shaft. (When reused.)



Tool number : — (J-46208)

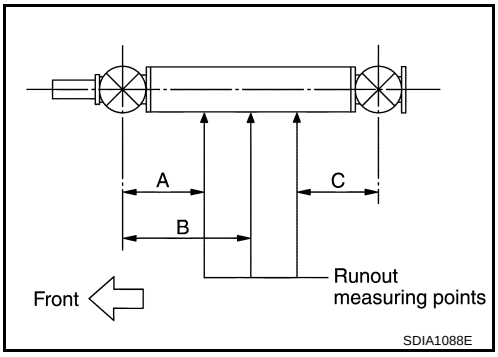
5. Put matching marks on flange yoke with final drive companion flange. (When reused.)

CAUTION:
For matching mark, use paint. Do not damage flange yoke and companion flange.



6. Remove propeller shaft fixing bolts and nuts. Then propeller shaft.

INSPECTION

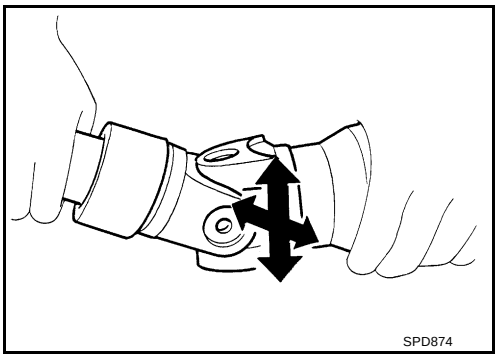


- Inspect propeller shaft runout at measuring points. If runout exceeds specifications, replace propeller shaft assembly.

Propeller shaft runout limit : 1.5 mm (0.059 in) or less

Propeller shaft runout measuring points

Dimension for M/T models	**A: 340 mm (13.39 in)**
	B: 660.5 mm (26.00 in)
	C: 340 mm (13.39 in)
Dimension for A/T models	**A: 340 mm (13.39 in)**
	B: 641.5 mm (25.26 in)
	C: 340 mm (13.39 in)



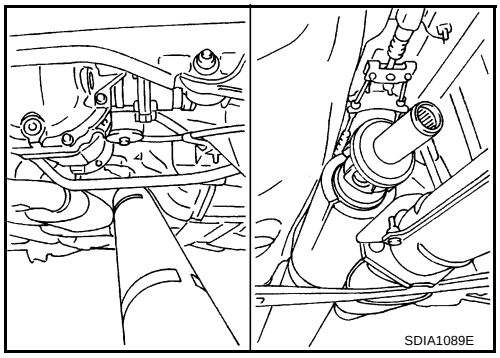
- Inspect journal axial play. If the play exceeds specifications, replace propeller shaft assembly.

Journal axial play : 0 mm (0 in)

- Check propeller shaft for bend and damage. If damage is detected, replace propeller shaft assembly.

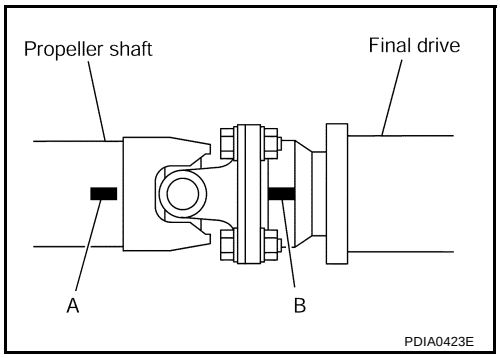
CAUTION:
Do not disassemble joints.

INSTALLATION



When Installing New Propeller Shaft

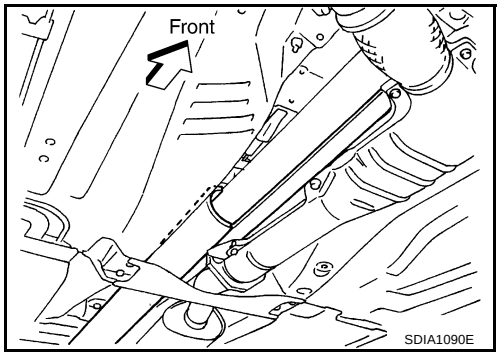
CAUTION:



- **When installing propeller shaft, handle it carefully.**
- **Propeller shaft must be installed with packing material attached (delivered condition). Do not install propeller shaft with packing material removed.**

1. Insert propeller shaft with packing material between floor reinforcement and floor panel.

   CAUTION:
   After insertion, check that shift control boot does not come off (M/T models).



2. Install propeller shaft while aligning its matching mark A with the matching mark B on the joint as close as possible.
3. Temporarily tighten bolts and nuts.

4. Press down propeller shaft with matching mark C facing upward. Then tighten fixing bolts and nuts to the specified torque. Refer to PR-6, "Components" .

5. Remove packing material from propeller shaft.
6. Return exhaust system to its original position. For tightening torque, EX-3, "EXHAUST SYSTEM" .
7. After assembly, perform a driving test to check propeller shaft vibration. If vibration occurred, separate propeller shaft from final drive. Reinstall companion flange after rotating it by 90, 180, 270 degrees. Then perform driving test and check propeller shaft vibration again at each point.

When Installing Reused Propeller Shaft

CAUTION:

When installing propeller shaft, handle it carefully.

1. With protector (special service tool) attached, align matching marks to install propeller shaft to final drive companion flange, and then tighten to specified torque. Refer to PR-6, "Components" .
2. Remove protector (special service tool) from propeller shaft.
3. Return exhaust system to its original position. For tightening torque, EX-3, "EXHAUST SYSTEM" .
4. After assembly, perform a driving test to check propeller shaft vibration. If vibration occurred, separate propeller shaft from final drive. Reinstall companion flange after rotating it by 90, 180, 270 degrees. Then perform driving test and check propeller shaft vibration again at each point.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NGS000FR

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

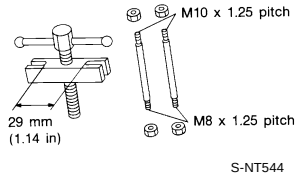
NGS000FS

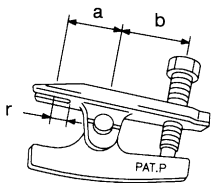
Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

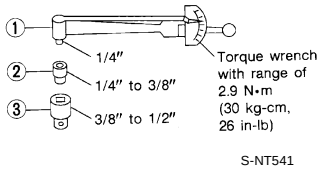
Precautions for Steering System

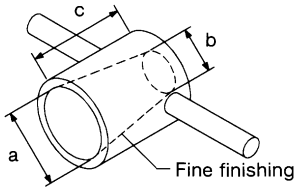
NGS00003

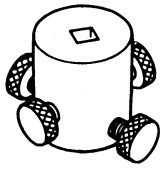
- Before disassembly, thoroughly clean the outside of the unit.
- Disassembly should be done in a clean work area. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- For easier and proper assembly, place disassembled parts in order on a parts rack.
- Use nylon cloth or paper towels to clean the parts; common shop rags can leave lint that might interfere with their operation.
- Before inspection or reassembly, carefully clan all parts in order on a parts rack.
- Before assembly, apply a coat of recommended power steering fluid to hydraulic parts. Petroleum jelly may be applied to O-rings and seals. Do not use any grease.
- Replace all gaskets, seals and O-rings. Avoid damaging O-rings, seals and gaskets during installation. Perform functional tests whenever designated.



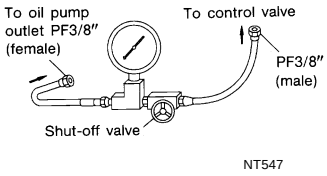


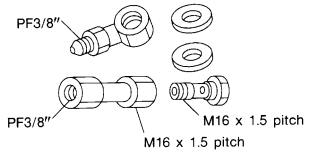






PREPARATION

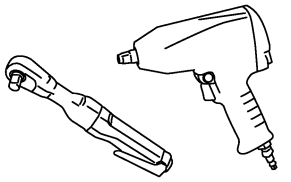




PFP:00002

Special Service Tools

NGS00004



The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST27180001 (J-25726-A) Steering wheel puller		Removing steering wheel
HT72520000 (J-25730-A) Ball joint remover a: 33 mm (1.30 in) b: 50 mm (1.97 in) r: 11.5 mm (0.453 in)		Removing outer socket ball joint

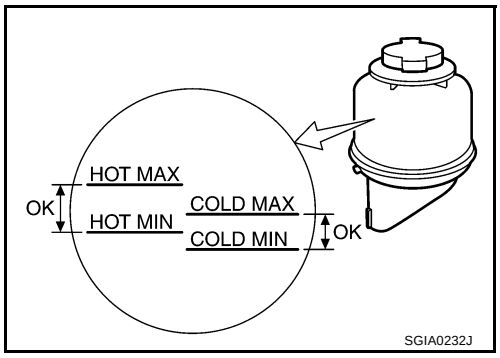
POWER STEERING FLUID

PFP:KLF20



Checking Fluid Level

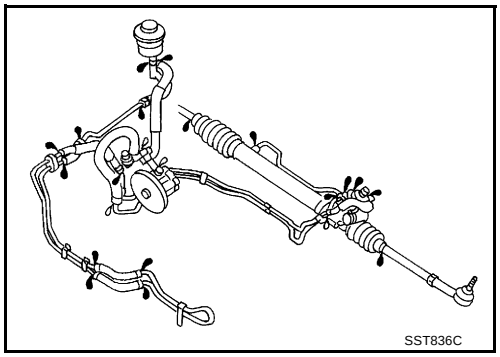
NGS00007

- Stop engine before performing a fluid level check.
- Ensure that fluid level is between the MAX range and MIN level.
- Because fluid level differs within the HOT range and the COLD range, check it carefully.

HOT : Fluid temperatures from 50 to 80 °C (122 to 176°F)

COLD : Fluid temperatures from 0 to 30°C (32 to 86°F)

CAUTION:



- **Do not overfill the MAX level.**
- **Do not reuse any used power steering fluid.**

Checking Fluid Leakage

NGS00008

Check that hydraulic piping lines for improper attachment and for leaks, cracks, damage, loose connections, chafing or deterioration.

1. Run engine until fluid temperature reaches 50 to 80° C (122 to 176°F) in reservoir tank. Keep engine speed idle.
2. Turn steering wheel right-to-left several times.
3. Hold steering wheel at each “lock” position for five seconds to check fluid leakage.

CAUTION:

Do not hold steering wheel in a locked position for more than 10 seconds. (There is the possibility that oil pump may be damaged.)

4. If fluid leakage at connections is noticed, then loosen flare nut and then retighten. Do not over tighten connector as this can damage O-ring, washer and connector.
5. If fluid leakage at the connectors is noticed, then loosen the flare nut and retighten it.
6. Check steering gear boots for accumulation of fluid indicating a from steering gear.

Air Bleeding Hydraulic System

NGS00009

Incomplete air bleeding causes the following. When this happens, bleed air again.

- Generation of air bubbles in reservoir tank
- Generation of clicking noise in oil pump
- Excessive buzzing in oil pump

NOTE:

When vehicle is stationary or while steering wheel is being turned slowly, some noise may be heard from oil pump or gear. This noise is normal and does not affect any system.

1. Stop engine, and then turn steering wheel fully to right and left several times.

CAUTION:

Do not allow steering fluid reservoir tank to go below the low-level line. Check tank frequenter and add fluid as needed.

2. Run engine at idle speed. Turn steering wheel fully to the right and then fully to the left, and keep for about three seconds. Then check whether a fluid leakage has occurred.
3. Repeat the 2nd procedure several times at about three seconds intervals.

CAUTION:

Do not hold steering wheel in the locked position more than 10 seconds. (There is the possibility that oil pump may be damaged.)

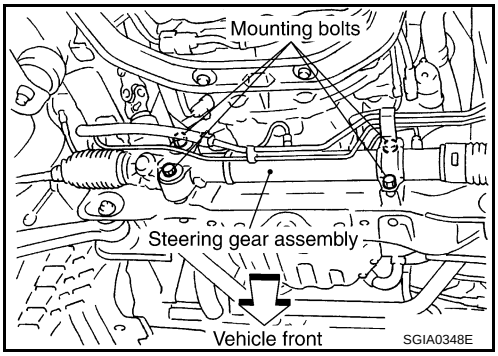
4. Check generation of air bubbles and cloud in fluid.
5. If air bubbles and the cloud don't fade, stop engine, hold air bleeding until air bubbles and the cloud fade. Perform the 2nd and the 3rd procedures again.
6. Stop engine, check fluid level.

STEERING WHEEL

PFP:48430

On-Vehicle Inspection and Service

NGS0000A



CHECKING CONDITION OF INSTALLATION

- Check installation condition of steering gear assembly, front suspension, axle and steering column.
- Check if movement exists when steering wheel is moved up and down, to the left and right and to the axial direction.

End play of the axle direction for steering wheel:

0 mm (0 in)

- Check if the mounting bolts for steering gear assembly are loose or not. Refer to PS-17, "POWER STEERING GEAR AND LINKAGE" .

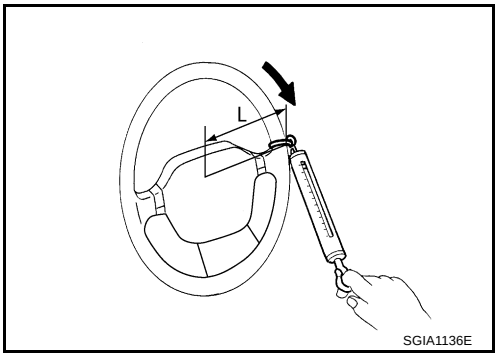
CHECKING STEERING WHEEL PLAY

1. Set tires to the straight ahead, start engine, then turn steering wheel to the left and right lightly, and measure steering wheel movement on the outer circumference when steering wheel is turned up to the point where tires start moving.

Steering wheel play on the outer circumference : 0 - 35 mm (0 - 1.38 in)

CHECKING NEUTRAL POSITION ON STEERING WHEEL

- Check neutral position on steering wheel after confirming that front wheel alignment is correct. Refer to PS-35, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



1. Set the vehicle to the straight ahead-direction, check if steering wheel is in the neutral position.
2. If it is not in the neutral position, remove steering wheel and reinstall it correctly.
3. If the neutral position cannot adjust in the two teeth of steering gear assembly, loosen tie-rod lock nuts of steering outer sockets, then adjust tie-rods by the same amount in the opposite direction.

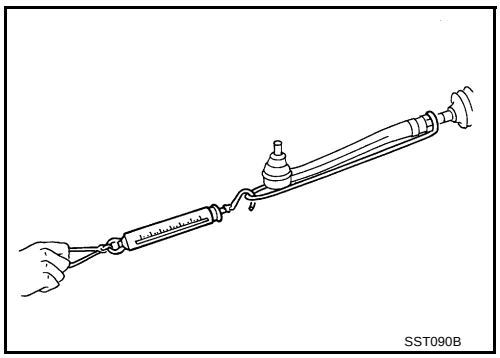
CHECKING STEERING WHEEL TURNING FORCE

1. Park vehicle on a level and dry surface, set parking brake.
2. Start engine.
3. Bring power steering fluid up to adequate operating temperature. [Make sure temperature of fluid is approximately 50 to 80°C (122 to 176°F).]
4. Check steering wheel turning force when steering wheel has been turned 540° from neutral position.

Steering wheel turning force : 7.45 N·m (0.76 kg-m, 66 in-lb)

NOTE:
Multiply the distance (L) from the hook of spring scale to the center of steering wheel by the measurement value with a spring scale.

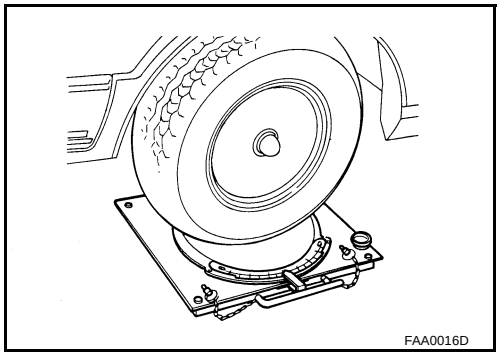
5. If steering wheel turning force is out of the specification, check rack sliding force and relief hydraulic pressure of oil pump. Regarding relief hydraulic pressure of oil pump, refer to PS-28, "CHECKING RELIEF OIL PRESSURE" .



a. Disconnect lower joint and steering knuckle from steering gear assembly. Refer to PS-17, "Removal and Installation" , FAX-4, "Removal and Installation" .

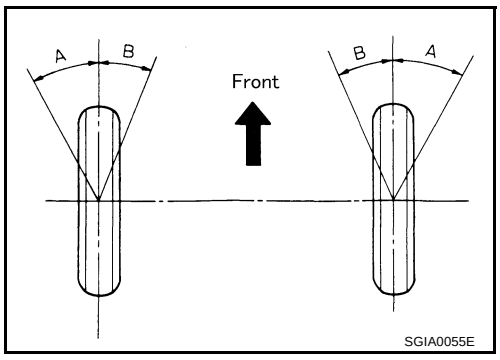
b. Start and run engine at idle to make sure steering fluid has reached normal operating temperature.

c. While pulling outer socket slowly in ± 11.5 mm (± 0.453 in) range from neutral position, make sure rack sliding force is within specification.



Rack sliding force: 171 - 234 N (17.4 - 23.9 kg, 38 - 53 lb)

d. If rack sliding force is not within specification, overhaul steering gear assembly.

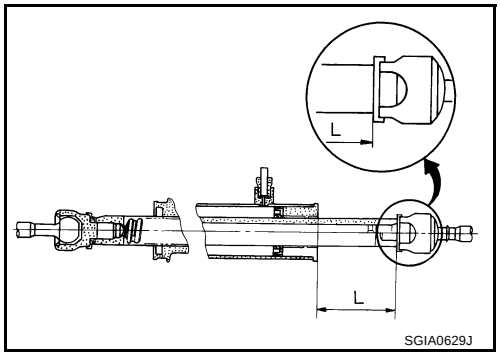


CHECKING FRONT WHEEL TURNING ANGLE

- Check front wheel turning angle after the toe-in inspection. Place front wheels on turning radius gauges and rear wheels on stands so that vehicle can be level. Check the maximum inner and outer wheel turning angles for LH and RH road wheels.

- Start engine and run at idle, turn steering wheel all the way right and left, measure the turning angle.

Inner wheel (Angle: A)	Minimum	35° 55' (35.9°)
	Nominal	38° 55' (38.9°)
	Maximum	39° 55' (39.9°)
Outer wheel (Angle: B)	Nominal	30° 40' (30.7°)



- If it is not within specification, measure rack strokes.

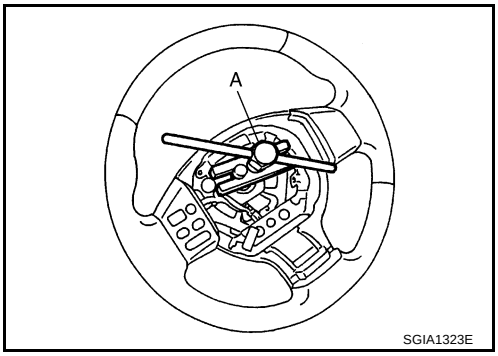
Rack stroke "L" : 64.5 mm (2.539 in)

- If rack stroke is out of specification, disassemble steering gear assembly to check rack stroke.
- Any turning angles are not adjustable. If any of steering angles are out of the specification, check if the following parts are wear or damaged.
  - Steering gear
  - Steering column
  - Front suspension components

  If found that they are worn or damaged, replace them with new ones respectively.

Removal and Installation

NGS0000B



REMOVAL

NOTE:

When reconnecting spiral cable, fix cable with a tape so that fixing case and rotating part keep aligned. This will omit neutral position alignment procedure during spiral cable installation.

1. Set vehicle to the straight-ahead position.
2. Remove driver air bag module. Refer to SRS-40, "Removal and Installation" .
3. Remove steering wheel lock nut after steering is locked.
4. Remove steering wheel with the steering wheel puller A.

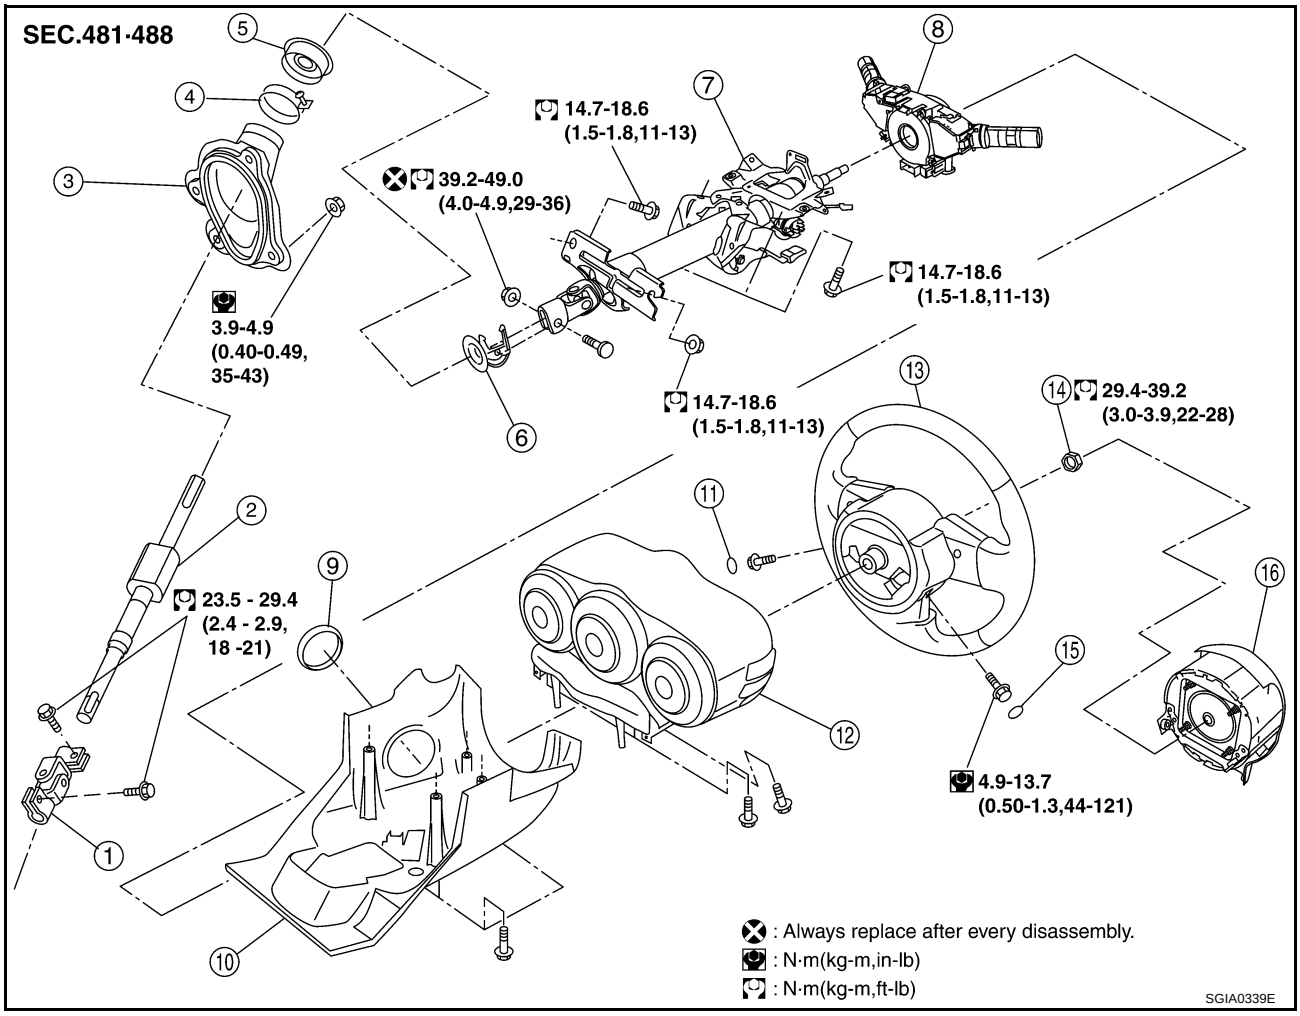
Tool number A: ST27180001 (J-25726-A)

INSTALLATION

Installation is the reverse order of removal. For tightening torque, refer to PS-10, "Removal and Installation" .

NOTE:

Check the spiral cable neutral position after replacing or rotating spiral cable. Refer to SRS-42, "Removal and Installation" .



STEERING COLUMN

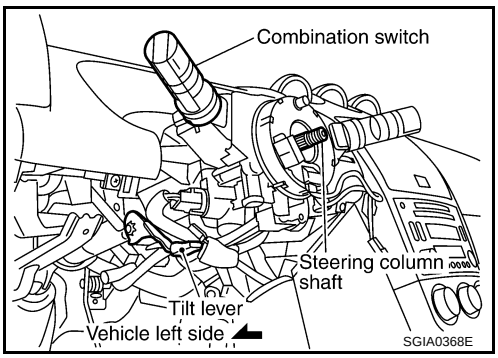
PFP:48810

Removal and Installation

NGS0000C

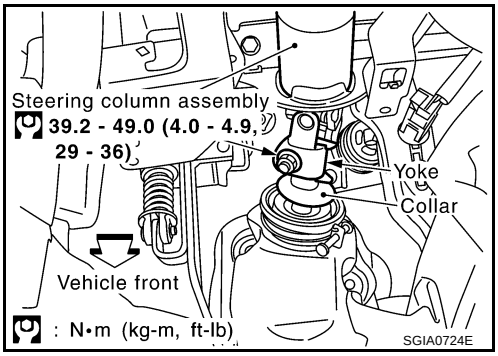
COMPONENTS

1.	Lower joint	2.	Lower shaft	3.	Hole cover
4.	Clamp	5.	Hole cover seal	6.	Collar
7.	Steering column assembly	8.	Combination switch & spiral cable	9.	Escutcheon
10.	Column lower cover	11.	Right lid	12.	Combination meter & column upper cover
13.	Steering wheel	14.	Steering wheel lock nut	15.	Left lid
16.	Driver air bag module				



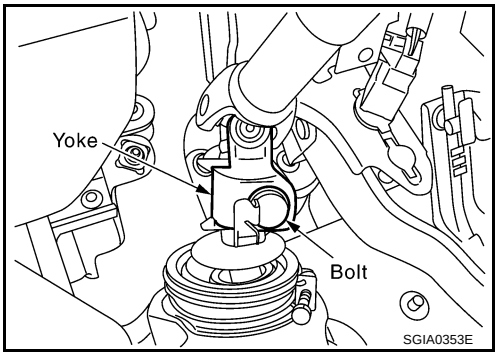
CAUTION:

- **Care must be taken not to give axial impact to steering column assembly during removal and installation.**
- **Care must be taken not to move steering gear during removal of steering column assembly.**



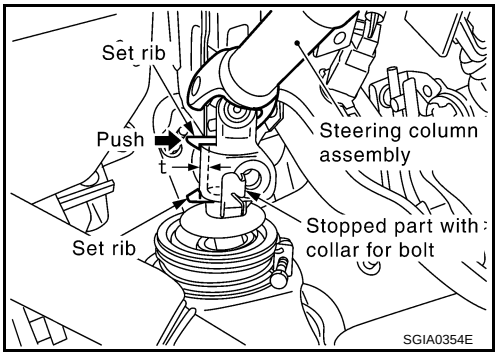
REMOVAL

1. Set vehicle to the straight ahead-direction.
2. Remove driver air bag module from steering wheel. Refer to SRS-40, "DRIVER AIR BAG MODULE" .
3. Disconnect steering switch connector, remove steering wheel lock nut, then remove steering wheel. Refer to PS-7, "STEERING WHEEL" .
4. Remove dash side finisher (LH). Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
5. Remove instrument driver panel lower. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
6. Remove column lower cover and combination meter (which is connected with steering column upper cover) from steering column assembly. Refer to DI-24, "Removal and Installation for Combination Meter" .

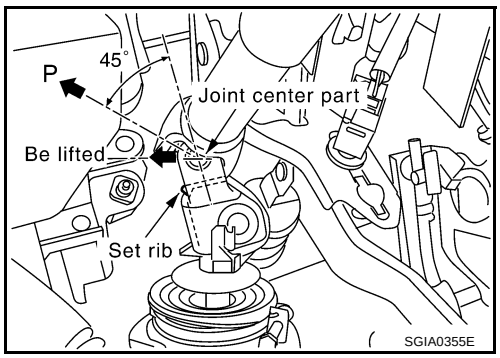


7. Remove combination switch & spiral cable from steering column assembly. Refer to SRS-42, "Removal and Installation" .
8. Disconnect the following connector from steering column assembly.
   - Steering lock harness connector
   - Ignition switch harness connector
   - Key switch harness connector
9. Remove control unit with VDC/TCS/ABS control unit. Refer to BRC-129, "VDC/TCS/ABS CONTROL UNIT" .
10. Disconnect brake switch harness connector.
11. Remove steering column shaft from lower shaft in the following procedure.

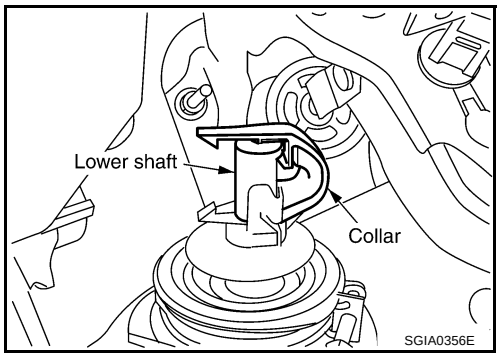
a. Remove lock nut from yoke.



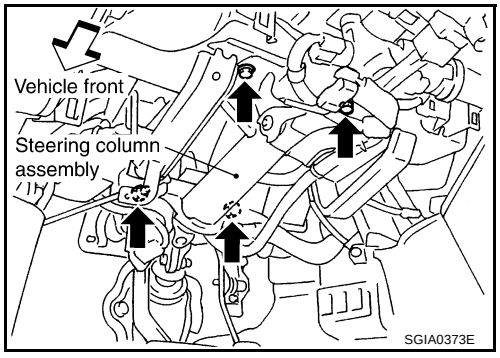
b. Turn steering wheel to the right to appear the head of bolt.
c. Remove the fixed part of collar for bolt to the outside of its head, remove bolt.



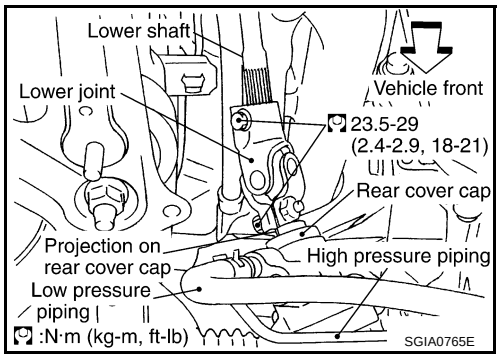
d. Remove the set lib of steering column assembly side from yoke, push it equal to the thick part of yoke.



NOTE:
Because collar is set in lower shaft, if the set lib is pushed (action), joint center will be lifted in the opposite direction (reaction), and then the set lib will be in squeezed to the thick part of yoke.

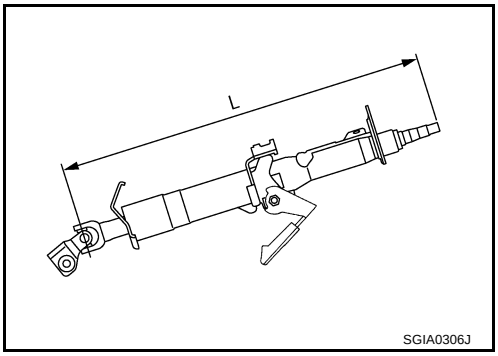


e. Yoke will be removed from collar, when steering column assembly is lifted about 45° oblique upward.



f. Collar remains on lower shaft.

12. Remove bolts and nut from steering member, remove steering column assembly from steering member.
13. Remove collar from lower shaft.
14. Remove hole cover seal from lower shaft.
15. Remove mounting bolts, then remove hole cover from panel.



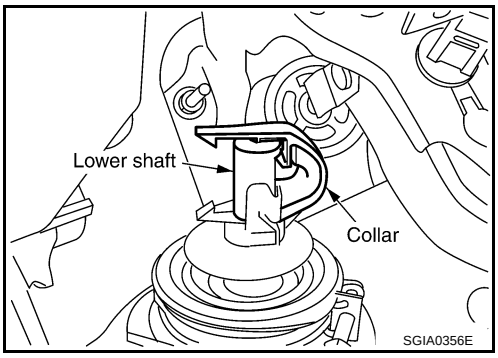
16. Raise vehicle, then loosen bolt for lower yoke of lower joint and remove joint together with lower shaft.

INSPECTION AFTER REMOVAL

- Check if there is something wrong with jacket tube of steering column assembly and collar etc. And then if they are damaged, replace with new one.
- If vehicle has a collision light shocked, check column length “L” as shown in the figure. Then if it is out of the specified value, replace with new one.

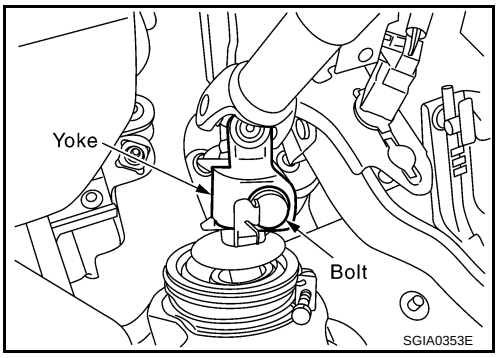
Specified value

Steering column length “L”: 548 mm (21.57 in)



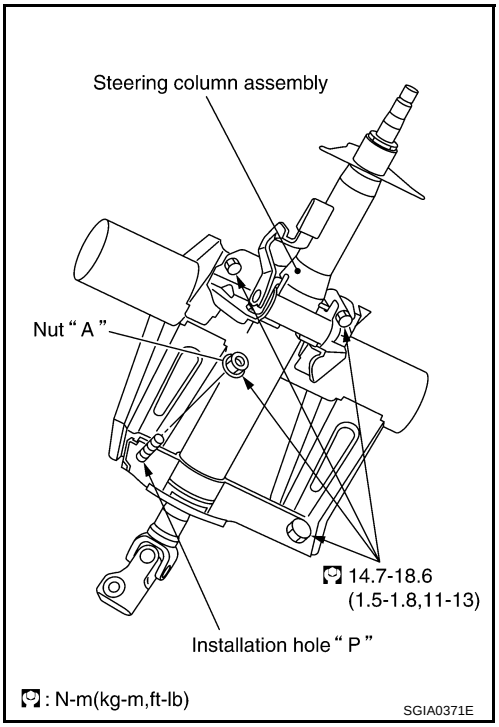
- Check the turning torque of steering column with preload gauge (SST: ST3127S000 [J-25765-A]). If it is out of the specified value, repair it or replace with new one.

Specified value



Turning torque : 0 - 0.2 N·m (0 - 0.02 kg-m, 0 - 2 in-lb)

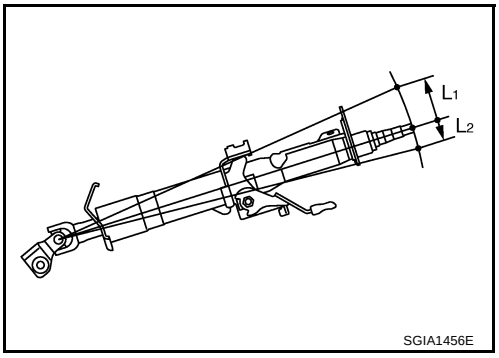
INSTALLATION



1. Install collar to lower shaft.

2. Install yoke of column shaft to collar, tack bolt and nut.

3. Put steering column assembly (installation hole “P”) on bolt for steering member side and install nut “A” then tighten it together with the other bolts at the specified torque.
4. Connect yoke and collar with bolt, tighten nut at the specified torque.

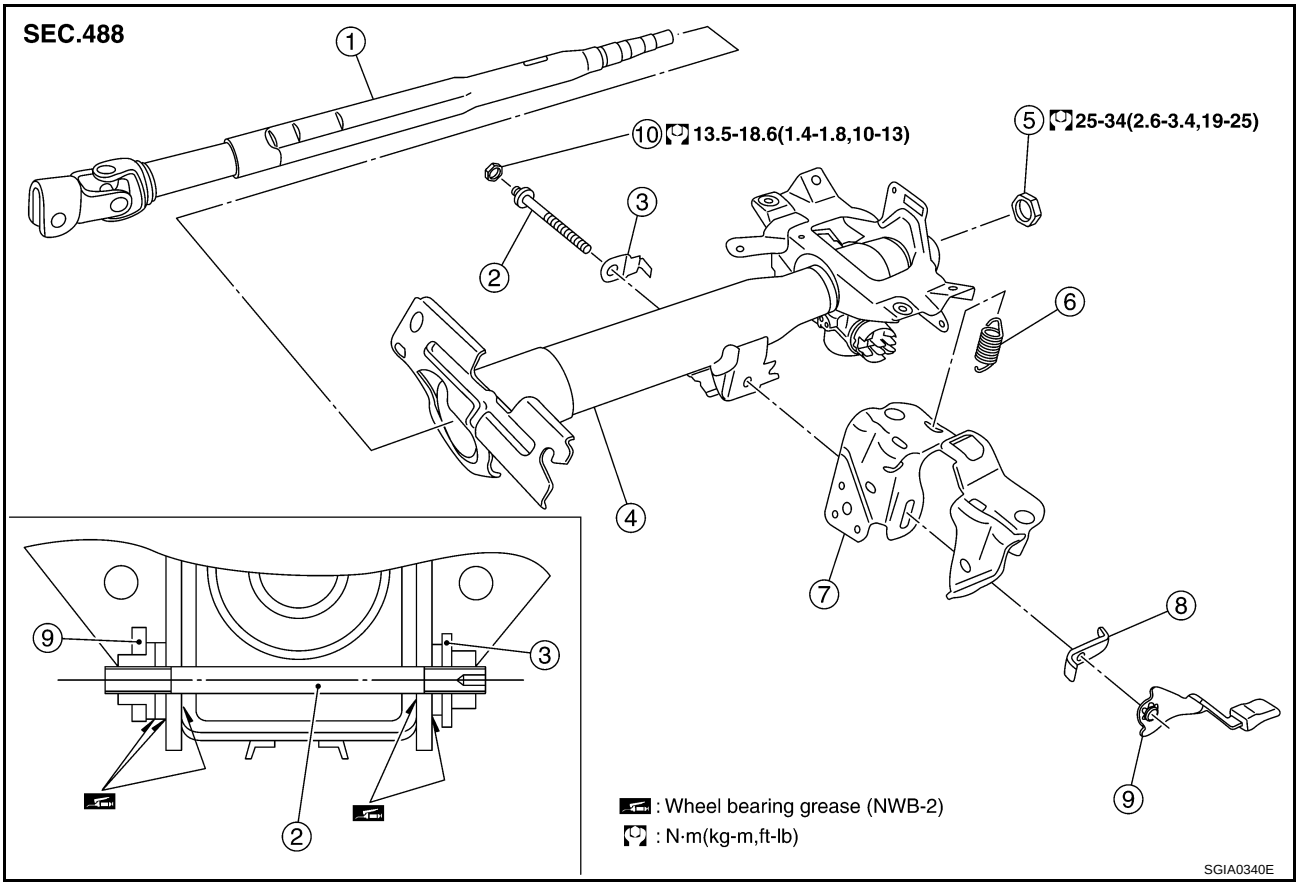


INSPECTION AFTER INSTALLATION

- After installing steering column to vehicle, check tilt device and its operation range “L_1” , “L_2” .

Tilt operating range “L_1 ” : 28 - 32 mm (1.10 - 1.26 in)

“L_2 ” : 13 - 17 mm (0.51 - 0.67 in)

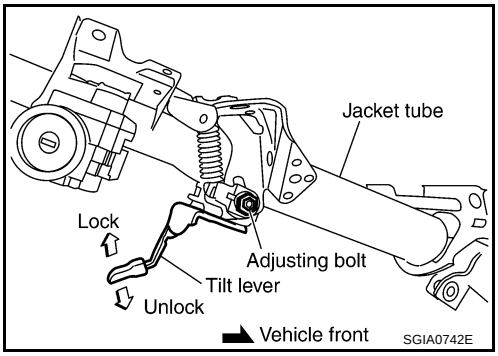


- Check if steering operation can turn to the end of the left and right smoothly.

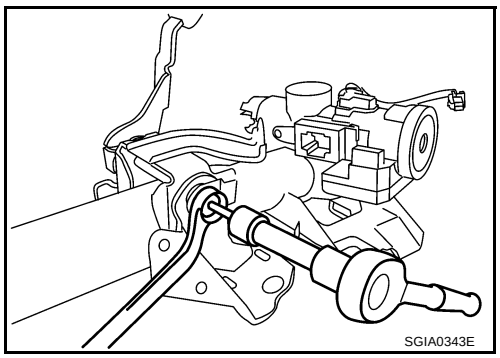
Disassembly and Assembly

NGS0000D

COMPONENTS

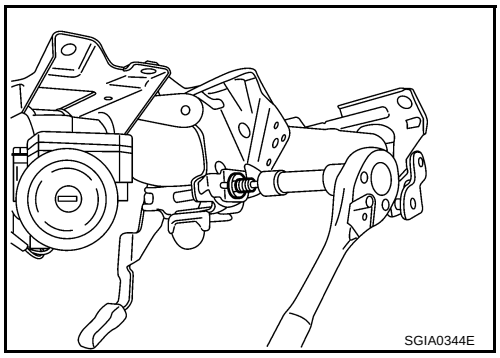


1. Steering column shaft
2. Adjusting bolt
3. Adjusting stopper
4. Jacket tube
5. Steering column shaft lock nut
6. Spring
7. Column mounting bracket
8. Tilt lever stopper
9. Tilt lever
10. Lock nut



DISASSEMBLY

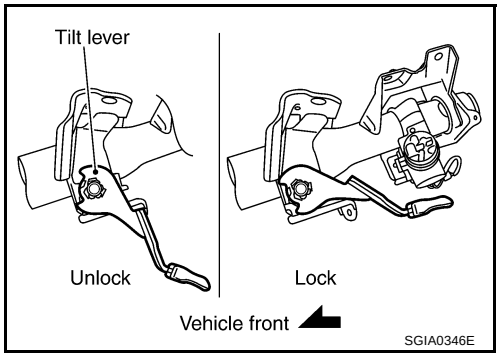
1. Remove steering column shaft lock nut, then remove steering column shaft from front side of jacket tube.
2. Remove tilt device from jacket tube.
3. Remove lock nut and adjusting stopper according to the following procedure.



a. Turn tilt lever to the unlock side.
b. Remove spring from column mounting bracket.

c. Lock adjusting bolt, then remove lock nut.

d. Remove adjusting bolt, adjusting stopper, column mounting bracket, tilt lever stopper and tilt lever from jacket tube.



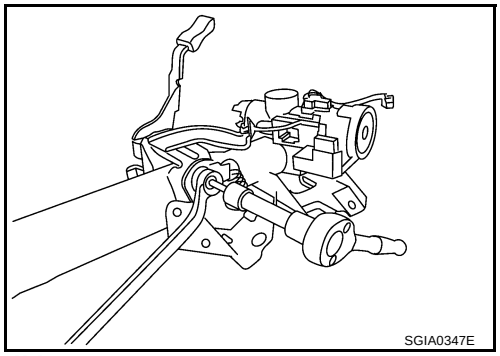
INSPECTION AFTER DISASSEMBLY

- Check if there is something wrong with steering column shaft and bearing. And then if they are damaged, replace with new one.
- Check if there is something wrong with the component of tilt device. And then if it is damaged, replace with new one.

ASSEMBLY

1. Install tilt device to jacket tube. Refer to PS-15, "Disassembly and Assembly" .

   NOTE:
   - Turn tilt lever to unlock side while at work to make it easier.
   - That can avoid column shaft's sudden descent when tilt lever is operated on vehicle.



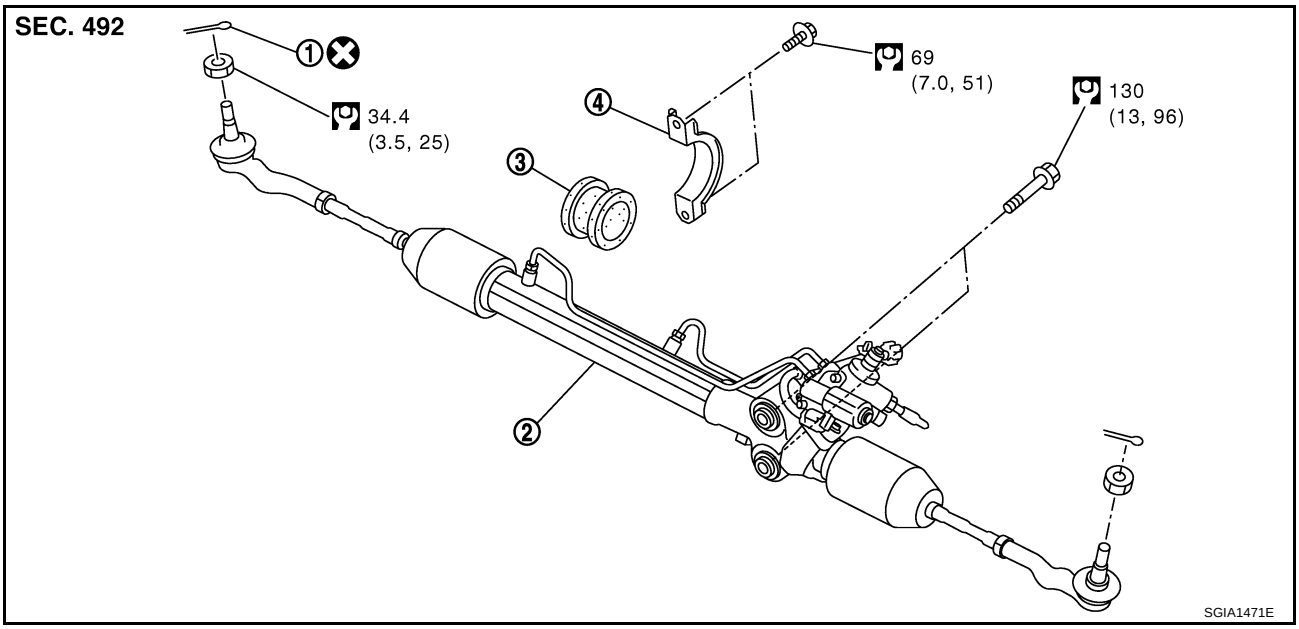
2. When tilt lever is in the locked position (operation range is about 40°), tighten lock nut at the specified torque to make tilt lever locked.

   Tightening torque:

   13.5 - 18.6 N·m (1.4 - 1.8 kg-m, 10 - 13 ft-lb)

3. Apply grease to the part shown in the figure of component. Refer to PS-15, "Disassembly and Assembly" .
4. Install steering column shaft to jacket tube, tighten steering column shaft lock nut at the specified torque.

   Tightening torque : 25 - 34 N·m (2.6 - 3.4 kg-m, 19 - 25 ft-lb)



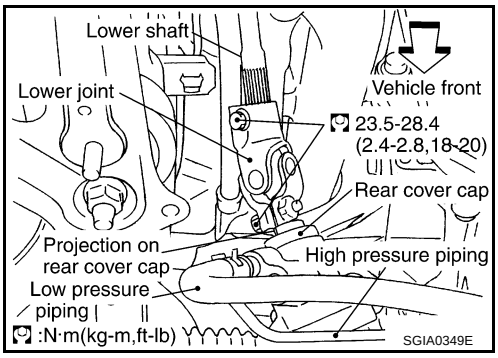
POWER STEERING GEAR AND LINKAGE

PFP:49001

Removal and Installation

NGS0000E

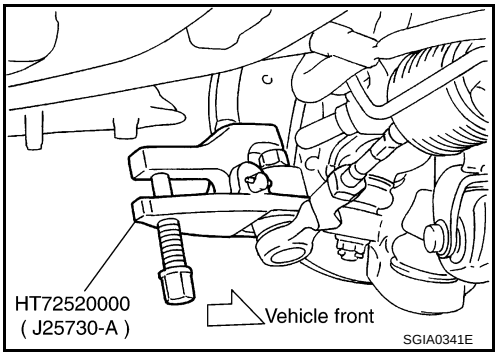
COMPONENTS



1. Cotter pin
2. Steering gear assembly
3. Rack mounting insulator
4. Rack mounting bracket

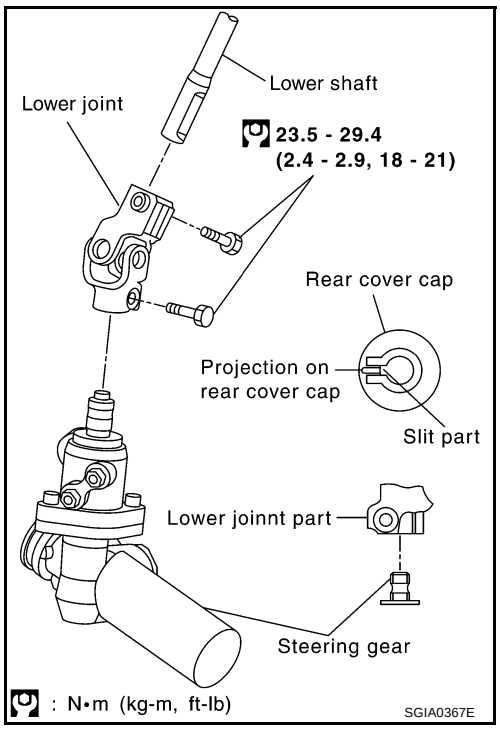
Refer to GI-11, "Components" , for the symbols in the figure.

CAUTION:
Spiral cable may snap due to steering operation if steering column is separated from steering gear assembly. Therefore fix steering wheel with a string to avoid turns.



REMOVAL

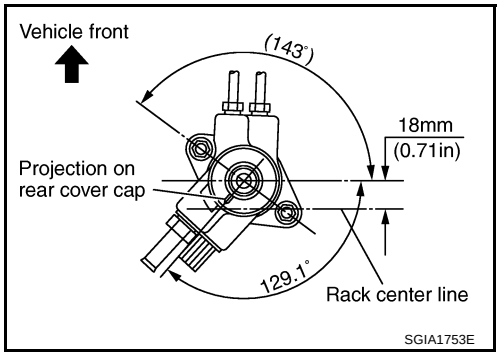
1. Set wheels in the straight-ahead position.
2. Remove undercover and tires from vehicle with power tool.
3. Remove front crossbar. Refer to FSU-8, "Components" .
4. Confirm slit of lower joints fits with the projection on rear cover cap, furthermore marking position on steering gear assembly nearly fits with the projection on rear cover cap.
5. Remove cotter pin at steering outer socket, then loosen mounting nut.



6. Use a ball joint remover (SST) to remove steering outer socket from steering knuckle. Be careful not to damage ball joint boot.

   CAUTION:
   Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (SST) from coming off.
7. Remove oil pipings (high pressure side and low pressure side) from steering gear assembly, then drain fluid from pipings.

8. Loosen bolt on upper yoke of lower joint and remove bolt on lower yoke of joint, then slide lower joint into lower shaft. Separate steering gear assembly from lower shaft.
9. Tack bolt on upper yoke of lower joint, fix lower joint to lower shaft.

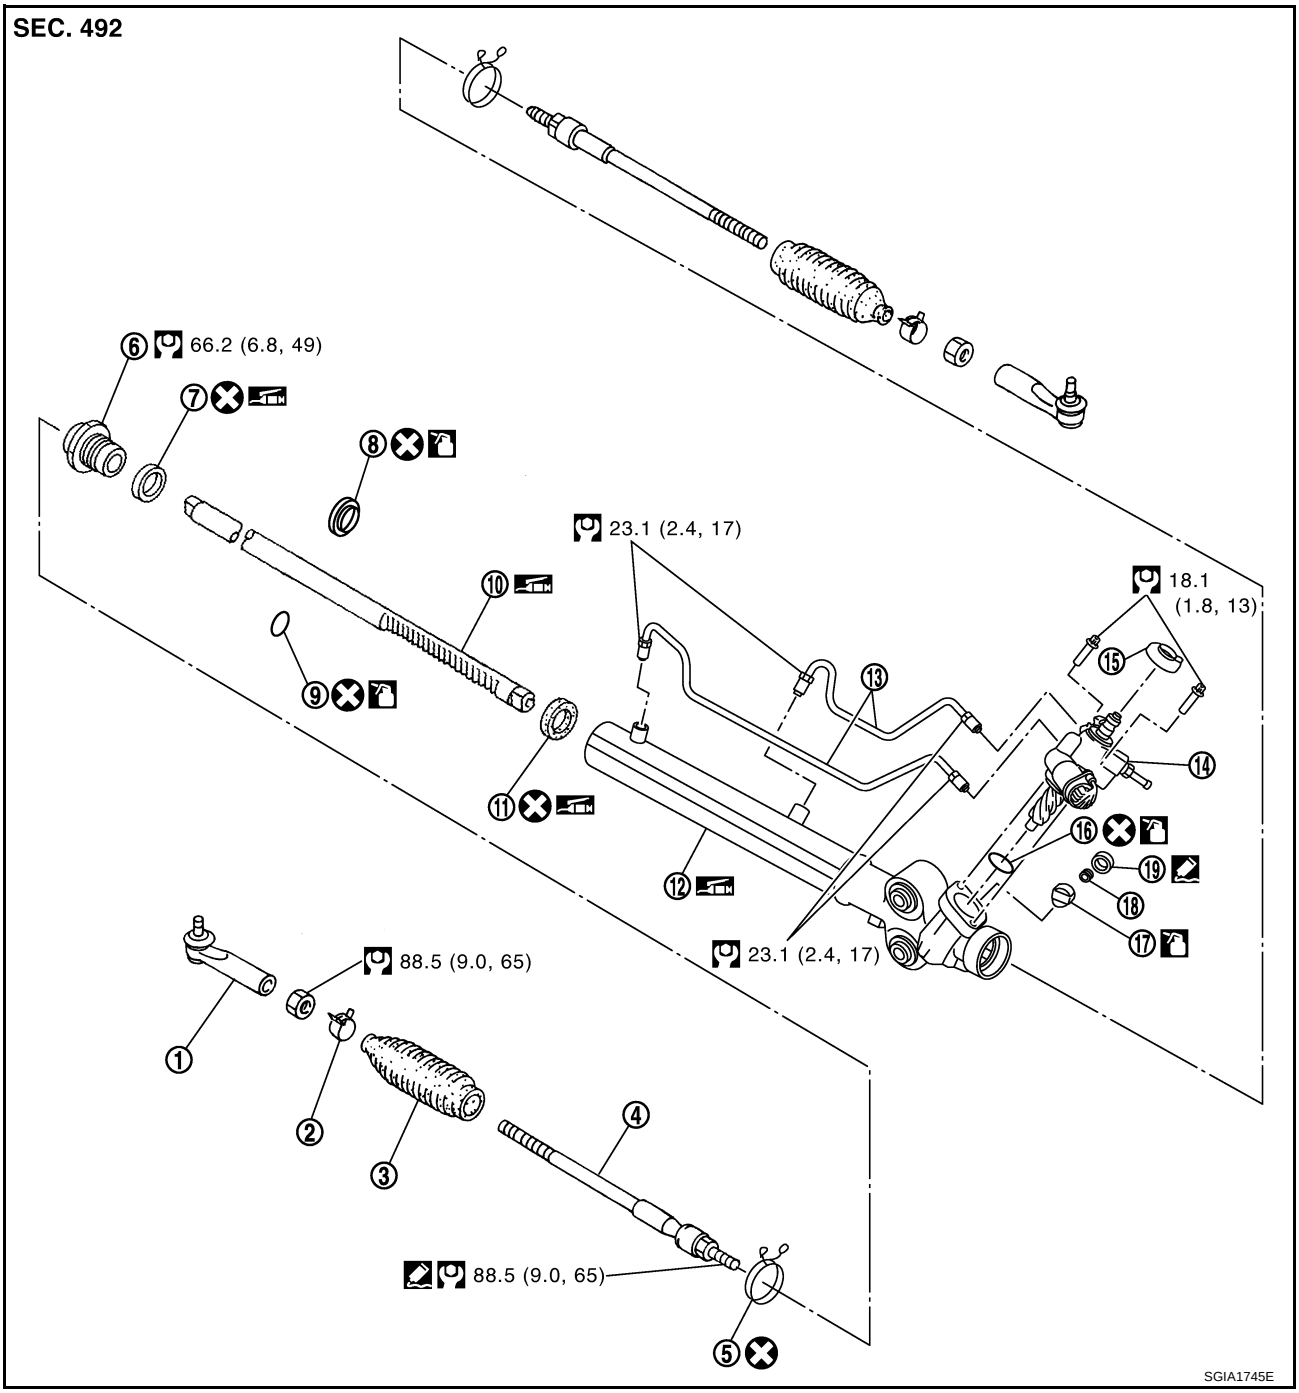


10. Remove the fixing bolt and remove steering gear assembly, rack mounting bracket and insulator from vehicle.

INSTALLATION

- Refer to PS-17, "Removal and Installation" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- After removing/installing or replacing steering components, check wheel alignment. Refer to FSU-6, "Wheel Alignment Inspection" .
- When steering wheel is set in the straight ahead direction, confirm slit of lower joint fits with the projection on rear cover cap, furthermore marking position on steering gear assembly nearly fits with the projection on rear cover cap.
- After installation, bleed air from piping. Refer to PS-6, "Air Bleeding Hydraulic System" .



POWER STEERING GEAR

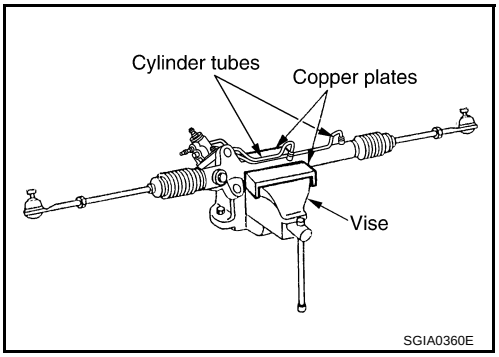
PFP:49001

Disassembly and Assembly

NGS000B1

COMPONENTS

1.	Outer socket	2.	Boot clamp	3.	Boot
4.	Inner socket	5.	Boot clamp	6.	End cover assembly
7.	Rack oil seal	8.	Rack Teflon ring	9.	O-ring A
10.	Rack assembly	11.	Rack oil seal	12.	Gear housing assembly
13.	Cylinder tube	14.	Gear-sub assembly	15.	Rear cover cap
16.	O-ring B	17.	Retainer	18.	Spring
19.	Adjusting screw				

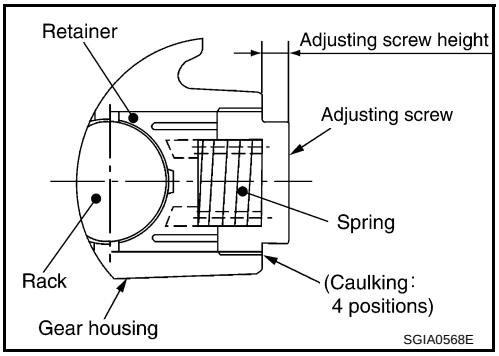


Refer to GI-11, "Components" , and the followings for the symbols in the figure.

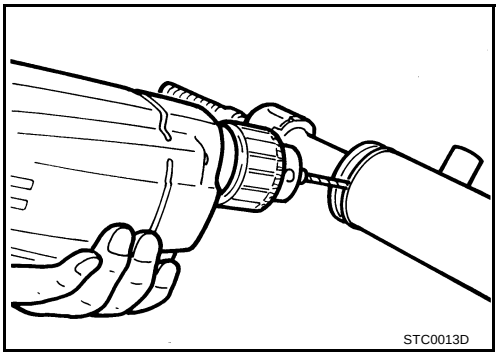
: Apply Genuine Thread Locking Sealant, Three Bound 1111B or equivalent.

: Apply multi-purpose grease.
: Apply Genuine NISSAN PSF or equivalent.

CAUTION:



- **Secure steering gear assembly with a vise, using copper plates or something similar to prevent it from being damaged. Do not grip cylinder with a vise.**
- **Before performing disassembly, clean steering gear assembly with kerosene. Be careful not to bring any kerosene into contact with the discharge and return port connectors.**



DISASSEMBLY

1. Remove cylinder tubes from gear housing assembly.
2. Remove rear cover cap from gear-sub assembly.
3. Measure adjusting screw height from gear housing assembly, then loosen adjusting screw.

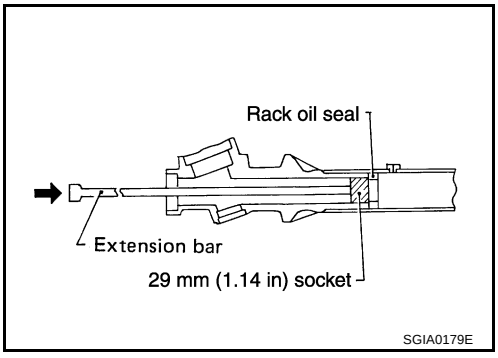
   CAUTION:
   - **Do not turn adjusting screw more than twice.**
   - **Replace steering gear assembly when adjusting screw is removed or more than twice.**
4. Remove fixing bolts of gear-sub assembly, and then remove gear-sub assembly from gear housing assembly.
5. Remove O-ring B from gear housing assembly.
6. Loosen lock nut of outer socket, and remove outer socket.
7. Remove boot clamps of the small diameter side and the large diameter side, then remove boots.

   CAUTION:
   On removing boots, be careful not to damage the inner socket and the gear housing assembly. If they are is damaged, change them to avoid oil leaks.
8. Drill out the clinching part of cylinder outer rim with a 3 mm (0.12 in) drill in 1.5 mm (0.059 in) depth.

9. Remove end cover assembly with a 42 mm (1.65 in) open head (suitable tool).

   CAUTION:
   Be careful not to damage rack. If it is damaged, replace rack. Otherwise, oil leaks may result.
10. Pull rack with rack oil seal out of gear housing assembly.

    CAUTION:
    Be careful not to damage cylinder. If it is damaged, replace gear housing assembly. Otherwise, oil leaks may result.



11. Heat rack Teflon ring to approximately 40°C (104°F) with a dryer, then remove it and O-ring A from rack assembly.

CAUTION:
Be careful not to damage rack. If it is damaged, change to a new one to avoid oil leaks.

12. Use a taped 29 mm (1.14 in) socket and an extension bar. Remove rack oil seal from gear housing assembly.

CAUTION:
Be careful not to damage gear housing assembly and cylinder inner wall. If it is damaged, gear housing assembly must be replaced. Otherwise, oil leaks will result.

INSPECTION AFTER DISASSEMBLY

Boot

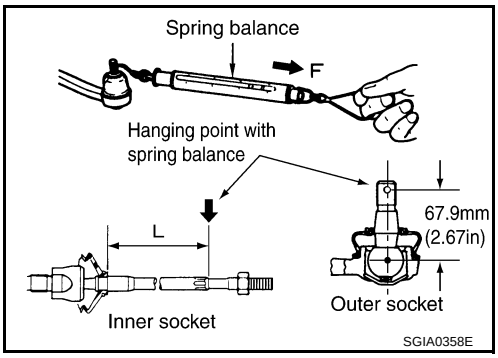
Check boot for cracks and deformation. Replace it, if necessary.

Rack Assembly

Check rack for damage and wear. Replace it, if necessary.

Gear-sub Assembly

- Check pinion gear for damage or wear. Replace if necessary.
- Rotate pinion and check for torque variation or rattle. Replace if necessary.



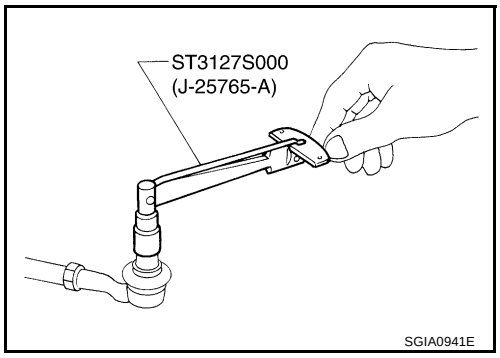
Gear Housing Assembly

Check gear housing assembly for damage and scratches (inner wall). Replace it, if necessary.

Outer Socket and Inner Socket

Swing Torque

- Hook a spring balance at the point shown in the figure. Confirm if the reading is within the specification. When ball stud and inner socket start moving the measured value must be within the specification. If the reading is outside the specification, replace socket.

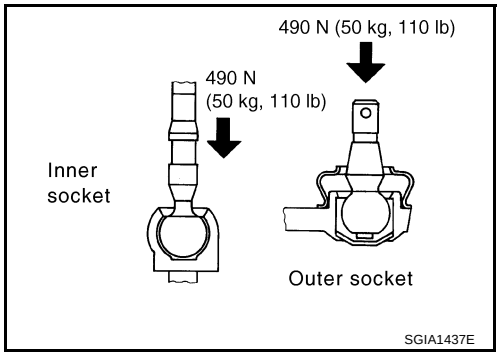


Specified value

Item	Outer socket	Inner socket
Measuring point	Cotter-pin hole of stud	shown as L: 48.5 mm (1.909 in)
Swing torque	0.3 - 2.9 N·m (0.03 - 0.29 kg-m, 3 - 25 in-lb)	1.0 - 7.8 N·m (0.11 - 0.79 kg-m, 9 - 69 in-lb)
Measuring value	4.42 - 42.7 N (0.5 - 4.4 kg, 1 - 10 lb)	10 - 78 N (1 - 8 kg, 2 - 18 lb)

Rotating Torque

- Using a preload gauge (SST), check if reading is within the value specified below. If the value is outside the standard, replace outer sockets.

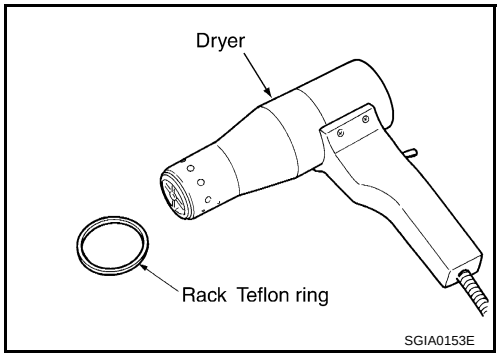


Rotating torque	0.3 - 2.9 N·m (0.03 - 0.29 kg-m, 3 - 25 in-lb)

Axial End Play

- Apply load of 490 N (50 kg,110 lb) to ball stud axially. Use a dial-gauge to measure the amount of the movement that the stud makes. Check if the reading is within the specified below. If the value is outside the standard, replace outer and inner sockets.

Outer socket	0.5 mm (0.020 in) or less
Inner socket	0.2 mm (0.008 in) or less



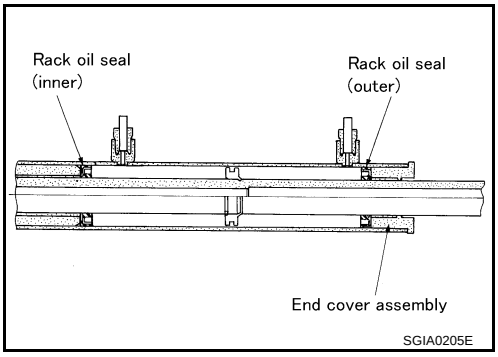
ASSEMBLY

1. Apply recommended fluid to O-ring A. Put an O-ring A into rack Teflon ring.

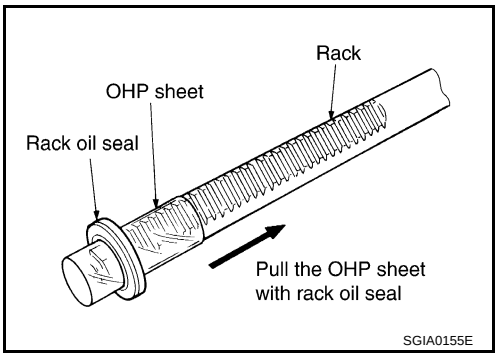
   NOTE:
   Do not reuse O-ring A.

2. Heat rack Teflon ring to approximately 40°C (104°F) with a dryer. Assemble it to mounting groove of rack.

   NOTE:
   Do not reuse rack Teflon ring.

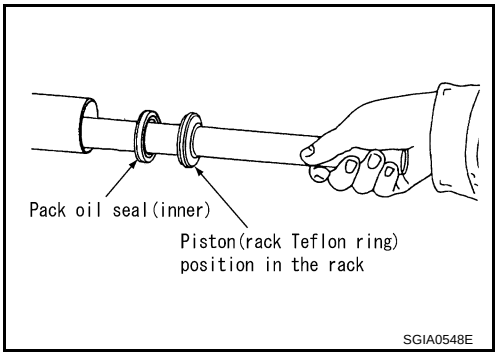


3. To fit rack Teflon ring on rack, use rack Teflon ring installation tool (SST) from tooth side. Compress rim of ring with the tool.
4. Apply Multi-purpose grease or equivalent to rack oil seal. Insert rack oil seal, then insert rack to gear housing assembly.

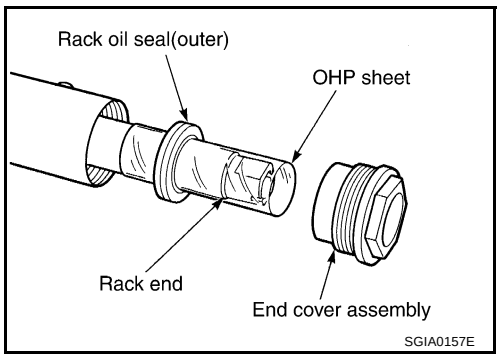


NOTE:
Do not reuse rack oil seal.

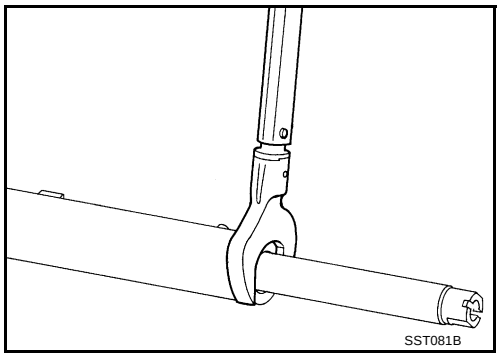
CAUTION:
- **When inserting rack, do not damage retainer sliding part. If it is damaged, replace gear housing assembly.**
- **When unstring rack, do not damage cylinder inner wall. If it is damaged, It may cause oil leaks. Replace gear housing assembly.**
- **Attach rack oil seal. Both inner lip and outer lip should face each other.**



a. To avoid damaging inner rack oil seal, wrap an OHP sheet [approximately. 70 mm (2.76 in) × 100 mm (3.94 in)] around rack tooth. Place oil seal on sheet. Then, pull oil seal along with OHP sheet until they pass the toothed section of rack, then remove it.



b. Insert rack oil seal (inner) to piston (rack Teflon ring) position and push retainer to adjust screw side with fingers lightly, and then make rack move in gear housing assembly, install rack oil seal (inner) to fit in with gear housing assembly.

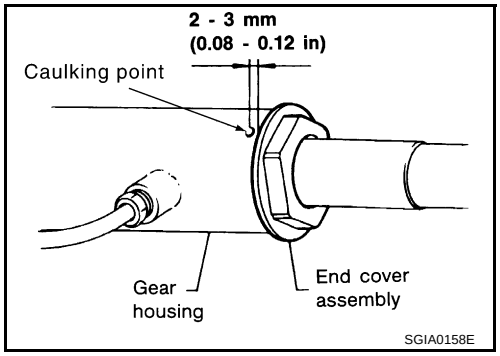


c. When installing outer rack oil seal, cover the end of rack with an OHP sheet [70 mm (2.76 in) × 100 mm (3.94 in)]. It will avoid damaging rack oil seal. Then place oil seal on sheet. Pull rack oil seal along with OHP sheet until they pass rack end. Then remove OHP sheet.

d. Install end cover assembly to rack, move it to gear housing assembly.

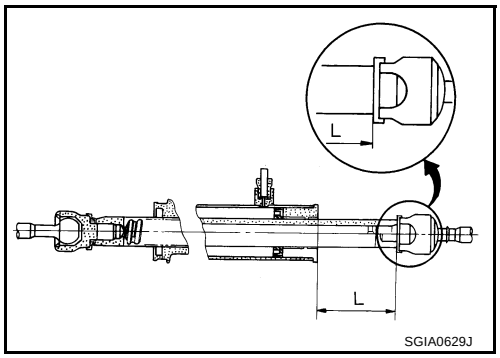
5. Using a 42 mm (1.65 in) open head (suitable tool), tighten end cover assembly at the specified torque.

CAUTION:
Do not damage rack surface. If it is damaged, it may cause oil leaks. Replace rack assembly.



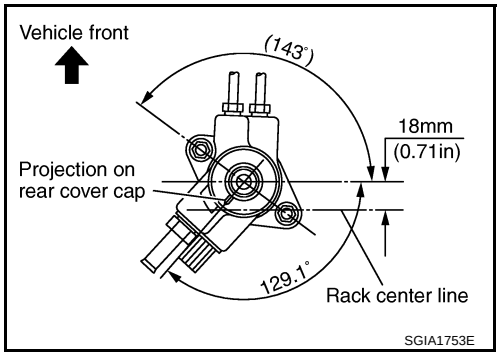
6. After tightening end cover assembly, caulk cylinder at one point as shown in the figure using a punch. This will prevent end cover from getting loose.

7. Apply recommended fluid to O-ring B. Install O-ring B to gear housing assembly.

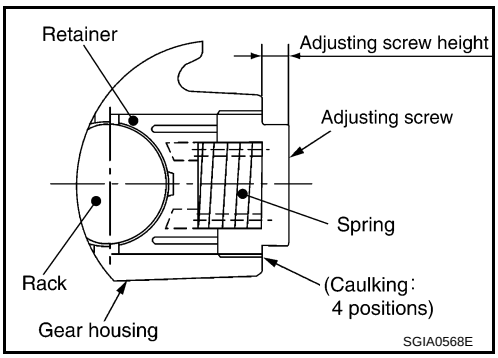


NOTE:
Do not reuse O-ring B.

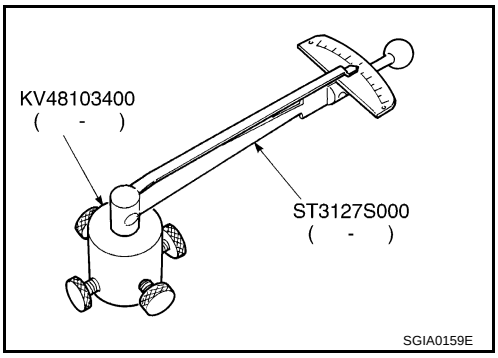
8. Install gear-sub assembly to gear housing assembly.



9. Decide neutral position of rack.



Rack stroke “L” : 64.5 mm (2.539 in)



10. Install the projection part (Tip) of rear cover cap to gear-sub assembly as shown in the figure.

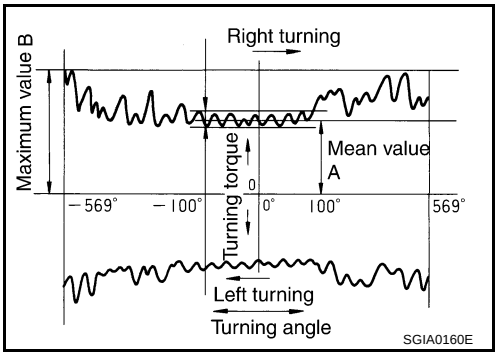
11. Apply thread locking adhesive (Three Bond 1111B or equivalent) to the thread of adjusting screw to the adjusting screw height from gear housing assembly. The adjusting screw height is the same as it was measured in the overhaul in advance.
12. Rotate pinion ten times whole range of rack so that parts get to fit with each other.

13. Measure pinion rotating torque within from –180° to + 180° make preload gauge (SST) and torque adapter (SST) in rack neutral position, then hold preload gauge (SST) at maximum torque.
14. After loosening adjusting screw once, tighten it again with torque of 4.9 - 5.9 N·m (0.50 - 0.60 kg-m, 44 - 52 in-lb). After that loosen it within from 20° to 40°.

15. Measure pinion rotating torque with torque adapter (SST) and preload gauge (SST), then confirm whether its reading is within the specified value. If the reading is not within the specified value, readjust screw angle with adjusting screw. Change gear assembly to new one, if the reading is still not within the specified value or the rotating torque of adjusting screw is less than 5 N·m (0.51kg-m, 44 in-lb)

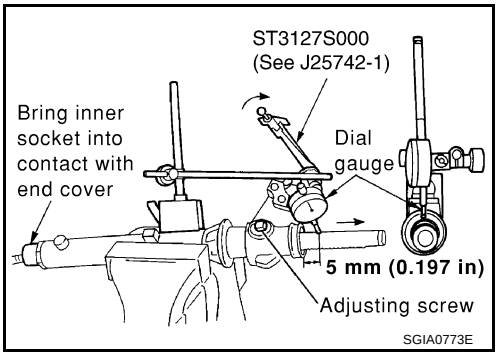
Pinion rotation torque:

Around neutral position (within ±100°)



Average "A":

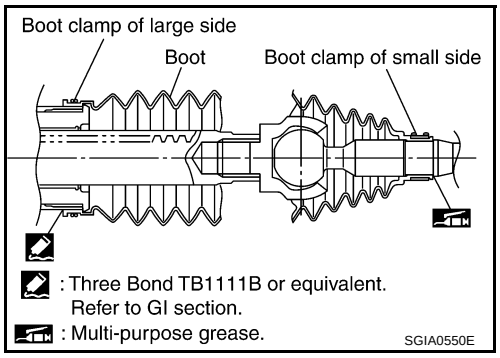
1.71 - 2.34 N·m (0.18 - 0.23 kg-m, 16 - 20 in-lb)



Other than above (more than ±100°)

Maximum variation "B":

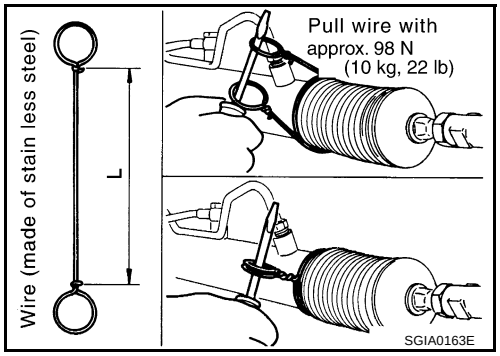
2.3 N·m (0.23 kg-m, 20 in-lb)



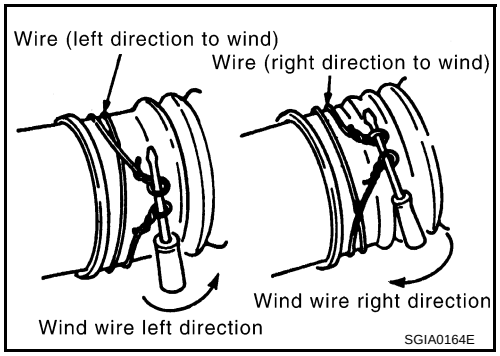
16. Turn pinion fully to the end of the left with tie-rods to rack.
17. Set dial gauge to rack as shown in the figure. Measure vertical movement of rack when pinion is turned counterclockwise with torque of 19.6 N·m (2.0 kg-m, 14 ft-lb). Check reading is within the specified value. If reading is outside of the specification, readjust screw angle with adjusting screw. If reading is still outside of specification, or if the rotating torque of adjusting screw is less than 5 N·m (0.51 kg-m, 44 in-lb), replace steering gear assembly.

Specified value		
Amount of vertical movement with rack	Less than 0.265 mm (0.0104 in)	
Measuring point	Axial direction of rack	5 mm (0.20 in) away from end of gear housing
	Radius direction of rack	Shaft direction of adjusting screw

18. Install large-diameter side of boot to gear housing assembly.
19. Install small-diameter side of boot to the mounting groove of inner socket boot.
20. Install boot clamp to the small-diameter side of boot.
21. Install boot clamp to the large-diameter side of boot.

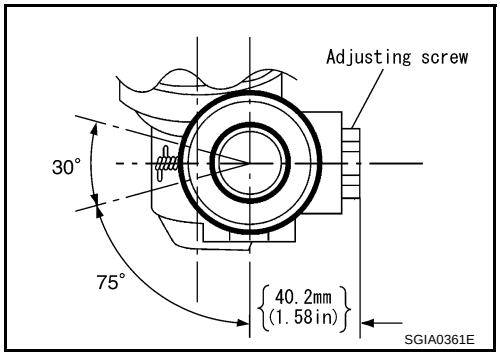


NOTE:
Do not reuse boot clamp.

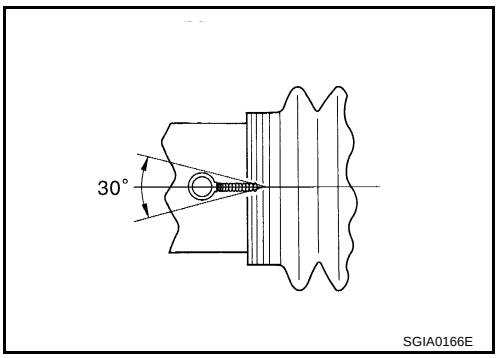


a. Tighten large-diameter side of RH/LH boot with boot clamp (stainless wire).

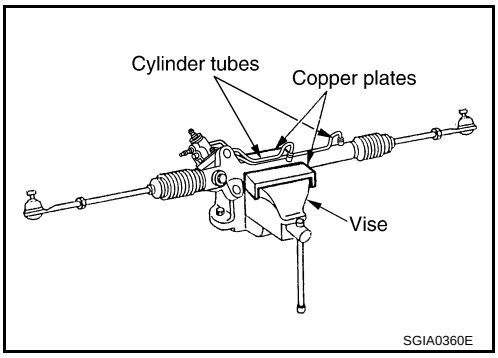
Wire length "L" : 370 mm (14.57 in)



b. After wrapping clamp around boot groove for two turns, insert screwdriver in loop on both ends of wire. Twist 4 to 4.5 turns while pulling with a force of approx. 98 N (10 kg, 22 lb).



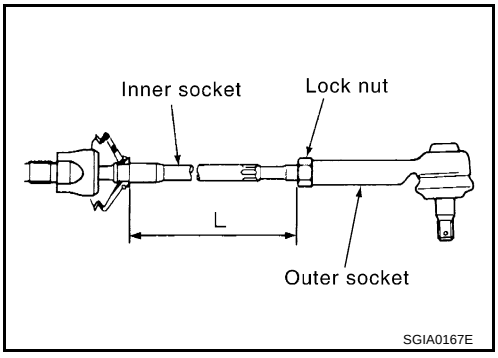
c. Twist boot clamp as shown in the figure, pay attention to relationship between winding and twisting directions.



d. Confirm the twisted point with clamp faces in the opposite direction to adjusting screw within 30° as shown in the figure.

e. After twisting wire 4 to 4.5 turns, bend cut end of wire. Cut end of wire should not touch boot. Be sure wire end is at least 5 mm (0.20 in) away from clearance for tube.

22. Install cylinder tubes to gear housing assembly.



23. Tighten lightly inner socket in specified length “L”, then tighten lock nut at specified torque. Refer to PS-19, "COMPONENTS" . Reconfirm if inner socket length is within limit of specified length “L”.

Inner socket length “L” : 106.3 mm (4.19 in)

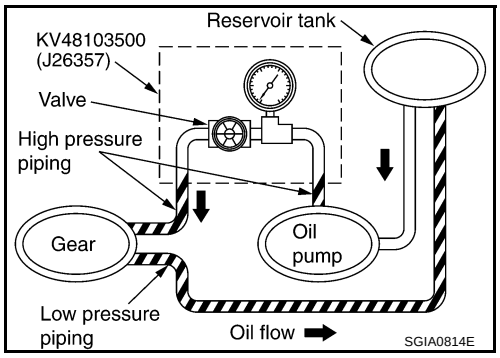
CAUTION:

Perform toe-in adjustment after this procedure. Length achieved after toe-in adjustment is not necessarily value given here.

POWER STEERING OIL PUMP

PFP:49110

On-Vehicle Inspection and Service

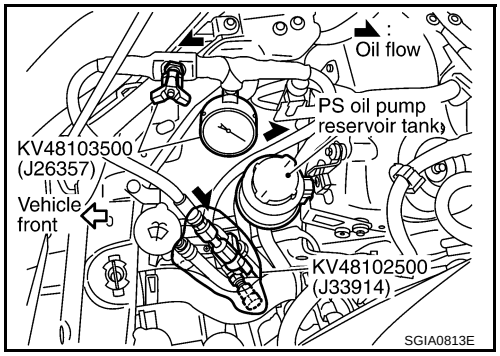


NGS0000H

CHECKING RELIEF OIL PRESSURE

CAUTION:

Before starting work, confirm belt tension is proper.



1. Connect oil pressure gauge (SST) and oil pressure gauge adapter (SST) between oil pump discharge connector and high pressure hose and then bleed air from the hydraulic circuit.

2. Start engine. Allow engine to run until tank temperature reaches 50 to 80°C (122 to 176°F).

   CAUTION:

   - **Warm up engine with shut-off valve fully opened. If engine is started with shut-off valve closed, fluid pressure in power steering pump increases to maximum. This will raise fluid temperature excessively.**
   - **Be careful not to contact hose with belt when engine is started.**

3. With engine at idle, close shut-off valve and read the relief oil pressure.

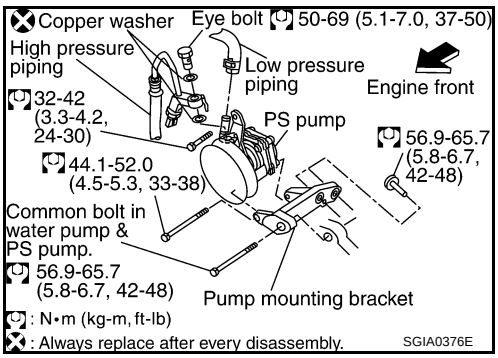
   Relief oil pressure:

   9,600 - 10,200 kPa (97.9 - 104 kg/cm^2 , 1,392 - 1,479 psi)

   CAUTION:

   Do not close shut-off valve of pressure gauge for more than 10 seconds.

4. After measurement, open shut-off valve slowly.
   - If relief oil pressure is outside the specification, disassemble and repair oil pump. Refer to PS-29, "Disassembly and Assembly" .
5. After inspection, disconnect oil pressure gauge (SST) and oil pressure gauge adapter (SST) from hydraulic circuit, connect oil pump discharge connector and high pressure hose. Add fluid and bleed air from hydraulic circuit thoroughly. Refer to PS-6, "Air Bleeding Hydraulic System" .



Removal and Installation

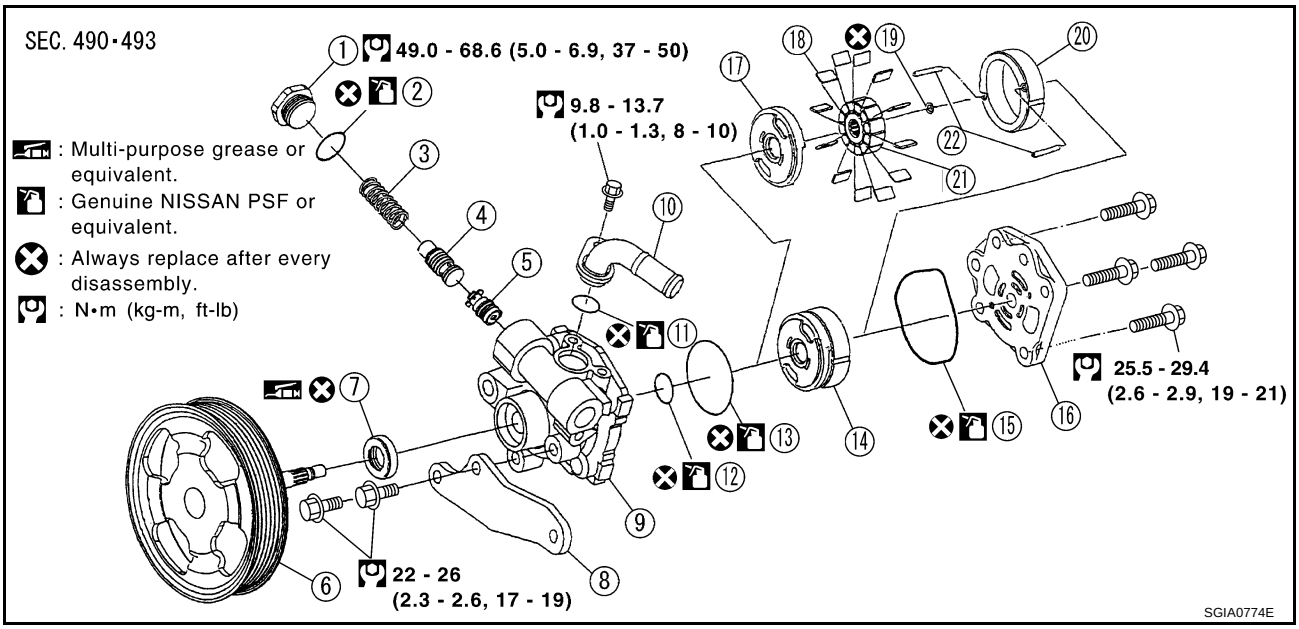
NGS0000I

REMOVAL

1. Remove engine cover.
2. Remove air cleaner box.
3. Drain water from radiator upper tank, then remove radiator upper hose.
4. Remove radiator fan shroud. Refer to CO-13, "Removal and Installation" .

5. Loosen idler pulley, then remove belt.
6. Drain power steering fluid from reservoir tank.
7. Remove piping of high pressure and low pressure (drain fluid from their pipings)
8. Remove bolt common to water pump and power steering pump.
9. Remove bolt then remove power steering pump.

INSTALLATION



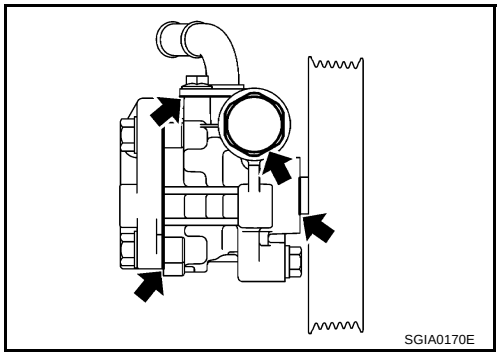
Refer to PS-33, "HYDRAULIC LINE" for tightening torque. Install in the reverse order of removal.

- After installation, adjust belt tension. Refer to EM-12, "DRIVE BELTS" .
- After installation, bleed air. Refer to PS-6, "Air Bleeding Hydraulic System" .

Disassembly and Assembly

NGS0000J

COMPONENTS

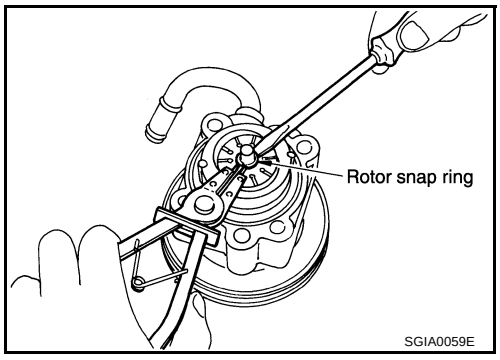


1. Plug
2. O-ring D
3. Flow control valve spring
4. Relief valve assembly
5. Flow control valve assembly
6. Shaft kit
7. Oil seal
8. Bracket
9. Body assembly
10. Suction connector assembly
11. O-ring E
12. O-ring C
13. O-ring B
14. Cartridge assembly
15. O-ring A
16. Cover assembly
17. Side plate
18. Vane
19. Rotor snap ring
20. Cam ring
21. Rotor
22. Dowel pin

INSPECTION BEFORE DISASSEMBLY

Disassemble power steering oil pump only if the following items are found.

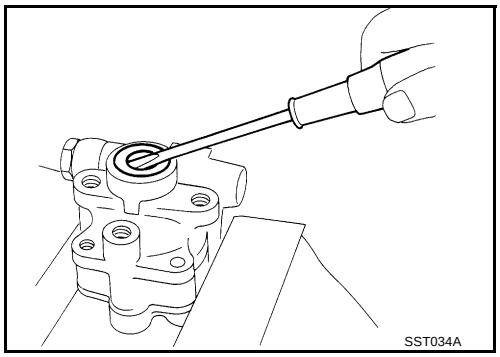
- Oil leakage from oil pump
- Deformed or damaged pulley
- Poor performance



DISASSEMBLY

NOTE:
Fix oil pump in vise as the occasion demands.

CAUTION:
When retaining drive shaft in a vise, always use copper or aluminium plates between vise and shaft.



1. Unscrew two front bracket bolts and remove bracket from body assembly.
2. Unscrew four cover assembly bolts and remove cover assembly from body assembly.
3. Remove O-ring A from body assembly.
4. Remove rotor snap ring with snap ring pliers, and remove shaft kit from body assembly.

   CAUTION:
   When removing rotor snap ring, be careful not to damage pulley shaft of shaft kit.

5. Using a screwdriver, remove oil seal for body assembly.
6. Remove cam ring, rotor, vane, side plate, O-ring B and O-ring C from body assembly.
7. Remove plug, then remove O-ring D, flow control valve spring, relief valve assembly and flow control value assembly from body assembly.

   CAUTION:
   Be careful not to drop and deform relief valve assembly and flow control valve assembly.
8. Remove fixing bolt of suction connector assembly, then remove suction connector assembly and O-ring E from body assembly.

INSPECTION AFTER DISASSEMBLY

Body Assembly and Cover Assembly Inspection

- Check body assembly and cover assembly for damage. If any damage is found, replace with new part for cover assembly, and replace with new power steering pump assembly for body assembly.

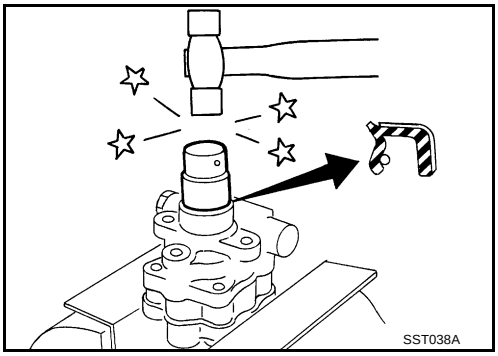
Cartridge Assembly Inspection

- Check cam ring, side plate, rotor and vane for damage. If any damage is found, replace cartridge assembly with new one.

Relief Valve Assembly Inspection

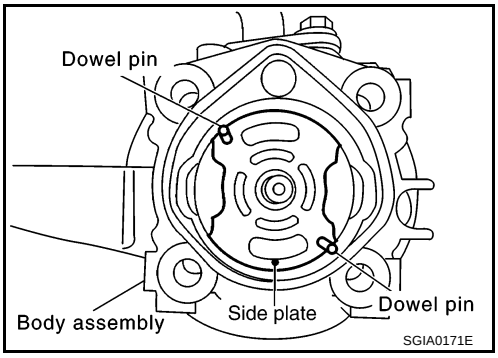
- Check relief valve assembly for damage. If any damage is found, replace it with new one.

Flow Control Valve Assembly Inspection



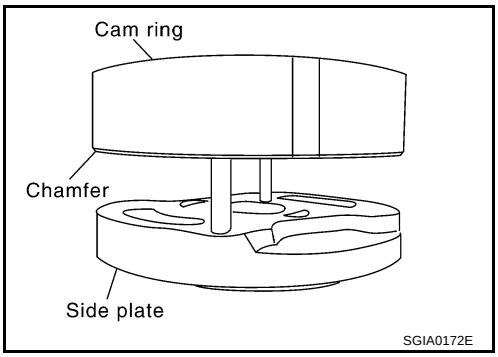
- Check flow control valve assembly for damage. If any damage is found, replace it with new one.

ASSEMBLY

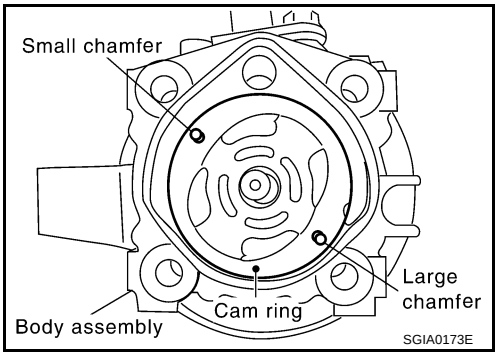


NOTE:
Fix oil pump in vise as occasion demands.

CAUTION:
When retaining drive shaft in a vise, always use copper or aluminium plates between vise and shaft.

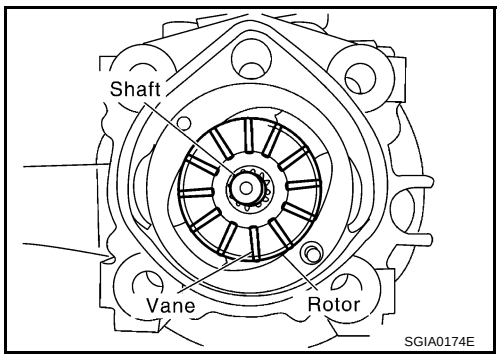


1. Apply a coat of Multi-purpose grease or equivalent to oil seal lip and to the circumference of oil seal. Using proper tool such as hand press machine, install it to the body assembly.
   NOTE:
   Do not reuse oil seal.
2. Install shaft kit to body assembly.
3. Apply recommended fluid to O-ring B and O-ring C, then install O-ring B and O-ring C to body assembly.
   NOTE:
   Do not reuse O-ring B and O-ring C.



4. Set dowel pin at the illustration position (The position is the same regardless of right or left direction), and install side plate to body assembly.

5. Install cam ring on side plate as follows;
   - Turn chamfered edge side of cam ring to side plate as shown in the figure.
   - Position large chamfered side of cam ring as shown in the figure.



6. Install rotor to shaft of shaft kit (rotor direction is the same regardless of the front and back).
7. Install vane to rotor (vane direction is the same regardless of inside and outside).
8. Install rotor snap ring to shaft of shaft kit.

   NOTE:
   - Do not reuse rotor snap ring.

   CAUTION:
   Be careful not to damage rotor and pulley shaft.

9. Apply recommended fluid to O-ring A, then install O-ring A to body assembly.

   NOTE:
   Do not reuse O-ring A.
10. Attach cover assembly to body assembly and tighten fixing bolts diagonally at the specified torque.
11. Install flow control valve assembly, relief valve assembly and flow control valve spring to body assembly.
12. Apply recommended fluid to O-ring D and install to plug, then tighten plug at the specified torque.

    NOTE:
    Do not reuse O-ring D.
13. Apply recommended fluid to O-ring E and install to suction connector assembly, then install suction connector to body assembly.

    NOTE:
    Do not reuse O-ring E.
14. Install bracket to body assembly, and tighten mounting bolts at the specified torque.

HYDRAULIC LINE

PFP:49721

Removal and Installation

NGS0000K

1. Reservoir tank
2. Reservoir tank bracket
3. Hose & tube assembly
4. Suction hose
5. Oil pressure sensor
6. Eye bolt
7. Oil cooler
8. Copper washer
9. Power steering oil pump
10. Steering gear assembly
11. Common bolt
12. Oil pump bracket
13. Clip

SERVICE DATA AND SPECIFICATIONS (SDS)

PRECAUTIONS

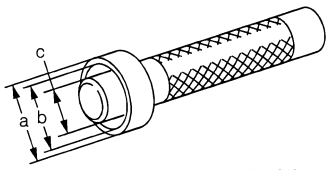
PFP:00001

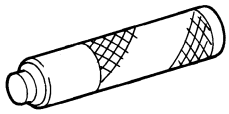
Caution

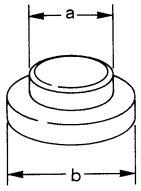
NDS0000T

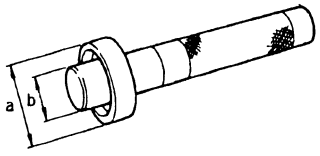
Observe the following precautions when disassembling and servicing drive shaft.

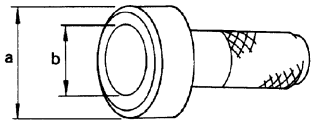
- Joint sub-assembly does not disassemble because it is non- overhaul parts.
- Perform work in a location which is as dust-free as possible.
- Before disassembling and servicing, clean the outside of parts.
- Prevention of the entry of foreign objects must be taken into account during disassembly of the service location.
- Disassembled parts must be carefully reassembled in the correct order. If work is interrupted, a clean cover must be placed over parts.
- Paper shop cloths must be used. Fabric shop cloths must not be used because of the danger of lint adhering to parts.
- Disassembled parts (except for rubber parts) should be cleaned with kerosene which shall be removed by blowing with air or wiping with paper shop cloths.

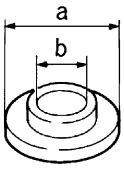








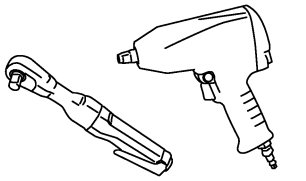




PREPARATION

PFP:00002

Special Service Tools



NDS0000U

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name		Description
ST33220000 (—) Drift a: 37 mm (1.46 in) dia. b: 31 mm (1.22 in) dia. c: 22 mm (0.87 in) dia.	 ZZA1046D	● Removing wheel hub ● Removing wheel bearing outer side inner race ● Inspection of wheel bearing rotating torque
ST33251000 (—)	 ZZA0982D	Installing wheel hub
ST35300000 (—) Drift a: 45 mm (1.77 in) dia. b: 59 mm (2.32 in) dia.	 ZZA0881D	● Installing wheel hub ● Inspection of wheel bearing rotating torque
KV40100900 (—) Drift a: 52 mm (2.05 in) dia. b: —	 ZZA0539D	Wheel bearing rotating torque inspection

WHEEL HUB

PFP:43202

On-Vehicle Inspection

NDS0000X

Make sure the mounting conditions (looseness, back lash) of each component and component status (wear, damage) are normal.

WHEEL BEARING INSPECTION

- Move wheel hub in the axial direction by hand. Make sure there is no looseness of wheel bearing.

  Axial end play : 0.05 mm (0.002 in) or less

- Rotate wheel hub and make sure there is no unusual noise or other irregular conditions. If there are any irregular conditions, replace wheel bearings.

Removal and Installation

NDS0000Y

COMPONENT

1. Drive shaft
2. Dust shield
3. Ball seat
4. Bushing
5. Cotter pin
6. Axle housing
7. Back plate
8. Anchor block
9. Wheel bearing
10. Wheel hub

Refer to GI-11, "Components" , for the symbols in the figure.

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove cotter pin. Then remove lock nut from drive shaft.
3. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-39, "REAR DISC BRAKE" .

   NOTE:
   Avoid depressing brake pedal while brake caliper is removed.
4. Remove disc rotor and remove parking cable and parking brake shoe from back plate. Refer to PB-4, "PARKING BRAKE CONTROL" , PB-5, "PARKING BRAKE SHOE" .
5. Remove fixing bolts and nuts in axle side of radius rod, front lower link with power tool.
6. Remove fixing bolt and nut in axle side of rear lower link with power tool. Then remove coil spring. Refer to RSU-15, "REAR LOWER LINK & COIL SPRING" .
7. Remove fixing bolt and nut in axle side of shock absorber with power tool.
8. Using a puller (suitable tool), remove axle from drive shaft.

   CAUTION:
   - **When removing axle, do not apply an excessive angle to drive shaft joint. Also be careful not to excessively extend slide joint.**

- **Do not allow drive shaft to hang down without support for counter shaft, wheel joints, and other parts.**

9. Remove suspension arm and cotter pin at axle, then loosen mounting nut.
10. Use a ball joint remover (suitable tool) to remove suspension arm from axle. Be careful not to damage ball joint boot.

CAUTION:
Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.

INSPECTION AFTER REMOVAL

Ball Joint Inspection

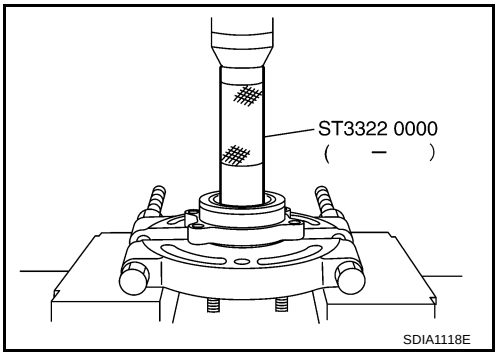
- Check for boot breakage, axial looseness, and torque of suspension arm ball joint. Refer to RSU-11, "SUSPENSION ARM" .

INSTALLATION

- Refer to RAX-6, "Removal and Installation" for tightening torque. Install in the reverse order of removal.

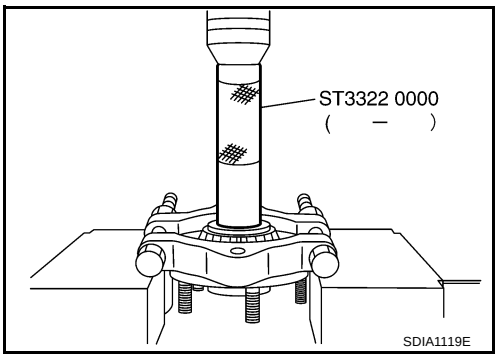
NOTE:
Refer to component parts location and do not reuse non-reusable parts.

Disassembly and Assembly



NDS0000Z

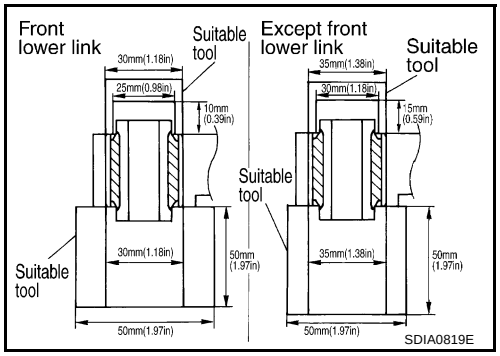
DISASSEMBLY



Wheel Bearing

CAUTION:
Do not disassemble if wheel bearing has no trouble.

1. Remove wheel bearing fixing bolts and anchor block fixing nuts, and remove wheel hub and bearing assembly, back plate and anchor block from axle.
2. Using a drift (SST) and a puller (suitable tool), press wheel hub out to remove from wheel bearing.



3. Using a drift (SST) and a puller (suitable tool), press wheel bearing outer side inner race out to remove from wheel hub.

Bushing

- Using a suitable drift, remove each bushing from axle.

INSPECTION AFTER DISASSEMBLY

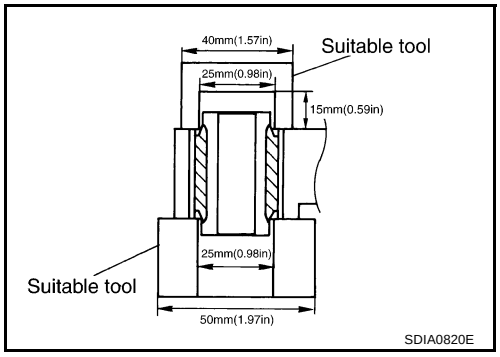
Check for deformity, cracks and damage of each parts, replace if necessary.

Wheel Hub

- Inspect wheel hub for deformation, cracks, and other damage. If any irregular conditions are found, replace wheel hub.

Axle

- Inspect axle for deformation, cracks, and other damage. If any irregular conditions are found, replace axle.



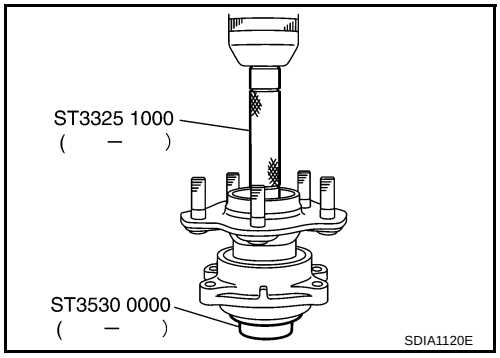
Back Plate

- Inspect back plate for deformation, cracks, and other damage. If any irregular conditions are found, replace back plate.

ASSEMBLY

Bushing

- Using a suitable drift to install each bushing onto axle.



Wheel Bearing

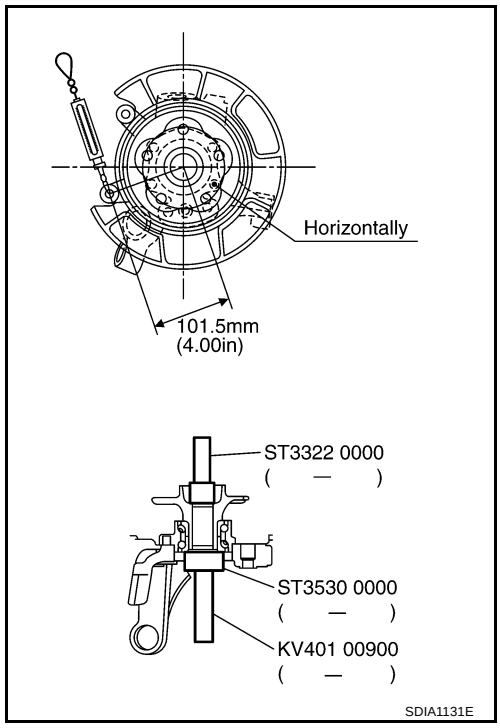
1. Press fit a wheel hub into wheel bearing with a drift (SST).

   CAUTION:

   - **Press fit a drift (SST) while holding it against wheel bearing inner side inner race.**
   - **Wheel bearing cannot be reused. Do not attempt to reuse it.**

   NOTE:
   Final press load guideline 49,033 N (5,000 kg, 11,000 lb)
2. Install back plate and wheel hub and bearing assembly.
3. Install anchor block onto axle.

INSPECTION AFTER ASSEMBLY



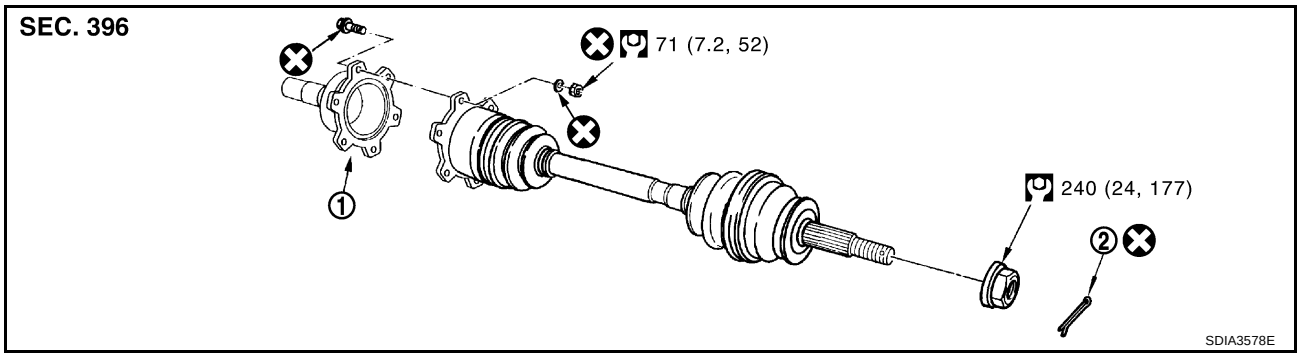
1. With wheel bearing pressed into axle housing, apply 49,033 N (5,000 kg, 11,000 lb) to wheel hub and rotate both clockwise and counterclockwise 10 times to minimize resistance.
2. Attach spring balance in the position shown in illustration and pull at a rate of 10 ± 2 rpm to measure rotating torque.

Rotating torque:

Less than 1.88 N·m (0.19 kg-m, 17 in-lb)

Spring balance reading:

Less than 18.5 N (1.89 kg, 4.16 lb)



REAR DRIVE SHAFT

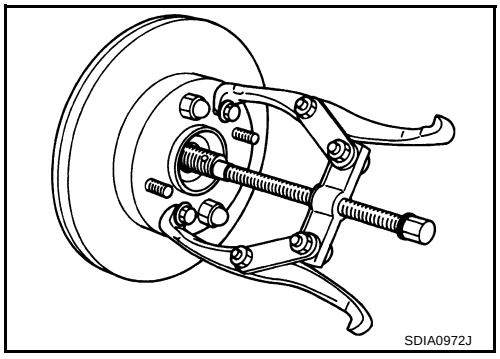
PFP:39600

Removal and Installation

NDS00010

COMPONENTS

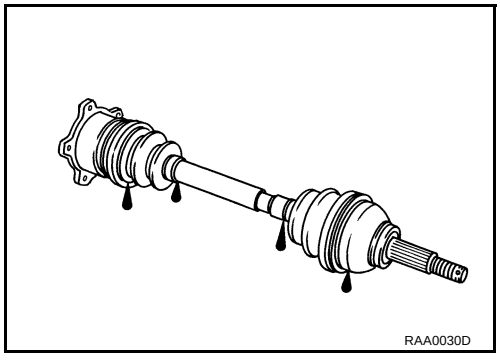
1. Side flange
2. Cotter pin



Refer to GI-11, "Components" , for the symbols in the figure.

REMOVAL

1. Remove tires from vehicle with power tool.
2. Remove cotter pin. Then remove lock nut from drive shaft.
3. Remove stabilizer connecting rod mounting bracket bolt and free stabilizer connecting rod.
4. Remove fixing nuts and bolts between side flange and drive shaft with power tool.
5. Using a puller (suitable tool), remove drive shaft from axle.



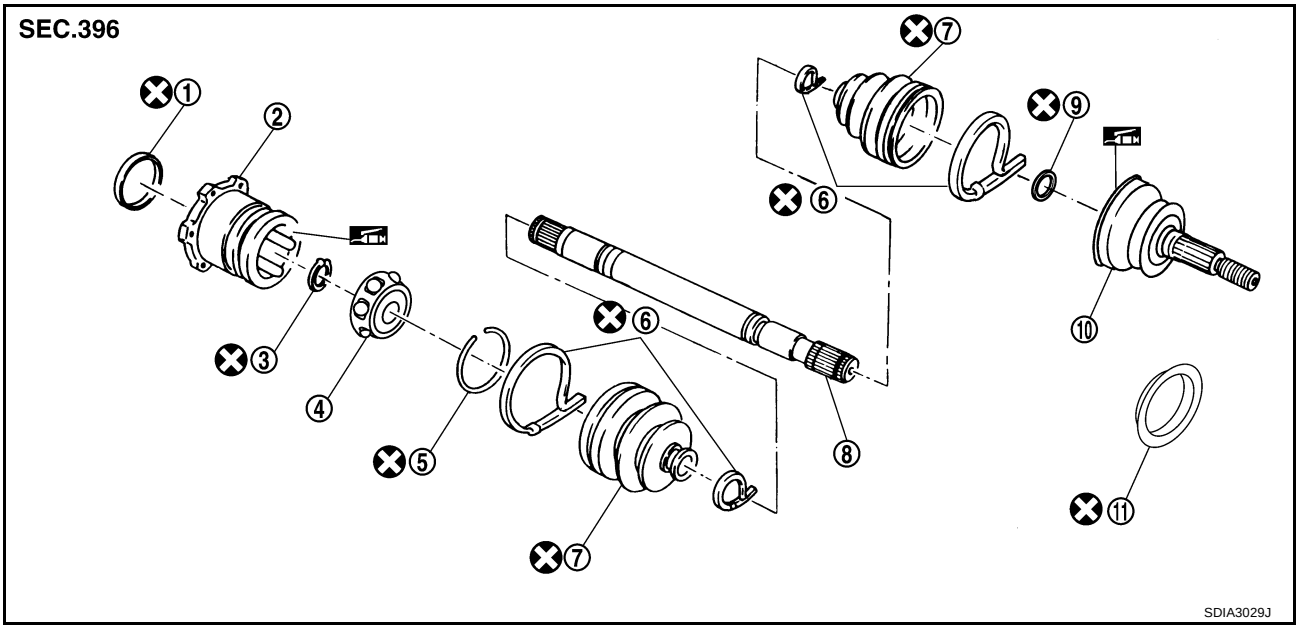
CAUTION:

- **When removing drive shaft, do not apply an excessive angle to drive shaft joint. Also be careful not to excessively extend slide joint.**

INSPECTION AFTER REMOVAL

- Move joint up/down, left/right, and in the axial direction. Check for any rough movement or significant looseness.
- Check boot for cracks or other damage, and also for grease leakage.
- If a trouble is found, disassemble drive shaft, and then replace with new one.

INSTALLATION



- Refer to RAX-10, "Removal and Installation" for tightening torque. Install in the reverse order of removal.

NOTE:
Refer to component parts location and do not reuse non-reusable parts.

Disassembly and Assembly

NDS00011

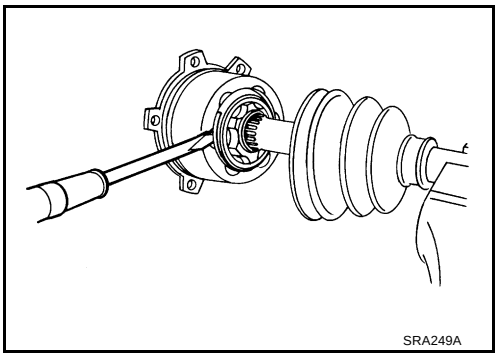
COMPONENTS

1. Plug	2. Housing	3. Snap ring
4. Ball cage/Steel ball/Inner race assembly	5. Stopper ring	6. Boot band
7. Boot	8. Shaft	9. Circular clip
10. Joint sub-assembly	11. Dust shield	

Refer to GI-11, "Components" and the followings for the symbols in the figure.

: Fill NISSAN genuine grease or equivalent.

DISASSEMBLY



Final Drive Side

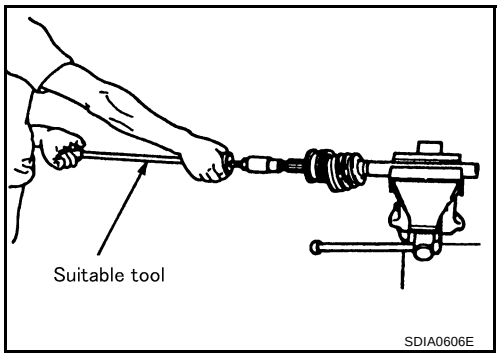
1. Press shaft in a vice.

   CAUTION:

   When retaining drive shaft in a vice, always use copper or aluminum plates between vise and shaft.

2. Remove boot bands.
3. If plug needs to be removed, move boot to wheel side, and drive it out with a plastic hammer.
4. Remove stopper ring with a flat-bladed screwdriver, and pull out housing.

5. Remove snap ring, then remove ball cage/steel ball/inner race assembly from shaft.
6. Remove boot from shaft.
7. Remove old grease on housing with paper towels.



SFA514A

Wheel Side

1. Place shaft in a vice.

   CAUTION:
   When retaining drive shaft in a vice, always use copper or aluminum plates between vise and shaft.
2. Remove boot bands. Then remove boot from joint sub-assembly.
3. Screw a drive shaft puller 30 mm (1.18 in) or more into threaded part of joint sub-assembly. Pull joint sub-assembly out of shaft.

   CAUTION:
   - **If joint sub-assembly cannot be removed after five or more unsuccessful attempts, replace shaft and joint sub assembly as a set.**
   - **Align sliding hammer and drive shaft and remove them by pulling directly.**
4. Remove boot from shaft.
5. Remove circular clip from shaft.
6. While rotating ball cage, remove old grease on joint sub-assembly with paper towels.

SDIA0606E

INSPECTION AFTER DISASSEMBLY

Shaft

- Replace shaft if there is any runout, cracking, or other damage.

Joint sub-assembly (Wheel Side)

- Make sure there is no rough rotation or unusual axial looseness.
- Make sure there is no foreign material inside joint.
- Check joint sub-assembly for compression scars, cracks, fractures.

  CAUTION:
  If there are any irregular conditions of joint sub-assembly components, replace the entire joint sub-assembly.

Housing (Final Drive Side)

- Make sure there are compression scars, cracks, factures or unusual wear of ball rolling surface.
- Make sure there is no damage to shaft screws.
- Make sure there is no deformation of boot installation parts.

Ball Cage

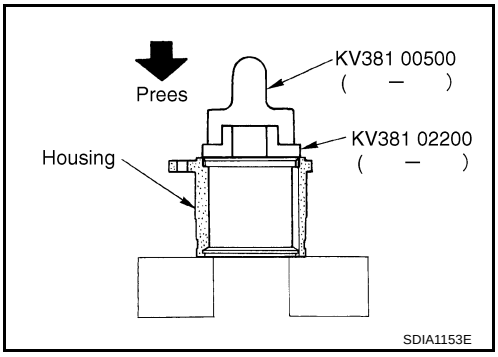
- Make sure there are compression scars, cracks, factures of sliding surface.

Steel Ball

- Make sure there are compression scars, cracks, factures or unusual wear.

Inner Race

- Check ball sliding surface for compression scars, cracks or fractures.
- Make sure there is no damage to serrated part.



CAUTION:
If there are any irregular conditions in the component, replace with a new set of housing, ball cage, steel ball and inner race.

ASSEMBLY

Final Drive Side

1. If plug has been removed, use a drift (SST) to press in a new one.

   NOTE:
   Discard old plug; replace with new one.

2. Wind serrated part of shaft with tape. Install boot band and boot to shaft. Be careful not to damage boot.

   NOTE:
   Discard old boot band and boot; replace with new one.

3. Remove protective tape wound around serrated part of shaft.

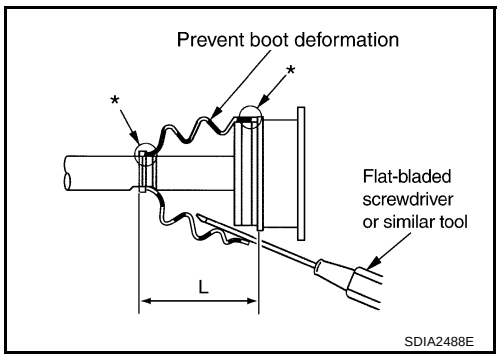
4. Install ball cage/steel ball/inner race assembly to shaft, and secure them tightly with a snap ring.

   NOTE:
   Discard old snap ring; replace with new one.

5. Insert the amount grease (NISSAN genuine grease or equivalent) onto housing (* point) to the quantity mentioned below, and install it to shaft.

   Grease amount : 124 – 134 g (4.37 – 4.73 oz)

6. Install stopper ring to housing.
7. After installed, pull shaft to check engagement between joint sub-assembly and stopper ring.

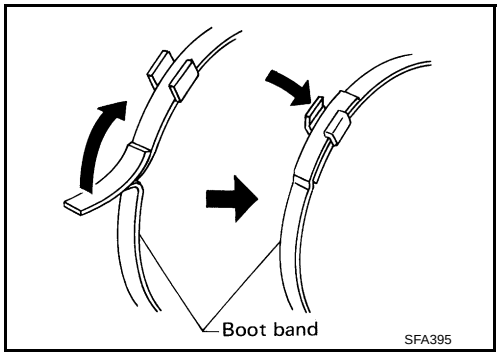


8. Install boot securely into grooves (indicated by * marks) shown in the figure.

   CAUTION:
   If there is grease on boot mounting surfaces (indicated by* marks) of shaft and housing, boot may come off. Remove all grease from surfaces.

9. Make sure boot installation length “L” is the length indicated below. Insert a flat-bladed screwdriver or similar tool into smaller side of boot. Bleed air from boot to prevent boot deformation.

   Boot installation Length “L ” : 93.9 mm (3.697 in)



CAUTION:

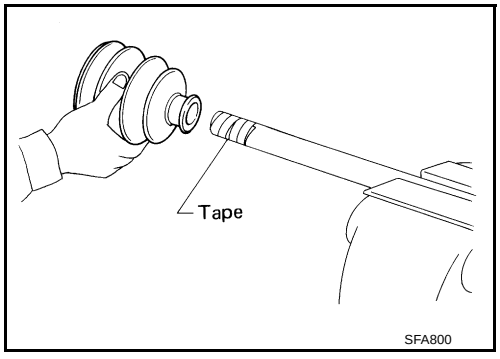
- **Boot may break if boot installation length is less than standard value.**
- **Take care not to touch the tip of screwdriver to inside of boot.**

10. Secure big and small ends of boot with new boot bands as shown in the figure.

    NOTE:
    Discard old boot bands; replace with new ones.

11. After installing housing and shaft, rotate boot to check whether or not the actual position is correct. If boot position is not correct, secure boot with new boot band again.

Wheel Side

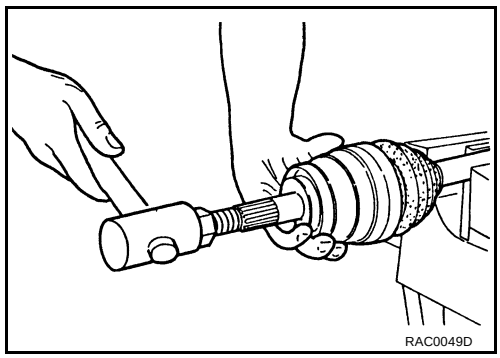


1. Insert the amount grease (NISSAN genuine grease or equivalent) into joint sub-assembly serration hole until grease begins to ooze from ball groove and serration hole. After insert grease, use a shop cloth to wipe off old grease that has oozed out.

2. Wind serrated part of shaft with tape. Install boot band and boot to shaft. Be careful not to damage boot.

   NOTE:
   Discard old boot band and boot; replace with each new one.

3. Remove protective tape wound around serrated part of shaft.

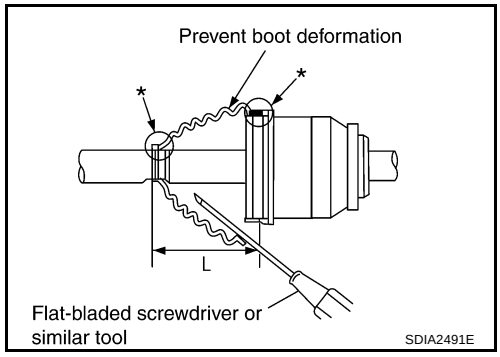


4. Attach circular clip to shaft. At this time, circular clip must fit securely into shaft groove. Attach nut to joint sub-assembly. Use a wooden hammer to press-fit.

   NOTE:
   Discard old circular clip; replace with new one.

5. Insert the amount grease (NISSAN genuine grease or equivalent) listed below into housing from large end of boot.

   Grease amount : 86 – 96 g (3.03 – 3.39 oz)



6. Install boot securely into grooves (indicated by * marks) shown in the figure.

   CAUTION:
   If there is grease on boot mounting surfaces (indicated by* marks) of shaft and housing, boot may come off. Remove all grease from surfaces.

7. Make sure boot installation length “L” is the length indicated below. Insert a flat-bladed screwdriver or similar tool into smaller side of boot. Bleed air from boot to prevent boot deformation.

   Boot installation length “L” : 97.0 mm (3.819 in)

   CAUTION:
   - **Boot may brake if boot installation length is less than standard value.**
   - **Be careful that screwdriver tip does not contact inside surface of boot.**

8. Secure big and small ends of boot with new boot bands as shown in the figure.

   NOTE:
   Discard old boot bands; replace with new ones.

9. After installing joint sub-assembly and shaft, rotate boot to check whether or not the actual position is correct. If boot position is not correct, secure boot with new boot bands again.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NIS00063

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NIS00064

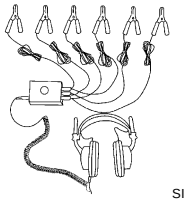
Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions

NIS00065

- Disconnect both battery cables in advance.
- Never tamper with or force air bag lid open, as this may adversely affect air bag performance.
- Be careful not to scratch pad and other parts.
- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.
Do not use any organic solvent, such as thinner or benzine.



PREPARATION

Engine ear  SIIA0995E	Locating the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS00298

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to RF-9, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to RF-7, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS00299

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint
   These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

   CAUTION:
   Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

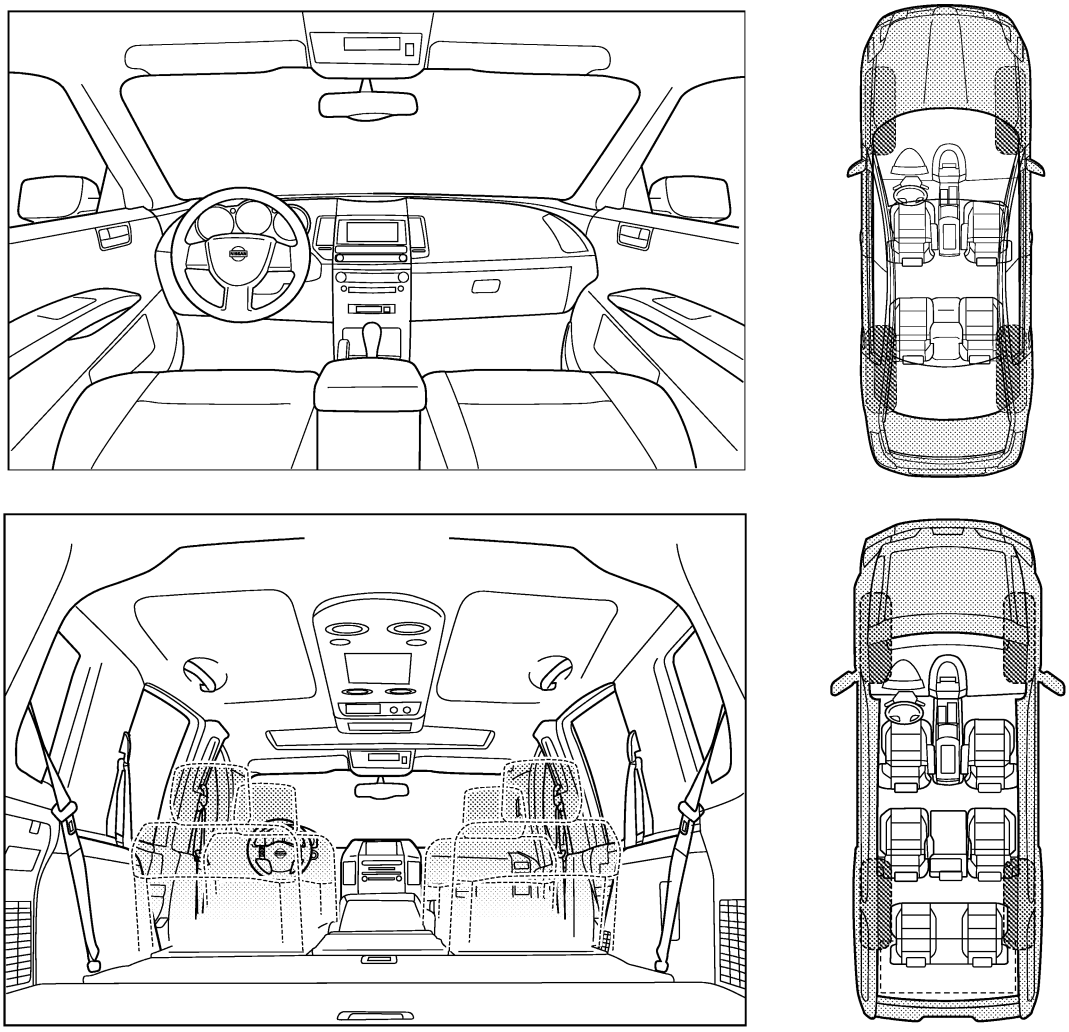
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



Diagnostic Worksheet

NIS0029A

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

Component Parts and Harness Connector Location

NIS0006B

Following Parts Are Built Into 5th Bow Auto Closure Assembly.

- 5th bow half-latch switch built in 5th bow lock assembly in storage lid.
- 5th bow full-latch switch built in 5th bow lock assembly in storage lid.
- 5th bow ending switch built in 5th bow lock assembly in storage lid.
- 5th bow unlock actuator.
- 5th bow closure motor.

NOTE:
Always replace following switches as a 5th bow lock assembly.

- 5th bow half-latch switch
- 5th bow full-latch switch
- 5th bow ending switch.

5th bow full open detection switch and 5th bow full close detection switch are built into 5th bow switch assembly located at plate rail RR. Replace above switches as a plate rail RR.

System Description

NIS0006C

An electronic soft top open/close system has been adopted that allows the soft top to be opened or closed using the soft top switch.
The following parts operate, linked with the operation of the soft top.

- When the soft top begins to operate, the passenger seat tilts forward. When operation is completed, it returns to its original position.
  (It does not move when the seat cancel switch is ON.)
- When the soft top begins to operate, both power windows activate to the fully-open position.
  (They do not activate to the fully-closed position after operation is completed.)
  Moreover, power window cannot be operated while soft top is operating.

When the soft top switch is released, soft top operation stops.

CONDITIONS FOR OPERATION

Operation is avairable when all of the conditions below are satisfied.

- Ignition switch is ON.
- The brake pedal is ON.
- Vehicle speed is 4 km/h (2 MPH) or less.
- Battery voltage is approximately 10 V or more.

CAUTION:
Run the engine when operating or inspecting the soft top to prevent battery dies.

CONDITIONS FOR STOPPING OPERATION

Operation of the soft top stops when the conditions below are satisfied while the soft top is operating.

- Any of the above operation conditions is no longer satisfied.
- The passenger side power seat is operated. (It does not move when seat cancel switch is ON.)

OUTLINE OF OPERATION

Refer to the illustrations for the positions of the soft top, and the conditions of switch and actuator operation.

OPERATION: FULL CLOSE → FULL OPEN

Refer to RF-19, "State Chart" .

- CONDITION: FULL CLOSE

Item	Condition
5th bow half-latch switch	: OFF
5th bow full-latch switch	: OFF
5th bow ending switch	: OFF
5th bow full open detection switch	: OFF
5th bow full close detection switch	: OFF
Storage lid full open detection switch	: OFF
Storage lid full close detection switch LH	: OFF
Storage lid full close detection switch RH	: OFF
Roof full open detection switch	: OFF
Roof full close detection switch	: OFF
Body interference prevention switch	: OFF
Roll bar interference prevention switch	: OFF

- CONDITION: OP 1
  When the soft top switch is pushed to OPEN, the indicator lamp illuminates, windows activate to the fully-open position and the passenger seat tilts forward by approximately 6 degrees by power window down request signal. When passenger seat tilts forward by approximately 6 degrees, seat back position signal is turned ON.

Item	Condition
Soft top switch	: OPEN (Until the operation ends)
Indicator lamp	: ON
Power window down request signal	: ON
Seat back position signal	: OFF → ON

- CONDITION: OP 2
  The 5th bow unlock actuator operates, releasing the 5th bow lock.

Item	Condition
5th bow unlock actuator	: ON

- CONDITION: OP 3
  The 5th bow actuator moves the 5th bow up.

Item	Condition
5th bow half-latch switch	: OFF → ON
5th bow actuator	: UP
5th bow unlock actuator	: ON → OFF

- CONDITION: OP 4
  The 5th bow is rising.

Item	Condition
5th bow actuator	: UP
5th bow full close detection switch	: OFF → ON
5th bow closure motor	: OPEN → STOP
5th bow full-latch switch	: OFF → ON
5th bow ending switch	: OFF → ON

- CONDITION: OP 5
  The 5th bow stops in the fully-open position. The storage lid unlock actuator operates, releasing the storage lid lock.

Item	Condition
5th bow full open detection switch	: OFF → ON
5th bow actuator	: UP → STOP
Storage lid unlock actuator (LH and RH)	: OFF→ON
Storage lid full close detection switch (RH)	: OFF → ON

- CONDITION: OP 6
  The storage lid actuator operates, raising the storage lid.

Item	Condition
Storage lid full close detection switch (LH)	: OFF → ON
Storage lid actuator (LH and RH)	: OPEN
Storage lid unlock actuator (LH and RH)	: ON → OFF

- CONDITION: OP 7
  The storage lid stops in the fully-open position. The 5th bow actuator moves the 5th bow down.

Item	Condition
Storage lid full open detection switch	: OFF → ON
Storage lid actuator (LH and RH)	: OPEN → STOP
5th bow actuator	: DOWN
5th bow full open detection switch	: ON → OFF

- CONDITION: OP 8
  The 5th bow actuator stops in the fully-closed position. The roof actuator operates (OPEN operation), opening the roof.

Item	Condition
5th bow full close detection switch	: ON → OFF
5th bow actuator	: DOWN → STOP
Roof actuator (LH and RH)	: OPEN
Roof full close detection switch	: OFF → ON

- CONDITION: OP 9
  While the roof is opening, the 5th bow actuator moves the 5th bow up.

Item	Condition
Roof actuator (LH and RH)	: OPEN
5th bow actuator	: UP
5th bow full close detection switch	: OFF → ON
Roll bar interference prevention switch	: OFF → ON

- CONDITION: OP 10
  While the roof is opening, the 5th bow stops in the fully-open position.

Item	Condition
Roof actuator (LH and RH)	: OPEN
5th bow full open detection switch	: OFF → ON
5th bow actuator	: UP → STOP
Body interference prevention switch	: OFF → ON

- CONDITION: OP 11
  The roof is stored and stops motion. The storage lid actuator operates (DOWN operation) to lower the storage lid.
  The passenger seat also returns to its original position.

Item	Condition
Roof full open detection switch	: OFF → ON
Roof actuator (LH and RH)	: OPEN → STOP
Storage lid actuator (LH and RH)	: CLOSE
Storage lid full open detection switch	: ON → OFF
Storage lid full close detection switch (LH)	: ON → OFF
Power window request signal	: OFF

- CONDITION: OP 12
  At the fully-closed position, the storage lid inverts and stops. The passenger seat tilts back. Opening operation is completed, and the indicator lamp turns OFF.

Item	Condition
Storage lid full close detection switch (RH)	: ON → OFF
Storage lid actuator (LH and RH)	: CLOSE → OPEN → STOP
Indicator lamp	: ON → OFF

OPERATION: FULL OPEN → FULL CLOSE

Refer to RF-21, "State Chart" .

- CONDITION: FULL OPEN

Item	Condition
5th bow half-latch switch	: ON
5th bow full-latch switch	: ON
5th bow ending switch	: ON
5th bow full open detection switch	: ON
5th bow full close detection switch	: ON
Storage lid full open detection switch	: OFF
Storage lid full close detection switch LH	: OFF
Storage lid full close detection switch RH	: OFF
Roof full open detection switch	: ON
Roof full close detection switch	: ON
Body interference prevention switch	: ON
Roll bar interference prevention switch	: ON

- CONDITION: CL 1
  When the soft top switch is pressed to the CLOSE side, the indicator lamp illuminates, storage lid unlock actuator also operates, releasing the storage lid lock.

Item	Condition
Soft top switch	: OLOSE (Until the operation ends)
Indicator lamp	: ON
Storage lid unlock actuator	: ON
Storage lid full close detection switch (RH)	: OFF → ON

- CONDITION: CL 2
  Windows activate to the fully-open position and the passenger seat tilts forward by approximately 6 degrees by power window down request signal. Storage lid actuator operates to raise the storage lid. When passenger seat tilts forward by approximately 6 degrees, seat back position signal is turned ON.

Item	Condition
Storage lid full close detection switch (LH)	: OFF → ON
Storage lid actuator (LH and RH)	: UP
Power window down request signal	: ON
Storage lid unlock actuator	: ON → OFF
Seat back position signal	: OFF → ON

- CONDITION: CL 3
  The storage lid stops at the fully-open position. The roof actuator operates (CLOSE operation) to close the roof.

Item	Condition
Storage lid full open detection switch	: OFF → ON
Storage lid actuator (LH and RH)	: OPEN → STOP
Roof actuator (LH and RH)	: CLOSE
Roof full open detection switch	: ON → OFF
Body interference prevention switch	: ON → OFF

- CONDITION: CL 4
  While the roof is closing, the 5th bow actuator operates (DOWN operation) to lower the 5th bow.

Item	Condition
Roof actuator (LH and RH)	: CLOSE
5th bow actuator	: DOWN
5th bow full open detection switch	: ON → OFF

- CONDITOIN: CL 5
  The roof is closing, and 5th bow is lowering.

Item	Condition
Roof actuator (LH and RH)	: CLOSE
5th bow full close detection switch	: ON → OFF
5th bow actuator	: DOWN → STOP
Roll bar interference prevention switch	: ON → OFF

- CONDITION: CL 6
  The roof stops at the fully-closed position. The 5th bow actuator inverts, raising the 5th bow.

Item	Condition
Roof full close detection switch	: ON → OFF
Roof actuator (LH and RH)	: CLOSE → STOP
5th bow actuator	: UP
5th bow full close detection switch	: OFF → ON

- CONDITON: CL 7
  The 5th bow stops in the fully-open position. The storage lid actuator operates (DOWN operation) lower the storage lid.

Item	Condition
5th bow full open detection switch	: OFF → ON
5th bow actuator	: UP → STOP
Storage lid actuator (LH and RH)	: CLOSE
Storage lid full open detection switch	: ON → OFF
Storage lid full close detection switch (LH)	: ON → OFF

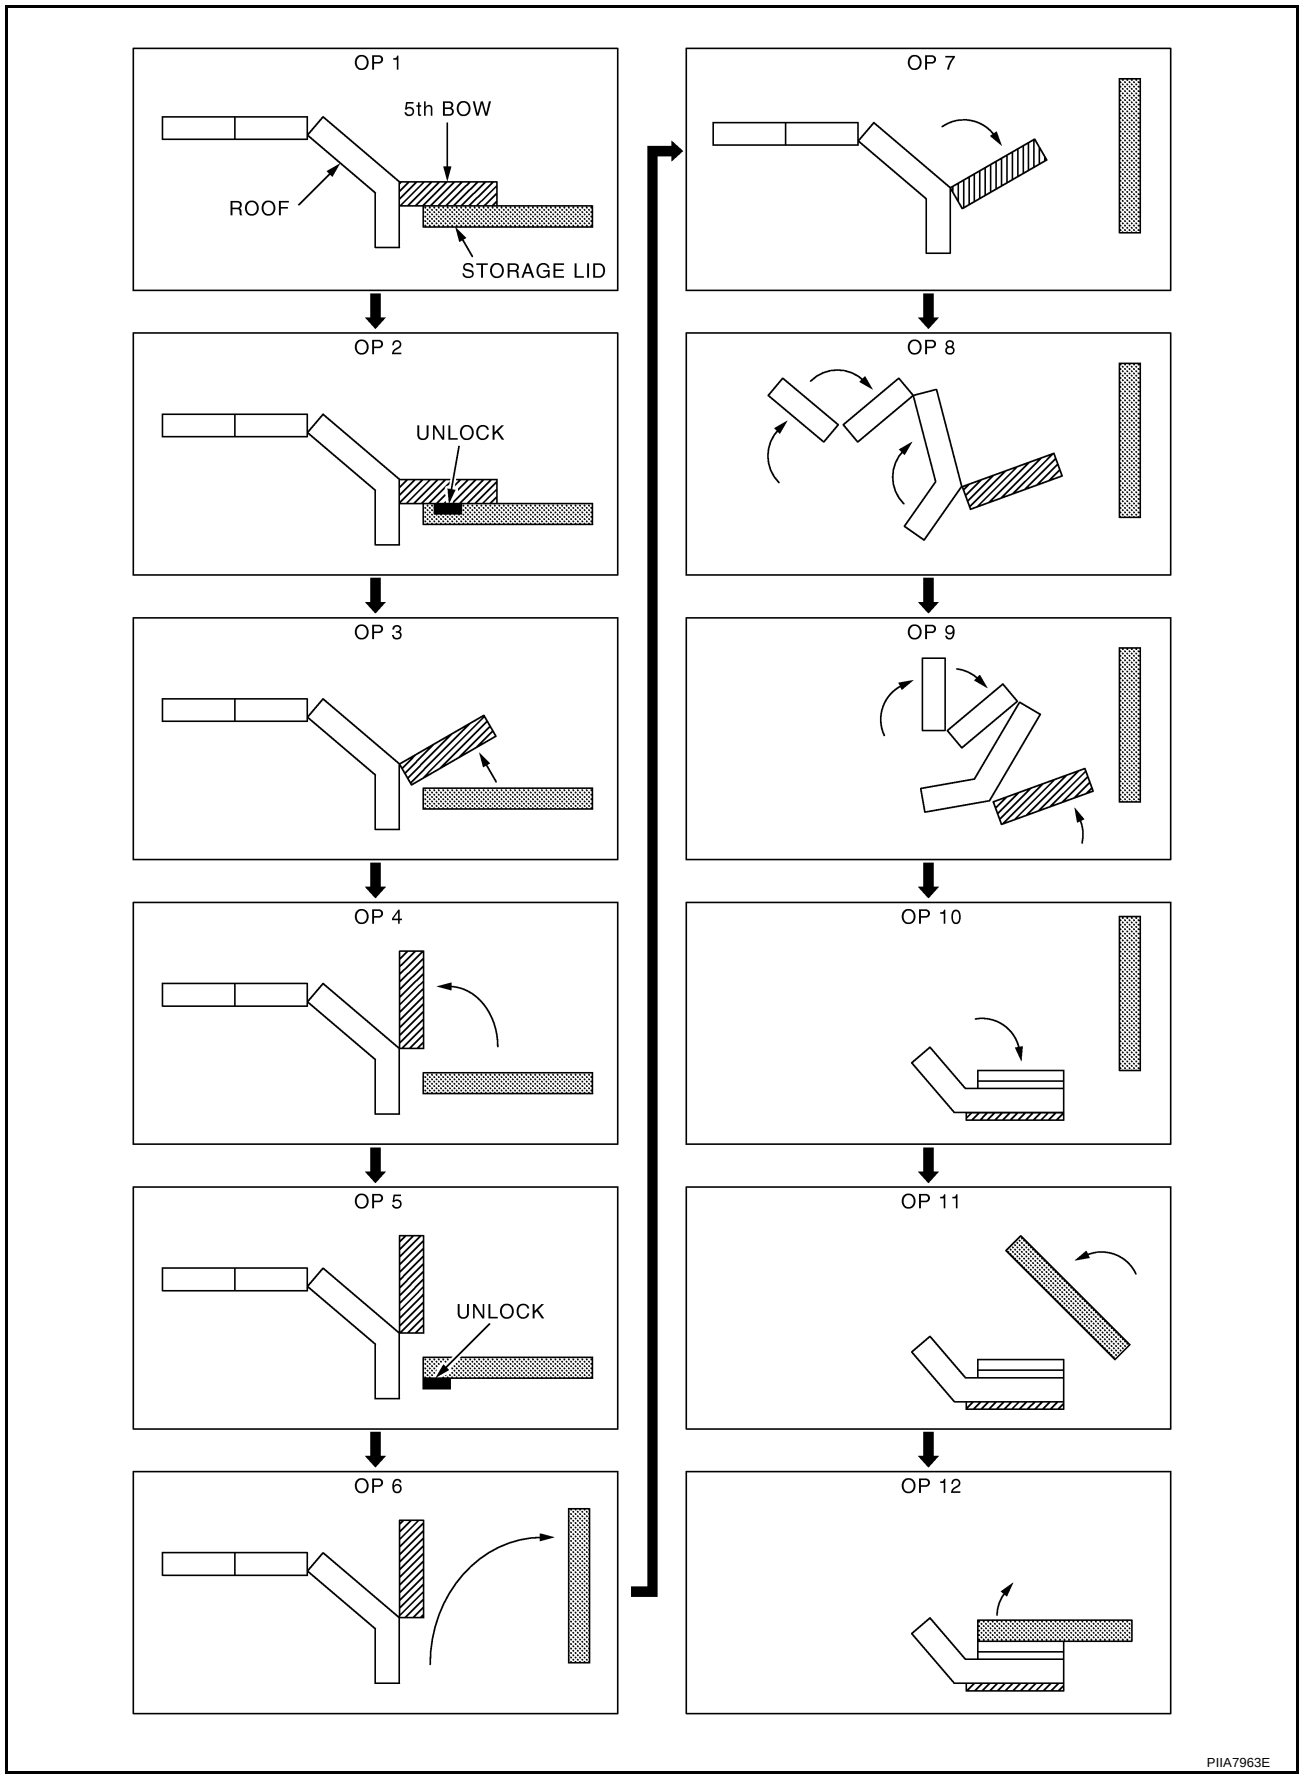
- CONDITION: CL 8
  The storage lid inverts and stops at the fully-closed position. The 5th bow actuator operates (DOWN operation) to lower the 5th bow.

Item	Condition
Storage lid full close detection switch (RH)	: ON → OFF
Storage lid actuator	: CLOSE → OPEN → STOP
5th bow actuator	: DOWN
5th bow full open detection switch	: ON → OFF

- CONDITION: CL 9
  The 5th bow is lowering.

Item	Condition
5th bow actuator	: DOWN
5th bow full close detection switch	: ON → OFF

- CONDITION: CL 10
  5th bow auto closure operates. The passenger seat tilts back. Closing operation is completed, soft top front lock is locked, and the indicator lamp turns OFF. The passenger seat also returns to its original position.



Item	Condition
5th bow actuator	: DOWN → STOP
5th bow half-latch switch	: ON → OFF
5th bow full-latch switch	: ON → OFF
5th bow ending switch	: ON → OFF
5th bow closure motor	: CLOSE → STOP
Power window request signal	: OFF
Indicator lamp	: ON → OFF

OPEN → CLOSE

State Chart

Each Switch and Actuator Signal Chart

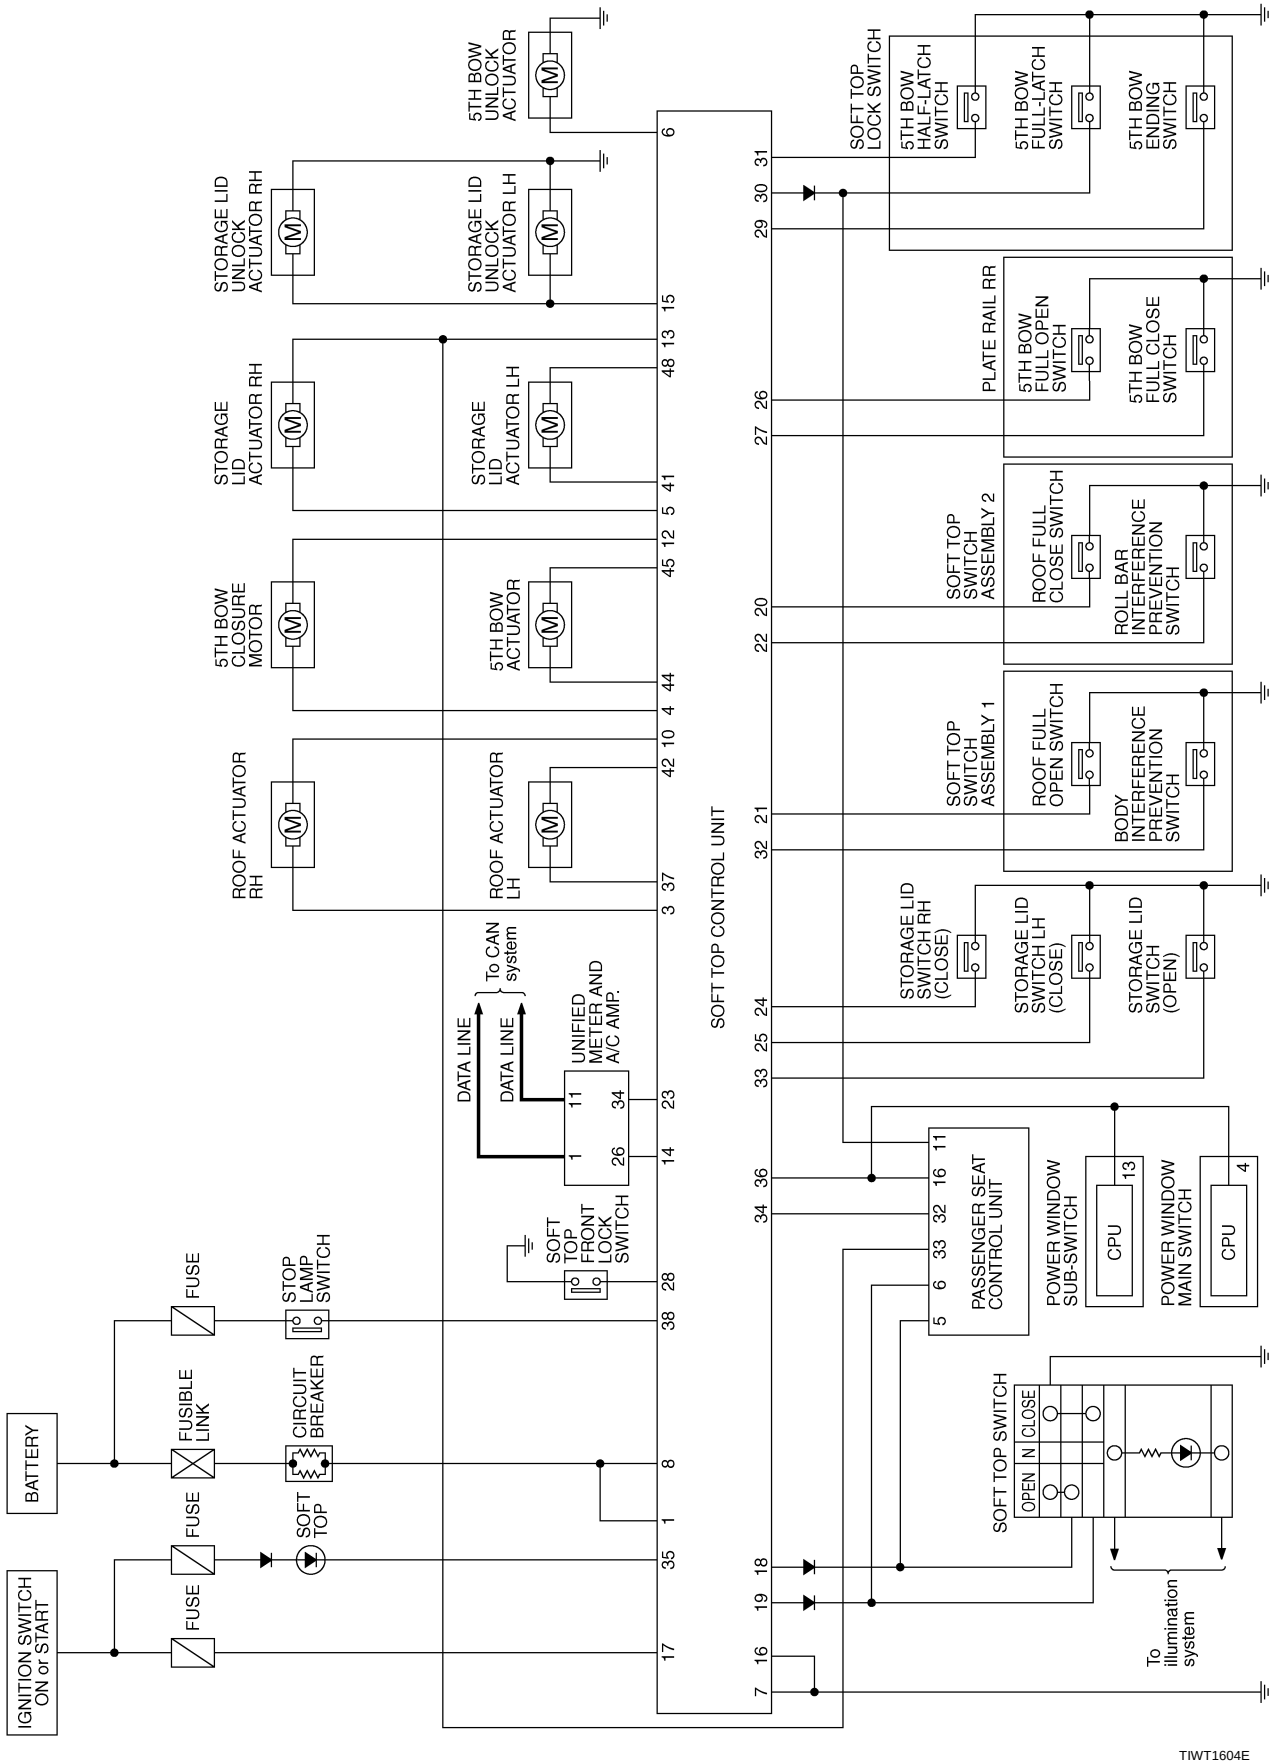
Indicator Lamp

NIS0006E

The indicator lights, turns off or blinks according to the operating state.

Turns OFF : The open / close operation stops or completes or any switch is malfunctioning

Lights : The soft top is operating or the operation stops on the way



Blinks : The soft top cannot be operated, do not response or front lock is unlocked at the fully closed position

State of roof		The operation stops when the soft top is,		Operation
		full open or full close	in position on the way	
Operational condition		Turning off	Lighting	Lighting
Out of operational condition	When battery voltage decreases remarkably	Turning off	Lighting	Lighting
	Brake pedal is not depressed	Turning off	Lighting	Lighting
	Vehicle speed is 5 km/h (3 MPH) or more	Turning off	Lighting	Lighting
	Ignition switch: OFF	Turning off	Turning off*	Turning off*
Malfunction of	any switch of the system	Turning off	Lighting	Blinking
	soft top control unit	Blinking	Blinking	Blinking
	vehicle speed signal	Blinking	Blinking	Blinking

*: The soft top operates for approximately 30 seconds after turn ignition switch OFF.

				Other than above	0

Work Flow

NIS0006I

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to RF-12, "System Description" .
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to RF-37, "Trouble Diagnosis Chart by Symptom" .
4. Does soft top system operate normally? If Yes, GO TO 5. If No, GO TO 3.
5. INSPECTION END.

Trouble Diagnosis Chart by Symptom (CLOSE → OPEN)

NIS0006J

The operation chart for roof position. Refer to RF-19, "State Chart" .

Symptom	Diagnostic procedure and repair order	Roof position	Refer to page
Roof does not operate	1. Check soft top control unit power supply	OP1	RF-40
	2. Check soft top switch (Open)	OP1	RF-40
	3. Check operation permission condition	OP1	RF-78
	4. Check each switch condition (Open operate)	Full close	RF-80
	5. Check seat back position signal	OP1	RF-83
	6. Check 5th bow unlock actuator (Open operate)	OP2	RF-44
	7. Check 5th bow half-latch switch (Open operate)	OP2	RF-44
	8. Check 5th bow actuator (Open operate)	OP3	RF-46
5th bow operation stops at full open position	1. Check 5th bow full close detection switch (Open operate)	OP4	RF-46
	2. Check 5th bow full open detection switch (Open operate)	OP5	RF-48
	3. Check storage lid unlock actuator (Open operate)	OP5	RF-49
	4. Check storage lid full close detection switch (LH and RH) (Open operate)	OP5.6	RF-50
	5. Check storage lid actuator (Open operate)	OP6	RF-52
Storage lid operation stops at full open position	Check storage lid full open detection switch (Open operate)	OP7	RF-53
Roof does not operate	Check roof actuator (Open operate)	OP8	RF-55
Roof stops on the way	Check roll bar interference prevention switch (Open operate)	OP8	RF-56
Storage lid operation stops at full open position after the roof is stored.	1. Check body interference prevention switch (Open operate)	OP10	RF-57
	2. Check roof full open detection switch	OP10	RF-58
Passenger side seat back does not operate.	1. Check passenger side seat cancel switch	OP1	SE-52
	2. Check passenger side seat operate signal 1	OP1	RF-82
Passenger side seat bock does not return to former state	Check passenger side seat operate signal 2	OP10	RF-83
Power window down does not operate.	Check power window harness	OP1	RF-82

Symptom	Diagnostic procedure and repair order	Roof position	Refer to page
Both power window down and passenger seat are not operated.	Check power window down request signal	OP1	RF-81
Indicator lamp does not light. (soft top operates properly)	Check indicator lamp circuit	—	RF-85
Indicator lamp blinks when IGN SW: OFF → ON is done.	Replace soft top control unit	—	RF-86
Indicator lamp blinks when beginning to run.	Check speed signal	—	RF-84

(OPEN → CLOSE)

The operation chart for roof position. Refer to RF-21, "State Chart" .

Symptom	Diagnostic procedure and repair order	Roof position	Refer to page
Roof does not operate	1. Check soft top control unit power supply	CL1	RF-40
	2. Check soft top switch (Close)	CL1	RF-42
	3. Check operation permission condition	CL1	RF-78
	4. Check each switch condition (Close operate)	Full open	RF-81
	5. Check seat back position signal	CL1	RF-83
	6. Check storage lid unlock actuator (Close operate)	CL1	RF-59
	7. Check storage lid full close detection switch (LH and RH) (Close operate)	CL1.2	RF-60
	8. Check storage lid actuator (Close operate)	CL2	RF-62
Storage lid operation stops at full open position	1. Check roof actuator (Close operate)	CL2	RF-66
	2. Check body interference prevention switch (Close operate)	CL3	RF-65
Roof stops on the way	1. Check storage lid full open detection switch (Close operate)	CL3	RF-63
	2. Check roof full close detection switch (Close operate)	CL5	RF-67
	3. Check 5th bow actuator (Close operate)	CL5	RF-69
Operation stops after 5th bow operates down	Check 5th bow full close detection switch (Close operate)	CL5	RF-69
Operation stops after 5th bow operates up	Check 5th bow full open detection switch (Close operate)	CL6	RF-71
Auto closure of 5th bow does not operate.	1. Check 5th bow half-latch switch	CL10	RF-72
	2. Check 5th bow full-latch switch	CL10	RF-73
	3. Check 5th bow ending switch	CL10	RF-75
	4. Check 5th bow closure motor	CL10	RF-76
Passenger side seat back does not operate.	1. Check passenger side seat cancel switch	CL1	SE-52
	2. Check passenger side seat operate signal 1	CL1	RF-82
Passenger side seat back does not return to former state	Check passenger side seat operate signal 3	CL10	RF-83
Power window down does not operate.	Check power window harness	CL1	RF-82
Both power window down and passenger seat are not operated.	Check power window down request signal	CL1	RF-81
Indicator lamp does not light. (soft top operates properly)	Check indicator lamp circuit	—	RF-85

Symptom	Diagnostic procedure and repair order	Roof position	Refer to page
Indicator lamp blinks when IGN SW: OFF → ON is done.	Replace soft top control unit	—	RF-86
Indicator lamp blinks when beginning to run.	Check speed signal	—	RF-84
Indicator lamp blinks when soft top front lock is unlock at the fully closed position.	Check soft top front lock switch	Full close	RF-78

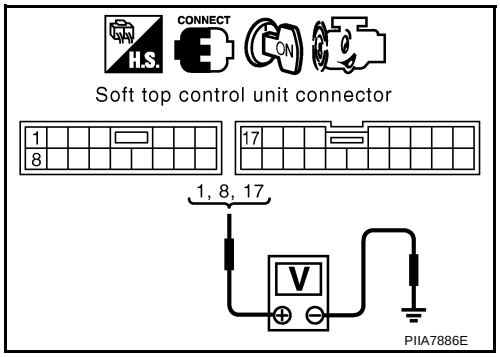
Check Soft Top Control Unit Power Supply (OP, CL)

NIS0006K

1. CHECK FUSE

- Check 10A fuse [No.12, located in the fuse block (J/B)]
- Check 40A fusible link (letter **G** located in the fuse and fusible link box.)

NOTE:
Refer to RF-11, "Component Parts and Harness Connector Location" .



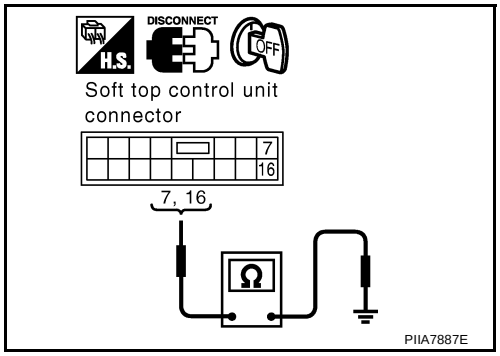
OK or NG

OK >> GO TO 2.
NG >> If fuse blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Start engine.
2. Check voltage between soft top control unit connector B66, 67 terminal 1, 8, 17 and ground.

1 (W/R) - Ground : Battery voltage
8 (W/R) - Ground : Battery voltage
17 (R) - Ground : Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Check soft top control unit power supply circuit for open or short.

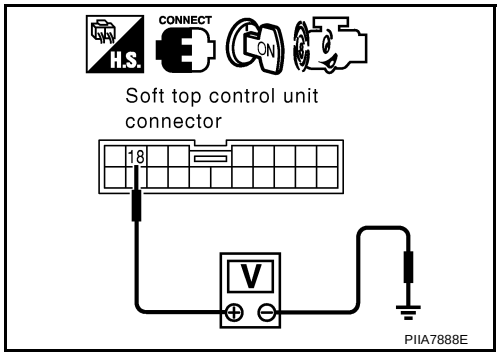
3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit connector.
3. Check continuity between soft top control unit connector B66 terminal 7, 16 and ground.

7 (B) - Ground : Continuity should exist.
16 (B) - Ground : Continuity should exist.

OK or NG

OK >> Power supply and ground circuit are OK.
NG >> Check soft top control unit ground circuit for open or short.



Check Soft Top Switch (OPEN)

NIS0006L

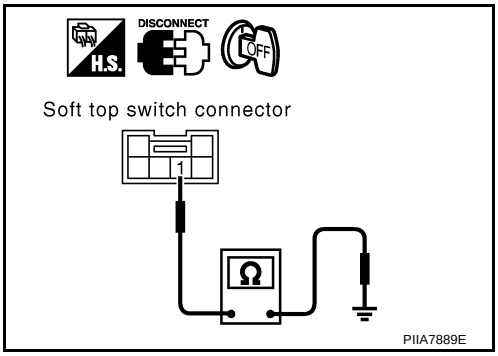
1. CHECK SOFT TOP OPEN SWITCH SIGNAL

1. Start engine.
2. Check soft top control unit connector and ground.

Connector	Terminal (Wire color)		Soft top switch Condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	18 (SB)	Ground	OPEN	0
			Other than above	5

OK or NG

OK >> Soft top switch (OPEN) is OK.
NG >> GO TO 2.



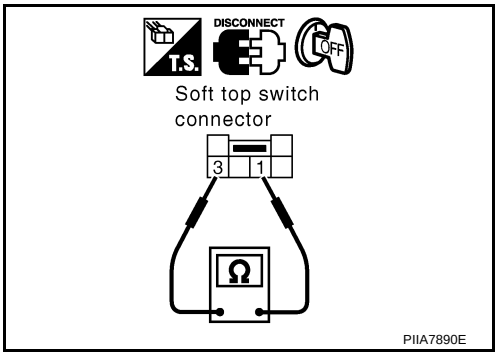
2. CHECK SOFT TOP SWITCH GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top switch connector.
3. Check continuity between soft top switch connector M14 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.



3. CHECK SOFT TOP SWITCH

Soft top switch operate, check continuity between soft top switch connector M14 terminal 1 and 3.

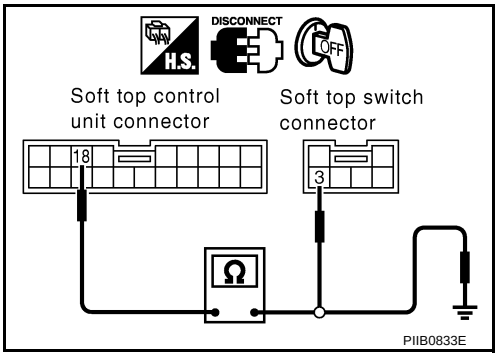
Connector	Terminal		Soft top switch Condition	Continuity
M14	1	3	OPEN	Yes
			Other than above	No

OK or NG

OK >> GO TO 4.
NG >> Replace soft top switch.

4. CHECK SOFT TOP SWITCH CIRCUIT

1. Check continuity between soft top control unit connector B67 terminal 18 and soft top switch connector M14 terminal 3.

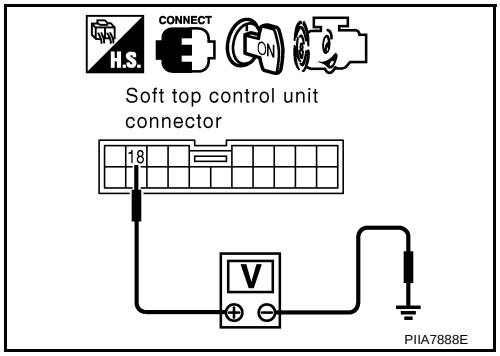


Connector	Terminal (Wire color)	Connector	Terminal (Wire color)	Continuity
	(+)		(-)	
B67	18 (SB)	M14	3 (L/B)	No
M14	3 (L/B)	B67	18 (SB)	Yes

2. Check continuity between soft top control unit connector B67 terminal 18 and ground.

18 (SB) - Ground : Continuity should not exist.

OK or NG



OK >> GO TO 5.
NG >> Repair or replace harness.

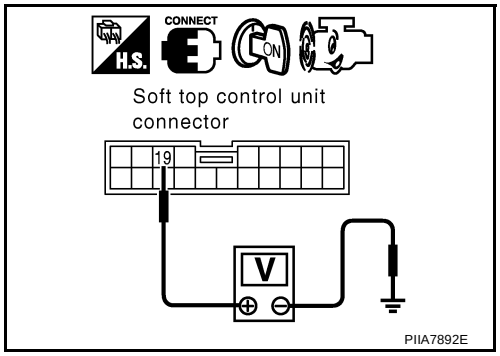
5. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 18 and ground.

18 (SB) - Ground : Approx. 5V

OK or NG

OK >> Check condition of harness and connector.
NG >> Replace soft top control unit.



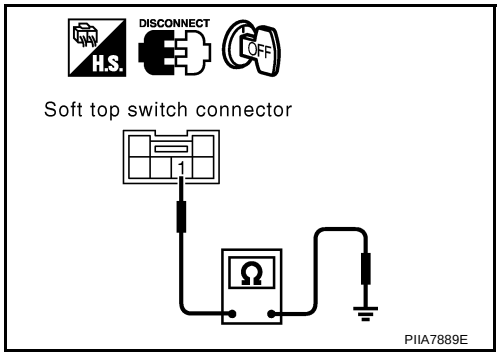
Check Soft Top Switch (CLOSE)

NIS0006M

1. CHECK SOFT TOP CLOSE SWITCH SIGNAL

1. Start engine.
2. Check soft top control unit connector and ground.

Connector	Terminal (Wire color)		Soft top switch Condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	19 (R/W)	Ground	CLOSE	0
			Other than above	5



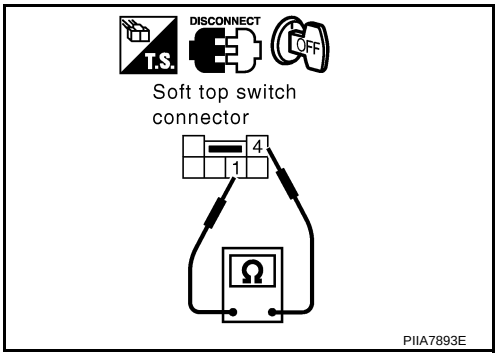
OK or NG

OK >> Soft top switch (CLOSE) is OK.
NG >> GO TO 2.

2. CHECK SOFT TOP SWITCH GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top switch connector.
3. Check continuity between soft top switch connector M14 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.



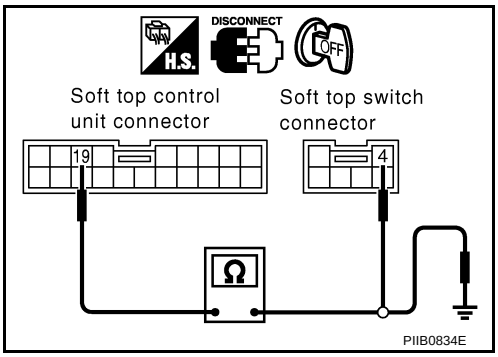
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK SOFT TOP SWITCH

Soft top switch operate, check continuity between soft top switch connector M14 terminal 1 and 4.

Connector	Terminal		Soft top switch Condition	Continuity
M14	1	4	CLOSE	Yes
			Other than above	No



OK or NG

OK >> GO TO 4.
NG >> Replace soft top switch.

4. CHECK SOFT TOP SWITCH CIRCUIT

1. Check continuity between soft top control unit connector B67 terminal 19 and soft top switch connector M14 terminal 4.

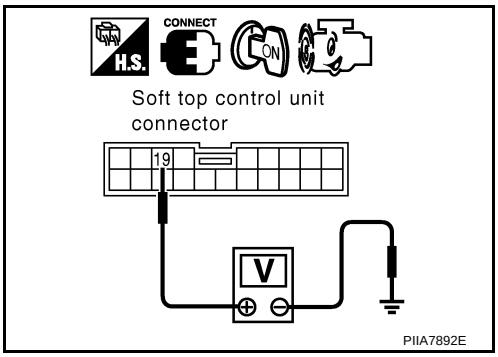
Connector	Terminal (Wire color) (+)	Connector	Terminal (Wire color) (-)	Continuity
B67	19 (R/W)	M14	4 (R/G)	No
M14	4 (R/G)	B67	19 (R/W)	Yes

2. Check continuity between soft top control unit connector B67 terminal 19 and ground.

19 (R/W) - Ground : Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness.



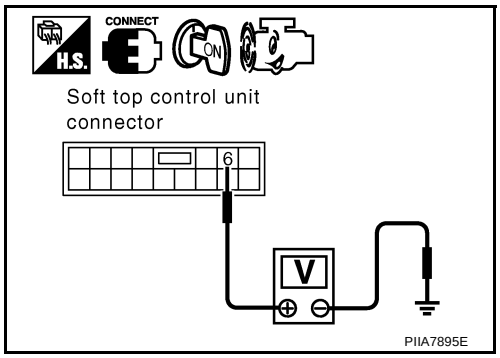
5. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 19 and ground.

19 (R/W) - Ground : Approx. 5V

OK or NG

OK >> Check condition of harness and connector.
NG >> Replace soft top control unit.



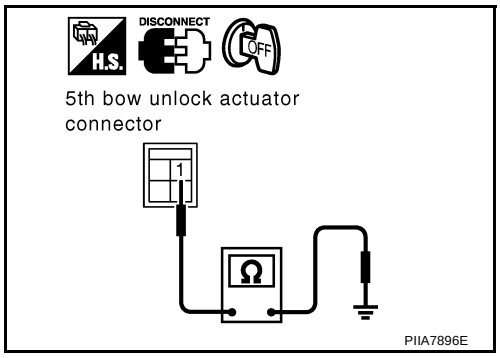
Check 5th Bow Unlock Actuator (Open Operate)

NIS0006N

1. CHECK 5TH BOW UNLOCK ACTUATOR SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof Condition	Voltage (V) (Approx.)
	(+)	(-)		
B66	6 (R)	Ground	OP1 → OP2	0 → Battery voltage



OK or NG

OK >> GO TO 2.
NG >> Replace soft top control unit.

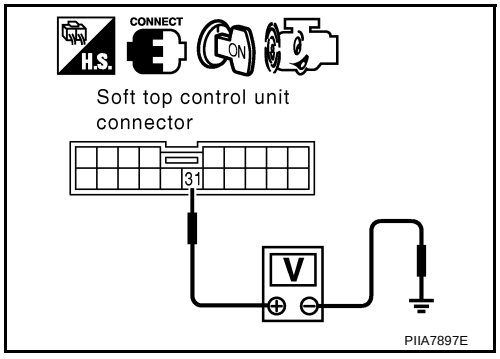
2. CHECK 5TH BOW UNLOCK ACTUATOR GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect 5th bow unlock actuator connector.
3. Check continuity between 5th bow unlock actuator connector T203 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.

OK or NG

OK >> Replace 5th bow unlock actuator.
NG >> Repair or replace harness.



Check 5th Bow Half-Latch Switch (Open Operate)

NIS0006O

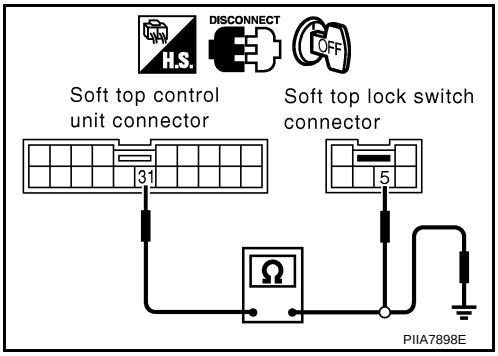
1. CHECK 5TH BOW HALF-LATCH SWITCH SIGNAL CHECK

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	31 (L)	Ground	OP2 → OP3	5 → 0

OK or NG

OK >> Soft top lock switch (5th bow half-latch switch) is OK.
NG >> GO TO 2.



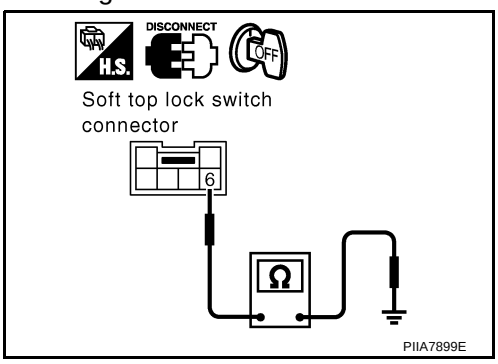
2. CHECK 5TH BOW HALF-LATCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top lock switch (at 5th bow lock assembly in storage lid) connector.
3. Check continuity between soft top control unit connector B67 terminal 31 and soft top lock switch connector T205 terminal 5.

31 (L) - 5 (L) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 31 and ground.

31 (L) - Ground : Continuity should not exist.



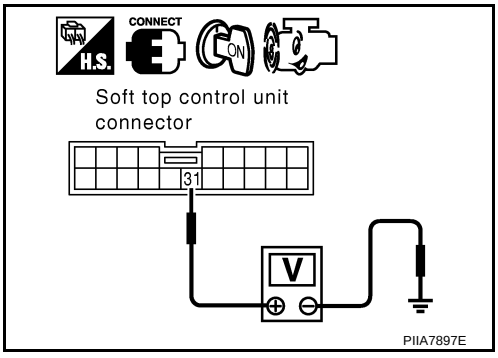
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW HALF-LATCH SWITCH GROUND CIRCUIT

Check continuity between soft top lock switch connector T205 terminal 6 and ground.

6 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

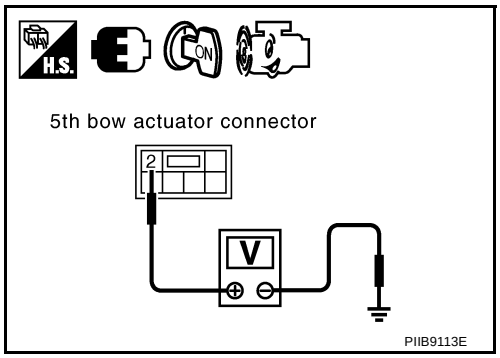
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 31 and ground.

31 (L) - Ground : Approx. 5V

OK or NG

OK >> Replace Soft top lock switch (5th bow lock assembly in storage lid).
NG >> Replace soft top control unit.



Check 5th Bow Actuator (Open Operate)

NIS0006P

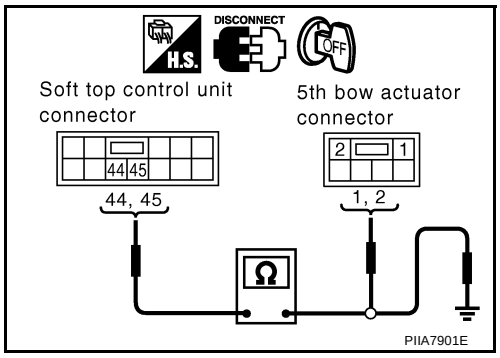
1. CHECK 5TH BOW ACTUATOR INPUT SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between 5th bow actuator connector and ground.

Con-nector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B233	2 (G/R)	Ground	OP2 → OP3	0 → Battery voltage

OK or NG

OK >> Replace 5th bow actuator.
NG >> GO TO 2.



2. CHECK 5TH BOW ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow actuator connector.
3. Check continuity between soft top control unit connector B68 terminal 44, 45 and 5ht bow actuator connector B233 terminal 1, 2.

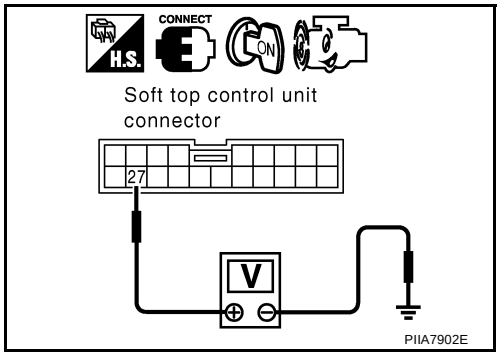
44 (G/R) - 1 (G/Y) : Continuity should exist.
45 (G/Y) - 2 (G/R) : Continuity should exist.

4. Check continuity between soft top control unit connector B68 terminal 44, 45 and ground.

44 (G/R) - Ground : Continuity should not exist.
45 (G/Y) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.



Check 5th Bow Full Close Detection Switch (Open Operate)

NIS0006Q

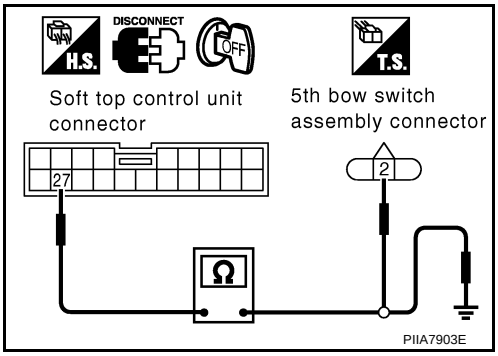
1. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	27 (GY)	Ground	OP3 → OP4	5 → 0

OK or NG

OK >> Plate rail RR (5th bow full close switch) is OK.
NG >> GO TO 2.



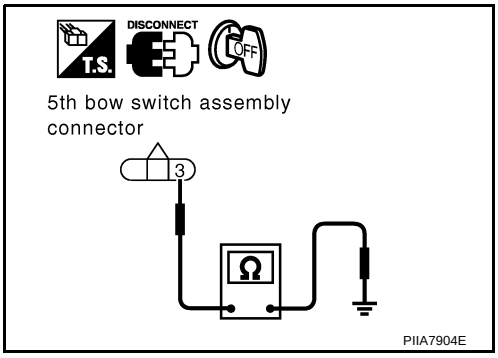
2. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow switch assembly (at plate rail RR) connector.
3. Check continuity between soft top control unit connector B67 terminal 27 and 5th bow switch assembly connector B214 terminal 2.

27 (GY) - 2 (W/G) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 27 and ground.

27 (GY) - Ground : Continuity should not exist.



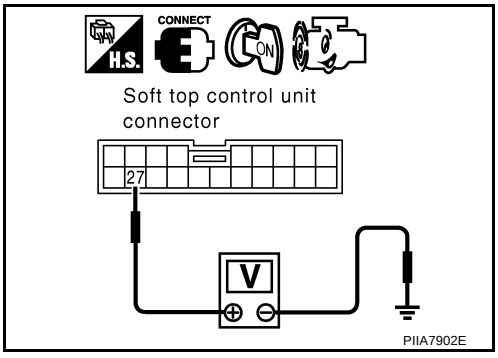
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH GROUND CIRCUIT

Check continuity between 5th bow switch assembly connector B214 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

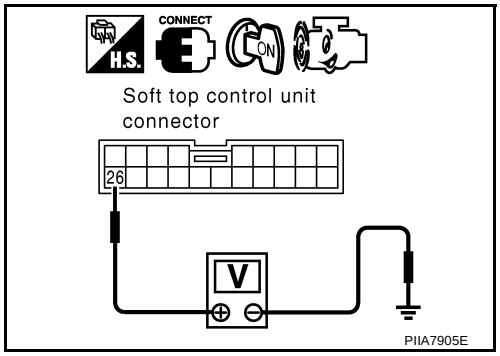
4. CHECK SOFT TOP CONTORL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 27 and ground.

27 (GY) - Ground : Approx. 5V

OK or NG

OK >> Replace plate rail RR.
NG >> Replace soft top control unit.



Check 5th Bow Full Open Detection Switch (Open Operate)

NIS0006R

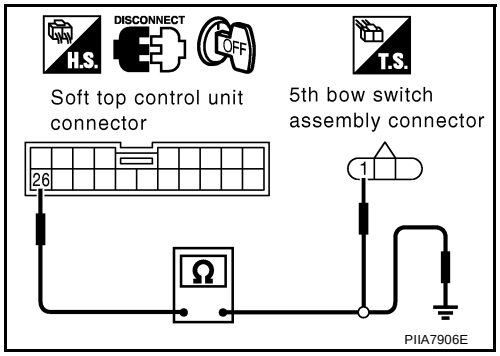
1. CHECK 5TH BOW FULL OPEN DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	26 (LG)	Ground	OP4 → OP5	5 → 0

OK or NG

OK >> Plate rail RR (5th bow full open switch) is OK.
NG >> GO TO 2.



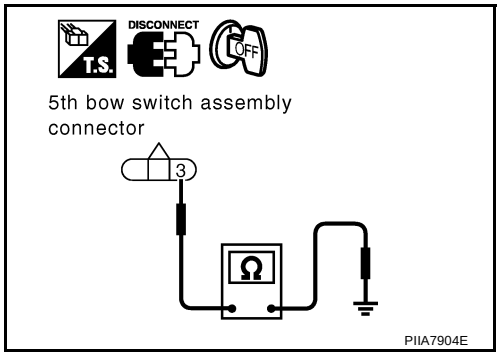
2. CHECK 5TH BOW FULL OPEN DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow switch assembly (at plate rail RR) connector.
3. Check continuity between soft top control unit connector B67 terminal 26 and 5th bow switch assembly connector B214 terminal 1.

26 (LG) - 1 (LG) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 26 and ground.

26 (LG) - Ground : Continuity should not exist.



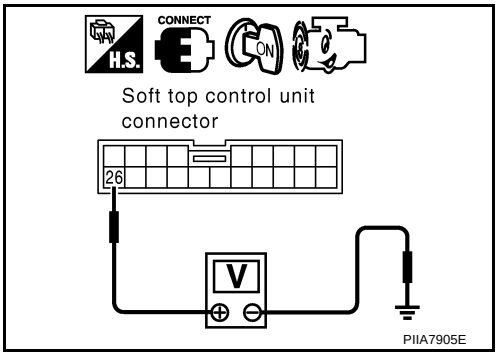
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW FULL OPEN DETECTION SWITCH GROUND CIRCUIT

Check continuity between 5th bow switch assembly connector B214 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

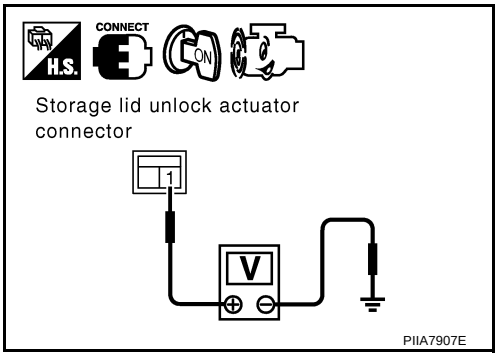
4. CHECK SOFT TOP CONTORL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 26 and ground.

26 (LG) - Ground : Approx. 5V

OK or NG

OK >> Replace plate rail RR.
NG >> Replace soft top control unit.



Check Storage Lid Unlock Actuator (Open Operate)

NIS0006S

1. CHECK STORAGE LID UNLOCK ACTUATOR SIGNAL

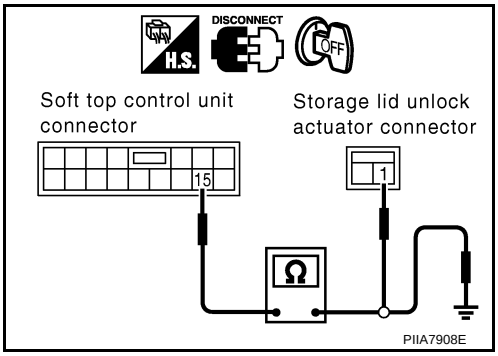
1. Start engine.
2. Operate soft top switch OPEN, check voltage between storage lid unlock actuator (LH or RH) connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B65 (LH)	1 (R)	Ground	OP5 → OP6	0 → Battery voltage → 0
B70 (RH)	1 (L)			

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK STORAGE LID UNLOCK ACTUATOR CIRCUIT



1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid unlock actuator connector.
3. Check continuity between soft top control unit connector B66 terminal 15 and storage lid unlock actuator connector B65 (LH), B70 (RH) terminal 1.

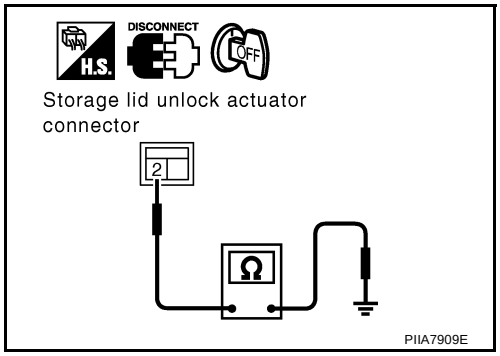
B65 (LH) 15 (OR) - 1 (R) : Continuity should exist.

B70 (RH) 15 (OR) - 1 (L) : Continuity should exist.

4. Check continuity between soft top control unit connector B66 terminal 15 and ground.

15 (OR) - Ground : Continuity should not exist.

OK or NG



OK >> Replace soft top control unit.
NG >> Repair or replace harness.

3. CHECK STORAGE LID UNLOCK ACTUATOR GROUND CIRCUIT

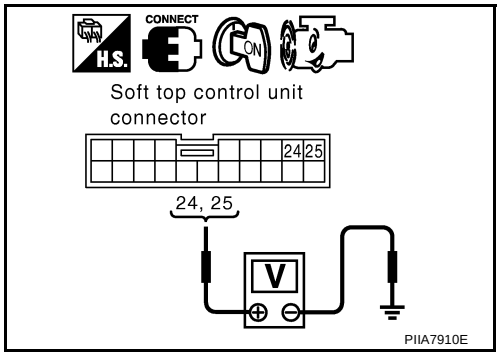
1. Turn ignition switch OFF.
2. Disconnect storage lid unlock actuator connector.
3. Check continuity between storage lid unlock actuator connector B65 (LH), B70 (RH) terminal 2 and ground.

B65 (LH) 2 (B/W) - Ground : Continuity should exist.

B70 (RH) 2 (B/Y) - Ground : Continuity should exist.

OK or NG

OK >> Replace malfunction storage lid unlock actuator (LH or RH).
NG >> Repair or replace harness.



Check Storage Lid Full Close Detection Switch (Open Operate)

NIS0006T

1. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH SIGNAL

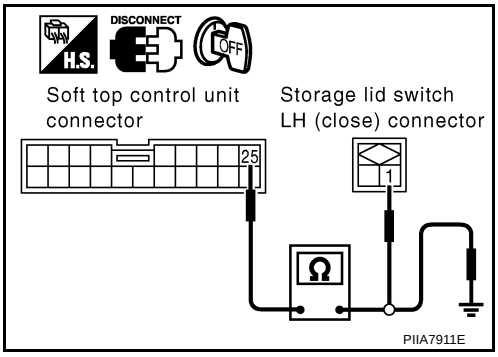
1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector		Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
		(+)	(-)		
B67	RH	24 (G)	Ground	OP5	5 → 0
	LH	25 (L/Y)		OP6	

OK or NG

OK >> Storage lid switch (LH & RH) (CLOSE) is OK.
NG >> GO TO 2.

2. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH CIRCUIT



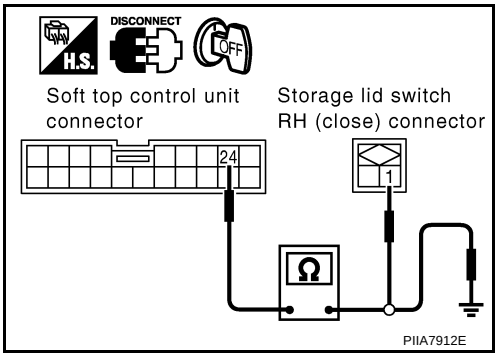
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid switch (close) connector.
3. Check the following.

– Continuity between soft top control unit connector B67 terminal 25 and storage lid switch LH (close) connector B64 terminal 1.

25 (L/Y) - 1 (L/Y) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 25 and ground.

25 (L/Y) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B67 terminal 24 and storage lid switch RH (close) connector B69 terminal 1.

24 (G) - 1 (G) : Continuity should exist.

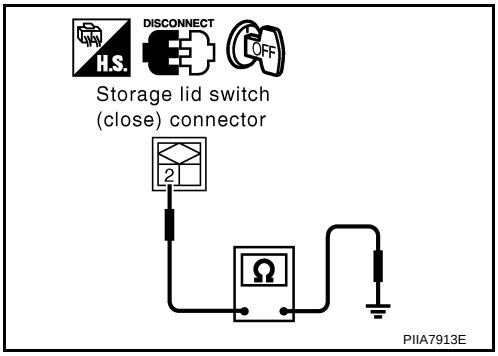
– Continuity between soft top control unit connector B67 terminal 24 and ground.

24 (G) - Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH GROUND CIRCUIT



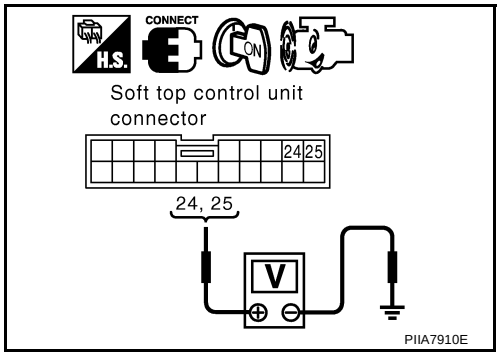
Check continuity between storage lid switch (close) connector B64 (LH), B69 (RH) terminal 2 and ground.

B64 (LH) 2 (B) - Ground : Continuity should exist.

B69 (RH) 2 (B/R) - Ground : Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.



4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 24 (RH), 25 (LH) and ground.

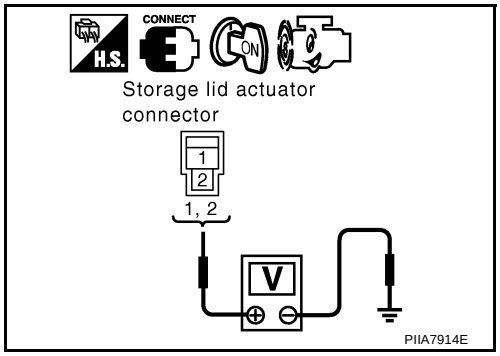
24 (G) - Ground : Approx. 5V

25 (L/Y) - Ground : Approx. 5V

OK or NG

OK >> Replace malfunction storage lid switch (LH or RH) (CLOSE).

NG >> Replace soft top control unit.



Check Storage Lid Actuator (Open Operate)

NIS0006U

1. CHECK STORAGE LID ACTUATOR (OPEN) SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between storage lid actuator connector and ground.

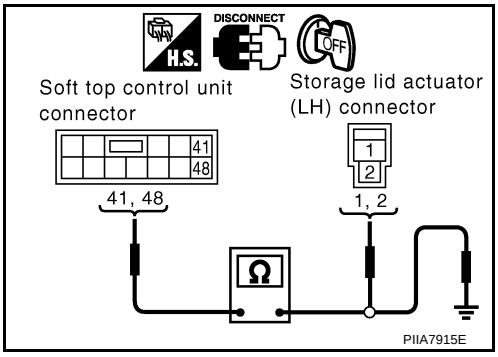
Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
T28 (LH)	2 (R/L)	Ground	OP6 → OP7	0 → Battery voltage → 0
T30 (RH)	1 (R/B)			

OK or NG

OK >> Replace storage lid actuator (LH or RH).

NG >> GO TO 2.

2. CHECK STORAGE LID ACTUATOR CIRCUIT



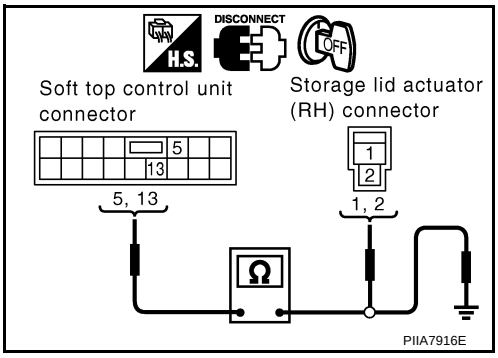
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid actuator connector.
3. Check the following.

- Continuity between soft top control unit connector B68 terminal 41, 48 and storage lid actuator (LH) connector T28 terminal 1, 2.

41 (R/L) - 2 (R/L) : Continuity should exist.
48 (Y/B) - 1 (Y/B) : Continuity should exist.

- Continuity between soft top control unit connector B68 terminal 41, 48 and ground.

41 (R/L) - Ground : Continuity should not exist.
48 (Y/B) - Ground : Continuity should not exist.



4. Check the following.

- Continuity between soft top control unit connector B66 terminal 5, 13 and storage lid actuator (RH) connector T30 terminal 1, 2.

5 (R/B) - 1 (R/B) : Continuity should exist.
13 (L/R) - 2 (L/R) : Continuity should exist.

- Continuity between soft top control unit connector B66 terminal 5, 13 and ground.

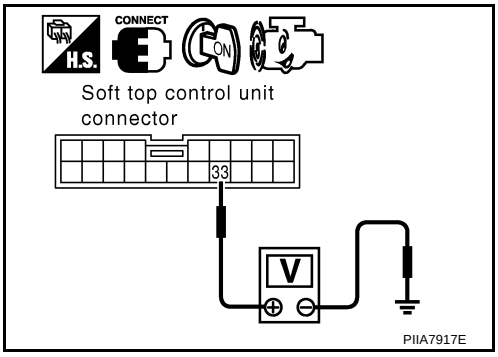
5 (R/B) - Ground : Continuity should not exist.
13 (L/R) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.

Check Storage Lid Full Open Detection Switch (Open Operate)

NIS0006V



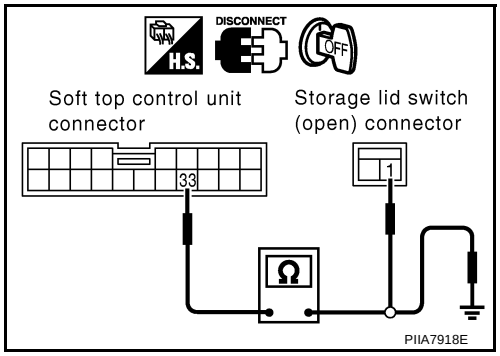
1. CHECK STORAGE LID FULL OPEN DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	33 (BR)	Ground	OP6 → OP7	5 → 0

OK or NG

OK >> Storage lid switch (OPEN) is OK.
NG >> GO TO 2.



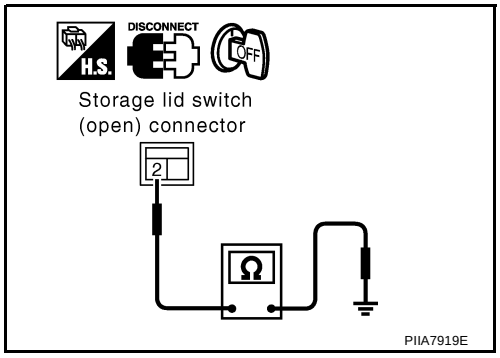
2. CHECK SOTORAGE LID FULL OPEN DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid switch (open) connector.
3. Check continuity between soft top control unit connector B67 terminal 33 and storage lid switch (open) connector T27 terminal 1.

33 (BR) - 1 (BR) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 33 and ground.

33 (BR) - Ground : Continuity should not exist.



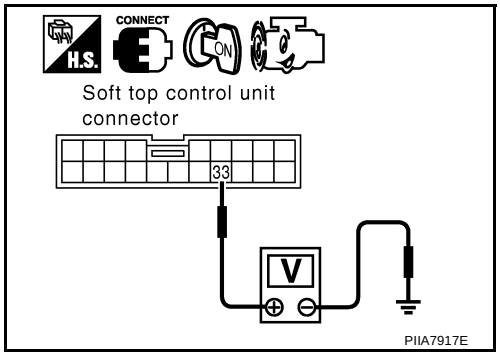
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK STORAGE LID FULL OPEN DETECTION SWITCH GROUND CIRCUIT

Check continuity between storage lid switch (open) connector T27 terminal 2 and ground.

2 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

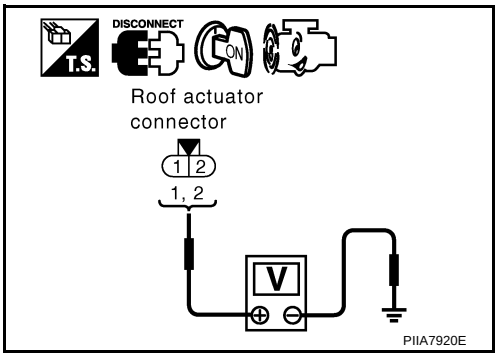
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 33 and ground.

33 (BR) - Ground : Approx. 5V

OK or NG

OK >> Replace storage lid switch (open).
NG >> Replace soft top control unit.



Check Roof Actuator (Open Operate)

NIS0006W

1. CHECK ROOF ACTUATOR (OPEN) SIGNAL

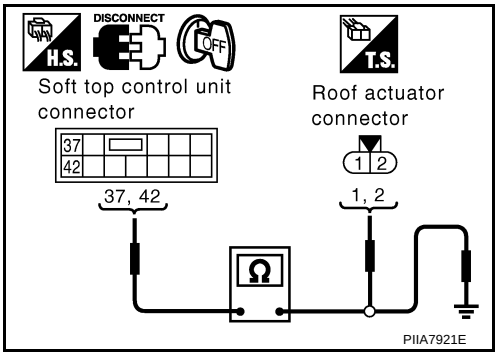
1. Turn ignition switch OFF.
2. Disconnect roof actuator connector.
3. Start engine.
4. Operate soft top switch (OPEN), check voltage between roof actuator connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B59 (LH)	2 (R)	Ground	OP8 → OP11	0 → Battery voltage → 0
B72 (RH)	1 (R)			

OK or NG

OK >> Replace roof actuator (LH or RH).
NG >> GO TO 2.

2. CHECK ROOF ACTUATOR CIRCUIT



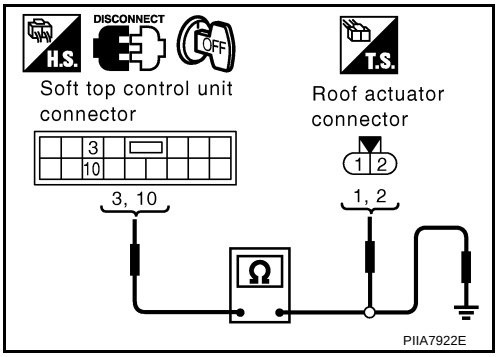
1. Turn ignition switch OFF.
2. Disconnect soft top control unit connector.
3. Check the following.

– Continuity between soft top control unit connector B68 terminal 37, 42 and roof actuator (LH) connector B59 terminal 1, 2.

37 (R) - 2 (R) : Continuity should exist.
42 (Y) - 1 (Y) : Continuity should exist.

– Continuity between soft top control unit connector B68 terminal 37, 42 and ground.

37 (R) - Ground : Continuity should not exist.
42 (Y) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B66 terminal 3, 10 and roof actuator (RH) connector B72 terminal 1, 2.

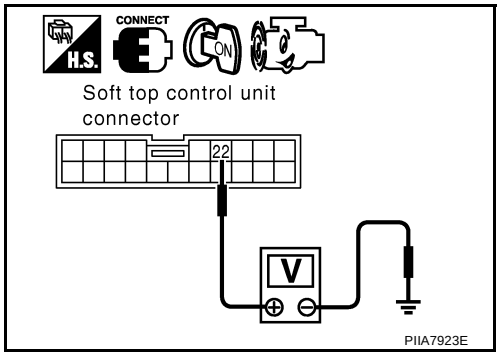
3 (R) - 1 (R) : Continuity should exist.
10 (Y) - 2 (Y) : Continuity should exist.

– Continuity between soft top control unit connector B66 terminal 3, 10 and ground.

3 (R) - Ground : Continuity should not exist.
10 (Y) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.



Check Roll Bar Interference Prevention Switch (Open Operate)

NIS0006X

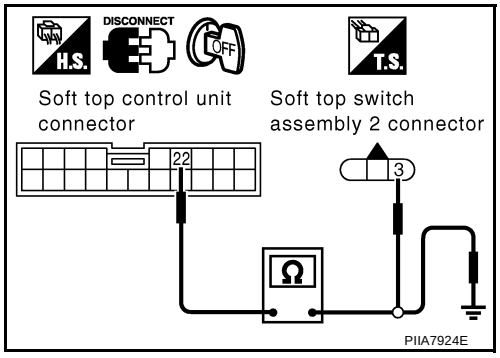
1. CHECK ROLL BAR INTERFERENCE PREVENTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	22 (W/R)	Ground	OP8 → OP9	5 → 0

OK or NG

OK >> Soft top switch assembly 2 is OK.
NG >> GO TO 2.



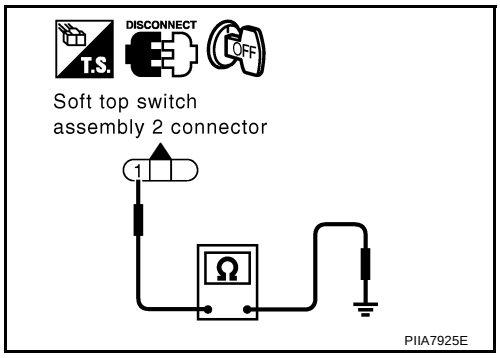
2. CHECK ROLL BAR INTERFERENCE PREVENTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top switch assembly 2 (roll bar interference prevention switch) connector.
3. Check continuity between soft top control unit connector B67 terminal 22 and soft top switch assembly 2 connector B213 terminal 3.

22 (W/R) - 3 (W/R) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 22 and ground.

22 (W/R) - Ground : Continuity should not exist.



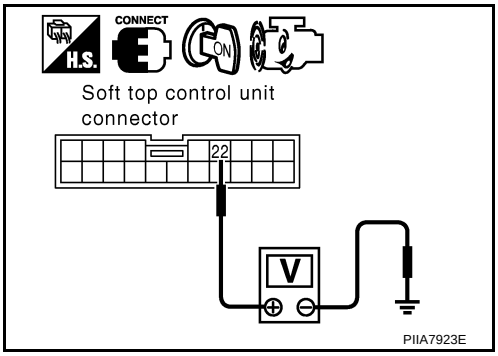
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK ROLL BAR INTERFERENCE PREVENTION SWITCH GROUND CIRCUIT

Check continuity between soft top switch assembly 2 connector B213 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

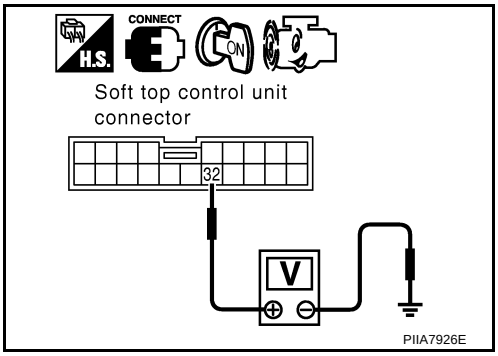
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 22 and ground.

22 (W/R) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top switch assembly 2.
NG >> Replace soft top control unit.



Check Body Interference Prevention Switch (Open Operate)

NIS0006Y

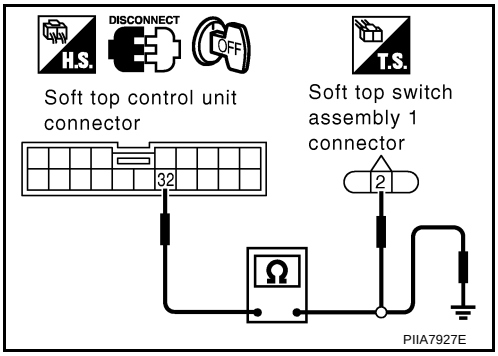
1. CHECK BODY INTERFERENCE PREVENTION SWITCH

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	32 (W)	Ground	OP10	5 → 0

OK or NG

OK >> Soft top switch assembly 1 is OK.
NG >> GO TO 2.



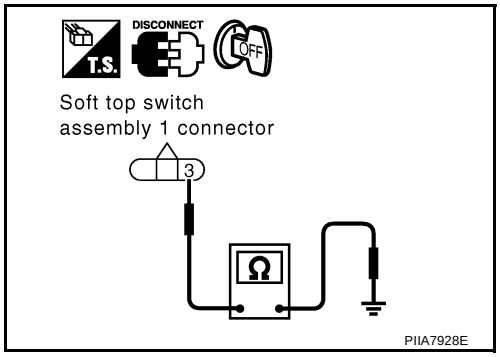
2. CHECK BODY INTERFERENCE PREVENTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top switch assembly 1 (body interference prevention switch) connector.
3. Check continuity between soft top control unit connector B67 terminal 32 and soft top switch assembly 1 connector B212 terminal 2.

32 (W) - 2 (W) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 32 and ground.

32 (W) - Ground : Continuity should not exist.



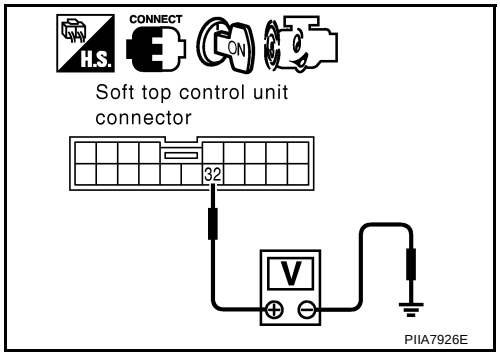
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK BODY INTERFERENCE PREVENTION SWITCH GROUND CIRCUIT

Check continuity between soft top switch assembly 1 connector B212 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

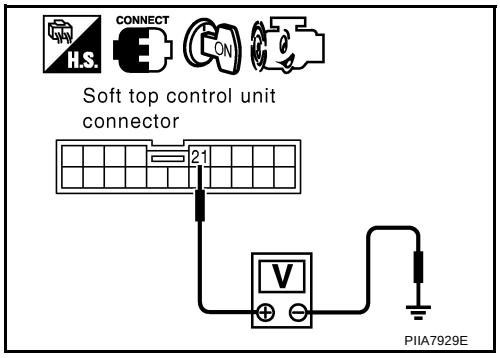
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 32 and ground.

32 (W) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top switch assembly 1.
NG >> Replace soft top control unit.



Check Roof Full Open Detection Switch (Open Operate)

NIS0006Z

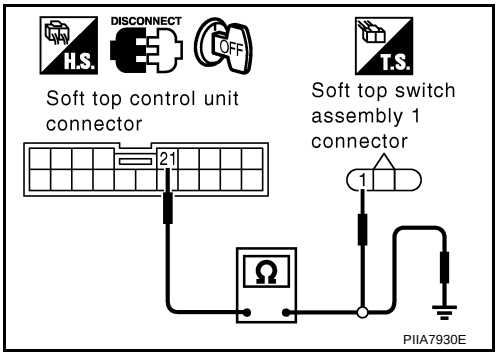
1. CHECK ROOF FULL OPEN DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch OPEN, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	21 (W/L)	Ground	OP10 → OP11	5 → 0

OK or NG

OK >> Soft top switch assembly 1 (roof full open detection switch) is OK.
NG >> GO TO 2.



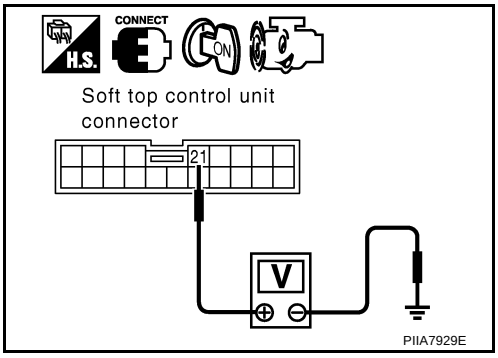
2. CHECK ROOF OPEN DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top switch assembly 1 connector.
3. Check continuity between soft top control unit connector B67 terminal 21 and soft top switch assembly 1 connector B212 terminal 1.

   21 (W/L) - 1 (W/L) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 21 and ground.

   21 (W/L) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

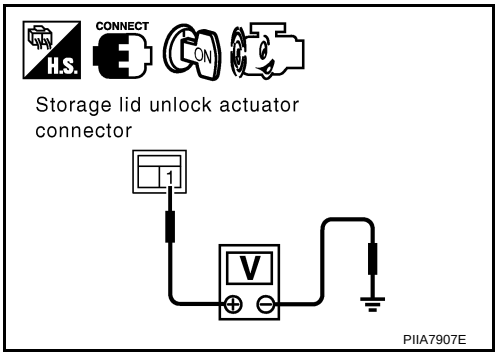
3. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 21 and ground.

   21 (W/L) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top switch assembly 1.
>> Replace soft top control unit.



Check Storage Lid Unlock Actuator (Close Operate)

NIS00070

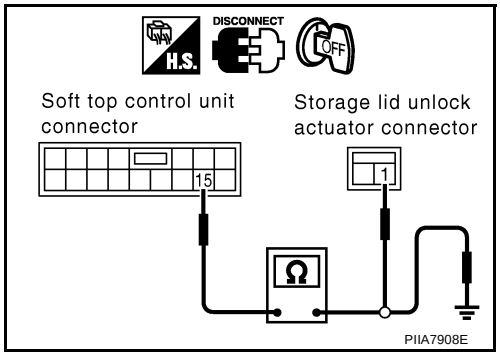
1. CHECK STORAGE LID UNLOCK ACTUATOR SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between storage lid unlock actuator connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B65 (LH)	1 (R)	Ground	CL1 → CL2	0 → Battery voltage → 0
B70 (RH)	1 (L)			

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



2. CHECK STORAGE LID UNLOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid unlock actuator connector.
3. Check continuity between soft top control unit connector B66 terminal 15 and storage lid unlock actuator connector B65 (LH), B70 (RH) terminal 1.

   B65 (LH) 15 (OR) - 1 (R) : Continuity should exist.

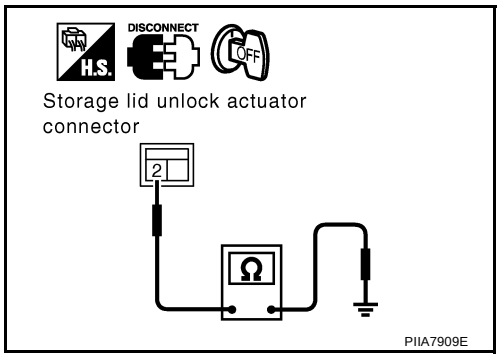
   B70 (RH) 15 (OR) - 1 (L) : Continuity should exist.
4. Check continuity between soft top control unit connector B66 terminal 15 and ground.

   15 (OR) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.

3. CHECK STORAGE LID UNLOCK ACTUATOR GROUND CIRCUIT



1. Turn ignition switch OFF.
2. Disconnect storage lid unlock actuator connector.
3. Check continuity between storage lid unlock actuator connector B65 (LH), B70 (RH) terminal 2 and ground.

   B65 (LH) 2 (B) - Ground : Continuity should exist.

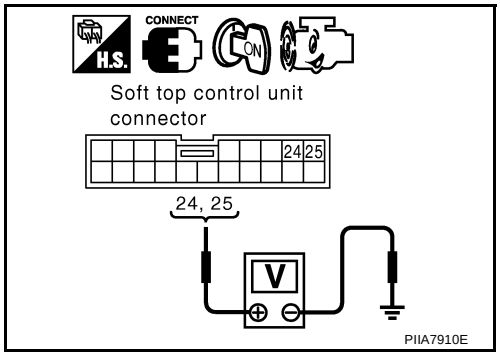
   B70 (RH) 2 (B/Y) - Ground : Continuity should exist.

OK or NG

OK >> Replace malfunction storage lid unlock actuator (LH or RH).
NG >> Repair or replace harness.

Check Storage Lid Full Close Detection Switch (Close Operate)

NIS00071



1. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH SIGNAL

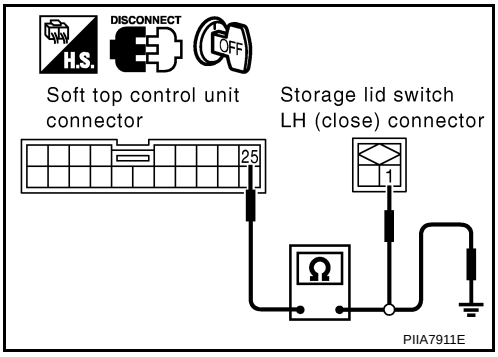
1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	24 (G) for switch RH	Ground	CL1	5 → 0
	25 (L/Y) for switch LH		CL1 → CL2	

OK or NG

OK >> Storage lid switch (LH & RH) (CLOSE) is OK.
NG >> GO TO 2.

2. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH CIRCUIT



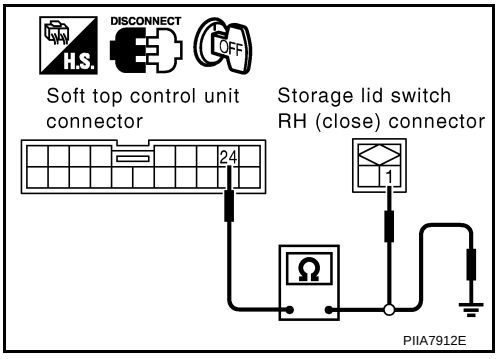
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid switch (close) connector.
3. Check the following.

– Continuity between soft top control unit connector B67 terminal 25 and storage lid switch LH (close) connector B64 terminal 1.

25 (L/Y) - 1 (L/Y) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 25 and ground.

25 (L/Y) - Ground : Continuity should not exist.



4. Check the following.

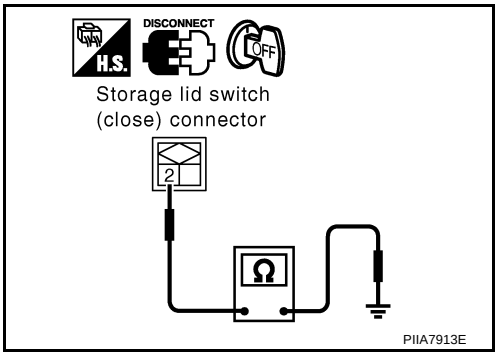
– Continuity between soft top control unit connector B67 terminal 24 and storage lid switch RH (close) connector B69 terminal 1.

24 (G) - 1 (G) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 24 and ground.

24 (G) - Ground : Continuity should not exist.

OK or NG



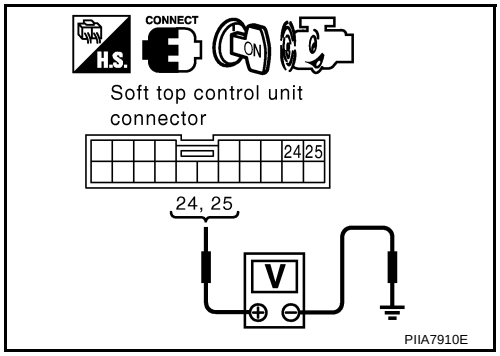
OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK STORAGE LID FULL CLOSE DETECTION SWITCH GROUND CIRCUIT

Check continuity between storage lid switch (close) connector B64 (LH), B69 (RH) terminal 2 and ground.

B64 (LH) 2 (B) - Ground : Continuity should exist.

B69 (RH) 2 (B/R) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

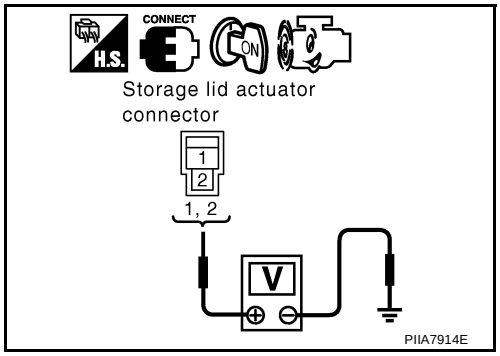
4. CHECK SOFT TOP ROOF CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 24, 25 and ground.

24 (G) - Ground : Approx. 5V
25 (L/Y) - Ground : Approx. 5V

OK or NG

OK >> Replace malfunction storage lid switch (LH or RH).
NG >> Replace soft top control unit.



Check Storage Lid Actuator (Close Operate)

NIS00072

1. CHECK STORAGE LID ACTUATOR (CLOSE) SIGNAL

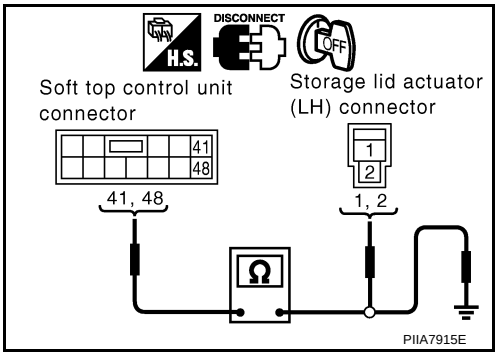
1. Start engine.
2. Operate soft top switch CLOSE, check voltage between storage lid actuator connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
T28 (LH)	1 (Y/B)	Ground	CL2 → CL3	0 → Battery voltage → 0
T30 (RH)	2 (L/R)			

OK or NG

OK >> Replace storage lid actuator (LH or RH).
NG >> GO TO 2.

2. CHECK STORAGE LID ACTUATOR CIRCUIT



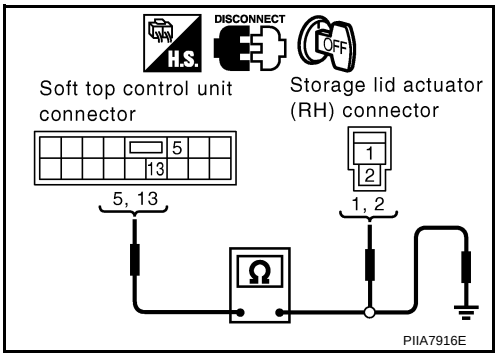
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid actuator connector.
3. Check the following.

– Continuity between soft top control unit connector B68 terminal 41, 48 and storage lid actuator (LH) connector T28 terminal 1, 2.

41 (R/L) - 2 (R/L) : Continuity should exist.
48 (Y/B) - 1 (Y/B) : Continuity should exist.

– Continuity between soft top control unit connector B68 terminal 41, 48 and ground.

41 (R/L) - Ground : Continuity should not exist.
48 (Y/B) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B66 terminal 5, 13 and storage lid actuator (RH) connector T30 terminal 1, 2.

5 (R/B) - 1 (R/B) : Continuity should exist.
13 (L/R) - 2 (L/R) : Continuity should exist.

– Continuity between soft top control unit connector B66 terminal 5, 13 and ground.

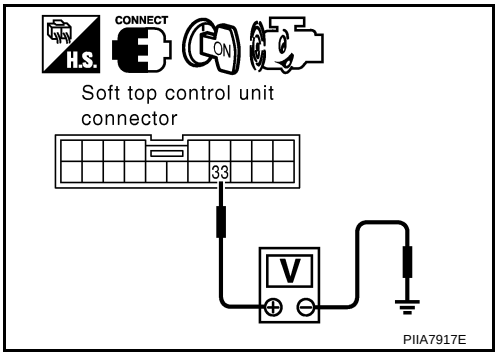
5 (R/B) - Ground : Continuity should not exist.
13 (L/R) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.

Check Storage Lid Full Open Detection Switch (Close Operate)

NIS00073



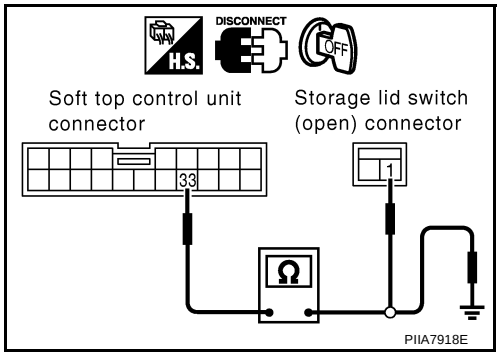
1. CHECK STORAGE LID FULL OPEN DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	33 (BR)	Ground	CL2 → CL3	5 → 0

OK or NG

OK >> Storage lid switch (OPEN) (storage lid full open detection switch) is OK.
NG >> GO TO 2.



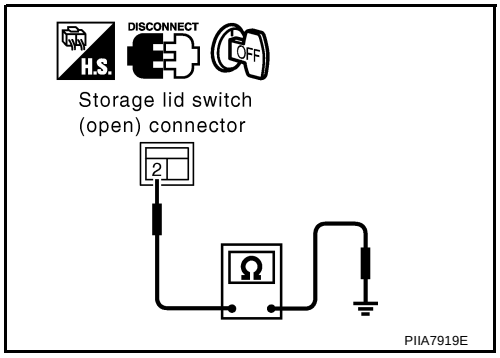
2. CHECK SOTORAGE LID FULL OPEN DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid switch (open) connector.
3. Check continuity between soft top control unit connector B67 terminal 33 and storage lid switch (open) connector T27 terminal 1.

33 (BR) - 1 (BR) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 33 and ground.

33 (BR) - Ground : Continuity should not exist.



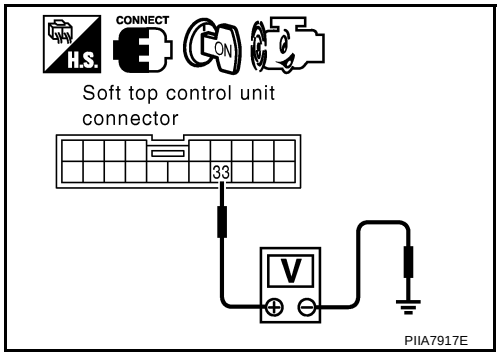
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK STORAGE LID FULL OPEN DETECTION SWITCH GROUND CIRCUIT

Check continuity between storage lid switch (open) connector T27 terminal 2 and ground.

2 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

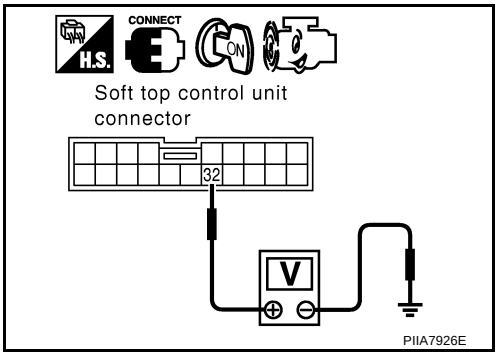
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 33 and ground.

33 (BR) - Ground : Approx. 5V

OK or NG

OK >> Replace storage lid switch (open).
NG >> Replace soft top control unit.



Check Body Interference Prevention Switch (Close Operate)

NIS00074

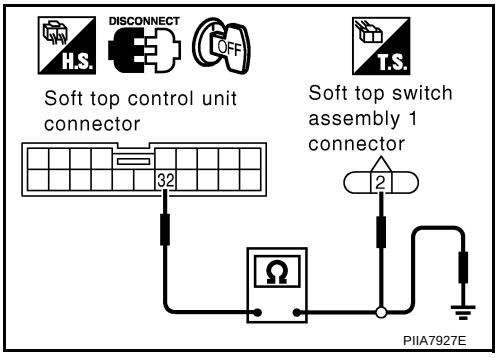
1. CHECK BODY INTERFERENCE PREVENTION SWITCH

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	32 (W)	Ground	CL3	0 → 5

OK or NG

OK >> Soft top switch assembly 1 (body interference prevention switch) is OK.
NG >> GO TO 2.



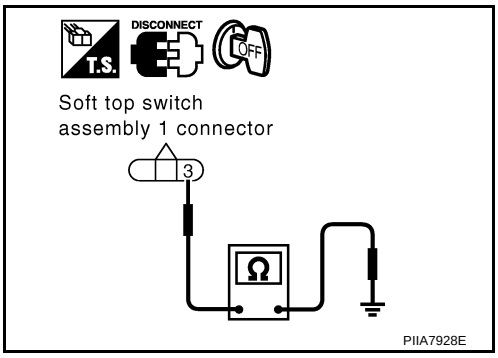
2. CHECK BODY INTERFERENCE PREVENTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top switch assembly 1 (body interference prevention switch) connector.
3. Check continuity between soft top control unit connector B67 terminal 32 and soft top switch assembly 1 connector B212 terminal 2.

32 (W) - 2 (W) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 32 and ground.

32 (W) - Ground : Continuity should not exist.



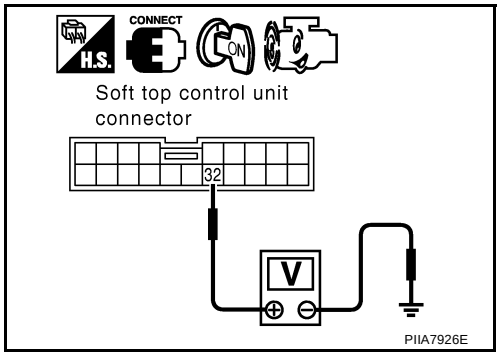
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK BODY INTERFERENCE PREVENTION SWITCH GROUND CIRCUIT

Check continuity between soft top switch assembly 1 connector B212 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

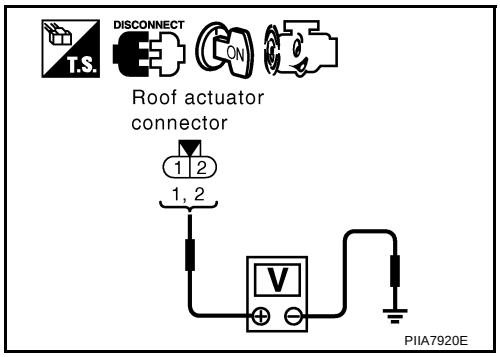
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 32 and ground.

32 (W) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top switch assembly 1.
NG >> Replace soft top control unit.



Check Roof Actuator (Close Operate)

NIS00075

1. CHECK ROOF ACTUATOR (CLOSE) SIGNAL

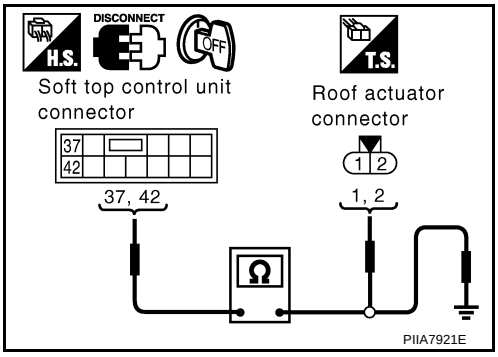
1. Turn ignition switch OFF.
2. Disconnect roof actuator connector.
3. Start engine.
4. Operate soft top switch (CLOSE), check voltage between roof actuator connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B59 (LH)	1 (Y)	Ground	CL3 → CL6	0 → Battery voltage → 0
B72 (RH)	2 (Y)			

OK or NG

OK >> Replace roof actuator (LH or RH).
NG >> GO TO 2.

2. CHECK ROOF ACTUATOR CIRCUIT



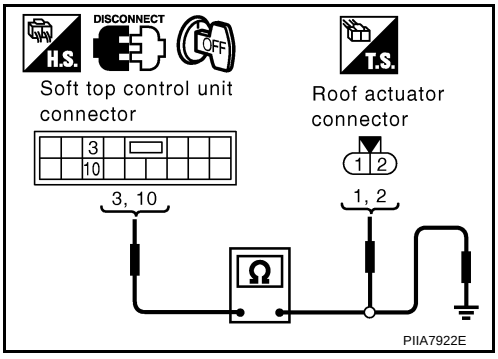
1. Turn ignition switch OFF.
2. Disconnect soft top control unit connector.
3. Check the following.

– Continuity between soft top control unit connector B68 terminal 37, 42 and roof actuator (LH) connector B59 terminal 1, 2.

37 (R) - 2 (R) : Continuity should exist.
42 (Y) - 1 (Y) : Continuity should exist.

– Continuity between soft top control unit connector B68 terminal 37, 42 and ground.

37 (R) - Ground : Continuity should not exist.
42 (Y) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B66 terminal 3, 10 and roof actuator (RH) connector B72 terminal 1, 2.

3 (R) - 1 (R) : Continuity should exist.
10 (Y) - 2 (Y) : Continuity should exist.

– Continuity between soft top control unit connector B66 terminal 3, 10 and ground.

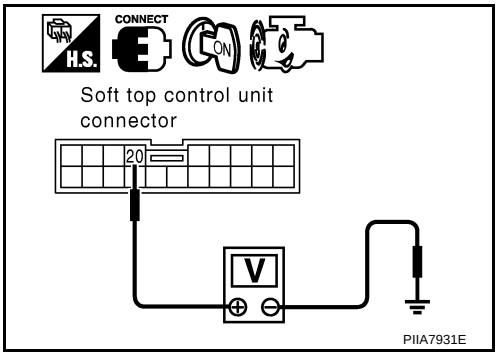
3 (R) - Ground : Continuity should not exist.
10 (Y) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.

Check Roof Full Close Detection Switch

NIS00076



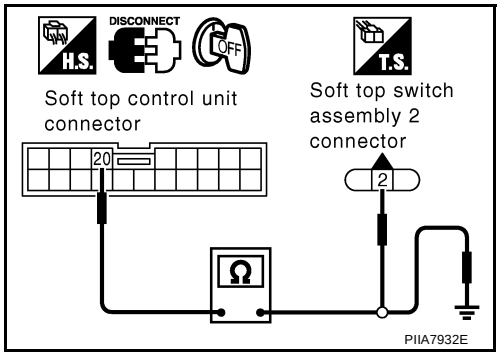
1. CHECK ROOF FULL CLOSE DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	20 (W/B)	Ground	CL5 → CL6	0 → 5

OK or NG

OK >> Soft top switch assembly 2 (roof full close detection switch) is OK.
NG >> GO TO 2.



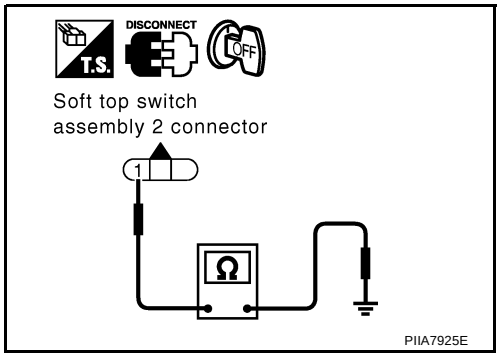
2. CHECK ROOF FULL CLOSE DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top switch assembly 2 (roof full close detection switch) connector.
3. Check continuity between soft top control unit connector B67 terminal 20 and soft top switch assembly 2 connector B213 terminal 2.

20 (W/B) - 2 (W/G) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 20 and ground.

20 (W/B) - Ground : Continuity should not exist.



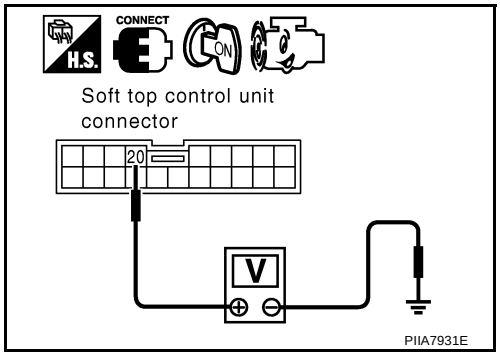
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK ROOF FULL CLOSE DETECTION SWITCH GROUND CIRCUIT

Check continuity between soft top switch assembly 2 connector B213 terminal 1 and ground.

1 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

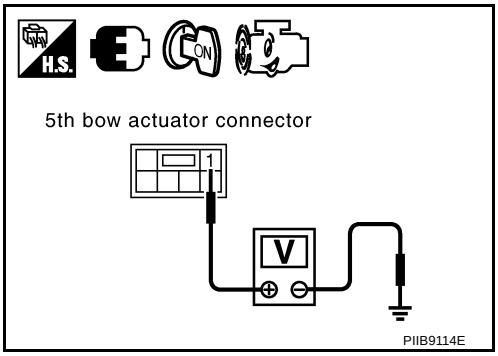
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 20 and ground.

20 (W/B) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top switch assembly 2.
NG >> Replace soft top control unit.



Check 5th Bow Actuator (Close Operate)

NIS00077

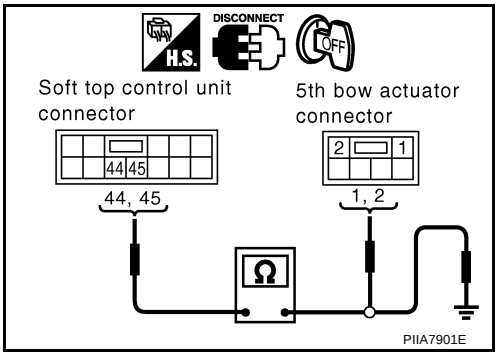
1. CHECK 5TH BOW ACTUATOR INPUT SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between 5th bow actuator connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B233	1 (G/Y)	Ground	CL4 → CL5	0 → Battery voltage → 0

OK or NG

OK >> Replace 5th bow actuator.
NG >> GO TO 2.



2. CHECK 5TH BOW ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow actuator connector.
3. Check continuity between soft top control unit connector B68 terminal 44, 45 and 5ht bow actuator connector B233 terminal 1, 2.

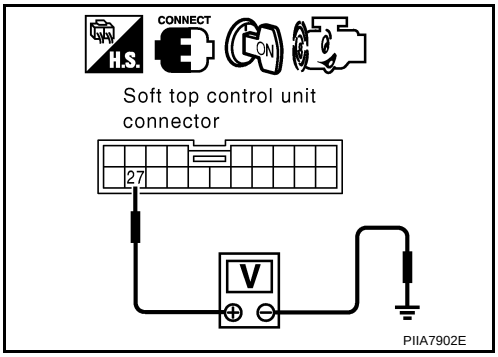
44 (G/R) - 1 (G/Y) : Continuity should exist.
45 (G/Y) - 2 (G/R) : Continuity should exist.

4. Check continuity between soft top control unit connector B68 terminal 44, 45 and ground.

44 (G/R) - Ground : Continuity should not exist.
45 (G/Y) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.



Check 5th Bow Full Close Detection Switch (Close Operate)

NIS00078

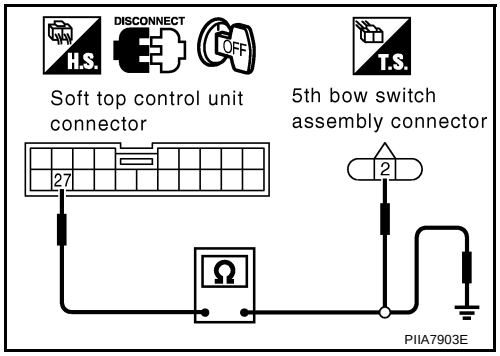
1. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	27 (GY)	Ground	CL5 → CL6	0 → 5 → 0

OK or NG

OK >> Plate rail RR (5th bow full close switch) is OK.
NG >> GO TO 2.



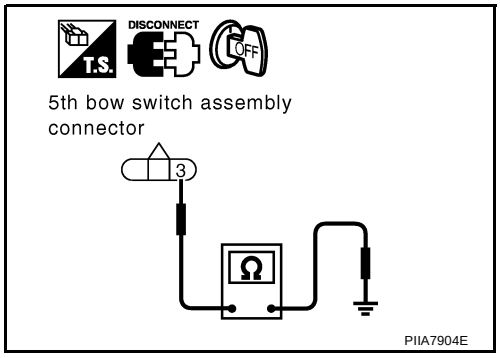
2. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow switch assembly (at plate rail RR) connector.
3. Check continuity between soft top control unit connector B67 terminal 27 and 5th bow switch assembly connector B214 terminal 2.

27 (GY) - 2 (W/G) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 27 and ground.

27 (GY) - Ground : Continuity should not exist.



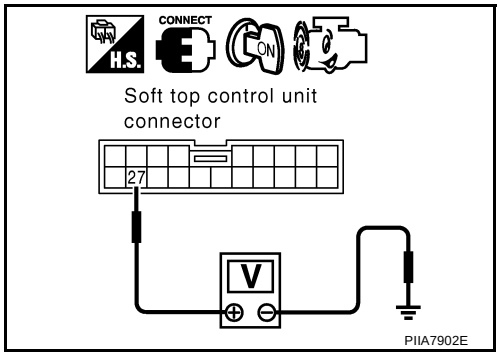
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW FULL CLOSE DETECTION SWITCH GROUND CIRCUIT

Check continuity between 5th bow switch assembly connector B214 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

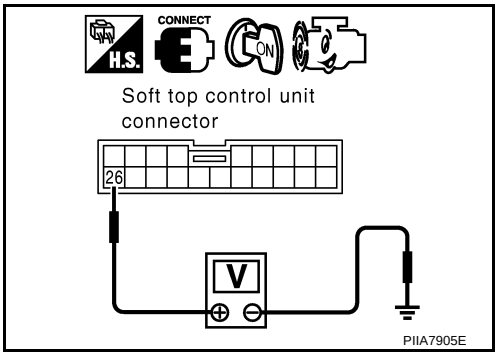
4. CHECK SOFT TOP CONTORL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 27 and ground.

27 (GY) - Ground : Approx. 5V

OK or NG

OK >> Replace plate rail RR.
NG >> Replace soft top control unit.



Check 5th Bow Full Open Detection Switch (Close Operate)

NIS00079

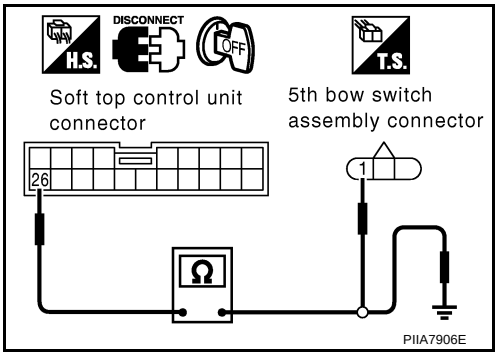
1. CHECK 5TH BOW FULL OPEN DETECTION SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	26 (LG)	Ground	CL6 → CL7	5 → 0

OK or NG

OK >> Plate rail RR (5th bow full open switch) is OK.
NG >> GO TO 2.



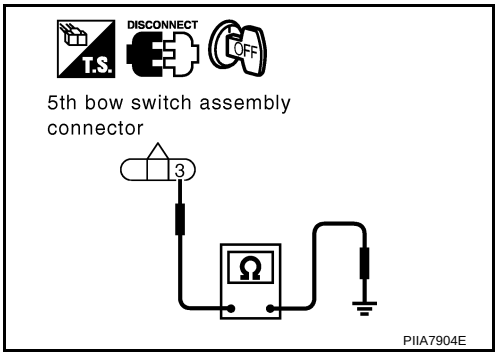
2. CHECK 5TH BOW FULL OPEN DETECTION SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow switch assembly connector.
3. Check continuity between soft top control unit connector B67 terminal 26 and 5th bow switch assembly connector B214 terminal 1.

26 (LG) - 1 (LG) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 26 and ground.

26 (LG) - Ground : Continuity should not exist.



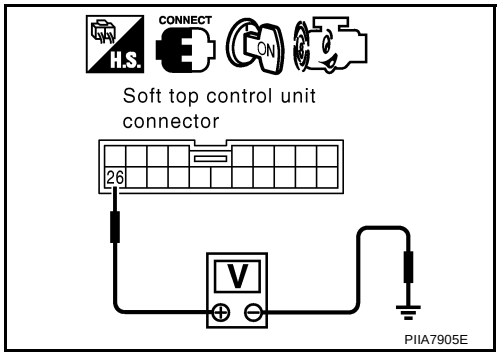
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW FULL OPEN DETECTION SWITCH GROUND CIRCUIT

Check continuity between 5th bow switch assembly connector B214 terminal 3 and ground.

3 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

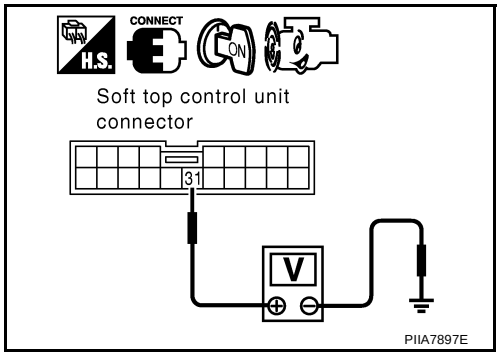
4. CHECK SOFT TOP CONTORL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 26 and ground.

26 (LG) - Ground : Approx. 5V

OK or NG

OK >> Replace plate rail RR.
NG >> Replace soft top control unit.



Check 5th Bow Half-Latch Switch (Close Operate)

NIS0007A

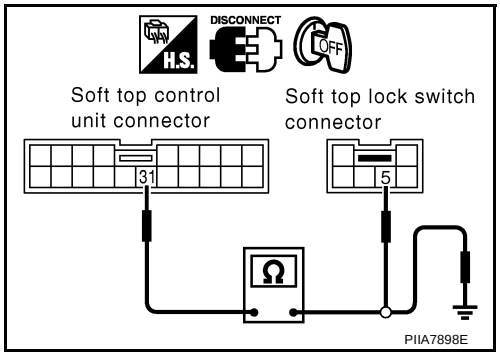
1. CHECK 5TH BOW HALF-LATCH SWITCH SIGNAL CHECK

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	31 (L)	Ground	CL9 → CL10	0 → 5

OK or NG

OK >> Soft top lock switch (5th bow half-latch switch) is OK.
NG >> GO TO 2.



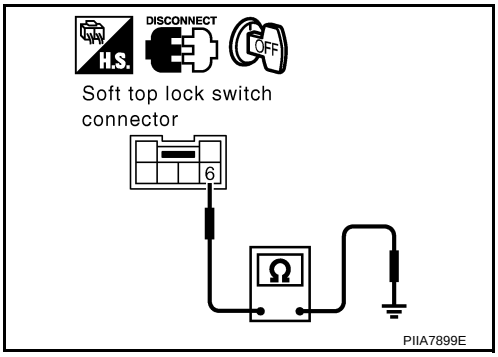
2. CHECK 5TH BOW HALF-LATCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top lock switch (at 5th bow lock assembly in storage lid) connector.
3. Check continuity between soft top control unit connector B67 terminal 31 and soft top lock switch connector T205 terminal 5.

31 (L) - 5 (L) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 31 and ground.

31 (L) - Ground : Continuity should not exist.



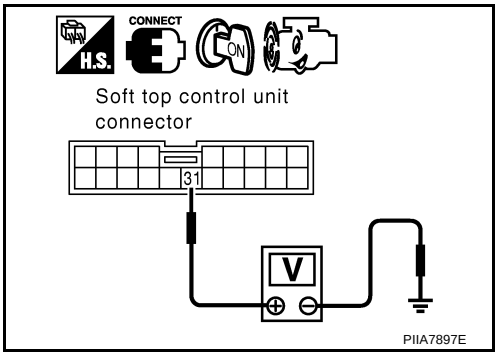
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW HALF-LATCH SWITCH GROUND CIRCUIT

Check continuity between soft top lock switch connector T205 terminal 6 and ground.

6 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

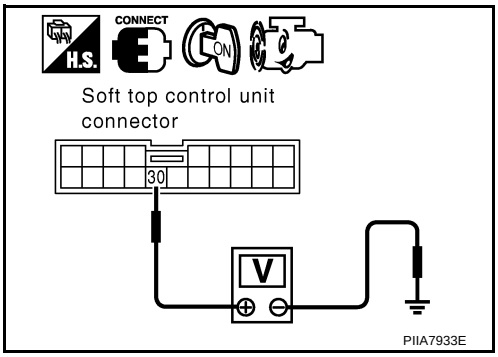
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 31 and ground.

31 (L) - Ground : Approx. 5V

OK or NG

OK >> Replace 5th bow lock assembly in storage lid.
NG >> Replace soft top control unit.



NIS0007B

Check 5th Bow Full-Latch Switch

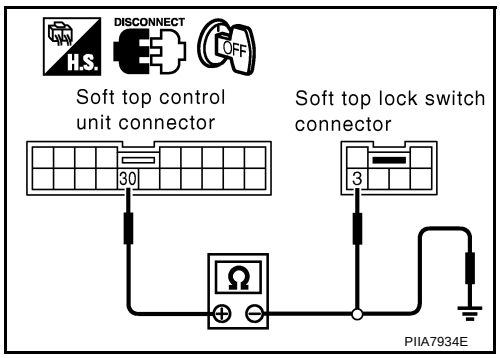
1. CHECK 5TH BOW FULL-LATCH SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	30 (Y/R)	Ground	CL10	0 → 5

OK or NG

OK >> Soft top lock switch (5th bow full-latch switch) is OK.
NG >> GO TO 2.



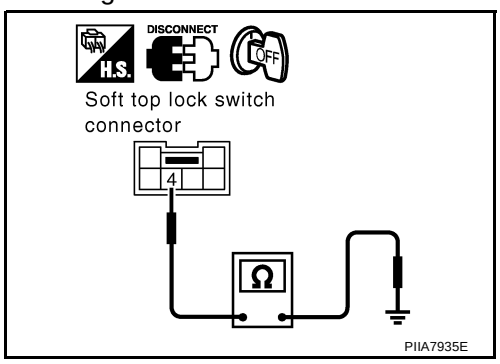
2. CHECK 5TH BOW FULL-LATCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top lock switch (at 5th bow lock assembly in storage lid) connector.
3. Check continuity between soft top control unit connector B67 terminal 30 and soft top lock switch connector T205 terminal 3.

30 (Y/R) - 3 (Y) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 30 and ground.

30 (Y/R) - Ground : Continuity should not exist.



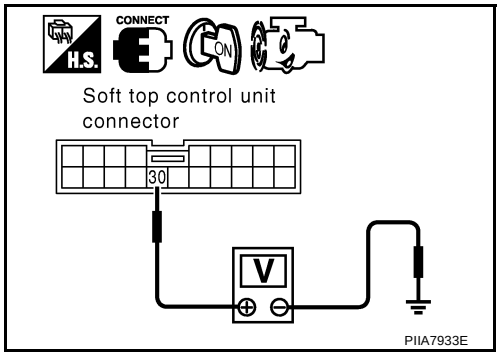
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW HALF-LATCH SWITCH GROUND CIRCUIT

Check continuity between soft top lock switch connector T205 terminal 4 and ground.

4 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

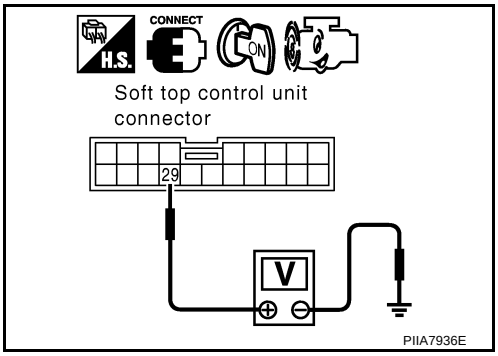
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 30 and ground.

30 (Y/R) - Ground : Approx. 5V

OK or NG

OK >> Replace 5th bow assembly in storage lid.
NG >> Replace soft top control unit.



Check 5th Bow Ending Switch

NIS0007C

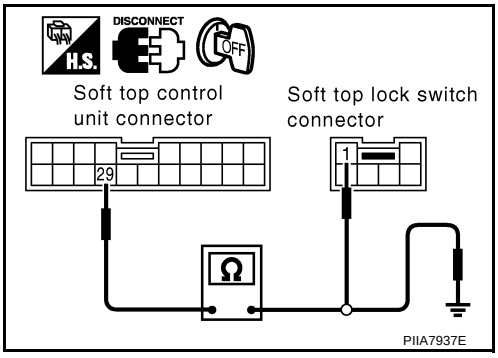
1. CHECK 5TH BOW ENDING SWITCH SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	29 (R/Y)	Ground	CL10	0 → 5

OK or NG

OK >> Soft top lock switch (5th bow ending switch) is OK.
NG >> GO TO 2.



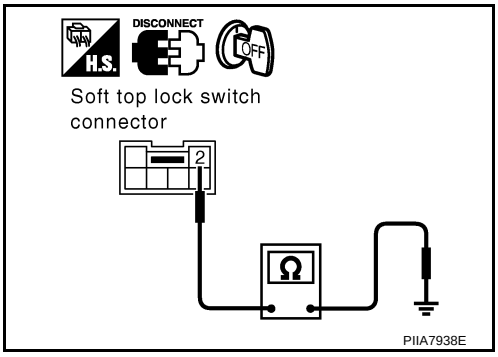
2. CHECK 5TH BOW ENDING CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top lock switch (at 5th bow lock assembly in storage lid) connector.
3. Check continuity between soft top control unit connector B67 terminal 29 and soft top lock switch connector T205 terminal 1.

29 (R/Y) - 1 (R) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 29 and ground.

29 (R/Y) - Ground : Continuity should not exist.



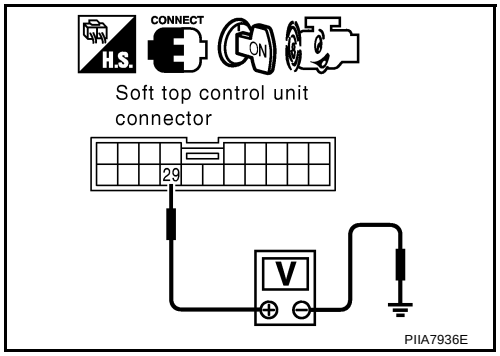
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK 5TH BOW ENDING SWITCH GROUND CIRCUIT

Check continuity between soft top lock switch connector T205 terminal 2 and ground.

2 (B) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

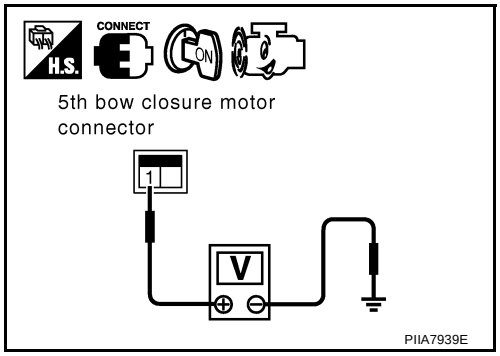
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 29 and ground.

29 (R/Y) - Ground : Approx. 5V

OK or NG

OK >> Replace soft top lock switch (5th bow lock assembly in storage lid).
NG >> Replace soft top control unit.



Check 5th Bow Closure Motor

NIS0007D

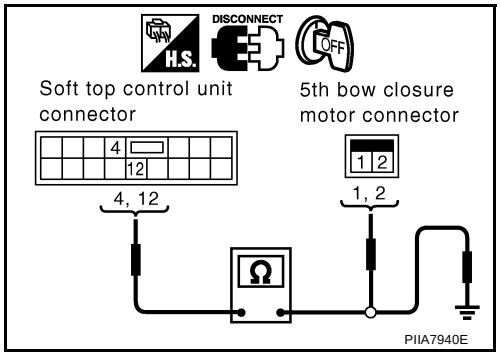
1. 5TH BOW CLOSURE MOTOR INPUT SIGNAL

1. Start engine.
2. Operate soft top switch CLOSE, check voltage between 5th bow closure motor connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
T204	1 (W)	Ground	CL9 → CL10	0 → Battery voltage → 0

OK or NG

OK >> Replace 5th bow closure motor.
NG >> GO TO 2.



2. CHECK 5TH BOW CLOSURE MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and 5th bow closure motor connector.
3. Check continuity between soft top control unit connector B66 terminal 4, 12 and 5th bow closure motor connector T204 terminal 1, 2.

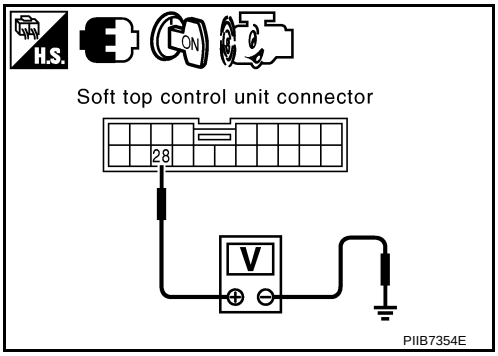
4 (G/R) - 1 (W) : Continuity should exist.
12 (G/Y) - 2 (G) : Continuity should exist.

4. Check continuity between soft top control unit connector B66 terminal 4, 12 and ground.

4 (G/R) - Ground : Continuity should not exist.
12 (G/Y) - Ground : Continuity should not exist.

OK or NG

OK >> Replace soft top control unit.
NG >> Repair or replace harness.



Check Soft Top Front Lock Switch

NIS001L7

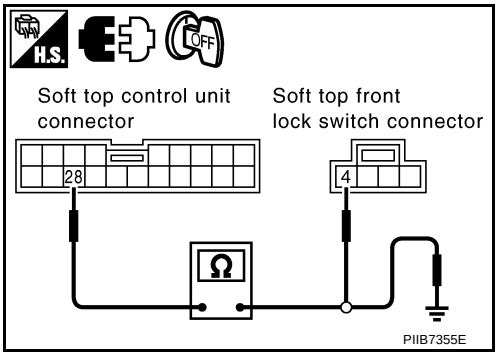
1. SOFT TOP FRONT LOCK SWITCH SIGNAL

1. Start engine.
2. Check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage (V) (Approx.)
	(+)	(-)			
B67	28 (LG/B)	Ground	Front lock	Lock	5
				Unlock	0

OK or NG

OK >> Soft top front lock switch is OK.
NG >> GO TO 2.



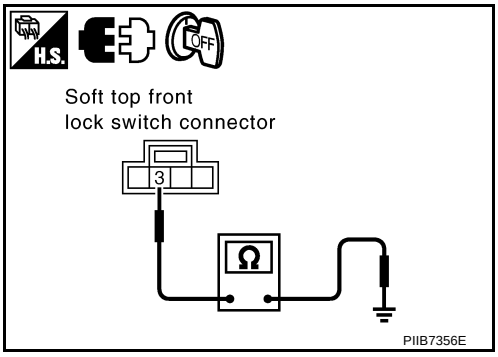
2. CHECK 5TH BOW ENDING CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and soft top front lock switch connector.
3. Check continuity between soft top control unit connector B67 terminal 28 and soft top front lock switch connector R8 terminal 4.

28 (LG/B) - 4 (LG/B) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 28 and ground.

28 (LG/B) - Ground : Continuity should not exist.



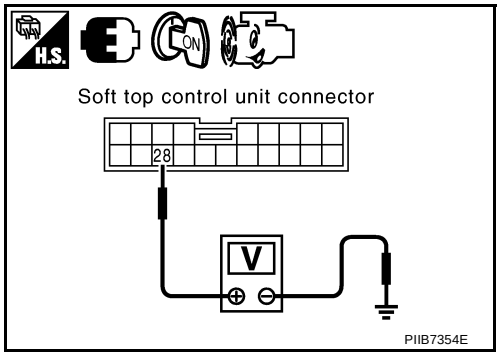
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK SOFT TOP FRONT LOCK SWITCH GROUND CIRCUIT

Check continuity between soft top front lock switch connector R8 terminal 3 and ground.

3 (B/W) - Ground : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

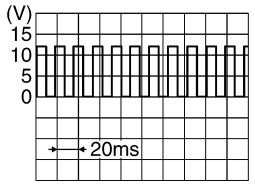
4. CHECK SOFT TOP CONTROL UNIT OUTPUT SIGNAL

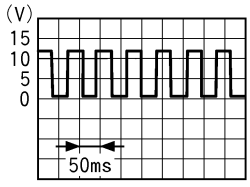
1. Connect soft top control unit connector.
2. Start engine.
3. Check voltage between soft top control unit connector B67 terminal 28 and ground.

28 (LG/B) - Ground : Approx. 5V

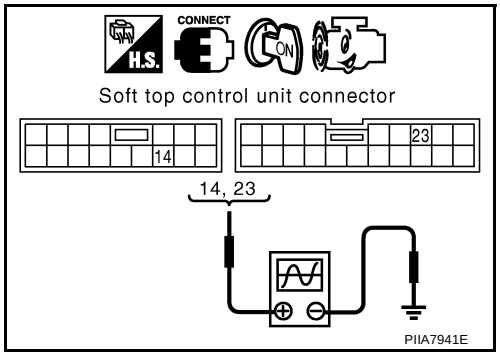
OK or NG

OK >> Replace soft top front lock switch (front lock striker RH).
NG >> Replace soft top control unit.





Check Operation Permission Condition



NIS0007E

First perform the “SELF-DIAG RESULT” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULT” of “BCM”. Refer to BCS-15, "CONSULT-III Function (BCM)" .

1. CHECK VEHICLE SPEED SIGNAL

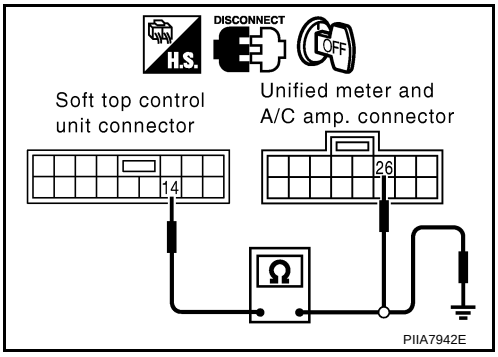
1. Start engine.
2. Check the signal between soft top control unit connector and ground with oscilloscope.

Connector	Terminal (Wire color) (+)	Terminal (Wire color) (-)	Condition	Signal (Reference value.)
B66	14 (W)	Ground	Speedometer operated [When vehicle speed is Approx. 40km/h (25MPH)]	 PKIA1935E
B67	23 (W/G)			 PIIB0078J

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK VEHICLE SPEED SIGNAL CIRCUIT



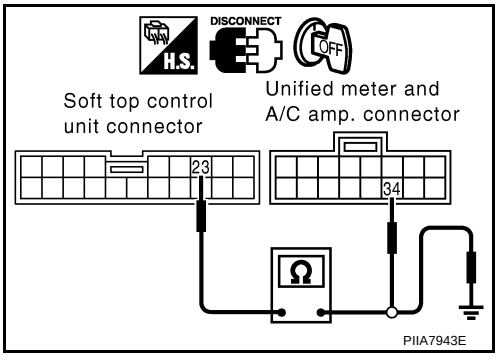
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and unified meter and A/C amp connector.
3. Check the following.

– Continuity between soft top control unit connector B66 terminal 14 and unified meter and A/C amp connector M49 terminal 26.

14 (W) - 26 (W) : Continuity should exist.

– Continuity between soft top control unit connector B66 terminal 14 and ground.

14 (W) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B67 terminal 23 and unified meter and A/C amp connector M49 terminal 34.

23 (W/G) - 34 (L) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 23 and ground.

23 (W/G) - Ground : Continuity should not exist.

OK or NG

OK >> Check unified meter and A/C amp. Refer to DI-44, "System Description" .

NG >> Repair or replace harness.

3. CHECK FUSE

- Check 10A fuse [No.20, located in fuse block (J/B)].

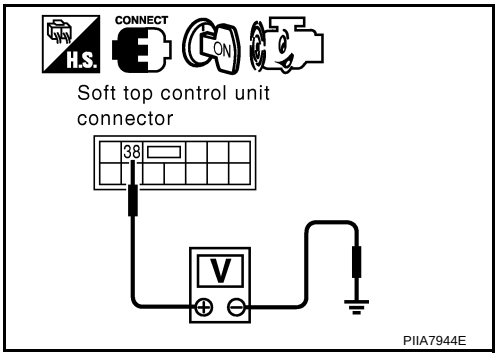
NOTE:
Refer to RF-11, "Component Parts and Harness Connector Location" .

OK or NG

OK >> GO TO 4.

NG >> If fuse blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

4. CHECK BRAKE PEDAL SIGNAL



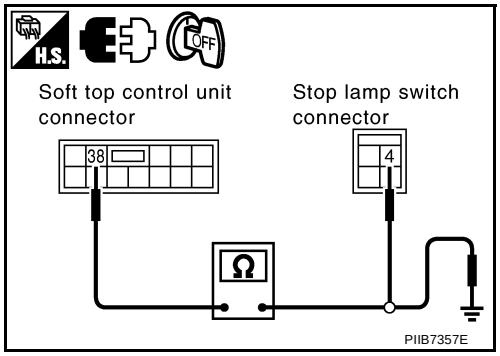
Check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Brake pedal condition	Voltage (V) (Approx.)
	(+)	(-)		
B68	38 (W)	Ground	Depressed	Battery voltage
			Released	0

OK or NG

OK >> Stop lamp switch is OK.

NG >> GO TO 5.



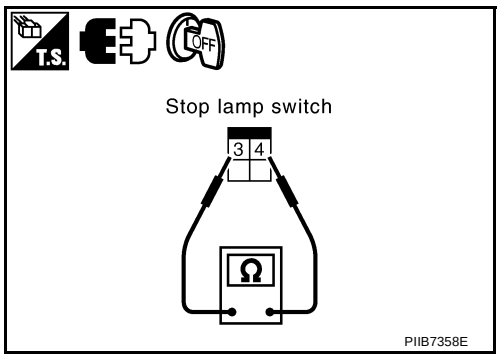
5. CHECK BRAKE PEDAL SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and stop lamp switch connector.
3. Continuity between soft top control unit connector B68 terminal 38 and stop lamp switch connector E111 terminal 4.

38 (W) - 4 (P/L) : Continuity should exist.

4. Continuity between soft top control unit connector B68 terminal 38 and ground.

38 (W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness.

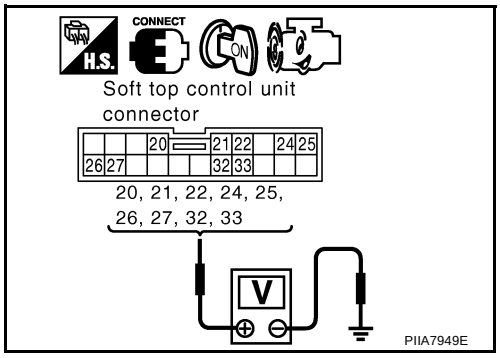
6. CHECK STOP LAMP SWITCH

Continuity between stop lamp switch connector E111 terminal 3 and 4.

Connector	Terminal		Brake pedal condition	Continuity
E111	3	4	Depressed	Yes
			Released	No

OK or NG

OK >> Check condition of harness and connector.
NG >> Replace stop lamp switch.



Check Each Switch Condition (Open Operate)

NIS0007F

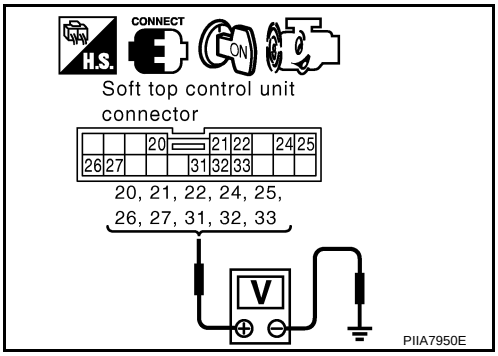
1. CHECK EACH SWITCH SIGNAL

1. Start engine.
2. Check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	20 (W/B)	Ground	Full closed	5
	21 (W/L)			
	22 (W/R)			
	24 (G)			
	25 (L/Y)			
	26 (LG)			
	27 (GY)			
	32 (W)			
	33 (BR)			

OK or NG

OK >> Each switch condition is OK.
NG >> Check malfunction switch.



Check Each Switch Condition (Close Operate)

NIS0007G

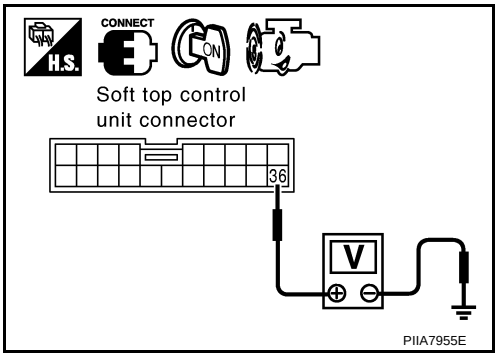
1. CHECK EACH SWITCH SIGNAL

1. Start engine.
2. Check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	20 (W/B)	Ground	Full opened	0
	21 (W/L)			
	22 (W/R)			
	24 (G)			5
	25 (L/Y)			
	26 (LG)			0
	27 (GY)			
	31 (L)			
	32 (W)			
	33 (P)			5

OK or NG

OK >> Each switch condition is OK.
NG >> Check malfunction switch.



Check Power Window Down Request Signal

NIS0007H

1. CHECK POWER WINDOW REQUEST SIGNAL

1. Start engine.
2. Soft top switch operate, check voltage between soft top control unit connector and ground.

Con-nector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	36 (PU)	Ground	OP1 → OP11 (open operation)	5 → 0 → 5
			CL1 → CL10 (close operation)	

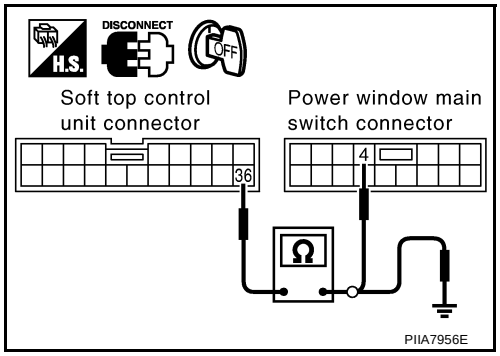
OK or NG

OK >> Check the condition of harness and connector.
NG >> Replace soft top control unit.

Check Power Window Harness

NIS0007I

1. CHECK POWER WINDOW CIRCUIT



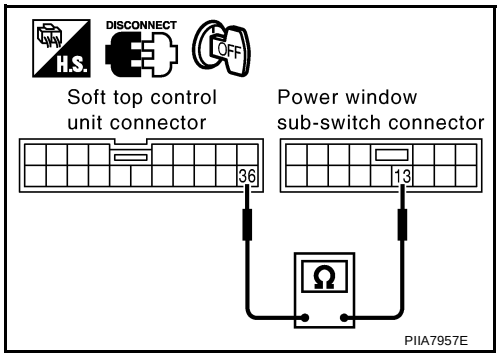
1. Turn ignition switch OFF.
2. Disconnect soft top control unit, power window main switch and power window sub-switch connector.
3. Check the following.

– Continuity between soft top control unit connector B67 terminal 36 and power window main switch connector D7 terminal 4.

36 (PU) - 4 (P) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 36 and ground.

36 (PU) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B67 terminal 36 and power window sub-switch connector D37 terminal 13.

36 (PU) - 13 (P) : Continuity should exist.

OK or NG

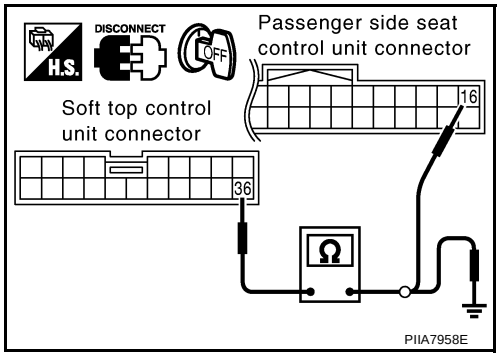
OK >> Replace malfunction power window switch.
NG >> Repair or replace harness.

Check Passenger Side Seat Operate Signal 1

NIS0007J

1. CHECK PASSENGER SIDE SEAT CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and passenger side seat control unit connector.
3. Check continuity between soft top control unit connector B67 terminal 36 and passenger seat control unit connector B353 terminal 16.



36 (PU) - 16 (PU/W) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 36 and ground.

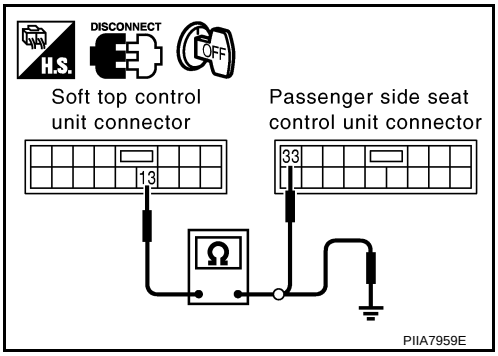
36 (PU) - Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger seat control unit.
NG >> Repair or replace harness.

Check Passenger Side Seat Operate Signal 2

NIS0007K



1. CHECK PASSENGER SIDE SEAT CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit, storage lid actuator RH and passenger seat control unit connector.
3. Check continuity between soft top control unit connector B66 terminal 13 and passenger seat control unit connector B354 terminal 33.

13 (L/R) - 33 (G/B) : Continuity should exist.

4. Check continuity between soft top control unit connector B66 terminal 13 and ground.

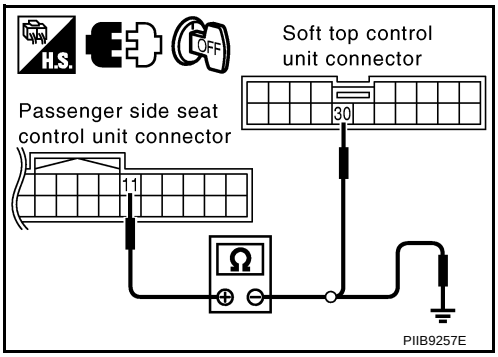
13 (L/R) - Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger seat control unit.
NG >> Repair or replace harness.

Check Passenger Side Seat Operate Signal 3

NIS0007L



1. CHECK PASSENGER SIDE SEAT CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit, passenger seat control unit and soft top lock switch connector.
3. Check continuity between passenger seat control unit connector B353 terminal 11 and soft top control unit connector B67 terminal 30.

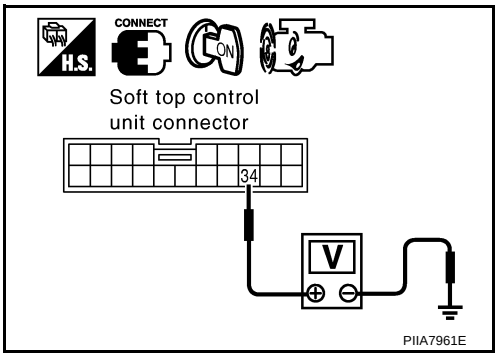
11 (L/W) - 30 (Y/R) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 30 and ground.

11 (L/W) - Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger seat control unit.
NG >> Repair or replace harness.



Check Seat Back Position Signal

NIS0007M

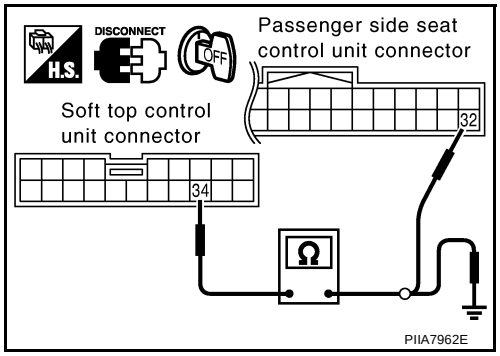
1. CHECK SEAT BACK POSITION SIGNAL

1. Start engine.
2. The thing whose seat cancel switch is OFF is confirmed.
3. Soft top switch operate, check voltage between soft top control unit connector and ground.

Connector	Terminal (Wire color)		Seat condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	34 (L/W)	Ground	When passenger seat inclines forward	5
			Other than above	0

OK or NG

OK >> Replace soft top control unit.
NG >> GO TO 2.



2. CHECK SEAT BACK POSITION SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and passenger seat control unit connector.
3. Check continuity between soft top control unit connector B67 terminal 34 and passenger seat control unit connector B353 terminal 32.

34 (L/W) - 32 (G/W) : Continuity should exist.

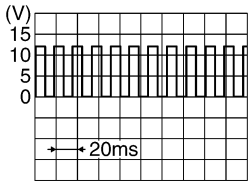
4. Check continuity between soft top control unit connector B67 terminal 34 and ground.

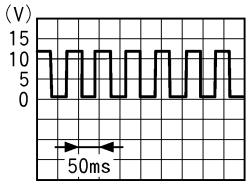
34 (L/W) - Ground : Continuity should not exist.

OK or NG

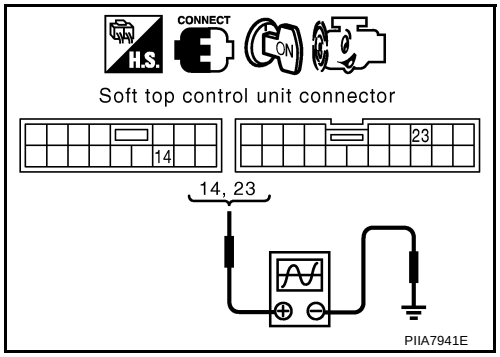
OK >> Check passenger side seat. Refer to SE-37, "Trouble Diagnosis Symptom Chart" .

NG >> Repair or replace harness.





Check Speed Signal Circuit



NIS0007N

First perform the “SELF-DIAG RESULT” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULT” of “BCM”. Refer to BCS-15, "CONSULT-III Function (BCM)" .

1. CHECK VEHICLE SPEED SIGNAL

1. Start engine.
2. Check the signal between soft top control unit connector and ground with oscilloscope.

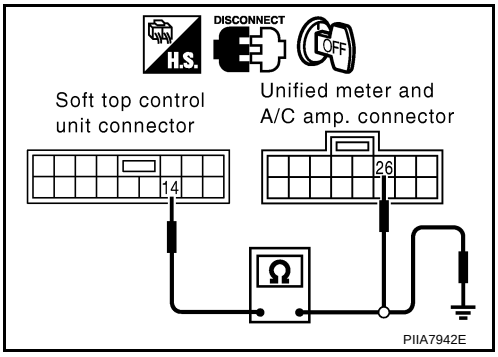
Connector	Terminal (Wire color) (+)	Terminal (Wire color) (-)	Condition	Signal (Reference value.)
B66	14 (W)	Ground	Speedometer operated [When vehicle speed is Approx. 40km/h (25MPH)]	 PKIA1935E
B67	23 (W/G)			 PIIB0078J

OK or NG

OK >> Replace soft top control unit.

NG >> GO TO 2.

2. CHECK VEHICLE SPEED SIGNAL CIRCUIT



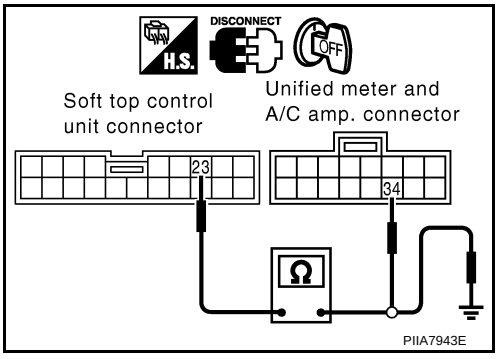
1. Turn ignition switch OFF.
2. Disconnect soft top control unit and unified meter and A/C amp connector.
3. Check the following.

– Continuity between soft top control unit connector B66 terminal 14 and unified meter and A/C amp connector M49 terminal 26.

14 (W) - 26 (W) : Continuity should exist.

– Continuity between soft top control unit connector B66 terminal 14 and ground.

14 (W) - Ground : Continuity should not exist.



4. Check the following.

– Continuity between soft top control unit connector B67 terminal 23 and unified meter and A/C amp connector M49 terminal 34.

23 (W/G) - 34 (L) : Continuity should exist.

– Continuity between soft top control unit connector B67 terminal 23 and ground.

23 (W/G) - Ground : Continuity should not exist.

OK or NG

OK >> Check unified meter and A/C amp. Refer to DI-44, "System Description" .

NG >> Repair or replace harness.

Check Indicator Lamp Circuit

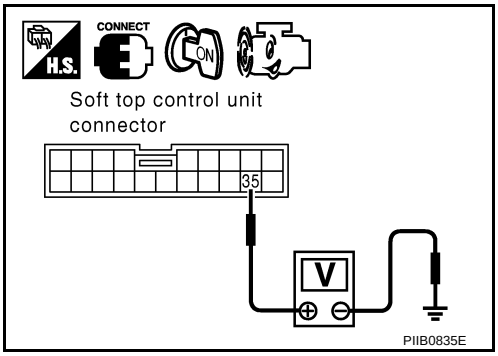
NIS0007O

1. CHECK FUSE

- Check 10A fuse [No.14, located in fuse block (J/B)]

NOTE:
Refer to RF-11, "Component Parts and Harness Connector Location" .

OK or NG



OK >> GO TO 2.

NG >> If fuse blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK INDICATOR LAMP SIGNAL

1. Start engine.
2. Soft top switch operate, check voltage between soft top control unit connector and ground.

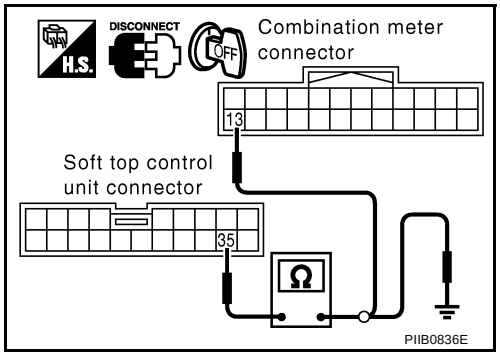
Connector	Terminal (Wire color)		Roof condition	Voltage (V) (Approx.)
	(+)	(-)		
B67	35 (Y)	Ground	Full open or full close	Battery voltage
			Other than above	0

OK or NG

OK >> Check the condition of the harness and the connector.

NG - 1 >> If battery voltage: Replace soft top control unit.

NG - 2 >> If 0V: GO TO 3.



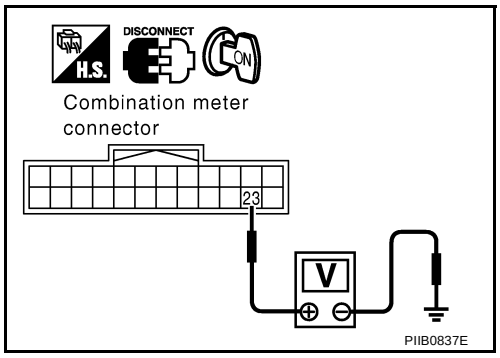
3. CHECK INDICATOR LAMP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and combination meter connector.
3. Check continuity between soft top control unit connector B67 terminal 35 and combination meter connector M19 terminal 13.

35 (Y) – 13 (G/W) : Continuity should exist.

4. Check continuity between soft top control unit connector B67 terminal 35 and ground.

35 (Y) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

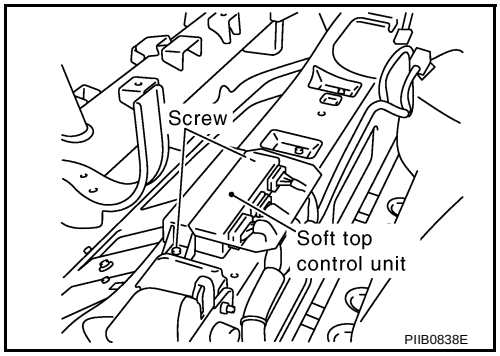
4. CHECK INDICATOR LAMP POWER SUPPLY

1. Turn ignition switch ON.
2. Check voltage between combination meter connector M19 terminal 23 and ground.

23 (G/Y) – Ground : Battery voltage

OK or NG

OK >> Check the Condition of the Harness and the Connector.
- If OK: Replace combination meter.
- If NG: Repair or replace harness.



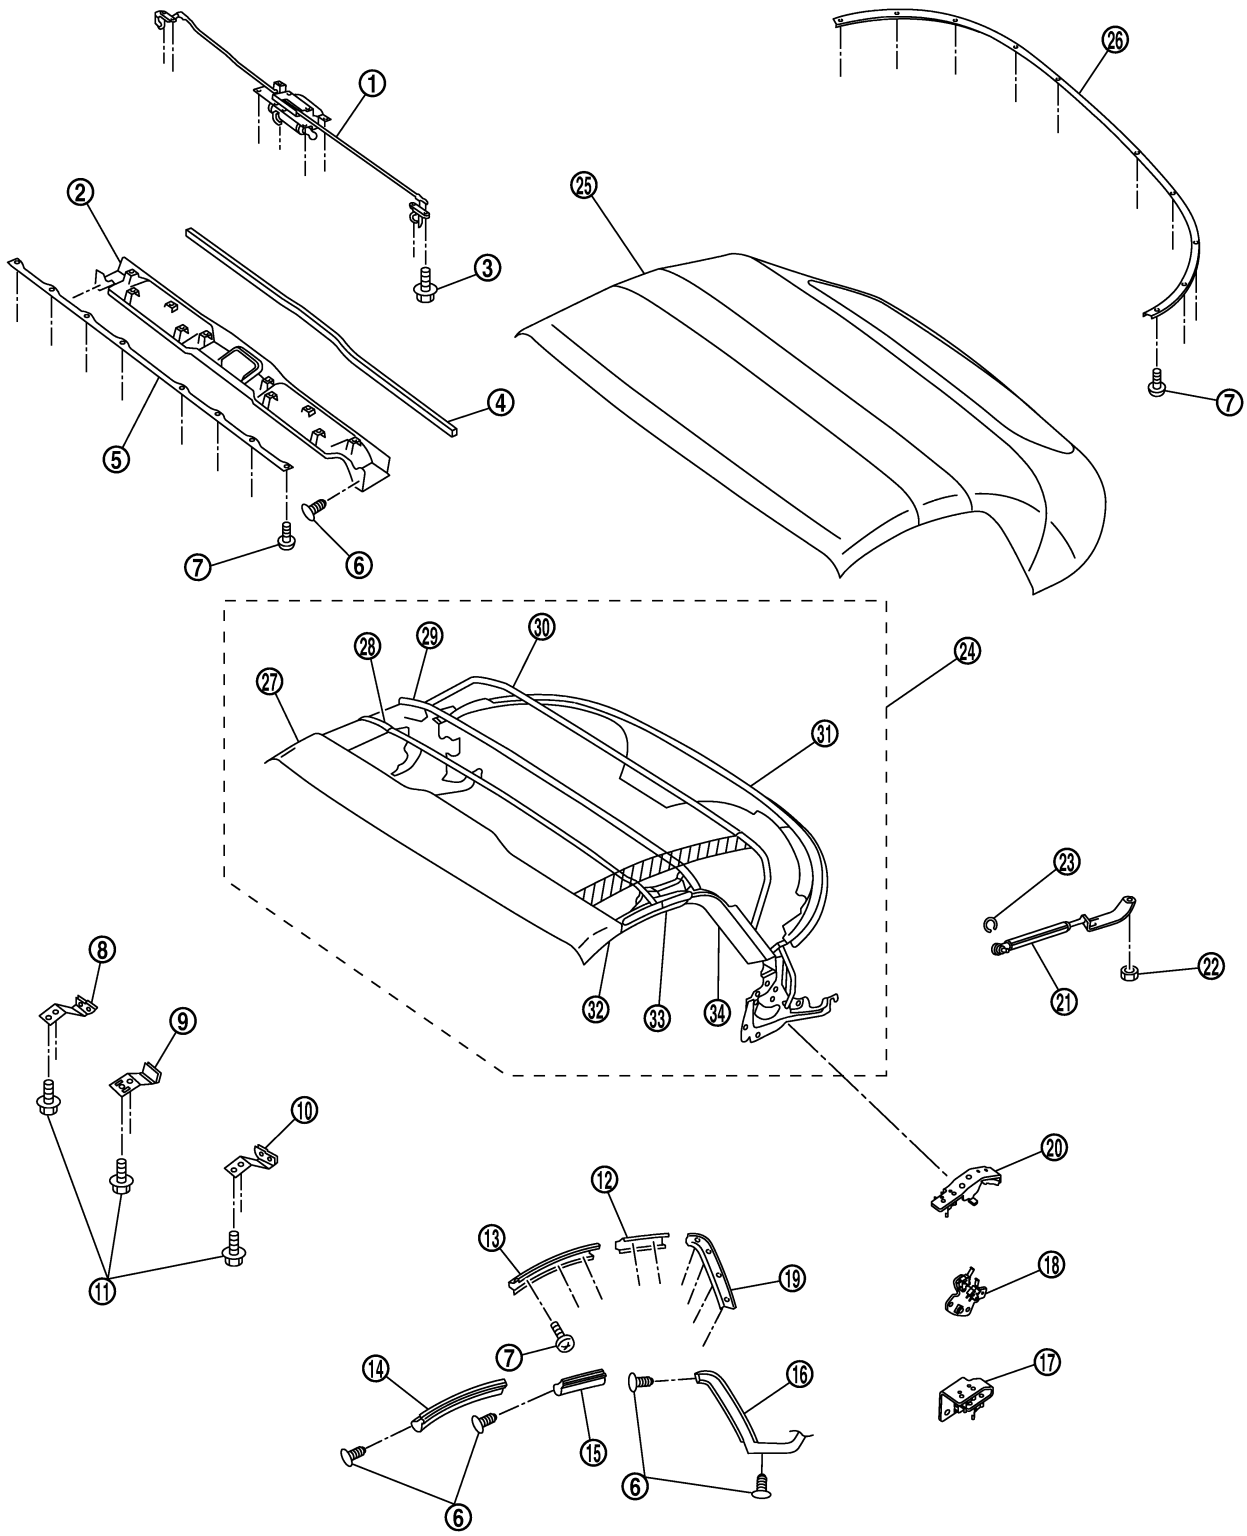
NG >> Repair or replace harness.

Removal and Installation of Soft Top Control Unit

NIS0007P

REMOVAL

1. Push the soft top switch on the close side to clear the soft top storage room, and release the buttom before strage lid starts closing.
2. Remove trim parts and turn the front side of storage room finisher. RF-126, "Removal and Installation of Storage Room Finisher"
3. Disconnect soft top control unit connector, remove the screw and soft top control unit.



INSTALLATION

Installation in the reverse order of removal.

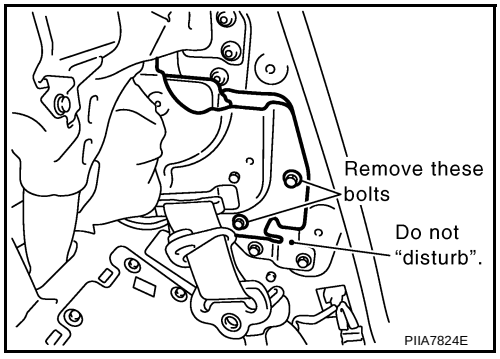
Removal and Installation of Soft Top Assembly

NIS0007R



CAUTION:
Install fender cover to protect rear fender.

REMOVAL

1. Fully open storage lid with soft top retracting.
2. Remove seat belt sholder bolt. Refer to SB-6, "REMOVAL OF SEAT BELT RETRACTOR" .
3. Remove rear side finisher. Refer to EI-37, "REAR SIDE FINISHER" .
4. Remove back panel finisher. Refer to EI-42, "BACK PANEL FINISHER" .
5. Loosen bolts at soft top mounting bracket (front).

   CAUTION:
   Do not remove soft top mounting bracket (front) (body side).

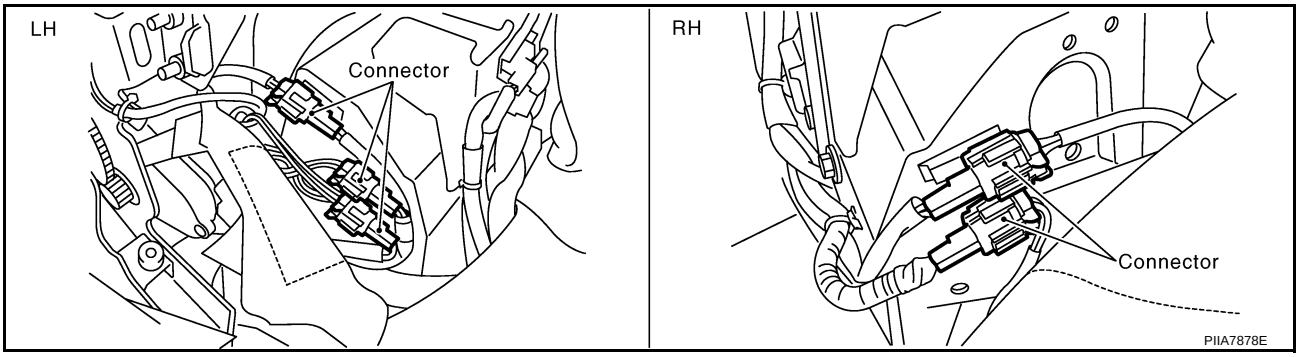
   Nut: 28.0 N·m (2.9 kg-m, 21 ft-lb)

6. Close soft top until 5th bow are raised and folded with C-link. Loosen nut at soft top mounting bracket (rear). Then fold (open) soft top assembly completely.

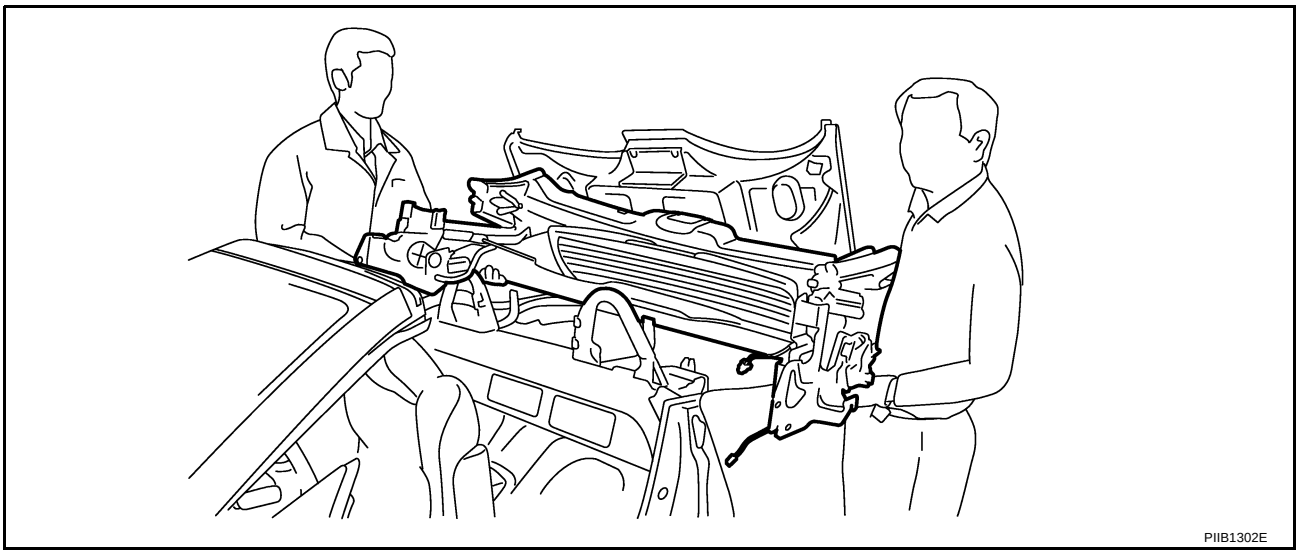
   CAUTION:
   Do not remove soft top mounting bracket (rear) (body side).

   Bolt: 28.0 N·m (2.9 kg-m, 21 ft-lb)

7. Remove back panel bracket.



8. Remove bolts, at the soft top mounting plate and shims.



CAUTION:
Do not replace left and right shims with each one with different thickness.

Bolt: 28.0 N·m (2.9 kg-m, 21 ft-lb)

9. Disconnect harness connector.

10. Lift up soft top assembly from left and right, and then remove soft top assembly.

CAUTION:
2 workers are required for the heavy load of approximately 40 kg (89 lb).

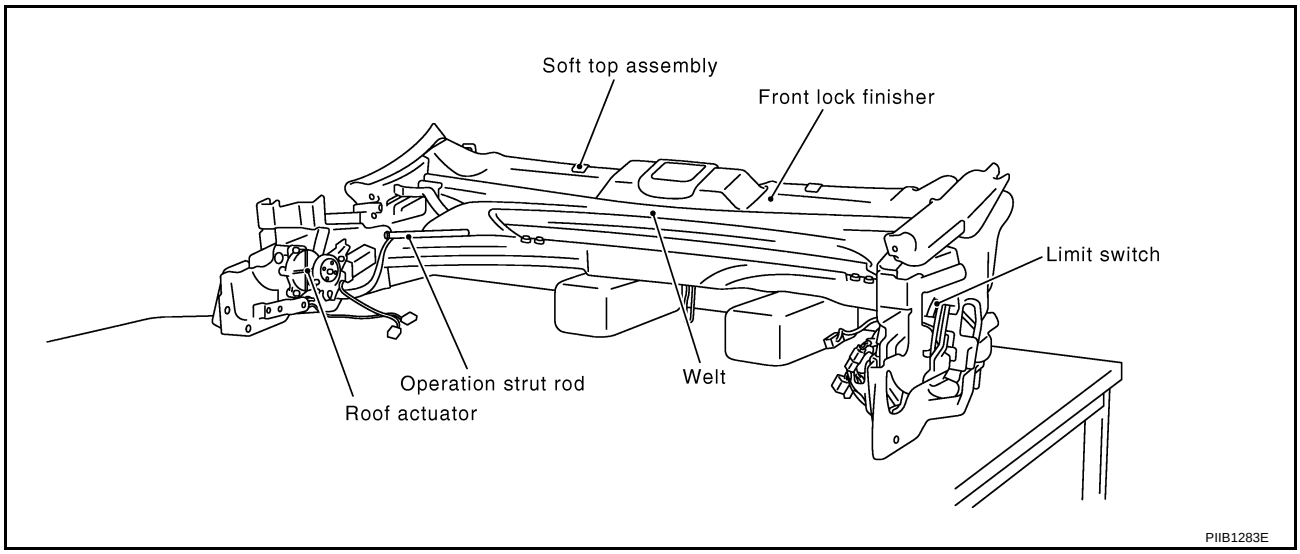
INSTALLATION

Install in the reverse order of removal except the order of tightening bolts and nuts. (See note below.)

NOTE:
Before tighten soft top fixing bolts and nuts, make sure that soft top is sat on each pins from soft top mounting brackets without any gaps.
To sit soft top correctly, follow this order.

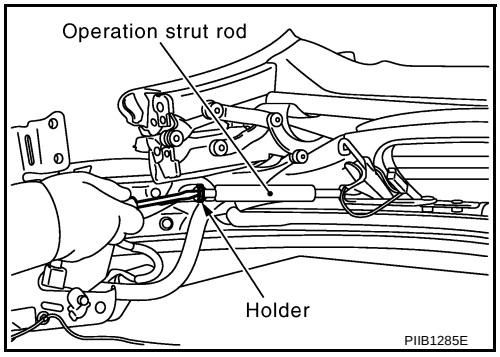
1. Push soft top assembly down when nuts at soft top mounting bracket (rear) is tighten.
2. Close soft top until the angle of A-link becomes vertical against ground, then tighten bolts at soft top mounting bracket (front).
3. Tighten bolts at soft top mounting plate with shims, then attach back panel bracket with bolts.

Removal and Installation of Soft Top Cover



NIS0007S

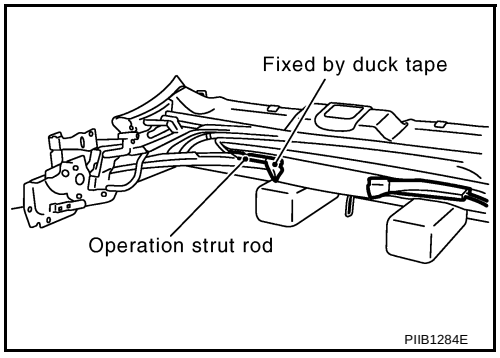
REMOVAL



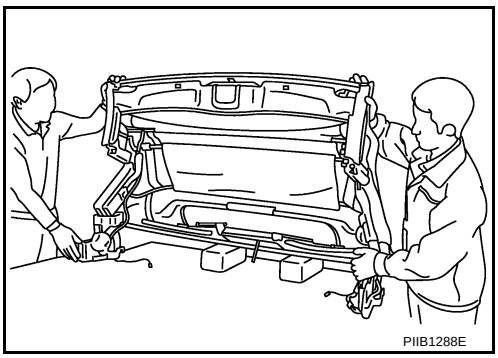
CAUTION:

- **Do not reuse used double-faced adhesive tape, nonwoven fabric, EPT seal, pad, etc.**
- **Be careful not to damage soft top assembly during removal. Do not place it upside-down so as to prevent cover from compression scars.**

1. Remove soft top assembly from the vehicle. Refer to RF-88, "Removal and Installation of Soft Top Assembly" .
2. Set up the soft top assembly on the table.

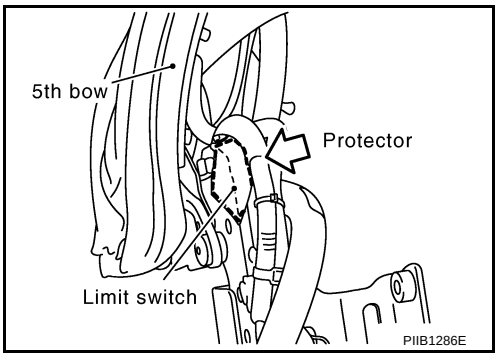


3. Remove roof actuator (RH/LH). Refer to RF-108, "Removal and Installation of Roof Actuator" .
4. Remove holder of 5th bow operation strut rods, and then remove 5th bow operation strut rods.

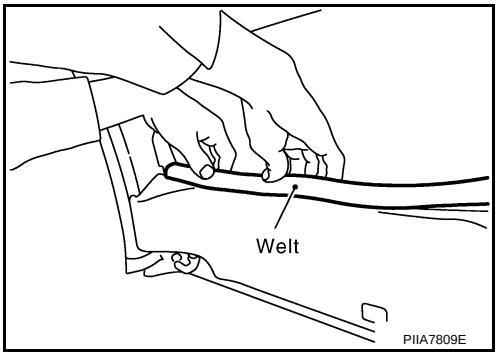


CAUTION:

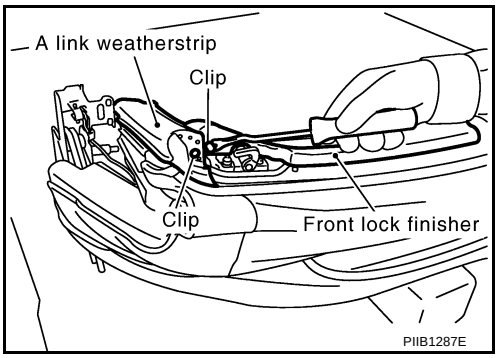
- **When 5th bow operating strut rods are removed, 5th bow drops suddenly.**
  Perform operation while holding 5th bow.



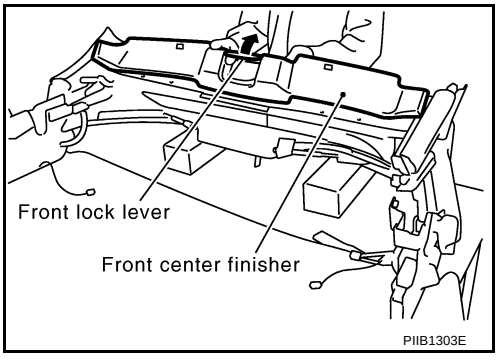
- **Temporarily fix 5th bow operating strut rods on 5th bow finisher after removal.**



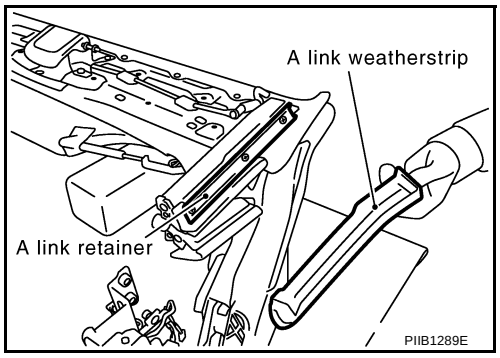
5. Open soft top assembly.



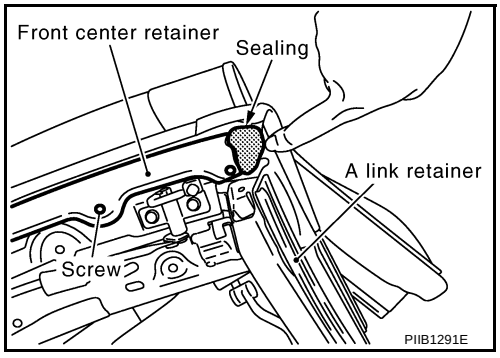
6. Protect the limit switch contact around the rotation axis of the 5th bow on the left side of soft top with tape.



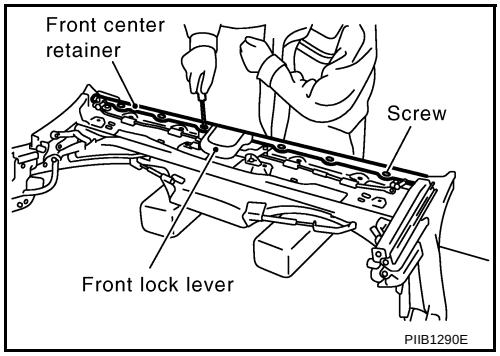
7. Remove welt on the rear end of front lock finisher.



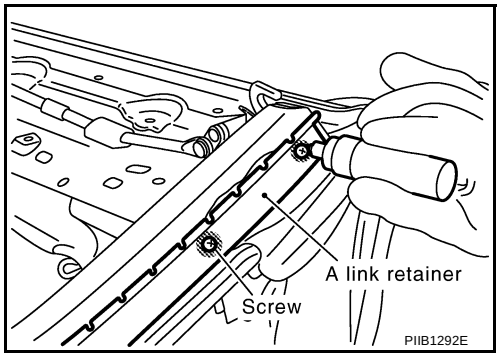
8. Remove left/right clips on the front end of front lock finisher.



9. Pull up front lock lever, and then disengage clips to remove front lock finisher.

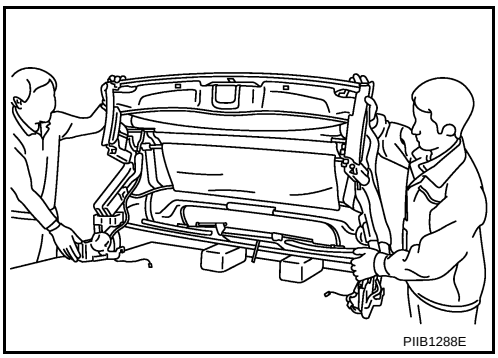


10. Remove clip, and then A link weather strip.

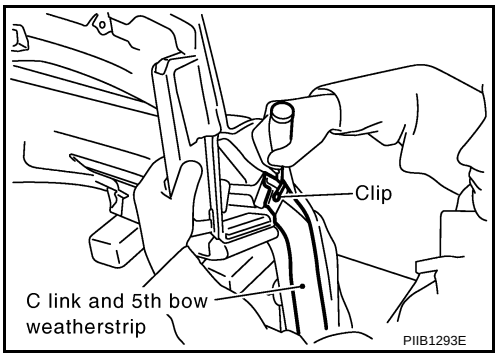


11. Peel a link sealing out.

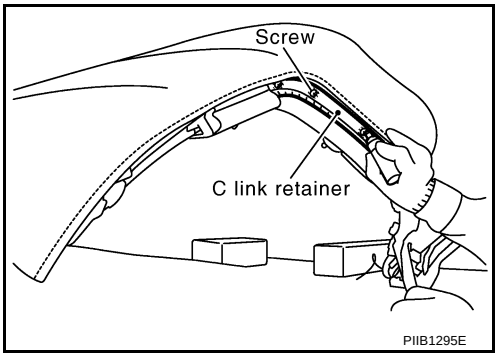
12. Remove screws, and then remove front center retainer.



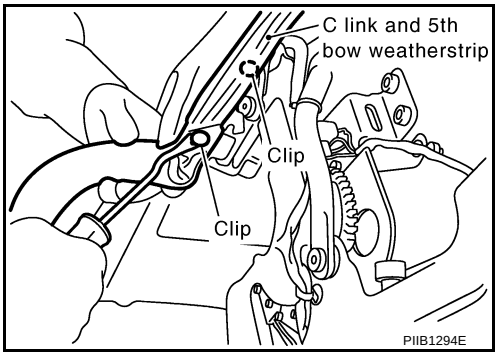
13. Put matching marks to installation position of A link retainer.



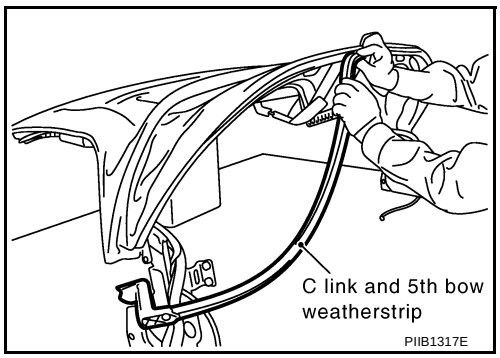
14. Remove screws, and then remove A link retainer.



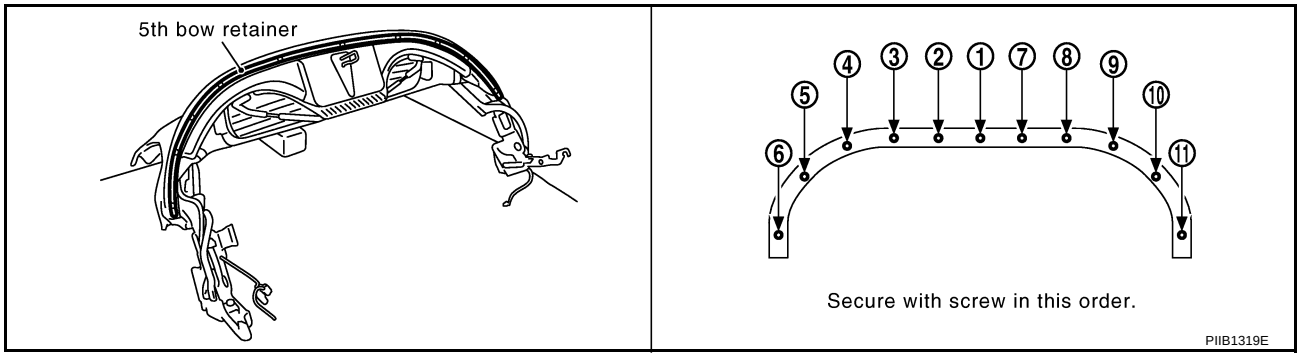
15. Open soft top about 90 degrees.



16. Remove clips on the top of C link and 5th bow weather strip.

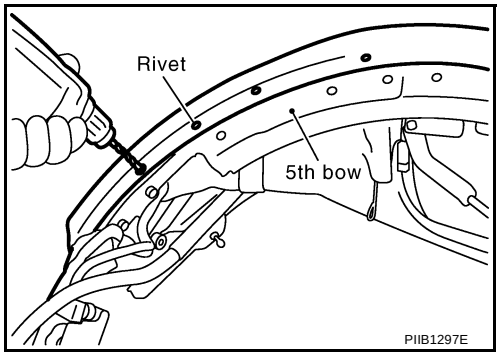


17. Fully open soft top.
18. Put matching marks to installation position on C link retainer.
19. Remove screws, and then remove C link retainer.

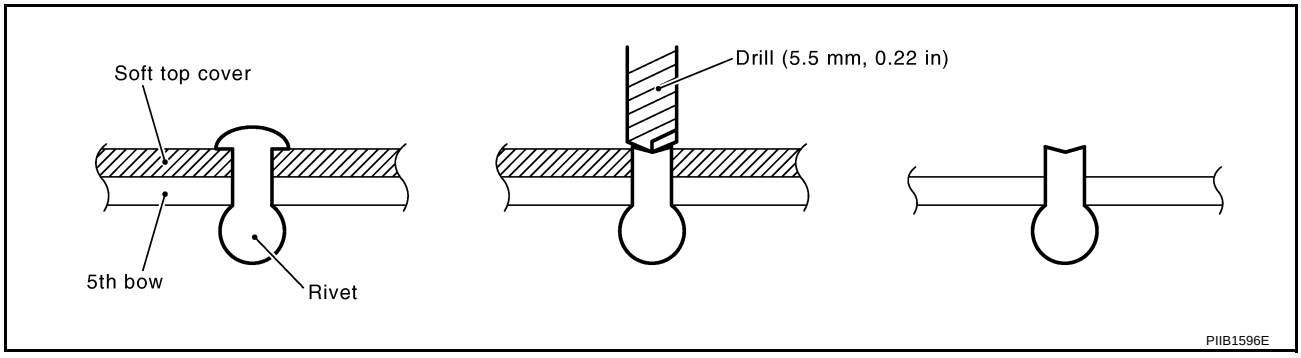


20. Remove clips on the bottom edge of C link and 5th bow weatherstrip.

21. Remove C link and 5th bow weather strip from 5th bow.

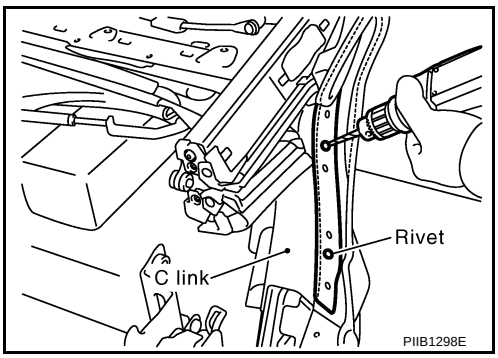


22. Remove screws, and then remove 5th bow retainer.

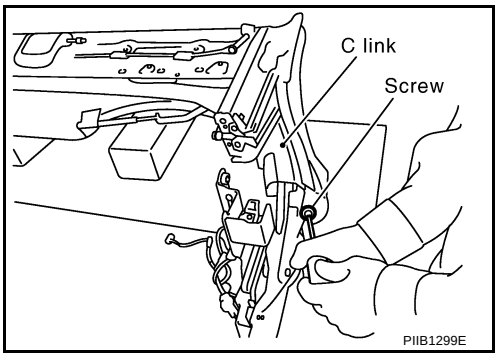


23. Shave rivets head of soft top cover 5th bow by using a drill.
[Drill bit diameter: 5.5 mm (0.22 in)]

CAUTION:

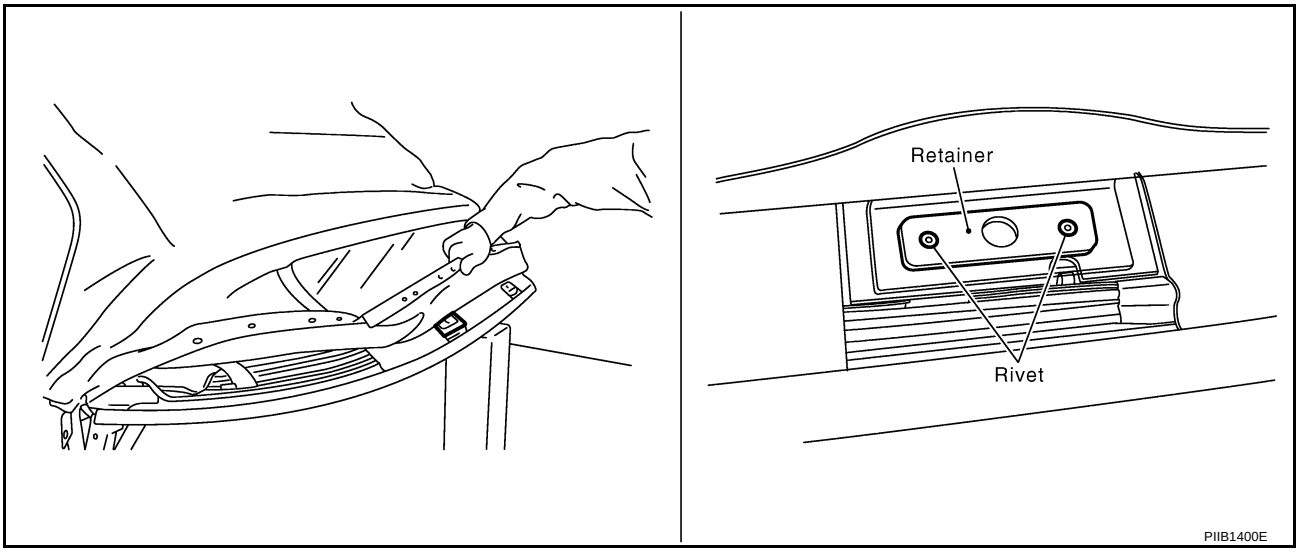


Do not attempt to remove rivets completely.



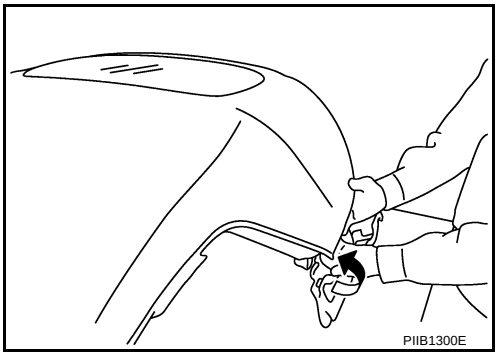
24. Close soft top, and then Shave rivets head and of C link by using a drill.
[Drill bit diameter: 5.5 mm (0.22 in)]

CAUTION:
Do not attempt to remove rivets completely.

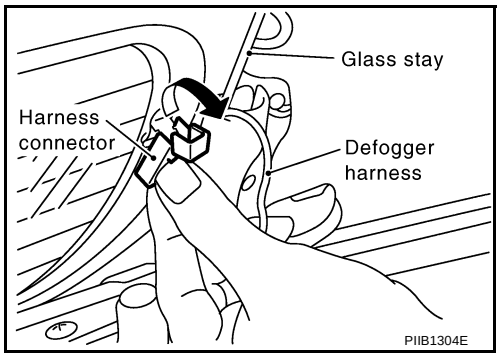


25. Cut EPT seal and remove screws on the bottom of C link.

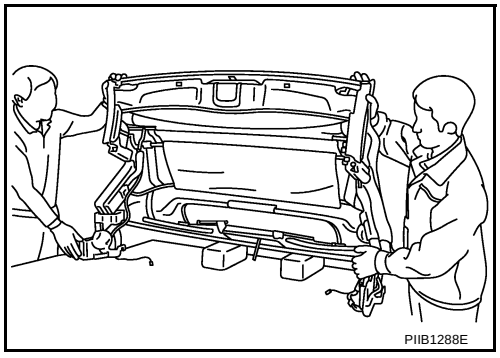
NOTE:
Check the position when cutting EPT seal.



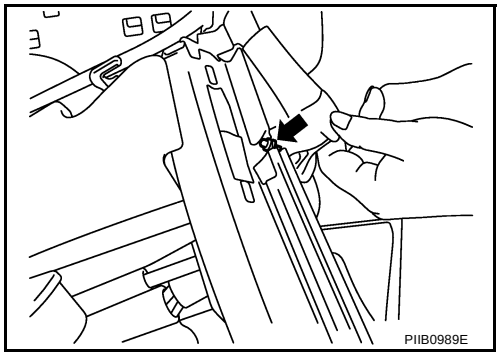
26. Pull up soft top cover from 5th bow finisher.
27. Shave rivets head of 5th bow finisher upper surface, and then remove rivets head and remove retainer.
[Drill bit diameter: 5.5 mm (0.22 in)]



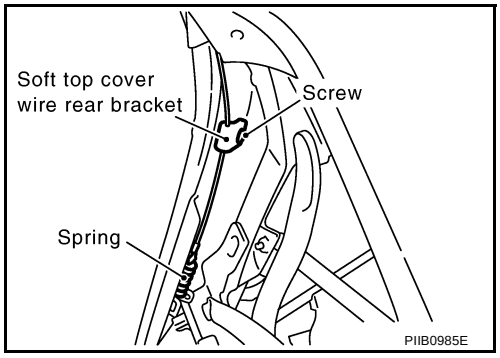
CAUTION:
- **Do not attempt to remove rivets completely.**
- **Be careful not to damage soft top when using a drill.**



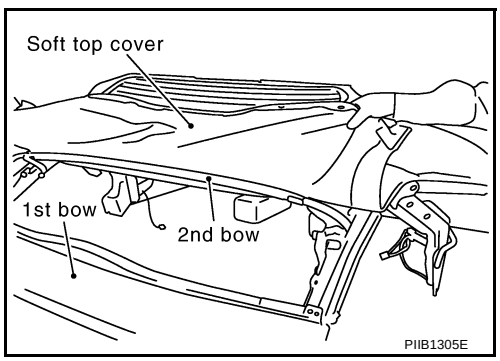
28. Pull up cover from the bottom of C link.



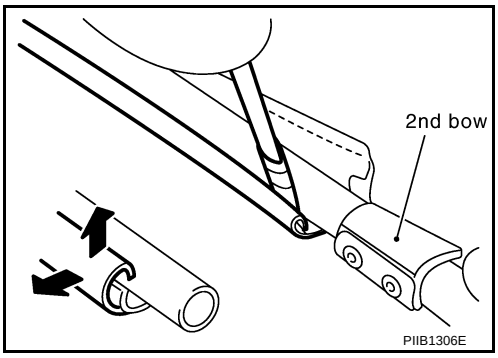
29. Open harness connector cover, and then disconnect defogger harness connector from terminal.



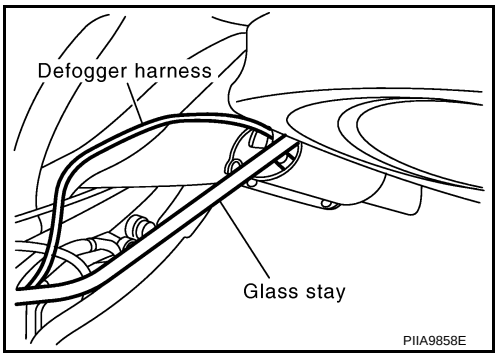
30. Open soft top about 90 degrees.



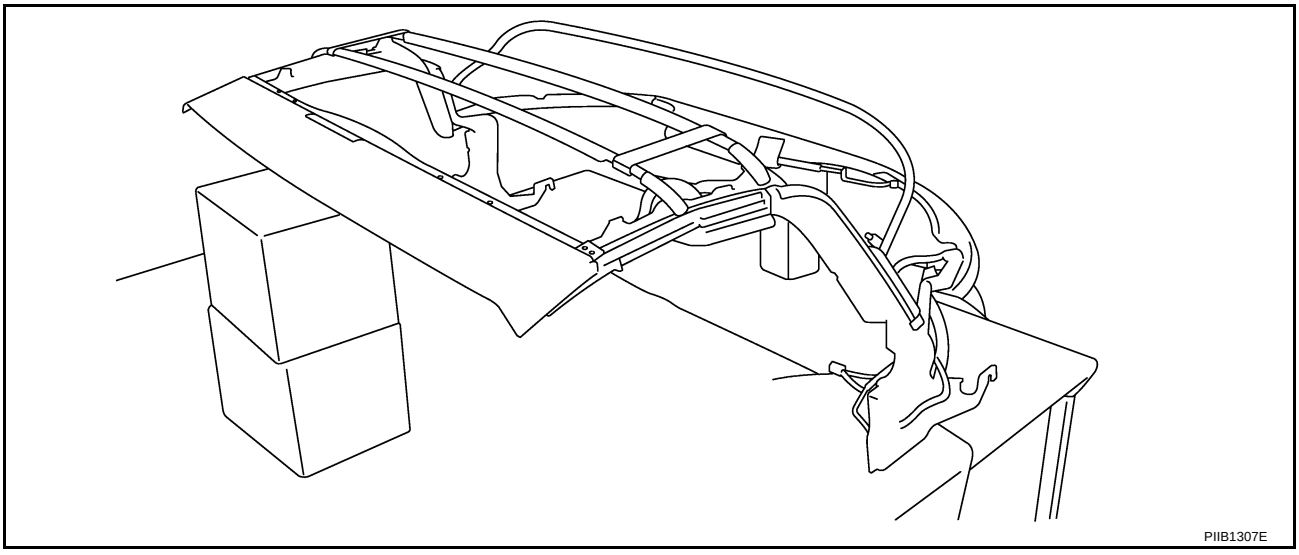
31. Remove soft top wire from A link.



32. Remove soft top cover wire rear bracket from C link.
33. Remove spring from C link.

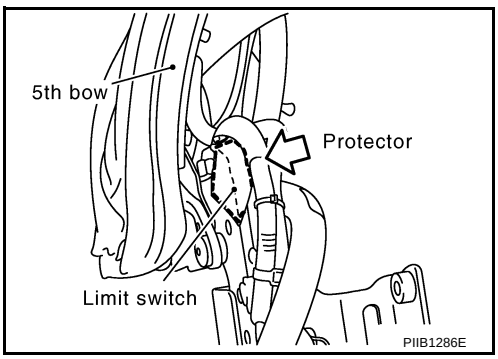


34. Pull out soft top cover frontward from 1st bow.



35. Pull up 2nd bow retainer by using a screwdriver, and then remove soft top cover from 2nd bow.

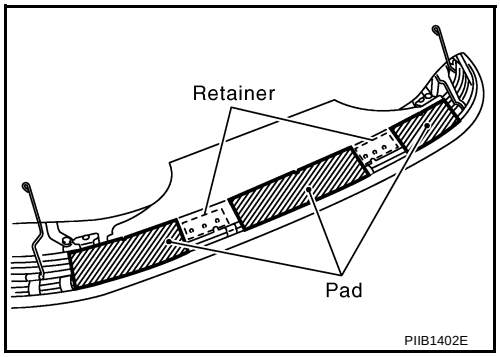
36. Pull up 3rd bow retainer by using a screwdriver, and then remove soft top cover from 3rd bow.
37. Pull out glass stay and defogger harness from sleeve on rear window glass side.



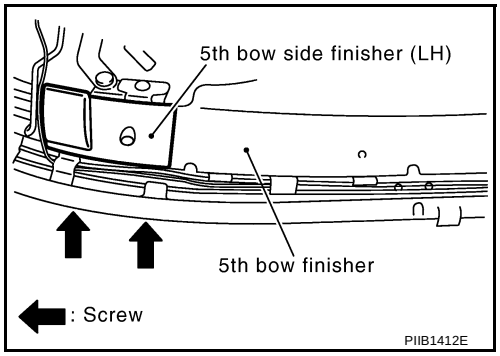
38. Pull out soft top cover from 4th bow and remove soft top cover completely from frame.

INSTALLATION

CAUTION:



Make sure that the limit switch contact around the rotation axis of the 5th bow on the left side of soft top is protected with tape.

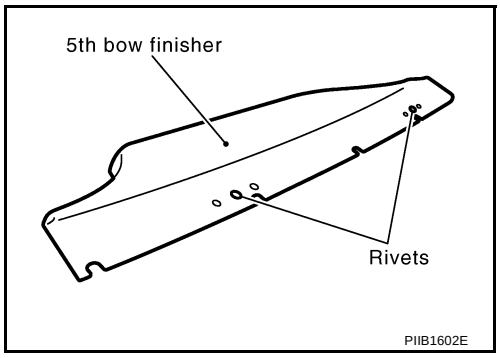


Preparation Work

1. Remove 5th bow finisher pads.

   NOTE:
   Put matching marks so as to check the position when installing.

2. Remove screws, and then remove 5th bow side finisher (RH/LH).



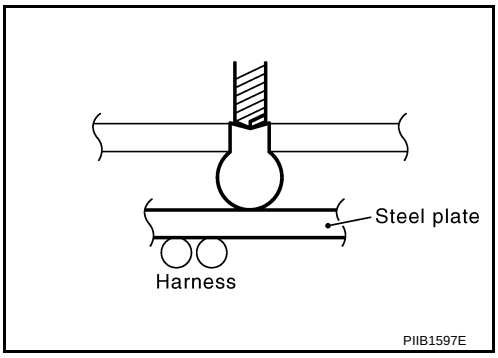
3. Remove clips, and then remove 5th bow finisher.

4. Remove rivets head of 5th bow finisher retainer.

   CAUTION:
   Do not attempt to remove rivets completely.

5. Replace retainers under 5th bow finisher with a new part.

NOTE:

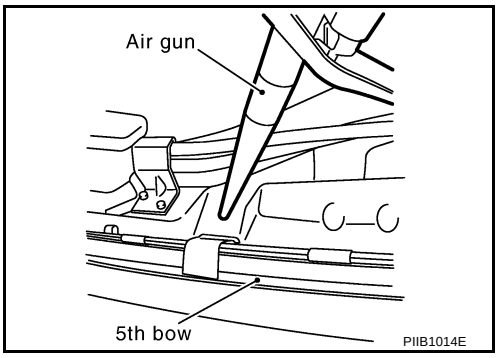


- Put new retainers under 5th bow finisher with rivet.
- Apply nonwoven fabric to retainer lower edge.

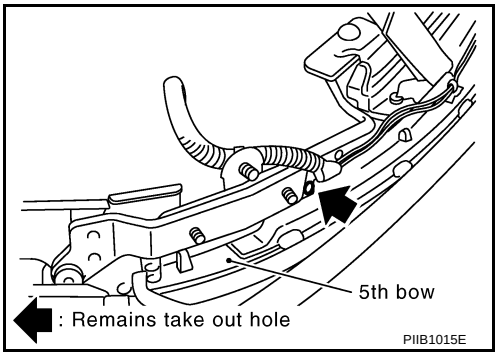
6. Remove remains of soft top cover mounting rivet from 5th bow and C link.

NOTE:

Put a steel plate between a rivet and harnesses on 5th bow for harness protection, when removing the remaining rivets by drill.

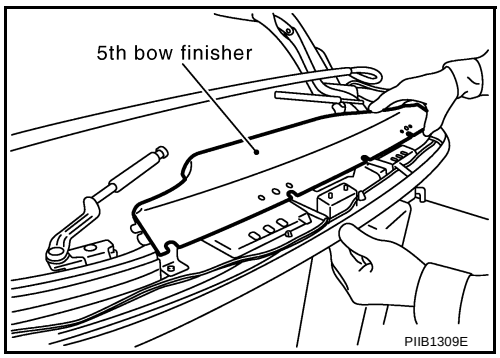


CAUTION:

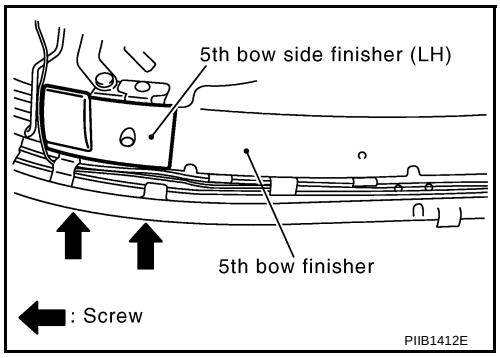


Take out the remains of rivets completely from 5th bow, other wise the remains cause noise.

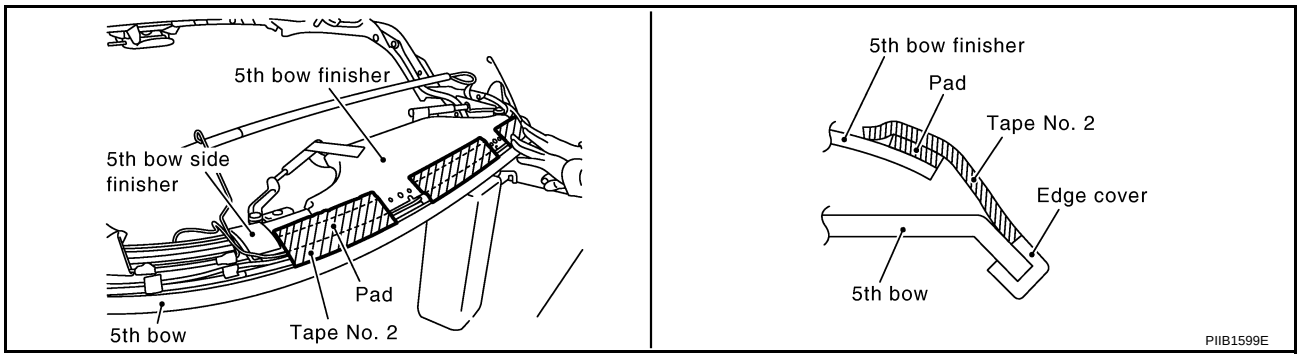
NOTE:



- Blow remains of rivet toward both ends of 5th bow with compressed air if they are in 5th bow.

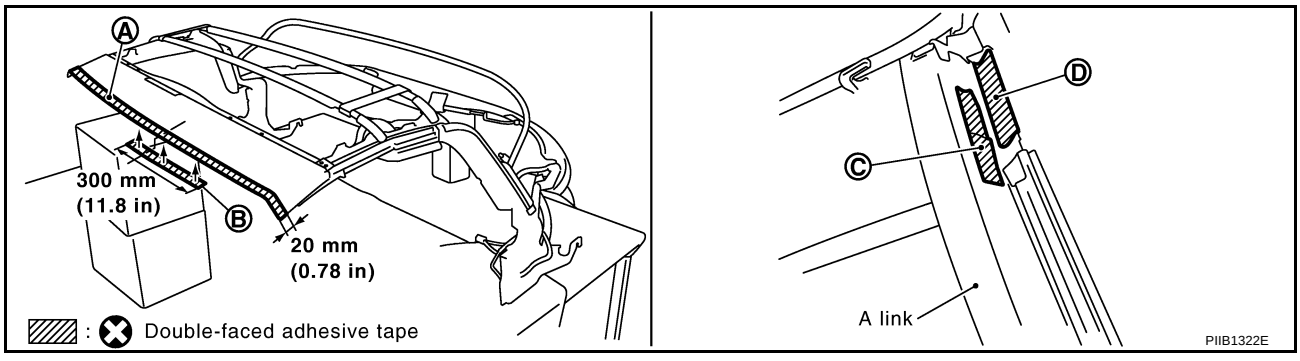


- Remove the remains drawn to both ends by the air blow from the gap.



7. Install 5th bow finisher to 5th bow.

8. Install 5th bow side finisher (RH/LH) to 5th bow.



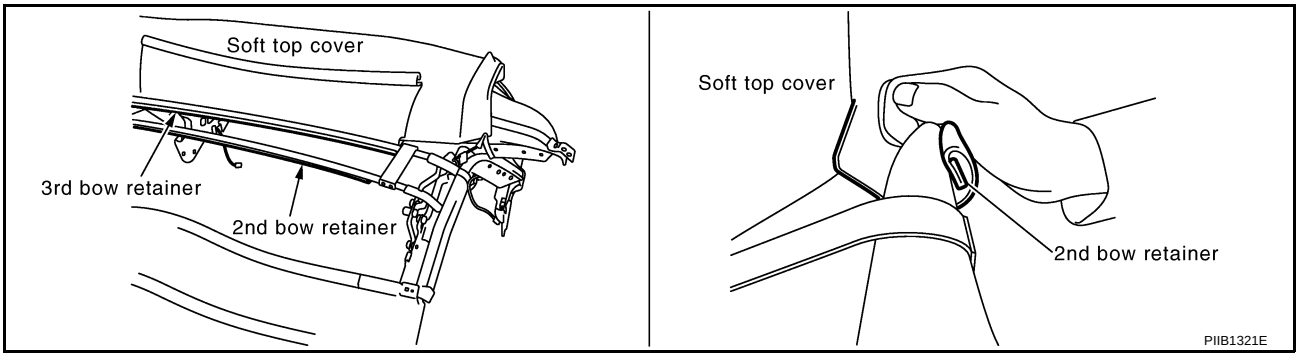
9. Install new pads and fabric tapes.

10. Secure 5th bow finisher harness with new nonwoven fabric if necessary.

Installation

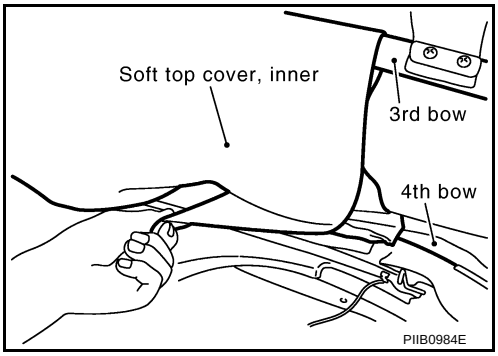
1. Apply double faced adhesive tape for frame.

A: Upper side of 1st bow
B: Under side of 1st bow
C: Outer side of A link (between grommets)
D: Outer and under side of 1st bow edge



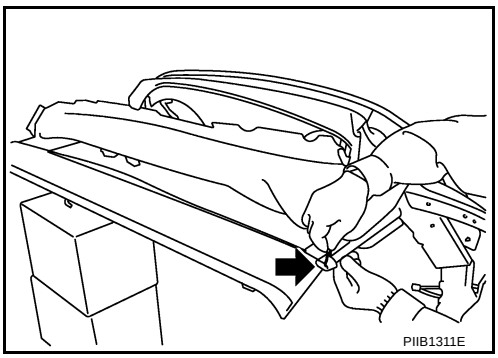
2. Put soft top cover on frame.

3. Put glass stays and defogger harnesses into sleeves on both side of rear window.

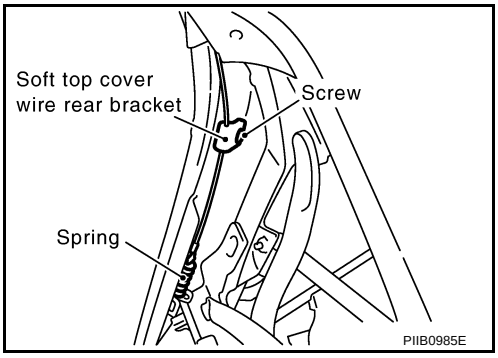


NOTE:

- Out side bag is for glass stay.
- Inside bag is for harness.

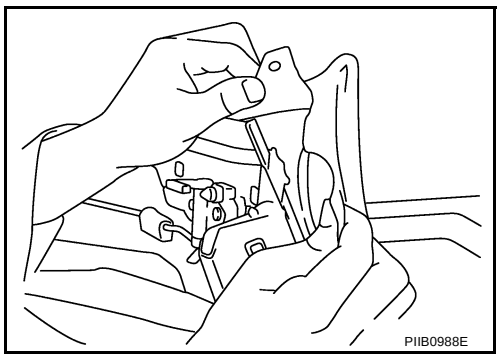


4. Hook soft top cover inner fabric edge to 3rd bow retainer and press retainer to hold securely.

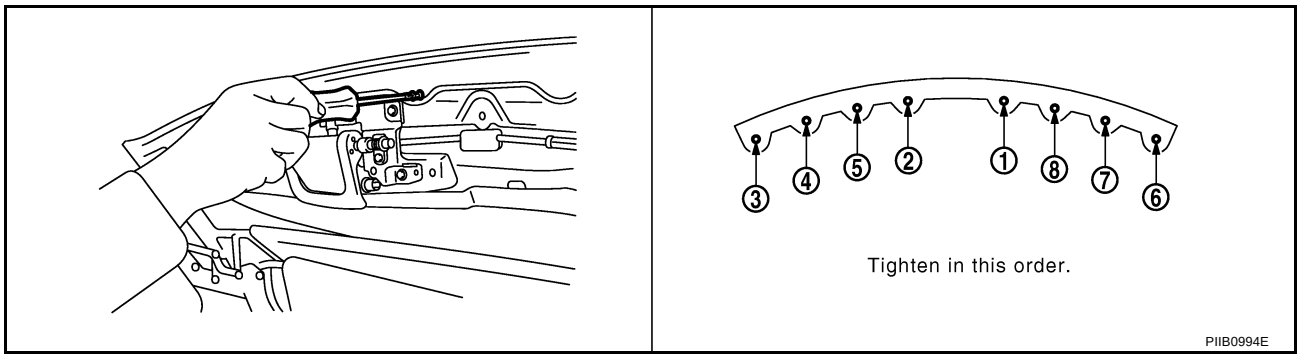


5. Hook soft top cover inner fabric edge to 2nd bow retainer and press retainer to hold securely.
6. Wrap soft top cover around 4th bow and fix soft top cover by velcro fastener.

7. Insert soft top cover wire to A link.



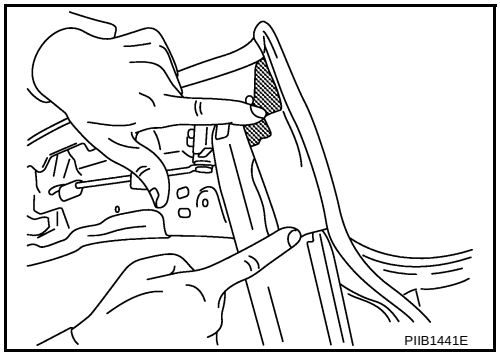
8. Tighten soft top cover wire rear bracket to C link with screw. (Face tension wire outside.)



9. Hook soft top cover wire spring on C link and bend the hook of wire spring to prevent unhooking the hook.

10. Put soft top cover on 1st bow.

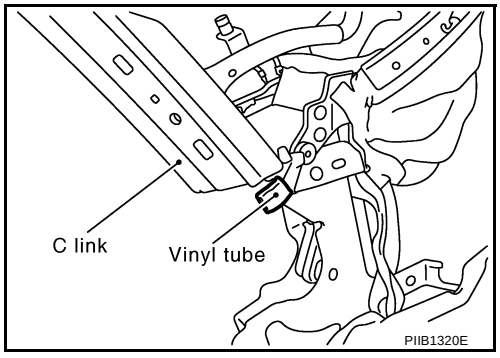
11. Align soft top cover hole and grommet hole at the 1st bow.



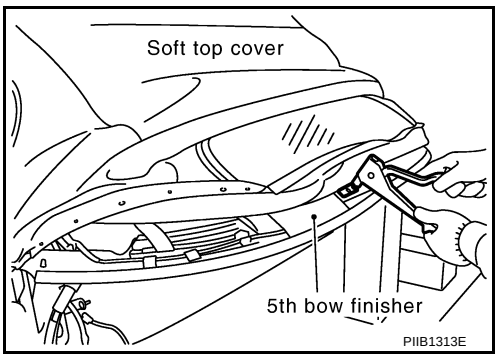
12. Tighten screws on 1st bow with front center retainer.

13. Apply EPT seal to A link installation position.

CAUTION:

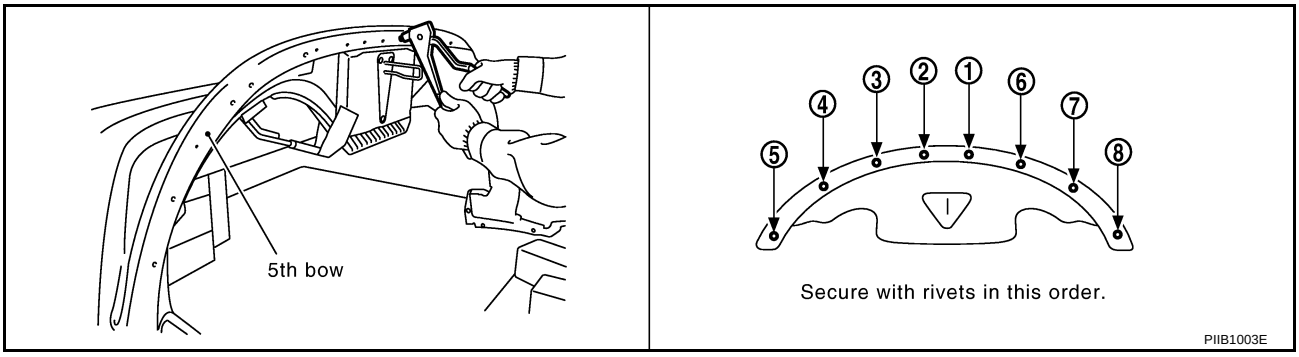


Install EPT seal to the original position.

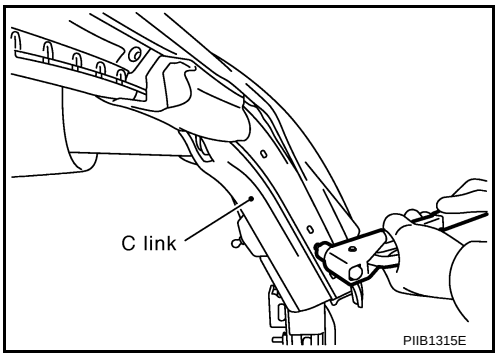


14. Put soft top cover on C link lower.

NOTE:

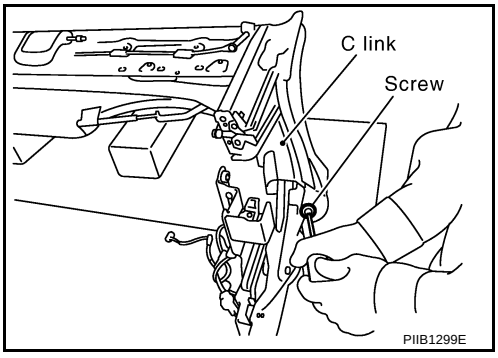


- Make sure that vinyl tube is on C link bottom end bracket.
- Be careful not to pull soft top cover with too much tension.

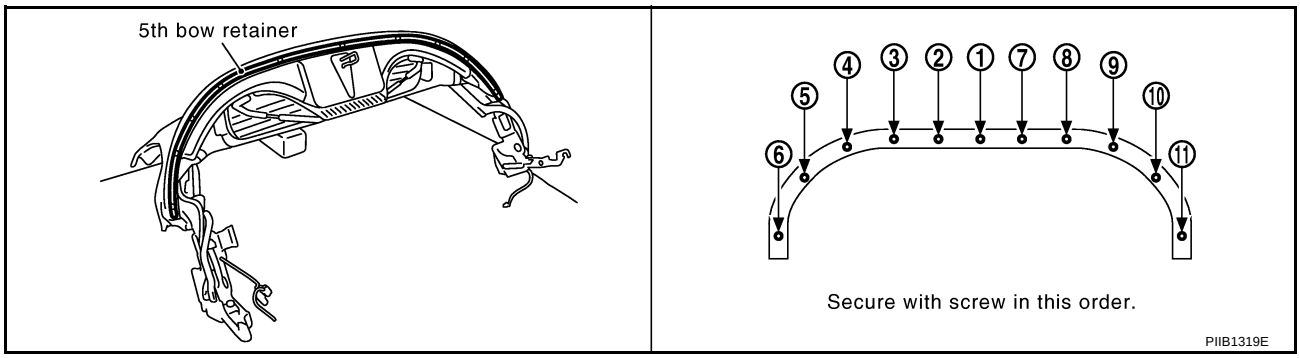


15. Open 5th bow then secure soft top cover to 5th bow finisher upper surface with rivet.

16. Close 5th bow then wrap soft top cover around 5th bow.
17. Secure soft top cover to 5th bow with rivet.



18. Secure soft top cover to C link with rivet.

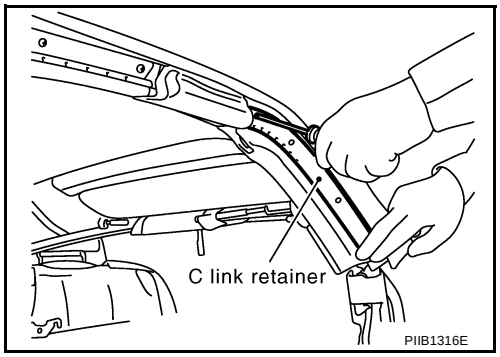


19. Align screw hole on soft top cover and the bottom of C link, and then tighten with screw.

NOTE:

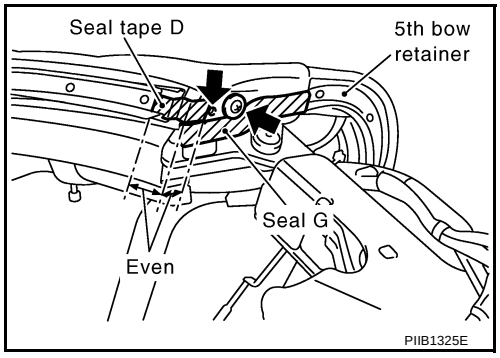
- During tighten up the screw, insert a thin metal rod such as a nail [diameter: 4mm (0.16in)] to a clip hole near the screw to align holes of soft top cloth and its backing plastic plate, and C link frame.
- Tighten screw while holding soft top at certain angle for easy screw installation.

20. Close 5th bow then install 5th bow retainer with screws.



CAUTION:
Apply it to the original position.

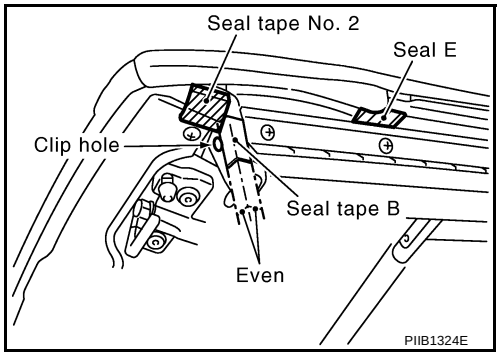
NOTE:
During tighten up the screw, insert a thin metal rod such as a nail [diameter: 4mm (0.16in)] to a clip hole near the each end of 5th bow retainer to align holes of the retainer, soft top cloth and its backing plastic plate, and 5th bow.



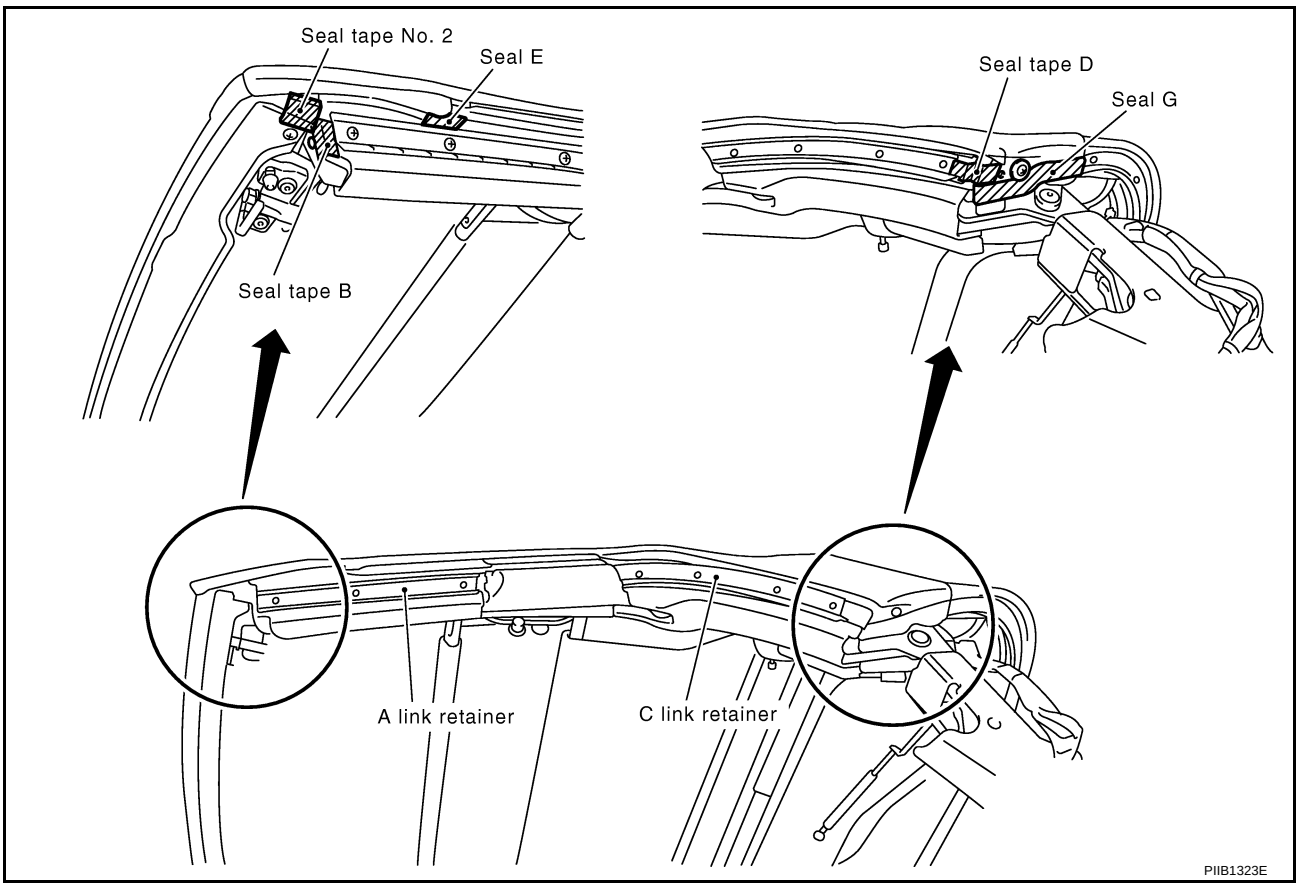
21. Install C link retainer with screws.

NOTE:
Align matching marks on the retainer to screw heads, when installing the retainer.

22. Apply seal to C link lower installation position.

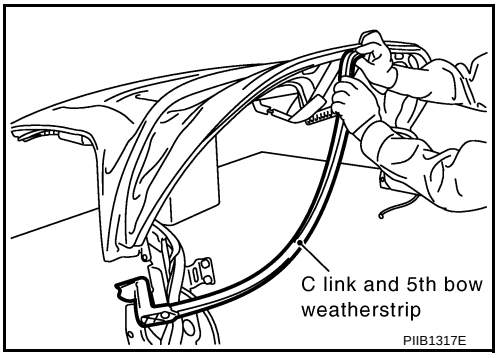


CAUTION:
Make sure not to cover clip hole and screw head.

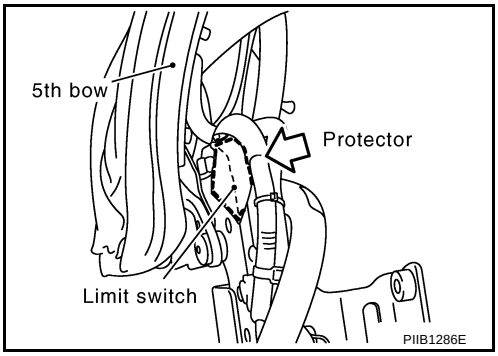


23. Install A link retainer with screws.

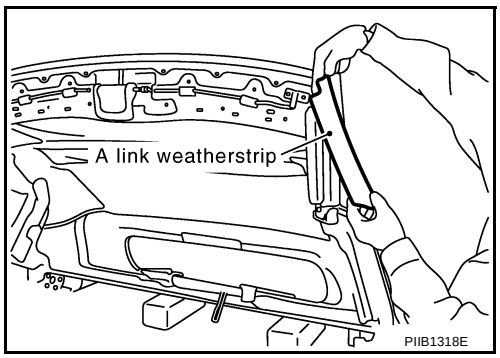
NOTE:
Align matching marks on the retainer to screw heads, when installing the retainer.



24. Apply seal E to A link installation position.



25. Recheck seals for A link and C link.

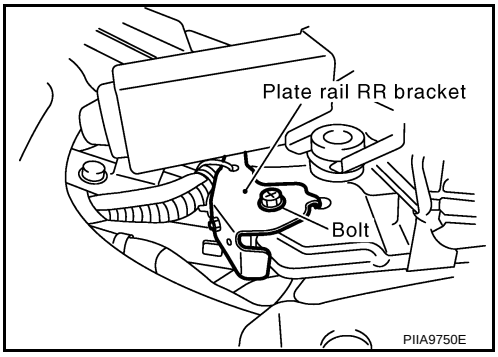


26. Install C link and 5th bow weather strip to 5th bow and C link.

27. Remove protection tape on the limit switch.

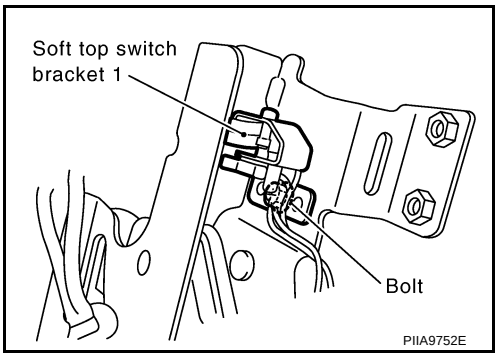
28. Install A link weather strip.

29. Install front lock finisher and welt after closing soft top.
30. Connect defogger harnesses at rear window.
31. Install 5th bow operating strut rods (RH/LH).
32. Install roof actuator (RH/LH). Refer to RF-108, "Removal and Installation of Roof Actuator" .
33. Install soft top assembly to vehicle. Refer to RF-88, "Removal and Installation of Soft Top Assembly" .
34. Check soft top open/close operation.
35. Check door glass contact. Refer to GW-53, "FITTING INSPECTION" .
36. Check for water leakage. Refer to RF-116, "Repairing Method for Water Leakage Around Doors" .



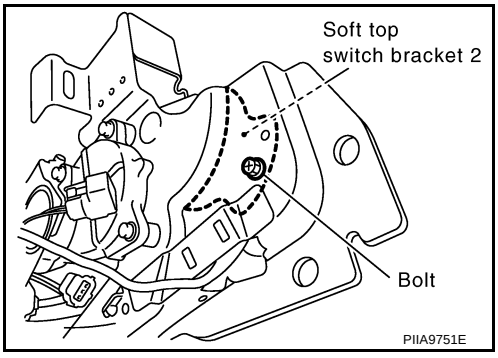
NOTE:
If there are wrinkles on the soft top cover, use a hair dryer to warm up the wrinkled area. Apply warm air from the hair dryer keeping the distance by 150 - 200 mm (5.9 - 7.8 in) and move the dryer to gently warm up soft top cover, for about 5 - 10 minutes until the wrinkle seems to be gone. Not to heat up soft top cover to much.

Removal and Installation of Switches



NIS0007T

REMOVAL



1. Uninstall soft top assembly from the vehicle. Remove roof actuator (RH/LH) from the soft top.
2. Remove harness tie wrap band at the left side of the soft top.
3. Remove limit switches with plate rail RR bracket by removing bolt.

4. Remove limit switches with soft top switch bracket1 by removing bolt.

5. Remove limit switches with soft top switch bracket 2 by removing bolt.

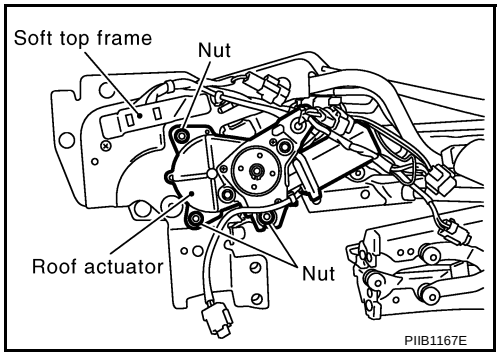
INSTALLATION

Install in the reverse order of removal.

NOTE:

Wire harnesses correctly to avoid following situation.

- Pinching harnesses by frame.
- Tangling harnesses by frame and links.
- Pulling harnesses between fixing point by harness clips.



Removal and Installation of Roof Actuator

NIS0007U

REMOVAL

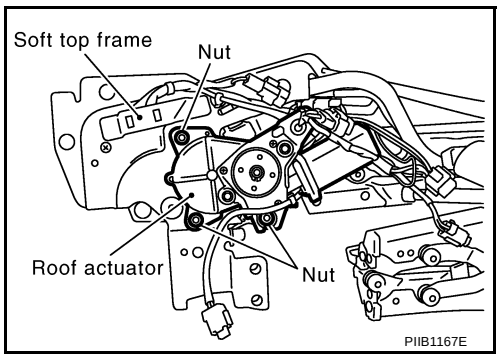
1. Remove soft top assembly. Refer to RF-88, "Removal and Installation of Soft Top Assembly" .
2. Remove nuts and then remove roof actuator (RH/LH).

   NOTE:
   If removal is difficult, rotate motor axis to remove them.

3. Disconnect soft top actuator harness connector.

INSTALLATION

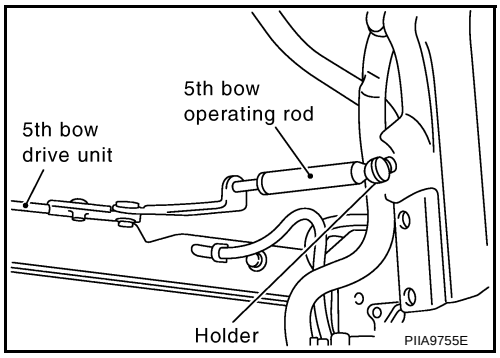
Install in the reverse order of removal.



Removal and Installation of 5th Bow Drive Unit

NIS0007V

REMOVAL



1. Uninstall soft top assembly from the vehicle.
2. Remove roof actuator (RH/LH) from the soft top.

   NOTE:
   If removal is difficult, rotate motor axis to remove them.

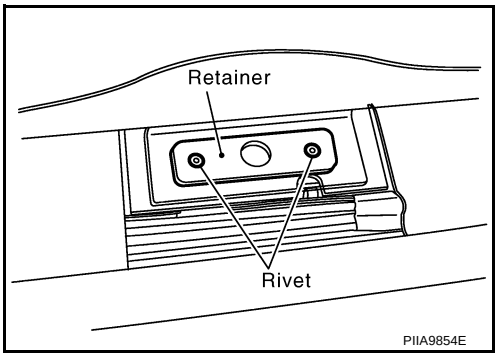
3. Disconnect 5th bow operating rod (RH/LH) at the frame side by pulling out the holder.

   NOTE:
   This step will make the 5th bow up and down motion easier.

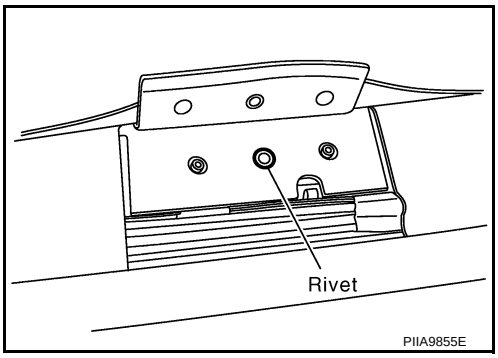
4. Make sure that the limit switch contact around the rotation axis of the 5th bow on the left side of soft top is protected with tape.
5. Open the soft top manually, and put a stand under the 1st bow. Then fix the soft top not to move during this procedure.

   NOTE:
   Put a waste cloth between the front lock and the stand not to make any scratches to the soft top.
6. Remove the C link and 5th bow weather strip.

7. Remove the soft top cover retainer (5th bow retainer) from 5th bow by taking out screws.

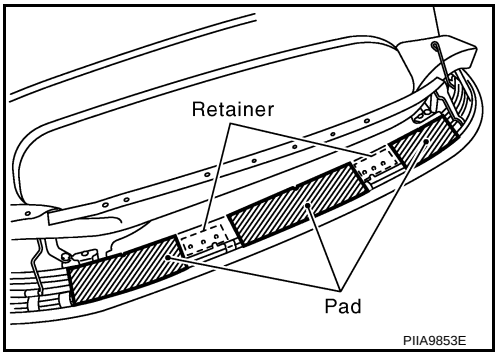


8. Drilling rivets attaching the soft top cover to 5th bow, then pull up the soft top cover bottom edge.

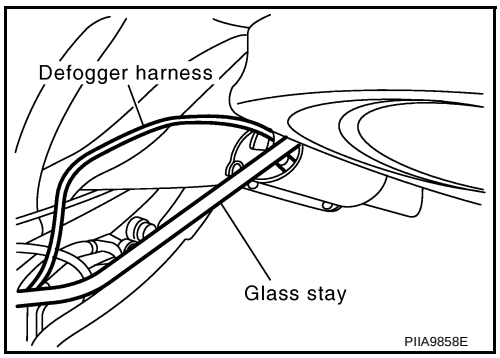


NOTE:
Use 4 mm (0.16 in) diameter drill bit to remove the rivet head. When drilling rivets, be careful not to damage the soft top cover.

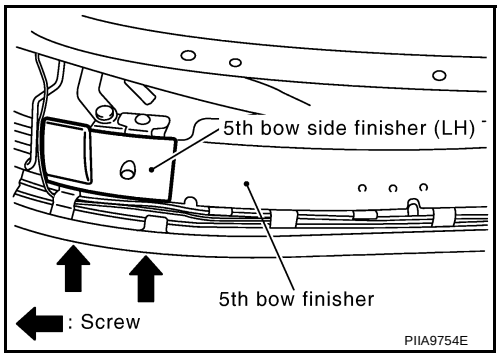
9. Drilling rivets with retainers attaching with tags from the soft top cover, 5th bow finisher and the 5th bow.



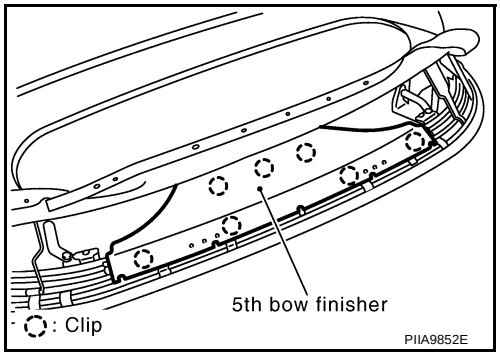
NOTE:
Use 4 mm (0.16 in) diameter drill bit to remove the rivet head. The soft top cover is separated from 5th bow.



10. Drilling rivets under retainers by using 4 mm (0.16 in) diameter drill bit.

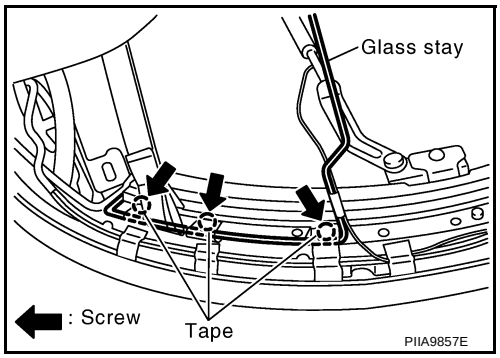


11. Remove pads from 5th bow finisher.

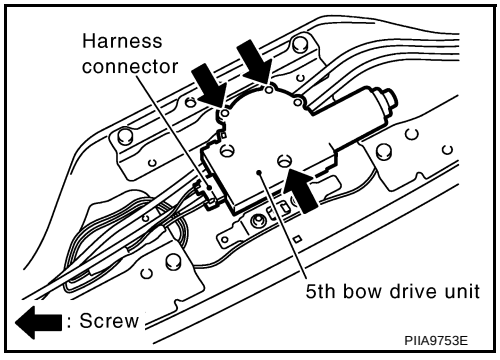


12. Roll the soft top cover bottom edge up, and disconnect defogger harness connector from the rear window glass.
13. Pull out glass stays from sleeves on each side of the rear window glass.

14. Remove 5th bow side finisher (RH/LH) by removing screws.

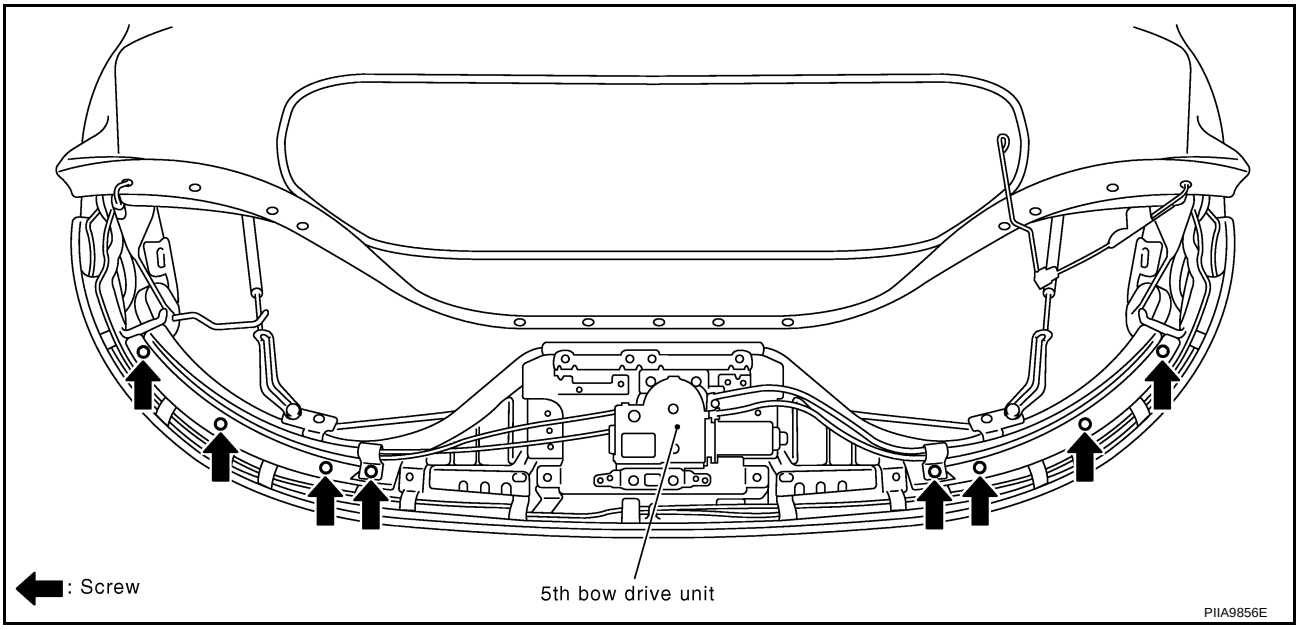


15. Remove 5th bow finisher by pulling the finisher up.



16. Remove glass stays from 5th bow by removing screws from the bottom of the 5th bow.

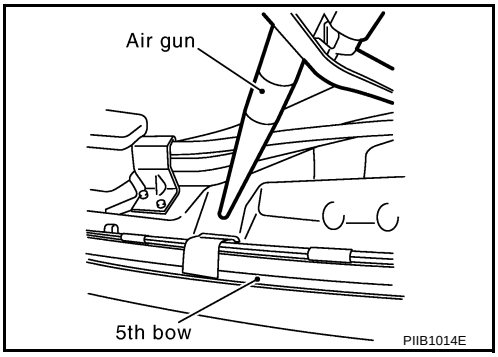
    NOTE:
    - When removing glass stays, support 5th bow to avoid a bend of glass stay. This bend may happen by the weight of the 5th bow and the tensile force of the tether from the soft top cover.
    - Be careful not to damage the 5th bow nor to be hurt by the falling 5th bow, because the 5th bow is heavy and moves freely after removing glass stays.



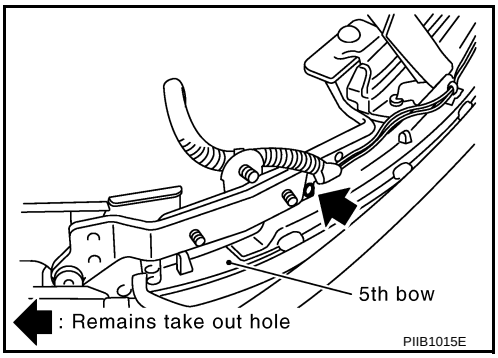
17. Disconnect 5th bow drive unit harness connector.

18. Remove 5th bow drive unit and rails together from 5th bow by removing screws.

NOTE:

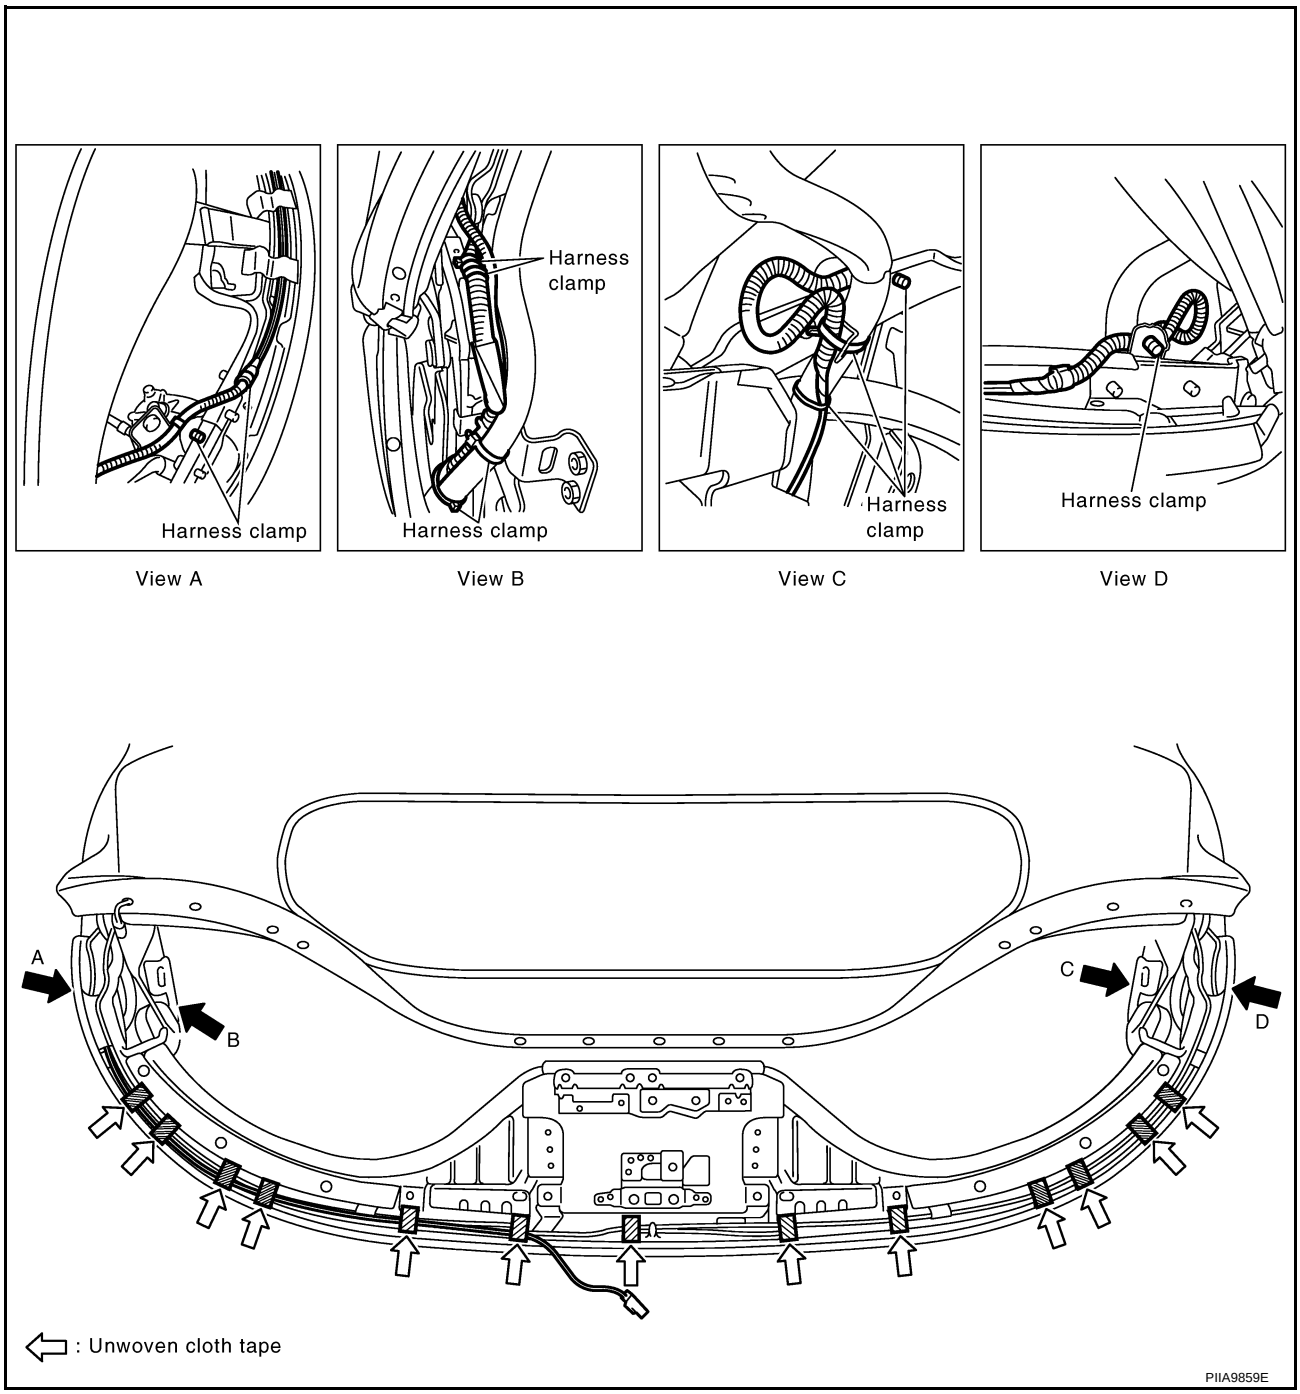


- After removing drive unit and rails, not to pull rails. Otherwise, the wire in the rail may be damaged.
- The screws are not reusable.

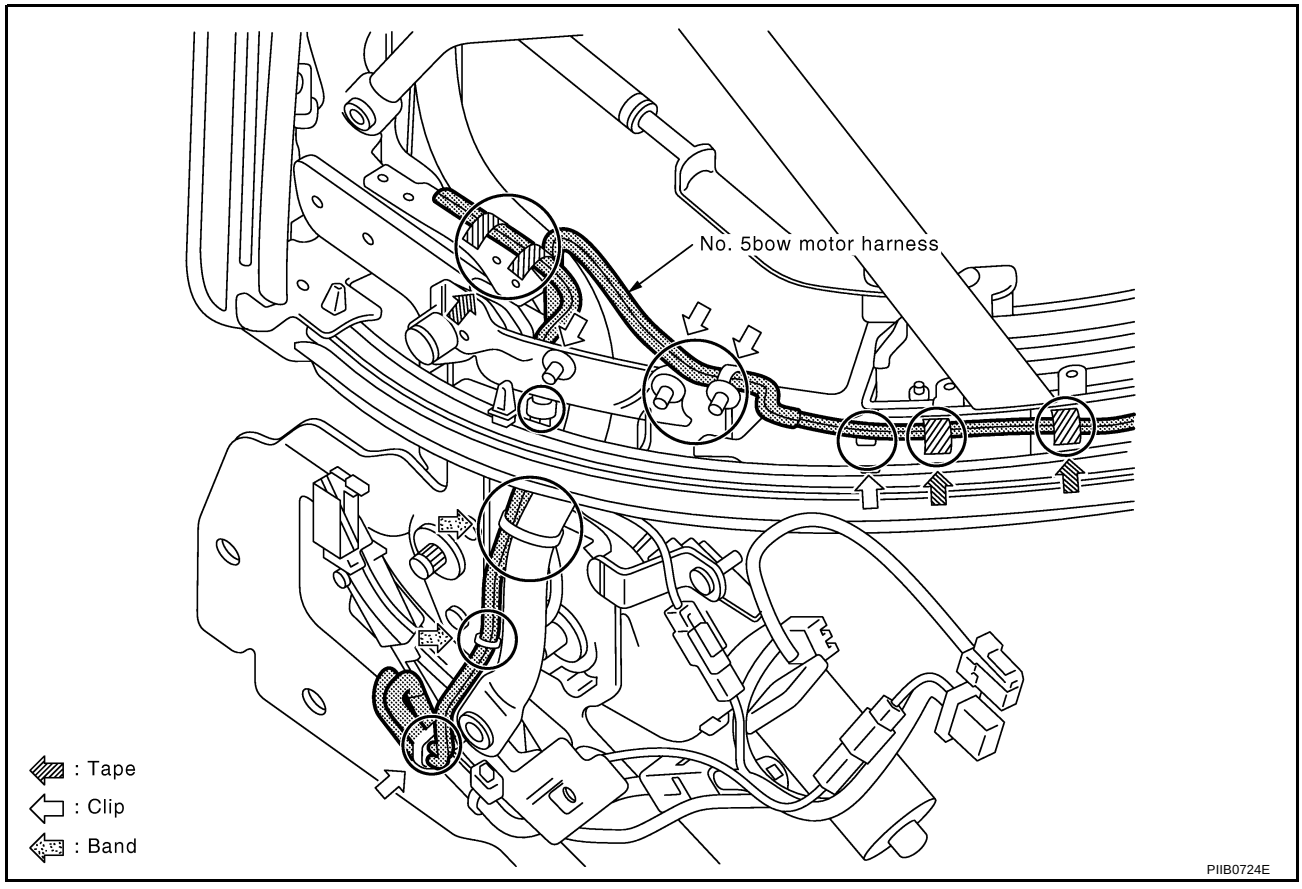


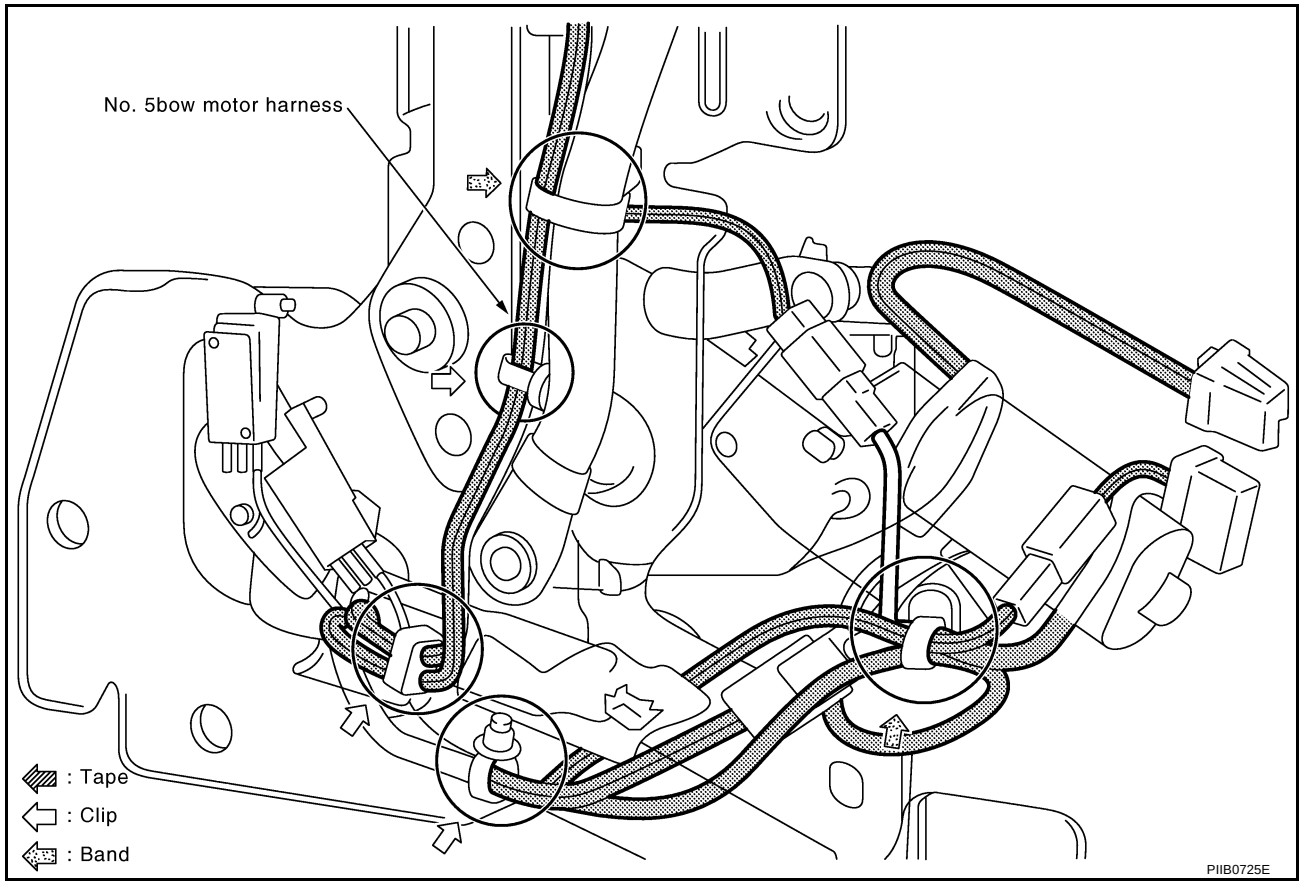
INSTALLATION

Preparation Work

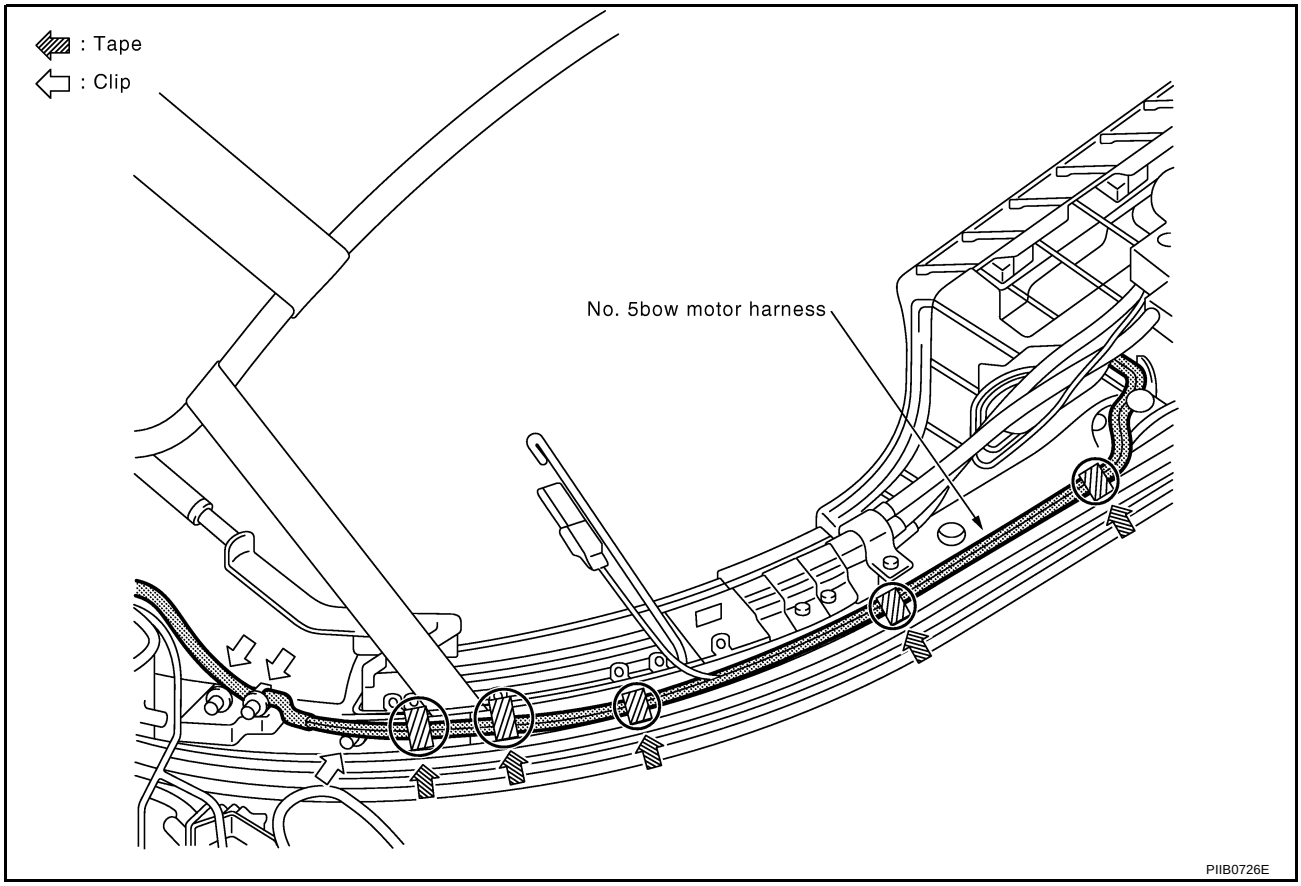


1. Blow remains of rivet toward both ends of 5th bow with compressed air if they are entering into 5th bow.

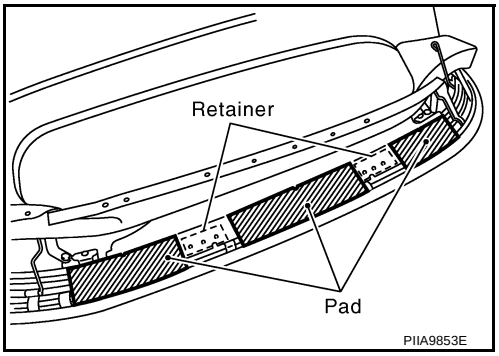




2. Remove the remains drawn to both ends by the air blow from the gap.



3. For fixing harness to 5th bow and Soft top frame, see next figure.



No. 5bow motor harness
: Tape
: Clip
: Band
PIIB0724E

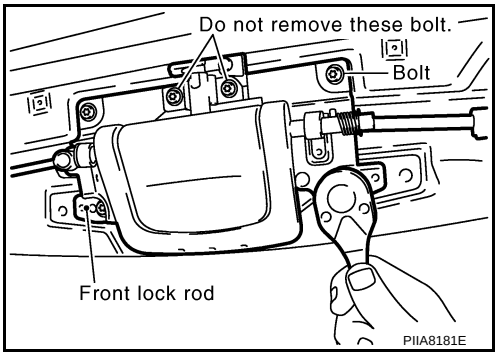
No. 5bow motor harness
: Tape
: Clip
: Band
PIIB0725E

4. Replace rivet retainer on back of 5th bow finisher with a new one.
5. Secure 5th bow finisher with rivet, and then apply nonwoven fabric.
6. Install 5th bow finisher and 5th bow finisher (RH/LH).
7. Apply pad on 5th bow finisher.

   NOTE:
   Apply pad to the original position.

Installation

Install in the reverse order of removal.



Removal and Installation of Front Lock

NIS0007W

REMOVAL

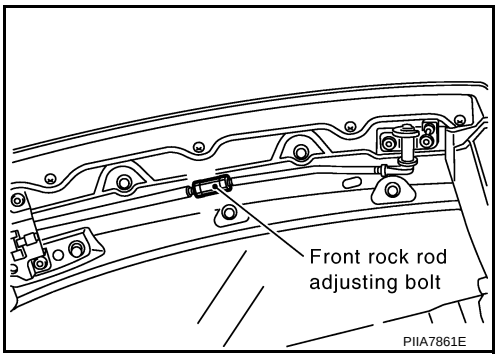
1. Remove welt and front finisher.
2. Remove bolts, and then remove front lock rod.

   CAUTION:
   Do not remove front lock hook, center bolts.

3. Remove bolts, and then remove front lock striker, LH, center, and RH.

   NOTE:
   Paint matching marks for front lock assembly to check location for installation.

INSTALLATION

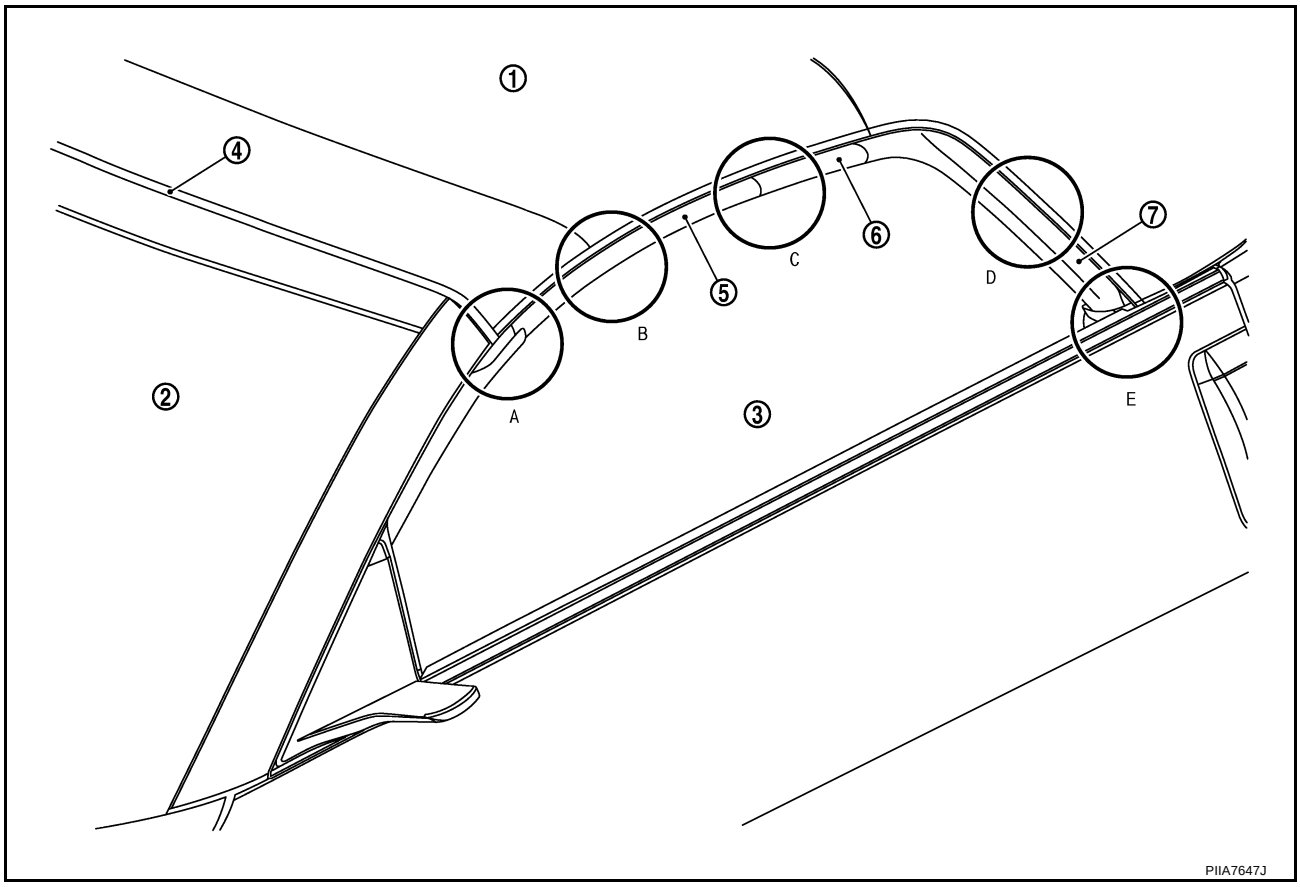


Install in the reverse order of removal.
Always adjust before installation. Refer to RF-115, "INSPECTION AND ADJUSTMENT" .

INSPECTION AND ADJUSTMENT

1. Apply super-check spray on a contact surface of 3 hooks which may touch with rods on the body. Fully close soft top, and then engage front lock.
2. Open soft top, and then make sure that the part, from which iron material is visible by peeling off super-check mark, exceeds “L” line.

3. Adjust hook contact length by adjusting front lock rod length using front lock rod adjust bolt if “L” line is not exceeded in front lock hook, RH and LH.

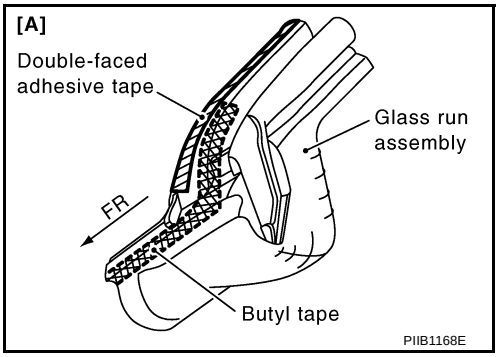


4. There is a part malfunction, if “L” line is not exceeded in front lock center hook. Replace front lock assembly.
5. Make sure that the super check mark exceeds the “L” line, and then measure the fully closed operating force while contacting push-pull gauge to the handle. Make sure that the operating force is 68.6 N (7 kg, 15.4 lb) or less, and then install it.

   NOTE:
   - Replace front lock assembly if the operating force is over the specified value.
   - Make sure that operating force when replacing front weather strip, center weather strip, and rear weather strip is 107.8 N (11 kg, 24.2 lb) or less.

Repairing Method for Water Leakage Around Doors

NIS0007X

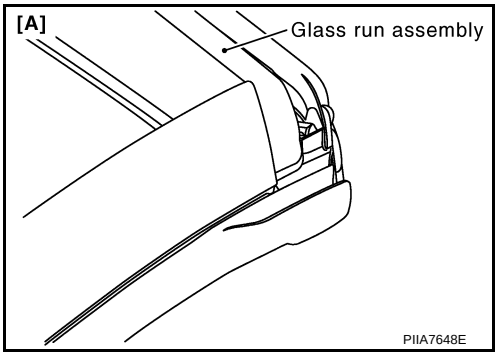


1. Soft top assembly
2. Windshield glass
3. Door glass
4. Glass run assembly
5. A link weather strip
6. B link weather strip
7. C link and 5th bow weather strip

WATER LEAKAGE FROM A

Water may be entering passenger room through back of front pillar.
Cause: Butyl tape on back of glass run assembly may be separating from roof panel.

Repair Procedure 1

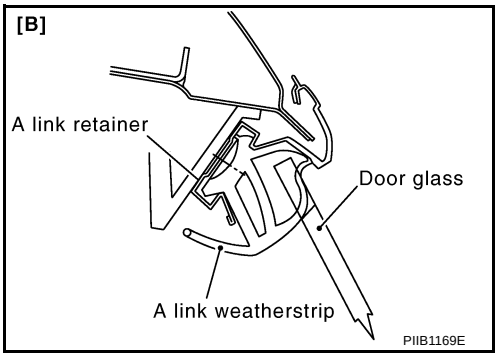


Apply butyl tape on back of glass run assembly again, and correct installing position.

Water may be entering through connection between front pillar and front edge of soft top.
Cause: There may be a gap between glass run assembly and weather strip of soft top.

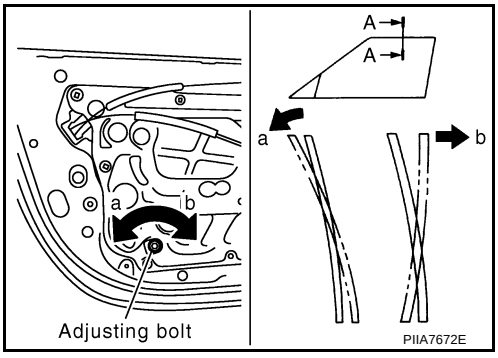
Repair Procedure 2

Replace glass run assembly with a new one to eliminate the gap between glass run assembly and weather strip.



WATER LEAKAGE FROM B

Water may be entering through door glass upper inside edge.
Cause: There may be poor contact between A link weather strip of soft top and door glass.

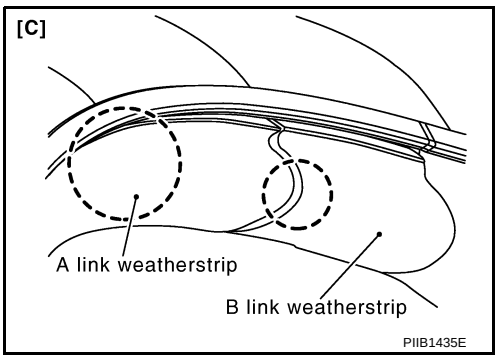


Repair Procedure 3

- Adjust door glass position frontward/backward or upward/downward against soft top assembly.
- Adjust door glass tilt contact by rotating adjusting bolt on regulator lower edge.

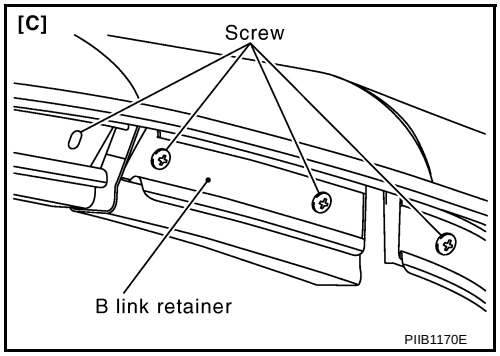
CAUTION:
Soft top assembly position may be incorrect when glass upper position is low even if door glass adjustment is performed. Perform soft top assembly adjustment, if necessary. Refer to GW-51, "FRONT DOOR GLASS AND REGULATOR" .

Adjust door glass tilt contact by rotating adjusting bolt on regulator lower edge.



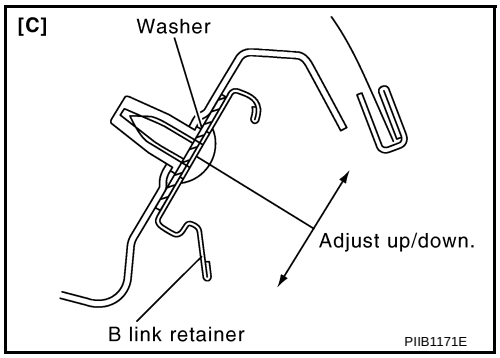
WATER LEAKAGE FROM C

Water may be entering through a joint between soft top weather strips.
Cause: There may be a step or a gap at the weather strips joint.



Repair Procedure 4

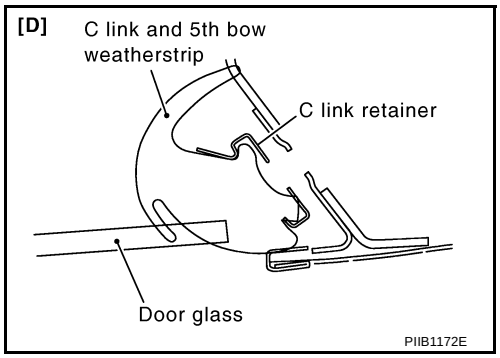
- Replace weather strip with a new one.
- If the step or the gap is not eliminated after replacing weather strip, then perform the following procedure.



Repair Procedure 5

- Loosen retainer screws.
- Make fine upward/downward position adjustments to the B link retainer.
  (Move the B link retainer of a protruded weather strip downward for the adjustment.)

- Insert approximately 0.5 mm (0.02 in) washer into the back of the subsiding weather strip retainer, if the step is not eliminated after adjustment.



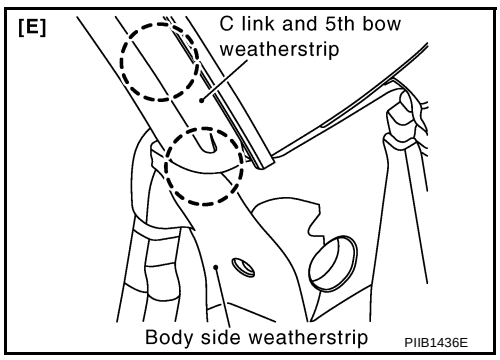
WATER LEAKAGE FROM D

Water may be entering through inside door glass rear.
Cause: There may be poor contact between Clink and 5th bow weather strip of soft top and door glass.

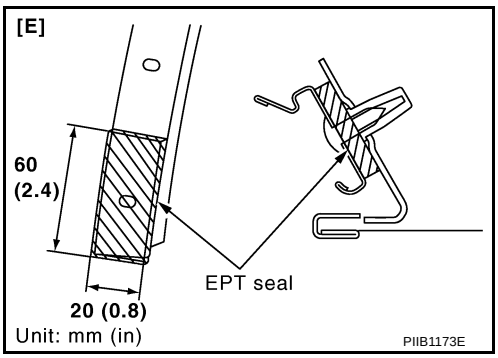
Repair Procedure 6

- Adjust door glass position frontward/backward or upward/downward against soft top.
- Adjust door glass tilt contact by rotating adjusting bolt on regulator lower edge.

CAUTION:
Soft top assembly position may be incorrect in the case of glass upper position is low even if door glass adjustment is performed. Perform soft top assembly adjustment if necessary. Refer to GW-51, "FRONT DOOR GLASS AND REGULATOR" .



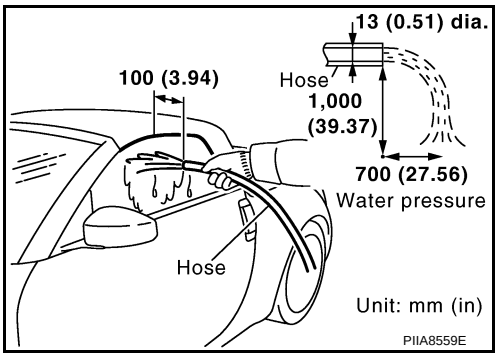
WATER LEAKAGE FROM E



Water may be entering passenger room through weather strip joint.
Cause: There may be a step or a gap between C link and 5th bow weather strip side and body side of weatherstrip.

Repair Procedure 7

- Remove C link weather strip.
- Remove C link retainer.



- Apply approximately 5 mm (0.2 in) thick EPT seal to retainer back surface.

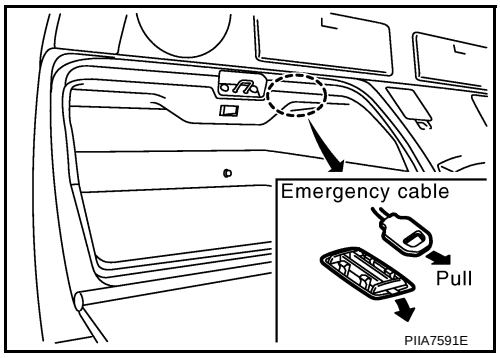
WATER LEAKAGE TEST

Visually check for water leakage after repairing.

1. 2 workers are required. One worker checks inside the vehicle, and the other one washes with water.
2. Use 13 mm (0.51 in) diameter hose. Adjust water pressure by following method.
   Hold the hose horizontally, and release water at 1000 mm (39.37 in) height from ground. Adjust the distance, between the ground point just below the hose and the water dropping point, to reach 700 mm (27.56 in). (See the figure.)
3. Keeping the distance between the hose and the testing area by 100 mm (3.94 in), apply water along the area 3 times. During applying water, move the hose by 100 mm (3.94 in)/sec speed.

4. Visually check for water leakage.

Correspondence in Emergency

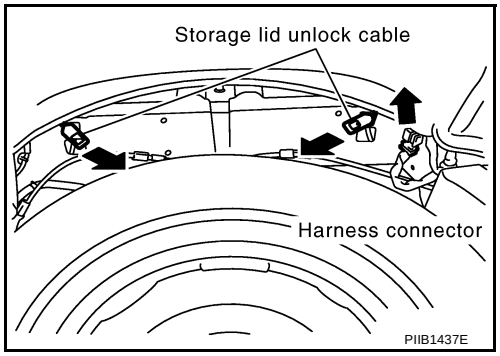


NIS0007Y

If the soft top cannot be operated electrically in the event of a discharged battery or any other system malfunction, the soft top needs to be closed manually or opened manually according to the following procedures.

MANUAL OPERATION (SOFT TOP FULLY OPEN ⇒ FULLY CLOSE)

1. Open The Trunk Lid



- Open the lid behind the passenger's seat (rear floor box).
- Remove cap of the emergency cable.
- Pull the emergency cable upper surface in the box.
- Open trunk lid.

2. Open The Storage Lid

- Remove floorboard inside of the trunk.
- Disconnect the storage lid motor harness connector upperward, which is located at the right hand side of the trunk.
- Pull down the storage lid lock release cable (right and left sides in the trunk).
- Confirm a clicking sound of lock release.
- Pull up the storage lid from the right and left sides of vehicle (two people are required).

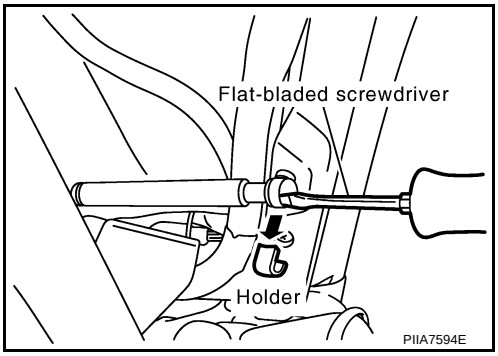
  CAUTION:
  The storage lid is extremely heavy. Pulling it up should be done by two people. Use Hex-wrench to rotate the axis of the gear, when the lid does not move.

3. Close The Soft Top

- Disconnect roof actuator harness connector right and left sides.

  CAUTION:
  2nd disconnect top of roof actuator harness connector right and first disconnect top of roof actuator harness connectors left sides.
- Pull up the soft top right and left sides of the vehicle slowly by hand (two people are required).
- Lock soft top front lock.

4. Close The Storage Lid



Push down soft top to body panel.

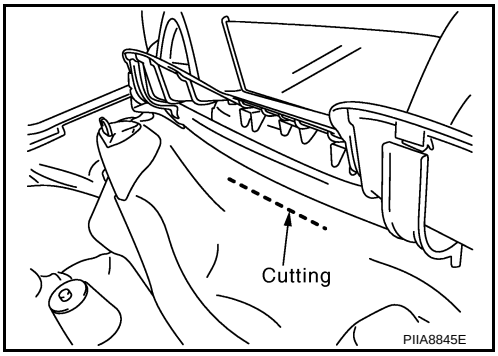
5. Lower The Soft Top 5th Bow

- Remove both operating rod of soft top 5th bow.

CAUTION:
Remove a holder of operating rod end.
Simultaneously hold soft top 5th bow by hand when removing the holder.

- Push in 5th bow to storage lid (do half lock).

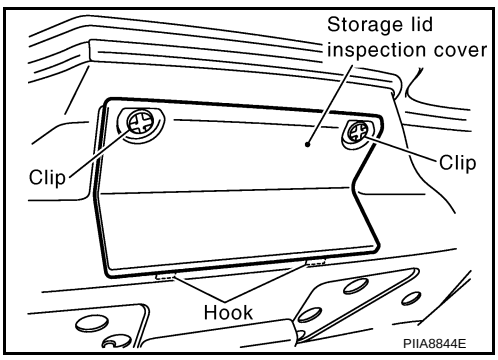
CAUTION:
After closing the soft top manually according to the above procedures, have the soft top operation system checked and/or repaired by a NISSAN dealer as soon as possible.
Avoid leaving the vehicle outside for long periods or driving at high speed. As the rear of the soft top is not locked completely, this may allow wind and rain get into the vehicle.



MANUAL OPERATION (SOFT TOP FULLY CLOSE ⇒ FULLY OPEN)

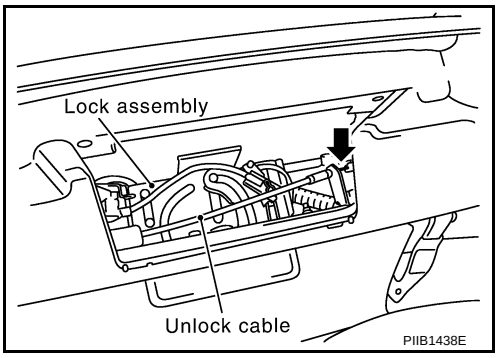
1. Remove The Luggage Floor Trim

Remove the rear floor box and luggage floor finisher upper. Refer to EI-41, "Removal and Installation (for Roadster Models)" .



2. Cutting Storage Room Finisher

Cut storage room finisher from seat side.



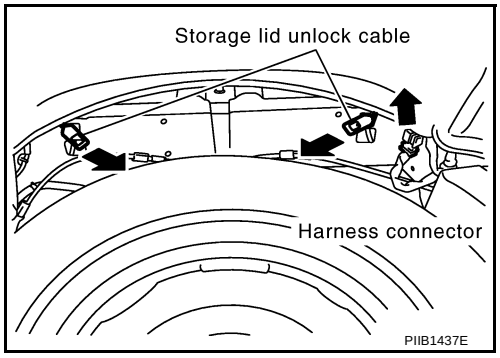
3. Unlock The Storage Lid

- Remove clip of inspection cover.

- Remove the storage lid inspection cover.
- Pull the unlock wire then unlock the soft top 5th bow.

4. Open The Soft Top 5th Bow

- Remove both shock absorber of soft top 5th bow.
- Open the soft top 5th bow (approximate 90 degrees)



5. Open The Trunk Lid

- Pull the emergency cable.
- Open the trunk lid.

6. Open The Storage Lid

- Remove floorboard inside of the trunk.
- Disconnect the storage lid motor harness connector downward which is in the right hand side of the trunk.
- Pull down the storage lid lock release cable (right and left side of the trunk).
- Confirm a clicking sound of lock release.
- Pull up the storage lid from the right and left sides of vehicle (two people are required).

  CAUTION:
  The storage lid is extremely heavy. Pulling it up should be done by two people. Use Hex-wrench to rotate the axis of the gear, when storage lid does not move.

- Disconnect roof actuator harness connector right and left side (disconnect top of roof actuator harness connector right and left side).

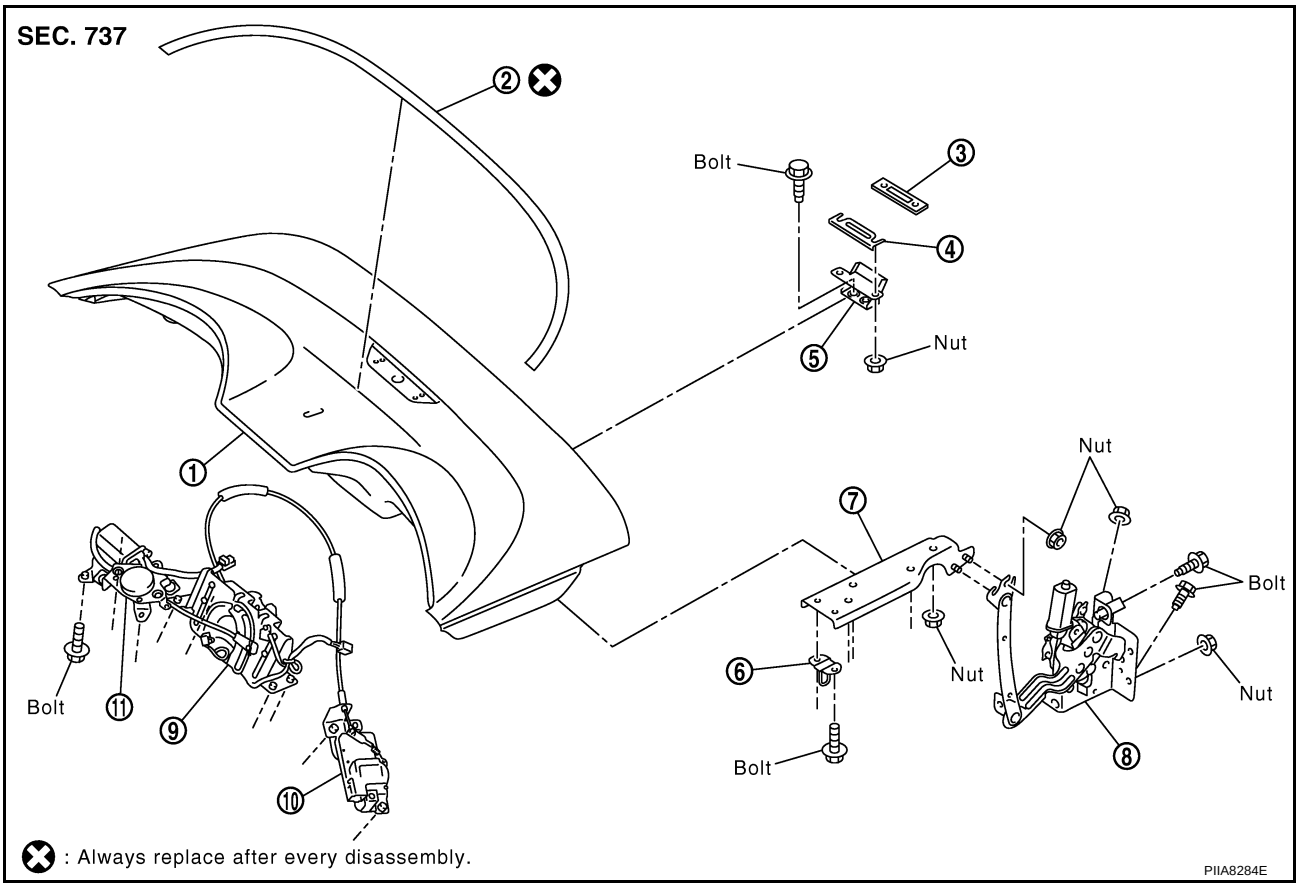
7. Open The Soft Top

- Lower the soft top 5th bow.
- Unlock the front lock.
- Open the soft top right and left side of the vehicle slowly by hand (two person job).

8. Close The Storage Lid

NOTE:
If necessary.

9. Close The Trunk Lid



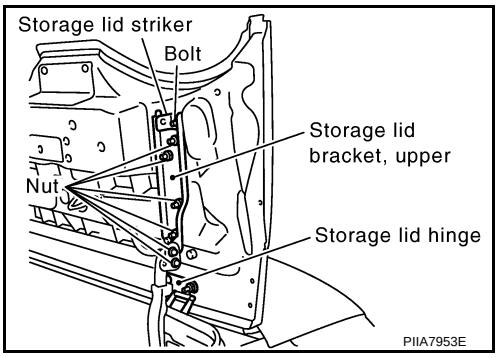
NOTE:
If necessary.

STORAGE LID

PFP:97002

Removal and Installation of Storage Lid Assembly

NIS0007Z



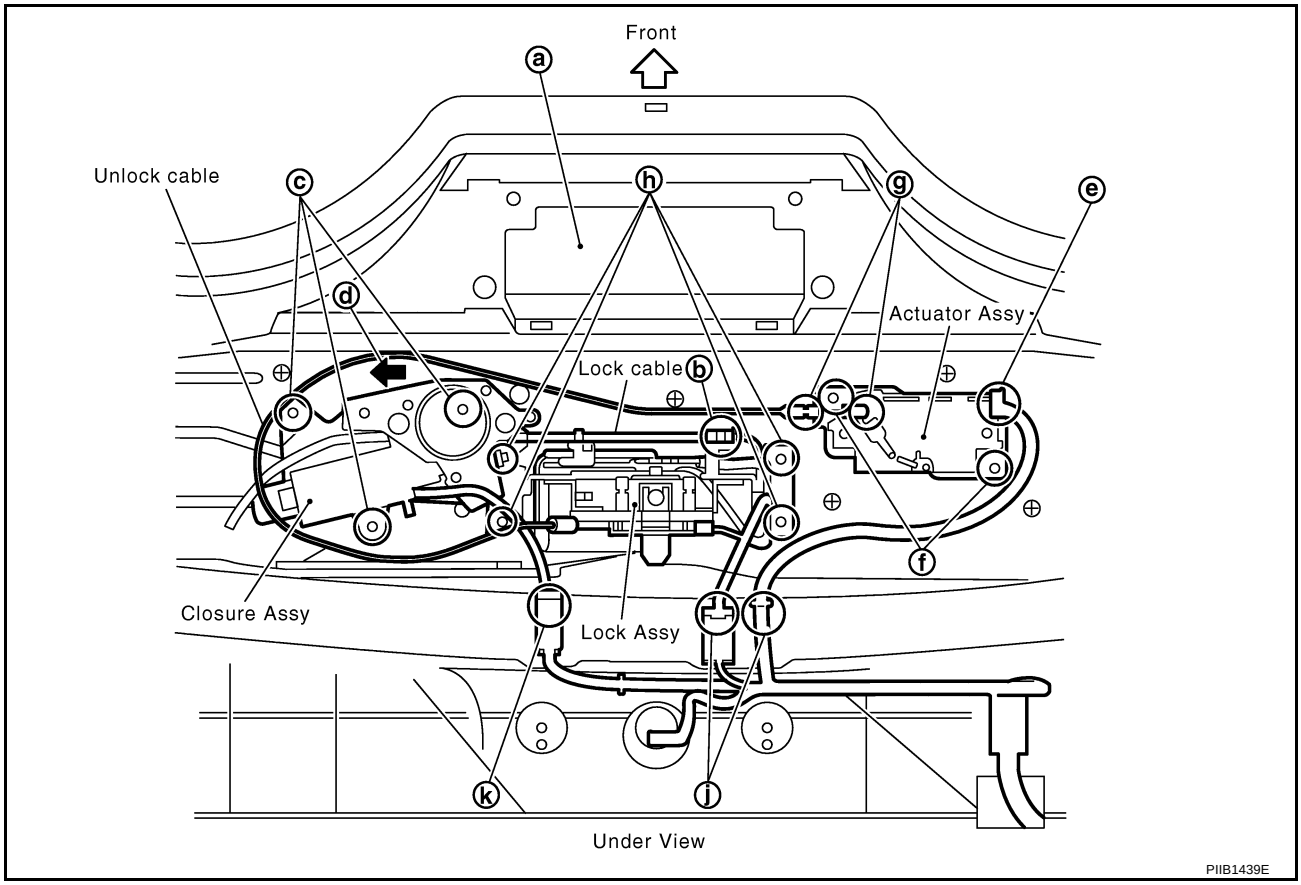
1. Storage lid	2. Storage outer protector	3. Spacer
4. Shim	5. Storage lid hinge	6. Storage lid striker
7. Storage lid upper bracket	8. Storage lid lower bracket	9. 5th bow lock
10. 5th bow unlock actuator	11. 5th bow closure motor	

REMOVAL

1. Disconnect storage lid actuator connector.
2. Remove bolts, and then remove storage lid striker.

   NOTE:
   - 2 or more workers are required.
   - Paint matching marks to check location for installation.
3. Remove nuts which is connecting the storage lid upper bracket and the storage lid lower bracket.

   NOTE:
   Paint matching marks to check location for installation.
4. Remove nuts of storage lid hinge, and then remove storage lid, spacers and shims.



INSTALLATION

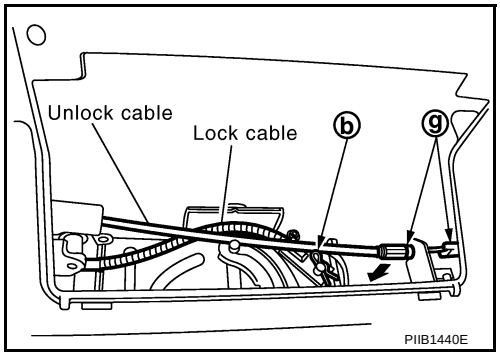
1. Install in the reverse order of removal.
2. Install storage lid, and then adjust fitting of lid.

Removal and Installation of Storage Lid Inside Unit

NIS00080

REMOVAL

NOTE:



After installing Storage lid on the vehicle, an adjustment of Storage lid position is required in both closed and opened condition.

Put the removed storage lid on the floor or a work bench covered by waste clothes to prevent any scratches.

1. Remove storage lid inspection cover on the front side of Storage lid. (a in the figure)
2. Disconnect a wire from a lock assembly by pulling out a connection pin. (b in the figure)

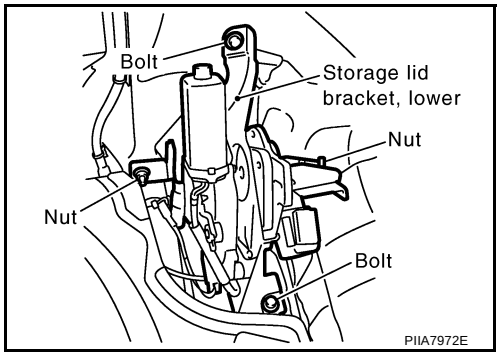
   NOTE:

   The pin should be taken off by a small pliers not to fell into Storage lid. If the pin fell into Storage lid, then it is very difficult to take the pin out from the lid. And if the pin is left inside the lid, it may make an uncomfortable noise.

3. Remove closure mounting bolt from back of storage lid. (c in the figure)
4. Move closure toward outside of vehicle (because it interferes with unlock). (d in the figure)
5. Disconnect unlock actuator connector. (e in the figure)
6. Disconnect actuator side of unlock cable. (g in the figure)
7. Remove unlock actuator mounting bolt from back of storage lid, and then remove unlock actuator from inspection cover. (f in the figure)
8. Remove lock mounting bolt from back of storage lid, and then move entire lock toward rear of storage lid. (h in the figure)

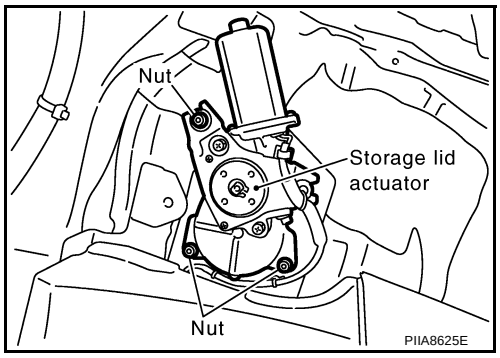
9. Disconnect lock harness connector, and then remove lock from inspection cover. (j in the figure)
   NOTE:
   Turn lock catcher counterclockwise, and then face it to storage lid inspection hole side to remove because it interferes with storage lid when removing.
10. Disconnect closure harness connector, and then remove closure from inspection cover. (k in the figure)
11. Disconnect unlock actuator, lock, and closure harness connectors from inspection cover.
    (Push in harness connector clip tabs from back of storage lid using a screwdriver so as to remove.)

INSTALLATION



Install in the reverse order of removal.

Removal and Installation of Storage Lid Actuator

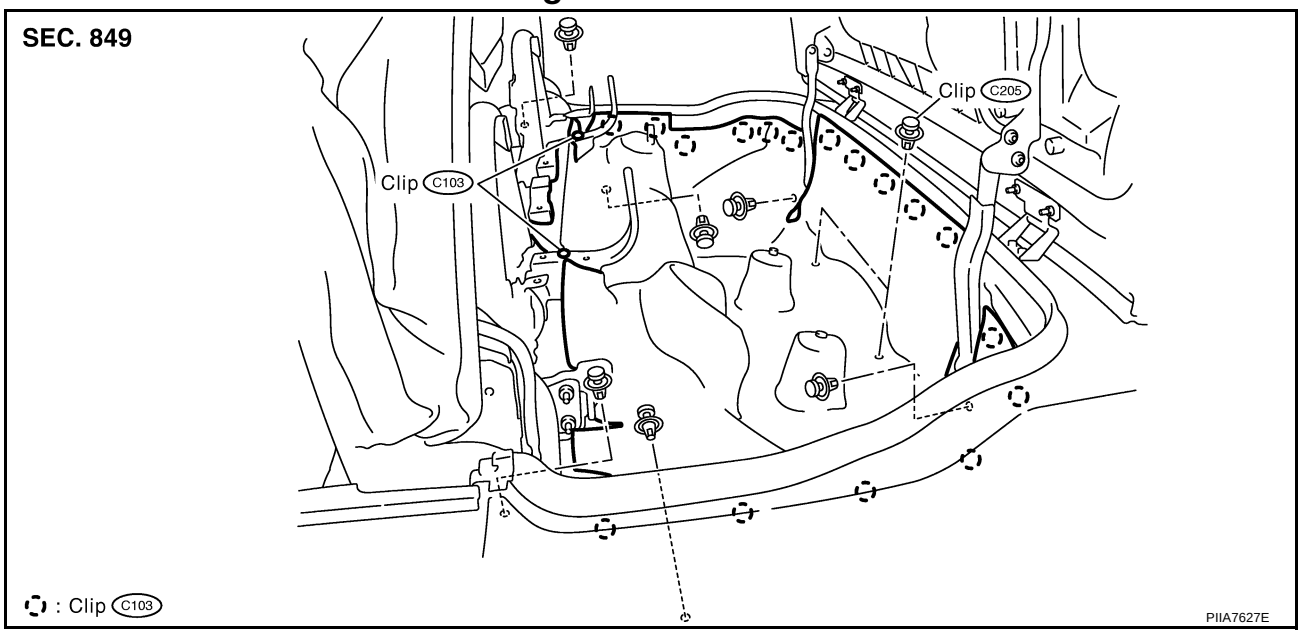


NIS00081

REMOVAL

1. Remove trank room trim.
2. Remove nuts and bolts, and then remove storage lid lower bracket.

3. Disconnect storage lid actuator harness connector.
4. Remove nuts and remove storage lid actuator from storage lid bracket, lower.



INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Storage Room Finisher

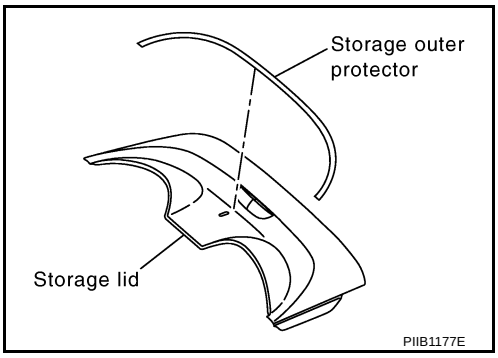
NIS00082

REMOVAL

1. Remove rear side finisher. Refer to EI-37, "REAR SIDE FINISHER" .
2. Remove bolts, and then soft top mounting bracket (front).
3. Remove bolts, and then soft top mounting bracket (rear).
4. Lift up soft top mounting bracket using a lever, and then remove storage room finisher clips.
5. Remove storage room finisher clips, and then remove rear side of storage room finisher.

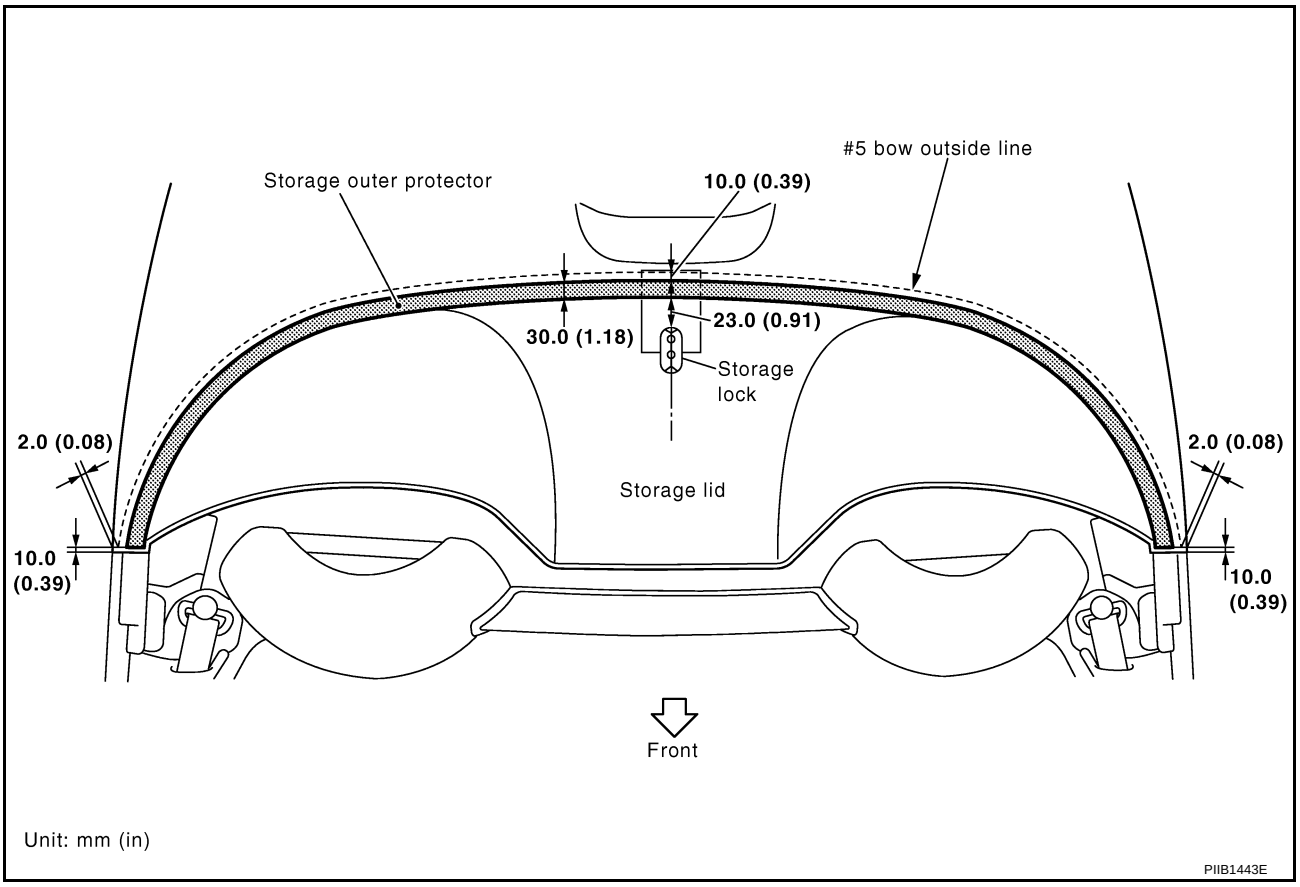
6. Lift up back panel finisher clips using remover tools, and then remove front side of storage room finisher.

INSTALLATION



Install in the reverse order of removal.

Removal and Installation of Storage Outer Protector



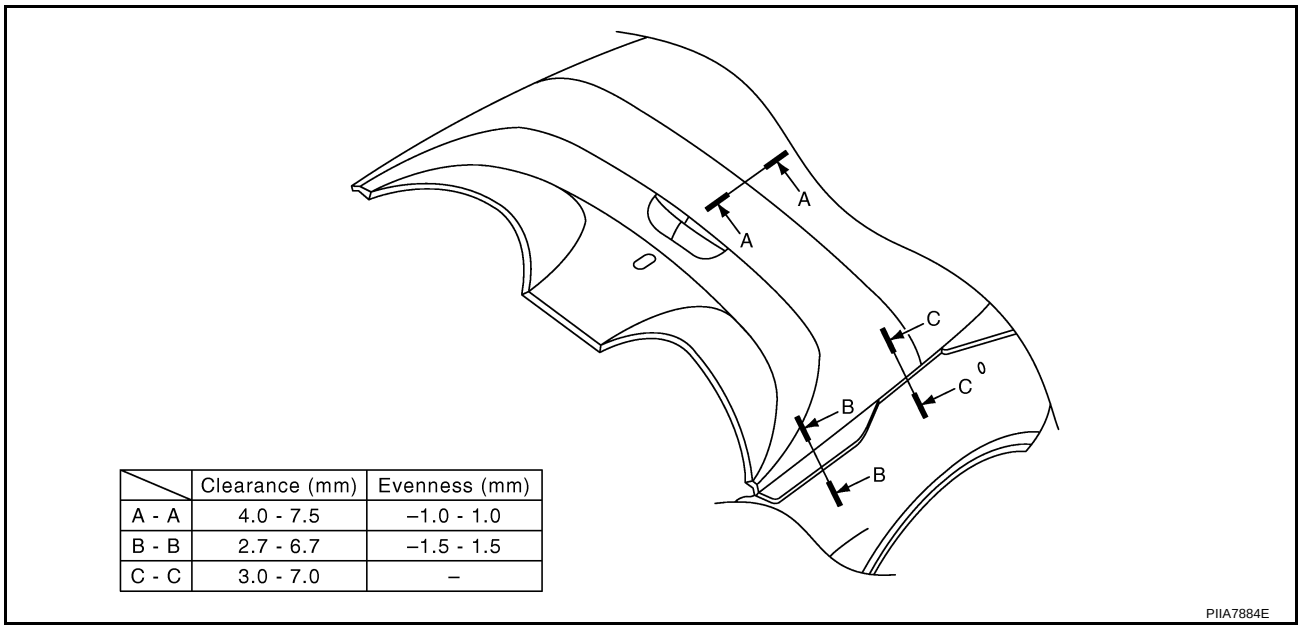
NIS00083

Note the following, and install in the reverse order of removal.

1. Heat the bonded area using a hair dryer, and then remove storage outer protector.
   NOTE:
   Do not reuse storage outer protector after removing.

2. Remove storage room finisher.

3. Clean Storage lid surface.
4. Close Soft top, and draw a line on a storage lid just behind the 5th bow out side edge by a water base marker pen.
5. Apply IPA solution (isopropyl alcohol : water = 1 : 1) on the lid, and set the storage outer protector position from one side. And do the same procedure to another side.
6. Apply left side storage lid outer aligning with left storage lid scribed line.
7. Apply right side storage lid outer aligning with right storage lid scribed line.

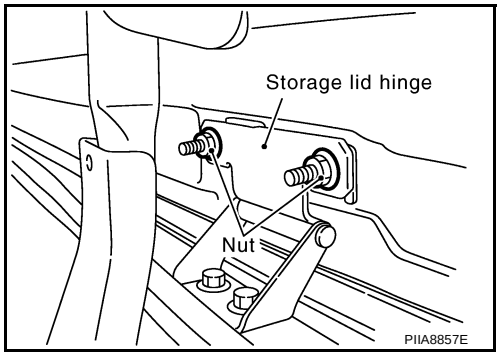


NOTE:
Not to put air or dust under the tape.
After applying the tape on the lid, peal off the protection film on the storage outer protector.

- Secure left, right, and front end of storage room finisher with remaining part when removing using double-faced adhesive tape.

Adjustment of Storage Lid

NIS00084

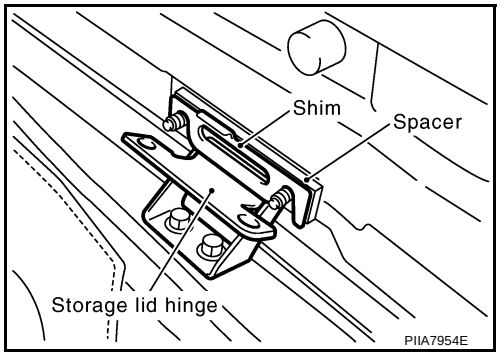


ADJUSTMENT IN FULLY CLOSED POSITION

	Clearance (mm)	Evenness (mm)
A - A	4.0 - 7.5	–1.0 - 1.0
B - B	2.7 - 6.7	–1.5 - 1.5
C - C	3.0 - 7.0	–

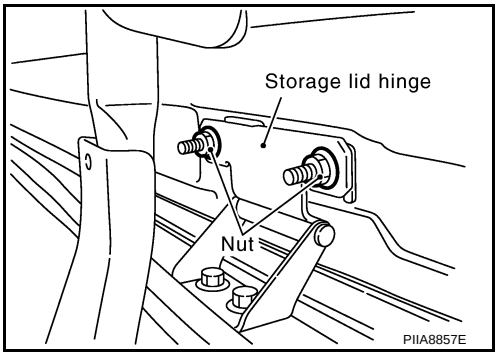
A-A Clearance Adjustment

Loosen nuts of storage lid hinge. Adjust storage lid until the clearance is within the specification.



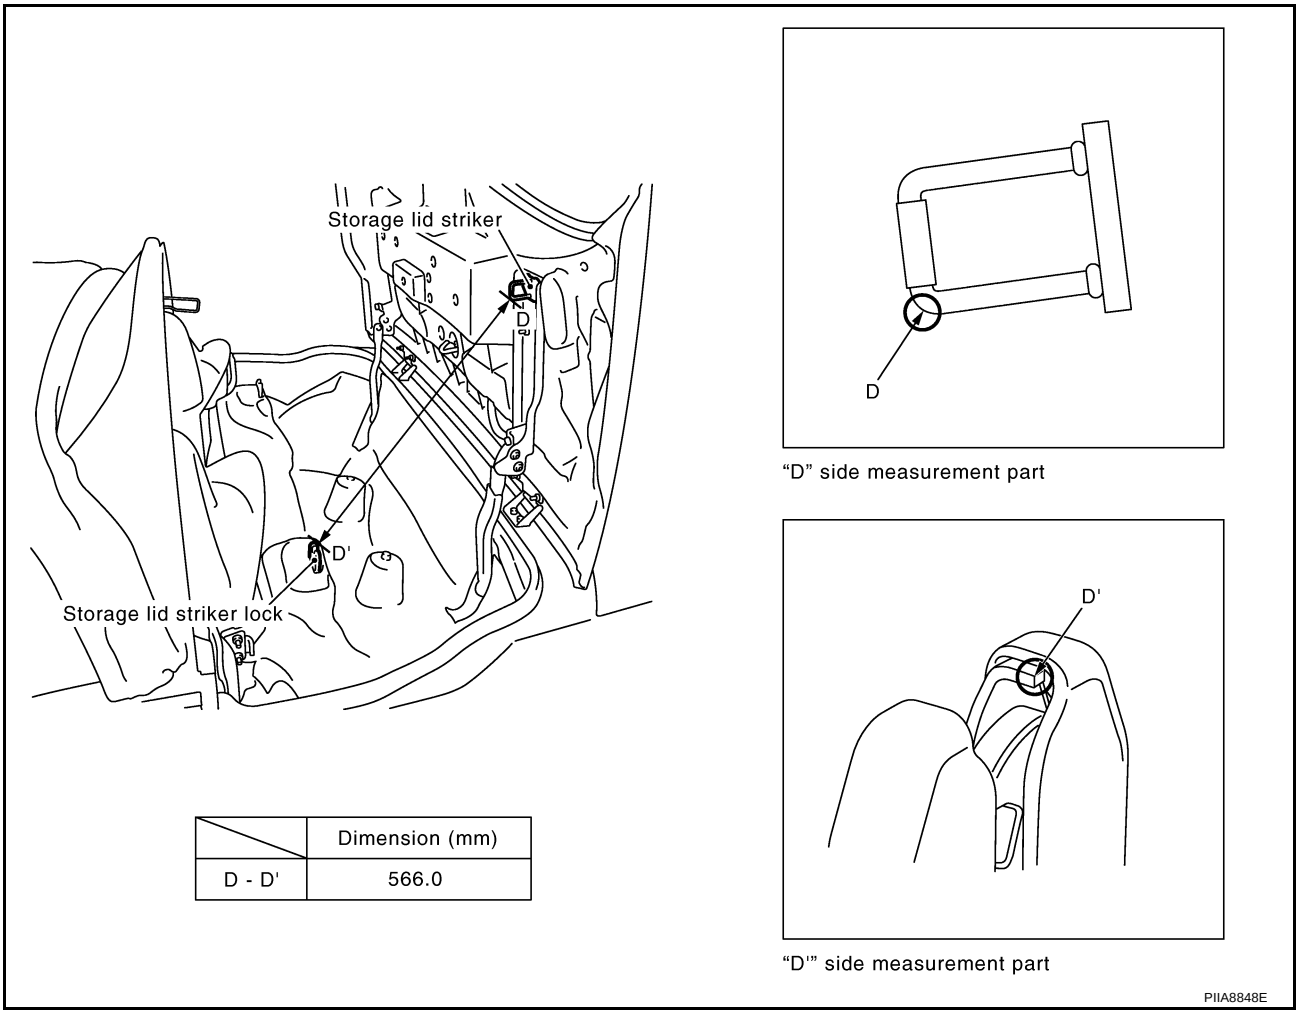
B-B Clearance Adjustment

Loosen nut of storage lid striker lock, and adjust it until the clearance is within the specification.



C-C Clearance Adjustment, A-A Evenness Adjustment

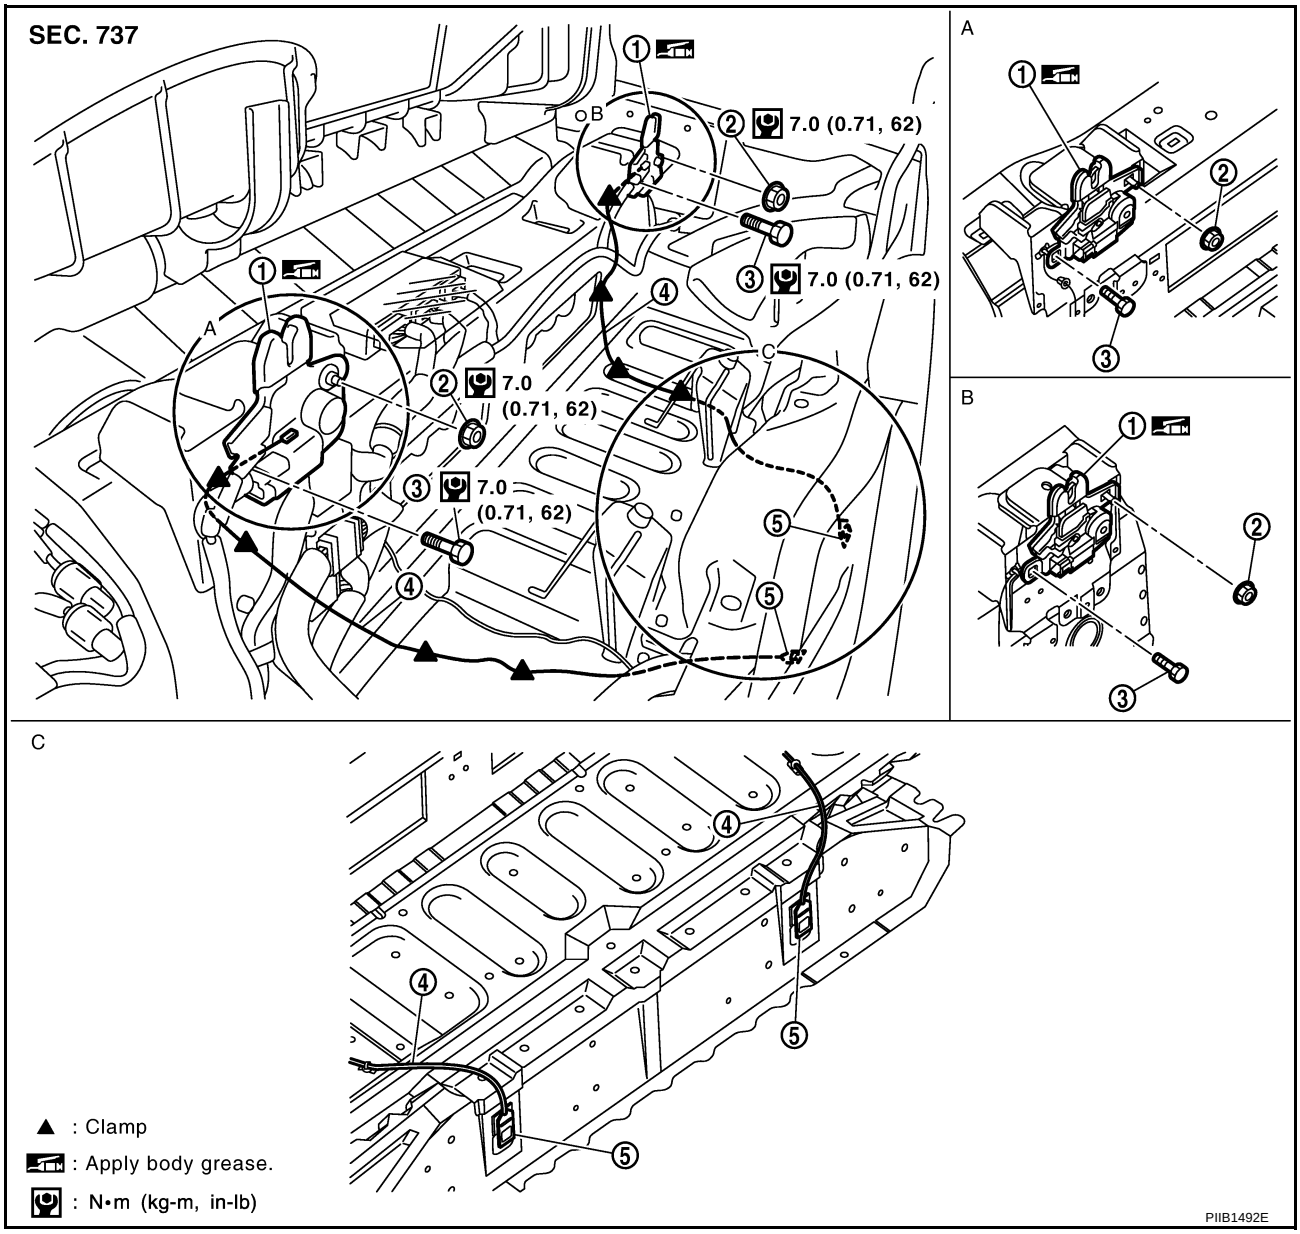
Loosen nuts of storage lid hinge. Adjust storage lid height by exchanging or adding shim until the evenness is within the specification.



B-B Evenness Adjustment

Loosen nuts of storage lid hinge. Adjust the lid until the evenness is within the specification.

ADJUSTMENT IN FULLY OPENED POSITION



Adjust linkage position of storage lid striker and storage lid striker lock to specified dimension, by loosening nuts fixing storage lid bracket, upper and lower.

	Dimension (mm)
D - D'	566.0

Removal and Installation of Storage Lid Striker Lock & Storage Lid Emergency Opener Cable

NIS00085

1. Storage lid striker lock assembly
2. Nut
3. Bolt
4. Storage lid emergency opener cable
5. Storage lid emergency opener hook

REMOVAL

1. Remove storage room finisher. Refer to RF-126, "Removal and Installation of Storage Room Finisher" .
2. Remove trunk front finisher. Refer to EI-49, "TRUNK ROOM TRIM & TRUNK LID FINISHER" .
3. Disconnect each clamp of storage lid emergency opener cable.
4. Disconnect each harness connector of storage lid lock assembly.
5. Remove storage lid lock mounting bolts, and then remove storage lid lock assembly.

INSTALLATION

Install in the reverse order of removal.

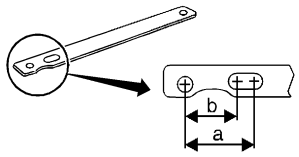
PRECAUTIONS

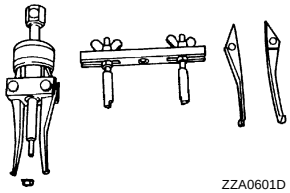
PFP:00001

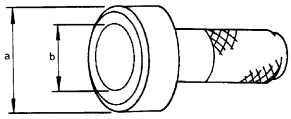
Service Notice or Precautions

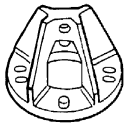
NDS00009

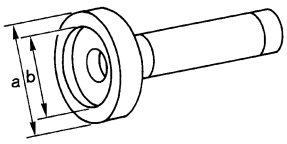
- Check for the correct installation status prior to removal or disassembly. If matching marks are required, be certain they do not interfere with the function of the parts when applied.
- Overhaul should be done in a clean work area, it is preferable to work in dustproof area.
- Before disassembly, using steam or white gasoline, completely remove sand and mud from the exterior of the unit, preventing them from entering into the unit during disassembly or assembly.
- Check appearance of the disassembled parts for damage, deformation, and unusual wear. Replace them with a new ones if necessary.
- Gaskets, seals and O-rings should be replaced any time when the unit is disassembled.
- In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, observe it.
- Clean and flush the parts sufficiently and blow-dry them.
- Be careful not to damage sliding surfaces and mating surfaces.
- When applying sealant, remove the old sealant from the mounting surface; then remove any moisture, oil, and foreign materials from the application and mounting surfaces.
- Always use shop paper for cleaning the inside of components.
- Avoid using cotton gloves or shop rags to prevent entering of lint.
- During assembly, observe the specified tightening torque, and apply new gear oil, petroleum jelly, or multi-purpose grease as specified for each vehicle, if necessary.

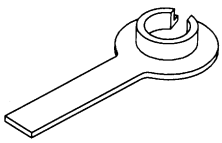




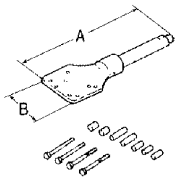


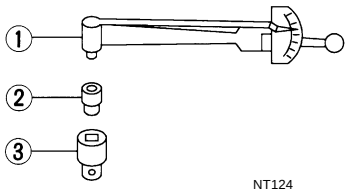


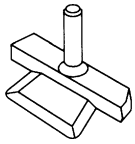


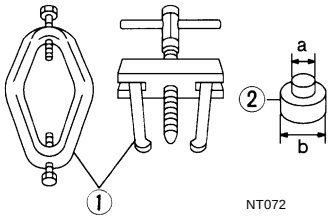


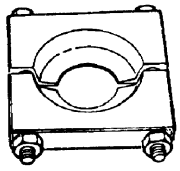
PREPARATION

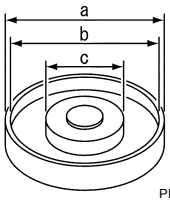




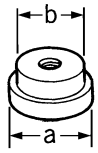


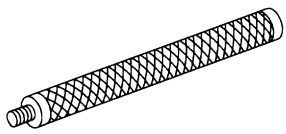


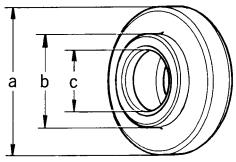


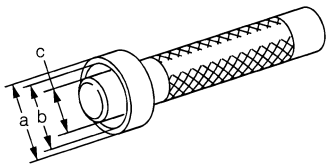


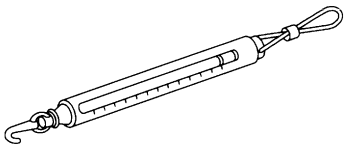
PFP:00002

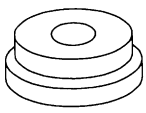








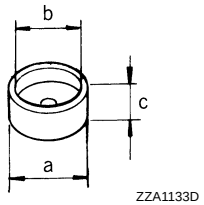


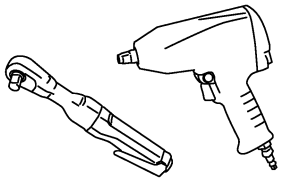


Special Service Tools

NDS0000A

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.





Tool number (Kent-Moore No.) Tool name		Description
KV40104000 (—) Flange wrench a: 85 mm (3.35 in) dia. b: 65 mm (2.56 in) dia.	 NT659	Removing and installing drive pinion lock nut
KV381054S0 (J-34286) Puller	 ZZA0601D	Removing front oil seal
ST30720000 (J-25405) Drift a: 77 mm (3.03 in) dia. b: 55.5 mm (2.185 in) dia.	 ZZA0811D	● Installing front oil seal ● Installing pinion rear bearing outer race
KV40104100 (—) Attachment	 ZZA0804D	Removing side flange
ST36230000 (J-25840-A) Sliding hammer	 ZZA0803D	Removing side flange
KV38100200 (J-26233) Drift a: 65 mm (2.56 in) dia. b: 49 mm (1.93 in) dia.	 ZZA1143D	Installing side oil seal
KV38107900 (J-39352) Protector	 S-NT129	Installing side flange

Tool number (Kent-Moore No.) Tool name	Description
KV38100800 (J-25604-01) Attachment a: 541 mm (21.30 in) b: 200 mm (7.87 in)  SDIA0267E	Fixing unit assembly
ST3127S000 (J-25765-A) Preload gauge 1: GG91030000 (J-25765) Torque wrench 2: HT62940000 (—) Socket adapter (1/2″) 3: HT62900000 (—) Socket adapter (3/8″)  NT124	Measuring pinion bearing preload and total preload
KV10111100 (J-37228) Seal cutter  S-NT046	Removing rear cover
ST3306S001 (J-22888-D) Differential side bearing puller set 1: ST33051001 (J-22888-20) Puller 2: ST33061000 (J-8107-2) Base a: 28.5 mm (1.122 in) dia. b: 38 mm (1.50 in) dia.  NT072	Removing and installing side bearing inner race
ST30031000 (J-22912-01) Replacer  ZZA0700D	Removing pinion rear bearing inner race
KV40105230 (—) Drift a: 92 mm (3.62 in) dia. b: 86 mm (3.39 in) dia. c: 45 mm (1.77 in) dia.  PDIA0591E	Installing pinion rear bearing outer race

Tool number (Kent-Moore No.) Tool name	Description
ST30613000 (J-25742-3) Drift a: 72 mm (2.83 in) dia. b: 48 mm (1.89 in) dia.  ZZA1000D	Installing pinion front bearing outer race
ST30611000 (J-25742-1) Drift bar  S-NT090	Installing pinion front bearing outer race (Use with ST30613000)
ST30901000 (J-26010-01) Drift a: 79 mm (3.11 in) dia. b: 45 mm (1.77 in) dia. c: 35.2 mm (1.386 in) dia.  ZZA0978D	Installing pinion rear bearing inner race
KV38100300 (J-25523) Drift a: 54 mm (2.13 in) dia. b: 46 mm (1.81 in) dia. c: 32 mm (1.26 in) dia.  ZZA1046D	Installing side bearing inner race
(J-8129) Spring gauge  NT127	Measuring turning torque
(J-34309) Differential shim selector tool  NT134	Adjusting bearing preload and pinion gear height
(J-25269-4) Side bearing disc (2 Req'd)  NT136	Selecting pinion height adjusting washer

Commercial Service Tools

NDS0000B

Tool name	Description
Spacer a: 60 mm (2.36 in) dia. b: 36 mm (1.42 in) dia. c: 30 mm (1.18 in)  ZZA1133D	Installing pinion front bearing inner race
Power tool  PBIC0190E	Loosening nuts and bolts

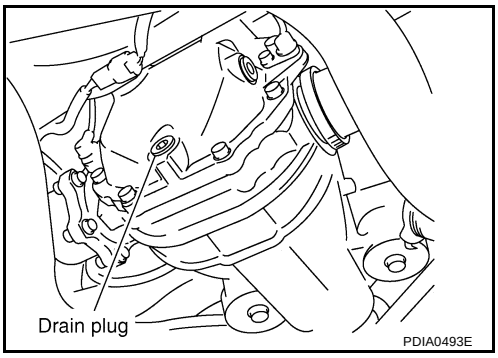
DIFFERENTIAL GEAR OIL

PFP:KLD30



Changing Differential Gear Oil

NDS0000E

DRAINING

1. Stop engine.
2. Remove drain plug and drain gear oil.
3. Set a gasket on drain plug and install it to final drive assembly and tighten to the specified torque. Refer to RFD-19, "COMPONENTS" (R200 2-pinion) or RFD-39, "COMPONENTS" (R200V LSD).

   CAUTION:
   Do not reuse gasket.

FILLING

1. Remove filler plug. Fill with new gear oil until oil level reaches the specified level near filler plug mounting hole.

   Oil grade and Viscosity:

   Refer to MA-11, "Fluids and Lubricants" .

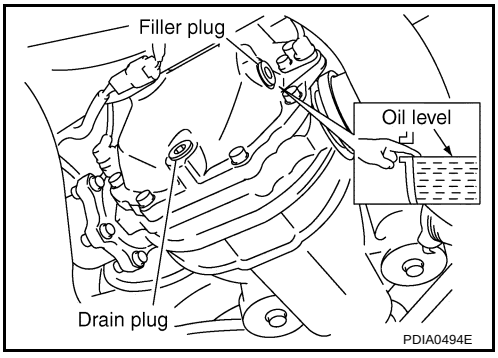
   Oil capacity:

   Approx. 1.4 ℓ (3 US pt, 2-1/2 Imp pt)

2. After refilling oil, check oil level. Set a gasket to filler plug, then install it to final drive assembly. Refer to RFD-19, "COMPONENTS" (R200 2-pinion) or RFD-39, "COMPONENTS" (R200V LSD).

   CAUTION:
   Do not reuse gasket.

Checking Differential Gear Oil



NDS0000F

OIL LEAKAGE AND OIL LEVEL

- Make sure that oil is not leaking from final drive assembly or around it.
- Check oil level from filler plug mounting hole as shown in the figure.

  CAUTION:
  Do not start engine while checking oil level.
- Set a gasket on filler plug and install it on final drive assembly. Refer to RFD-19, "COMPONENTS" (R200 2-pinion) or RFD-39, "COMPONENTS" (R200V LSD).

  CAUTION:
  Do not reuse gasket.

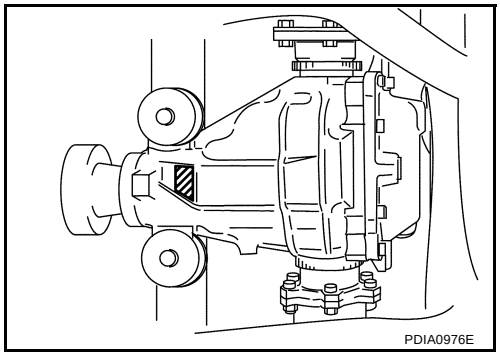
FRONT OIL SEAL

PFP:38189

Removal and Installation

NDS0000G

CAUTION:



Verify identification stamp of replacement frequency put in the lower part of gear carrier to determine replacement for collapsible spacer when replacing front oil seal. Refer to RFD-10, "IDENTIFICATION STAMP OF REPLACEMENT FREQUENCY OF FRONT OIL SEAL" . If necessary collapsible spacer replacement, remove final drive assembly and disassemble it to replace front oil seal and collapsible spacer. Refer to RFD-17, "Removal and Installation" , RFD-19, "Disassembly and Assembly (R200 2-pinion)" and/or RFD-39, "Disassembly and Assembly (R200V LSD)" .

NOTE:

The reuse of collapsible spacer is prohibited in principle. However, it is reusable on a one-time basis only in cases when replacing front oil seal.

IDENTIFICATION STAMP OF REPLACEMENT FREQUENCY OF FRONT OIL SEAL

- The diagonally shaded area in the figure shows stamping point for replacement frequency of front oil seal.
- The following table shows if collapsible spacer replacement is needed before replacing front oil seal.
  When collapsible spacer replacement is required, disassemble final drive assembly to replace collapsible spacer and front oil seal. Refer to RFD-19, "Disassembly and Assembly (R200 2-pinion)" or RFD-39, "Disassembly and Assembly (R200V LSD)" .

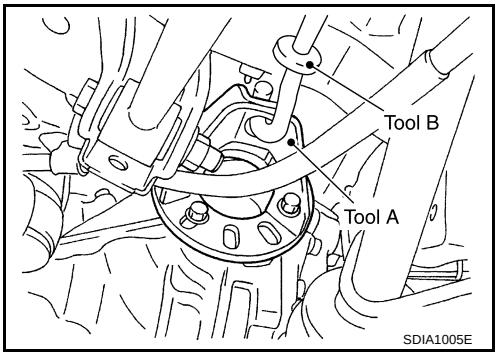
Stamp	collapsible spacer replacement
No stamp	Not required
“0” or “0” on the far right of stamp	Required
“01” or “1” on the far right of stamp	Not required

CAUTION:

Be sure to make a stamping after replacing front oil seal.

- After replacing front oil seal, make a stamping on the stamping point in accordance with the table below in order to identify replacement frequency.

CAUTION:



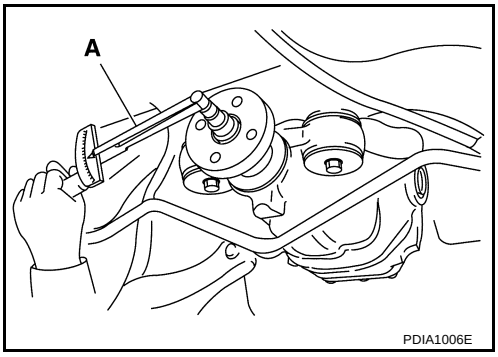
Stamping shall be made from left to right.

Stamp before stamping	Stamping on the far right	Stamping
No stamp	0	0
“0” (Front oil seal was replaced once.)	1	01
“01” (Collapsible spacer and front oil seal were replaced last time.)	0	010
“0” is on the far right. (Only front oil seal was replaced last time.)	1	...01
“1” is on the far right. (Collapsible spacer and front oil seal were replaced last time.)	0	...010

REMOVAL

1. Drain gear oil. Refer to RFD-9, "DRAINING" .
2. Make a judgment if a collapsible spacer replacement is required. Refer to RFD-10, "IDENTIFICATION STAMP OF REPLACEMENT FREQUENCY OF FRONT OIL SEAL" .
3. Remove rear wheel sensor. Refer to BRC-34, "WHEEL SENSORS" (ABS), BRC-73, "WHEEL SENSORS" (TCS/ABS) or BRC-128, "WHEEL SENSORS" (VDC/TCS/ABS).
4. Remove drive shaft from final drive. Then suspend it by wire etc. Refer to RAX-10, "Removal and Installation" .
5. Install attachment to side flange, and then pull out the side flange with the sliding hammer.

   Tool number **A: KV40104100 (—)**
   B: ST36230000 (J-25840-A)



NOTE:

Model	Circular clip installation position	
	Right side	Left side
R200 (2-pinion)	Final drive side	
R200V (LSD)	Final drive side	Side flange side

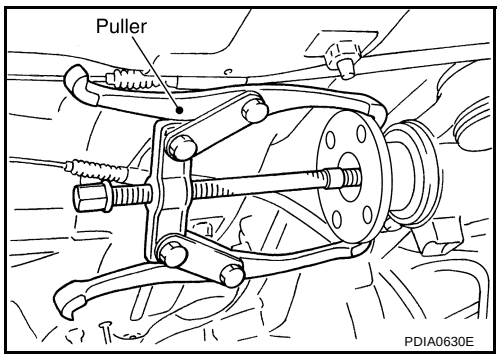
6. Remove propeller shaft. Refer to PR-6, "Removal and Installation" .
7. Measure the total preload with the preload gauge.

   Tool number **A: ST3127S000 (J-25765-A)**

   NOTE:
   Record the preload measurement.

8. Remove drive pinion lock nut using the flange wrench.

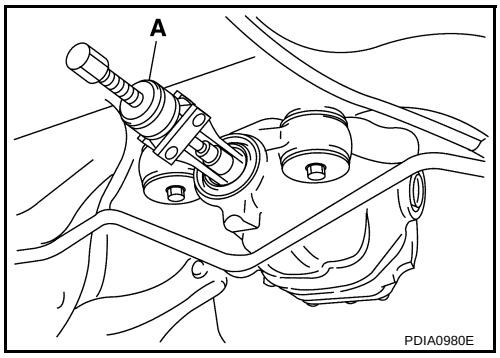
   Tool number **: KV40104000 (—)**



9. Put matching mark on the end of the drive pinion. The matching mark should be in line with the matching mark A on companion flange.

   CAUTION:
   For matching mark, use paint. Do not damage drive pinion.

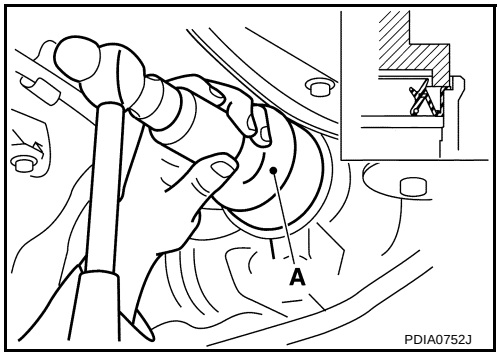
   NOTE:
   The matching mark A on the final drive companion flange indicates the maximum vertical runout position.



10. Remove companion flange using a puller.

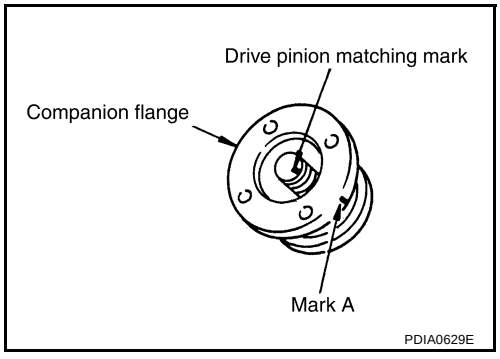
11. Remove front oil seal using the puller.

Tool number A: KV381054S0 (J-34286)



INSTALLATION

1. Apply multi-purpose grease to front oil seal lips.
2. Install front oil seal using the drift as shown in the figure.



Tool number A: ST30720000 (J-25405)

CAUTION:

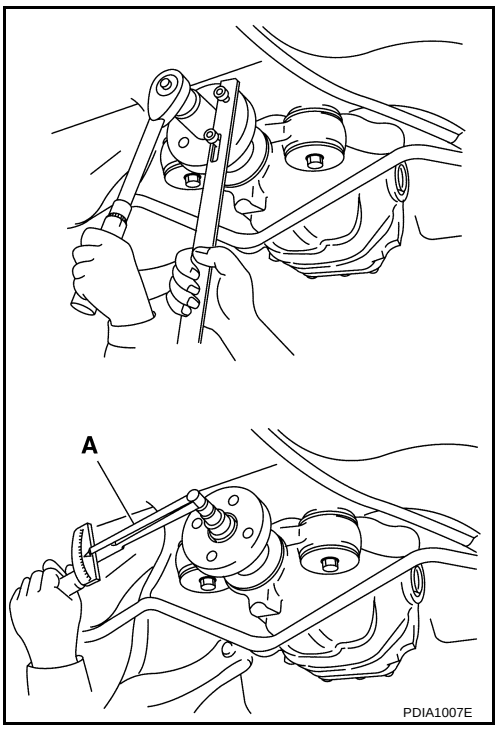
- **Do not reuse oil seal.**
- **Do not incline oil seal when installing.**

3. Align the matching mark of drive pinion with the matching mark of companion flange, and then install the companion flange.

4. Apply anti-corrosion oil to the thread and seat of new drive pinion lock nut, and temporarily tighten drive pinion lock nut to drive pinion.

CAUTION:
Do not reuse drive pinion lock nut.

5. Tighten to drive pinion lock nut, while adjust total preload torque.



Tool number A: ST3127S000 (J-25765-A)

Drive pinion lock nut tightening torque:

147 – 323 N·m (15 – 32 kg-m, 109 – 238 ft-lb)

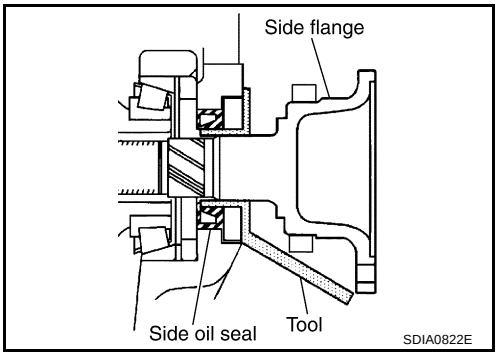
Total preload torque:

Total preload torque should equal the measurement taken during removal plus an additional 0.1 – 0.4 N·m (0.01 – 0.04 kg-m, 1 – 3 in-lb).

CAUTION:
- **Adjust to the lower limit of the drive pinion lock nut tightening torque first.**
- **If the preload torque exceeds the specified value, replace collapsible spacer and tighten it again to adjust. Do not loosen drive pinion lock nut to adjust the preload torque.**

6. Make a stamping for identification of front oil seal replacement frequency. Refer to RFD-10, "IDENTIFICATION STAMP OF REPLACEMENT FREQUENCY OF FRONT OIL SEAL" .

CAUTION:
Be sure to make a stamping after replacing front oil seal.



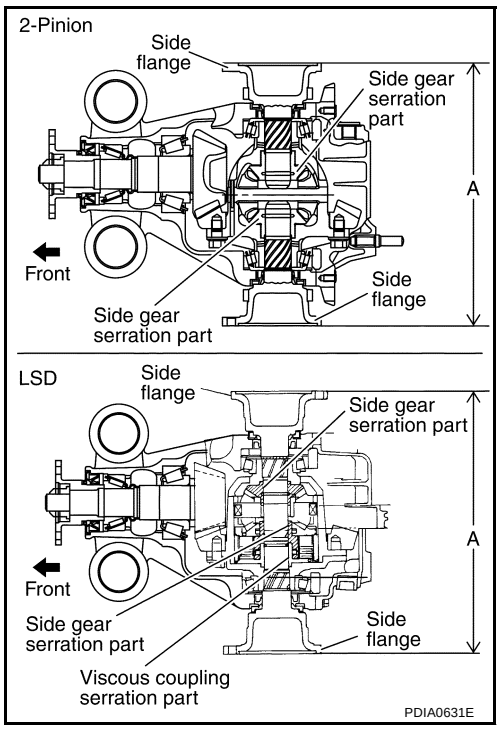
7. Install propeller shaft. Refer to PR-6, "Removal and Installation" .
8. Install side flange with the following procedure.

NOTE:
Install the RH side flange, then install the LH side flange. If LH side flange is installed first, the RH side flange comes out sometimes from the shock of installing the RH side flange. [For R200V (with LSD)]

a. Attach the protector to side oil seal.

Tool number : KV38107900 (J-39352)

b. After the side flange is inserted and the serrated part of side gear has engaged the serrated part of flange, remove the protector.



c. Put a suitable drift on the center of side flange, then drive it until sound changes.

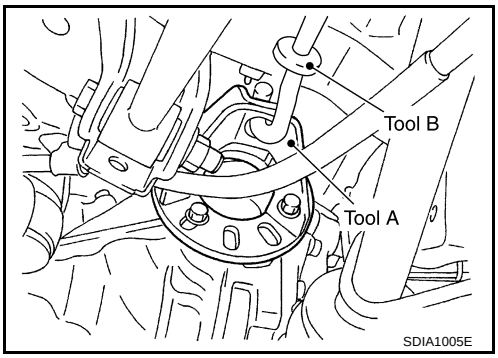
NOTE:
When installation is completed, driving sound of the side flange turns into a sound which seems to affect the whole final drive.

d. Confirm that the dimension of the side flange installation (Measurement A) in the figure comes into the following.

Measurement A: 326 – 328 mm (12.83 – 12.91 in)

9. Install drive shaft. Refer to RAX-10, "Removal and Installation" .
10. Install rear wheel sensor. Refer to BRC-34, "WHEEL SENSORS" (ABS), BRC-73, "WHEEL SENSORS" (TCS/ABS) or BRC-128, "WHEEL SENSORS" (VDC/TCS/ABS).
11. Refill gear oil to the final drive and check oil level. Refer to RFD-9, "FILLING" .
12. Check the final drive for oil leakage. Refer to RFD-9, "OIL LEAKAGE AND OIL LEVEL" .

SIDE OIL SEAL



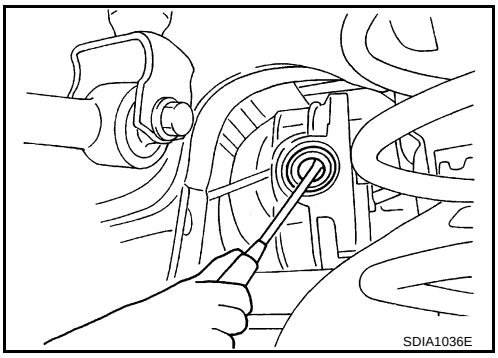
PFP:33142

Removal and Installation

NDS0000H

REMOVAL

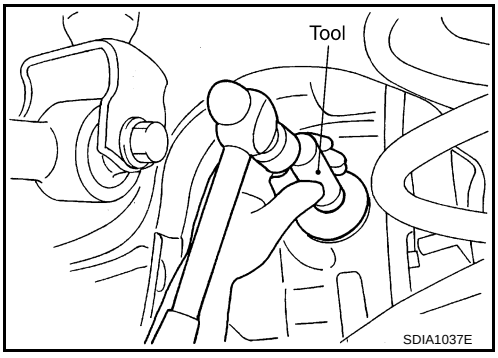
1. Remove rear wheel sensor. Refer to BRC-34, "WHEEL SENSORS" (ABS), BRC-73, "WHEEL SENSORS" (TCS/ABS) or BRC-128, "WHEEL SENSORS" (VDC/TCS/ABS).
2. Remove drive shaft from final drive. Then suspend it by wire etc. Refer to RAX-10, "Removal and Installation" .
3. Install attachment to side flange, and then pull out the side flange with the sliding hammer.



Tool number **A: KV40104100 (—)**
B: ST36230000 (J-25840-A)

NOTE:

Model	Circular clip installation position	
	Right side	Left side
R200 (2-pinion)	Final drive side	
R200V (LSD)	Final drive side	Side flange side



4. Remove side oil seal, using a flat-bladed screwdriver.

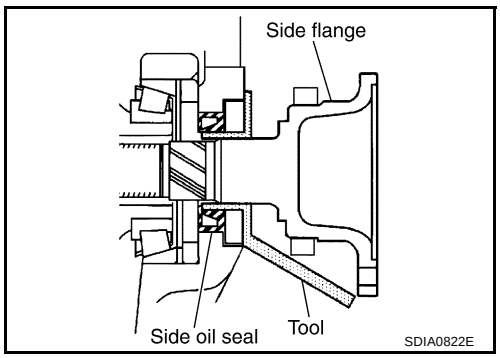
CAUTION:
Be careful not to damage gear carrier.

INSTALLATION

1. Apply multi-purpose grease to side oil seal lips.
2. Install side oil seal until it becomes flush with the case end, using the drift.

Tool number **: KV38100200 (J-26233)**

CAUTION:
- **Do not reuse oil seal.**
- **When installing, do not incline oil seal.**



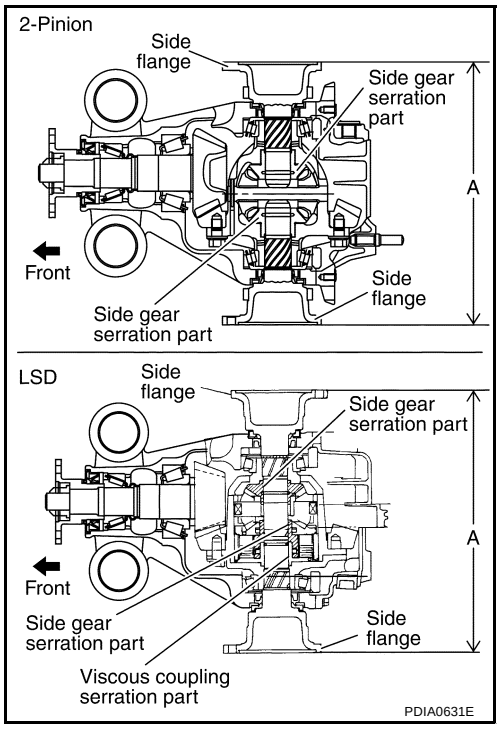
3. Install side flange with the following procedure.

NOTE:
Install the RH side flange, then install the LH side flange. If LH side flange is installed first, the RH side flange comes out sometimes from the shock of installing the RH side flange. [For R200V (with LSD)]

a. Attach the protector to side oil seal.

Tool number : KV38107900 (J-39352)

b. After the side flange is inserted and the serrated part of side gear has engaged the serrated part of flange, remove the protector.



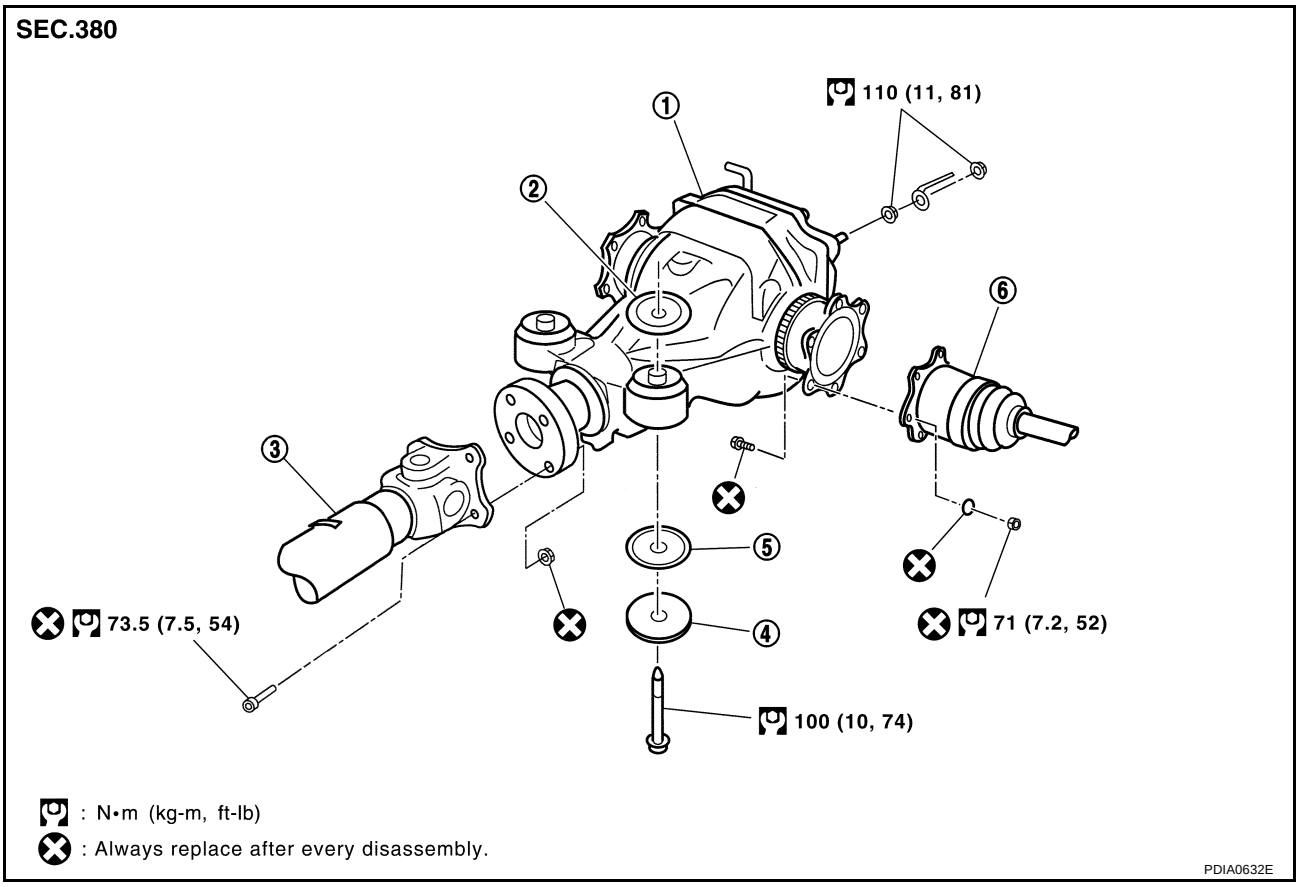
c. Put a suitable drift on the center of side flange, then drive it until sound changes.

NOTE:
When installation is completed, driving sound of the side flange turns into a sound which seems to affect the whole final drive.

d. Confirm that the dimension of the side flange installation (Measurement A) in the figure comes into the following.

Measurement A: 326 - 328 mm (12.83 - 12.91 in)

4. Install drive shaft. Refer to RAX-10, "Removal and Installation" .
5. Install rear wheel sensor. Refer to BRC-34, "WHEEL SENSORS" (ABS), BRC-73, "WHEEL SENSORS" (TCS/ABS) or BRC-128, "WHEEL SENSORS" (VDC/TCS/ABS).



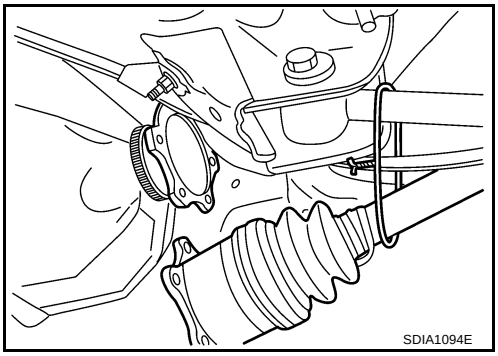
REAR FINAL DRIVE ASSEMBLY

PFP:38300

Removal and Installation

NDS0000I

COMPONENTS

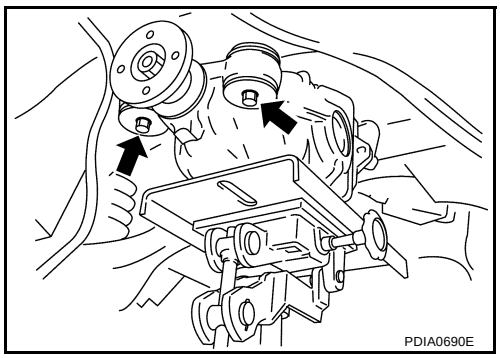


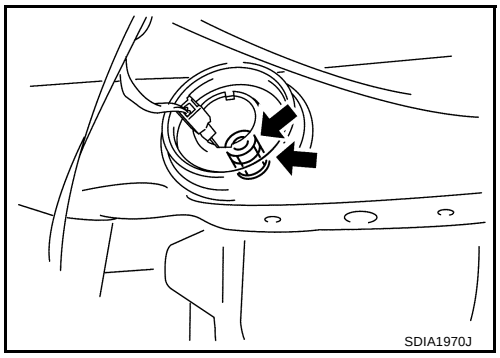
1. Rear final drive assembly
2. Upper stopper
3. Propeller shaft
4. Washer
5. Lower stopper
6. Drive shaft

REMOVAL

1. Remove propeller shaft from the final drive. Refer to PR-6, "Removal and Installation" .

   CAUTION:
   Do not impact or damage propeller shaft tube.
2. Remove rear stabilizer bar with a power tool. Refer to FSU-18, "STABILIZER BAR" .
3. Remove drive shaft from final drive. Then suspend it by wire etc. Refer to RAX-10, "REAR DRIVE SHAFT" .
4. Remove breather hose from the final drive.
5. Remove rear wheel sensor. Refer to BRC-34, "WHEEL SENSORS" (ABS), BRC-73, "WHEEL SENSORS" (TCS/ABS) or BRC-128, "WHEEL SENSORS" (VDC/TCS/ABS).





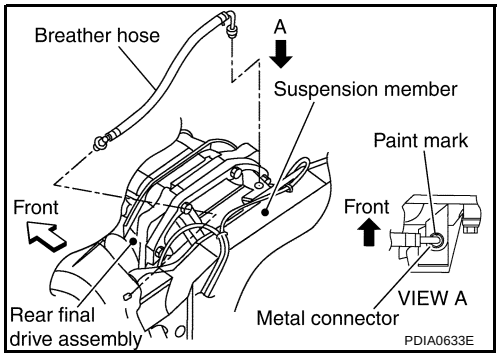
6. Set a suitable jack to rear final drive assembly.

CAUTION:
Do not place a suitable jack on the rear cover (aluminum case).

7. Remove the mounting bolts and nuts connecting to the suspension member, and remove rear final drive assembly.

CAUTION:
Secure rear final drive assembly to a suitable jack while removing it.

INSTALLATION

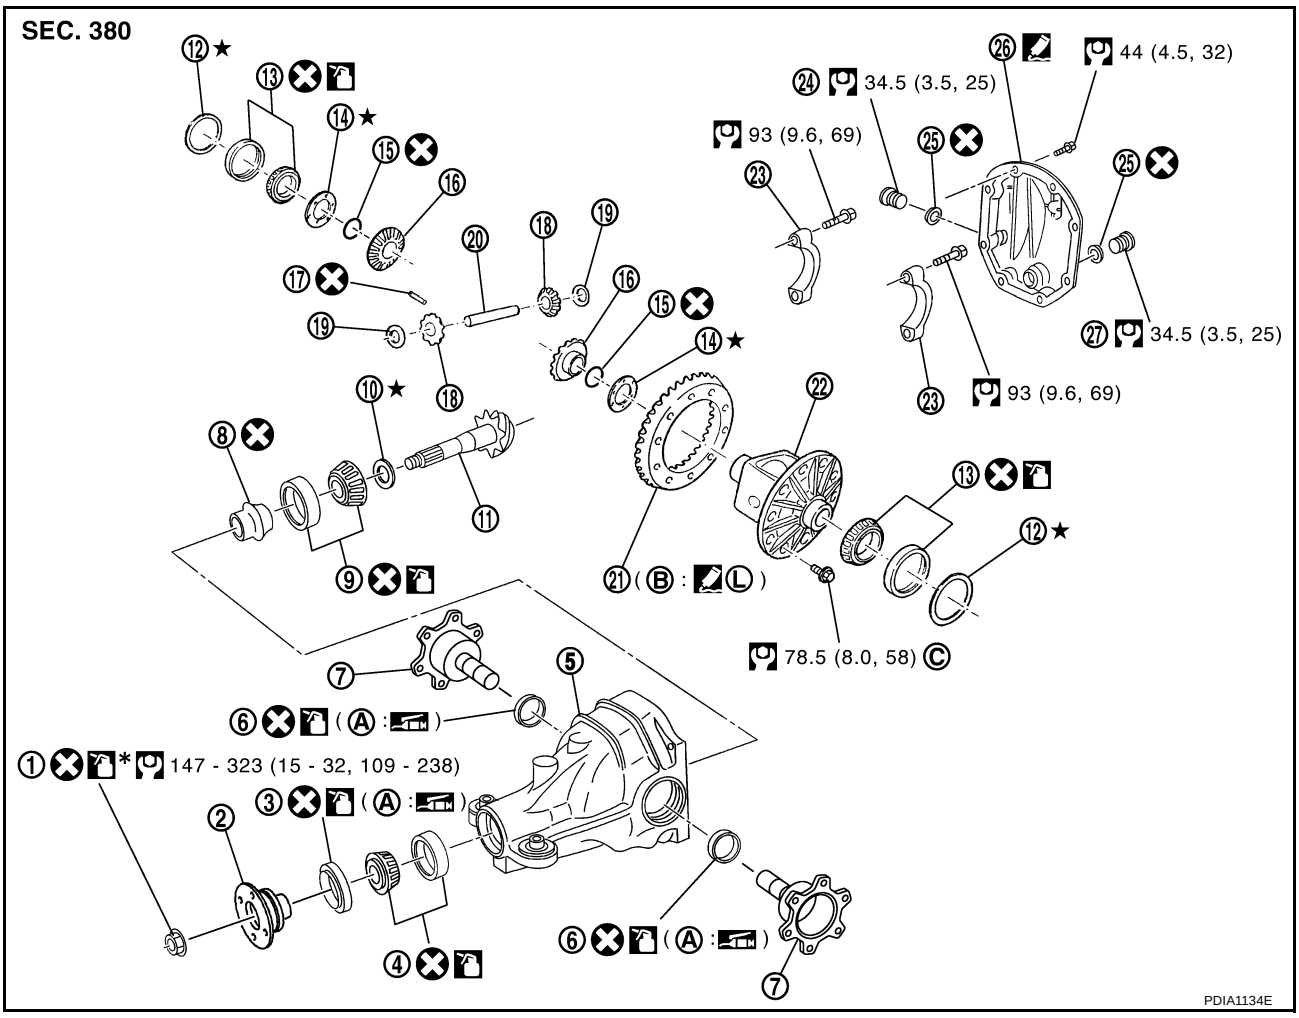


Note the following, and installation is in the reverse order of removal.

- Refer to RFD-19, "COMPONENTS" (R200 2-pinion) or RFD-39, "COMPONENTS" (R200V LSD) about each tightening torque.
- When installing breather hoses, refer to the figure.

CAUTION:
Make sure there are no pinched or restricted areas on the breather hose caused by bending or winding when installing it.

- For installation, the vehicle side end shall be inserted to suspension member. Install metal connector side of this hose to rear cover by inserting it with aiming painted marking to the front of vehicle.



- When oil leaks while removing final drive assembly, check oil level after the installation. Refer to RFD-9, "Checking Differential Gear Oil" .

Disassembly and Assembly (R200 2-pinion)

NDS0000J

COMPONENTS

1.	Drive pinion lock nut	2.	Companion flange	3.	Front oil seal
4.	Pinion front bearing	5.	Gear carrier	6.	Side oil seal
7.	Side flange	8.	Collapsible spacer	9.	Pinion rear bearing
10.	Pinion height adjusting washer	11.	Drive pinion	12.	Side bearing adjusting washer
13.	Side bearing	14.	Side gear thrust washer	15.	Circular clip
16.	Side gear	17.	Lock pin	18.	Pinion mate gear
19.	Pinion mate thrust washer	20.	Pinion mate shaft	21.	Drive gear
22.	Differential case	23.	Bearing cap	24.	Filler plug
25.	Gasket	26.	Rear cover	27.	Drain plug

A: Oil seal lip

B: Screw hole

C: After tightening the bolts to the specified torque, tighten the bolts additionally by turning the bolts 31 to 36 degrees.

Refer to GI-11, "Components" and the followings for the symbols in the figure.

: Apply gear oil.

: Apply anti-corrosion oil.

: Apply Genuine Silicone RTV or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

: Apply Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

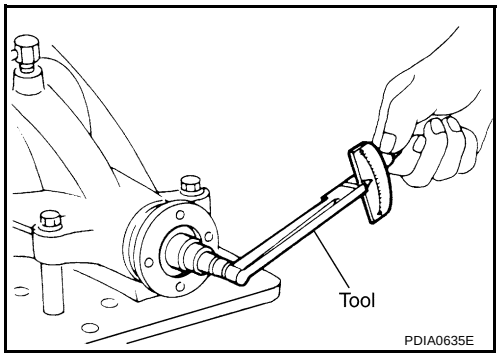
ASSEMBLY INSPECTION AND ADJUSTMENT

- Before inspection and adjustment, drain gear oil.

Total Preload Torque

1. Secure final drive assembly onto an attachment.

Tool number : KV38100800 (J-25604-01)



2. Remove side flanges.
3. Rotate drive pinion back and forth 2 to 3 times to check for unusual noise and rotation malfunction.
4. Rotate drive pinion at least 20 times to check for smooth operation of the bearing.
5. Measure total preload with the preload gauge.

Tool number : ST3127S000 (J-25765-A)

Total preload torque:

2.85 – 3.75 N·m (0.29 – 0.38 kg-m, 26 – 33 in-lb)

NOTE:
Total preload torque = Pinion bearing preload torque + Side bearing preload torque

- If measured value is out of the specification, disassemble it to check and adjust each part. Adjust the pinion bearing preload and side bearing preload. Adjust the pinion bearing preload first, then adjust the side bearing preload.

When the preload torque is large

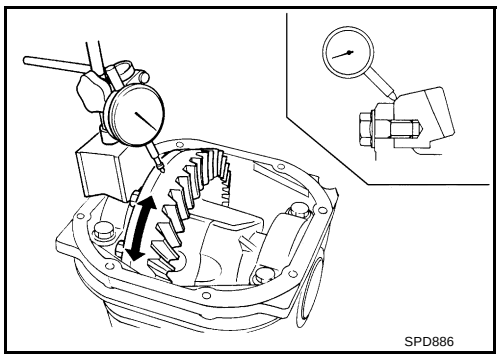
On pinion bearings: **Replace the collapsible spacer.**

On side bearings: **Use thinner side bearing adjusting washers by the same amount to each side. Refer to RFD-60, "Side Bearing Adjusting Washer" .**

When the preload is small

On pinion bearings: **Tighten the drive pinion lock nut.**

On side bearings: **Use thicker side bearing adjusting washers by the same amount to each side. Refer to RFD-60, "Side Bearing Adjusting Washer" .**

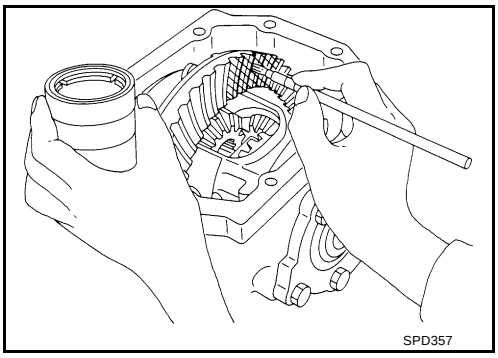


Drive Gear Runout

1. Remove rear cover. Refer to RFD-24, "Differential Assembly" .
2. Fit a dial indicator to the drive gear back face.
3. Rotate the drive gear to measure runout.

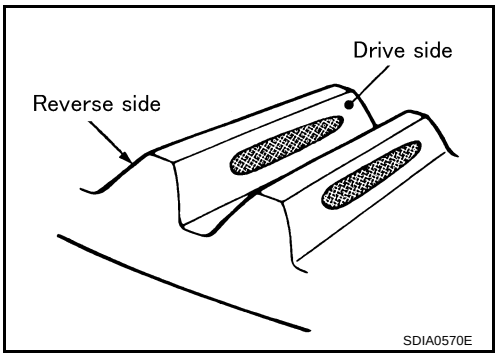
Runout limit: 0.05 mm (0.0020 in) or less

- If the runout is outside of the repair limit, check drive gear assembly condition; foreign material may be caught between drive gear and differential case, or differential case or drive gear may be deformed, etc.



CAUTION:
Replace drive gear and drive pinion gear as a set.

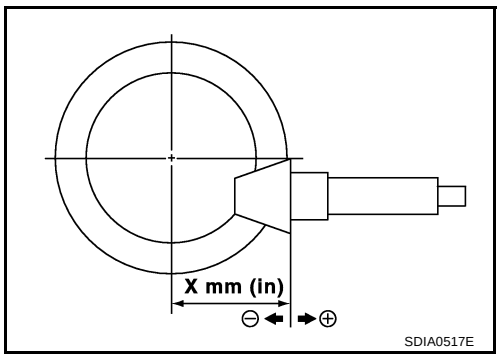
Tooth Contact



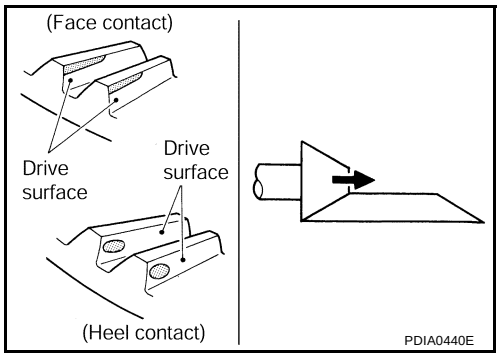
1. Remove rear cover. Refer to RFD-24, "Differential Assembly" .
2. Apply red lead to drive gear.

CAUTION:
Apply red lead to both the faces of 3 to 4 gears at 4 locations evenly spaced on drive gear.

3. Rotate drive gear back and forth several times, check drive pinion gear to drive gear tooth contact.

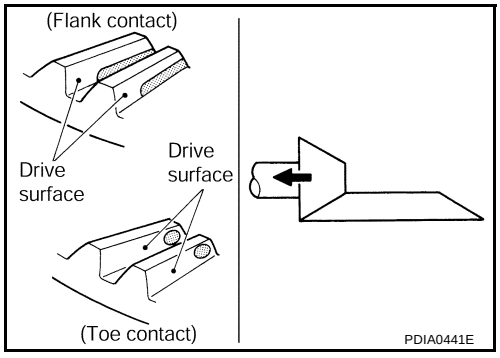


CAUTION:
Check tooth contact on drive side and reverse side.



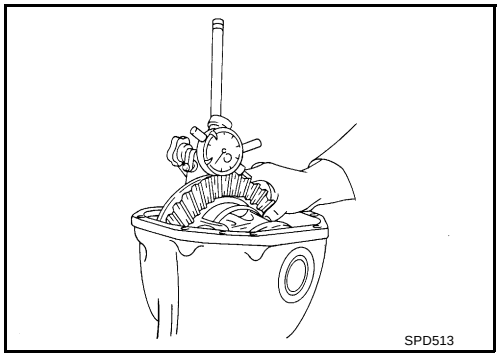
Tooth contact condition		Pinion height adjusting washer selection valve [mm (in)]		Adjustment (Yes/No)	Possible cause
Drive side	Back side				
Heel side Toe side	Toe side Heel side	Thicker ↑	+0.09 (+0.0035)	Yes	Occurrence of noise and scoring sound in all speed ranges.
			+0.06 (+0.0024)		Occurrence of noise when accelerating.
			+0.03 (+0.0012)	No	–
			0		
		Thinner ↓	-0.03 (-0.0012)		
			-0.06 (-0.0024)	Yes	Occurrence of noise at constant speed and decreasing speed.
			-0.09 (-0.0035)		Occurrence of noise and scoring sound in all speed ranges.

SDIA0207E



4. If tooth contact is improperly adjusted, follow the procedure below to adjust the pinion height (dimension X).

- If the tooth contact is near the face (face contact), or near the heel (heel contact), thicken pinion height adjusting washers to move drive pinion closer to drive gear.
  Refer to RFD-60, "Pinion Height Adjusting Washer" .



- If the tooth contact is near the flank (flank contact), or near the toe (toe contact), thin pinion height adjusting washers to move drive pinion farther from drive gear.
  Refer to RFD-60, "Pinion Height Adjusting Washer" .

Backlash

1. Remove rear cover. Refer to RFD-24, "Differential Assembly" .
2. Fit a dial indicator to the drive gear face to measure the backlash.

Backlash: 0.10 – 0.15 mm (0.0039 – 0.0059 in)

- If the backlash is outside of the specified value, change the thickness of side bearing adjusting washer.

When the backlash is large:

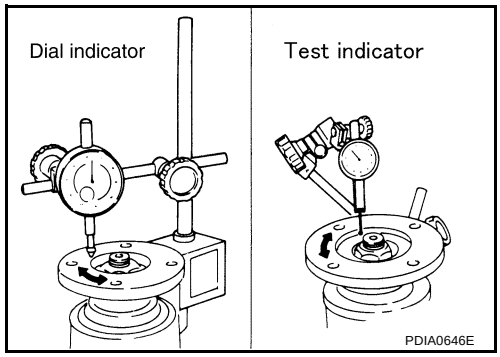
Make drive gear back side adjusting washer thicker, and drive gear tooth side adjusting washer thinner by the same amount. Refer to RFD-60, "Side Bearing Adjusting Washer" .

When the backlash is small:

Make drive gear back side adjusting washer thinner, and drive gear tooth side adjusting washer thicker by the same amount. Refer to RFD-60, "Side Bearing Adjusting Washer" .

CAUTION:

Do not change the total amount of washers as it will change the bearing preload.



Companion Flange Runout

1. Fit a dial indicator onto the companion flange face (inner side of the propeller shaft mounting bolt holes).
2. Rotate the companion flange to check for runout.

Runout limit : 0.08 mm (0.0031 in)

3. Fit a test indicator to the inner side of the companion flange (socket diameter).
4. Rotate the companion flange to check for runout.

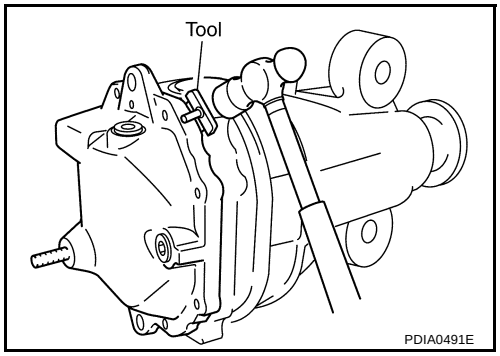
Runout limit : 0.08 mm (0.0031 in)

5. If the runout value is outside the repair limit, follow the procedure below to adjust.

a. Check for runout while changing the phase between companion flange and drive pinion gear by 90° step, and search for the position where the runout is the minimum.

b. If the runout value is still outside of the limit after the phase has been changed, possible cause will be an assembly malfunction of drive pinion and pinion bearing and malfunction of pinion bearing. Check for these items and repair if necessary.

c. If the runout value is still outside of the limit after the check and repair, replace companion flange.



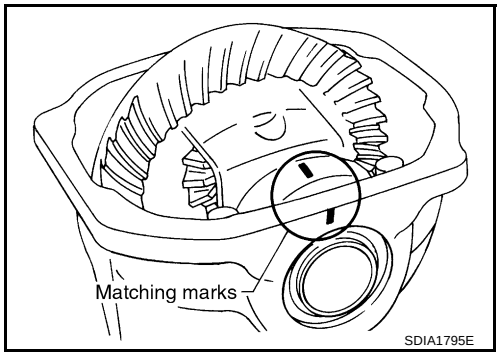
DISASSEMBLY

Differential Assembly

1. Drain gear oil, if necessary.
2. Remove side flange.
3. Remove rear cover mounting bolts.
4. Remove rear cover to insert the seal cutter between gear carrier and rear cover.

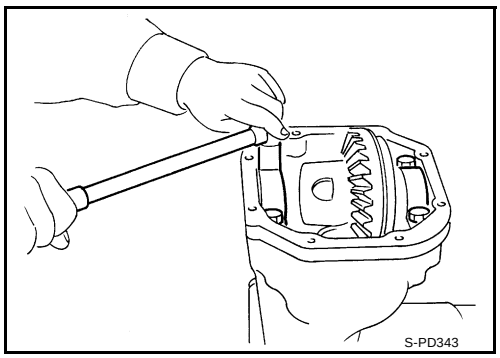
   Tool number : KV10111100 (J-37228)

   CAUTION:
   - **Be careful not to damage the mating surface.**
   - **Do not insert flat-bladed screwdriver, this way damage the mating surface.**



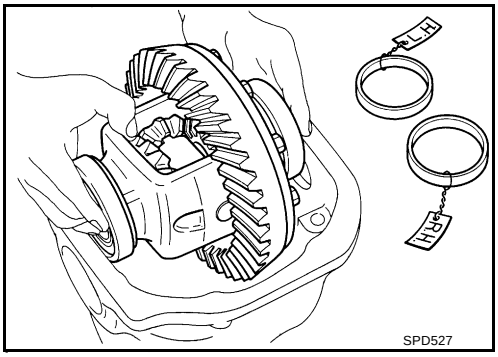
5. Using two 45 mm (1.77 in) spacers, mount carrier on the attachment.

   Tool number : KV38100800 (J-25604-01)



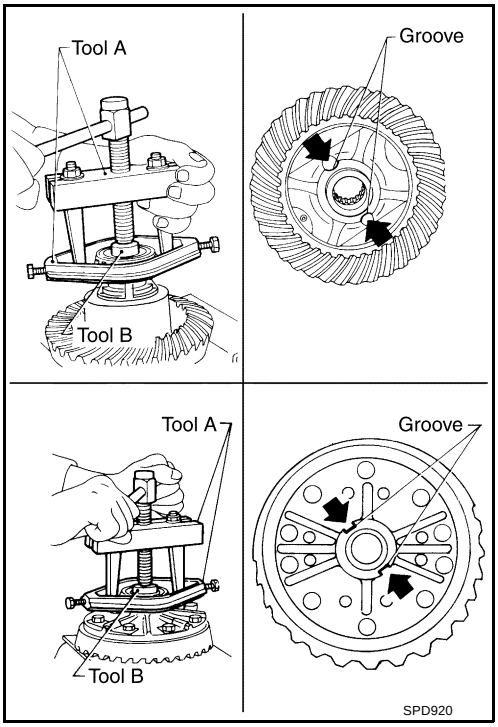
6. For proper reinstallation, paint matching marks on one side of the bearing cap.

   CAUTION:
   - **For matching marks, use paint. Do not damage bearing caps and gear carrier.**
   - **Bearing caps are line-board during manufacture. The matching marks are used to reinstall them in their original positions.**



7. Remove bearing caps.

8. Lift differential case assembly out with a suitable tool.

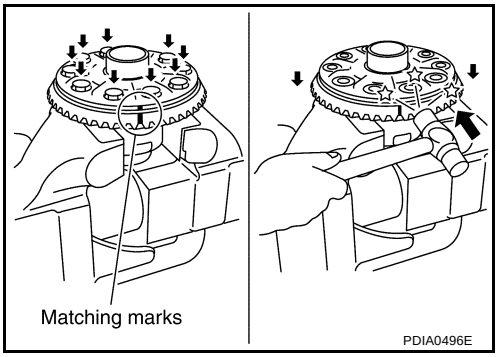


- Keep side bearing outer races together with inner race. Do not mix them up.
  Also, keep side bearing adjusting washers together with bearings.

9. Remove side bearing inner race.
   To prevent damage to bearing, engage puller jaws in groove.

   Tool number **A: ST33051001 (J-22888-20)**
   B: ST33061000 (J-8107-2)

   CAUTION:
   - **To prevent damage to the side bearing and drive gear, place copper plates between these parts and vise.**
   - **It is not necessary to remove side bearing inner race except it is replaced.**

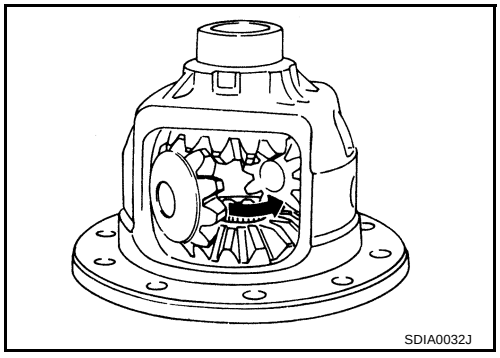


10. For proper reinstallation, paint matching marks on one differential case assembly.

    CAUTION:
    For matching marks, use paint. Do not damage differential case and drive gear.

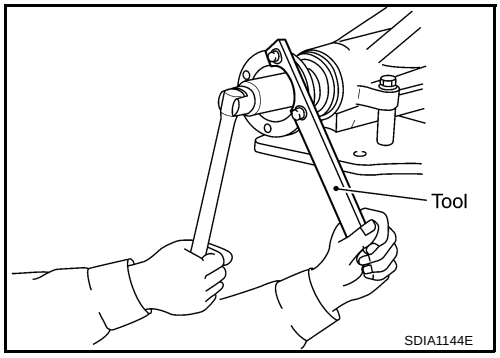
11. Remove drive gear mounting bolts.
12. Tap drive gear off differential case assembly with a soft hammer.

    CAUTION:
    Tap evenly all around to keep drive gear from bending.



13. Remove lock pin of pinion mate shaft with a punch from drive gear side.

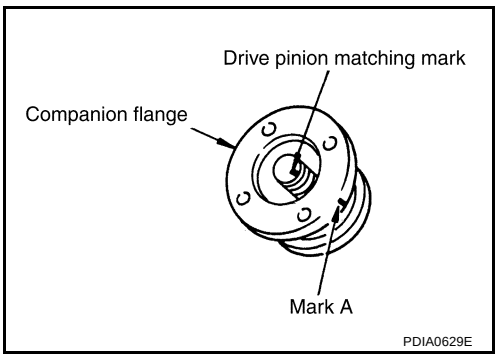
14. Remove pinion mate shaft.



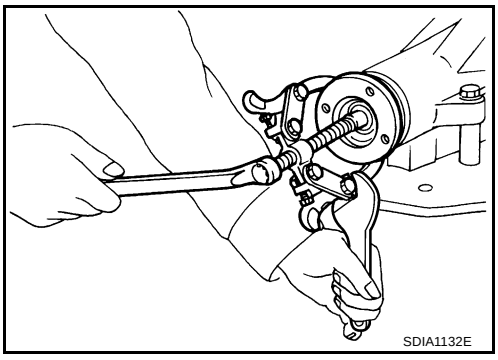
15. Turn pinion mate gear, then remove pinion mate gear, pinion mate thrust washer, side gear and side gear thrust washer from differential case.

Drive Pinion Assembly

1. Remove differential assembly. Refer to RFD-24, "Differential Assembly" .
2. Remove drive pinion lock nut with the flange wrench.



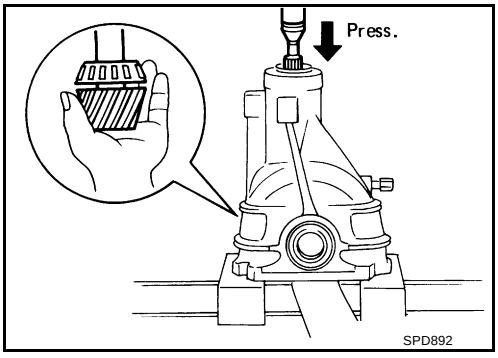
Tool number : KV40104000 (—)



3. Put matching mark on the end of drive pinion. The matching mark should be in line with the matching mark A on companion flange.

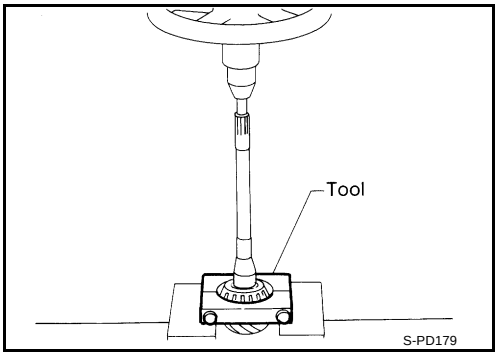
CAUTION:
For matching mark, use paint. Do not damage companion flange and drive pinion.

NOTE:
The matching mark A on the final drive companion flange indicates the maximum vertical runout position.
When replacing companion flange, matching mark is not necessary.



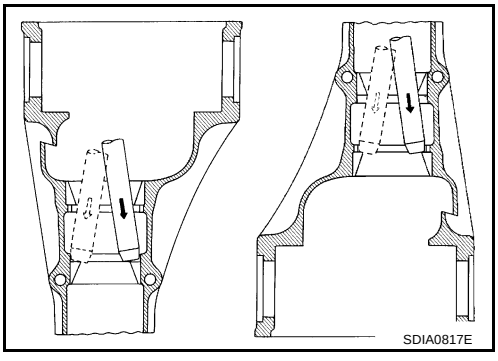
4. Remove companion flange using the suitable puller.

5. Press drive pinion assembly out of gear carrier.



CAUTION:
Do not drop drive pinion assembly.

6. Remove front oil seal.
7. Remove side oil seal.
8. Remove pinion front bearing inner race.
9. Remove collapsible spacer.



10. Remove pinion rear bearing inner race and drive pinion height adjusting washer with the replacer.

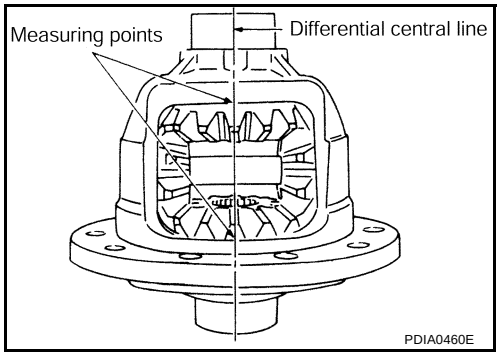
Tool number : ST30031000 (J-22912-01)

11. Tap pinion front/rear bearing outer races uniformly a brass rod or equivalent to removed.

CAUTION:
Be careful not to damage gear carrier.

INSPECTION AFTER DISASSEMBLY

Clean up the disassembled parts. Then, inspect if the parts are worn or damaged. If so, follow the measures below.



Content	Conditions and Measures
Hypoid gear	● If the gear teeth do not mesh or line-up correctly, determine the cause and adjust or replace as necessary. ● If the gears are worn, cracked, damaged, pitted or chipped (by friction) noticeably, replace with new drive gear and drive pinion as a set.
Bearing	● If any chipped (by friction), pitted, worn, rusted or scratched mark, or unusual noise from the bearing is observed, replace as a bearing assembly (as a new set).
Side gear and Pinion mate gear	● If any cracks or damage on the surface of the tooth is found, replace. ● If any worn or chipped mark on the contact sides of the thrust washer is found, replace.
Side gear thrust washer and pinion mate thrust washer	● If it is chipped (by friction), damaged, or unusually worn, replace.
Oil seal	● Whenever disassembled, replace. ● If wear, deterioration of adherence (sealing force lips), or damage is detected on the lips, replace them.
Differential case	● If any wear or crack on the contact sides of the differential case is found, replace.
Companion flange	● If any chipped mark (about 0.1 mm, 0.004 in) or other damage on the contact sides of the lips of the companion flange is found, replace.

ADJUSTMENT AND SELECTION OF ADJUSTING WASHERS

Differential Side Gear Clearance

- Assemble the differential parts if they are disassembled. Refer to RFD-24, "Differential Assembly" .

1. Place differential case straight up so that side gear to be measured comes upward.

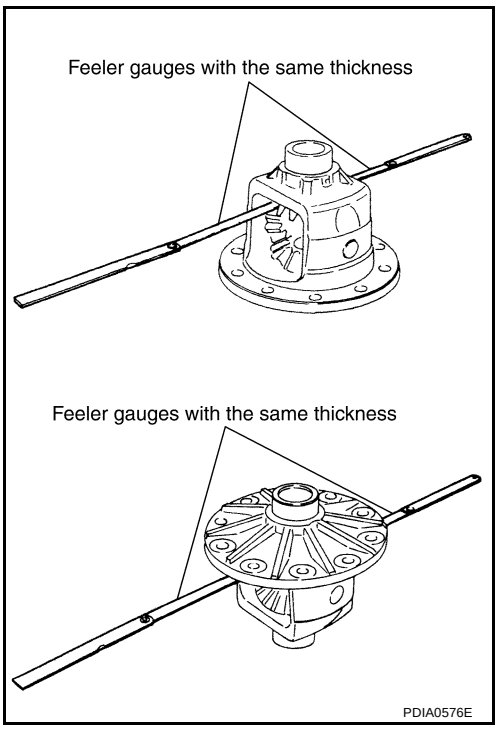
2. Using feeler gauge, measure the clearance between side gear back and differential case at 3 different points, while rotating side gear. Average the 3 readings, and then measure the clearance of the other side as well.

Side gear back clearance specification:

0.2 mm (0.008 in) or less.
(Each gear should rotate smoothly without excessive resistance during differential motion.)

CAUTION:
To prevent side gear from tilting, insert feeler gauges with the same thickness from both sides.

3. If the back clearance is outside the specification, use a thicker/thinner side gear thrust washer to adjust. Refer to RFD-60, "Side Gear Thrust Washer" .

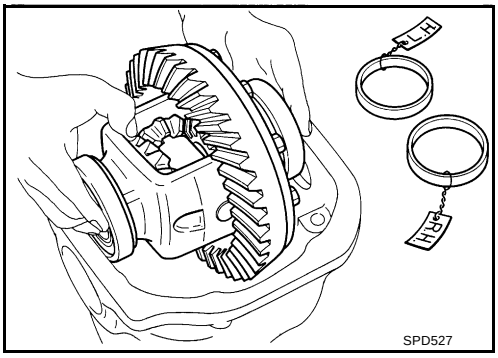


When the back clearance is large:

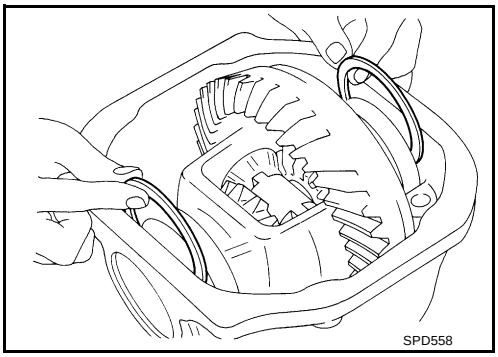
Use a thicker thrust washer.

When the back clearance is small:

Use a thinner thrust washer.

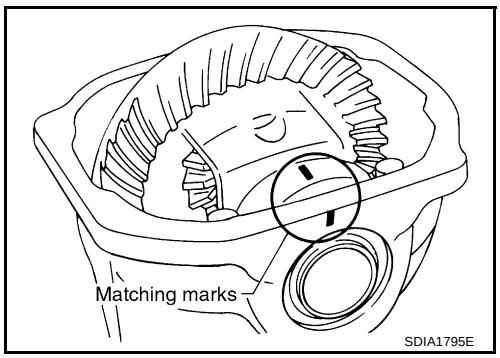


CAUTION:
Select a side gear thrust washer for right and left individually.



Side Bearing Preload

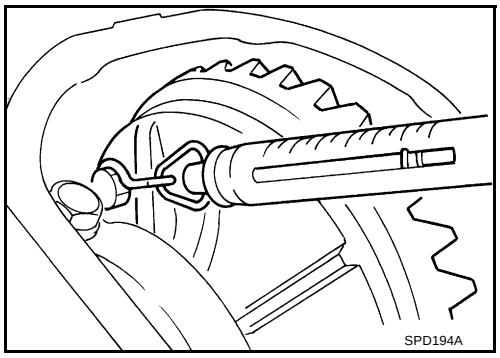
- Selecting carrier side bearing adjusting washers is required for successful completion of this procedure.



1. Make sure all parts are clean. Also, make sure the bearings are well lubricated with gear oil.
2. Place the differential case, with side bearings and bearing races installed, into gear carrier.

3. Insert left and right original side bearing adjusting washers in place between side bearings and gear carrier.

4. Install bearing caps in their correct locations and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-19, "COMPONENTS" .
5. Turn the carrier several times to seat the bearings.



6. Measure the turning torque of the carrier at the drive gear mounting bolts with a spring gauge.

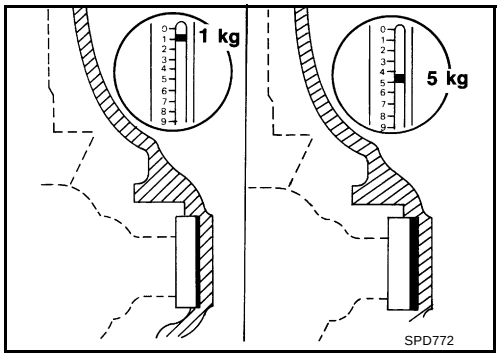
Tool number : — (J-8129)

Specification:

34.2 – 39.2 N (3.5 – 4.0 kg, 7.7 – 8.8 lb) of pulling force at the drive gear bolt

7. If the turning torque is outside the specification, use a thicker/ thinner side bearing adjusting washer to adjust. Refer to RFD-60, "Side Gear Thrust Washer" .

If the turning torque is less than the specified range:



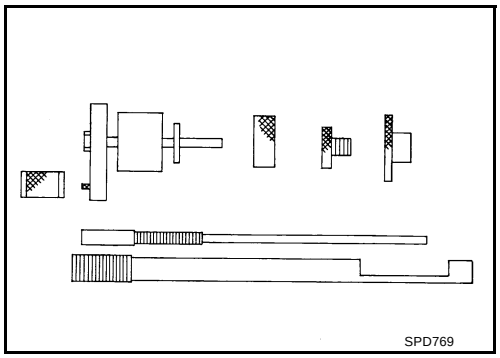
Use a thicker thrust washer.

If the turning torque is greater than the specification:

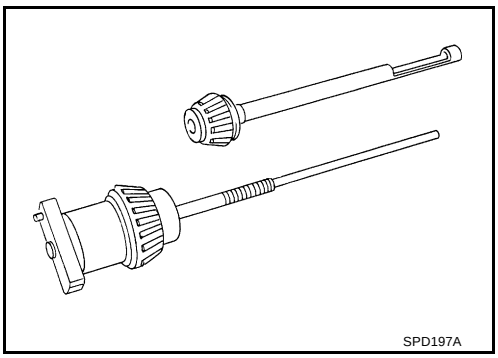
Use a thinner thrust washer.

CAUTION:

Select a side bearing adjusting washer for right and left individually.

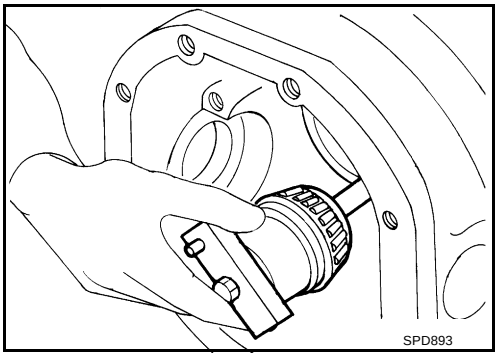


8. Record the total amount of washer thickness required for the correct carrier side bearing preload.

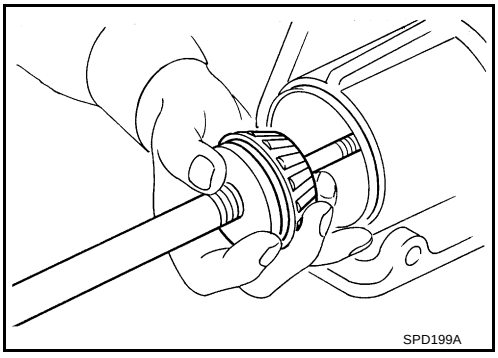


Pinion Gear Height

1. Make sure all parts are clean and that the bearings are well lubricated.
2. Assemble the pinion gear bearings into the differential shim selector tool.

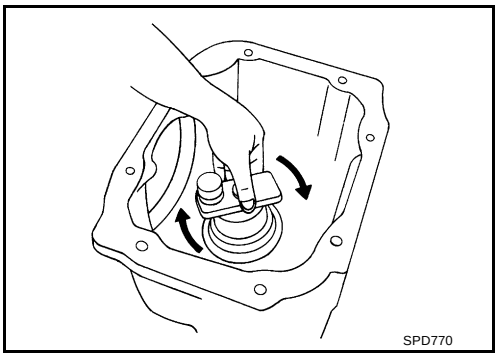


Tool number : — (J-34309)



- **Pinion front bearing;** make sure the J-34309-3 pinion front bearing seat is secured tightly against the J-34309-2 gauge anvil. Then turn the pinion front bearing pilot, J-34309-5, to secure the bearing in its proper position.
- **Pinion rear bearing;** the pinion rear bearing pilot, J-34309-8, is used to center the pinion rear bearing only. The pinion rear bearing locking seat, J-34309-4, is used to lock the bearing to the assembly.
- **Installation of J-34309-9 and J-34309-16;** place a suitable 2.5 mm (0.098 in) thick plain washer between J-34309-9 and J-34309-16. Both surfaces of J-34309-9 and J-34309-16 must be parallel with a clearance of 2.5 mm (0.098 in).

SPD197A



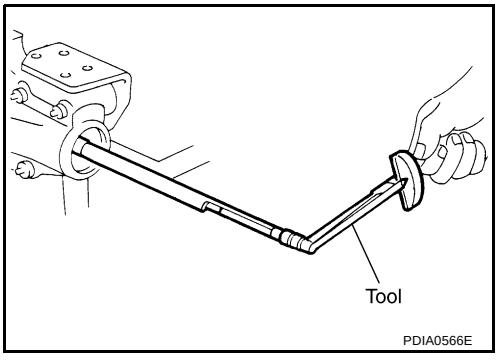
3. Install the pinion rear bearing inner race into gear carrier. Then place the pinion preload shim selector tool, J-34309-1, gauge screw assembly.

SPD893

4. Assemble the pinion front bearing inner race and the J-34309-2 gauge anvil. Assemble them together with the J-34309-1 gauge screw in gear carrier. Make sure that the pinion height gauge plate, J-34309-16, will turn a full 360 degrees. Tighten the two sections together by hand.

SPD199A

5. Turn the assembly several times to seat the bearings.

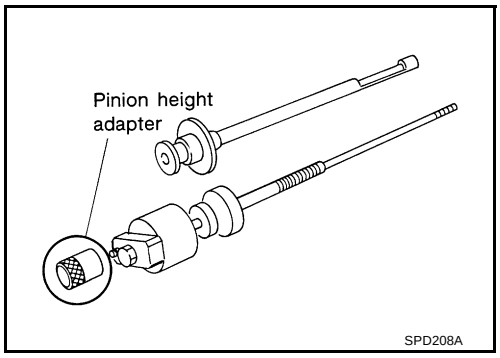


SPD770

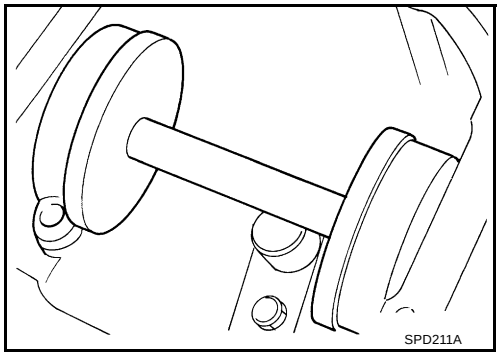
6. Measure the turning torque at the end of the J-34309-2 gauge anvil using preload gauge.

Tool number : ST3127S000 (J-25765- A)

Turning torque specification:



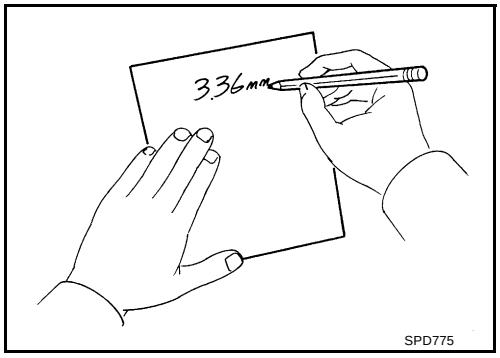
1.0 – 1.3 N·m (0.11 – 0.13 kg-m, 9 – 11 in-lb)



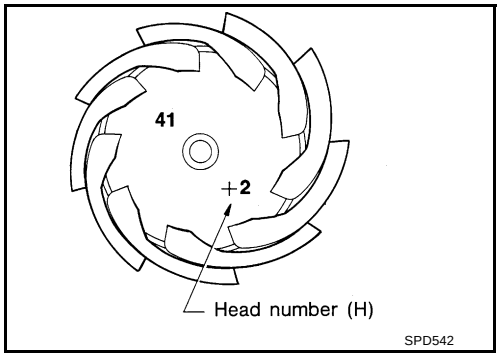
PDIA0566E

7. Place the J-34309-11 “R200A” pinion height adapter onto the gauge plate and tighten it by hand.

   CAUTION:
   Make sure all machined surfaces are clean.

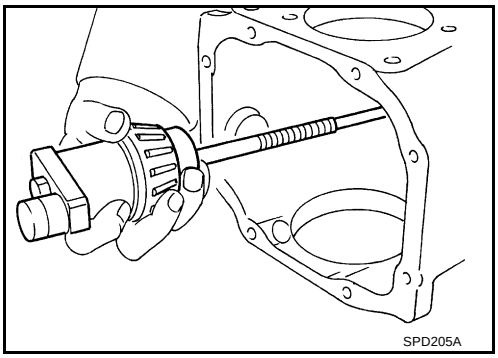


8. Position the side bearing discs, J-25269-4, and arbor firmly into the side bearing bores. Install the bearing caps and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-19, "COMPONENTS" .



9. Select the correct standard pinion height adjusting washer thickness. Select by using a standard gauge of 3 mm (0.12 in) and your J-34309-101 feeler gauge. Measure the distance between the J-34309-11 pinion height adapter including the standard gauge and the arbor.

10. Write down exact measurement (the value of feeler gauge).

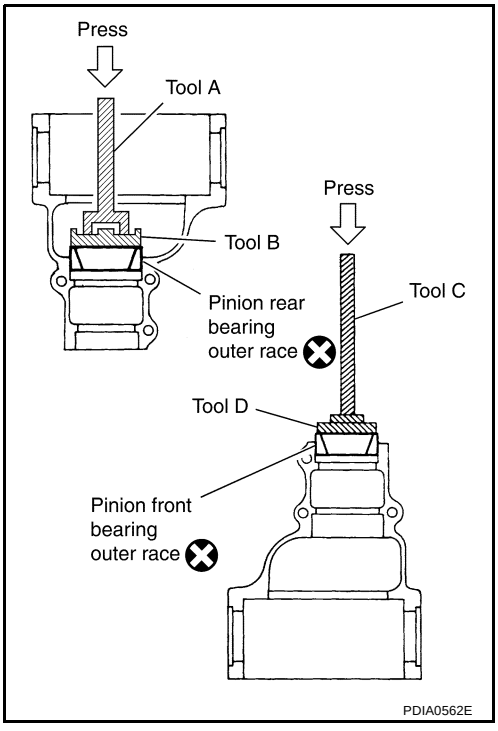


11. Correct the pinion height washer size by referring to the “pinion head number”.
    There are two numbers painted on the drive pinion. The first one refers to the drive pinion and drive gear as a matched set. This number should be the same as the number on the drive gear. The second number is the “pinion head height number”. It refers to the ideal pinion height from standard for quietest operation. Use the following chart to determine the correct pinion height washer.

Pinion head height number	Add or remove from the standard pinion height adjusting washer thickness measurement
- 6	Add 0.06 mm (0.0024 in)
- 5	Add 0.05 mm (0.0020 in)
- 4	Add 0.04 mm (0.0016 in)
- 3	Add 0.03 mm (0.0012 in)
- 2	Add 0.02 mm (0.0008 in)
- 1	Add 0.01 mm (0.0004 in)
0	Use the selected washer thickness
+1	Subtract 0.01 mm (0.0004 in)
+2	Subtract 0.02 mm (0.0008 in)
+3	Subtract 0.03 mm (0.0012 in)
+4	Subtract 0.04 mm (0.0016 in)
+5	Subtract 0.05 mm (0.0020 in)
+6	Subtract 0.06 mm (0.0024 in)

12. Select the correct pinion height adjusting washer. Refer to RFD-60, "Pinion Height Adjusting Washer" .
13. Remove the J-34309 differential shim selector tool from the final drive housing. Then disassemble to retrieve the pinion bearings.

ASSEMBLY

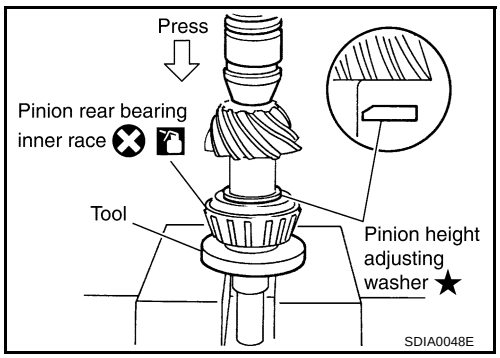


Drive Pinion Assembly

1. Install front and rear bearing outer races using drifts.

Tool number **A: ST30720000 (J-25405)**
B: KV40105230 (—)
C: ST30611000 (J-25742-1)
D: ST30613000 (J-25742-3)

CAUTION:
- **At first, using a hammer, tap bearing outer race until it becomes flat to gear carrier.**
- **Do not reuse pinion front and rear bearing outer race.**

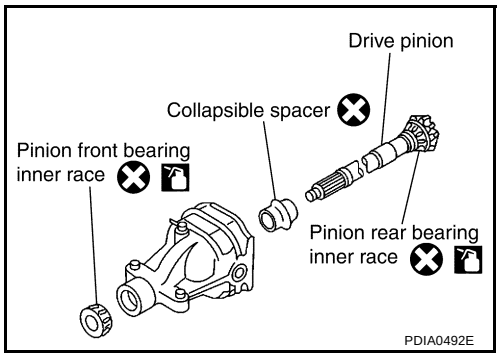


2. Select drive pinion height adjusting washer. Refer to RFD-60, "Pinion Height Adjusting Washer" .

3. Install selected drive pinion height adjusting washer to drive pinion. Press pinion rear bearing inner race to it, using drift.

   Tool number : ST30901000 (J-26010-01)

   CAUTION:
   - **Pay attention to the direction of pinion height adjusting washer. (Assemble as shown in the figure.)**
   - **Do not reuse pinion rear bearing inner race.**

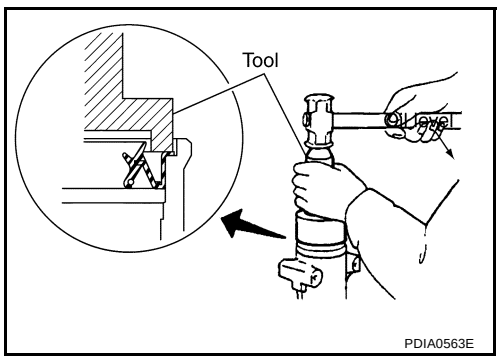


4. Assemble collapsible spacer to drive pinion.

   CAUTION:
   Do not reuse collapsible spacer.

5. Apply gear oil to pinion rear bearing, and assemble drive pinion into gear carrier.
6. Apply gear oil to pinion front bearing, and assemble pinion front bearing inner race to drive pinion assembly.

   CAUTION:
   Do not reuse pinion front bearing inner race.



7. Using suitable spacer, press the pinion front bearing inner race to drive pinion as far as drive pinion nut can be tightened.

8. Using the drift, install front oil seal as shown in the figure.

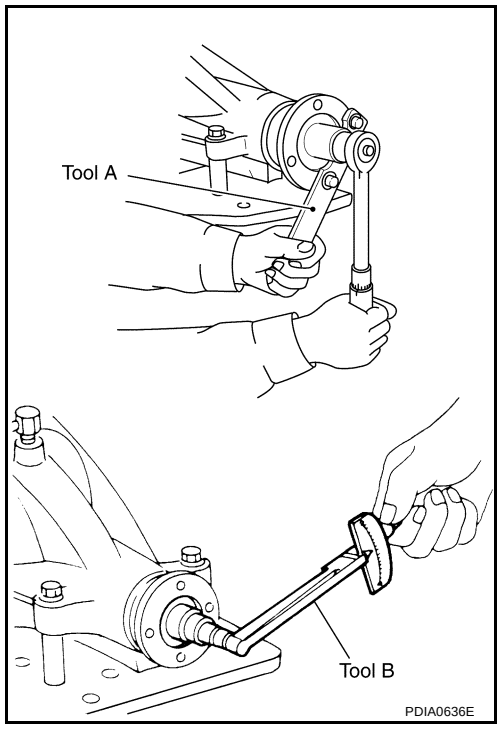
   Tool number : ST30720000 (J-25405)

   CAUTION:
   - **Do not reuse oil seal.**
   - **When installing, do not incline oil seal.**
   - **Apply multi-purpose grease onto oil seal lips, and gear oil onto the circumference of oil seal.**

9. Install companion flange.

   NOTE:
   When reusing drive pinion, align the matching mark of drive pinion with the matching mark A of companion flange, then install companion flange.

10. Apply anti-corrosion oil to the thread and seat of drive pinion lock nut, and temporarily tighten drive pinion lock nut to drive pinion.



CAUTION:
Do not reuse drive pinion lock nut.

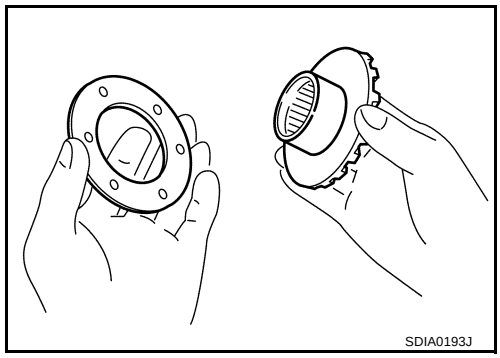
11. Adjust to the drive pinion lock nut tightening torque and pinion bearing preload torque.

Tool number **A: KV40104000 (—)**
B: ST3127S000 (J-25765-A)

Drive pinion lock nut tightening torque:
147 – 323 N·m (15 – 32 kg-m, 109 – 238 ft-lb)

Drive pinion bearing preload:
2.65 – 3.23 N·m (0.27 – 0.32 kg-m, 24 – 28 in-lb)

CAUTION:
- **Adjust to the lower limit of the drive pinion lock nut tightening torque first.**
- **If the preload torque exceeds the specified value, replace collapsible spacer and tighten it again to adjust. Do not loosen drive pinion lock nut to adjust the preload torque.**
- **After adjustment, rotate drive pinion back and forth 2 to 3 times to check for unusual noise, rotation malfunction, and other malfunctions.**

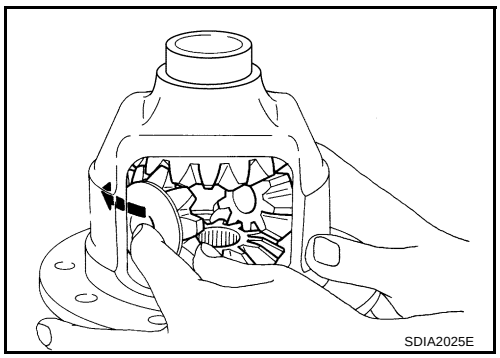


12. Install differential case assembly. Refer to RFD-35, "Differential Assembly" .

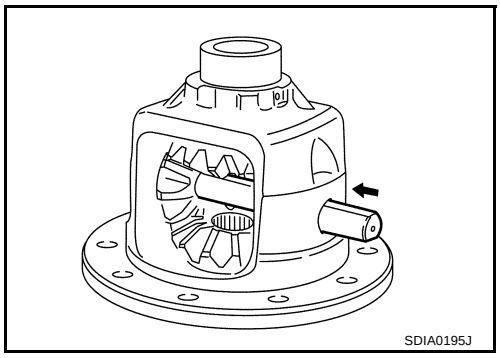
CAUTION:
Do not install rear cover yet.

13. Check and adjust drive gear runout, tooth contact, drive gear to drive pinion backlash, and companion flange runout. Refer to RFD-20, "Drive Gear Runout" , RFD-21, "Tooth Contact" , RFD-22, "Backlash" and RFD-23, "Companion Flange Runout" .
Recheck above items. Readjust the above description, if necessary.
14. Check total preload torque. Refer to RFD-20, "Total Preload Torque" .
15. Install rear cover. Refer to RFD-35, "Differential Assembly" .

Differential Assembly



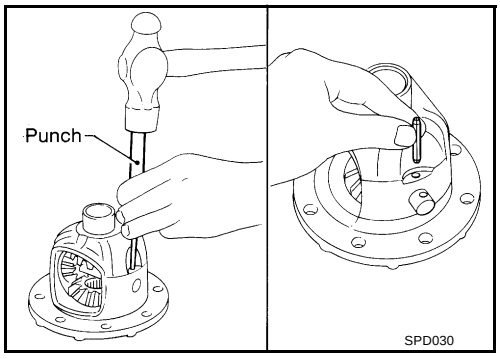
1. Install side gear thrust washers with the same thickness as the ones installed prior to disassembly or reinstall the old ones on the side gears.



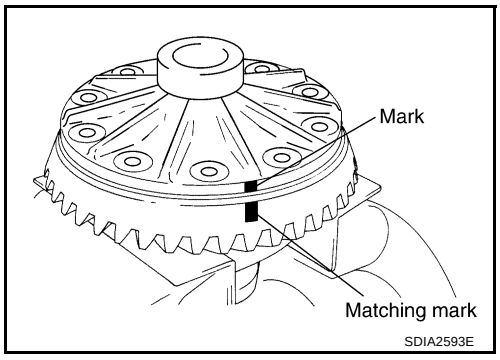
2. Install side gears and thrust washers into differential case.

CAUTION:
Make sure that the circular clip is installed to side gears.

3. Align 2 pinion mate gears in diagonally opposite positions, then rotate and install them into differential case after installing thrust washer to pinion mate gear.

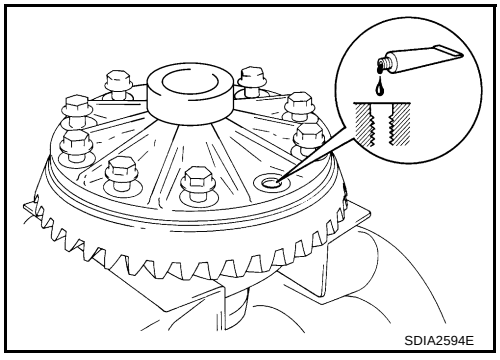


4. Align the lock pin holes on differential case with shaft, and install pinion mate shaft.
5. Measure side gear end play. If necessary, select the appropriate side gear thrust washers. Refer to RFD-59, "DIFFERENTIAL SIDE GEAR CLEARANCE" .



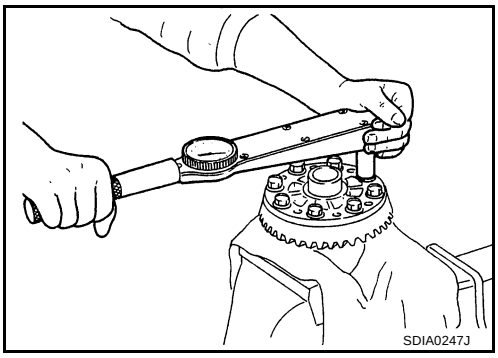
6. Drive a lock pin into pinion mate shaft, using a punch. Make sure lock pin is flush with differential case.

CAUTION:
Do not reuse lock pin.



7. Align the matching mark of differential case with the mark of drive gear, then place drive gear.

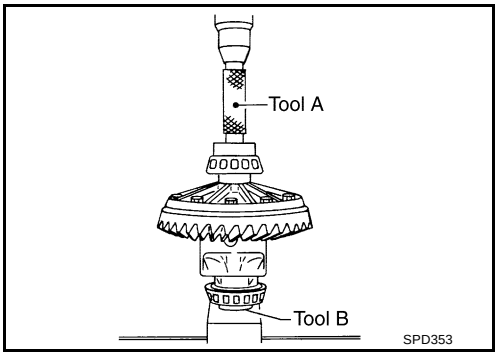
8. Apply thread locking sealant into the thread hole of drive gear.
   - **Use Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .**



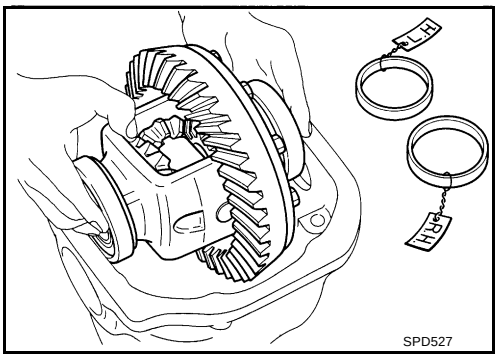
CAUTION:
Drive gear back and threaded holes shall be cleaned and degreased sufficiently.

9. Install drive gear on the mounting bolts, and then tighten to the specified torque. Refer to RFD-19, "COMPONENTS" .

CAUTION:

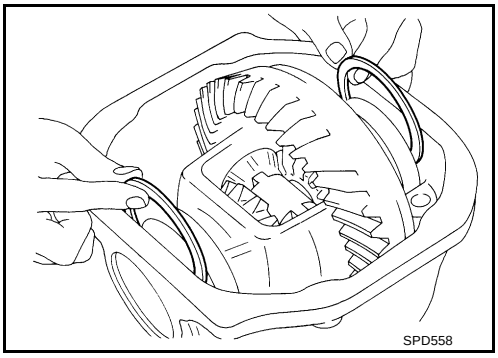


- **Tighten bolts in a crisscross fashion.**
- **After tightening the bolts to the specified torque, tighten the bolts additionally by turning the bolts 31 to 36 degrees.**

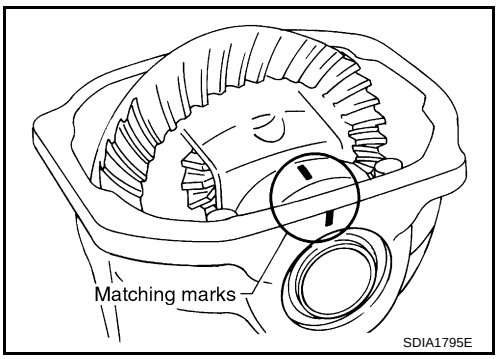


10. Press side bearing inner races to differential case, using the drift and the base.

Tool number **A: KV38100300 (J-25523)**
B: ST33061000 (J-8107-2)

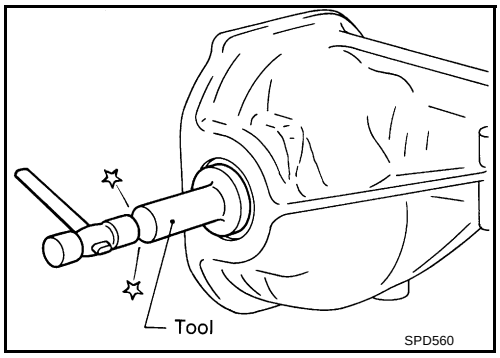


CAUTION:
Do not reuse side bearing inner race.



11. Install differential case assembly with side bearing outer races into gear carrier.
12. Measure side bearing preload. If necessary, select the appropriate side bearing adjusting washers. Refer to RFD-29, "Side Bearing Preload" .

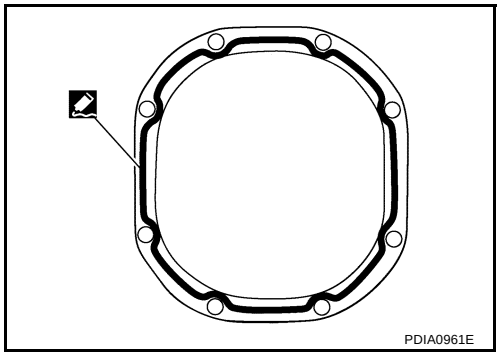
13. Insert selected left and right side bearing adjusting washers in place between side bearings and gear carrier.



14. Align matching marks on bearing cap with that on gear carrier.
15. Install bearing caps and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-19, "COMPONENTS" .

16. Using the drift, drive side oil seals until it becomes flush with the case end.

Tool number : KV38100200 (J-26233)



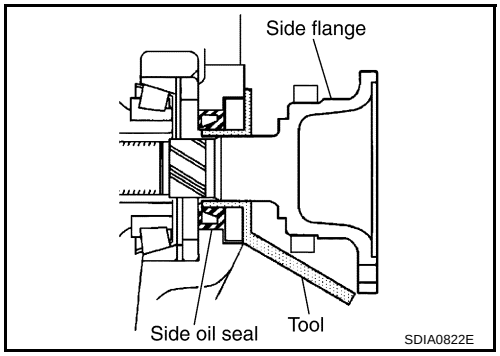
CAUTION:

- **Do not reuse oil seal.**
- **When installing, do not incline oil seal.**
- **Apply multi-purpose grease onto oil seal lips, and gear oil onto the circumference of oil seal.**

17. Check and adjust drive gear runout, tooth contact, drive gear to drive pinion backlash, and total preload torque. Refer to RFD-20, "Drive Gear Runout" , RFD-21, "Tooth Contact" , RFD-22, "Backlash" and RFD-20, "Total Preload Torque" .
Recheck above items. Readjust the above description, if necessary.

18. Apply sealant to mating surface of rear cover.

- **Use Genuine Silicone RTV or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .**



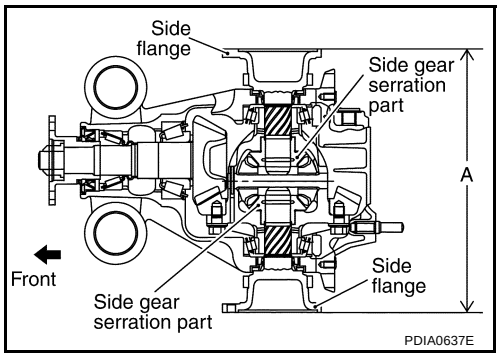
CAUTION:
Remove old sealant adhering to mounting surfaces. Also remove any moisture, oil, or foreign material adhering to application and mounting surfaces.

19. Install rear cover on gear carrier and tighten mounting bolts with the specified torque. Refer to RFD-19, "COMPONENTS" .

20. Install side flange with the following procedure.

a. Attach the protector to side oil seal.

Tool number : KV38107900 (J-39352)

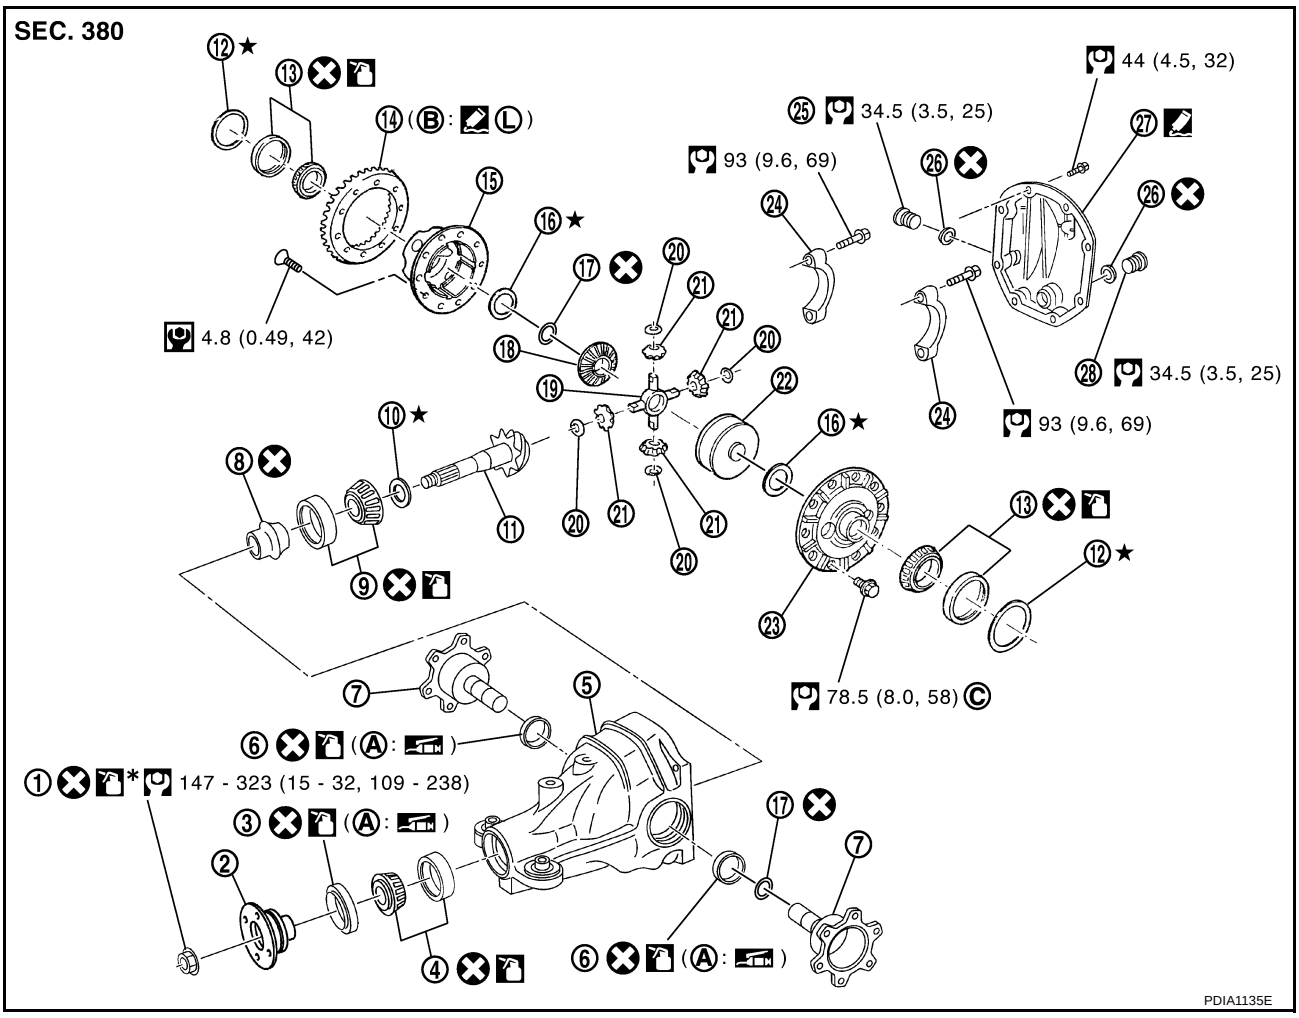


b. After the side flange is inserted and the serrated part of side gear has engaged the serrated part of flange, remove the protector.

c. Put a suitable drift on the center of side flange, then drive it until sound changes.

NOTE:
When installation is completed, driving sound of the side flange turns into a sound which seems to affect the whole final drive.

d. Confirm that the dimension of the side flange installation (Measurement A) in the figure comes into the following.



Measurement A: 326 – 328 mm (12.83 – 12.91 in)

Disassembly and Assembly (R200V LSD)

NDS0000K

COMPONENTS

1. Drive pinion lock nut
2. Companion flange
3. Front oil seal
4. Pinion front bearing
5. Gear carrier
6. Side oil seal
7. Side flange
8. Collapsible spacer
9. Pinion rear bearing
10. Pinion height adjusting washer
11. Drive pinion
12. Side bearing adjusting washer
13. Side bearing
14. Drive gear
15. Differential case B
16. Side gear thrust washer
17. Circular clip
18. Side gear
19. Pinion mate shaft
20. Pinion mate thrust washer
21. Pinion mate gear
22. Viscous coupling
23. Differential case A
24. Bearing cap
25. Filler plug
26. Gasket
27. Rear cover
28. Drain plug

A: Oil seal lip

B: Screw hole

C: After tightening the bolts to the specified torque, tighten the bolts additionally by turning the bolts 31 to 36 degrees.

Refer to GI-11, "Components" and the followings for the symbols in the figure.

: Apply gear oil.

*: Apply anti-corrosion oil.

: Apply Genuine Silicone RTV or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

L: Apply Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .

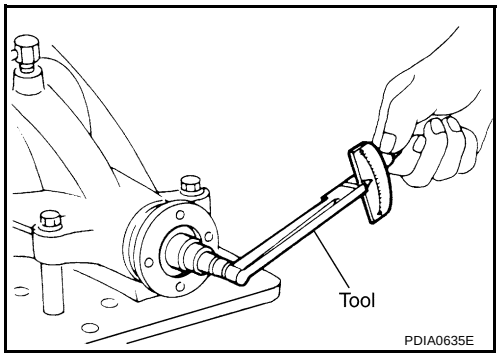
ASSEMBLY INSPECTION AND ADJUSTMENT

- Before inspection and adjustment, drain gear oil.

Total Preload Torque

1. Secure final drive assembly onto an attachment.

Tool number : KV38100800 (J-25604-01)



2. Remove side flanges.
3. Rotate drive pinion back and forth 2 to 3 times to check for unusual noise and rotation malfunction.
4. Rotate drive pinion at least 20 times to check for smooth operation of the bearing.
5. Measure total preload with the preload gauge.

Tool number : ST3127S000 (J-25765-A)

Total preload torque:

2.85 – 3.75 N·m (0.29 – 0.38 kg-m, 26 – 33 in-lb)

NOTE:
Total preload torque = Pinion bearing preload torque + Side bearing preload torque

- If measured value is out of the specification, disassemble it to check and adjust each part. Adjust the pinion bearing preload and side bearing preload. Adjust the pinion bearing preload first, then adjust the side bearing preload.

When the preload torque is large

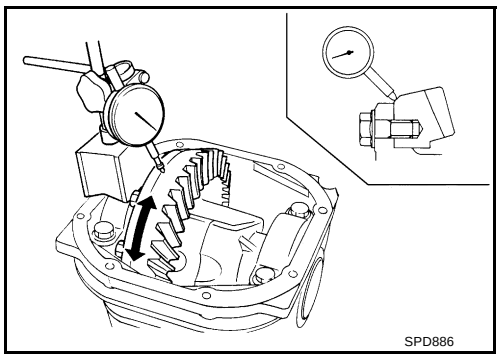
On pinion bearings: **Replace the collapsible spacer.**

On side bearings: **Use thinner side bearing adjusting washers by the same amount to each side. Refer to RFD-60, "Side Bearing Adjusting Washer" .**

When the preload is small

On pinion bearings: **Tighten the drive pinion lock nut.**

On side bearings: **Use thicker side bearing adjusting washers by the same amount to each side. Refer to RFD-60, "Side Bearing Adjusting Washer" .**

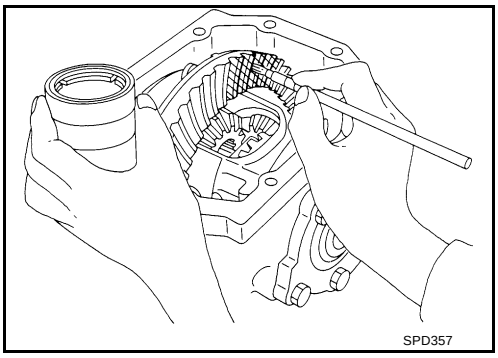


Drive Gear Runout

1. Remove rear cover. Refer to RFD-44, "Differential Assembly" .
2. Fit a dial indicator to the drive gear back face.
3. Rotate the drive gear to measure runout.

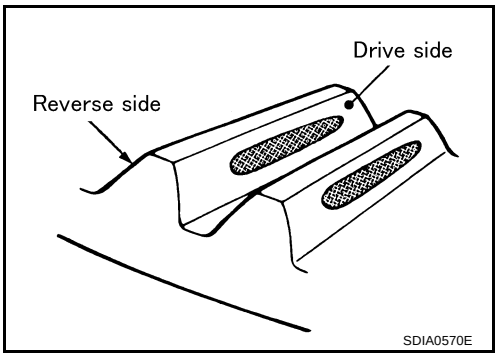
Runout limit: 0.05 mm (0.0020 in) or less

- If the runout is outside of the repair limit, check drive gear assembly condition; foreign material may be caught between drive gear and differential case, or differential case or drive gear may be deformed, etc.



CAUTION:
Replace drive gear and drive pinion gear as a set.

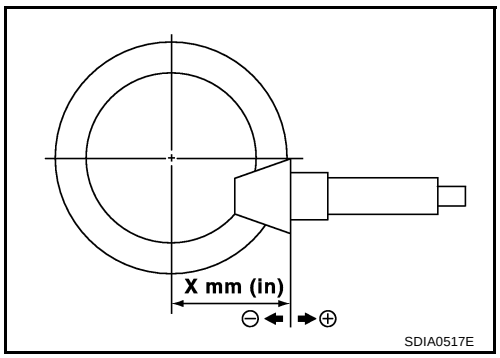
Tooth Contact



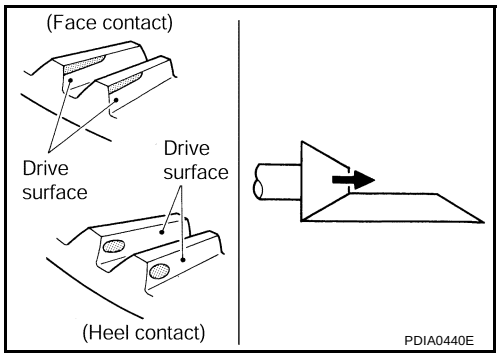
1. Remove rear cover. Refer to RFD-44, "Differential Assembly" .
2. Apply red lead to drive gear.

CAUTION:
Apply red lead to both the faces of 3 to 4 gears at 4 locations evenly spaced on drive gear.

3. Rotate drive gear back and forth several times, check drive pinion gear to drive gear tooth contact.

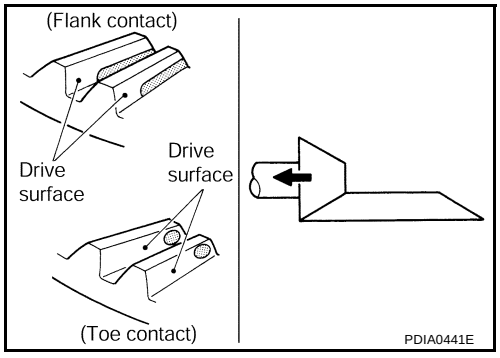


CAUTION:
Check tooth contact on drive side and reverse side.



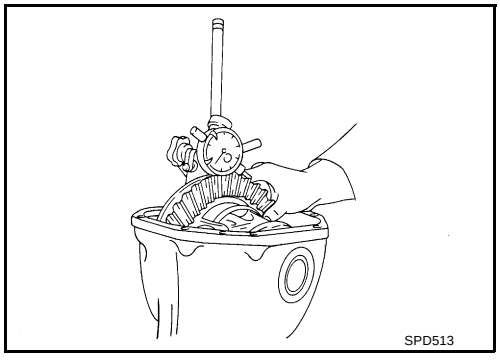
Tooth contact condition		Pinion height adjusting washer selection valve [mm (in)]		Adjustment (Yes/No)	Possible cause
Drive side	Back side				
Heel side Toe side	Toe side Heel side	Thicker ↑	+0.09 (+0.0035)	Yes	Occurrence of noise and scoring sound in all speed ranges.
			+0.06 (+0.0024)		Occurrence of noise when accelerating.
			+0.03 (+0.0012)	No	–
			0		
		Thinner ↓	-0.03 (-0.0012)		
			-0.06 (-0.0024)	Yes	Occurrence of noise at constant speed and decreasing speed.
			-0.09 (-0.0035)		Occurrence of noise and scoring sound in all speed ranges.

SDIA0207E



4. If tooth contact is improperly adjusted, follow the procedure below to adjust the pinion height (dimension X).

- If the tooth contact is near the face (face contact), or near the heel (heel contact), thicken pinion height adjusting washers to move drive pinion closer to drive gear.
  Refer to RFD-60, "Pinion Height Adjusting Washer" .



- If the tooth contact is near the flank (flank contact), or near the toe (toe contact), thin pinion height adjusting washers to move drive pinion farther from drive gear.
  Refer to RFD-60, "Pinion Height Adjusting Washer" .

Backlash

1. Remove rear cover. Refer to RFD-44, "Differential Assembly" .
2. Fit a dial indicator to the drive gear face to measure the backlash.

Backlash: 0.10 – 0.15 mm (0.0039 – 0.0059 in)

- If the backlash is outside of the specified value, change the thickness of side bearing adjusting washer.

When the backlash is large:

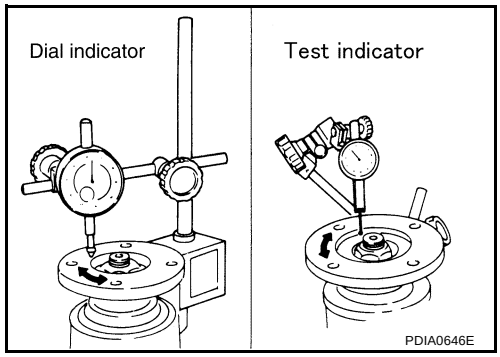
Make drive gear back side adjusting washer thicker, and drive gear tooth side adjusting washer thinner by the same amount. Refer to RFD-60, "Side Bearing Adjusting Washer" .

When the backlash is small:

Make drive gear back side adjusting washer thinner, and drive gear tooth side adjusting washer thicker by the same amount. Refer to RFD-60, "Side Bearing Adjusting Washer" .

CAUTION:

Do not change the total amount of washers as it will change the bearing preload.



Companion Flange Runout

1. Fit a dial indicator onto the companion flange face (inner side of the propeller shaft mounting bolt holes).
2. Rotate the companion flange to check for runout.

Runout limit : 0.08 mm (0.0031 in)

3. Fit a test indicator to the inner side of the companion flange (socket diameter).
4. Rotate the companion flange to check for runout.

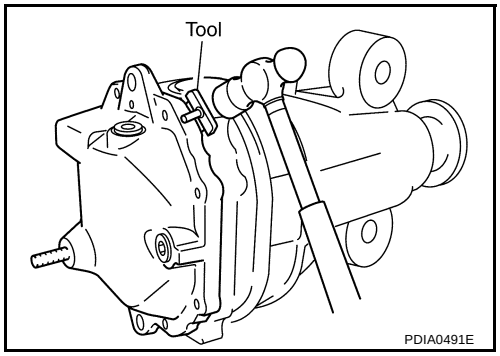
Runout limit : 0.08 mm (0.0031 in)

5. If the runout value is outside the repair limit, follow the procedure below to adjust.

a. Check for runout while changing the phase between companion flange and drive pinion gear by 90° step, and search for the position where the runout is the minimum.

b. If the runout value is still outside of the limit after the phase has been changed, possible cause will be an assembly malfunction of drive pinion and pinion bearing and malfunction of pinion bearing. Check for these items and repair if necessary.

c. If the runout value is still outside of the limit after the check and repair, replace companion flange.



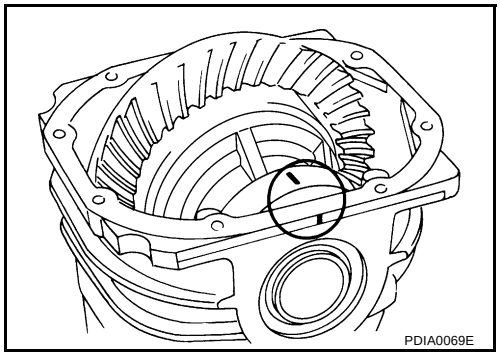
DISASSEMBLY

Differential Assembly

1. Drain gear oil, if necessary.
2. Remove side flange.
3. Remove rear cover mounting bolts.
4. Remove rear cover to insert the seal cutter between gear carrier and rear cover.

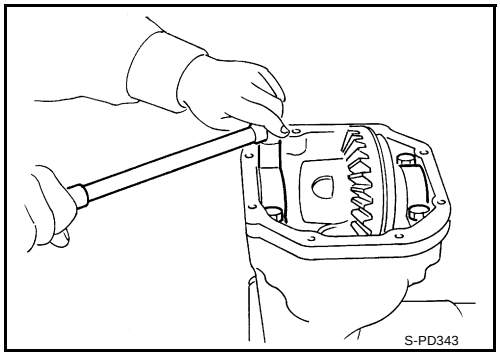
   Tool number : KV10111100 (J-37228)

   CAUTION:
   - **Be careful not to damage the mating surface.**
   - **Do not insert flat-bladed screwdriver, this way damage the mating surface.**



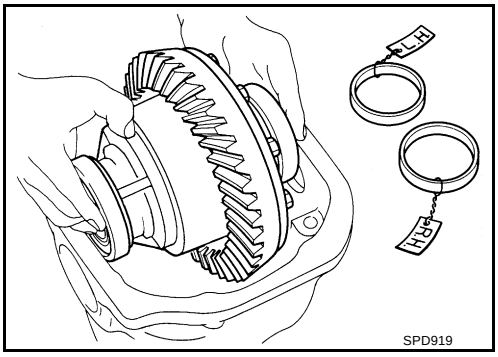
5. Using two 45 mm (1.77 in) spacers, mount carrier on the attachment.

   Tool number : KV38100800 (J-25604-01)



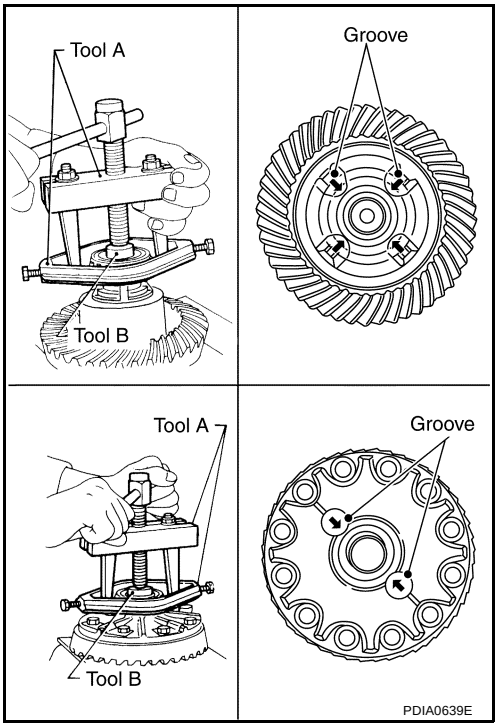
6. For proper reinstallation, paint matching marks on one side of the bearing cap.

   CAUTION:
   - **For matching marks, use paint. Do not damage bearing caps and gear carrier.**
   - **Bearing caps are line-board during manufacture. The matching marks are used to reinstall them in their original positions.**



7. Remove bearing caps.

8. Lift differential case assembly out with a suitable tool.

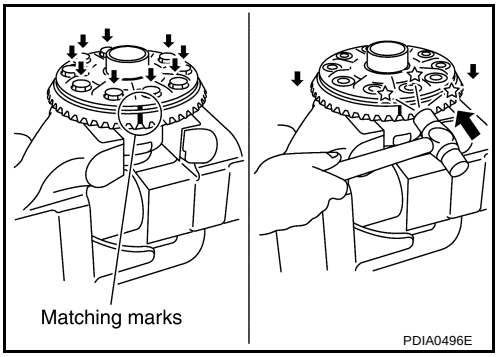


- Keep side bearing outer races together with inner race. Do not mix them up.
  Also, keep side bearing adjusting washers together with bearings.

9. Remove side bearing inner race.
   To prevent damage to bearing, engage puller jaws in groove.

   Tool number **A: ST33051001 (J-22888-20)**
   B: ST33061000 (J-8107-2)

   CAUTION:
   - **To prevent damage to the side bearing and drive gear, place copper plates between these parts and vise.**
   - **It is not necessary to remove side bearing inner race except it is replaced.**

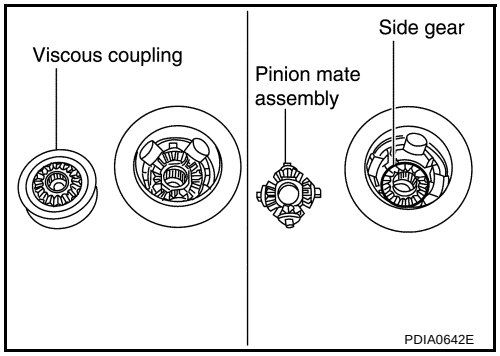


10. For proper reinstallation, paint matching marks on one differential case assembly.

    CAUTION:
    For matching marks, use paint. Do not damage differential case and drive gear.

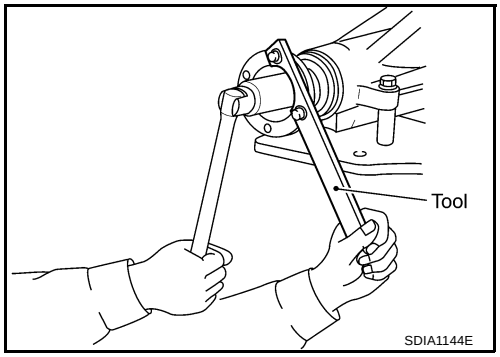
11. Remove drive gear mounting bolts.
12. Tap drive gear off differential case assembly with a soft hammer.

    CAUTION:
    Tap evenly all around to keep drive gear from bending.



13. Put matching marks with paint.

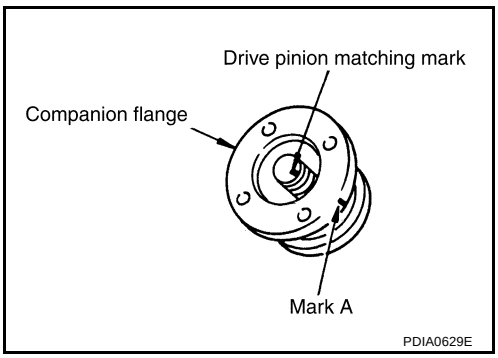
14. Loosen screws on differential cases A and B.



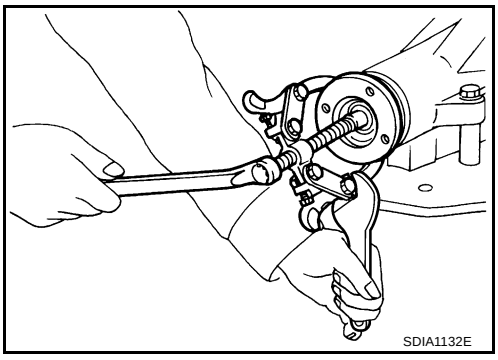
15. Separate differential case A and B, then remove viscous coupling, pinion mate gear, pinion mate thrust washer, side gear and side gear thrust washer from differential cases.

Drive Pinion Assembly

1. Remove differential assembly. Refer to RFD-44, "Differential Assembly" .
2. Remove drive pinion lock nut with the flange wrench.



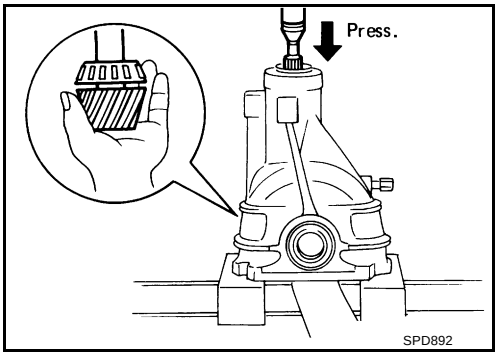
Tool number : KV40104000 (—)



3. Put matching mark on the end of drive pinion. The matching mark should be in line with the matching mark A on companion flange.

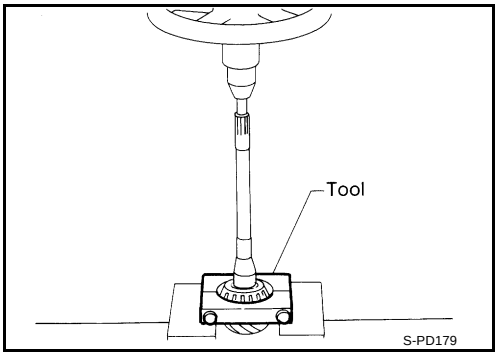
CAUTION:
For matching mark, use paint. Do not damage companion flange and drive pinion.

NOTE:
The matching mark A on the final drive companion flange indicates the maximum vertical runout position.
When replacing companion flange, matching mark is not necessary.



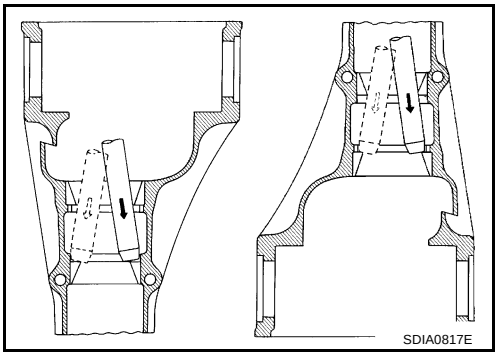
4. Remove companion flange using the suitable puller.

5. Press drive pinion assembly out of gear carrier.



CAUTION:
Do not drop drive pinion assembly.

6. Remove front oil seal.
7. Remove side oil seal.
8. Remove pinion front bearing inner race.
9. Remove collapsible spacer.



10. Remove pinion rear bearing inner race and drive pinion height adjusting washer with the replacer.

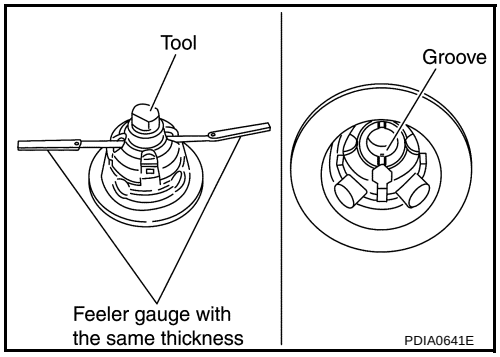
Tool number : ST30031000 (J-22912-01)

11. Tap pinion front/rear bearing outer races uniformly a brass rod or equivalent to removed.

CAUTION:
Be careful not to damage gear carrier.

INSPECTION AFTER DISASSEMBLY

Clean up the disassembled parts. Then, inspect if the parts are worn or damaged. If so, follow the measures below.



Content	Conditions and Measures
Hypoid gear	● If the gear teeth do not mesh or line-up correctly, determine the cause and adjust or replace as necessary. ● If the gears are worn, cracked, damaged, pitted or chipped (by friction) noticeably, replace with new drive gear and drive pinion as a set.
Bearing	● If any chipped (by friction), pitted, worn, rusted or scratched mark, or unusual noise from the bearing is observed, replace as a bearing assembly (as a new set).
Side gear and Pinion mate gear	● If any cracks or damage on the surface of the tooth is found, replace. ● If any worn or chipped mark on the contact sides of the thrust washer is found, replace.
Side gear thrust washer and pinion mate thrust washer	● If it is chipped (by friction), damaged, or unusually worn, replace.
Oil seal	● Whenever disassembled, replace. ● If wear, deterioration of adherence (sealing force lips), or damage is detected on the lips, replace them.
Differential case	● If any wear or crack on the contact sides of the differential case is found, replace.
Companion flange	● If any chipped mark (about 0.1 mm, 0.004 in) or other damage on the contact sides of the lips of the companion flange is found, replace.

ADJUSTMENT AND SELECTION OF ADJUSTING WASHERS

Differential Side Gear Clearance

- Assemble the differential parts if they are disassembled. Refer to RFD-44, "Differential Assembly" .

1. Place differential assembly so that right side gear is on the upper side.
2. Measure the clearance between right side gear back and differential case using feeler gauge, while rotating right side gear with a suitable tool attached to splines.

Side gear back clearance specification:

0.15 mm (0.0059 in) or less.
(Each gear should rotate smoothly without excessive resistance during differential motion.)

CAUTION:

- **Do not place feeler gauge at groove side of differential case.**
- **To prevent side gear from tilting, insert feeler gauges with the same thickness from both sides.**

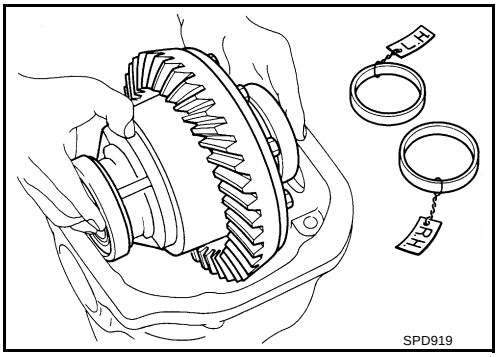
3. If the back clearance is outside the specification, use a thicker/thinner side gear thrust washer to adjust. Refer to RFD-60, "Side Gear Thrust Washer" .

When the back clearance is large:

Use a thicker thrust washer.

When the back clearance is small:

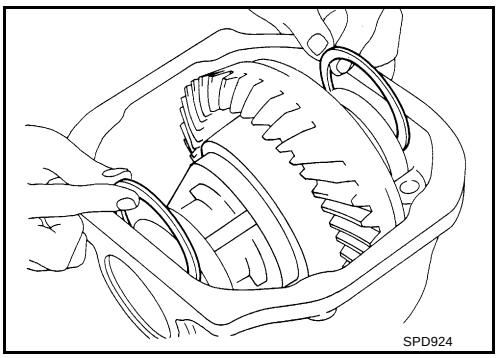
Use a thinner thrust washer.



CAUTION:

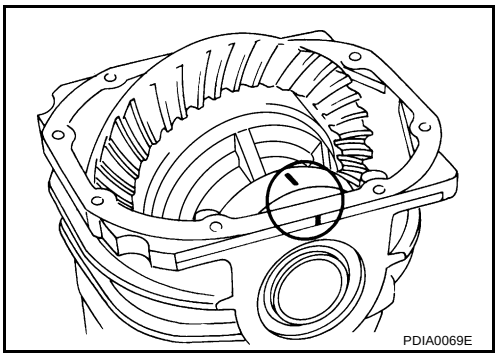
- **Adjust the clearance with the left side gear thrust washer only.**
- **Only one side gear thrust washer can be selected.**

Side Bearing Preload



- Selecting carrier side bearing adjusting washers is required for successful completion of this procedure.

1. Make sure all parts are clean. Also, make sure the bearings are well lubricated with gear oil.
2. Place the differential case, with side bearings and bearing races installed, into gear carrier.

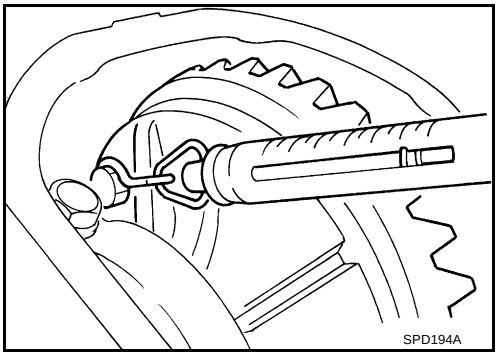


SPD919

3. Insert left and right original side bearing adjusting washers in place between side bearings and gear carrier.

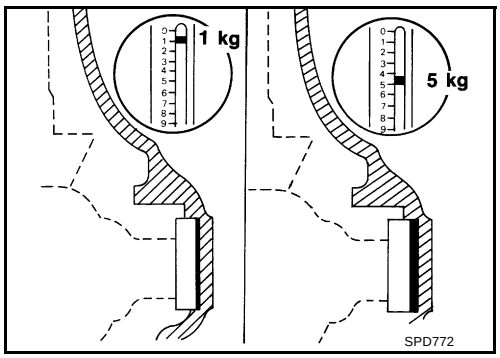
SPD924

4. Install bearing caps in their correct locations and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-55, "Differential Assembly" .
5. Turn the carrier several times to seat the bearings.



PDIA0069E

6. Measure the turning torque of the carrier at the drive gear mounting bolts with a spring gauge.



Tool number : — (J-8129)

Specification:

34.2 – 39.2 N (3.5 – 4.0 kg, 7.7 – 8.8 lb) of pulling force at the drive gear bolt

SPD194A

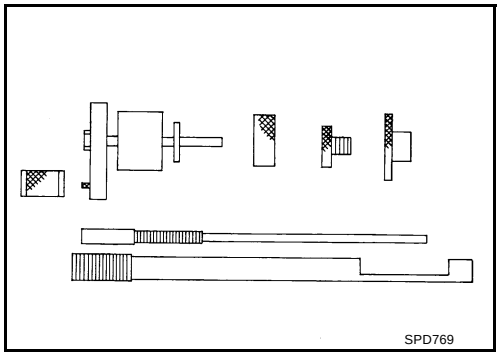
7. If the turning torque is outside the specification, use a thicker/ thinner side bearing adjusting washer to adjust. Refer to RFD-60, "Side Bearing Adjusting Washer" .

If the turning torque is less than the specified range:

Use a thicker thrust washer.

If the turning torque is greater than the specification:

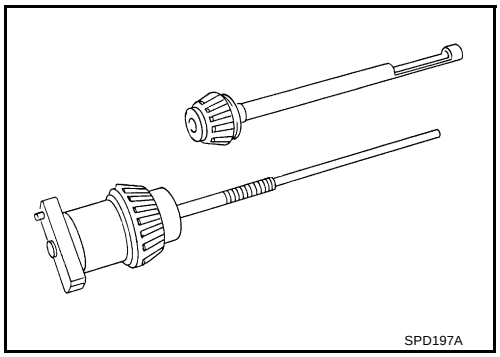
Use a thinner thrust washer.



CAUTION:

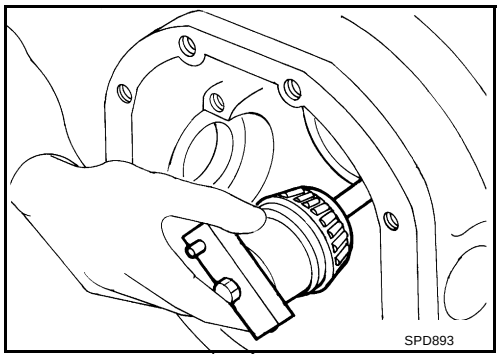
Select a side bearing adjusting washer for right and left individually.

8. Record the total amount of washer thickness required for the correct carrier side bearing preload.

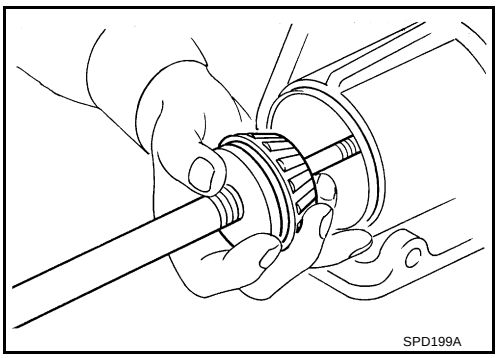


Pinion Gear Height

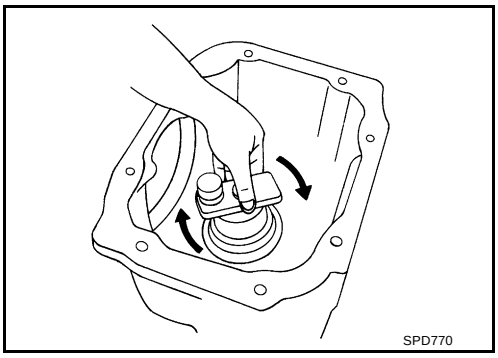
1. Make sure all parts are clean and that the bearings are well lubricated.
2. Assemble the pinion gear bearings into the differential shim selector tool.



Tool number : — (J-34309)



- **Pinion front bearing;** make sure the J-34309-3 pinion front bearing seat is secured tightly against the J-34309-2 gauge anvil. Then turn the pinion front bearing pilot, J-34309-5, to secure the bearing in its proper position.
- **Pinion rear bearing;** the pinion rear bearing pilot, J-34309-8, is used to center the pinion rear bearing only. The pinion rear bearing locking seat, J-34309-4, is used to lock the bearing to the assembly.
- **Installation of J-34309-9 and J-34309-16;** place a suitable 2.5 mm (0.098 in) thick plain washer between J-34309-9 and J-34309-16. Both surfaces of J-34309-9 and J-34309-16 must be parallel with a clearance of 2.5 mm (0.098 in).

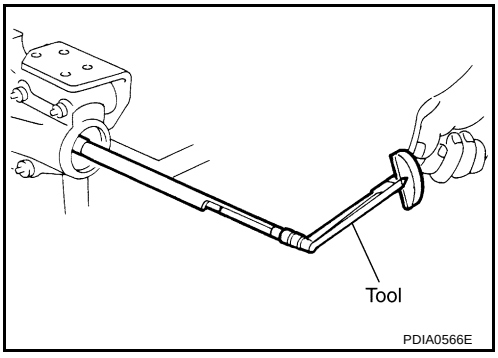


3. Install the pinion rear bearing inner race into gear carrier. Then place the pinion preload shim selector tool, J-34309-1, gauge screw assembly.

4. Assemble the pinion front bearing inner race and the J-34309-2 gauge anvil. Assemble them together with the J-34309-1 gauge screw in gear carrier. Make sure that the pinion height gauge plate, J-34309-16, will turn a full 360 degrees. Tighten the two sections together by hand.

SPD199A

5. Turn the assembly several times to seat the bearings.



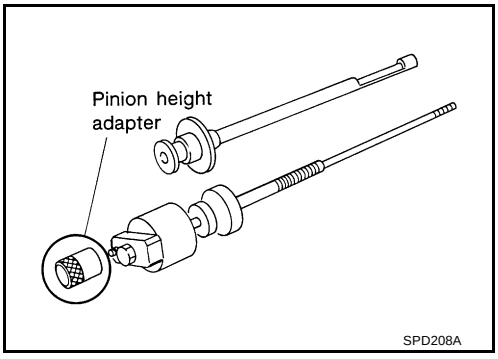
SPD770

6. Measure the turning torque at the end of the J-34309-2 gauge anvil using preload gauge.

Tool number : ST3127S000 (J-25765- A)

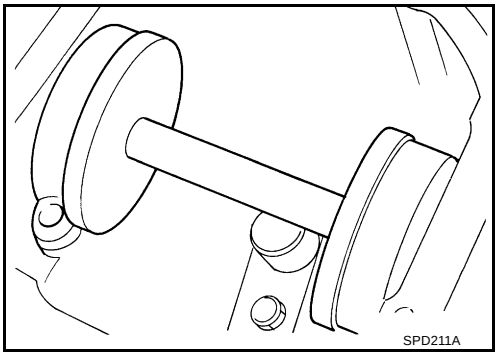
Turning torque specification:

1.0 – 1.3 N·m (0.11 – 0.13 kg-m, 9 – 11 in-lb)



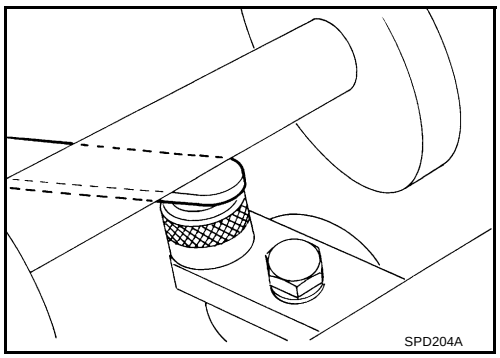
PDIA0566E

7. Place the J-34309-11 “R200A” pinion height adapter onto the gauge plate and tighten it by hand.

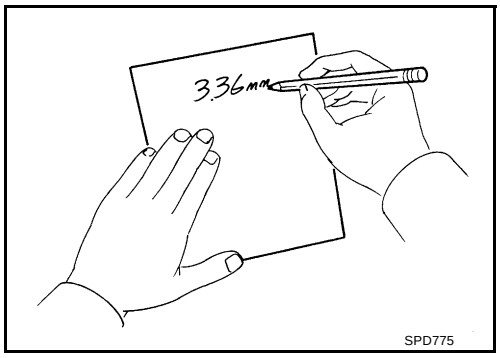


CAUTION:

Make sure all machined surfaces are clean.

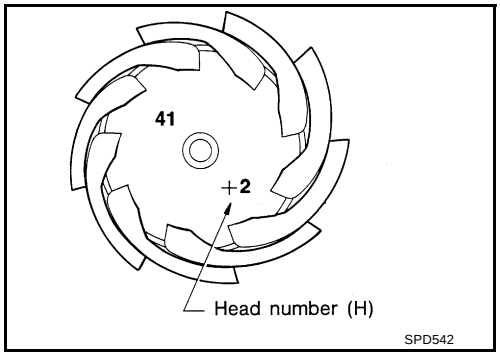


SPD208A



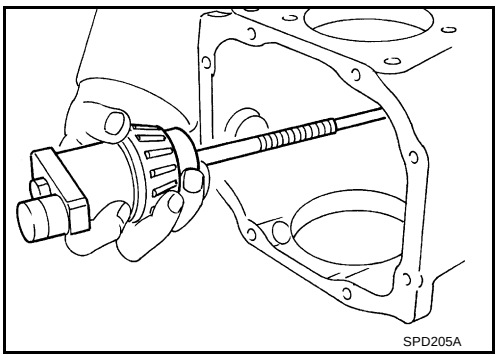
8. Position the side bearing discs, J-25269-4, and arbor firmly into the side bearing bores. Install the bearing caps and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-39, "COMPONENTS" .

SPD211A



9. Select the correct standard pinion height adjusting washer thickness. Select by using a standard gauge of 3 mm (0.12 in) and your J-34309-101 feeler gauge. Measure the distance between the J-34309-11 pinion height adapter including the standard gauge and the arbor.

10. Write down exact measurement (the value of feeler gauge).



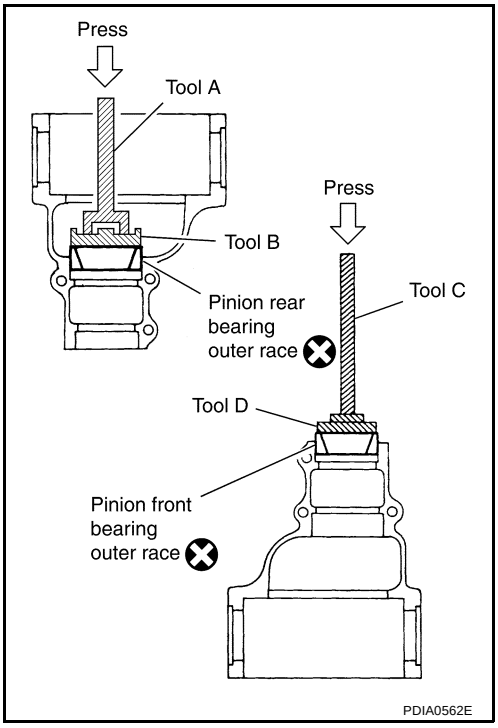
11. Correct the pinion height washer size by referring to the “pinion head number”.
There are two numbers painted on the drive pinion. The first one refers to the drive pinion and drive gear as a matched set. This number should be the same as the number on the drive gear. The second number is the “pinion head height number”. It refers to the ideal pinion height from standard for quietest operation. Use the following chart to determine the correct pinion height washer.

Pinion head height number	Add or remove from the standard pinion height adjusting washer thickness measurement
- 6	Add 0.06 mm (0.0024 in)
- 5	Add 0.05 mm (0.0020 in)
- 4	Add 0.04 mm (0.0016 in)
- 3	Add 0.03 mm (0.0012 in)
- 2	Add 0.02 mm (0.0008 in)
- 1	Add 0.01 mm (0.0004 in)
0	Use the selected washer thickness
+1	Subtract 0.01 mm (0.0004 in)
+2	Subtract 0.02 mm (0.0008 in)
+3	Subtract 0.03 mm (0.0012 in)
+4	Subtract 0.04 mm (0.0016 in)
+5	Subtract 0.05 mm (0.0020 in)
+6	Subtract 0.06 mm (0.0024 in)

12. Select the correct pinion height adjusting washer. Refer to RFD-60, "Pinion Height Adjusting Washer" .

13. Remove the J-34309 differential shim selector tool from the final drive housing. Then disassemble to retrieve the pinion bearings.

ASSEMBLY

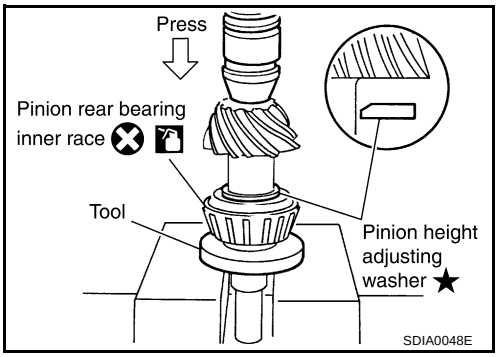


Drive Pinion Assembly

1. Install front and rear bearing outer races using drifts.

Tool number **A: ST30720000 (J-25405)**
B: KV40105230 (—)
C: ST30611000 (J-25742-1)
D: ST30613000 (J-25742-3)

CAUTION:
- **At first, using a hammer, tap bearing outer race until it becomes flat to gear carrier.**
- **Do not reuse pinion front and rear bearing outer race.**

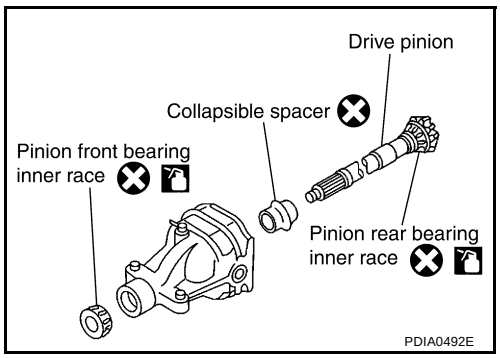


2. Select drive pinion height adjusting washer. Refer to RFD-50, "Pinion Gear Height" .

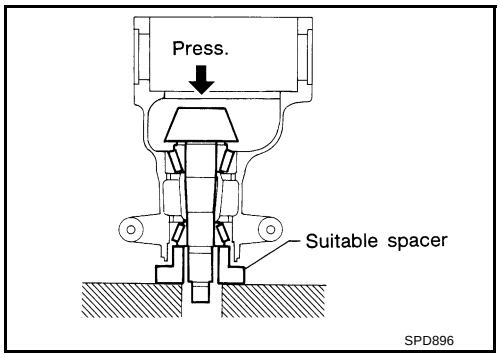
3. Install selected drive pinion height adjusting washer to drive pinion. Press pinion rear bearing inner race to it, using drift.

Tool number **: ST30901000 (J-26010-01)**

CAUTION:
- **Pay attention to the direction of pinion height adjusting washer. (Assemble as shown in the figure.)**
- **Do not reuse pinion rear bearing inner race.**



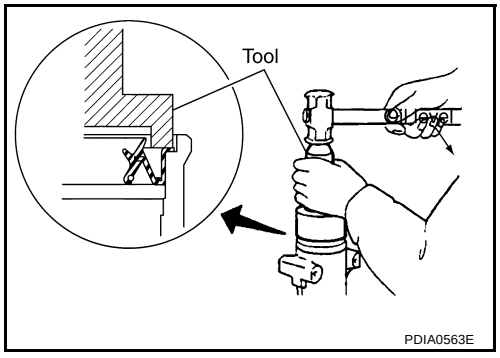
4. Assemble collapsible spacer to drive pinion.



CAUTION:
Do not reuse collapsible spacer.

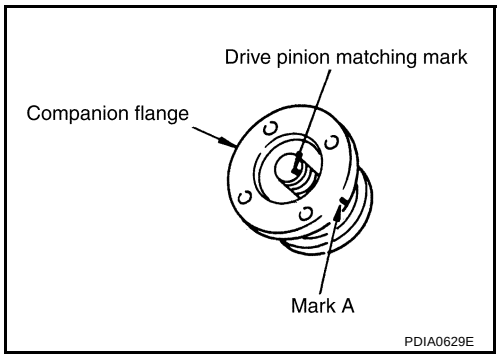
5. Apply gear oil to pinion rear bearing, and assemble drive pinion into gear carrier.
6. Apply gear oil to pinion front bearing, and assemble pinion front bearing inner race to drive pinion assembly.

CAUTION:
Do not reuse pinion front bearing inner race.



7. Using suitable spacer, press the pinion front bearing inner race to drive pinion as far as drive pinion nut can be tightened.

8. Using the drift, install front oil seal as shown in the figure.



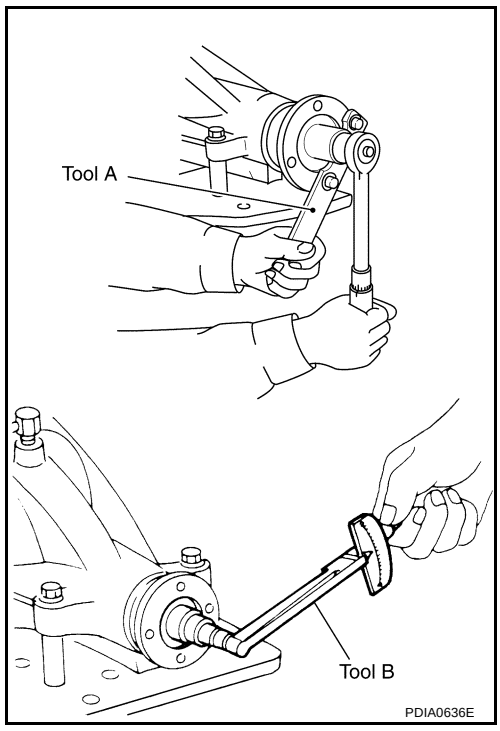
Tool number : ST30720000 (J-25405)

CAUTION:
- **Do not reuse oil seal.**
- **When installing, do not incline oil seal.**
- **Apply multi-purpose grease onto oil seal lips, and gear oil onto the circumference of oil seal.**

9. Install companion flange.

NOTE:
When reusing drive pinion, align the matching mark of drive pinion with the matching mark A of companion flange, then install companion flange.

10. Apply anti-corrosion oil to the thread and seat of drive pinion lock nut, and temporarily tighten drive pinion lock nut to drive pinion.



CAUTION:
Do not reuse drive pinion lock nut.

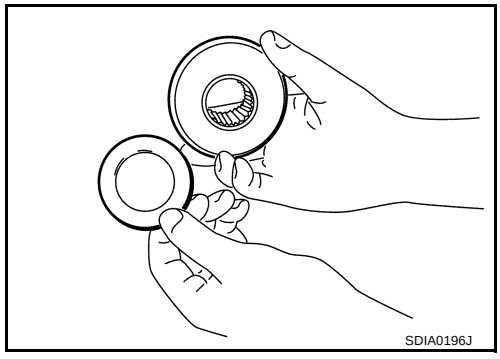
11. Adjust to the drive pinion lock nut tightening torque and pinion bearing preload torque.

Tool number **A: KV40104000 (—)**
B: ST3127S000 (J-25765-A)

Drive pinion lock nut tightening torque:
147 – 323 N·m (15 – 32 kg-m, 109 – 238 ft-lb)

Drive pinion bearing preload:
2.65 – 3.23 N·m (0.27 – 0.32 kg-m, 24 – 28 in-lb)

CAUTION:
- **Adjust to the lower limit of the drive pinion lock nut tightening torque first.**
- **If the preload torque exceeds the specified value, replace collapsible spacer and tighten it again to adjust. Do not loosen drive pinion lock nut to adjust the preload torque.**
- **After adjustment, rotate drive pinion back and forth 2 to 3 times to check for unusual noise, rotation malfunction, and other malfunctions.**



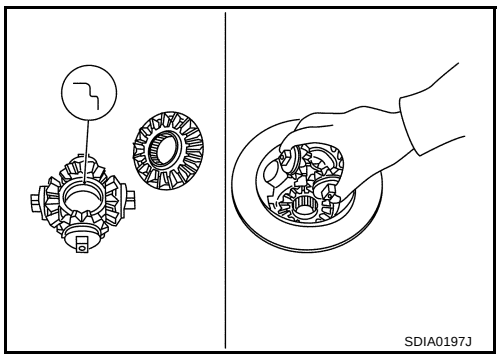
12. Install differential case assembly. Refer to RFD-44, "Differential Assembly" .

CAUTION:
Do not install rear cover yet.

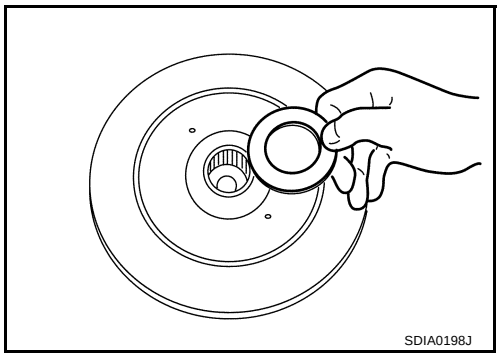
13. Check and adjust drive gear runout, tooth contact, drive gear to drive pinion backlash, and companion flange runout. Refer to RFD-40, "Drive Gear Runout" , RFD-41, "Tooth Contact" , RFD-42, "Backlash" and RFD-43, "Companion Flange Runout" .
Recheck above items. Readjust the above description, if necessary.
14. Check total preload torque. Refer to RFD-40, "Total Preload Torque" .
15. Install rear cover. Refer toRFD-44, "Differential Assembly" .

Differential Assembly

1. Install side gear thrust washer with the same thickness as the ones installed prior to disassembly or reinstall the old ones on the side gear.

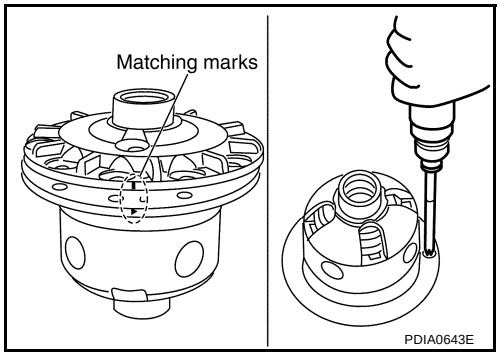


2. Install side gear and thrust washer into differential case B.



CAUTION:
Make sure that the circular clip is installed to side gear.

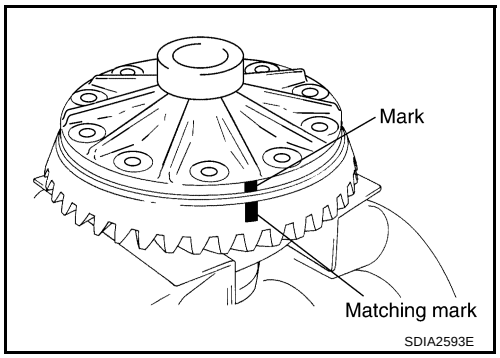
3. Install pinion mate assembly (pinion mate shaft, pinion mate gears and pinion mate thrust washers) into differential case B.



CAUTION:
The pinion mate shaft groove side shall be installed to side gear.

SDIA0197J

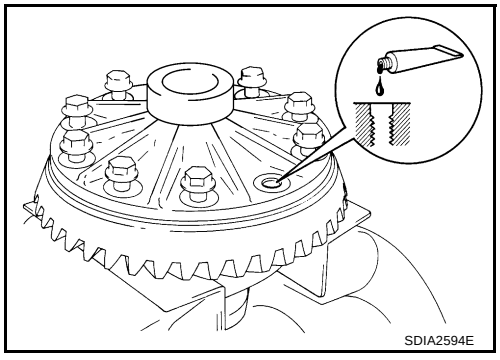
4. Install viscous coupling into differential case B.
5. Install side gear thrust washer with the same thickness as the ones installed prior to disassembly or reinstall the old ones on the viscous coupling.



SDIA0198J

6. Align the matching marks and install differential case A into differential case B.
7. Measure side gear end play. If necessary, select the appropriate side gear thrust washer. Refer to RFD-48, "Differential Side Gear Clearance" .

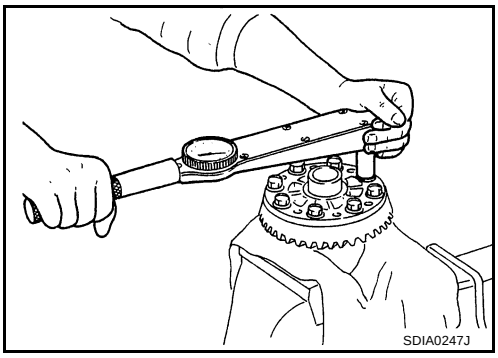
PDIA0643E



8. Align the matching mark of differential case with the mark of drive gear, then place drive gear.

SDIA2593E

9. Apply thread locking sealant into the thread hole of drive gear.
   - **Use Genuine High Strength Thread Locking Sealant or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .**

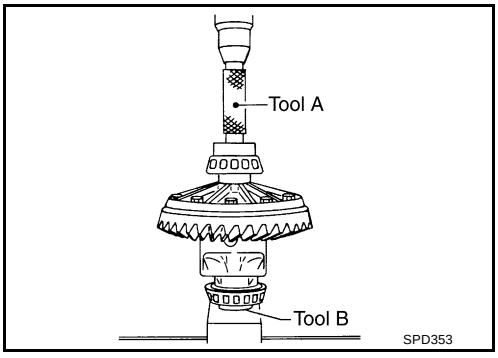


CAUTION:
Drive gear back and threaded holes shall be cleaned and degreased sufficiently.

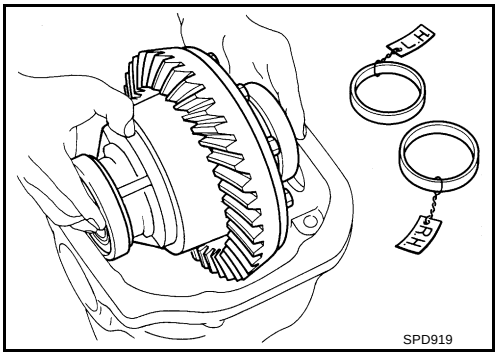
SDIA2594E

10. Install drive gear on the mounting bolts, and then tighten to the specified torque. Refer to RFD-39, "COMPONENTS" .

CAUTION:

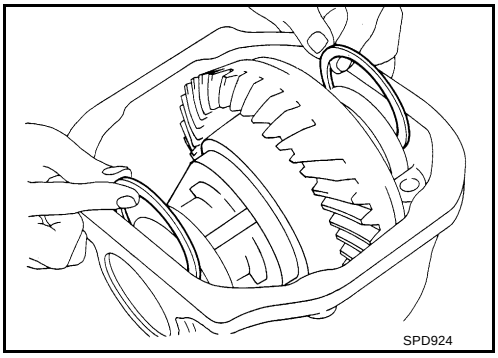


- **Tighten bolts in a crisscross fashion.**
- **After tightening the bolts to the specified torque, tighten the bolts additionally by turning the bolts 31 to 36 degrees.**

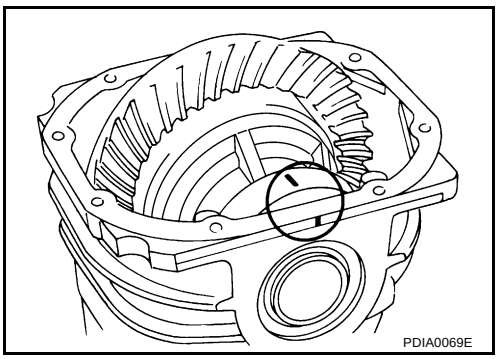


11. Press side bearing inner races to differential case, using the drift and the base.

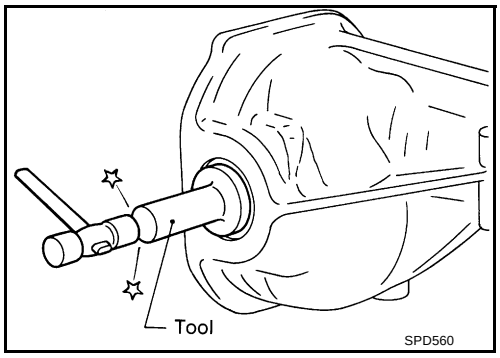
Tool number **A: KV38100300 (J-25523)**
B: ST33061000 (J-8107-2)



CAUTION:
Do not reuse side bearing inner race.



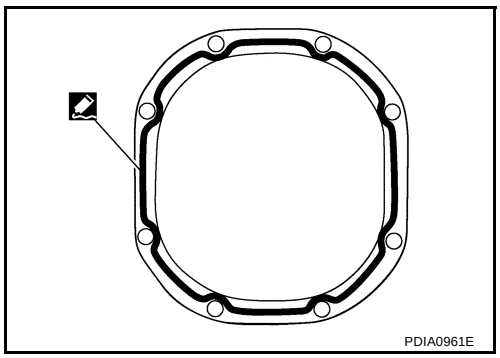
12. Install differential case assembly with side bearing outer races into gear carrier.
13. Measure side bearing preload. If necessary, select the appropriate side bearing adjusting washers. Refer to RFD-49, "Side Bearing Preload" .



14. Insert selected left and right side bearing adjusting washers in place between side bearings and gear carrier.

15. Align matching marks on bearing cap with that on gear carrier.
16. Install bearing caps and tighten bearing cap mounting bolts to the specified torque. Refer to RFD-39, "COMPONENTS" .

17. Using the drift, drive side oil seals until it becomes flush with the case end.



Tool number : KV38100200 (J-26233)

CAUTION:

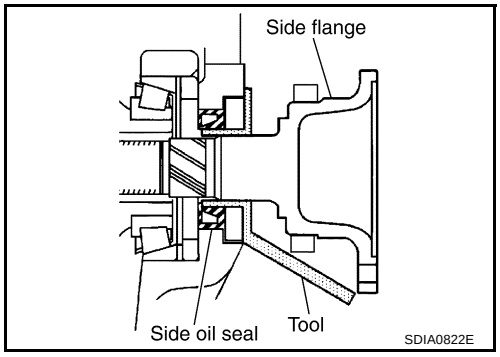
- **Do not reuse oil seal.**
- **When installing, do not incline oil seal.**
- **Apply multi-purpose grease onto oil seal lips, and gear oil onto the circumference of oil seal.**

18. Check and adjust drive gear runout, tooth contact, drive gear to drive pinion backlash, and total preload torque. Refer to RFD-40, "Drive Gear Runout" , RFD-41, "Tooth Contact" , RFD-42, "Backlash" and RFD-40, "Total Preload Torque" .
Recheck above items. Readjust the above description, if necessary.

19. Apply sealant to mating surface of rear cover.

- **Use Genuine Silicone RTV or equivalent. Refer to GI-45, "Recommended Chemical Products and Sealants" .**

CAUTION:



Remove old sealant adhering to mounting surfaces. Also remove any moisture, oil, or foreign material adhering to application and mounting surfaces.

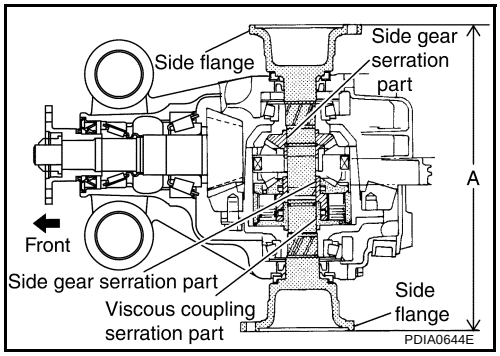
20. Install rear cover on gear carrier and tighten mounting bolts with the specified torque. Refer to RFD-39, "COMPONENTS" .
21. Install side flange with the following procedure.

NOTE:

Install the RH side flange, then install the LH side flange. If LH side flange is installed first, the RH side flange comes out sometimes from the shock of installing the RH side flange.

a. Attach the protector to side oil seal.

Tool number : KV38107900 (J-39352)



b. After the side flange is inserted and the serrated part of side gear has engaged the serrated part of flange, remove the protector.

c. Put a suitable drift on the center of side flange, then drive it until sound changes.

NOTE:

When installation is completed, driving sound of the side flange turns into a sound which seems to affect the whole final drive.

d. Confirm that the dimension of the side flange installation (Measurement A) in the figure comes into the following.

Measurement A: 326 – 328 mm (12.83 – 12.91 in)

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

General Specifications

NDS0000L

Applied model	VQ35DE	
	M/T	A/T
Final drive model	R200	R200V (With LSD)
Gear ratio	3.538	3.357
Number of teeth (Drive gear/Drive pinion)	46/13	47/14
Oil capacity (Approx.) ℓ (US pt, Imp pt)	1.4 (3, 2-1/2)	
Number of pinion gears	2	4
Drive pinion adjustment spacer type	Collapsible	

Inspection and Adjustment

NDS0000M

DRIVE GEAR RUNOUT

Item	Runout limit
Drive gear back face	0.05 mm (0.0020 in) or less

DIFFERENTIAL SIDE GEAR CLEARANCE

Item	Specification	
	R200	R200V (With LSD)
Side gear backlash (Clearance between side gear and differential case)	0.2 mm (0.008 in) or less (Each gear should rotate smoothly without excessive resistance during differential motion.)	0.15 mm (0.0059 in) or less (Each gear should rotate smoothly without excessive resistance during differential motion.)

PRELOAD TORQUE

Item	Specification
Pinion bearing (P_1)	2.65 – 3.23 N·m (0.27 – 0.32 kg-m, 24 – 28 in-lb)
Side bearing (P_2)	0.20 – 0.52 N·m(0.02 – 0.05 kg-m, 2 – 4 in-lb)
Side bearing to pinion bearing (Total preload) (Total preload = P_1 + P_2)	2.85 – 3.75 N·m(0.29 – 0.38 kg-m, 26 – 33 in-lb)

BACKLASH

Item	Specification
Drive gear to drive pinion gear	0.10 – 0.15 mm (0.0039 – 0.0059 in)

COMPANION FLANGE RUNOUT

Item	Runout limit
Companion flange face	0.08 mm (0.0031 in) or less
Inner side of the companion flange	0.08 mm (0.0031 in) or less

SERVICE DATA AND SPECIFICATIONS (SDS) 18
Wheel Alignment (Unladen*) 18
Ball Joint 18
Wheelarch Height (Unladen*) 18

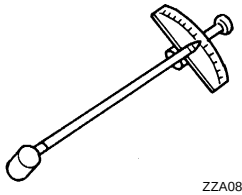
PRECAUTIONS

PFP:00001

Cautions

NES0000K

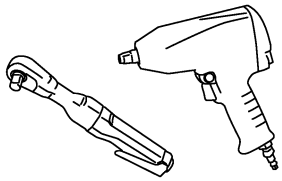
- When installing rubber bushings, final tightening must be carried out under unladen conditions with tires on ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- Unladen conditions mean that fuel, engine coolant and lubricant are full. Spare tire, jack, hand tools and mats are in designated positions.
- After servicing suspension parts, be sure to check wheel alignment.
- Caulking nuts are not reusable. Always use new ones when installing. Since new caulking nuts are pre-oiled, tighten as they are.



PREPARATION

PFP:00002

Special Service Tools



NES0000L

The actual shapes of Kent-Moore tools may differ from those of special service tools illustrated here.

Tool number (Kent-Moore No.) Tool name	Description
ST3127S000 (J-25765-A) Preload gauge  ZZA0806D	Measuring rotating torque of ball joint

Commercial Service Tools

NES0000M

Tool name	Description
Power tool  PBIC0190E	Loosening bolts and nuts

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

NES0000N

Use chart below to help you find the cause of the symptom. If necessary, repair or replace these parts.

Reference page			RSU-7	RSU-9	—	—	—	RSU-7	RSU-5	RSU-16	NVH in PR section.	NVH in RFD section.	NVH in RAX and RSU sections.	NVH in WT section.	NVH in WT section.	NVH in RAX section.	NVH in BR section.	NVH in PS section.

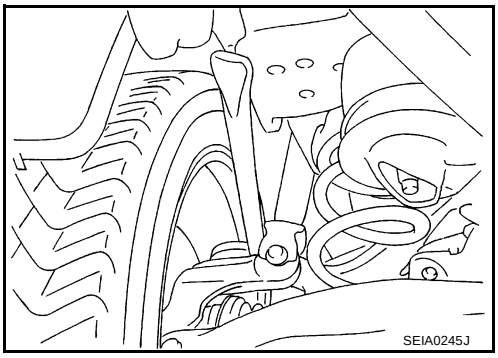
REAR SUSPENSION ASSEMBLY

PFP:55020

On-Vehicle Inspection

NES0000O



Make sure the mounting conditions (looseness, back lash) of each component and component status (wear, damage) are normal.

INSPECTION OF SUSPENSION ARM BALL JOINT END PLAY

- Measure axial end play by installing and moving up/down with an iron pry bar or something similar between suspension arm and axle.

  Axial end play : 0 mm (0 in)

  CAUTION:
  Be careful not to damage ball joint boot.

SEIA0245J

SHOCK ABSORBER INSPECTION

- Check shock absorber for oil leakage, damage and replace if necessary.

Wheel Alignment Inspection

NES0000P

DESCRIPTION

- Measure wheel alignment under unladen conditions. “Unladen conditions” means that fuel, engine coolant, and lubricant are full. Spare tire, jack, hand tools and mats in designated positions.

PRELIMINARY INSPECTION

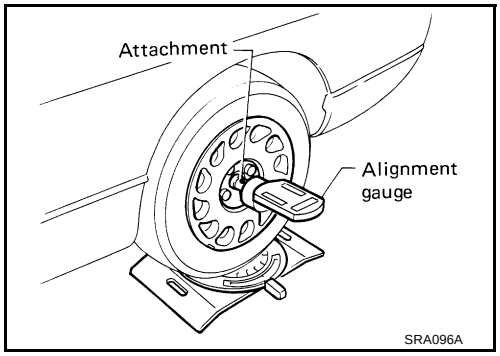
- Check tires for improper air pressure and wear.
- Check road wheels for runout.
- Check wheel bearing axial end play.
- Check ball joint axial end play of suspension arm.
- Check shock absorber operation.
- Check each mounting point of axle and suspension for looseness and deformation.
- Check each link, arm and member for cracks, deformation, and other damage.
- Check vehicle posture.

GENERAL INFORMATION AND RECOMMENDATIONS

- A four-wheel thrust alignment should be performed.
  - This type of alignment is recommended for any NISSAN/INFINITI vehicle.
  - The four-wheel “thrust” process helps ensure that the vehicle is properly aligned and the steering wheel is centered.
  - The alignment rack itself should be capable of accepting any NISSAN/INFINITI vehicle.
  - The rack should be checked to ensure that it is level.
- Make sure the machine is properly calibrated.
  - Your alignment equipment should be regularly calibrated in order to give correct information.
  - Check with the manufacturer of your specific equipment for their recommended Service/Calibration Schedule.

THE ALIGNMENT PROCESS

IMPORTANT:

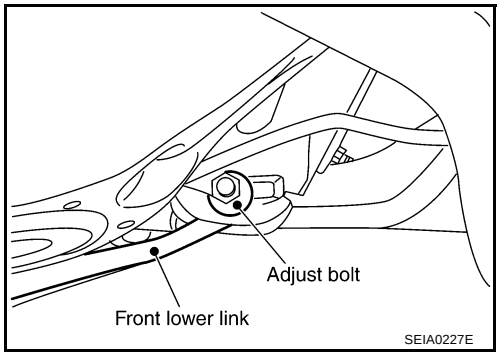


Use only the alignment specifications listed in this Service Manual.

- When displaying the alignment settings, many alignment machines use “indicators”: (Green/red, plus or minus, Go/No Go). **Do NOT use these indicators.**
  - The alignment specifications programmed into your machine that operate these indicators may not be correct.
  - This may result in an ERROR.
- Some newer alignment machines are equipped with an optional “Rolling Compensation” method to “compensate” the sensors (alignment targets or head units). **DO NOT use this “Rolling Compensation” method.**
  - Use the “Jacking Compensation Method”. After installing the alignment targets or head units, raise the vehicle and rotate the wheels 1/2 turn both ways.
  - See Instructions in the alignment machine you're using for more information on this.

CAMBER INSPECTION

- Measure camber of both right and left wheels with a suitable alignment gauge and adjust in accordance with the following procedures.

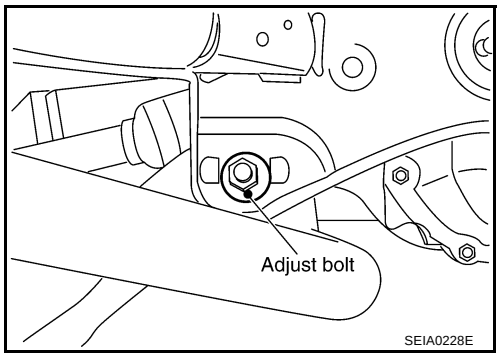


Camber **: Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

If outside the standard value, adjust with adjusting bolt in front lower link.

NOTE:

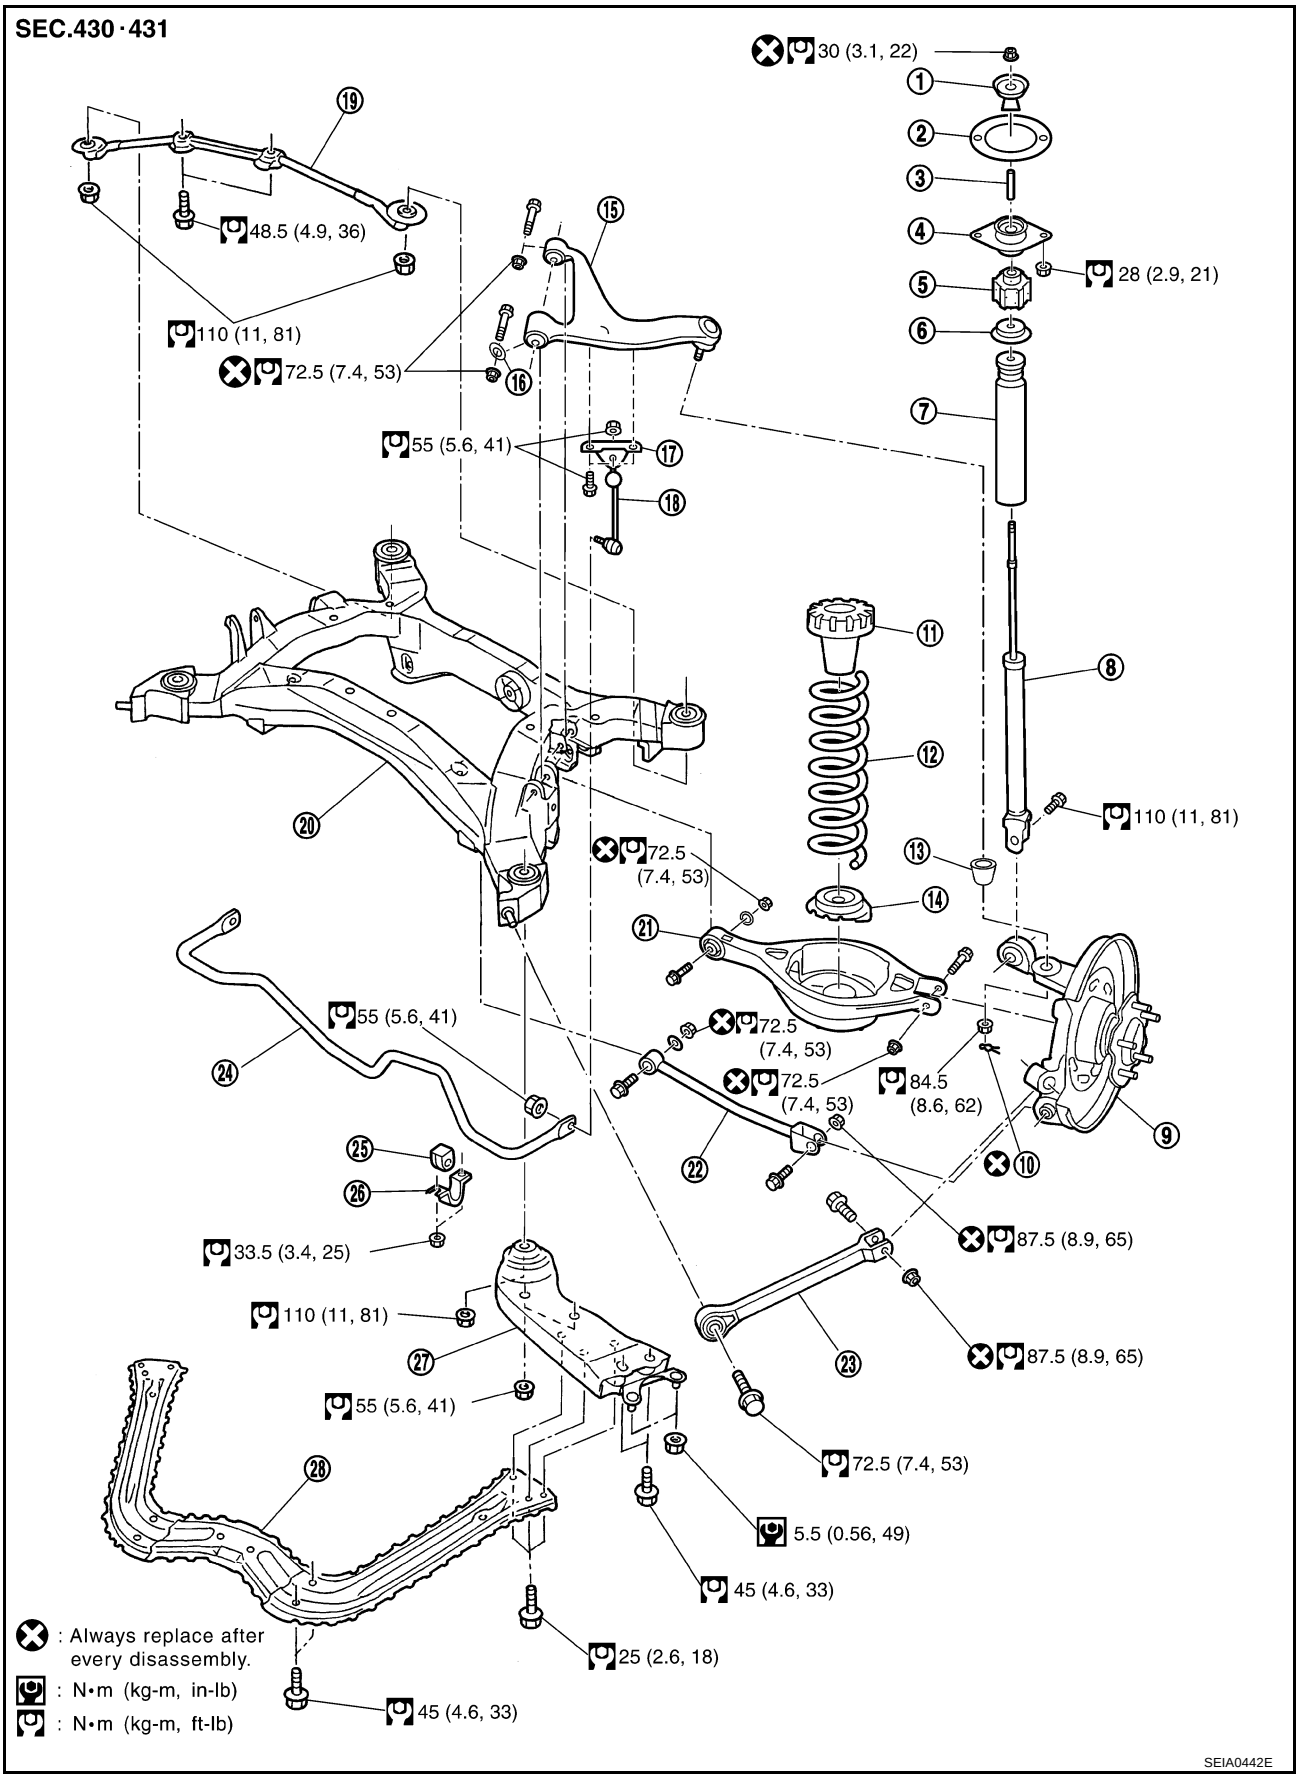
After adjusting camber, be sure to check toe-in.



TOE-IN

If toe-in is not within the specification, adjust with adjusting bolt in rear lower link.

CAUTION:



Be sure to adjust equally on RH and LH side with adjusting bolt.

If toe-in is not still within the specification, inspect and replace any damaged or worn rear suspension parts.

Components

NES0000Q

1. Bushing
2. Mounting seal
3. Distance tube
4. Mounting seal bracket
5. Bushing
6. Bound bumper cover
7. Bound bumper
8. Shock absorber
9. Axle
10. Cotter pin
11. Upper seat
12. Coil spring
13. Ball seat
14. Rubber seat
15. Suspension arm
16. Stopper rubber
17. Stabilizer connecting rod mounting bracket
18. Stabilizer connecting rod
19. Rear pin stay
20. Rear suspension member
21. Rear lower link
22. Front lower link
23. Radius rod
24. Stabilizer bar
25. Stabilizer bushing
26. Stabilizer clamp
27. Member stay
28. Tunnel stay

Removal and Installation

NES0000R

REMOVAL

1. Remove tire with power tool.
2. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-39, "REAR DISC BRAKE" .

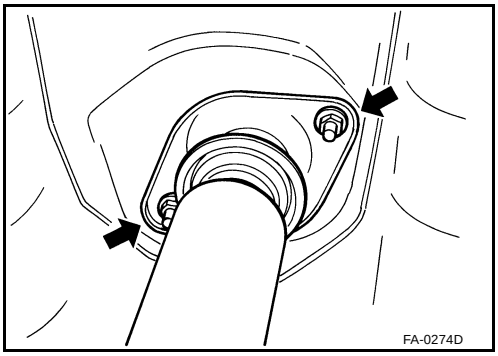
   NOTE:
   Avoid depressing brake pedal while brake caliper is removed.
3. Remove stabilizer bar. Refer to RSU-16, "STABILIZER BAR" .
4. Remove rear exhaust tube. Refer to EX-3, "EXHAUST SYSTEM" .
5. Remove rear propeller shaft. Refer to PR-5, "REAR PROPELLER SHAFT" .
6. Separate attachment bolts between parking brake cable and vehicle and rear suspension member. Refer to PB-4, "PARKING BRAKE CONTROL" .
7. Remove wheel sensor from rear final drive.
8. Remove rear lower link and coil spring. Refer to RSU-15, "REAR LOWER LINK & COIL SPRING" .
9. Remove fixing bolt in upper side of mounting seal bracket. Refer to RSU-9, "SHOCK ABSORBER" .
10. Set jack under rear final drive.
11. Remove tunnel stay and member stay from vehicle.
12. Remove fixing bolts and nuts of rear pin stay and then remove rear pin stay from vehicle.
13. Gradually lowering jack, remove rear suspension assembly.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of installation position of links (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

SHOCK ABSORBER



PFP:56210

Removal and Installation

NES0000S

REMOVAL

1. Remove tire with power tool.
2. Set jack under rear lower link.
3. Remove fixing bolt in lower side of shock absorber assembly with power tool.
4. Remove mounting seal bracket fixing nuts of shock absorber upper side with power tool and remove shock absorber from vehicle.

INSPECTION AFTER REMOVAL

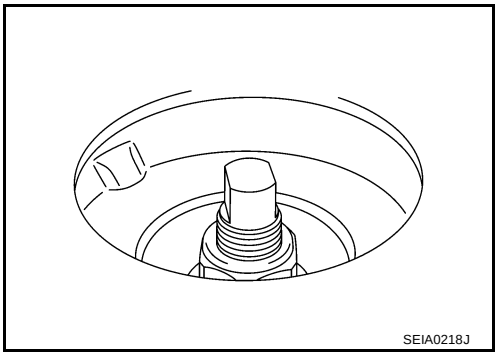
- Check shock absorber assembly for deformation, cracks, damage, and replace if necessary.
- Check piston rod for damage, uneven wear or distortion, and replace if necessary.
- Check welded and sealed areas for oil leakage, and replace if necessary.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of shock absorber assembly lower side (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

Disassembly and Assembly



NES0000T

DISASSEMBLY

CAUTION:
Make sure piston rod on shock absorber is not damaged when removing components from shock absorber.

1. Remove mounting seal from mounting seal bracket.
2. Wrap a shop cloth around lower side of shock absorber and fix it in a vise.

   CAUTION:
   Do not set the cylindrical part of shock absorber in vise.
3. Secure piston rod tip so that piston rod does not turn, and remove piston rod lock nut.
4. Remove bushing (Upper side), distance tube, mounting seal bracket, bushing (Lower side), bound bumper cover and bound bumper from shock absorber.

INSPECTION AFTER DISASSEMBLY

Bound Bumper and Bushing

- Check bound bumper and bushing for cracks, deformation or other damage. Replace if necessary.

ASSEMBLY

- Refer to RSU-7, "Components" for tightening torque. Assembly in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.

  CAUTION:
  Make sure piston rod on shock absorber is not damaged when attaching components to shock absorber.

SUSPENSION ARM

PFP:55501

Removal and Installation

NES0000U

REMOVAL

1. Remove tire with power tool.
2. Remove drive shaft. Refer to RAX-10, "REAR DRIVE SHAFT" .
3. Remove fixing nuts and bolts between suspension arm and rear suspension member.
4. Remove cotter pin of suspension arm ball joint, and loosen nut.
5. Use a ball joint remover (suitable tool) to remove suspension arm from axle. Be careful not to damage ball joint boot.

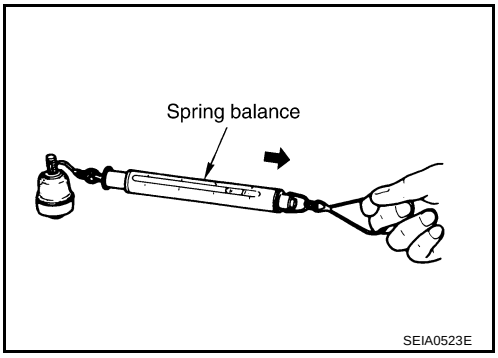
   CAUTION:
   Tighten temporarily mounting nut to prevent damage to threads and to prevent ball joint remover (suitable tool) from coming off.
6. Remove suspension arm and stopper rubber from vehicle.

INSPECTION AFTER REMOVAL

Visual Inspection

- Check suspension arm and bushing for deformation, cracks or damage. If any non-standard condition is found, replace it.
- Check boot of ball joint for cracks or damage, and also for grease leakage.

Ball Joint Inspection



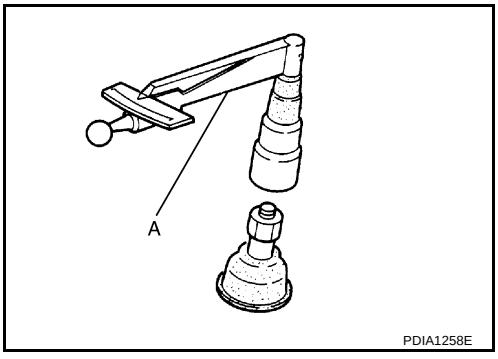
- Manually move ball stud to confirm it moves smoothly with no binding.

Swing Torque Inspection

NOTE:
Before measuring, move ball joint at least ten times by hand to check for smooth movement.

- Hook spring balance at cotter pin mounting hole. Confirm spring balance measurement value is within specifications when ball stud begins moving.

  Swing torque:
  0.5 - 3.4 N·m (0.06 - 0.34 kg-m, 5 - 30 in-lb)
  Measured value of spring balance:
  8.06 - 54.8 N (0.83 - 5.5 kg, 1.81 - 12.32 lb)



- If it is outside the specified range, replace suspension arm assembly.

Rotating Torque Inspection

- Attach mounting nut to ball stud. Make sure that sliding torque is within the specifications with a preload gauge.

  Tool number A: ST3127S000 (J-25765-A)
  Rotating torque:
  0.5 - 3.4 N·m (0.06 - 0.34 kg-m, 5 - 30 in-lb)

- If it is outside the specified range, replace suspension arm assembly.

Axial End Play Inspection

- Move tip of ball joint in axial direction to check for looseness.

  Axial end play : 0 mm (0 in)
- If it is outside the specified range, replace suspension arm assembly.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of rear suspension member installation position (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

RADIUS ROD

PFP:55110

Removal and Installation

NES0000V

REMOVAL

1. Remove tire with power tool.
2. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-39, "REAR DISC BRAKE" .

   NOTE:
   Avoid depressing brake pedal while brake caliper is removed.
3. Remove fixing bolt and nut in axle side of radius rod with power tool.
4. Remove rear lower link and coil spring. Refer to RSU-15, "REAR LOWER LINK & COIL SPRING" .
5. Remove fixing bolt in lower side of shock absorber with power tool.
6. Remove fixing bolt and nut in axle side of front lower link with power tool.
7. Remove fixing bolt in rear suspension member side of radius rod with power tool, then remove radius rod from vehicle.

INSPECTION AFTER REMOVAL

- Check radius rod and bushing for any deformation, cracks, or damage. Replace if necessary.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of rear suspension member and axle installation position (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

FRONT LOWER LINK

PFP:55110

Removal and Installation

NES0000W

REMOVAL

1. Remove tire with power tool.
2. Set jack under rear lower link.
3. Remove fixing nut and bolt between front lower link and rear suspension member with power tool.
4. Remove fixing nut and bolt between front lower link and axle with power tool.
5. Remove front lower link from vehicle.

INSPECTION AFTER REMOVAL

- Check front lower link and bushing for any deformation, cracks, or damage. Replace if necessary.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of rear suspension member and axle installation position (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-7, "Components" .

REAR LOWER LINK & COIL SPRING

PFP:551B0

Removal and Installation

NES0000X

REMOVAL

1. Remove tire with power tool.
2. Set jack under rear lower link.
3. Loosen fixing bolt and nut of rear lower link in side of suspension member, and then remove fixing bolt and nut in side of axle with power tool.
4. Slowly lower jack, then remove upper seat, coil spring and rubber sheet from rear lower link.
5. Remove fixing bolt and nut in side of rear suspension member to remove rear lower link with power tool.

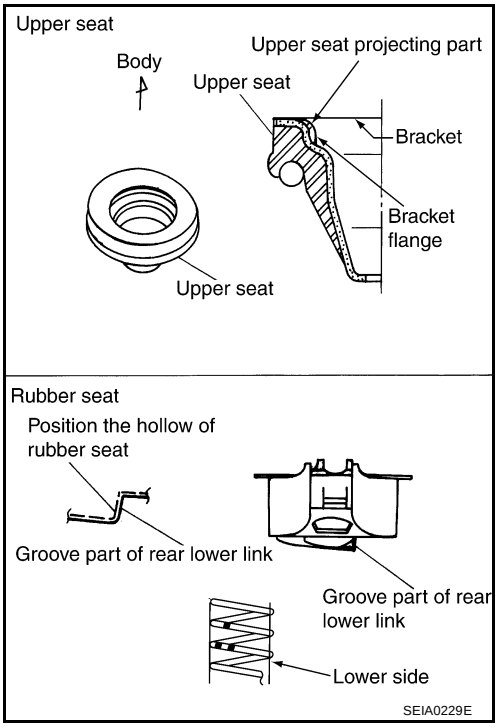
INSPECTION AFTER REMOVAL

- Check rear lower link, bushing and coil spring for deformation, cracks, and damage. Replace rear lower link and coil spring if necessary.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.



- Check that upper seat is attached as shown in the figure.

  NOTE:
  Insert bracket tabs (3) and the inside protrusion on upper seat into each other beforehand as shown in the figure.

- Match up rubber seat indentions and rear lower link grooves and attach.

  NOTE:
  Make sure spring is not up side down. The top and bottom are indicated by paint color.

- Perform final tightening of rear suspension member and axle installation position (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

STABILIZER BAR

PFP:56230

Removal and Installation

NES0000Y

REMOVAL

1. Remove fixing bolts and remove stabilizer connecting rod mount bracket from suspension arm.
2. Remove lower side fixing nut on stabilizer connecting rod and remove stabilizer connecting rod from stabilizer bar with power tool.
3. Remove fixing nut on stabilizer clamp and remove stabilizer from vehicle with power tool.

INSPECTION AFTER REMOVAL

- Check stabilizer bar, stabilizer bushings, stabilizer clamp, stabilizer connecting rod, stabilizer connecting rod mounting bracket for any deformation, crack or damage. Replace if necessary.

INSTALLATION

- Refer to RSU-7, "Components" for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.

REAR SUSPENSION MEMBER

PFP:55501

Removal and Installation

NES0000Z

REMOVAL

1. Remove tire with power tool.
2. Remove brake caliper with power tool. Hang it in a place where it will not interfere with work. Refer to BR-39, "REAR DISC BRAKE" .

   NOTE:
   Avoid depressing brake pedal while brake caliper is removed.
3. Remove rear exhaust tube. Refer to EX-3, "EXHAUST SYSTEM" .
4. Remove stabilizer bar. Refer to RSU-16, "STABILIZER BAR" .
5. Remove drive shaft. Refer toRAX-10, "REAR DRIVE SHAFT" .
6. Remove final drive. Refer to RFD-17, "REAR FINAL DRIVE ASSEMBLY" .
7. Separate the attachment between parking brake cable and vehicle and rear suspension member. Refer to PB-4, "PARKING BRAKE CONTROL" .
8. Remove rear lower link and coil spring. Refer to RSU-15, "REAR LOWER LINK & COIL SPRING" .
9. Remove fixing bolt in lower side of shock absorber.
10. Set jack under rear suspension member.
11. Remove fixing bolts and nuts tunnel stay and member stay from vehicle.
12. Remove fixing bolts and nuts of rear pin stay and then remove rear pin stay from vehicle.
13. Slowly lowering jack, then remove rear suspension member, suspension arm, radius rod, front lower link and axle from vehicle as a unit.
14. Remove fixing bolts and nuts, then remove suspension arm, front lower link, radius rod from rear suspension member.

INSPECTION AFTER REMOVAL

- Check rear suspension member for deformation, cracks, and other damage and replace if necessary.

INSTALLATION

- Refer to RSU-7, "Components" , for tightening torque. Install in the reverse order of removal.

  NOTE:
  Refer to component parts location and do not reuse non-reusable parts.
- Perform final tightening of installation position of links (rubber bushing) under unladen condition with tires on level ground. Check wheel alignment. Refer to RSU-18, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NHS00001

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution for Seat Belt Service

NHS00002

CAUTION:

- **Before removing the seat belt pre-tensioner assembly, turn the ignition switch off, disconnect the both battery cables and wait at least 3 minutes.**
- **Do not use electrical test equipment for seat belt pre-tensioner connector.**
- **After replacing or reinstalling seat belt pre-tensioner assembly, or reconnecting front seat belt pre-tensioner connector, check the system function. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**
- **Do not use disassemble buckle or seat belt assembly.**
- **Replace anchor bolts if they are deformed or worn out.**
- **Never oil tongue and buckle.**
- **If any component of seat belt assembly is questionable, do not repair. Replace the whole seat belt assembly.**
- **If webbing is cut, frayed, or damaged, replace seat belt assembly.**
- **When replacing seat belt assembly, use a genuine NISSAN seat belt assembly.**

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attaching hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

Precautions for Battery Service

NHS00003

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

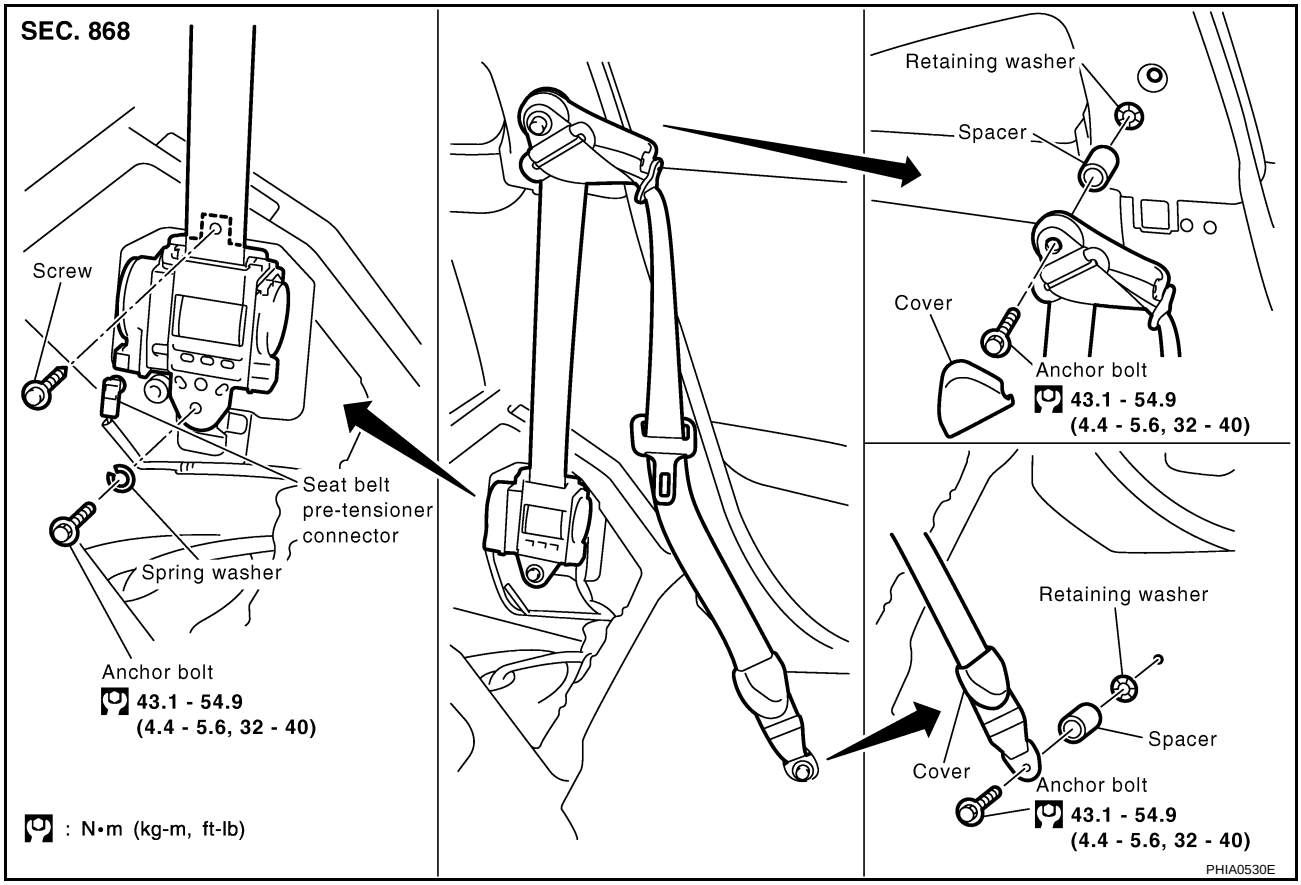
SEAT BELTS

PFP:86884

System Description

NHS00004

SEAT BELT WARNING CHIME



- With ignition switch turned ON and seat belt unfastened (seat belt switch ON), warning chime will sound for approximately 6 seconds.
- If warning chime does not sound. Refer to DI-88, "Seat Belt Buckle Switch (Driver Side) Signal Inspection" .

SEAT BELT WARNING LAMP

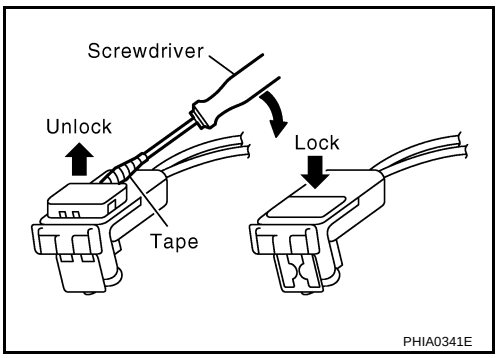
- Fasten driver's seat belt.
- The seat belt warning lamp should go out.
- If the seat belt warning lamp does not go out. Refer to DI-58, "Wiring Diagram — WARN —" .

Removal and Installation of Seat Belt (Coupe)

NHS00005

CAUTION:

Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.



REMOVAL OF SEAT BELT RETRACTOR

1. Remove the shoulder anchor cover on the seat belt anchor.
2. Remove the anchor bolt.
3. Slide up outer anchor cover, and remove the anchor bolt.
4. Remove the rear side finisher and rear pillar finisher. Refer to EI-35, "Removal and Installation (for Coupe Models)" .
5. Remove the center console. Refer to IP-10, "Component Parts Drawing" .
6. Remove the luggage floor finisher lower. Refer to EI-39, "Removal and Installation (for Coupe Models)" .
7. Remove the woofer and woofer amp. (BOSE system) bracket mounting bolts. Refer to AV-49, "Removal and Installation of Woofer and Woofer Amp. (BOSE System)" .
8. Remove the rear floor box. Refer to EI-39, "Removal and Installation (for Coupe Models)" .

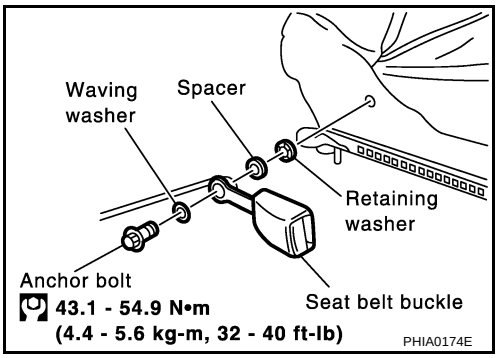
9. Disconnect the seat belt pre-tensioner connector.

CAUTION:

- **For installing/removing pre-tensioner seat belt connector, insert screwdriver wrapped in tape into notch, lift lock and remove connector.**
- **Install connector with lock raised, and push lock into connector.**

10. Remove the seat belt pre-tensioner retractor fixing screw and anchor bolt, and then remove the seat belt retractor.

INSTALLATION OF SEAT BELT RETRACTOR



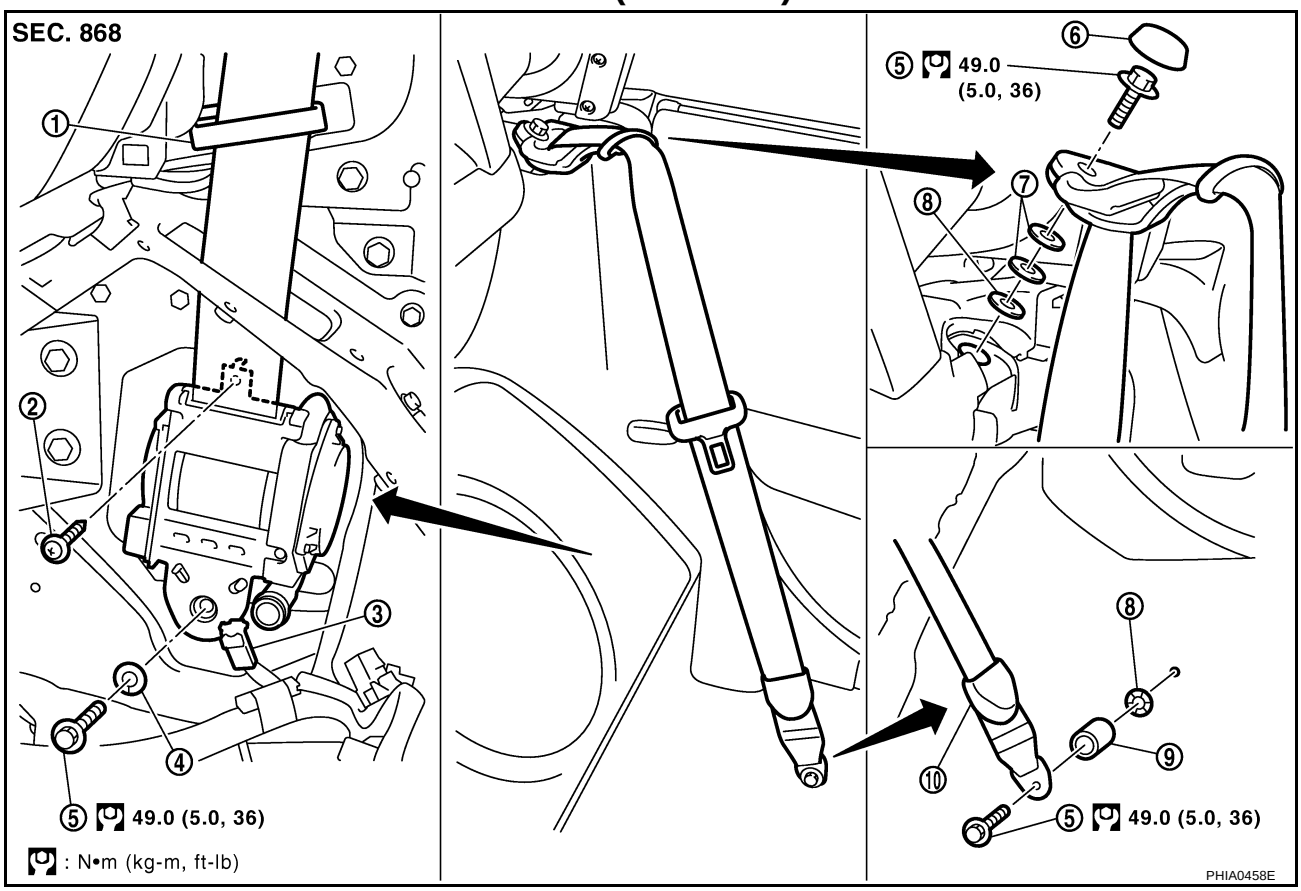
CAUTION:

Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

Install in the reverse order of removal.

REMOVAL OF SEAT BELT BUCKLE

1. Remove the seat. Refer to SE-73, "REMOVAL" .
2. Remove the screws, and remove the seat cushion inner finisher.
3. Remove the anchor bolt, and remove the buckle.



INSTALLATION OF SEAT BELT BUCKLE

Install in the reverse order of removal.

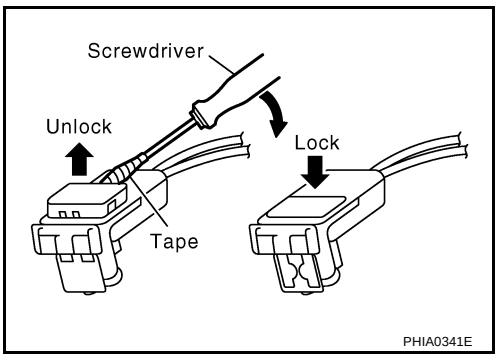
Removal and Installation of Seat Belt (Roadster)

NHS00006

1. Sash guide
2. Screw
3. Seat belt pre-tensioner connector
4. Spring washer
5. Anchor bolt
6. Shoulder anchor cover
7. Spacer
8. Retaining washer
9. Spacer
10. Outer anchor cover

CAUTION:

Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.



REMOVAL OF SEAT BELT RETRACTOR

1. Remove the shoulder anchor cover on the seat belt anchor.
2. Remove the anchor bolt.
3. Slide up outer anchor cover, and remove the anchor bolt.
4. Remove the rear side finisher. Refer to EI-37, "Removal and Installation (for Roadster Models)" .
5. Remove the center console. Refer to IP-10, "Component Parts Drawing" .
6. Remove the luggage floor finisher lower. Refer to EI-41, "Removal and Installation (for Roadster Models)" .
7. Remove the woofer and woofer amp. (BOSE system) bracket mounting bolts. Refer to AV-49, "Removal and Installation of Woofer and Woofer Amp. (BOSE System)" .
8. Remove the rear floor box. Refer to EI-41, "Removal and Installation (for Roadster Models)" .

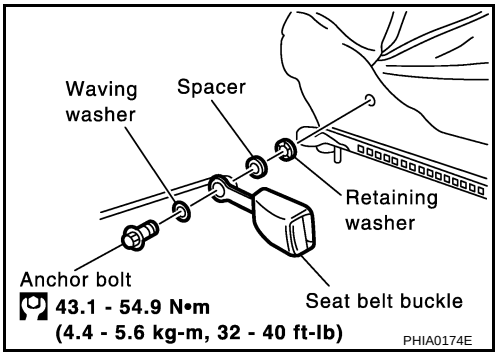
9. Disconnect the seat belt pre-tensioner connector.

CAUTION:

- **For installing/removing pre-tensioner seat belt connector, insert screwdriver wrapped in tape into notch, lift lock and remove connector.**
- **Install connector with lock raised, and push lock into connector.**

10. Remove the seat belt pre-tensioner retractor fixing screw and anchor bolt, and then remove the seat belt retractor.
11. Remove the sash guide and then remove the seat belt assembly.

INSTALLATION OF SEAT BELT RETRACTOR



CAUTION:

Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

Install in the reverse order of removal.

REMOVAL OF SEAT BELT BUCKLE

1. Remove the seat. Refer to SE-73, "REMOVAL" .
2. Remove the screws, and remove the seat cushion inner finisher.
3. Remove the anchor bolt, and remove the buckle.

INSTALLATION OF SEAT BELT BUCKLE

Install in the reverse order of removal.

Seat Belt Inspection

NHS00007

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:

a. Switch ignition ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about 6 seconds.

b. Fasten driver's seat belt. The seat belt warning lamp should go out and the chime (if sounding) should stop.

2. If the air bag warning lamp is blinking, conduct self-diagnosis using CONSULT-II, and confirm with air bag warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" .

3. Make sure that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.

4. Check the shoulder seat belt guide for seats. Ensure guide swivels freely and that webbing lays flat and does not bind in guide. Ensure height adjuster operates properly and holds securely.

5. Check retractor operation:

a. Fully extend the seat belt webbing and check for twists, tears or other damage.

b. Allow the seat belt to retract. Ensure that webbing returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth, because dirt built up in the loops of the upper anchors can cause the seat belts to retract slowly.

c. Fasten the seat belt. Check the seat belt returns smoothly and completely to the retractor. If the webbing does not return smoothly, the cause may be an accumulation of dust or dirt. Use the “SEAT BELT TAPE SET” and perform the following steps.

   Inspect the seat belt through-anchor:

   1. Pull the seat belt out to a length of 500 mm (19.69 in) or more.
   2. Use a clip or other device to the fix the seat belt at the rear side finisher webbing opening.
   3. Pass a thin wire through the through-anchor webbing opening. Hold both ends of the wire and pull taut while moving it up and down several times along the webbing opening surface to remove dirt.
   4. Any dirt that cannot be removed with the wire can be removed by cleaning the opening with a clean cloth.
   5. Apply tape at the point where the webbing contacts the through-anchor webbing opening.

      NOTE:
      Apply the tape so that there is no looseness or wrinkling.

   6. Remove the clip fixing the seat belt and make sure that the webbing returns smoothly.
   7. Repeat steps above as necessary to check the other seat belts.

SEAT BELT RETRACTOR ON-VEHICLE CHECK

Emergency Locking Retractors (ELR)

NOTE:
All seat belt retractors are of the Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the webbing from extending any further.
Check the seat belt retractors using the following test(s) to determine if a retractor assembly is operating properly.

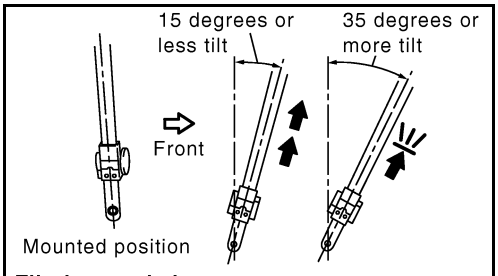
ELR Function Stationary Check

Grasp the shoulder webbing and pull forward quickly. The retractor should lock and prevent the belt from extending further.

ELR Function Moving Check

WARNING:
Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. Do Not perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event the retractor does not lock.

1. Fasten driver's seat belt. Buckle a passenger into the seat for the belt that is to be tested.
2. Proceed to the designated safe area.
3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop. The driver and passenger must be prepared to brace themselves in the event the retractor does not lock. Apply brakes firmly and make a very hard stop.



While stopping, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

SEAT BELT RETRACTOR OFF-VEHICLE CHECK

1. Remove the seat belt retractor assembly.
2. Slowly pull out webbing while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the figure.

   15 degrees or less tilt : Webbing can be pulled out.
   35 degrees or more tilt : Webbing locks and cannot be pulled out.

   If NG, replace the retractor assembly.

Tilt the seat belt retractor forward from the mounted position without twisting the retractor.

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS00001

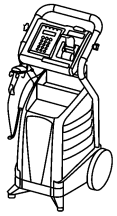
The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

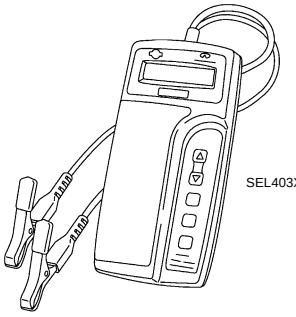
WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NKS00002





Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

PREPARATION

— (J-44373 Model MCR620) Starting/Charging System Tester  SEL403X	Tests starting and charging system. For operating instructions, refer to Technical Service Bulletin.

Commercial Service Tools

NKS0054Y

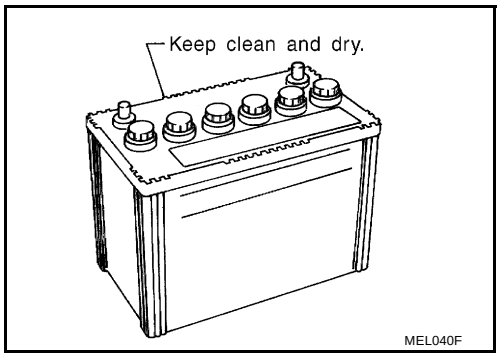
Tool name	Description
Power tool  PIIB1407E	Loosening bolts, nuts and screws

BATTERY

PFP:AYBGL

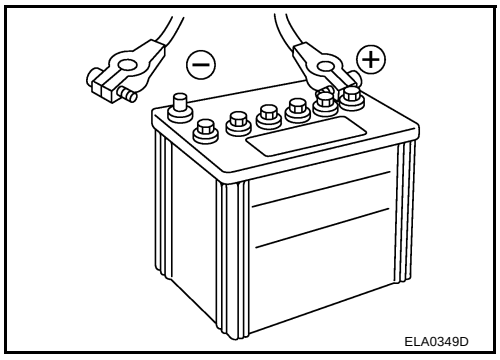
How to Handle Battery

NKS00006



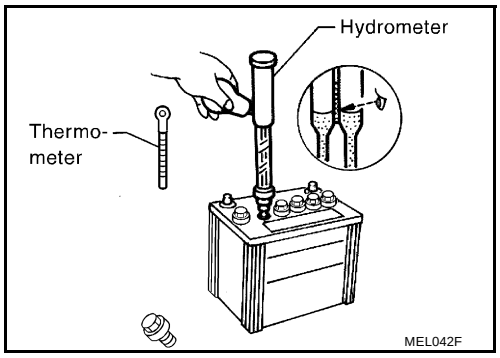
CAUTION:

- **If it becomes necessary to start the engine with a booster battery and jumper cables, use a 12-volt booster battery.**
- **After connecting battery cables, ensure that they are tightly clamped to battery terminals for good contact.**



METHODS OF PREVENTING OVER-DISCHARGE

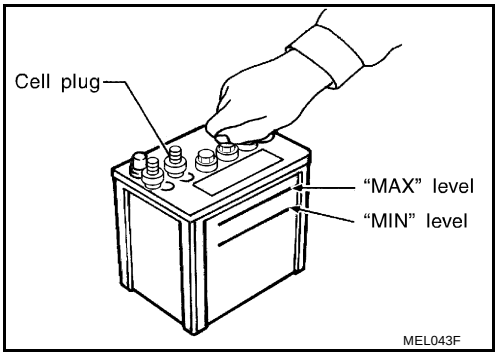
The following precautions must be taken to prevent over-discharging a battery.



- The battery surface (particularly its top) should always be kept clean and dry.
- The terminal connections should be clean and tight.
- At every routine maintenance, check the electrolyte level.
  This also applies to batteries designated as “low maintenance” and “maintenance-free”.

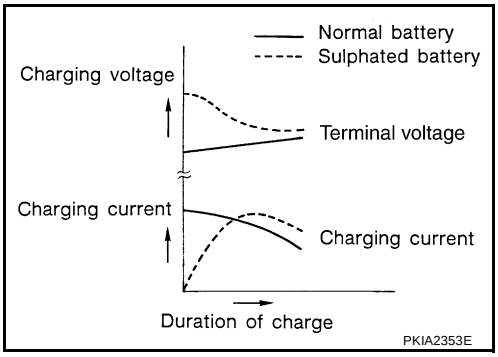
- When the vehicle is not going to be used over a long period of time, disconnect the battery cable from the negative terminal.

- Check the charge condition of the battery.
  Periodically check the specific gravity of the electrolyte. Keep a close check on charge condition to prevent over-discharge.



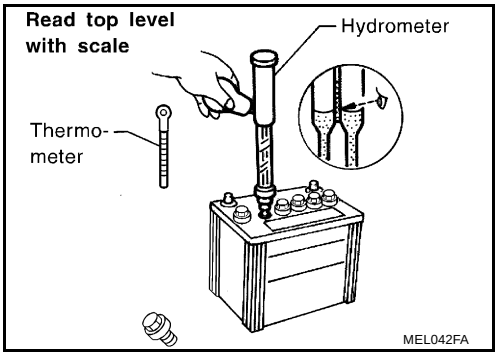
CHECKING ELECTROLYTE LEVEL

WARNING:



Never allow battery fluid to come in contact with skin, eyes, fabrics, or painted surfaces. After touching a battery, never touch or rub your eyes until you have thoroughly washed your hands. If acid contacts eyes, skin or clothing, immediately flush with water for 15 minutes and seek medical attention.

- Remove the cell plug using a suitable tool.
- Add distilled water up to the MAX level.



Sulphation

A battery will be completely discharged if it is left unattended for a long time and the specific gravity will become less than 1.100. This may result in sulphation on the cell plates.
To determine if a battery has been "sulphated", note its voltage and current when charging it. As shown in the figure, less current and higher voltage are observed in the initial stage of charging sulphated batteries.
A sulphated battery may sometimes be brought back into service by means of a long, slow charge, 12 hours or more, followed by a battery capacity test.

SPECIFIC GRAVITY CHECK

1. Read hydrometer and thermometer indications at eye level.
2. Use the chart below to correct your hydrometer reading according to electrolyte temperature.

Hydrometer Temperature Correction

Battery electrolyte temperature °C (°F)	Add to specific gravity reading
71 (160)	0.032
66 (150)	0.028
60 (140)	0.024
54 (130)	0.020
49 (120)	0.016
43 (110)	0.012
38 (100)	0.008
32 (90)	0.004
27 (80)	0
21 (70)	–0.004

Battery electrolyte temperature °C (°F)	Add to specific gravity reading
16 (60)	–0.008
10 (50)	–0.012
4 (40)	–0.016
–1 (30)	–0.020
–7 (20)	–0.024
–12 (10)	–0.028
–18 (0)	–0.032

Corrected specific gravity	Approximate charge condition
1.260 - 1.280	Fully charged
1.230 - 1.250	3/4 charged
1.200 - 1.220	1/2 charged
1.170 - 1.190	1/4 charged
1.140 - 1.160	Almost discharged
1.110 - 1.130	Completely discharged

CHARGING THE BATTERY

CAUTION:

- **Never “quick charge” a fully discharged battery.**
- **Keep the battery away from open flame while it is being charged.**
- **When connecting the charger, connect the leads first, then turn on the charger. Never turn on the charger first, as this may cause a spark.**
- **If battery electrolyte temperature rises above 55 °C (131 °F), stop charging. Always charge battery at a temperature below 55 °C (131 °F).**

Charging Rates

Amps	Time
50	1 hour
25	2 hours
10	5 hours
5	10 hours

Never charge at more than 50 ampere rate.

NOTE:

The ammeter reading on your battery charger will automatically decrease as the battery charges. This indicates that the voltage of the battery is increasing normally as the state of charge improves. The charging amps indicated above refer to initial charge rate.

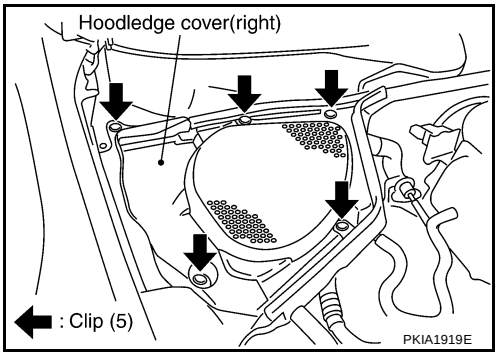
- If, after charging, the specific gravity of any two cells varies more than 0.050, the battery should be replaced.

Trouble Diagnoses with Battery Service Center

NKS00007

For battery testing, use Battery Service Center (J-48087). For details and operating instructions, refer to Technical Service Bulletin and/or Battery Service Center User Guide.

Removal and Installation

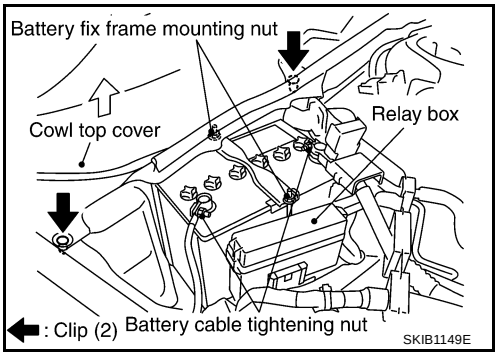


NKS00008

REMOVAL

CAUTION:

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.



1. Remove hoodledge cover (right).

2. Disconnect both battery cables from terminals.

   CAUTION:

   When disconnecting, disconnect the battery cable from the negative terminal first.
3. Remove clips of cowl top cover (right) and it raises to the up side.
4. Remove battery fix frame mounting nuts and battery fix frame.
5. Remove relay box from bracket.
6. Remove battery.

INSTALLATION

Installation is the reverse order of removal.

CAUTION:

When connecting, connect the battery cable to positive terminal first.

Battery fix frame mounting nut

: 3.9 N·m (0.40 kg-m, 35 in-lb)

Battery cable tightening nut

: 5.4 N·m (0.55 kg-m, 48 in-lb)

STARTING SYSTEM

PFP:23300

System Description

NKS00009

M/T MODELS

Power is supplied at all times:

- through 40A fusible link (letter **M** , located in the fuse and fusible link block)
- to ignition switch terminal 1,
- through 10A fuse (No. 71, located in the IPDM E/R)
- to CPU of IPDM E/R,
- through 15A fuse (No. 78, located in the IPDM E/R)
- to CPU of IPDM E/R.

With the ignition switch in the ON or START position, power is supplied:

- to CPU of IPDM E/R, from battery direct
- through 10A fuse (No. 89, located in the IPDM E/R) and IPDM E/R terminal 25
- to clutch interlock switch terminal 1.

When the clutch pedal is depressed, power is supplied:

- through clutch interlock switch terminal 2
- to IPDM E/R terminal 53.

Ground is supplied:

- to IPDM E/R terminals 38, 50 and 60
- from grounds E17, E43 and B102 (with VDC, navigation system or telephone).
- from grounds E17, E43 and F152 (without VDC, navigation system and telephone).

Then starter relay is turn ON.
With the ignition switch in the START position, IPDM E/R is energized and power is supplied:

- from ignition switch terminal 5
- to IPDM E/R terminal 4 and
- through IPDM E/R terminal 3
- to starter motor terminal 1.

The starter motor plunger closes and provides a closed circuit between the battery and starter motor. The starter motor is grounded to the engine block. With power and ground supplied, cranking occurs and the engine starts.

A/T MODELS

Power is supplied at all times:

- through 40A fusible link (letter **M** , located in the fuse and fusible link block)
- to ignition switch terminal 1,
- through 10A fuse (No. 71, located in the IPDM E/R)
- to CPU of IPDM E/R,
- through 15A fuse (No. 78, located in the IPDM E/R)
- to CPU of IPDM E/R.

With the ignition switch in the ON or START position, power is supplied:

- to CPU of IPDM E/R, from battery direct.

When the selector lever in the “P” or “N” position, power is supplied:

- from A/T assembly (TCM) terminal 9
- to IPDM E/R terminal 53.

Ground is supplied:

- to IPDM E/R terminals 38, 50 and 60
- from grounds E17, E43 and B102 (with VDC, navigation system or telephone).
- from grounds E17, E43 and F152 (without VDC, navigation system and telephone).

Then starter relay is turn ON.
With the ignition switch in the START position, IPDM E/R is energized and power is supplied:

- from ignition switch terminal 5
- to IPDM E/R terminal 4 and
- through IPDM E/R terminal 3
- to starter motor terminal 1.

The starter motor plunger closes and provides a closed circuit between the battery and starter motor. The starter motor is grounded to the engine block. With power and ground supplied, cranking occurs and the engine starts.

Trouble Diagnoses with Starting/Charging System Tester (Starting)

NKS0000B

For starting system testing, use Starting/Charging System Tester (J-44373). For details and operating instructions, refer to Technical Service Bulletin.

*1 For battery testing, use Battery Service Center (J-48087). For details and operating instructions, refer to Technical Service Bulletin and/or Battery Service Center User Guide.

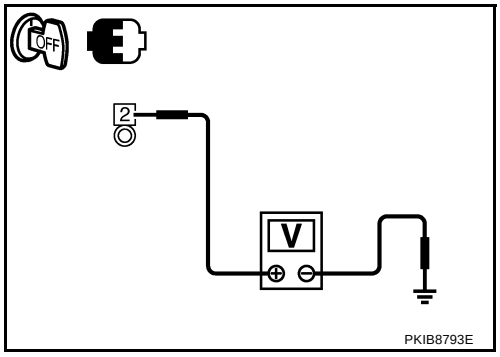
*2 SC-16, "MINIMUM SPECIFICATION OF CRANKING VOLTAGE REFERENCING COOLANT TEMPERATURE"

*3 SC-14, "Check “B” Terminal Circuit"

*4 SC-15, "Check “S” Connector Circuit"

DIAGNOSTIC PROCEDURE 1
Check “B” Terminal Circuit

CAUTION:



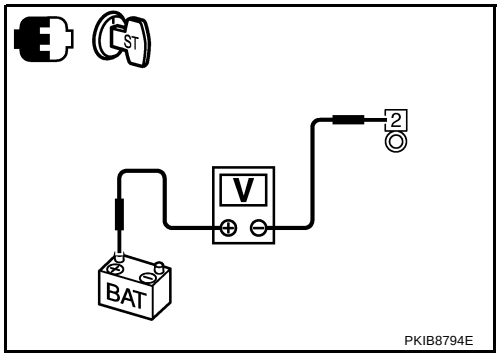
Perform diagnosis under the condition that engine cannot start by the following procedure.

1. **Remove fuel pump fuse.**
2. **Crank or start the engine (where possible) until the fuel pressure is released.**

1. CHECK “B” TERMINAL CIRCUIT

1. Turn ignition switch OFF.
2. Make sure that starter motor “B” terminal connection is clean and tight.
3. Check voltage between starter motor “B” terminal and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Starter motor “B” terminal	Terminal		
E203	2	Ground	Battery voltage



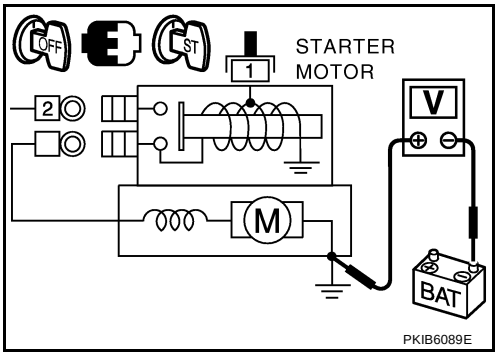
OK or NG

OK >> GO TO 2.
NG >> Check harness between battery and starter motor for open circuit.

2. CHECK BATTERY CABLE CONNECTION STATUS (VOLTAGE DROP TEST)

1. Shift A/T selector lever to “P” or “N” position. (A/T models)
   Keep depressing clutch pedal fully. (M/T models)
2. Check voltage between starter motor “B” terminal and battery positive terminal.

Terminals			Condition	Voltage (Approx.)
(+)	(–)			
	Starter motor “B” terminal	Terminal		
Battery positive terminal	E203	2	When the ignition switch is in START position	Less than 0.5 V



OK or NG

OK >> GO TO 3.
NG >> Check harness between the battery and the starter motor for poor continuity.

3. CHECK GROUND CIRCUIT STATUS (VOLTAGE DROP TEST)

1. Turn ignition switch OFF.
2. Shift A/T selector lever to “P” or “N” position. (A/T models)
   Keep depressing clutch pedal fully. (M/T models)
3. Check voltage between starter motor case and battery negative terminal.

Terminals		Condition	Voltage (Approx.)
(+)	(–)		
Starter motor case	Battery negative terminal	When the ignition switch is in START position	Less than 0.2 V

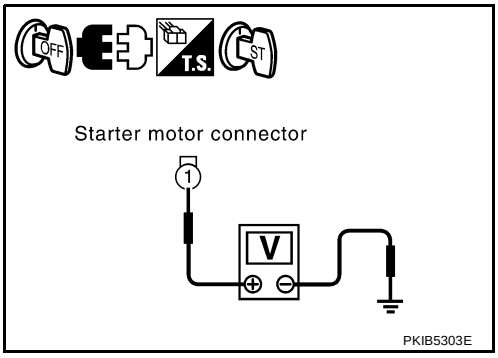
OK or NG

OK >> “B” terminal circuit is OK. Further inspection necessary. Refer to SC-13, "Trouble Diagnoses with Starting/Charging System Tester (Starting)" .

NG >> Check the starter motor case and ground for poor continuity.

DIAGNOSTIC PROCEDURE 2

Check “S” Connector Circuit



CAUTION:

Perform diagnosis under the condition that engine cannot start by the following procedure.

1. **Remove fuel pump fuse.**
2. **Crank or start the engine (where possible) until the fuel pressure is released.**

1. CHECK “S” CONNECTOR CIRCUIT

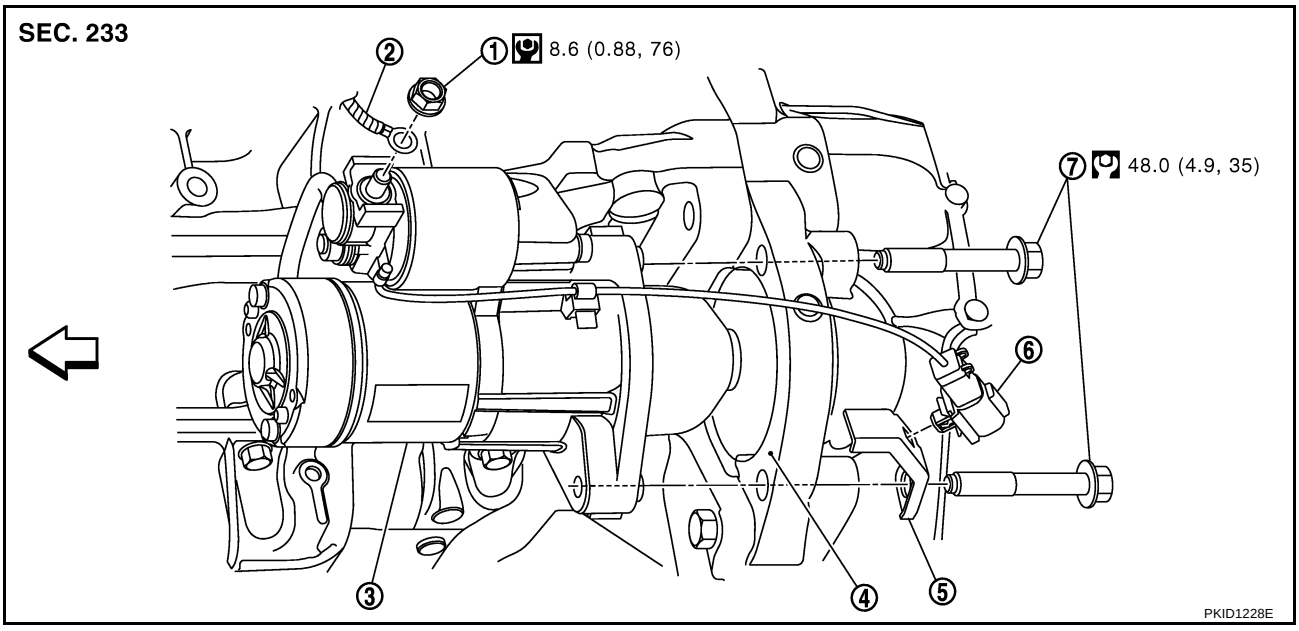
1. Turn ignition switch OFF.
2. Disconnect starter motor connector.
3. Shift A/T selector lever to “P” or “N” position. (A/T models)
   Keep depressing clutch pedal fully. (M/T models)
4. Check voltage between starter motor harness connector and ground.

Terminals			Condition	Voltage (Approx.)
(+)		(–)		
Starter motor connector	Terminal			
F44	1	Ground	When the ignition switch is in START position	Battery voltage

OK or NG

OK >> “S” connector circuit is OK. Further inspection necessary. Refer to SC-13, "Trouble Diagnoses with Starting/Charging System Tester (Starting)" .

NG >> Check the following.



- 40A fusible link (letter **M** , located in fuse and fusible link block)
- Ignition switch
- Starter relay (within the IPDM E/R)
- Harness for open or short

MINIMUM SPECIFICATION OF CRANKING VOLTAGE REFERENCING COOLANT TEMPERATURE

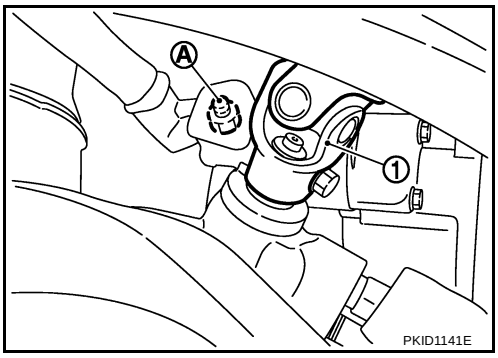
Engine coolant temperature	Voltage [V]
–30 °C to –20 °C (–22 °F to –4 °F)	8.6
–19 °C to –10 °C (–2 °F to 14°F)	9.1
–9 °C to 0 °C (16 °F to 32 °F)	9.5
More than 1 °C (More than 34 °F)	9.9

Removal and Installation

NKS0000C

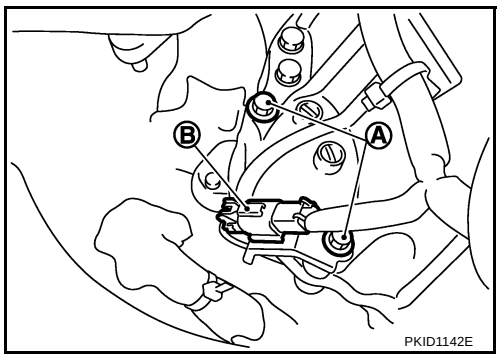
1. "B" terminal mounting nut
2. "B" terminal harness
3. Starter motor
4. Transmission case (M/T models) Converter housing (A/T models)
5. Harness clip bracket
6. "S" terminal connector
7. Starter motor mounting bolt

⇦: Vehicle front



Refer to GI-11, "Components" for symbols not described on the above.

REMOVAL



1. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal.

   CAUTION:

   Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.
2. Remove engine undercover, using power tools.
3. Disconnect steering lower joint (1), then remove it. Refer to PS-17, "REMOVAL" .
4. Remove "B" terminal mounting nut (A).

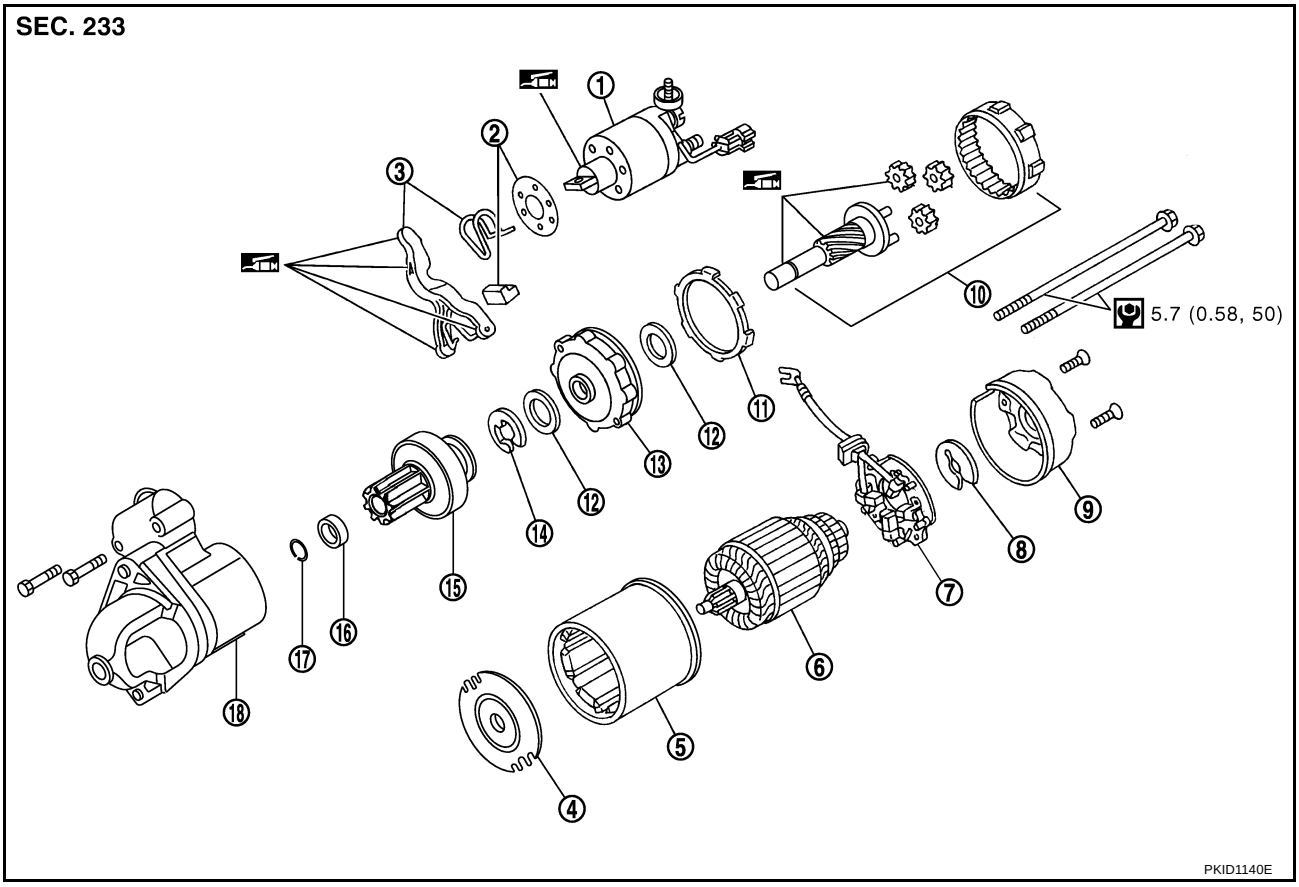
5. Disconnect “S” connector (B).
6. Remove starter motor mounting bolts (A) and harness connector clip bracket, using power tools.

7. Remove starter motor (1) downward from the vehicle.

INSTALLATION

Installation is the reverse order of removal.

CAUTION:



Be sure to tighten “B” terminal nut carefully.

Disassembly and Assembly

NKS0000D

TYPE: S114-928

SEC. 233

1. Magnetic switch assembly	2. Dust cover kit	3. Shift lever set
4. Center bracket (A)	5. Yoke assembly	6. Armature assembly
7. Brush holder assembly	8. Thrust washer	9. Rear cover assembly
10. Shaft gear assembly	11. Packing	12. Thrust washer
13. Center bracket (P)	14. E-ring	15. Pinion assembly
16. Pinion stopper	17. Pinion stopper clip	18. Gear case assembly

: High-temperature grease point

Refer to GI-11, "Components" for symbols not described on the above.

INSPECTION AFTER DISASSEMBLY

Pinion/Clutch Check

1. Inspect pinion teeth.
   - Replace pinion if teeth are worn or damaged. (Also check condition of ring gear teeth.)
2. Inspect reduction gear teeth.
   - Replace reduction gear if teeth are worn or damaged. (Also check condition of armature shaft gear teeth.)
3. Check to see if pinion locks in one direction and rotates smoothly in the opposite direction.
   - If it locks or rotates in both directions, or unusual resistance is evident, replace.

CHARGING SYSTEM

PFP:23100

System Description

NKS0000E

The alternator provides DC voltage to operate the vehicle's electrical system and to keep the battery charged. The voltage output is controlled by the IC regulator.
Power is supplied at all times

- through 10A fuse (No. 36, located in the fuse and fusible link block)
- to alternator terminal 4 (“S” terminal).

“B” terminal supplies power to charge the battery and operate the vehicle's electrical system. Output voltage is controlled by the IC regulator at terminal 4 (“S” terminal) detecting the input voltage.
The charging circuit is protected by the 140A fusible link (letter **A** , located in the fusible link holder).
The alternator is grounded to the engine block.
With the ignition switch in the ON or START position, power is supplied

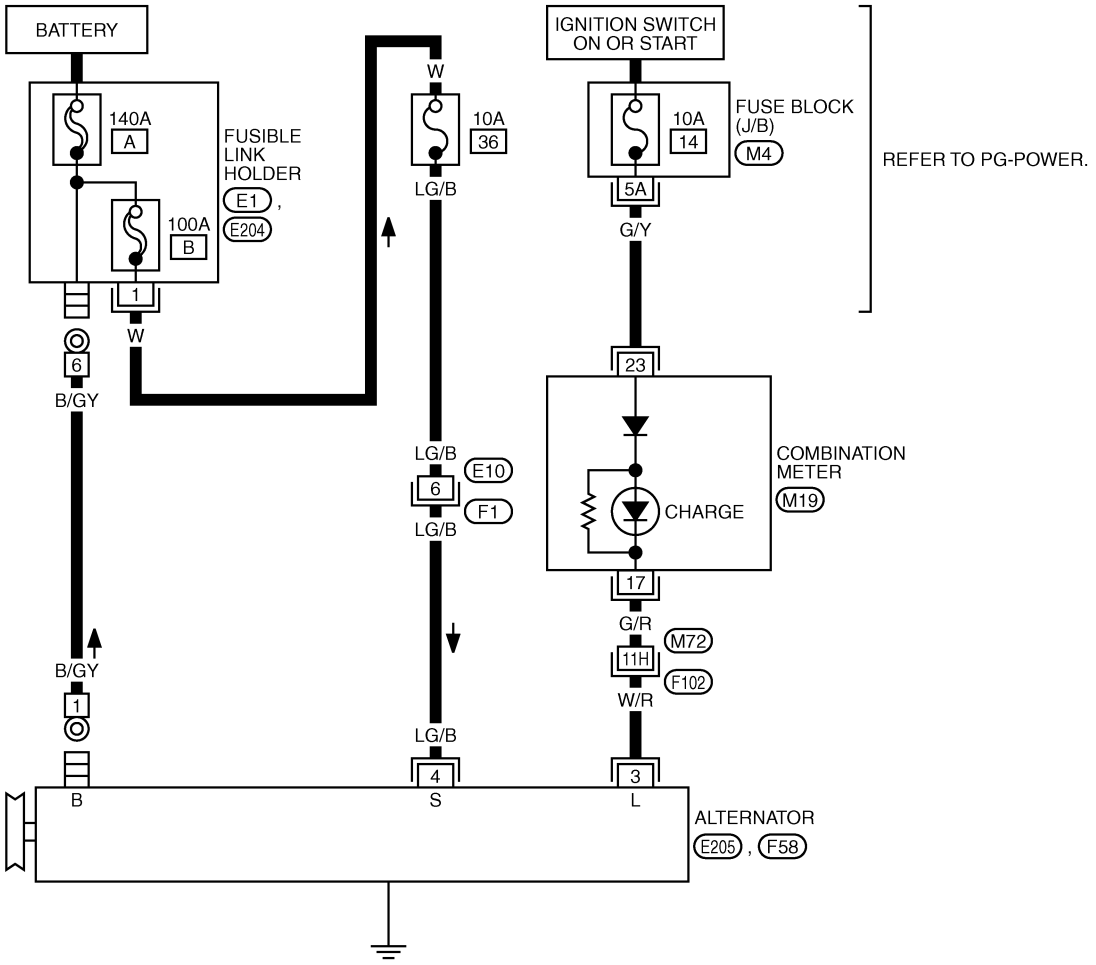
- through 10A fuse [No. 14, located in the fuse block (J/B)]
- to combination meter terminal 23 for the charge warning lamp.

Ground is supplied with power and ground supplied

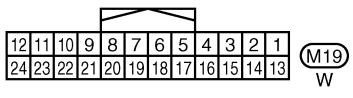
- to terminal 17 of combination meter
- through alternator terminal 3 (“L” terminal)
- through case ground.

The charge warning lamp will illuminate. When the alternator is providing sufficient voltage with the engine running, the ground is opened and the charge warning lamp will go off.
If the charge warning lamp illuminates with the engine running, a malfunction is indicated.

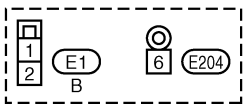
MALFUNCTION INDICATOR



The IC regulator warning function activates to illuminate charge warning lamp, if any of the following symptoms occur while alternator is operating:



- Excessive voltage is produced.
- No voltage is produced.



Wiring Diagram — CHARGE —

Trouble Diagnoses with Starting/Charging System Tester (Charging)

NKS0000G

For charging system testing, use Starting/Charging System Tester (J-44373). For details and operating instructions, refer to Technical Service Bulletin.

*1 SC-23, "Check “L” Terminal Circuit (Open)"
*2 SC-24, "Check “L” Terminal Circuit (Short)"
*3 SC-24, "Check “S” Terminal Circuit"
*4 SC-24, "Check “B” Terminal Circuit"
*5 SC-27, "ALTERNATOR PULLEY INSPECTION"

PRELIMINARY INSPECTION

1. CHECK BATTERY TERMINALS CONNECTION

Check if battery terminals are clean and tight.

OK or NG

OK >> GO TO 2.
NG >> Repair battery terminals connection.

2. CHECK FUSE AND FUSIBLE LINK

Check for blown alternator and combination meter fuses and fusible links.

Unit	Power source (Power supply terminals)	Fuse and fusible link No.
Alternator	Battery (“S” terminal)	36, letter B, letter A
Combination meter	Ignition switch ON (“L” terminal)	14

OK or NG

OK >> GO TO 3.
NG >> Be sure eliminate cause of malfunction before installing new fuse and fusible link.

3. CHECK ALTERNATOR DRIVE BELT TENSION

Check alternator drive belt tension. Refer to EM-12, "Checking Drive Belts" .

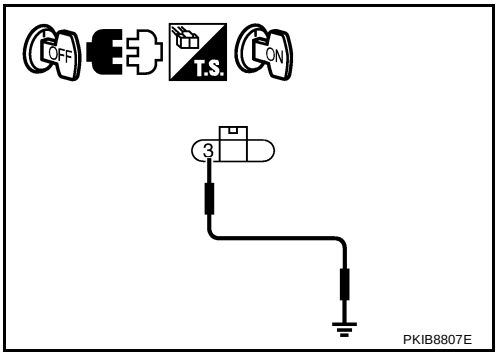
OK or NG

OK >> INSPECTION END
NG >> Repair as needed.

DIAGNOSTIC PROCEDURE 1
Check “L” Terminal Circuit (Open)

1. CHECK “L” TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if “L” terminal is clean and tight.



OK or NG

OK >> GO TO 2.
NG >> Repair “L” terminal connection. Confirm repair by performing complete Starting/Charging system test. Refer to Technical Service Bulletin.

2. CHECK “L” TERMINAL CIRCUIT (OPEN)

1. Disconnect alternator connector.
2. Apply ground to alternator harness connector terminal.
3. Check condition the charge warning lamp with the ignition switch in the ON position.

Alternator connector	Terminal	Ground	Condition	
			Ignition switch position	Charge warning lamp
F58	3		ON	illuminate

OK or NG

OK >> Go to SC-22, "Trouble Diagnoses with Starting/Charging System Tester (Charging)" .
NG >> Check the following.

- Harness for open between combination meter and alternator
- Harness for open between combination meter and fuse
- Charge warning lamp (Combination meter)

DIAGNOSTIC PROCEDURE 2
Check “L” Terminal Circuit (Short)

1. CHECK “L” TERMINAL CIRCUIT (SHORT)

1. Turn ignition switch OFF.
2. Disconnect alternator connector.
3. Turn ignition switch ON.

Charge warning lamp should light up?

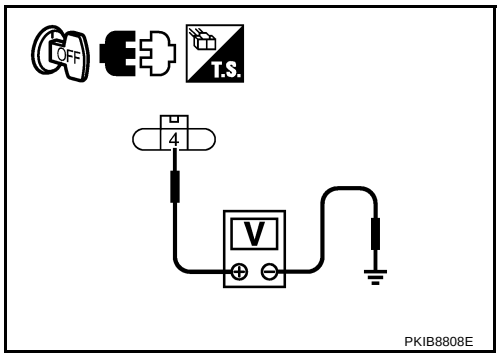
YES >> Check the following.
- Harness for short between combination meter and alternator
- Charge warning lamp (Combination meter)

NO >> Go to SC-22, "Trouble Diagnoses with Starting/Charging System Tester (Charging)" .

DIAGNOSTIC PROCEDURE 3
Check “S” Terminal Circuit

1. CHECK “S” TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if “S” terminal is clean and tight.



OK or NG

OK >> GO TO 2.
NG >> Repair “S” terminal connection. Confirm repair by performing complete Starting/Charging system test. Refer to Technical Service Bulletin.

2. CHECK “S” TERMINAL CIRCUIT

1. Disconnect alternator connector.
2. Check voltage between alternator harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Alternator connector	Terminal		
F58	4	Ground	Battery voltage

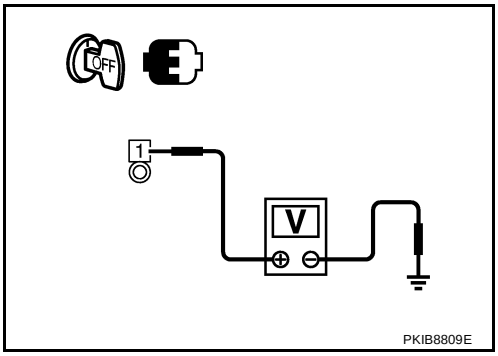
OK or NG

OK >> Go to SC-22, "Trouble Diagnoses with Starting/Charging System Tester (Charging)" .
NG >> Harness for open between alternator and fuse.

DIAGNOSTIC PROCEDURE 4
Check “B” Terminal Circuit

1. CHECK “B” TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if “B” terminal is clean and tight.



OK or NG

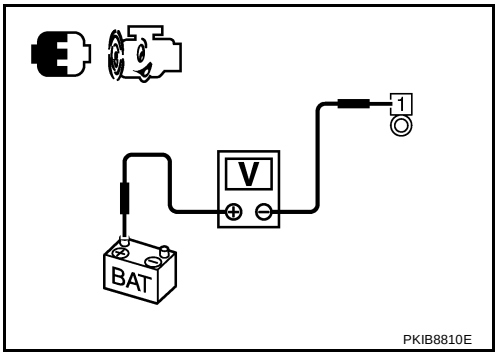
OK >> GO TO 2.
NG >> Repair “B” terminal connection. Confirm repair by performing complete Starting/Charging system test. Refer to Technical Service Bulletin.

2. CHECK “B” TERMINAL CIRCUIT

Check voltage between alternator “B” terminal and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Alternator “B” terminal	Terminal		
E205	1	Ground	Battery voltage

OK or NG



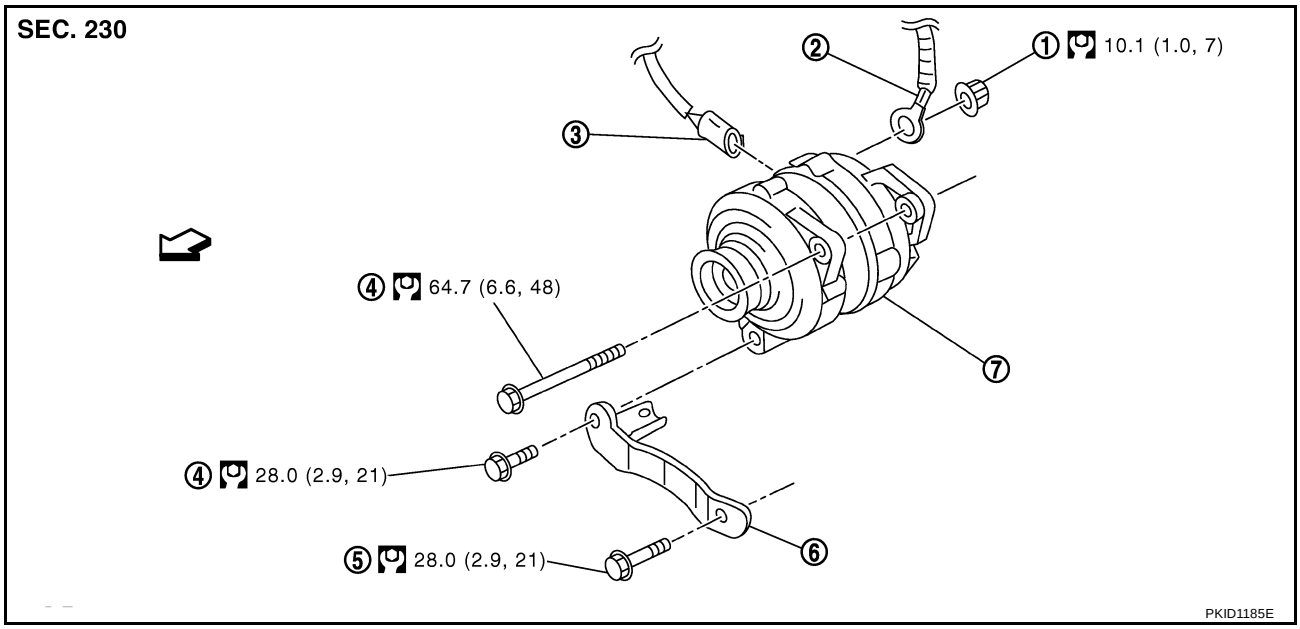
OK >> GO TO 3.

NG >> Check harness for open between alternator and fusible link.

3. CHECK “B” TERMINAL CONNECTION (VOLTAGE DROP TEST)

1. Start engine, then engine running at idle and warm.
2. Check voltage between battery positive terminal and alternator “B” terminal.

Terminals			Voltage (Approx.)
(+)	(–)		
	Alternator “B” terminal	Terminal	
Battery positive terminal	E205	1	Less than 0.2 V



OK or NG

OK >> Go to SC-22, "Trouble Diagnoses with Starting/Charging System Tester (Charging)" .

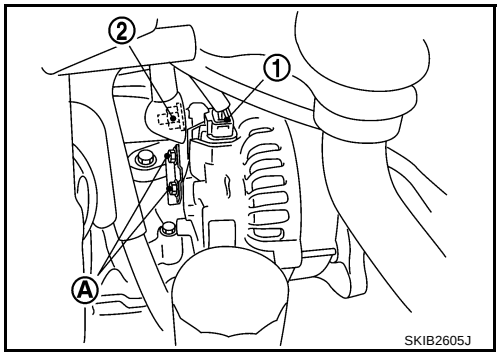
NG >> Check harness between battery and alternator for poor continuity.

Removal and Installation

NKS0000H

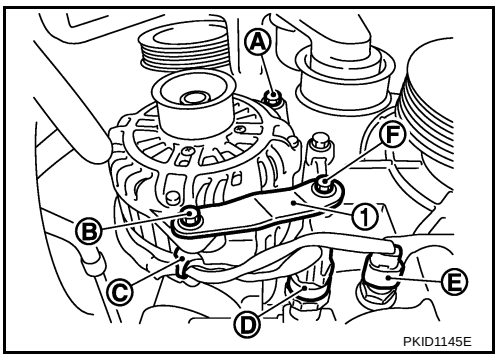
1. "B" terminal mounting nut
2. "B" terminal harness
3. Alternator connector
4. Alternator mounting bolt
5. Alternator stay mounting bolt
6. Alternator stay
7. Alternator

⇦ :Vehicle front



Refer to GI-11, "Components" for symbols not described on the above.

REMOVAL



1. Open the driver and front passenger window, and then disconnect the battery cable from the negative terminal.

   CAUTION:

   Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.
2. Remove engine undercover, using power tools.
3. Remove air cleaner assembly and harness clip. Refer to EM-15, "AIR CLEANER AND AIR DUCT" .
4. Remove radiator cooling fan assembly. Refer to CO-21, "COOLING FAN" .
5. Remove alternator and power steering oil pump belt. Refer to EM-12, "Removal and Installation" .
6. Disconnect alternator connector (1).
7. Remove "B" terminal mounting nut (2).
8. Remove the harness bracket bolts (A).

9. Remove oil pressure switch harness clip (C) from alternator stay (1).
10. Disconnect oil pressure switch connector (D) and oil temperature sensor connector (E).
11. Remove alternator mounting bolt (B) and alternator stay mounting bolt (F) using power tools, then remove alternator stay.
12. Remove alternator mounting bolt (A), using power tools.

13. Remove alternator assembly downward from the vehicle.

ALTERNATOR PULLEY INSPECTION

Perform the following.

- Make sure that alternator pulley does not rattle.
- Make sure that alternator pulley nut is tight.

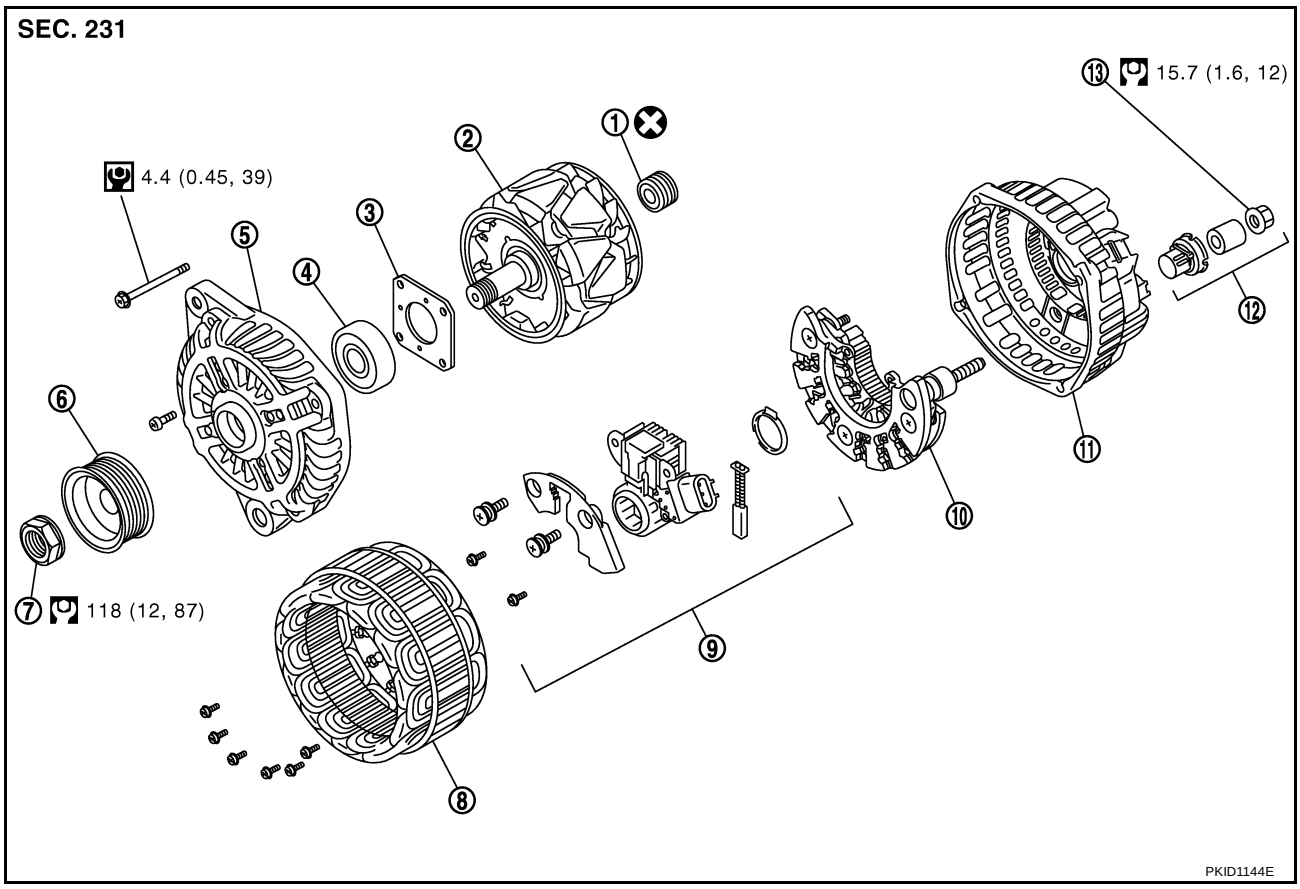
Alternator pulley nut:

: 118 N·m (12.0 kg-m, 87 ft-lb)

INSTALLATION

Installation is the reverse order of removal.

- Install alternator, and check tension of belt. Refer to EM-12, "Checking Drive Belts" .



CAUTION:

Be sure to tighten “B” terminal nut carefully.

Disassembly and Assembly

NKS0000I

TYPE: A3TJ1991

1. Rear bearing
2. Rotor assembly
3. Retainer
4. Front bearing
5. Front bracket assembly
6. Pulley
7. Pulley nut
8. Stator assembly
9. IC voltage regulator assembly
10. Diode assembly
11. Rear bracket assembly
12. Terminal set
13. “B” terminal nut

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NIS0009B

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Service Notice

NIS0009C

- When removing or installing various parts, place a cloth or padding onto the vehicle body to prevent scratches.
- Handle trim, molding, instruments, grille, etc. carefully during removing or installing. Be careful not to oil or damage them.
- Apply sealing compound where necessary when installing parts.
- When applying sealing compound, be careful that the sealing compound does not protrude from parts.
- When replacing any metal parts (for example body outer panel, members, etc.), be sure to take rust prevention measures.

Precautions for Battery Service

NIS0009D

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Precautions for Work

NIS0009E

- When removing or disassembling each component, be careful not to damage or deform it. If a component may be subject to interference, be sure to protect it with a shop cloth.
- When removing (disengaging) components with a screwdriver or similar tool, be sure to wrap the component with a shop cloth or vinyl tape to protect it.
- Protect the removed parts with a shop cloth and keep them.
- Replace a deformed or damaged clip.
- If a part is specified as a non-reusable part, always replace it with new one.
- Be sure to tighten bolts and nuts securely to the specified torque.
- After re-installation is completed, be sure to check that each part works normally.
- Follow the steps below to clean components.

– Water soluble foul: Dip a soft cloth into lukewarm water, and wring the water out of the cloth to wipe the fouled area.
Then rub with a soft and dry cloth.

– Oily foul: Dip a soft cloth into lukewarm water with mild detergent (concentration: within 2 to 3%), and wipe the fouled area.
Then dip a cloth into fresh water, and wring the water out of the cloth to wipe the detergent off. Then rub with a soft and dry cloth.

- Do not use organic solvent such as thinner, benzene, alcohol, and gasoline.
- For genuine leather seats, use a genuine leather seat cleaner.

Tool name	Description
Engine ear  SIIA0995E	Locating the noise

SQUEAK AND RATTLE TROUBLE DIAGNOSES

PFP:00000

Work Flow

NIS0029B

CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any customer's comments; refer to RF-9, "Diagnostic Worksheet" . This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by test driving the vehicle with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak —(Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces=higher pitch noise/softer surfaces=lower pitch noises/edge to surface=chirping
- Creak—(Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle—(Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock —(Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick—(Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump—(Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz—(Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.
If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T models, drive position on A/T models).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSBs) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Chassis Ear: J-39570, Engine Ear and mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to RF-7, "Generic Squeak and Rattle Troubleshooting" .

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
  - separate components by repositioning or loosening and retightening the component, if possible.
  - insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape. A Nissan Squeak and Rattle Kit (J-43980) is available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.

NOTE:
Always check with the Parts Department for the latest parts information.
The following materials are contained in the Nissan Squeak and Rattle Kit (J-43980). Each item can be ordered separately as needed.
URETHANE PADS [1.5 mm (0.059 in) thick]
Insulates connectors, harness, etc.
76268-9E005: 100 × 135 mm (3.94 × 5.31 in)/76884-71L01: 60 × 85 mm (2.36 × 3.35 in)/76884-71L02: 15 × 25 mm (0.59 × 0.98 in)
INSULATOR (Foam blocks)
Insulates components from contact. Can be used to fill space behind a panel.
73982-9E000: 45 mm (1.77 in) thick, 50 × 50 mm (1.97 × 1.97 in)/73982-50Y00: 10 mm (0.39 in) thick, 50 × 50 mm (1.97 × 1.97 in)

INSULATOR (Light foam block)
80845-71L00: 30 mm (1.18 in) thick, 30 × 50 mm (1.18 × 1.97 in)
FELT CLOTHTAPE
Used to insulate where movement does not occur. Ideal for instrument panel applications.
68370-4B000: 15 × 25 mm (0.59 × 0.98 in) pad/68239-13E00: 5 mm (0.20 in) wide tape roll
The following materials, not found in the kit, can also be used to repair squeaks and rattles.
UHMW (TEFLON) TAPE
Insulates where slight movement is present. Ideal for instrument panel applications.
SILICONE GREASE
Used in place of UHMW tape that will be visible or not fit. Will only last a few months.
SILICONE SPRAY
Use when grease cannot be applied.
DUCT TAPE
Use to eliminate movement.

CONFIRM THE REPAIR

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Generic Squeak and Rattle Troubleshooting

NIS0029C

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. The cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint
   These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

   CAUTION:
   Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks from the Nissan Squeak and Rattle Kit (J-43980) to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. The trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it's important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.
Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. The rear seatback lock and bracket

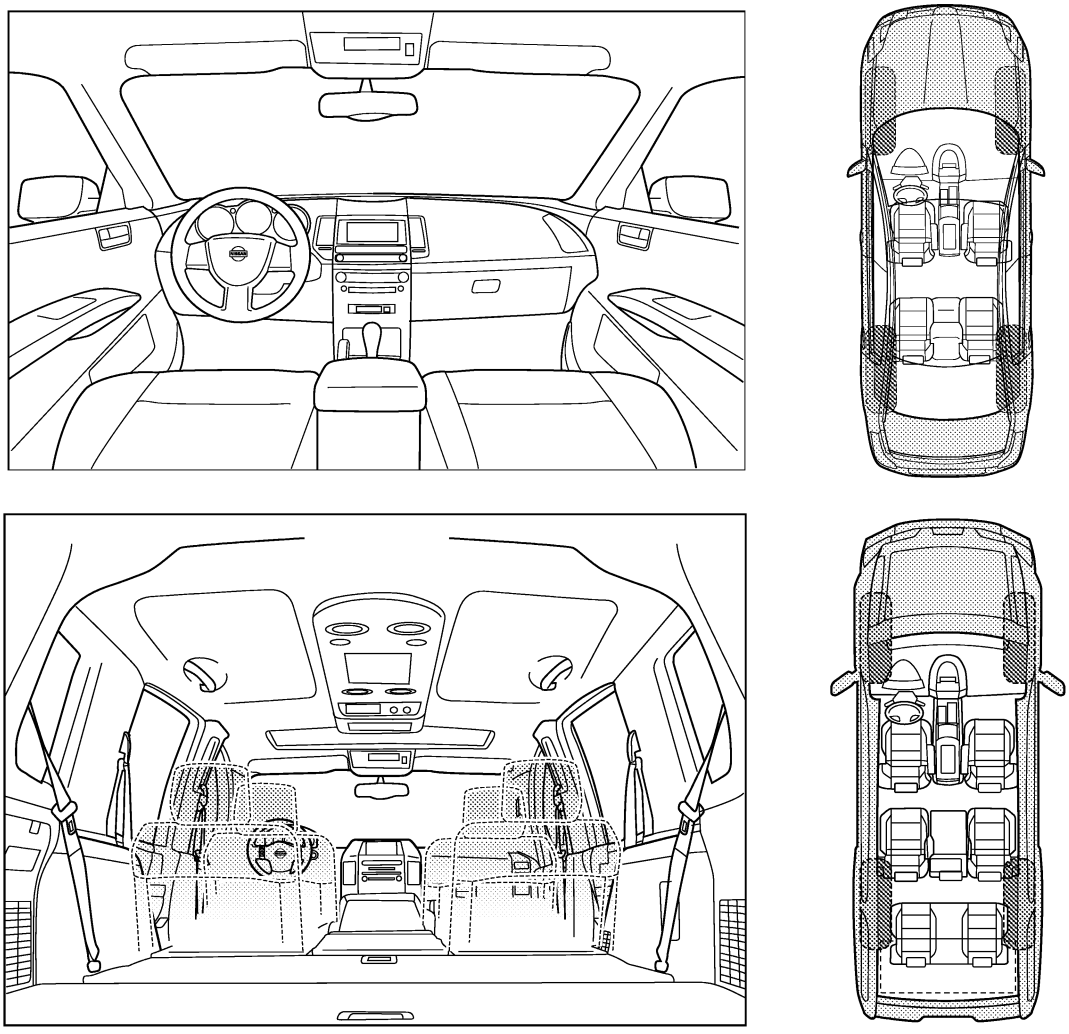
These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.
Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.



Diagnostic Worksheet

NIS0029D

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.

Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

System Description

NIS0009N

Power is supplied at all times,

- through 40A fusible link (letter **F** , located in the fusible link)
- to BCM terminal 55,
- through 10A fuse [No.18, located in the fuse block (J/B)]
- to BCM terminal 42,
- through BCM terminal 41,
- to passenger seat control unit terminal 34,
- through BCM terminal 54
- to driver side power seat switch terminal 1 and passenger seat control unit terminal 39.

When ignition switch in ON or START position,
power is supplied

- thought 10A fuse [No. 12, located in the fuse block (J/B)]
- to passenger seat control unit terminal 2.

When ignition switch in START position,
power is supplied

- thought 10A fuse [No. 9, located in the fuse block (J/B)]
- to passenger seat control unit terminal 1.

ground supplied

- to BCM terminal 52
- through body grounds M30 and M66,
- to passenger side seat control unit terminals 40, 48
- through body grounds B5, B6 and T14.

DRIVER SIDE SEAT OPERATION

When a driver side seat sliding switch is operated forward,
power is supplied

- through power seat switch terminal 5
- to sliding motor terminal 5.

Then ground is supplied

- to sliding motor terminal 6
- through power seat switch terminal 6
- through power seat switch terminal 2

The driver side seat moves forward.
When a driver side seat sliding switch is operated backward,
power is supplied

- through power seat switch terminal 6
- to sliding motor terminal 6.

Then ground is supplied

- to sliding motor terminal 5
- through power seat switch terminal 5

- through power seat switch terminal 2

The driver side seat moves backward.
When a driver side seat reclining switch is operated forward, power is supplied

- through power seat switch terminal 3
- to reclining motor terminal 3.

Then ground is supplied

- to reclining motor terminal 4
- through power seat switch terminal 4
- through power seat switch terminal 2

The driver side seat folds forward.
When a driver side seat reclining switch is operated backward, power is supplied

- through power seat switch terminal 4
- to reclining motor terminal 4.

Then ground is supplied

- to reclining motor terminal 3
- through power seat switch terminal 3
- through power seat switch terminal 2

The driver side seat reclines backward.

PASSENGER SIDE SEAT MANUAL OPERATION

When a passenger side seat sliding switch is operated forward, ground is supplied

- to passenger seat control unit terminal 14
- through power seat switch terminal 14
- through power seat switch terminal 40B
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the forward signal, power is supplied simultaneously

- through passenger seat control unit terminal 45
- to sliding motor terminal 45

Then ground is supplied

- to sliding motor terminal 37
- through passenger seat control unit terminal 37

The passenger side seat moves forward.
When a passenger side seat sliding switch is operated backward, ground is supplied

- to passenger seat control unit terminal 15
- through power seat switch terminal 15
- through power seat switch terminal 40B
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the backward signal, power is supplied simultaneously

- through passenger seat control unit terminal 37
- to sliding motor terminal 37

Then ground is supplied.

- to sliding motor terminal 45
- through passenger seat control unit terminal 45

The passenger side seat moves backward.
When a passenger side seat reclining switch is operated forward, ground is supplied

- to passenger seat control unit terminal 12
- through power seat switch terminal 12
- through power seat switch terminal 40B
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the forward signal, power is supplied simultaneously

- through passenger seat control unit terminal 42
- to reclining motor terminal 42

Then ground is supplied

- to reclining motor terminal 35
- through passenger seat control unit terminal 35

The passenger side seat folds forward.
When a passenger side seat reclining switch is operated backward, ground is supplied

- to passenger seat control unit terminal 13
- through power seat switch terminal 13
- through power seat switch terminal 40B
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the backward signal, power is supplied simultaneously

- through passenger seat control unit terminal 35
- to reclining motor terminal 35

Then ground is supplied

- to reclining motor terminal 42
- through passenger seat control unit terminal 42

The passenger side seat reclines backward.

PASSENGER SEATBACK TILT FORWARD/BACKWARD OPERATION

When a passenger side seatback tilt switch is operated forward, ground is supplied

- to passenger seat control unit terminal 8
- through seatback tilt switch terminal 8
- through seatback tilt switch terminal 40
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the forward signal, power is supplied simultaneously

- through passenger seat control unit terminal 42
- to reclining motor terminal 42

Then ground is supplied

- to reclining motor terminal 35
- through passenger seat control unit terminal 35

Then, a seat folds front most forward.
When a passenger side seatback tilt switch is operated backward, ground is supplied

- to passenger seat control unit terminal 9
- through seatback tilt switch terminal 9
- through seatback tilt switch terminal 40
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the backward signal, power is supplied simultaneously

- through passenger seat control unit terminal 35

- to reclining motor terminal 35

Then ground is supplied

- to reclining motor terminal 42
- through passenger seat control unit terminal 42.

The passenger side seat returns to former position.

INTERLOCKING OPERATION OF THE PASSENGER SEAT WITH THE SOFT TOP

NOTE:
Refer to RF-12, "System Description" for detailed operation.

CLOSE → OPEN

When a soft top switch is operated to OPEN,
ground is supplied

- to passenger seat control unit terminal 5
- through soft top switch terminal 3
- through soft top switch terminal 1
- through body ground M30 and M66.

Then passenger seat control unit recognizes the soft top OPEN signal,
Soft top control unit transmits power window down signal to passenger seat control unit,

- through soft top control unit terminal 36
- to passenger seat control unit terminal 16.

When passenger seat control unit receives power window down signal and soft top OPEN signal,
power is supplied simultaneously

- through passenger seat control unit terminal 42
- to reclining motor terminal 42

Then ground is supplied

- to reclining motor terminal 35
- through passenger seat control unit terminal 35

Then, a seat folds 6° forward.
When storage lid closed, soft top control unit transmits a storage lid close signal to passenger seat control unit,

- through soft top control unit terminal 13
- to passenger seat control unit terminal 33.

When passenger seat control unit receives storage lid close signal,
power is supplied simultaneously

- through passenger seat control unit terminal 35
- to reclining motor terminal 35

Then ground is supplied

- to reclining motor terminal 42
- through passenger seat control unit terminal 42.

The passenger side seat returns to former position.

OPEN → CLOSE

When a soft top switch is operated to CLOSE,
ground is supplied

- to passenger seat control unit terminal 6
- through soft top switch terminal 4
- through soft top switch terminal 1
- through body ground M30 and M66.

Then passenger seat control unit recognizes the soft top CLOSE signal,
soft top control unit transmits power window down signal to passenger seat control unit,

- through soft top control unit terminal 36
- to passenger seat control unit terminal 16.

When passenger seat control unit receives power window down signal and soft top CLOSE signal,

power is supplied simultaneously

- through passenger seat control unit terminal 42
- to reclining motor terminal 42

Then ground is supplied

- to reclining motor terminal 35
- through passenger seat control unit terminal 35

Then, a seat folds 6° forward.
When soft top lock switch (5th bow full latch switch) is turned ON, soft top control unit transmits a soft top lock signal to passenger seat control unit,
ground is supplied

- to passenger seat control unit terminal 11
- through soft top lock switch (5th bow full latch switch) terminal 3
- through soft top lock switch (5th bow full latch switch) terminal 4
- through body ground B5, B6 and T14.

When passenger seat control unit receives soft top lock switch ON signal,
power is supplied simultaneously

- through passenger seat control unit terminal 35
- to reclining motor terminal 35

Then ground is supplied

- to reclining motor terminal 42
- through passenger seat control unit terminal 42.

The passenger side seat returns to former position.

PASSENGER SIDE RECLINING MOTOR OPERATION

When a passenger side seat reclining motor is operated,
signal is transmitted

- to passenger seat control unit terminal 3
- through reclining motor terminal 3
- through reclining motor terminal 41
- through passenger seat control unit terminal 41.

Then passenger seat control unit judges seatback angle by receiving reclining sensor signal.

SEATBACK TILT CANCEL SWITCH OPERATION

When a passenger side seatback tilt cancel switch is operated to CANCEL,
ground is supplied

- to passenger seat control unit terminal 7
- through seatback tilt cancel switch terminal 7
- through seatback tilt cancel switch terminal 40C
- through body ground B5, B6 and T14.

Then passenger seat control unit recognizes the CANCEL signal.
When a “seatback tilt cancel switch” is operated to CANCEL, the automatic operation of a passenger seat is not performed.

MANUAL OPERATION

The seat positions can be adjusted by operating the sliding switch and reclining switch located on the side of both driver and passenger seat cushions.

AUTOMATIC OPERATION

Passenger Seatback Tilting Function

- When the seatback tilt switch on the rear side of the passenger seatback is operated to tilt forward, the seatback tilts forward to the front most position.
- To tilt the seatback backward or restore its position, push the seatback tilt switch on the tilt-backward direction. The seatback will be tilting backwards while the switch is operated. It can be moved backwards until it reaches to its start position.

Conditions For the Operation

When the following conditions are satisfied, the seatback tilts forward or backward by operating the seatback tilt switch.

Conditions	● Power seat switches (sliding and reclining) are OFF. ● The seat belt is not fastened. ● The vehicle speed is approximately 6 km/h or less. ● The soft top is not currently in operation.*1 ● The ignition switch is not in the START position. ● The seatback tilt cancel switch is in AUTO.

*1: The operation will be stopped only while the reclining motor is operating.

Conditions for Stopping the Operation

- Seatback tilting operation stops when any one of the conditions below is satisfied.

Conditions	● A power seat switch (sliding or reclining) is operated. ● The seat belt is fastened. ● The vehicle speed is approximately 7 km/h or more. ● The soft top is in operation. (Stops only tilt-forward operation.)*2 ● The seatback tilting switch is operated while the seatback is in operation. ● The ignition switch is turned to the START position. ● Reclining motor lock is detected.

*2: Operation will be stopped only while the reclining motor is operating.

NOTE:

If operation stops as a result of the conditions below, use the reclining switch to tilt the seat backward.

- A power seat switch (sliding or reclining) is operated.
- The seat belt is fastened.
- The seatback tilt cancel switch is turned to “CANCEL”.

Soft Top Interlocking Operation Function

- The seatback tilts forward by approximately 6° (tilt froward operation) when the soft top opens or closes.
- When open/close operation is completed, the seatback returns to the tilt start position (return operation).

Conditions for the Operation

When the soft top switch is pushed to OPEN or CLOSE, and all of the conditions below are satisfied, then the seatback operates, linked with the operation of the soft top.

Conditions	● The power seat switches (sliding and reclining) are OFF. ● The seatback tilt switch is OFF. ● The vehicle speed is 6 km/h or less. ● The ignition switch is ON. ● The seatback tilt cancel switch is turned to AUTO.

Conditions for the Pausing/Stopping Operation

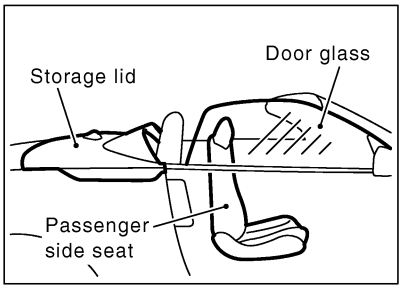
Operation is paused or stopped if any of the conditions below are satisfied during soft top operation.

Stop conditions	● A power seat switch (sliding or reclining) is operated. ● Reclining motor lock is detected (return operation only). ● The seatback tilt switch is operated while the seatback is operating. ● The seatback tilt cancel switch is turned to CANCEL.
Pause condition	● The ignition switch is turned to the START position.

Seat Status Output Signal

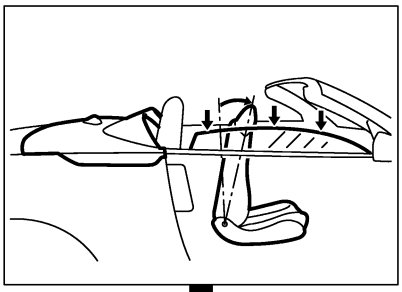
- Depending on the seat status, the “passenger seat control unit” sends the seat status output signal to the “soft top control unit”.
- The “soft top control unit” controls the soft top open/close operation based on whether the seat status signal is ON or OFF. For details about soft top control, refer to RF-19, "Operation Chart" .

Seat status signal OFF→ ON condition	● When a seatback tilt forward motion has been completed. (as a process during a soft top interlocking operation) ● When a seatback tilt forward motion has been completed. (during a automatic operation by using a seatback tilt switch) ● When a seatback tilt forward permission condition is satisfied for a soft top interlocking operation, and a tilt forward / backward operation is under going, and if the seatback is tilted more than 6 degree from the start position of the tilt forward / backward operation. (during a automatic operation by using a seatback tilt switch) ● When a seatback tilt forward permission condition is satisfied for a soft top interlocking operation, and a tilt forward operation was under going, but the operation was stopped under some conditions, (See below *4.) and if the seatback is tilted more than 6 degree from the start position of the tilt forward operation. (after an automatic operation by using a seatback tilt switch) ● When a seatback tilt forward permission condition is satisfied for a soft top interlocking operation, and also the seatback tilt cancel switch is in “Cancel” position. ● When the ignition switch has been turned from “START” to “ON” position. (during a soft top interlocking operation. After an engine start operation, the soft top interlocking operation is accepted.)
Seat status signal ON→ OFF condition	● When a seatback tilt backward motion has been started. (as a process during a soft top interlocking operation) ● When a seatback tilt backward permission condition is satisfied for a soft top interlocking operation, after a tilt forward operation has been finished. (during a automatic operation by using a seatback tilt switch) ● When a seatback tilt backward permission condition is satisfied for a soft top interlocking operation, and a tilt forward / backward operation is under going, and if the seatback is tilted more than 6 degree from the start position of the tilt forward / backward operation. (during a automatic operation by using a seatback tilt switch) ● When a seatback tilt backward permission condition is satisfied for a soft top interlocking operation, and a tilt forward operation was under going, but the operation was stopped under some conditions, (See below *4.) and if the seatback is still tilted more than 6 degree from the start position of the tilt forward operation. (after an automatic operation by using a seatback tilt switch.) ● When the ignition switch has been turned from “ON” to “START” position. (during a soft top interlocking operation. During an engine start operation, the soft top interlocking operation is paused.) ● When a seatback tilt forward motion has been started by the seatback tilt switch, just after the seatback tilt forward motion has been finished for a soft top interlocking operation. (for the seatback tilt switch operation during a soft top interlocking operation) ● When a seatback tilt forward motion has been started by the passenger seat reclining switch, just after the seatback tilt forward motion has been finished for a soft top interlocking operation. (for the seat reclining switch operation during a soft top interlocking operation)



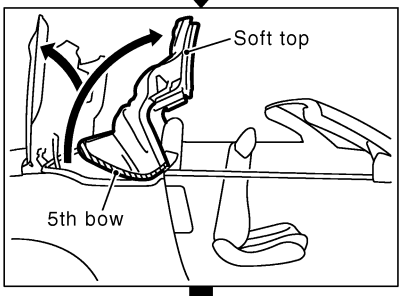
*3: After that, seat condition signal stays ON if cancel switch turns to AUTO.
The seat status signal turns ON only when power window DOWN signal input is ON.

*4: If tilt forward/backward operation stops as a result of the conditions below, the tilt start position does not change.

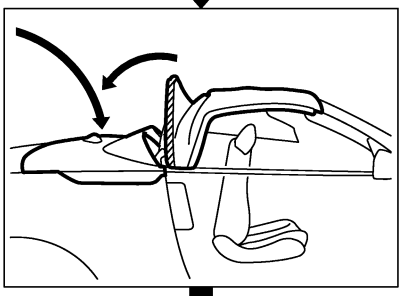


- The vehicle speed is approximately 7 km/h or more.
- The seatback tilt switch is operated while the seatback is operating.
- The ignition switch is turned to the START position.

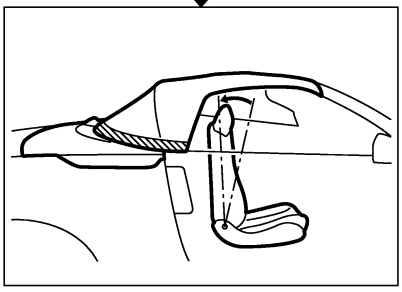
Operation of the Passenger Seat Linked with the Soft Top



Passenger seat operation during soft top CLOSE operation

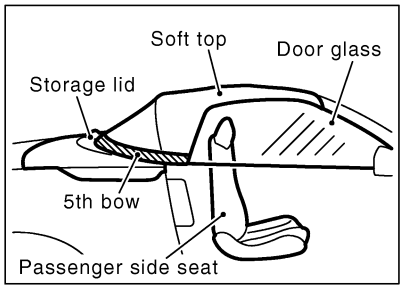


1. Passenger seatback tilts forward by approximately 6˚ as soon as windows go down, when soft top switch has been pushed on CLOSE.

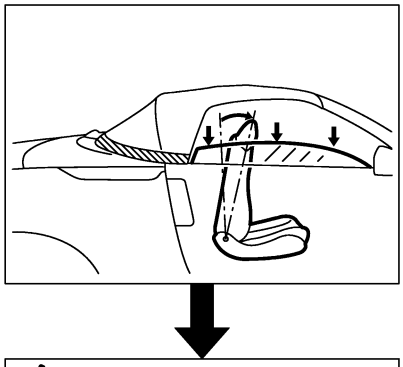


2. Soft top CLOSE operation starts as soon as the passenger seatback tilt forward operation completes.

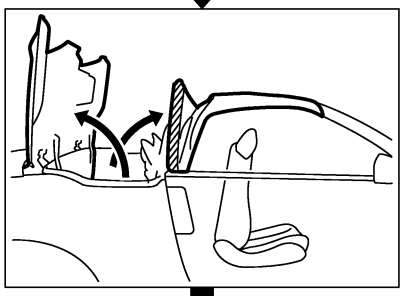
3. Soft top continues the operation.



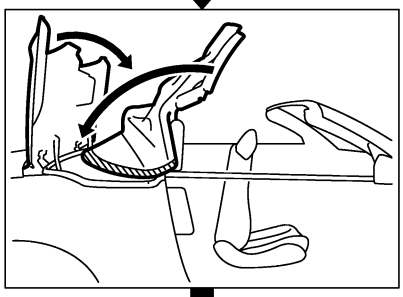
4. Passenger seatback goes back to the original position when 5th bow is closed.



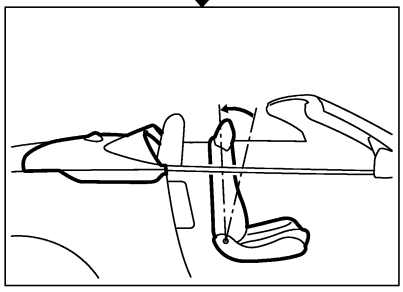
PIIA7847E



Passenger seat operation during soft top OPEN operation



1. Passenger seatback tilts forward by approximately 6° as soon as windows go down, when soft top switch has been pushed on OPEN.



2. Soft top OPEN operation starts as soon as the passenger seatback tilt forward operation completes.

3. Soft top continues the operation.

4. Passenger seatback goes back to the original position when storage lid is closed.

PIIA9713E

CANCEL FUNCTION

The seatback tilt cancel switch can be used to set following functions ON or OFF.

- The seatback tilt forward/backward function
- The soft top interlocking operation function

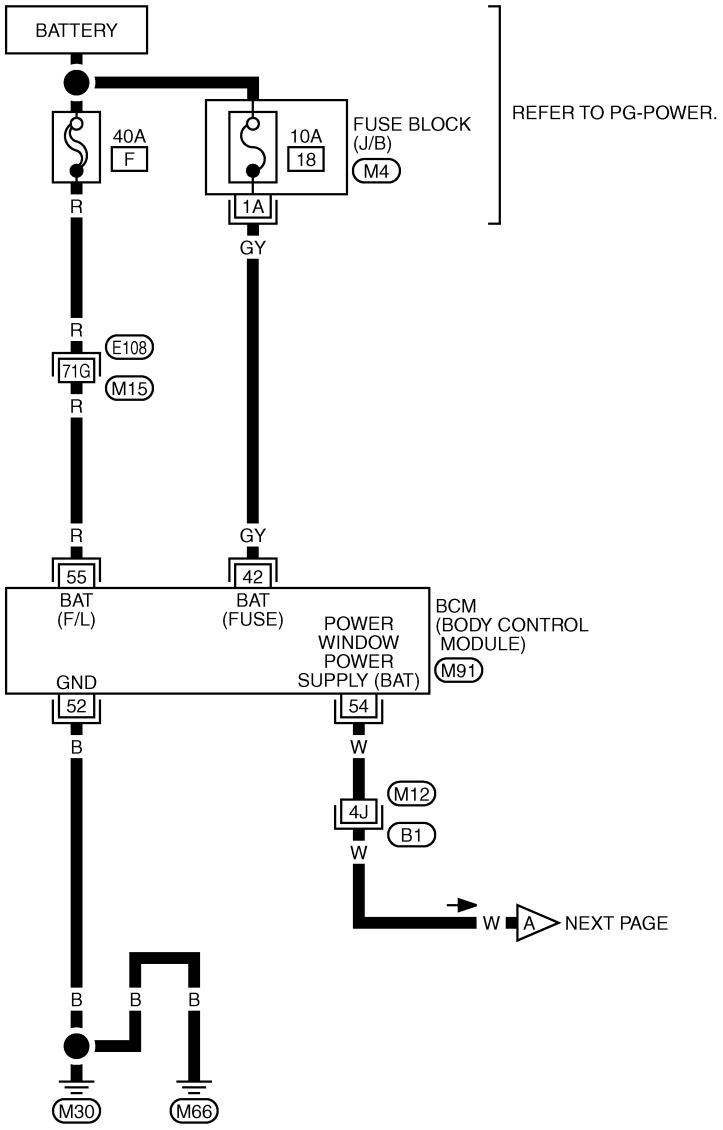
CAUTION:

- **If a child seat is installed, turn the seat tilt cancel switch OFF to disable the seatback tilt forward/backward function and the soft top interlock operation function.**

FAIL-SAFE MODE

If the power seat switch is not operated, nor the seat back tilt switch is not operated, nor the soft top interlocking operation is not under operation, and if the passenger seat control unit detects a motor operation power from the soft top control unit, the passenger seat control unit stops the motor by switching the motor power line to ground.

Operation location	● Sliding motor ● Reclining motor



Canceling Fail-Safe Mode

- Disconnect and reconnect the battery terminal.
- Disconnect and reconnect the passenger seat control unit connector.

Work Flow

NIS0009V

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to SE-16, "System Description" .
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to SE-37, "Trouble Diagnosis Symptom Chart" .
4. Does power seat system operate normally? If Yes, GO TO 5, If No, GO TO 3.
5. INSPECTION END.

Trouble Diagnosis Symptom Chart

NIS0009W

Always check the “WORK FLOW” before troubleshooting. Refer to SE-37, "Work Flow" .

Symptom	Diagnosis / service procedure		Refer to page
Power seat systems do not operate (Neither driver side seat nor passenger side seat operation can be performed).	Check BCM power supply and ground circuit		SE-38
Functions of a driver side power seat do not operate.	Check driver side power seat power supply and ground		SE-40
A part of driver side power seat system does not operate.	1.	Check driver side seat sliding motor circuit	SE-41
	2.	Check driver side seat reclining motor circuit	SE-42
All the passenger side power seat systems do not operate.	Check passenger seat control unit power supply and ground		SE-44
A passenger seat does not a sliding operation.	Check passenger side seat sliding motor circuit		SE-45

Symptom	Diagnosis / service procedure		Refer to page
A passenger seat does not carry out a reclining operation (Neither manual operation nor an automatic operation can be performed).	Check passenger side seat reclining motor circuit		SE-46
The automatic operation of a passenger seat can not be performed (a manual operation can be performed).	1.	Check passenger side seat reclining sensor circuit	SE-47
	2.	Check seatback tilt cancel switch circuit	SE-52
	3.	If the above systems are normal, replace passenger seat control unit.	SE-15
A passenger seat operates automatically when the vehicle is running.	Check vehicle speed signal		SE-57
Passenger seatback does not return during a soft top CLOSE operation.	Check soft top lock switch circuit		SE-55
Passenger seatback does not tilt forward and return during a soft top OPEN operation.	Check storage lid close signal circuit		SE-55
Passenger seatback does not tilt forward during a soft top CLOSE operation or OPEN operation.	1.	Check power window down request signal circuit	SE-54
	2.	Check soft top switch circuit	SE-53
	3.	If the above systems are normal, replace passenger seat control unit.	SE-15
Seat does not tilt when passenger seatback tilt switch is pushed (other functions operate normally).	1.	Check seatback tilt switch circuit	SE-51
	2.	Check seat belt buckle switch circuit	SE-56
	3.	If the above systems are normal, replace passenger seat control unit	SE-15
A part of passenger seat system does not operate (only manual).	1.	Check passenger side seat sliding switch circuit	SE-48
	2.	Check passenger side seat reclining switch circuit	SE-49
Passenger seatback dose not go back to the original position during a soft top CLOSE or OPEN operation.	Check passenger seat control unit ignition signal circuit		SE-44
The manual operation of a passenger seat cannot be performed (a automatic operation can be performed).	Check passenger side power seat ground circuit		SE-50

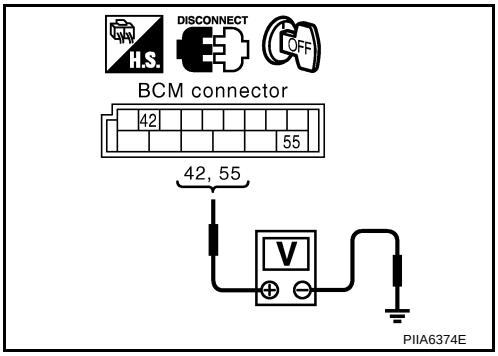
Check BCM Power Supply and Ground

NIS0009X

1. CHECK FUSE

- Check 40A fusible link (letter **F** located in the fuse and fusible link box).
- Check 10A fuse [No.18, located in the fuse block (J/B)]

NOTE:
Refer to SE-15, "Component Parts and Harness Connector Location" .



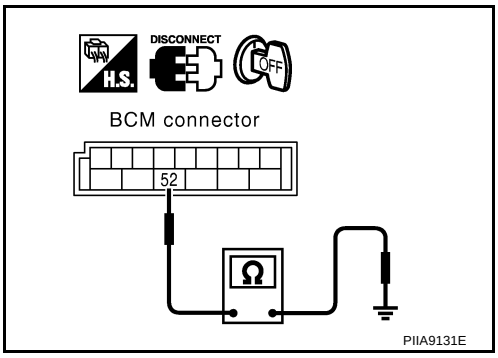
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK BCM POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector M91 terminal 42, 55 and ground.

42 (GY) - Ground : Battery voltage
55 (R) - Ground : Battery voltage



OK or NG

OK >> GO TO 3.
NG >> Repair or replace the harness between BCM and fusible link.

3. CHECK BCM GROUND CIRCUIT

Check continuity between BCM connector M91 terminal 52 and ground.

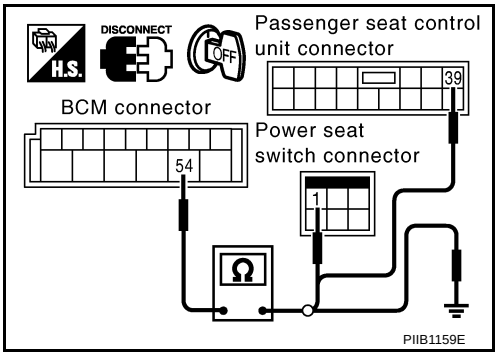
52 (B) - Ground : Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace the harness between BCM and ground.

4. CHECK BCM OUTPUT POWER SUPPLY CIRCUIT

1. Disconnect power seat switch and passenger seat control unit connector.
2. Check continuity between BCM connector M91 terminal 54 and power seat switch connector B326 terminal 1.



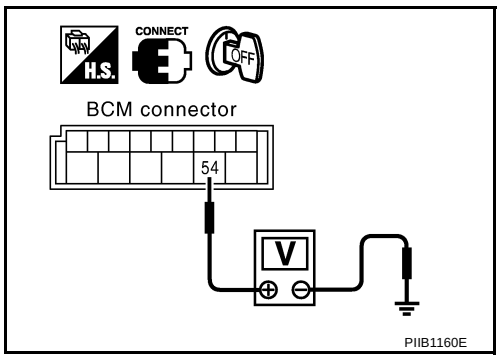
54 (W) - 1 (R) : Continuity should exist.

3. Check continuity between BCM connector M91 terminal 54 and passenger seat control unit connector B354 terminal 39.

54 (W) - 39 (R) : Continuity should exist.

4. Check continuity between BCM connector M91 terminal 54 and ground.

54 (W) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 5.
NG >> Replace harness between BCM and power seat switch or passenger seat control unit.

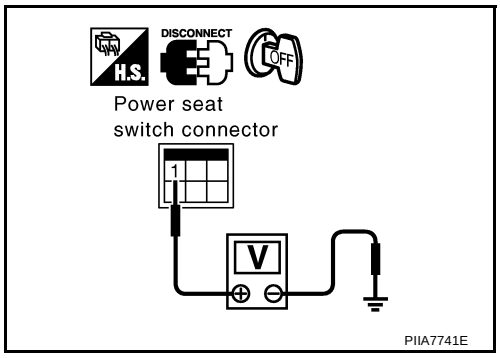
5. CHECK BCM OUTPUT POWER SUPPLY

1. Connect BCM connector.
2. Check voltage between BCM connector M91 terminal 54 and ground.

54 (W) - Ground : Battery voltage

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace BCM.



Check Driver Side Seat Power Supply and Ground

NIS0009Y

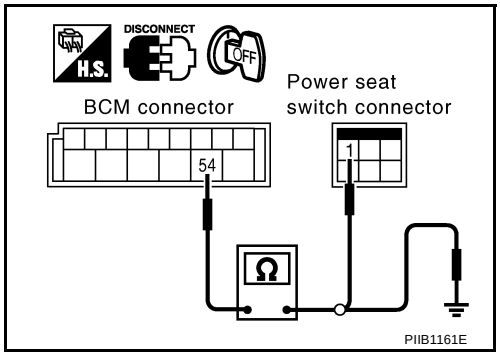
1. CHECK POWER SEAT SWITCH POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect power seat switch connector.
3. Check voltage between power seat switch connector B326 terminal 1 and ground.

1 (R) - Ground : Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



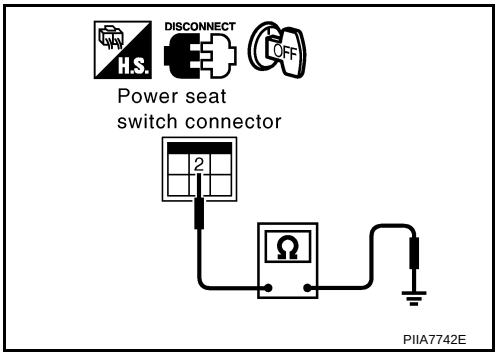
2. CHECK BCM OUTPUT POWER SUPPLY CIRCUIT

1. Disconnect passenger seat control unit connector.
2. Check continuity between BCM connector M91 terminal 54 and power seat switch connector B326 terminal 1.

54 (W) - 1 (R) : Continuity should exist.

3. Check continuity between BCM connector M91 terminal 54 and ground.

54 (W) - Ground : Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace harness between BCM and power seat switch.

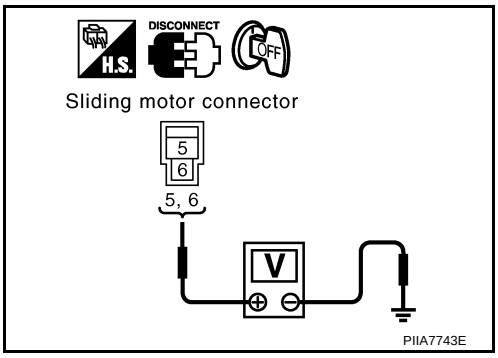
3. CHECK POWER SEAT SWITCH GROUND CIRCUIT

Check continuity between power seat switch connector B326 terminal 2 and ground.

2 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Repair or replace the harness between power seat switch and ground.



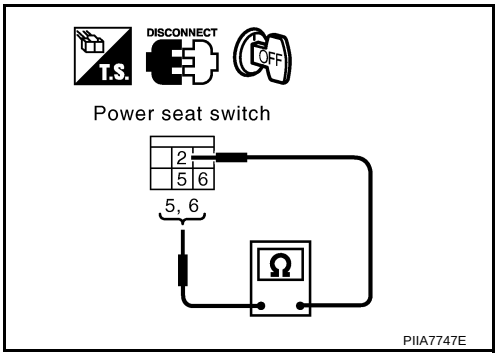
Check Driver Side Seat Sliding Motor Circuit

NIS0009Z

1. CHECK SLIDING MOTOR POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect sliding motor connector.
3. Sliding switch operate, check voltage between sliding motor connector and ground.

Connector	Terminal (Wire color)		Sliding switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B337	5 (Y)	Ground	FORWARD	Battery voltage
			Other than above	0
	6 (SB)		BACKWARD	Battery voltage
			Other than above	0



OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

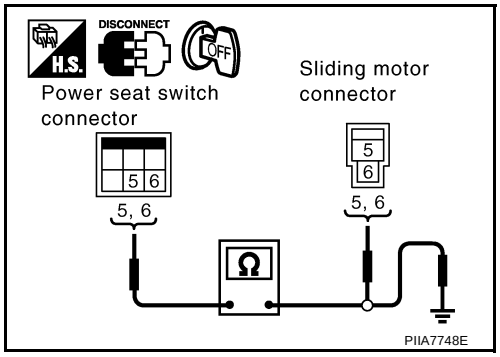
2. CHECK POWER SEAT SWITCH 1

1. Disconnect power seat switch connector.
2. Sliding switch operate, check continuity between power seat switch terminal 5, 6 and 2.

Terminals		Sliding switch condition	Continuity
5	2	BACKWARD	Yes
		Other than above	No
6		FORWARD	Yes
		Other than above	No

OK or NG

OK >> Replace sliding motor.
NG >> Replace power seat switch.



3. CHECK SLIDING MOTOR CIRCUIT HARNESS

1. Disconnect power seat switch connector.
2. Check continuity between power seat switch connector B326 terminal 5, 6 and sliding motor connector B337 terminal 5, 6.

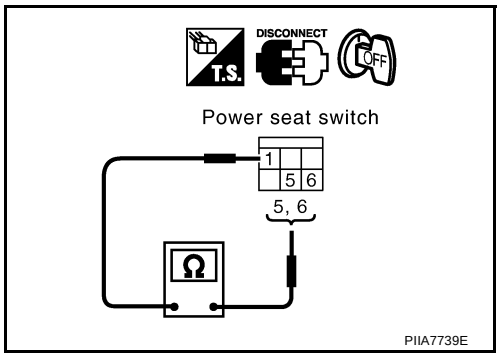
5 (Y) - 5 (Y) : Continuity should exist.
6 (SB) - 6 (SB) : Continuity should exist.

3. Check continuity between power seat switch connector B326 terminal 5, 6 and ground.

5 (Y) - Ground : Continuity should not exist.
6 (SB) - Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness between power seat switch and sliding motor.



4. CHECK POWER SEAT SWITCH 2

Check continuity between power seat switch as follows.

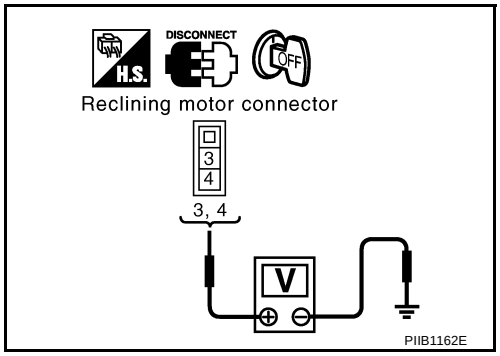
Terminals		Sliding switch condition	Continuity
5	1	FORWARD	Yes
		Other than above	No
6		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace power seat switch.

Check Driver Side Seat Reclining Motor Circuit

NIS000A0

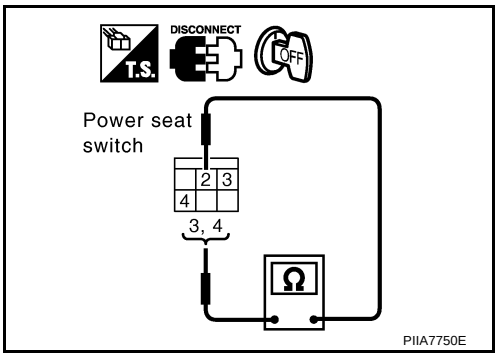


1. CHECK RECLINING MOTOR POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect reclining motor connector.
3. Reclining switch operate, check voltage between reclining motor connector and ground.

Connector	Terminal (Wire color)		Reclining switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B336	3 (OR)	Ground	FORWARD	Battery voltage
			Other than above	0
	4 (G)		BACKWARD	Battery voltage
			Other than above	0

OK or NG



OK >> GO TO 2.
NG >> GO TO 3.

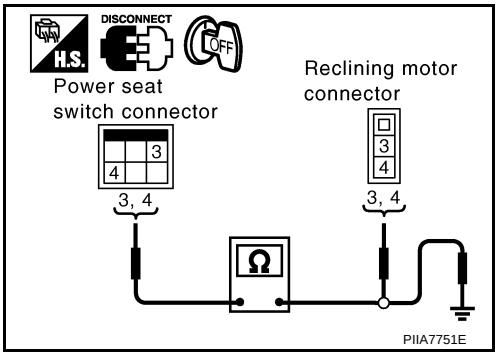
2. CHECK POWER SEAT SWITCH 1

1. Disconnect power seat switch connector.
2. Reclining switch operate, check continuity between power seat switch terminal 3, 4 and 2.

Terminals		Reclining switch condition	Continuity
3	2	FORWARD	Yes
		Other than above	No
4		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> Replace reclining motor.
NG >> Replace power seat switch.



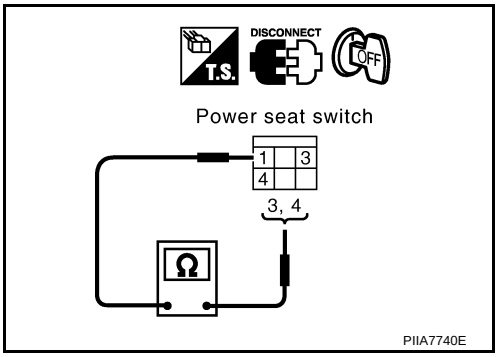
3. CHECK RECLINING MOTOR CIRCUIT HARNESS

1. Disconnect power seat switch connector.
2. Check continuity between power seat switch connector B326 terminal 3, 4 and reclining motor connector B336 terminal 3, 4.

3 (OR) - 3 (OR) : Continuity should exist.
4 (G) - 4 (G) : Continuity should exist.

3. Check continuity between power seat switch connector B326 terminal 3, 4 and ground.

3 (OR) - Ground : Continuity should not exist.
4 (G) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness between power seat switch and reclining motor.

4. CHECK POWER SEAT SWITCH 2

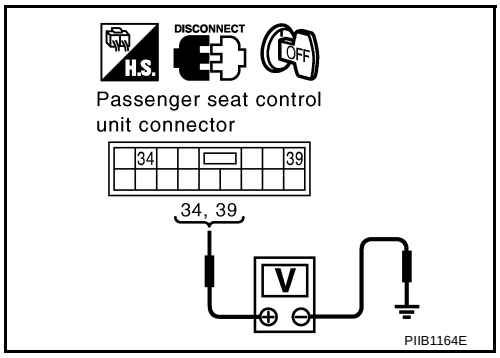
Reclining switch operate, check continuity between power seat switch as follows.

Terminals		Reclining switch condition	Continuity
3	1	FORWARD	Yes
		Other than above	No
4		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace power seat switch.

Check Passenger Seat Control Unit Power Supply and Ground



NIS000A1

1. CHECK PASSENGER SEAT CONTROL UNIT POWER SUPPLY

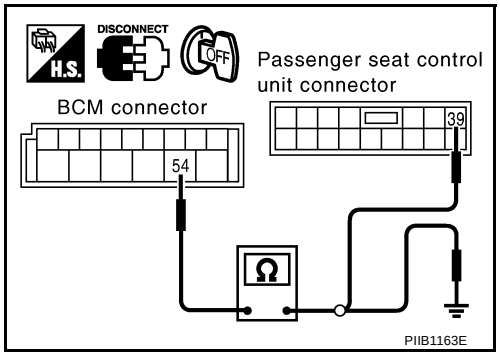
Check voltage between passenger seat control unit connector B354 terminal 34, 39 and ground.

34 (R/W) - Ground : Battery voltage.

39 (R) - Ground : Battery voltage.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> GO TO 2.



2. CHECK BCM OUTPUT POWER SUPPLY CIRCUIT

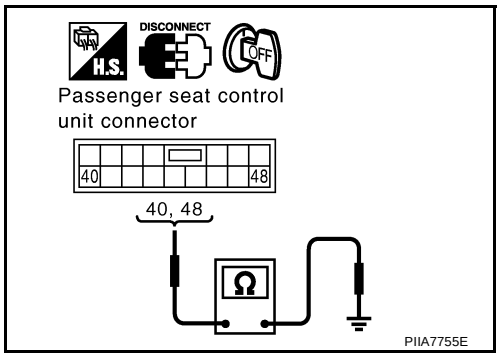
1. Turn ignition switch OFF.
2. Disconnect BCM and passenger seat control unit connector.
3. Check continuity between BCM connector M91 terminal 54 and passenger seat control unit connector B354 terminal 39.

54 (W) - 39 (R) : Continuity should exist.

4. Check continuity between BCM connector M91 terminal 54 and ground.

54 (W) - Ground : Continuity should not exist.

OK or NG



OK >> GO TO 3.
NG >> Repair or replace the harness between BCM and passenger seat control unit.

3. CHECK PASSENGER SEAT CONTROL UNIT GROUND CIRCUIT

Check continuity between passenger seat control unit connector B354 terminal 40, 48 and ground.

40 (B/W) - Ground : Continuity should exist.

48 (B) - Ground : Continuity should exist.

OK or NG

OK >> Check the harness between power seat control unit and fuse block and the 10A fuse (#18).
NG >> Repair or replace the harness between passenger seat control unit and ground.

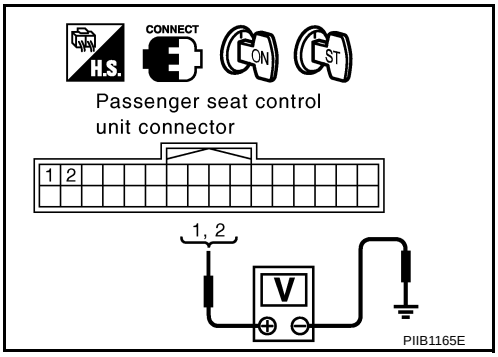
Check Passenger Seat Control Unit Ignition Signal Circuit

NIS000A2

1. CHECK FUSE

- Check 10A fuse [No.9, located in the fuse block (J/B)].
- Check 10A fuse [No.12, located in the fuse block (J/B)].

NOTE:
Refer to SE-15, "Component Parts and Harness Connector Location" .



OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

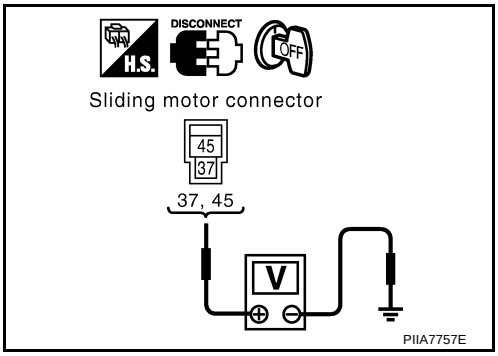
2. CHECK PASSENGER SEAT CONTROL UNIT POWER SUPPLY

Check voltage between passenger seat control unit and ground.

Connector	Terminal (Wire color) (+)	Terminal (Wire color) (-)	Condition		Voltage (V) (Approx.)
B353	1 (W)	Ground	Ignition switch	: START	Battery voltage
	2 (L)			: ON	

OK or NG

OK >> Replace passenger seat control unit.
NG >> Repair or replace the harness between passenger seat control unit and fuse block (J/B).



Check Passenger Side Seat Sliding Motor Circuit

NIS000A3

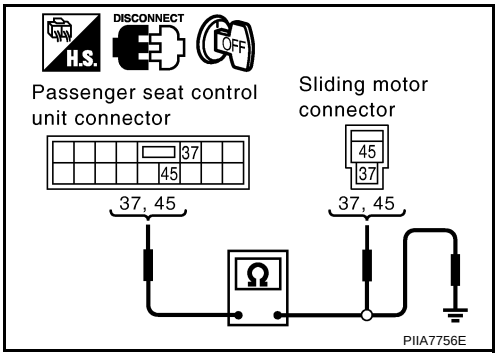
1. CHECK SLIDING MOTOR POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect sliding motor connector.
3. Sliding switch operated, check voltage between sliding motor connector and ground.

Connector	Terminal (Wire color) (+)	Terminal (Wire color) (-)	Sliding switch condition	Voltage (V) (Approx.)
B344	37 (SB)	Ground	BACKWARD	Battery voltage
			Other than above	0
	45 (Y)		FORWARD	Battery voltage
			Other than above	0

OK or NG

OK >> Replace sliding motor.
NG >> GO TO 2.



2. CHECK SLIDING MOTOR CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector.
2. Check continuity between passenger seat control unit connector B354 terminal 37, 45 and sliding motor connector B344 terminal 37, 45.

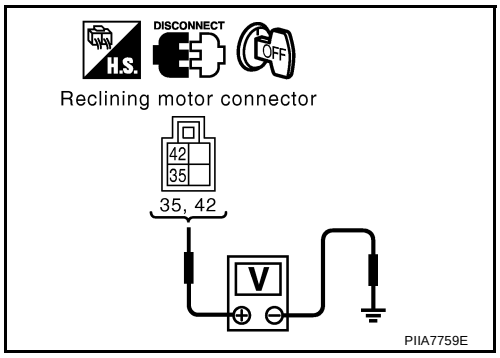
37 (SB) - 37 (SB) : Continuity should exist.
45 (Y) - 45 (Y) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B354 terminal 37, 45 and ground.

37 (SB) - Ground : Continuity should not exist.
45 (Y) - Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Repair or replace harness between passenger seat control unit and sliding motor.



Check Passenger Side Seat Reclining Motor Circuit

NIS000A4

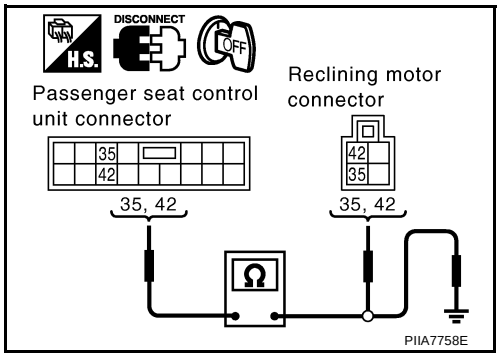
1. CHECK RECLINING MOTOR POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect reclining motor connector.
3. Reclining switch operated, check voltage between reclining motor and ground.

Connector	Terminal (Wire color)		Reclining switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B358	35 (G)	Ground	BACKWARD	Battery voltage
			Other than above	0
	42 (OR)		FORWARD	Battery voltage
			Other than above	0

OK or NG

OK >> Replace reclining motor.
NG >> GO TO 2.



2. CHECK RECLINING MOTOR CIRCUIT HARNESS

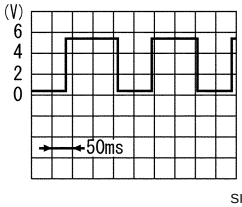
1. Disconnect passenger seat control unit connector.
2. Check continuity between passenger seat control unit connector B354 terminal 35, 42 and reclining motor connector B358 terminal 35, 42.

35 (G) - 35 (G) : Continuity should exist.
42 (OR) - 42 (OR) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B354 terminal 35, 42 and ground.

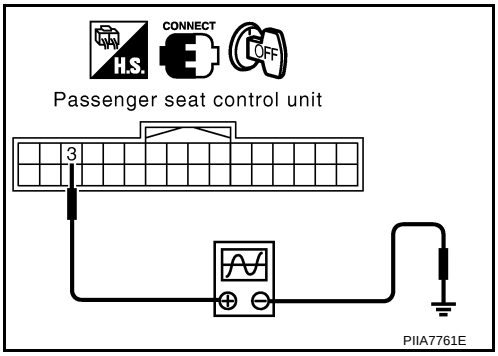
35 (G) - Ground : Continuity should not exist.
42 (OR) - Ground : Continuity should not exist.

OK or NG



OK >> Check the condition of the harness and connector.
NG >> Repair or replace harness between passenger seat control unit and reclining motor.

Check Passenger Side Seat Reclining Sensor Circuit



NIS000A5

1. CHECK RECLINING SENSOR OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between passenger seat control unit connector and ground, with oscilloscope.

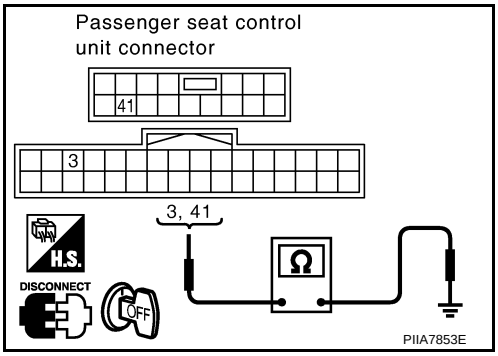
Connector	Terminal (Wire color) (+)	Terminal (Wire color) (-)	Condition	Signal (Reference value)
B353	3 (Y)	Ground	When reclining motor is operated.	

SIIA0692J

PIIA7761E

OK or NG

OK >> Passenger side seat reclining motor circuit is OK.
NG1 >> When voltage waveform dose not appear with a constant voltage (approx. 5V), GO TO 3.
NG2 >> When voltage waveform dose not appear with a constant voltage (approx. 0V), GO TO 2.



2. CHECK RECLINING SENSOR CIRCUIT HARNESS

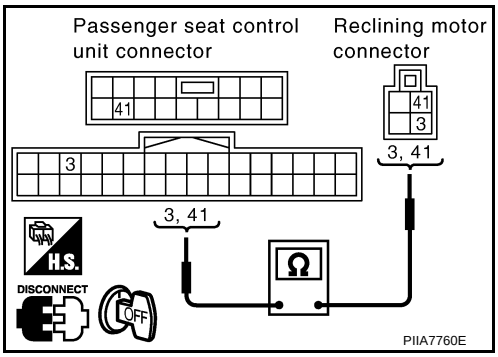
1. Disconnect passenger seat control unit connector.
2. Check continuity between passenger seat control unit connector B354 terminal 3, 41 and ground.

3 (Y) - Ground : Continuity should not exist.
41 (Y/B) - Ground : Continuity should not exist.

OK or NG

OK >> Replace passenger seat control unit.
NG >> Repair or replace harness between passenger seat control unit and reclining motor.

PIIA7853E



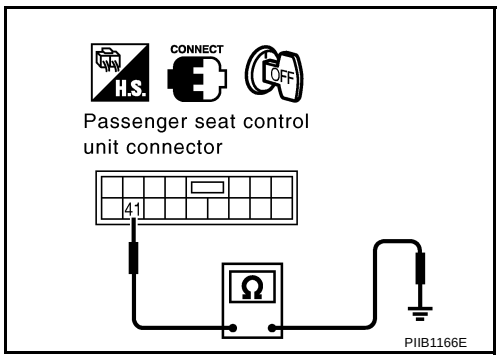
3. CHECK RECLINING SENSOR CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector.
2. Check continuity between passenger seat control unit connector B354 terminal 3, 41 and reclining motor connector B358 terminal 3, 41.

3 (Y) - 3 (Y) : Continuity should exist.
41 (Y/B) - 41 (Y/B) : Continuity should exist.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness between passenger seat control unit and reclining motor.



PIIA7760E

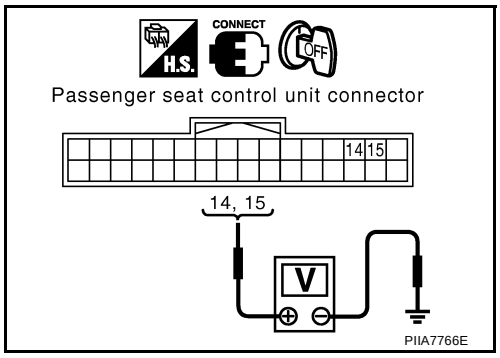
4. CHECK RECLINING SENSOR GROUND CIRCUIT

1. Connect passenger seat control unit connector.
2. Check continuity between passenger seat control unit connector B354 terminal 41and ground.

41 (Y/B) - Ground : Continuity should exist.

OK or NG

OK >> Replace reclining motor.
NG >> Replace passenger seat control unit.



Check Passenger Side Seat Sliding Switch Circuit

NIS000A6

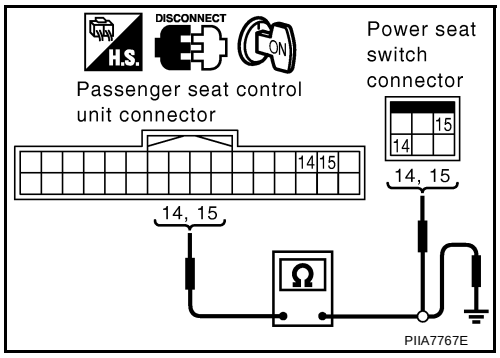
1. CHECK SLIDING SWITCH OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Sliding switch operated, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Sliding switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	14 (Y)	Ground	FORWARD	0
			Other than above	Battery voltage
	15 (SB)		BACKWARD	0
			Other than above	Battery voltage

OK or NG

OK >> Replace passenger seat control unit.
NG >> GO TO 2.



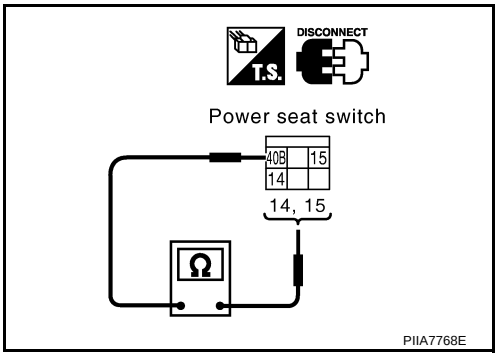
2. CHECK SLIDING SWITCH CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector and power seat switch connector.
2. Check continuity between passenger seat control unit connector B353 terminal 14, 15 and power seat switch connector B357 terminal 14, 15.

14 (Y) - 14 (Y) : Continuity should exist.
15 (SB) - 15 (SB) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B353 terminal 14, 15 and ground.

14 (Y) - Ground : Continuity should not exist.
15 (SB) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between passenger seat control unit and power seat switch.

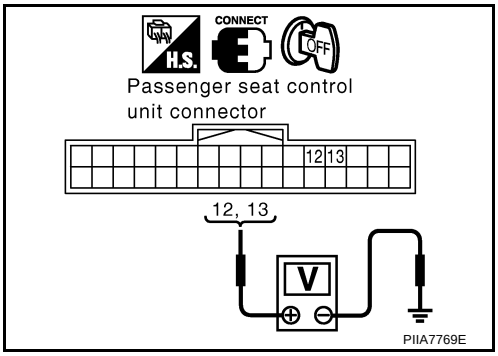
3. CHECK POWER SEAT SWITCH

Sliding switch operated, check continuity between power seat switch terminal 14, 15 and 40B.

Terminals		Sliding switch condition	Continuity
14	40B	FORWARD	Yes
		Other than above	No
15		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace power seat switch.



Check Passenger Side Seat Reclining Switch Circuit

NIS000A7

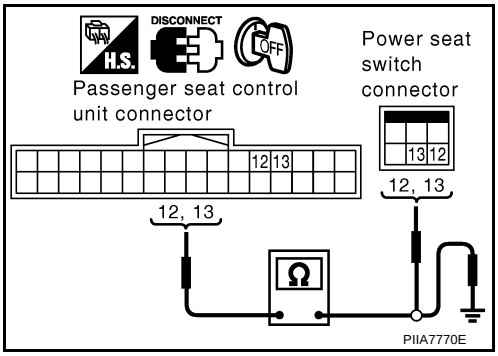
1. CHECK RECLINING SWITCH OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Reclining switch operated, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Reclining switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	12 (OR)	Ground	FORWARD	0
			Other than above	Battery voltage
	13 (G)		BACKWARD	0
			Other than above	Battery voltage

OK or NG

OK >> Passenger side seat reclining switch circuit is OK.
NG >> GO TO 2.



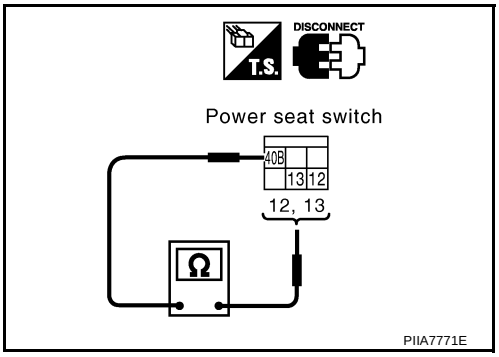
2. CHECK RECLINING SWITCH CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector and power seat switch connector.
2. Check continuity between passenger seat control unit connector B353 terminal 12, 13 and power seat switch connector B357 terminal 12, 13.

12 (OR) - 12 (OR) : Continuity should exist.
13 (G) - 13 (G) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B353 terminal 12, 13 and ground.

12 (OR) - Ground : Continuity should not exist.
13 (G) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between passenger seat control unit and power seat switch.

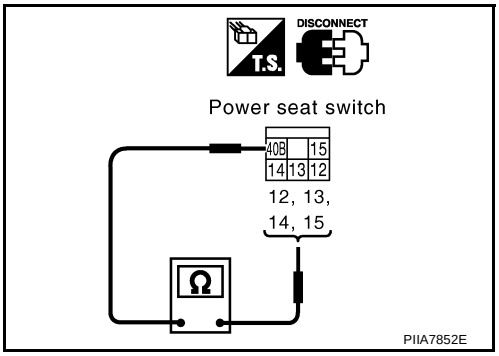
3. CHECK POWER SEAT SWITCH

Reclining switch operated, check continuity between power seat switch terminal 12, 13 and 40B.

Terminals		Reclining switch condition	Continuity
12	40B	FORWARD	Yes
		Other than above	No
13		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace power seat switch.



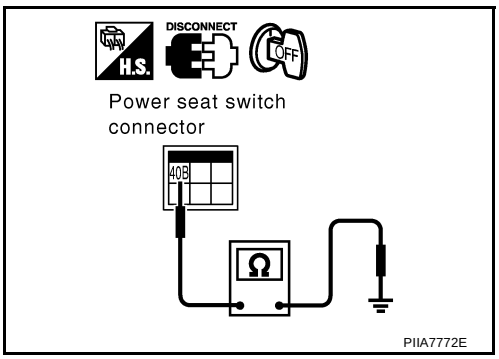
Check Passenger Side Power Seat Switch Ground Circuit

NIS000A8

1. CHECK POWER SEAT SWITCH

1. Turn ignition switch OFF.
2. Disconnect power seat switch connector.
3. Check continuity between power seat switch terminal 12, 13, 14, 15 and 40B.

Terminals		Condition	Continuity
12	40B	When reclining switch is turned to forward	Yes
		Other than above	No
13		When reclining switch is turned to backward	Yes
		Other than above	No
14		When sliding switch is turned to forward	Yes
		Other than above	No
15		When sliding switch is turned to backward	Yes
		Other than above	No



OK or NG

OK >> GO TO 2.
NG >> Replace power seat switch.

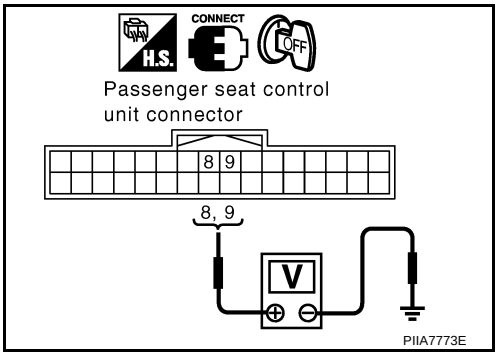
2. CHECK POWER SEAT SWITCH GROUND CIRCUIT

Check continuity between power seat switch connector B357 terminal 40B and ground.

40B (B/W) - Ground : Continuity should exist.

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Repair or replace the harness between power seat switch and ground.



Check Seatback Tilt Switch Circuit

NIS000A9

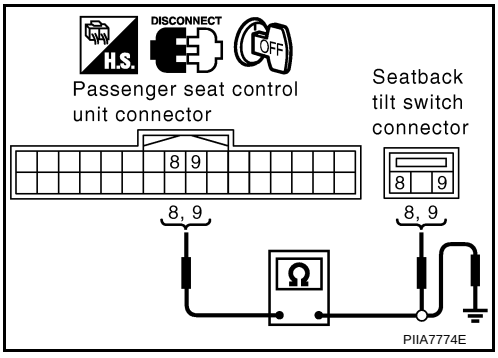
1. CHECK SEATBACK TILT SWITCH OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Seatback tilt switch operated, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Seatback tilt switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	8 (BR)	Ground	FORWARD	0
			Other than above.	Battery voltage
	9 (LG)		BACKWARD	0
			Other than above.	Battery voltage

OK or NG

OK >> Seatback tilt switch circuit is OK.
NG >> GO TO 2.



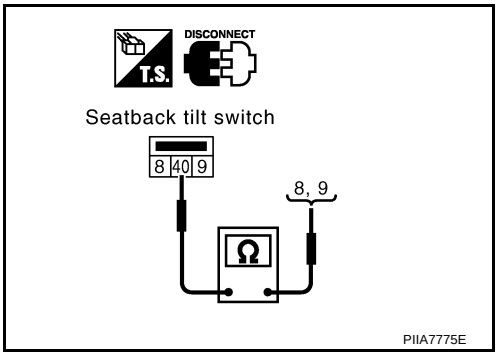
2. CHECK SEATBACK TILT SWITCH CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector and seatback tilt switch.
2. Check continuity between passenger seat control unit connector B353 terminal 8, 9 and seatback tilt switch connector B372 terminal 8, 9.

8 (BR) - 8 (BR) : Continuity should exist.
9 (LG) - 9 (LG) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B353 terminal 8, 9 and ground.

8 (BR) - Ground : Continuity should not exist.
9 (LG) - Ground : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between passenger seat control unit and seatback tilt switch.

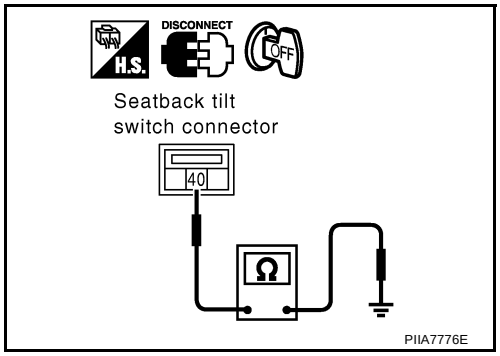
3. CHECK SEATBACK TILT SWITCH

Seatback switch operated, check continuity between seatback tilt switch terminal 8, 9 and 40.

Terminals		Seatback switch condition	Continuity
8	40	FORWARD	Yes
		Other than above	No
9		BACKWARD	Yes
		Other than above	No

OK or NG

OK >> GO TO 4.
NG >> Replace seatback tilt switch.



4. CHECK SEATBACK TILT SWITCH GROUND CIRCUIT

Check continuity between seatback tilt switch connector B372 terminal 40 and ground.

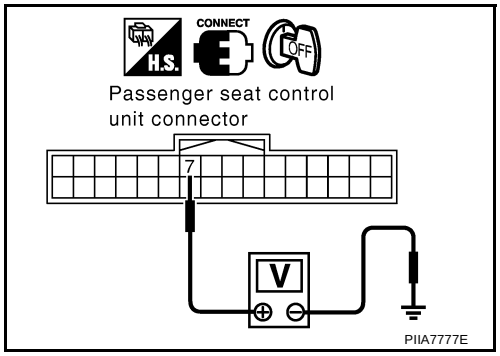
40 (B/W) - Ground : Continuity should exist.

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Repair or replace the harness between seatback tilt switch and ground.

Check Seatback Tilt Cancel Switch Circuit

NIS000AA



1. CHECK SEATBACK TILT CANCEL SWITCH OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Seatback tilt cancel switch operated, check voltage between passenger seat control unit connector and ground.

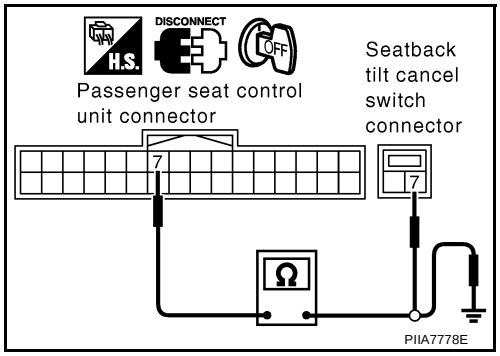
Connector	Terminal (Wire color)		Seatback tilt cancel switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	7 (P)	Ground	CANCEL	0
			AUTO	5

OK or NG

OK >> Passenger seatback tilt cancel switch circuit is OK.
NG >> GO TO 2.

2. CHECK SEATBACK TILT CANCEL SWITCH CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector and seatback tilt cancel switch.
2. Check continuity between passenger seat control unit connector B353 terminal 7 and seatback tilt cancel switch connector B373 terminal 7.

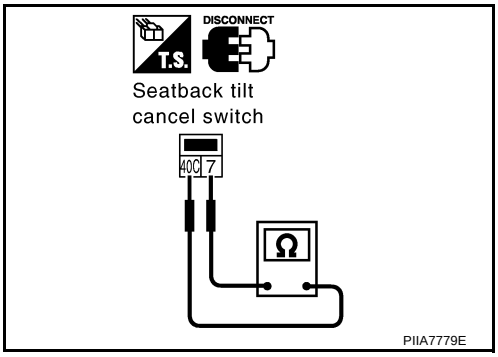


7 (P) - 7 (P) : Continuity should exist.

3. Check continuity between passenger seat control unit connector B353 terminal 7 and ground.

7 (P) - Ground : Continuity should not exist.

OK or NG

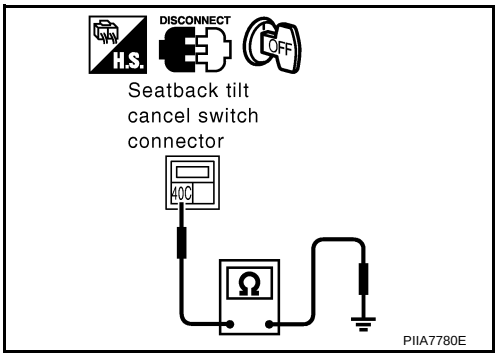


OK >> GO TO 3.
NG >> Repair or replace harness between passenger seat control unit and seatback tilt cancel switch.

3. CHECK SEATBACK TILT CANCEL SWITCH

Seatback tilt cancel switch operated, check continuity between seatback tilt cancel switch terminal 7 and 40C.

Terminals		Seatback tilt cancel switch condition	Continuity
7	40C	CANCEL	Yes
		AUTO	No



OK or NG

OK >> GO TO 4.
NG >> Replace seatback tilt cancel switch.

4. CHECK SEATBACK TILT CANCEL SWITCH GROUND CIRCUIT

Check continuity between seatback tilt cancel switch connector B373 terminal 40C and ground.

40C (B/W) - Ground : Continuity should exist.

OK or NG

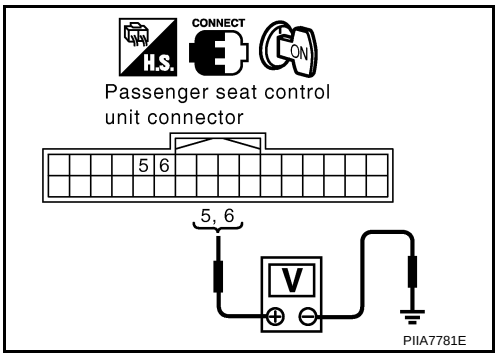
OK >> Check the condition of the harness and connector.
NG >> Repair or replace the harness between seatback tilt cancel switch and ground.

Check Soft Top Switch Circuit

NIS000AB

1. CHECK SOFT TOP SYSTEM

Soft top is operated.



Operate normally?

Yes >> GO TO 2.
No >> Further inspection necessary. Refer to

2. CHECK SOFT TOP SWITCH OUTPUT SIGNAL

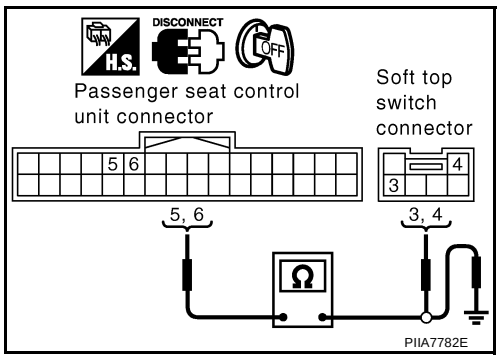
1. Turn ignition switch ON.
2. Soft top switch operated, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Soft top switch condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	5 (R)	Ground	OPEN*	0
			Other than above	Battery voltage
	6 (GY)		CLOSE*	0
			Other than above	Battery voltage

*: Turn ignition switch ON and depress brake pedal when soft top switch operates.

OK or NG

OK >> Soft top switch circuit is OK.
NG >> GO TO 3.



3. CHECK SOFT TOP SWITCH CIRCUIT HARNESS

1. Disconnect passenger seat control unit connector and soft top switch.
2. Check continuity between passenger seat control unit connector B353 terminal 5, 6 and soft top switch connector M14 terminal 3, 4.

5 (R) - 3 (L/B) : Continuity should exist.
6 (GY) - 4 (R/G) : Continuity should exist.

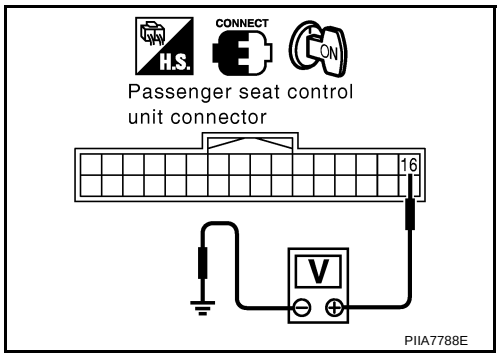
3. Check continuity between passenger seat control unit connector B353 terminal 5, 6 and ground.

5 (R) - Ground : Continuity should not exist.
6 (GY) - Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness between passenger seat control unit and soft top switch.

Check Power Window Down Request Signal Circuit



NIS000AC

1. CHECK POWER WINDOW DOWN REQUEST SUGNAL INPUT

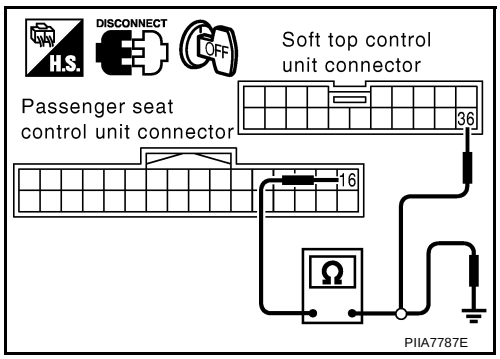
1. Turn ignition switch ON.
2. Check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	16 (PU/W)	Ground	When soft top switch is turned to OPEN or CLOSE.*	0
			Other than above.	5

*: Turn ignition switch ON and depress brake pedal when soft top switch operates.

OK or NG

OK >> Power window down request signal circuit is OK.
NG >> GO TO 2.



2. CHECK POWER WINDOW DOWN REQUEST SUGNAL CIRCUIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and passenger seat control unit connector.
3. Check continuity between passenger seat control unit connector B353 terminal 16 and soft top control unit connector B67 terminal 36.

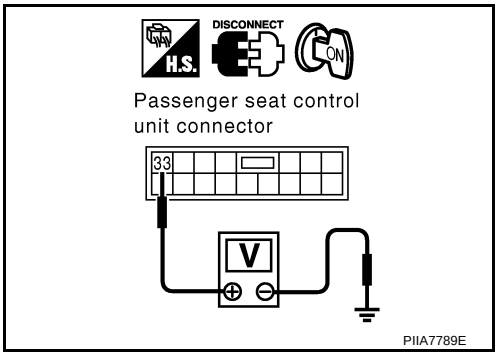
16 (PU/W) - 36 (PU) : Continuity should exist.

4. Check continuity between passenger seat control unit connector B353 terminal 16 and ground.

16 (PU/W) - Ground : Continuity should not exist.

OK or NG

OK >> Power window down request signal circuit is OK. Further inspection is necessary. Refer to RF-81, "Check Power Window Down Request Signal" .
NG >> Repair or replace harness between passenger seat control unit and soft top control unit.



Check Storage Lid Close Signal Circuit

NIS000AD

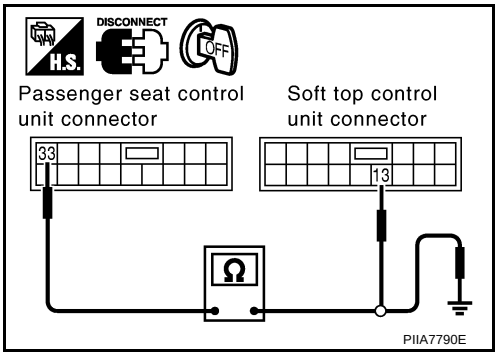
1. CHECK STORAGE LID CLOSE SIGNAL

1. Turn ignition switch ON.
2. Soft top operates in OPEN, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	33 (G/B)	Ground	When storage lid is in a closing operation	Battery voltage
			Other than above.	0

OK or NG

OK >> Replace passenger seat control unit.
NG >> GO TO 2.



2. CHECK STORAGE LID CLOSE SIGNAL CIRCUIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect soft top control unit and storage lid actuator and passenger seat control unit connector.
3. Check continuity between passenger seat control unit connector B353 terminal 33 and soft top control unit connector B66 terminal 13.

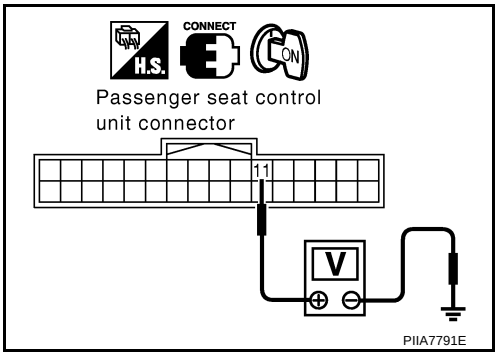
33 (G/B) - 13 (L/R) : Continuity should exist.

4. Check continuity between passenger seat control unit connector B353 terminal 33 and ground.

33 (G/B) - Ground : Continuity should not exist.

OK or NG

OK >> Storage lid close signal circuit is OK. Further inspection is necessary. Refer to RF-62, "Check Storage Lid Actuator (Close Operate)" .
NG >> Repair or replace harness between passenger seat control unit and soft top control unit.



Check Soft Top Lock Switch Circuit

NIS000AE

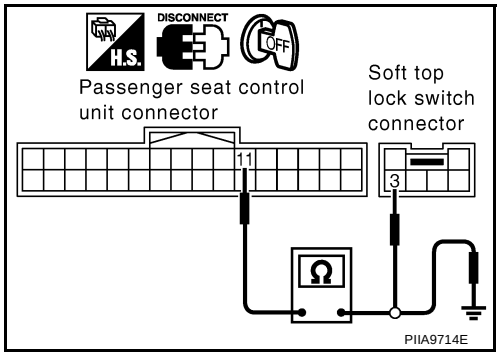
1. CHECK SOFT TOP LOCK SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Soft top operates in CLOSE, check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B353	11 (L/W)	Ground	5th bow full latch switch is turned to ON	0
			Other than above	5

OK or NG

OK >> Replace passenger seat control unit.
NG >> GO TO 2.



2. CHECK SOFT TOP LOCK SWITCH CIRCUIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect passenger seat control unit and soft top lock switch connector.
3. Check continuity between passenger seat control unit connector B353 terminal 11 and soft top lock switch connector T205 terminal 3.

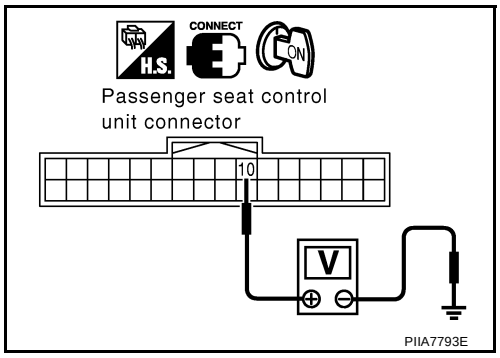
11 (L/W) - 3 (Y) : Continuity should exist.

4. Check continuity between passenger seat control unit connector B353 terminal 11 and ground.

11 (L/W) - Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and connector.
NG >> Repair or replace harness between passenger seat control unit and soft top control unit.



Check Seat Belt Buckle Switch Circuit

NIS000AF

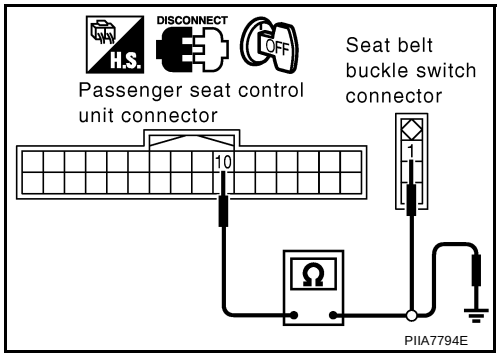
1. CHECK SEAT BELT BUCKLE SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between passenger seat control unit connector and ground.

Connector	Terminal (Wire color)		Condition		Voltage (V) (Approx.)
	(+)	(-)			
B353	10 (L/Y)	Ground	Seat belt.	: Fastened	5
				: Unfastened	0

OK or NG

OK >> Seat belt buckle switch circuit is OK.
NG >> GO TO 2.



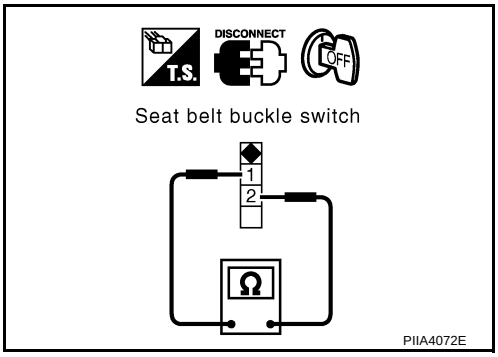
2. CHECK SEAT BELT BUCKLE SWITCH CIRCUIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect passenger seat control unit connector and seat belt buckle switch connector.
3. Check continuity between passenger seat control unit connector B353 terminal 10 and seat belt buckle switch connector B11 terminal 1.

10 (L/Y) - 1 (W) : Continuity should exist.

4. Check continuity between passenger seat control unit connector B353 terminal 10 and ground.

10 (L/Y) - Ground : Continuity should not exist.



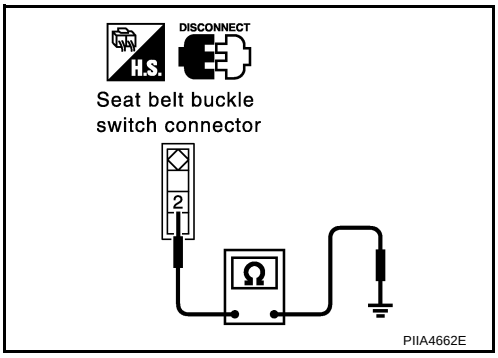
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between passenger seat control unit and seat belt buckle switch.

3. CHECK SEAT BELT BUCKLE SWITCH

Check continuity between seat belt buckle switch terminal 1 and 2.

Terminals		Condition		Continuity
1	2	Seat belt	: Fastened	No
			: Unfastened	Yes



OK or NG

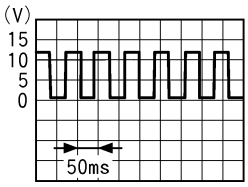
OK >> GO TO 4.
NG >> Replace seat belt buckle switch.

4. CHECK SEAT BELT BUCKLE SWITCH GROUND CIRCUIT

Check continuity between seat belt buckle switch connector B11 terminal 2 and ground.

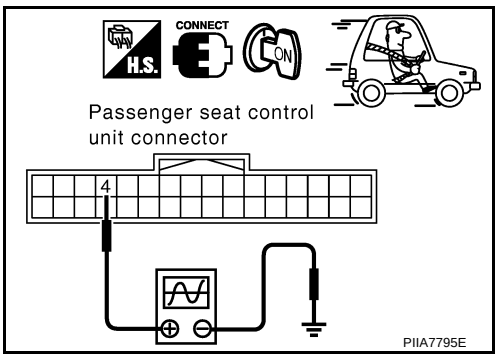
2 (B) - Ground : Continuity should exist.

OK or NG



OK >> Check the condition of the harness and connector.
NG >> Repair or replace the harness between seat belt buckle switch and ground.

NIS000AG



Check Vehicle Speed Signal

1. CHECK VEHICLE SPEED SIGNAL

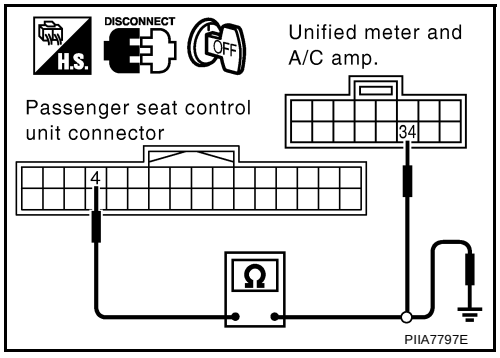
1. Turn ignition switch ON.
2. Check signal between passenger seat control unit connector and body ground with oscilloscope.

Connector	Terminal (Wire color)		Condition	Signal (Reference value)
	(+)	(-)		
B353	4 (PU)	Ground	When vehicle speed is approx. 40 km/h (25 MPH)	

PIIB0078J

OK or NG

OK >> Replace passenger seat control unit.
NG >> GO TO 2.



2. CHECK VEHICLE SPEED SIGNAL CIRCUIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect passenger seat control unit connector and unified meter and A/C amp.
3. Check continuity between passenger seat control unit connector B353 terminal 4 and unified meter and A/C amp. connector M49 terminal 34.

4 (PU) - 34 (L) : Continuity should exist.

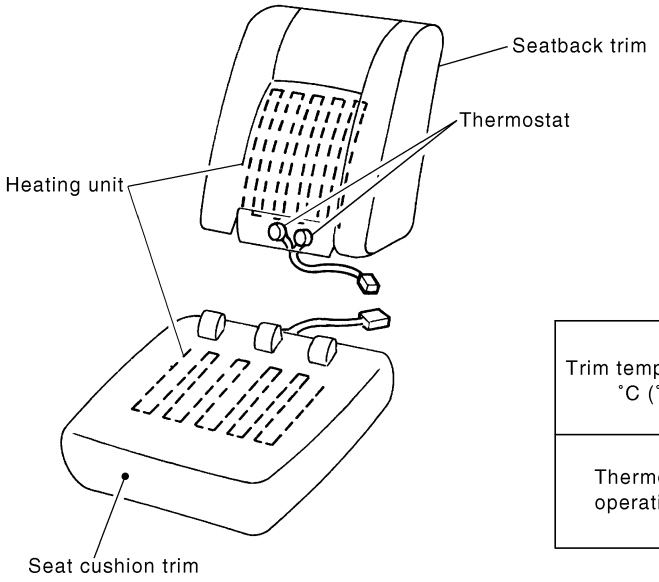
4. Check continuity between passenger seat control unit connector B353 terminal 4 and ground.

4 (PU) - Ground : Continuity should not exist.

OK or NG

OK >> Vehicle speed signal circuit is OK. Further inspection is necessary. Refer to DI-18, "Vehicle Speed Signal Inspection" .

NG >> Repair or replace harness between passenger seat control unit and unified meter and A/C amp.



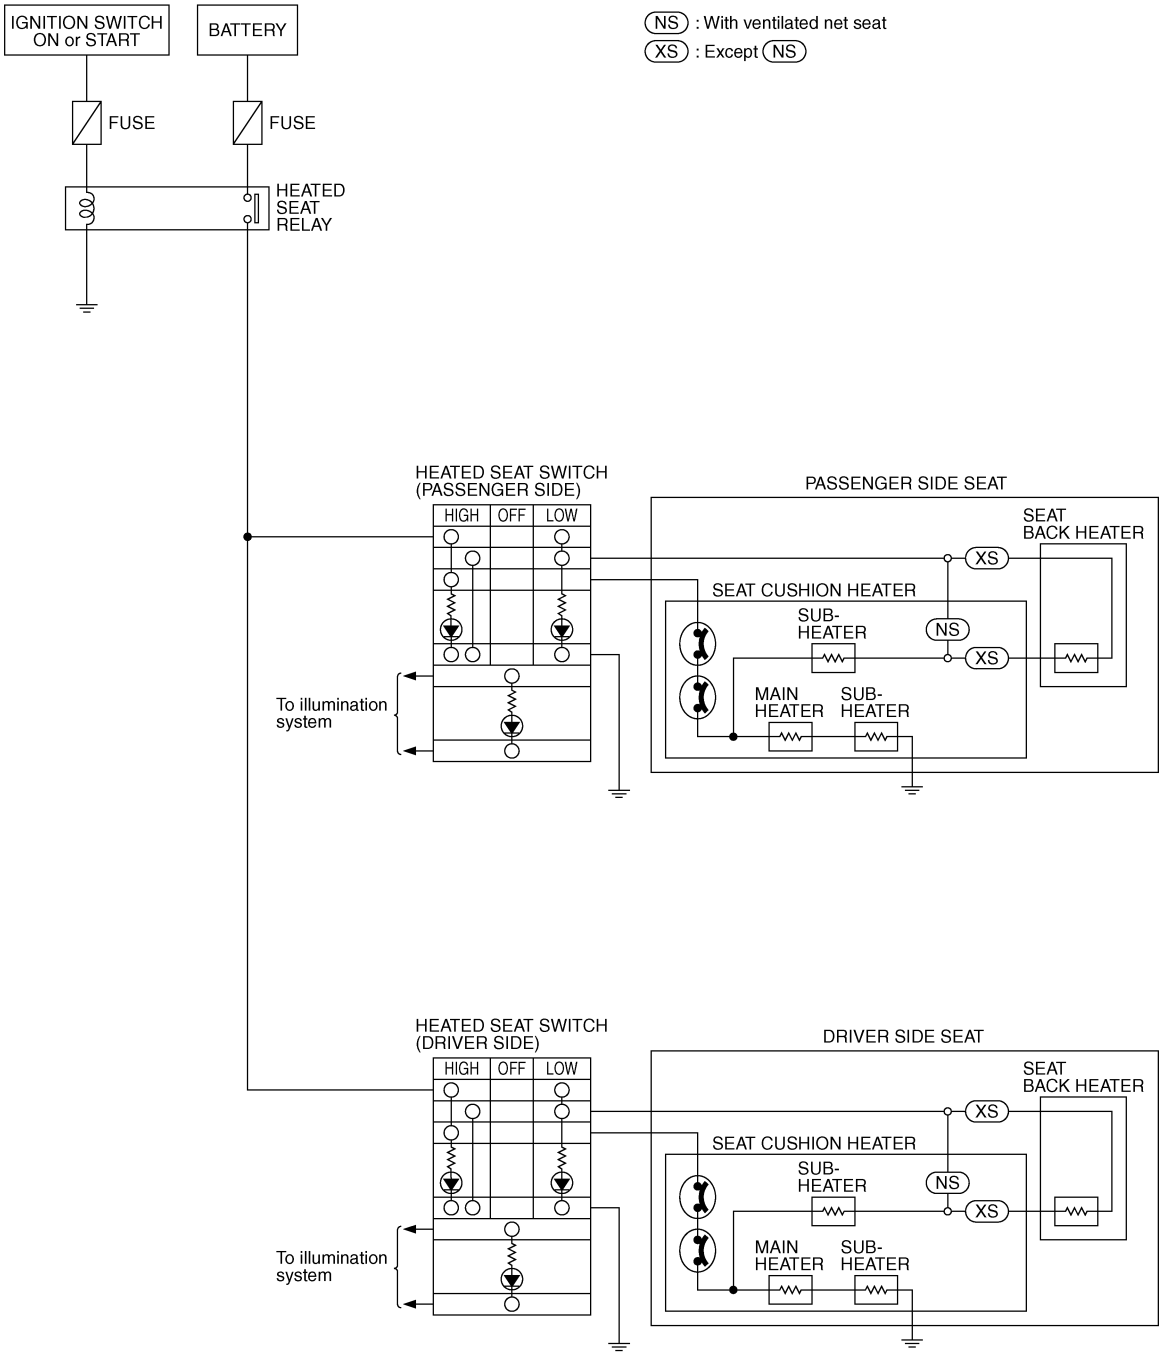
HEATED SEAT

PFP:87335

Description

NIS000AH

- When handling seat, be extremely careful not to scratch heating unit.
- To replace heating unit, seat trim and pad should be separated.
- Do not use any organic solvent, such as thinner, benzene, alcohol, etc. to clean trims.



Trim temperature °C (°F)	Heating up to 35 - 45 (95 - 113)	Cooling down to 25 - 35 (77 - 95)
Thermostat operation	OFF	ON

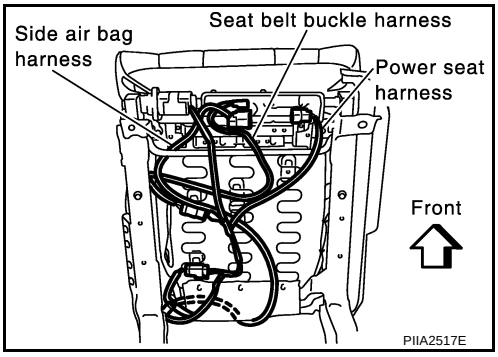
3. Side air bag module
4. Seatback trim upper
5. Seatback trim lower
6. Seatback pad lower

7. Seatback garnish
8. Seat cushion trim
9. Seat cushion pad
10. Seatback frame
11. Seat cushion inner finisher
12. Reclining inner device
13. Power seat switch
14. Inner cover inner device
15. Seat cushion frame
16. Reclining device rod
17. Reclining outer device
18. Inner cover outer device
19. Side air bag module harness
20. Seat cushion outer finisher
21. Lifter dial
22. Seat belt buckle
23. Power seat harness
24. Sliding inner assembly
25. Flexible wire
26. Seat thigh support adjuster assembly
27. Sliding outer assembly



REMOVAL

When removing or installing the seat trim, carefully handle it to keep dirt out and avoid damage.

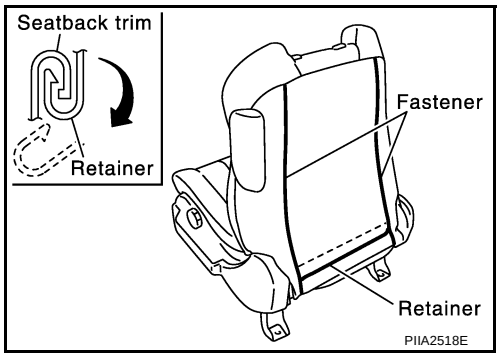
CAUTION:

- **Before removing the seat, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **When checking the power seat circuit for continuity using a circuit tester, do not confuse its connector with the side air bag module connector. Such an error may cause the air bag to deploy.**
- **Do not drop, tilt, or bump the side air bag module installing in the seat. Always handle it with care.**

1. Remove the front leg cover and rear leg cover (LH/RH).
2. Slide the seat until the body mounting bolts are visible and a tool can be inserted.
3. Remove mounting bolts from vehicle.
4. Disconnect both battery cables.
5. Disconnect harness connector from under seat cushion.
6. Remove fastening clips under seat cushion, and remove seats from vehicle.

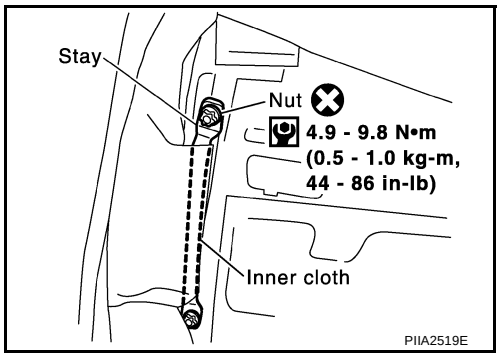
INSTALLATION

Install in the reverse order of removal.



Disassembly and Assembly

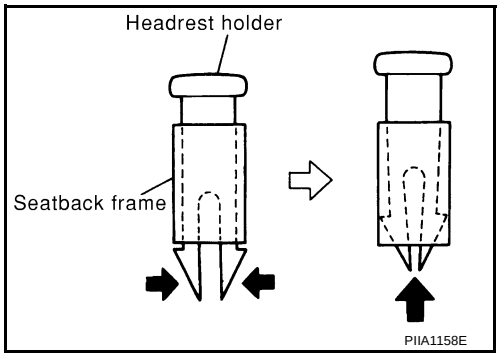
NIS000AM



SEATBACK TRIM AND PAD (MANUAL SEAT AND POWER SEAT)

Disassembly

1. Open fastener on back of seatback, and remove retainer from seatback trim.



2. Remove the stay securing the inner cloth.

3. Squeeze and pull up headrest holder tabs to remove from seatback frame.

   NOTE:
   Before installing the headrest holder, check its orientation (front/rear and right/left).

4. Remove the seat heater harness connector. After removing the seatback trim and pad, remove the hog ring to separate the trim and pad.

   NOTE:
   Seatback heater unit is stitched into seatback trim. It cannot be separated (for heated seat models only).

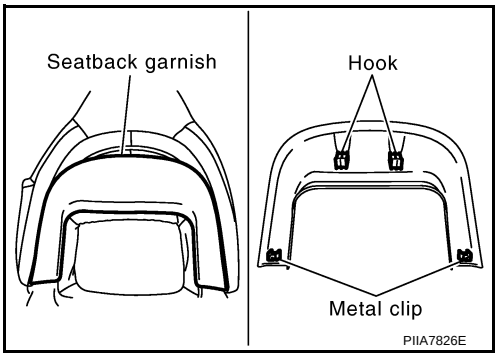
Assembly

Assemble in the reverse order of disassembly.

REMOVAL OF SEATBACK ASSEMBLY

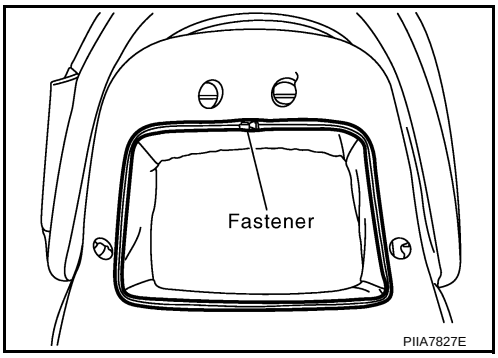
1. After completing the steps 1 of “SEATBACK TRIM AND PAD”, remove the harness connectors for the reclining motor (driver seat only).
2. Pull out the harness connector for the side air bag from the seat cushion.
3. Remove the reclining device mounting bolts on the seatback frame, and remove the seatback assembly.

   NOTE:
   When assembling the seatback frame, make sure that the reclining device are locked on both sides, and be sure to temporarily tighten the bolts, then tighten them finally.



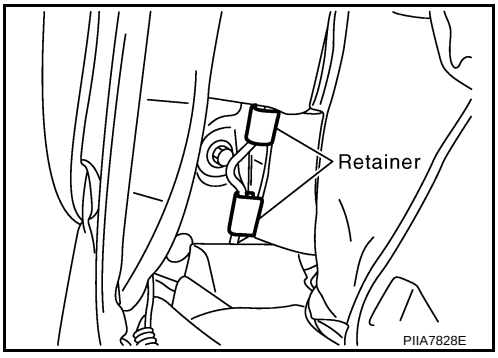
INSTALLATION OF SEATBACK ASSEMBLY

Install in the reverse order of removal.

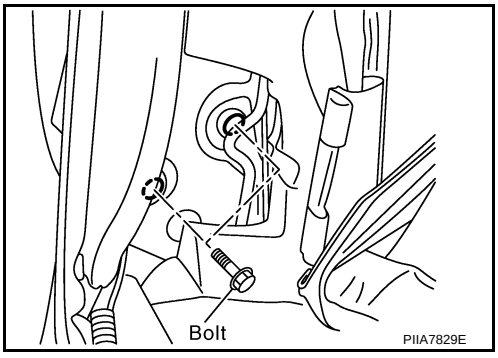


SEATBACK TRIM AND PAD (NET SEAT FOR ROADSTER)

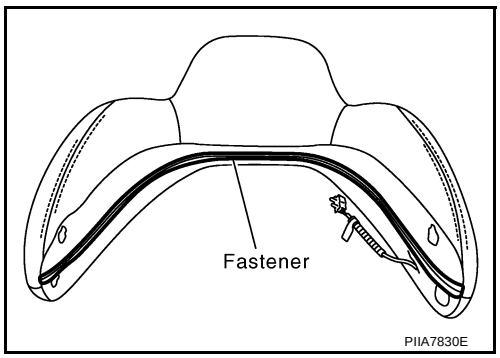
Disassembly



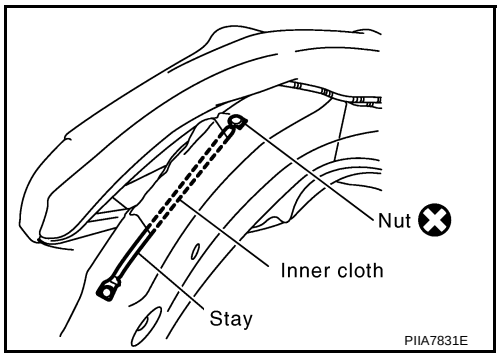
1. Remove the seatback garnish.



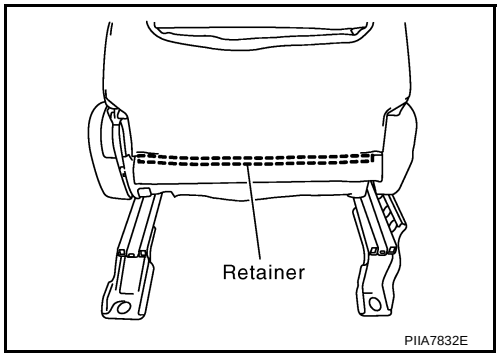
2. Open fastener on seatback lower.



3. Remove the retainer.



4. Disconnect side air bag connector.
5. Remove the seatback upper mounting bolts.



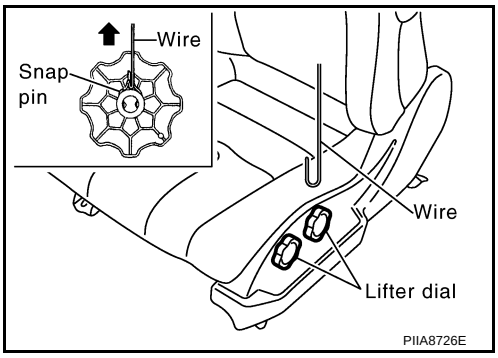
6. Open fastener on seatback upper.

7. Remove the stay securing the inner cloth.

8. Separate the seatback frame and pad upper and seatback trim upper.
9. Remove the retainer.

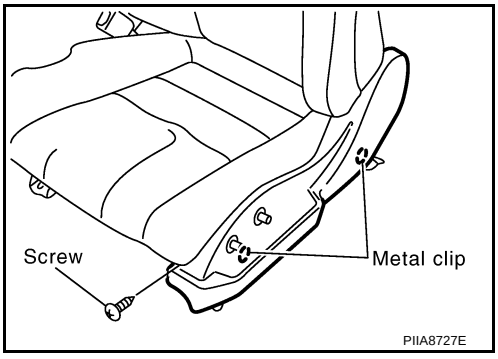
10. After removing the seatback trim and pad, remove the hog rings to separate the trim and pad.

Assembly



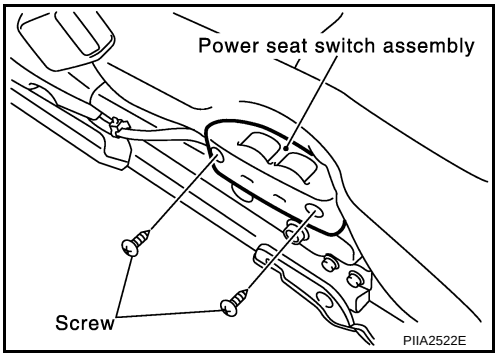
Assemble in the reverse order of disassembly.

SEAT CUSHION TRIM AND PAD (POWER SEAT AND NET SEAT)

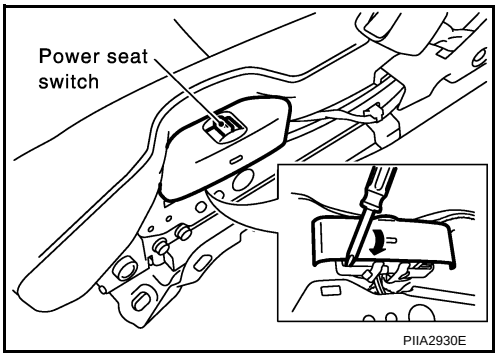


CAUTION:
Do not disassemble front passenger seat cushion assembly.
Always replace as an assembly.
For front passenger seat service parts, refer to the service part catalogue.

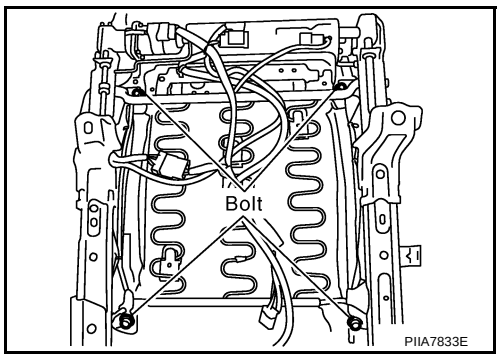
Disassembly



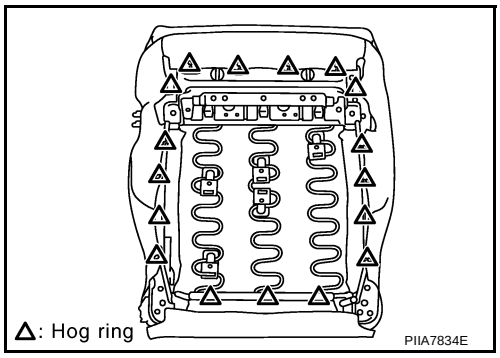
1. Hang snap ring on wire, and pull it up to remove. Remove Lifter dial.



2. Unfasten the screw and metal clip and remove the seat cushion outer finisher.



3. Unfasten screws and remove the power seat switch assembly.



Insert a screwdriver in lower side of power seat switch and remove it (passenger seat for coupe).

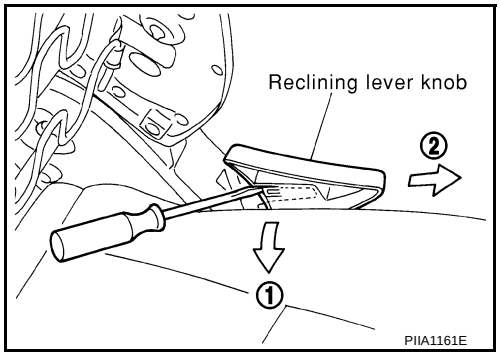
4. Remove bolts on the under side of seat cushion.

5. Remove hog rings from under seat cushion frame.

6. Disconnect harness connector from seat cushion heater unit.
7. After removing the seat cushion trim and pad, remove the hog rings to separate the trim and pad.

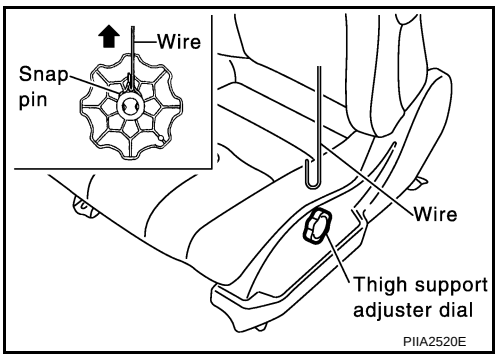
NOTE:
Seat cushion heater unit is stitched into seat cushion trim. It cannot be separated.

Assembly



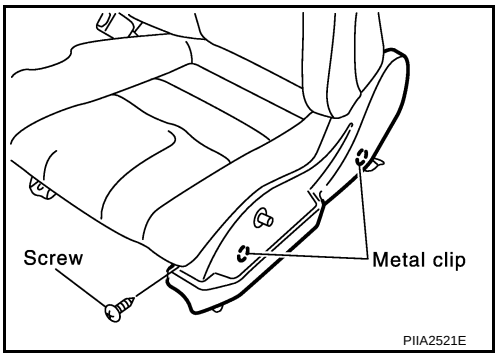
Assemble in the reverse order of disassembly.

SEAT CUSHION TRIM AND PAD (MANUAL SEAT FOR COUPE)



CAUTION:
Do not disassemble front passenger seat cushion assembly.
Always replace as an assembly.
For front passenger seat service parts, refer to the service part catalogue.

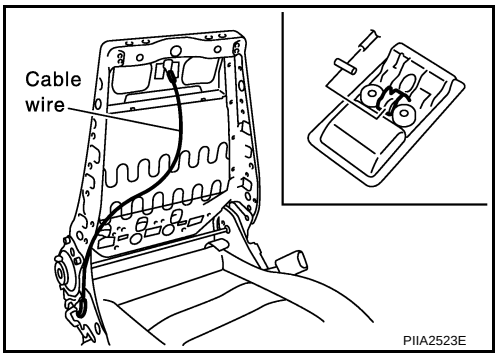
Disassembly



1. Pull up tabs of reclining lever from inside. Slide knob forward to remove.

2. Hang snap ring on wire, and pull it up to remove. Remove thigh support adjuster dial.

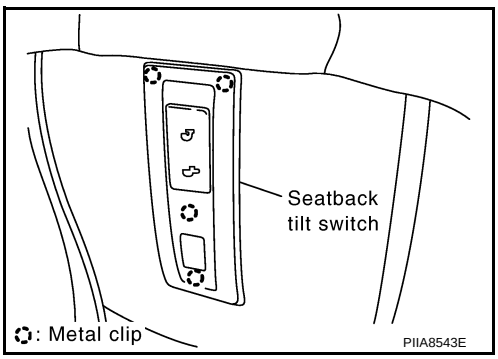
3. Unfasten the screw and metal clip and remove the seat cushion outer finisher.



4. Remove bolts on the under side of seat cushion.
5. Remove hog rings from under seat cushion frame.
6. After removing the seat cushion trim and pad, remove the hog rings to separate the trim and pad.

Assembly

Assemble in the reverse order of disassembly.



PASSENGER SIDE SEATBACK FORWARD RECLINING (COUPE)

1. Remove passenger side seatback trim and pad. Refer to SE-74, "SEATBACK TRIM AND PAD (MANUAL SEAT AND POWER SEAT)" .
2. Remove screw and fixing clip, then disconnect cable wire.

PASSENGER SIDE SEATBACK FORWARD RECLINING (ROADSTER)

1. Remove the seatback tilt switch.

2. Disconnect seatback tilt switch harness connector.

3. Remove passenger side seatback trim and pad. Refer to SE-74, "SEATBACK TRIM AND PAD (MANUAL SEAT AND POWER SEAT)" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NHS00008

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for SRS “AIR BAG” and “SEAT BELT PRE-TENSIONER” Service

NHS00009

- Do not use electrical test equipment to check SRS circuits unless instructed in this Service Manual.
- Before servicing the SRS, turn ignition switch OFF, and disconnect both battery cables. Then wait at least 3 minutes.
  For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pre-tensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.
- Diagnosis sensor unit must always be installed with their arrow marks “⇐” pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformations or rust before installation and replace if required.
- The spiral cable must be set to the neutral position since its rotations are limited. Do not attempt to turn steering wheel or column, if steering gear was disconnected from the column shaft.
- Handle air bag module carefully. Always put a driver air bag module with the pad side facing upward.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After an air bag deployemented, the front instrument panel assembly should be replaced if damaged.
- Always replace instrument panel pad following front passenger air bag deployment.

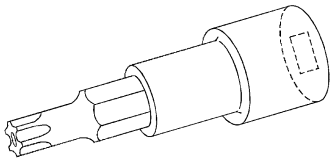
Precautions for Battery Service

NHS0000A

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Occupant Classification System Precaution

NHS000A0



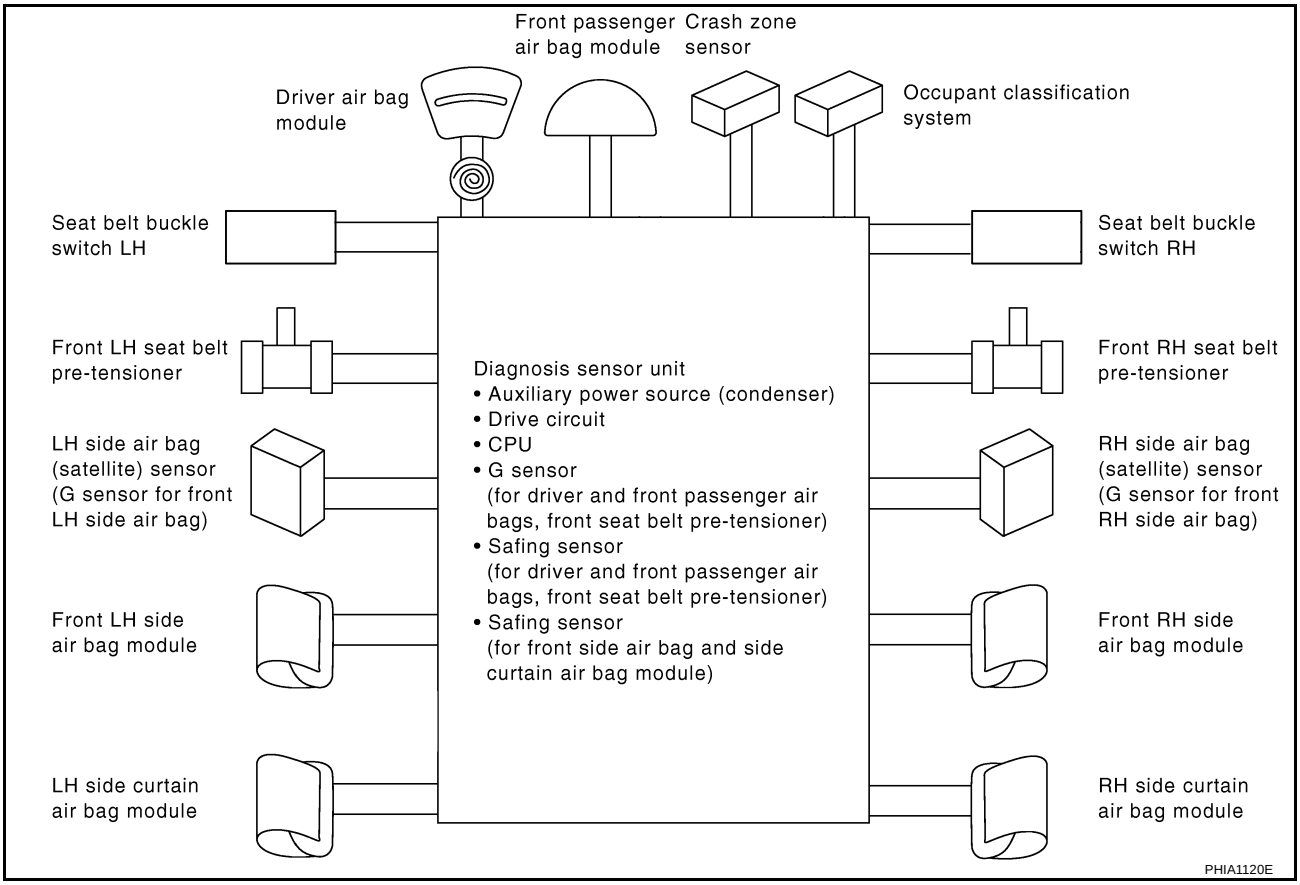
Replace occupant classification system control unit and passenger front seat cushion as an assembly.

PREPARATION

PFP:00002

Commercial Service Tools

NHS0000C



Tool name	Description
Tamper resistant TORX bit  S-NT757	Size: T30

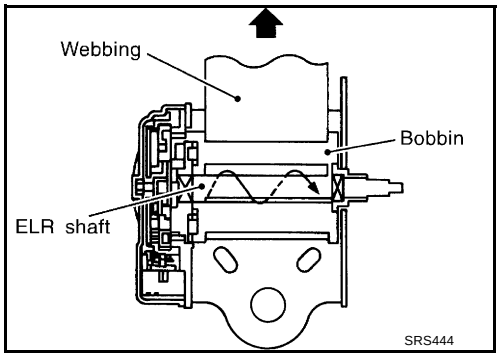
SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

PFP:28556

SRS Configuration

NHS0000D

The air bag deploys if the diagnosis sensor unit activates while the ignition switch is in the ON or START position.
The collision modes for which supplemental restraint systems are activated are different among the SRS systems. For example, the driver air bag module and front passenger air bag module are activated in a frontal collision but not in a side collision.
SRS configurations which are activated for some collision modes are as follows;



SRS configuration	Frontal collision	Left side collision	Right side collision
Driver air bag module	×	—	—
Front passenger air bag module	×	—	—
Front LH seat belt pre-tensioner	×	—	—
Front RH seat belt pre-tensioner	×	—	—
Front LH side air bag module	—	×	—
Front RH side air bag module	—	—	×
LH side curtain air bag module*	—	×	—
RH side curtain air bag module*	—	—	×

*: For Coupe

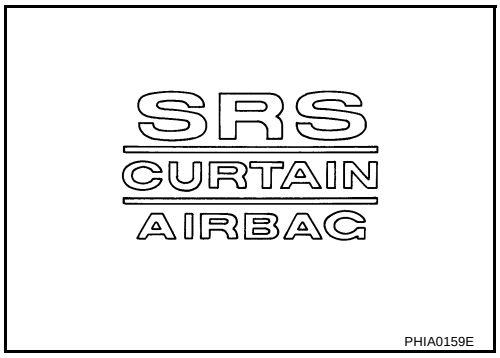
Front Seat Belt Pre-tensioner with Load Limiter

NHS0000E

The seat belt pre-tensioner system with load limiter is installed for both the driver's seat and the front passenger seat. It operates simultaneously with the SRS air bag system in the event of a frontal collision with an impact exceeding a specified level.
When the frontal collision with an impact exceeding a specified level occurs, seat belt slack resulting from clothing or other factors is immediately taken up by the pre-tensioner. Vehicle passengers are securely restrained.
When passengers in a vehicle are thrown forward in a collision and the restraining force of the seat belt exceeds a specified level, the load limiter permits the specified extension of the seat belt by the twisting of the ELR shaft, and a relaxation of the chest-area seat belt web tension while maintaining force.

Front Side Air Bag

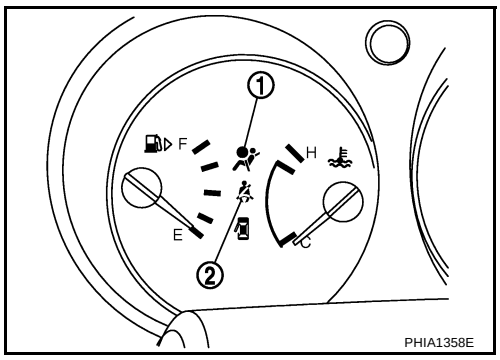
NHS0000F



Front side air bag is built-in type.
The front seatbacks with built-in type side air bag have the labels as shown.

Side Curtain Air Bag/for Coupe

NHS0000G



The side curtain air bags have the labels as shown.

Warning Lamp

NHS000A6

Air bag warning lamp : (1)
Seat belt warning lamp: (2)

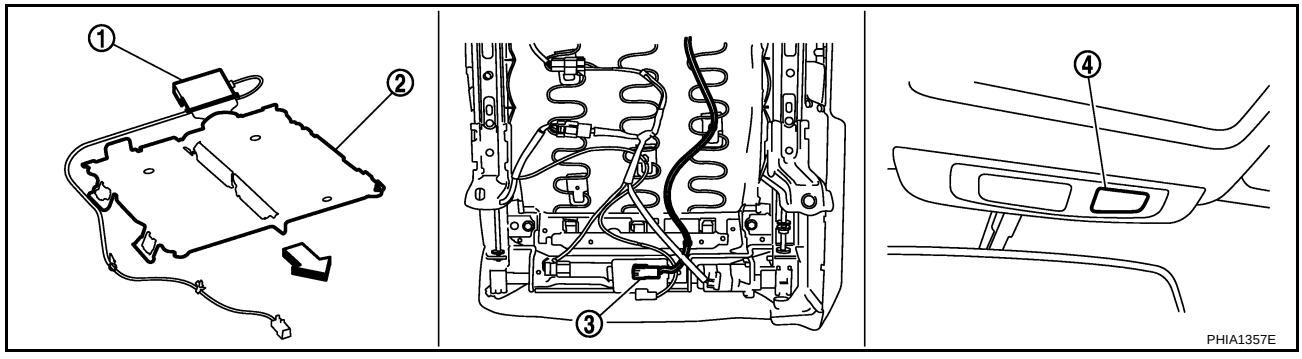
Occupant Classification System (OCS)

NHS000A1

The occupant classification system identifies different size occupants, out of position occupants, and detects if child seat is present in the front passenger seat. The occupant classification system receives inputs from the occupant classification sensor (located inside the passenger seat cushion assembly) and belt tension sensor (part of the passenger front seat belt assembly and located at the belt anchor location). Depending on classification of passenger, the occupant classification system sends a signal to the diagnosis sensor unit. The diagnosis sensor unit uses this signal to determine full, partial, or non deployment of passenger front air bag in the event of a collision. Depending on the signal received, the diagnosis sensor unit can disable the passenger front air bag completely.

NOTE:
In case of customer concern, CONSULT-ll can be used to confirm the passenger air bag status (readiness).

Passenger Air Bag Status Condition



NHS000A2

Front Passenger Seat (Condition)	PASS AIR BAG OFF Indicator (Status)	Passenger Air Bag Status (Readiness)	CONSULT-lll Display
Seat occupied	OFF	Active (enabled)	ON
seat occupiedNOTE	ON	Deactivated (disabled)	OFF
Seat empty	OFF	Deactivated (disabled)	OFF

NOTE:
Passenger does not meet Ocuupant classification System specifications for passenger air bag activation.

Component Parts of Occupant Classification System

NHS000A3

1. Occupant classification system control unit
2. Seat sensor mat
3. Occupant classification system connector
4. Passenger air bag OFF Indicator (cut-off telltaile)

Passenger Seat belt Warning System

NHS000A4

SYSTEM DESCRIPTION
This system warns when passenger seat belt is not fasten.

This system is composed of the following items.

- Seat belt warning lamp.
- Seat belt buckle switch (passenger side).
- Air bag diagnosis sensor unit.
- Occupant classification system.

Seat belt warning lamp is used for both driver seat belt warning and passenger seat belt warning.
Seat belt warning lamp turns ON when all conditions below are met.

- Driver seat belt is fastened.
- Occupant is on passenger seat.
- Passenger seat belt is not fasten.

TROUBLE DIAGNOSIS

PFP:00004

Trouble Diagnosis Introduction

NHS0000H

CAUTION:

- **Do not use electrical test equipment on any circuit related to the SRS unless instructed in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**
- **Do not repair, splice or modify the SRS wiring harness. If the harness is damaged, replace it with a new one.**
- **Keep ground portion clean.**

DIAGNOSIS FUNCTION

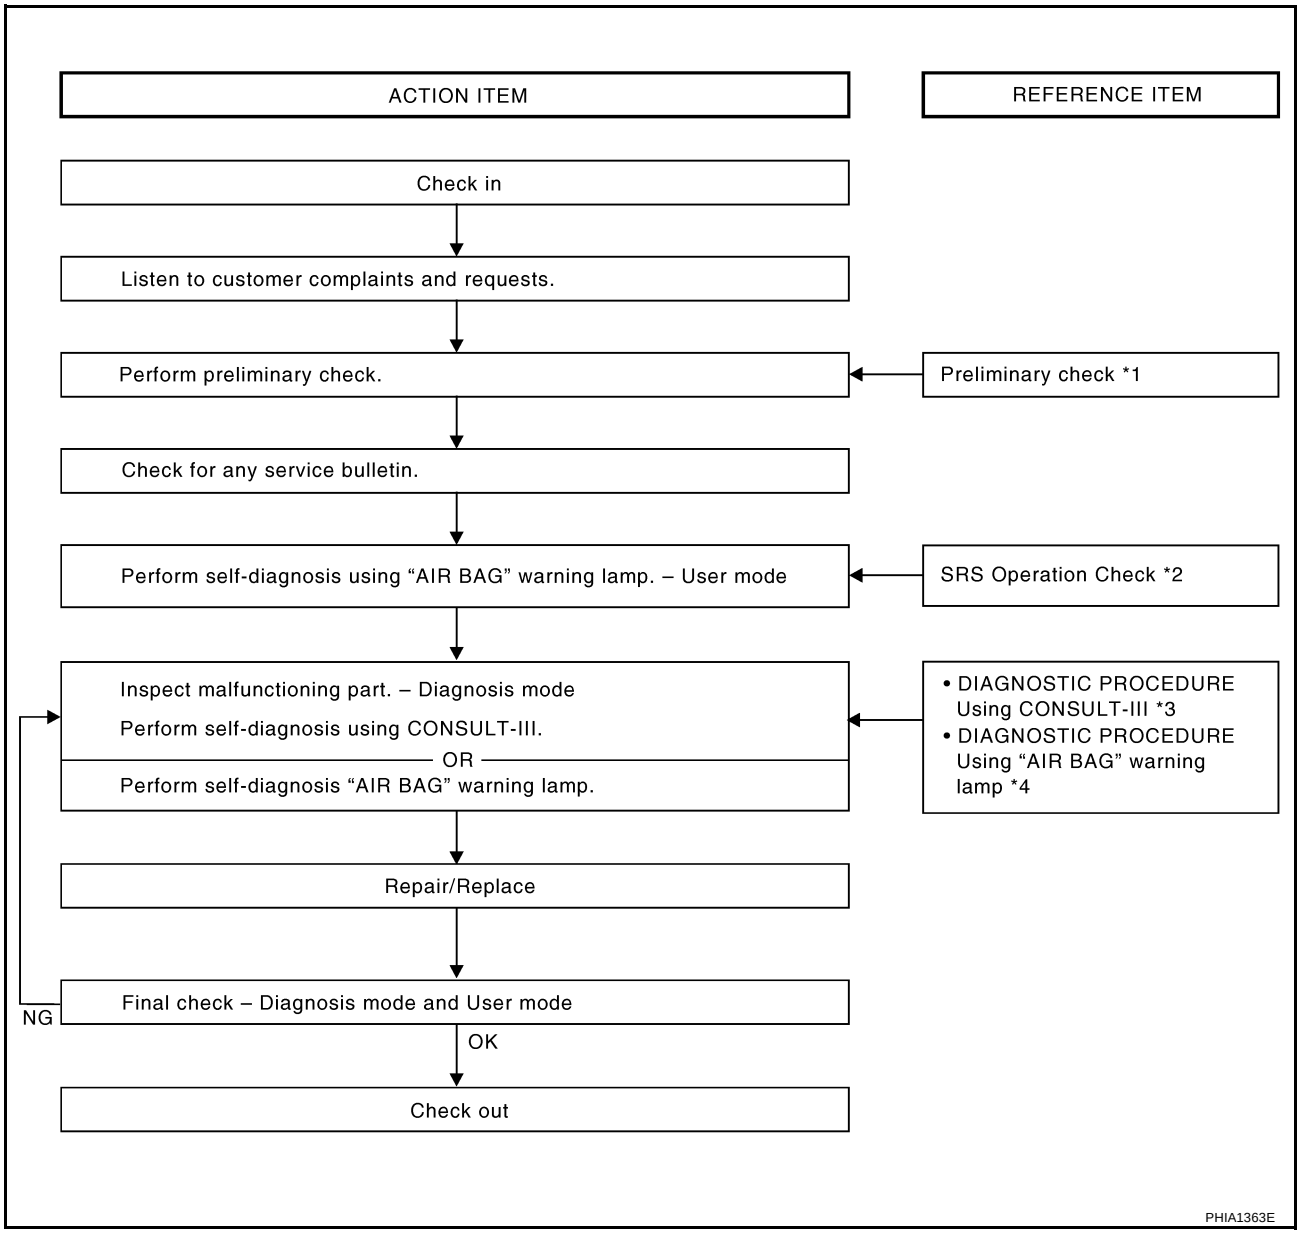
The SRS self-diagnostic results can be read by using “AIR BAG” warning lamp and/or CONSULT-lll.
The User mode is exclusively prepared for the customer (driver). This mode warns the driver of a system malfunction through the operation of the “AIR BAG” warning lamp.
The Diagnosis mode allows the technician to locate and inspect the malfunctioning part.
The mode applications for the “AIR BAG” warning lamp and CONSULT-lll are as follows:

	User mode	Diagnosis mode	Display type
“AIR BAG” warning lamp	X	X	ON-OFF operation
CONSULT-III	—	X	Monitoring

HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

Information from Customer



WHAT..... Vehicle model
WHEN..... Date, Frequencies
WHERE..... Road conditions
HOW..... Operating conditions, Symptoms

Preliminary Check

Make sure that the following parts are in good order.

- Battery (Refer to SC-4, "How to Handle Battery" .)
- Fuse (Refer to SRS-13, "Wiring Diagram — SRS —/For Coupe" or SRS-19, "Wiring Diagram — SRS —/For Roadster" .)
- System component-to-harness connections

WORK FLOW

CONSULT-lll Function

NHS0000M

DIAGNOSIS MODE FOR CONSULT-LLL

- “SELF-DIAG [CURRENT]”
  A current self-diagnostic results (also indicated by the number of warning lamp flashes in the Diagnosis mode) is displayed on the CONSULT-lll screen in real time. This refers to a malfunctioning part requiring repairs.
- “SELF-DIAG [PAST]”
  Self-diagnostic results previously stored in the memory are displayed on the CONSULT-lll screen. The stored results are not erased until memory erasing is performed.
- “TROUBLE DIAG RECORD”
  With TROUBLE DIAG RECORD, diagnostic results previously erased by a reset operation can be displayed on the CONSULT-lll screen.
- “ECU DISCRIMINATED NO.”
  The diagnosis sensor unit for each vehicle model is assigned with its own, individual classification number. This number will be displayed on the CONSULT-lll screen, as shown. When replacing the diagnosis sensor unit, refer to the part number for the compatibility. After installation, replacement with a correct unit can be checked by confirming this classification number on the CONSULT-lll screen.
  After repair, make sure the discriminated number of diagnosis sensor unit installed to vehicle are same. Refer to SRS-51, "ECU DISCRIMINATED NO." .

HOW TO CHANGE SELF-DIAGNOSIS MODE WITH CONSULT-LII

From User Mode to Diagnosis Mode

After selecting “AIR BAG” on the “SELECT SYSTEM” screen, User mode automatically changes to Diagnosis mode.

From Diagnosis Mode to User Mode

To return to User mode from Diagnosis mode, touch “BACK” key of CONSULT-lll until “SELECT SYSTEM” appears, then diagnosis mode automatically changes to User mode.

HOW TO ERASE SELF-DIAGNOSTIC RESULTS

- “SELF-DIAG [CURRENT]”
  A current self-diagnostic result is displayed on the CONSULT-lll screen in real time.
  After the malfunction is repaired completely, no malfunction is detected on “SELF-DIAG [CURRENT]”.
- “SELF-DIAG [PAST]”
  Return to the “SELF-DIAG [CURRENT]” CONSULT-lll screen by touching “BACK” key of CONSULT-lll and select “SELF-DIAG [CURRENT]” in SELECT DIAG MODE. Touch “ERASE” in “SELF-DIAG [CURRENT]” mode.

  NOTE:
  If the memory of the malfunction in “SELF-DIAG [PAST]” is not erased, the User mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.
- “TROUBLE DIAG RECORD”
  The memory of “TROUBLE DIAG RECORD” cannot be erased.

Self-Diagnosis Function (Without CONSULT-lll)

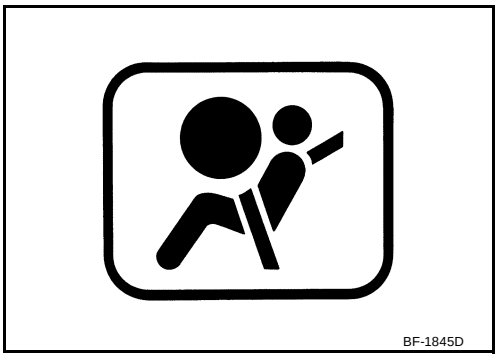
NHS0000N

- The reading of these results is accomplished “User mode” and “Diagnosis mode”.
- After a malfunction is repaired, turn ignition switch ON. Diagnosis mode returns to the User mode. At that time, the self-diagnostic result is cleared.

HOW TO CHANGE SELF-DIAGNOSTIC MODE WITHOUT CONSULT-LLL

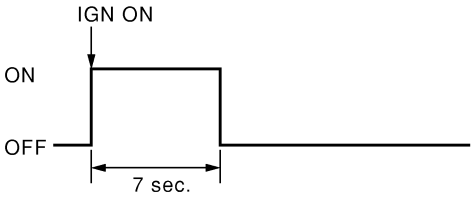
HOW TO ERASE SELF-DIAGNOSTIC RESULTS

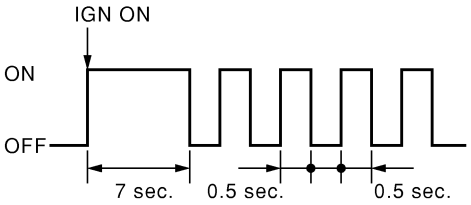
After a malfunction is repaired, turn the ignition switch OFF for at least one second, then back ON. Diagnosis mode returns to the User mode. At that time, the self-diagnostic results are cleared.

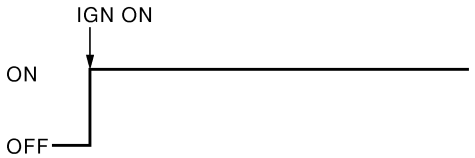


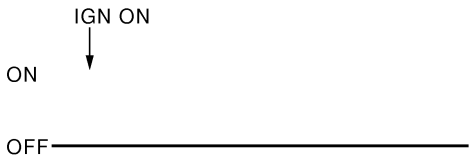
SRS Operation Check (USER MODE)

NHS0000O









DIAGNOSTIC PROCEDURE

Checking Air Bag Operation by Using “AIR BAG” Warning Lamp—User Mode

1. Turn ignition switch from OFF to ON, and make sure that the air bag warning lamp blinks.
2. Compare the SRS air bag warning lamp blinking pattern with the examples.

Warning lamp examples

“AIR BAG” warning lamp operation-User mode-	SRS condition	Reference item
 SHIA0011E	● No malfunction is detected. ● No further action is necessary.	—
 SHIA0012E	● The system is malfunctioning and needs to be repaired as indicated.	Go to SRS-33, "WARNING LAMP FLASH CODE CHART" or SRS-29, "DTC No. Index (“SELF-DIAG [CURRENT]” “SELF-DIAG [PAST]” or TROUBLE DIAG RECORD)" .
 SHIA0013E	● Air bag is deployed. ● Seat belt pre-tensioner is deployed.	Go to SRS-53, "COLLISION DIAGNOSIS" .
	● Diagnosis sensor unit is malfunctioning. ● Air bag power supply circuit is malfunctioning. ● SRS air bag warning lamp circuit is malfunctioning.	Go to SRS-37, "Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn OFF" .
 SHIA0014E	● Diagnosis sensor unit is malfunctioning. ● Air bag warning lamp circuit is malfunctioning.	Go to SRS-38, "Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn ON" .

Trouble Diagnosis with CONSULT-III

NHS0000P

DIAGNOSTIC PROCEDURE

Diagnositic mode	Description
SELF-DIAG RESULT	The self-diagnosis result is displayed. (SELF-DIAG [CURRENT], [PAST], [RECORRD]). Refer to SRS-29, "DTC No. Index (“SELF-DIAG [CURRENT]” “SELF-DIAG [PAST]” or TROUBLE DIAG RECORD)" .
ECU DISCRIMINATED No.	The parts number of diagnosis sensor unit is displayed.

DTC No. Index (“SELF-DIAG [CURRENT]” “SELF-DIAG [PAST]” or TROUBLE DIAG RECORD)

Diagnostic item	Explanation		Repair order “Recheck SRS at each replacement”
NO DTC IS DETECTED.	When malfunction is indicated by the “AIR BAG” warning lamp in User mode.	● Low battery voltage (Less than 9V)	—
		● Self-diagnostic results “SELF-DIAG [PAST]” (previously stored in the memory) might not be erased after repair. ● Intermittent malfunction has been detected in the past.	● Go to SRS-25, "DIAGNOSIS MODE FOR CONSULT-III" .
	● No malfunction is detected.		—
DRIVER AIRBAG MODULE [OPEN] [B1054]	● Driver air bag module circuit is open (including the spiral cable).		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace driver air bag module. 4. Replace the spiral cable. 5. Replace the diagnosis sensor unit.
DRIVER AIRBAG MODULE [VB-SHORT] [B1055]	● Driver air bag module circuit is shorted to a power supply circuit (including the spiral cable).		
DRIVER AIRBAG MODULE [GND-SHORT] [B1056]	● Driver air bag module circuit is shorted to ground (including the spiral cable).		
DRIVER AIRBAG MODULE [SHORT] [B1057]	● Driver air bag module circuit is shorted between lines.		
ASSIST A/B MODULE [VB-SHORT] [B1070]	● Front passenger air bag module circuit is shorted to a power supply circuit.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag module. 4. Replace the diagnosis sensor unit.
ASSIST A/B MODULE [OPEN] [B1071]	● Front passenger air bag module circuit is open.		
ASSIST A/B MODULE [GND-SHORT] [B1072]	● Front passenger air bag module circuit is shorted to ground.		
ASSIST A/B MODULE [SHORT] [B1073]	● Front passenger air bag module circuit is shorted between lines.		
CRASH ZONE SEN [UNIT FAIL] [B1033] [B1034] CRASH ZONE SEN [COMM FAIL] [B1035] CRASH ZONE SEN [UNMATCH] [B1036]	● Crash zone sensor		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the crash zone sensor. 4. Replace the diagnosis sensor unit.

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
SIDE MODULE LH [OPEN] [B1134]	● Front LH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front LH setback assembly (front LH side air bag module). 4. Replace the diagnosis sensor unit.
SIDE MODULE LH [VB-SHORT] [B1135]	● Front LH side air bag module circuit is shorted to a power supply circuit.	
SIDE MODULE LH [GND-SHORT] [B1136]	● Front LH side air bag module circuit is shorted to ground.	
SIDE MODULE LH [SHORT] [B1137]	● Front LH side air bag module circuit is shorted between lines.	
SIDE MODULE RH [OPEN] [B1129]	● Front RH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front RH setback assembly (front RH side air bag module). 4. Replace the diagnosis sensor unit.
SIDE MODULE RH [VB-SHORT] [B1130]	● Front RH side air bag module circuit is shorted to some power supply circuit.	
SIDE MODULE RH [GND-SHORT] [B1131]	● Front RH side air bag module circuit is shorted to ground.	
SIDE MODULE RH [SHORT] [B1132]	● Front RH side air bag module circuit is shorted between lines.	
SATELLITE SENS LH [UNIT FAIL] [B1118] [B1119] SATELLITE SENS LH [COMM FAIL] [B1120] SATELLITE SENS LH [UNMATCH] [B1121]	● LH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit.
SATELLITE SENS RH [UNIT FAIL] [B1113] [B1114] SATELLITE SENS RH [COMM FAIL] [B1115] SATELLITE SENS RH [UNMATCH] [B1116]	● RH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit.
PRE-TEN FRONT LH [OPEN] [B1086]	● Front LH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front LH seat belt. 4. Replace the diagnosis sensor unit.
PRE-TEN FRONT LH [VB-SHORT] [B1087]	● Front LH pre-tensioner circuit is shorted to a power supply circuit.	
PRE-TEN FRONT LH [GND-SHORT] [B1088]	● Front LH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT LH [SHORT] [B1089]	● Front LH pre-tensioner circuit is shorted between lines.	

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
PRE-TEN FRONT RH [OPEN] [B1081]	● Front RH pre-tensioner circuit is shorted to a power supply circuit.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front RH seat belt. 4. Replace the diagnosis sensor unit.
PRE-TEN FRONT RH [VB-SHORT] [B1082]	● Front RH pre-tensioner is shorted to a power supply circuit.	
PRE-TEN FRONT RH [GND-SHORT] [B1083]	● Front RH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT RH [SHORT] [B1084]	● Front RH pre-tensioner circuit is shorted between lines.	
CURTAIN MODULE LH* [OPEN] [B1150]	● LH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace LH side curtain air bag module. 4. Replace the diagnosis sensor unit.
CURTAIN MODULE LH* [VB-SHORT] [B1151]	● LH side curtain air bag module circuit is shorted to some power supply circuits.	
CURTAIN MODULE LH* [GND-SHORT] [B1152]	● LH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE LH* [SHORT] [B1153]	● LH side curtain air bag module circuit is shorted between lines.	
CURTAIN MODULE RH* [OPEN] [B1145]	● RH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace RH side curtain air bag module. 4. Replace the diagnosis sensor unit.
CURTAIN MODULE RH* [VB-SHORT] [B1146]	● RH side curtain air bag module circuit is shorted to a power supply circuit.	
CURTAIN MODULE RH* [GND-SHORT] [B1147]	● RH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE RH* [SHORT] [B1148]	● RH side curtain air bag module circuit is shorted between lines.	
CONTROL UNIT [B1001-B1015] [B1026-B1031] [B1042-B1047] [B1058-B1063] [B1074-B1079] [B1106-B1111] [B1122-B1127] [B1138-B1143] [B1202-B1207]	● Diagnosis sensor unit is malfunctioning.	● Replace the diagnosis sensor unit.
PASS A/B INDCTR CKT [B1023]	● Cutoff telltale circuit is open or shorted to grand or the circuits are shorted each other.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace cutoff telltale. 4. Replace the diagnosis sensor unit.

Diagnostic item	Explanation	Repair order “Recheck SRS at each replacement”
OCCUPANT SENS C/U [UNIT FAIL] [B1017] [B1020] [B1021]	● Trouble occurs in Occupant Classification System-CU.	● Replace passenger side seat cushion assembly.
OCCUPANT SENS C/U [COMM FAIL] [B1022]	● Trouble occurs in Occupant Classification System-CU, circuit of Occupant Classification System-CU—Diagnosis Sensor Unit or Diagnosis Sensor Unit.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace passenger side seat cushion assembly. 4. Replace the diagnosis sensor unit.
OCCUPANT SENS [UNIT FAIL] [B1018]	● Trouble occurs in Occupant Classification System-SENS.	● Replace passenger side seat cushion assembly.
FRONTAL COLLISION DETECTION [B1209]	● Seat belt pre-tensioner and front air bag are deployed.	● Go to SRS-53, "For Frontal Collision" .
SIDE COLLISION DETECTION [B1210]	● Side and curtain air bag is deployed.	● Go to SRS-55, "For Side Collision" .

*: For coupe

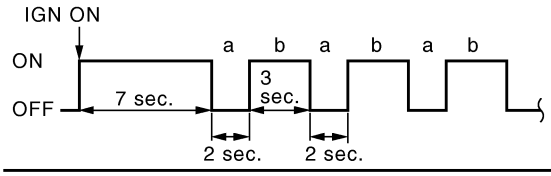
NOTE:
Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using air bag warning lamp or CONSULT-III each time repair is finished. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.

Trouble Diagnosis without CONSULT-III

NHS0000Q

DIAGNOSTIC PROCEDURE

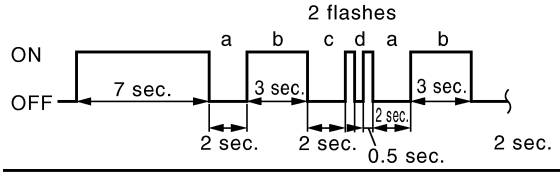
Inspecting SRS Malfunctioning Parts by Using “AIR BAG” Warning Lamp — Diagnosis Mode



NOTE:
SRS will not enter Diagnosis mode if no malfunction is detected in User mode.

1. Turn ignition switch ON.
2. After “AIR BAG” warning lamp lights for 7 seconds, turn ignition switch OFF within 1 second.
3. Wait more than 3 seconds.
4. Repeat the steps 1 to 3 two times.
5. Turn ignition switch ON.

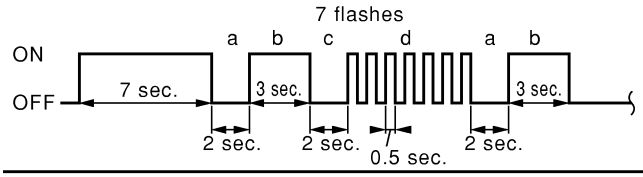
SRS is now in Diagnosis mode.
“AIR BAG” warning lamp operates in Diagnosis mode as follows:



WARNING LAMP FLASH CODE CHART

<Diagnosis results (previously stored in the memory) might not be erased after repair or intermittent malfunctions have been detected in the past.>

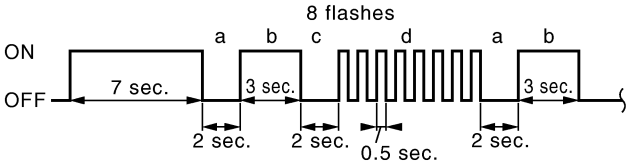
Flash pattern	Repair order
a through b are repeated. 	1. Erase memory. (Once key switch is turned from OFF to ON, TROUBLE DIAG RECORD will be erased.)



PHIA0532E

<Driver air bag module>

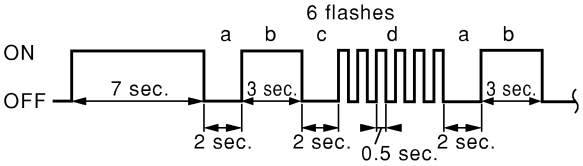
Flash pattern	Repair order
a through d are repeated. d: Two flashes indicate malfunctioning driver air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the spiral cable. 4. Replace the related harness.



PHIA1233E

<Diagnosis sensor unit>

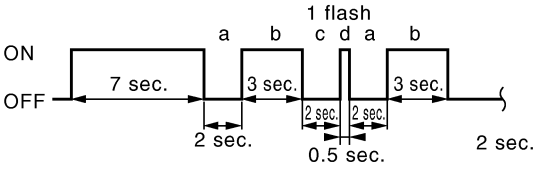
Flash pattern	Repair order
a through d are repeated. d: Seven flashes indicate malfunctioning diagnosis sensor unit circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the diagnosis sensor unit. 4. Replace the related harness.



SHIA0028E

<Front passenger air bag module>

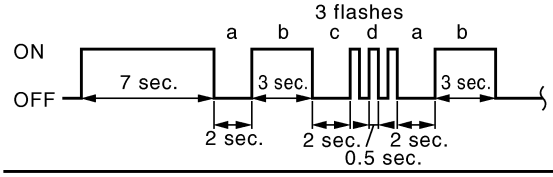
Flash pattern	Repair order
a through d are repeated. d: Eight flashes indicate malfunctioning front passenger air bag module circuit.  	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1234E

<Crash zone sensor>

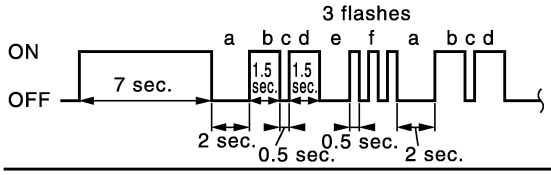
Flash pattern	Repair order
a through d are repeated. d: Six flashes indicate malfunctioning crash zone sensor circuit.  	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the crash zone sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.



SHIA0083E

<Front RH seat belt pre-tensioner>

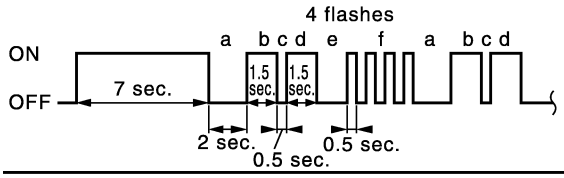
Flash pattern	Repair order
a through d are repeated. d: One flash indicates malfunctioning front RH seat belt pre-tensioner circuit.  	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1235E

<Front LH seat belt pre-tensioner>

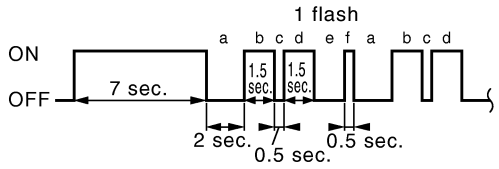
Flash pattern	Repair order
a through d are repeated. d: Three flashes indicate malfunctioning front LH seat belt pre-tensioner circuit.  	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1236E

<RH side air bag (Satellite) sensor>

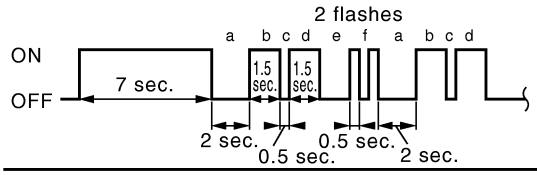
Flash pattern	Repair order
a through f are repeated. f: Three flashes indicate malfunctioning RH side air bag (Satellite) sensor circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.



SHIA0032E

<LH side air bag (Satellite) sensor>

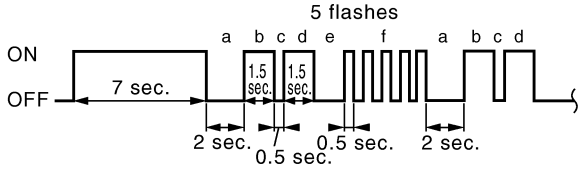
Flash pattern	Repair order
a through f are repeated. f: Four flashes indicate malfunctioning LH side air bag (Satellite) sensor. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.



SHIA0033E

<Front RH side air bag module>

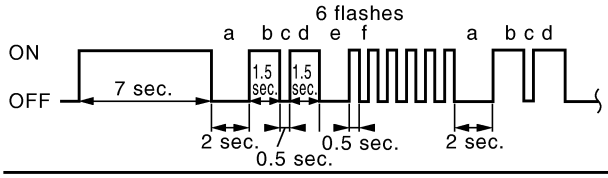
Flash pattern	Repair order
a through f are repeated. f: One flash indicates malfunctioning front RH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1237E

<Front LH side air bag module>

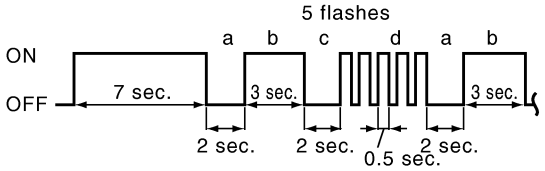
Flash pattern	Repair order
a through f are repeated. f: Two flashes indicate malfunctioning front LH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1238E

<RH side curtain air bag module>

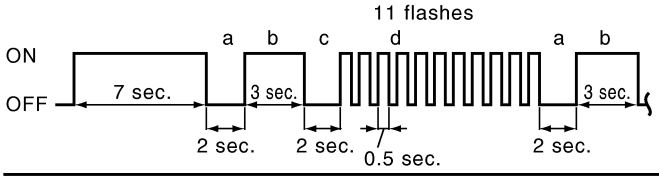
Flash pattern	Repair order
a through f are repeated. f: Five flashes indicate malfunctioning RH side curtain air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1240E

<LH side curtain air bag module>

Flash pattern	Repair order
a through f are repeated. f: Six flashes indicate malfunctioning LH side curtain air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the related harness.



PHIA1241E

<Occupant classification system>

Flash pattern	Repair order
a through d are repeated. d: Five flashes indicate malfunctioning OCS control unit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger seat cushion and occupant classification system control unit as an assembly. 4. Replace the diagnosis sensor unit.

PHIA1242E

<Front passenger air bag off indicator>

Flash pattern	Repair order
a through d are repeated. d: Eleven flashes indicate malfunctioning front passenger air bag off indicator. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag off indicator unit. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

PHIA1243E

Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn OFF

NHS0000R

DIAGNOSTIC PROCEDURE

1. CHECK THE DEPLOYMENT OF AIR BAG MODULE

Is air bag module deployed?

YES or NO

YES >> Refer to SRS-53, "COLLISION DIAGNOSIS" .
NO >> GO TO 2.

2. CHECK THE AIR BAG FUSE

Check 10A fuse [No.13, located in fuse block (J/B)].
Refer to PG-15, "Fuse" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK AIR BAG FUSE AGAIN

Replace “AIR BAG” fuse and turn ignition switch ON.

Does the “AIR BAG” fuse blow again?

YES >> Repair or replace main harness.
NO >> **INSPECTION END**

4. CHECK DIAGNOSIS SENSOR UNIT

With CONSULT-III

Is “AIR BAG” displayed on CONSULT-III?

YES or NO

YES >> GO TO 5.
NO >> Visually check the wiring harness connection of diagnosis sensor unit. If the harness connection check result is OK, replace diagnosis sensor unit.

5. CHECK HARNESS CONNECTION

Is harness connection between warning lamp and diagnosis sensor unit OK?

OK or NG

OK >> Replace diagnosis sensor unit.
NG >> Connect “AIR BAG” warning lamp and diagnosis sensor unit connector properly. If “AIR BAG” warning lamp still does not go off, replace harness.

Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn ON

NHS0000S

DIAGNOSTIC PROCEDURE

1. CHECK “METER” FUSE

Check 10A fuse [No.14, located in fuse block (J/B)].
Refer to PG-15, "Fuse" .

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK “METER” FUSE AGAIN

Replace 10A fuse [No.14, located in fuse block (J/B)] and turn ignition switch ON.

Does the meter fuse blow again?

YES >> Repair or replace the related harness.
NO >> **INSPECTION END**

3. CHECK HARNESS CONNECTION BETWEEN DIAGNOSIS SENSOR UNIT AND COMBINATION METER

Disconnect diagnosis sensor unit connector and turn ignition switch ON.
Does “AIR BAG” warning lamp turn ON?

YES or NO

YES >> Replace diagnosis sensor unit.
NO >> Replace combination meter assembly.

Trouble Diagnosis: Passenger Seat belt Warning System

NHS000A5

1. HECK THE SYSTEM 1

Check seat belt warning lamp function.

Seat belt warning lamp turns ON in the following conditions.

- Driver seat belt is fastened.
- Occupant is on passenger seat.
- Passenger seat belt is not fasten.

OK or NG

OK >> GO TO 2.
NG >> Check the followings.
- Harness between air bag diagnosis sensor unit and combination meter.
- Seat belt buckle switch (passenger side) circuit.
- Seat belt buckle switch (passenger side).
  If these are OK, replace air bag diagnosis sensor unit.

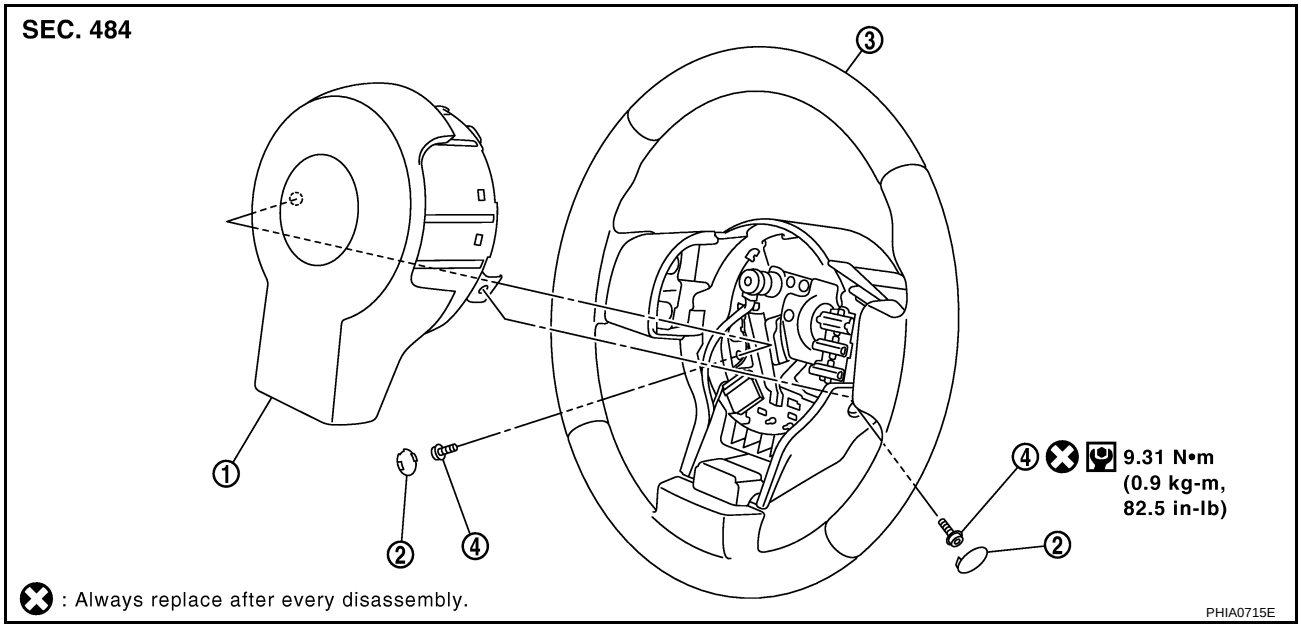
2. CHECK THE SYSTEM 2

Check seat belt warning lamp function.

Seat belt warning lamp turns OFF in the following conditions.

- Driver seat belt is fastened.
- Occupant is on passenger seat.
- Passenger seat belt is fastened.

OK or NG



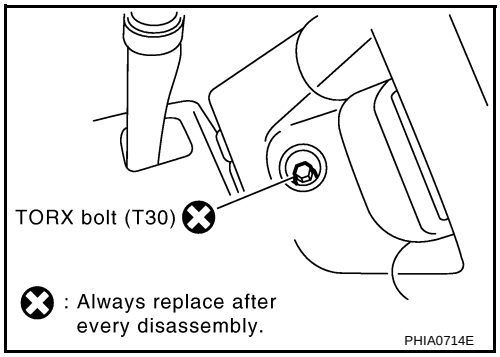
OK >> System is OK.
NG >> Check the followings.
- Sea tbelt buckle switch (passenger side) circuit.
- Seat belt buckle switch (passenger side).
  If these are OK, replace air bag diagnosis sensor unit.

DRIVER AIR BAG MODULE

PFP:K8510

Removal and Installation

NHS0000T

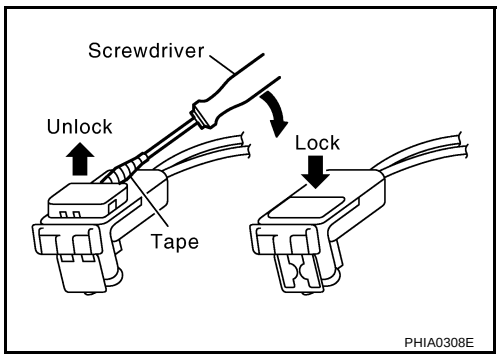


1. Driver air bag module
2. Side lid (RH/LH)
3. Steering wheel
4. TORX bolt (T30)

REMOVAL

CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the side of driver air bag module.**
- **Do not use air tools or electric tools for servicing.**

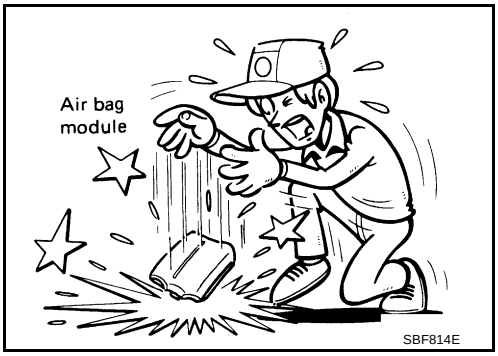


1. Remove the side lids (RH/LH).
2. Using Tamper resistant TORX bit (T30), remove the TORX bolts (T30) at right and left.

3. Disconnect the steering wheel switch sub-harness connector.
4. Disconnect the air bag harness connector, and remove the driver air bag module.

   CAUTION:

   - **For installing / removing driver air bag module connector, insert thin screwdriver wrapped in tape into notch, lift lock and remove connector.**
   - **Install connector with lock raised, and push lock into connector.**
   - **After installing the connector, make sure that the lock is pushed securely into it.**



CAUTION:

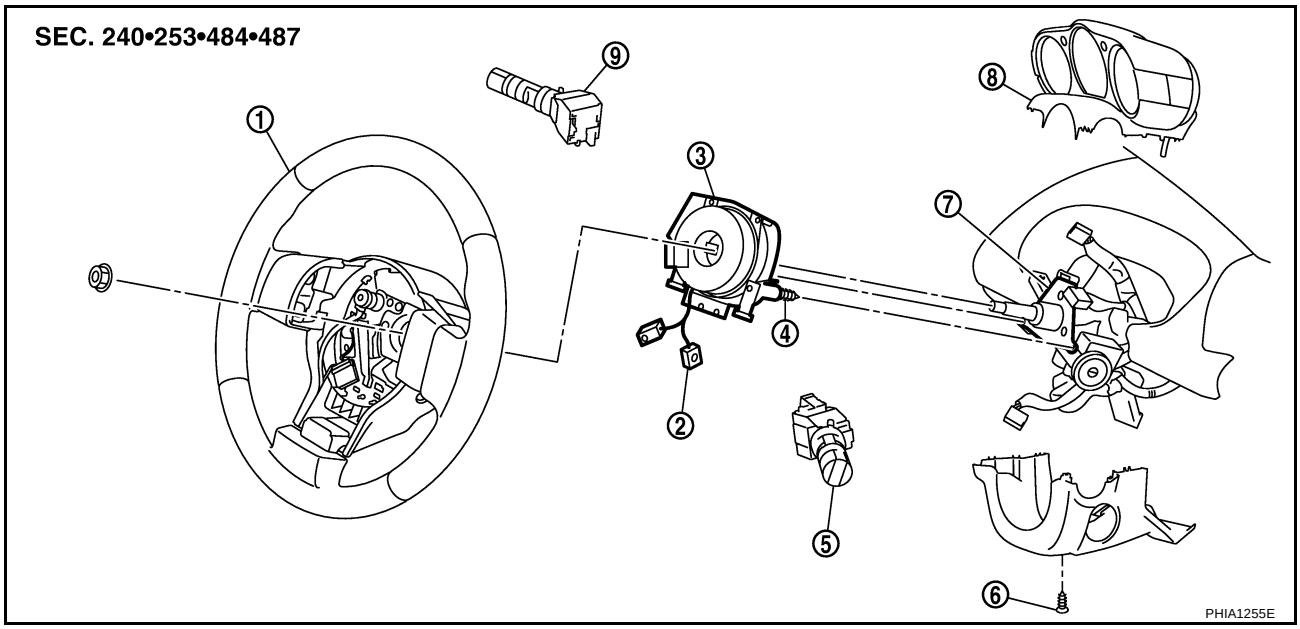
- **Always work from the side of driver air bag module.**
- **Always place driver air bag module with pad side facing upward.**
- **Do not insert any foreign objects (screwdriver, etc.) into driver air bag module.**
- **Do not disassemble driver air bag module.**
- **Do not use old bolts after removal; replace with new bolts.**
- **Do not expose the driver air bag module to temperatures exceeding 90°C (194°F).**

- **Replace driver air bag module if it has been dropped or sustained an impact.**
- **Do not allow oil, grease or water to come in contact with the front passenger air bag module.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:



- **For installing the air bag module, tighten the TORX bolts (T30).**
- **After the work is completed, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

SPIRAL CABLE

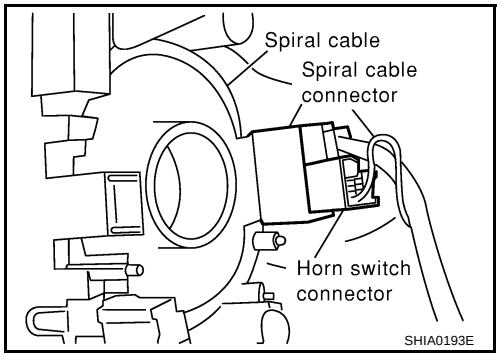
PFP:25554

Removal and Installation

NHS0000U

1. Steering wheel	2. Driver air bag module connector	3. Spiral cable
4. Screw (Do not remove)	5. Wiper and washer switch	6. Screw
7. Sreering column assembly	8. Combination meter	9. Lighting and turn signal switch

REMOVAL



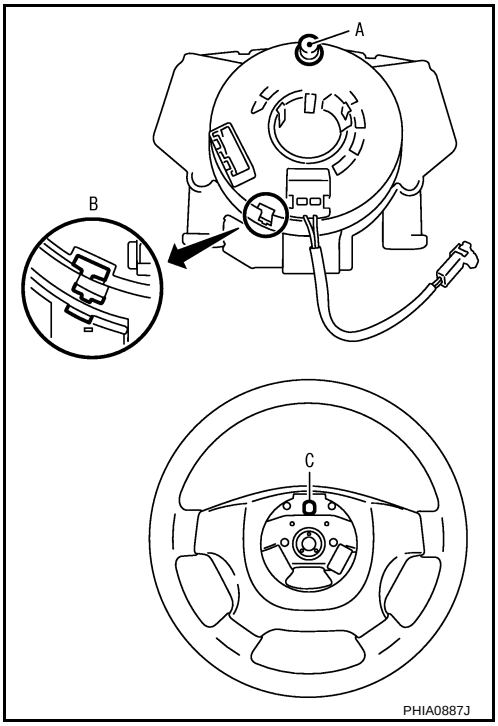
CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Remove driver air bag module. Refer to SRS-40, "Removal and Installation" .
2. Disconnect horn switch connector.
3. Set the steering wheel in the neutral position.
4. Remove steering wheel. Refer to PS-7, "STEERING WHEEL" .
5. Remove combination meter assembly. Refer to DI-24, "Removal and Installation for Combination Meter" .
6. Loosen the spiral cable fixing screws, and then remove the spiral cable.

   CAUTION:
   - **Do not disassemble spiral cable.**
   - **Do not apply lubricant to the spiral cable.**
7. Remove the horn switch connector and then remove spiral cable connector.

   CAUTION:
   Also, with the steering linkage disconnected the cable may snap by turning the steering wheel beyond the limited number of turns.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

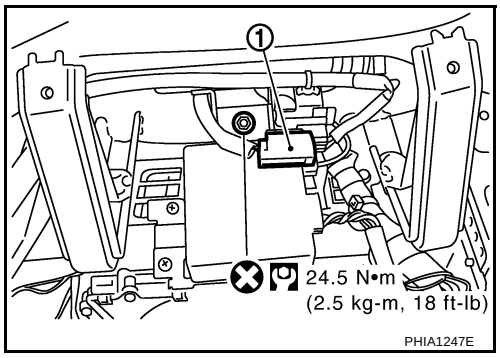
- **The spiral cable may snap by steering operation if the cable is installed in an improper position.**
- **The neutral position is set as follows.**
  Turn quietly the spiral cable clockwise to the end position. Then turn it counterclockwise (about 2 and harf turns) and stop turning at the point on which the stopper insertion holes are in the same position.
  The service part is installed in the neutral position by the stopper and can be set without adjusting after the stopper is removed.
- **Do not turn the spiral cable rashly and also beyond the limit number of turns. (These will cause cable snap.)**
- **Adjust the spiral cable locating pin (showed as A inthe figure) to the steering wheel locating pin hole (showed as C in the figuer).**
- **Secure the air bag harness with the harness fixing hook.**
- **After the work is completed, make sure no system malfunction is detected by air bag warning lamp.**
- **In case that malfunction is detected by the air bag warning lamp, reset by the self-diagnosis function and delete the memory by CONSULT–III.**
- **In case that malfunction is still detected after the above operation, perform self-diagnosis to repair malfunctions. Refer to Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

FRONT PASSENGER AIR BAG MODULE

PFP:K8515

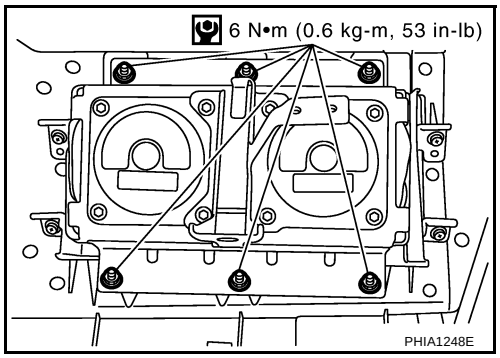
Removal and Installation

NHS0000V



REMOVAL

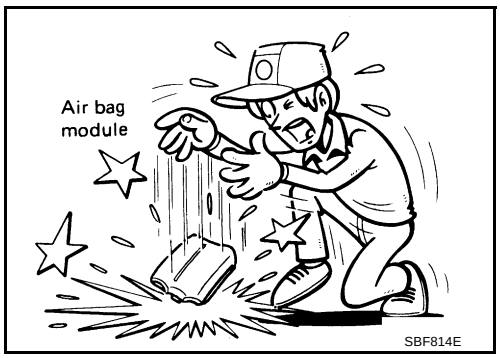
CAUTION:



- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the side of or under front passenger air bag module.**
- **Do not use air tools or electric tools for servicing.**

1. Remove cluster lid C. Refer to IP-14, "(Q) Cluster Lid C" .
2. Remove instrument passenger panel lower and knee protector (RH). Refer to IP-13, "(L) Instrument Passenger Panel Lower" .
3. Disconnect passenger air bag module connector.

   Passenger air bag module connector : (1)



4. Remove hexagon bolt, and then remove instrument passenger panel upper assembly.
5. Remove fixing nuts, and then remove front passenger air bag module.

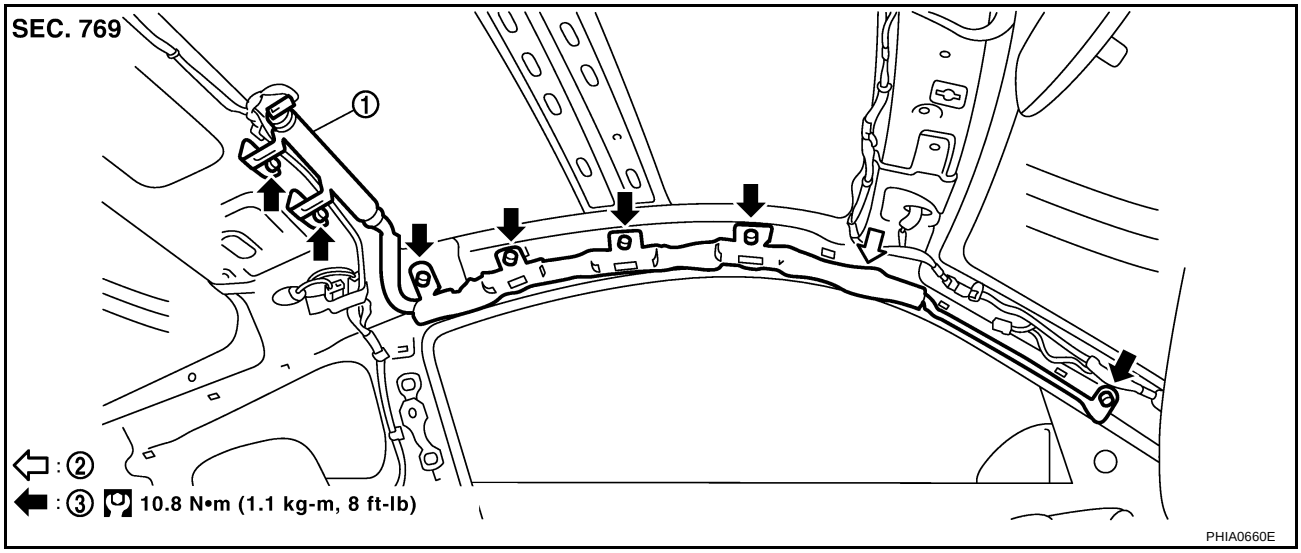
CAUTION:

- **Always place front passenger air bag module with caution label side facing upward.**
- **Do not insert any foreign objects (screwdriver, etc.) into front passenger air bag module.**
- **Do not disassemble front passenger air bag module.**
- **Do not use old bolts after removal; replace with new bolts.**
- **Replace front passenger air bag module if it has been dropped or sustained an impact.**
- **Do not expose the front passenger air bag module to temperatures exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the front passenger air bag module.**
- **After front passenger air bag module inflates, the instrument panel assembly should be replaced.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:



- **Always work from the side of or under front passenger air bag module.**
- **After the work is completed, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

SIDE CURTAIN AIR BAG MODULE (FOR COUPE)

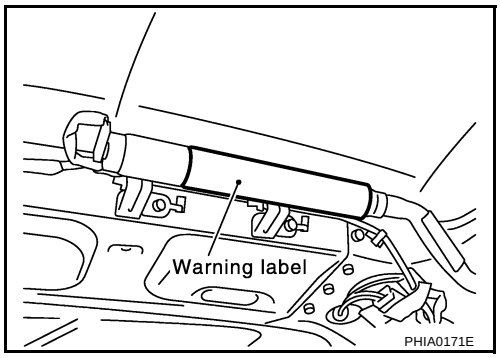
PFP:985P0

Removal and Installation

NHS0000W

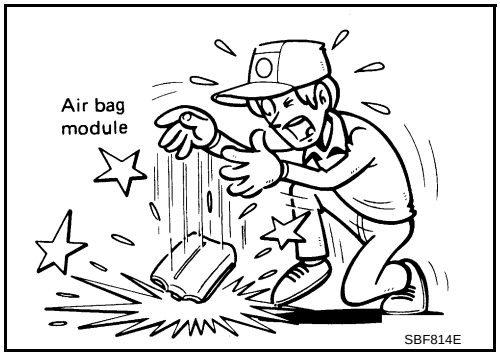
1. Side curtain air bag module
2. Clip
3. Bolt

REMOVAL



CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**



1. Remove headlining. Refer to EI-44, "Removal and Installation (for Coupe Models)" .
2. Disconnect side curtain air bag connector.
3. Remove side curtain air bag module fixing bolts and clip.
4. Remove the side curtain air bag module.

CAUTION:

- **Always place the side curtain air bag module with the warning label facing upward.**
- **Do not disassemble side curtain air bag module.**
- **Do not insert any foreign objects (screwdriver, etc.) into air bag module connector.**

- **Replace side curtain air bag module if it has been dropped or sustained an impact.**
- **Do not expose the air bag module to temperatures exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the side curtain air bag module.**

INSTALLATION

Install in the reverse order of removal.

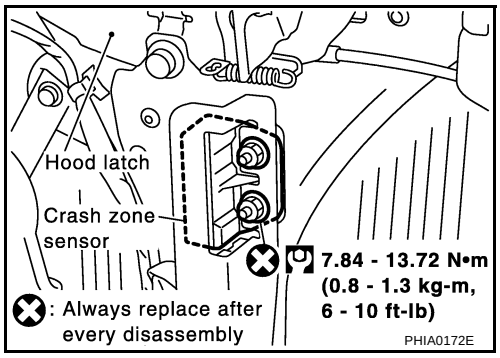
CAUTION:

- **Always work from the side of the side curtain air bag module.**
- **After replacement of side curtain air bag module, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

CRASH ZONE SENSOR

PFP:98531

Removal and Installation



NHS0000X

REMOVAL

CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Remove crash zone sensor connector.
2. Remove crash zone sensor fixing nuts.

CAUTION:

- **Replace crash zone sensor if it has been dropped or sustained an impact.**
- **Do not disassemble crash zone sensor.**

INSTALLATION

Install in the reverse order of removal.

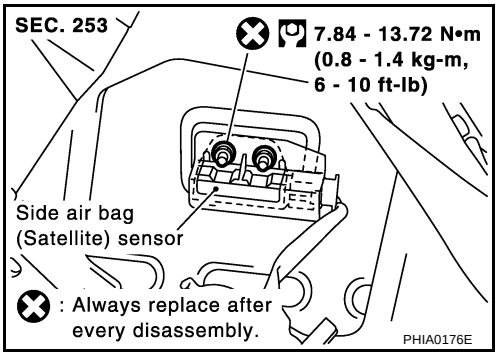
CAUTION:

- **Check crash zone sensor for proper installation.**
- **After the work is complete, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

SIDE AIR BAG (SATELLITE) SENSOR

PFP:98830

Removal and Installation



NHS0000Y

REMOVAL

CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Remove seat belt pre-tensioner. Refer to SB-4, "Removal and Installation of Seat Belt (Coupe)" or SB-6, "Removal and Installation of Seat Belt (Roadster)" .
2. Remove side air bag (Satellite) sensor fixing nuts.
3. Remove the side air bag (Satellite) sensor connector.

CAUTION:

- **Do not use old nuts; replace with new ones.**
- **Check side air bag (Satellite) sensor to ensure it is free of deformities, dents, cracks or rust. If it shows any visible signs of damage, replace it with new one.**
- **Do not attempt to disassemble side air bag (Satellite) sensor.**
- **Replace side air bag (Satellite) sensor if it has been dropped or sustained an impact.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Check side air bag (Satellite) sensor for proper installation.**
- **After replacement of side air bag (Satellite) sensor, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

FRONT SEAT BELT PRE-TENSIONER

PFP:86884

Removal and Installation

NHS0000Z

For removal and installation procedures, refer to SB-4, "Removal and Installation of Seat Belt (Coupe)" or SB-6, "Removal and Installation of Seat Belt (Roadster)" .

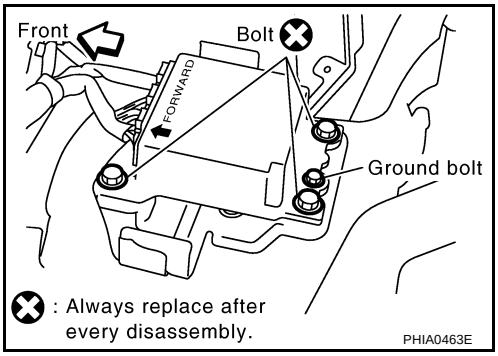
DIAGNOSIS SENSOR UNIT

PFP:28556

Removal and Installation

NHS00010

REMOVAL



CAUTION:

- **Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Disconnect each harness connector for the air bag module and seat belt pre-tensioner.
2. Remove center console. Refer to IP-11, "Removal and Installation" .
3. Disconnect diagnosis sensor unit connector.
4. Remove fixing bolts from the diagnosis sensor unit.

Hex bolt: 24.5 N·m (2.5 kg-m, 18 ft-lb)

Ground bolt: 6.9 N·m (0.7 kg-m, 61 in-lb)

CAUTION:

- **Do not use old bolts. Replace with new ones.**
- **Check diagnosis sensor unit bracket to ensure it is free of deformities, dents, cracks or rust. If it shows any visible signs of damage, replace with new one.**
- **Replace diagnosis sensor unit if it has been dropped or sustained an impact.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Check the diagnosis sensor unit for proper installation.**
- **After replacement of diagnosis sensor unit, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-27, "SRS Operation Check (USER MODE)" .**

ECU DISCRIMINATED NO.

After replacing the diagnosis sensor unit, make sure that the diagnosis sensor unit identification is correct for the vehicle as equipped.

Model	Specification	ECU DISCRIMINATED No.
Coupe	Models with driver and passenger air bags and seat belt pre-tensioner	FAE6
	Models with driver and passenger air bags, seat belt pre-tensioner, side air bags and curtain air bags	FAE4
Roadster	Models with driver and passenger air bags and seat belt pre-tensioner	FAE7
	Models with driver and passenger air bags, seat belt pre-tensioner and side air bags	FAE5

OCCUPANT CLASSIFICATION SYSTEM CONTROL UNIT

PFP:98852

Removal and Installation

NHS000A7

The occupant classification system control unit, seat pressure sensor, and bladder are an integral part of the front passenger seat cushion and are replaced as an assembly. Refer to SE-67, "Removal and Installation" .

COLLISION DIAGNOSIS

PFP:00015

For Frontal Collision

NHS00011

To repair the SRS, perform the following steps.

When SRS (except the front side air bag and side curtain air bag modules) is activated in a collision:

1. Replace the diagnosis sensor unit.
2. Remove the air bag modules (except the front side air bag modules and side curtain air bag modules), crash zone sensor assembly, bracket and seat belt pre-tensioner assemblies.
3. Check the SRS components using the table below:

– Replace any SRS components showing visible signs of damage (dents, cracks and deformation).

4. Install new air bag modules (except the front side air bag modules and side curtain air bag modules) crash zone sensor assembly, bracket and seat belt pre-tensioner assemblies.
5. Perform self-diagnosis using CONSULT-III or “AIR BAG” warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" for details. Ensure entire SRS operates properly.

When SRS is not activated in a collision:

1. Check the SRS components using the table below:

– Replace any SRS components showing visible signs of damage (dents, cracks and deformation).

2. Perform self-diagnosis using CONSULT-III or “AIR BAG” warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" for details. Ensure entire SRS operates properly.

When only one front air bag module is activated in a collision:

1. Replace the following components:

– Diagnosis sensor unit

– Crash zone sensor

– Activated front air bag and seat belt pre-tensioner.

2. Check the other SRS components using the table below. (Refer to “SRS is NOT activated”.)

– Replace any SRS components showing visible signs of damage (dents, cracks and deformation).

3. Perform self-diagnosis using CONSULT-III or “AIR BAG” warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" for details. Ensure entire SRS operates properly.

Only one front air bag may inflate a crash, depending on the crash severity and whether the front occupants are belted or unbelted. This does not indicate improper performance of the system. Perform self-diagnosis to make sure the entire SRS operates properly.

SRS INSPECTION (FOR FRONTAL COLLISION)

Part	SRS is activated	SRS is NOT activated
Driver airbag module	If the Driver airbag has deployed: REPLACE. Install with new fasteners.	If the Driver air bag has NOT been activated: [same text as in current manual]
Passenger front airbag module	If the Passenger front airbag has deployed: REPLACE. Install with new fasteners.	If the Passenger front air bag has NOT been activated: [same text as in current manual]
Crash zone sensor	If any of the front airbags or seat belt pre-tensionsers have been activated: REPLACE the crash zone sensor and bracket with new fasteners.	If the front airbags or seat belt pre-tensionsers have NOT been activated: [same text as in current manual]
Seat belt pre-tensioner assemblies	If the driver or passenger Seat belt pre-tensioner has been activated: REPLACE the seat belt pre-tensioner assemblies with new fasteners.	If the pre-tensioners have NOT been activated: [same text as in current manual]
Diagnosis sensor unit	If any of the SRS components have been activated: REPLACE the Diagnosis sensor unit. Install with new fasteners.	If none of the SRS components have been activated: [same text as in current manual]

Part	SRS is activated	SRS is NOT activated
Steering wheel	[same text as in current manual]	
Spiral cable	If the Driver airbag has deployed: REPLACE the spiral cable.	If the Driver airbag has not deployed: [same text as in current manual]
Harness and connectors	1. Check connectors for poor connection, damage, and terminals for deformities. 2. Check harness for binding, chafing, cuts, or deformities. 3. If no damage is found, reinstall the harness and connectors. 4. If damaged—REPLACE damaged section of harness. Do not repair, splice or modify any SRS harness.	
Instrument panel	1. Visually check instrument panel for damage. 2. If no damage is found, reinstall the instrument panel. 3. If damaged—REPLACE the instrument panel with bolts.	

For Side Collision

NHS00012

WHEN THE SIDE AIR BAG IS ACTIVATED IN THE SIDE COLLISION:

1. Replace the following components:
- All parts of front seatback (including front seatback frame) with front side air bag module (on the side on which front side air bag is activated)
- Curtain air bag module (on the side on which side curtain air bag is activated)
- Diagnosis sensor unit
- Satellite sensor (on the side on which side air bag and side curtain air bag is activated)
2. Check the SRS components and the related parts using the following table.
- Replace any SRS components and the related parts showing visible signs of damage (dents, cracks, deformation).
3. Perform self-diagnosis using CONSULT-III or “AIR BAG” warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" . Ensure entire SRS operates properly.

WHEN SRS IS NOT ACTIVATED IN THE SIDE COLLISION:

1. Check the SRS components and the related parts using the following table.
- Replace any SRS components and the related parts showing visible signs of damage (dents, cracks, deformation).
2. Perform self-diagnosis using CONSULT-III or “AIR BAG” warning lamp. Refer to SRS-27, "SRS Operation Check (USER MODE)" . Ensure entire SRS operates properly.

SRS INSPECTION (FOR SIDE COLLISION)

Part	Front side air bag and side curtain air bag is activated	Front side air bag and side curtain air bag is NOT activated
(LH or RH) side curtain air bag module*	REPLACE the side curtain air bag module. (Repair the center pillar inner, etc. before installing new one if damaged.)	1. Check for visible signs of damage (dents, tears, deformation) of the center pillar on the collision side. 2. If damaged— Remove the side curtain air bag module. 3. Check for visible signs of damaged (tears etc.) of the side curtain air bag module. 4. Check harness and connectors for damage, and terminals for deformities. 5. If no damage is found, reinstall the side curtain air bag module with new bolts. 6. If damaged—REPLACE the side curtain air bag module with new bolts.
Front (LH or RH) side air bag module	REPLACE all parts of seatback with deployed front side air bag module.	1. Check for visible signs of damage (dents, tears, deformation) of the seat back on the collision side. 2. Check harness and connectors for damage, and terminals for deformities. 3. If no damage is found, reinstall the front seatback assembly. 4. If damaged—REPLACE the front seatback assembly.
(LH or RH) side air bag (Satellite) sensor	REPLACE the side air bag (Satellite) sensor on the collision side with new nuts. (Repair the center pillar inner, etc. before installing new one if damaged.)	1. Remove the side air bag (Satellite) sensor on the collision side. Check harness connectors for damage, terminals for deformities, and harness for binding. 2. Check for visible signs of damage (dents, cracks, deformation) of the side air bag (Satellite) sensor. 3. Install the side air bag (Satellite) sensor to check fit. 4. If no damage is found, reinstall the side sir bag (Satellite) sensor with new nuts. 5. If damaged—REPLACE the side air bag (Satellite) sensor with new nuts.
Diagnosis sensor unit	REPLACE the diagnosis sensor unit with the new bolts.	1. Check case and bracket for dents, cracks or deformities. 2. Check connectors for damage, and terminals for deformities. 3. If no damage is found, reinstall the diagnosis sensor unit with new bolts and ground bolt. 4. If damaged—REPLACE the diagnosis sensor unit with new bolts and ground bolt.

Part	Front side air bag and side curtain air bag is activated	Front side air bag and side curtain air bag is NOT activated
Seat belt pre-tensioner assembly	1. Check if the seat belt can be extended smoothly. If the seat belt cannot be extended smoothly, – Check for deformities of the center pillar inner. – If the center pillar inner has no damage, REPLACE the seat belt pre-tensioner assembly. 2. Remove the seat belt pre-tensioner assembly on the collision side. Check harness cover and connectors for damage, terminals for deformities, and harness for binding. 3. Check for visible signs of damage (dents, cracks, deformation) of the seat belt pre-tensioner assembly. 4. Check seat belt adjuster for damage. 5. If no damage is found, reinstall the seat belt pre-tensioner assembly. 6. If damaged—REPLACE the seat belt pre-tensioner assembly with new bolts.	
Seat with front side air bag	REPLACE all parts of front seatback (including front seatback frame)	1. Visually check the seat on the collision side. 2. Remove the seat on the collision side and check the following for damage and deformities. – Harness, connectors and terminals – Frame and recliner (for front and rear seat), and also adjuster and slides (for front seat) 3. If no damage is found, reinstall the seat. 4. If damaged—REPLACE the damaged seat parts using new bolts.
Center inner pillar	1. Check the center inner pillar on the collision side for damage (dents, cracks, deformation). 2. If damaged—REPAIR the center inner pillar.	
Trim/headlining*	1. Check for visible signs of damage (dents, cracks, deformation) of the interior trim on the collision side. 2. If damaged—REPLACE the damaged trim parts.	

*: For coupe

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NES000LO

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Battery Service

NES000LP

Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

Service Notice or Precautions

NES000LQ

- Low tire pressure warning lamp flashes 1min., then turns ON when occurring any malfunction except low tire pressure.
  Delete the memory with CONSULT-III, or register the ID to turn low tire pressure warning lamp OFF. Refer to WT-21, "ID Registration Procedure" .
- ID registration is required when replacing or rotating wheels. replacing transmitter or BCM. Refer to WT-21, "ID Registration Procedure" .
- Replace grommet seal, valve core and cap of the transmitter in TPMS every tire replacement by reaching wear limit of tire.

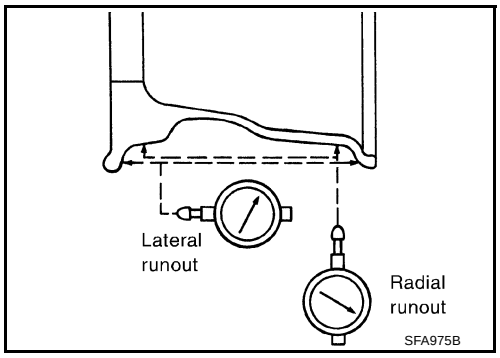
×: Applicable

ROAD WHEEL

PFP:40300

Inspection



NES00017

ALUMINUM WHEEL

1. Check tires for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.

a. Remove tire from aluminum wheel and mount on a tire balance machine.

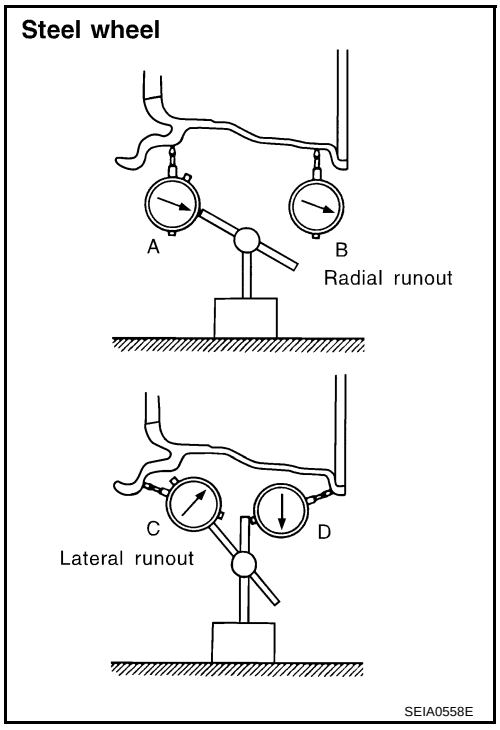
b. Set dial indicator as shown in the figure.

Wheel runout (Dial indicator value):

Refer to WT-39, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

STEEL WHEEL

1. Check tires for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.



a. Remove tire from steel wheel and mount wheel on a tire balance machine.

b. Set two dial indicators as shown in the figure.

c. Set each dial indicator to 0.

d. Rotate wheel and check dial indicators at several points around the circumference of the wheel.

e. Calculate runout at each point as shown below.

Radial runout = (A+B)/2

Lateral runout = (C+D)/2

f. Select maximum positive runout value and the maximum negative value.
Add the two values to determine total runout.
In case a positive or negative value is not available, use the maximum value (negative or positive) for total runout.
If the total runout value exceeds the limit, replace steel wheel.

Wheel runout:

Refer to WT-39, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

ROAD WHEEL TIRE ASSEMBLY

PFP:40300

Balancing Wheels (Bonding Weight Type)

NES00018

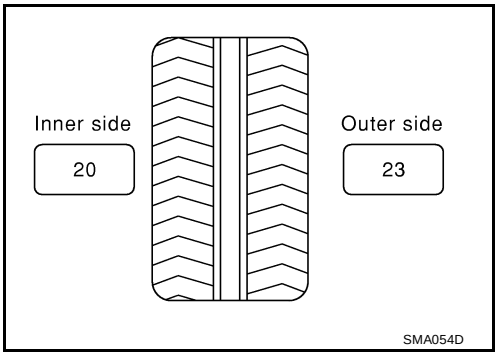
REMOVAL

1. Remove inner and outer balance weights from the road wheel.

   CAUTION:
   Be careful not to scratch the road wheel during removal.

2. Using releasing agent, remove double-faced adhesive tape from the road wheel.

   CAUTION:
   - **Be careful not to scratch the road wheel during removal.**
   - **After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.**



WHEEL BALANCE ADJUSTMENT

- If a tire balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.

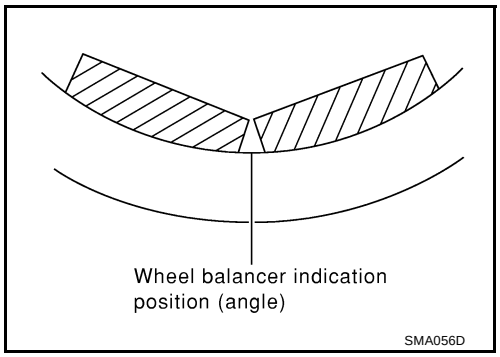
1. Set road wheel on wheel balancer using the center hole as a guide. Start the tire balance machine.
2. When inner and outer unbalance values are shown on the wheel balancer indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

   CAUTION:
   - **Do not install the inner balance weight before installing the outer balance weight.**
   - **Before installing the balance weight, be sure to clean the mating surface of the road wheel.**

   Indicated unbalance value × 5/3 = balance weight to be installed
   Calculation example:
   23 g (0.81 oz) × 5/3 = 38.33 g (1.35 oz) = 40 g (1.41 oz) balance weight (closer to calculated balance weight value)
   Note that balance weight value must be closer to the calculated balance weight value.
   Example:
   37.4 = 35 g (1.23 oz)
   37.5 = 40 g (1.41 oz)

   a. Install balance weight in the position shown in the figure.
   b. When installing balance weight to road wheels, set it into the grooved area on the inner wall of the road wheel as shown in the figure so that the balance weight center is aligned with the tire balance machine indication position (angle).

   CAUTION:
   - **Always use genuine NISSAN adhesion balance weights.**
   - **Balance weights are unreusable; always replace with new ones.**
   - **Do not install more than three sheets of balance weight.**



c. If calculated balance weight value exceeds 50 g (1.76 oz), install two balance weight sheets in line with each other (as shown in the figure).

CAUTION:
Do not install one balance weight sheet on top of another.

3. Start tire balance machine again.
4. Install drive-in balance weight on inner side of road wheel in the tire balance machine indication position (angle).

CAUTION:
Do not install more than two balance weights.

5. Start tire balance machine. Make sure that inner and outer residual unbalance values are 5 g (0.17 oz) each or below.
   - If either residual unbalance value exceeds 5 g (0.17 oz), repeat installation procedures.

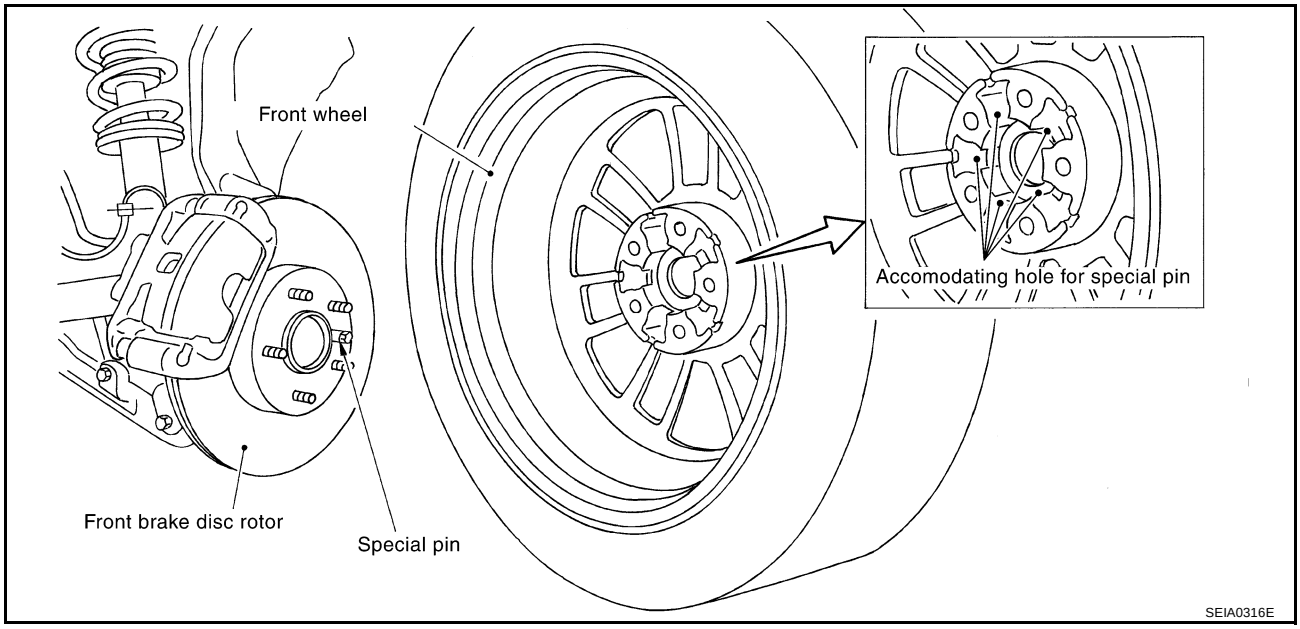
Wheel balance (Maximum allowable unbalance):

Maximum allowable unbalance	Dynamic (At rim flange)	5 g (0.17 oz) (one side)
	Static (At rim flange)	10 g (0.35 oz)

Tire Rotation

NES00019

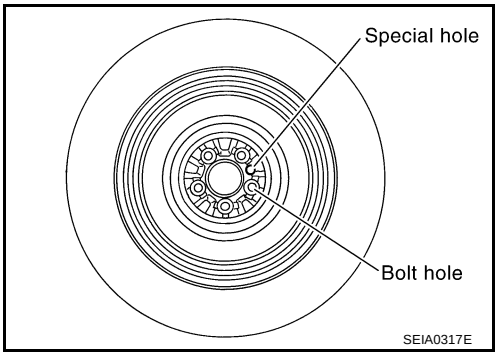
CAUTION:
- **Do not include the T-type spare tire when rotating the tires.**
- **Use NISSAN genuine wheel nuts for aluminum wheels.**



NOTE:
Tire cannot be rotated in vehicle, as front tire are different size from rear tire and the direction of wheel rotation is fixed in each tire.

DESCRIPTION

Safety Device Preventing from Being Incorrectly Installed

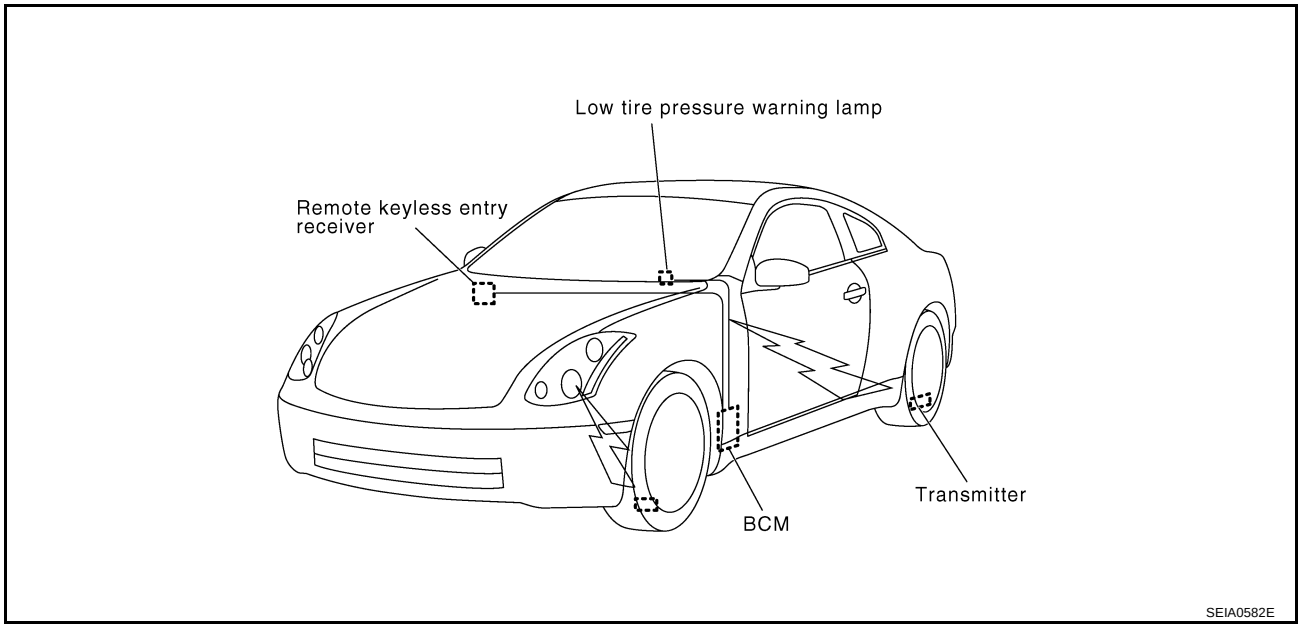


Front brake disc rotor and front wheel

- Front and rear wheel size for this model differs, therefore a special pin has been installed on the front brake disc rotor. To accommodate this pin a hole has been provided on the front wheel (the rear wheel does not have this hole.) and in some case the rear wheel is being mistakenly installed on the front.

T-type spare tire wheel

- T-type spare tire wheel for this model has a special hole designed to avoid the pin on front disc rotor.

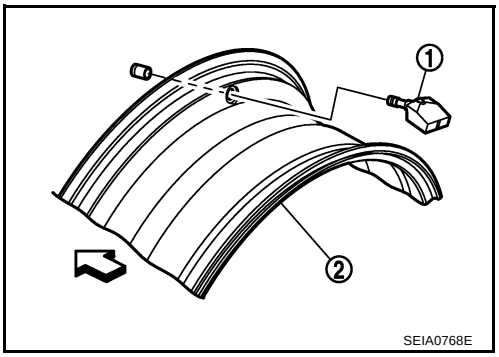


TIRE PRESSURE MONITORING SYSTEM

PFP:40300

System Components

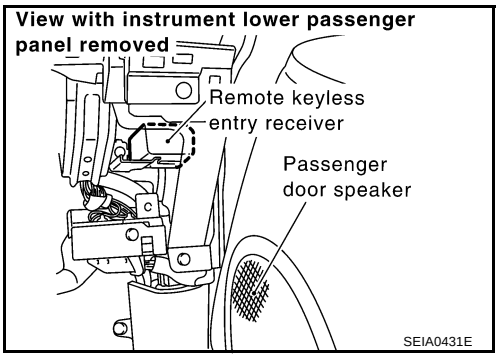
NES0001A



System Description

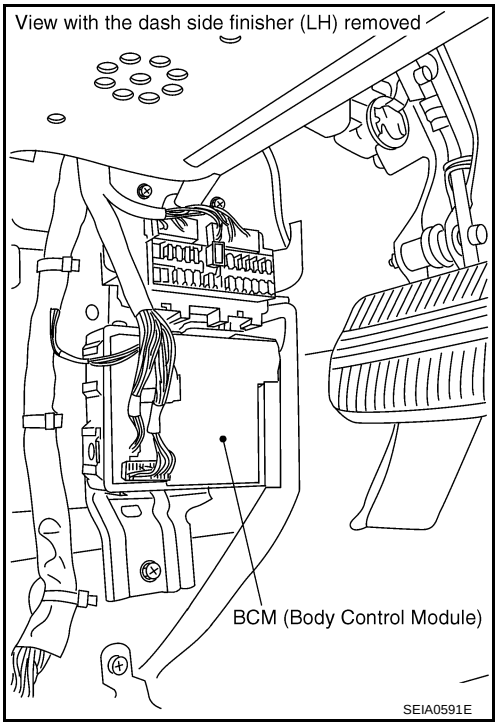
NES0001B

TRANSMITTER



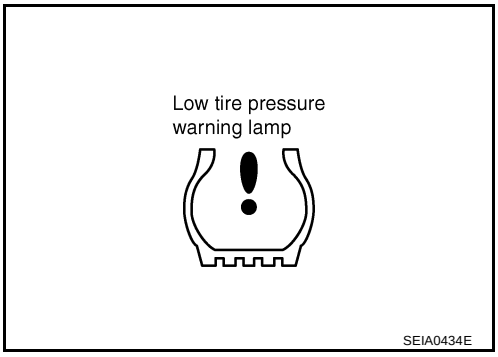
A sensor-transmitter (1) integrated with a valve is installed on a wheel (2), and transmits a detected air pressure signal in the form of a radio wave.

⇦ : Outside



REMOTE KEYLESS ENTRY RECEIVER

The remote keyless entry receiver receives the air pressure signal transmitted by the transmitter in each wheel.



BCM (BODY CONTROL MODULE)

The BCM reads the air pressure signal received by the remote keyless entry receiver, and controls the low tire pressure warning lamp operations. It also has a judgement function to detect a system malfunction.

LOW TIRE PRESSURE WARNING LAMP

The combination meter receives tire pressure status from the BCM using CAN communication. When a low tire pressure condition is sensed by the BCM, the combination meter low tire pressure warning lamp are activated.

Low tire pressure warning lamp indication

Condition	Low tire pressure warning lamp
Less than 190 kPa (1.90 kg/cm^2 , 28 psi) [Note]	ON
Low tire pressure warning system malfunction [Other diagnostic item]	Warning lamp flashes 1 min, then turns ON.

NOTE:

Standard air pressure is for 240 kpa (2.4 kg/cm^2 , 35 psi) vehicles.

Can Communication

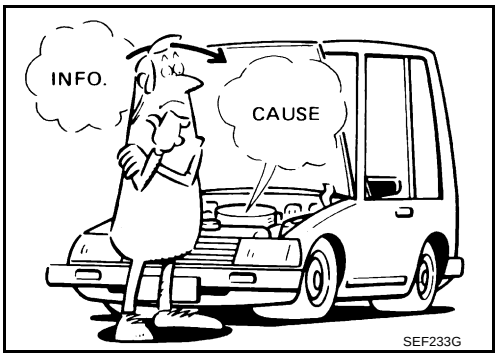
NES000A0

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only. Refer to LAN-49, "CAN Communication Signal Chart" .

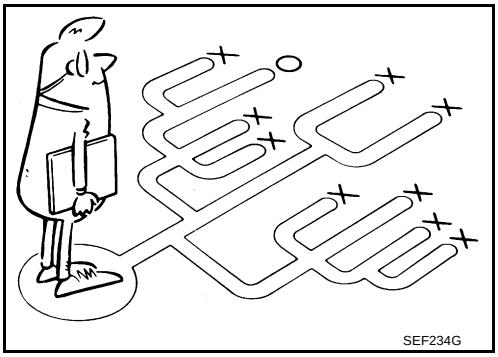
TROUBLE DIAGNOSIS

PFP:00004



How to Perform Trouble Diagnosis

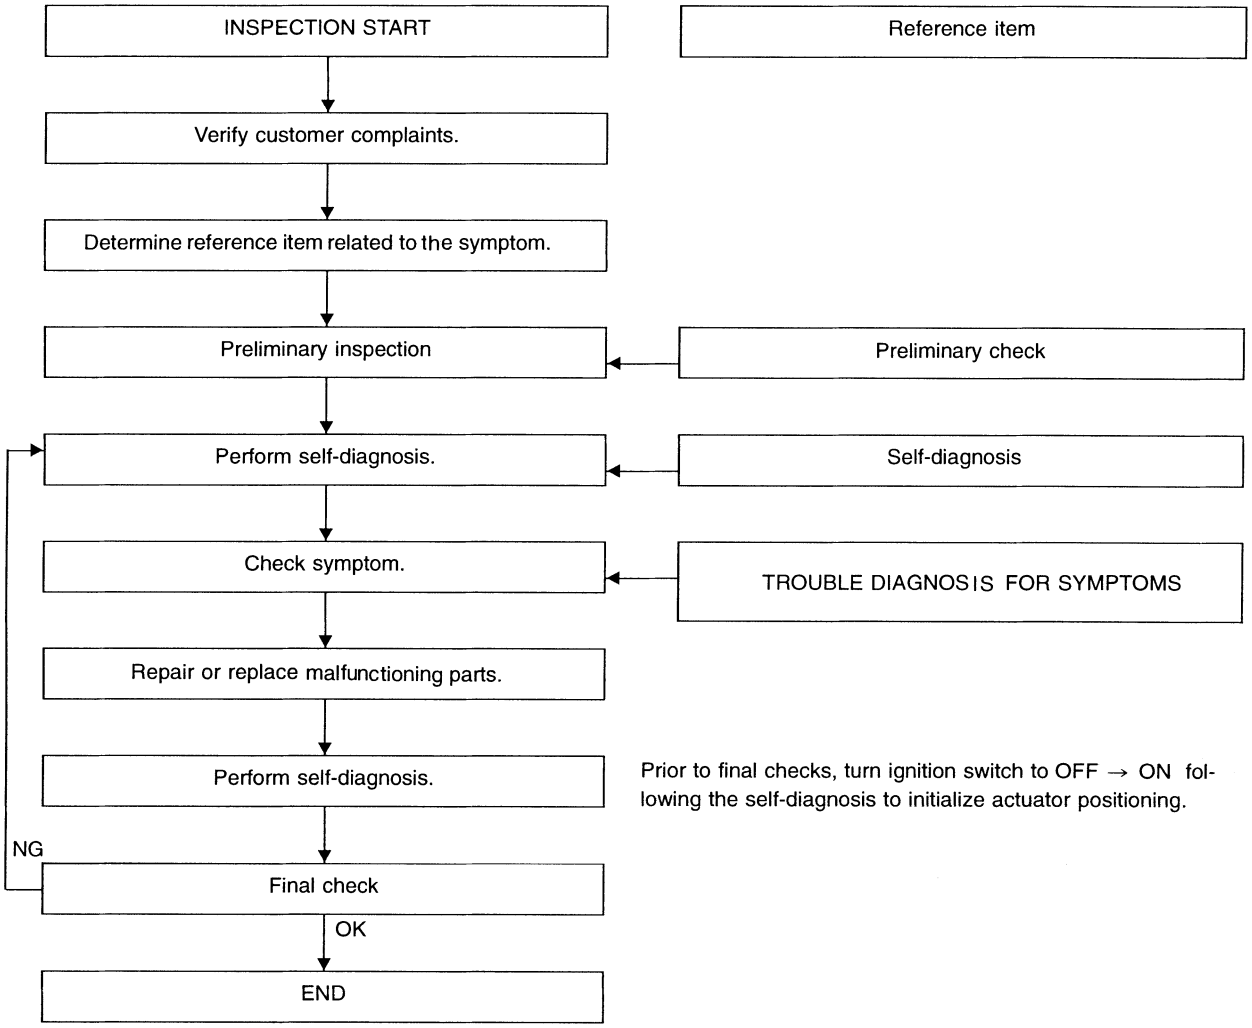
NES000AF



BASIC CONCEPT

- To perform trouble diagnosis, it is the most important to have understanding about vehicle systems (control and mechanism) thoroughly.
- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptoms, and understand them fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptoms by driving vehicle with customer.

  CAUTION:
  Customers are not professional. It is dangerous to make an easy guess like “maybe the customer means that...,” or “maybe the customer mentions this symptom”.



- It is essential to check symptoms right from the beginning in order to repair malfunctions completely.
  For intermittent malfunctions, reproduce symptoms based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairing without any symptom diagnosis, you cannot judge if malfunctions have actually been eliminated.
- After completing diagnosis, always erase diagnostic memory.
- For intermittent malfunctions, move harness or harness connector by hand. Then check for poor contact or reproduced open circuit.

INTRODUCTION

- Before troubleshooting, verify customer complaints.
- If a vehicle malfunction is difficult to reproduce, harnesses, harness connectors or terminals may be malfunctioning. Hold and shake these parts to make sure they are securely connected.
- When using a circuit tester to measure voltage or resistance of each circuit, be careful not to damage or deform connector terminals.

ID Registration Procedure

NES0001G

ID REGISTRATION WITH ACTIVATION TOOL

This procedure must be done after replacing or rotating wheels, replacing transmitter or BCM.

1. Select “AIR PRESSURE MONITOR” on “SELECT WORK ITEM”.
2. Touch “WORK SUPPORT” on “SELECT DIAG MODE” screen, and select “ID REGIST”.
3. With the activation tool (J-45295) pushed against the front-left transmitter position of the tire air valve, press the button then keep 5 seconds.
4. Register the IDs in order from FR LH, FR RH, RR RH to RR LH. When ID registration of each wheel has been completed, a buzzer sounds and turn signal lamp (LH/ RH) blinks.

SEIA0460E

Activation tire position		Buzzer	Turn signal lamp	CONSULT-III
1	Front LH	Once	2 times flashing	“Red” ↓ “Green”
2	Front RH	2 times		
3	Rear RH	3 times		
4	Rear LH	4 times		

5. After completing all ID registrations, press “END” to complete the procedure.

NOTE:
Be sure to register the IDs in order from FR LH, FR RH, RR RH, to RR LH, or the self-diagnostic results display will not function properly.

ID REGISTRATION WITHOUT ACTIVATION TOOL

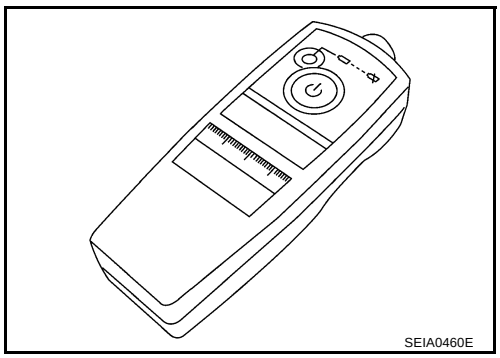
This procedure must be done after replacing or rotating wheels, replacing transmitter or BCM.

1. Select “AIR PRESSURE MONITOR” on “SELECT WORK ITEM”.
2. Touch “WORK SUPPORT” on “SELECT DIAG MODE” screen, and select “ID REGIST”.
3. Adjust the tire pressure to the values shown in the table below for ID registration, and drive the vehicle at 40 km/h (25 MPH) or more for a few minutes.

Tire position	Tire pressure kPa (kg/cm^2 , psi)
Front – Left	240 (2.4, 34)
Front – Right	220 (2.2, 31)
Rear – Right	200 (2.0, 29)
Rear – Left	180 (1.8, 26)

4. After completing all ID registrations, press “END” to complete the procedure.

Activation tire position	CONSULT-III
Front LH	“Red” ↓ “Green”
Front RH	
Rear RH	
Rear LH	



5. Inflate all tires to proper pressure. Refer to WT-39, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

Transmitter Wake Up Operation

NES0001H

WITH ACTIVATION TOOL

1. With the activation tool (J-45295) pushed against the front-left transmitter, press the button for 5 seconds.
   - When ignition switch ON, as the low tire pressure warning lamp blinks per the follow diagram, the respective transmitter then must be woken up.

Warning lamp blinking timing	Need to activation tire position
ON / OFF: a, b — a : 0.3sec, b : 1.3sec	Front LH
ON / OFF: a, a, a, b — a : 0.3sec, b : 1.3sec	Front RH
ON / OFF: a, a, a, a, b — a : 0.3sec, b : 1.3sec	Rear RH
ON / OFF: a, a, a, a, a, b — a : 0.3sec, b : 1.3sec	Rear LH
ON / OFF: a, b — a : 2sec, b : 0.2sec	All tire

SEIA0378E

2. Register the ID of wheel that warning lamp flashes. When wake up of registered wheel has been completed, turn signal lamp flashes two times.
3. After completing wake up of all transmitters, make sure low tire pressure warning lamp goes out.

CONSULT-III Function (BCM)

NES000DL

CONSULT-III MAIN FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

BCM diagnosis part	Mode	Function
Air pressure monitor	Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.
	Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
	Data monitor	Input/Output data in the control unit can be read.
	Active test	Diagnostic Test Mode in with CONSULT-III drives some actuators apart from the control unit (BCM) and also shifts some parameters in a specified range.

WORK SUPPORT MODE

ID REGST RL 1 [DONE/YET]	Registration ID is displayed.
WARNING LAMP [ON/OFF]	Control status of low tire pressure warning lamp is displayed.
BUZZER [ON/OFF]	Buzzer in combination meter is displayed.

ACTIVE TEST MODE

NOTE:

Before performing the self-diagnosis, be sure to register the ID, or else the actual malfunction location may be different from that displayed on CONSULT-III.

TEST ITEM LIST

Test item	Content
FLASHER	This test is able to check to make sure that each turn signal lamp turns on.
HORN	This test is able to check to make sure that the horn sounds.
WARNING LAMP	This test is able to check to make sure that the warning lamp turns on.
ID REGIST WARNING	This test is able to check to make sure that the buzzer sounds or the warning lamp turns on.
FLAT TIRE WARNING	This test is able to check to make sure that the buzzer sounds or the warning lamp turns on.

Diagnosis Procedure with Warning Lamp Function (Without CONSULT-III)

NES000A4

DESCRIPTION

During driving, the low tire pressure warning system receives the signal transmitted from the transmitter installed in each wheel. The control unit (BCM) of this system has pressure judgement and trouble diagnosis functions.

FUNCTION

When the low tire pressure warning system detects low inflation pressure or another unusual symptom, the warning lamps in the combination meter comes on. To start the self-diagnostic results mode, ground terminal of the tire pressure warning check connector. The malfunction location is indicated by the warning lamp flashing. Refer to PG-41, "HARNESS" .

MALFUNCTION CODE CHART

Code (warning lamp blinks)	Diagnosis item	Reference
15	Front-left tire pressure drops to 190 kPa (1.90 kg/cm^2 , 28 psi) or less.	—
16	Front-right tire pressure drops to 190 kPa (1.90 kg/cm^2 , 28 psi) or less.	
17	Rear-right tire pressure drops to 190 kPa (1.90 kg/cm^2 , 28 psi) or less.	
18	Rear-left tire pressure drops to 190 kPa (1.90 kg/cm^2 , 28 psi) or less.	
21	Transmitter no data (front - left)	WT-30
22	Transmitter no data (front - right)	
23	Transmitter no data (rear - right)	
24	Transmitter no data (rear - left)	
31	Transmitter checksum error (front - left)	WT-30
32	Transmitter checksum error (front - right)	
33	Transmitter checksum error (rear - right)	
34	Transmitter checksum error (rear - left)	
35	Transmitter pressure data error (front - left)	WT-31
36	Transmitter pressure data error (front - right)	
37	Transmitter pressure data error (rear - right)	
38	Transmitter pressure data error (rear - left)	
41	Transmitter function code error (front - left)	WT-30
42	Transmitter function code error (front - right)	
43	Transmitter function code error (rear - right)	
44	Transmitter function code error (rear - left)	
45	Transmitter battery voltage low (front - left)	WT-30
46	Transmitter battery voltage low (front - right)	
47	Transmitter battery voltage low (rear - right)	
48	Transmitter battery voltage low (rear - left)	
52	Vehicle speed signal	WT-32

LOW TIRE PRESSURE WARNING LAMP SYMPTOM CHART

Diagnosis Item	Symptom (Ignition switch ON)	Low tire pressure warning lamp	Cause	Action
Low tire pressure warning lamp	Warning light comes on immediately and turns off after 1 second.	 ON 1 sec > stays OFF SEIA0592E	All wheel transmitters are “activated” (working).	None (system OK)
	Warning light blinks on for 2 seconds, then turns off for 0.2 seconds-repeats.	 Blinks: ON 2 sec > OFF 0.2 sec SEIA0593E	All wheel transmitters are not activated.	Activate all wheel transmitters. Refer to WT-22, "Transmitter Wake Up Operation" .
	Warning light blinks 1 time.	 Blinks 1 time ON 0.3 sec > OFF 1.0 sec PEIA0073E	Front LH wheel transmitter is not activated.	Activate front LH wheel transmitter. Refer to WT-22, "Transmitter Wake Up Operation" .
	Warning light blinks 2 times.	 Blinks 2 times ON 0.3 sec > OFF 0.3 sec SEIA0595E	Front RH wheel transmitter is not activated.	Activate front RH wheel transmitter. Refer to WT-22, "Transmitter Wake Up Operation" .
	Warning light blinks 3 times.	 Blinks 3 times ON 0.3 sec > OFF 0.3 sec SEIA0596E	Rear RH wheel transmitter is not activated.	Activate rear RH wheel transmitter. Refer to WT-22, "Transmitter Wake Up Operation" .

Diagnosis Item	Symptom (Ignition switch ON)	Low tire pressure warning lamp	Cause	Action
Low tire pressure warning lamp	Warning light blinks 4 times.	 Blinks 4 times ON 0.3 sec > OFF 0.3 sec SEIA0597E	Rear LH wheel transmitter is not activated.	Activate rear LH wheel transmitter. Refer to WT-22, "Transmitter Wake Up Operation" .
	Warning light comes on and does not turn off.	 Comes ON and stays ON SEIA0598E	Tire pressure is low.	Check tire pressure with CONSULT-III. Refer to WT-24, "DATA MONITOR MODE" .
			The fuse for combination meter from battery is pulled out.	Check the fuse for combination meter from battery. Install or replace (if needed).
			BCM connector pulled out.	Check BCM connector. Reconnect if needed.
			Low tire pressure or tire pressure monitoring system malfunction.	● Perform CONSULT-III Self- Diagnosis. Refer to WT-23, "SELF-DIAG RESULTS MODE" . – Perform ID Registration if needed. Refer to WT-21, "ID Registration Procedure" .
Turn signal lamp	Turn signal lamp does not flash 2 times or horn does not sound after transmitter activation.	—	1. Tool J-45295 (special service tool) battery low. 2. Ignition OFF during activation. 3. Tool J-45295 (special service tool) not positioned correctly. 4. Transmitters already activated.	1. Install new battery. 2. Make sure ignition is ON during activation. 3. Position tool correctly during activation. 4. None

NOTE:
If more than one wheel transmitter is NOT activated, the warning light blinking patterns for those wheels will combine. (Example: one blink/OFF/three blinks = Rear LH and Rear RH transmitters are not activated.)

Preliminary Check

NES0001K

BASIC INSPECTION

1. CHECK ALL TIRE PRESSURES

- Check all tire pressures. Refer to WT-39, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

OK or NG

OK >> GO TO 2.
NG >> Adjust tire pressure to specified value.

2. CHECK LOW TIRE PRESSURE WARNING LAMP ACTIVATION

- Check low tire pressure warning lamp activation.

Dose low tire pressure warning lamp activate for 1 second when ignition switch is turned “ON”?

YES >> GO TO 3.
NO >> Check fuse and combination meter.

3. CHECK CONNECTOR

1. Disconnect BCM harness connectors M90 and M91.
2. Check terminals for damage or loose connection.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK ACTIVATION TOOL

- Check activation tool battery.

OK or NG

OK >> Perform self-diagnosis.
NG >> Replace activation tool battery.

TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS

PFP:00000

Transmitter or Control Unit (BCM)

NES0001M

MALFUNCTION CODE NO. 21, 22, 23 OR 24

1. CHECK CONTROL UNIT

- Drive for several minutes. Check all tire pressures with CONSULT-III “DATA MONITOR”.

Are all tire pressures displayed 0 kPa?

YES >> GO TO 2.
NO >> GO TO 3.

2. CHECK REMOTE KEYLESS ENTRY RECEIVER CONNECTOR

1. Disconnect remote keyless entry receiver harness connector M78.
2. Check terminals for damage or loose connection.
3. Reconnect harness connector.

OK or NG

OK >> Replace BCM refer to BCS-17, "Removal and Installation of BCM" , then GO TO 3.
NG >> Repair or replace remote keyless entry receiver harness connector.

3. ID REGISTRATION

- Perform ID registration of all transmitters.

Is there any tire that ID cannot be registered to?

YES >> Replace transmitter of the tire, then GO TO 5.
NO >> GO TO 4.

4. VEHICLE DRIVING

- Drive at a speed of 40 km/h (25 MPH) or more for several minutes without stopping.
  Check all tire pressures with CONSULT-III “DATA MONITOR” within 15 minutes after vehicle speed becomes 17 km/h (11 MPH).

Does “DATA MONITOR” display tire pressure as normal without any warning lamp?

YES >> INSPECTION END
NO >> GO TO 5.

5. ID REGISTRATION AND VEHICLE DRIVING

1. Perform ID registration of all transmitters.
2. Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes. Then check all tire pressures with CONSULT-III “DATA MONITOR” within 5 minutes.

Does “DATA MONITOR” display tire pressure as normal without any warning lamp?

YES >> INSPECTION END
NO >> GO TO the inspection applicable to DTC.

Transmitter - 1

NES0001N

MALFUNCTION CODE NO. 31, 32, 33, 34, 41, 42, 43, 44, 45, 46, 47 OR 48

1. ID REGISTRATION (CORRECTION OF TRANSMITTER LOCATION)

1. Perform ID registration of all transmitters.
2. Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes.

>> GO TO 2.

2. REPLACE TRANSMITTER

1. Check low tire pressure warning condition again, and replace malfunctioning transmitter.
2. Perform ID registration of all transmitters.

Can ID registration of all transmitters be completed?

YES >> GO TO 3.
NO >> GO TO the inspection 1. Refer to WT-30, "Transmitter or Control Unit (BCM)" .

3. VEHICLE DRIVING

- Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes. Then check all tire pressures with CONSULT-III “DATA MONITOR” within 5 minutes.

Does “DATA MONITOR” display tire pressure as normal without any warning lamp?

YES >> INSPECTION END
NO >> Replace malfunctioning transmitter, and perform “Step 3” again.

Transmitter - 2

NES0001O

MALFUNCTION CODE NO. 35, 36, 37 OR 38

1. CHECK ALL TIRE PRESSURE

- Check all tire pressures. Refer to WT-39, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

Are there any tires whose pressure is “64 psi” or more?

YES >> Adjust tire pressure to specified value.
NO >> GO TO 2.

2. VEHICLE DRIVING

1. Perform ID registration of all transmitters.
2. Drive at a speed of 40 km/h (25 MPH) or more for several minutes without stopping.
   Check all tire pressures with CONSULT-III “DATA MONITOR” within 15 minutes after vehicle speed becomes 17 km/h (11 MPH).

>> Replace transmitter with new one if “DATA MONITOR” displays 64 psi or more. Then GO TO 3.

3. ID REGISTRATION AND VEHICLE DRIVING

1. Perform ID registration of all transmitters.
2. Drive at a speed of 40 km/h (25 MPH) or more for 3 minutes, and then drive the vehicle at any speed for 10 minutes. Then check all tire pressures with CONSULT-III “DATA MONITOR” within 5 minutes.

Does “DATA MONITOR” display tire pressure as normal without any warning lamp?

YES >> INSPECTION END
NO >> GO TO the inspection applicable to DTC.

Vehicle Speed Signal

NES0001P

MALFUNCTION CODE NO. 52

1. CHECK SELF-DIAGNOSTIC RESULTS

1. Perform “CONSULT-III Start procedure”.
2. Touch “BCM” on “SELECT SYSTEM” screen.
3. Touch “SELF-DIAG RESULTS” on “SELECT DIAG MODE” screen.
4. Check display contents in self-diagnostic results.

Is the “CAN COMM CIRCUIT” displayed in the self-diagnosis display?

YES >> Perform trouble diagnosis for CAN communication system.
NO >> Check combination meter. Refer to DI-47, "SELF-DIAGNOSTIC RESULTS" .

TROUBLE DIAGNOSIS FOR SYMPTOMS

PFP:00007

Warning Lamp Does Not Come On When Ignition Switch Is Turned On

NES0001Q

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

1. Perform “CONSULT-III Start Procedure”.
2. Touch “BCM” on “SELECT SYSTEM” screen.
3. Touch “SELF-DIAG RESULTS” on “SELECT DIAG MODE” screen.
4. Check display contents in self-diagnostic results.

Is the “CAN COMM CIRCUIT” displayed in the self-diagnosis display items?

YES >> Perform trouble diagnosis for CAN communication system.
NO >> GO TO 2.

2. CHECK COMBINATION METER

Check combination meter function.

OK or NG

OK >> GO TO 3.
NG >> Check combination meter. Refer to DI-47, "SELF-DIAGNOSTIC RESULTS" .

3. CHECK LOW TIRE PRESSURE WARNING LAMP

1. Turn ignition switch OFF.
2. Disconnect BCM harness connectors M90 and M91.

Does the warning lamp activate?

YES >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NO >> Check combination meter and repair or replace.

Warning Lamp Stays On When Ignition Switch Is Turned On

NES0001R

DIAGNOSTIC PROCEDURE

1. PERFORM SELF-DIAGNOSIS

1. Turn ignition switch ON. (Do not start engine.)
2. Select “SELF-DIAG RESULTS” mode for “AIR PRESSURE MONITOR” with CONSULT-III.
3. Touch “ERASE”.
4. Turn ignition switch OFF.
5. Start engine.

Does low tire pressure warning lamp turn OFF?

YES >> INSPECTION END
NO >> GO TO 2.

2. PERFORM ID REGISTRATION

Perform ID registration all transmitters. Refer to WT-21, "ID Registration Procedure" .

Does low tire pressure warning lamp turn OFF?

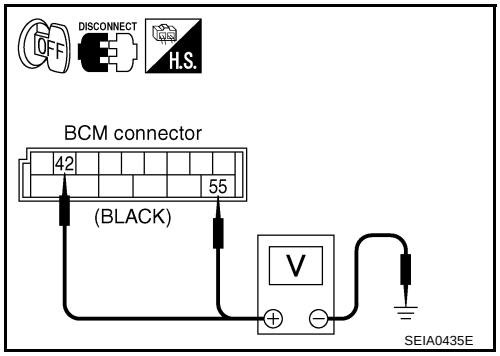
YES >> INSPECTION END
NO >> GO TO 3.

3. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect BCM harness connectors M90 and M91.
3. Check terminals for damage or loose connections.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.



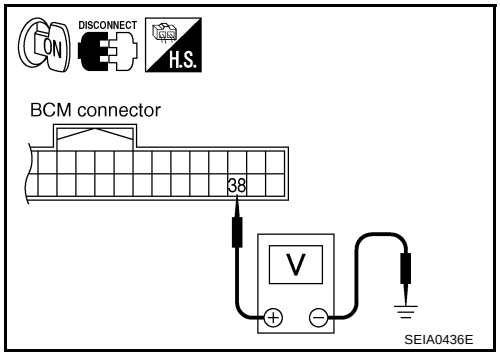
4. CHECK POWER SUPPLY CIRCUIT (BATTERY)

1. Turn ignition switch OFF.
2. Disconnect BCM harness connector.
3. Check voltage between BCM harness connector M91 terminals 42, 55 and ground.

Connector	Terminal	Voltage (Approx.)
M91	42 - Ground	Battery voltage
	55 - Ground	

OK or NG

OK >> GO TO 5.
NG >> Check BCM power supply circuit for open or short.

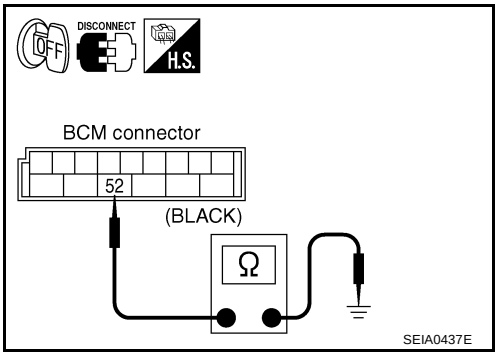


5. CHECK POWER SUPPLY CIRCUIT (IGN)

1. Turn ignition switch OFF.
2. Disconnect BCM harness connector.
3. Turn ignition switch ON.
4. Check voltage between BCM harness connector M90 terminal 38 and ground.

Connector	Terminal	Voltage (Approx.)
M90	38 - Ground	Battery voltage

OK or NG



OK >> GO TO 6.
NG >> Check BCM power supply circuit for open or short.

6. CHECK GROUND CIRCUIT

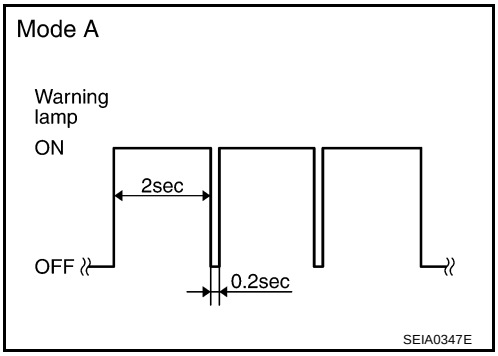
1. Turn ignition switch OFF.
2. Disconnect BCM harness connector.
3. Check continuity between BCM harness connector M91 terminal 52 and ground.

Continuity should exist.

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair or replace BCM ground circuit.



Warning Lamp Blinks When Ignition Switch Is Turned On

NES0001S

NOTE:
If warning lamp blinks below, the system is normal.

Blink Mode A

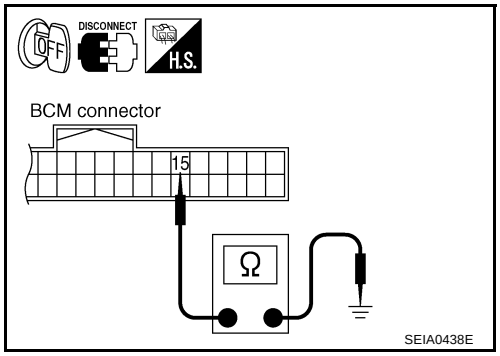
- This mode shows transmitter status is OFF-mode.
  Perform transmitter wake up operation. Refer to WT-22, "Transmitter Wake Up Operation" .

DIAGNOSTIC PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect BCM harness connector M90.
3. Check terminals for damage or loose connections.

OK or NG



OK >> GO TO 2.

NG >> Repair or replace damaged parts.

2. CHECK TIRE PRESSURE WARNING CHECK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM harness connector.
3. Check continuity between BCM harness connector M90 terminal 15 and ground.

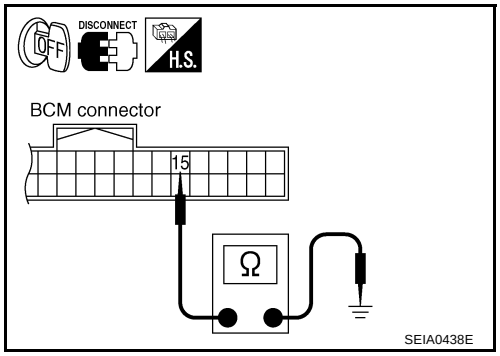
Continuity should exist.

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .

NG >> Repair or replace harness connector.

Turn Signal Lamp Blinks When Ignition Switch Is Turned On



NES0001T

DIAGNOSTIC PROCEDURE

1. CHECK TIRE PRESSURE WARNING CHECK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM harness connector.
3. Check continuity between BCM harness connector M90 terminal 15 and ground.

Continuity should exist.

OK or NG

OK >> Check turn signal lamp operation. Refer to LT-65, "TURN SIGNAL AND HAZARD WARNING LAMPS" .

NG >> Repair or replace harness connector.

ID Registration Can Not Be Completed

NES0001U

DIAGNOSTIC PROCEDURE

1. ID REGISTRATION (ALL)

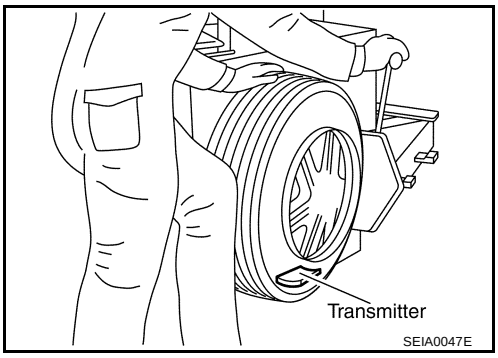
- Perform ID registration of all transmitters.

Can ID registration of all transmitters be completed?

YES >> INSPECTION END

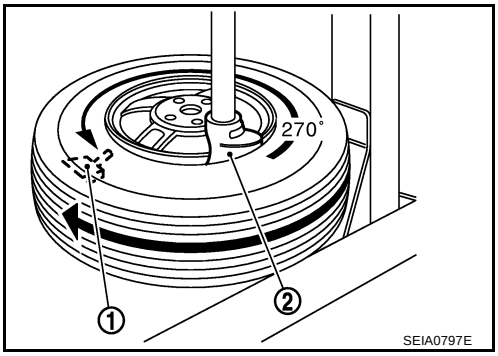
NO >> GO TO WT-30, "TROUBLE DIAGNOSIS FOR SELF-DIAGNOSTIC ITEMS" .

REMOVAL AND INSTALLATION



PFP:00000

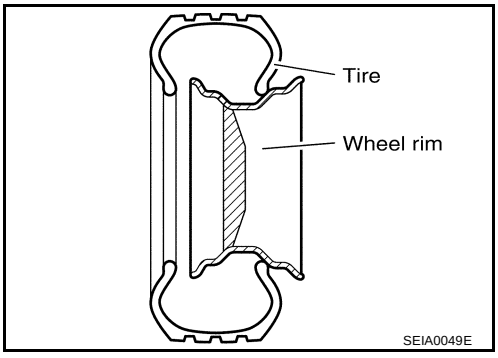
Transmitter



NES0001V

REMOVAL

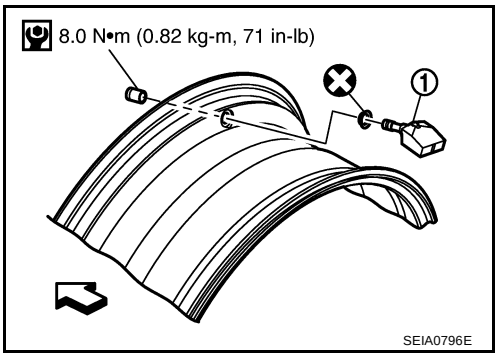
1. Deflate tire. Unscrew transmitter retaining nut and allow transmitter to fall into tire.
2. Gently bounce tire so that transmitter falls to bottom of tire. Place on tire changing machine and break both tire beads ensuring that the transmitter remains at the bottom of the tire.



3. Turn tire so that valve hole is at bottom and bounce so that transmitter (1) is near valve hole. Carefully lift tire onto turntable and position valve hole (and transmitter) 270 degree from mounting/dismounting head (2).
4. Lubricate tire well and remove first side of the tire. Reach inside the tire and remove the transmitter.

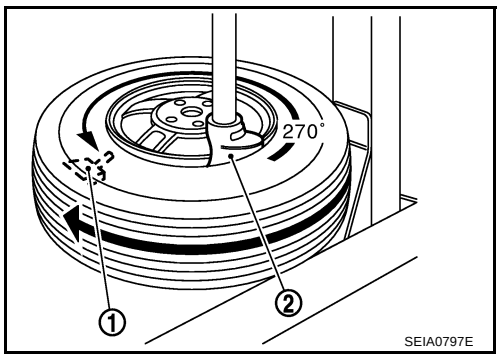
INSTALLATION

1. Put first side of tire onto rim.



2. Mount transmitter (1) on rim and tighten nut.

CAUTION:



Speed for tightening nut should be less than 10 rpm.

⇦ : Outside

3. Place wheel on turntable of tire machine. Ensure that transmitter (1) is 270 degree from mounting head (2) when second side of tire is fitted.

   NOTE:
   Do not touch transmitter at mounting head.

4. Lubricate tire well and fit second side of tire as normal. Ensure that tire does not rotate relative to rim.
5. Inflate tire and fit to appropriate wheel position.

REMOTE KEYLESS ENTRY RECEIVER

Removal

1. Remove the front kicking plate LH. Refer to EI-35, "BODY SIDE TRIM" .
2. Remove the dash side finisher LH. Refer to EI-35, "BODY SIDE TRIM" .
3. Remove the instrument lower cover. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove the glove box assembly. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
5. Disconnect keyless entry receiver connector.

Installation

Install in the reverse order of removal.

BCM (BODY CONTROL MODULE)

Removal

Remove the BCM. Refer to BCS-17, "Removal and Installation of BCM" .

Installation

Install in the reverse order of removal.

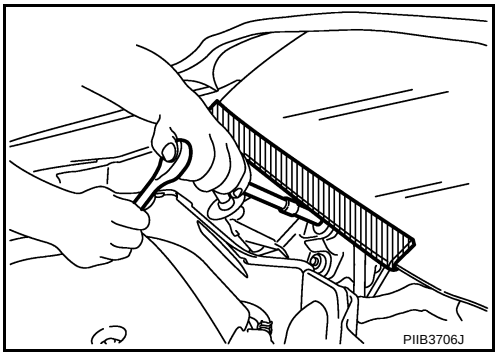
Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

NKS00544

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.



WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

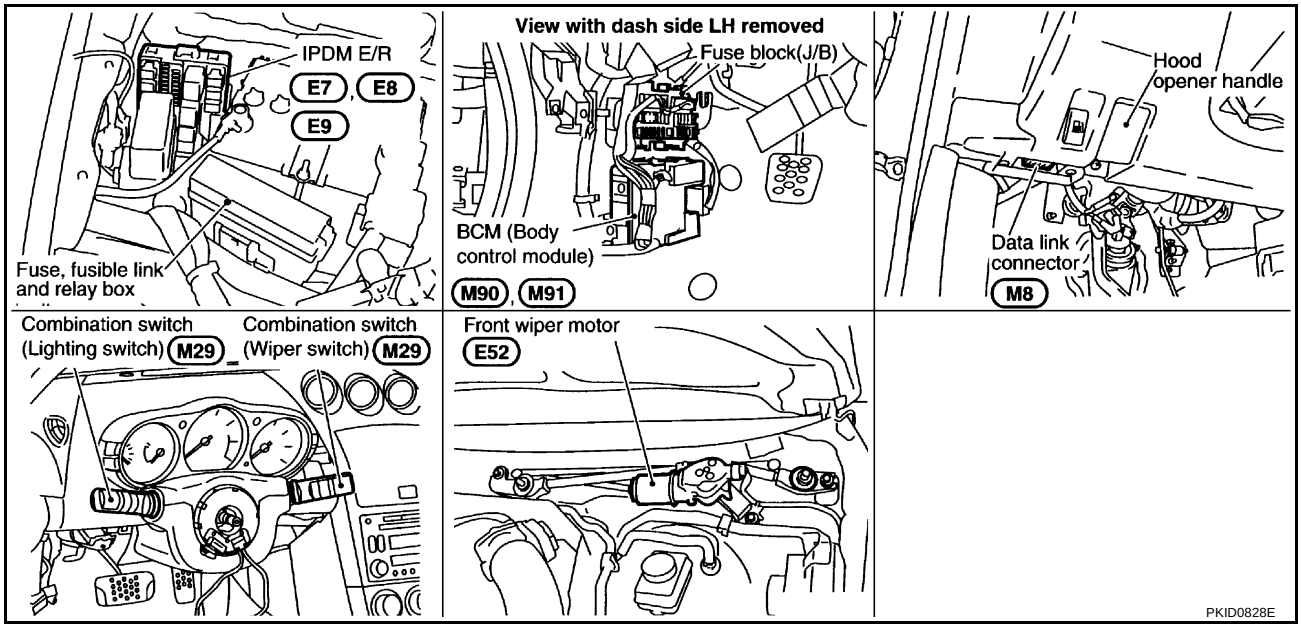
Precautions for Procedures without Cowl Top Cover

NKS00545

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

Precautions for Battery Service

NKS00546



Before disconnecting the battery, lower both the driver and passenger windows. This will prevent any interference between the window edge and the vehicle when the door is opened/closed. During normal operation, the window slightly raises and lowers automatically to prevent any window to vehicle interference. The automatic window function will not work with the battery disconnected.

FRONT WIPER AND WASHER SYSTEM

PFP:28810

Components Parts and Harness Connector Location

NKS0051Z

System Description

NKS00520

- All front wiper relays (HI, LO) are included in IPDM E/R (intelligent power distribution module engine room).
- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM (body control module) when switch is turned ON.
- BCM controls front wiper LO, HI, and INT (intermittent) operation.
- IPDM E/R operates wiper motor according to CAN communication signals from BCM.

OUT LINE

Power is supplied at all times

- to ignition relay, located in IPDM E/R, from battery direct
- through 40 A fusible link [letter F, located in fuse, fusible link and relay box]
- to BCM terminal 55,
- through 10 A fuse [No.18 located in fuse block (J/B)]
- to BCM terminal 42,
- through 30 A fuse [No.73 located in IPDM E/R]
- to front wiper relay, located in IPDM E/R,
- through 15 A fuse [No.78 located in IPDM E/R]
- to CPU (central processing unit) located in IPDM E/R,
- through 10 A fuse [No.71 located in IPDM E/R]
- to CPU located in IPDM E/R.

When ignition switch is in ON or START position, power is supplied

- to ignition relay, located in IPDM E/R,
- through 10 A fuse [No.1 located in fuse block (J/B)]
- to BCM terminal 38,
- through ignition relay, located in IPDM E/R
- to front wiper relay, located in IPDM E/R
- to front wiper high relay, located in IPDM E/R
- to CPU located in IPDM E/R,
- through 10 A fuse [No.84 located in IPDM E/R]
- through IPDM E/R terminal 44

- to front washer pump terminal 2.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66,
- to IPDM E/R terminals 38 and 60
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone),
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone),
- to combination switch terminal 12
- through grounds M30 and M66.

LOW SPEED WIPER OPERATION

When the front wiper switch is in low position, BCM detects low speed wiper ON signal by BCM wiper switch reading function.
BCM sends front wiper request signal (LOW) with CAN communication line

- from BCM terminals 39 and 40
- to IPDM E/R terminals 48 and 49.

When the IPDM E/R receives front wiper request signal (LOW), it turns ON front wiper relay, located in the IPDM E/R, power is supplied

- to front wiper motor terminal 3
- through IPDM E/R terminal 21 and front wiper high relay and front wiper relay.

Ground is supplied

- to front wiper motor terminal 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone),
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With power and ground is supplied, front wiper motor operates at low speed.

HIGH SPEED WIPER OPERATION

When the front wiper switch is in high position, BCM detects high speed wiper ON signal by BCM wiper switch reading function.
BCM sends front wiper request signal (HI) with CAN communication line

- from BCM terminals 39 and 40
- to IPDM E/R terminals 48 and 49.

When the IPDM E/R receives front wiper request signal (HI), it turns ON front wiper relay, located in IPDM E/R, power is supplied

- to front wiper motor terminal 2
- through IPDM E/R terminal 31 and front wiper high relay and front wiper relay.

Ground is supplied

- to front wiper motor terminal 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone),
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

With power and ground is supplied, front wiper motor operates at high speed.

INTERMITTENT OPERATION

Front wiper intermittent operation delay interval is determined from a combination of 3 switches (intermittent operation dial position 1, 2, and 3) and vehicle speed signal.
After each intermittent operation delay interval, BCM sends front wiper request signal to IPDM E/R.

Wiper Dial Position Setting

Wiper dial position	Intermittent operation interval	Combination switch		
		Intermittent operation dial position 1	Intermittent operation dial position 2	Intermittent operation dial position 3
1	Short	ON	ON	ON
2		ON	ON	OFF
3		ON	OFF	OFF
4	↑ ↓	OFF	OFF	OFF
5		OFF	OFF	ON
6		OFF	ON	ON
7	Long	OFF	ON	OFF

Example: For wiper dial position 1
Using combination switch reading function, BCM detects ON/OFF status of intermittent operation dial positions 1, 2, and 3.
When combination switch status is as listed below, BCM determines that it is wiper dial position 1.

- Intermittent operation dial position 1: ON (Continuity exists between combination switch output 3 and input 1.)
- Intermittent operation dial position 2: ON (Continuity exists between combination switch output 5 and input 1.)
- Intermittent operation dial position 3: ON (Continuity exists between combination switch output 4 and input 2.)

BCM determines front wiper intermittent operation delay interval from wiper dial position 1 and vehicle speed, and sends wiper request signal (INT) to IPDM E/R.

AUTO STOP OPERATION

With wiper switch turned OFF, wiper motor will continue to operate until wiper arms reach windshield base.
When the wiper arms are not located at base of windshield with wiper switch OFF, ground is provided

- from IPDM E/R terminal 21
- to front wiper motor terminal 3, in order to continue wiper motor operation at low speed

When the wiper arms reach base of windshield, front wiper motor terminals 1 and 4 are connected, and ground is supplied

- to IPDM E/R terminal 32
- through front wiper motor terminals 1 and 4
- through grounds E17, E43 and B102 (with VDC system, navigation system or telephone),
- through grounds E17, E43 and F152 (without VDC system, navigation system and telephone).

Then the IPDM E/R sends auto stop operation signal to BCM with CAN communication.
When the BCM receives auto stop operation signal, BCM sends wiper stop signal to IPDM E/R with CAN communication line. IPDM E/R stops wiper motor. Wiper motor will then stop wiper arms at the STOP position.

WASHER OPERATION

When the wiper switch is in front wiper washer position, BCM detect front wiper washer signal by BCM wiper switch reading function (Refer to WW-7, "COMBINATION SWITCH READING FUNCTION").
Combination switch ground is supplied

- to front washer pump terminal 1
- through combination switch terminal 11
- to combination switch terminal 12
- through grounds M30 and M66.

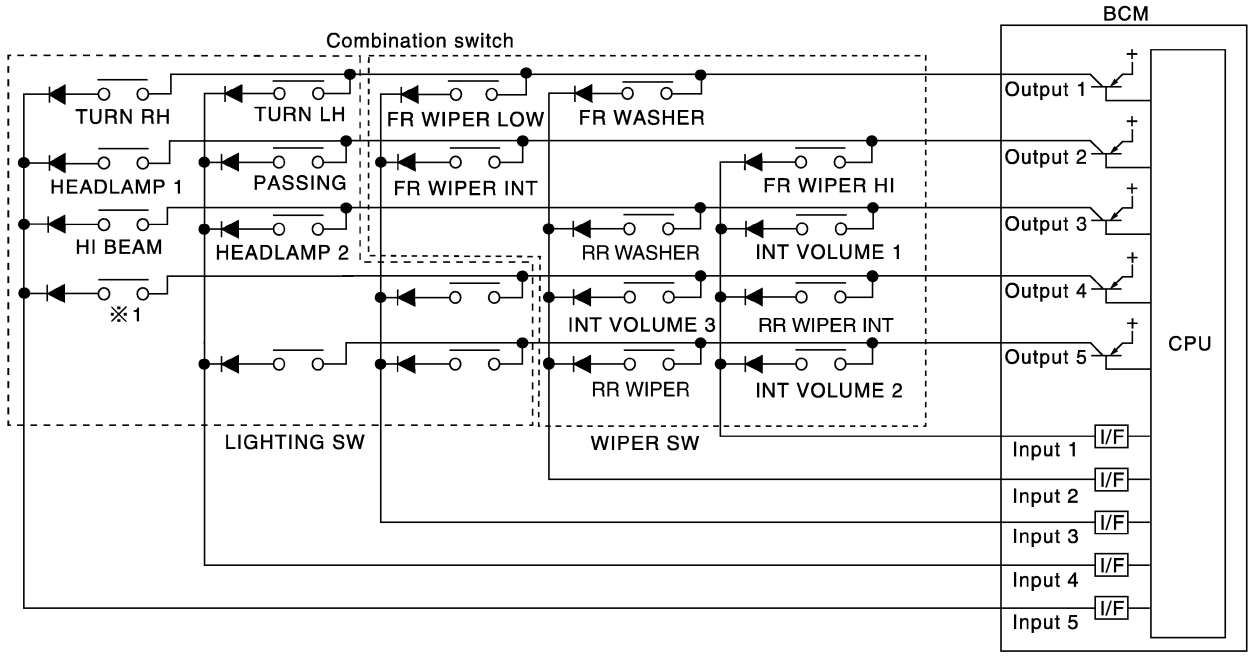
With ground is supplied, front washer pump is operated.
When the BCM detects that front washer pump has operated for 0.4 seconds or longer, BCM operates front wiper motor for low speed.
When the BCM detects washer switch is OFF, low speed operation cycles approximately 2 times and stops.

MIST OPERATION

When the wiper switch is turned to the mist position, wiper low speed operation cycles once and then stops.
For additional information about wiper operation under this condition, refer to WW-5, "LOW SPEED WIPER OPERATION" .
If switch is held in mist position, low speed operation continues.

FAIL-SAFE FUNCTION

If an abnormality occurs in CAN communications, IPDM E/R holds the condition just before fail-safe status is initiated until ignition switch is turned off. (If wipers were operating in LO just before the initiation of fail-safe status, they continue to operate in LO until ignition switch is turned OFF)



COMBINATION SWITCH READING FUNCTION

Description

- BCM reads combination switch (wiper) status, and controls related systems such as headlamps and wipers, according to the results.
- BCM reads information of a maximum of 20 switches by combining five output terminals (OUTPUT 1 - 5) and five input terminals (INPUT 1 - 5).

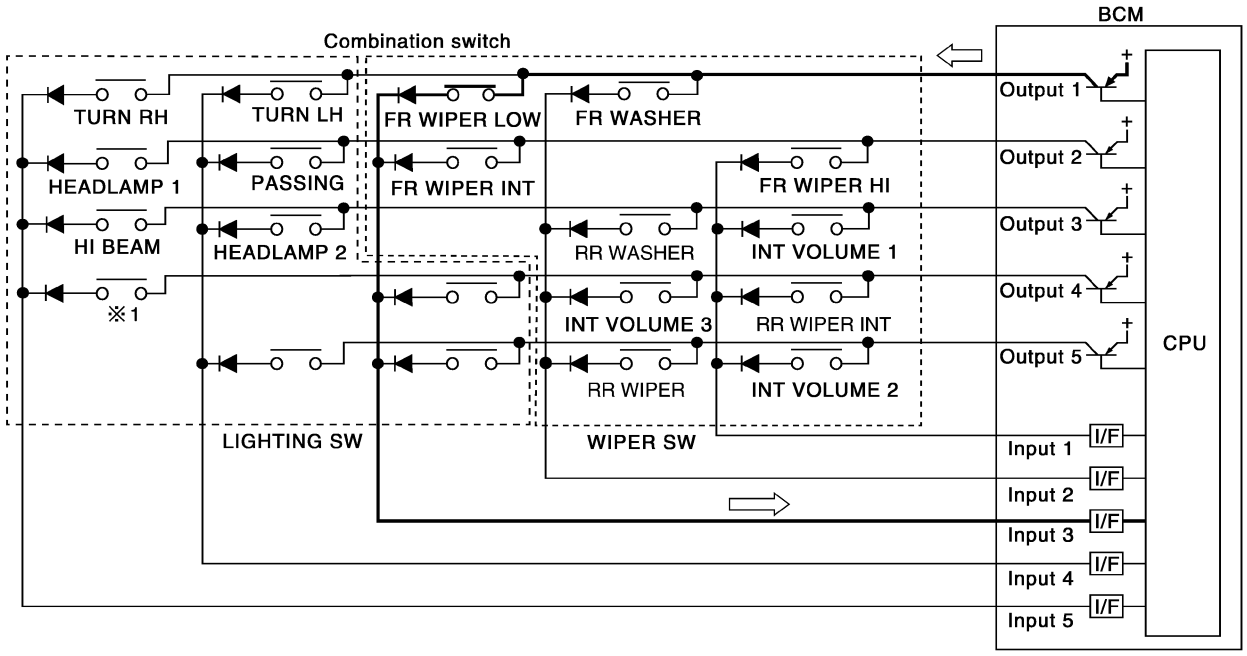
Operation Description

- BCM activates transistors of output terminals (OUTPUT 1 - 5) periodically, and allows current to flow in turn.
- If any (1 or more) switches are turned ON, circuit of output terminals (OUTPUT 1 - 5) and input terminals (INPUT 1 - 5) becomes active.
- At this time, transistors of output terminals (OUTPUT 1 - 5) are activated to allow current to flow. When voltage of input terminals (INPUT 1 - 5) corresponding to that switch changes, interface in BCM detects voltage change, and BCM determines that switch is ON.

※1 : LIGHTING SWITCH 1ST POSITION

PKIC4861E

BCM - Operation Table of Combination Switches



BCM reads operation status of combination switch using combinations shown in table below.

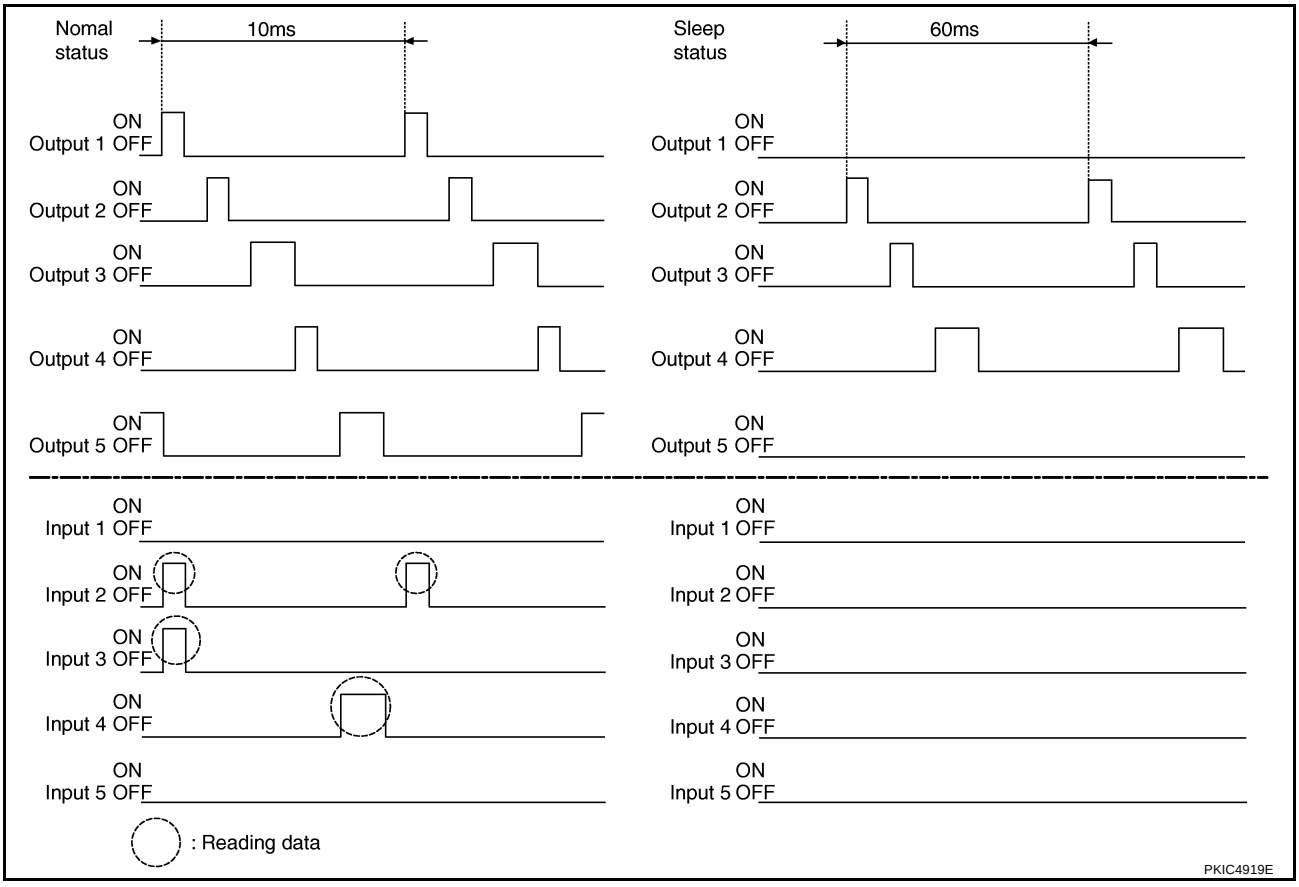
	COMB SW OUTPUT 1		COMB SW OUTPUT 2		COMB SW OUTPUT 3		COMB SW OUTPUT 4		COMB SW OUTPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
COMB SW INPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	INT VOLUME 1 ON	INT VOLUME 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	INT VOLUME 2 ON	INT VOLUME 2 OFF
COMB SW INPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	INT VOLUME 3 ON	INT VOLUME 3 OFF	RR WIPER ON	RR WIPER OFF
COMB SW INPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	—	—
COMB SW INPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEAD-LAMP 2 ON	HEAD-LAMP 2 OFF	—	—	—	—
COMB SW INPUT 5	TURN RH ON	TURN RH OFF	HEAD-LAMP 1 ON	HEAD-LAMP 1 OFF	HI BEAM ON	HI BEAM OFF	LIGHTING SW (1st) ON	LIGHTING SW (1st) OFF	—	—

PKIC4963E

Sample Operation: (When Wiper Switch Turned to LOW Position)

- When wiper switch is turned to LOW position, front wiper LOW contact in combination switch turns ON. At this time if OUTPUT 1 transistor is activated, BCM detects that voltage changes in INPUT 3.
- When BCM detects that voltage changes in INPUT 3 while OUTPUT 1 transistor is ON, it judges that front wiper switch is in LOW position. Then BCM sends front wiper request signal (LO) to IPDM E/R using CAN communication.
- If BCM detects that voltage changes in INPUT 3 when OUTPUT 1 transistor is activated again, it recognizes that wiper switch is still in LOW position.

※1 : LIGHTING SWITCH 1ST POSITION



PKIC4862E

NOTE:
Each OUTPUT terminal transistor is activated at 10 ms intervals. Therefore after switch is turned ON, electrical loads are activated with time delay. But this time delay is so short that it cannot be detected by human senses.

Operation Mode

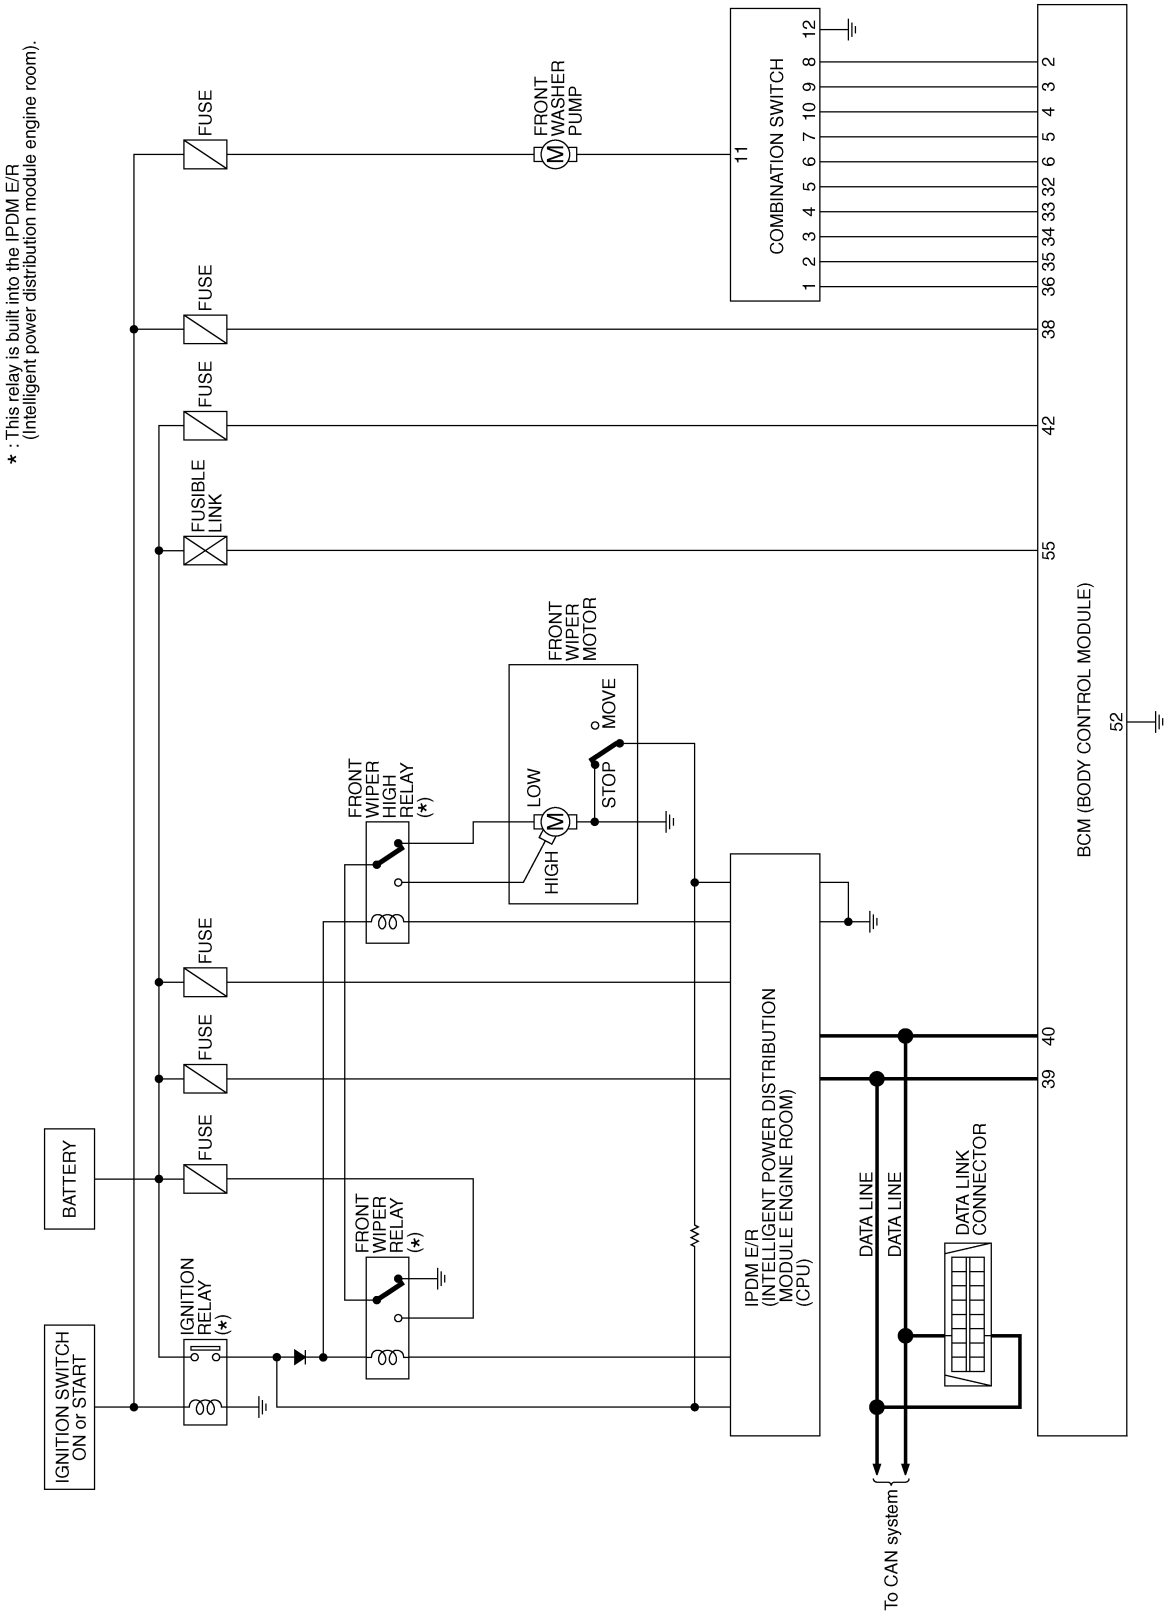
The combination switch reading function has the operation modes shown below.

1. Normal status
- When BCM is not in sleep status, OUTPUT terminals (1 - 5) each turn ON-OFF every 10 ms.
2. Sleep status
- When BCM is in sleep status BCM enters low power mode. OUTPUT (1 - 5) turn ON-OFF every 60 ms, and only input from light switch system is accepted.

CAN Communication System Description

NKS00521

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.



CAN Communication Unit

NKS00522

Refer to LAN-48, "CAN System Specification Chart" .

How to Proceed With Trouble Diagnosis

NKS00527

1. Confirm the symptoms and customer complaint.
2. Understand operation description and function description. Refer to WW-4, "System Description" .
3. Perform preliminary check. Refer to WW-18, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does the front wiper and washer operate normally? If YES, GO TO 6. If NO, GO TO 4.

6. INSPECTION END

Preliminary Check

NKS00528

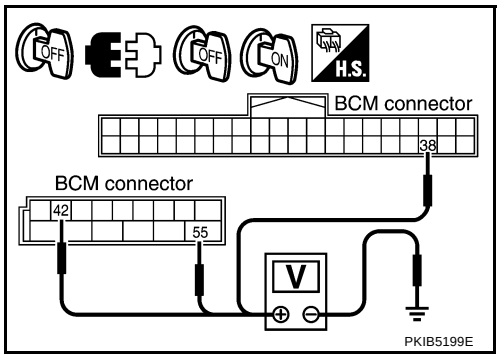
CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

Unit	Power source	Fuse and fusible link No.
Front washer pump	Ignition switch ON or START	84
Front wiper motor, front wiper relay, front wiper HI relay	Battery	73
BCM	Battery	F
		18
	Ignition switch ON or START	1

Refer to WW-11, "Wiring Diagram — WIPER —" .



OK or NG

OK >> GO TO 2

NG >> If fuse is blown, be sure to eliminate the cause of malfunction before installing new fuse, Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector terminal and ground.

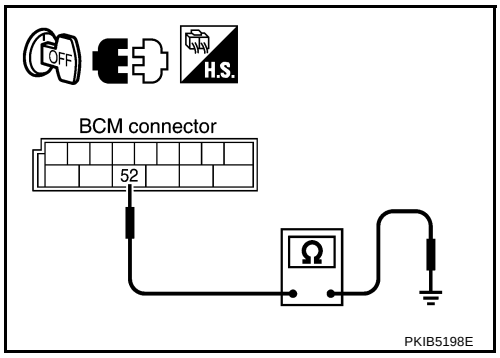
Terminals			Ignition switch position	
(+)		(-)	OFF	ON
BCM connector	Terminal			
M90	38	Ground	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage

OK or NG

OK >> GO TO 3.

NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT



Check continuity between BCM harness connector and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END

NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS00529

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis position	Diagnosis mode	Description
WIPER	WORK SUPPORT	Changes the setting for each function.
	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Device operation can be checked by applying a drive signal to device.
BCM	SELF-DIAG RESULTS	BCM performs self-diagnosis of CAN communication.
	CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.

WORK SUPPORT

Display Item List

Item	Description	CONSULT-III	Factory setting
WIPER SPEED SETTING	Vehicle speed sousing type wiper control mode can be changed in this mode. Vehicle speed sousing type wiper control mode between two ON/OFF.	ON	—
		OFF	×

NOTE:
Regarding wiper speed setting, if the BCM set value is initialized by the use of CONSULT-III work support, then set it individually to OFF after the initialization because it is automatically set to ON by initializing CONSULT-III.

DATA MONITOR

Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “ignition switch ON (ON)/Other OFF or ACC (OFF)” status as judged from ignition switch signal.
IGN SW CAN	“ON/OFF”	Displays “ignition switch ON (ON)/Other OFF or ACC (OFF)” status as judged from CAN communication signal.
FR WIPER HI	“ON/OFF”	Displays “FRONT WIPER HI (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WIPER LOW	“ON/OFF”	Displays “FRONT WIPER LOW (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WIPER INT	“ON/OFF”	Displays “FRONT WIPER INT (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WASHER SW	“ON/OFF”	Displays “FRONT WASHER Switch (ON)/Other (OFF)” status as judged from wiper switch signal.
INT VOLUME	“1 - 7”	Displays intermittent operation dial position setting (1 - 7) as judged from wiper switch signal.
FR WIPER STOP	“ON/OFF”	Displays “Stopped (ON)/Operating (OFF)” status as judged from auto-stop signal.
VEHICLE SPEED	“km/h”	Displays vehicle speed status as judged from vehicle speed signal.
RR WIPER ON NOTE 1	“ON/OFF”	Displays “Rear Wiper ON (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WIPER INT NOTE 1	“ON/OFF”	Displays “Rear Wiper INT (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WASHER SW NOTE 1	“ON/OFF”	Displays “Rear Washer Switch (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WIPER STOP NOTE 1	“ON/OFF”	Displays “Rear Wiper Stop (ON)/Other (OFF)” status, as judged from wiper switch signal.
RR WIPER STP2 NOTE 2	“OFF”	—

NOTE:
1. Coupe models
2. This item is displayed, but cannot be monitored.

ACTIVE TEST

Display Item List

Test item	Display on CONSULT-III screen	Description
Front wiper output	FR WIPER	With a certain operation (OFF, HI, LO, INT), front wiper can be operated.
Rear wiper output NOTE	RR WIPER	Rear wiper can be operated by ON–OFF operation.

NOTE:
Coupe models

CONSULT-III Function (IPDM E/R)

NKS0052A

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

Diagnosis Mode	Description
SELF–DIAG RESULTS	Refer to PG-18, "SELF-DIAG RESULTS" .
DATA MONITOR	The input/output data of IPDM E/R is displayed in real time.
CAN DIAG SUPPORT MNTR	The result of transmit/receive diagnosis of CAN communication can be read.
ACTIVE TEST	IPDM E/R sends a drive signal to electronic components to check their operation.

DATA MONITOR

All Signals, Main Signals, Selection From Menu

Item name	CONSULT-III screen display	Display or unit	Monitor item selection			Description
			ALL SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	
FR wiper request	FR WIP REQ	STOP/LOW/HI	×	×	×	Signal status input from BCM
Wiper auto stop	WIP AUTO STOP	ACT P/STOP P	×	×	×	Output status of IPDM E/R
Wiper protection	WIP PROT	OFF/Block	×	×	×	Control status of IPDM E/R

NOTE:
Perform monitoring of IPDM E/R data with ignition switch ON. When ignition switch is at ACC, the display may not be correct.

ACTIVE TEST

Display Item List

Test item	CONSULT-III screen display	Description
Front wiper (HI, LO) output	FR WIPER	With a certain operation (OFF, HI ON, LO ON), front wiper relay (and/or front wiper high relay) can be operated.

Front Wiper Does Not Operate

NKS0052B

CAUTION:

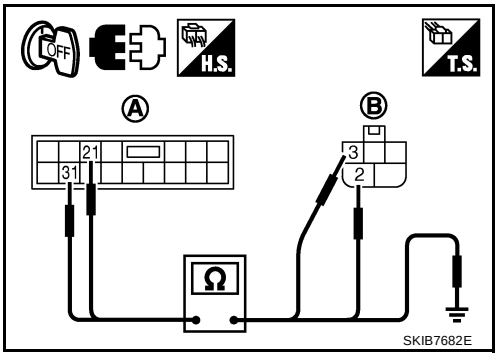
During IPDM E/R fail-safe control, front wipers may not operate. Refer to PG-16, "CAN COMMUNICATION LINE CONTROL" in "PG IPDM E/R" to make sure that it is not in fail-safe status.

1. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check that front wiper LO and HI operation.

IPDM E/R AUTO ACTIVE TEST



1. Start up auto active test. Refer to PG-20, "Auto Active Test" .
2. With operating the test item, check that front wiper LO and HI operation.

Does front wiper operate normally?

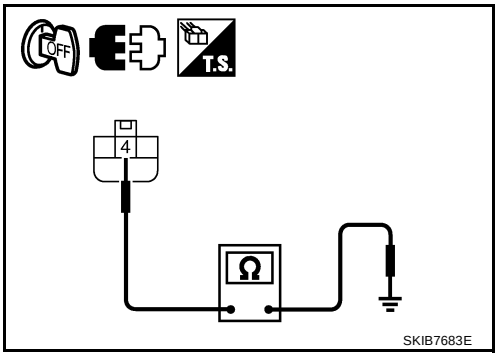
YES >> GO TO 5.
NO >> GO TO 2.

2. CHECK FRONT WIPER CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector (A) and front wiper motor harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
E7	21	E52	3	Yes
	31		2	

4. Check continuity between IPDM E/R harness connector (A) and Ground.



A		Ground	Continuity
Connector	Terminal		
E7	21		No
	31		

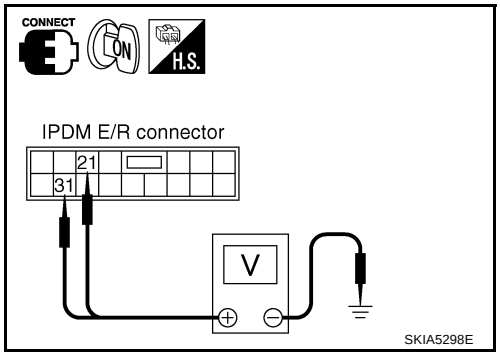
OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

Check continuity between front wiper motor harness connector and ground.

Front wiper motor connector	Terminal	Ground	Continuity
E52	4		Yes



OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK IPDM E/R

CONSULT-III ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Select "FRONT WIPER" of IPDM E/R active test item.
3. With operating the test item, check voltage between IPDM E/R harness connector and ground.

Terminals			Condition	Voltage (Approx.)
(+)		(-)		
IPDM E/R connector	Terminal			
E7	21	Ground	Stopped	0 V
			LO operation	Battery voltage
	31		Stopped	0 V
			HI operation	Battery voltage

IPDM E/R AUTO ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Start up auto active test. Refer to PG-20, "Auto Active Test" .
3. With operating the test item, check voltage between IPDM E/R harness connector and ground.

Terminals			Condition	Voltage (Approx.)
(+)		(-)		
IPDM E/R connector	Terminal			
E7	21	Ground	Stopped	0 V
			LO operation	Battery voltage
	31		Stopped	0 V
			HI operation	Battery voltage

OK or NG

OK >> Replace front wiper motor. Refer to WW-31, "Disassembly and Assembly Front Wiper Motor and Linkage" .
NG >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

5. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

CONSULT-III DATA MONITOR

1. Select “FR WIPER INT”, “FR WIPER LOW”, and “FR WIPER HI” of BCM data monitor item.
2. With operating the wiper switch, check the monitor status.

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Check combination switch (wiper switch). Refer to LT-92, "Combination Switch Inspection" .

6. CHECKING CAN COMMUNICATIONS BETWEEN BCM AND IPDM E/R

Perform self-diagnosis for “BCM” with CONSULT-III.

Display of self-diagnosis results

NO DTC>> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
CAN COMM CIRCUIT>> Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

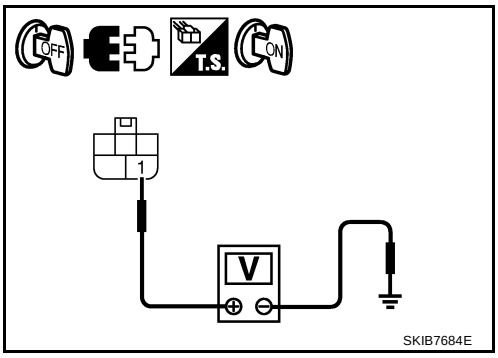
Front Wiper Does Not Return to Stop Position

NKS0052C

1. CHECK FRONT WIPER STOP SIGNAL

With CONSULT-III

1. Select "WIP AUTO STOP" of IPDM E/R data monitor item.
2. Make sure that “WIP AUTO STOP” turns “ACT P” - “STOP P” linked with wiper operation.



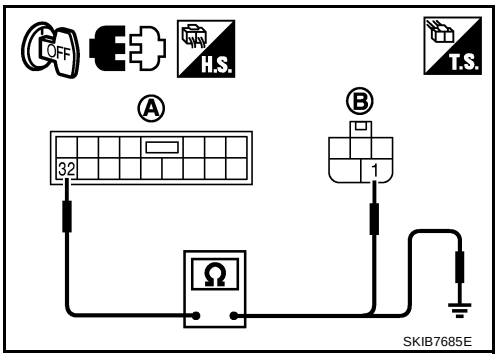
GO TO 2

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> GO TO 2.

2. CHECK IPDM E/R

1. Turn ignition switch OFF.
2. Disconnect front wiper motor connector.
3. Turn ignition switch ON.
4. Check voltage between front wiper motor harness connector and ground.



Terminals			Voltage (Approx.)
(+)		(-)	
Front wiper motor connector	Terminal	Ground	
E52	1		Battery voltage

OK or NG

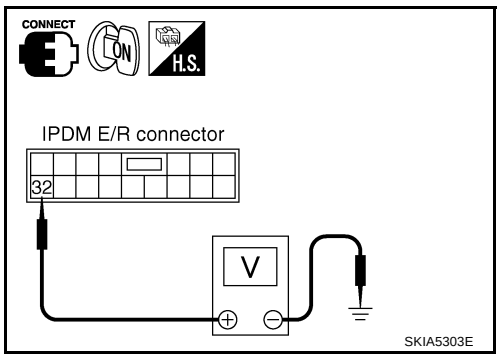
OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK FRONT WIPER AUTO STOP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector (A) and front wiper motor harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
E7	32	E52	1	Yes

4. Check continuity between IPDM E/R harness connector (A) and ground.



A		Ground	Continuity
Connector	Terminal		
E7	32		Yes

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Repair harness or connector.

4. CHECK IPDM E/R

1. Connect IPDM E/R connector and front wiper motor connector.
2. Turn ignition switch ON.
3. Check voltage between IPDM E/R harness connector and ground while front wiper motor is stopped and while it is operating.

Terminal			Condition	Voltage (Approx.)
(+)		(-)		
IPDM E/R connector	Terminal			
E7	32	Ground	Wiper stopped	0 V
			Wiper operating	Battery voltage

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace front wiper motor. Refer to WW-31, "Disassembly and Assembly Front Wiper Motor and Linkage" .

Only Front Wiper Low Does Not Operate

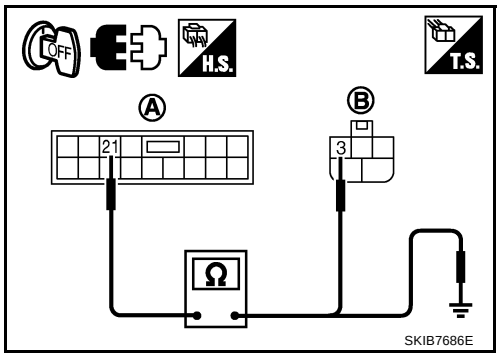
NKS0052D

1. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check that front wiper LO operation.

IPDM E/R AUTO ACTIVE TEST



1. Start up auto active test. Refer to PG-20, "Auto Active Test" .
2. With operating the test item, check that front wiper LO operation.

Does front wiper operate normally?

YES >> Refer to LT-92, "Combination Switch Inspection" .
NO >> GO TO 2.

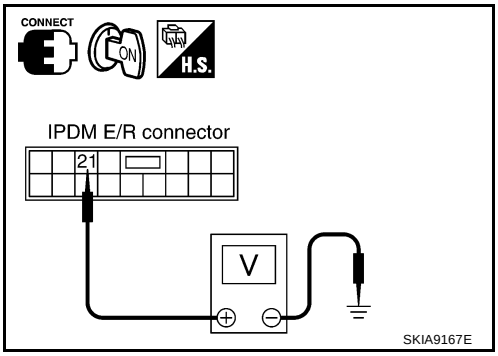
2. CHECK FRONT WIPER MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector (A) and front wiper motor harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
E7	21	E52	3	Yes

4. Check continuity between IPDM E/R harness connector (A) and ground.

A		Ground	Continuity
Connector	Terminal		
E7	21		No



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK IPDM E/R

CONSULT-III ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Select "FRONT WIPER" of IPDM E/R active test item.
3. With operating the test item, check that front wiper LO operation.

Terminals			Voltage (Approx.)
(+)		(-)	
IPDM E/R connector	Terminal	Ground	
E7	21		Battery voltage

IPDM E/R AUTO ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Start up auto active test. Refer to PG-20, "Auto Active Test" .
3. With operating the test item, check that front wiper LO operation.

Terminals			Voltage (Approx.)
(+)		(-)	
IPDM E/R connector	Terminal	Ground	
E7	21		Battery voltage

OK or NG

OK >> Replace front wiper motor. Refer to WW-31, "Disassembly and Assembly Front Wiper Motor and Linkage" .

NG >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

Only Front Wiper Hi Does Not Operate

NKS0052E

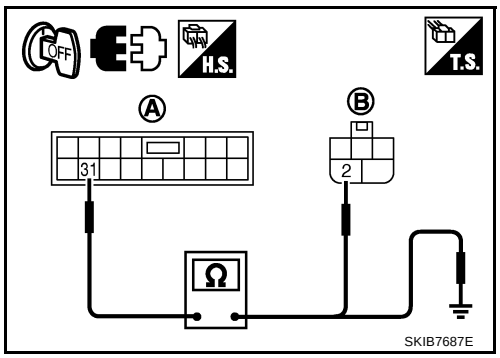
1. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check that front wiper HI operation.

IPDM E/R AUTO ACTIVE TEST

1. Start up auto active test. Refer to PG-20, "Auto Active Test"
2. With operating the test item, check that front wiper HI operation.



Does front wiper operate normally?

YES >> Refer to LT-92, "Combination Switch Inspection" .

NO >> GO TO 2.

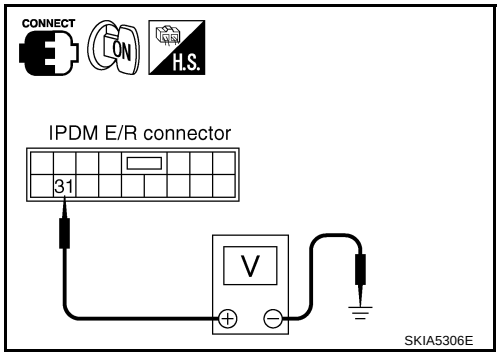
2. CHECK FRONT WIPER MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector (A) and front wiper motor harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
E7	31	E52	2	Yes

4. Check continuity between IPDM E/R harness connector (A) and ground.

A		Ground	Continuity
Connector	Terminal		
E7	31		No



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK IPDM E/R

CONSULT-III ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Select "FRONT WIPER" of IPDM E/R active test item.
3. With operating the test item, check voltage between IPDM E/R harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(-)	
IPDM E/R connector	Terminal	Ground	
E7	31		Battery voltage

IPDM E/R AUTO ACTIVE TEST

1. Connect IPDM E/R connector and front wiper motor connector.
2. Start up auto active test. Refer to PG-20, "Auto Active Test" .
3. With operating the test item, check voltage between IPDM E/R harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(-)	
IPDM E/R connector	Terminal	Ground	
E7	31		Battery voltage

OK or NG

OK >> Replace front wiper motor. Refer to WW-31, "Disassembly and Assembly Front Wiper Motor and Linkage" .
NG >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .

Only Front Wiper Intermittent Does Not Operate

NKS0052F

1. CHECK COMBINATION SWITCH

CONSULT-III DATA MONITOR

1. Select "FR WIPER INT" of BCM data monitor item.
2. With operating the wiper switch, check the monitor status.

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check combination switch (wiper switch) Refer to LT-92, "Combination Switch Inspection" .

Front Wiper Interval Time Is Not Controlled by Vehicle Speed

NKS0052G

1. CHECK FUNCTION OF COMBINATION METER

Confirm that speedometer operates normally.

Does front wiper operate normally?

YES >> GO TO 2.
NO >> Combination meter vehicle speed system malfunction. Refer to DI-18, "Vehicle Speed Signal Inspection" .

2. CHECK CAN COMMUNICATION BETWEEN BCM AND COMBINATION METER

Perform self-diagnosis for “BCM” with CONSULT-III.

Displayed self-diagnosis results

NO DTC>>Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
CAN COMM CIRCUIT>>Check CAN communication line of BCM. Refer to BCS-16, "CAN Communication Inspection Using CONSULT-III (Self-Diagnosis)" .

Front Wiper Intermittent Operation Switch Position Cannot Be Adjusted

NKS0052H

1. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

CONSULT-III DATA MONITOR

1. Select "INT VOLUME" of BCM data monitor item.
2. Make sure that “INT VOLUME”, changes in order form 1 to 7 according to wiper switch operation.

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check combination switch (wiper switch). Refer to LT-92, "Combination Switch Inspection" .

Wiper Does Not Wipe When Front Washer Operates

NKS0052I

1. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

CONSULT-III DATA MONITOR

1. Select "FR WASHER SW" of BCM data monitor item.
2. Make sure that “FR WASHER SW” turn ON-OFF according to front wiper switch operation.

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check front wiper switch. Refer to LT-92, "Combination Switch Inspection" .

After Front Wiper Operate for 10 Seconds, They Stop for 20 Seconds, and After Repeating the Operations Five Times, They Become Inoperative

NKS0052J

CAUTION:

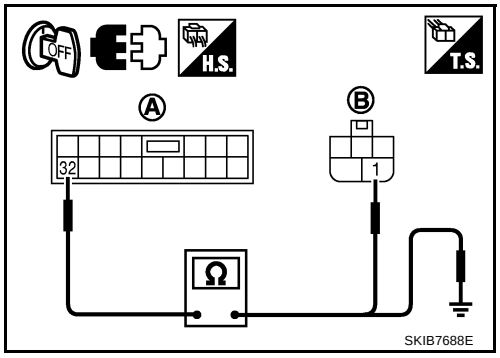
- **When auto-stop signal has not varied for 10 seconds or longer while IPDM E/R is operating front wipers, IPDM E/R considers that front wipers are locked, and stops wiper output. That causes this symptom.**
- **This status can be checked by “DATA MONITOR” of “IPDM E/R” on which “WIPER PROTECTION” item shows “BLOCK”.**

1. CHECK WIPER MOTOR SIGNAL

CONSULT-III DATA MONITOR

1. Select "WIP AUTO STOP" of BCM data monitor item.
2. make sure that “WIP AUTO STOP” turns “ACT P” - “STOP P” linked with wiper operation.

GO TO 2



OK or NG

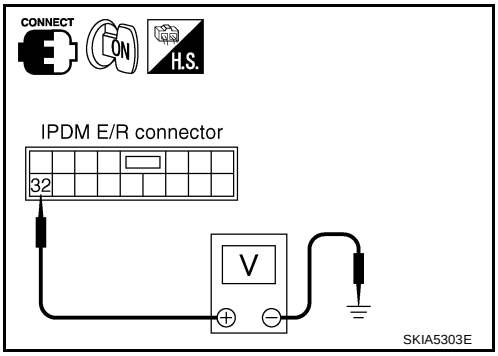
OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> GO TO 2.

2. CHECK WIPER AUTO STOP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector (A) and front wiper motor harness connector (B).

A		B		Continuity
Connector	Terminal	Connector	Terminal	
E7	32	E52	1	Yes

4. Check continuity between IPDM E/R harness connector (A) and ground.



A		Ground	Continuity
Connector	Terminal		
E7	32		No

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK FRONT WIPER MOTOR

1. Connect IPDM E/R connector and front wiper motor connector.
2. Turn ignition switch ON.
3. Check voltage between IPDM E/R harness connector and ground while front wiper motor is stopped and while it is operating.

Terminal			Condition	Voltage (Approx.)
(+)		(-)		
IPDM E/R connector	Terminal			
E7	32	Ground	Wiper stopped	0 V
			Wiper operating	Battery voltage

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Replace front wiper motor. Refer to WW-31, "Disassembly and Assembly Front Wiper Motor and Linkage" .

Front Wiper Does Not Stop

NKS0052K

1. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

CONSULT-III DATA MONITOR

1. Select “FR WIPER INT”, “FR WIPER LOW”, “FR WIPER HI”, and “FR WASHER SW” of BCM data monitor item.
2. With operating the wiper switch, check the monitor status.

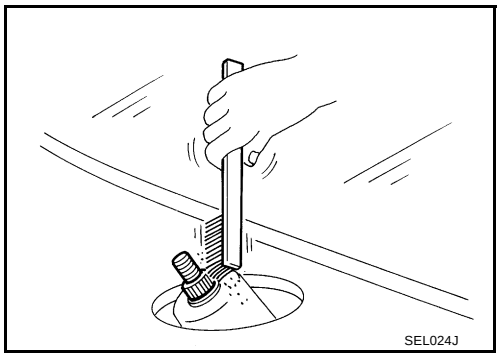
CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-26, "Removal and Installation of IPDM E/R" .
NG >> Check combination switch (wiper switch). Refer to LT-92, "Combination Switch Inspection" .

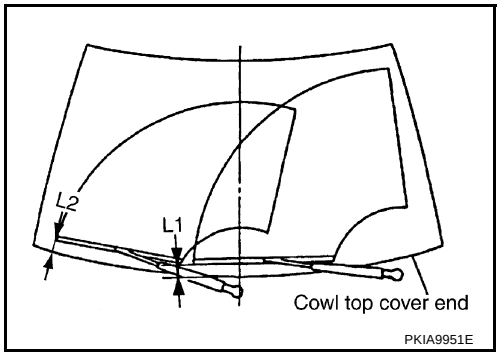
Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location



NKS0052L

REMOVAL

1. Turn front wiper switch ON to operate wiper motor, and then turn front wiper switch OFF (auto stop).
2. Remove washer tube from washer tube joint.
3. Open hood, remove front wiper arm caps, and remove front wiper arm nuts.
4. Raise front wiper arms, and remove front wiper arms from vehicle.



INSTALLATION

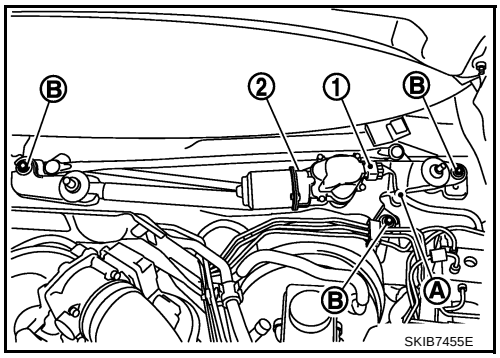
1. Clean up the pivot area as shown in the figure. This will reduce possibility of front wiper arm looseness.
2. Prior to front wiper arms installation, turn front wiper switch ON to operate wiper motor, and then turn front wiper switch OFF (auto stop).

3. Lift the blade up and then set it down onto windshield glass surface to set the blade center to clearance “L1” & “L2” immediately.
4. Tighten front wiper arm nuts to specified torque.

Front wiper arm nuts : 23.6 N·m (2.4 kg-m, 18 ft-lb)

5. Install washer tube from washer tube joint.
6. Spray washer fluid. Turn front wiper switch ON to operate wiper motor, and then turn front wiper switch OFF (auto stop).
7. Make sure that wiper blades stop within clearance “L1” & “L2”.

Clearance “L1” : 63.9 ± 7.5 mm (2.516 ± 0.295 in)
Clearance “L2” : 32.0 ± 6.5 mm (1.260 ± 0.256 in)



8. Install front wiper arm caps.

Removal and Installation of Front Wiper Drive Assembly

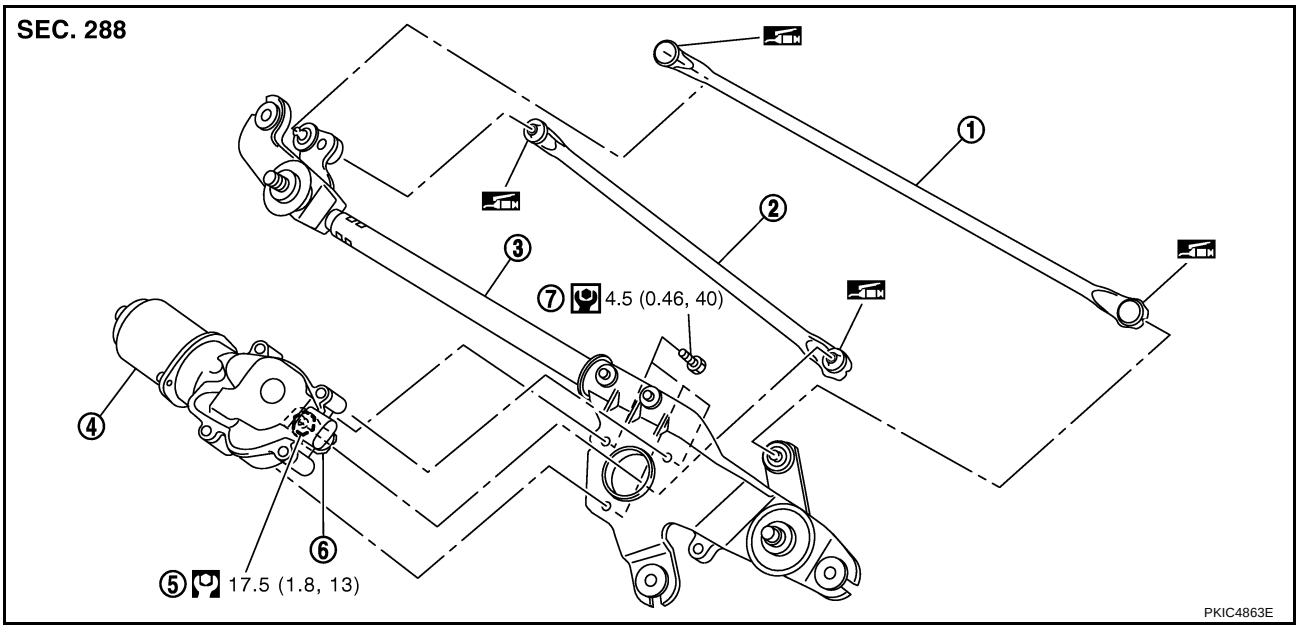
NKS0052M

REMOVAL

1. Remove front wiper arms. Refer to WW-30, "REMOVAL" .
2. Remove cowl top cover. Refer to EI-20, "COWL TOP" .
3. Disconnect wiper motor connector (1) and remove connector clip (A).
4. Remove front wiper drive assembly mounting bolts (B), and remove front wiper drive assembly (2) from the vehicle.

INSTALLATION

1. Install front wiper drive assembly to the vehicle.



Front wiper drive assembly mounting bolts : 4.5 N·m (0.46 kg-m, 40 in-lb)

2. Connect wiper motor connector. Turn front wiper switch ON to operate wiper motor, and then turn front wiper switch OFF (auto stop).
3. Install connector clips to the wiper frame, and install cowl top cover. Refer to EI-20, "COWL TOP" .

4. Install front wiper arms and arm caps. Refer to WW-30, "INSTALLATION" .

Disassembly and Assembly Front Wiper Motor and Linkage

NKS0052N

1. Wiper linkage 1
2. Wiper linkage 2
3. Motor frame
4. Wiper motor
5. Motor arm nut
6. Motor arm
7. Wiper motor mounting bolt

:N·m (kg-m, in-lb)

:N·m (kg-m, ft-lb)

:Should be lubricated with grease

DISASSEMBLY

1. Remove wiper linkages from wiper motor and motor frame.
2. Remove wiper motor mounting bolts, and remove wiper motor from wiper frame.

CAUTION:

Be careful not to bend wiper linkages nor to damage the resin part of ball joint when removing wiper linkages.

ASSEMBLY

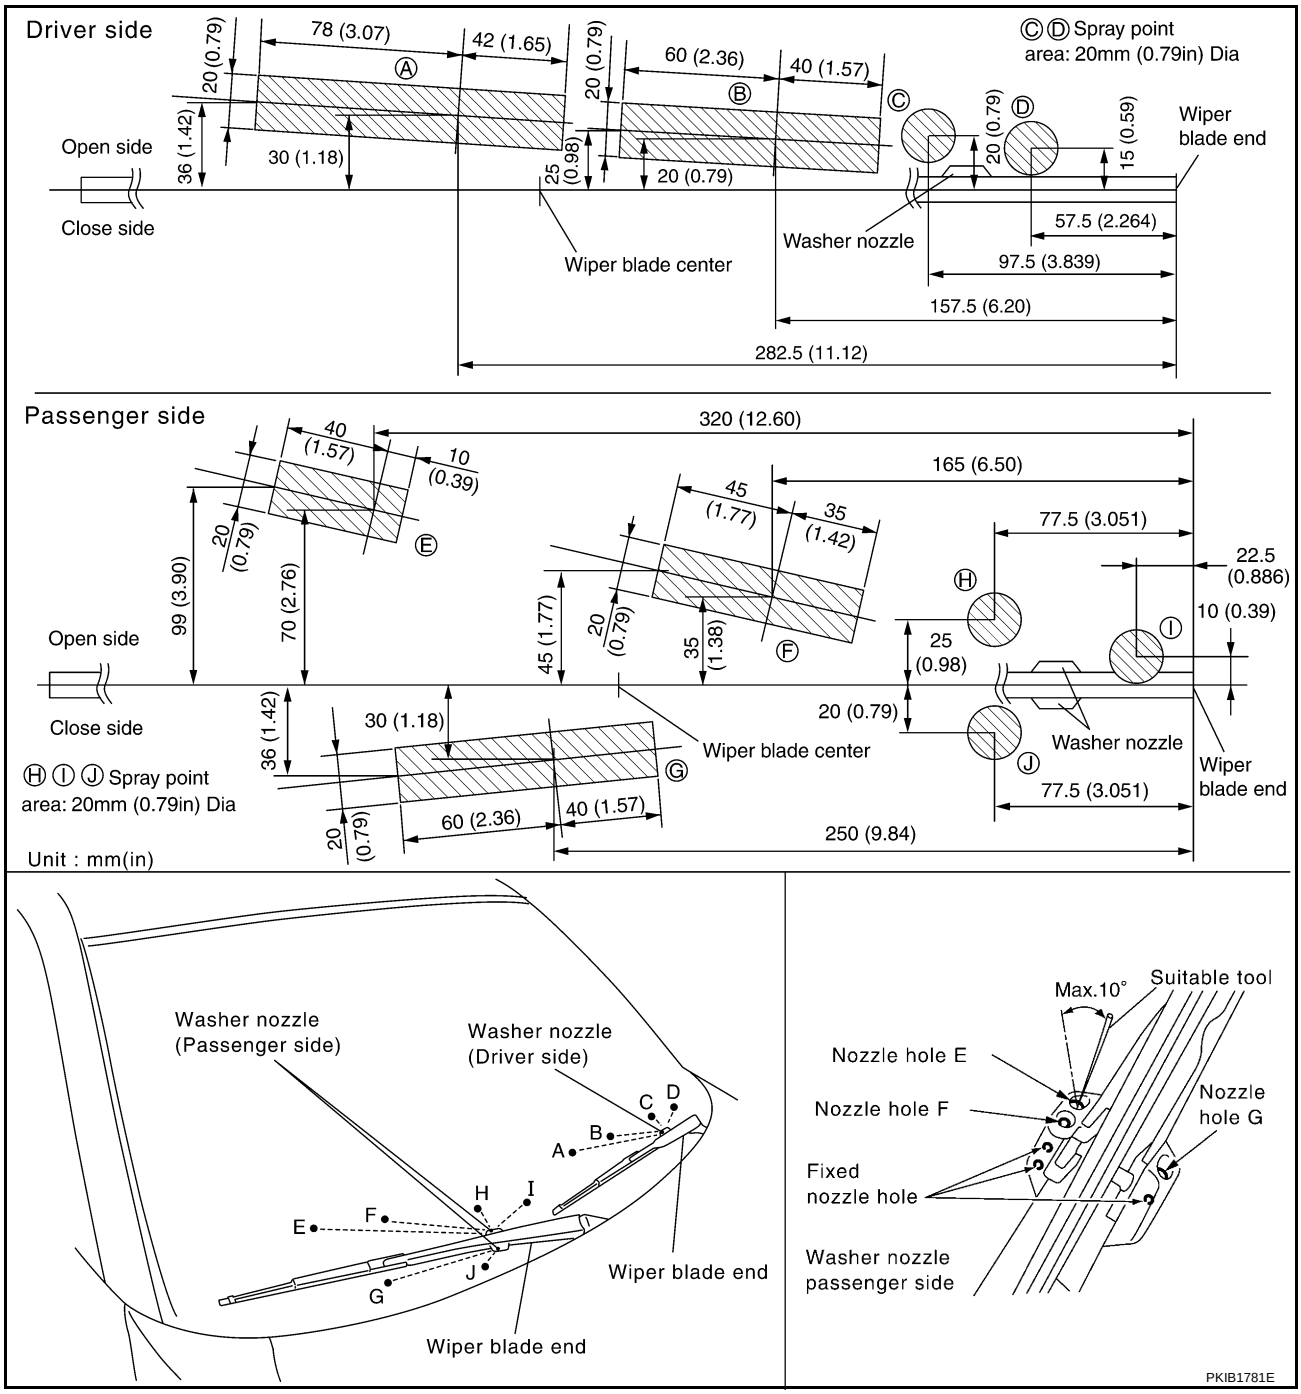
1. Connect wiper motor connector. Turn front wiper switch ON to operate wiper motor, and then turn front wiper switch OFF (auto stop).
2. Disconnect wiper motor connector.
3. Install wiper motor to wiper frame.

Wiper motor mounting bolts : 4.5 N·m (0.46 kg-m, 40 in-lb)

4. Install wiper linkages to wiper frame and wiper motor.

CAUTION:

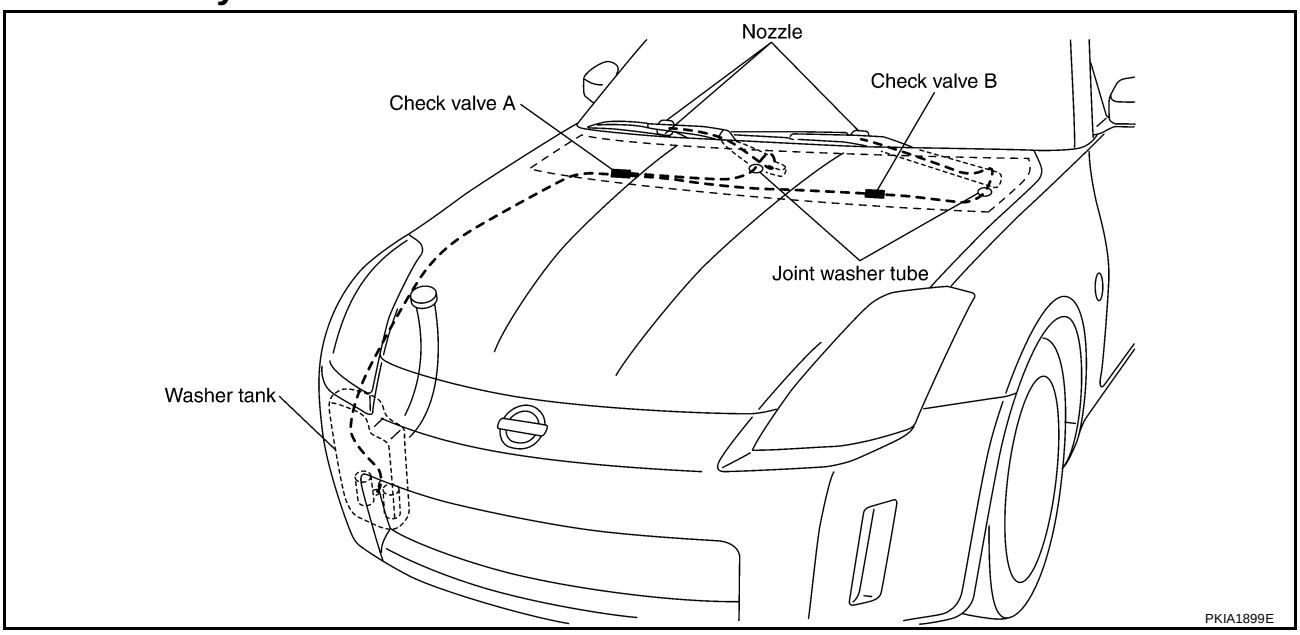
- **Never drop the wiper motor nor cause it to interfere with other parts.**
- **Check joint of motor arm and wiper linkages (at retainer) for grease conditions. Apply grease if necessary.**



Washer Nozzle Adjustment

NKS0052O

1. When wiper blade position is in auto stop condition, remove front wiper motor connector to ensure front wiper arms do not move.
2. Adjust each nozzle position (A, B, E, F, and G) so that spray positions are in the range of shaded parts.



CAUTION:

Only washer nozzles (A, B, E, F, and G) can be adjusted. Washer nozzles (C, D, H, I, and J) cannot be adjusted because of fixed nozzles.

Washer Tube Layout

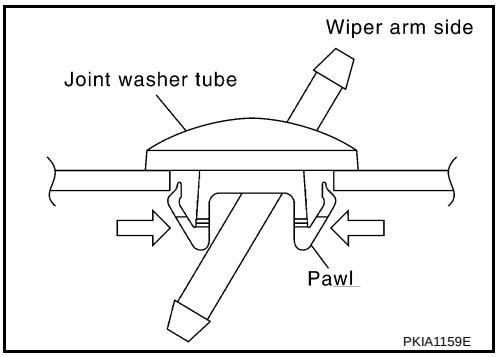
NKS0052P

Removal and Installation of Front Washer Nozzle

NKS0052Q

Replace wiper arm assembly. Refer to WW-30, "Removal and Installation of Front Wiper Arms, Adjustment of Wiper Arms Stop Location" .

CAUTION:



Never remove/install washer nozzle from wiper arm assembly.

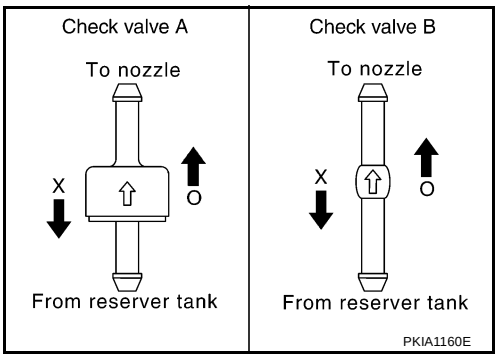
Removal and Installation of Front Washer Tube Joint

NKS0052R

REMOVAL

1. Remove upwards while pressing pawls on reverse side.
2. Remove washer tube.

INSTALLATION



Installation is the reverse order of removal.

Inspection for Washer Nozzle

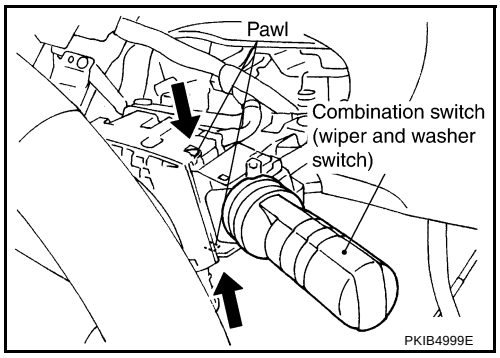
NKS0052S

CHECK VALVE INSPECTION

Blow air in the injection direction, and check that air flows only one way. Make sure that the reverse direction (inhale) is not possible.

Inspection of Front Wiper and Washer Switch Circuit

NKS0052T



Refer to LT-92, "Combination Switch Inspection" .

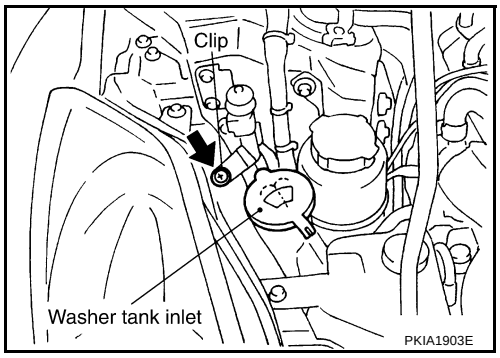
Removal and Installation of Front Wiper and Washer Switch

NKS0052U

REMOVAL

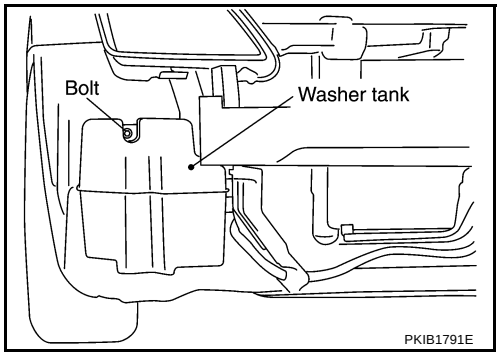
1. Remove steering column lower cover and combination meter. Refer to IP-10, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect wiper and washer switch connector.
3. Pull wiper and washer switch toward the passenger door while pressing pawls in direction shown by the arrow (⬅) in the figure, and remove it from the base.

INSTALLATION



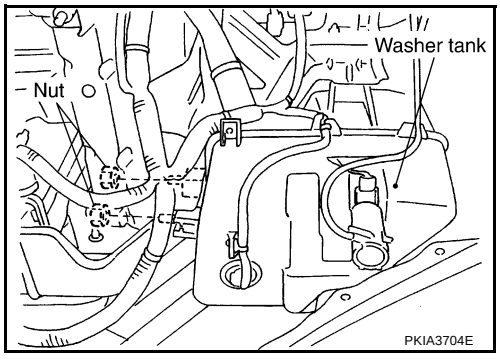
Installation is the reverse order of removal.

Removal and Installation of Washer Tank



NKS0052V

REMOVAL



1. Remove clip and pull out washer tank inlet.

2. Remove under cover.
3. Remove fender protector. Refer to EI-21, "FENDER PROTECTOR" .
4. Remove front bumper fascia. Refer to EI-14, "FRONT BUMPER" .
5. Disconnect washer pump connector.
6. Remove washer tank mounting bolt and nuts.

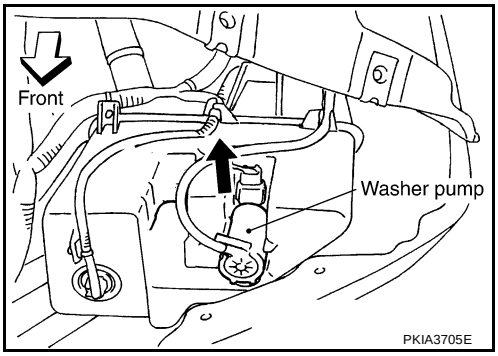
7. Remove washer tube, and remove washer tank from the vehicle.

INSTALLATION

Installation is the reverse order of removal.

CAUTION:

After installation, add water up to the upper level of washer tank inlet, and check for water leaks.



Washer tank mounting bolt and nuts : 5.7 N·m (0.58 kg-m, 50 in-lb)

Removal and Installation of Washer Pump

NKS0052W

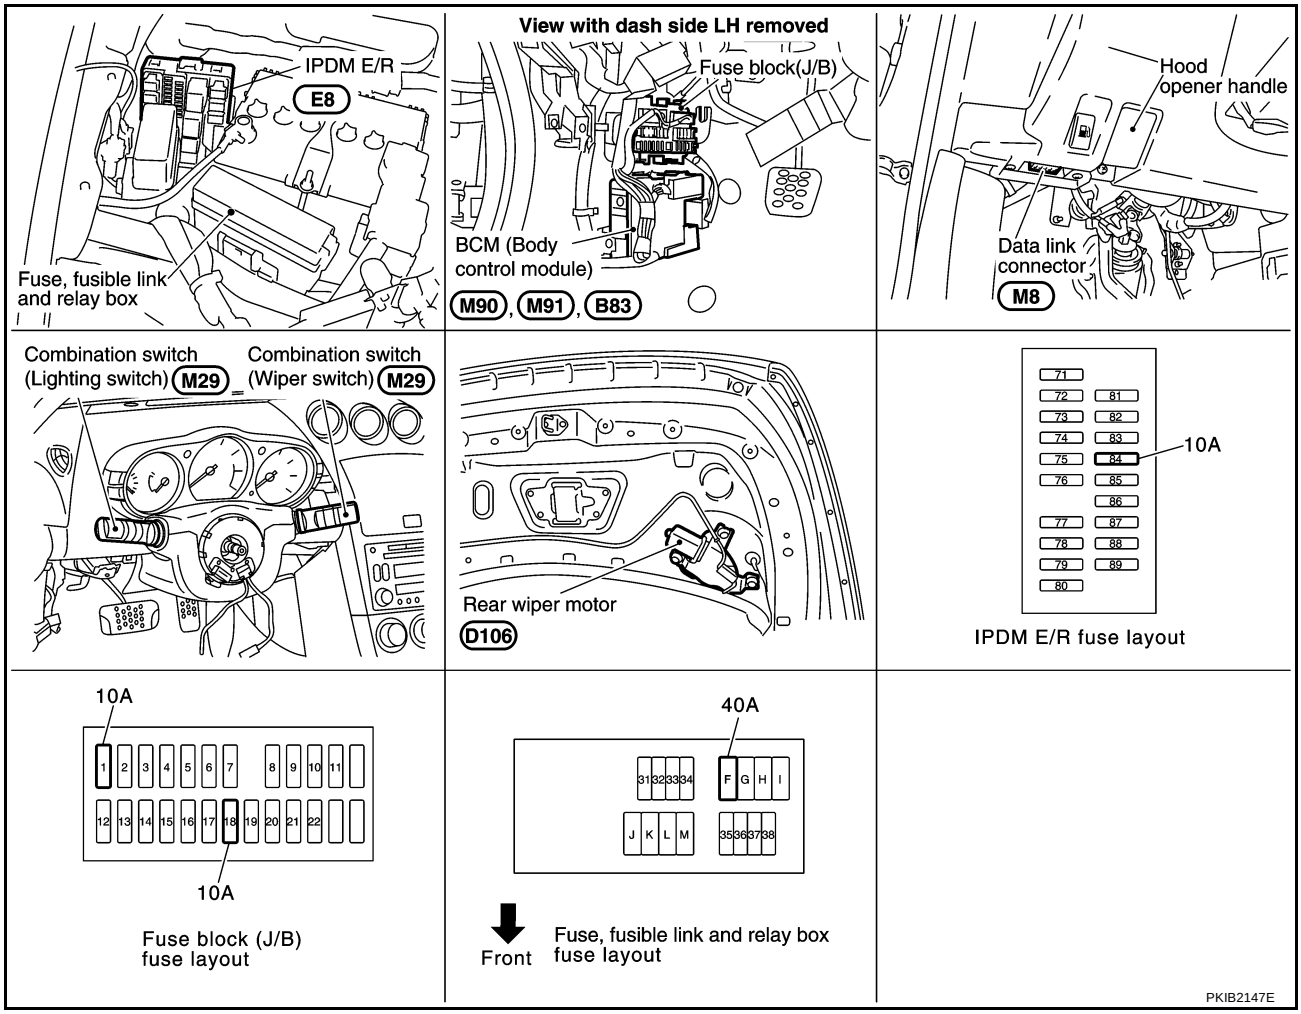
REMOVAL

1. Remove fender protector. Refer to EI-21, "FENDER PROTECTOR" .
2. Disconnect washer pump connector and remove washer tube.
3. Pull out washer pump in direction shown by the arrow (⬅) in the figure. Remove washer pump from washer tank.

INSTALLATION

Installation is the reverse order of removal.

CAUTION:



When installing washer pump, there should be no packing twists, etc.

REAR WIPER AND WASHER SYSTEM

PFP:28710

Components Parts and Harness Connector Location

NKS0052X

System Description

NKS0052Y

- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM when switch is turned ON.
- BCM (body control module) controls rear wiper ON and INT (intermittent) operation.

OUT LINE

Power is supplied at all times

- through 40 A fusible link (letter F, located in fuse, fusible link and relay box)
- to BCM terminal 55,
- through 10 A fuse [No. 18, located in fuse block (J/B)]
- to BCM terminal 42.

When ignition switch is in ON or START position, power is supplied

- through 10 A fuse [No. 1, located in fuse block (J/B)]
- to BCM terminal 38,
- through 10 A fuse (No. 84, located in IPDM E/R)
- through IPDM E/R terminal 44
- to rear washer pump terminal 2.

Ground is supplied

- to BCM terminal 52
- through grounds M30 and M66,

- to combination switch terminal 12
- through grounds M30 and M66.

Rear Wiper Operation

When wiper switch is in rear wiper ON position, BCM detect rear wiper ON signal by BCM wiper switch reading function.
BCM operate rear wiper motor, power is supplied

- through BCM terminal 70
- to rear wiper motor 4.

Ground is supplied

- to rear wiper motor terminal 1
- through grounds B5, B6, D105 and T14.

With power and ground is supplied, rear wiper operates.

Intermittent Operation

The rear wiper motor operates wiper arms at low speed approximately every 7 seconds.
When wiper switch is in rear wiper INT position, BCM detect rear wiper INT signal by BCM wiper switch reading function. (Refer to WW-7, "COMBINATION SWITCH READING FUNCTION")
BCM operate rear wiper motor, power is supplied

- through BCM terminal 70
- to rear wiper motor 4.

Ground is supplied

- to rear wiper motor terminal 1
- through grounds B5, B6, D105 and T14.

With power and ground is supplied, rear wiper operates at intermittent.

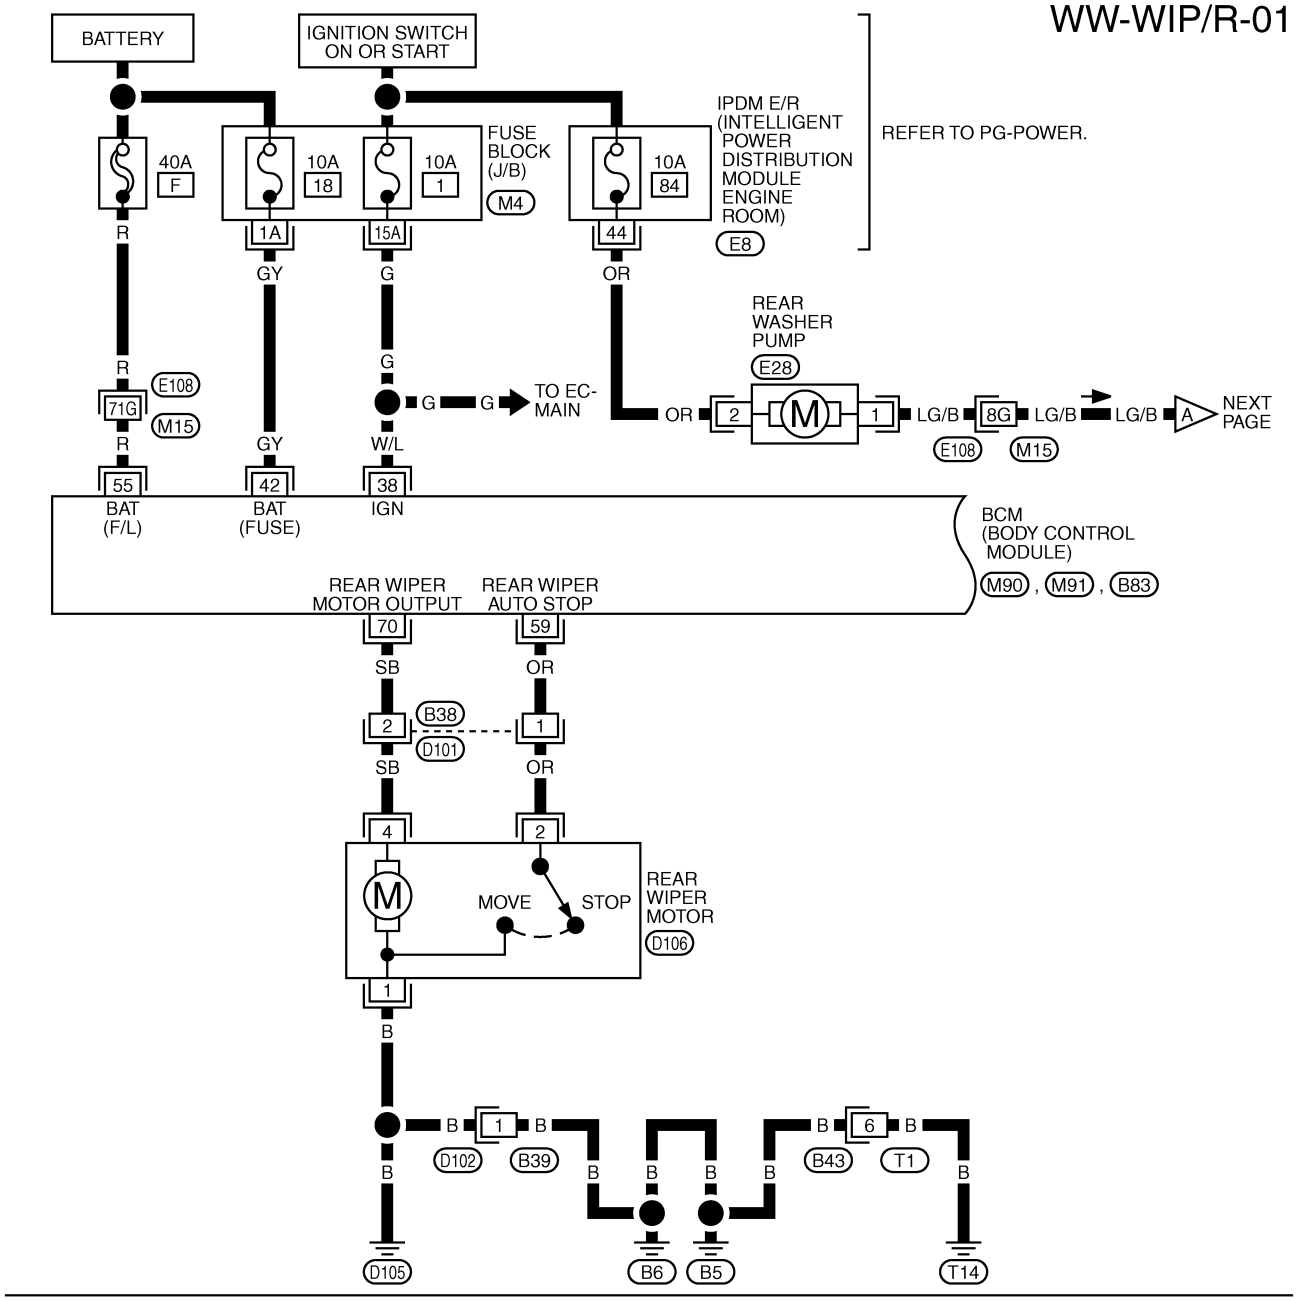
Auto Stop Operation

With rear wiper switch turned OFF, rear wiper motor will continue to operate until wiper arm reaches rear wiper stopper.
Then wiper motor turns the other way and wiper arm moves once until wiper arm reaches stopper.

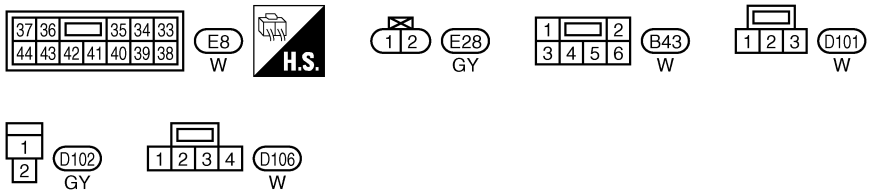
Washer Operation

When wiper switch is in rear wiper washer position, BCM detect rear wiper washer signal by BCM wiper switch reading function (Refer to WW-7, "COMBINATION SWITCH READING FUNCTION"), and combination switch (wiper switch) ground is supplied

- to rear washer pump terminal 1
- through combination switch terminal 13
- to combination switch terminal 12
- through grounds M30 and M66.



With ground is supplied, rear washer pump is operated.
When BCM detects that rear washer pump has operated for 0.4 seconds or longer, BCM operates rear wiper motor low speed.
When BCM detects washer switch is OFF, low speed operation cycles approximately 3 times and then stops.



BCM WIPER SWITCH READING FUNCTION

Refer to WW-7, "COMBINATION SWITCH READING FUNCTION" .

Wiring Diagram — WIP/ R —

NKS0052Z

Terminals and Reference Values for BCM

NKS00530

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF not to be fluctuated by overloaded.**
- **Turn wiper dial position to 4 except when checking waveform or voltage of wiper dial position. Wiper dial position can be confirmed on CONSULT-III. Refer to WW-43, "DATA MONITOR" .**

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
5	Y/R	Combination switch input 2	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Rear washer switch	 PKIB4959J Approx. 1.0 V
					Rear wiper switch ON	 PKIB4955J Approx. 0.8 v
6	Y/G	Combination switch input 1	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	Approx. 0 V
					Rear wiper switch INT	 PKIB4959J Approx. 1.0 V
33	G	Combination switch output 4	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Rear wiper switch INT	 PKIB4958J Approx. 1.2 V

Terminal No.	Wire color	Signal name	Measuring condition			Reference value
			Ignition switch	Operation or condition		
34	W/L	Combination switch output 3	ON	Lighting, turn, wiper switch (Wiper intermittent dial position 4)	OFF	 PKIB4960J Approx. 7.2 V
					Rear washer switch	 PKIB4958J Approx. 1.2 V
38	W/L	Ignition switch (ON)	ON	—		Battery voltage
39	L	CAN – H	—	—		—
40	P	CAN – L	—	—		—
42	GY	Battery power supply	OFF	—		Battery voltage
52	B	Ground	ON	—		Approx. 0 V
55	R	Battery power supply	OFF	—		Battery voltage
59	OR	Rear wiper auto stop signal	ON	Rear wiper operates		Approx. 0 V
				Rear wiper does not operate		Battery voltage
70	SB	Rear wiper motor output signal	ON	Rear wiper operates		Battery voltage
				Rear wiper does not operate		Approx. 0 V

How to Proceed With Trouble Diagnosis

NKS00531

1. Confirm the symptoms and customer complaint.
2. Understand operation description and function description. Refer to WW-36, "System Description" .
3. Perform preliminary check. Refer to WW-42, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does rear wiper and washer operate normally? If YES, GO TO 6. If NO, GO TO 4.
6. INSPECTION END

Preliminary Check

NKS00532

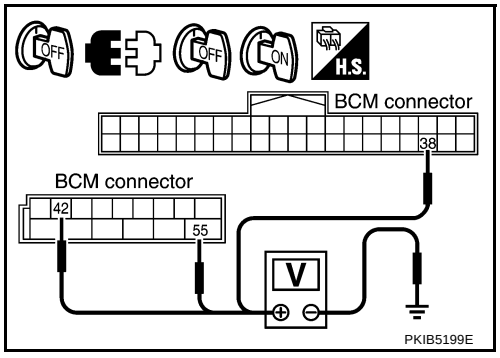
CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES AND FUSIBLE LINK

Check for blown fuses and fusible link.

Unit	Power source	Fuse and fusible link No.
Rear washer pump	Ignition ON or START	84
BCM	Ignition ON or START	1
	Battery	F
		18

Refer to WW-38, "Wiring Diagram — WIP/ R —" .



OK or NG

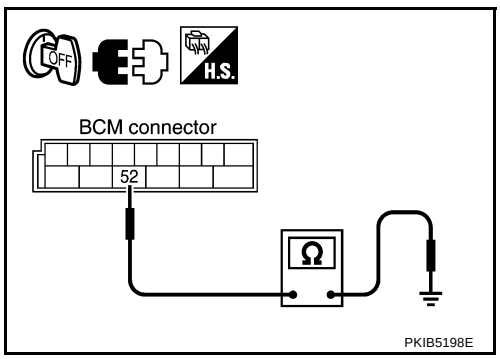
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector and ground.

Terminals			Ignition switch position	
(+)		(-)	OFF	ON
BCM connector	Terminal			
M90	38	Ground	Approx. 0 V	Battery voltage
M91	42		Battery voltage	Battery voltage
	55		Battery voltage	Battery voltage



OK or NG

OK >> GO TO 3.

NG >> Repair harness or connector.

3. CHECK GROUND CIRCUIT

Check continuity between BCM and ground.

BCM connector	Terminal	Ground	Continuity
M91	52		Yes

OK or NG

OK >> INSPECTION END

NG >> Repair harness or connector.

CONSULT-III Function (BCM)

NKS00533

CONSULT-III can display each diagnostic item using the diagnostic test mode shown following.

BCM diagnosis position	Diagnosis mode	Description
WIPER	DATA MONITOR	Displays BCM input data in real time.
	ACTIVE TEST	Device operation can be checked by applying a drive signal to device.

DATA MONITOR
Display Item List

Monitor item		Contents
IGN ON SW	“ON/OFF”	Displays “ignition switch ON (ON)/Other OFF or ACC (OFF)” status as judged from ignition switch signal.
IGN SW CAN	“ON/OFF”	Displays “ignition switch ON (ON)/Other OFF or ACC (OFF)” status as judged from CAN communication signal.
FR WIPER HI	“ON/OFF”	Displays “FRONT WIPER HI (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WIPER LOW	“ON/OFF”	Displays “FRONT WIPER LOW (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WIPER INT	“ON/OFF”	Displays “FRONT WIPER INT (ON)/Other (OFF)” status as judged from wiper switch signal.
FR WASHER SW	“ON/OFF”	Displays “FRONT WASHER Switch (ON)/Other (OFF)” status as judged from wiper switch signal.
INT VOLUME	“1 - 7”	Displays intermittent operation dial position setting (1 - 7) as judged from wiper switch signal.
FR WIPER STOP	“ON/OFF”	Displays “Stopped (ON)/Operating (OFF)” status as judged from auto-stop signal.
VEHICLE SPEED	“km/h”	Displays vehicle speed status as judged from vehicle speed signal.
RR WIPER ON NOTE 1	“ON/OFF”	Displays “Rear Wiper ON (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WIPER INT NOTE 1	“ON/OFF”	Displays “Rear Wiper INT (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WASHER SW NOTE 1	“ON/OFF”	Displays “Rear Washer Switch (ON)/Other (OFF)” status as judged from wiper switch signal.
RR WIPER STOP NOTE 1	“ON/OFF”	Displays “Rear Wiper Stop (ON)/Other (OFF)” status, as judged from wiper switch signal.
RR WIPER STP2 NOTE 2	“OFF”	—

NOTE:
1. Coupe models
2. This item is displayed, but cannot be monitored.

ACTIVE TEST
Display Item List

Test item	Display on CONSULTIII screen	Description
Front wiper output	FR WIPER	With a certain operation (OFF, HI, LO, INT), front wiper can be operated.
Rear wiper output NOTE	RR WIPER	Rear wiper can be operated by any ON–OFF operation

NOTE:
Coupe models

Rear Wiper Does Not Operate

NKS00534

1. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

CONSULT-III DATA MONITOR

1. Select "RR WIPER ON" of BCM data monitor item.
2. With operating the wiper switch, check the monitor status.

CHECK COMBINATION SWITCH

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

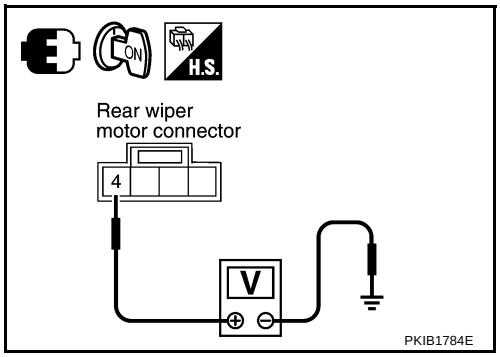
OK >> GO TO 2.
NG >> Check combination switch (wiper switch). Refer to LT-92, "Combination Switch Inspection" .

2. ACTIVE TEST

CONSULT-III ACTIVE TEST

1. Select "REAR WIPER" of BCM active test item.
2. With operating the test item, check that rear wiper operation.

GO TO 3



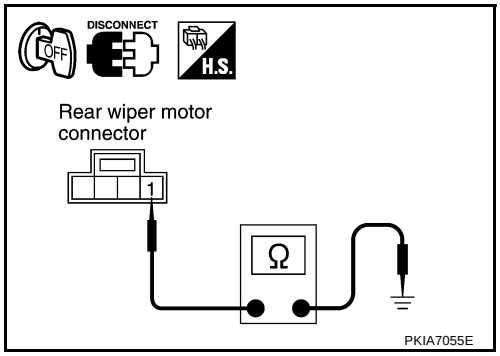
Does rear wiper operate normally?

YES >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NO >> GO TO 3.

3. CHECK BCM

With rear wiper switch ON, check voltage between rear wiper motor harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(-)	
Rear wiper motor connector	Terminal	Ground	
D106	4		Battery voltage



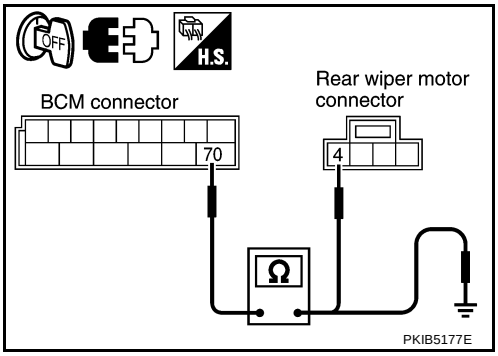
OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect rear wiper motor connector.
3. Check continuity between rear wiper motor harness connector and ground.

Rear wiper motor connector	Terminal	Ground	Continuity
D106	1		Yes



OK or NG

OK >> Replace rear wiper motor. Refer to WW-47, "Removal and Installation of Rear Wiper Motor" .
NG >> Repair harness or connector.

5. CHECK REAR WIPER CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and rear wiper motor connector.
3. Check continuity between BCM harness connector and rear wiper motor harness connector.

BCM		Rear wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
B83	70	D106	4	Yes

4. Check continuity between BCM harness connector and ground.

BCM connector	Terminal	Ground	Continuity
B83	70		No

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Repair harness or connector.

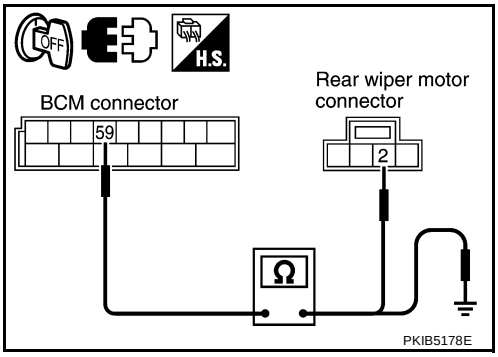
Rear Wiper Does Not Return to Stop Position

NKS00535

1. CHECK REAR WIPER MOTOR CIRCUIT

With CONSULT-III

1. Select "RR WIPER STOP" of BCM data monitor item.
2. Make sure that “RR WIPER STOP”, turn ON-OFF linked with rear wiper switch operation.



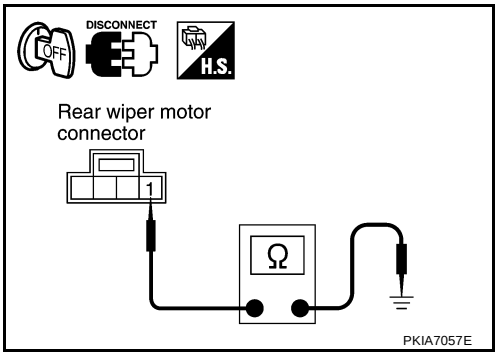
GO TO 2

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> GO TO 2.

2. CHECK REAR WIPER AUTO STOP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and rear wiper motor connector.
3. Check continuity between BCM harness connector and rear wiper motor harness connector.

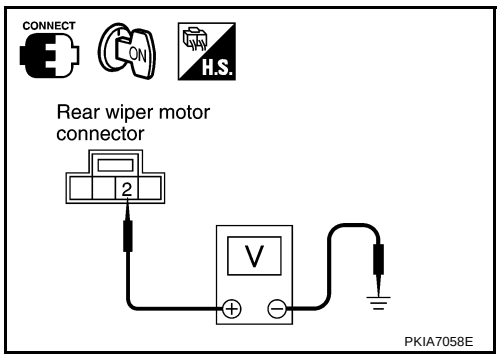


BCM		Rear wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
B83	59	D106	2	Yes

4. Check continuity between BCM harness connector and ground.

BCM connector	Terminal	Ground	Continuity
B83	59		No

5. Check continuity between rear wiper motor harness connector and ground.



Rear wiper motor connector	Terminal	Ground	Continuity
D106	1		Yes

OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK REAR WIPER MOTOR SIGNAL

1. Connect BCM connector and rear wiper motor connector.
2. Turn ignition switch ON.
3. Check voltage between rear wiper motor harness connector terminal and ground while rear wiper motor is stopped and while it is operating.

Terminals			Condition	Voltage (Approx.)
(+)		(-)		
Rear wiper motor connector	Terminal			
D106	2	Ground	Wiper stopped	Battery voltage
			Wiper operating	0 V

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Replace rear wiper motor. Refer to BCS-17, "Removal and Installation of BCM" .

Only Rear Wiper ON Does Not Operate

NKS00536

Refer to LT-92, "Combination Switch Inspection" .

Only Rear Wiper INT Does Not Operate

NKS00537

Refer to LT-92, "Combination Switch Inspection" .

Wiper Does Not Wipe When Rear Washer Operates

NKS00538

Refer to LT-92, "Combination Switch Inspection" .

Rear Wiper Does Not Stop

NKS00539

1. CHECK CIRCUIT BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-III

1. Select “BCM” on CONSULT-III, and select “WIPER” on “SELECT TEST ITEM” screen.
2. Select “DATA MONITOR” on “SELECT DIAG MODE” screen. Make sure that “RR WIPER INT”, “RR WIPER ON”, and “RR WASHER SW” turn ON-OFF according to wiper switch operation.

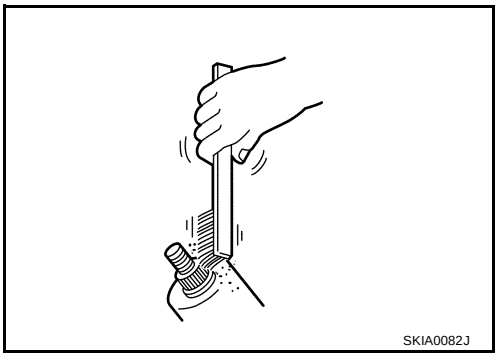
Without CONSULT-III

Refer to LT-92, "Combination Switch Inspection" .

OK or NG

OK >> Replace BCM. Refer to BCS-17, "Removal and Installation of BCM" .
NG >> Check combination switch (wiper switch). Refer to LT-92, "Combination Switch Inspection" .

Removal and Installation of Rear Wiper Arm, Adjustment of Wiper Arms Stop Location



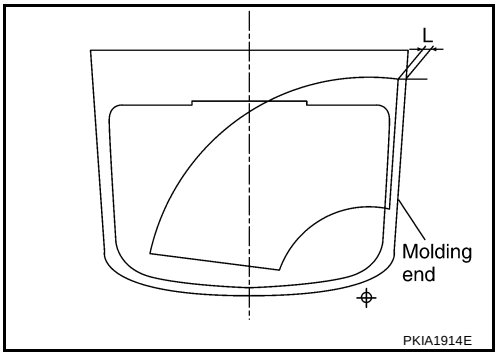
NKS0053A

REMOVAL

1. Turn rear wiper switch ON to operate wiper motor, and then turn rear wiper switch OFF (auto stop).
2. Remove rear wiper arm cap, and remove rear wiper arm nut.
3. Raise rear wiper arm, and remove rear wiper arm from the vehicle.

INSTALLATION

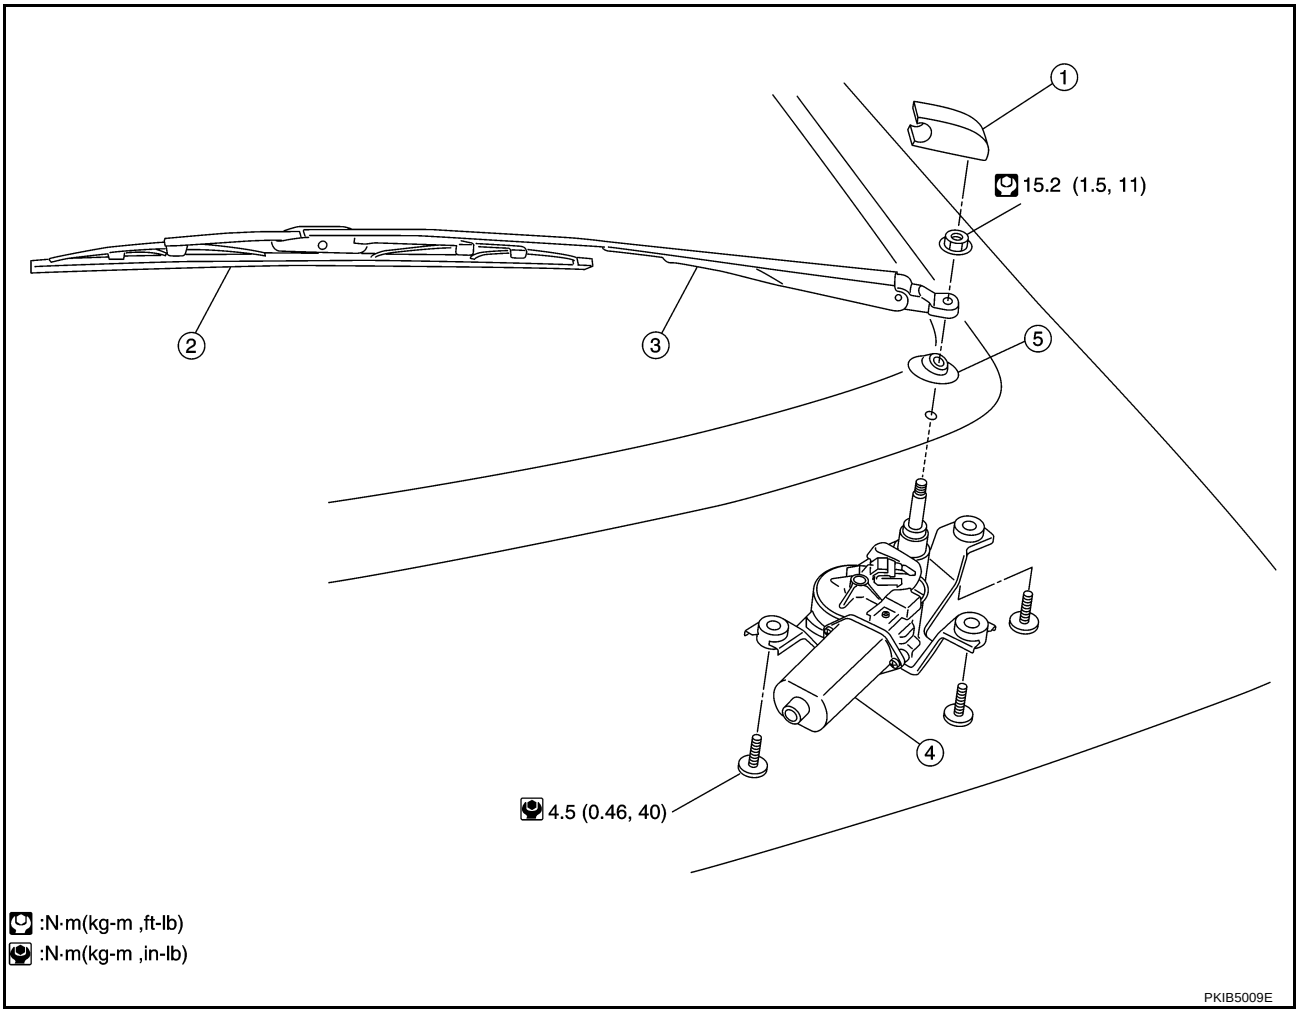
1. Clean up the pivot area as shown in the figure. This will reduce possibility of rear wiper arm nut looseness.
2. Prior to rear wiper arm installation, turn rear wiper switch ON to operate wiper motor, and then turn rear wiper switch OFF (auto stop).



3. Lift the blade up and then set it down onto windshield glass surface to set the blade center to clearance “L” immediately.
4. Tighten wiper arm nuts to specified torque.

Rear wiper arm nut : 15.2 N·m (1.6 kg-m, 11 ft-lb)

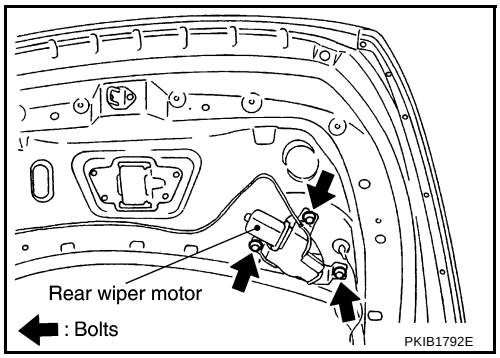
5. Spray washer fluid. Turn rear wiper switch ON to operate wiper motor, and then turn rear wiper switch OFF (auto stop).
6. Make sure that wiper blade stop within clearance “L”.



Clearance “L” : 30 ± 7.5 mm (1.181 ± 0.295 in)

7. Install rear wiper arm caps.

Removal and Installation of Rear Wiper Motor



NKS0053B

1. Cover wiper arm
2. Wiper blade
3. Wiper arm
4. Rear wiper motor
5. Pivot cap

REMOVAL

1. Remove rear wiper arm. Refer to WW-46, "REMOVAL" .
2. Remove pivot cap.
3. Remove back door finisher lower. Refer to EI-48, "BACK DOOR FINISHER" .
4. Disconnect rear wiper motor connector.
5. Remove rear wiper motor mounting bolts and remove rear wiper motor from the vehicle.

INSTALLATION

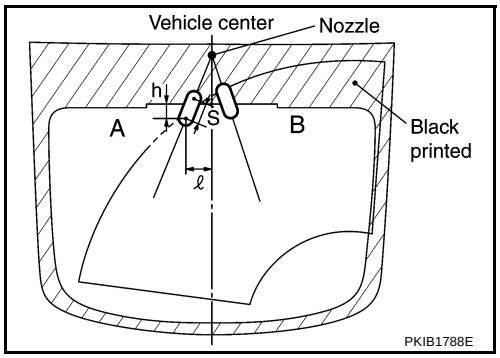
1. Install rear wiper motor to the vehicle.

Rear wiper motor mounting bolts : 4.5 N·m (0.46 kg-m, 40 in-lb)

2. Install pivot cap.
3. Connect rear wiper motor connector. Turn rear wiper switch ON to operate wiper motor, and then turn rear wiper switch OFF (auto stop).
4. Install back door finisher lower. Refer to EI-48, "BACK DOOR FINISHER" .
5. Install rear wiper arm and arm cap. Refer to WW-47, "INSTALLATION" .

CAUTION:

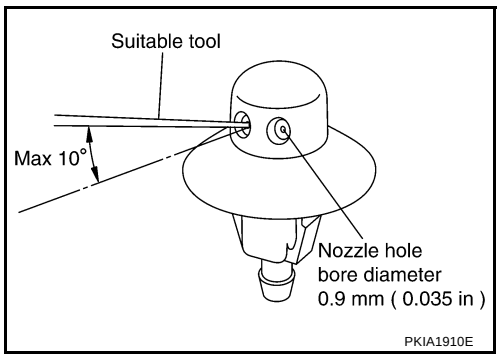
Never drop the rear wiper motor nor cause it to interfere with other parts.



Washer Nozzle Adjustment

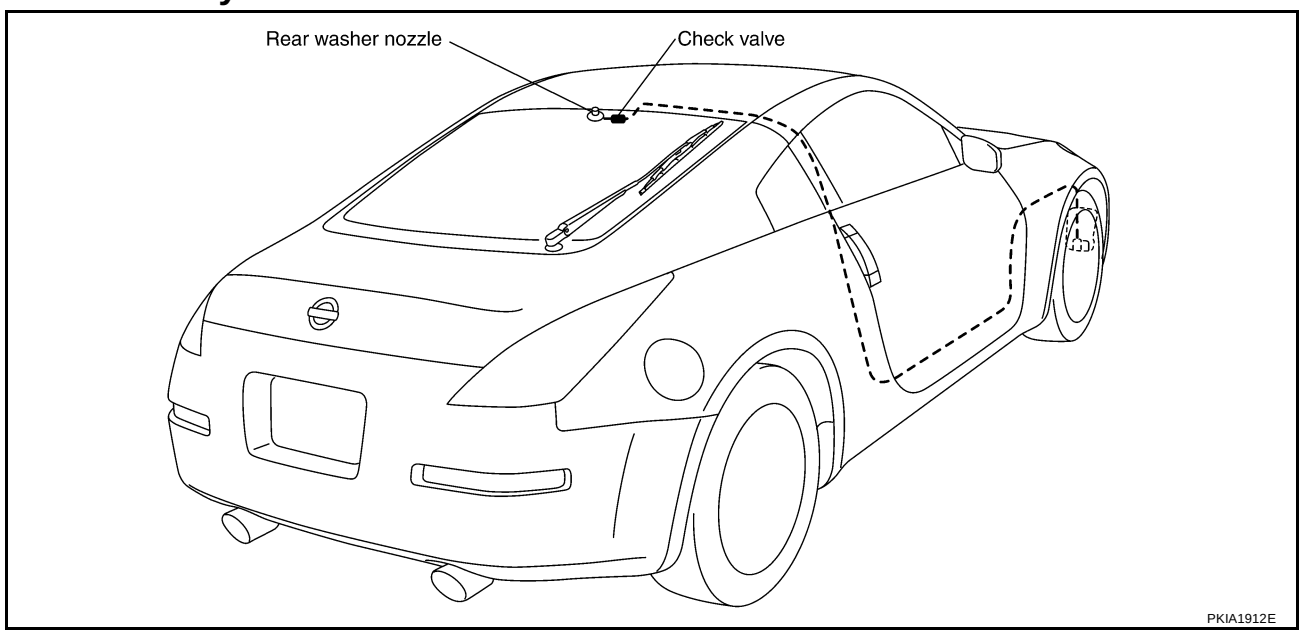
NKS0053C

Adjust spray position as shown in the figure.



Unit: mm (in)

Spray position	h (height)	ℓ (width)	S	Diameter (spray position range)
A	30 (1.18)	73 (2.87)	50 (1.97)	30
B	12 (0.47)	50 (1.97)	50 (1.97)	30

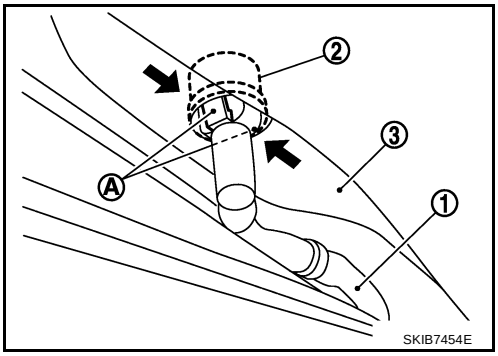


Adjust washer nozzle with suitable tool as shown in the figure.

Adjustable range : ±10° (In any direction)

Washer Tube Layout

NKS0053D



Removal and Installation of Rear Washer Nozzle
